Mr. MACKENZIE KING: What I was saying was that my hon. friend could have his choice. He has made agriculture his choice, and certainly we will go on with agriculture.

Mr. GRAYDON: May I say how pleased I am that the Prime Minister has accepted my choice on this occasion.

RADIO BROADCASTING

VACANCY ON BOARD OF GOVERNORS

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): May I ask the Prime Minister when the house may expect an announcement on the filling of the present vacancy on the board of governors of the Canadian Broadcasting Corporation.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Very soon, I hope. The vacancy has existed, I believe, only about a fortnight and it will be filled within that length of time.

Mr. GRAYDON: In that regard may I suggest on this occasion, as I have urged on previous occasions, that organized agriculture be taken into consideration when the appointment is being made, because we really need a representative of the farmers on that board.

Mr. MACKENZIE KING: Yes. The late Mr. Nathanson, who was on the board, represented business which is also entitled to representation on the board. That circumstance may have to be considered as well as the question of additional representation of agriculture, to which reference has been made before.

Mr. GRAYDON: Of course, the situation with respect to agriculture is an old problem on the board. It has been referred to on previous occasions.

CANADIAN ARMY

REFERENCE IN "GLOBE AND MAIL" TO ARRANGEMENTS WITH RESPECT TO PRIZE FIGHTING

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): May I direct a question to the parliamentary assistant of the Minister of National Defence. The minister unfortunately is not able to be here to-day, but I have placed in the hands of his parliamentary assistant certain press clippings from the sports page of the Toronto *Globe and Mail.*

Some hon. MEMBERS: Oh, oh.

Mr. GRAYDON: I can tell that this is a page which is read very generally. From these clippings the parliamentary assistant will see that the well-known sports columnist, Jim Coleman, makes certain serious allegations respecting the arrangements made by the Canadian army in connection with prize fighting. I note that Lieutenant-Colonel A. G. White, adjutant of the Montreal military district, has made a reply to Mr. Coleman, but I think the controversy merits an investigation by the minister, and I would ask him, after making inquiries, to give a statement to the house covering the points which have been so raised.

Mr. W. C. MACDONALD (Parliamentary Assistant to the Minister of National Defence): The press clippings to which the leader of the opposition has referred reached me this afternoon. I had no previous knowledge of the matters referred to in the clippings. However, I shall be very glad to make inquiries and give the house a statement.

Mr. GRAYDON: The allegations are pretty serious.

Mr. CRERAR: Are they correct?

Mr. GRAYDON: That is what I want to find out.

ARGENTINE REPUBLIC

QUESTION AS TO RECOGNITION OF THE NEW GOVERNMENT

On the orders of the day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): The leader of the opposition (Mr. Graydon) asked me about recognition of the new government of Argentina. My hon. friend will no doubt be interested to know that, acting on instructions, the Canadian minister in Buenos Aires established official relations with the Ramirez government to-day.

MAN-POWER

PRIORITY RATINGS FOR INDUSTRIES

On the orders of the day:

Hon. HUMPHREY MITCHELL (Minister of Labour): Mr. Speaker, on Wednesday last

as recorded on page 3467 of *Hansard*, the hon. member for Danforth inquired about labour priorities. I would like to make the following answer. Labour priorities are established for all industries in the priorities division of the labour supply branch, Department of Labour, by the interdepartmental labour priorities committee, consisting of representatives of the wartime prices and trade board, Department of Munitions and Supply and selective service. The priority assigned to an industry is based on the relative essentiality of its normal production. Many firms normally producing relatively less essential goods change over to the production of war materials and must be assigned a priority rating in accordance with the assessment of the essentiality of their new activities.

Labour priorities are confidential and are not disclosed, even to the firms concerned. Firms may make application for special priority consideration through their wartime prices and trade board administrator, or directly to the priorities division of the Department of Labour. All applications and claims are investigated by the wartime prices and trade board and Department of Munitions and Supply representatives and, when justified, are presented to the interdepartmental labour priorities committee for their consideration.

Mr. GRAYDON: May I ask the minister why these are so confidential?

Mr. MITCHELL: Because the relative importance of industries may change from day to day. That is the reason. I think my hon. friend will agree that it is just as well that it should be kept confidential. That is the considered judgment of all the agencies that are concerned with the question of priorities for industrial operations.

Mr. GRAYDON: I can quite understand the minister's position. That is one side of the argument. The other is the possibility that observance of confidence in the matter might be carried to the point of abuse. I am not suggesting that this exists, but in any event the possibility of its arising is there.

Mr. MITCHELL: I can assure my hon. friend that if he has any knowledge of anything he thinks is abuse I shall be glad to hear of it, or from any other member of the house.

PRIVILEGE—MR. ROY

REFERENCE TO ARTICLE IN MONTREAL "DAILY STAR" OF JUNE 9, 1943

On the orders of the day:

Mr. J. SASSEVILLE ROY (Gaspé): Mr. Speaker, I rise to a question of privilege. A Montreal newspaper called the Montreal *Daily Star*, in its edition of June 9, published an editorial entitled "Opportunity for Service", which contains a vicious attack upon me and my constituents. The last part of the article reads as follows:

> The government plans a campaign to enforce "dim-out" regulations and to discourage careless talk and the circulation of sensational and inaccurate rumours many of which last year were repeated in the House of Commons itself by members of the affected constituencies.

They might just as well have mentioned my name, because everybody knows that the "affected constituency" is the one I have the honour to represent in this house. They speak of rumours which they say were repeated in the House of Commons. I believe that every Canadian citizen would have been much more happy to learn that those reports of sinkings in the St. Lawrence were merely rumours, but unfortunately they were true, and as a matter of fact they have been officially recognized by the proper authorities in this very House of Commons; so much so, that the government has decided to follow a new policy this year with respect to the protection of the St. Lawrence.

Some hon. MEMBERS: Order.

Mr. SPEAKER: Order. The hon. gentleman is entitled to make a denial of statements made in the newspaper quoted, but he is not entitled to make another argument.

Mr. ROY: Mr. Speaker, I should at least like to quote further from the first part of this article, which is also wrong and very injurious to my constituents. It reads as follows:

> Premier King's announcement that a civilian defence system has been organized to guard the lower St. Lawrence against submarines represents a marked advance over the precautions taken last year, when the absence of civilian cooperation was in a measure responsible for the sinking of some ships. The population of that area are now being given an opportunity, which they will no doubt seize with alacrity, to share in their own defence.

That is a stupid statement, Mr. Speaker; it is utterly ridiculous. I wish to recall to the editor of this paper that our civilian population has never waited and will never wait to protect our country.

Some hon. MEMBERS: Order.

Mr. SPEAKER: Order. I understand that the hon. gentleman has concluded his remarks on the question of privilege.

PASSPORTS

INQUIRY AS TO DISTRIBUTION OF APPLICATION FORMS TO MEMBERS OF PARLIAMENT

On the orders of the day:

Mr. J. H. LECLERC (Shefford): Mr. Speaker, I wish to direct a question to the Prime Minister. I hold in my hand an application form for renewal of a passport. This came to me by chance. I tried to get a few copies of these application forms from the passport office because everybody knows it is absolutely necessary for members of parliament to have some of them on hand for the use of constituents who desire to renew their passports; but I was informed by the passport office that I could have none, and that they should be asked for direct by the applicant. Surely if this is done as a matter of economy, it is, as we say in French, *une économie de bout de chandelle*. If the government wants to economize, it could save much more by economizing on stationery, dispensing with the large envelopes that come to members of parliament with just a short letter inside.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I made a statement a few days ago in the house in which I indicated the reasons why the passport office thought it inadvisable to have the application forms distributed, and I need not repeat what I said at that time. I do not mind saying to my hon. friend, as I intended to say the other day, that while the passport office is making its rule rigid, it has from its point of view good reasons for so doing. I myself feel that possibly there might be a measure of concession made to members of parliament. The department's purpose is to effect economies and at the same time to maintain in the use of these forms a certain security which is regarded by our government and by the United States government as important. However, I am not sorry that my hon. friend has brought the matter up, and I shall have another discussion with the officials of the department about it. Even ministers themselves sometimes find it difficult to get things done in their own departments that they themselves might wish to do.

MADAME CHIANG KAI-SHEK

INQUIRY AS TO ARRANGEMENTS FOR PUBLIC APPEARANCE

On the orders of the day:

Mr. W. K. ESLING (Kootenay West): Mr. Speaker, in view of the great public interest taken in the coming visit of Madame Chiang Kai-shek and the many appeals to members of the house as to the prospects of hearing her, I wonder whether the Prime Minister would not consider arranging for her public appearance in front of the parliament buildings or elsewhere so that the wishes of the public might be gratified.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I may assure my hon. friend that my colleagues and I have appreciated the great public interest there will be in Madame Chiang Kai-shek's appearance in the capital next week. I have personally taken up with Madame Chiang Kai-shek what she might find it possible to do in the way of speaking before hon. members of the house and over the radio, and have since taken up the question whether it would be possible for her to speak outdoors. Madame Chiang Kai-shek herself would prefer to speak indoors, and also to make just one address. In order that the largest possible number of persons may have the advantage of hearing that address we have reached the conclusion that while it would be well to have the address delivered in this chamber, where all hon. members of this house and members of the senate could be conveniently accommodated, and others in the galleries in so far as that can be arranged on the basis of the official list, the address should be broadcast so that it may be heard in all parts of Canada. To permit of the address being broadcast—and not raising at this time the question whether broadcasts should be made from the house during its regular sittings—as well as for other reasons it has been thought desirable to have the broadcast made at 11 o'clock in the morning of Wednesday of next week. That will be the arrangement with regard to the address. I am sure that arrangements can be made for having loud speakers on parliament hill, and I have no doubt that if the citizens are gathered there Madame Chiang Kai-shek will be only too happy to make an appearance before them, but I am quite sure she would wish to be spared having to deliver a second address.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Thursday, June 10, consideration in committee of a resolution to grant to his majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

MUNITIONS AND SUPPLY

Hon. C. D. HOWE (Minister of Munitions and Supply): Mr. Chairman, the estimates of the Department of Munitions and Supply for the current fiscal year total $166,300,000, as compared with the estimates for the last fiscal year, which totalled $698,090,106.01. This is a sharp reduction, but I would point out to hon. members that the size of the estimate for the department has no relation to the sum of money to be expended by the department, which for the current fiscal year will amount to something in the order of $3,400,000,000. The department is the procurement agency for the armed services and for all allied governments, and the funds to cover these purchases are furnished by those from whom requisitions are received. The items taken care of by the departmental vote cover additions and extensions to plants; payment for cargo vessels which are purchased to be operated by the Canadian government; housing developments in connection with the munitions programme; revolving funds for working capital of crown companies, and departmental administration. The departmental appropriation has been broken down under eight separate headings, and with the consent of the house I shall place this break-down on *Hansard* as follows:

Department of Munitions and Supply
Draft Estimates, 1942-43, 1943-44

	Actual expenditures preliminary 1942-43	Estimated expenditures 1943-44
1. Additions and extensions to plants	$361,853,661 59	$195,000,000 00
2. Cargo vessels—Operated by Park Steamship Ltd	15,522,500 00	45,000,000 00
3. Housing development	30,725,643 49	30,000,000 00
4. Land and other miscellaneous physical property	3,856,920 07	7,000,000 00
5. Revolving funds for working capital—		
Munitions production	100,000,000 00	....
Aircraft production	25,000,000 00	....
Ship production	100,000,000 00	....
Miscellaneous stores	20,000,000 00	....
6. General production and warehousing expenses	14,300,408 74	15,000,000 00
7. Loans to commodity companies	17,334,584 94	15,000,000 00
8. Departmental administration	9,496,387 18	9,300,000 00
	$698,090,106 01	$316,300,000 00
Less—Estimated reduction in revolving funds		150,000,000 00
		$166,300,000 00

The Minister of Munitions and Supply also administers the air services branch of the Department of Transport, and the war estimates of that department total $6,095,085. These have been broken down under two items, and with the consent of the committee I shall place the breakdown of this amount on *Hansard* as follows:—

Air Services Branch (Department of Transport) War Expenditures and Estimates

	Expended 1942-43	Estimated 1943-44
9. Air Services:		
To provide for special radio services, weather observation and teletype services—		
Radio	$1,093,981 94	$1,761,325 00
Meteorological	812,254 56	1,366,000 00
17 Additional radio range stations (maintenance): new division office at Vancouver; additional staff at headquarters	....	374,460 00*
Subsidization of radio-operator students	....	100,000 00*
10. Civil Aviation:		
Extra airport traffic control systems	184,047 30	680,000 00
Operation and maintenance of municipal (terminal) airports	276,093 30	336,600 00
Additional facilities—Moncton to Newfoundland airline	418,344 85	976,700 00
Improvements to North Bay airport	343,339 04	....
Operation and maintenance—North-West air route	60,992 91	....
Montreal airport improvements	....	500,000 00*
	$3,189,053 90	$6,095,085 00

*Supplementary items 1943-44.

Over the past three and a half years I have made reports to the house from time to time on the production programme. These were reports of progress towards objectives yet to be attained. It will be recalled that there were always one or two items in the programme which were giving us trouble either because of difficulty of design, the need for elaborate tooling, or shortages of critical materials and components. I am now able to report that certain of our major objectives have been reached. Late in 1942 we were delivering in substantial quantities every item of war equipment for which we had received orders in the first two and a half years of the war. Every week we are launching six or more vessels, either escort, cargo or patrol. Every week we are turning out 80 planes. Every week our automobile factories produce 4,000 motor vehicles and 450 fighting vehicles. Every week our gun plants make 940 heavy guns or mountings, and our small arms plants turn out 13,000 smaller weapons. Every week our ammunition factories make 525,000 rounds of heavy ammunition and 25,000,000 rounds of small arms ammunition. Every week our chemicals and explosive industry has an output of 10,000 tons. Every week our factories produce $4,000,000 worth of instruments and communications equipment. We have launched 500 ships and delivered 8,000 aircraft. We have delivered 475,000 motor vehicles and 21,300 fighting vehicles. We have delivered 55,500 heavy guns or mountings and 630,000 small weapons. We have produced 800,000 tons of chemicals and explosives. We have produced instruments and communications equipment to the value of $160,000,000. These are some of the highlights of a programme which includes almost every type of equipment and supply needed in modern warfare. The total dollar value of our deliveries to date is over $4,500,000,000. We estimate employment in war industry at upwards of 900,000 men and women.

I mentioned a moment ago that certain of our targets had been attained. This does not mean that there will be any slackening of the over-all effort, but rather a change in emphasis. Some programmes will be reduced, others will be expanded. There are some rather drastic reductions in ground army stores on the one hand, but on the other greatly increased demands for naval vessels, guns and equipment, combat aircraft and radar equipment. Before receiving notice of changes in programme, our over-all production programme for the fiscal year 1943-44 totalled 3 billion, 653 million dollars. We are now able to estimate the revised programme at 3 billion, 425 million dollars, or a shrinkage of approximately 6 per cent. Of this shrinkage approximately 30 million dollars represents reductions in defence construction projects, leaving slightly less than 200 million dollars or a 5½ per cent net reduction in the production programme. Because we realized that changes in programme were inevitable in war production, we have maintained a high degree of flexibility in the planning of our production facilities, which now permits us to make the changes necessary with a minimum of inconvenience.

I will comment briefly now on each item of the programme, giving the accomplishment to date and indicating what changes will be made, either by way of reduction or expansion.

Ammunition. We have created a great ammunition industry in Canada. More than 38 million rounds of heavy ammunition have come from our factories. Complete filled rounds of this heavy ammunition are now produced at a rate of 525,000 rounds a week.

At the close of 1942 we were making 28 types of shells of 15 different calibres, ranging from the 40 millimeter quick-firing shell to the 7·2 howitzer. So far this year three types have gone out of production. Of the remaining 25 types, two will be increased in output, others will be produced at the current rate, and others will be reduced.

Some cuts in production will take place at once, but wherever possible any necessary reductions in the programme will be made over a period of months and should cause a minimum dislocation of manpower.

All told, there are nearly 50 plants engaged in making shells alone. There are scores of other plants producing components, including 12 types of fuses, 14 types of cartridge cases, two types of gaines, six kinds of primers, two types of depth charges, ten types of trench mortar bombs, pyrotechnics of 70 different kinds, as well as practice bombs, anti-tank mines, rifle grenades.

Components. As the output of shells declines, so the production of cartridge cases, fuses, primers and gaines will also be reduced. However, all of the cartridge case manufacturing capacity thus released will be diverted to making additional cartridge cases for the United States. Over-all production will decline. Some plants can be converted to the manufacture of other types of equipment, but this is not possible in every case.

Chemicals and Explosives. The vast Canadian chemicals and explosives production is supervised by Allied War Supplies Limited. This crown company has under its control 40

different projects, 34 of which have come into full operation. Of the 18 major projects on the list, three are mammoth ammunition-filling developments, three are making explosives, two are fuse-filling undertakings, and the others are chemicals producers. Total employment in these factories is in excess of 50,000 men and women.

The various Canadian chemicals and explosives projects under the administration of Allied War Supplies cover an area equal to that of the city of Montreal. The largest, are the shell-filling plants, but on one explosives project alone the capital expenditure runs to 18 million dollars.

Great Britain and the allied nations have relied heavily upon us for this production.

Our present production of chemicals and explosives is running at a rate of 10,000 tons a week. The total quantity turned out to date is in excess of 800,000 tons. One of these products is the most powerful explosive developed anywhere during the present war. The production of this valuable and secret explosive is being increased.

As our heavy ammunition programme recedes from its peak, due to decreased requirements, production of certain explosives and propellants will also be reduced.

Small arms ammunition. A tremendous production job has been accomplished in small arms ammunition. In 1940 we made only three types, to a value of 4½ million dollars. Now we are making 20 main types, ranging in calibre from ·22 to 20 mm., having a value of 23 million dollars for the four months from January 1 to the end of April of this year.

The 9 mm., bullet, used in the Sten carbine, can be cited as one example of a lowered target. The future objective has merely been lowered so that the present production figure will be tripled instead of quadrupled.

Much planning remains to be done before anything more definite can be said regarding revision of the small arms ammunition programme, because these changes must be made on the basis of advices received only a few days ago. In the meantime, we are turning out more than 25 million rounds a week in plants and arsenals employing 30,000 people, half of them women. The government arsenal at Quebec is the model on this continent for this type of production, both in efficiency of operation and quality and quantity of production.

Guns. In the production of heavy guns and small arms, we have achieved mass output on a constantly rising scale. Toward the end of 1942 our monthly ordnance output was greater than it had been for the entire 1941 year.

More than one-fifth of the total government investment in war plants has been allocated to the production of guns and small arms.

We are making twelve types of heavy ordnance, and 16 types of carriages and mountings, in Canadian shops. To date we have produced 55,500 guns, gun barrels or mountings. Our weekly production rate is now 940 units—570 guns and gun barrels and 370 mountings. Merchant ships and combat vessels made in Canadian yards can now be equipped with Canadian-made guns. Our field artillery, anti-aircraft guns, our tank and anti-tank guns are being shipped overseas for service on all fronts.

We are now engaged in revising some of our gun schedules downwards. The items most likely to be affected are the 3·7 and Bofors anti-aircraft guns and the 6-pounder anti-tank gun. The scheduled production of 3·7 and 40 mm. Bofors AA guns will carry on at a reduced scale to the end of 1944. The plant making the 6-pounder carriage is being converted to the manufacture of 20 mm. Universal mountings for the army and single 20 mm. mountings for the navy.

There are eight major plants and scores of subcontractors operating on small arms contract. Our output of small arms in 1942 increased 1,300 per cent over 1941. We have turned out 630,000 small arms to date and present production is at the rate of 13,000 units a week. These include rifles, carbines, anti-tank rifles, smoke dischargers, bomb throwers, two types of trench mortars, and four types of machine guns.

In line with the changing picture of our overall production programme, there will also be adjustments in the small arms schedule.

Maximum output of the Bren gun, 8,000 per month, will be reached this month and will be maintained at that rate until the end of 1944. Original schedule for the No. 4 army rifle, Canadian version of Lee-Enfield, which is being produced in the government-owned and operated plant, Small Arms Limited, was doubled during the past year, and our present output is now in excess of 34,000 a month. Production of this weapon will be increased to better than 40,000 a month.

Production of the Sten, which is now at peak, will be slightly reduced from the maximum planned—10,000 a month. Present orders on hand for Vickers, ·5-inch naval machine guns, training rifles, and 2-inch trench mortars are sufficient to carry us into 1944.

72537—225½

Production of the Boys anti-tank rifle will be discontinued during the summer. We are also abandoning producing the Browning aircraft and tank type machine guns, having met requirements for both these weapons. This production will be partially replaced by the Browning pistol and a 20 mm. machine gun.

Naval Guns and Naval Orders. We are now producing four types of naval guns and ten types of naval mountings for use both on combat and merchant ships. While there will be some slight changes in this programme, the overall picture involves a substantial increase in output.

There will be a substantial increase, too, in the production of a wide variety of other naval equipment. For example, Canada is now producing in quantity 20 or more components of naval torpedoes. These include the engines, propellers, bodies, transmission gear, and gyroscopes. The output of all of these will be increased.

There will be larger output from the 168 firms now engaged in making the complicated and expensive components of anti-submarine detection devices, which Canada delivers complete to the navies of the united nations.

All told, Canada supplies 60 or more types of the most complicated instruments for naval purposes, on all of which we are increasing our production. These include equipment for arresting planes on carrier decks, secret gun sighting devices, and fire control instruments costing up to $30,000 each.

Canada makes the fire control clocks and other instruments for the navy which determine the range, elevate the gun, calculate both the distance to the target and its movement, the wind deflection of the bullet, and finally fire the gun at the correct instant.

There are no higher manufacturing standards in the world than those demanded by the navy. Canadian manufacturers have met those standards with conspicuous success.

Many British warships being repaired and re-equipped in Canadian and United States ports are being supplied with these Canadian-made guns, mountings, anti-submarine detection equipment and instruments.

Motorized Equipment. One of the most important contributions Canadian industry has made to the war is our output of fighting vehicles and motor transport. It is generally agreed that a major factor in the victories of the British armies in Africa was the quality and reliability of the motorized equipment they had at their disposal in the Egyptian, Libyan and Tunisian campaigns. More than 36 per cent of the motorized equipment throughout the entire middle east if of Canadian make. Fifty per cent of the load-carrying vehicles used by Montgomery's victorious Eighth Army were Canadian made.

Soon, very soon, the 500,000th motor vehicle will roll from the assembly line of one of our automobile plants. We are turning out these military vehicles, as distinguished from fighting units, in more than 100 different types at a rate of 4,000 a week. Our present production of fighting vehicles, including tanks, runs to 450 a week, for a present total of more than 24,000 units.

So highly are our Canadian-made military vehicles rated that this programme of ground equipment production is to be continued at its present peak capacity.

Through our army engineering design branch, constant changes and improvements have been effected in the motorized transport and fighting vehicles made in Canada. Our designers have achieved remarkable results in improving the quality, performance, and utility of mechanized units. The Canadian "dry pin track" for instance, has just been approved for production. Developed by our own design branch, it is a tank track which not only gives better performance than any other type in use to-day, but can be made more economically than any other. The lessons learned in active theatres of war are being steadily applied. The motorized units we are sending overseas to-day are more serviceable, better built, and more economically manufactured than the units of a year ago. New models are constantly going into production.

Tanks. We have just completed our Valentine tank programme. The total production—1,400—has gone to Russia. Recalling our difficulties in the early stages of this programme, I am able to say that the last tank was delivered exactly on shedule. The plant has been converted to the production of engines and components for the escort vessel programme. We are approaching the end of our contract for Ram tanks. Over 1,700 have been produced. Our tank arsenal is now producing self-propelling gun mounts, and will shortly go into production on the M-4 tank. This type is now standard for the United States, British and Canadian armies.

Instruments and Communications. In the field of instruments and communications we have made remarkable progress. We have produced intricate instruments to the extent of $160 million and the 1943 production will reach the $250 million mark. They are now being produced at a rate of $4·3 million a week.

Three new industries have been developed in Canada to meet the demands of the radio industry, the output of which has expanded sixteenfold since the beginning of the war. They are a dynamotor industry, a ceramic insulation industry, and a crystal industry.

We have become a major source of united nations supply in this field. Canadian invention is responsible for seven major developments in the production of signals equipment. Ranging from a "talkie-walkie" set which one man can operate as easily as a cradle phone, to a super-highpower field wireless station with a radius of more than 100 miles. These products of original Canadian design have so impressed our allies that large orders have been placed in Canada for tens of millions of dollars worth of this equipment.

All the communication devices for Canadian tanks, ships, planes, and motorized vehicles are being produced in volume in this country. These are the artificial eyes and ears of our armed forces. Optical instruments by the tens of thousands have been produced to date by Research Enterprises Limited, a government-owned company producing a great variety of intricate equipment such as prismatic gunsights, clinometers, periscopes, range-finders, dial sights and cathode tubes. This company, which employs 6,800 people, is working on orders for radio and optical equipment totalling more than 130 million dollars.

Aircraft. To date Canada has produced 8,000 planes. Aircraft are now coming from our factories at the rate of 80 a week in nine types. We are now passing through an intermediate stage, entering production of new trainer types and just achieving production of combat planes such as the Lancaster and Mosquito, which presented very special and difficult production problems. The low production point arising from the change in models has now been passed. Production figures will steadily increase. While we have had ups and downs in our monthly planned production, actually the total poundage of planes produced has steadily mounted since the middle of 1940, when we were producing only two planes a week.

The four types of trainer craft upon which the industry is now engaged are the Fairchild Cornell, an elementary trainer; the North American Harvard, a single-engined advanced trainer; the Canadian Anson, regarded as the best twin-engined advanced trainer in the world, which is being produced under the supervision of the government-owned company, Federal Aircraft Limited, and the Bristol Bolingbroke, a twin-engined reconnaissance bomber and gunnery trainer.

The service types are the PBY-5A Catalina, a coastal reconnaissance amphibian; the Lancaster, mightiest four-engined long-range bomber in the world, being produced in the government-owned and operated plant Victory Aircraft Limited; the Curtiss Helldiver, navy dive bomber, and the famous Mosquito, fast twin-engined fighter bomber. In addition to these, we are also producing the Noorduyn Norseman, the only all-Canadian designed plane on the list, regarded as the best single-engined all-round transport type plane yet designed.

Two of the planes I have mentioned have yet to come into production. Design modifications have held up the dive bomber programme, but these have now been cleared, and the first Lancaster, biggest and most ambitious job ever undertaken by the Canadian aircraft industry, is expected to be test-flown within a few weeks.

The Canadian aircraft industry, and plants in component manufacture, now employ more than 100,000 workers. More than 25 per cent of these employees are women. Because we are increasing our production, the aircraft industry will in future be able to absorb all workers, not required by the armed services and in high priority shipbuilding, who were hitherto employed on those programmes which are to be curtailed.

In addition to the production of new aircraft, Canada has established an aircraft overhaul industry to service the thousands of planes now operating in the dominion. Thirty special plants are located strategically across the dominion, to make regular engine overhauls, to take care of airframe reconditioning, and to rebuild damaged planes. These plants recondition and replace into service 200 planes and 800 engines every month.

In any assessment of our aircraft record, two points are basic; first, every single plane we are building today is the accepted leader in its class; and, second, the quality of workmanship and the methods employed in the manufacture of Canadian planes are unexcelled.

Cargo Ship Building. During the twenty years before the outbreak of this war, Canada built not one seagoing merchant ship. Our present record in shipbuilding, therefore, is all the more remarkable in that it represents the achievement of what is virtually a new major industry.

Last month we launched 19 cargo vessels from Canadian yards.

By the end of May we had achieved a total of 168 freighters launched under our cargo vessel programme. Of these, 141 had been

delivered by the end of May. All but four of these are 10,000 ton vessels. The others are 4,700 tonners.

Roughly one-half of our overall commitments for shipbuilding in Canada, which total one billion dollars, will be spent on cargo ship construction.

Freighters delivered, under construction, or on order, total more than 300, of which 90 per cent are 10,000 ton ships.

The 43,000 workers in the 12 Canadian yards engaged in this cargo boat programme have every reason to be proud of their contribution to the war effort. Recently the Burrard Dry Dock Company set a record by delivering the *Fort Wedderburne* in 89 days from the laying of the keel. At West Coast Ship Builders a ship has been launched forty-five days after the laying of the keel.

Our cargo shipbuilding programme is now at its peak. It will be maintained there. The entire programme is administered by Wartime Merchant Shipping Limited, one of the largest of our crown companies.

Practically all the shipbuilding at present being carried on by the united nations is designed to meet immediate war requirements. For this purpose the British shipping authorities developed a type of cargo ship known as the North Sands. This type was chosen because the components were suited to mass production by engineering shops and foundries not heretofore accustomed to serving shipbuilding, and the ship itself is suitable for construction in all types of shipyards, including new shipyards built and equipped hurriedly. The engine and boilers are of rugged construction, simplified for operation by a person of limited experience and easy to repair and maintain in all ports of the world.

The ship is suitable for carrying all types of cargo; general merchandise, crated motor vehicles, bulk grains, coal, ore, lumber, or munitions of all types, ranging up to the heaviest of guns and tanks.

This type, under the name of the Liberty ship, was also adopted by the United States Maritime Commission for their greatly expanded cargo shipbuilding programme; modified somewhat to suit their mass production methods. It constitutes an overwhelming proportion of the present vast American monthly ship output.

It should be clearly understood that the ship built in the United Kingdom and Canada under the name of North Sands ship is from the standpoint of hull design and horsepower exactly the same ship as is built in the United States under the name of Liberty ship. Consequently the rated speed of the American Liberty and the Canadian and British North Sands is exactly the same, namely 11 knots. Our Canadian ships have exceeded 14 knots on their trials, without load, in smooth water and have averaged a speed of over 11 knots on a return voyage loaded between British Columbia and New Zealand.

This ship under service conditions is up to convoy speed. Increasing its speed would involve increasing the power plant by the cube of the increase in speed. To drive this ship at 11 knots requires 2,500 horse-power to drive it at 18 knots would require over 11,000 horse-power, in addition to which the ship itself must be redesigned. Any effective increase in speed gained by such a proportionately tremendous increase in power would involve building and tooling new plants for components manufacture, which could only be done after high expenditure and great delay. During the period of change-over less ship tonnage would be produced, at a time when ships of the type now being built are most urgently needed for war purposes. From the Canadian standpoint the building of faster ships is a post-war rather than a present-day war problem, for which the necessary advice is now being secured from the best sources.

A certain number of the North Sands type of ship were built as oil burners, with certain changes in design and equipment of a strictly operational nature. These have been named Victory ships, both here and in the United States.

Based upon our experience in building the North Sands ships and the Victory ships, the necessary arrangements are now being made to build next year an improved design of cargo ship to be known as the Modified North Sands ship, one of the characteristics of which will be its adaptability for either coal or fuel oil, which, under war or post-war conditions, will give the ship much greater operating flexibility.

Canadian export trade in peace-time consists chiefly of bulk cargoes of agricultural, forest, or mineral products. The 11-knot ship now being built will carry these cargoes at a lower ton mile cost than any faster ship which would necessarily cost much more to build, operate and maintain.

We are also building a limited number of 4,700-ton ships, of a design adopted by the British authorities for general and bulk cargo carrying to ports where the volume of trade is not large and the water is more shallow. These ships, which were originally designed for British operation, are now being modified to meet Canadian operating conditions. They are most suitable for Canadian coastwise trade and also to supply Labrador, Newfoundland and the West Indies.

Naval shipbuilding. We are not only building cargo vessels to carry our munitions and war materials abroad. We are building the vessels to escort and protect them.

To date we have placed contracts for 424 frigates, corvettes and steel minesweepers—these are our escort craft. By the end of this month we shall have launched a total of 221 of these vessels.

During May, we launched a total of 17 escort craft.

In addition to the steel vessel programme, we have placed orders for 178 wooden patrol ships and wooden minesweepers. Of these, 100 were in the water by the end of May.

We are also building two destroyers of the Tribal class.

Eleven yards are engaged on the construction of escort vessels, including the government-owned yard Toronto Shipbuilding Limited. Of these the largest type is the frigate of which 18 have already been launched. These ships, more than 300 feet in length, are bigger, faster and more heavily armed than corvettes.

Our entire naval shipbuilding programme is being expanded and expedited.

There are some 65 smaller boatbuilders with about 4,000 employees turning out a wide variety of small craft ranging from lifeboats to the smaller patrol boats. Of the 4,000 boats ordered from these yards, about 75 per cent have been delivered. Expenditure on this small craft programme now totals more than 16 million dollars. In addition, several eastern yards are engaged in ship repair and overhaul work of vital importance to maintaining the Atlantic lifeline.

In addition to the 21 major shipyards engaged on cargo and naval shipbuilding, there are well over 300 Canadian component manufacturers on the shipbuilding programme, supplying the countless requirements of the industry, from rivets, to ship plate, from navigation instruments to engines and boilers.

Destinations. About thirty per cent of all Canadian war production is delivered direct to the Canadian forces at home and abroad. The remainder goes to Britain, the United States, India, Africa, China, Australia, New Zealand and the South Pacific.

Arms sent to China include Canadian 25-pounder guns, Bren and Boys guns, rifles and ammunition for these weapons. We expect to ship many additional types of equipment, now that the mutual aid board is operating.

Canada has sent Russia more than 1,400 Canadian tanks, more than 2,000 Canadian universal carriers, Canadian naval guns, and Canadian Bren guns and anti-tank rifles. We have provided the Russians, too, with ammunition for heavy guns and small arms.

In addition, to Russia have gone machine tools, boots, gloves, textiles, clothing and personal equipment. To this great and successful ally have gone large shipments of the five metals most urgently required for the Russian war programme.

To the United States Canada has been shipping war materials such as components of various munitions, ammunition, secret electrical devices and of course base metals. These transactions are handled by a government company, War Supplies Limited.

More than 80 per cent of the Canadian output of automotive transport has gone to Britain, Egypt, India, the middle east, the near east, the far east, Australia and New Zealand. To the empire, Africa, Australia and New Zealand have gone armoured cars, guns, heavy ammunitions, small arms, anti-aircraft guns, bombs, anti-tank mines and small arms ammunition.

We have begun the manufacture of 145 military locomotives for the government of India.

Canadian-made rifles are in use in Africa, Iraq, New Zealand, Australia, India and many other places. Canadian-made aircraft have long been in combat service and Canadian machine guns have been blasting German, Italian and Japanese planes from the skies on all fronts.

Other equipment shipped throughout the world includes heavy ammunition, bomb throwers, Sten guns, universal carriers, parachutes and flare chutes, artillery, tank and anti-tank guns, and a long list of instruments.

General Purchases. Our general purchasing branch handling most of the supplies required by our army, navy and air force, constitutes the biggest single market for hundreds of Canadian manufacturing plants. Orders placed by the division now total two and a half billion dollars. Its purchases range from pins to locomotives, from canned milk to fire fighting vehicles. It involves the buying of battle dress—50,000 dress a week and 5 million pairs of footwear a year—the purchase of food, medical supplies, lumber, fuels, machinery, electrical equipment, and miscellaneous stores. It also buys raw materials for the finished products. Last year more than $1¼ million was saved by the purchase of raw cotton to supply textile mills working on orders for the department. And now this branch has taken on the huge job, by arrangement with United States authorities, of purchasing the food required to feed

thousands of men working on the Alaska highway. There has been set up recently in Edmonton a crown company, North West Purchasing Limited, which will handle all purchases in Canada for the Alcan and Canol projects and for the various military operations in the Yukon and Alaska.

Construction. To date contracts for the construction of defence projects total 340 million dollars and commitments for new industrial productive facilities approximate $850 million.

In the construction field, the war peak rate of building was reached in the spring of 1942.

Air Services Branch (Department of Transport). The air services branch, comprising the civil aviation division, the meteorological division and the radio division, is responsible for the construction of all aerodromes and ancillary services in Canada, Newfoundland and Labrador which are required for home defence and for the British commonwealth air training plan. To date, the branch has spent over $100,000,000 on 286 projects, including the construction of 146 new aerodromes and extensive improvements to 51 others. In carrying out these projects, we have established some remarkable construction records thanks to the efficiency and enterprise of the Canadian construction industry which has displayed characteristic ingenuity in coping with difficult problems of climate and terrain.

The establishment of a very extensive network of operational and training fields has required a corresponding increase in meteorological and radio services. In addition to weather forecasting for our passenger airway services, the meteorological division is providing the weather data for the R.A.F. ferry service across the Atlantic and the T.C.A. service between Canada and Newfoundland. It is also forecasting for the R.C.A.F. and naval units operating off the Atlantic and Newfoundland coasts, as well as the air patrols on the Pacific coast north to the Alaska boundary. These responsibilities have meant a considerable increase in personnel in operating centres and the construction of new weather observation stations in many remote and isolated locations. We are now setting up radiosonde stations in various parts of the country for the purpose of recording weather conditions in the stratosphere for long range forecasting.

Since the outbreak of war 14 radio range and communication stations have been built and equipped by the radio division for the Department of National Defence for Air. Seven radio stations are nearing completion and we are planning the construction of 16 additional stations in the current year. The radio division is also collaborating closely with the Department of National Defence for Naval Services. Radio stations of the division along the east and west coasts and Hudson bay and Hudson strait and in the Canadian Arctic are now serving the navy. These stations form an important link in the aircraft detection programme and are, of course, of great value to the naval authorities in facilitating ship movements.

We have been successful in coordinating the Canadian radio services with the United States services, so that we are approaching the time when one single system of radio aids to navigation in the air and on the sea will service the north American continent.

Crown companies. Park Steamship Company Limited: Up to the present time 12 vessels of 10,000 tons deadweight; 5 vessels of 4,700 tons deadweight and one tanker have been delivered to the company. The first vessel was received from the builders on the 30th June, 1942, and the last (of the within stated number) on the 1st June, 1943. These vessels, through managerial agreements, have been turned over for management and operation to reputable steamship firms and placed in trade designated by the Canadian shipping board. Managing operators are directly responsible to the company in respect to the care of the vessels and the financial results obtained from the voyages made, and close supervision is given thereto by the company. By the close of the year 1943 it is expected the company will have at least 30 dry cargo vessels of 10,000 tons deadweight; 8 vessels of 4,700 tons deadweight and 10 tankers—all of these steamers to be handled in the foregoing manner.

In addition to the ships I have mentioned, 30 ships of the 10,000-ton class have been delivered to the company to be chartered to the Ministry of War Transport of the United Kingdom on a bare boat basis. The United Kingdom is able to furnish crews for these boats whereas Canada cannot do so at this time.

Every effort is being made to obtain the maximum number of crews for the purpose of operating as many ships as possible by Park Steamship Company, and in that connection the company works closely with the director of merchant seamen, Department of Transport. During the war period the size of the Park Steamship Company fleet will be limited only by the number of Canadian crews that can be obtained. After the war,

the ships now being chartered to the United Kingdom will be returned to Canada and will then be added to our Canadian merchant fleet.

Defence Communications Limited. This company was established a few months ago. It will coordinate existing telegraph and telephone services, and provide new communication services for the armed forces.

Fairmont Company Limited. This government company is continuing its work of purchasing, storing and selling rubber for use of Canadian war industry.

Melbourne Merchandising Limited. This company is purchasing in bulk and distributing the wool required for use in war contracts.

Citadel Merchandising Company Limited. This company which was set up to fill the machine tool requirements of war industry has done an outstanding job. It has provided from Canadian and United States sources 32,822 machine tools to an approximate value of $170,730,000.

Plateau Company Limited. This company continues its work of purchasing, storing and selling silk, cotton, nylon, and kapok for the use of the production programme.

Cutting Tools and Gauges Limited. It is the function of this company to procure the cutting tools and gauges required for the munitions programme.

Wartime Housing Limited. Besides plant construction, the department, through the crown company, Wartime Housing Limited, has engaged in a housing programme in connection with war industries. These activities have ranged from the provision of additional housing in heavily populated industrial areas to the development of entire new communities.

Wartime Housing Limited has proved to be a vital link in Canada's long-range war production programme. It is the largest housing agency Canada has ever known. To the end of April it had, completed, under construction, or pending, a programme involving an expenditure of more than $75 million and providing accommodation for more than 90,000 people.

This programme includes 16,377 houses, 11 hostels, 63 staff houses, 13 bunk houses, 16 dining halls, 14 schools and 18 special buildings. With houses built in scores of communities from Halifax to Prince Rupert, the home building programme is standardized to four- and six-room types of insulated houses which are generally rented, subject to regional conditions, at $22 and $25 a month for four-room bungalows and $30 a month for six-room dwellings. The houses are demountable, and were designed purposely for removal or salvage. The gross income from projects already occupied or under construction will amount to more than $8 million a year.

Wartime Industries Control Board. The appointment of controllers to increase and conserve supplies of strategic materials has been subject to some criticism in this house and elsewhere. It is claimed that the system violates the principle of ministerial responsibility. I think I should tell the house that controllers are subject to the direction of the minister in all that they do. Their orders are issued with his full knowledge and concurrence. If we had not taken immediate steps to increase and conserve our supplies of strategic materials through curtailment, rationing and other means, it is quite certain that we should not have achieved the record of production which I have just outlined. The only possible alternative to curtailment and rationing was to take what we needed for war and essential industries, and let the public scramble for the rest. If we had followed this procedure, I am quite sure that we would now be criticized for not having taken steps to ensure the orderly distribution of materials which were in short supply. Admittedly, curtailment and rationing measures always contain an element of experiment. Inequities in distribution can only be discovered through trial. Where we have found such inequities, we have taken the necessary corrective steps. At the present time I believe our various curtailment and rationing programmes are accomplishing the main objective—the allocation of materials where they are needed most—with a minimum of hardship to the public.

Coal. Coal is one of our most pressing supply problems. Consumption has increased by more than 45 per cent since the war began. In 1939 we used 28,500,000 short tons; last year 41,500,000 short tons, and in the current year we expect to use 47,250,000 short tons. Since the 1938-1939 coal year Canadian production has increased, but to an extent much smaller than the proportionate increase in total consumption. The result is that we have relied to an increasing extent on imports from the United States. Since the war began our imports from the United States have nearly doubled. As requirements in the United States are also increasing, it is impossible to forecast with any degree of certainty what quantity of coal we can import from the United States in the current year. So far this year our United States imports have been lower by more than half a million tons than those of last year. All of this means that Canada faces a possible shortage of 4,000,000 short tons during the current year. We can

only meet this shortage by increasing Canadian production and by rigorous conservation of existing supplies.

An announcement was made some days ago of a state of national emergency in coal production. It is planned to return to coal mines every man in civilian industry who has worked previously in this highly skilled occupation. Men in the armed forces who wish to go back to the mines will be given every assistance to do so, consistent with military policy. No coal miner will be drafted or permitted to enlist in the armed services or allowed to change his occupation without permission of national selective service. We hope that these measures will increase man-power in coal mines to the point where the estimated production will be increased by 3,000,000 short tons. I appeal to all those who are working in our coal mines to do their utmost to help us obtain increased production. I can think of nothing that would be more damaging to our war effort than a critical shortage of coal during the next heating season.

A programme of conservation is already under way. A few days ago I asked all Canadians to shut off their heating systems at the earliest possible date, as a means of conserving coal. It is imperative that the conservation programme achieve a saving of at least a million tons.

Fuel wood. The shortage of fuel wood is as serious as the coal situation. As a result of inadequate cutting in the winter of 1941-42, the residents of many communities have, during the past few months, suffered severe hardship. The extreme severity of the winter increased consumption, made deliveries difficult, and curtailed drastically production for next winter.

Following the announcement in March that the government would pay fuel-wood dealers a subsidy of $1 per cord, some increase in production has been noted. The situation is still serious, however, and many communities may be in short supply next winter unless immediate, local action is taken.

Timber. During the latter months of 1942 and until very recently the shortage of lumber in Canada for war purposes was so severe that some important military projects were delayed. The 1943 production will show another serious decline. During the past few months we have had to eliminate non-essential exports, to curtail civilian consumption and to revise military specifications. We have exerted our best efforts to improve the labour supply, so that production may be increased. Orders have been diverted from the coastal areas of British Columbia to other producing areas in Canada where the shortage has not been so critical.

As a result of these measures no direct military programmes are now being delayed for lack of lumber, except where climatic conditions make hauling impossible. Our commitments to Britain, the British dominions, and the United States, for military lumber are being met in full. Retailers are still short of supplies; and industrial, agricultural, railway, public utility and other essential civilian users are finding it difficult to obtain their requirements. Had it not been for the steps taken to allocate the supplies of lumber available for domestic use, the situation would have been much more critical.

Britain and the rest of the British empire are almost entirely dependent on this country for lumber imports for direct war uses. In 1943 Canada will supply Britain with 70 per cent of her lumber import requirements. The shipments to Britain will include one billion feet of softwood lumber, 20 million feet of Sitka spruce for airplane construction, 34,000 tons of birch logs for the manufacture of aircraft veneer, 80 million feet of Douglas fir plywood, as well as large quantities of pit props, railway ties, and board made in the pulp and paper mills. In addition, Canada will supply British Empire countries with about 100,000,000 feet of urgently needed timber for military purposes.

In 1943, Canada will ship to the United States about one billion feet of lumber, all of which will be directed by the lumber and lumber products branch of the war production board into direct military uses. A crown company, Aero Timber Products Limited, has been set up on the Pacific coast to develop and increase the production of aircraft spruce. Another crown company, Veneer Log Supply, is supervising the production of veneer logs for the aircraft programme.

Petroleum. Our petroleum position is still very serious. While the victory in Tunisia will mean the opening of the Mediterranean and relief for over-burdened shipping, an offensive, or several offensives, in Europe will make heavy demands on our transportation facilities for the shipment of vast quantities of petroleum products.

Recently I discussed in the house the steps we are taking in Canada to stimulate the production of crude oil. A crown company, Wartime Oils Limited, has been established to provide assistance in the development of marginal deposits. Meanwhile, we must still

depend on outside sources for about 85 per cent of our requirements, and as these sources are being called upon to supply increasingly greater quantities of oil for the fighting fronts, it becomes necessary for Canada to get along with less.

The demand for aviation gasoline is rising in proportion to our increased use of aircraft for patrolling the sea lanes. The fuel oil requirements of the railways for their Rocky mountain divisions have increased approximately 400,000 barrels this year, and we have been faced with new and heavy demands for gasoline for the Alaska highway and other contract work in the northwest. The fuel oil demands of the navy and merchant marine are increasing materially.

In spite of our two major conservation programmes—gasoline rationing and fuel oil conversion—we are only just meeting our present gasoline and oil requirements. Any increase in requirements, or any decrease in supply will necessitate a further curtailment in the supply available for civilian use.

Rubber. As a result of the activities of the rubber control, consumption of rubber for civilian purposes has been reduced to a mere ten per cent of what it was before the war. Out of this ten per cent, tires are being provided only for essential vehicles.

Restrictive orders were not alone responsible for this saving of our stock of crude rubber. Much of it was achieved by the use of substitutes, and reclaim, in the manufacture of hundreds of essential articles.

This progressive reduction in the use of rubber is still going forward. Our technical experts are devising new formulas for substitutions; as soon as these are tested their use is made compulsory.

Although some small supplies of crude rubber have been added to the united nations' stockpile, we must still conserve existing supplies.

Construction of the government-owned Polymer Corporation plant at Sarnia, Ontario, is progressing satisfactorily. When operating at capacity, the plant will have an output of 34,000 tons of buna-S and 7,000 tons of butyl rubber per year.

It must be reemphasized that this production of 41,000 tons of synthetic rubber already has been earmarked. It will be used only for direct war purposes and for such other essential purposes as we now use our crude rubber. It will provide no relief for the shortage experienced by the ordinary civilian.

The cooperation of the Canadian public in accepting very strict tire rationing regulations and elimination of hundreds of civilian articles, has been very helpful to our rubber conservation programme.

Steel. Canada's steel production has been doubled since the war began, and this country is now the fourth greatest steel producer among the united nations, exceeded only by the United States, Russia and Great Britain. Because of the great increase in productive capacity and because of rigid curtailment policies, we have succeeded in meeting our heavy obligations. At no time has there been a single serious interruption in the operation of a munitions plant or a vital industry owing to lack of steel.

Canada has always been a heavy importer of steel. Early in the war the European sources were cut off and we had to rely on the United States and on our own resources. Despite an enormous increase in our requirements, we are now dependent on the United States for only one-third instead of nearly one-half of our supply.

The most spectacular expansion has been in the field of alloy steels for guns, armour plate, and machine tools, and these are the types of steel which call for the greatest metallurgical skill, the most complex equipment, and the greatest number of man hours. The production of alloy steels is now five times as great as in 1939. This programme has been under the supervision of Atlas Plant Extension Limited, a crown company.

Before the war Canada had not manufactured a pound of armour plate, yet to-day the quality of her product is so high and the manufacturing process so skilful that metallurgists from Britain and the United States have come here to observe the operations. The factory making this plate is now turning out enough for all Canadian requirements for tanks, armoured vehicles, gun shields and certain naval purposes.

In 1939 our output of steel ingots was under 1½ million tons; in 1940 just over 2 million; in 1941 just over 2½ million; in 1942 almost 3 million. At the end of 1943 we will be operating at the rate of more than 3 million tons per year.

New rolling and finishing mills of the most modern type have been equipped and are in operation. Two new plate mills have helped to increase production of plate to nearly 300,000 tons more in 1942 than in 1939. Most of this has gone into building cargo vessels and fighting ships. Shell steel production now is at about a quarter of a million tons

per year. We are using over half a million tons of steel per year to make tanks and other army vehicles.

Steel foundry capacity also has been expanded. The output of castings has risen from 61,000 tons in 1939 to 160,000 tons in 1942. These castings are used in a great variety of munitions from huge stern frames for cargo ships to parts for small arms.

For 1943 the steel requirements of this country are estimated at nearly five million tons, of which domestic mills will supply more than three million. We have built the two largest blast furnaces in the British Empire. One is not quite finished, but during the summer our pig iron output will be at a rate of over 2½ million tons per year, which is nearly four times as much as in 1939.

In coping with the enormous construction programmes which have been under way during the past three years, it has been almost impossible to make ends meet. At the present time we are able to release more steel for essential purposes such as railway equipment and agricultural implements.

Non-ferrous metals. Canada is the greatest base metal exporting country in the world, and this year our output will attain the highest peak in our history. This has been achieved by the enormous expansion of the aluminum industry, the development of a Canadian process for the production of magnesium, the extension of recovery operations at large base metal mines, the revival of old mines, the expansion of existing properties and the development and exploitation of new marginal and submarginal deposits.

The aluminum industry in Canada provides possibly our most spectacular story of wartime expansion. The Canadian output is more than six times that of 1939, is now greater than the total 1939 production of the rest of the world, and is supplying about 40 per cent of the war requirements of the United Nations.

Yet the demands are now so great—18,000 pounds are required for one large bomber—that civilian curtailments will continue until the war is over.

In the case of copper, nickel, lead and zinc the aggregate refined production is estimated at 827,800 tons for 1943, as against 662,100 tons in 1939.

Canada is now producing 95 per cent of the combined nickel output of the United Nations; 20 per cent of the zinc output; 12½ per cent of the copper output; 15 per cent of the lead output; 75 per cent of the asbestos output; and 20 per cent of the mercury output.

[Mr. Howe.]

Formerly entirely dependent on imports for our supply of magnesium, we now have a government owned and operated magnesium plant, using a process developed in Canada, which supplies our own needs plus a surplus for export.

At the beginning of the war, we were lacking in such essential metals as tin, tungsten, molybdenum, mercury, chrome and manganese. Under the direction of a government company, Wartime Metals Corporation, every effort has been made to stimulate the production of these metals, and where necessary to build up stock piles of imported metals. These efforts have met with a large measure of success.

We have discovered what appears to be one of the most important discoveries of tungsten on this continent. In the latter half of 1943 Canada should be well on the way to self-sufficiency in tungsten.

The search for molybdenum has met with considerable success. Two new properties, one financed by the government, will be in operation in the latter half of this year, and their combined output should provide the major part of our requirements.

The development of mercury has been outstanding. Prior to the war, we were entirely dependent on imported supplies, but to-day Canada is one of the important producing countries of the world and we are exporting in quantity.

Chemicals. Although Canadian production has risen to unprecedented heights, the supply of basic chemicals, such as alcohol, chlorine, glycerine, soda ash, and sulphuric acid, would be insufficient, if their uses were not constantly watched and, wherever necessary restricted.

Supplies Control. Canada is no longer short of cork. Hard fibres, however, are in critical supply. Substitutes for Manila and Java hemp have been found for certain uses and the production of hemp in the United States, on an increased scale this year, is expected to help the supply position materially. Nylon has replaced silk almost entirely in the production of parachute shrouds, and substantial quantities of nylon yarn are being shipped to the United Kingdom for this purpose. The supply of kapok is sufficient for our war requirements.

Machine Tools. The expansion of machine tool production and the efficient control of the allocation of machine tools has been one of the cornerstones of our production programme.

Since the war began we have produced machine tools in Canada to the value of $60,000,000. This represents an increase in yearly production approximately five times as great as that of our best pre-war year. In allocating machine tools the objective has been to eliminate waste by preventing the creation of new tool capacity when there is existing capacity which will do the job.

Priorities. The priorities branch is responsible for the proper distribution of certain scarce equipment and components. Canadian industry has been placed on the same basis as United States industry in the allotment of scarce United States equipment affected by the United States priority procedures. I remind you that priorities on imported United States equipment are fixed by the priorities officers of the United States government, although application must be made through the Canadian priorities office.

Ship Repairs. Control of ship repairs and salvage is becoming increasingly important as the battle of the Atlantic reaches its peak. In the first three years of the war, apart from naval ships, Canada repaired 5,000 vessels averaging 4,000 gross tons each.

Now that Canada has assumed greater responsibilities in convoying ships to Britain, our activities in this field will continue to expand.

Since the salvage control was established in May, 1942, effective measures have been taken to recover ships and cargoes abandoned by owners or underwriters, and much valuable material has been salvaged.

Construction. Thousands of tons of valuable raw materials have been conserved for war and essential use by construction control. A restrictive order has placed all construction projects on a licence basis.

Many hundreds of projects have been postponed until after the war, and thus a backlog of post-war activity is being built up.

It is recognized that in crowded areas private dwellings must be built. In the last four months 5,622 licences for home construction have been issued.

Power. Our great resources of electrical power provide one of the basic reasons why Canada now holds fourth place among the united nations as a war producer. The unfavourable winter season and the lateness of the ice break-up this year severely tested our power facilities.

With still more power plants and facilities going into operation this year, it would now seem safe to assume that, if present restrictions are maintained, we need have no fear for the future.

It took Canada forty-five years to bring power installations up to 7,155,000 horse-power in 1938. In the short time since war began, new developments, including the enormous Shipshaw undertaking and certain other projects not yet completed, will have added an effective electrical capacity of 1,870,000 horse-power.

Since the beginning of the war, interconnections between power systems have been made more elastic and of great capacity. Power has been loaned from time to time between the United States and Canada. In times of break-down, power has been transmitted to the United States at Niagara, and taken from the United States at Beauharnois, or vice versa, depending on the needs of the moment. In all respects the relations between the Canadian and American controls have been cooperative and helpful.

In Ontario, production has been materially increased by the completion of the Big Eddy development, the Madawaska development, and the submerged weir in the Niagara river. The DeCew Falls development is nearing completion. In Quebec, all the power companies have greatly increased their output, and the Shipshaw development alone has increased the installations this year by 600,000 horse-power. Additional generators are being installed monthly. In Alberta, the Minnewanka development has been completed; and in British Columbia, the Brilliant development is proceeding. In all the provinces, improved storage facilities, together with the installation of new machinery, have made more power available. All this new power must be used for war and essential purposes.

The gas situation in southwestern Ontario has been improved by additional drilling and by completion of a part of the new coke-oven gas plant at Hamilton. Of necessity, the gas restrictions have been very severe on many families in that area. It is hoped that when the new ovens at Hamilton are completed, and with full use of the still gas at Sarnia, all requirements for war production will be met, and some cases of individual hardship may be mitigated.

Motor Vehicle Control. Only a limited number of new trucks are being released and such releases are only for the most vital purposes. It follows, therefore, that owners of existing trucks are the custodians of irreplaceable property of importance in the war programme, and, as such, they must take every precaution to keep their trucks in good running order. Every assistance is being given to operators and garagemen to assure adequate essential repair facilities.

The transfer of used trucks from essential industries, such as farming, mining, lumbering and general haulage, is causing serious difficulties, and is likely to become critical during the harvesting of the western crops. This problem is receiving careful consideration.

Transit. With drastic restrictions on gasoline and tires for private vehicles, the public transit systems have been faced with the almost impossible task of handling approximately twice as much traffic as before the war with few additional vehicles.

In some eleven centres all across Canada the hours of approximately 351,500 office, factory, and store employees, including 39,000 government employees in Ottawa, have been staggered to relieve peak pressure on transit facilities.

When gasoline rationing became necessary, a need developed to utilize private passenger cars to transport workers in essential industries. Many of our war plants are not adequately served by car and bus lines. Late last year there was put into operation the wartime industrial transit plan which permits in certain approved plants the choice of a sufficient number of employee owner-drivers whose responsibility it is to provide the transportation needs of their fellow workers. In return these owner-drivers are the only employees of the plants entitled to special gasoline and tire privileges. By the end of April 1943, the plan was in operation in more than 1,500 plants and industries in Canada. 48,000 cars transport approximately 195,000 workmen, and as a result approximately 38,000 special gasoline categories have been eliminated.

Urban bus mileage curtailment now results in a saving of 4,687,000 bus miles per annum. Inter-urban bus mileage curtailment now effects a saving of 21,700,000 bus miles per annum. This is a net saving. A gross saving which includes mileage diverted to the exclusive transportation of war workers and armed forces would be considerably larger. Further savings are anticipated on summer schedules. Restrictions on the operation of taxicabs have also produced considerable saving in gasoline and rubber.

Transport. Handicapped by increasingly serious shortages of rolling stock and personnel, the railroads of this country have had to contend with very serious operating problems.

Restrictions such as the curtailment of extra sections, the elimination of special trains, the cancellation of special fares, including week-end rates, and the provision, to as great an extent as possible, for maximum loading of freight cars, have resulted in substantial reductions in the use of railway equipment, and substantial increases in the movement of freight.

The railways of Canada are doing a magnificent job. Despite the handicap of less personnel and equipment, they are now handling 50 per cent more traffic than ever before in their history.

I have endeavoured to give hon. members a brief summary of the work of the Department of Munitions and Supply and to indicate the present state of war production. The day to day problems in this field do not lessen. Shortages of man-power have developed, particularly in coal mining, base metal mining, forest industries, in common labour for steel mills and allied industries, and for construction work, and are being dealt with effectively by selective service. It must not be forgotten that more than 700,000 of our younger men, all physically fit, are in the armed services, and that their loss to industry has made necessary widespread readjustments of our remaining man-power.

A recent check of our production personnel indicates that only about 4 per cent of the men in industry were on deferment from military services as of March 1 last. The percentage of deferments in industry has been considerably reduced since then. This should disprove conclusively the statement frequently made that war industry is in competition with the armed services for men. It is quite proper at this stage of our production programme that the armed services should have complete precedence within the age group that have been called up for military service. It is our policy that deferments are asked only for men having specialized training and skill of a type that is absolutely essential to our programme. Women are playing an ever increasing part in war production and there has been no loss of efficiency on that account. Lost time as a result of labour disputes has been trivial, when compared with the record of any allied country. The output of war material from Canadian factories is a fine tribute to the loyalty and devotion of the men and women employed in our many war plants and war industries. When the history of Canada's participation in the war is written, those men and women will deserve to share with our armed services a full measure of recognition.

Canadian industry has developed remarkably under the stimulus of war. Never again will there be any doubt that Canada can manufacture anything that can be manufactured elsewhere. Our industry has pioneered production

in many new lines of war material, and has brought about improvements in many older manufacturing processes. Its equipment has been modernized, and its productive capacity has been expanded out of all comparison with our pre-war industry.

Later in this debate my associate, the hon. member for Stormont (Mr. Chevrier), will report on cost reductions that have been effected in our war plants.

I would like to mention especially the devotion to duty of the officers of my department, many of whom are serving without salary. I have drafted into the service of the department the men whom I consider best qualified by experience to direct its varied activities. Among them are many who came to the department with established reputations in the field of production. I am sure that industry will agree with me that their expert direction has had no small part in bringing our war programme to its present effectiveness.

The production programme of Canada has been meshed in with that of the United Kingdom, United States and other allied countries through Canadian membership on the combined production and resources board and through close contact with all allied production agencies. The Department of Munitions and Supply has branch offices in Washington and in London, England, with organizations duplicating in skeleton form our organization here in Ottawa. I feel that ours is a department of government capable of meeting the many and varied problems involved in a manufacturing and supply programme that is straining Canada's capacity to the utmost. However long the war may be, I am confident that there will be no break in Canada's production front. Therefore, I do not hesitate to ask hon. members to approve the appropriations now under consideration.

NATIONAL DEFENCE FOR NAVAL SERVICES

Acquisition, construction, charter, repair and upkeep of ships, $167,571,202.

Hon. ANGUS L. MACDONALD (Minister of National Defence for Naval Services): I should like to answer some of the questions which have been asked during the last few days and to which I was not able to give exact answers at the time. One question concerned transportation in Canada, the United States and Great Britain by air, water and rail. For the fiscal year ended March 31, 1943, transportation in Canada by air cost, in round figures, $31,000; by water, $17,000, and by rail, $2,245,000. In the United States there was no charge for air or water transportation, but rail transportation in that country amounted to $368. In Great Britain there was no charge for air or water transportation, but rail transportation amounted to $86,000. Ocean transportation amounted to $51,000.

The hon. member for St. Paul's (Mr. Ross) inquired about lubricating oils, I have here a memorandum from the director of fuel for the navy which indicates that discussions on this question have been under way for some time between representatives of the three armed services, the oil industry and the national research council. One of the main purposes of these discussions was to reduce the number of grades of lubricating oil produced. Acceptances of tenders for lubricating oils for this fiscal year have been issued for five classes only, for the mechanical maintenance of ships, but for the maintenance of ordnance and secret equipment the requirements are greater due to the varied and delicate mechanism involved.

Mr. ROSS (St. Paul's): How many types of equipment are there?

Mr. MACDONALD (Kingston City): I cannot give my hon. friend the various types of machinery. I think that matter is not yet fully settled, but negotiations and discussions are going on with the same end in mind as prevailed in the former discussions with regard to the grades of oil for ships.

The hon. member for Yale asked whether there are deductions from the pay of ratings, and I think I replied that I did not believe there were any deductions except for income tax where income tax was exigible. I am informed that that answer is correct, that there are no compulsory deductions except in cases of men who are liable to income tax.

Mr. STIRLING: I asked also as to other ranks—officers, too.

Mr. MACDONALD (Kingston City): Officers as well as other ranks.

Mr. STIRLING: There are no deductions for officers?

Mr. MACDONALD (Kingston City): The memorandum I have deals with ratings, but I should think that in the case of officers there would be deductions in many cases for income tax.

Mr. STIRLING: I should think there were other ones, also.

Mr. MACDONALD (Kingston City): My memorandum deals only with ratings. I can look up later the question of deductions from officers' pay.

The hon. member for Lake Centre asked, I believe the day before yesterday, as to the

number of officers to be trained this year and what facilities were available to train them. Some 1,496 new officers are to be trained in this fiscal year; in addition, some 489 officers now in the service will be taking specialist courses. As to what facilities are available to train them: they will be trained at King's, at Deep Brook, and some of them in technical schools. Some of them will receive training in the specialist branches of the navy.

Mr. DIEFENBAKER: During the last year has the navy been in the position of not having sufficient facilities to train the officer personnel required, and what is the estimate of the number of officers that will be required to be trained during the coming year?

Mr. MACDONALD (Kingston City): Those are the figures which I just gave my hon. friend—1,496 new officers—

Mr. DIEFENBAKER: Is that sufficient?

Mr. MACDONALD (Kingston City): —to be trained during the fiscal year. These are the men who will come into the service and receive officer training. In addition, 489 officers who are already in the service and consequently have a certain amount of training will be taking specialist training this year. This makes a total of nearly 2,000 officers either receiving their first training or some type of specialist training.

Mr. DIEFENBAKER: Does the minister infer from that that there has been no shortage during the past year of facilities for the training of officers?

Mr. MACDONALD (Kingston City): We have done the best we could with the facilities we had. The facilities might have been improved, and we are endeavouring to improve them.

The leader of the opposition asked me as to the taxes on a certain property in Toronto, on Crescent road. That property is given to the department without any rental charge. The understanding is that we pay taxes and insurance. I understand that the cost of insuring the property amounts to $186, and that the taxes for this year are $1,368.

Some question was asked about buildings in Winnipeg. I made a reply to the effect, I think, that I did not know of any offer to give a house to the department rent free. I am informed that that is correct. There have been several offers to rent or sell properties to us, but no arrangement has been made in that regard.

[Mr. A. L. Macdonald.]

I was asked, I believe by the hon. member for Peterborough West, as to the number of architects in the department for naval services, and offhand I said I thought it was about fifty. I find that that is approximately the number in Ottawa. But there are architects and engineers on the Pacific coast, in eastern Quebec, on the Atlantic coast, in Newfoundland, and in what is known as the central district, so that the total of architects and construction engineers in the works and buildings branch—I am including both those in uniform and those who are civilians—is, for all Canada, 131.

The question was asked the other night by the hon. member for St. John-Albert as to the number of buildings of one kind and another at Deep Brook. The number is 114.

Mr. HAZEN: If I may interrupt here, I asked the minister also what kind of buildings they were.

Mr. MACDONALD (Kingston City): All the buildings are of wood. I understand that the walls and roofs are covered with fire-resistant shingles. I do not know the exact term. They are not wholly fireproof, I believe, but they are of a type commonly used now in buildings which are not intended to be wholly permanent. There are no brick or stone buildings at Deep Brook.

Mr. HAZEN: I asked also what they would be used for.

Mr. MACDONALD (Kingston City): I can give my hon. friend the names of the buildings. They are: the power house, two administration buildings, one anti-aircraft tower and dome, one anti-submarine school, one clothing store, one central heating plant, one chapel, one cell block—that should not be put right after the chapel—one cooking school, one drill shed, one dental clinic, one diving shed, ten quarters for chief petty officers and petty officers, one mess for chief petty officers and petty officers, one canteen for chief petty officers and petty officers, one fire station No. 1, one fire station No. 2, one garage, one gun battery, one gunnery school, one guard quarters, one hospital, one inflammable store—which means a store for the retention of goods which are inflammable in their nature—one laundry, one lecture hall, five buildings to be used as married quarters, one magazine, one building for training of new entry men in seamanship, one mechanical training establishment, one shipwright's shop, one central post office, one auto repair shop, one chlorinator house, one pump-house, three recreational huts, one mechanical training shop, one officers' mess, one ordnance artificers' shop, one physical

training school, one regulating office, seven regulating blocks, one railway station. The railway station, I imagine, will be on a siding. The whole establishment is quite near the railway; in fact the railway runs, I believe, through the establishment. There are also: two naval store buildings, one torpedo school, one torpedo machine shop, one victualling store and bakery, one wardroom for warrant officers, one mess room for warrant officers, four buildings to be used as quarters for warrant officers, one building to be used for nursing sisters and Wren officers as quarters; one mess to be used by nursing sisters and Wren officers; six buildings to be used for the quartering of ratings and wrens; one building to be used as mess for the Wrens; seventeen buildings to be used for ratings' quarters; five buildings to be used for ratings' mess; five buildings to be used for canteens, two buildings to be used as officers' quarters.

My hon. friend asked for an analysis of the sum of $1,294,000 which was expended as indicated in a return brought down some time ago under the heading, "other expenditures". That amount, in round figures, is made up as follows:

Purchase of new machinery	$250,000
Mess traps first outfit	37,000
Naval stores first outfit	46,000
Small boats	22,000
Charts	1,000
Medical stores first outfit	18,000
Anti-submarine equipment	55,000
Fire-fighting equipment	10,000
Training equipment	50,000
Photographic equipment	10,000
Motorcars, trucks and tractors	45,000
Books of reference	10,000
Typewriters and office machines	10,000
Armament stores	728,000

Mr. EMMERSON: The list of buildings given by the minister gives those that have been newly constructed. What has been done with the original residence at Deep Brook, the large, magnificent property there, which was taken over?

Mr. MACDONALD (Kingston City): That is being put to use. There were two garages, and those and any other buildings on the property are being put to use.

Mr. ROSS (St. Paul's): When the minister gave answers yesterday he said he would tell us how many commissioned officers of all depots were located at headquarters in Ottawa.

Mr. MACDONALD (Kingston City): Either yesterday or the day before I put on *Hansard* the number at headquarters.

Mr. MacNICOL: If the minister has already answered the question I am going to ask, or if he thinks it is not in order, he need not answer it. Approximately how many Fairmile boats are at present operating on the sea? How many are in the harbour for repairs? Has the Fairmile squadron, if that term may be used, a commander of its own looking after all Fairmiles? If so, what is his name; how long has he been in charge of the operation of Fairmiles and what is his experience?

Mr. MACDONALD (Kingston City): I shall have to look up the number of ships and find out whether they are in harbour or at sea.

Mr. HAZEN: The other evening I mentioned the question of pensions for men serving in the navy in territorial waters. The minister referred me to section 2, paragraph 3 of the Pension Act, which provides for service in Canada in such coastal or inland waters as may be designated by the governor in council to be service in a theatre of war, and consequently the insurance principle applies in such cases. Has any order in council been passed designating any coastal or inland waters as theatres of war? If so, what coastal and inland waters are included in the order?

Mr. MACDONALD (Kingston City): I do not think any waters have been designated as a theatre of war in the sense of the order in council, but any men serving on a Canadian ship of war in any of our coastal waters would be on active service and would automatically be pensionable. That is the view which the Minister of Pensions and National Health (Mr. Mackenzie) holds, and I think it is quite right.

Mr. HAZEN: That changes the picture a little. Has any order in council been passed under section 2, paragraph 3?

Mr. MACDONALD (Kingston City): I think not.

Mr. HAZEN: If that is so, is it not very much open to question at the present time if the insurance principle is applicable to men in the navy who are serving in the territorial waters of Canada or in inland waters? It seems to me that unless there is an order in council, that principle is not applicable to these men.

Mr. MACKENZIE (Vancouver Centre): That is quite correct. The insurance principle applies to those outside Canada in the air or in the navy, or with the land troops, and disability or death incurred during such service is pensionable. For those who have served only in Canada, death or disability is pensionable if it arises out of service or is attributable to service. The insurance principle does

not apply to those who have served only in Canada, but applies to anyone in the navy, the army or the air force who has served outside Canada and returns to the country for any service whatever.

Mr. HAZEN: Would the Minister of National Defence for Naval Services look into this matter and give it further consideration? Men who are serving in the navy in our territorial waters or perhaps, in some cases, in our inland waters, should come under the insurance principle. These men are just as much engaged in protecting our coasts, and many of them are just as much subject to submarine attack as men outside territorial waters. I think the insurance principle should apply to these men.

Mr. MacNICOL: In 1940, I believe, Commander A. C. Turner, R.C.N.V.R., held some important post in Toronto for the department, and it is said that he was later moved to Halifax. May I inquire if he is now in Halifax, and, if so, what post he holds?

Mr. MACDONALD (Kingston City): Yes, he was moved to Halifax to take a post at the dockyard. I am not able to say just where he is within the last week or two or within the last day or two.

Mr. MacNICOL: When I was home I passed by a new factory being erected south of the Canadian Pacific railway track just southwest of Leaside station and on making inquiries was told that it was for the purpose of building boats of some description. I am not just sure what the type was, but if my memory serves me aright, it was the kind of boat that is used in connection with aeroplane crashes at sea or lake to save the crew. I learned that these boats were being built by some folks I have known for quite a long time. I believe he was a hot-air furnace manufacturer. I just wondered what knowledge he had of building these boats, and just what type of boat is to be built there.

Mr. MACDONALD (Kingston City): That would not be under this department. The production might be crash boats for the air force, and the arrangements for that would be made by the Department of Munitions and Supply.

Mr. MacNICOL: These boats are not in the minister's department?

Mr. MACDONALD (Kingston City): I do not think so.

Mr. MacNICOL: The hon. member for Lunenburg is not in his seat at the moment. If he were, I do not think I would have to ask this question. It pertains to a Nova Scotian, Captain P. E. Walters, of 25 Waverley street, Toronto. I do not know him, but from the letters he writes I infer that he is connected with the well-known Walters family of Lunenburg. I believe his brother sailed the *Bluenose*. This gentleman has written me many letters, offering himself in any capacity to the naval service to help win the war. He gives his experience and signs himself "captain", and I have been wondering why he has not been given some employment if he is capable. He tells me that he has already taken the matter up with the hon. member for Lunenburg, who if he were here, would no doubt be inquiring about the matter himself, but in his absence I do so.

Mr. MACDONALD (Kingston City): I know the gentleman. He has written to the department on various occasions, and to my hon. friend and many other members of the house. But for some reason or another it has not been found exactly possible to make use of his services.

Mr. HAZEN: Just another word about pensions. I would like to direct the minister's attention to his remarks as reported on page 3454 of *Hansard* at the top of the first column. I am not going to quote them, but it would seem to me that that statement should be corrected a little. As I understand it, if a man in the navy has served in any theatre of war and then suffers a disability while serving in Canada or in the territorial or coastal waters of Canada, the insurance principle is applicable.

Mr. MACKENZIE (Vancouver Centre): It applies anywhere if the man served outside Canada in any of the three services.

Mr. HAZEN: But take the case of a man who has not served outside Canada, but has served on a ship in the territorial waters of Canada; the insurance principle is not applicable in his case.

Mr. MACKENZIE (Vancouver Centre): It is very largely discretionary how far the principle would apply. I understand that the naval authorities advise the pension commission as to whether the man's service was outside Canada, and that is taken as a statement of fact and the pension law applied accordingly.

Mr. HAZEN: But the words used are "coastal or inland waters". As I understand it, a man on a naval ship serving in coastal waters where he may be subjected to submarine attack does not necessarily get the benefit of the insurance principle. I think the minister might very well give further attention to that matter.

Mr. MACDONALD (Kingston City): I shall be glad to look into and discuss it with my hon. friend and make a fuller statement next week.

Mr. HAZEN: There were some questions of mine which the minister did not answer. I asked him how much was spent last year under item 4 on Deep Brook. I also asked him to tell us when it was decided to establish a training centre at Deep Brook.

Mr. MACDONALD (Kingston City): I am sorry if I missed answering those questions. The amount expended on Deep Brook is $3,742,000.

Mr. HAZEN: Is that out of last year's vote?

Mr. MACDONALD (Kingston City): That would, I take it, be up to the end of the last fiscal year. I would have to look up the minutes of the board meetings to ascertain just when the decision was reached, but I think it was about a year ago. I know the contractor got on the ground and began his excavations in July or August, so that I imagine the contract was let in July, which would bring the date of the decision to build just about a year ago.

Item agreed to.

11. Naval stores: small boats, minesweeping degaussing, anti-submarine, fire-fighting and training equipment, et cetera, $57,651,110.

Mr. HAZEN: Would the minister give us a break-down of the $19 million expenditure for 1942-43, and the break-down of the expenditure for 1943-44?

Mr. MACDONALD (Kingston City): I am sorry I cannot give my hon. friend an analysis of last year's expenditures. That is a bit difficult to do in view of the new method we have adopted of presenting the estimates in accordance with the desire to have a uniform type of presentation by the three departments, but I shall endeavour to give my hon. friend the main items for this year. The item of $57,000,000 includes the purchase of stores, small boats, charts, medical stores, wireless telegraphy equipment, mine-sweeping equipment, degaussing equipment, anti-submarine equipment, radio direction finding equipment commonly called r.d.f., fire-fighting equipment, training equipment and photographic equipment. I have not the figures for each item; it will take me some little time to get that information, but I shall be glad to get the figures and place them on *Hansard*. I have figures here which show the cost per man per ship, but perhaps that is in too much detail. I assume that my hon. friend would like to know the amount under each of these headings. I can get that for him, and it will be more convenient than to attempt to give him a great deal of detail which he may not want.

Mr. HAZEN: Are there included under the heading "small boats" any of the 550 ships to which the minister has referred?

Mr. MACDONALD (Kingston City): No; those would be what we call pulling boats, whalers and that sort of thing. They would not be included in the 550.

Mr. HAZEN: Have there been any shortages in naval stores during the past year, or have any alleged shortages of naval stores been brought to the minister's attention?

Mr. MACDONALD (Kingston City): Does my hon. friend mean a shortage in supply or a loss of stores through defalcation, or something like that?

Mr. HAZEN: I am referring to naval stores.

Mr. MACDONALD (Kingston City): But does my hon. friend refer to any difficulty in obtaining them?

Mr. HAZEN: No; I mean shortages through defalcations, or something like that.

Mr. MACDONALD (Kingston City): There have been a few minor cases, very minor, investigated by the mounted police and the naval police. They have been very few, I am glad to say.

Mr. ADAMSON: The minister mentioned degaussing equipment or apparatus. Is there a ship-wiping station on this side, to depolarize the magnetism of the ships?

Mr. MACDONALD (Kingston City): On both the east and west coasts they have what is called a degaussing range where the ships go up and down. I assume it is this equipment that my hon. friend has in mind.

Mr. ADAMSON: They bring the ships alongside and depolarize the magnetism.

Mr. MACDONALD (Kingston City): I would assume that was part of the arrangement, but I am not sure. I know the ships do run over a certain measured distance in the harbour to try out their equipment, and I assume that what my hon. friend has in mind forms part of that test. I shall look into it and make sure.

Mr. ADAMSON: I just wondered whether there were complete facilities on this side.

Mr. MACDONALD (Kingston City): I would think so. We took up that work very early both at Halifax and near Victoria. We

had some very able scientists working on it who did some extremely valuable work, beginning early in 1940. So that I think I can safely assume that all modern methods and appliances are available in each case.

Mr. MacNICOL: What is included in the words "fire-fighting"? Does the department have its own fire brigades? If so, where are they, on the docks or in stores?

Mr. MACDONALD (Kingston City): At many of our bases we have fire engines, stirrup pumps and all that sort of thing.

Mr. MacNICOL: And are they operated by firemen trained by the department or firemen drafted or accepted from fire departments thoughout the country?

Mr. MACDONALD (Kingston City): I should think they would be our own ratings, who receive some special training in fire-fighting.

Mr. HAZEN: Is any investigation, check-up or audit being made at the present time to ascertain if there have been any shortages in naval stores?

Mr. MACDONALD (Kingston City): Test checks or spot checks are being made constantly by our own men, and sometimes by outside men.

Item agreed to.

12. Miscellaneous stores and services: printing, stationery, laundry, office machinery, teletype rental, etc., $6,552,959.

Mr. ROSS (Souris): Would publicity come under printing? The other day I asked a question in regard to public relations and I was given the personnel in that branch, but nothing was said about publicity.

Mr. MACDONALD (Kingston City): I can give my hon. friend the items making up this total; printing and stationery, $617,000; books for service use, which would be largely manuals of instruction issued to ratings, books used on ships, code books and the like, $258,000; books for naval libraries, $25,000; typewriters and office machines (new equipment), $110,000; typewriters and office machines (replacements), $10,000; laundry and dry cleaning, $202,000; wages for storekeepers and armament workers, the men who work in the stores at various places and the men who work in the armament depots all over the country, $3,451,000; storekeeping contingencies for new equipment, $184,000; storekeeping contingencies for repairs, replacements, supplies and so on, $201,000; general miscellaneous services, including dockage, towing and so on, $316,000; water for ships, $141,000; inspection and testing, $5,000; rental of teletypes, $318,000; carry-over from last year, $311,000; contingencies, $367,000.

Mr. ADAMSON: Are such books as the manual of seamanship printed in Canada now?

Mr. MACDONALD (Kingston City): I am not sure that they are. We are beginning to do a good deal of printing both for ourselves and for the British admiralty, in the way of confidential books and that sort of thing, and I think it is a good arrangement for both of us. I am not sure about the manuals of seamanship; there may have been a considerable store of those on hand in Great Britain, and they may be still available.

Mr. ADAMSON: Is the money for teletypes for purchase or rental?

Mr. MACDONALD (Kingston City): For rental.

Mr. ADAMSON: To whom is the rental paid?

Mr. MACDONALD (Kingston City): Generally to the communications companies. There are teletypes running from here to Washington, from here to Halifax and to St. John's, Newfoundland; and I think we have another one to London, England.

Mr. ADAMSON: A direct one to England?

Mr. MACDONALD (Kingston City): Yes, I think we have, at this moment. We have them to various places throughout the country. Rentals are paid to the cable, telegraph and telephone companies.

Mr. GRAYDON: In connection with the matters contained in this item, was the minister's department under the jurisdiction of the director of economies control, about which we have heard something this session.

Mr. MACDONALD (Kingston City): Yes, I think so. I have never been sure, but I think I was.

Mr. GRAYDON: And how did the minister get along with him?

Mr. MACDONALD (Kingston City): I do not think I had much occasion to apply to the director of economies control. I believe I did make application to him, but it was in connection with a matter which really did not require an application. He was pleased to grant the request. I think I had occasion only once to write to him.

Mr. GRAYDON: Just a little pleasant formality.

Mr. MACDONALD (Kingston City): Yes; to show there was good feeling between us.

Mr. MacINNIS: Recently and since the beginning of the war we have read in the papers about the hardships suffered by survivors from torpedoed ships, and the difficulties they have in feeding themselves. I understand that in the United States rafts and boats are now fitted up with light fishing tackle. Has this department done the same thing?

Mr. MACDONALD (Kingston City): Yes; we have a complete kit for life-saving. As I said the other night, it includes concentrated food, such as chocolate, and that sort of thing. Then I believe a fishing line and some hooks are included in the kit.

Mr. MacINNIS: It would be very light. and would not require much space.

Mr. MACDONALD (Kingston City): It would not take much space.

Mr. MacNICOL: There was an article in this morning's newspaper about a new suit invented by a Canadian.

Mr. ADAMSON: A zoot suit.

Mr. MACDONALD (Kingston City): The navy is very much against the zoot variety.

Mr. MacNICOL: The article states that the suit was invented by a Canadian in Toronto. It is equipped with considerable apparatus, and packed with kapok, to keep afloat those who may fall into the water. Among other things it is equipped with a flashlight attached to the top of the cap, and this light flashes on and off. The article states the authorities are purchasing quite a number of these suits. Is a number being purchased by the minister's department, and, if so, under what item?

Mr. MACDONALD (Kingston City): Various designs of life-saving suits are constantly before the department. I am not aware that we have actually made any agreement with the gentleman from Toronto for the purchase of the suit about which the hon. member speaks. I know that a year or two ago, Mr. Gordon Leitch of Toronto was interested in a certain kind of suit which he felt would be helpful to shipwrecked men. From time to time various designs of belts, clothing and pullovers which will help to keep a man afloat have been submitted. I am not sure, however, that we have made any definite commitments for the suit mentioned by the hon. member.

Mr. MacNICOL: The flashlight is in the cap, and operates on and off. When the man falls or is thrown into the water from a ship he pulls the cap over his head and the light goes on and off, like a lighthouse light.

Mr. MACDONALD (Kingston City): Yes; I know about it.

Mr. ADAMSON: Dehydrated rations were a Canadian invention, were they not? Has this ration been adopted by the Royal Navy, and, if so, with what results? Has it been as successful as we hoped?

Mr. MACDONALD (Kingston City): In one form or another life-boat rations have been tried out by various countries. Great Britain had a life-boat ration. Our men studied it, and made some changes in it. They were very successful in providing water and food which would not go stale. I know that the ration designed here by our naval medical research unit attracted much attention in Great Britain and the United States. I am not in a position to say whether they have actually adopted it, but I know they were keenly interested and asked for samples, which we were glad to send them.

Mr. ADAMSON: The British navy have adopted our dehydrated food on all ships?

Mr. MACDONALD (Kingston City): Yes.

Mr. ROSS (St. Paul's): Doctor Best of Toronto deserves great credit for the fine work he has done in connection with perfecting life-boat rations. He has been living on submarines and on ships, under the most trying conditions, and I am happy to pay him tribute for all he has done in this connection.

Mr. MACDONALD (Kingston City): I agree, entirely. His work has been of a very high order.

Mr. HAZEN: I understood the minister to say that $258,000 was spent on code books. Are those books manufactured in Canada? Are they purchased from firms in this country?

Mr. MACDONALD (Kingston City): They are not purchased from firms. They are being printed by the naval department, itself, in Ottawa.

Mr. HAZEN: What does the laundry item include? Does the navy launder sailors' uniforms?

Mr. MACDONALD (Kingston City): I think this laundry item includes sheets, pillowcases, blankets, hospital bedding and supplies of that kind. I do not think it includes the personal laundry of officers or men.

Mr. HAZEN: Do sailors have to look after their own uniforms? How about the white uniforms?

Mr. MACDONALD (Kingston City): Yes; they have to scrub them down and press them out.

Item agreed to.

13. Sundries: postage, pilotage, prize funds and other costs not included in above items, $3,261,237.

Mr. DIEFENBAKER: This is an omnibus item, and offers me an opportunity to bring a matter to the attention of the minister. All of us agree as to the wonderful development which has taken place in the Canadian navy. However, there is always room for improvement, and one matter has been brought to my attention by a number of naval officers. I refer to giving greater consideration to officers of the R.C.N.V.R. in the matter of promotions, and the like.

Is it a fact that there is any difference between pay received by officers of the R.C.N. and those of the R.C.N.V.R.? My further argument will be based upon the minister's answer.

Mr. MACDONALD (Kingston City): There is no difference in the pay of R.C.N. and R.C.N.V.R. officers of the same ranks.

Mr. DIEFENBAKER: Is there any difference in the allowances?

Mr. MACDONALD (Kingston City): No.

Mr. DIEFENBAKER: I am advancing the argument I intend to advance not by way of criticism but in an effort to secure information on this subject and thus be able to reassure these R.C.N.V.R. officers who represent about eighty to eighty-five per cent of the men in the navy. They feel that they are deserving of greater representation on the naval board than they have had heretofore. Has the minister given consideration to increasing this representation? Is there any representative of the R.C.N.V.R. on the naval board?

Mr. MACDONALD (Kingston City): The secretary of the board is an R.C.N.V.R. officer.

Mr. DIEFENBAKER: That is Captain Pennington.

Mr. MACDONALD (Kingston City): Yes.

Mr. DIEFENBAKER: Is it expected that he will shortly leave the board?

Mr. MACDONALD (Kingston City): If he does, I should think we would probably replace him with another R.C.N.V.R. officer.

Mr. DIEFENBAKER: How many members are there of the naval board? Is there only the one man representing the R.C.N.V.R., who make up about eighty-five per cent of the personnel of the navy?

[Mr. Hazen.]

Mr. MACDONALD (Kingston City): The naval board consists of the chief of naval staff, the vice-chief of naval staff, the chief of naval engineering, the chief of naval equipment and supply, the chief of naval personnel, the deputy minister, the secretary, and I sit in with the board myself. My hon. friend will understand that the board is made up of the senior officers of the department, the heads of branches and that sort of thing, and it is not always possible perhaps to get a R.C.N.V.R. officer who has had the necessary training and experience to fit him to be the head of a department. There are some departments that R.C.N.V.R. officers could head very well.

Mr. DIEFENBAKER: What departments would they be?

Mr. MACDONALD (Kingston City): That would depend upon the experience of the particular officer. It is obvious that the chief of naval staff would be expected to be a permanent officer, and I think that would apply also to the vice-chief of naval staff who must take the place of the chief in his absence. The chief of naval engineering and construction, Admiral Stephens, is an engineering officer of something like thirty-five years' experience, and it would be quite difficult to find a R.C.N.V.R. officer with the necessary naval engineering experience. Many of them are qualified engineers, but they have not had the naval experience that Admiral Stephens has had. Personnel might be a place where a R.C.N.V.R. officer of the right type could perform satisfactory work.

Mr. DIEFENBAKER: If that were done, I think it would remove a lot of the reason for complaint.

Mr. MACDONALD (Kingston City): The secretary of the naval board is a R.C.N.V.R. officer. The deputy minister is a civilian, and if there is such a thing as a civilian viewpoint, he would have it. I must say that I have not heard of the complaints to which my hon. friend referred, but I might not hear of them. A lot of the R.C.N.V.R. officers who come back from the sea to Ottawa call in to see me and they talk quite frankly. I always encourage them to do that, but I must say that I have not heard of these complaints. I should be very sorry to think there was any feeling between the three branches of the navy. In this regard we follow the Royal Navy's system which has the same three branches. Our navy is only about thirty years old; it is obvious that we should have some model and guide, and I do not know where we could get a better model and guide than the British navy itself.

Mr. DIEFENBAKER: Has any consideration been given to appointing a R.C.N.V.R. officer as personnel representative on the naval board? The navy is the only service in Canada where any distinction is made between officers who served prior to the war and those who have volunteered since. I am placing this matter before the minister in all sincerity. He says that none of these complaints has come to him, but I can understand that. If the naval regulations are similar to the army regulations, an officer would have no right to make a complaint except through the regular channels.

In making the suggestion that there should be a greater representation of the R.C.N.V.R. on the naval board, I do so out of consideration for the wishes of a number of these officers who have spoken to me. In the course of conversation with at least ten of them the same matter was raised. The minister says that the secretary of the board is a R.C.N.V.R. officer, but ordinarily secretaries have little to say. We all want to see the navy built up; we all want to see it achieve greater efficiency and continue the magnificent work it has been doing; but if there is any ground for the complaint made by these R.C.N.V.R. officers that they are not receiving fair and proper representation on the board, that their ideas do not receive the proper attention, the minister should give it attention. If this is done, I feel that there will be great dividends in the way of morale, and it certainly would do no harm in connection with policy. The majority of those on the board would be permanent officers, but at the same time there would be brought into the discussions of the naval staff the viewpoint of those who had been civilians previously. The civilian viewpoint, the viewpoint of the man who has entered the service since the outbreak of the war, would be refreshing and might do a great deal to improve conditions which in many instances are not known as well by those who make a profession of the service.

Mr. MACDONALD (Kingston City): I thank my hon. friend for what he has said. He has made a constructive and helpful suggestion. I shall bear it very carefully and very fully in mind. I might say that in all those branches which are headed by members of the permanent service of the Royal Canadian Navy, there are a great many Royal Canadian Naval Volunteer Reserve men serving. A goodly number of the officers serving with the head of the naval personnel branch would be R.C.N.V.R. officers; and in that way their views, I should think, would become well known to the head of the branch. As I said, however, I shall be glad to consider the whole matter with the utmost care, and once more I thank my hon. friend for what he has said and the spirit in which he has said it.

Mr. HAZEN: Last evening I asked the minister what was the tonnage of the corvettes, Fairmiles, and some of the other ships in the navy. The minister said he did not know whether he should answer that question, and I did not press it. I ask him now if he would be prepared to tell us what is the tonnage of the smallest class of ship in the Canadian navy.

Mr. MACDONALD (Kingston City): I mentioned, I think several times, that we had fighting ships, and ships which, while very useful, were not of that type. Does my hon. friend mean the smallest vessel of any sort that we have, or is he referring to combat ships?

Mr. HAZEN: What I really had in mind was the fighting ships in the 550.

Mr. MACDONALD (Kingston City): I fancy the smallest of the 550 would be some of the armed yachts. Some of these are larger than Fairmiles; there may be some which are smaller. I am not exactly sure whether our smallest fighting ship is the armed yacht or the Fairmile. I would have to look over the tonnage of all the armed yachts and compare them with the Fairmile tonnage in order to answer that.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

The CHAIRMAN: Shall item 13 carry?

Mr. HAZEN: I would ask for a breakdown of this item.

Mr. MACDONALD (Kingston City): The item of sundries includes, as is natural, a great many small items. There is first of all a small item, capitation allowance, which is made to certain ministers of religion, who perform their ministrations for men of the service in cases where no regular chaplain is available. The amount is $706. Then there are costs of courts-martial and subsistence of prisoners, $28,000; apprehension of deserters, $1,412; prize funds, that is, prizes given for proficiency in such matters as rifle and pistol shooting and so on, $706; funeral expenses, $14,000; money paid to the national research

council for scientific services, $539,000; unemployment insurance stamps, $95,000; temporary civil servants, $54,000, which is for the unemployment insurance scheme; casual labour, $33,000 at Halifax and $7,000 at Esquimalt; bonding premiums, $3,000 to pay for bonds held on naval personnel who handle public funds; administration of merchant seamen's order, $46,000; rehabilitation grants, $141,000; small grants for Prince Robert house on the west coast, a hostel there, $1,200; pension to ex-skipper White, $363; unforeseen expenses, $568,000; contingencies, $130,000.

Mr. STIRLING: Is that $1,200 the total contribution of the government to Prince Robert house?

Mr. MACDONALD (Kingston City): So far as I know, it is. The navy league have an interest in that house and I believe we undertook this to help them out.

Mr. STIRLING: Would the minister explain just what happens to a suggested invention that is sent in to the department? What exactly is done with it? Is there an inventions board or an inventions branch in connection with his department, or does the national research council deal entirely with it?

Mr. MACDONALD (Kingston City): We have a man to whom such matters are frequently referred. There is also an inventions board which is attached to the national research council, and they are the people who pass on a great many of these inventions.

Mr. STIRLING: At some stage the navy must give its opinion on that, and I wondered whether it gave its opinion before the invention went to the national research council or at a later stage.

Mr. MACDONALD (Kingston City): Sometimes before and sometimes after.

The CHAIRMAN: Shall I report progress?

Mr. GRAYDON: Before the estimate finally goes through, this seemed to me to be an appropriate occasion, at the conclusion of the consideration of the estimates of the three defence departments under the war appropriation bill resolution, for the members of this house to pause and to reflect for a moment upon the giant contribution which the officers and non-commissioned officers and the men and women of all three branches of our armed forces are making in a cause for which this nation and empire in collaboration with the other united nations are fighting, for the preservation of a free, democratic way of life.

[Mr. A. L. Macdonald.]

Well over a month has been consumed in the consideration of the appropriations which will enable our forces to continue to make that contribution. During the debate there has been active and constructive criticism by members of this house. On many occasions there has been disagreement both as to policy and as to detail. On several occasions this disagreement has reached a high pitch. I rather think, for instance, that the Minister of National Defence for Naval Services will, upon reflection, agree that one of the most dangerous and perhaps one of the most delicate positions in which he found himself during the consideration of his estimates was when he singled out for special mention the hon. member for Broadview (Mr. Church); for this member's name may properly be said to be synonymous with the armed forces and their dependents for whom he has worked indefatigably for well over a quarter of a century.

However, we of the Progressive Conservative party have only attempted to meet the government in debating collision where we felt that the government in the interests of the nation and particularly in the interests of the armed forces, required that type of criticism in order that it may itself be rendered more capable, more competent and more efficient to do the services which the people of Canada desire it at this time to do.

There is something about democracy, however, which must not be overlooked. Right in this chamber are the representatives of the people who, while differing as to policy, method and detail in many instances, will rise up in one concordant unit, one member vying with another, on the one and only important issue facing Canada to-day, namely, the bringing of the present hostilities to a victorious conclusion.

We as civilians in Canada during this wartime period try to do our best, but that best falls far short of our armed forces' best. The achievements of the Royal Canadian Navy, the Canadian Army and the Royal Canadian Air Force have aroused in Canadians an enthusiastic, justifiable pride in the heroism and the valour of the men and the officers of all three services.

I think, therefore, that this parliament should at this moment put aside all its petty cleavages, all its little thoughts, and concentrate upon tendering our appreciation to those hundreds of thousands of our men and women who are prepared to lay upon the altar of sacrifice, if needs be, all that they have, including that dearest of all treasures, life itself. To them in the midst of our deilberations with respect to the financial requirements needed to support them, I desire to place upon the record of parliament, not

only on behalf of His Majesty's Loyal Opposition but on behalf of the entire membership of this House of Commons, a tribute of grateful recognition of their high position in our thoughts and in our minds to-day.

We solemnly recall and remember the sacrifice made by those who have fallen in this war; and to those of their kin upon whom their loss falls most heavily, we express our heartfelt and genuine sympathy at this time.

This can be little more than a gesture of this house, but we who are not privileged to serve in the more dangerous fields of conflict, at least owe it to those who do, to display to them this unity of thought and purpose, which goes much more deeply than any inadequate words of mine can properly express.

Mr. MACDONALD (Kingston City): I wish to tell my hon. friend the member for Cumberland that in giving him last night the cost of buildings at Point Edward I may have left the impression that the total cost for the completed work was $5,701,000. On checking it over I find that the whole cost will be a good deal more than $5,701,000. That is the expenditure only to a certain date this year. I desire to make that correction.

Mr. BLACK (Cumberland): I wish to thank the minister for that information. Has he an estimate of the cost of the whole project when completed?

Mr. MACDONALD (Kingston City): The estimate for the total cost when the project will ultimately be completed—of course, that will be some considerable time—including the work done and work yet to be done this year and in future years is $11,566,000. The figure which I gave my hon. friend was calculated some time back this year for the total cost up to that time.

Mr. BLACK (Cumberland): I made one other inquiry of the minister as to the actual tonnage of coal used. There are almost 6,000,000 barrels of oil and 5,336,000 gallons of gas used as fuel, and the minister said last night that from one to ten thousand tons of coal was used as fuel, but he would give the exact figures later. I should be glad if he would put them on record.

Mr. MACDONALD (Kingston City): I told my hon. friend that I was not sure, that it might be one or ten thousand tons. I had the figure of ten thousand tons in mind because I was thinking of ships that go well out to sea. That is about the right figure for those ships. What I omitted to take into account was a considerable number of ships in harbour, such as gate vessels, harbour tugs, fire boats and that sort of thing, which I find consume a great deal more coal than ships that go out to sea. The total for all ships, certain minesweepers and patrol boats, which are open seagoing vessels, and the harbour craft is 62,000 tons. That is the estimate for the year. The estimated cost of the coal is $711,000.

Mr. MacNICOL: Is the minister able to answer my question as to the number of Fairmiles at sea and undergoing repairs?

Mr. MACDONALD (Kingston City): I suppose there is no harm in giving my hon. friend this information.

Mr. MacNICOL: If it is not in the public interest I do not insist.

Mr. MACDONALD (Kingston City): There are three in for refitting or repairs at the moment; the rest are all operating. The rest would number approximately fifty.

Mr. MacNICOL: I also asked a question about the commander of the Fairmiles.

Mr. MACDONALD (Kingston City): The commander of the Fairmiles is now Captain Heenan of the Royal Canadian Naval Reserve. He is a man of considerable sea experience. He began as a boy in sailing ships and has followed the sea ever since. He is the senior officer of the Fairmiles, and with him he has as staff officer Commander Powell of the Royal Canadian Naval Volunteer Reserve.

The hon. member for St. John-Albert asked as to the tonnage of ships. Without going into the tonnage of all ships, I may tell him that the largest ship of war we have is 7,000 tons and the smallest seventy-nine tons.

Item agreed to.

Progress reported.

SUPPLY

The house in committee of supply, Mr. Bradette in the chair.

DEPARTMENT OF AGRICULTURE

Administration service.

1. Departmental administration, $130,406.

Hon. J. G. GARDINER (Minister of Agriculture): Mr. Chairman, since I was last before the committee with my estimates I was called upon to attend the funeral of the late Hon. W. R. Motherwell, who had preceded me as Minister of Agriculture. The fact that during the almost eight years that I have had the privilege of being Minister of Agriculture four men have passed away who had

formerly occupied this position in earlier days, suggests to us the rate at which time passes. No life could have exemplified more completely the importance of making full use of the time that is allotted than the life of Hon. W. R. Motherwell. He was given thirteen years longer than the allotted span, and during the whole period of his life has been busily engaged in doing those things which he considered to be in the interests of agriculture.

He was born a few miles from this city, in Lanark county. He won a scholarship which took him early in life to the Guelph agricultural college, where he graduated with honours as one of its first class. Shortly after graduation he journeyed west to locate as a practical farmer on a piece of raw prairie which, in a period of about twenty years, he converted into one of the finest farm homes in Canada. He made the trip west from the end of steel by ox-cart and turned his first sod with oxen, but he lived to see the farm equipped with the most up-to-date machinery and farmed by the most modern and most up-to-date methods. Mr. Motherwell accomplished the difficult task of remaining a practical dirt farmer while keeping up to date as a technical agriculturist. This part of the story comes to me second hand, but the remainder of his life was so closely intermingled with my own that his passing has removed a faithful friend and a helpful adviser.

In 1904 I went to what is now Saskatchewan. My first political experience was in assisting to elect the first government of Saskatchewan, in which Mr. Motherwell was minister of agriculture, in 1905. In 1911 I became principal of a school in his home constituency and in 1914 entered the legislature as his representative, supporting the government of which he was a member. In 1921 he became my representative in the House of Commons for the federal constituency of Melville, and in 1940 I became his representative in the House of Commons for the federal constituency of Melville. For thirty-two years we lived within sight of each other's home. I therefore speak of him to-night as a close neighbour, as a long-time political friend and as my most valued tutor in matters pertaining to agriculture. He was a man with whom one could feel honoured to be in agreement and with whom one hesitated to be in disagreement because of his wide experience, great knowledge, unquestioned integrity and his conscientious pursuit of his convictions.

Mr. Motherwell's service to agriculture is written into the records of farm organizations, first in the province of Saskatchewan, later across Canada and, while Minister of Agriculture of Canada, across the world. His great energy and organizing ability found expression in the territorial and Saskatchewan grain growers' associations, which laid the community foundation for every cooperative farm organization in western Canada. During his period as minister in Saskatchewan he laid the legislative base for every cooperative farm organization in that province, and brought arts, science, engineering, law, medical and agricultural students together on one campus. During his service in Ottawa he promoted cooperatives, encouraged the grading of farm products and fought in a practical way every parasite and disease which attacked animal and plant life, crowning his efforts by organizing an attack upon rust in wheat. His outstanding international achievements were those of arranging to have the world poultry and wheat conferences held in Canada.

His long and useful service in agriculture was acknowledged by his friends while he still lived, in two ways: first, by hanging a life-size portrait of himself in the agricultural college he established at Saskatoon, and second, by gathering in his long cherished Qu'Appelle valley, the beauty spot of the prairie west, to present him with a substantial purse and express their appreciation of his services. But his greatest joy came from the fact that his only grandson, who had reached the age of maturity and who graduated with the highest honours from the institution Mr. Motherwell had established at Saskatoon, did him the honour just before his death of taking over the old homestead, thus keeping in the name of its creator the farm which has meant so much to Canada.

I was gratified to have the privilege of representing the government of Canada and you, the agriculture committee, before which he stood so often, at the graveside of a matchless farmer, a technical and practical agriculturist, a Canadian statesman whose name will live in the annals of western Canadian pioneering life. It was my privilege to carry to his widow, his son, his daughter, his grandson and granddaughter, all of whom are highly honoured in their own right by all who know them, your sympathy and your appreciation of a life well lived. At the same time I should like to say to this committee that I believe the passing of Mr. Motherwell marks the end of an era in the development of agricultural life in the great central section of Canada. He was one of the pioneers. In his death we witnessed the

passing of one who did much to make possible the settlement of people in the western part of this country and to make of Canada a greater country.

While I was west I had the opportunity of attending the funeral of a neighbour of Mr. Motherwell, whose life marks, I think, the beginning of a new era, not only in the agriculture of the west but in the experiences of Canada as a nation. This man, Doctor Hiel, had not reached an age at which we expect men to pass on. He was a young man, only thirty-three years of age. Into his life, however, he had crowded more than most of us are able to crowd into a span of seventy or eighty years. He was the youngest person ever to graduate from the university of Saskatchewan, entering that university before he was fifteen and graduating in due course. He took a course in medicine at the university of Toronto and passed with honours. He spent a year as an interne at the sanatorium in the province of Saskatchewan, a year as an interne at the Civic hospital in Ottawa, a year as an interne at the Bedford hospital in Great Britain, and took a post-graduate course in Vienna. Then he spent a year as surgeon on a British ship sailing out of Liverpool. Two years before the war he came home and began to practise medicine in Timmins, Ontario. When the war started he enlisted, and two weeks ago passed away in a hospital in Toronto, following an attack of pneumonia. He was brought to his old farm home to be buried, in the same neighbourhood in which Mr. Motherwell had lived.

As a comment on the statements made the other evening by the hon. member for Vegreville I should like to describe to this committee what I experienced at that funeral. This young man was one of a family of ten; he was the fourth boy of a group of seven, all born and raised on a farm in Saskatchewan. On this occasion he was dressed in the uniform of a captain of His Majesty's forces; over the coffin in which he was placed was draped the union jack, and the coffin was carried by his six brothers. Of those six brothers the first two were in uniform; one was a lieutenant in the army, serving on the Pacific coast and the other was a private in the army also serving on the Pacific coast. Of the two brothers immediately following, one had a teacher's degree, and had taught school in Saskatchewan, while the other had the degree of M.A., and is principal to-day of the high school grades in a school of which the hon. member for Yorkton (Mr. Castleden) was principal until a short time ago, and of which I had the privilege of being principal some years previously. Behind those two were two other young men, one a farmer, farming in his own right, and the other a grain buyer who had farmed for a number of years and then taken up the position of grain buyer.

But a most important fact is that following these six young men were the father and mother. And that father and mother were over seventy years of age. With them were two daughters, the third being in eastern Canada, the wife of a young man of foreign nationality who came east to take his part in making munitions, in order that this war might be prosecuted to a successful conclusion.

The point I wished to make particularly is that the mother and father came to this country from Europe. They were of German nationality, having come here from Austria before they were twenty years of age. They married in Canada, raised their family on a farm in western Canada, and made their living from the soil, soil which had never been broken before they broke it. They worked out of that soil the education of that family, consisting of the group of boys and girls I have described.

The further point I make is this: We were led into a church of the Lutheran faith. The service was conducted in the German language, and the hymns were sung in both German and English at the same time. A thousand people attended that service—Poles, Germans, Anglo-Saxons, and people of other nationalities. But I am sure hon. members in the committee will agree with me that an incident of that kind in a country such as ours, under these conditions, does mark the opening of a new era, an era of international understanding among all the nationalities who have come to this country, an understanding which will result and has already resulted in the building of a lasting Canadianism.

I recite these two incidents, one to mark the passing of the great pioneering age in western Canada, and the other to mark what has become a united feeling among our people in support of the institutions of government which make freedom possible in this country, and out of which true Canadianism will grow. The men we honour by mentioning them here were builders of a better and greater Canada.

Mr. MacNICOL: Mr. Chairman, I rise at the request of my leader, who was not as well acquainted as I was with the late Hon. W. R. Motherwell, to say a few words at this time. Perhaps it is fitting that I do so because my people came from the county of Lanark, Ontario, in which county the late minister was born.

I like to think of the late Mr. Motherwell as he sat in opposition during those days when the Right Hon. R. B. Bennett was

Prime Minister. One would have had to see Mr. Motherwell in opposition to appreciate fully just what a bonny fighter he really was. Certainly he had great debating abilities. His arguments were always presented in a kindly and generous way, and all hon. members liked to hear him speak. He advanced his points in good order and bolstered them with great strength.

I remember his last speech in the house, when he was sitting on the government side. On that occasion he disagreed with government policy. A man who can view any issue in a broad and unbiased manner, and who can take a stand against those whom he is supposed to support, is a good man indeed. When I say that I am referring, not to the correctness or otherwise of the arguments he advanced on that occasion, but rather to his spirit of independence, a spirit which was exemplified in many battles in which I have seen him take part.

In the last few years I have made a study of the great province from which Mr. Motherwell came, in the hope that as a humble member of parliament I might do something for its greater development. In my studies I came across the names of two other men, each of whom rendered great and lasting service to that province. I have in mind the father of the hon. member for Moose Jaw (Mr. Ross) and the father of the hon. member for Qu'Appelle (Mr. Perley). I believe at one time the late Mr. Ross was a senator as was the late Mr. Perley. That part of the late Senator Ross' career with which I made myself familiar was the part in which he acted as commissioner, and travelled to the Northwest Territories to negotiate treaties with the Indians. I spent some time in the same area last summer.

These three men all pioneered in the west. I like to think of the pioneers, and the hardships they overcame. My own people, who came to the county of Lanark in 1820, and these pioneers of whom I have been speaking, and who went to western Canada, suffered hardships we find it difficult to understand. They faced most unfavourable circumstances, but succeeded in overcoming them.

I know the late Hon. W. R. Motherwell had the tenacity to overcome any difficulty with which he was confronted. I was pleased to hear the minister say that the late Mr. Motherwell settled north of the valley of the Qu'Appelle, because after much travel I can say that, despite its lack of trees, when compared with the valleys in eastern Canada the valley of the Qu'Appelle is one of the most beautiful I have seen. It has a beauty and a glory all its own, and I should hope that the present Minister of Agriculture, should he remain in office long enough, would do something toward providing a better water supply, through storage facilities, and thereby make a contribution which would result in even greater beauty to that valley. I was thrilled with the beauty of the Qu'Appelle, because I had not thought that in that part of the country, on the prairies, one would find such a beautiful spot. I could say more about that part of Canada, but possibly on this occasion I should not speak at greater length.

I realize I have spoken altogether too imperfectly, and feel that my leader might have spoken with greater eloquence than I have in paying this tribute to a distinguished statesman who has passed on. I understand he received his education in the county of Lanark, just outside the town of Perth, and it is altogether likely that he went to western Canada as a young man. A reference to the Parliamentary Guide discloses that in 1894 he contested the constituency of Qu'Appelle. That being the case, he must have gone out there when quite a young man. He must have been an able young man to receive the nomination for Qu'Appelle on that occasion. I am happy to make these few observations about the dear old gentleman. I feel I can call him "dear old", because he and I were great friends. I can remember, when the last redistribution bill was being considered and I was chairman of the main committee, he came to me and said, "I know I can trust you." I said, "You surely can." The result was that he got his way, and I am happy he did even though he did not come back here any more.

Mr. COLDWELL: Mr. Chairman, I think it is fitting and proper that the Minister of Agriculture (Mr. Gardiner), in introducing his estimates to-night, should pay the tribute he did to the late Hon. W. R. Motherwell. I was never on the same side of politics as Mr. Motherwell, but in common with all those who were on the opposite side, I admired the great work he did for the western farmer, particularly the farmer of Saskatchewan. In the life of the Hon. W. R. Motherwell we have the story of the Saskatchewan pioneers. As the minister has stated, along with several other old-timers he founded the grain growers' association. From their work largely came the cooperative elevator company and throughout the years he was a doughty representative of the western plains.

I came to this house when he was a man of very advanced years and I can remember hearing him express his views. They were not always in consonance with the views of the government which he supported, and that fact

made me admire him all the more. Sometimes it takes a great deal of courage for a man to disagree with old friends. On several occasions it must have been more or less painful, not only for Mr. Motherwell but for his friends when he felt compelled to disagree.

The Minister of Agriculture said that the passing of the Hon. W. R. Motherwell marked the end of a pioneer era. The minister spoke of the members of the family who were present at a funeral. My years in western Canada have not been as many as those of either the Minister of Agriculture or Mr. Motherwell. I have been there for some thirty-four years. I can remember quite well the coming of these later, but still pioneer people from central and southern Europe. Only to-day I was remarking how I had watched the immigrant trains come into the town where I was teaching, with the women wearing shawls on their heads. They were often representative of a depressed humanity from central Europe seeking a way out in the new land. Although I have spent fewer years in the west than the Minister of Agriculture, I have seen a boy of one of these families become a member of the Saskatchewan legislature and eventually an officer in His Majesty's forces, although he was originally of German-speaking origin. Others, too, are making their contribution to the new Canada in many ways.

We who live on the plains owe a tremendous debt of gratitude to men like Mr. Motherwell, to the late Hon. George Langley, to A. G. and John Hawkes, Haultain and the rest of them. We may not have agreed politically —I did not—but I pay my tribute for the foundations which they so well and truly laid in the province in which I live.

Mr. BLACKMORE: Mr. Chairman, no representative of a western Canadian constituency, no representative of any agricultural constituency could feel at ease when remaining quiet while such kind words were being said in memory of the Hon. W. R. Motherwell. I am glad the Minister of Agriculture has taken time to-night to pay this tribute which is so richly deserved. It is perhaps true that the passing of the Hon. W. R. Motherwell marked the end of an era, but there were two things for which he stood consistently, which we must not allow to pass. One of those was a square deal for the farmer. That good man took a particular interest in me. When I came here I was inexperienced in political affairs, and he came to me several times and told me how serious was the injury that was being done to the farming population of Canada. I think he was trying to imbue me with the spirit of revolt against what was happening to the farmer. I tried to assure him that I already was imbued with that spirit, that the only difficulty was that I could not find the means to express myself adequately in order that I might be effective in the fight for a better set of conditions for the farmer.

I think every member will remember the last speech which that great man delivered. I think we can fittingly call him a great man. At that time he protested against what had been done to the wheat growers of western Canada, what he considered to be a betrayal of the interests of the western farmer and the wrecking, so to speak of all the things for which Mr. Motherwell had given his life. We in this house should remember with great respect the efforts that he put forth on behalf of the farmer, and we should be impressed by them. We have a long way to go yet before we give the farmer anything like the kind of deal to which he is entitled and which in the interests of the economy of this country he must receive.

Another thing for which the Hon. W. R. Motherwell stood was a greater democracy. I can remember the sternness with which he set himself against the almost panicky movement toward the adoption of the Sirois report, and I can recall the letter which he wrote to the *Western Producer,* calling attention to the grievous error that was being made. He was not in favour of centralization; he favoured decentralization and greater democracy for the people. We could well listen to the words of counsel of that great Canadian. I rejoice that I have had this opportunity of adding these few words of tribute to a man whose name was almost a household word in western Canada. His name was associated in my mind with the good things of life before I had any realization of why they were there.

Mr. PERLEY: Mr. Chairman, I am glad the Minister of Agriculture has provided an opportunity for us to express our appreciation of the splendid work done by the late Doctor Motherwell and to pay a tribute to him and regret his passing. He was one of the early pioneers. One hon. member has already referred to the fact that my father had some little association with Doctor Motherwell in the pioneer days. He was born on a farm in Ontario. He proved his initiative in going to western Canada and applying there the principles of sound agriculture. He started on a farm near Abernethy, which is north of the Qu'Appelle valley. The farm of the Minister of Agriculture is nearby, and I might mention that my own farm is less than twenty miles from Doctor Motherwell's farmstead;

I knew the property very well. I well recall having been present, when a mere boy, at the first meeting in Indian Head attended by Doctor Motherwell, and I was proud of the fact that my father was there in association with him in forming the first grain growers' association, which was organized at that meeting to fight for a square deal for the farmer. In those days the main issue was the right to ship grain in cars and get better service. Mr. Motherwell was elected on that occasion to head that organization. I think he did a good job.

Much has already been said of what he accomplished on behalf of the farmers. He fought for them right through. Those were the days of the buckboard and pony. In the winter time Mr. Motherwell hauled his grain across the Qu'Appelle valley. I remember on one occasion, when I happened to be in Sintaluta, which is a little east of Indian Head, he arrived with a load of grain in bags, drawn by a team of horses; the grain was not even in bulk. He was a pioneer. It is not necessary for me to enlarge upon what has already been said with respect to the part he played in political affairs and in the public life of Canada. I had the honour of sitting in this house with him for a number of sessions, and I cannot help but say that he was a fair fighter. We did not always agree, but he was always willing to be fair, and beyond doubt he made a great contribution to public life and set a great example to those who sat with him and followed him. I am pleased to have had this opportunity of paying my respects and expressing a word of appreciation of this splendid character.

Mr. CRERAR: Mr. Chairman, as one who can lay claim to be a pioneer in the prairie country, I should like to add my word to the tributes which have been paid to the late Mr. Motherwell. He went to what is now Saskatchewan in 1883. My father settled in western Manitoba in the autumn of 1881. I often reflect upon the debt which we in western Canada owe to the pioneers, the people who went out to the far-flung spaces of the prairies, often remote from a railway, getting mail perhaps once or twice a month, without medical services, without the amenities which we now consider necessary for a full life. They possessed qualities which it is well for us to think upon. Those who go to the far places to develop and build up a country must possess qualities which are among the greatest in the human scale of values. Mr. Motherwell possessed those qualities. He had character and integrity; he had public spirit, whether in his school district, in his church, in his municipality, or in the larger fields of provincial and federal affairs. He had, as the hon. member for Davenport said, the quality of being a bonny fighter. He battled intensely for what he believed in. He did not hold his opinions lightly; he was willing at all times and in all places to stand up and fight for the convictions that were in him. That is a quality I always admire, whether I agree with the convictions or not.

All over the prairie country to-day the pioneers are passing off the stage; the little cemeteries are filled with them; but the qualities of faith, of courage, of self-reliance, which they bequeathed to their successors are ones which should not be overlooked or forgotten. I am glad indeed to pay my humble tribute of respect to the memory of a great westerner, a fine farmer and a devoted public servant.

Mr. JOHNSTON (Bow River): Since last the Minister of Agriculture (Mr. Gardiner) was before us we have had statements from the ministers representing the army, the air force, the navy, and industry, and we have viewed every one of their problems from the point of view of war industry. The last minister to address the committee was the Minister of Munitions and Supply (Mr. Howe), and he outlined the progress in the manufacture of war supplies and showed what a height of development the industry had reached. It has come practically to peak production, and its labour problems from now on will, I suppose, be readily manageable. The army is in need of men and is making a stand in that regard. The air force was probably the most outspoken with respect to man-power of any of the departments so far before the committee. I admired the way in which the Minister of National Defence for Air (Mr. Power) spoke about man-power as it affects his department. He said without hesitation, "We are not going to fool around with this problem any longer; men are either going to be in the air force or on the farms, but once they are in the air force they are going to stay there." The Minister of National Defence for Naval Services (Mr. Macdonald) took practically the same attitude.

As we know, the army is in need of men, and agriculture is in need of men. With all due respect to what the minister said the other day about his not being on the man-power committee and this not being his problem at the present time, I think he must take a definite stand on this question, because we are coming to the stage in agriculture when probably the greatest demands are to be made upon it. As I pointed out, in industry we are at a point, so far as the equipment of

our armed forces is concerned, when probably we can slacken down or at any rate will not need to increase the pace. But in agriculture that is not true, because the more progress we make and the more victories we achieve in this war, the greater the demands on agriculture will be. We anticipate that Italy will soon be forced out of the war. It will then become an obligation on agriculture to feed the Italian people, and we in this country will have to supply a share of their needs.

Someone asked the other day where we were going to be short of food. I say that, if there is any shortage, the place where we would be short of food is right in Canada, because I believe agriculture has a definite obligation. Having made definite commitments to supply foodstuffs for overseas, these commitments must be fulfilled, and we shall have to divide among ourselves what is left. If we have to come to rationing, that is what it will have to be, and the greater our success overseas, probably the greater the shortage of food here will be. Therefore everything points to the necessity of placing agriculture on a war-time basis, and the minister will have to come out and declare emphatically what labour he requires for the farms, and will have to put those requirements before the Minister of Labour (Mr. Mitchell). There the problem will rest, and the Minister of Labour will have to deal with it in the same way as he is dealing with similar problems in the navy, the air force and the army. He cannot fool around with this problem; it has to be solved.

The Minister of Agriculture, when he was speaking the other day, rather shifted the blame for man-power on to someone else's shoulders. He was asked whether he was on the man-power committee, and he made this statement, as reported at page 2894 of *Hansard* of May 21, 1943:

Yes; there is a man-power committee and I am on that committee.

Then further on:

I have explained to the committee on two occasions that this is not my problem and has nothing to do with my estimates.

Whether it has to do with his estimates or not, it is certainly his problem, and it is his problem in two ways: first, because agriculture is his problem, and agricultural production is his problem, and he cannot and will not get production unless help is there on the farms; and second, because he is on the man-power committee.

The other day I received a letter that illustrates some of the difficulties that confront us. I wish to put a part of that letter on the record. It comes from a lady and is dated April 13:

Did you get my letter of recent date telling you of my son's—

Here she names her son.

—short leave or rather visit home? He went back to Victoria on the 4th April and applied for 60 days agriculture leave but was turned down. All miners and agricultural leaves were called off, so he was informed.

When we expect that these boys in the army will get agricultural leave that is what they are faced with, and apparently there are to be no more leaves either from the air force or from the navy. I received a letter from the Department of National Defence for Naval Services the other day, and in effect that is exactly what it stated, that these leaves for agricultural purposes would have to be stopped. The Minister of National Defence for Air said the same thing. Last year we had some recourse to that method and could get employment from the armed forces, but that is a thing of the past. This lady continues:

Here we are with practically 500 acres of crop to be threshed before we can commence seeding operations for the new crop. You know, too, all the work there is to be done, cleaning all the seed for 600 acres and treating it too. At present we are absolutely without help. My husband himself looks as if he were due for a break-down. Can you wonder at it?

I have three more letters in the same tone, just received, to which I replied to-day. One is from a fellow who is in a much worse condition. He has a mortgage of $7,000 on his place. He paid $3,700 interest and another $2,200 in interest this year, but he still owes $9,000 and the mortgage company is now clearing him off the farm. With his son taken away, what will he do?

These are the conditions we have to face. The minister, when he was speaking the other day, made further reference to this question, as recorded at page 2893 of *Hansard* of May 21. On that page will be found certain figures in regard to employment, but before I refer to those figures I might quote something the minister said as reported at page 2896:

To an extent, of course, the figures based on the 1941 census must be estimates. The figures with regard to the placements are actual figures and the figures with regard to the applications which are in the offices are also actual figures. I scarcely agree with those who seem to feel that the figures do not mean anything.

The minister is right in the last statement. They do mean something, and I shall refer to that later on. Further on he said:

What these figures do mean is that people have not been sufficiently anxious about the employment situation on their farms to appeal

to the employment offices to a greater extent than they have done. They have been directed to do so by everyone who has been talking to them about these matters. I am sure that members have directed them to do so, as I have done every time they have written to me inquiring about the matter. . . .

I would point out to the minister, however, the futility of applying to these offices, because, according to the table to which I have referred, on March 1, 1939, the estimated number of male farm workers, including operator, in thousands, was 1,080; in 1940, 1,065; in 1941, 1,000; in 1942, 910, and in 1943, 880. That shows a yearly decrease of about 50,000. If that rate continues I wonder what the condition will be next year when the figure is reduced by another 50,000. And that includes the operator himself. The same condition is true so far as hired help is concerned. In 1939, taking the same date, in thousands, the figure was 285; in 1940, 270; in 1941, 220; in 1942, 175; in 1943, 140. In other words, we have a yearly decrease there of about 36,000. That is hired help, so that hired help will be practically non-existent for this fall's work, because the Minister of Labour is taking all casual workers who used to work during the agricultural season and putting them into industry, and industry, it is hoped, will continue on a fairly level base from now on. Well, we shall have to take some from the armed forces and probably industry and put them into the mining industry, but there will be no help from that source for agriculture; and when you reduce the actual male workers on the farm by 50,000 a year and the hired help by 36,000, you will find agriculture this fall in a most precarious situation.

The Minister of Agriculture suggested that the farmers should avail themselves of the services of the employment offices. That is all very well as far as it goes, and probably they will be assisted to the extent that their applications can be filled. But if you look at the table for Saskatchewan and Alberta—I will not refer to the other provinces—you will find that the placements were 115 males and fifteen females for the month of March, 1943; and in April of the same year the number of males was 298 and females sixteen. But the unfilled orders that were sent in numbered 942 males and 135 females.

What good purpose would it have served for the people in that district to take advantage of the employment services or of the selective service agencies? They could not begin to fill the vacancies that already existed, and there was no use in appealing to them because they did not have the men. In Alberta we find a similar situation. You cannot therefore pick out one province and say that though the condition I have described existed there, it was simply a localized affair. In Alberta, in March the placements numbered 304 males and 39 females, and in April it was 714 males and 43 females. For Alberta the unfilled orders from April 29 were 576 males and 125 females. That was last year. If the same rate of depletion continues as in the last three or four years, and there is no reason to believe it will not, the situation is going to be aggravated almost twofold this year.

Mr. GARDINER: My hon. friend said, "That was last year". But the figures he was just reading were for March and April of this year, 1943. I am sure my hon. friend does not want to misrepresent things.

Mr. JOHNSTON (Bow River): I do not want to misrepresent anything. It is quite true, as the minister says, that the figures I have just given were for 1943. But the fact remains that there will be fewer men on the farms this fall than there were March 31, 1943, because they are being taken away from the farms now. I have just stated that some of these postponements are not being granted any more. The minister for air said quite definitely the other day that he was not going to fool round any more with postponements from the air force, that the men had either to be in the air force or on the farm, and that if they wanted to be on the farm they would be discharged from the air force.

Mr. GARDINER: Those are all voluntary enlistments.

Mr. JOHNSTON (Bow River): It depends upon what is meant by voluntary enlistments.

Mr. GARDINER: It does not depend upon anything. They are voluntary enlistments.

Mr. JOHNSTON (Bow River): Of course the minister knows that we have come to understand voluntary enlistment now as a modified form, and a strong form, of conscription. The minister knows quite well that when these boys on the farm know they will be called up into the army, just before that time comes they volunteer. That is not voluntary enlistment in the ordinary accepted sense of the term; that is coercion.

Mr. GARDINER: I do not want to argue the question of military enlistments, because I do not think this is the proper time. That question has already been argued for three weeks, but I think it is only fair to say that many of the men enlisting in the air force to-day are eighteen years of age, and no one has been compelling them to go anywhere.

Mr. JOHNSTON (Bow River): They wait until they are about to receive their call-up notice and then they enlist, for the obvious reason that they know they will have to go. I could give the minister many instances where that has occurred. As I told him, I have three letters on my desk that I answered just to-day in regard to that very matter. The minister might say that if they are essential to agriculture they will get off, but that definitely is not so. As I pointed out to another minister the other day, when a member of this house attempts to get a postponement for one of these farm boys what happens in some cases—I will not say in all cases—is that as soon as the commanding officer finds out that he may lose one of his boys, the boy is shipped away; he is put in a draft for overseas. I have known that to happen twice within the last month and I read a portion of a letter about it the other day. So that we cannot depend upon possible postponements for our agricultural help. I am not blaming the armed services, because you cannot have an air force, or an army, or a navy, if the fellows are going to be in the armed services one day, home the next, and back in the armed forces the next day.

Obviously something definite must be done to ensure agriculture the man-power it requires. We must view agriculture as an essential industry and treat it as such. Otherwise, this fall and next spring when we are seeding another crop we shall find ourselves in the greatest difficulties. Agriculture must be treated as a war industry.

I can see a great deal of benefit in having a defence force and in giving everybody a certain amount of training. I would suggest that the boys from the farm be given their training for home defence purposes during the winter or in between seasons for agriculture, and it should be definitely understood that when their services are required on the farm in the spring and in the fall they will not even have to ask for leave and be worrying whether they are to get leave or not. Let it be definitely understood that in the busy seasons on the farm they will be sent back on the farm. Then the farmers can make their plans accordingly.

Take the case I gave a while ago. This farmer is about fifty-five years old. I know him quite well. He has about six hundred acres yet to be seeded. His boy has gone. His son has been transferred to another ship. His nephew, who was helping him before, is on the Atlantic coast. They applied for leave last spring, but their cases were put off and put off until now this farmer is up against an impossible situation.

A lady from Quebec wrote me that her son had been taken into the air force and that, in consequence, she had to dispose of her great dairy herd. They are now milking only one cow. She gave me the names and addresses of several families within fifty miles of Montreal which have had to dispose of large dairy herds. The situation is becoming so serious that we shall have to take a longer range view, and I think the Minister of Agriculture should definitely state some concrete policy in regard to farm labour. The boys in the army who are essential to agriculture will have to be sent home to the farm to stay there, and the only military training for them should be for the reserve army, the training to take place during the off seasons for agriculture.

Another thing that has been pointed out to me and, I am sure, to other hon. members, is that hired help is asking such tremendous wages that the farmers simply cannot pay them. The price the farmer receives for his products is not sufficient for him to pay the high wages that are being asked to-day. Ordinary farm labour this spring was asking for seven dollars a day. That was in threshing time this spring. With present prices the farmer simply cannot pay it. Then what is going to happen? Just what happened last year. The farmers are not going to pay such wages because their returns are not sufficient to enable them to do so; it is not because they do not want to do so. The result will be that this year there will be a great drop in the production of foodstuffs. If somebody suggests that instead of raising so much wheat the farmers should go into mixed farming because that does not require as much labour, he is definitely wrong. Anyone who has had to feed cattle during the winter would never make a suggestion of that kind.

We shall have to control the wages the farmers are asked to pay, or we shall have to increase the prices which the farmer receives for his products, so that he will be able to pay these high wages. I am not blaming the fellows who are out working for hire, because they see men who are working in industries in the cities getting high wages. Mind you, they do not work as long as the fellows who have to work on the farms. When you get up at five o'clock in the morning and work until ten o'clock at night you earn your $7, but when you work in an industry you do your eight hours and then go home. Of course some farmers are a little better off than others; they may have a little more power equipment, but there will have to be an adjustment in the prices of farm products. I do not think the bonus scheme is at all satisfactory. I believe the principle is wrong, when you give farmers bonuses for not raising wheat. I think if you

paid them a decent price for their produce they would not require nor ask for bonuses, and you would overcome a great deal of the difficulty.

In the last two or three months I have received several resolutions, some of them rather in the form of petitions, signed by large numbers of ratepayers protesting against the prices received for two commodities, namely, pork and eggs. I was asked to bring this matter to the attention of the minister. They say they can see no reason why there should be such a fluctuation in the prices paid to producers of pork, since the price is set for the packers at seaboard. If that condition still prevails, and I presume it does—

Mr. GARDINER: The fluctuation is all above the price set.

Mr. JOHNSTON (Bow River): Yes; but the point is that there should be some stabilization, so that the farmer might know definitely what he would get. In all these resolutions I have received, in regard to both pork and eggs, the request was made that there should be stable prices so that they might know exactly what was coming to them. One of the great handicaps to farming is the uncertainty of it; uncertainty regarding weather conditions, uncertainty regarding the length of the season, uncertainty regarding help both in spring and fall, and then, on top of that, uncertainty as to price and whether or not they will be able to sell their grain at all. In addition to all that, there is the tremendous worry of how the mortgage is to be paid.

Let me give an illustration to-night. This man has been farming for about thirty-five years. He had a mortgage of $7,000 on his farm. He paid $3,500 in interest in one shot and $2,200 just a little while ago, but he still owes $9,000 and he is going to be foreclosed. Show me an industry in this country that has to put up with these conditions. Why, industry would not stand for it for a moment. Those of us who were on the war expenditures committee last year know definitely that wages do not concern the industrialist very much because they are all figured in the cost of production. When industry has to hire unskilled help, that extra cost is figured in. It will be remembered that last year we sent schoolboys out west to help the farmers, and those schoolboys had to be paid $4 and $5 a day. But the farmers were not allowed to add that extra expense to their cost of production.

What happens at the Fairchild plant in Montreal, or at any other place; I do not pick out that one particularly? When they have to take on new hands, is the price of their commodity raised? Yes, it is raised, not by $1,000 a plane but by much more than that, due to the extra cost of this green labour they have to train. I am not complaining about that; but I do say that if industry is to be treated in that way, surely there is an obligation upon the Minister of Agriculture to see that agriculture is treated in exactly the same way. That is not asking too much. I do not see what objection the other members of the cabinet could have if the Minister of Agriculture were to say: We are not asking any favours for agriculture; we want it placed on exactly the same footing as other essential industries. No logical, sane individual, even though he happens to be a cabinet minister, could possibly object to that. Is it not discrimination to the *n*th degree when we ask the farming people to pay double the wages they have been paying, yet say that they dare not add that increased cost to their cost of production, and that we will not compensate them in any way for it?

As a result of the labour condition that existed last year, farmers were not able to have their grain threshed, and in my district, owing to mice, they suffered a definite loss of ten bushels to the acre. Why? That was no fault of their own; it was partly due to the weather, but it was partly the fault of the Department of Labour, because the farmers did not have the help they needed. If an industry in this country is held back through no fault of its own, that extra cost is immediately added to the cost of production. We never ran across an industry in all of Canada that had to stand those losses, and moreover we did not run across one instance in all our travels across the country last year in which an industry was even asked to stand that loss. It was a foregone conclusion that all these added costs were to go into the cost of production, and then, in addition, industry is given what it considers a reasonable profit. Surely it is not asking too much to say that agriculture should be treated in exactly the same way. It is not a case of pleading for agriculture; it is a case of stating the facts, and hon. members of this house should demand of the government that this be done.

Mr. DONNELLY: I wish to say a word in regard to the farm labour situation. I come from a constituency in which the only industry is farming; there is no other industry at all, only the small villages which exist to meet the convenience of the farmers. While labour is not abundant in my constituency, still there is no labour shortage. The farmers all have their crop in again this year. It is true that last year we had a big crop and

we were not able to get it all harvested, but that was not on account of any shortage of help. There was plenty of help; people were walking the streets, unable to get any work, and that condition was owing to the weather. During the month of September we were able to work on the land for only four days; the rain prevented us from doing any harvesting. During the month of October we were able to use a combine for only eight days, and the result was that our crop was left on until this spring. But some weeks ago all our crop was in, and it is looking well; there has been plenty of rain.

I wish to say also that throughout my constituency there will be found very few boys remaining on the farms. They are practically all somewhere in the forces, in the army, the navy or the air force. The only boys left there now are not able to go into the forces on account of their physical condition. Most of our boys were volunteers, and I do not think it is fair or right for the hon. member for Bow River to say that these young men enlisted because they were afraid they might be conscripted. The boys in my constituency did not enlist for that reason; they enlisted of their own accord. They were not afraid of conscription or anything else. Many of them enlisted long before they became twenty-one years of age, when they might be conscripted. Many of those boys who volunteered have gone overseas, and they are there willingly, not because they were afraid of anything.

Farming conditions in western Canada are now quite different from what they were. When I went to western Canada and was farming in the district of Abernethy, when we would farm a half-section of land, 320 acres, we would put about 200 acres in crop and would summer-fallow 100 acres. In the spring of the year a man would have to hire another man to help him. He would get his crop in, and then summer-fallow his own 100 acres himself. When the fall came he would have to hire another man to do the stooking, and half a dozen or a dozen men would come in to help him take it off and thresh it.

To-day farming conditions in the district I come from are the very opposite. We can now farm two and a half sections, 1,600 acres, with just as little farm help as was required on half a section some years ago, and we can do the farming in the same time. We take 1,600 acres to-day, and pay a man to work the combine. We seed 800 acres, and one man can do it all. When he has done the seeding he turns round, takes off the seeding attachment, uses the one-way and summer-fallows the other 800 acres, keeping it black all summer. When the crop is ready to harvest, a man is hired to run the combine and another to drive the truck. They can take off a crop that required ten or twelve or fifteen men in earlier times.

To-day we do not have those big harvesting excursions coming from eastern Canada that we had years ago. Any who came into my district last year were not needed.

Mr. JOHNSTON (Bow River): Why did you not get your crop harvested?

Mr. DONNELLY: On account of the weather. That is the same reason why many people in eastern Canada have not been able to put in their crops this year—the weather. If they were able to get to work on the land for six days, they would get their crops in. But where you can work for only one or two days in a week it is a different proposition. It is the same way with us. We had adverse weather conditions. If we had had more combines, then in the days we could work we would get more off. But men were no help to us. We wanted machinery. We want weather; and if we do not get the weather, and enough machines to take off the crop, then it cannot be taken off; that is all there is to it.

Mr. McIVOR: Cannot the government do anything about the weather?

Mr. DONNELLY: Sometimes we think it should. It is nice to have the weather with us, anyway.

Mr. PERLEY: The hon. member might be a good minister of weather.

Mr. DONNELLY: The hon. member for Bow River has referred to bonuses, and has said that the bonuses were not satisfactory. I want to say to him that I lived in a district where for ten years we had no crop, and almost ninety-nine per cent of the farmers were on relief. It was God's blessing when we got off relief and received the bonus.

Mr. JOHNSTON (Bow River): You should have farm insurance, not a bonus.

Mr. DONNELLY: We received the benefits of the Prairie Farm Assistance Act, which is a sort of insurance against crop failure.

Mr. JOHNSTON (Bow River): What we should have is complete crop insurance.

Mr. DONNELLY: That was one of the best pieces of legislation for the farmers of western Canada ever passed by this House of Commons. And I defy the hon. member, or anybody else, to go into my constituency and tell my people it was not.

Mr. JOHNSTON (Bow River): I would be delighted to.

Mr. DONNELLY: Come on and tell them, and see how you will be received.

Mr. JOHNSTON (Bow River): I probably will.

Mr. DONNELLY: They believe it was the best piece of legislation ever put on the statute books as insurance against crop failure. A man does his work, puts in his crop; then Providence is against him, and he gets nothing. It is not his fault. This is some sort of insurance against that very thing. The Prairie Farm Assistance Act does relieve the burden, a little. Nothing had a greater effect in undermining the morale of our people in western Canada than had relief. This is one method whereby the necessity for relief is lessened, and we are getting away from it.

Mr. JOHNSTON (Bow River): A poor method.

Mr. DONNELLY: It is for the poor man, or the rich man, or anybody else.

Mr. JOHNSTON (Bow River): I said it was a poor method.

Mr. DONNELLY: The big farmer suffers the same as anybody else. It is just as bad for him as it is for the other man.

Then the hon. member for Bow River mentioned a while ago that wages in industry had increased, but that farmers are not being treated in the same way. I suppose my hon. friend is a wheat grower, and he surely knows that in the last three or four months the price of wheat has gone up over ten per cent. Surely he knows that the price of wheat is now $1.01 or $1.02 a bushel, whereas not long ago it was only 90 cents. If that is not operating on behalf of the farmer, the same as it is for industry, I should like to know what it is.

Mr. PERLEY: Why has it gone up three cents in the last three days?

Mr. DONNELLY: Some hon. members have been asking that the grain exchange be closed. What will they do when it comes to that? If the grain exchange had not been open we would not have known that the price was $1.01 or $1.02.

I do not intend to take up the time of the committee any further. I wish only to say this, that so far as farming conditions in western Canada are concerned this year, we still have plenty of help in the section of the country from which I come. We have our crop in, and we will take it off.

[Mr. Donnelly.]

Mr. ROSS (Souris): I had not intended to say anything about man-power, because I have said something about that already. But when the hon. member for Wood Mountain was talking about that one-way seeder attachment I was wondering how he was going to fill the bacon and dairy quotas. I happen to live in western Canada, and I am sorry to say that in my constituency we have a distinct labour shortage. We do operate more than the one-way and a combine, and I think that condition prevails throughout most of the area where diversified farming is practised. I know something about the conditions which prevail in my hon. friend's riding, and I think what he said is correct, so far as it applies to that part of the country. But that certainly does not prevail throughout western Canada. I am sure the Minister of Agriculture would not say he was satisfied with that kind of production.

Mr. DONNELLY: I did not say that was the only thing we did.

Mr. ROSS (Souris): The hon. member was not able to say much else, either.

Mr. DONNELLY: My hon. friend might be surprised at what I might say.

Mr. ROSS (Souris): I do not wish to repeat any argument that has been made, both at the last session and at this one, as to the condition agricultural producers face to-day. I am sure we expect a greater effort on the part of the Minister of Agriculture in this respect. Not long ago I said we were going to get our crops in, but I did not know how we would take the hay off, and the other crops in the fall.

It is a sad picture to go to some farms in my constituency and see old people looking after the stock, and the conditions under which they are carrying on to-day.

I have another point to bring before the committee, although it may not be quite in order. The committee on agriculture was not called until June, but in the past two days it has held meetings while the house has been in session. At one of the first meetings I said that when the chairman of the wheat board was here I would wish him to make an explanation of the statement made by the Minister of Trade and Commerce respecting durum wheat. The other afternoon I happened to be in the house when that particular matter was explained before the committee on agriculture. I raised the question next day, and the chairman, for whom I have great respect, said that the chairman of the wheat board had made a very full statement, one

which he felt would satisfy me when I read it in the proceedings of the committee. I received a copy of those proceedings this afternoon, and I wish to assure him that the statement did not satisfy me, at all. In fact, it is not as full a statement as the minister made on March 29—and that did not satisfy me, either.

Since then I have received a return dated April 14 as to the total acreage of durum wheat grown in Canada in 1942. There were some 259,000 acres, with a yield of 6,800,000 bushels. The amount of the 1942 crop marketed from August 1, 1942 to May 1, 1943 was 2,578,000 bushels. The amount exported in the same period was 526,000 bushels.

I have a return dated April 1, asking for the number of macaroni manufacturing firms in Canada, and I find that in 1941 there were twenty such firms. The total amount of flour used annually for macaroni is forty-six million pounds, which is less than one million bushels of durum wheat. Of the 1942 durum wheat crop, over two years' supply for macaroni had been delivered, and exports had been made during that period when the minister made the statement on the last day of March. According to the facts we are able to obtain, the percentage of durum wheat available over annual requirements is just as great as that of hard wheat. I know it is stated by the officials of the board that the reason for the recommendation to the government was that durum wheat delivered under the quota had been pretty well exhausted and that, in view of the prospect of meat rationing and the necessity of the encouragement of the use of other foods, it was recommended to the government that durum wheat, which is not used for bread making but entirely for the manufacture of macaroni and other allied products, be delivered irrespective of the quota.

During the interval I have checked things in my constituency which is in southern Manitoba, and I have found that the producers there have grown considerably over 12,000 acres of durum wheat and have received a return of some 300,000 bushels. When the statement was made at the end of March, over three-quarters of that durum wheat had been marketed and there was very little left. The fact that this statement was made has created quite a change in seeding operations in southern Manitoba. This is directly the responsibility of the Department of Agriculture which has to do with matters of production, and since the Minister of Agriculture is a member of the wheat board, along with the Minister of Trade and Commerce, the Minister of Mines and Resources and the Minister of Finance—

Mr. GARDINER: The wheat committee, not the wheat board.

Mr. ROSS (Souris): I mean the wheat committee of the cabinet. I think the minister should enlarge upon the statement which was made. It does not bear out what we were given to understand by the Minister of Trade and Commerce, and the great bulk of this durum wheat is produced in southern Saskatchewan. I am sure the Minister of Agriculture is conversant with the whole picture. We may not have another opportunity to take up this matter before the seeding operations of 1944 are under way. We may be able to make a statement on the speech from the throne, but I doubt if we shall be able to go into this matter and question officials before it is too late next spring. I think the minister should enlarge upon the reasons for issuing this order, because the facts I have been able to obtain from the returns placed before the house do not bear out the situation as pictured by the Minister of Trade and Commerce.

Mr. GARDINER: Replying to what has been said by the hon. member for Souris, I can only say that the matter to which he has referred would be dealt with entirely by the Department of Trade and Commerce and not by this department. Therefore I would hesitate to attempt to make a statement to-night without the records in front of me to show the exact situation. If it is thought wise that I should do so at some later time in the discussion, I shall be glad to look up the records and familiarize myself with them, and discuss the matter in so far as it relates to these estimates.

A number of other statements have been made with regard to the situation, and I should like to say something about them. The hon. member for Bow River (Mr. Johnston) appealed to me to take some stand in connection with farm labour. All I can say to him with regard to that is that we had a discussion about farm labour back in March, 1942, when it was discussed at considerable length on my estimates, as well as at other times during this session. The figures he has quoted to the committee give some indication as to what has happened as a result of the discussions which took place at that time. As has been stated already by the hon. member for Bow River, on March 1, 1939, there were 1,080,000 male family workers on the farms of Canada. In the year following, six months of which was during the first year of the war and before we became very active in making munitions or in the enlistment of men, this number was reduced to 1,065,000, or a reduction of 15,000. In the following year

there was a further reduction of 65,000, and in the year following the reduction amounted to 90,000. That was as at March 1, 1942. It was in March, 1942, that we took action to halt the increase in the number of those who were leaving the farms, and the result was that as between March 1, 1942, and March 1, 1943, only 30,000 male family workers left the farms.

Mr. JOHNSTON (Bow River): What is the average yearly decrease?

Mr. GARDINER: I am not speaking of the average, because that does not meet the point I am making. The point is that in 1941-42 a total of 90,000 left the farms, and then, on account of the action that we took in March, 1942, only 30,000 left in the next year.

Mr. JOHNSTON (Bow River): Because the surplus had already been drawn off.

Mr. GARDINER: Not according to the argument my hon. friend was using. He was arguing that if we went on at that rate we would have all the people off the farms. We did not go on at that rate. Where there had been an increase from 65,000 to 90,000, in the following year there was a decrease to 30,000, a direct result of the action taken by the government following the discussions which had taken place in the labour committee, of which I happen to be a member.

Mr. DOUGLAS (Weyburn): That is still twice as many as before the war.

Mr. GARDINER: We had discussions early in this session, and I think every hon. member, even those on the other side, who come from western Canada, will agree that since the discussions took place early in February there has been a marked change.

Mr. JOHNSTON (Bow River): We could not stand another 30,000.

Mr. GARDINER: I am just replying to the statement my hon. friend made that the Minister of Agriculture ought to do something about the matter. The Minister of Agriculture did not wait until June, 1943, to do something about it; the Minister of Agriculture acted in March, 1942, and the government, along with the Minister of Agriculture, took action. When we were not getting the results we wanted from that action I did not remain in Ottawa; I went out to Saskatoon and met the farmers; I went to Regina and met the board. I then came back to Ottawa and placed the situation before the Minister of Labour (Mr. Mitchell), who immediately took action. I think every hon. member from western Canada on the other side of the chamber will admit that since that action was taken, the condition has been considerably different from what it was before the action was taken. I make this statement to indicate that we have not been resting on our oars in connection with this whole matter.

Referring to the other question which was raised as to whether the farmers are going to the labour bureaux when they are short of labour, I submit that nowhere in *Hansard* can it be found that during this discussion I said that the farmers ought to go to these bureaux. What I did say was that they actually do go to these bureaux. I administered the labour bureaux in Saskatchewan for five years when I was a member of that government. I know that during that period the farmers came to the labour bureaux when they were short of men, and I know they have followed that practice ever since. They have been coming to these bureaux continuously and asking for help. As for the hon. member who is just rising in his place, I am going to say something which may convince him that he had better wait until I am through.

Mr. WRIGHT: I was going to ask the minister if he had the figures of the percentage of farm help in the western provinces that is hired through the bureaux.

Mr. GARDINER: When I was west I took occasion to get the reply to the statements which were made by the hon. member for Melfort during the discussions which we had some three weeks ago. I got the report on his own municipality, and I found that, according to the statement of the secretary-treasurer—

Mr. WRIGHT: What municipality is that?

Mr. GARDINER: The municipality in which my hon. friend farms. He knows the name and number better than I do.

Mr. WRIGHT: I doubt if the minister knows it.

Mr. GARDINER: I have the record, and I can place it on *Hansard* at any time. But my hon. friend knows what municipality it is.

Mr. GRAYDON: It is not far from Tisdale, anyway.

Mr. GARDINER: It is not very far from Melfort. The facts are these, that 150 or 151 men were placed in that municipality by the individual there who acted on behalf of those who were taking care of employment in Saskatchewan. The statement which was made here was that men were asking $100 a month, and I took it from what was said that some of them were getting it. The information I got from the records was that one man had been paid $85; that that one man was an expert operator of a tractor, and that the man

who employed him was quite satisfied to pay him $85; he wanted this man for employment. Then I got the further information that a number of others were paid $75 as operators of tractors, but that the general wage paid in that municipality for farm labour was from $60 to $70 a month. That is a fairly high wage, and I would not try to build an argument on the supposition that $60 to $70 a month for farm labour in western Canada at present, and more particularly in Saskatchewan, is not a fairly high wage under all the conditions.

An hon. MEMBER: And board?

Mr. GARDINER: And board, yes. But I would say this, that if a farmer is going to hire a man for only the two months during which he is busy seeding, and then is going to let him go, and hire another man for two months while he is harvesting, the story is entirely different from simply saying that a man is getting $60 or $70 or $85 a month to do a particular job. If he is to be hired through the whole summer he might be paid one wage; if he is to be hired through the whole year he might be paid another. But simply to rise in the house and say that somebody was paid $100 or $85 does not prove anything in connection with this discussion.

Mr. WRIGHT: If I might correct the minister, I did not state that any man was paid $100 a month. I said the man was hired at $75; he asked $85 after working for two weeks, and the farmer agreed to give him $85; when he increased his price and wanted $100, the farmer refused to hire him at that figure. That is the statement I made. The minister has not yet answered my question as to what percentage of the farm help hired in the western provinces is hired through the employment bureaux?

Mr. GARDINER: It is not a question of the percentage hired through the bureaux. I know that percentage is low. The average farmer in western Canada, like the average farmer in eastern Canada, hires his help without having to go to the employment bureau at all. It is only when he is finding difficulty in obtaining help that he goes to the employment bureau. But if, after all those have gone to the employment bureaux who have felt inclined to go, the results are as indicated by the figures I put on *Hansard*, those figures do not indicate any great shortage of labour in the particular area covered by those figures, and that is all they were intended to indicate. When we go beyond that, I think every hon. member will admit that there are farms all across Canada upon which there is a shortage of labour, and the fact that any hon. member gets half a dozen or a dozen letters in a week indicating that there is a shortage of labour on some farms is something to be expected. We have in Canada 750,000 farmers. If out of those 750,000 some few thousands are short of labour, letters will come to hon. members from those who are short of help. But I must say that, of the letters which I get with regard to shortage of labour, by far the greater number come from people whose sons have volunteered either for the armed services or for some work in munition plants or in shipyards or somewhere else; and there are a certain number too who write in on account of something which has happened in the calling up of men which is not fully understood, and about which sometimes action has been taken that should not have been taken. But I repeat what I said the other night, that by far the greater number of the cases which come to me, even yet, deal with situations which were created before the first of February last. There is the occasional one which was dealt with after that date, but that is not true of much the greater number. I quite agree that hardships are brought about by situations such as were outlined by the hon. member for Bow River. Any man who was put on a ship and sent to Britain after being fully trained must have been in the armed services before the first of February last, and was there under the conditions which existed before the last action was taken by the labour department to deal with them.

I must say, too, that a certain percentage of letters which I receive come from people who have been doing more than the country expected of them in connection with the prosecution of the war, and doing it conscientiously. For example, two or three days ago I had a letter from a woman in Saskatchewan whom I know very well, calling my attention to the fact that her son had enlisted very early in the war and was still in the service. She called my attention to the further fact that she and her husband over a considerable period of years have not been in good health —which I also know to be true—and then she says "Our son thought that he could go over with a group of other men and clean up this fellow Hitler, get the war over and come back here to work," but, she said, "it is taking much longer than he thought. It is now going on four years, and he is still away, and we are unable to carry on longer." Well, I did what other hon. members do; I sent the letter to the military people; they have taken it up, and I am quite satisfied that in cases of that kind action is taken, and has been taken

regularly ever since the war started, in order to deal with such situations and make it possible for men who are in the army under those circumstances to go back to the farms and give assistance.

However, after all these individual cases that we can bring up have been dealt with, a very large proportion of the 750,000 farmers have made no complaint whatever. If the facts were otherwise, the situation would not be what it is to-day. I have here the last figures in connection with production and the storage of farm products. They are not yet in print; but they indicate, as all the figures down to the present have indicated, that there is not this reduction in the production of farm products which is hinted here in practically every speech delivered by those who are critical of the present position.

In cheese there is a reduction in production; but in milk there is no such reduction and, after all, the foundation of all production of dairy products is milk. So that if more milk is being produced this year than last year or the year before, we are certainly not going down in our production of that particular product. There is more whole milk being consumed in Canada to-day than at any other time in our history, and the consumption is going up day by day. There may be reasons why the government might want to change that; but if they did attempt to change it, I am sure that everyone who is trying to do something to assist in seeing to it that our people, and more particularly our children, are better fed, would immediately complain about our attempting to cut down on the consumption of milk in order to get an increased production of something else.

However, in spite of the fact that cheese production is down this year as compared with last year, it is not down as compared with any other year recently in our history apart from last year; and in spite of the fact that our production is down, our exports are higher this year than they have ever been in any year since the war started. In other words, if what my hon. friend the member for Bow River is concerned about is the feeding of the British people, we are still sending them more food each year than in the previous year, and that applies not only to cheese but to pork products. And we are making preparations for sending beef, which we have never sent since the war started. We are sending, and have available, more wheat than we have been called upon to send previously. And so on. I could go through the whole list.

I say this in order to point out that the statements which were made continuously, and which were called to the attention of the house the other night by the Minister of Labour, have no foundation at all in fact. The hon. member for Lethbridge was holding forth on his fear that we would have shortages, and the Minister of Labour said, where, or what does he mean by shortages? If I remember the words of my hon. friend, they were to this effect: If the minister does not know what I mean by shortages, then I am not able to tell him.

His next question was, do you expect us to feed all the Chinese people? Well, now, that question was a reasonable one. Most of the discussions that are going on with regard to a possible shortage of food in Canada are related to the feeding of the whole world, and I do not think anyone in this house or in this country, who is well informed, will take such a ridiculous position as to maintain or try to maintain that a country with eleven million people, even if they were all farming, could feed even those people in China who are suffering at the present time as a result of lack of food. We are attempting to send food over to Britain in a volume which will be sufficient to keep the British people and the armed forces working out of Britain supplied with food.

Someone—I believe it was the hon. member for Bow River—said that, if necessary, we should ration ourselves down to the point where we are going short in order to save the people in Britain from going short; and that is exactly the policy the government has been following ever since the war started. From time to time we have found it necessary to ration, but I am afraid that members in this house, on account of the fact that we have never been short of anything, have an entirely wrong idea as to what rationing is put into effect for.

Britain rationed cheese last year in order to try to increase her consumption of cheese. She put the ration up to the figure of eight ounces in an attempt to get it up to eight ounces, but it only went to five ounces.

Mr. JOHNSTON (Bow River): Is that what we are doing here? Does the minister suggest that?

Mr. GARDINER: It might be a good thing to do it with some products which we have rationed and are now piling up in this country.

Mr. JOHNSTON (Bow River): I was just asking for information.

Mr. GARDINER: Let me answer my hon. friends in the words of the hon. member for Lethbridge. If he does not understand it after the number of times I have explained it in the past, I am sure my explaining it again would not help him. The situation is simply

this, that ever since this war started we have been giving Britain all the food that we could possibly give her and at the same time keep our people fed with the minimum they require. In 1941, for example, we took all the cheese off this market during the summer months and sent it to Britain and told our people to eat something else, and they ate something else and had no difficulty in finding it.

Every year since the war started we have said to the farmers, "We do not want you to produce more butter than the people here eat", and down to last year they produced a little more than the people wanted and last year a little less than they wanted to eat, and accordingly we rationed butter. This year we have a greater amount of butter in storage than we have had over a long period of years, some four million pounds more than we had over an average of five years preceding 1940. In other words, the situation has righted itself in a very few months so far as butter production as compared with consumption is concerned. We can right any situation that may be created in connection with food in this country, so long as the situation is as it has been since the beginning of the war.

Something was said with regard to prices. It was said that we should have better returns. We have had increased returns from the production of munitions and machines of war; the companies that are producing these things have increased returns. I am not going to try to convince members of this house that farmers are getting all they ought to get in the way of prices for farm products. I do not know that anyone gets all he ought to get during war time; and if anyone is getting all he ought to get in ordinary peace times, then somebody ought to do something about it and see to it that at least we all make sacrifices during the war.

Let us look for a few moments at prices. Take butcher steers at Toronto. In 1939 the price was $6.77 per hundred and in 1942 it was $10.29 per hundred. Figure that increase, from $6.77 to $10.29. And the average of the years from 1926 to 1929 was $9.04.

Mr. BLACKMORE: The minister must, of course, make allowance, and I think he gladly will, for the fact that in 1939 the farmer who was going to feed would pay a lower price for his beef before he started to feed, whereas in the fall of 1942 he would pay a high price, and his actual returns from feeding in 1939 might be greater than his returns in 1943.

Mr. GARDINER: I agree. I have all the prices here and I can quote them to show the relationship. But my hon. friend, who comes from an area where they feed cattle, knows as well as I do that when cattle are selling at present prices there is money in feeding grain to those cattle at present ceiling prices.

Mr. BLACKMORE: Provided they do not pay too much for the cattle.

Mr. GARDINER: That is a matter of choice which they make themselves.

Mr. BLACKMORE: There was no choice last year.

Mr. GARDINER: Oh, yes, there was a choice.

Mr. BLACKMORE: In my district there was none.

Mr. GARDINER: I will deal with that later.

Mr. BLACKMORE: They could not get the cattle except at a certain price.

Mr. GARDINER: The average price from 1926 to 1929 was $9.04. The average twenty-year price was $7.04, and at the present time the price for the same grade of cattle is $12.38. All I am pointing out is that the price has increased. There is no use in trying to give the impression that prices of other commodities have gone up and that prices of cattle have not gone up. They have gone up. Let us look at hogs. In 1939 the price was $8.91. The average for 1926-29 was $11.61, and the average for 1942 was $11.72. In other words, the price had gone up from $8.91 to $11.72, and it was eleven cents higher per hundred than the average price for 1926-29. That is on the Toronto market, and the other markets compare with that.

The price of cheese in 1939 was 12·7 cents, and in 1942, 21·5 cents. The average price for the four years 1926 to 1929 was 18·9 cents. In other words, the price was 2·6 cents higher last year than what we call the parity basis, and there has been a difference of 8·8 cents since the war began. The jobbing price of creamery butter in 1939 was 23·8 cents, and in 1942, 35·1 cents. The parity basis was 38·2 cents. But on top of that price of 35·1 cents is the bonus of 8 cents in summer and 10 cents in winter, which brings the return to a higher level than the parity basis.

And so on. I could go through all the prices for all the products and show that the government has not lost sight of the fact that there must be increased returns for farm products.

Mr. BLACKMORE: Will the minister deal with the price of wool?

Mr. GARDINER: I am not sure that I have that here. But I can tell my hon.

friend this, that I have the relationship between the price of wool in this country and the price in the United States, which we discussed last year, and after you have made allowance for freight and for the tariff on wool going into the United States you will find that the Canadian farmer is getting a higher return in Canada than he would get if he were permitted to sell his wool in the United States. We are paying him a subsidy on his wool, too.

Mr. DOUGLAS (Weyburn): That is on account of the duty.

Mr. GARDINER: The fact that another country puts a duty on is the reason that they have a higher price than we have. They do it to get higher prices for their own product.

Mr. DOUGLAS (Weyburn): That is not an excuse for our not having a better price.

Mr. GARDINER: It is not an excuse at all. It is a reason for our not having that higher price.

Mr. PERLEY: That is hardly the case with beef, is it?

Mr. GARDINER: There is a condition existing with regard to beef, and there is a condition existing with regard to wheat, which my hon. friend was speaking of a few moments ago. The price of wheat which prevails on the Winnipeg market is exactly the United States price less the cost of taking the wheat to the United States and after accounting for the duty and exchange. It works out to almost identically the same price that you have on the Winnipeg grain exchange to-day. And so on. You can go through all the prices. As a matter of fact, I have gone through them to try to satisfy myself to what extent we might benefit if the United States boundary were open and we could ship our products in there, over whatever obstructions there might be against our doing so. When you take into account freight, tariff and other costs, there is nothing like the advantage in the price on the other side which some of us seem to think there might be.

An hon. MEMBER: What about the price to the United States farmer and the price to the Canadian farmer?

Mr. GARDINER: You have to take into account wages, the value of the land, overhead and so many other things before you can figure out just where the two stand on different sides of the line. Wages in the United States are higher than ours in spite of what has been said here to-night, and other costs are similarly higher on the other side. I want to impress on the committee that the situation which was emphasized by the hon. member for Bow River is one to which the government has been alive for a considerable period of time, and it has been doing something about it. The results are something that we are not ashamed of, although we may not be satisfied with them. I think that is all I need say at the moment. We have had a long discussion on this whole question, and I would suggest to the committee that we might now carry the item.

Mr. WRIGHT: I wish to say just a word with regard to quotas on farm machinery and farm machinery repairs. First, however, I should like to say a word on the farm labour question which the minister has been discussing again to-night. He stated that conditions were considerably better now since last March when the government issued orders to the boards suggesting that postponements be granted to those engaged in agriculture. I think that can be said generally of the whole dominion. But I have a return here which was brought down to the house on May 31, 1943, which gives the number of postponements requested and granted between December 1, 1942, and April 30, 1943.

The ACTING CHAIRMAN (Mr. Golding): I wonder if we could not keep to this item for granting to His Majesty $130,406 for departmental administration. We have had quite a lengthy discussion of the man-power problem, and I think it would be well to confine further discussion to the item before the Chair.

Mr. DOUGLAS (Weyburn): This is a general item, Mr. Chairman, and second, the minister has discussed the whole question of man-power. You say that we have had a general discussion. Is that discussion to end the moment one of our group rises in his place?

Mr. GARDINER: If I might speak to this question, Mr. Chairman, I think all will agree that I sat here the other evening for several hours listening to the discussion of labour problems, and I have sat here and listened again to-night. But I was asked questions and was urged to rise and answer them, and I hoped that when I was urged to answer, my answer would close the discussion on this particular matter. I think considerable leeway has been allowed in the whole discussions in the two days these estimates have been before the committee, and I do not think the Chairman is suggesting anything unreasonable when he suggests we should confine further

discussion to the item. As a matter of fact this question can be discussed on another item in the estimates, but if it is to be discussed now instead of waiting until we reach that item, it will mean the discussion will take place over again later.

Mr. WRIGHT: The matter I wished to discuss was farm machinery, but first I just wanted to answer the minister with regard to the question he raised. This return shows that between December 1, 1942, and April 30, 1943, in the district of London, Ontario, 1,652 requests for postponement were made and 1,014 were granted, or 97 per cent; in the district of Montreal 5,478 requests for postponement were made and 5,461 were granted, or 99·7 per cent; in the district of Regina, Saskatchewan, 6,630 requests were made, of which 4,678 were granted, or 70 per cent.

Mr. GARDINER: What were the dates?

Mr. WRIGHT: Between December 1, 1942, and April 30, 1943. These are the latest figures available.

Mr. GARDINER: I think, Mr. Chairman, if the hon. member will look at the figures which were put on *Hansard* months before, he will find very little difference between them and the figures he is now giving. In other words when you go back to December—of what year?

Mr. WRIGHT: 1942.

Mr. GARDINER: You still have the figures which were coming along through January and that period when, as I said before, there was considerable difficulty. Many men were called up during that period who were denied postponement, but I think everyone admits that there has been quite a change from the middle of February down to the present time.

Mr. WRIGHT: This is up to the end of April.

Mr. GARDINER: If you had it by months I might be able to answer it. If you had it for January, February, March and April separately, it might indicate something.

Mr. WRIGHT: I would judge that it does indicate something, that there has been very little improvement, though I do believe the situation is rather better. However, I am not going to discuss that further at the moment.

With regard to the question of farm labour, I would suggest to the minister that larger quotas should be established in connection with new farm machinery and repair parts. We have been told lately that we have reached the peak in the manufacture of some war materials and that in some factories men are being laid off. If this is the situation, I believe the quotas in connection with farm machinery should be increased, which would be of assistance in meeting the labour problem, particularly in the west, where I know it will be critical this fall. If we could have a larger quota of combines and some of the newer types of farm machinery made available to the farmers, it would help the situation materially. So that I would ask the minister to give serious consideration to the possibility of making available more farm machinery at this time.

Mr. DOUGLAS (Weyburn): I wish to raise just one point on this general item. The minister may care to say something about it in more detail under some other item, but if I am in order I should like to raise it now. I wish to say a word about the grading of hogs. The minister may have received a number of complaints; I know that in going through the country I find that many people are perturbed over the matter of deductions in regard to hogs that are overweight. This winter I have been deluged, no doubt in common with other hon. members, with letters from people enclosing their receipt forms showing the deductions that have been made for overweight hogs. The chief complaint is that the deduction is so high for just a few pounds overweight. Farmers are not always able to ship just when they wish as a result of a number of factors into which I need not go at the present time, and when the hog is a few pounds overweight they lose $1 or $2, and, in some instances, even more. I have a number of receipts which I did not bother to bring down to the chamber; I do not think it is worth while to put them on record, for I imagine the minister has even more of them and is probably more familiar with the situation than I am. I wonder if he has given any thought to it, because in the minds of most of the farmers the conviction remains, whether or not it is justified, that this heavy deduction for a few pounds overweight is not warranted. Many of them are quite convinced, as a matter of fact, that the packer is getting it, because some of that overweight may disappear with the dressing knife; when the hogs are being dressed they can be brought within the weight limit. I have heard the suggestion, and I pass it on to the minister for what it is worth, that instead of taking off a set amount when the weight exceeds 230 pounds, as I think it is now, or 220 pounds—

Mr. GARDINER: No; it is 186 pounds dressed.

Mr. DOUGLAS (Weyburn): And 230 pounds live weight?

Mr. GARDINER: About 240 pounds.

Mr. DOUGLAS (Weyburn): The suggestion is that instead of taking off fifty cents or a dollar when the hog is overweight, it might be possible to graduate the deduction, to take off perhaps twenty-five cents for the first five or ten pounds, or ten cents a pound, or something like that, so that the farmer who has gone just a few pounds over will not have the same deduction made as in the case of a farmer who has gone twelve or fifteen pounds over. I do not know whether or not the minister has given that point any consideration, but I wish he would do so.

Mr. GARDINER: This matter has been under discussion constantly, not only since the war began but before the war. The policy we followed before the war was that of attempting to standardize our bacon so that it would compete with Danish bacon on the British market. In order to have our bacon compete with that Danish bacon we must have 200-pound hogs, not 240 pounds, and before the war we were attempting to hold the size of the hog down to 200 pounds. It was possible for a farmer to bring in a hog weighing anywhere from 190 to 220 pounds and get B-1 for it. If he had it around 200 pounds, probably he would get select for it, and receive a dollar extra instead of a discount. Since the beginning of the war, however, we have increased the weight. We are trying now to keep the weight at around 220, but we do allow them to run up to 240 and still qualify as B-1 hogs, which is the price always quoted on the market.

Mr. DOUGLAS (Weyburn): The deduction starts at 220 pounds, does it?

Mr. GARDINER: No; the deduction starts at 186 pounds dressed. If the hog is properly fed, it may run up to 240 pounds live weight and dress 186 pounds; but if it is fed in other ways, it may dress over 186 pounds without going up to the 240 pounds live weight, or it might go over the 240 pounds and still dress down to 186 pounds, depending upon how it was fed and bred. However, the general practice is to try to keep the hogs around 220 pounds, which gives a leeway of twenty pounds on either side, down to the 200 at which we tried to keep them before the war, or up to 240 pounds, to which we are allowing them to run now. I have had some experience in this connection in marketing my own hogs. The farmer says that because the hog went up to 187 pounds when it was dressed he was docked. It was not just because it went up to 187 pounds; he could have had it anywhere between 200 and 240 pounds live weight and still be given the B-1 price, or perhaps get the select price, which would mean a dollar in addition.

The question as to whether the packer or the farmer gets the dollar is not hard to answer; all one has to do is look at the record. The policy is this, that if you produce a particularly good hog you get a dollar extra. If you produce a particularly poor hog you have $1.50 taken off. When you add together all the dollars that are paid the farmers and add together all the deductions at $1.50 taken from the farmers they just about balance each other. In other words, they are making the man who produces a poor hog help to finance the man who produces a good one, with the idea of encouraging the farmer to produce good hogs instead of poor ones. That is the general policy. It is not a matter of the packer getting more. He would be much better off if every farmer produced select hogs, and so would everyone else.

As to whether or not this is a proper policy, all one has to do is look at the records across Canada and see how the standard of hogs has been improved during the period of years the policy has been in effect. Since the war started, we have been allowing the hogs to get heavier and heavier, as I have indicated. Only last week I had a report on conditions in the British market, to the effect that during the last twelve months, by allowing these increases in weight, we have greatly reduced the standard of the bacon reaching England as compared with the Danish bacon with which we must compete when the war is over. They raised another complaint as well; they said apparently our plants have not the efficient men doing the cutting that they had previously, because quite often they find a slash in the bacon that should not be there, or other marks which indicate that the men doing the work now are not as expert as those who were doing it before the war started. In other words, the experts have gone to other work, where they can get higher pay. That all indicates that we are slipping in the standard of the bacon we are sending over to Britain at the present time. If we keep on slipping until the end of the war, and are not able to raise our standards again, before the Danish people are in a position to come into the market with their product, we shall have difficulty in continuing to hold our market in Great Britain. That is the only question involved in the matter.

Mr. COLDWELL: Has the minister overcome the difficulty in connection with salting?

Mr. GARDINER: We have to salt more on account of the fact that we cannot always get the ships properly refrigerated to take the product over. We have to put in special refrigerators in the holds of ordinary boats, and we have to use more salt in order to keep the product in good condition until it arrives at its destination.

Mr. COLDWELL: And that is reducing the standard.

Mr. GARDINER: Yes; it does reduce the standard.

Mr. PERLEY: There is an item under which the subject of the marketing of live stock can be discussed. We wish to make some progress in committee. This is the second Friday on which we have discussed the first item. The minister has allowed us considerable leeway, and we have discussed about a thousand different farm problems under the item.

I know there is a shortage of farm labour. Even since last Friday I have received several letters pointing out that difficulty. I know of one instance where a farmer of sixty years of age lost his life because from trying to do a little extra work he caught cold, which developed into pneumonia.

The subject of man-power was discussed when the matter was raised by the hon. member for Témiscouata. The Minister of Labour will be before the committee in a few days, and the discussion will be repeated. I think we have heard enough. All hon. members know there is a shortage. From what the minister said to-night it would appear that since February the situation has somewhat improved. I would suggest that we discontinue our discussion of the labour situation, and go on with the items in the estimates.

Mr. WEIR: I was on the point of raising a matter of procedure. I would be one of the last to attempt to interfere with the consideration of any subject by hon. members opposite. To-night a matter was raised by the hon. member for Souris, and then we heard a reference to the farm implement and repair situation, followed by a discussion of hog grading. My point is that the matter raised by the hon. member for Souris was discussed in the committee to which it was referred.

Mr. ROSS (Souris): I pointed that out.

Mr. WEIR: I raise the second point of order, that the subject of farm machinery is in order of reference already before the house. True, it has not been passed, so that I do not suppose any point of order can be taken with respect to it. But with regard to hog grading, I submit that it should be discussed under item 28 in the estimates. If we are to make any progress we must get down to a consideration of the individual items; otherwise we shall have a repetition of discussions.

Mr. DOUGLAS (Weyburn): Did I understand the hon. member for Macdonald to suggest that any of the items which will later be referred to the committee on agriculture cannot be discussed in committee of the whole? If that is his opinion, he is entirely in error. The terms of reference the house may give to the committee on agriculture do not preclude the house from discussing the items in either committee of supply or committee of the whole.

May I thank the minister for his answer respecting hog grading. He did not say anything about the possibility of taking a 25-cent deduction for each pound above, say, 186 pounds. If a man had a deduction of two pounds it would be fifty cents, and three pounds, seventy-five cents, rather than $1.50 for being one pound over.

Mr. GARDINER: We gave twenty pounds leeway.

Mr. HANSELL: I shall not hold up the item unnecessarily, but I notice there is an amount of $2,000 for motor car allowance. I do not object to that. But do I understand that that $2,000 is exempt from income tax?

Mr. GARDINER: I think it is.

The ACTING CHAIRMAN (Mr. Golding): This item is statutory, and should not be discussed at this point.

Mr. HANSELL: I am not objecting to it. I think the minister should have a car. But what I wish to say—and I am going to be a bit bold about it, because no other person seems to have been bold enough to have mentioned it—

Mr. COLDWELL: Perhaps it could be done again under another item.

Mr. HANSELL: Perhaps my hon. friend does not know what I am going to say. I would point out that there are other people who have to run cars, too. Those other people include members of parliament. I do not know for what purpose the minister uses his car, nor am I particularly concerned. But I will guarantee he does not travel any farther on government business, with his car, than I do on parliamentary business with my car. I represent a large constituency, and I am not the only hon. member representing a large constituency. A great deal of the travelling

done by members of parliament is done because they are members of parliament, and must appear at farmers' conferences, municipal meetings and the like. One may receive a telephone call to come right along to attend a victory loan meeting, a Red Cross meeting, or a hundred and one other things.

Mr. MacNICOL: And we would not mind doing it if we could get the gasoline.

Mr. HANSELL: I do not suppose there is a western member who does not spend at least a thousand dollars each year on his parliamentary expenses.

Mr. GARDINER: If my hon. friend is going to make a speech, I must point out that Mr. Chairman's ruling was absolutely correct. This is statutory, and is not in the item.

Mr. HANSELL: I make that protest, and if I am allowed to go on I might be able to save the minister some expense. That is the situation, just the same, and I must protest against it. We are reaching the point where the poor man will never have a chance to represent the people of Canada in parliament. That is the fact of the matter. If we are to fight about this, I must say that I am not in favour of the passage of the estimate. If it is to be statutory, all right. But the matter should have some consideration by those in parliament holding responsible positions.

Mr. DOUGLAS (Weyburn): Would the minister explain the increase of $4,848?

Mr. GARDINER: That is covered by cost of living bonus, contribution to unemployment insurance and some increases in temporary salaries.

Mr. DOUGLAS (Weyburn): Any increase in the size of the staff?

Mr. GARDINER: No; on temporary salaries.

Item agreed to.

Administration service.

3. Advisory committee on agricultural services, $1,680.

Mr. PERLEY: What is the function of this committee?

Mr. DOUGLAS (Weyburn): Could the minister give us the personnel?

Mr. GARDINER: This is an advisory committee. I understand that the secretary has joined up, which accounts for the decrease in the vote. The committee is made up of Doctor H. Barton, deputy minister of agriculture; E. S. Archibald, director, experimental farms services; A. M. Shaw, director, marketing services; J. M. Swaine, director, science services; G. I. Christie, president, Ontario agricultural college; W. R. Reek, deputy minister, Ontario department of agriculture; L. P. Roy, deputy minister, Quebec department of agriculture; Robert Newton, national research council; L. C. McOuat, general agricultural agent, Canadian Pacific Railway Company; H. L. Trueman, assistant director, science services. They are all men who are drawing salaries from either provincial governments or corporations; we just pay the expenses.

Mr. DOUGLAS (Weyburn): How often did they meet last year?

Mr. GARDINER: They did not meet last year.

Mr. DOUGLAS (Weyburn): Is that why the item is reduced?

Mr. GARDINER: The secretary is not on the job at the present time. They may not meet this year.

Mr. GRAYDON: Has this advisory committee made a report?

Mr. GARDINER: The national advisory committee usually meets twice a year and has been in position to consider proposals that have been made either by its own members or by others connected with different phases of the work. They have made reports, but during this last year, largely on account of the conditions under which we have been working, they have not met.

Mr. GRAYDON: If the committee makes a report, I suppose it could be tabled?

Mr. GARDINER: I would think so.

Mr. DOUGLAS (Weyburn): Was any money spent under the item last year?

Mr. GARDINER: Just a small amount for travelling expenses.

Mr. DOUGLAS (Weyburn): The committee did not meet last year, and it is not expected they will meet this year?

Mr. GARDINER: I imagine that we shall probably not appoint a secretary to take the place of the man who is in the services; but if the war were to end and we put this man back in this position, we would likely go on with the work.

Mr. BLACKMORE: Could the minister give one instance where this committee has given him advice?

Mr. GARDINER: On one question in which my hon. friend is very much interested, wool and sheep and beef and things of that kind.

Mr. BLACKMORE: Did they have anything to do with recommending the present price of wool in Canada?

Mr. GARDINER: No; that was decided by other authorities.

Mr. BLACKMORE: If they made that recommendation, I say it would condemn them.

Mr. DOUGLAS (Weyburn): It seems rather absurd to be passing this item, even though it is only for $1,680, if the committee does not intend to meet.

Mr. GARDINER: I would not say that they do not intend to meet, but it is possible they will not meet. It is only a small sum of money voted for the purpose of calling them together.

Mr. DOUGLAS (Weyburn): In war time I think the need would be greater.

Mr. GARDINER: If they do not meet, we shall not spend any money.

Mr. DOUGLAS (Weyburn): If the committee was any good in peace time, it certainly is more necessary now.

Mr. GARDINER: Most of the gentlemen on the committee are in the building in which I am located, and others are members of the bacon and other boards and are advising us all the time in other directions. It may be necessary to call the committee before the year ends.

Mr. BLACKMORE: Does the minister select the personnel of this committee?

Mr. GARDINER: I have the final say, but I would consult quite a number of people before signing my name to the appointments.

Item agreed to.

Administration service.

4. Contributions to empire bureaux, $36,407.

Mr. COLDWELL: Is this work being carried on during the war? I am not criticizing the appropriation, but I should like to know if it is being used. Personally I think we should spend a great deal more than we do on this sort of thing.

Mr. GARDINER: They are functioning in Britain as they were before. There is probably more benefit to be gained from their functioning owing to the experience they have had. One bureau, the Farnham House laboratory, has been moved over here because they can function better on this side. This covers only our contribution, because the expenses are paid by governments in different parts of the world, mostly empire countries.

Mr. BLACKMORE: What are the names of the various bureaux?

Mr. GARDINER: Farnham House laboratory, imperial agricultural bureau, imperial bureau of entomology and imperial bureau of mycology.

Item agreed to.

Science service.

8. Botany and plant pathology, $312,520.

Mr. BLACKMORE: Can the minister tell us of any discovery made under this vote which would justify it?

Mr. GARDINER: The hon. member is not covering all the field in which this particular branch operates. It is engaged in the study of plant diseases across the country and in the fighting of plant diseases. It would be hard to say that, under this particular vote alone, we have discovered something, that rust or something of that sort exists in a certain area, that we have found that a certain parasite is preying upon plants in other areas.

Mr. COLDWELL: I was going to ask the minister if in the scientific field he is able to retain the staff he had before, or are changes occurring? I sometimes think that, compared with industry, particularly in its scientific branches, the men who are doing these jobs for us in nearly all our government bureaux are not receiving salaries that are commensurate with those paid by private industry for the same kind of service. I was wondering whether the war was having any effect upon the staffing of these various scientific organizations.

Mr. GARDINER: Our losses up to date have been entirely through enlistments.

Mr. COLDWELL: You have not lost any to private industry?

Mr. GARDINER: We have not lost any, or very few in any event, to private industry. Of course the type of work that is done here probably does not employ exactly the type that the hon. member has in mind.

Mr. COLDWELL: No; I realize that.

Item agreed to.

Science service.

9. Agricultural chemistry, $102,881.

Mr. DOUGLAS (Weyburn): This is the item, I imagine, on which the whole question of chemurgy would come up, the use of agricultural products for industrial purposes. Has the minister any statement to make as to what research is being done by the department along these lines? Some sensational results are being obtained in the United States, where they are producing grain alcohol, and from grain alcohol synthetic rubber, and also plastics, wall board and many other commodities for industrial purposes. What work is being done by the government along that line, and is any attempt being made to work out plans for post-war use of agricultural products in industry? The people on the prairies are very much interested in this question, because we recognize that after the war, if western Canada is to have a stable economy, she must develop industry, and she can only develop industry along chemurgical lines whereby agricultural products can be used to build up some of the products in industrial demand. Early in the session the hon. member for Moose Jaw made an excellent speech on chemurgy. I understood from his speech that he was planning to move an amendment asking for half a million dollars for research to be carried on along these lines. I do not know whether he intended to move it in connection with this item or another one, but I hope he has made representations to the minister, because I know his suggestions received wide acclaim throughout the west. I hope the fact that he is becoming a rear admiral or taking an active interest in the navy is not causing him to lose interest in this particular subject.

Mr. GARDINER: The question which has been raised has been discussed, of course, from time to time. I do not know that this item is exactly the place to discuss it. The director of experimental farms, Doctor Archibald, is chairman of the chemurgy committee, and much of the work having to do with the possible production of rubber in Canada is carried on at the experimental farms. It would relate largely to the production of plants such as the plant which is utilized in Russia for that purpose, the producing of them on our experimental farms and trying them out; also whether it would be an advantage to attempt to make rubber from wheat through the production of alcohol, and whether we should pursue other systems of producing it if we desire to produce it in this country at all.

The question whether we should have money for this purpose has been up every year since the war started; that is, we did not wait until the matter was raised in the house to discuss it in council and among the different departments of government; we have been discussing it constantly. But much of the information which could be made available in connection with the question is available to us at present from the United States. Our people are working in cooperation with the Americans in the production of synthetic rubber. Any information they have is available to us through the proper officials of a different department, not the Department of Agriculture. They are working along with the Department of Munitions and Supply, and our national research council, which operates in the Department of Trade and Commerce, is carrying on research work in connection with this matter and has done so for many years. Any information which one has the other obtains and utilizes it for the purpose in hand. But I would suggest that, if this matter of rubber and the possibility of the production of rubber is to be discussed, the better place to discuss it would be upon the experimental farm estimates, because the farms are doing some work which may be helpful in this direction, and if any sum were to be brought forward at any time for the purpose it would be to implement those estimates.

Mr. JOHNSTON (Bow River): Has the minister the information so that it can be discussed under those items, or should it be discussed under Munitions and Supply, or Trade and Commerce?

Mr. GARDINER: In view of what is being done, it certainly should be discussed under Munitions and Supply. There is a statement published which is being sent out to those who are sending in resolutions with regard to it.

Mr. JOHNSTON (Bow River): As it relates to wheat?

Mr. GARDINER: I think it would be better to discuss it all in one place, and the better place would be when we have the experimental farm service estimates before us. As I have said, Doctor Archibald is in charge of experimental farms and is also chairman of the chemurgy committee which is studying the question from every point of view. I think that if we discuss it while he is here we would be more in order and would get more information.

Mr. PERLEY: Has the minister any idea under which item the hon. member for Moose Jaw was going to bring up the matter?

Mr. GARDINER: I think that likely if it is brought up, that is if sums were voted, they

would have to be voted under supplementaries. I can say to the committee that the question has been under discussion every year since the war started, and after discussing all features of it in past years we have not brought an estimate for the purpose, for the reasons I have just stated, that there has been made available information from elsewhere, where much more has been done than we can hope to do in the years while the war is on.

Mr. COLDWELL: Is there anywhere that the hon. member for Moose Jaw could raise the question for the purpose of the extra $500,000 item being appropriated?

Mr. GARDINER: He could probably raise it and say that he is in favour of it, just as many things have been raised to-night.

Mr. GRAYDON: Did the hon. member for Moose Jaw, when he made that statement, accurately reflect the views of the administration?

Mr. PERLEY: Some of us thought of it, but we did not care to advance it for fear it would not get the same encouragement it might be expected to receive if it were proposed by the hon. member for Moose Jaw.

Mr. EDWARDS: It is a fact nevertheless that in the United States the federal department of agriculture have set up four experimental laboratories across the country to deal with the question of the possibility of using agricultural products for rubber. Apparently we in Canada have done nothing along similar lines. Is it felt that we shall get the benefit of the research work of the United States department of agriculture, and that there is no necessity for us doing anything here? As I appreciate the policy over there, those laboratories are set up purely and simply looking at the question from the point of view of agriculture rather than from that of industry.

Item agreed to.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Monday, June 14, 1943

The house met at three o'clock.

FOOD CONFERENCE

PROBLEMS CONSIDERED AND PROGRAMME FOR FUTURE ACTION—REPORT TABLED

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, on June 8, I stated, in reply to a question by the leader of the opposition (Mr. Graydon), that I would table the report of the united and associated nations conference on food and agriculture as soon as it was available, and that, at the same time, I would make a brief general statement on the work of the conference and the programme for future action. I now table the report as approved on June 3, under the designation: Final Act.

The food conference was held at Hot Springs, Virginia. Its sessions opened on May 18, and were concluded on June 3. It was the first general conference of the united nations. That in itself gives the conference an historic significance. While the conference met in time of war, it was not concerned with the prosecution of the war. It had to do with one of the problems which demand solution if, after the termination of hostilities, the world is to enjoy enduring peace. Its purpose was to assist in freeing the peoples of the world from want, once the axis powers have been defeated. The conference was an act of faith in the continuing solidarity of the united nations.

The fact that the subject matter of the conference was food and agriculture is evidence of a determination to make a fundamental approach to the solution of post-war problems. No subject could have been more suitable for exploration. The production of food is the most important of man's economic activities. Its absorbs the energies of more men and women than all other economic pursuits combined.

A consideration of the problems falls naturally into three parts: the objectives in quantity and quality to be set in the consumption of food; the production of foodstuffs to meet consumption needs; the better distribution of the produce of agriculture and of fisheries.

The conference recognized that there had never been enough food produced in the world to maintain the health of all its peoples. The development of the science of nutrition has added greatly to the knowledge of the kinds of food needed to maintain health and efficiency. The nutrition experts who were gathered at the conference set the goals for the achievement of better standards of health, and indicated various measures which might be taken to that end, particularly the provisions of protective and other nutritionally desirable foods. The problem to be faced was stated by the conference to be that of ensuring the production of the necessary food and having it made available to the consumer. The primary emphasis in all the studies made by

the nutrition experts, and the basic conclusion of the conference itself was that the production of food must be increased if freedom from want is to be achieved.

The conference gave attention to methods of increasing the supply of food by such means as raising the efficiency of production, the employment of additional land and labour, the conservation of resources, and the advantages to be derived, in certain cases, from international specialization.

The largest market for the produce of agriculture lies amongst the tillers of the soil. Producers of food are also important consumers of other goods as well as of their own produce. It was recognized by the conference that the general welfare would be promoted by ensuring to the producers of food a reasonable return for their labour. The conference therefore considered special measures to increase the purchasing power of agriculturists generally, and, particularly, the purchasing power of the less advanced and less favoured peoples.

A second main conclusion of the conference was that the expansion of agricultural production must be part of the expansion of the whole world economy. It was recognized that if markets are to be opened for an expanded food production, and if people are to be able to buy the food which they need, poverty must be made to disappear. The increasing of industrial production, the provision of full employment, the prevention of exploitation, the development of social legislation, the orderly management of currencies and investments, the fostering of international trade through the reduction of trade barriers, were seen to be problems to be considered if the purposes of the conference on food and agriculture were to be realized. These studies lay outside the scope of the conference and call for separate consideration, which some of them are already receiving.

The conference was primarily concerned with agriculture, but it did not overlook the value, as foodstuffs, of fish and marine products. It recognized the importance of fish in the economy of many countries. It recommended that the general conclusions which it had reached, wherever appropriate, should apply to fish and marine products.

In its deliberations, the conference had to take account of the special world conditions under which it was meeting. There were two questions of great importance which did not come within its terms of reference. The first concerns the production of food and its distribution in wartime, which is a task for agencies already in existence. The second is the question of relief, on an international scale, which is to be the subject of a conference at an early date.

The conference's study of the problems of food and agriculture was partly concerned with the intermediate period between the present, and the time when the long-term goals of the conference could be actively pursued and achieved.

Countries which are free from the tyranny of the invader are already able to take steps towards the attainment of the goals set at the conference. As other countries are liberated, they, too, can strive towards these goals. The immediate aim must be the abolition of hunger as a first step towards freedom from want. During the transition period which will follow the cessation of hostilities in particular areas, measures will have to be taken to meet the special circumstances caused by the war. Long-term goals will have to be kept firmly in mind so that temporary expedients will not result in permanent maladjustments.

Throughout its deliberations, the conference recognized the primary responsibility of each nation to ensure that its own people are fully employed, and that they have the means of procuring the food needed for a healthy life. The conference also agreed that only through active cooperation with other nations can the fullest prosperity of each nation be secured.

The final act of the conference, the result of its deliberations, comprises a declaration and some thirty resolutions. In the first resolution, the conference recommends that all nations represented should set out in a formal declaration their individual obligation to their own people, and to one another, to collaborate in raising the levels of nutrition and standards of living of their peoples, and in improving the efficient production and distribution of agricultural products. It also recommends that they report to one another on the progress achieved. Other resolutions contain statements of principles and recommendations of policy for the short-term and the long-term period. The resolutions also dealt with the opening up of undeveloped areas suitable for settlement and food production, the fostering of desirable changes in the pattern of production designed to give greater emphasis to protective foods; the provision of agricultural credit; the advancement of cooperative societies, and the improvement of marketing facilities. I need scarcely assure the house that all these recommendations will receive detailed study by the government.

To facilitate collaboration among nations in this field of endeavour, the conference

recommended that a permanent international organization on food and agriculture be established. It suggested that each government represented at the conference appoint a representative to an interim commission, the duty of which would be to carry out the recommendations of the conference and to prepare a specific plan for a permanent international organization on food and agriculture. The conference invited the President of the United States of America to arrange for the establishment of this interim commission, and for the calling of an early meeting.

In recommending the functions of the proposed permanent organization, the conference followed closely the comprehensive agenda which had been fixed for its own deliberations. It also urged the interim commission to give consideration to the question of providing for membership in the permanent organization of countries not represented at the conference. It recommended as well the association of the permanent organization with other institutions, which already exist, or which may be set up later, in the field of food and agriculture, and in related scientific, economic and other fields.

President Roosevelt in his speech to the delegates on Monday last, described the conference as "epoch making". He willingly accepted the recommendation that, as President of the United States, he should call together the proposed interim commission.

The president associated himself with the declaration of the conference that every nation should assume the responsibility, in collaboration with others, of providing adequate food for its own people. I am prepared to make at once a similar declaration on behalf of Canada.

In conclusion, I should like to mention among other of the promising results of the first united nations conference, the friendly spirit which inspired its deliberations, the earnestness with which the delegates worked together toward worthy ends, and the unanimity with which their decisions were reached.

Mr. Speaker, I should ask that copies of the Final Act be provided to members of the house, and would move, seconded by Mr. Crerar:

That 700 copies in English and 300 copies in French of the Final Act of the united nations conference on food and agriculture, laid on the table this day, be printed forthwith, and that standing order 64 in relation thereto be suspended.

At first glance, it would seem that seven hundred copies in English and three hundred in French of the Final Act may not be as large a number as would be desired. I am informed however that something in the nature of an abridged popular statement which will serve all immediate purposes will shortly be available, and I think this would be a sufficient number, therefore, of copies of the Final Act in its formal shape to be obtained.

Mr. GORDON GRAYDON (Leader of the Opposition): In the statement he has just made, the Prime Minister speaks of a projected conference with respect to relief, which I take it is relief of the stricken countries that have been victims of the axis aggression, and has nothing to do with domestic relief,—of which, I hope, we have seen the last in our time. Would the Prime Minister inform the house whether this conference on relief will be separate from the meetings of the interim commission of which he spoke, and which will be headed by the President of the United States?

Mr. MACKENZIE KING: Yes, it will be separate.

Motion agreed to.

AGRICULTURE COMMITTEE

CONCURRENCE IN SECOND REPORT

Mr. W. G. WEIR (Macdonald) moved:

That the second report of standing committee on agriculture and colonization, presented to the house on Friday, June 11, 1943, be now concurred in.

Mr. MARK C. SENN (Haldimand): Before this motion passes I should like to raise one question which was raised in the committee. This report provides for the calling, in order to get information, of certain boards which have to do with the Department of Agriculture and foodstuffs generally, and there was some question in the committee as to whether, if these matters were referred to the committee on agriculture, it would preclude any examination or discussion of the estimates of the Minister of Agriculture, either civil or under the war appropriation bill. I am perfectly satisfied and in fact glad to have this matter referred to the committee if it does not preclude such discussion. On the other hand it would be too bad if the minister's estimates were not to be discussed until this matter was finally disposed of by the committee.

Hon. J. G. GARDINER (Minister of Agriculture): As I understand the recommendations of the committee, they are that certain boards which deal with the expenditure of money having to do with the marketing of products during the war period are to be called before the committee, and my understanding is that this will not interfere in any way with the discussion of the estimates here in the house.

Motion agreed to.

PRIVATE BILL

BETHEL FULL GOSPEL ASSEMBLY

Mr. THOMAS REID (New Westminster) moved the first reading of Bill No. 109 (from the senate) to incorporate Bethel Full Gospel Assembly.

Mr. GRAYDON: I would ask the hon. member to give a full explanation of this bill.

Mr. REID: I should be glad to give a full explanation if we had time, but probably that would take all afternoon. I shall give a short resumé, however, of what it means, and perhaps that will suffice until the bill comes before the committee. Those asking for the incorporation of the church have their headquarters in Vancouver. They are part of a sect whose headquarters are located in the state of Tennessee, which state is well known to all hon. members of this house. They have been in existence for some forty years. Their teachings are those of the new testament; their beliefs are similar to those of the Baptists. They desire incorporation in order to administer the affairs of the church, including real property. Their object is the dissemination of the gospel in all languages, the ordination of ministers and missionaries, the establishment of schools; and as a Presbyterian I am pleased to help the church along.

Motion agreed to and bill read the first time.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

SASKATCHEWAN MOTORS COMPANY BUILDING, REGINA

Mr. BENCE:

1. How much money has been spent by the government on alterations, and/or additions to the Saskatchewan Motors Company building in the city of Regina, which has been rented for the purposes of the Department of Agriculture?

2. Does the government supply its own fuel and janitor services for the said building?

[Mr. Senn.]

Mr. FOURNIER (Hull):

1. $3,510 on account of alterations and changes as required by the Department of Agriculture. Final estimate not yet received.

2. The lessor provides the heating and the crown attends to the cleaning.

KING'S BIRTHDAY HONOUR LIST

Mr. REID:

1. What department of government is responsible for the recommendations made to His Majesty the King, of those who are deemed worthy of recognition in the king's birthday honour list?

2. From what department, or from whom is advice obtained for the names submitted to the government?

Mr. MACKENZIE KING: The conferring of awards and decorations by His Majesty the King is an exercise of the royal prerogative. In respect to the exercise of this prerogative in relation to Canadians, His Majesty's Canadian government accept full constitutional responsibility. The responsibility of making recommendations in respect to such matters is not a responsibility which His Majesty's Canadian government delegates to any department of government.

MOBILIZATION ACT—REJECTIONS ON MEDICAL GROUNDS

Mr. DIEFENBAKER:

How many men, by military districts, heretofore rejected on medical grounds, have been reexamined since the 31st of October, 1942, and of these, how many have been called for service under the National Resources Mobilization Act?

Mr. MITCHELL:

Part 1

Administrative Divisions	Men Found Unfit by Private Physician	*Re-examined By Medical Revision Board and Found Fit
"A" London, Ont. ...	3,744	1,471
"B" Toronto, Ont. ..	9,000	4,212
"C" Kingston, Ont. .	5,891	2,179
"D" Port Arthur, Ont.	302	176
"E" Montreal, P.Q. .	12,661	5,906
"F" Quebec, P.Q. ...	6,787	2,235
"G" Halifax, N.S. ..	987	453
"H" Saint John, N.B.	683	285
"I" Charlottetown, P.E.I.	160	51
"J" Winnipeg, Man.	808	544
"K" Vancouver, B.C.	2,325	1,074
"M" Regina, Sask. ..	134	54
"N" Edmonton, Alta.	1,057	542
Total	44,539	19,182

*In the re-examinations conducted by the medical revision board 5,676 men, previously found fit by the private physicians, were re-examined owing to doubt regarding previous medical category. Some of these were found fit but these cases are not segregated for statistical purposes.

Part 2

19,182 men—as shown above, were called for service under the National Resources Mobilization Act with the exception of those who were granted postponements or whose cases are pending.

WARTIME HOUSING LIMITED—GENERAL MANAGER

Mr. NICHOLSON:

1. What salary was paid to Victor T. Goggin when he was first appointed general manager of Wartime Housing Limited?
2. Was his salary increased to $12,000 a year? If so, when?
3. What is the total amount he has been paid for salary and expenses since his appointment?

Mr. CHEVRIER:

1. $10,000.
2. Yes—July 1, 1942.
3. Salary, $24,047.80; expenses, $7,058.64.

MAGNESIUM—WILDMAN PROCESS

Mr. KNOWLES:

1. Have reports been made to the government concerning the Wildman process for the production of magnesium? If so, what department is in possession of these reports?
2. What companies in Canada are engaged in the production of magnesium?
3. Does the government own and/or control any plants engaged in the production of magnesium?
4. Has the government, since the outbreak of the present war, given any capital assistance to any companies engaged in the production of magnesium?
5. Who owns the Magnesium Company of Canada, Limited?

Mr. CHEVRIER:

1. (a) Yes. (b) The Departments of Mines and Resources and Munitions and Supply.
2. Dominion Magnesium Company, Limited.
3. Yes.
4. No.

Note—The government owns the magnesium plant at Haley, Ontario, which was built and is operated by the Dominion Magnesium Company, Limited, without fee or profit.

5. The department has no knowledge or record of the Magnesium Company of Canada.

QUESTIONS PASSED AS ORDERS FOR RETURNS

PRICE CEILING—VEGETABLES

Mr. REID:

1. Has a price ceiling been placed on vegetables by the wartime prices and trade board?
2. If so, on what date, and upon what vegetables?
3. What ceiling price has been fixed on each kind or variety of vegetables?
4. Is the ceiling price the same throughout Canada?
5. If not, what are the ceiling prices on each variety of vegetables in the different districts or provinces?

Mr. ILSLEY: Return tabled.

ST. LAWRENCE RIVER NAVIGATION

Mr. LACOMBE:

1. Has the government taken the necessary steps for the protection of convoys on the St. Lawrence river?
2. Of the total number of vessels operating in the St. Lawrence river during the last navigation season, what percentage in tonnage was sunk?
3. What was the average number, per week or month, of naval vessels which came up the St. Lawrence river last season?
4. What was the average number during the years 1939, 1940, 1941, and 1942?
5. Have the Canadian Pacific and the Canadian National Railways benefited greatly in their transportation as a result of the limitations of navigation on the St. Lawrence river?
6. If so, what has been the net revenue of each of these companies during the years 1939, 1940, 1941, 1942, and 1943?

LOANS TO CANADIAN PACIFIC RAILWAY COMPANY

Mr. SHAW:

1. Have any loans been made to the Canadian Pacific Railway Company by the Canadian government during the past twenty years?
2. Upon what dates were such loans made, and at what rates of interest?
3. Upon what dates were interest and principal payments made by the said railway company to the Canadian government? What was the actual amount of each such payment?
4. What is the total amount of, (a) principal; (b) interest, which the Canadian Pacific Railway Company owes to the Canadian government at the present date?

UNEMPLOYMENT INSURANCE COMMISSION—BRITISH COLUMBIA OFFICES

Mr. BLACKMORE:

1. How many of the persons appointed to the seventeen permanent positions filled by the civil

service commission in the British Columbia offices of the unemployment insurance commission, were born in British Columbia?

2. What was the birthplace of each of the others?

3. How many of the aforementioned seventeen were transferred from eastern Canada to British Columbia to fill those seventeen positions?

4. Did the federal government treasury pay the cost of their transportation to British Columbia? If so, what was the total cost of transferring each of them and their effects?

5. Why were the positions not given to the people in whose province the offices were to operate, and why was it necessary to transfer any from the east to fill positions in British Columbia?

6. What is the name and salary of the director or acting director of information and publicity, unemployment insurance commission; what are his duties, and how many of a staff are under his jurisdiction?

WARTIME HOUSING LIMITED—HULL, QUE.

Mr. NICHOLSON:

In connection with war-time houses in Hull, Quebec.

1. When was the contract for the first 100 houses let?

2. When were these houses to be completed according to the contract?

3. On what date was the first of the houses occupied by a tenant?

4. On what date were all of the first 100 occupied?

5. What was the cost per unit for construction and painting?

6. What was the cost per unit for services?

7. What was the cost per unit for each of the additional fifty houses for construction and painting?

8. What was the cost for services per unit?

9. What was the total capital cost for constructing the 150 houses, providing all the streets, sewers, landscaping, and administrative costs?

10. What is the total amount spent on repairs since the houses have been completed?

11. How many coal and wood sheds have been built in connection with the Hull development?

12. How many feet of lumber are there in each shed?

13. What was the average cost per shed?

MR. JUSTICE MCTAGUE—PAYMENTS FOR SALARY AND EXPENSES

Mr. NOSEWORTHY:

What salary and what expenses is Justice McTague receiving at the present time, (a) as a judge; (b) as chairman of the war labour board; (c) as chairman of the wartime depreciation board; (d) as serving in any other capacity as a government official?

[Mr. Blackmore.]

NATIONAL STEEL CAR CORPORATION—MALTON PLANT

Mr. NOSEWORTHY:

1. What was the total amount paid by the government of Canada, and/or the British government, for the production of airplanes, parts, and other war equipment, at the Malton plant of the National Steel Car prior to expropriation?

2. What was the total amount due to the company on account of production at the time of expropriation?

3. What was the total number of planes of all types built or assembled at the plant before expropriation?

4. What was the number of each type built or assembled at the plant before expropriation?

5. What was the amount paid the company by the government following expropriation for, (a) land; (b) waterworks system; (c) buildings; (d) machinery and equipment; (e) accounts receivable; (f) inventories of raw materials; (g) works in process; (h) finished parts and machines of all kinds; (i) sundry assets (give break-down); (j) claims for fees or profits on work performed or in process?

6. What is the amount collected by the government to date on accounts receivable taken over from the company?

MOTIONS FOR PAPERS

RESIGNATION OF ASSISTANT DIRECTOR CIVILIAN, NATIONAL SELECTIVE SERVICE

Mr. STOKES:

For a copy of all letters, telegrams, and other communications, which passed between Goldwin Smith, formerly assistant to C. F. Needham, assistant director civilian, national selective service, and the Minister of Labour, deputy minister of labour, or any official of the department, relating to his resignation or transfer to another department of government.

FALCONBRIDGE NICKEL COMPANY—NORWAY REFINERY

Mr. COLDWELL:

For a copy of all communications between J. Gordon Hardy, president of the Falconbridge Nickel Company, and the Prime Minister or any department of government, concerning Mr. Hardy's statement, as president of the company, and relating to the company's Norwegian plant, made in Toronto on April 21, 1943.

INTERNMENTS—CAMILLIEN HOUDE

Mr. ROY (for Mr. Lacombe):

For a copy of all letters, telegrams, correspondence, memoranda, evidence, reports and other documents in the possession of the Department of Justice, concerning the appeal of Mr. Camillien Houde, heard on the 28th May, 1943, by an advisory board at Fredericton.

Mr. ST. LAURENT: Mr. Speaker, the hon. member is not in his seat, and as I feel it necessary to oppose this motion I would ask that it stand until he is present.

Motion stands.

NATIONAL WAR FINANCE COMMITTEE MEETINGS

Mr. ROY (for Mr. Dorion):

For a copy of the minutes and report of the meetings of the national finance Committee, which took place in Ottawa on December 9, 1936, and the following days, under the chairmanship of the Minister of Finance.

Mr. ILSLEY: Mr. Speaker, exactly the same observations apply to this motion.

Motion stands.

INNISFAIL, ALTA., RURAL MAIL ROUTE NO. 3

Mr. SHAW:

For a copy of all letters, telegrams and other documents passing between the Post Office Department and any official thereof, and any individual or group of individuals, since October 1, 1942, relating to the mail delivery service in connection with rural route No. 3, Innisfail, Alberta.

ST. JAMES-WINNIPEG AIRPORT COMMISSION—STEVENSON FIELD—RAILWAY EXTENSION

Mr. KNOWLES:

For a copy of all representations made to the government by the St. James-Winnipeg airport commission, as indicated in sessional paper No. 382, of June 8, 1943; also for a copy of all replies made by the government, or any department or branch thereof, to the above representations; also for a copy of all communications, documents and memoranda in the possession of the government, or any department or branch thereof, relating to the question of rerouting the Souris branch of the Canadian Pacific Railway in order to permit a northward extension of Stevenson field, at Winnipeg.

Mr. RALSTON: Mr. Speaker, if this order is passed I should like it understood that it is subject to reservation as to documents in the nature of confidential reports made by departmental officers to the heads of branches.

MILITARY SERVICE—POSTPONEMENTS FOR FARMERS

Mr. ROY (for Mr. Dorion):

For a copy of all correspondence, telegrams, and other documents, dated during the twelve-month period to June 10, 1943, in possession of the government, regarding the postponement from military service of those engaged in the farm industry.

Mr. MITCHELL: In connection with this motion I would point out that there are thousands upon thousands of letters involved, and that it means going into all the different departments looking for letters which in any way deal with the subject matter referred to. It would be almost a physical impossibility to complete this return, and I suggest that it be dropped from the order paper.

Mr. SPEAKER: The hon. member is not in his seat; shall we say it stands?

Motion stands.

MILITARY SERVICE—PERMANENT LEAVE FOR FARMERS

Mr. ROY:

For a copy of all correspondence, telegrams, memoranda, and other documents exchanged, from June 21, 1940, to the present date, between the premier of the province of Quebec, and the ministers of the federal government, asking for the permanent leave of farmers, farmers' sons and farm employees from army service.

LABOUR CONDITIONS

MOVEMENT OF FARM WORKERS FROM THE PRAIRIES TO ONTARIO

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): Mr. Speaker, will the Minister of Labour kindly amplify his statement made last night with respect to the proposed movement of 1,000 farm workers from the prairies to Ontario for temporary farm work this summer, and explain particularly why such workers will be obliged to bear any part of their transportation costs?

Hon. HUMPHREY MITCHELL (Minister of Labour): Mr. Speaker, owing to the advance in farm work in Saskatchewan it has been possible to make an arrangement whereby workers will be brought east to Ontario to help out during an urgent period. They will be assigned to farms mainly in central and southwestern Ontario.

To begin with the movement will be of about 500 men and the maximum transfer will be 1,000 men. The dominion government will pay transportation costs easterly but will require workers to pay a small amount of the return trip westerly.

It is expected these western men will stay in Ontario about two months, but certainly they will be back on the prairies in time for the western harvest. No man will be recruited in the west whose absence would interfere with farm production there. I hope we shall have completed arrangements for this transfer of farm labour within the next ten days as the help is needed in Ontario now.

W. W. Dawson, supervisor of farm labour requirements for Saskatchewan and director of the dominion-provincial farm labour programme for that province, has advised

that because of the good work of "win the war" municipal committees there actually will be men to spare from Saskatchewan farms from now until harvest time. On May 28 he wrote a report to one of my officials, and I quote this paragraph:

> You will certainly hear from us if we get stuck for help, but in the meantime I think it is safe to say that we have the farm labour problem under control in the province, and it is my expectation that within ten days we will have more men than we know what to do with.

Mr. GRAYDON: In the slack season?

Mr. MITCHELL: Yes, that is obvious.

Mr. COLDWELL: Who says that?

Mr. MITCHELL: Dawson. I read that passage because it has a western tinge to it.

Mr. COLDWELL: I do not know what it means.

Mr. MITCHELL: I will say it is the way practical people deal with a practical problem. Put it that way.

It is for this reason that we are seeking men from Saskatchewan. On Saturday afternoon an official of the labour department called the minister of agriculture of Manitoba by telephone in order to advise him of the plan for bringing some men east from Saskatchewan. The Minister of Agriculture was out of the city but the whole matter was placed before the deputy minister of agriculture, Mr. J. H. Evans. Mr. Evans said that the matter would be fully discussed at a special meeting of the dominion-provincial committee on farm labour to see what possibility there might be to participate in the plan so far as Manitoba is concerned. This meeting will be held to-morrow morning, June 15, and Mr. Evans will advise us immediately as to the conclusions of that meeting.

The deputy minister of agriculture for Alberta, Mr. O. S. Longman, who is also chairman of the dominion-provincial committee on farm labour, has been advised of the plan. Because of the distance of Alberta from Ontario no specific request has been made for sending Alberta farmers east. It was however pointed out to Mr. Longman that word has been received from British Columbia of a very serious shortage of help to put up hay in the interior. If there were some men from Alberta who might be spared for five or six weeks between now and harvest time, Mr. Longman was asked to consider the possibility of organizing some movement into this area of British Columbia.

With reference to the particular point raised by the leader of the opposition (Mr. Graydon) we decided to require part payment of transportation costs in order to ensure the bona fides of the men wishing to come east. Our experience in the past has been that when free transportation is offered there are some who simply go along for the trip and make themselves scarce on arrival. The requirement that part of the transportation be paid is an undertaking each man will sign before he leaves for the east. It is not expected that in each case the charge will be more than five dollars.

Mr. GRAYDON: Has this been done through the offices of national selective service, or is it being done outside that department?

Mr. MITCHELL: It is being done through the instrumentality of the Department of Labour, which embraces national selective service. As I said the other afternoon, we are not responsible for the weather. The fact that we were ahead in the west and backward in the east prompted us to make this transfer, so as to assist Ontario farmers at this time.

Mr. ROSS (Souris): Does the minister say he had no definite word from Manitoba on this matter

Mr. MITCHELL: I think I said that. I said there was to be a meeting to-morrow morning. I will know to-morrow.

Mr. ROSS (Souris): I have a press release dated June 12 from the area from which these men would be taken. It states that possibly some men will be taken from Manitoba in the transfer of western farm labour for Ontario. This suggested movement is hardly in keeping with the facts as cited by the Minister of Agriculture in discussing agricultural labour, as reported at page 2898 of *Hansard* for May 21. He placed on the record an extract from an article published in the United States indicating that one man should be exempt for agriculture for every sixteen war units, as set out. I know many farmers in southern Manitoba who are operating alone two or three times that number of units, and who cannot now obtain help in haying operations.

Mr. BENCE: Can the minister tell us how selective service is going to ensure that the men being taken from Saskatchewan will be returned?

Mr. MITCHELL: I will have the complete record.

Mr. BENCE: Will permission to go into industrial plants be refused to these men?

Mr. MITCHELL: Absolutely.

SHIPYARDS IN LOWER ST. LAWRENCE AREA—QUESTION OF APPOINTMENT OF CONTROLLER

On the orders of the day:

Mr. MAURICE BOURGET (Lévis): I should like to direct a question to the Minister of Munitions and Supply. Is it the intention of the government to place a controller in charge of the shipbuilding yards in the lower Quebec area?

Hon. C. D. HOWE (Minister of Munitions and Supply): Consideration is being given to the question which my hon. friend has brought up. I hope within the next two or three days to be able to make a definite announcement as to the government's plans for shipyards in the lower St. Lawrence area. I might mention that there is some labour unrest in that area, perhaps not without cause, and I should like to express the hope that no action will be taken by labour in that area until after the government plans have been announced.

GASOLINE

REPORTED INVENTION OF NEW CARBURETTOR

On the orders of the day:

Mr. E. E. PERLEY (Qu'Appelle): Mr. Speaker, I should like to ask a question of the Minister of Munitions and Supply, under whose jurisdiction comes the matter of fuel administration. My question is prompted by an article appearing in the Regina *Leader-Post* of June 11. It states that Melford J. Ball, of Weyburn, has invented a new carburrettor which will effect a great saving in gasoline.

Some hon. MEMBERS: Oh, oh.

Mr. PERLEY: Some hon. members are laughing, but this is a matter of such great importance that I trust the minister will give it careful consideration. The report says that this young man has invented—and I shall quote it—

Mr. SPEAKER: Not only is the hon. member's question out of order, but I would point out that he will be in a position to ask the question when the minister is before the committee.

Mr. PERLEY: This is a matter of vital importance and should be dealt with immediately. This young man has invented a carburettor, and I should like the house to hear what the article says. I think you will agree, Mr. Speaker, when you have heard it, that it is of vital importance and should be considered.

Mr. SPEAKER: I point out that a report from a newspaper cannot be read in order to base a question on a statement which the hon. member cannot guarantee as correct. It seems to me this is a matter which could be taken up in committee.

Mr. PERLEY: I shall put my question in another way, then. Has the Minister of Munitions and Supply learned of the invention of a new carburettor by a young man in Weyburn, Saskatchewan. Associated in the development has been a mechanic stationed with the Royal Air Force at Weyburn. It is reported that tests show the standard car would save fifty per cent gasoline.

Hon. C. D. HOWE (Minister of Munitions and Supply): I have not heard of this invention. I may say, however, that we have a war inventions board in Canada which is prepared to examine very fully any invention sent to it. If the hon. member will have the invention sent to the war inventions board I am sure it will receive careful consideration.

REDISTRIBUTION

POSTPONEMENT DURING HOSTILITIES—PROPOSED AMENDMENT TO BRITISH NORTH AMERICA ACT

On the orders of the day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I should like to make a statement to the house with respect to the subject of redistribution which has been mentioned on one or two previous occasions. The statement has a bearing upon the length of time it may take parliament to conclude the work of the present session. On more than one occasion my colleagues and I have given anxious consideration to the problems involved in undertaking, during the war, the work of readjustment of the representation in the House of Commons. I need not remind hon. members who have had a long experience in the house that the process of redistribution may give rise to sharp and even acrimonious differences. The government is desirous, as I know the house and the country are, to avoid, in war time, occasions for political differences and controversy, whenever such differences can be avoided without prejudice to the national war effort or to the effective functioning of our free parliamentary institutions.

We are particularly anxious to prevent differences that might be avoided arising at a time when hostilities, in which our own Canadian forces may be engaged, are at an acute stage. From now on until the close of the war it will at no time be possible to predict what the actual situation may be. We may

be certain, however, that until victory over the axis powers is finally achieved, the situation will become increasingly intense. Apart altogether from future possibilities, circumstances arising out of the war have occasioned special difficulties in respect to redistribution during the continuance of hostilities.

In the first place, the census of 1941, on which the redistribution would have to be based, was taken after Canada had been at war for almost two years. In that period, enlistments in the armed forces, migrations from province to province occasioned by the establishment of war industries, and other shifts of population directly attributable to war-time conditions, had abnormally added to the numbers in some provinces and decreased those in others. In the two years that have elapsed since the census was taken, war-time movements of population have continued and may even have intensified. It may be questioned therefore whether a redistribution based upon the situation in 1941 would conform at all closely to the actual situation which would prevail when the time came to hold a general election. There is another important circumstance of which I am sure all members of the house will wish to take account. Redistribution involves not merely the readjustment of the representation of the provinces, but also the delimitation of the electoral divisions within all or nearly all of the provinces.

I need not remind hon. members that a considerable number of our fellow members are absent on active service in the armed forces and that some of them are overseas. Redistribution, affecting, as it inevitably would, the boundaries of a great many constituencies, would be a matter of immediate concern to them, and a matter on which their right to express their views should, if at all possible, be preserved. These considerations have caused the government to conclude that it does not now seem desirable that readjustment of representation on the basis of the census of 1941 should have to be made during the continuance of the hostilities in which Canada is now engaged, and that an amendment to the British North America Act should be sought in order to permit of the postponement of redistribution.

My colleague the Minister of Justice will at an early date introduce the appropriate resolution in this house. A similar resolution will be introduced in the other house. I believe that the course the government is recommending will, upon careful consideration, commend itself to members of all parties in the house, as I am sure it will to the people of Canada generally. It will be recognized that the government is seeking to have done only what is in the national interest at a time of war, and that by limiting the effect of the action proposed to the period of hostilities in which Canada is now engaged there will be no occasion for the slightest apprehension that any fundamental constitutional rights will be affected.

[Mr. Mackenzie King.]

CANADIAN ARMY

STATEMENT WITH REFERENCE TO DISTURBANCES AT SUSSEX MILITARY CAMP

On the orders of the day:

Mr. W. C. MACDONALD (Parliamentary Assistant to the Minister of National Defence): The hon. member for York-Sunbury (Mr. Hanson) asked some questions on May 27 and June 7 with reference to the disturbances at Camp Sussex, New Brunswick, which I should now like to answer.

1. A military course of inquiry was assembled, evidence was heard and findings were made by the court.

2. An inquest was held by the civil authorities. The coroner's jury found that Private D. M. Bennett died as the result of a wound from a ·303 service bullet fired by an unidentified person. The jury added a recommendation to the effect that a further investigation be made by the attorney-general's department. This investigation is proceeding.

3. The civil authorities have requested the military authorities to take no further steps until the civil investigation is completed.

4. A soldier, Rifleman J. P. Bidegare, has been arrested by the civil authorities and charged with attempt to do grievous bodily harm contrary to the provisions of section 273 of the criminal code.

5. Both the Dufferin and Haldimand battalion and the Voltigeurs de Québec are still in Canada but in different military districts.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Friday, June 11, consideration in committee of a resolution to grant to his majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the Chair.

MUNITIONS AND SUPPLY

1. Additions and extensions to plants, $195,000,000.

Mr. DIEFENBAKER: Mr. Chairman, I listened this afternoon to the Prime Minister (Mr. Mackenzie King) announcing to the house the attitude which he felt should characterize hon. members of this house during war time, and I could not help but think that if we all were to adopt the standards suggested by him considerable improvement would take place, not only in the debates in this parliament but in the contribution that each and all of us are endeavouring to make. I feel that the duty of an opposition in approaching a discussion of the various matters under the war appropriation measure, should be divided in two parts: one, to give credit when credit is due, and the other, fearlessly to point out shortcomings or deficiencies to the end that Canada's war effort may reach a point of maximization at the earliest possible time.

As I listened to the recital of the Minister of Munitions and Supply (Mr. Howe) on Friday last, I could not help following with great interest and with great pride, what he had to say for without regard to political party the members of this house are Canadians first and foremost, and all will experience pride in the production record of Canadian war industry as revealed by him. It means an economic revolution in Canada has taken place in the transformation of Canada into one of the great industrial nations of the world. It represents a change of attitude and a change of emphasis, with each of the united nations concentrating on the production of that which they can most conveniently produce. It represents the beginning of the culmination of the results of the combined production and resources board which was set up in November, 1942. The duties of the board were defined as follows:

> The board shall combine the production programmes of the United States, the United Kingdom and Canada, into a single integrated programme adjusted to the strategic requirements of the war as indicated to the board by the combined chiefs of staff and to all relevant production factors. In this connection the board shall take account of the need for maximum utilization of the productive resources available to the United States, the British commonwealth of nations and the united nations, the need to reduce demands on shipping to a minimum, and the essential needs of the civilian populations.

Canada's production record in the past year, and I speak as one who in the past has been most critical, is a tribute to what private initiative and private enterprise can do in this country with state collaboration. During the last few months tremendous, drastic and far-reaching changes have taken place in production, and they are indicated in the estimates placed before the house by the minister. Canada in company with the other united nations has adopted the uniform principle of producing offensive weapons instead of defensive weapons. The blueprint of victory consists in taking the offensive. Besides the production of ordinary munitions Canada will concentrate on the production of certain types of aircraft, nine in number, particularly Lancaster bombers and Mosquito bombers, and on fighting naval vessels and on cargo vessels. There has been a change in ground production, due in large measure I am informed to the experience of our troops at Dieppe and in Africa during recent months. I am not going into the question of man-power to-day, but the change in ground production will mean either unemployment for many thousands of men in Canada or the hoarding by industry of men until changed conditions make them employable unless action is taken and immediately by selective service authorities to the end that these men be placed in their proper positions.

Women have made a great contribution in munitions production, but they are not as yet being used to the extent that they are in Great Britain and the United States of America in industry. Recently a number of members of this house had an opportunity to visit the city of Buffalo and to see there in operation two of the greatest aircraft plants in the United States producing fighting planes. From information secured there I can tell the house, and what I say now will be confirmed by those who were present on that visit, that some fifty-two per cent of the employees in one of these great factories are women. We in Canada will have to increase the number of women in industry if the man-power requirements of the army, the navy and the air force and of industry are to be supplied.

In the past, in 1940, 1941 and 1942, Canada as a member of the united nations found out that valour without production would not win victory. The experience of recent days in Africa and of very recent days in the islands of the Mediterranean has shown the necessity for ever-increasing air power on the part of the united nations. There are many to-day who will contend that, having regard to the

vast destruction being wrought each night in the great industrial cities of the Ruhr and other parts of Germany, the united nations should devote themselves almost exclusively to developing great air power; that overwhelming air power can and will bring Germany and the other axis nations to their knees.

When I offer words of criticism, as I shall shortly, they will be directed to only one or two matters and my colleagues will devote themselves to other phases in connection with production. The record in the production of cargo-carrying ships is one in which this opposition takes pride, as the idea was first forcefully brought before this house, by the hon. member for Vancouver South (Mr. Green), and the hon. member for Cumberland (Mr. Black). We take pride in the production of tanks and the contribution they have made in Russia, and we also recall that when one of the members on this side of the house first suggested that tanks could and should be built in Canada—I refer to the hon. member for Parkdale (Mr. Bruce), and I have his actual words here—the attitude taken by the government was that it could not be done.

Mr. HOWE: That statement has been made several times. Will the hon. member read the words where the government said it could not be done? The government had been working on tanks for months before it was mentioned here.

Mr. DIEFENBAKER: I will give the words.

Mr. HOWE: Never mind the oratory—give us the words.

Mr. DIEFENBAKER: There is a peculiar trait in the minister—as long as you praise him he is perfectly satisfied, but once you offer constructive criticism immediately he becomes aroused. I will give him the quotation later.

Mr. HOWE: Why not now?

Mr. DIEFENBAKER: In effect, the minister ridiculed the idea, and five days later one of the departments of information announced that Canada was going ahead very shortly with the production of 300 tanks. No doubt the only objection the minister had at that time, knowing as he must have known that Canada was going to go ahead with the production of tanks, was that the suggestion had come from the opposition before he himself had made the announcement.

I think that we have justifiable pride in what has been done in that it does show one thing that cannot too often be accentuated in this country and among democracies, and that is that democracies do function when challenged by danger. They are slow to begin operations but when once the people of democracies appreciate that they are fighting for the survival of freedom great results ensue. The results in the united nations are such that within less than four years they are to-day producing more war supplies than the axis nations, who started seven or nine years prior to the war to produce. The united nations have caught up with them in the interval since the beginning of the war and have now passed them.

A tribute should be paid to the Canadian industrialists and to labour for their partnership in this great work. There is not a man or woman in Canada to-day who, in the production record as outlined by the minister, has not a sense of pride in the fact that, through their contributions to victory loans and their actual labour in our factories, and through the leadership in trade unions and the cooperation of industry itself and industrialists, outstanding results have been achieved. They all have pride in their participation in this partnership of patriotic production, which will pay dividends in assured victory for our armed forces of the united nations.

Labour in Canada has a record of which it might well be proud. When I was in Buffalo I was told that a recent survey had taken place in the United States in regard to the question of, shall I call it, unjustifiable absenteeism, absenteeism that is not justified by necessity. In eight of the greatest cities of the United States, industrial centres, the rate of absenteeism was found to be from five to fifteen per cent with an average of around nine per cent compared with two per cent prior to the war. Translated into production that represents tremendous figures in potential output. Here in Canada, according to the best figures I have been able to secure, we find that in spite of the fact that there is heavy taxation on all those engaged in labour and that therefore some may be poorer if they work six days in the week than if they work four, absenteeism during the past year has been less than the low rate of two per cent in the United States prior to the war. That tells its own story and clearly proves that labour in Canada in general appreciates everything that this war is being fought for; it appreciates what it means to labour as to all others.

I think it is a matter of pride to all Canadians that while wages are maintained in the main as of October, 1941, and that across the line in the United States wages are immeasurably greater, in munitions and war production the men and women of this country have continued, regardless of their feelings with regard to the wages they receive, to contribute to the great work that they have done in the production of this nation.

We want the minister to be able to place before the house the record of the numbers of men who will be out of work in each industry by changes that are being made. What transfers are being made in consequence now and what will be made? We also want to know the plans the government have to prevent anyone in industry from hoarding employees against the day when production has been resumed in that particular industry.

I come now to a question on which I think the government must give particulars, that of capital advances and assistance to private companies, and the matter of the continuance of government corporations after the war. Last year and the year before I asked the minister what were the plans and what was intended to be done and what disposal is to be made of these plants after the war. After almost four years of war, the answer given in past years will not be accepted as sufficient to-day. The general answer given then was to the effect that no plans had been made and no decision arrived at. When I look at the record and find that Canada has advanced by way of capital assistance to private corporations the sum of $821,000,000 as of December last and that 335 private companies have received capital assistance, having regard to the expenditure that has been made in this direction and the vast developments that have taken place, the building of tremendous factories and the installation of machinery that has run into literally hundreds of millions of dollars, I feel that the people of Canada have a right to know now what the government's plan is for the disposal of these industries after the war.

So far as I have been able to find out, all that has been done in this connection has been to provide optional purchase clauses in some, but very few, of the government agreements with private corporations. In a return, No. 298 of May 21, 1943, answers are given to questions asked by the hon. member for Rosetown-Biggar (Mr. Coldwell). The hon. member asked the following question: Are there any optional purchase clauses contained in government agreements with private corporations in connection with government investments in any industry or plant? The list is given there. There is a number of agreements, with Defence Industries Limited, Consolidated Mining and Smelting Company Limited, Alberta Nitrogen Company, Electric Reduction Company of Canada Limited, Canada Wire and Cable Company, Anaconda American Brass Limited, Nichols Chemical Company Limited, Electric Steels Limited, Chemical Construction Corporation and Welland Chemical Works Limited, Shawinigan Chemicals Limited, Macdonald Chemicals Limited, Naugatuck Chemicals Limited. Defence Industries Limited has received capital advances of about $109,000,000, and these other companies have received capital advances totalling, according to approximate figuring, about $170,000,000. In these agreements there is not the definiteness there should be. The general provision relative to the disposal of plants seems to be, as indicated in relation to Defence Industries Limited, that the government shall give the company a sixty-day option to purchase the plant or any part thereof at a price it is willing to accept from any other party; if the offer is not accepted, the government is free to sell the plant to any other party at a price not less than that offered to Defence Industries Limited. These terms are not clear; indeed they are so wide open that the government is left in a position where a sale far below the proper and fair price could be made. The criticism that I have heard and which I am bringing before the minister is based on the fact that the government now is not making arrangements to protect the interests of the people of Canada after the war for the tremendous amounts they have expended in war industry. I believe the time has come, in view of the large expenditure which will be made this year, estimated at $195,000,000, in additions to and extensions of plants, that we in western Canada have the right to share in the industrialization which is taking place.

I will cite as an example the province of Saskatchewan. We could have tanneries established there, but our hide production is shipped out of the province to be manufactured. We are in a position to manufacture glycerine and glue, yet only a few months ago an arrangement was made whereby we would ship the bones out of Saskatchewan to the United States of America, where they are manufactured into one or other of these components. I do not want to become parochial, but I must again bring to the minister's attention the fact that,

according to the most reliable figures I have been able to obtain, of the vast sum of $800,000,000 dispensed by way of capital assistance, Saskatchewan has received less than $1,000,000. There is no justification for that. The hon. member for Saskatoon City (Mr. Bence) has dealt with the question of establishing a flax processing plant in western Canada and plants for the production of synthetic rubber. Factories could and should be established in various parts of Canada to provide when the war is over a backlog for the unemployment which may otherwise take place. It is a notoriously well-known fact that man-power does not move freely back and forth across the dominion where work is available, and seeks employment as near home as it can.

The following inquiries were directed to the Minister of Munitions and Supply, reference sessional paper 231-C, March 29, 1943: "In each province, what is the total amount of capital assistance given?. What is the total volume of all orders given by the Department of Munitions and Supply (a) to all Canadian industry and (b) in each province?" The answer, which I do not accept because ordinary addition will bring out the necessary facts, is that "it is impossible to give a money break-down by provinces that will properly reveal the extent to which each province is participating in war orders made possible by capital assistance or by the operation of crown companies or by ordinary award of contracts". With all due respect, I say that that statement does not represent the facts. The only reason I can suggest why the minister failed to give an answer showing what each province has received compared with what other provinces received, is that the record was anything but favourable to governmental planning. The United States to-day, passing through a similar condition to our own here in Canada, realizing that when the war is over she will own or be interested in factories valued at many thousands of millions of dollars, is engaged in a survey with a view of ascertaining what plans can be and should be made now for the disposal of these plants after the war. I do not know what the figures are for Canada; I have endeavoured to secure them but I have been unable to do so; but in the United States, when the war is over, the government will own 96 per cent of the new shipbuilding industries; 93 per cent of the new aircraft industries; 71 per cent of the new iron and steel plants, and 64 per cent of the electrical equipment factories. No doubt a similar situation obtains in this country.

[Mr. Diefenbaker.]

We in parliament have a right to a declaration this session on this problem. Will these industrial undertakings be leased, or will they be sold to private enterprise, subject to the necessary controls to assure that monopolistic enterprise shall not thereby be built up? On the other side of the picture is socialization or state operation. What is the plan of the government? Shall it be private enterprise, with the government having something to do with management? Shall it be private enterprise without any control? Or will the government continue after the war to operate some of the government-owned or war-financed plants manufacturing commodities which are as necessary in time of peace as they are in time of war? I think that in the distribution of these plants after the war, division among the different "enterpreneurs" should be made on proper terms and with the design of promoting competition. If there is one argument we hear to-day more than another it is that when the war is over the government will be in a position to turn over these plants to its friends, and to discriminate in their disposal or dispersion. That sort of argument can be and must be answered now. In the interests of post-war employment and for the good of our people as a whole a decision and a plan must be evolved now.

So far as this party is concerned its policy has been enunciated by its leader, Mr. John Bracken, and it is simply this. "While paying a tribute to what private enterprise has done and can do, and recognizing that it has been a mainspring of world progress throughout the generations, we hold that it does not and must not be allowed to mean the rampage of uncontrolled greed. Prosperity comes from production, production from enterprise, largely private enterprise. It is when enterprise fails that prosperity disappears." So far as the government of the United States is concerned there is some suggestion to-day that co-operation between industry and labour will continue when the war is over, but co-operation between industry and the government must never be substituted for competition. To-day Britain is facing this problem; and though the minister may laugh the fact remains that this is one problem which must be faced now.

Mr. HOWE: I should like my hon. friend to withdraw that remark, because I was not laughing at anything the hon. gentleman said; it was at a comment made behind me.

Mr. DIEFENBAKER: Very well; I am quite prepared to accept that.

Mr. HOWE: I do not like that to appear in my hon. friend's speech, because I was not laughing at anything he said.

Mr. DIEFENBAKER: I am trying to offer a serious suggestion to the minister, and I find that he usually accepts suggestions made in that way.

I have dealt with this matter at some length, and my time is nearly up. I am not going into the details of the plan for the demobilization of industry, or to offer any suggestions in that regard, but plans for this demobilization must be made now, and if I may I would suggest that the government must take into consideration the following points:

1. A determination of the basis upon which sale or disposition shall be made.

2. A government plan now for the conversion of these war-time industries to peace-time economy and production.

3. A determination now as to which plants will be continued after the war for standby purposes.

4. A plan now of assistance to small industries after the war by way of loans to stimulate the change from the war-time to peace-time economy, coupled with technical advice as to the most appropriate use of their facilities in peace-time production.

We have many large industries in Canada, but in the main the backbone of our industry is the small enterprise. I have the exact figures on my desk, though I do not see them at the moment; as nearly as I remember them, however, there are only 172 industries in Canada employing more than 500 men, while there are 24,600 employing less than 500 men. There should be a guarantee that private enterprise of the small business type will receive a fair and reasonable share of the available facilities, to the end that competition will be engendered and control of the great industries that have been established during the war or have increased in importance since the beginning of the war shall not fall into the hands of cartels or monopoly groups. In that connection I would point out that the national planning board of the United States of America has suggested that so far as certain great industries are concerned, producing such crucial commodities as magnesium, aluminum, aircraft and the like, consideration should be given to the extension of a joint private and governmental partnership in those industries, necessary as they are to peace as to war economy.

That in general is the information I should like to secure from the minister in connection with this phase of his estimates. I should like to know what further extensions of existing companies are planned for this coming year. I should like to know why the provinces which up to the present time have not received any appreciable share of industry should not have an opportunity to build up some of the industrial life that is to be found in other parts of Canada, through the development of power where that power is available, in the province of Saskatchewan for an example.

In the few moments still at my disposal I want to refer to one other matter, though I shall deal with it at greater length later on; I have reference to the production of aircraft in this country. I have before me the various speeches in this connection made by the minister, together with the reports he has given during the last three years, and all I can say is that the hopes expressed in regard to aircraft production have not been fulfilled. I go back to 1940 and find the same hopeful expressions in regard to the production of aircraft that we hear to-day, and it was the same in 1941 and 1942. On October 3, 1941, Mr. Bell, the controller, during the course of a speech, said that at that time Canada was producing more aircraft per week than in a whole year before the war, but he did not say what year he was talking about. The production before the war was shown by the minister on May 22, 1940, to have been very small. If increasing aircraft production is necessary, as apparently it is; if the war production of Germany can be reduced by seventeen per cent in three months through air attack, should not Canada now embark upon an ever-extending campaign for the production of aircraft? The record in this connection is such, I think, that an explanation is required from the minister in regard to what happened at the Malton plant when it was operated by National Steel Car. Last year and the year before it was held up as an example of efficiency in production. The people of Canada have a right to know how much money was put into that plant and what was the cost in man hours of the production of each type of aeroplane. Apparently the de Havilland plant in production of Mosquito bombers has revealed weaknesses, though members of this house have no knowledge of what happened, except that a government controller was put in charge in place of the former management. What is the production now of de Havilland Mosquitos—and I know

one must always ask that question subject to security needs. The hon. Mr. Davis said two months ago in Australia that Canada was producing five Mosquito planes per day.

Mr. JOHNSTON (Bow River): Where did he get his information?

Mr. DIEFENBAKER: According to the minister, speaking on November 30, 1942, before the Canadian club at Toronto, we find this:

> We are now in production with de Havilland Mosquitos, recognized as the world's fastest and most efficient plane. We have planned production of five planes per day of this type.

Having regard to the fact that information as to production was given in Australia, I would ask the minister to tell the house and the country how many of these planes were built and delivered as of March 31, 1943.

There has been a great deal of criticism of these two plants. Every hon. member who has at all interested himself in the production of aircraft has heard criticism. We hear that man-power has not been utilized properly, that men have been held back from doing more work than was required at the time. There was wastefulness and inefficiency in the operations of these plants. Changes have taken place. The Malton plant has been taken over by the government. The de Havilland plant is now in charge of a controller appointed by the government.

The CHAIRMAN: The hon. member has spoken for forty minutes.

Mr. DIEFENBAKER: May I finish just this sentence?

Mr. HOWE: Yes; finish your statement.

Mr. DIEFENBAKER: How many man-hours were required to produce Mosquito bombers at these plants, compared with the plants in the United States? Having regard to the many months of preliminary work preparatory to the production of Mosquito bombers—and I am informed this was some eleven months, speaking of course subject to correction—what was the cost, in wages alone, of the men employed in this plant during the period they have been engaged in the production of Mosquito bombers?

I think when the whole story of aircraft production is told, it will be found that immediate and drastic action is necessary. We are not producing the engines, although in 1940 the minister indicated that engines would be produced. In his statement of May 22, 1940, he said:

> Aeroplane engines are not manufactured in Canada, and are at present the limiting factor in the further development of our aircraft industry. Extensive study has been given to obtaining a source of aeroplane engines within Canada, and negotiations are proceeding for the establishment in Canada of a large plant for the manufacture of aeroplane engines.

In his address the other day the minister paid a fine tribute to Canadian labour and Canadian industry when he said, in effect, that we could produce anything in Canada, and that the war had proven the truth of his statement. At page 3556 we find these words:

> Never again will there be any doubt that Canada can manufacture anything that can be manufactured elsewhere.

We talk about the manufacturing of planes, that the number produced to-day amounts to about 8,000, and that the number being produced each month is about 320. Yet the fact is that when the minister gave his report a year ago, production in that respect was greater than it is to-day.

Mr. HOWE: In numbers, yes.

Mr. DIEFENBAKER: Yes. On May 14, 1942, the minister said:

> In the matter of aircraft, our production is now stepped up to about 400 planes a month, and we have plants that are not in production. . . . we have now reduced our production to nine types of planes, and the plants are cleaning up old orders and concentrating on one type of production for each plant with accordingly improved results.

Mr. HOWE: May I say to my hon. friend that there would be forty times the number of man-hours in the production of a Lancaster bomber that there would be in the production of a Fleet trainer. That is the reason for the smaller number of planes. But the tonnage of planes goes steadily higher.

Mr. DIEFENBAKER: The same condition prevailed in 1942. Then we had nine different types of planes, and we have the same nine to-day.

Mr. HOWE: But we were cleaning up our orders on smaller planes.

Mr. DIEFENBAKER: The fact remains that in May, 1942, we had concentrated production on nine planes, the same number as we are concentrating on to-day. The monthly production is eighty planes less than it was a year ago. That reduction requires an explanation from the minister.

May I thank the committee for allowing me these extra few words. In conclusion, may I say that at this time we in the House of Commons want information, and very full information, as to the reasons why we are not to-day producing aeroplane engines in preparation for the post-war period. We can do it—that was admitted by the minister when he paid tribute to Canada's workmen. We want

to know, too, what happened in connection with the Malton plant, and what happened in connection with the de Havilland plant. We want a full and complete statement on these plants, because there are rumours around which require to be answered.

Mr. REID: Mr. Chairman, those of us who listened to the speech of the Minister of Munitions and Supply (Mr. Howe) on Friday last, and others who have since read his speech in *Hansard,* must have come to the conclusion that the record of achievement by the minister as it appears in *Hansard* is one of which every one of us can be proud. Before the war, in certain countries Canada had been looked upon as an agricultural land. To-day such is not the case, because Canada now ranks among the foremost nations of the world as an industrial producer. Some considerable credit is due the minister, and I was pleased indeed when at the opening of his remarks the hon. member for Lake Centre (Mr. Diefenbaker) paid his respects to the record, to the minister and to the men who have helped to produce guns, tanks and all the implements of war we are to-day producing.

I have not always seen eye to eye with the Minister of Munitions and Supply. We have had our differences. But I have never had any doubt that he was the best man this country could have obtained for the job. I think every hon. member will agree with that statement. If there are those who would not agree, I challenge them to name anyone in Canada who could better his record. The minister has had a job to do. I have differed with him, as have other hon. members from the eastern and western provinces, particularly those from British Columbia. We have differed with him in the matter of the centralization of industry in the two central provinces. As I say, we realize that the minister had a job to do, that he had to produce these articles of war, but I am just wondering if after the war the eastern and western provinces, particularly British Columbia, will have any opportunity to develop industries. It may well be that by that time we might be over-industrialized in certain lines of endeavour.

I am not going to deal with a great number of matters this afternoon, but there is one thing I should like to bring to the attention of the committee and of the Minister of Munitions and Supply. I refer to the production of steel in British Columbia. I may say right here that I do not approach this subject as one who is ignorant of the facts. I am one of the few members of the house who have had practical and successful experience in the manufacture and production of both steel and iron. As the minister pointed out, we are producing in Canada at the present time some 3,000,000 tons of steel. We are importing 2,000,000 tons, with the possibility that we shall have to import 500,000 tons additional this year. I wonder how many hon. members realize that practically all the ore needed to make the 3,000,000 tons produced in Canada comes from the United States? The steel plants in Nova Scotia bring in ore from Brazil or Newfoundland, but the great steel plants in Ontario get their ore from the lake Superior region, from the Mesaba range. I was surprised to read the other day that there is only visible a ten years' supply in the open pits of the Mesaba range, and which furnish eighty-five per cent of the iron ore used in the United States and practically all that used by the steel plants in Ontario. There are other supplies of ore in the Mesaba range but they will have to go deeper for it, perhaps go into the mining of iron ore.

There is, however, plenty of iron ore in Canada. I am not particularly familiar with the iron ore deposits in the eastern provinces, but I have made some little study of those in British Columbia. I say without fear of successful contradiction that the iron ores of British Columbia contain a higher iron content than any other ore in the world. The Mesaba range ores contain only as high as fifty-one per cent iron, but those of British Columbia run as high as seventy per cent iron content. These ores are also low in the impurities, especially phosphorus and sulphur which are usually found in iron ore. There is also in British Columbia an abundance of coal and limestone. Over the years some forty-eight engineers have reported on more than thirty-two properties containing iron ore. All these properties are on tidewater. The question then arises: Why is it that no development has taken place in British Columbia or that no practical effort has been made to develop the iron ores of that province, as well as to do more in the way of developing the iron ores in other parts of Canada?

The fight which British Columbia has put up for the manufacture of steel in that province has been one of thirty years or more duration. It is most interesting to note that last year a special committee was set up by the United States senate, called the Truman committee. Sworn evidence was given before this committee that the Morgan-United States Steel corporation interests were behind the blocking of any move to develop steel production in British Columbia.

We have always suspected that the hands of Morgan and the United States Steel corporation were behind this, but here we, for the first time, have sworn testimony. It is interesting to note that the United States Steel corporation and the Morgan interests were present at that committee but as yet no rebuttal has been made to the sworn statements of Mr. Landahl of Seattle.

It may be asked why I am bringing up the question of steel production at this time. I do it for two reasons. First, I want to direct the attention of the minister and the committee to the reasons why the efforts put forth by the people of British Columbia and the western states have been thwarted. Second, there is a principle at stake. We have been living and are still living in the days of cartels and combines. To my mind this matter is so serious that I deem it my duty as a member to get up in my place this afternoon and ask that note be made of the statements made before the United States senate committee in August, 1942. Those statements were most damaging and should receive some consideration and investigation by the government of this country. I am not going to deal with all the proposals which have been put forward by British Columbia since the war began in connection with the erection of an electric furnace to melt our surplus steel scrap. We were promised that this would be done, and at one time actually thought it was to be an accomplished fact. The promise has recently been made by the minister that he will help to further this project, so that I shall not refer to the matter other than to say that it is rather strange that when the announcement appeared in the press two weeks ago that certain public-spirited men of Vancouver were coming to Ottawa to place the matter before the Minister of Munitions and Supply, the agent of the Morgan-United States Steel corporation interests was in the city and the chief agent of the corporation in Vancouver also appeared in Ottawa. That may have been only a coincidence, but to me it was a most remarkable coincidence. I may be a little suspicious, but I do not think they were here for their health. They were here, I believe, to watch and to continue blocking if they could any effort toward the establishment of a steel-making industry in British Columbia.

I have not the time this afternoon to read all the evidence given before the Truman committee, but I would advise hon. members to get a copy of this evidence and read it carefully, particularly the statements given under oath about the iron ores of British Columbia. They will find in this evidence details of the fight that has gone on over a twenty-five year period. However, I should like to read one letter which I think will explain quite briefly some of the evidence which had been submitted. This is from Senator Thomas Voyce to Senator Lewis Schwellenbach, and it reads:

> Dear Senator: I regret it was impossible to arrange a meeting between you and the men here who have charge of efforts to build a blast furnace on the Pacific coast.
>
> The next best I can do is to write you and try to give you a view of this particular situation and bring about the action necessary, to place our situation before the President in Washington; he is in my judgment the only one able to assist the Pacific coast.
>
> I enclose a memorandum giving a few details of the proposed industrial development.
>
> When you read the memorandum and report enclosed, you will say—"if that is correct, why has no blast furnace been built on the Pacific coast" and that was what I was so anxious to go over with you.
>
> I wanted you to know that since 1912 the Morgan-U.S. Steel Corporation groups have held the entire Pacific coast under control, ruining those that attempted to build a blast furnace on the Pacific coast, reaching into every source, issuing government pamphlets covering iron ores, coking coals, et cetera, stopping publishing favouring such, stopping newspapers from mentioning this development a second time, doing everything that power-frenzied men with unlimited cash generally do—first under the leadership of Judge Gary, and since his death merely as ordinary routine.
>
> Instead of sending an ordinary engineer, it would be best to send a G man engineer; only one such could cope with the machinations of the Morgan-U.S. Steel Corporation groups, that are constantly in operation to prevent us on the Pacific coast from making use of our iron ores, coals, et cetera.

That is a very important letter because it deals not only with the iron ores of the western districts of the United States but with the iron ores of British Columbia which it was intended to use when a steel smelting plant could be developed in Washington, Oregon or California.

I also want to put on record a further statement. This is by Mr. Landahl, who appeared before that committee:

> Every time an M.P. or someone of importance starts to press for iron and steel production in British Columbia, the local fifth column says —"let us have an (another) examination of our iron ore resources."

I want to point out here that again and again we have had examinations and reports on our iron ores, one conflicting with the other and these conflicting reports have to

quite an extent been engendered by those opposed to the establishment of a steel plant on the Pacific coast. I continue the quotation:

For forty-three years there have been almost annual "examinations of the iron ore resources of the province of British Columbia." Numerous reports have been expensively printed by the governments.

Then he gives the names of the engineers who have made these reports and goes on to say:

Forty-eight mining engineers of fine repute, most of them, over one every year for forty-three years, and nobody stops this dreadful betrayal of the people.

Beginning of the year 1941, owing to the war, an agitation was on for starting pig iron production and the dominion and B.C. governments were moved to "have an (another) examination of our resources." Arthur G. McKee and Co. of Cleveland was engaged—did the work—handed in report August 20, 1941. The report is marked as printed in 1941.

Copies of this report can now be obtained, but for some considerable time the report was prevented from being printed. I continue the quotation:

Latter part of May I was east and met an engineer that had been in B.C. when the McKee examination was under way. He showed me the report. I went through the same and asked—

Q. Where did you get all these wrong figures from?

A. From Doctor Walker and Mr. Wilkinson.

By the way, Mr. Wilkinson is agent in Vancouver for the United States Steel corporation. The quotation continues:

Q. Wilkinson, who is he?

A. He owns the Morrison Nail Works.

Q. Who took the McKee Company to Wilkinson?

A. Doctor Walker did (Walker is Deputy Minister of Mines).

Wilkinson is the mainland agent for the U.S.S. Corporation—He led the fight against the British Ironmasters in 1922-26.

While we avoided the Morgan-U.S. Steel Corporation, their emissaries ambushed us in every quarter and stopped every source we negotiated with from carrying out their undertakings. Briefly we found that—

(a) They controlled all private finance in the United States.

(b) They could influence in their favour all other finance, governmental and private, here and all other countries.

(c) Only one man in the world ever successfully challenged their supremacy, and that was President Franklin D. Roosevelt.

When the matter was drawn to the President's attention last fall he obtained permission for the erection of a steel plant on the Pacific coast. And where do you think, Mr. Chairman, that steel plant is being built? Away down in the orange groves of California, where the steel interests realize that it must, from its very location, disappear after this war is over. But at least President Franklin D. Roosevelt got action.

To my mind, Mr. Chairman, this matter is extremely serious. I know that the minister may tell us that man-power is short or that he is getting enough steel from the United States and Canada to fill the requirements, but there is no doubt, and I say this without fear of successful contradiction, that if the government had heeded the advice of the members from British Columbia in 1939 and 1940 that steel plant would have been in operation to-day in British Columbia and would certainly have been a great contributing factor in the building of more ships in Canada and in making available more steel.

I do not know whether I am right in saying this or not. But I feel it is pertinent to say at this time that even when the matter was put up by members of parliament from British Columbia in Ottawa last fall they were told by Mr. Kilbourn, the steel controller, that British Columbia did not have the ghost of a chance for a steel plant—did not have the ghost of a chance. So we found it all along the way. Every time we put up the proposition our efforts were thwarted. We were told that steel could be got elsewhere more cheaply than in British Columbia, and that after the war there would be an over-supply of steel. But, Mr. Chairman, the whole Pacific coast market is open there. During this war we have been transporting steel scrap from British Columbia across to the east at a cost of $15 per ton for freight and then bringing it back to British Columbia at $25 per ton freight, and in the face of the fact that British Columbia has an abundance of iron ores, ores with the highest iron content anywhere in the world, and has likewise available ample supplies of coal, and mountains of lime, all of which are on the seaboard.

I pointed out when I started, Mr. Chairman, that I had two objects in view. One was to bring this serious matter to the attention of the house and of the minister, and the other was to endeavour if I could in my small way to help break down the opposition outside this house who up to the present time have been able to thwart the people of British Columbia in developing its natural resources and in developing industries within that province. There is a principle at stake. While I know that it has been attempted unsuccessfully by other corporations, it is my opinion that if this steel cartel could be broken down so that we in British Columbia would be allowed to develop our iron ores, it might be the means of helping us also to break down

other cartels which have been thwarting our advancement, and this must be done if we in British Columbia are to continue our onward march of progress in that province.

I might mention a serious matter that came to my attention the other day, which has to do with cartels but perhaps has nothing directly to do with steel. A canning manufacturer in New Westminster, who has built up a wonderful business, was approached some weeks ago by certain interests who wanted to buy that business. He told them it was not for sale. They offered him a wonderful price and he said, "No; it is my life's work, an industry I have built up by my own initiative." He was told by these men who approached him, "All right; keep it, but if we can we will put you out of business." That is extremely serious.

Mr. HOWE: That is a very serious charge, and the hon. member must give full particulars, the names of all parties, so that steps can be taken.

Mr. REID: I will tell the minister what I will do, to be fair. I will give him the names in confidence.

Mr. HOWE: Not in confidence; give me the names.

Mr. REID: I will give the minister the name of the man who was approached.

Mr. HOWE: And the name of the man who approached him, I think.

Mr. REID: I will try to find that out. I did not hear the name of the man who approached him, but I was very much impressed by the statement because it did not come from an irresponsible person, and I brought it in here to show that there are certain interests in this country who are determined that certain provinces, either east or west, will not progress or have certain industries. As the minister knows, I have stood in my place, as was my duty, and pointed out the danger of centralization of industries in the country. It is not the easiest thing to stand against the government or the minister, and I am not blaming the minister for this matter of steel because it has been going on for thirty or thirty-five years. But he has men outside in his department who are not giving him right advice, or if they are giving him advice it is negative: do not allow British Columbia to develop; they do not need it.

I felt I was carrying out the trust given me by the people of New Westminster in rising in my place and in my humble way bringing the matter to the attention of the minister and of the house in the hope that it might do some good in helping to break down, if possible, these outside of governments themselves who up to the present time have controlled to quite an extent the industrial life of this and other countries.

Mr. COLDWELL: I am sure that hon. members will forgive me if I do not follow their arguments through. I have listened with interest to the hon. member for New Westminster (Mr. Reid). I read the United States evidence to which he referred, and I heard the evidence given here last autumn. I believe he was thoroughly justified in bringing before the committee the question of the manufacture of steel on the Pacific coast of Canada.

The statement which the minister made on Friday was of an extremely creditable achievement. I think the whole house will agree with that assertion. It indicates what industrial planning, even when it is taken, if I may say so, rather unwillingly and under pressure, can do for a nation. Of the various phases of the minister's statement, members of our party in this house will have something to say subsequently. Taken as a whole, the record indicates what this country can do when it has a well-defined purpose in view.

Mr. McIVOR: And leadership.

Mr. COLDWELL: What we have done for the fell purposes of war we ought to do when the war is over for the purposes of peace. The minister said, as the hon. member for Lake Centre (Mr. Diefenbaker) quoted him:

> Canadian industry has developed remarkably under the stimulus of war. Never again will there be any doubt that Canada can manufacture anything that can be manufactured elsewhere.

We must see to it that we do not have cause to regret that during this process of war we have fastened upon the country policies and perhaps industries which may not eventually result in the public interest. Having said that, I want to say something about another cartel. The hon. member for New Westminster referred to the steel cartel.

Considerable interest has been aroused in Canada with regard to the contracts made by governments, including the Department of Munitions and Supply, with Aluminum Company of Canada, which the minister mentioned during the course of his remarks the other day. Let us get this clearly in mind. This company is a fully-owned subsidiary of Aluminium Limited, which was the creation in 1928 of the Aluminum Company of America. The Aluminum Company of America controls 100 per cent of the domestic aluminum in the United States, and its Aluminium Limited, through its control of the Aluminum Company of Canada, controls 100 per cent of the aluminum production of Canada.

Aluminium Limited is the corporation through which the Aluminum Company of America enabled itself to cooperate with the international cartel which was promoted by its creature, Aluminium Limited, and under which Aluminum Company of Canada operates as its fully-owned subsidiary.

There are, as far as I am able to find out, few parallels, either in the United States or in Canada, of corporations which constitute such an entire monopoly of vital industrial and war material as these companies control. They are able to exercise price fixing, to restrain production, to control raw material and the necessary electric power to produce and manufacture aluminum and aluminum products.

For fifty years Aluminum Company of America, later, its creature, Aluminium Limited, and the latter's fully-owned companies together have obtained, and for nearly half that time maintained, complete control of one of the most profitable industries in the world. It is to this giant trust that Canada has given, through permitting it to write off during the war the cost of its plant extensions and three-fifths of the new power plant "Shipshaw", what amounts to a bonus of $154,500,000 in one area on the Saguenay river. In addition to the write-offs, under certain circumstances, and in some instances in one year, they give further bonuses amounting to over $23,000,000, making in all a total of $177,000,000.

These are not advance payments for aluminum, as some people are saying. Canada gets no rebate in price on account of these enormous concessions. In addition, the United States government has advanced to it, as of March 24, 1943, the sum of $68,500,000, enabling it more than to pay for entirely the power plant costing $64,500,000. The advance payment of $68,500,000 is to be paid off by a deduction of five cents a pound on every pound of aluminum supplied to the United States Metal Reserve Company. No such provision exists in regard to the price paid for aluminum by the British and Canadian governments. I am not going to discuss the agreement made by the British government. In my opinion, the agreement made between the Aluminum Company and the British government is the saddest of the four. The Minister of Munitions and Supply said in the house that there was only one price to all governments for aluminum. I had made the statement that there were two prices, fifteen cents for aluminum supplied to the United States for its own purposes, and seventeen cents for aluminum to be used in connection with the lease-lend programme. The minister stated that the price throughout was to be fifteen cents, to the United States, to Canada, to Australia and to Great Britain. On March 23 the minister drew attention to an article reprinted in the Ottawa *Journal* from the New York publication *P M*. This dispatch stated that the agreement between the Aluminum Company Limited of Canada and the United States government provided for payments of fifteen cents a pound for aluminum destined for its own use but seventeen cents a pound for lease-lend use. The minister said that the statement was wholly erroneous, that all the aluminum produced in Canada is sold at the same price to whoever buys it; in other words, the price to Great Britain in Canada is the same as the price to the United States in Canada, and the price that Canada pays for aluminum is the same price that Australia pays.

Now I have before me a copy of a letter, which I obtained when I was in Washington recently, written from the office of the Secretary of Commerce, Washington, and dated March 24, 1943. It is addressed to Senator the Hon. Harry S. Truman, United States Senate, Washington, D.C. and is signed by Mr. Jesse H. Jones, United States Secretary of Commerce, and written one day after the Minister of Munitions and Supply made in the house the statement to which I have referred. The letter clearly indicates that there are two prices: fifteen cents for eighty per cent of the aluminum, and seventeen cents for twenty per cent of the aluminum supplied to the Metals Reserve Company of the United States, or, in other words, to the United States government's metals control organization. I want to read this letter:

Dear Senator Truman,—

In reply to your inquiry about Metals Reserve Company's purchases of aluminum from Canada, beg to advise that May 2, 1941, at the request of OPM, Metals Reserve Company contracted with the Aluminum Company of Canada for the purchase of 170,000 metric tons (374,680,000 pounds) of aluminum at 17 cents per pound, the then prevailing price of aluminum in this country.

This contract and all subsequent contracts in this programme were approved by the president.

In connection with the purchase, the aluminum company required an advance of $25,000,000, which we agreed to make at two per cent interest. Such advances are authorized in connection with the purchase of critical and strategic materials under section 5d of the Reconstruction Finance Corporation Act, as amended, and do not require interest. The interest was computed to equal 0·295 cent per pound of aluminum, and in drawing the contract this was deducted from the price of 17 cents. The advance was to be reimbursed at the rate of 6⅔ cents a pound of aluminum delivered.

Substantial advances on purchase contracts of critical and strategic materials have been made to China and Russia, and in connection with purchases in some Latin-American countries.

May 13, 1941, OPM requested that the initial contract be doubled. This was concluded at the same price. The company asked for an advance of $25,000,000 against this contract, and a loan for this amount was made to it by the Export-Import Bank at three per cent interest.

In negotiating contracts with the Aluminum Company of America to build and operate aluminum plants in the United States for our account, we secured a reduction from Alcoa—

The Aluminum Company of America.

—in the price of aluminum in the United States from 17 cents to 15 cents per pound, thereby saving the government a great many millions of dollars.

I want to draw attention particularly to this paragraph:

After getting the reduced price from Alcoa, we asked the Aluminum Company of Canada to reduce their price from 17 cents to 15 cents, notwithstanding we had contracted to pay 17 cents. The company was reluctant to reduce the price since they were getting 17 cents from the British and Canadian governments. However, we finally prevailed upon them to reduce the price to 15 cents on 80 per cent of the shipments. To get this reduction in price, we waived the interest on the advances, and made a reduction in the amortization requirements. The reduction from 17 cents to 15 cents saved Metals Reserve Company $16,000,000, while only $2,500,000 was waived in interest. This revision of the previous contracts provided for an increase in our purchases of aluminum from Canada to 1,000,000,000 pounds.

February 23, 1942, we were requested by WPB to increase the purchase of Canadian aluminum by an additional 370,000,000 pounds. These purchases were made at the reduced price schedule. The latter contracts also provided for advances against deliveries.

Total loans and advances to date in connection with all purchase contracts aggregate $68,500,000, and repayments have been $15,919,477. Total amount of aluminum contracted for is 1,370,000,000 pounds, and deliveries to date have been 368,000,000 pounds.

The contracts made provision for a fixed basis of cancellation on any part of the aluminum that we might determine not to buy.

Metals Reserve Company has had no control over the expenditure of the loans and advances, that is, whether they were to be used for working capital, plant, expansion, or otherwise.

Sincerely yours,

Jesse H. Jones,
Secretary of Commerce.

Mr. HOWE: Will the hon. member table that letter?

Mr. COLDWELL: That letter is tabled.

Mr. MACKENZIE (Vancouver Centre): Is that a copy?

Mr. COLDWELL: It is a copy. But the contents of the letter have been checked. When I returned to Ottawa and read again the minister's speech made on March 23, I thought perhaps I or the stenographer who copied the letter had made a mistake in the date, and consequently I telegraphed Washington to have a check made of the date of the letter. I received this reply:

Re your telegram this morning offices Jesse Jones and Senator Truman both confirm March 24 1943 date on Jones letter.

Mr. HOWE: May I interrupt for a minute? That letter is not inconsistent with what I said in the house. I was not aware of the arrangement with the Jesse Jones agency—the Metals Reserve Company, I believe it is called—because it did not pass through the Department of Munitions and Supply. It was a contract between the Metals Reserve Company and the Aluminum Company of Canada Limited. The first intimation I had of it was an intimation from a United States source that a price of 15 cents has been contracted for with the United States agency. I immediately advised the Aluminum Company of Canada that the price to Canada and the price to Great Britain would also be 15 cents, and that was accepted and the contracts were revised accordingly. The fact that the Metals Reserve corporation did not make a price of 15 cents for their total purchase is news to me. But what I intended to say was that existing contracts between the Aluminum Company of Canada and Britain—in the meantime the British government had appointed me their agent to deal with aluminum matters—were revised on a 15 cents basis converted into Canadian funds.

Mr. COLDWELL: Well, it will be noted that the Aluminum Company of Canada was reluctant to reduce the price from 17 to 15 cents to the United States government because they were getting 17 cents from the British and Canadian governments.

Mr. HOWE: Yes; but may I say that there is a vast difference in the relative positions. The new plants in the United States were built with funds furnished by the United States government and are owned by that government, whereas the Aluminum Company of Canada were making metal in plants which they themselves owned.

Mr. COLDWELL: I shall have something to say about that in a few minutes, but I would draw the minister's attention to this, that 15 cents and 17 cents a pound were the exact prices originally agreed upon among members of the international cartel which was formed in 1931. That is the cartel known as Alliance Limited, a cartel which, by the way, included Farbenindustrie of Germany

until 1942. Indeed, as far as the parent company of Aluminum of Canada is concerned, namely, Aluminium Limited, so far as I know it has not been dissolved; that is, the cartel of which Farbenindustrie was a part.

On May 14 I also drew attention to the fact that the prospectus of the company referred to what was termed a reduction in the base selling price of aluminum, and I noticed that the minister used the same words in March. I concluded that there must be some provision for some price other than the base price. I understand that some four contracts were made between the Metals Reserve Corporation and the Aluminum Company of Canada, and of course these contracts have been referred to on the floor of congress; references will be found at page 1943 of the congressional appendix, by Hon. John M. Coffee. I understand that these contracts contain what is known in the United States, and sometimes in Canada too, as an escalator clause, which provides that in the event of certain costs, including wages, raw material, transportation or insurance increasing, the price shall be advanced proportionately and accordingly. So that there is another price than the one mentioned in the contract. In other words, the price referred to in the prospectus as the base price of fifteen cents or seventeen cents, as the case may be, is only a base price, the actual price may be higher. Whether even the minimum price of fifteen cents is fair and reasonable is a matter to which I wish to draw the attention of this committee.

In the meantime I am going to ask the minister to tell the committee, when he has something to say, what are the actual prices per pound we have paid and are paying for aluminum, now and since the outbreak of the war. In the course of an investigation into the operations of the Aluminum Company of America, and in a brief submitted to the courts on behalf of the United States government, references are made to the cost of producing commercial ingots at Arvida in the year 1937. Not only will you find the reference there; it will be found also in the annual report of the company for 1937 or 1938, when Mr. E. K. Davis, president of Aluminium Limited, made the statement that they were selling some aluminum at thirteen cents a pound and that this gave Aluminum of Canada a profit of four cents a pound, giving a cost at that time, estimated in that way, of nine cents a pound; and it was admitted by the company before the United States courts that in that year, with a relatively small production, with the equipment then installed and including in the price the profits made by the subsidiary companies in the production of bauxite, power and so forth, the Arvida plant was producing commercial ingots at a price of 8·93 cents a pound. To-day the new aluminum plant, with the latest, most modern and most efficient machinery, producing, as the minister told us on Friday, six times as much aluminum as in 1939, still charges fifteen cents and seventeen cents a pound as a base price.

Mr. MacNICOL: That is a profit of 100 per cent.

Mr. COLDWELL: With the vastly increased production and the more modern equipment, Aluminium Limited at its subsidiary's Arvida plant should produce the metal at a much lower figure than in 1937. Let me repeat that the prices set by the corporation and agreed to by the government are the prices set in 1931 by the international cartel, Alliance Limited. Again let me remark that if the sister company, the Aluminum Company of America, with higher labour costs and more expensive power, can produce the metal and maintain its very high profits, as it has done and is doing, on the basis of fifteen cents a pound, then obviously the Aluminum Company of Canada is able to produce and sell aluminum to the Canadian, United States, Australian and other united nations governments at a price considerably less than that at which the United States company can sell to the government of that country.

I say the united nations are being sold down the Saguenay river by these agreements; that while our people are called upon to sacrifice, and while Canadian boys are giving their lives in a great cause, this giant corporation is receiving profits and properties which will enable it after the war to maintain a monopoly which will dominate electric power resources and the production of aluminum on the American continent and to a large extent throughout the world. This is a serious condition, and I intend to prove these statements this afternoon, if I have time.

To understand the effect of the government's policy in regard to the aluminum companies it is necessary to delve into their history and to trace, as briefly as possible, the steps by which they have secured their stranglehold both on aluminum and on the nations. I shall take the Aluminum Company of America first, because it was originally the parent of all the companies affiliated with Aluminium Limited. It can be shown that this has been a highly profitable monopoly for many years. An analysis of the financial history of this corporation reveals the enormous profits made by the owners. In 1905 the original capital, including not only cash but

stock issued in payment for patents, amounted to not more than $3,121,600. Thirty years later, in 1935, the original investment, without the investment of another cent raised from themselves or from the public, gave the owners assets in Alcoa and its creature, Aluminium Limited, totalling $167,500,000. By 1942 those assets had jumped to over $350,000,000 for Aluminium Limited alone. In the twenty-five years from 1911 to 1935 the profits available for securities representing the original investment of $3,121,600 totalled $240,000,000, indicating an annual return of 282 per cent. Out of this some $81,274,000 was paid in cash dividends, representing a cash return of 100 per cent per year paid on the original investment. Imagine what will be the vast increase in the assets of the corporation as a result of the accelerated depreciation now being granted by Canada! This enormous accumulation of wealth, representing mainly gains derived from monopoly power and privileged access to valuable hydro-electric resources, has been concentrated in the hands of a mere handful of people. There has been no wide diffusion of ownership of aluminum shares, some ninety per cent of the stock being held by directors and members of their families.

It is to this company that the governments of Canada, the United States, Great Britain and Australia are giving millions of dollars over and above the real value of the aluminum during the course of the present war. That is what the agreements really do.

The lifelong policy of the aluminum corporation has been to maintain high prices for its product, the effect of which has been to restrict its use. General Motors, for example, abandoned its use years ago on account of Alcoa's arbitrary price-fixing policy. The Ford Motor Company about the same time turned to steel in order to escape the monopoly stranglehold. Other companies followed the same path. On the eve of the expiration of its original patents, in 1906 and 1909, it entered upon a plan to secure control of raw materials which might be used by any possible competitor. It secured agreements with three of its most profitable competitors not to supply bauxite to other producers or manufacture aluminum for periods of forty and fifty years. It undertook to tie up the principal water-power companies in North America so that no competitor could obtain electric power for the manufacture of aluminum. This it succeeded in doing.

For example, on August 14, 1899, Alcoa entered into a contract with the Shawinigan Water and Power Company of Shawinigan Falls, Quebec, Canada, for the supply of power. Like its other contracts for power, this contract contained a restrictive covenant by which the power company agreed that it would not use its power for the manufacture of aluminum, or sell power to any manufacturer of aluminum other than Alcoa. Section 12 of the contract provided:

> In consideration of the agreement by Aluminum Company of America that the power generated by the water privileges granted by this contract shall be used for the purpose of the manufacture of aluminum and such purposes as may be incidental thereto, and for lighting and heating the premises of said second party and for no other purposes, the Shawinigan Water and Power Company of Shawinigan Falls, Quebec, Canada, agrees that it will not furnish water or water-power to any other person, corporation or organization engaged in the business of manufacturing aluminum and further that said Shawinigan Water and Power Company itself will not use water or water-power for or in connection with the business of manufacturing aluminum during the continuance of this contract, or of any renewal thereof, it being the true intent and meaning hereof that with respect to the manufacture of aluminum the rights to be granted and conveyed unto the Aluminum Company of America shall be sole and exclusive.

Section 16 of the contract gave to this restrictive covenant the status of a covenant running with the land of the power company. The contract was to continue for a period of ten years, subject to successive renewals for periods of ten years. Subsequent contracts renewed this covenant, and it is still in effect. Contracts of exactly similar sort were made with Niagara and other power corporations, so that eventually Alcoa controlled power everywhere along the St. Lawrence in Canada and the United States. One might properly remark that Canada's Combines Investigation Act is a dead letter, so far as these giant monopolies are concerned.

As early as 1896 Alcoa entered into an agreement with its only competitor, a Swiss company, to divide the world markets between them. But by 1901 French and British companies had made their appearance so that it became necessary to enlarge the cartel. In order to get around the United States Sherman anti-trust law, the Alcoa formed a Canadian subsidiary, the Northern Aluminum Company, and from that day to this it has endeavoured to circumvent United States laws with respect to trusts and cartels by using Canadian corporations.

From 1919 to 1925, George D. Haskell, president of the Baush Machine Tool company, endeavoured to find ways and means of manufacturing his own aluminum. He got in touch with James B. Duke, the owner of the power plant and water power on the Saguenay river. As soon as Arthur Vining Davis, the president and financial genius of

the Aluminum Company of America, heard of it, he saw Duke and negotiated a merger with him whereby Duke became a partner and one of seven directors with the ownership of fifteen per cent of the common stock and one-ninth of the preferred stock. Duke had paid $1,000,000 for the Saguenay power sites which the province of Quebec had alienated for $40,000. The market value of the stock which Duke received for the Shipshaw or lower Saguenay site was approximately $40,000,000. He retained the upper site which Duke-Price Power had already developed.

Duke died in 1925, and in 1926 Alcoa acquired 53⅓ per cent control of the Duke-Price Power Company which owned the upper development and immediately entered into a fifty year contract with it to take 100,000 horse-power at a total cost of $60,000,000.

By these measures all contemplated competition was eliminated.

I do not propose to go into the methods by which bauxite deposits were acquired in the United States, British Guiana, Dutch Guiana and elsewhere. Suffice it to say that similar methods were followed, and successfully.

An interesting sidelight of the character of the economic barons into whose hands the government's policies are delivering Canada, is shown by the manner in which they succeeded in obtaining a large block of shares willed by Charles M. Hall, the inventor of the process, to the American Missionary Society. Within a few months of acquiring the stock from the beneficiaries at $5 a share, it was selling at $79 a share. The earnings on this stock that year, 1925, was $13.22 a share. Davis acquired over 61,000 of these shares for himself, and some 49,000 of them went to Duke in part payment of the power site.

Meantime in 1924 the Northern Aluminum Company, the subsidiary of the Aluminum Company of America, had become known as the Aluminum Company of Canada. Its business had expanded into the making of aluminum wire and sheet and it owned bauxite deposits in British Guiana. With the acquisition of the Duke-Price Power Company it changed the name of the Duke-Price Power to the Saguenay Power Company Limited and entered, as I have said, into the fifty-year contract to take power at a total cost of $60,000,000. This contract was guaranteed by Alcoa.

Now the stage was all set for the creation of a world cartel into which Alcoa could not enter on account of the United States anti-trust laws. It remembered that in 1912 the United States Department of Justice had ordered the dissolution of the agreement with the Swiss company. But it also remembered that through its subsidiary, the Northern Aluminum Company, it had entered into agreements designed to control sales outside the United States. As a result it succeeded at once, in 1912, in raising the price of aluminum in the United States from 17 cents a pound to 26·46 cents a pound. After the world war it entered into various informal agreements and understandings to restrict competition and maintain high prices. As can be established from the records, between 1921 and 1927, it supplemented these agreements by acquiring producing facilities in the home markets of foreign producers, notably Norwegian.

In 1928, the directors of Aluminum Company of America decided that they were sufficiently strong to dominate the world. Because the Sherman anti-trust law made their own entry into a world cartel dangerous, they decided to form a new company under Canadian law. Thus they created Aluminium Limited and at once transferred to it thirty-three of its foreign subsidiaries, including the Aluminum Company of Canada. How closely these companies remain one is shown by the ownership of stock in them. The latest report I have been able to secure, that of 1938, shows that 81 per cent of Alcoa stock is held by the people who also hold 83·93 per cent of the stock of Aluminium Limited which now became the parent company of the Aluminum Company of Canada, which it owns fully, and thirty-two other companies outside the United States. It is of the parent company, Aluminium Limited, that our minister at Washington, Mr. Leighton McCarthy, is a vice-president and director at the present time.

Mr. HOWE: No.

Mr. COLDWELL: Yes, excuse me.

Mr. HOWE: Not at the present time.

Mr. COLDWELL: Unless he has resigned in the last three weeks.

Mr. HOWE: He resigned last February.

Mr. COLDWELL: That was from the Aluminum Company of Canada. I asked Mr. McCarthy when I was in Washington three weeks ago the direct question as to whether or not it was true that he was a vice-president and director of the parent company, which I had miscalled the Aluminum Company of the United States, but which I should have called Aluminium Limited, and Mr. McCarthy's reply was this: "Yes, I am a director of Aluminium Limited, and I am intending to remain a director of that company."

Mr. KNOWLES: And vice-president.

Mr. COLDWELL: And vice-president as well. There is no disputing the fact that Mr. McCarthy told me that himself. However, that is a point I am going to take up with the Prime Minister on external affairs estimates when I shall refer to the statement which was read to the house and which I described at the time as a deliberate concealment of the truth. I shall have something further to say when the Prime Minister is here.

It is significant that shortly after, in 1931, the heads of French and British aluminum companies visited the United States and met Arthur V. Davis with a view to entering upon mutually satisfactory argeements regarding aluminum. The new company, Aluminium Limited, had already been organized in Canada to handle foreign business. It was obvious then and emphasized by events afterward that Alcoa would be left undisturbed in the United States market. Aluminium Limited was organized not as a 100 per cent subsidiary of Alcoa, as was Northern Aluminum Company which preceded it, but ostensibly as an independent Canadian Corporation, thus not subject to United States law. Arthur V. Davis made his younger brother, Edward K. Davis, president of the new parent company and chose as directors men who had long been associated with the Aluminum Company of America or the Aluminum Company of Canada or with other wholly owned subsidiaries. The two corporations had, as I have already said, almost identically the same stockholders.

From that time on Aluminium Limited worked with the European cartel. It entered into price fixing agreements with respect to various markets and all kept out of the United States where Alcoa had a free hand and the same prices. In 1930 the Davis brothers promoted a new cartel. The heads of the European companies journeyed to the United States where they were met by Arthur and Edward Davis. In order to avoid running foul of the anti-trust law, they moved to Montreal, the happy hunting ground for corporations, to negotiate the terms of the new agreement.

The result was the formation of the Alliance; the Alliance foundation agreement was executed in Paris on July 3, 1931, and about three months later it was duly incorporated in Switzerland with two Aluminium Limited employees as manager and assistant manager of the whole cartel. Price fixing and suppression of competition by the Alliance were made effective by three major devices: first, by fixing an Alliance buying price; second, by removing surplus stocks of aluminum from the world markets and, third, by the alleviation of production quotas.

[Mr. Knowles.]

The Alliance buying price was reconsidered usually every three months. The buying price represented the price at which the Alliance pledged itself to purchase any unsold aluminum from its members periodically. Since it was unnecessary to sell any surplus on the world market, the buying price became the fixed minimum price for the world. To make control doubly sure, the Alliance fixed production quotas based on the export prospects at the time. Under this allotment Aluminium Limited was permitted 28·58 per cent; the French company, 21·36 per cent; the Swiss, 15·42 per cent; the two German companies, which subsequently became a part of the nazi industrial system Farbenindustrie, 19·64 per cent, and the British, 15 per cent. The immediate result was that production of aluminum was cut down to eighty per cent, and subsequently to fifty per cent of normal. There were some smaller producers with whom Alliance also made arrangements to curtail their production.

Alcoa could not join the cartel. It had a surplus of aluminum, but this was immaterial because Aluminium Company, the predominant partner in Alliance Corporation, was Alcoa's creature. There was no danger of the surplus aluminum entering the world market without Alcoa's consent. Indeed, the original Alliance agreement of 1931 permitted Aluminium Limited to supply Alcoa with aluminum in the United States without including these amounts in its production quota. This was changed in 1936 when a system of fines for exceeding quotas was substituted.

The Alliance continued to fix prices and allot quotas until March 31, 1938 when unprecedented rearmament demands rendered restriction unnecessary. By this time Germany had become the greatest producer of aluminum in the world. It is interesting to note that the world price was set originally at £70 gold per ton, but that in accordance with the agreement of 1931, Aluminium Limited was allowed to export to the United States to Alcoa outside the allotment. This was largely accomplished by setting a price in the United States to purchasers other than Alcoa of £80 gold per ton, thus preventing effective competition in aluminum products with the several United States subsidiaries of Alcoa in that country.

In a letter produced in the district court of the United States for southern New York in 1940, dated January 25, 1932, and addressed to Aluminium Limited, McDowell wrote the following instructions:

For shipment to U.S.A., you should fix your ingot price to your largest U.S.A. customer at

15 cents (U.S. currency) per pound f.o.b Arvida, and to other customers at 17·2 cents, f.o.b. Arvida. The A.C.O.C. (Aluminum Company of Canada) will accept your ingot orders for shipment to U.S.A. at 15 cents U.S. currency per pound f.o.b. Arvida.

This letter is particularly important because it indicates that Aluminium Limited was not a competitor with Alcoa in the United States market and that fifteen cents a pound is the equivalent of £70 gold per metric ton. A universal minimum price had been set. But it is also important for another reason. Read with the letter of Mr. Jesse Jones to Senator Truman of the United States, wherein Mr. Jones states that the United States was on March 24, 1943, paying fifteen cents for eighty per cent of its aluminum and seventeen cents for the remainder, it proves conclusively that the Canadian unit of the world cartel is at this moment maintaining the cartel's world price for its product supplied to the united nations.

It will be remembered that I mentioned earlier the formation of a previous cartel in 1912 and its effect upon aluminum prices in the United States. Waltz of the Bremer and Waltz Company of St. Louis testified before the United States court—I have these records —that he purchased imported aluminum in 1910 and 1911 at 10½ cents a pound, and that American aluminum had been selling in the United States, before April, 1912, when the cartel was formed, at 16½ cents a pound. Following the agreement the United States price rose to 26½ cents a pound.

When we remember that with inefficient methods and small production foreign companies could deliver aluminum f.o.b. United States ports for 10½ cents a pound in 1911, we can get some idea of what prices of fifteen and seventeen cents a pound mean in 1943. Indeed, as lately as 1929, a year of high prices industrially, Aluminium Limited was selling aluminum to Alcoa at thirteen cents a pound, f.o.b. Arvida, and a contract was made at that price for 75,000,000 pounds. Again let me repeat that the cost of producing aluminum ingots at Arvida in 1937 was referred to by Mr. Davis in his annual report and was reported to the United States authorities as 8·93 cents a pound, without any deductions for inter-company profits on electric power, bauxite, et cetera, which they were collecting in addition.

Since then there has been enormous expansion both in power facilities and in plant for the production of aluminum. Contracts for 1,380,000,000 pounds of aluminum have been made with the United States alone, to say nothing of contracts with Britain, Canada and Australia. The newest, most efficient, most economical pots for smelting have been installed at Arvida with almost unlimited hydro-electric power. No wonder that the estimate was given to me that under ordinary circumstances, with the usual provision for amortization, and with vastly increased production, aluminum could be produced at Arvida for about six cents a pound. Lest this should be disputed, let me add of Aluminium Limited that from 1931 to 1933 the fully-owned subsidiaries of the company including the Aluminum Company of Canada operated at only fifty per cent of capacity, that the Aluminum Company of Canada operated at only thirty-five per cent of capacity in 1933 and 1934, at forty-six per cent in 1935, and at fifty-one per cent in 1936. Yet the 1943 prospectus of the Aluminum Company of Canada, which I have quoted before in the house, states:

> The company has realized net income from its operations every year since its incorporation in 1924. Dividends on the common shares have been paid in every year since 1924.

Furthermore, in the year 1932, Aluminium Limited was paying about a million dollars a year to the Upper Saguenay Power Company for electric power which it did not use, nor did it use any substantial power from the lower Saguenay development between 1925 and 1938, although the enormous investment had to be carried as a part of their expenses. Now they are using all available power, with new and modern aluminum pots and equipment, and the governments are paying prices of fifteen cents and seventeen cents a pound as decided by the Alliance agreement in 1931.

Thus it may be safely assumed that the cost of production has been drastically reduced since 1938 inasmuch as increase in production and the freezing of relatively low wages will tend to lower unit costs rather than to raise them. The conclusion is inescapable that as far as aluminum is concerned the monopolistic power of the Aluminum Company of America exercised through its creature in Canada, Aluminium Limited, is exacting from the united nations—with the consent of the government—a toll unparalleled in history. I submit that the agreement is improvident and against Canada's best interest.

Mr. HOWE: To what agreement does my hon. friend refer?

Mr. COLDWELL: The general agreement with the Aluminum Company for the expansion of their plant, for increasing their electric power, the agreements regarding depreciation allowance, the price of aluminum—the several agreements.

To argue that because Sir Stafford Cripps or someone else expressed appreciation of the

quality and quantity of their product, the contracts and agreements are sound is to deceive oneself and the country. I have no doubt their product is good. I have no doubt the quantity is satisfactory. I have no doubt that the material is vital, but I am not overlooking the fact that they dictated their own terms. Look again at the letter written by Mr. Jesse Jones on March 24 last.

Mr. GRAYDON: What year?

Mr. COLDWELL: This year, 1943. He says:

> We asked the Aluminum Company of Canada to reduce their price from 17 cents to 15 cents, notwithstanding we had contracted to pay 17 cents. The company was reluctant to reduce the price since they were getting 17 cents from the British and Canadian governments.

Nothing in this to merit any thanks from Britain or from Canada. On the contrary, it seems clear they were out to get all the traffic would bear, while Canadian boys died across the seas and our people at home worked and saved to prosecute the war.

But there is another and, in the long run, a more serious aspect to this situation. I have shown, I think conclusively, that we are dealing with a group of industrial barons whose chief aim has been to make money and obtain world-wide power. Yet it is to this organization the several governments have given, or advanced, over $300,000,000 in one form or another during this war. It is easily the greatest financial grab ever pulled off in the history of Canada.

Cost-free new aluminum facilities, and the power plant at Shipshaw will do two things: (1) enable them to control more effectively than ever the light metal industry of the world and (2) undersell publicly-owned power in the northeastern part of North America.

I have shown the interest of the Aluminum companies in electric power at various stages of their development. From the evidence, there can be no doubt whatsoever that the effective control of power and power development was a weapon used to prevent the establishment of rival companies. Thus their complete control and war-time development of the whole of the power resources of the Saguenay river are ominous from that point of view.

In spite of various attempts on the part of the Hydro Electric Commission of Ontario to obtain international agreements for the development of the St. Lawrence, nothing has been done. The dominant interest in the St. Lawrence area has been and is—including Beauharnois—the Aluminum Company, whose agents have endeavoured at all times to block public power development on the river. But this phase will be dealt with by one of my colleagues.

The CHAIRMAN: The hon. member has spoken for fifty minutes.

Mr. COLDWELL: I should like to finish if I may, Mr. Chairman.

Some hon. MEMBERS: Go ahead.

Mr. COLDWELL: I do not propose now to deal with the labour aspects of this company's activities. They can be dealt with at another time. Suffice it to say, such relations have often been both scandalous and inhuman. Men in the pot room rarely last long amid the poisonous fumes, and the labour turnover in that part of the plant is appalling. Cheap labour, cheap power and high monopoly prices for their product have brought the Aluminum interests untold wealth and economic power.

Now I think I have proved what I intended to prove:

1. That the price we are paying for aluminum is a monopoly price, substantially set by the world cartel in 1931, and out of line with the actual cost of production.

2. That the information given to this house on March 23 was not in accordance with the true facts, because, as the minister now points out, he did not know what the facts were.

3. The minister also denied that the $68,500,000 was an advance, a balance of which might be cancelled and the Aluminum Company thereby relieved of the balance.

Mr. HOWE: I did not say it was not advanced but it was not for the Shipshaw development. It was advanced to build pot rooms for making the aluminum.

Mr. COLDWELL: The minister will find that he said that it could not be cancelled.

Mr. HOWE: The cost of the pot rooms cannot be cancelled. The other can.

Mr. COLDWELL: I was going to draw attention to the letter of Mr. Jones in which he says that the contracts make provision for a fixed basis of cancellation.

Mr. MacINNIS: Is it Jesse Jones or Jesse James?

Mr. COLDWELL: Jesse Jones. To go on with my point:

4. The minister stated that all aluminum produced in Canada is sold at the same price whoever buys it. Mr. Jones' letter states that

there are two base prices, fifteen and seventeen cents. I would ask the minister to tell us the prices actually paid.

5. The electric power development, which was paid for by the government in large measure, in fact wholly if you take the deal as a whole, menaces the future of publicly-owned hydro electric enterprise.

I am asking if the minister will table all the contracts made with the company on behalf of the Canadian, British, Australian and United States governments so that we may see what is in them.

I have placed the facts before the committee without invective, I am certain without exaggeration, and I know without misrepresentation. These are the facts as I have accumulated them. I have got them first hand from first-hand sources. I have no doubt that there are certain people who know the people I visited when I was in Washington and know the offices where I got my information. I assure the committee that my information is authentic and gathered from those who were able to give me the information. I ask, is there an hon. member who will dare now to rise in his place and say that the deal with this giant unit of an international cartel is not, without exaggeration, a grave danger to the country and a public scandal?

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Hon. C. D. HOWE (Minister of Munitions and Supply): The hon. member for Rosetown-Biggar (Mr. Coldwell) made certain remarks about the aluminum contracts, for which he suggests the department has been responsible. I wish to say just a few words in that regard, and I will give the facts asked for at a later sitting.

I think we will all agree with regard to the importance of aluminum in this war. We know that, at the time the first contract was being made, the women of Britain were delivering up their pots and pans, in order that aeroplanes might be manufactured to save the battle of Britain. I am happy to say that Canada was able to make a very substantial contribution of aluminum at that time. Had we not been able to do so, I think it is possible that the battle of Britain, instead of being won, might have been lost. We know the importance of aluminum to-day. Without aluminum the manufacture of combat aircraft is impossible. We know that Canada's tremendous contribution of aluminum has made possible the great expansion in the production of aeroplanes, not only in Britain and in the United States, but in this country as well. That I think has been of very great importance to the war effort, and therefore no one in this chamber will disagree with me when I say that Canada was in duty bound to provide all the aluminum it could, and to take every step that could be taken to that end.

With that premise, we can examine the aluminum contracts. Let me say that the Department of Munitions and Supply has been fighting one battle and one battle only, namely, the battle against the axis. It has not been fighting a battle against trusts and combines. It has not been fighting a battle for one industry as against another, or for one province as against another. It has been trying to mobilize the industrial resources of Canada for the most effective battle against the axis.

We have heard in great deail that Aluminium Limited, the parent company of the Aluminum Company of Canada, is a combine. I daresay that is true. It has been a combine for a great many years, and I presume it is a combine to-day. But whether it is a combine or not, the government has not had time to take up a war against any combine, even though it were inclined to do so. As I say, we have been fighting one war, namely the war against the axis, and we have mobilized Canadian industry, as it was at the outbreak of war, for the purpose of fighting the axis. As a matter of fact, we have tried not to use the excuse of the war for changing the competitive position of any industry in Canada. Every industry has been treated exactly the same as any other. If any industry has come to the Department of Munitions and Supply and said, "We are capable of producing more of any article required for war than we are doing at present; these are our plans for doing so," we have examined the proposal very carefully, and if it could be fitted into the pattern being followed by the department for expansion we have encouraged that industry to expand.

We have done that for every industry. We have not singled out a few industries and said, "We will expand you, but your competitor will have to stay as he is." Any industry that has had the desire and the ambition and courage to expand to meet war needs has been encouraged to do so by my department, and perhaps financially assisted to do so.

Mr. KNOWLES: May I remind the minister that there is no competitor in this case?

Mr. HOWE: Quite so, and there never was a competitor as far as Canada is concerned.

Mr. McIVOR: If you had not this aluminum, what would be the result in the production of equipment?

Mr. HOWE: There would be no aeroplanes, or fewer aeroplanes. As to the dealings of the Department of Munitions and Supply, it has been pointed out that Alcoa, the Aluminum Company of America, was the original company on this continent manufacturing aluminum. It has been pointed out that the Aluminum Company of Canada was organized as part of the Aluminum Company of America. It has also been pointed out that at a certain stage in the development of the aluminum company, the parent company was established in Canada, and that the Aluminum Company of Canada and certain foreign companies manufacturing aluminum were combined under the aegis of Aluminium Limited. There is no question about that.

I might point out that in forming Aluminium Limited as a Canadian company, subject to Canadian laws, and transferring the Canadian holdings of Alcoa to Canada and placing that company under Canadian law, a step in advance was taken as far as Canada is concerned. I think we will agree that any company that is Canadian, subject to Canadian law, is a better citizen of Canada than a company which is merely a branch of a United States company; obviously a company having its head office in another country is not subject to Canadian law to the same extent. However, I may say that so far as I could follow the remarks of the hon. member before the dinner recess, he was quoting from evidence produced by Thurman Arnold in his investigation of the Aluminum Company of America.

Thurman Arnold of course had a great reputation as a trust-buster or of a breaker of combines. Mr. Arnold, as special prosecutor for the government of the United States, conducted a case against the Aluminum Company of America which was in the courts of the United States for more than three years. I am sorry I have not refreshed my memory about the details of the prosecution, but I recall that over 300 charges were brought against the Aluminum Company of America. After an exhaustive inquiry which covered three years, and reams of evidence, the court gave its decision, finding the Aluminum Company of America not guilty on every charge laid by the United States government. So much for the charge that the Aluminum company is a trust and in combine illegally with the aluminum companies throughout the world. I simply state that for what it is worth, but once again I say that the Department of Munitions and Supply has not been conducting a war against combines. It has taken industry as it found it, has tried to get the greatest production possible out of industry, and its purpose is to leave industry in exactly the same competitive position as at the outbreak of war. After the war, under normal conditions, if any government desires to proceed against Aluminium Limited, or against Aluminum Company of Canada as a combine, that will be perfectly in order, but I think every hon. member will agree with me, that we should not use the excuse of war to do something that we cannot appropriately do in peace time, as far as attacking the competitive position of any industry in Canada is concerned.

As to the purchase of aluminum, the first transactions between Britain and the Aluminum Company of Canada were carried out without Canadian intervention. The Ministry of Aircraft Production had, and still has, a representative in the United States. It was that representative of the Minister of Aircraft Production who conducted the negotiations with the Aluminum Company of Canada which led to the first British contract. The United States contracts were worked out by the Metals Reserve Corporation, or whatever is the appropriate agency of the United States government, direct with the aluminum company. I have never seen the United States contracts and have not a copy of them. It was news to me that those contracts mentioned two prices. I know that the price change in the United States took place while the contracts were under negotiation. When the first United States contract was drawn, the price of aluminum in the United States was seventeen cents a pound, and the first contract between the United States and the Aluminum Company of Canada mentioned a price of seventeen cents a pound. While a second contract was being negotiated the price of aluminum was revised in the United States, owing I think largely to the fact that the United States government had paid for the building of plants which manufacture aluminum in that country, and had demanded a reduction in price on that account. In any event, at that stage the base price in the United States was reduced to fifteen cents. By that time I had been appointed the agent of the British government in its aluminum transactions. I immediately demanded a reduction in the price of aluminum to Canada and to Britain, to correspond with

the reduction to the United States. That demand was granted, and prices were revised accordingly to Britain, Australia and Canada.

Canada, for her own purposes, has not required expanded facilities. We were entitled to the facilities which were in Canada when the war broke out, and to date we have not required more aluminum than those original facilities would provide. Therefore Canada has not contracted with the Aluminum Company of Canada for additional ingot capacity.

We have been told repeatedly that Canada has financed this expansion with its own funds. That is not true; we have provided no money whatever to the aluminum company for expansion.

Mr. BLACKMORE: Would the minister permit a question?

Mr. HOWE: Yes.

Mr. BLACKMORE: What expansion has he in mind when he says "this expansion"?

Mr. HOWE: Every expansion. Everything that the aluminum company has built in Canada since the war began.

Mr. BLACKMORE: I was just trying to gather what the minister meant. I understood him to say that they did not need to expand—

Mr. HOWE: —to supply the Canadian demand.

Mr. BLACKMORE: That there was already sufficient expansion?

Mr. HOWE: They have expanded vastly, of course, to supply the demand from the United States and from Britain.

We have provided a certain accelerated depreciation. I will divide that into two stages. One is the special depreciation for the expansion required to fill the United States order for aluminum. The United States order was placed with the knowledge that no facilities existed in Canada to fill the order, and that these facilities must be constructed, and constructed as part of the price of the aluminum which would go to the United States. The contract was drawn with the understanding that a loan would be made by the United States sufficient to pay for the pot rooms and other manufacturing facilities, needed to turn out the aluminum required by the United States within the time mentioned in the contract.

Mr. COLDWELL: May I ask the minister a question?

Mr. HOWE: Yes.

Mr. COLDWELL: Was there any restriction in fact regarding that loan? It could be used for anything?

Mr. HOWE: I think there were no restrictions placed on the use of that loan. That, of course, is a matter between the United States and the aluminum company; but the amount was the amount required to pay for the pot rooms, and alumina plants and all other facilities which are required to manufacture aluminum in ingot form.

That contract could have been written differently. It could have been written that the aluminum would be purchased for ten cents, and the equivalent of five cents could have been paid the aluminum company as capital to create the facilities which would manufacture aluminum. In that event there would have been the investment in Canada of so many dollars in capital facilities, which of course would not have been taxable, and there would have been the sale of aluminum to the United States at 10 cents a pound, the profits on which would have been taxable. Had the transaction been framed in that way there would have been no criticism whatever in this house. That type of investment in Canada has been going on for many years, and has been very welcome as a source of capital for industrial purposes in this country.

Mr. KNOWLES: Does the minister feel that there would have been profits at ten cents a pound?

Mr. HOWE: I will cover that presently. You are all set to make a speech; let me continue mine. That would not have been as valuable a transaction for Canada as the present transaction. It probably would, indeed it must, have taken that form had we refused to allow accelerated depreciation on that part of the purchase price which went into fixed capital. The difference would have been this: Had the deal been organized in that way, the Aluminum Company of Canada would own an asset which they would have been allowed to depreciate over the years; as it is, they own an asset which is fully depreciated. In other words, any dollar of earnings that comes from that asset is taxable as income by the Canadian government.

Let me point out to hon. gentlemen that, when anyone invests money in building a manufacturing plant or any other industrial enterprise, he has an obligation from the state that that capital will be returned to him over the years as depreciation. That is a very valuable concession granted him by the state. If you look over the balance sheets of industrial companies, you will find that each year

there is a deduction before taxation of perhaps five or six per cent of the original capital in the form of depreciation. Through accelerated depreciation, the new aluminum facilities will exhaust all rights to depreciation. That write-off can never occur in the future. Therefore, as I say, any earnings which will be made by the aluminum company from these facilities will be taxable in full. So that when we compare the deal which my hon. friend would say would be quite proper—that is, that five cents a pound would be paid by the United States as capital invested in Canada, and the aluminum sold at ten cents a pound—the position of Canada would have been vastly worse as far as taxable income is concerned than is the present situation.

We come now to Shipshaw. I noticed that my hon. friend did not make this mistake in his discussion this afternoon, but in the United States it has been stated definitely that the money which paid for the Shipshaw development was loaned to the aluminum company by the United States. As a matter of fact, the Shipshaw transaction was worked out well before the United States became a purchaser of aluminum in Canada. It was quite obvious that we would be very short of power for war purposes in the Quebec area. The Aluminum Company of Canada, as I have said before, had a partly completed development at Shipshaw on which there had been spent some $35,000,000 and which was producing some 200,000 horsepower. Before the war it was estimated that the expenditure of another $35,000,000 or perhaps $38,000,000 would complete the development and provide a potential one million horsepower at that location.

Mr. MacNICOL: Over a period of time.

Mr. HOWE: Well, as fast as it could be built. It is not finished yet; they are adding new turbines right along; but the dam was there; the construction was there for a million horsepower, and by May of next year the project will be producing a million horsepower. The potential horsepower was needed. It has been suggested that this development was carried out to block the St. Lawrence development. Let me remind hon. members that Canada is committed to the St. Lawrence development; that it has agreed with the United States to proceed with that development, and the St. Lawrence development was blocked not in Canada but in the United States. An exchange of notes took place which put us definitely on record as being willing and anxious to proceed with the St. Lawrence development. Had an agreement been completed, perhaps we would not have been anxious to proceed with Shipshaw; but not having the St. Lawrence development, we could not win the war with its help. We had to have a development that would give results, and therefore we encouraged the Shipshaw development. It has been suggested that we allowed an accelerated depreciation on the entire cost of the Shipshaw development. We did not; we allowed accelerated depreciation on sixty per cent of the cost.

Mr. COLDWELL: I think I said that.

Mr. HOWE: Perhaps so. That percentage was worked out very carefully. Construction costs were soaring at the time. The cost of turbines, which had to come largely from the United States, had more than doubled when the agreement was made. It was obvious that labour was becoming more difficult to obtain, and we were pressing the aluminum company to do the job in half the time they had intended to take when their estimate was made up. After going very carefully into all the factors and studying the question for months—we had engineers studying the possibilities—we decided that if we were to ask the aluminum company to carry out that expansion in war time, in a period of high prices, we were justified in reducing the charges on the plant to forty per cent of the cost, allowing the other sixty per cent to be written off by the company out of war-time profits. That transaction, as I say, was a Canadian transaction; the United States had nothing to do with it. The transaction had been concluded before the sale of aluminum to the United States took place, and the Shipshaw development should not be involved in any way with the transaction that has been under discussion here this afternoon and evening.

There was some other phase of my hon. friend's discussion with which I intended to deal. I will say this, that the Aluminum Company of Canada have carried out their contracts to the letter. They have delivered every pound of aluminum they have contracted to deliver, at the time for which the aluminum was promised. They have shown tremendous courage, taking on great liabilities, in carrying out the expansion that has been required by the united nations for their war programmes. It has been suggested here that the earning power of the aluminum company has been expanded enormously. If that is so, I suggest that it should be reflected in the market price of the shares of the company. Those shares now are exactly the same shares the company had outstanding before the war; they are bought and sold freely on the Montreal stock

exchange. Perhaps the fairest value of any security is its current quotation on the stock exchange.

Mr. COLDWELL: What were they last year? They were 65.

Mr. HOWE: True. What were they in 1939? They were 140. They are about 120 to-day, but before any war expansion took place they sold at 140 and kept around that level fairly consistently. Since the expansion has taken place, the shares have dropped steadily, until about a year ago. In recent months there has been buying that has brought them up to the present price which, as I say, is about 120. I had occasion to look up the price range; I am sorry I have not the figures here, but I would say simply that those who sell at 120 evidently think the company has less earning power to-day than it had in 1939, while those who buy at 120 probably think it is nearly as good as it was in 1939. But there is no class of buyer who seems to believe that these shares should be bought in large blocks at this time, at rising prices.

Therefore, in discussing the relations of the Department of Munitions and Supply with the Aluminum Company of Canada, I think I can say that the aluminum company have given value for anything that has been invested in this country by other governments. They have sold aluminum at the cheapest price at which it has been sold by any country. Incidentally I may say that the aluminum company in England is selling its aluminum at some seven or eight cents more than the price at which it is being sold in Montreal to-day. I think that is all I have to say at the moment; I shall look over *Hansard* and perhaps amplify my remarks to-morrow.

Mr. MacINNIS: What is the actual price Canada is paying for aluminum?

Mr. HOWE: The base price for aluminum to-day is fifteen cents, which may be increased or decreased according to increases or decreases in the cost of wages, transportation and power. The big item in which the cost has advanced is transportation. In the old days bauxite was brought in ships from British Guiana to Ha Ha bay on the Saguenay, and the cost of transportation was very low. To-day it is brought from British Guiana to an island in the Caribbean; there it is transhipped and brought to any United States port from New Orleans to New York. There it is transhipped by rail, and pays rail freight to the Saguenay. That, of course, has added enormously to the transportation costs.

Mr. MacINNIS: Would the minister give the adjustment?

Mr. HOWE: I can give the last adjustment. The last adjustment was about two cents over the base price. It is the same to all powers—to the United States, Canada and England. I will find the effect of the escalator clause in each of the years to which it has been adjusted. It is fixed by Price, Waterhouse and Company, who have been appointed referees for all buying countries, as to the actual differential between the base cost and the present day cost. I might say that the price of power has gone down, the price of wages has gone up slightly, and the price of transportation has gone up enormously.

Mr. KNOWLES: When the minister said that later on he would give the facts asked for by the hon. member for Rosetown-Biggar, did he mean he would table the contracts?

Mr. HOWE: Certainly, such contracts as I have. I have not the first British contract, I never had it. I have not the United States contracts.

Mr. KNOWLES: The minister will table the British contract?

Mr. HOWE: I cannot do that; we are under agreement with the British government not to do so. I will table any Canadian contract I have.

Mr. MacNICOL: Mr. Chairman, the hon. member for Lake Centre (Mr. Diefenbaker) made an excellent speech in connection with the general productivity of industry under the supervision of the Minister of Munitions and Supply. The hon. member for New Westminster (Mr. Reid) gave the committee an informative address in relation to iron and steel production. The hon. member for Rosetown-Biggar (Mr. Coldwell) delivered another informative address on the subject of aluminum, a subject concerning which the minister has spoken for the last half hour.

For the next half hour I shall speak on the subject of oil. Before commencing any detailed discussion I would point out to the minister that while in his opinion it is not the business of the government at the present time to take up questions in connection with combines, the United States government does. They have had exhaustive inquiries and investigations by senate committees into the supply of both rubber and oil. And from what the hon. member for Rosetown-Biggar has said I presume they have had an exhaustive inquiry into the production of aluminum. I believe it is this government's business—any government's business—to see that the people are not exploited. I am not saying that they

are. I am going to wait until other arguments are offered along the lines of those given to-day. But I maintain it is the government's business, in spite of the war to prevent the exploitation of the Canadian people.

As I said on April 14, 1943, I was greatly depressed by the minister's speech on the subject of oil. I had built my hopes on the belief that the time was not far distant when Canada would be independent of any outside sources of oil, both economically and defensively; I had built up that belief in my mind from the exhaustive reports issued by the government's engineers. But I must confess I do not believe the minister—well, I will not say that I do not believe—rather, I have not been convinced that the minister himself is in favour of Canada's becoming independent, in the matter of oil production.

The hon. member for Rosetown-Biggar said that the price of aluminum is much too high. I am convinced that prices of oil and gasoline are altogether too high if, as is said by the engineers of the Department of Mines and Resources, we have—as they have shown—inexhaustible raw tar-sand resources from which to produce oil.

On February 18, 1942, the hon. member for Bow River (Mr. Johnston) asked a question respecting the production of oil from tar sands. On that occasion the minister said:

> It indicates, however—

Referring to a report the minister had.

> —that the location of the sands and the possibility of development is too remote to be of any great use in this war.

The war has been going on now for almost four years. We were in bad shape during the first year. What have we done since? What single thing have we done to relieve the oil shortage situation in this country? So far as I can see, extremely little has been done.

When on April 14 the minister opened his speech he said something I did not like, one, two, three:

> There seems to be an erroneous idea in the minds of many regarding these tar sands. Whether these ideas are due to propaganda, supported by wishful thinking, I do not know.

It is neither propaganda nor wishful thinking upon which I base my arguments in connection with oil production. I base what I say upon thousands—no, I will not say thousands—but upon many miles of hard travel and survey, far into the Athabaska area. I have surveyed, myself, the tar sands there, and have carried out those surveys in the company of some of the greatest oil geologists in the world. One of them is very close to the top in Washington, and anything I have said about tar sands and the possibilities of the production of oil has been based (1) on the reports issued by the government itself—and in my judgment, the Department of Mines and Resources has some of the ablest engineers in America, barring none, so far as understanding the development of oil from tar sands is concerned—(2) on reports of the United States bureau of mines, and the opinions of some of their best engineers and (3) my own observations, in company with engineers who travelled through that area. So that anything I say is not based on wishful thinking or propaganda. So far as I am concerned I am above propaganda. Others may speak for themselves, but I have long been convinced that the time has come for Canada to have a national oil policy, first, to make herself economically independent of any outside sources of oil supply and, second, to make us independent defensively.

What position are we in? If we were attacked by one of even the small nations, a nation which would have command of the air and oil supplies, we would be helpless. And we will continue to be so unless we wake up to the production of oil in Canada in a big way. There is no other way to save our people from the constant threat of lower gasoline rations, the constant threat to the owners of domestic oil-burner equipment, and the constant threat to our defence position.

I have already thanked the minister for sending investigators. However, I would not have sent the same investigators—and it will be understood I have nothing whatever to say against them. They were fine men, but I would have sent engineers from the Department of Mines and Resources. They were by far the better qualified.

Mr. HOWE: They were up there, too.

Mr. MacNICOL: They had surveyed the area for thirty years, and they had drilled holes by the hundreds. Doctor S. C. Ells had traversed over two thousand miles through that area, drawing base lines. He has investigated numerous outcroppings, and had tested the sands in many places. In my judgment there is no better authority on tar sands than Doctor Ells.

Mr. HOWE: Doctor Ells was in charge of the work there.

Mr. MacNICOL: I was there, and I know how little Doctor Ells had to do. I was there, and I make my own investigations. The engineers had been there for one month when I arrived, and up to that time as far as I know, they had little contact with Doctor Ells. If

the minister says they did have, then perhaps a parliamentary investigation will show just how little Doctor Ells had to do in carrying on the investigation of the tar sands area last summer.

I want to make statements which are based only on what I have seen with my own eyes and what I know from my own investigations. I am not much for hearsay. I accept Doctor S. C. Ells' statement. In 1936 he made a statement to a mining engineering convention in Edmonton when he said that after exhaustive inquiry over many years it was his judgment that there were over 500 million barrels of oil available from the tar sands by open-cut method. This is mining that can be carried on without too much trouble by removing the amount of top soil or none at all, and then excavating the tar sand.

Mr. HOWE: After 1936 a mill was built costing around a million dollars and used to develop this oil.

Mr. MacNICOL: I am coming to that.

Mr. HOWE: In 1942 the government tried to accelerate the inquiry. My hon. friend was in the house from 1930 to 1935.

Mr. MacNICOL: I am coming to that. That is what Doctor Ells said in 1936. Then last year he wrote an article for the June issue of the *Canadian National Geographic* magazine in which he stated that after further investigation, that would be between 1936 and 1942, he believed that a billion barrels of oil could be extracted by the open-cut method. The report presented by the minister is based on a six months investigation. I believe that during the first month of this investigation the proper equipment was not at hand to bore holes. Later on they used, I believe, Doctor Ells' equipment. The report submitted on April 14, 1943, stated in effect that approximately 40 million barrels of oil were available by the open-cut method at Steep Bank and on the Horse river. Forty million barrels is a mere bagatelle to what should be there if the reports issued by the Department of Mines and Resources after thirty years investigation are correct. They should be correct. The Department of Mines and Resources should not send out reports based on thirty years investigation that are not correct. I, for one, believe them to be correct. I believe that there is a vast quantity of oil up there. As Doctor Ells says, there are a billion barrels which could be taken out by the open-cut method. And if some engineer should come along with an in situ method of extracting oil in those oil-sand areas where there is considerable top soil, Doctor Ells says that another hundred billion barrels could be obtained. Surely someone will come along some day with a method which will save this country from being dependent on other countries for its supply of oil. With the proper method we would have available a hundred billion barrels, in addition to the billion barrels which Doctor Ells says can be taken out by the open-cut mothod. Doctor Ells is backed up by the mines and resources department engineers. I have talked to a number of them who have carried on investigations out there.

I made two trips to the Fort McMurray tar-sands area in 1941. On the first trip they were having difficulty with the mining. The sands were planed off with a revolving planer, and every now and then the knives of this planer would strike against a nodule, a round, heavy hard lump of the tar sand, and would break off. On the second trip they had adopted the powder-blasting method, and when I was there last summer, my third visit, they were still using this method and were finding it quite satisfactory. The report tabled by the minister states that as far as mining is concerned, it is very satisfactory. They have overcome one of the difficulties suggested by the minister.

Another argument against the development of the tar sands was that the extraction method is not satisfactory. As I said before, the engineers sent up last summer were good men, but I do not think they were there long enough to be able to make a report equal to that made by the mines and resources department after thirty years. But even they stated that the method employed to separate the bitumen from the sand in the Abasand plant was satisfactory. We were told that two things were not satisfactory: First, mining —they say it is; second, the separation method—they say it is.

If these two things are satisfactory, and if the mines and resources department statement that there are inexhaustible quantities of oil in these sands is correct, I should like to know why the minister then fired the company which had been operating this plant. This company had done the pioneering work for the last few years; they had suffered everything but death in trying to keep the plant in operation. There may have been a shortage of money, and I presume there was or else they would have had a better plant. I should like to know why they were fired. The hon. member for Rosetown-Biggar has been talking about a combine. Whom did the minister send up there to produce oil? He did not send outside engineers; oh, no. He sent members of the Canadian Oil company. He made the president of the Canadian Oil company the president of the

reorganized Abasand company. He made the vice-president and general manager of the Canadian Oil company the vice-president and general manager of the Abasand company. Two of the directors of the reorganized Abasand company are directors of the Canadian Oil company.

We want to get out of the hands of the big fellows. We want oil produced in this country and we want it produced at the right price. We have long paid too much for our oil; we have long paid far too much for our gasoline. I have nothing to say against these men, but I would feel more confident if the oil companies did not have a thing to do with the development of oil from these tar sands. I would much rather see this carried on by people who are not personally interested in oil.

Mr. HOWE: Is my hon. friend suggesting that the Canadian Oil company is a great international cartel or anything of that sort? It is one of our smaller companies.

Mr. MacNICOL: I do not suggest that, but I should like to know who are behind the Canadian Oil company. Are they connected with any other oil company?

Mr. HOWE: Not that I know of.

Mr. MacNICOL: Are they associated with Imperial Oil?

Mr. HOWE: No.

Mr. MacNICOL: Are the same men not associated with Imperial Oil? Are they associated with Standard Oil?

Mr. HOWE: No.

Mr. MacNICOL: It will be interesting to find out with whom they are associated. I have no fault to find with them, because they are fine men; but, as I say, I would be better pleased if the Canadian Oil company or any other company producing oil from wells did not have anything to do with the production of oil from these sands. I do not know much about the Abasand people. I met the president only twice and I have not seen him for most of a year, nor have I had any communication from him in that time. What I want to see is oil produced in this country. I want to see this country released from being dependent upon any other country for its oil. We are told by the mines and resources department that the oil is there, and I take their word for it.

I am not going to say that the method of separation used by Abasand is perfect because I do not know enough about it. On the other hand I have made an exhaustive inquiry into oil, and I was extremely interested in reading the report of the United States senate investigating committee into the connection of the Standard Oil company with the production of rubber in Germany. I recommend every hon. member to read thoroughly this report. It tells all about the oil business, too. But I am perhaps a little ahead of my story and I will come back to that later.

The minister said at the conclusion of his remarks on April 14 that every known system had been tried. Let me quote his exact words, from page 2153 of *Hansard:*

> Every known process has been tried, and to-day I think the fact is that no satisfactory process either for mining the tar sands or for extracting the oil in an economical way has been wholly perfected.

I would ask the minister if the Freeman process has been tried. Prior to 1935-36 the government of the day in Canada, or somebody acting for it, after consultation with Freeman, who is a great engineer and expert in the extraction of oil from low-grade coals and so forth, sent a lot of tar sands to London, where they were tested. I have the Freeman report in my hand. It is signed by himself and says in part:

> The actual Freeman extraction method produced a total yield of 36·07 gallons per ton.

That is, from the tar sands which were shipped over to England.

It goes on:

> The oil lends itself easily to refining—

We have been told that it did not.

> —and by the transformation refining method would produce motor spirit, lamp oil, lubricating bases and pitch.

That is out of the tar sands, from which he had extracted 36·07 gallons per ton. The report goes on:

> The above sands are surface sands but at a depth of thirty feet and more would in all probability produce as high as 75 gallons of excellent oil per ton by the extraction method.

I have the full story of the Freeman system here and have made careful inquiry into it. I should like to know later on if that system has been tried out. If not, then all known systems have not been tried.

I would ask further if the Blumner hydrogenization system was tried. The United States senate report gives an illuminating description of the whole oil business. From my studies I gather that in the early twenties a great engineer, Doctor Bergius, whose record I have here, invented the hydrogenization system. He was apparently not able to bring it to the point of operating in a commercial plant, but the great Doctor Blumner perfected the hydrogenization system to work in a commercial plant. Then the great German company I.G.

Farbenindustrie purchased Blumner patents and plant and proceeded to produce oil from coal. Doctor Blumner then, in collaboration with Doctor Fischer brought out his own Blumner process, which I presume he concluded was an improvement on the system which the Farbenindustrie was using. So far as I can understand, it was what I may call an improved Doctor Blumner process which the German government took over to use in the production of oil for Germany. When the war broke out, Germany was producing less than nine million barrels of oil a year, but they took over the Doctor Blumner process for extracting oil from coal by the hydrogenization method. When war broke out, it was thought that Germany would not be able to get enough gasoline for her war machine, but to-day Germany is producing 150 million barrels of gasoline a year and since they conquered that part of Russia in the Donets Basin, they have built another plant there and are producing over ten million barrels a year there. If Germany can do it, why cannot we? Why should we be constantly threatened with having to throw out our domestic oil-burners which I understand would cost the country not less than fifty million dollars, including the coal-burning equipment that would have to be installed, and we cannot get the coal. If we have the oil resources we should have been producing the oil before this. As I said before, the oil controller has done a good job, but had we appointed an oil producer we could perhaps have dispensed with the services of the oil controller and got all the oil and gasoline for all our needs.

Someone asks what is hydrogenization. Mr. R. T. Haslam, a very great chemist with the Standard Oil company, described it in a very neat way. I quote from his evidence before the United States senate committee, at page 5040:

> I want to explain just briefly and simply what hydrogenization is. In principle the process is simple; in practice it is complex.
>
> I have here a lump of coal (exhibiting). I have in this bottle hydrogen (exhibiting). I could show that it is hydrogen by touching a match to it. If there is no air in it it burns like the Hindenburg burned over Lakehurst, with a tough flame. If there happens to be a little air in it, it explodes. So therefore I will not demonstrate it to you.
>
> The problem is how to get those two together and combined chemically so that when we get through we have petroleum in this bottle (indicating). We convert a solid to a liquid. It is a matter of putting coal here (illustrating) plus hydrogen, and coming out with petroleum oil. That is done in complicated apparatus at a pressure of 3,500 pounds per square inch, at a temperature red hot, around 900 degrees Fahrenheit, and in the presence of hydrogen gas.

As I understand it, the hydrogen is introduced and acts as a catalyst and breaks down the molecules of oil in the coal. The oil is separated from the coal, after the moisture has first been taken out of the coal. The place of the water is filled with other oil. The other oil is then recovered, too, and used over and over again. In his speech on April 14 the minister said the hydrogenization system would cost twelve million dollars. That is a small item. The minister has been doing a big job in many lines industrially, a marvellous job, and I know he could do just as big a job in the oil business if he would. I appeal to him to go the limit in trying to produce oil in this country. If we cannot produce ample oil from the tar sands—but I believe we can—we can produce oil from coal. We have lots of coal in Nova Scotia and Saskatchewan and mountains of it in Alberta, from which we could produce all the oil that is required. If we have the will to produce the oil we can lift this country out of the position we are in now and be defensively and economically independent so far as oil is concerned, instead of being under this constant threat of a shortage.

The government could put up a pilot plant and demonstrate that oil can be extracted from coal. All these systems, the Freeman, the Blumner and the I. G. Farbenindustrie extract oil from coal, but they can extract oil from tar-sand bitumen, too.

Doctor Thau was one of the greatest oil engineers in Germany. The German government appointed him to look into the Blumner process, and I have here a copy of his report in which he gives a description of this process. I will quote a paragraph:

> Coal in the pulverized state, is mixed with about an equal quantity of oil with high boiling point, and the mixture after having passed through a heat exchanger is under elevated pressure forced through this set of six retorts in a series at comparatively high rate of velocity. The retorts are connected to each other by a pipe leading from the outlet at the top of one of the retorts to the bottom inlet of the next. These connecting pipes are passed vertically through the heated brick setting to prevent a loss of heat of the fuel in its way from one retort to the next.

This report to the German government, I am informed, was the basis upon which they accepted the process to produce oil, and the fact that they are producing 150 million barrels a year speaks volumes in his favour. I would support the minister to the limit if he would introduce a bill, asking for whatever sum of money he might consider necessary for the purpose of putting up a hydrogenization plant in Canada to produce oil either from our coal or from our tar sands or from our torbanites or from our hydro carbons of any kind.

Mr. HOWE: I appreciate that very much, and it would help me a great deal if I were a little surer of the future of the Progressive Conservative party, and that my hon. friend will be in the house to support me.

Mr. MacNICOL: So far as I am concerned, I am not talking politics. This is no time to talk politics, and I am a Canadian above everything else.

Mr. HOWE: I know that. I simply wanted to be sure that you could be in the house.

Mr. MacNICOL: There is nothing in politics for me. I am here to help my country in every way I possibly can, and when I believe that I have ceased to render some service to the country by my presence here I will quit the job. As I say, there is nothing in it for me, and in fact I would be better off away from here; but I want to help the country. I say, therefore, that I would support the minister if he would bring in a measure that would assist us in producing oil in a big way in Canada. Look at the situation in which we find ourselves to-day. We are purchasing eighty-five per cent of our oil requirements and paying perhaps $10,000,000 a year in exchange. Should we not try to get ourselves out of that trap if we possibly can? If we could produce oil and gasoline on a large scale we would get our gas at a much lower rate and our citizens would have oil to burn in their furnaces. If our gasoline ration goes any lower and if Canadians are compelled to take out their oil-burners in that event—I am not blaming the minister—someone will be responsible. Why not let us act upon the reports we have received from our own Department of Mines and Resources, who have been investigating the situation for the last thirty years? In that department we have had some of the best engineers in this field; they have studied the question of oil production, and on the basis of their investigations we are given to understand that our requirements could be satisfied. The minister said that a hydrogenization mill could be put up for $12,000,000 to produce 20,000 barrels a day. If you put up 4 mills that would be around $50,000,000 and that would give you another 60,000 barrels a day. That would make us, together with what is now produced, independent of any other country, both economically and from the point of view of defence.

Something was said about sulphur. In this connection I was alarmed at some of the remarks the minister made because I thought I knew a little about chemistry and the question of desulphurization. He said, with regard to the question of desulphurizing oil obtained from bitumen and tar sands, that a percentage of sulphur remained after the process. I had always believed that a wash sulphuric acid and caustic soda would desulphurize anything that contained sulphur, and for this reason I wrote to one of the great companies of the United States with a view to obtaining some information on the subject. I got in touch with the Phillips Petroleum company. They did not stipulate that I should not quote from their letter and I do not think it would do any harm. The letter is not marked confidential. They say:

> Although the sulphur in the crude oil as extracted from the oil sands may be as high as 5 per cent, it seems unlikely that there would be more than a few tenths of one per cent in the lighter products, such as motor fuel, manufactured from the oil. High sulphur content in the heavier products, such as asphalt or fuel oil, is of little importance.

The circulars enclosed tell about the process which they use for extracting sulphur from crude oil. I learned also from a number of oil companies that a great many varieties of crude oil contain sulphur. So that the sulphur content is not as serious a problem as it appears to be.

Let me say this in conclusion, Mr. Chairman. In connection with any investigations I have made with regard to oil or anything else and which I have submitted to this house I have had no other object before me than the desire to render some service to my native land. I have always tried to do that to the best of my ability. As I said at the commencement of my remarks, I have believed, and I still believe, that we have in Alberta a product which we should develop and of which we should avail ourselves. The Turner valley produces 8,000,000 barrels; and if we take all the wells in Canada, including the Turner valley, we have a production of from 10,000,000 to 12,000,000 barrels a year. This means that we must import from 80,000,000 to 90,000,000 barrels more. It is the duty of Canadians, therefore, to make every effort to find somewhere in Canada sufficient oil to make up the difference between what is now produced and what is required; and if we cannot get it from oil wells, of which there are thousands throughout the country, there is no reason why we should not get it from the source I have already indicated. The average oil field produces 9,000 barrels per acre, whereas, according to Doctor Ells, the tar sands contain 70,000 barrels per acre. I suggest to the minister that he should send up some men from the Department of Mines and Resources to investigate and report to him, and on that basis he could bring in a bill for the erection of hydrogenization plants. The minister knows

a great deal more about this than I do, certainly more than anyone else in the House of Commons does, and I think he will agree with me that we could produce not less than 75,000,000 barrels a year in addition to what is produced by the oil companies, if Mines and Resources estimates are correct. It would not hurt the oil companies, and on the other hand it would save the country and enable the Canadian people to obtain their oil and gas at a lower price than they pay to-day.

I hope that the minister will not take this as offered in the way of criticism. I am speaking as one business man to another, because I realize what a difficult task he has and that he cannot possibly know everything that is going on in the huge department over which he has charge. There are hundreds of details to be looked after and, frankly, I do not see how he does it. Indeed, I hope that it does not break him down. There is no reason whatever, however, so far as I can see, why we cannot lift this country into a state of independence so far as oil is concerned, when you consider that we have ample coal in Nova Scotia, and supplies elsewhere. We have lots of coal in Alberta and Saskatchewan, and it is claimed that there are large deposits of lignite coal in northern Ontario. But before going into the production of oil from coal by hydrogenization, let us try to produce what we can from the tar sands and so do something to lift the province of Alberta out of the depression it has been in. We cannot help our western provinces too much. If Alberta has oil in her tar sands, here is a golden opportunity to put that great province on its feet in supplying Canada with all this additional oil and gasoline from its resources.

Mr. HOWE: I thank my hon. friend for his very helpful and cooperative speech. I would point out that we are trying our best to get some accurate information on the possibilities of tar sands as a source of oil. As my hon. friend says, the area has been under investigation for thirty years. Some years ago a private enterprise undertook commercial development and spent perhaps a million dollars in carrying out that development. Nevertheless last year, when we hoped to complete our investigation, we found that in the whole season not sufficient oil was produced from the tar sands to give us a sample on which to work out the refinery run. Our purpose in sending in a new management, or a partly new management—because the old directors are still associated with the company—was to give a more practical turn to the operations in that field. The reason that the Canadian Oil company was chosen is that it is a purely Canadian company and the one oil company I know of that believes in the future of the tar sands. I think you must choose an agency which has confidence that a worthwhile result will emerge, and the Canadian Oil company have that confidence. I sincerely hope that before the current season passes we shall have complete operation on the product; we shall then know whether hydrogenation is necessary. It is an expensive process and it may not be necessary. I think by the end of this season we shall know whether it is necessary or not, and what the prospects are for developing the tar sands on a commercial scale.

Mr. KNOWLES: Members of this group are deeply interested in the subject which was discussed just now by the hon. member for Davenport, but this evening I should like to carry on with the discussion concerning aluminum, which was brought to the attention of the committee this afternoon by the hon. member for Rosetown-Biggar.

Before I take up the thread of this discussion, may I occupy a minute in adding my tribute to those which have been expressed by other members to the phenomenal progress this country has been making on the industrial front, as indicated so well in the report made on Friday afternoon by the Minister of Munitions and Supply. There were a number of statements he made which we would like to underline, particularly that statement toward the close of his address wherein he pointed out that never again can it be said that it is impossible to produce in Canada anything which can be produced anywhere in the world. I hoped at that moment that he would add a further sentence—I am sure he would agree with this sentiment—namely, that it surely has been demonstrated that if it is possible in time of war for us to produce the things we need in this kind of emergency, it is equally possible to produce the things we need in time of peace.

This evening the Minister of Munitions and Supply spoke briefly in reply to the address which was made before six o'clock by the leader of this group. Again, as on previous occasions when this matter has been before the house, a good deal was said about the importance of aluminum in the waging and winning of the war. We have said before, and I want to repeat it now, that we agree wholeheartedly with that statement of fact, and we in this group rejoice that it is possible for us in this country to make so effective a contribution toward the winning of the war as it is ours to make, by producing so large a portion of the aluminum needed by the

united nations. But I insist once again, Mr. Chairman, that this does not justify policies which are against the best interests of the people of Canada, and it does not justify paying—to put it bluntly—too high a price.

When the minister was speaking this evening, it was, I believe, the hon. member for Fort William who interrupted him to ask just what would have happened if we had not produced aluminum in the quantities in which it has been produced in Canada. The interruption, I take it, was designed to emphasize the importance of producing aluminum in this country. Again I say we agree. Equally we would assert the importance of the producing of food. Likewise we assert the importance of producing the materials of war, and the importance of the contribution made by our men who go into the armed services. But in none of these cases does the government simply sit back and pay the price which those who are offering their services or are producing food or munitions of war ask, or, shall I say, demand. But it is our contention that in the case of aluminum you have not only a Canadian monopoly but a world cartel literally demanding, not only of this government but of the governments of all the united nations, that they pay the cartel's price for material so badly needed in this time of war.

The minister made frequent references to the fact that it is not the intention of the government to which he belongs to seek to change the competitive position of any company in Canada while the war is on. I already drew his attention to the fact that that remark is hardly relevant as far as aluminum is concerned, in view of the fact that with respect to aluminum there is no competition in Canada, or, for that matter, anywhere in the world.

The minister emphasized, and repeated it two or three times, that it was not the intention of the present government to use the war as an excuse to battle combines. I want to make it perfectly clear that we of this group are not to be put in the position of wanting to use the war to advance any particular position that we may hold, though let me not be interpreted for one moment as veering from our absolute opposition to combines of this kind. I do wish to point out to the minister that the position he takes means this, that the aluminum interests are being allowed to use the war as an excuse immeasurably to strengthen their position, and that is what we vigorously oppose. We feel the government is falling down on the job in not being more vigilant in this matter.

I find myself called upon frequently to refer to one of the newspapers in the city from which I come, the Winnipeg *Free Press*. In its issue of June 9 appeared another in a long succession of editorials on this matter, most of which was devoted to defending the government and the aluminum company, and to attacking the Cooperative Commonwealth Federation with respect to its charges against the deal. Toward the end of the editorial, however, I found two or three sentences which I should like to quote:

> The aluminum company is of course a great international trust. As such it should be watched with vigilance, for we have learned from experience that international trusts can and often do pursue policies which run counter to public interest.

Then, as though to justify the lack of vigilance after suggesting that there should be vigilance, the *Free Press* adds:

> At the moment, however, the aluminum company is doing a tremendous production job in the interests of victory.

Our contention is that this company, in the light of its past record, is more interested in maintaining its control over aluminum as a world monopoly; and that the government, in taking the plausible position enunciated by the minister to-night of not using the war as an excuse to battle against combines, is in effect giving the aluminum interests an opportunity to use the war to strengthen their position.

During the course of his remarks this evening the minister had something to say about the fact that the Aluminum Company of America had changed its set-up a bit, with the result that the former Canadian properties of Alcoa are now under the control of a Canadian company. The minister suggested that it was better to have these under a Canadian company which was under the jurisdiction of Canadian laws, and so on. There are several comments I should like to make in reply to that suggestion; I shall make one or two of them at this moment, and the others will come out as I proceed. First, I should like to point out that Aluminium Limited, which is the parent company and which, according to the prospectus of the Aluminum Company of Canada, owns 100 per cent of the shares of the Canadian company, has nine directors. I note that of these directors four reside in Canada and five in the United States. The principal officers of the company are the president and six vice-presidents. Of these seven officers two reside in Canada and five in the United States. In 1928, when Aluminium Limited was set up, the stock issued at that time was turned over in its entirety to the holders of shares in the Aluminum Company of America, in the purchase of the property of the Aluminum Company of Canada. This means that at that time the ownership of Aluminium Limited,

which in turn owns 100 per cent of the Aluminum Company of Canada, was identical with the ownership of the Aluminum Company of America. I believe the figures I am about to read were placed on the record this afternoon, but perhaps they should be repeated. As late as 1937 the holders of 81·53 per cent of Alcoa stock—Alcoa, as we all know now, being the short name for the Aluminum Company of America—held 83·93 per cent of the stock of Aluminium Limited.

Now I should like to say a word about the profits of Aluminium Limited, the parent company of the Aluminum Company of Canada. The figures I wish to give are taken from the consolidated statement of profit and loss of Aluminium Limited as published in a report made by that company to the Montreal stock exchange on December 16, 1942. For each of the years 1938, 1939, 1940 and 1941 the figures I am about to give are as they appear in the company's report. I should like to offer a word of explanation in connection with the figures I will give for 1942. For that year the company's report gives figures only for the nine months ending September 30. In the table I am about to give, the figures for that portion of 1942 have been divided by three and multiplied by four so as to give the approximate totals for the year, in order that a proper comparison may be made with previous years. I believe it would be of interest to members of this house to have some of the important figures out of this report, and I am going to take time to read these figures into *Hansard*:

	1938	1939	1940	1941	1942
1. Gross profit	$21,674,187	$31,375,757	$43,264,219	$72,635,494	$89,842,600
2. Executive salaries (parent and fully-owned subsidiary companies)	451,432	434,343	493,750	641,656	(not listed)
3. Provision for Canadian income and excess profits taxes...	2,602,397	3,754,051	10,239,227	12,296,489	10,827,396
4. Provision for income and excess profits taxes other than Canadian	1,931,962	4,296,260	11,871,324	15,676,229	20,457,016
5. Provision for depreciation and depletion	3,651,529	3,771,926	4,392,404	23,338,647	40,994,252
6. Net Profit for the year transferred to earned surplus..	11,384,268	15,846,384	10,698,156	15,489,951	15,876,532
7. Totals of amounts in items 5 and 6 above	15,035,797	19,618,310	15,090,660	38,828,598	56,870,784

I should like to make some comment in connection with the figures I have just given. First, as one might expect, the gross profits mount steadily through the years under consideration. Second, one notices that the executive salaries took a slight drop from 1938 to 1939, but that since then they have been increasing steadily, although, so far as wages are concerned, it is difficult to get such increases.

Mr. HOWE: Would my hon. friend reject the idea that there may be more personnel in the executive, in view of the expansion?

Mr. KNOWLES: That is possible. I would be glad if that information might be supplied.

Mr. HOWE: I do not think it can; but I make that suggestion.

Mr. KNOWLES: The next is Canadian income and excess profits tax. It will be noticed, when one studies the table, that these increased through the years 1938, 1939, 1940 and 1941, but that the amount set aside by the company for 1942 drops considerably from what it was in 1941.

However, the next item deals with provision for income and excess profits taxes, other than Canadian—taxes which Aluminium Limited has to pay to other governments, because many of its subsidiaries are operating in other countries. These taxes show a steady increase from less than $2,000,000 in 1938 to $20,000,000 in 1942.

I am sure hon. members will find it interesting to make a comparison, and to note that the Canadian treasury was to get less in 1942 than in 1941, but that other governments were getting from Aluminium Limited a steadily increasing amount of taxes.

The next item deals with the provision for depreciation and depletion. In view of the fact that this matter has been already discussed at some length, we would expect it to mount steadily, and such is the case.

Then, when hon. members look at item 6 they will discover that even after all of these

items are taken into consideration—greatly increased depreciation and greatly increased taxes to governments other than Canadian—there is still left over for the year 1942 an amount of net profit, transferred by the company to its earned surplus, which is the largest in the entire history of the company.

An hon. MEMBER: Would the hon. member place on the record the net earnings of the Canadian company from 1938 to 1942?

Mr. KNOWLES: Item 6 in the table I have just given contains the information the hon. member asks for, namely, the earnings after all taxes have been paid and after depreciation allowances had been set aside, for each of the years 1938 to 1942. I have not added those figures together, but that can be done from the table.

Mr. HOWE: This is in respect of Aluminium Limited, the parent company.

Mr. KNOWLES: Yes, the parent company.

Mr. HOWE: The consolidated earnings of the British company, the British Guiana company and all other associated companies.

Mr. COLDWELL: Which owns fully the Aluminum Company of Canada.

Mr. KNOWLES: The prospectus of the Aluminum Company of Canada is substantially the same. The figures in most cases are a little less, but only a little less, because the Aluminum Company of Canada is the major holding of Aluminium Limited. The same story holds—gross profits increasing, and income and excess profits taxes increasing until 1941, and then dropping in 1942. But net profits that can be transferred to earned surplus steadily increase, and reach an all-time high in 1942.

I should like to say a few words about those profits under a slightly different heading. When one deals in figures involving so many millions, they become confusing. In fact, even the figures I shall give now may be difficult for most of us to grasp. However, perhaps it will be easier for us to understand from these figures what these huge profits mean to certain individuals.

I find from the report which Aluminium Limited made to the Montreal stock exchange in December, 1942, that there were then in existence 744,410 shares of Aluminium Limited. These were held by 2,358 shareholders. Some might argue that that number shows a fair amount of diffusion. To some of us even that number is very small.

However, I find that in item 17 appearing at page 9 of the report there is a partial breakdown of the holding of these 744,410 shares. This item shows that seventy-four people hold 1,000 or more shares each. The aggregate of the shares held by those seventy-four people is 574,295. This means that those seventy-four people hold an average of 7,774 shares each. On those shares in each of the years 1941 and 1942, according to page 2 of the same report, a dividend of $10 each was paid. That means that in 1942—dealing with one year—seventy-four people netted out of the operations of Aluminium Limited—the Canadian company—$77,740 each.

That figure is somewhat smaller than the million dollar figures with which we were dealing a moment ago. But it hits some of us with a great deal more force. This war is being fought largely in the air. Young men are being called upon to fly planes, in which aluminum figures so largely, to risk their lives, while those who happen to be connected with the process of producing aluminum—they are not doing the actual work—made in the course of 1942 an average of $77,740 each. When on a former occasion something was said about these profits the Minister of Munitions and Supply interjected—I believe the hon. member for Rosetown-Biggar was speaking at the time—to ask upon what capital investment these huge profits were being made.

As a matter of fact, the dividends being paid on the shares of Aluminium Limited invite an examination as to where they have all come from. We discover that of the 744,410 shares, the first twenty were bought at $25 each. Then there was a block of nearly 500,000—I shall not bother with giving the exact figures—which were turned over to the Aluminum Company of America for the purchase of the properties of the Aluminum Company of Canada. Those shares were given to the then holders of Alcoa stock in the proportion of one share for each three held. The other shares that were issued to make up the total of 744,410 shares—they are all listed on this report which I hold in my hand—were either given or sold only to shareholders of record, on some established basis.

I am not sure whether the hon. member for Rosetown-Biggar gave the figures this afternoon, but it has been pointed out already that the holdings of Alcoa stock have grown tremendously. A man who invested $100 in 1904 would have over $8,700 worth of stock in 1926 without the investment of an additional dollar. It is to these people that these shares were given or sold, so that I suggest that it is proper to say that the $10 per share which was given was, in many cases, nothing but a gift. This goes on year in and year out; these individuals are making that kind of profit out of our war effort.

A study of the reports issued by the Aluminum Company of Canada and Aluminium Limited made me realize that this is a fit study for examination by the treasury board. I recall the debate we had some time ago with respect to section 32A of the Income War Tax Act. This company is having to pay increased taxes to other governments, but it has managed to reduce the taxes which it pays to this government, and it struck me that its returns might well be the subject of an investigation by the treasury board under the provisions of section 32A of the Income War Tax Act. Accordingly I asked whether such an investigation had been carried out, and the answer given to me on May 31, which appears on page 3209 of *Hansard,* was that at no time since January 1, 1938, had the treasury board reviewed the income tax or excess profits tax returns of either the Aluminum Company of Canada or Aluminium Limited.

A moment ago the Minister of Munitions and Supply pointed out that I was dealing with Aluminium Limited rather than the Aluminum Company of Canada and suggested that the figures I was giving were larger on that account. I replied that they were slightly larger because Aluminium Limited includes many other companies, but that its major concern is the Aluminum Company of Canada. So far as profits are concerned, this company represents eighty or ninety per cent of its holdings. However, I think hon. members should know that this octopus that we have in our midst, Aluminium Limited, either controls or has an interest in a very wide range of companies all over the world.

I fear that I would overrun my time if I put this table on the record, but I should like to make a short reference to it. A list of the subsidiary and other companies of Aluminium Limited is to be found on pages six and seven of the report to which I have referred. I find that Aluminium Limited either owns outright or has an interest in thirty-seven companies; it owns outright twenty-three of them, it has more than fifty per cent control in five, and an interest in nine. These companies are listed under a number of headings, such as mining, transportation, power, aluminum production, aluminum fabrication and "various." Under "various" is to be found financial management, engineering management and research, correspondents in the United States, holding companies and so on. These companies are located all over the world, in British Guiana, Newfoundland, Canada, the United Kingdom, India, Sweden, Australia, Switzerland, Argentina and Brazil. I believe I have named all the countries; a number of them are repeated.

I rose in my place to-night to state definitely that in our view the government is permitting this company to make terrific gains out of this war. We do not accept as an answer to our argument the minister's statement that the government is not prepared to use the war as an excuse for trying to break up combines. I repeat that by its failure to be vigilant, as the *Free Press* has suggested, it is allowing this company to make increasing profits in terms of dollars and cents and also in terms of increased plant and capital equipment which it will have for use after the war in two fields, aluminum and power. When you read the prospectus of the Aluminum Company of Canada and the material contained in the report of Aluminium Limited you find no suggestion that they are not going to make profits after the war. What they state is that those of their officers who have pinned their faith to aluminum for years are now being supported by the results, and they point out that in the years to come these are really valuable lines to be in. We contend that the policies of the government have resulted in this country and other countries who are buying aluminum from these interests actually helping them to get these plants for use after the war.

Mr. CRERAR: A moment ago the hon. member stated that the present government was permitting this aluminum company to make terrific gains out of the war. Does the hon. member wish us to infer from his remarks that the government should have stepped in and, for instance, prevented the arrangement between the British company and the aluminum company for supplies of aluminum, or prevented the United States from going to the aluminum company to purchase its aluminum? What action should the government have taken to have prevented that?

Mr. KNOWLES: There is on our statute books the National Resources Mobilization Act. There are powers under that act to conscript men, to conscript wealth and to conscript industry. When members of this group, before I was in the house, argued that the conscription of wealth and industry should come first, the government insisted that at any rate it had the power to enforce it whenever it considered it desirable. I would suggest that if the government was aware of the history of the aluminum interests through these forty years—and if it was not, that in itself is reprehensible—it should have stepped in and taken over the operation of these properties for the duration of the war, under the authority of the National Resources Mobilization Act.

Mr. CRERAR: Assuming that the government had stepped in and expropriated or taken over the whole enterprise of the Aluminum Company of Canada on the Saguenay river, what would it have done for raw material? All the raw material that is converted into aluminum in the plant on the Saguenay comes from another country, and we do not and could not control that by any expropriation proceedings.

Mr. KNOWLES: The answer I make to that is, first, that the raw material comes from Newfoundland and from British and Dutch Guiana, all of which countries are part of or under the united nations.

Mr. CRERAR: But we do not control them.

Mr. COLDWELL: I rise to a point of order, Mr. Chairman. Is the hon. member for Winnipeg North Centre making a speech or the Minister of Mines and Resources? The minister can make his speech afterwards, I take it.

Mr. CRERAR: The hon. member for Rosetown-Biggar does not need to be quite so touchy on this question.

Mr. COLDWELL: I am not touchy; it is you.

Mr. CRERAR: The hon. member for Winnipeg North Centre offers strong criticism of the government because it did not do a certain thing. I think I am quite within my rights in asking him how he proposes we should have done it. I ask him how he would have done it.

Mr. KNOWLES: I take it that the minister has admitted that the aluminum interests had the government on the spot, so that the company could say to the government: This is the world price and you must pay it. And the government agreed to it.

Mr. HOWE: The government was not on the spot, because the government has had very few dealings with the aluminum company.

Mr. COLDWELL: The government was in the wringer.

Mr. KNOWLES: Some day we should be given the full story of who has been handling this business. When we start to bring these things out, the Minister of Munitions and Supply says: The government was not dealing with this deal. But these deals are pretty big. They affect not only the price which this government has to pay for aluminum, but the price which every one of the united nations has to pay for it.

[Mr. Knowles.]

Mr. MacINNIS: A little while ago we were told that it was a Canadian company under Canadian control.

Mr. KNOWLES: It should be brought under Canadian control, and because these deals will also affect the whole set-up after the war I submit that the government was remiss in not concerning itself with deals of this size. It emphasizes our feeling that not only are these interests using Canada as a sanctuary, where they come as refugees from the laws of the United States, but they pull the wool over the eyes of this government. They have been in this game for forty years. The story was given this afternoon, and I confess that I was startled to read the amazement on the face of hon. members opposite, including those in the government, as the story was unfolded. The Aluminum Company of America came here in 1889 and made a contract with the Shawinigan Water and Power Company, and later in 1902 incorporated the Northern Aluminum Company which acquired the properties purchased by Alcoa as a result of that contract in 1889. It not only set up the Northern Aluminum Company to operate the properties which it had bought from the Shawinigan Water and Power Company, but used the Northern Aluminum Company as a tool to effect the earlier cartel arrangements. Finally, after the Duke situation in 1925, the company was renamed the Aluminum Company of Canada and Alcoa continued to use a Canadian company to influence the world cartel, until in 1928 the Aluminum Company of America found that it was no longer possible to operate through subsidiaries but had to set up a wholly independent company.

The ACTING CHAIRMAN (Mr. Ross, Calgary East): The hon. member's time is up.

Mr. KNOWLES: I should just like to finish my sentence and say that in 1928 Aluminium Limited was set up, legally and technically, as an independent company. That is the problem the United States government is up against in the courts. Aluminium Limited's president is the brother of the president of the Aluminum Company of America. Aluminium Limited participated in the forming of the Alliance Aluminium Compagnie, which was incorporated in Switzerland, and then proceeded to operate as a world cartel. If my time were not up, I would add to the evidence that has already been produced in the committee, letters and telegrams which show that Aluminium Limited was in effect the instrument and the tool of the Aluminum

Company of America, guaranteeing to the other aluminum companies that Alcoa would not interfere in their operations and in turn guaranteeing to Alcoa that the other companies would not interfere with theirs.

Another story I should like to have told—

The ACTING CHAIRMAN: (Mr. Ross, Calgary East): The hon. member's time is up.

Mr. COLDWELL: Mr. Chairman, may I raise a point of order? Technically I doubt whether the hon. member's time is up, because the Minister of Mines and Resources made a speech in the middle of my hon. friend's speech, and I believe he can go on for another forty minutes after the minister sat down. That is the technical point I raise.

The ACTING CHAIRMAN (Mr. Ross, Calgary East): The hon. member commenced his speech at 9.15 p.m., and has spoken for more than forty minutes.

Mr. COLDWELL: I point out, Mr. Chairman, that we are in committee and a prolonged interruption is, I take it, a speech.

Mr. HOWE: I think the committee has pretty well agreed that we would like to hear the rest of the speech.

The ACTING CHAIRMAN (Mr. Ross, Calgary East): Has the hon. member unanimous consent?

Some hon. MEMBERS: Yes.

Mr. KNOWLES: I should like to read one or two passages from the brief which was presented by the United States government in its case against the aluminum interests. I quote from pages 763 and 764:

In 1934, when Germany started to rearm, the German company was demanding additional production rights and threatening to exceed its quota whether authorized to do so by the Alliance or not. In the face of this situation, Edward K. Davis proposed to Doctor Schirner, then the head of the German company, that Alcoa's metal, of which Aluminium Limited was custodian in Canada, might be used to relieve the German shortage, and he offered to try to work out some arrangement with Alcoa. The proposal made by Edward K. Davis contemplated that since the German company had 3,000 tons of titaniferous aluminum in Italy which it could not use, but which Alcoa could use, Aluminium Limited should deliver 3,000 tons of Alcoa's Canadian metal to the German company in return for the delivery by the German company of its Italian metal to Alcoa. This exchange was to be effected through the medium of the Alliance by an exchange of Alliance "delivery warrants" between Aluminium Limited and the Germany company (14,821-4, 14,856-65). On May 3, 1934, Edward K. Davis wrote George Gibbons, senior vice-president of Alcoa, with respect to this proposed exchange (Ex. 783). This letter was a part of and pursuant to previous negotiations between Gibbons and Edward K. Davis relating to the same subject matter (15,648-9). Although Edward K. Davis' proposal was never put into effect, it is significant that he negotiated with Alcoa and with the Germany company for the purpose of bringing about an exchange of metal which would relieve the German situation and thereby assist in preserving the structure of the Alliance as against the German threat to produce over its quota.

Edward K. Davis is the president of Aluminium Limited. Another quotation I would place on the record is to be found at page 644:

The operation of this gigantic world cartel will be discussed in detail later in this brief. Suffice it to say here that the Alliance, through its restrictions upon production and manipulation of prices, has been the most ingenious instrumentality ever employed by Alcoa to fasten an iron band around the United States market and render impregnable its domestic monopoly. Through its affiliate, Aluminium Limited, Alcoa has—like the ghost at the banquet table—exercised an invisible but powerful influence upon the policies and activities of every major aluminum producer in the world.

I am not going to transgress unduly upon the kindness of the committee, but there are one or two other quotations I should like to put on the record. As early as January 13, 1932, E. K. Davis, the president of our Canadian company, Aluminium Limited, objected to the British company selling metal produced by the International Aluminium Company and the Aluminum Corporation at less than the alliance buying price, and a few days later MacDowell cabled Morrison in part:

. . . my associates feel that your selling at less than alliance buying price—

The reference is to the British company.

—coupled with your unwillingness to supply us and presumably other Alliance members at the same price can only result in indefinite postponement of beneficial results expected from Alliance understanding and I am requested to inform you that our company views the situation thus created with chagrin and alarm and to say that we express the hope that you will find means to establish British prices at levels which will support rather than undermine the Alliance structure (Ex. 851).

Another quotation will be found on pages 746-47:

Even before the foundation agreement was executed, Aluminium Limited was instructed by E. K. Davis to sell aluminum after July 1, 1931, at £75 per ton. On June 19, 1931, he cabled Aluminium Limited's New York office as follows:

Note that our Canadian company has an office in New York which receives official advice of this kind.

In to-day's cablegram omitted to say that on January 1 Union (i.e. Alliance) will name buying price not less than seventy-five pounds sterling per ton available to all stocks exceeding 40 tons per share. Consequently anything you sell after July 1 at less than that figure is wasted. You had better post India and other low price markets.

I will not take up further time. I have given a few quotations in support of our contention, and what all members of the house really recognize, namely, that we are dealing with a great international trust which has had forty years in this game and which apparently has been able to pull the wool over the eyes of the government and get them to assist it in carrying on this kind of conspiracy. I object to the government not having exercised the vigilance, in the face of this 40-year story, which even the Winnipeg *Free Press* would say ought to be exercised.

Mr. HANSELL: Perhaps I might for a moment or two move to an entirely different subject, but one which I think is of great importance, although the minister may not at this particular moment think so. It is the business of the Minister of Munitions and Supply to turn out the necessary war materials. Perhaps he could be described as the czar of Canadian industry or Canadian war-time industry. There was a time when we were urging upon him to speed up production of war materials. We do not hear that so much now, because I imagine that the man-power situation has pretty well reached the peak of its productive capacity. That being the situation, we are living in a state where everyone is employed; in fact, we have a man-power problem.

I wish to put this to the minister and I should like him to say something about it. I do not want it to be regarded as being off the subject, because it is a tremendously important matter. I doubt whether there is anyone in Canada who knows the industrial set-up of the entire nation better than does the Minister of Munitions and Supply. At any rate, I do not think anyone should know it any better than he does. He should have his finger on the pulse of the whole industrial set-up of Canada to-day. I wish to know, therefore, whether the minister or his department or the government has made any sort of industrial survey with a view to passing to the peace-time functioning of industry.

The minister may say that that is not his business, that his business is to turn out war materials. I know that, and I am quite conscious of the fact that he is perhaps trying his best to do that. I am not criticizing his department; nevertheless, if, when peace comes, the minister is in the same seat he now occupies, we want to know what will be done then. It might very well be said that it may be a long time before peace is declared, but we do not know. It may be sooner than we expect, and the minister who is now in charge of the entire productive capacity of Canada—we may as well say that—should have at his finger-tips all that the government is going to do or that he is going to do if he is sitting in his seat at the time peace is declared. There is no use in waiting until the problem is upon us. I am not now talking of post-war reconstruction; I am speaking of that short transitional period when there is a change-over from the industrial set-up of Canada producing munitions of war to some industrial set-up changing over to the production of peace-time goods. There is no use in waiting until the problem is upon us and then closing our eyes and trusting to luck. The government has done that too often in the past, as, for example, in the national coal emergency. But this problem will face us, as certainly as we are sitting here to-night, and we must be ready for it. Someone has said that the difference between a politician and a statesman is, that a politician works and looks forward to the next election, while a statesman works and looks forward to the next generation. I should like to know what the government are doing in the way of working and looking forward to that transitional change-over in the industrial set-up of Canada.

Mr. HOWE: In reply to the question, I may say that a thorough study has been made of each industry to see what can be done. It will depend a good deal on how much warning we get of the end of hostilities. If the war were to collapse to-day, I do not know that we could avoid a certain lag in the change-over of industry; retooling and reorganization take time. But a study has been made; we have expert opinions of the post-war value of every plant the government owns, which is a large part of the industrial capacity of this country; we know the direction that conversion should take, and we only hope we shall have sufficient notice so that it can be done gradually.

Mr. BENCE: Two matters which were dealt with by the minister on Friday are of the utmost importance to this country, and both materials are in what is called short supply; I refer to petroleum and rubber. The matter of petroleum was dealt with earlier in the evening by the hon. member for Davenport in what I thought was an admirable address. I should like to say a few words now in connection with certain aspects of the rubber problem, and may I remark in the first place that it seems peculiar that that very scarce product, petroleum, is being used and used exclusively in this country for the manufacture of the equally scarce and important product, rubber.

There is a great question mark in the minds of many people with reference to this matter, particularly by reason of the feeling that the refusal to adopt means other than petroleum for the production of synthetic rubber is not motivated entirely by unselfish considerations. I hasten to say that I am not a scientist and I know nothing about the technical side of this matter, but there are a number of questions in my mind and in the minds of the public which, I believe, should be answered by the minister.

It may be that the administration itself does not know as much about the solution of this problem as it might do. It may be, and there is evidence to indicate that this conclusion is justified that it has merely pursued a policy of follow-the-leader and has adopted certain suggestions which were made by those across the line. To me it is significant that the government-owned corporation known as the Polymer corporation, which is going to operate a number of plants at the city of Sarnia, is almost entirely manned by persons who have been borrowed either from the natural rubber companies or from the oil companies of this country.

Petroleum is very scarce. That statement is almost axiomatic. The truth of it is evidenced by the fact that we have to put up a system of rigid rationing. This was also admitted by the minister in the house on Friday when he warned the people that in the near future rationing might have to be even more drastically curtailed. It has been stated on a number of occasions that the oil reserves of this country are by no means unlimited. It is stated, indeed, that at the present rate of depletion, and with no greater oil reserves than at present, within a period of approximately fourteen years no oil will be left on this continent. That is a very serious condition, and it is another indication to me that those who are in control of the production of synthetic rubber on this continent are not much concerned about establishing an industry which will be maintained more or less in perpetuity; for, if they believed that the production of synthetic rubber was to continue on this continent, they would set themselves to look for a product which is in abundance and cannot possibly be exhausted within the short period of fourteen or fifteen years to which I have referred.

I confess to the feeling that these interests do not want to make the production of synthetic rubber on this continent a permanent affair, and in substantiation of that statement I propose before I conclude my remarks to quote the statements of a number of well-known persons whose opinions are regarded as fairly reliable. However, before referring to some of these statements may I observe that the attitude of the administration since the beginning of the war, as was pointed out by the speaker who immediately preceded me, has been to regard any question of supply on a day-to-day basis without any regard for the long-term point of view. It seems to me the time is past to guide our policies on the principle of the proverb that we should not cross our bridges before we come to them, because in many instances it is necessary to plan a long time ahead in order to find the most efficient and economical method of producing a product over a period of years. To adopt a rubber production programme which must necessarily be curtailed in a few years seems to me the height of economic folly. My criticism to-day in that respect is the same as I have voiced in this chamber in the past, a criticism which I first placed before the house over two and a half years ago, when I asserted that the administration has entirely missed the boat as far as taking advantage of its opportunities to develop this country economically is concerned, and that it has failed to understand the necessity of adopting processes which not only will produce something to-day, but will go on producing it to-morrow or in the years to come. I suggest that the administration should take us completely into its confidence in connection with this matter of the production of synthetic rubber, and let us know what its plans are, not only for the immediate future but for years to come.

Recently the city council of my own city and the city council of North Battleford passed a resolution, which was sent to the government, urging the establishment of factories in Saskatchewan for the production of alcohol from grain for the manufacture of synthetic rubber. They received a reply from Mr. Bennett, who is executive assistant of the department. I have not had an opportunity to obtain a copy of the letter, but according to a press item he advised the city council of Saskatoon that the production of rubber from petroleum was the most practical process under present conditions. He went on to state that facilities for the production of synthetic rubber had been established at Sarnia, Ontario. So far as I am concerned I am not prepared to accept that statement without question. What I want is a complete explanation as to the manner in which this judgment was arrived at; the evidence that was furnished; the persons who were consulted and their connections, and how conclusive in the minds of the administration that judgment was. I might point out that considerable work has been done in the United States in the production

of synthetic rubber from agricultural products, and I should like to know what investigation was made by the administration with respect to the efficacy of that method rather than the use of petroleum. I would also point out that from what I have been able to glean from various statements and documents in my possession, it would appear that as far as the continent of Europe is concerned, all the available information points to the fact that the great bulk of the synthetic rubber produced there is made from agricultural products.

Recently, to try and obtain some information in this connection, I asked the administration what was the total stock of natural rubber in Canada. The answer I received was that crude natural rubber is a critical war commodity and that it was not in the public interest to answer this question. I am not entirely sure that this is not in the public interest to answer, but it may be. It does seem to me, however, that more information is given the public of this country than is accorded to members of parliament. I do not know why that should be so; possibly it is because members are in a position to ask follow-up questions which are pertinent to the matters dealt with, whereas the public has pretty well to accept what is given to it. In that respect I would point out that the public of this country have been advised that synthetic rubber factories are being set up in Canada and that the first of these will be capable of producing the needs of the armed forces by September, 1943. Then, according to information given to the public in a little booklet called "The Industrial Front," dated July 1, 1942, it would appear that the rubber in this country at that time was being used to the extent of eighty-five per cent to meet the needs of the armed forces. The disposition of the rubber is shown at page 96 of this booklet, as follows:

	Per cent
Tires and tubes of all types for the army	74·4
Truck and bus tires for essential transportation	3·25
Footwear for armed forces and essential civilian needs	2·9
Belting and other mechanical goods for defence and essential industry	2·5
Aeroplane tires and tubes	2·25
Wire and cable	2·0
Motor vehicle parts for army vehicles and to maintain essential transportation	2·0
Tank parts	1·8
Protective clothing, including anti-gas gloves and respirators	1·8
Retreading and repair of materials for essential transportation	1·2
Fire hose	0·7
Miscellaneous items, none of which comprise more than 0·5 per cent	5·2

That makes a total of 100 per cent. Apparently the public of this country can be given the information that by September of this year sufficient rubber will be on hand to meet the needs of the armed forces, so that to me, from this information, it would seem that we do not have to worry a great deal about that phase of the matter. But I should like to know the plan of the administration with respect to the production of synthetic rubber for other purposes, covering the fifteen per cent I have mentioned as being allotted to civilian needs and matters of that kind. If one plant in the city of Sarnia will produce that much rubber, what steps are being taken by the administration with respect to the production of more rubber? What is its plan in connection with an endeavour to obtain rubber from a product which will produce synthetic rubber to-day, tomorrow and perhaps fifty years from now, instead of from a product which may not be in existence at that time? Is it the intention of the government to go on and expand? How many plants does it propose to put up in the city of Sarnia? Does it propose to do anything in regard to the production of rubber from agricultural supplies?

I might point out that the reason given by some persons for the fact that we have not gone into the production of synthetic rubber from agricultural supplies, and that we have not established plants for this purpose in western Canada, is that the material has not been available for the construction of such plants. It may be that we are short of such material, but I notice that there was sufficient material for an industial alcohol plant at Thorold, Ontario, which is under construction at the present time, though we are producing more than enough alcohol to meet the needs of this country and, according to information given the house a short time ago, are exporting some alcohol to the United States.

In the resolution to which I have referred there is a statement which to me seems very striking, and significant of the interest that appears to be taken in this subject by those who have control of the situation in the United States. This is the statement:

> That Wm. J. Hale, research consultant for the Dow Chemical Company, speaking to the annual dinner of the Minnesota bankers' conference in February, 1943, as reported by the Chicago *Tribune*, stated that there was in existence an unpublicized reciprocal trade treaty with South American countries providing for the destruction of all United States synthetic rubber plants after the conclusion of the war;
>
> Mr. Hale is also authority for the statement that all successful synthetic rubber formulas are based on alcohol (Germany having 38 plants) made from farm products, providing 3·8 pounds of rubber for a gallon of alcohol;

Mr. Hale predicted that the Japanese, when driven out of Malaya and the Dutch East Indies would destroy all the rubber plantations, thus making continuation of the synthetic rubber industry in the United States imperative;

Then I heard some interesting information the other day, given by Mr. D. G. MacKenzie, who is probably known to members of this house. He was formerly minister of agriculture of Manitoba and is at present chief commissioner of the board of grain commissioners and chairman of the agriculture subcommittee of the James advisory committee to the cabinet. He has some significant statements to make in connection with this whole matter. In giving his evidence before the committee on reconstruction and reestablishment, set up by this house, among other things he said:

One of the difficulties that we have in trying to finalize our thinking on this problem arises from the differences of opinion that are emanating from the United States. What I say must be taken only as personal opinion, but there is evidence of a tremendous struggle going on in the United States to-day as between the petroleum interests on the one hand and perhaps the distilleries and farm block on the other hand in the matter of using cereal grains for the production of alcohol. I cannot help but feel behind that dispute or struggle—and it is a very intense one—there is a desire on the part of these respective interests to be in a position to control the market when the war is over.

Then, in answer to the question as to whether he agreed with Dorothy Thompson he said:

I have not seen any statement she has made so I cannot say whether I do or do not but I do feel definitely that there will be a very large synthetic rubber industry established over there that they now say will be competitive with natural rubber. The demands for rubber after the war may be so great as to make it possible that there will be need for both synthetic and natural rubber. These interests are looking forward and are anxious to be in a position to control production and marketing of these products when the war is over. On the other hand, as I stated last night, I was in New York a couple of weeks ago talking to two very eminent citizens there who made this very interesting statement. They said that on the basis of present known resources of petroleum and on the basis of present known consumption of petroleum their resources would not likely last more than fourteen years; so that these same interests are looking forward to that time when stocks of natural petroleum will be exhausted and other sources of supply will have to be developed.

He said, in effect—and I shall give the exact quotation later—that petroleum and oil interests were strongly entrenched and had all necessary technical knowledge to cope with problems immediately any question developed, but that on the other hand, unfortunately, agricultural interests were not as well equipped. He felt that if they were, great assistance could be given to that industry. In that connection he said, as reported at page 428:

The problem we are faced with in trying to work out these problems and in studying them is this: I have discussed this matter with scientists in Canada associated with some of our research foundations and with the National Research Council and so on, and we have not got in Canada anywhere a chemical engineer associated with agriculture, at least to my knowledge, with any idea of costs. These men whom I speak of, who are associated with research organizations, will tell us that they have the processes. There is no question about that, it can be done; but I have not been able to get any of them who will express an opinion as to costs in terms of commercial production.

He was referring to large-scale production.

Then, I have here what I believe is further substantiation of my assertion that there seems to be a great struggle going on in connection with the production of this very valuable commodity. In this, of course, I am not referring only to Canada. A report dated May 13 in the *Western Producer,* and headed "Alcohol Rubber is Shelved by Big Interests", is as follows:

The five alcohol synthetic rubber distilleries approved only recently by the United States war production board have been "laid on the shelf." John Carson, Washington representative of the Co-operative League of the United States, summarizes the alcohol synthetic rubber scrap in which two cooperatives were involved as follows:

This story is so incredible, even in these days when the dollar-a-year men direct a goodly part of the WPB machine, that sections of the picture must be revealed again:

1. The rubber story first began to smell when charges were made that great financial interests, particularly the Dutch-British-American interests, which owned the rubber plantations in the Dutch East Indies, were determined to prevent the development of synthetic rubber which might cheapen rubber and threaten the money invested in the natural rubber plantations in the postwar period.

2. The Standard Oil I.G. Farben cartel of Germany story added to the smell when the secret agreements within that international trust were exposed.

3. The smell became so threatening President Roosevelt created the Baruch committee to investigate and the committee recommended the development of alcohol synthetic rubber as well as oil synthetic rubber and the establishment of a rubber czar. Jeffers was appointed and given complete authority over rubber production, but not over the alcohol production programme.

4. Independents began to apply for approval of their applications to build alcohol distilleries. The senate committee recommended that a great number of small distilleries be established throughout the grain growing areas. WPB, however, ignored all the recommendations of the senate and approved the construction of three large distilleries. Independent distilleries were ignored, their applications forgotten.

5. Evidence of the determination of some hidden power to prevent the development of an

adequate alcohol programme forced Jeffers to join in raising questions and WPB was compelled to show new interest in alcohol rubber.

6. WPB appropriated $100,000 to survey the applications and projects proposed, largely by independent groups, including cooperatives; 116 projects were surveyed by engineers, and finally, only about a month ago, five projects were approved.

7. In one month, the army and navy and WPB developed a "new situation" where these five projects were "not needed."

Then this matter was brought very forcibly to the attention of the public in this country only recently by that well known columnist Dorothy Thompson when she said this in an article contained in the *Western Press:*

There will be attempts to reduce this struggle to the question: Should we have more or less synthetic rubber. That is not the question. We need vast quantities of synthetic rubber. We also need vast quantities of high octane gas.

Behind this dilemma is just one basic cause: the collusion of the oil interests, through the octupus of pressures which they have organized through government departments, to keep the manufacture of synthetic rubber, the so-called Buna-S in their own hands with the same exclusiveness as the production of aviation gas.

And again:

From the day that the war cut us off from natural rubber, there has been a controversy between oil and grain as a basis for synthetic rubber. The oil companies, who had bought the rubber process from the German chemical trust leaped into the game with their formidable pressure power. The chemists who favoured rubber from grain, had nothing but reason on their side.

The Russians, who have been making synthetic rubber for years, used grain and offered us their formula, but it was neglected. There was the so-called Polish process which is also based on grain, so that evidently rubber can be made from grain. Mr. Jeffers knows it. Mr. Nelson knows it. But grain has not had a look-in.

It would appear that Mr. Donald Nelson, himself, who is chairman of war production in Washington believes—or did believe last year, in any event—that the United States had adopted a wrong attitude with respect to the matter of the production of synthetic rubber. He apparently felt that too much emphasis had been placed upon the production of that commodity from petroleum, rather than from alcohol and grain. This is his statement, under date of July 6, 1942:

There is certain evidence which I can introduce to you that immediately we started surveying every one of these propositions to make alcohol out of grain, with Publicker, with Seagrams—we started with Doctor Weizmann, a man in whom I have great confidence—I talked to him last Thursday—I think he could tell you the complete story to-day after a full and complete investigation—he will be here Wednesday, if you would like to see him. To-day, after talking with him, I am convinced that if I were starting that programme over I would start with 60 per cent from alcohol from grain and 40 per cent petroleum. That would be my judgment, viewing it to-day, from what I know of the picture.

I think the attitude, as I understand it, of the administration was pretty well set out in an article appearing in the *Western Press* under the name of Mr. Craik, and dated May 1, 1943. This is what he says:

But, the way things are at present, there is believed to be little possibility of the construction of further synthetic rubber plants in the west or anywhere else in Canada. The hard-headed men in the Department of Munitions and Supplies admit quite frankly that their main concern is winning the war. They wanted synthetic rubber, quickly, and, with petroleum readily available at Sarnia, and the example of United States in manufacturing rubber from petroleum they decided to go ahead on this basis.

They believe that the Sarnia plant will produce sufficient rubber for essential wartime needs, by which they mean military needs, and that is all they are interested in at present.

I might interject there that in view of the statements which have been given to the public to the effect that sufficient synthetic rubber will be available from the Sarnia plant in September of this year, for the purposes of the armed forces, the administration should be extending its programme so that other essential needs may be met.

Mr. Craik goes on in his article to say:

All this is not to say, of course, that the case for synthetic rubber plants in western Canada is closed. Men closely connected with investigations into the industrial uses of agricultural products believe that, if the war stretches out over a few more years, it may become necessary to make more synthetic rubber to meet the increasing demands. Then, they say, the logical thing to do would be to build the plants in western Canada. They also point out that, if the war becomes unduly lengthened, petroleum supplies would tend to become shorter than ever, while the probability is there would still be great reserves of wheat.

According to what the minister said the other day, petroleum supplies are getting shorter. Mr. Craik goes on to say:

All this points to wheat as the product from which rubber will be made, provided greater need arises in the future.

I refer to these statements and make these quotations in order to indicate to the committee and the minister that there is a feeling of great suspicion in the minds of many people in this country in connection with the production of synthetic rubber. It seems to me that in order to clarify the situation the minister should make a complete statement. I urgently suggest to him that he consider this matter, not from the short-time point of view but from the long-time point

of view, as was referred to by the hon. member for Macleod who preceded me and who discussed industrial matters generally.

We are going to have tremendous problems on our hands at the conclusion of the war, and we should take advantage of every opportunity to combine the solution of matters which will arise during the war with the solution of problems which will arise after the war. This feeling which is abroad should not go unanswered. The agricultural interests in western Canada consider that they have not a chance against strongly entrenched industry as represented by the oil and natural rubber concerns unless there is intervention by the government in some way. Here was a case where the government was putting up the money to provide a wholly government-owned corporation; they had complete control of the situation, and I suggest that they should have attempted to take advantage of the situation in a way that would have solved some of these other problems. We have a grave suspicion that the administration has missed the boat in connection with the possible solution of some of our post-war difficulties.

Mr. GERSHAW: Mr. Chairman, I should like to pay a tribute to the Minister of Munitions and Supply and to his staff for the magnificent production record they have. Many men in the department are giving of their experience and abilities freely and are making a great contribution. There are times when materials are required urgently, and to meet these demands requires business experience of the highest order. I feel that if the same energy and thought were put into the solution of our post-war problems as have been put into the solution of these production problems, the people of Canada will need have no fear for the future.

Among the duties carried out by the department, as I understand it, is the locating of air schools, air fields and things of that kind. This is done by the technical officers of the department, and it is often quite difficult to follow their line of reasoning and understand why these airports are located where they are. Unfortunately some of them have been built in locations where there was no water; others have been placed in windy localities where the climate was rigorous, where the snow was deep and where flying hours were limited. Southern Alberta has a wonderful climate, it has clear visibility and mild weather. Places like Bassano, Empress and Bow Island have railroad connections, water and all the other conditions favourable for the location of schools and industries of this kind; yet they have been overlooked.

One service flying training school has been located in the district and it has been eminently successful. They have been able to put in longer flying hours there than in any other place in the dominion. The climatic conditions have been right; the visibility has been good, and the nature of the terrain is perfect. It is a matter of considerable pride that the school located at Medicine Hat stands out prominently among all the schools of Canada. It has the efficiency flying flag at present, and the officers are the very best.

Mr. COLDWELL: I should like to ask the minister one or two questions under this item. Could he give us a break-down of the item?

Mr. HOWE: I had the books here before dinner, but I have left them in the office. I can answer that to-morrow. Part of this is a carryover from commitments made in the last fiscal year, and it covers also plants in contemplation as well as facilities that we expect to expand.

Mr. COLDWELL: Would that be in connection with chemicals mainly?

Mr. HOWE: Yes. The rubber plant at Sarnia represents a $40,000,000 expenditure, and it was not 50 per cent paid for at the close of the fiscal year. Other chemical plants are in process of expansion. As types change, there is a need for retooling. The putting out of a new type gun or a new shell involves expenditures, and these have been estimated by the various departmental heads and are included in the figure.

Mr. COLDWELL: Does the minister's department have any responsibility for the building and operation of the pilot plant which is experimenting with the production of synthetic rubber from alcohol, or is that under the national research council.

Mr. HOWE: The national research council are doing certain work on the manufacture of alcohol from grains, and the department has made an exhaustive study of the relative merits of synthetic rubber based on grain alcohol and synthetic rubber made from a petroleum base. It came to the conclusion that as a long-range situation the part of wisdom was to use petroleum as a base. The use of grain instead of petroleum would involve a very low price for the grain. Wheat is a food and is entitled to a higher value as a food than it can have industrially. For example, to-day alcohol is being made from wheat, whereas in normal times it would be made from molasses at perhaps one-third the cost. To base a huge enterprise such as the synthetic rubber plant at Sarnia, which will cost in the neighbourhood of

$40,000,000, on cereals—wheat is used in the manufacture of alcohol only on account of transportation difficulties in connection with obtaining cheaper materials—to base such a plant on a temporary situation, on a war situation, did not seem the part of wisdom.

I shall be glad at the next sitting to give the committee a statement on the synthetic rubber situation and the reasons which led the government to base the manufacture of synthetic rubber on petroleum rather than on wheat. I shall give some detail. I was rather interested in the call I had from a committee of the Saskatchewan wheat pool which had visited a number of authorities in the United States and practically all the laboratories there, as well as obtaining such information as they could in Canada. That was an independent investigation made by people who could logically be expected to favour wheat as a basis for rubber rather than petroleum, and in my discussion with them I concluded that they had reached the same decision as had been reached by my officials, that to base the future of wheat on its use in industry would be very unfortunate for wheat. However, I have a statement prepared and I shall be very glad to give it at the next sitting.

Mr. COLDWELL: I am pleased to hear the minister say that he will give a complete statement on the subject to-morrow. One of the reasons why those of us from the prairies are so much interested in the production of rubber from grain is the fact that we have such huge surpluses of grain at the present time and we look into the future with something of misgivings. We know perfectly well that Britain has increased her cereal crops to a tremendous degree during the war, and we know that it is the intention of the British government to continue the production of grain on as great a scale as possible after the war, for obvious reasons, one being that she will no longer be the creditor nation that she was before the war and consequently will have to feed herself to a greater extent than before the war.

I appreciate the point of view that the members of the wheat pool may have. I do not know exactly what their viewpoint was, but it was indicated to some extent by the minister when he said that it would be unsafe to predicate the future of the wheat grower upon the manufacture of synthetic rubber. But the point we have in mind is these tremendous surpluses that we now have on the prairies. While there is every prospect of their being reduced to some extent owing to conditions in the United States, nevertheless we are likely to be faced with a considerable amount of wheat in this country at least until the war is over. When I was in Washington the other day the Vice-President told me that if transportation could be arranged, even now very much of our western wheat would be used over there, that it was very largely the question of transportation that was bothersome. Consequently, temporarily at least, while we may see some alleviation of the difficulty which we have faced during the past several years, I am rather looking to the future beyond the two years, we will say, after the war. If Britain continues to grow wheat and the Argentine republic has surpluses of wheat; if Australia has surpluses stored up on account of the war—her stock is disappearing to some extent through the United States armed forces in Australia—we want to find uses for our grain that will give some security for the future, some guarantee that the grain will be used.

I do not know whether the minister read an article a short time ago by Miss Dorothy Thompson—I read it but I have not it with me—in which she contended that the making of synthetic rubber from an alcohol base derived from grain was thoroughly feasible, but that it had been blocked by the oil companies who were interested in carrying on experiments and the production of synthetic rubber from petroleum. As was well said by the hon. member for Davenport this afternoon, it is a dangerous position to get into to allow this great new synthetic rubber industry to be controlled by the oil industry, which in turn is very largely a monopoly. We all know the extensive and numerous ramifications of the Standard Oil company, associated with its own company in this country, Imperial Oil, and none of us likes to see this great new industry of synthetic rubber left wholly under the control of the great oil companies. There are only two or three of them—Standard Oil and Royal Dutch Shell practically divide the world between them. But if we could see synthetic rubber made from alcohol—we do not have to look to grain exclusively, for there are other sources of alcohol; the minister mentioned the cutting off of the supply of molasses—it would change the whole picture. We can make alcohol from all kinds of other vegetable products. Various trees, for instance, are potential sources of alcohol.

I am glad the minister intends to make a statement on the subject to-morrow, because it is a very live one in our part of Canada, the west, and those of us in the house should be fully informed as to the whys and wherefores of making synthetic rubber from petroleum rather than from alcohol. Most of us would prefer to see alcohol used as the base rather than petroleum, which is in the hands of a great petroleum trust.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Tuesday, June 15, 1943

The house met at three o'clock.

INCOME TAX

REQUEST FOR EXTENSION OF FILING DATE FOR 1942 RETURNS

On the orders of the day:

Mr. P. C. BLACK (Cumberland): I wish to direct a question to the Minister of National Revenue. May I ask whether the time can be extended beyond June 30 for the filing of income tax returns for 1942, more particularly under T-1 general? It is pointed out to me by chartered accountants and business firms that in many cases it will be impossible for them to file their returns by that date and they contend that they should not be subjected to penalties or excessive interest charges. There have been changes in tax legislation and delays in the printing of the legislation and forms, which have been only recently distributed. Moreover, the staffs of chartered accountants and the offices of business concerns have been depleted by enlistments and by the transference of men to government work, and these have been replaced by inexperienced help. In addition to that, the work has greatly increased and many of these firms of chartered accountants find it impossible to make up their returns as of June 30.

Hon. C. W. G. GIBSON (Minister of National Revenue): The hon. member was good enough to give me notice of his question. Income tax returns which are due on June 30 are the individual returns, and the returns of corporations whose years ended on December 31. While amendments to the act delayed the production of the 1942 income tax forms, taxpayers have had six months in which to determine their 1942 incomes, and the forms have been available since early this month. There still remain over two weeks in which to file these returns.

I realize that some congestion exists in the offices of chartered accountants, who have numerous returns to prepare, but in view of the large number of taxpayers who will be filing returns, and the millions of dollars payable this month, it is not considered advisable to postpone the collection of this large sum by a general extension of time.

MUNITIONS AND SUPPLY

REFERENCE TO PRESS REPORT AS TO PURCHASE OF OFFICE EQUIPMENT

On the orders of the day:

Hon. C. D. HOWE (Minister of Munitions and Supply): I wish to correct certain information given this morning in the two Ottawa morning papers referring to return No. 257, subject, armchairs, chesterfield suites, sofas, et cetera, tabled yesterday in the House of Commons. Both articles implied that the chesterfields and other equipment purchased by the department were for its own use, whereas the returns specifically stated that the department merely acted as purchasing agent for the three armed services in buying the equipment referred to. The Department of Public Works purchases all such equipment used by the Department of Munitions and Supply, and since the inception of the department has supplied the Department of Munitions and Supply with: 991 armchairs of every kind; no chesterfields; six sofas and lounges.

LABOUR CONDITIONS

STRIKES IN GALT, ONT., WAR PLANTS

On the orders of the day:

Hon. H. A. BRUCE (Parkdale): I direct the government's attention to a news item appearing in to-day's papers. It describes a Mr. Arthur Williams as organizer for the Canadian congress of labour and he is reported to have suggested Ontario-wide trade union action to suppress striking employees in war plants at Galt. What action does the government propose to take in the circumstances under the defence of Canada regulations?

Mr. SPEAKER: That is a question that should be put on the order paper.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Monday, June 14, consideration in committee of a resolution to grant to his majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

MUNITIONS AND SUPPLY

1. Additions and extensions to plants, $195,000,000.

Mr. LIONEL CHEVRIER (Parliamentary Assistant to the Minister of Munitions and Supply): Mr. Chairman, I should like to discuss briefly this afternoon a subject which I believe is of some importance in the consideration of the war appropriation resolution so far as it concerns the Department of Munitions and Supply; that is, the purchasing policy of the department. For a moment I want to consider the method adopted in the department to reduce costs and to control profit margins. I should like to discuss briefly the contracting policy of the department, the manner in which contracts are awarded, the various kinds of contracts, the controls exercised over them, some of the conservation methods that have been adopted by the directors-general and the consequent reduction in prices of many of the commodities and instruments of war purchased by the department. These are all matters which have been discussed in the house from time to time, and I should like to show that the job of the department is to get the maximum possible value for the taxpayer's dollar, which involves not only seeing that profits are fair and reasonable but that costs are driven down in every possible way.

The chief job of the Department of Munitions and Supply is that of procurement for the army, the navy and the air force of Canada, the United Kingdom and the united nations. Its first job is to procure as quickly as possible those things which may be required from time to time. In the first years of the war the department was criticized because it was not producing fast enough. Now that production is here the main criticism seems to be that we are producing too fast and that the programme is costing far too much. I should like to examine that charge in the light of methods adopted by the department and the procedure followed to reduce costs and curtail profit margins. Before going into that subject, however, there are three points which I believe deserve the attention of the committee. The first point is that Canada has never been a manufacturer of military, naval or aircraft stores. We had not made a single gun in this country prior to the war. Certainly we had never made a tank, and for some twenty-five years prior to the war I do not believe we had produced a merchant shipping vessel. It is true that we had made some commercial planes but we had never made a combat plane, and I am sure hon. members will agree that there is all the difference in the world between a commercial and a combat plane.

Mr. HANSON (York-Sunbury): We had built commercial shipping.

Mr. CHEVRIER: My suggestion was that within a period of twenty-five years prior to the war we had not produced cargo or merchant shipping vessels. I was going on to say that the department was faced with this position, that it had to purchase a huge quantity of military stores never before made in this country. It would go to a manufacturer and ask him to make these articles. The manufacturer, not having made them before, was faced with the difficulty of not being able to submit a price. Very often he would say to the officers of the department, "Do you know what it is going to cost?" The answer from us was no, because we had no further information than he had in regard to costs. Therefore it became necessary to negotiate on the subject of prices, and the difficulty resulted from the fact that the contractor not only had not made these implements of war previously but did not know the price to quote, any more than the department knew it.

The second point I wish to bring to the attention of the committee is that all those who have given this subject any thought have come to the conclusion that the most desirable kind of contract that could be negotiated under those circumstances was the fixed price contract, in which the contractor undertakes to furnish to the department a fixed number of articles at so many cents or so many dollars. That is the ordinary contract that everyone was accustomed to in peace time. Obviously it has many advantages, because the contractor takes all the risks. Then the third point arose, but how are you going to negotiate safely fixed price contracts upon stores that not only have never been made in this country before but concerning the prices of which neither the department nor the contractor had the slightest idea?

That was the fundamental problem of munitions and supply in connection with the purchasing of a great deal of the military stores that it required from time to time. The department therefore had to establish a policy

and set up a technique. Briefly summed up, this is what was evolved. Wherever possible the competitive price system is used as the best method of finding the most efficient contractor. The department thinks that the cheapest production, both from the point of view of cost as well as the point of view of profits, can be obtained through the negotiation of short term contracts on a fixed price basis. However, the success of contracts of this kind depends entirely upon the ability of the department to obtain full, accurate and up to date knowledge of the costs of the contractor. Where this is not possible and cannot be obtained, as in the case of tanks and certain guns which have as many as 2,400 parts, the department has had to work out variations and modifications of the fixed price contract.

Here let me note that four-sevenths, in point of number, of all the contracts awarded by the Department of Munitions and Supply have been on the fixed price basis.

Though some criticize the tender system, the department adheres to the view that if we can get real competition between two or more concerns we are likely to get low prices on the first order and still lower prices on subsequent orders. Practically all purchases of foodstuffs, barracks stores, supplies, clothing and equipment of that kind have been purchased on the tender system. Obviously, however, the tender system will not work out when applied to the purchase of equipment mostly technical in character, which has never been produced in this country before. The department therefore hit upon the expedient of the cost audit. It allowed the manufacturer a reasonable fee for his work, with the understanding that at the earliest possible date it would examine his costs and revise his price as his costs might warrant.

Contracts, as a general rule, and in a broad way, which are awarded in the department may be divided into two parts, those awarded to independent contractors and those negotiated by so-called agents. The independent contracts may in turn be subdivided into five parts the first of which is the fixed price contract, about which I have been speaking; the next is the ceiling price contract, about which I shall have something to say in a moment. It is the contract which has to do generally speaking with the purchase of mechanical transport. Then there is the unit fee contract used generally in the purchase of guns. Again, we have another division called the target price; and finally the cost plus percentage. This is of course the least desirable kind of contract. But there are some instances when resort must be had to it, as for instance the case of overhaul of aircraft, and repair contracts for aircraft. But it is only in exceptional circumstances that resort is had to that kind of contract.

Contracts entered into by so-called agents may also be subdivided into two parts, those negotiated by government-owned companies, and those negotiated by privately owned companies on a management fee basis. Government-owned companies may be either operating companies, such as Small Arms Limited, or supervising companies, such as Allied War Supplies Limited. And the management fee contract may be on a unit basis, a monthly basis or a yearly basis.

These are the general divisions of contracts in the department. There are other contracts of an exceptional nature to which I make no reference here. Where the contractor is able to give us a fixed price, which we have reason to believe is fairly close to the right price we negotiate with him what is called a ceiling price contract. This means that the contractor's costs will be audited when the job is done, and he will be paid the actual audited costs, plus a fee, or a percentage on costs. In no case will the cost plus profit exceed the ceiling agreed upon. If on audit it is found that the ceiling price exceeds the actual cost plus the agreed profit, the contractor must adjust his price and return the excess he has been paid. This is what is called the ceiling price contract. It is subject to revision downward only.

Another type of arrangement in lieu of fixed price negotiations had to be found in the case where a reputable manufacturer was unable to submit any reasonable estimate of his costs, and was willing to work for a settled period without any fixed price. In such case it was our policy to allow the contractor his actual audited costs, plus a fee of so many dollars or cents for each unit of output which passed inspection. Sometimes the changing character of the contract necessitated a percentage rather than a fee. However, as I said a moment ago we have used the percentage on cost arrangement only as a last resort, and where it was quite impossible to estimate the duration or the difficulties of the job.

A word about the unit fee. This arrangement has a definite bearing on speed of production. The sooner the manufacturer gets his first unit out, the sooner he begins to earn something for his operation. The more units he produces, the higher are his earnings. The unit fee method has had much to do with the speeding up of production and the reduction of costs.

The question is sometimes asked: How can the cost plus fee arrangement lead to low

costs? Where is the incentive? The answer is that you do not speed production without a more efficient use of man-power. And where you reduce the number of man-hours required for a certain job, you also reduce its costs. So that the incentive to speed also creates an incentive to cost reduction.

At the start of a programme the manufacturer usually gets a large number of employees around him, in order to speed up production. Gradually he will find this to be somewhat cumbersome, and will always reduce the number of his employees later on, as the programme advances, in order to obtain more efficiency. This inevitably will lead to lower costs.

Still another method for creating incentive for cost reduction, where a fixed price cannot be established at the beginning of a programme, is the target price contract. The target price is something for the contractor to shoot at. It is really a trial run on the preliminary part of the programme. If the contractor gets under the target he will get a profit. If he goes over the target he will be penalized. Under this plan the contractor agrees to accept the target price for the first five or ten per cent of the amount of his contract. If after an audit it is found that the actual cost is the same as the target, the contractor gets a profit of five per cent of the target. If the contractor's costs exceed the target his profit is reduced by twenty-five per cent of the excess over and above the target. Should his actual costs be less than the target, he gets a bonus of twenty-five per cent of the saving. On this type of contract frequent audits are made sometimes as often as every three months.

So that we finally arrive at the position where it is possible to negotiate with the contractor a fixed price contract. I should like to point out, Mr. Chairman, that all these various modifications of the fixed price contract, such as the target price, the ceiling price and the unit fee arrangement are temporary arrangements being used by the department pending the day when it will be possible to negotiate contracts on a fixed price basis.

One of the great difficulties about establishing fixed prices is the frequent change in the design of equipment while it is in production. There is no known way of determining the efficiency of war equipment, except by use in combat. We find we must ask our contractors to make frequent changes in the design of equipment. Had it not been for these modifications and variations of the fixed price contract, production would certainly never have attained the peak it has attained to-day. The best proof of the wisdom of our policy is that to-day there exists in the department a group of war contractors who are definitely cost conscious. Their interest in cost reduction is second only to their interest in production.

I should like now to pass on to the checks or controls which are exercised in the department over contracts of a cost-plus nature. These are three in number: First, the treasury cost accountant; second, the representatives of Munitions and Supply, and third, the directors-general of the various programmes.

The cost accountant is an official of the Department of Finance. He is attached to the treasury branch of that department, and he works hand in hand with the Department of Munitions and Supply. There are hundreds of these cost accountants scattered throughout war industries in the country. Their job is to find out what costs are, and to supervise those costs. These men operate in accordance with a strict formula. For the information of the committee I should like to table the costing memorandum of the Department of Munitions and Supply, known as No. 433. This memorandum sets out in detail the items which may be charged as items of cost and those which may not be. I can assure you that there is no provision for donations, entertainment expenses, advertising expenses, bank interest and the like. If hon. members are interested in this costing memorandum and will read it, they will find there in great detail all the items which may or which may not be charged as cost items.

The cost accountant does not confine himself in his investigation to what the books show. He inquires into matters such as scrap losses, quantities and costs of materials, use of man-hours and things of that kind which are not normally shown on a company's books. He tries by a spot investigation to make sure that the company's payroll is genuine and has not been padded. He tries to bring into relief all substantial or unreasonable salary increases or bonuses which may not appear on the surface. He segregates and isolates expenses incidental to the development of a programme and which are not likely to recur in its advanced stages. He aims to tell the department the story of what is going on in the industry with reference to cost; he tries to tell the department not only the cost during the first period of production but also the cost after production is well under way. Where such costs are obtained the department is then in position to negotiate fixed price contracts.

The representatives of Munitions and Supply are experienced officials of the department who operate in the large war industries, particularly those on a cost plus fee basis. It is the responsibility of these men to help the industry increase production and reduce costs. They are also required to report all cases of inefficient or uneconomical operation. The directors-general of production supervise and direct all programmes. With their associates and assistants they combine the best production and technical experience that is available in the country.

For some time past the production departments under the direction of the coordinator of production have begun a campaign of conservation, the object of which is to help the contractors conserve machine tools, man-hours and materials of a critical nature. When this campaign was exhibited in Toronto in October last year it was estimated that at that time it had saved the country some $155,000,000. The estimate to-day would unquestionably be much higher. This exhibit of conservation projects was afterwards moved from Toronto and may now be seen in Montreal. If there are some hon. members who have not seen this exhibit I would suggest to them that they could profitably spend the time necessary to go to see it. It is now at 1155 Bishop street, Montreal. I am informed by one of the directors of this branch that some time next week the exhibit will be moved to Ottawa, where it may be seen.

I should like to give to the committee four or five examples taken from this conservation project which I believe will speak volumes for what has been done in the campaign. (*a*) First, I should like to refer to what has been accomplished in connection with the body of the Bren gun. This body is made from a steel forging, and after certain experiments it was found possible to redesign the forging dies so that it would be nearer to the finished shape. This resulted in a saving of 1,200,000 pounds of stainless steel and a large amount of chrome, which is scarce. Owing to the improved shape, 10,000 man-hours have been saved in the machining of this one part. A value of $125,000 may safely be put upon the saving in connection with this one item.

(*b*) The small catch for the Bren gun magazine was originally built up with welding rod and then machined to shape. It was found possible to accomplish the same purpose by three press operations, and the result has been a saving of 198,000 pounds of welding rod, and $39,000 worth of oxygen and acetylene. The saving in labour has been 515,000 hours and ten machine tools have been eliminated. The value of this conservation project is about $329,000. (*c*) The bipod assembly on the Boys anti-tank rifle was redesigned to be made from a malleable iron casting instead of from a steel forging, steel tubing and bar stock. The annual saving here has been estimated at 771,600 pounds of steel forgings, and forging capacity is very tight; 72,000 pounds of seamless steel tubing, which is scarce and has to be imported; 164,500 pounds of bar steel; 477,600 hours of labour and 77 machine tools. We can value this project at $1,780,000.

(*d*) The fuse for the 25-pounder shell was originally machined from brass bar stock. Brass calls for copper, which is extremely critical. The fuse was re-engineered to be made from zinc die castings. This resulted in saving 44,000,000 pounds of brass. At the same time 816,000 hours of labour were saved annually and fifteen machine tools were eliminated from this operation. This conservation project can be valued at over $6,500,000. (*e*) I should like to select one example from several hundred successful changes which have been made in the universal carrier. The track sprocket was originally rough flame cut from steel plate and partly finish machined all over. Now the sprocket is made from centrifugally cast steel and the only machining necessary is the boring of the hole for the shaft and the drilling of a few small holes. The annual saving in plate stock is nearly 9,000,000 pounds; 725,000 hours of labour have been saved, and the total saving can be valued at $1,700,000.

(*f*) Not all the ingenuity of this campaign has been directed toward war stores. Here is a case concerning the packing of motor vehicles for overseas shipment. A change was made in the manufacturing of the truck, which made closer packing possible. A study of the building of the boxes as to use of lumber and nails was made. This resulted in a large saving of shipping space, as well as a saving of 3,635 freight cars, over $2,000,000 worth of nails and lumber, and over $1,000,000 in labour. I would point out that no one can put a value on the shipping space which was saved.

The technical and financial press has been awake to the significance of this great conservation movement which is rapidly assuming the aspect of a crusade and it has spread the news of the accomplishments throughout Canadian industry. All these examples of savings were selected from a group of over 500 reported to the department some months ago. To them must be added over 350 more items reported in recent months.

All this information naturally raises the question of what has happened to prices in relation thereto. In addition to the greater

production that has been made possible through the conservation of the resources of the united nations, what additional value have the Canadian people been getting for the dollars they have paid in taxes or invested in war bonds? The news here is also good, and again I would ask the house to bear with me while I quote several examples of reductions in prices, as follows:

No. 119 fuze—price reduced from $3.05 to 65 cents.

100-round Bren magazine—price reduced from $38.58 to $18.

2-inch trench mortar—price reduced from $120.48 to $80.

3-inch trench mortar—price reduced from $345.65 to $236.

Universal carrier—price reduced from $3,825 to $2,900.

2-inch bomb thrower—price reduced from $81.81 to $67.05.

Gun barrels	Forging	Machining
3·7 A.A.	$1,650 to $900	$1,733 to $375
40 M.M.	$187.20 to $160	$460.53 to $183.40
2-pdr.	$178.50 to $171.60	

I am advised by the munitions contracts branch that the quarterly review of fixed prices on ammunition components for the second quarter of 1943, as compared with the first quarter, indicates a total over-all saving of $2½ million.

Gratifying as these results are, they do not permit of any complacency. Critical shortages still face us. The need for the most frugal use of man-power still exists.

One most encouraging feature of to-day's picture is the earnest participation of the workers themselves in making their labour more fruitful. "Employee suggestion plans" are being installed in plants throughout Canada. Canadian workers, stimulated by fair systems of recognition and rewards, have turned in thousands of usable ideas. Many are small in importance by themselves, but when multiplied by the thousand, they assume gigantic proportions. It is too early to try to make any estimate of the total savings which will be made by Canadian workmen, but here is a sample from one industry only which will indicate the possibilities. In this one industry during the period from August 22, 1942, to April 3, 1943, no fewer than 4,512 suggestions were received from the workers, of which 460 have been accepted and put into production, and over 1,200 have yet to be studied. In that industry the workers have been awarded $21,352.65 for their suggestions.

[Mr. Chevrier.]

I would like to say a word now, if I may about renegotiation. Notwithstanding the precautions taken by the department to reduce costs and curtail profit margins, occasionally there develops a case where the profit on a fixed price contract is an inordinate one. This may develop where large volumes of material or equipment of a certain kind have to be obtained. When this occurs the department takes the view that the contractor in war time should be content to give the taxpayer the greater part of the benefit of the improved techniques, rather than retain them for himself.

While the department appreciates the principle of the sanctity of contracts entered into between itself and its contractors, still it realizes that in war time there is a responsibility placed upon the minister to protect the taxpayers' money. For this reason, where it is shown that profits are unreasonable, the department renegotiates contracts, first, voluntarily, and then on a compulsory basis if need be. The powers in this regard conferred upon the minister, are to be found in clause 13, subsection 4, of the bill which was passed by the house some weeks ago. The subsection reads as follows:

Renegotiate contract price.

(4) If the minister is satisfied, upon an examination of the accounts and records of a person who has entered into a munitions contract, that the contract price paid and payable to such person contains an unreasonable profit, he may direct such person to renegotiate the contract price and may direct that there be withheld from such person any amount of the contract price which in the opinion of the minister represents an unreasonable profit, and may direct such person to pay to the Receiver General of Canada forthwith any amount which such person has received which in the opinion of the minister represents an unreasonable profit.

Then again, there is the control exercised over war profits by the corporation income tax and the excess profit tax. Following the budget of the year 1942, a company would pay at least 40 per cent of total profits as a corporation tax and an excess profit tax of 10 per cent of the net income, or 100 per cent of the excess profit over the average for the standard period. No change has been made with reference to these taxes in the budget which was brought down this year. Under existing tax laws no corporation can earn, after tax, a greater amount that seventy per cent of its pre-war standard profit.

It will be seen therefore, Mr. Chairman, from what I have been saying that the job of munitions supply may be subdivided into three parts, which in order of importance are: (1) to secure the required output in the minimum of

time; (2) to secure all benefits of modern production and cost reduction technique; and (3) to keep profits under strict control.

I do not pretend, Mr. Chairman, that we have attained one hundred per cent efficiency in all these, but all in all we are doing a good job in spending the taxpayers' money.

Mr. HANSON (York Sunbury): You are spending enough money all right.

Mr. CHEVRIER: There is no doubt of that, but my contention is that we are doing a good job in spending that money and we are trying to negotiate contracts on a proper, sound and businesslike basis. We are maintaining a close check on costs and profits through the audit system, and we are seeking to improve manufacturing technique by daily contact between our production officials and our contractors.

I should like to quote here what some people who do not live in this country think of our system, and I say this, that notwithstanding the criticism which may from time to time have been levelled against the control of war profits in Canada our system is more efficient than that at the present time obtaining in the United States. I should like to quote from an article which appeared in the "University of Pennsylvania Law Review." It is from the pen of James R. Withrow, Jr. Mr. Withrow is a graduate of Cornell university and a member of the New York Bar. He wrote an article entitled "The Control of War Profits in the United States and Canada." He came to Canada and spent some time here studying the methods which we adopted, in order to compare them with those exercised in the United States. In this rather lengthy article he goes into the manner in which the country to the south handles costs and profit margins as compared with the manner which we adopted, and he concludes in this fashion: I quote two sentences from his concluding paragraphs:

> Canada's method of controlling war profits is to negotiate contracts carefully and for a short period of time, and to provide wherever possible, an incentive to the manufacturer to reduce his costs. The tax laws are left to take care of the rest. . . .

And the concluding sentence:

> Certainly Canada's policy of awarding war contracts for short terms and subject to continuous scientific cost inspection, and thereafter relying on high corporate and excess profits taxes, seems better adapted to eliminate war profits without any discouragement of production than the procedures which have been followed in the United States.

Canadians might well be proud of the fact that, after almost four years of war, with an unprecedented outlay of public funds, there have been few charges of graft and almost no accusations of improper use of war moneys. In the few cases where waste and dishonesty have been discovered, the department has acted quickly and effectively.

The department is most anxious to maintain its reputation for honesty and efficiency. That it has done so in the face of many obstacles is due not only to the checks and controls which I have been speaking of, but particularly to the high calibre of the men who administer the war programme.

Mr. GRAYDON: I rise to take part in this phase of the committee's discussions in order to deal with two points only, and those at not very great length.

The Minister of Munitions and Supply, in his statement to the house the other day, pictured the development of a department which, judging by the buildings it occupies in Ottawa alone, seems to be almost an empire in itself. I take it that his statement was intended as a tribute to the energy, the capacity and the determination of Canadians in industry and in labour circles so far as the prosecution of our war effort to a successful issue is concerned. Sometimes we tend to divide ourselves into sections in our attitude to the war effort. That is a mistake. All Canada—every one of us—is in this effort; and, assuming the minister desired to express his commendation of those who are engaged in the production of materials of war, I would endorse that expression. I would, however, point out that since the administrative end of the department has developed into this huge empire, perhaps some criticism of a constructive nature may properly be directed to the minister in charge and to the government.

So far as industrial production goes, the government has adopted the policy of employer and employee production committees sometimes known as labour-management production committees. Their objective, of course, is increased production. The government, being committed to the encouragement of employer and employee production committees throughout the industries of the nation, must accept some criticism in view of the fact that it has not set an example by applying this principle in the administrative branch of the Department of Munitions and Supply. I mentioned this in a previous discussion without enlarging on it. Members of parliament have had placed in their hands a chart displaying the structure of the minister's department. Most of us who are interested in labour are concerned to find that, in the whole of this giant administrative

organization, the closest if not the only approach to labour cooperation is represented by the appointment held by Doctor Goldenberg, the liaison officer with the Department of Labour.

I am in hearty agreement with the policy and purpose of employer-employee production committees. We have too long ignored the fact that if we are to go places in production in any line, we must have a partnership of industry and labour. One of the best places where the government could realize this objective is right in the top strata of the Department of Munitions and Supply itself.

I would pay my tribute at this time to the industrialists who have given of their time and energies and abilities to the work over which the minister has jurisdiction. My criticism in no way constitutes a reflection on anyone, whether he be in labour or industry, who is giving of his best. It stems from the fact that in this departmental empire, labour has not its proper place and is not enabled to take its proper part. Hon. members know that in Great Britain organized labour has become a major partner in the national effort. We all admire the attitude of British labour and its accomplishments during the war. To use a phrase frequently employed by the Minister of Labour when the history of the war-time endeavour of Great Britain is written, the contribution of British labour will stand out in bold relief. I would therefore urge upon the minister, with all the earnestness at my command, and believing that we who have been champions of labour in this house and outside it for many years may properly make this suggestion, that he take labour into fuller partnership in the work of his department. The complaint is made not only with respect to the Department of Munitions but with respect to other departments of government as well, that agriculture and labour, embracing as they do two great producing elements of our country, have not, during this period of war, been taken sufficiently into the partnership so as to ensure the most vigorous and effective prosecution of the war.

I come to another point. Now that we have read so much and heard so much about making the world safe for democracy, to most of us who have not during the past been associated with major business enterprises, but have been ordinary common people trying to get along, making the world safe for democracy means at the same time making it safe for the common man. That is one of the things which we are prone to forget; because if the world is to remain safe for democracy it must be a world in which the little man has his place and his proper share of the opportunities of life. I lay that down as the premise of what I am about to say.

I have always felt that those who represent the bigger interests in this country and in other countries as well are able to speak for themselves. It can properly be said that they have not been exactly inarticulate in the years that are past. But it is the duty of those who represent the people in this parliament, as it is the duty of those who represent the people in other legislative assemblies throughout the world, to raise our voices on behalf of the little man; because very often his voice cannot otherwise be heard.

Yesterday we saw an amazing performance, at least so far as I was concerned. Looking on it as one who was attempting to gauge the position of those who were contending one way or the other, I could not help thinking that in the statement given by the Minister of Munitions and Supply there was a certain helplessness with regard to his position and that of the government. I am not going to attach a lot of blame to the Minister of Munitions and Supply particularly. I simply wish to attack a system which leaves him in a position of helplessness such as his words themselves would indicate on an occasion of this kind. Surely in Canada we have not yet reached the stage where a government need suffer from creeping paralysis in relation to international combinations with which it has sometimes to come in contact and with which it has to deal.

It is true, with respect to the contract as to which there was so much discussion yesterday and last night, that there are four nations involved, namely, Great Britain, the United States, Australia and Canada. It may be argued one way and then another with regard to the price which was paid for the product of these plants. But whatever may have been the underlying factor in the matter of price, I think it must have been made abundantly clear that at least the company involved was not losing anything in the transaction. Moreover, it seemed to me that the minister himself was not too sure that the actual price itself was the price that he would have placed upon the product. Rather, he left the impression that the price was set and that the governments of these four nations acquiesced and bought the product at a figure, not that they had thought was the proper one, but one that was set by an international combination.

Perhaps the government may be able to argue that from the point of view of selfish

nationalism Canada might conceivably get a better deal out of the transaction than the other three. That is not a sufficient answer. It is not a sufficient answer to say that the Minister of Finance will be able to hold his pail and get some of the milk out of the whole arrangement by way of taxation. There is a broader and much more comprehensive picture.

Millions of working people in Canada, and the men and women on 750,000 farms, are trying to find for themselves a field for private initative and private enterprise and for free enterprise itself. When the minister speaks as he did about his first job being to fight this war, no one will disagree on that point. But when he speaks of fighting the war and not fighting international combines, it seems to me that this might perhaps be a proper statement to make if the minister at the beginning had been able to assure the committee that while the war was being fought the same international combines were not fighting a battle against the common people themselves. Then it becomes a question not of attack but of defence, and I wish to draw that to the minister's attention, because while we are fighting this war we must be careful that there are no interests, international or otherwise, that are attacking either economically or financially the common people, whether they be working men, farmers, or members of other sections of the community.

Of course mention was made of other interests than that which occupied most of the attention of the committee yesterday. I shall not deal with them except to say that it does indicate, I think, a condition of affairs to which the declaration of the Progressive Conservative party, which met in Winnipeg last December, is pertinent. The party at that convention found it desirable and necessary, in the national interest, to make this public declaration which I wish to put on the record:

> Every person able and willing to work must be assured of gainful occupation with sufficient means to maintain a home and family. The objective is full employment at fair wages under progressively improving standards. We oppose relief as a substitute for work. For the achievement of this objective—

And now I come to the point which I wish particularly to emphasize.

> For the achievement of that objective—full employment at fair wages under progressively improving standards—and for the welfare and development of society, we strongly advocate the strengthening of the basic Canadian tradition of individual initiative and individual enterprise and opportunity, and the freeing of economic activities from bureaucratic controls. Government authority, however, should be maintained and exercised wherever necessary to protect primary producers, workers and consumers from exploitation through such abuses as price-fixing combines, monopolies and patent cartels. To those ends we believe that government should seek to create conditions under which the maximum volume of employment and the maximum national income may be assured through the initiative and enterprise of the people themselves.

Having in mind the desires of those who wish to follow the doctrine of individual initiative and free enterprise, which is in the interests of the people generally, in my opinion international combinations and cartels constitute one of the principal impediments to the achievement of this objective by the little man, whether he be in business, on the farm, in other primary occupations, in the workshop, in the plant or in the factory. Therefore these combinations, it seems to me, may well be the enemy of the ordinary man, and for that reason I raise my voice this afternoon in respect to this matter.

More than that; while it may be said that our friends to the left are very voluble in their criticism of this particular company, I suggest that while it is always necessary to arouse public opinion in regard to matters which need correction, it is equally important, if not more so, that the solution should be brought forward at the same time that the difficulty is outlined. I do not say this in any small, critical way of the group which brought up this matter yesterday, but I do believe that free enterprise and individual initiative never can find their true place in a world order in which monopolistic combinations exist; nor do I think that place can be found in a world order in which socialism is rampant. So as far as this party is concerned, our desire is expressed in the words which I read from the policy embodied in the convention platform, and I think that is one thing upon which the people of Canada will be generally agreed.

I should like to say a word in reference to the remarks of the hon. member for Stormont (Mr. Chevrier), who is the parliamentary assistant to the Minister of Munitions and Supply and who spoke this afternoon. The hon. member made it abundantly clear that as far as his department is concerned the problem of the renegotiation or adjustment of contracts could be dealt with on a voluntary basis; but he took care to indicate that the department would not hesitate to deal with these matters by compulsory methods in connection with contracts which they considered to be unfair, and he pointed out that the act gave the department power to proceed in this way. Following that statement I have a suggestion to offer in regard to the contract which has been under discussion. In the first place it seems

to me, as I think it must seem to the government and the minister, that this is a contract which in the interests of the Canadian people as well as the interests of the united nations should be reviewed and renegotiated. There is no reason in the world why Canada should not take the lead with respect to the whole question of international combinations. I do not think this country wants to take a back seat, in comparison with other countries in the world, in exercising initiative with respect to the formation of a new order when this war is over. I like to think that this nation will be in the front line when it comes to world-wide reform, as we want to see this country in the front with respect to domestic reform.

Having that definitely in mind, together with the information that is available in respect to international combinations throughout the world, it seems to me that this country should at once take the lead in setting up an international body which would go into the whole question of these combinations; because, from the minister's own statement, this country would seem helpless to do it alone. Perhaps some will say we should have a royal commission to look into the allegations that have been made with respect to this company, and I would be in favour of that; I put myself on record in that respect now. But I think more than a royal commission in Canada is required; I think we need a commission having power to cover the whole gamut of the united nations. Since this war began we have gone a long way in bringing together representatives of the various nations to discuss different subjects. We have had a conference on the question of food, for instance, and there are other matters which are the prospective subjects of further conferences of the kind. But if we are to clear away the underbrush which may bar the pathway to peace in the years following this war we must undertake some of the hard things as well as some of the easier things, and I think Canada ought now to take the initiative in the formation of an international body which will see to it that in the years to come, whether we are at peace or at war, no group of people other than governments will be able to exercise almost super-governmental powers. I believe the representatives of the people must have control when this war is over. If that is not to be so, we should know it now. If our boys are not to have fought in vain for this democracy which we have envisaged, then we must make some move to be sure that our democracy is not simply a hollow sham when the crisis actually arrives. I suggest that not only in Canada but throughout the united nations, as the representatives of the ordinary people in our own nation and perhaps also in an indirect way representing a cross-section of those in other nations, we have a right in time of war as in time of peace to see to it that these international combines and cartels are in our hands and that we are not in theirs. That seems to be at least a reasonable position for us to take in times like these.

I have no desire to attempt to arouse or inflame public opinion or to engender bitterness throughout our nation in time of war; that would be a despicable position for anyone to take, but I am serious about this matter, because as one of the representatives of the people I am alarmed at the situation in which we may find ourselves when this war is over unless we take some measures now. The united nations have shown in other respects that they can cooperate in a time of war, and that they can cooperate in their discussion of post-war problems. This looks to me like one of the major post-war problems we shall have to face.

In conclusion I suggest that the minister consider at once the question of appointing a royal commission to deal with all matters affecting this company, and other companies which may be similarly involved in world-wide international ramifications, which on the surface at least would seem to be inimical to the best interests of the ordinary man or woman. I would ask that he consider the whole question of such a royal commission, and that as a member of the government he, with the Prime Minister, should take the initiative in investigating the international arrangements and agreements under which a body such as that to which I referred a few minutes ago might be set up in the interests of a continuation of democracy and freedom in the years which lie ahead. Having made those investigations, I suggest that a move be made at once toward renegotiating the contract in the light of what will then actually be found.

I make these observations with as much earnestness as any I have made since I entered public life, because I feel keenly and deeply that we as a parliament are not taking the steps necessary to ensure the kind of democracy that the fighting forces of Canada and of other countries who are engaged in the war effort will expect. I believe we are not taking the steps or providing the measures from which a true and a full democracy, a democracy which will make the world safe for the common man, and give him freedom of opportunity when the war is over, may be developed.

Mr. HOWE: Mr. Chairman, the house leader of the Progressive Conservative party has made an eloquent speech by using the device of setting up a straw man and then proceeding to demolish it. He has asked me one or two questions, and I should like to ask him one. If he found that one company was making all the aluminum that was made by the allied countries at the outbreak of the war, or prior to the outbreak of the war, would he refuse to do business with it at a time when the production of aluminum meant the salvation of the British empire, for the reason that the interests of that company were spread over more than one country?

The production of aluminum is necessarily a business that involves more than one country. It is impossible to manufacture aluminum out of the resources of Canada alone. The principal raw material is bauxite, which comes from British Guiana. There has been an intense search in other areas for bauxite, but only a very small and low-grade bauxite deposit has been found in the western United States. It is being used with the south American bauxite to the extent that it can be used with that product, in order to relieve the hazardous procedure of bringing bauxite from British Guiana through the submarine infested Caribbean to Canada. It has been found, however, that it is impossible to do without a large proportion of south American bauxite in the manufacture of Canadian aluminum. The next most important ingredient is cryolite, which comes from Greenland. Without that cryolite the manufacture of aluminum by present processes is impossible. Another ingredient in a form suited to the manufacturing of aluminum is found in Newfoundland, and must be brought from Newfoundland to Canada to be used in our production.

I have mentioned only three of the chief elements which must come to Canada from other countries. There are other ingredients which are brought in, and necessarily so. From the outset Canada offers for the manufacture of aluminum from within Canada, first, hydro-electric power, which is essential, and second, efficient labour. The hydro-electric power and the efficient labour have resulted in the great industry on the Saguenay river. The use of the water powers which generate hydro-electric power does not involve any depletion of Canada's resources. Water has been flowing over the cliffs of the Saguenay for many hundreds of years, and will continue to do so, whether or not it is developed into water power.

So far as labour is concerned, the second resource supplied by Canada, I would say that through the industry on the Saguenay a great community has been built where no community existed before the coming of the Aluminum company. It would be well worth the time of any hon. member to take a trip through the Saguenay country, and the lake St. John country, and see the homes and the agricultural development which has resulted from the activities of the Aluminum company in that area. I believe it will be exceedingly difficult to say that the operations of the Aluminum company within Canada have left Canada a poorer nation, or one lower in the social scale than it would have been had that industry not located here.

A fallacy has been built up that huge profits are being made out of the war by the Aluminum company. I think if the last three ciphers can be struck off the capital invested in Canada by the Aluminum company through the years, and the last three ciphers struck from the gross and net profits of that company, it will be found that the returns both as to gross and net profits are reasonable in proportion to the invested capital. If that is not so, and when we can stop making demands on the Aluminum company for new capital facilities and new expansion in Canada, in British Guiana and in other countries where operations of direct concern to the Canadian production are taking place, then I think we can go to the Aluminum company and ask for a renegotiation of the contract. But unless we find that there is an excessive profit, as measured by a percentage of capital invested in the enterprise, there is no purpose in the Department of Munitions and Supply attempting to force a renegotiated price.

The price of aluminum is one of the few prices which have been reduced in the war years. Someone has said that aluminum was being sold at a lower price in 1911. I wish that same gentleman would tell me of some other article that was not sold at a lower price in 1911 than it is being sold in this year 1943. Aluminum is distinctive I believe, through the fact that while it has been expanding its production enormously, building new capital facilities for the purpose, and building a great power development, the price has been lower in each year of this war than it was in the preceding year.

My hon. friend has set up another straw man when he says that the Aluminum company is not subject to the laws of Canada. I should like him to tell me upon what he bases that information. Aluminium Limited is a creature of the Dominion of Canada.

Mr. GRAYDON: I did not say that.

Mr. HOWE: The hon. member said that he wanted an international commission to deal with a subject that could not be dealt with by the Canadian government.

Mr. GRAYDON: I know the minister does not want to misinterpret my remarks. The reason I suggested an international commission, as the minister well knows, was the indication by the minister of his helplessness with respect to the whole question of international combinations. I was dealing with international cartels when I suggested that there should be an international commission. I was leaving the minister a loophole, but he seems to have got himself more involved.

Mr. HOWE: I suggested no difficulty in dealing with the situation. I understand that Aluminium Limited owns all the plants which are now producing aluminum for the allied nations, except those in the United States. The whole position outside the United States can be dealt with right here in Canada.

Mr. GRAYDON: Have we full power to deal with the question of international combinations?

Mr. HOWE: Quite.

Mr. GRAYDON: Our responsibility then becomes that much greater.

Mr. HOWE: The ownership of properties in other countries does not create an international cartel. Is the Singer Sewing Machine company an international cartel? It owns a plant in almost every country in the world. So far as I know, that company is subject to the laws of the United States, just as Aluminium Limited is subject to the laws of Canada. There is no need of an international commission to deal with Aluminium Limited or with the Aluminum Company of Canada—they are both subject to the laws of Canada. Their properties within the dominion are subject to the jurisdiction of the federal government in the case of real property and to the jurisdiction of the provincial governments in the case of water powers.

Mr. GRAYDON: Why was it necessary to conduct a prosecution of this company under the Sherman anti-trust laws of the United States?

Mr. HOWE: This company was never prosecuted under the Sherman act of the United States; the company prosecuted was Alcoa, the Aluminum Company of America. I was definite in my statement and said that that company was prosecuted by the country in which it has its head office. If the government of Canada wishes to start a similar prosecution against either Aluminium Limited or the Aluminum Company of Canada, that is a matter wholly within its jurisdiction. These companies are domiciled in Canada, and are subject in every way to Canadian law.

[Mr. Howe.]

Mr. COLDWELL: Aluminium Limited was established here to escape the United States laws.

Mr. HOWE: Nevertheless it is established here, and it is subject to Canadian laws and to Canadian courts.

Mr. COLDWELL: Quite right.

Mr. HOWE: I am discussing the subject matter of the speech by the leader in the House of Commons of the great Progressive Conservative party. He seems to be leading his party into strange doctrines.

Mr. MACKENZIE (Vancouver Centre): He even quoted the Winnipeg convention.

Mr. HANSON (York-Sunbury): It would be well if my hon. friend would digest it.

Mr. HOWE: We are getting it bit by bit and piece by piece.

Mr. MACKENZIE (Vancouver Centre): Bits and pieces.

Mr. HOWE: The need for aluminum has not passed, it has not lessened; as a matter of fact it is greater to-day than it has ever been. We were approached not so many months ago and asked whether we could further enlarge the production of aluminum in Canada, and we were obliged to say that we had reached our limit in that regard. The result is that an expansion is taking place in the United States, and necessarily so, to meet war requirements. I may be entirely in error, but my judgment is that it is better at this time to concentrate on obtaining aluminum to build aeroplanes to win the war—I think it would be utter madness to start a battle between the government of Canada and our Canadian producer of aluminum. The leader in this house of the Progressive Conservative party apparently would stop the war to start a prosecution.

Some hon. MEMBERS: Oh, oh.

Mr. GRAYDON: Mr. Chairman, on a point of order. I have given the minister considerable leeway with respect to the statements he has made but—

Mr. ROSS (Moose Jaw): Very kind.

Mr. GRAYDON: The hon. member who has interrupted is usually quite courteous, but this seems to be one exception. In attempting to reach heights of rhetoric this afternoon the minister has built up a straw man of his own. He has done what he accused me of doing. He now says that I as leader of the opposition have suggested that we should stop the war in order to prosecute somebody under the combines act. I think the minister should

withdraw that statement. I know he did not make it intentionally, otherwise it might be more difficult to handle. I know he never thought for a moment that I said that. I did not suggest it, by inference, by implication or otherwise.

Mr. HOWE: I know my hon. friend did not suggest that we should stop the war. I may be mistaken, and I wish he would correct me if I am, but I think he did suggest that there should be an immediate prosecution of the Aluminum company under the combines act.

Mr. GRAYDON: I did not say that either.

Mr. HOWE: What did the hon. member say? I will read it to-morrow in *Hansard*.

Mr. GRAYDON: The minister may not have been paying as close attention to what I was saying as he usually does. I suggested that in view of the allegations which have been made in connection with this company a royal commission should be appointed to inquire into these international cartels and to find out whether this company actually formed part of such a cartel. In addition there should be a renegotiation of the contract in the light of the circumstances which have been brought to light. I went a little further and suggested that as this was an international situation, Canada should give a lead and set up an international body which would attempt to solve some of the difficulties which have been mentioned in this debate.

Mr. HOWE: In reply to my hon. friend's suggestion, may I say that I have pointed out that Aluminium Limited owns plants in a number of countries, and necessarily so if it is going to obtain the various products that go to making finished aluminum here in Canada. I know it to be a fact that the personnel of Aluminium Limited comprise all the men who are experienced in the art of making aluminum. This happens to be the only company that is making aluminum in this country. As one who must provide aluminum for our war effort, I would not want to take the responsibility of taking the attention of the executives of Aluminium Limited from their task of making aluminum. I would not want to place them in the witness box at this time to tell about their pre-war business dealings.

An hon. MEMBER: Another Bren gun inquiry.

Mr. HOWE: I do not think this is the time for that kind of investigation. Aluminium Limited will be here after the war. If at that time it is felt that their proceedings were improper, they can be investigated. The Aluminum company, along with other citizens of Canada, have done their utmost to meet the requirements of the allies in the field in which they are expert. I have said it before and I say it again, that they have stretched their resources to the utmost in order to do a job in the winning of the war. It only needed a suggestion to be made that we must have more aluminum, that we believed that they were capable of doing more, to have them increase their production. There has been a singleness of purpose in the conduct of their business which I think could be taken as an example by any other industry in this country. As I say, this department is aware of their operating position; their company accounts are an open book; a firm of auditors audits the books, and the results of those audits are known to the department of munitions.

Mr. COLDWELL: What is the firm?

Mr. HOWE: Price, Waterhouse and Company.

Mr. COLDWELL: Is not that the firm of audiors usually employed by the corporation itself?

Mr. HOWE: I think so, but it is a responsible firm of auditors which operates in every British country and in the United States as well. Audits are made of the accounts of the company, the expenditures are known to the government, and we do not believe that the profits are excessive. If a few ciphers could be struck off the figures, and they were compared with the accounts of any other company doing business in this war, it would be found, I think, that the gross and net profits of this company are not excessive.

Mr. JOHNSTON (Bow River): Have our own cost accountants investigated the cost of producing this product—investigated, for instance, the cost of labour and materials?

Mr. HOWE: We have all the cost accountants we can get, but if we put them all on that operation it would take the rest of the war perhaps to follow through.

Mr. JOHNSTON (Bow River): Could not our own cost accountants check over the figures?

Mr. HOWE: I am quite prepared to take the cost accounting of Price, Waterhouse and Company. I think most business concerns in the world have done that at one time or another, and I am prepared to do it. I think their cost accounting is to be relied on. The reason we have not renegotiated the Aluminum company contracts is that we have seen no necessity for doing so from the figures

that have passed through our hands. I am very happy about the operations of the Aluminum Company of Canada in this war, and I wish to say so at this time.

Mr. BLACKMORE: Mr. Chairman, the whole discussion up to the present time has been very interesting to me and highly instructive. I have enjoyed every moment of it. I enjoyed the speech of the leader of the Progressive Conservative party. I enjoyed too the reference he made to the fine spirit of optimism which prevailed in the convention out in Winnipeg, as a result of which his party proposes to find jobs for everyone. But I do wish that somewhere, somehow the party had taken pains to indicate the technique by which they are going to find those jobs.

An hon. MEMBER: Hear, hear—as in 1930!

Mr. BLACKMORE: That technique was altogether missing. If I have failed to see it I hope that one of my Progressive Conservative friends will call around and give me the authorities on the matter. I should like to know where they propose to find markets, and how they propose to guarantee markets, and how they propose to guarantee prices. I am going to tell the Progressive Conservatives here and now that unless they can find adequate markets for the production of Canadian industry they cannot put men to work, because work depends primarily and naturally upon work in industry, and industry depends upon the amount of goods that industry can sell. If industries cannot sell goods they cannot run, and if they cannot run they cannot employ men. Once the Progressive Conservatives get that thoroughly embedded in their thinking they will really begin to be progressive.

An hon. MEMBER: And the Liberals too.

Mr. BLACKMORE: And the Liberals too will have something to look forward to. But where are they going to get the money to increase the purchasing power of the people to enable the people to purchase the goods which industry stands ready to produce? Are they going to raise it by taxation and by borrowing? If they are, then I might as well tell them they can give up now and save themselves a whole lot of trouble in a fruitless search. If they cannot find enough money to put into the hands of the people to give the people purchasing power with which to purchase the production of industry, which production industry is finding a market for now in this war, they will have fewer markets, less production and less work. The laws governing these facts are as irrevocable as the laws of the Medes and Persians, only more so. I just thought that I should like to say that in respect to the Progressive Conservatives. I have no quarrel with them. I am just earnestly trying to find a solution, because I have sons and daughters and grandsons and granddaughters growing up in this country and I should like to see matters so arranged before I die that there is a chance for them all to find work if they want to work and make a living and build homes. But I have not found anything coming from the Progressive Conservatives or from the Liberals which has indicated how this is to be achieved.

With respect to the monopolies referred to by the leader of the opposition and by the hon. member for Rosetown-Biggar, I had not intended to refer to them, but inasmuch as they have been brought up I shall do so. How do monopolies develop in this country? How can they be controlled? Why is it that we do not now control monopolies? Is it that we do not possess the power to make laws, or is it that we do not possess the power of money over these monopolies? The answer to the second question is yes. We can make the laws all right in this country, and we can have the courts enforce them, but up to the present time we have not established unchallengeable control over money. We do not find ourselves able to control private industry—and money is the secret. I should like to know what the leader of the Progressive Conservatives would do in order to control these great monopolies after his international commission had discovered them.

I wish to turn for a minute or two to the remarks of the hon. member for Rosetown-Biggar and to give him just an idea of how I reacted to his excellent speech. I think that last night he did the finest job he ever did in parliament. It was splendid, ably delivered. I enjoyed listening to him. He told us all about the evil which exists, but he did not indicate how he himself would solve the problem which was presented by that evil.

Mr. COLDWELL: Give me time. I had not enough time last night.

Mr. BLACKMORE: I am going to be listening when he gives his solution. I am greatly looking forward to it. I would say this in a general way. If the state took over that great aluminum company; if the state owned it, the state would build up a much greater bureaucracy than now exists and would find much greater difficulty in picking out and placing in the key positions the efficient men that private industries are able to get. Then the government, burdened down with the

possession not only of the aluminum companies but of all the other companies which now form a most imposing and formidable array, would find themselves at a loss to know where to get the money to run them all.

There is another thought which came to me while the hon. member was speaking. He seemed to dislike the idea of international control. I agree with him one hundred per cent; I do too, but it seems to me, unless I am quite wrong, that I have heard the hon. member for Rosetown-Biggar speak with great fervour this session of having supranational governments in this world.

Mr. COLDWELL: No.

Mr. BLACKMORE: I am glad I was mistaken, but I had the impression when I was reasoning with the hon. member for Essex East and the hon. member for St. Lawrence-St. George about their proposals to have a supranational government, and again later in the discussion over the Sandwell case, that the hon. member for Rosetown-Biggar indicated a considerable amount of sympathy for this supranational idea.

Mr. MARTIN: He is learning.

Mr. BLACKMORE: If there was a supranational government established, it would control not only our aluminum but every other industry; it would control all the business of this country and everything else in this country. We should be unable to establish any kind of control over it—which is a very serious matter and which has much importance in connection with the fine remarks of the leader of the Progressive Conservatives. I want to point out to him that I am not opposing but agreeing entirely with his remarks about democracy. If Canada cannot be mistress in her own home and her own house, she cannot have democracy.

Mr. GRAYDON: I must have been right on that occasion.

Mr. BLACKMORE: Oh, the hon. member is right; everything he said was right. I am only finding fault with the things he left unsaid, and they are very important.

I wish to turn now for a few moments to the minister's remarks. I thought he gave a statement which impressed the whole country. I do not know when there has been a more striking and more valuable speech delivered in this chamber. I fancy that Canadians generally could hardly believe that their youthful Canada, which not long ago was called playfully "Jack Canuck", was capable of such tremendous and varied production. The minister went so far as to use the following words, as reported in *Hansard,* page 3556:

> Never again will there be any doubt that Canada can manufacture anything that can be manufactured elsewhere.

Every drop of Canadian blood in my body just leaped, every drop of British blood in me just raced with joy, when I read that. If Canada can produce anything that can be produced anywhere, is there any reason why Canada cannot stand completely independent and have absolute democracy and be completely mistress in her own home? None whatever; only the failure of Canadians to know how to manage the whole situation. I thought, when the minister gave his imposing array of accomplishments, what a triumph for individual enterprise! That much of the production has been a result of government cooperation we will grant, but in the main, by and large, it has been the result of private enterprise. There was no need of taking away private control, of socialization and all that kind of thing, in order to get production—and production is primarily what we need in any country in order that we may have a high standard of living.

Now, if Canada can produce the things she needs—and I am sure she can; scientific progress is proving ever more conclusively that she can—is there any reason why she should not do it? I have contended in this house ever since I came here that Canada should be producing her own sugar, and should have done so; and one of the gravest errors this government made was the failure to provide for the manufacture of Canada's complete sugar supply. I say that that will stand as a reflection on the government and as evidence, to the end of time, wherever it is known, of their lack of wisdom and judgment. We should produce our requirements of everything else that we can produce. If we produce what we can consume we can be more and more self-sufficient. And why not?

In the course of the debate on this three billion dollar war appropriation we have had a long talking time. If I remember correctly, we commenced the discussion of this appropriation on May 13. I have listened with great interest and thoughtfulness to most of the speeches which have been delivered, and I have asked myself this question, "Is this speech a wasting of time?" And I must confess that it is next to impossible to say of any speech which I have heard in the house that it has been wasting time. It has been good; and yet we have used much time, time that we needed for other things. Now we hear talk and read

in the newspaper rumours about closing up in the middle of July. I do not know of anything that could strike consternation into the people of Canada more surely than if they understood all that this house has to take care of this year and it is then reported that the house would rush and scramble and tear in order to get through in the middle of July, or would leave undone the things it ought to do because it has not time to deal with them. The middle of July is just one month away. I say that to deal adequately with the various problems which this house is in duty bound to take care of between now and the middle of July is utterly impossible.

In a general way I would say that parliament must somehow reform itself. I do not know just how it should be done; I am not prepared to make a suggestion now; but certainly parliament must bring itself up to date. Ox-cart ideas and horse and buggy methods are not good enough for this streamlined high-powered age, and our achievement this year has clearly shown it. Parliament has clung too long to out of date ideas and antiquated methods. Parliament has shown thereby a dangerous lack of vision, and "where there is no vision the people perish." Both democracy and the people are in grave danger at the present moment of perishing—not in Canada alone, but on the American continent. Dangers are lurking on every hand, both within the nation and without. We members of parliament must be exceedingly vigilant and resourceful if we are to be equal to the demands made upon us in this day and generation.

This is the eighty-ninth day of the fourth session of the nineteenth parliament. In the main, hon. members have spoken freely; that is, we have free speech. But on the whole they have failed to achieve their desired objectives —and I would include in that expression every member in the house. All I need to do is to refer to the old age pension question as an example. I think there is not an hon. member who does not want the aged people to receive $30 a month and receive it right away—not only the ones who are now receiving pensions, but everyone who has arrived at sixty years of age. Why are the members not able to attain their desire? There is something radically wrong; that simple little illustration proves it beyond the shadow of a doubt. When not only the whole of the people of Canada want a thing but all members of parliament want it, and we call this country a democracy, and still we cannot get it, then surely something is wrong. Where could I find more complete jutsification for the remarks I have just made? In other words, ideas and methods which we have had in this house up to the present time as a whole have just not got us anywhere; they have not got us where we know we ought to be.

It is not so much that hon. members do not have freedom of speech, but that somehow they lack wisdom to use that freedom of speech effectively by translating it into action. True, we have prosecuted world war number two with a gratifying measure of success. But with the great underlying causes which brought on that war, this parliament has not once come to grips—not once—in all the seven years I have been here. I maintain that that, again, is a condemnation of this house, somehow, somewhere. This parliament ought to ascertain without further delay the causes which brought on this war. Surely they are to be found, and surely hon. members will agree about them when they are found. This parliament should face the facts fairly and fearlessly. It ought to find means of removing these causes once and for all, and it should seek to do so diligently and systematically, without passion or prejudice. The members now sitting here ought to see to it that every possible effort is made to remove the causes of war. Failure to ascertain the causes of this war, failure to find the remedy, and neglect to apply that remedy, will mean that this parliament will become guilty of criminal negligence in the highest degree and will stand condemned before generations yet to come. And the members now sitting here, in this year of Our Lord 1943, will betray their trust, will betray the people who elected them, will betray the boys and girls who fight, will betray the millions of workers who toil, will betray the babes in the people's homes, and the generations yet unborn. This parliament cannot escape responsibility. Its duty is to act now in the coming months of 1943.

There are several important matters that this House of Commons should deal with itself. Members will ask, how are we to do it? If the members of all parties, in an honest, straightforward endeavour, tried to do it they could do it; perhaps not in this house, but in this city, in this building. The great question is, Do we want to do it? The greater question is, Are we going to be honourable enough to do it? For example, we could determine as a group of members outside the house entirely, and independently of party lines, that we will find the truth and the whole truth and act upon it at once. We do not agree on it among ourselves in parliament, but outside, in the main, we do. What is the matter? We could appoint non-partisan committees to find the truth; and we could hear the truth in secret

sessions if needs be; and then, if we unitedly insisted, suitable action could be taken and we could get results in this house, this year.

Among the problems that could and should be considered and dealt with, with satisfying thoroughness, the following might be listed: First, the treaty of peace. In the last war we fought right through, and no one seemed to have any idea what kind of peace we were to have. All we heard was that we were fighting to make the world safe for democracy and fighting a war to end wars; but just as we find to-day, not a person seemed to trouble himself about the question, how are we to do it? No one seems ever to trouble now about that question,—how is it to be done?

We should know what Canada's war aims are. I challenge any hon. member to rise in his place or to tell me outside that he knows what Canada's war aims are. Is that not a sad state of affairs? Then we should know what the various proposals are that are made in secret dispatches. Unquestionably it has been mentioned that certain proposals have been made. Why should we not know what they are? We are the members of parliament elected by the sovereign people of Canada in a democratic election. What an insult to our intelligence that we are forbidden to know these things! We should know them and should know exactly the difficulties in the way.

The hon. member for Rosetown-Biggar did the country a service yesterday when he exposed this aluminum company and gave the details. No matter whether there is anything wrong that cannot be righted; he gave us the truth and we ought to know the truth. We ought to know what the truth is in regard to all these things—such truths as the following one, for instance, which has astonished me! Somebody from Canada went around in 1937 and committed Canada to the undertaking that she would not increase her sugar beet acreage, that she would not do anything to increase it. No one in this parliament knew about that. That man made an agreement which has injured the people of this country incalculably during this war. Who was he and who told him he could go and do it, and why was it that this country, which never heard about it, was bound by the agreement? And there must be many other agreements similar to that. This house should know them, every one of them.

We ought to know what is involved in the united nations' idea. Listen to the words as they are pronounced over the radio—united nations. Well, now, what is involved in these united nations? We ought to know in detail so that everyone might understand. What are the proposals of these men who are working behind the scenes? How was it that at the Hot Springs conference Roosevelt tethered the press a safe distance from the conference? How was it that Morgenthau was so much annoyed when it leaked out in London that he had an international currency stabilization programme? Why was that? Am I to be told that the members of this house, in this responsible position, in this great country of ours with all its future before it, are not entitled to know these things? Have we lost the independence and courage of our fathers, that independence and courage which made magna charta a possibility? Are we afraid to be worthy to hold the positions we now occupy? We ought to know what is involved in this food conference. Every once in a while, through some speech made in some room in the Chateau Laurier or some assembly room of the House of Commons, some little thing leaks out that indicates that a good many things are contemplated with which members of this house do not agree, and yet it is all done in the dark somewhere, with the press tethered away —the press and parliament tethered. It is not in the public interest that we should know! We are immature, a species of glorified moron, I presume!

Mr. BENCE: Not glorified.

Mr. BLACKMORE: Not even glorified. We ought to know what is involved in the Atlantic charter. There has been talk, profuse talk about the Atlantic charter—how we are to guarantee freedom from want and freedom from fear—with never a word about how it is to be done, who is to pay the cost of it, where the money is to come from. Never a word. I submit, Mr. Chairman, that is a most singular state of affairs. I want to know whether the members of this house, particularly in the Liberal party, intend to submit to that kind of thing. I wonder if they are sufficiently docile lambs to take that all the time lying down, all of them.

Mr. HANSELL: I think they are.

Mr. BLACKMORE: We ought to know what share Canada is to contribute to this guarantee of freedom from want. Are we to have a mutual aid bill perpetuated through the years? If we are, how big will it be; will it be a billion dollars or two billion dollars, or will it be more; what do we intend to supply through that mutual aid bill, and how is it to be financed? I am surprised that I have never

seen that question asked and answered in the press of our land; that is something which astonishes me. Canada certainly ought to know what her share in this glorious enterprise is to be; if she is to participate. Are we to have a lease-lend for Canada? Is the United States to be able to perpetuate the lease-lend arrangement for twenty, thirty or forty years; is her lease-lend arrangement to depend upon the particular administration that happens to be in power, so that if by chance everything should be operating nicely under President Roosevelt and he should be eliminated from the scene in time, the lease-lend arrangement will be cancelled, and the people who thought they were guaranteed against want will find themselves at loose ends, as they were before the present war? Is that to be the arrangement; and, if so, are we, as members of this house, to submit to anything as insecure as that? Yet I do not see any evidence that we are to learn the truth about it; I say we ought to learn the truth before we leave this house.

The other day I read a statement by President Roosevelt, and I have read two or three similar statements, to the effect that the first thing to be done is for each nation to set its own house in order. With that I completely agree. Surely we ought to set our own house in order, but we cannot do that unless we have certain powers. We must have unchallengeable control of our currency and credit, of our production and of our price structure; we must have complete control of our own markets within our own country. If we cannot have these powers we cannot set our house in order. Yet practically all the supranational government schemes propose to take away from us each and every one of those powers, in greater or less degree, so far as I have read accounts of them. Every single hon. member should understand that fully. We could use the empire parliamentary association. Far be it from me to cast any reflection upon the empire parliamentary association, but I must say that I have been deeply disappointed in the amount of real learning we have obtained from that association. I do not see why we should not bring it really to life. I do not see why we should not arrange study clubs in which we might hear the truth from all sides, instead of having a lecture by some—I was going to say "emaciated"—relic of the League of Nations, who comes and tells us his idea and goes his way, making place for someone else to come along and tell us the same thing at another time. I am becoming entirely fed up when I think that all the speeches over the radio, all the speeches in these clubs and that sort of thing are along the same line, and all strangely resemble the propaganda which Sir William Beveridge apparently was sent or brought to this country to carry on. I am suspicious in the highest degree. I would say that not only should we learn through the empire parliamentary association or through some other dependable means, but we should be able to take our knowledge to the remotest parts of Canada, to every constituency, so that the people may share it.

I think it is time this house faced up squarely to the problem of what we intend to do about our national debt after this war is over. I have gathered the impression that hon. members just look upon this as a very touchy question and steer clear of it as something they would rather not face. Are we not aware that the boys and girls who are now fighting our war and who will sit in this chamber twenty years from now will have to face this problem, that they will not be able to leave it alone? What sort of people are we, who are supposed to be taking care of their interests, when we are so neglectful of this vital matter?

It is also time we know what we intend to do about the unemployment situation after this war. I read the other day that it was estimated by rather responsible men in the United States that shortly after the conclusion of the war there would be twenty million unemployed in that country. If the number of unemployed in Canada is in relation to that figure, is it not high time every member of this house was exercising himself with the deepest concern in regard to this matter? How are we to handle our tax structure? I am positively alarmed when I talk with people who are in the grip of the tyrannical tax structure which has been imposed upon the people of this country; it is merciless, implacable, immovable, inescapable, crushing, devastating, disheartening; it is a horrible thing, but there is no evidence whatever that it will be relaxed in any degree at all after this war is over. Yet we members sit here supinely doing nothing about it, only piling up the debt so that the structure may bear upon the people with even greater severity.

Another important matter that must be considered in connection with this debate, and one which I thought of raising several times, is the question of what we shall do with our armed forces after the war is over. As the minister for naval services was talking about his superb navy, the thought ran through my mind: Are we to have that superb navy after the war, and is everyone in Canada to be taught that it is necessary? Will parliament cheerfully vote the supply, year after year, to support that navy, or shall we have people here like those bewildered creatures who sat

here in 1937 and moved that every estimate be reduced to $1, who kept up their propaganda until they fooled the people of Canada into believing that we did not need any defences? That is important to know, whether we are to have a strong navy, a strong army and a strong air force after the war, because if we are to have a strong navy and army we will build for permanence. Not only will we construct the buildings; we will build the concept in the minds of the people, so that they will know, and they will be careful not to send to this parliament people who do not know that we must have a good strong army, navy and air force to be able to defend ourselves. Are we to have strong defence forces, or are they to fall into decay?

Then let us go on and ask ourselves this question not only with respect to Canada but with respect to the British commonwealth. During the period following the Napoleonic wars until the outbreak of the first great war the world witnessed one of the most peaceful eras in its history. There may have been many small wars, but there was nothing like the conflagration that burst out at the beginning and at the end of that century. Why was that? Those who are fairly well informed tell me that there was established what is know as the pax Britannica, the British peace, because the British people were strong enough to maintain peace. Are we now prepared to build up a British commonwealth organization, a cooperative arrangement, as a result of which we can have once more something similar to a pax Britannica? That is something that has worked successfully already. We ought to know about this possibility, but as a whole we do not know a thing about it. We have not done any constructive thinking or talking on it in this house.

Then the matter of social security ought to be taken care of by this house. We have heard the Beveridge scheme. By the confession of Sir William Beveridge himself, if I gathered it aright, his scheme is impossible and useless unless two things are guaranteed: first, full employment; second, a stable and equitable price structure. If we could guarantee employment and a stable and equitable price structure in Canada we would need no Beveridge plan. The big problem facing this house and this country is how to establish complete employment and a stable and equitable price structure throughout the country. That was the problem facing the Progressive Conservatives when they met. Strange that so many people overlook these things! Strange that so many of these newspapers which watch with almost malignant scrutiny the words of members of this house, in order to pounce upon them and write offensive editorials about them, have not noticed the discrepancy in the Beveridge report, and commented upon it! Never a word! Is there a mutual agreement to leave these things alone?

Another matter which ought to be taken up before the house continues its deliberations for another week is that of the sufferers who are at present enduring hardships that are a disgrace to the country. I have already referred to the old age pensioners. Let me now refer to the war veterans of the last war, and the widows of war veterans. They are now growing old and are rapidly diminishing in number, but they still suffer cruelly, while the representatives they have sent to Ottawa somehow or another seem to forget them—seem to forget everything, except to talk.

Perhaps the most imminent danger which confronts us at the present time is the idea of supranational government, to which I have already referred. Its advocates and their disciples always urge that supra-national government will prevent war, but they never show how it will be done. I say supranational government may try to prevent war, but it will render universal rebellion inevitable—rebellion with civil strife and bloodshed and famine over the fair stretches of Canada and the United States.

Every scheme of supranational government I have read about—and I have read all I could get my hands on—embodies international control of credit and currency. There is much talk about the control of production, the lowering of tariff barriers and other restrictions to trade. Somehow or another the men who talk about world problems do not take the trouble to point out why tariff restrictions are erected by weak nations, and why they impose exchange control. These men rarely explain that nations imposing trade restrictions do so in an endeavour to improve their economy, because they fall behind in the contest for trade, and therefore have an adverse trade balance. And of course the advocates of supranational government never talk about the existence of such a cause. They never mention the remedy except in most general terms—beautiful, high-sounding words, which somehow or another seem to mesmerize many people.

Supranational government can be avoided with all its dangers. May I read a statement which hon. members will find in the Ottawa *Citizen* of January 11, 1943, on the back page under the heading "Plan For Permanent Peace." This is a criticism of a book by

Doctor Hans Heymann. Strange how so many of these German names get into the books having to do with this supranational plan. It is an astonishing thing; I cannot quite understand it. It reminds me very much of those international financiers. The article quoted from the London *Chamber of Commerce Journal* explains that the idea conveyed by the whole book is of a world bank. "But Doctor Heymann is a financial expert and all his ideas on post-war reconstruction find their inevitable culmination in a 'huge new international banking mechanism'—a world bank to create money and credit." . . . "While nations may agree to some limitation of their sovereignty in respect of their external affairs, any proposal which involves interference with—much less control of—their internal affairs, as Doctor Heymann's scheme does, would mean the abandonment of the most important of President Roosevelt's four freedoms, freedom from fear. Currency and credit are the master keys to the economic and social life of any community, and for a nation to be asked to hand those keys to a clique of international bankers is calculated to strike terror into the hearts of millions who are facing death to preserve their right to manage their own affairs."

The CHAIRMAN: The hon. member has spoken forty minutes.

Mr. BLACKMORE: I shall take another occasion to finish my speech, in case hon. members do not wish to hear the rest of it now.

Mr. NOSEWORTHY: I was surprised this afternoon at the complacency and confidence with which the minister came to the defence of the aluminum interests, and the complacency with which he passed over the suggestion that the situation warranted an investigation of some kind. I was surprised furthermore yesterday by the readiness of the Minister of Mines and Resources (Mr. Crerar) to admit the inability of the government to deal with this international cartel.

Hon. members who spoke on this subject yesterday dealt with the international side of aluminum development, and the monopolistic control which had been effected in the development of aluminum. There is another monopoly which to my mind is far more serious to the people of Canada than that affecting aluminum. I refer to the monopoly of electric power which this great company has attained in Canada. I am confident there is not an hon. member in the house, regardless of his political affiliations, regardless of what he thinks of private ownership versus public ownership, who does not recognize the danger to public interests and the danger to industry in this country that lies in permitting any monopoly of our water power. That power is the very lifeblood of industry, and any monopolistic enterprise which can gain control of the right to develop power from the water that flows in our rivers has gained a stranglehold on the very industry of our country.

I doubt that there is an hon. member who is not convinced that any monopoly by any privately-owned company of the sole right to develop power from our rivers, and to distribute that power, is inimical to the public interests of our country.

In his speech yesterday the minister said:

It has been suggested that this development—

He was speaking of Shipshaw.

—was carried out to block the St. Lawrence development. Let me remind hon. members that Canada is committed to the St. Lawrence development; that it has agreed with the United States to proceed with that development, and the St. Lawrence development was blocked not in Canada but in the United States.

I am not as confident as the minister of the truth of the statement that the St. Lawrence development was blocked not in Canada but in the United States. I want to show to the committee this afternoon that the recent development of Shipshaw marks the successful culmination of a long series of attempts on the part of the aluminum interests to perfect an international pool of power which would not only keep competing aluminum companies out of the field, but would render the state of New York and the provinces of Ontario and Quebec almost entirely dependent on power from their development in Quebec, for their supply of the very lifeblood of modern civilization.

This battle for power control and for the establishment of an international pool of power has been carried on for more than twenty years by lobbying, by litigation, by the organization of holding companies and trusts, and by every means that such a powerful corporation could use. For more than twenty years the aluminum interests have sought, first, to get control of the St. Lawrence water project; second, failing that, to obstruct its development as a publicly-owned enterprise and, third, to carry out in the meantime a policy of encirclement, whereby it could get control of all other available power and thereby preempt the power market. By successfully obstructing the development of the St. Lawrence project the aluminum interests have rendered it necessary for New York state, the province of Ontario and the province of Quebec to enter into contracts with private companies, practically every one of

which is tied up directly or indirectly with the aluminum interests. In this connection let me quote the periodical *PM* of May 23, 1943. An article, dated Washington, reads:

The Shipshaw power project on the Saguenay river in Quebec was envisioned by Aluminum Company of America (Alcoa) as far back as 1925 as a means of preventing public development of the St. Lawrence.

Documents and testimony on file in the federal district court here in the government's anti-trust suit against Alcoa disclose that:

Alcoa bought the Saguenay river power sites, including Shipshaw, from the Duke-Price interests in 1925 and 1926, after it learned that they had planned to use this power to manufacture aluminum in Quebec in competition with Alcoa.

So anxious was Alcoa to prevent this that it paid $40,000,000 for these power sites, then largely undeveloped. The province of Quebec had sold these sites a quarter century earlier for $40,000.

On the eve of the purchase in 1925, Arthur V. Davis, chairman and directing genius of Alcoa, sent Alcoa's chief hydraulic engineer, James W. Rickey, to make a survey of the Saguenay properties.

Rickey at that time outlined the possibilities of the Shipshaw power development, a second "Boulder Dam," construction of which has now been financed for Alcoa by the American, Canadian, British and Australian governments.

Alcoa's chief engineer saw Shipshaw's huge power possibilities as a means of so "encircling" the St. Lawrence project that it could be developed only on Alcoa's terms or by Alcoa.

The plan was to use Shipshaw power to "sew up" these areas in which St. Lawrence power would have to be sold: Montreal, Ontario, upstate New York.

It was hoped thereby not only to prevent public development of the St. Lawrence, by preempting the markets for its power, but also to block further public power projects by Ontario's great publicly owned hydro electric.

In pursuance of this grand strategy, Alcoa in July, 1925, acquired the Chute à Caron and Shipshaw sites; and in May, 1926, the rest of the Saguenay power sites and properties.

Conferences looking toward disposal of this power, when developed, were held by Leighton G. McCarthy, then Alcoa's Canadian counsel now Canada's minister to Washington, with two key Canadian figures.

Mr. HOWE: On a point of order, may I ask my hon. friend what he is reading from?

Mr. NOSEWORTHY: I said I was reading from *PM* of Sunday, May 23.

Mr. HOWE: Is it an editorial?

Mr. NOSEWORTHY: It is an article by I. F. Stone, dated Washington.

Mr. HOWE: Mr. Chairman, is that in order?

The CHAIRMAN: I believe in committee of the whole it is permissible to quote articles.

Mr. HOWE: I do not wish to argue with the Chairman on the point of order, but I think it is out of order to read an editorial bearing on the debate.

Mr. COLDWELL: Mr. Chairman, I realize that you have given your ruling, but may I say to the Minister of Munitions and Supply that it is only editorial comment on the activities of the government or of a member of the house that is against the rules of the house. The hon. member is simply reading an article from a newspaper, not an editorial, which does not reflect upon the House of Commons or upon any member thereof.

Mr. NOSEWORTHY: The article continues:

One was Mackenzie King, then Prime Minister, as he now is again, and Sir Adam Beck, then head of Ontario hydro electric.

Mr. CHEVRIER: Mr. Chairman, on the point of order, citation 183 reads:

When a complaint is made of a newspaper, the newspaper itself must be produced, in order that the paragraphs complained of may be read.

As I understand it, the hon. member is reading from an article with appeared in *PM*. I believe he is reading the whole article, which appears to me to be objectionable. As the leader of the Cooperative Commonwealth Federation has said, he can read passages of an editorial and comment upon them, but I submit with deference that he cannot do what he is doing now.

Mr. COLDWELL: He has the paper there.

Mr. NOSEWORTHY: I have the paper. I am reading only selected passages which have a bearing on the point I am attempting to make.

The CHAIRMAN: I have no doubt that in committee of the whole an hon. member has the right to quote an editorial, even in toto, as long as he gives the source of his information and makes the statement upon his responsibility as a member of the house.

Mr. MacINNIS: The point raised by the hon. member for Stormont (Mr. Chevrier) has no relevancy at all. A newspaper is not being complained of. The hon. member for York South (Mr. Noseworthy) is merely reading from a paper, after having identified it.

Mr. NOSEWORTHY: The article continues:

The basic strategy for these moves is outlined in a ten-page letter and report which Rickey sent on February 25, 1925, to Arthur V. Davis, then vacationing in Palm Beach.

"If this scheme could be put through," Rickey reported to his chief, "decision regarding the St. Lawrence development is of secondary importance, but when agreement is finally reached we would occupy a very strong and strategic position."

The very nature of the St. Lawrence power and waterway project lends itself to the purposes which the aluminum company have set

out to achieve. The project requires the ratification of agreements in which five governments are involved. For twenty years the company has been able to provide obstructions to the project by working through one or more of these governments and committees or boards set up to work out the agreements. Let us review a few of the high lights of the tactics they have used to achieve their full purpose of securing, first, control of St. Lawrence power; second, the obstruction of the development of St. Lawrence power by government and, third, the gaining of control of other available sources of power. I shall not weary the committee with the long and involved story of how since the beginning of this century the aluminum interests have persistently and successfully gained control of the production and distribution of electric power in the Niagara and St. Lawrence areas or the details of the story of their obstructing the development of power by public ownership. I shall touch on only a few of the high lights.

The company later known as the Aluminum Company of America was first organized in the state of Pennsylvania in 1889. Its name was changed in 1907 to the Aluminum Company of America. In that year it set up a holding company, in which it held 100 per cent of the capital stock, for the purpose of securing power sites. It became interested in the Niagara power when that power was first converted from hydraulic power to hydro-electric at the turn of the century. It then entered into an agreement with the Niagara Falls Power company by which it attached its own generators to the company's plant and by which that company agreed not to sell power to any other company producing aluminum. It has from that time to this been the largest purchaser of power from the Niagara Falls Power company.

Let me give one little incident. That company, so closely associated with aluminum has fought through the courts of the United States for years to get authority to divert the entire United States share of power at Niagara Falls. It has carried on litigation over the years to secure that diversion and was only finally stopped by judgment given in the United States court of appeals on December 2, 1942.

At the time the company's name was changed to the Aluminum Company of America back in 1907, it organized a company known as the Long Sault Development company—again a company entirely owned by Aluminum—for the purpose of damming the St. Lawrence at the Long Sault rapids. It got so far as to get legislation through the New York legislature, and then applied in 1907, and in 1909, 1911, and 1912 to get legislation through the congress of the United States. Canada was drawn into the picture, and the matter came several times before the Canadian government and the International Joint Commission. In all the discussions there were three men who were prominent, and whose names have been prominent right down through the years in connection with Aluminum's control of water power. They were: Leighton McCarthy, K.C., counsel at that time for the Long Sault Development company and the St. Lawrence Power company; T. W. Rickey, engineer for the Aluminum Company of America; and Arthur V. Davis, president of Aluminum. That enterprise, that attempt to dam the St. Lawrence, was only blocked after years of litigation when the United States court of appeals in 1913 supported the repeal of the 1907 legislation. I should just like to read what Governor Alfred Smith of New York State had to say when speaking on this subject on February 1, 1926, as reported in the fifth annual report of the Power Authority of the State of New York for the year ended December 31, 1935. Governor Smith said:

> The two great sources of hydro-electric energy are at Niagara falls and on the St. Lawrence river. Corporations eager to get control of these water powers have been working on the project for years. As far back as 1907, by special charter, the right to develop the St. Lawrence river was granted to the Long Sault Development Company, which special charter was repealed by the legislature of 1913. In no way discouraged during all the years that have passed, private corporations still have their eye on the great power possibilities of the St. Lawrence river. . . . If both of these sources of supply fall into the hands of private companies, the possibility for future state development will be lost forever.

Arthur V. White, reporting to the Canadian Commission of Conservation in 1913, had this to say at page 13 of his report:

> Back of the activities to secure control of all the water-power development, power transmission and other rights and privileges at, and in the vicinity of, the Long Sault rapids is the Aluminum Company of America, commonly known as the Aluminum Trust. Connected with the Aluminum company is the St. Lawrence Securities Company, a holding company through which provision was made for an issue of $1,550,000 of stock to provide funds:
>
> "for the actual cost of improvements of the canal and other property of the St. Lawrence River Power Company, or the development of any water rights along the Little Sault owned or controlled."
>
> The St. Lawrence Securities Company—

That was a holding company for Aluminum, and in which Aluminum held 100 per cent of the stock.

The St. Lawrence Securities Company holds securities in the following United States companies:

St. Lawrence County Electric and Water Company
The St. Lawrence Water Company
The Massena Electric Light and Power Company
The St. Lawrence Transmission Company
The St. Lawrence River Power Company, and
The Long Sault Development Company.

Upon the Canadian side of the river the Aluminum Company of America and the St. Lawrence River Power Company (of New York state), either directly or indirectly, control the St. Lawrence Power Company and the St. Lawrence Power Transmission Company. The Stormont Electric Light and Power Company—the distributing agent for the St. Lawrence Power Company—and the Cornwall Street Railway, Light and Power Company, are both controlled by the Sun Life Assurance Company of Montreal.

In the year 1920 the Ontario hydro electric commission became vitally interested in developing St. Lawrence power.

Mr. MacNICOL: I had hoped that my hon. friend would refer to the fact that the International Joint Commission had during the last war granted the Aluminum company the right to erect a barrier across the river, and they have never been able to get them to remove that barrier since that time.

Mr. NOSEWORTHY: Thank you. The Ontario Hydro Electric Commission became very much interested in 1920 in developing St. Lawrence power. Sir Adam Beck realized at that time that if Ontario's needs for power were to be met by publicly-owned plants it would be necessary to begin the development of the St. Lawrence power project before the Niagara power project was operated to its capacity. In 1921 the Ontario hydro electric commission submitted to the International Joint Commission an elaborate statement and an engineering report respecting the proposal to develop the St. Lawrence waterways. At the time the commission went on record as being in favour of proceeding with the development of the international section of the river first. That policy is in strange contrast with the policy adopted by the Ontario hydro electric commission some years later, after the Aluminum company had done their lobbying, as I shall show later in this speech.

Following this application in 1921, the Ontario hydro electric commission formally applied to the Canadian government for approval of its plans for the initial step in a two-stage development of the international section of the St. Lawrence river. Before making this formal request, in July, 1924, a delegation from more than 350 Ontario municipalities requested the dominion government for early approval of the commission's plans. Unfortunately for the publicly-owned hydro system of Ontario, the aluminum interests at that time, in 1921 and 1922, had very influential friends at court in New York state. The governor of the day and the legislature of New York at the time were much more favourably inclined to private enterprise than to a publicly-owned enterprise. Legislation was granted permitting the Aluminum company and other companies to lease state-owned power sites for a long period of years, and between 1921 and 1926 application was made for twenty-two of those leases. A company owned outright by the Aluminum company was just on the point of getting its lease when Governor Alfred Smith was elected on the platform of a publicly-owned St. Lawrence system and was able to veto the lease which was just about to be issued to the Aluminum company's subsidiary. At the same time, in 1921, the Aluminum company joined forces with the General Electric Company and the du Pont interests, and they organized what was known as the Frontier Corporation. The Aluminum company maintained a controlling interest in that corporation. That corporation controlled all the privately-owned rights to power on the United States side of the St. Lawrence together with subsidiaries on the Canadian side at Niagara and Cornwall. I can give the committee the purpose of that corporation as it was given at an investigation held by order of the United States senate and reported in their document No. 72:

The Frontier Corporation was organized for the purpose of acquiring from Aluminum Co. of America, E. I. du Pont de Nemours & Co., and General Electric Co. certain lands, water rights, water privileges, and flowage rights on the St. Lawrence river in the towns of Massena, Louisville, and Waddington, N.Y.

It also acquired certain maps, surveys, and engineering data concerning the development of hydro-electric power along the St. Lawrence river.

It also acquired all of the issued outstanding capital stock of St. Lawrence Power Company, Ltd., an operating utility in Canada. It also acquired all of the authorizations to dam the St. Lawrence river, which might be granted to the Louisville Power Corporation or St. Lawrence Transmission Co., that company now being called the St. Lawrence Valley Power Corporation.

I have already indicated that the Aluminum company controlled the Frontier Corporation. That corporation was particularly interested in watching every move made by the Ontario hydro electric commission. This interest is evidenced by the activities of the corporation's legal counsel in Canada, Mr. Leighton McCarthy, throughout the years 1922 to 1926. During an inquiry which was held before the

Federal Trade Commission at Washington in 1934 there was presented to that commission certain accounts rendered by Mr. McCarthy to the Frontier Corporation. These were presented as exhibits. They were his accounts for his services performed in the interests of the corporation in Canada. They show clearly the Aluminum company's interest in Ontario hydro.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. NOSEWORTHY: When the committee rose at six o'clock, I was at the point of putting on the record a number of accounts rendered by Leighton McCarthy, K.C. to the Frontier corporation as evidence of that corporation's interest in Ontario hydro.

The first of these accounts covers the period from October, 1921 to May 31, 1922, and is itemized as follows:

Fee to Mr. Leighton McCarthy, K.C., generally representing interests of corporation in Canada (including attendance before the International Joint Commission, interview with members of Canadian government and senate and Sir Adam Beck and reporting thereon. . . .

And further on:

Procuring statutes and regulations re water power and water privileges, forwarding same to Mr. Rickey, perusing and considering special report from Mr. Rickey regarding the meeting of International Joint Commission at Washington, preparing special report on the Canadian situation before the formation of Frontier Corporation.

The second covers the period from June 1, 1922 to May 31, 1923, and is itemized as follows:

Fee to Mr. Leighton McCarthy, K.C., generally representing interests of corporation in Canada, including special interviews with members of Canadian government, Senate, House of Commons, Sir Adam Beck, and reporting thereon. . . .

Mr. HOWE: Mr. Chairman, I suggest to you that this discussion is entirely out of order. The item under consideration is additions and extensions to plants, and not one dollar of the item has anything to do with the Aluminum Company of Canada. We never paid for extension of plant of the Aluminum Company of Canada. We simply had nothing to do with water powers, either the St. Lawrence or any other. So far as this item is concerned, we have paid not a dollar in assistance in the building of water-power developments. I ask you, Mr. Chairman, if this discussion is relevant to the item?

[Mr. Noseworthy.]

Mr. KNOWLES: On the point of order may I remind you, Mr. Chairman, that when the Minister of Munitions and Supply introduced this matter on Friday, in the very able review which he gave, he made reference to the expansion of the aluminum facilities and referred to it as the largest that he had, and he also made reference to the enlargement of water-power facilities at Shipshaw. In view of his reference to these two phases of industrial development, I submit that this discussion is in order.

The CHAIRMAN: It can readily be understood that sometimes, in the consideration of estimates of this kind, where such large amounts are involved, it is almost impossible for members to confine themselves strictly to a particular item. I must take the same view, with regard to this item, that I took with reference to item 1, in the estimates respectively of the army, the navy and the air force, and I think the committee will agree with me that when the discussion of this first item is concluded hon. members should remain within the limits of the item that happens to be under discussion at the time.

Mr. NOSEWORTHY: The third account covers the period from June 1, 1923, to May 31, 1924. Among other items is this:

Fee in Montreal on January 20 and 21 and conference with Messrs. Bishop, Keefer, Rickey, et cetera, fee on interviews with the Honourable Mr. Mackenzie King and members of his government discussing, fee on interviews with members of government of province of Ontario, fee on special interviews with Mr. Gaby, discussing, visit of representatives of municipalities to Ottawa.

The fourth period is from January 1, 1924, to May 31, 1925.

Mr. HOWE: Mr. Chairman, I feel I must challenge your ruling on that point. The hon. member is discussing the Ontario Hydro Electric Commission and accounts rendered by the firm of McCarthy and McCarthy in connection therewith. I suggest that this is so remote from the item before us that I must challenge your ruling.

Mr. NICHOLSON: Mr. Chairman, you have given your ruling in this matter. You ruled that the hon. member for York South was in order and that ruling settles it.

Mr. HOWE: I appeal from your ruling, Mr. Chairman.

Mr. CHEVRIER: May I say a word in connection with this. We have been adhering, as I understand it, to standing order 58, with which the Chair is quite familiar. It states that speeches in committee of the whole must

be strictly relevant to the item or clause under discussion. This has not been a discussion of extension to aluminum plants, but has been a discussion of the history of aluminum, the history of the St. Lawrence waterways, in so far as aluminum may or may not be concerned, and it is entirely out of order under that standing order.

Mr. NOSEWORTHY: Speaking on the point of order, at the beginning of my speech I referred to the statement made by the minister yesterday and intimated that I intended to show that the minister was speaking without full knowledge of the subject.

The CHAIRMAN: On the point of order, if I understood correctly, it was agreed that a general discussion would be allowed on the first item of each of the three departments with which we have already dealt, and I think the same latitude should be allowed under this item. If, however, hon. members attempt to discuss irrelevant matters on other items we shall have nothing but confusion. In considering the estimates of the departments already dealt with, constructive and general criticism was allowed at the beginning, and perhaps the committee would find it convenient to follow that practice under this item. I am sure, however, that no member of the committee would like this discussion to continue indefinitely, and most speakers this afternoon and yesterday would have been out of order on item 1, if the rule were strictly applied. The committee seemed satisfied to allow the discussion to be fairly general on the first item, but again I would ask that the debate be confined to the item before us. I would ask the committee to be tolerant for a little while longer on account of the freedom given to previous speakers in dealing with the Department of Munitions and Supply.

Mr. HOWE: Do you put a time limit on your tolerance, Mr. Chairman?

Mr. NOSEWORTHY: Continuing this same item—

Mr. DONNELLY: I should like to know what the hon. member is reading from.

Mr. NOSEWORTHY: I am reading from evidence submitted to the chairman of the federal trade commission, in an investigation of Niagara-Hudson Power Corporation, and aluminum, paper No. 72, presented to the United States senate.

The CHAIRMAN: The hon. gentleman has now spoken for over forty minutes.

Mr. NOSEWORTHY: Taking into consideration the interruptions, Mr. Chairman?

The CHAIRMAN: I have made allowance for the interruptions. The hon. gentleman was supposed to have until five minutes after eight, and I allowed him to continue until thirteen minutes after eight.

Mr. CHURCH: I wish to take only a few moments, because I have very little except constructive criticism to offer. I do wish, however, after having consulted the Speaker and the Clerk, to direct attention to statements made in an article appearing in the weekly newspaper known as the Montreal *Standard* last Sunday by one Austin Cross, headed "Conservative Slam at the Navy Seen as an Obstacle." I believe this is the same gentleman who wrote a book attacking the present Minister of Munitions and Supply and almost every other member of the cabinet, notwithstanding the fact that there is a war on. I was surprised to find this book in the library, in view of the statements it contains about members of the cabinet and of parliament. I have no quarrel whatever with the newspapers; as I said during the transportation fight in 1920 and 1921, you can never answer a newspaper because it always has the last word.

I did not raise this question on a motion to go into supply because that would prevent the minister from going on with his work, and personally I should like to see the house close by the end of the month, but I am only a private member. Any time I have spoken it has been at the request of the whip, though in addition I have asked a few questions. Of the matters I have brought up in the house, ninety-five per cent have been in an endeavour to secure better care, comfort and treatment for the members of his majesty's forces in this country. This article to which I have referred is grossly libelous, false, and malicious, and not for the public benefit. I have never criticized his majesty's forces at any time. Why should I criticize them? I have been working with them all my life, and I have a great number of friends in the army, navy and air force in both wars. As chairman of the Toronto harbour board I was a friend of the masters and mates' association on the great lakes when the working people on those boats and the merchant marine had far fewer friends than they have to-day. I object to this sort of scurrilous criticism, which is not criticism at all. This reporter gives a garbled account and no report at all of what happened in this chamber. Fair reports of the proceedings here are privileged, and rightly so; they may criticize members of parliament as they wish, but cannot libel them. This was an unprovoked attack on me. I complain that the report of what I said was garbled, that this is not a fair report and no report at all, and that it has

caused me a great deal of damage in that it has advertised me as public enemy No. 1 of the men who are serving with such courage on land, on sea and in the air, when I have served so faithfully our forces all these years.

Then in the Montreal *Star* of last Thursday the same columnist added insult to injury, when he said that the house witnessed the resumption of an exchange between myself and one of the ministers, and again accused me of attacking the navy. I said, "How could I attack the Canadian navy when in 1926 to 1928 there was no navy to attack?" I was referring to the peace-time strength of the navy, in 1926, and I was not the only one to criticize it. This very newspaper was one of the chief critics of the policy of the government of that day which was throwing away our defences, especially the navy to which we owe so much. I am not going to fire off a rifle to attack a mosquito, but I am not going to put up with this sort of thing any longer. I am a Conservative; I have never been anything else, but I was a progressive Conservative long before that name was adopted by my party. I told my leader why I could not go to Winnipeg, and he was satisfied with my reason. Since the beginning of the war we have had an honourable agreement among the parties of this house that the war is to be paramount and that politics should be put on the shelf for the duration. That is what I have been faithfully doing. I have not thought about being a Conservative; the issue is too sacred and grave for that, with our men overseas rewriting such a glorious history of courage. The matter is too serious for us to be fighting among ourselves like cats and dogs for pure party advantage. That is about all I have to say in this connection. Mr. Harold Ickes, one of the members of Mr. Roosevelt's administration has called columnists like this gentleman calumnists, and that is exactly what he is. He has double-crossed both parties; he is cross-eyed; he has double-crossed almost every minister on the front benches to-day; he has attacked the Prime Minister, the three ministers of defence, the Minister of Munitions and Supply, and others. I do not care anything about him, and I am sorry I have paid so much attention to him.

There are one or two matters I wish to bring before the committee, though not in any critical spirit because, as you know, since the war started I have given independent support to the government as long as we had a total war effort; but what is meant by a total war effort is something else again. I have been a consistent supporter of free enterprise in this country. The stand taken this afternoon by the leader of the opposition is all right. He stated that the Aluminum company is part of an international cartel, and that the government seems more or less helpless to do anything about world combinations of this kind. Then he went on to say that some international commission should be set up to deal with cartels and combines, so that the worker, the farmer and the small business man could be protected, and international rates and regulations established. That is all right as far as it goes; I have no objection to that policy, but I can say that I do not believe in all this international business. What was it Mr. Benes said here the other day: "I want to return to my own country." When the war is over there still will be independent nations, because patriotism is the cement that holds nations together. The people of the countries of Europe that have been overrun by the axis will want to return and rebuild their own countries. There will always be nations; there will always be international trade, and I do not believe there is much use in sending a lot of college professors to Washington to talk about international debts, international exchange and so on. There will always be nations as long as time lasts.

I have referred to these matters on previous occasions. I was one of the pioneers in the hydro-electric development of Ontario, with many of our late leaders in this province, Sir James Whitney and Sir Adam Beck. We were blackguarded up and down the province; we were called amateur anarchists by one of the newspapers, but we took all the private franchises out of the counties of York, Ontario and Peel, and eventually all over the province. This was a people's movement for cheap light and power for all the people, and the leaders were not all of one party. I know of three or four hon. gentlemen across the chamber who were heads of municipalities and who took a great deal of interest then in this movement. This war is altogether different from the last one. I have a great deal of sympathy with hon. members to my left in what they say in some respects about public ownership of light, power and transportation. But we have to consider Quebec's own constitution, and the decision of the privy council. The province gave its water power to private enterprise, and a few years ago what is known in the Saguenay river as the Shipshaw deal, and spent $35,000,000 in developing it. Already in a great many ways the government has taken the responsibility for this aluminum transaction as a war measure.

As I said on February 25, 1943, when speaking about private enterprise, I believe the first thing to do after the war is to encourage private initiative and free enterprise. True it

is, that this will have to be brought up to date. I believe that when the soldiers come home they will want the rights that men enjoyed in the days of Macdonald and Laurier, when everybody owned some property. It might be a cow; it might be a small mill or a country store, or a horse and waggon, but it was property of some kind. We have been slow to see that, with the right of acquiring private property denied to them, the people of Canada became proletarian. Their liberty passed away; it will have to be restored. I believe in private initiative. I believe that the right to possess private property is derived from nature and not from man, and that the state has no business to abolish it, but can only regulate its use.

Those are my views, and they are honest views. I believe that would be the view of the soldiers when they come home. In my opinion you can have all the planning you like, but neither victory nor any kind of planning will ever bring about the millennium. In a debate last January in the British House of Commons, Admiral Southby quoted the language of Strube, who has immortalized "The Little Man" who saved England in this war. He goes on to refer to the little man who saved England, saved them in the raids over London, and at Dieppe and at Dunkirk. "The little man" personifies the spirit of the mother country, the spirit of free enterprise and freedom of both retailers and wholesalers. The said little man who is the embodiment of British common sense and sanity to beat Hitler and Mussolini will be quite at home to defeat bureaucracy.

We have been slow in this House of Commons in not sooner opposing giving up our control over water power for war-time purposes. I do not blame the minister altogether for this particular stand he has taken. I have known him as long as anyone has known him. I knew him when he was a civil engineer. I have had a great deal of respect for him, because I know he was an expert in his business. When he came to this house he was not a politician.

We on this side of the house have forgotten that we have been politicians. The opposition has given the government splendid, independent war support, if for a total war. I am only one of the humble members of the opposition, but I have been here for a long time now and I have yet to change my views on this question. I believe that "the little man" who saved England, as Strube has said:

> We who in the ashes dwell
> Want no planned and ordered hell;
> Fight no war to be policed
> When the bombs and fires have ceased.
> Life's too precious far to give
> For any freedom but to live.

The mother country was built up on free enterprise. That is what made this empire. We came into being by the sea, and we cannot exist without the sea. Our first duty is to the mother country. I do not know about international agreements, because we were told by Mr. Churchill that we had made certain international agreements, and that Canada was a party to them. So was New Zealand, so was Australia, and so were other dominions. I do not know whether the government can tell us what those international agreements are, or what international settlements are to come.

I believe in the public ownership of the water powers of this country. It should be owned by the people, and developed for the benefit of the people in all the provinces joined together at confederation. When I first entered the house I asked for a national hydro-electric policy. We have in this country 42,000,000 horse-power in the aggregate. Of that amount only about 7,000,000 horse-power has been developed, part of it only seasonal. That water power belongs to the people. That is what the late Theodore Roosevelt believed in, and what the present President of the United States believed in, when he was governor of the state of New York.

The first duty of the yes-men in Germany is to find out what the fuehrer wants and then to make the planets dance to his desires. Yes-men are not all astrologers; it is a pity they are not. They would be better for it. They exist in all classes of society and in all communities, and their mark everywhere is the dread of freedom. These authoritarian governments—Germany, Italy and Japan—exist only by reason of yes-men and nodders. When a leader emerges he is acclaimed by them and he drives the country to ruin to their resounding cheers. No opposition is possible in the dictator-ridden countries. That is true, but the evolution of tyranny in Germany, Italy and Japan is possible only because of those who were ready to surrender to usurpation, and one fuehrer, duce, or what-not dictator. Saddled, they cannot be unseated without a general upset and by force and revolution. In Canada we can speak our minds.

There are one or two observations I should like to make about this particular deal. There has been no Gallup poll in connection with it. This Gallup poll is one of the most mischievous institutions this country ever had. We have evidence of it every day in the week. We did not have this Gallup poll in the days of our fight for cheap light and power in Ontario. This was copied from Al Smith of New York, who twenty years ago called a straw vote. Where is the censorship to-day, especially with the parliamentary association meeting here in Canada? Where is the censor

to-day, when this Gallup poll is on and we are allowing all this talk about forty-nine per cent being for the mother country and twenty-one per cent in favour of joining the United States. I say that is wrong. We did not have that poll in the days to which I refer.

While I do not altogether like this particular transaction, and a lot of things done in the name of war, I do not like surrendering any further power to our beloved allies of Russia and the United States. They say that we should forget all about the empire, and that we do not owe anything to the empire. In answer to that, I say that we are allied to two very powerful friends, two very powerful allies—Russia and the United States. They may not be imperial in the sense that they want more territory. That remains to be seen. But they are imperial in the sense that they want a larger share in the peace and as world powers and a better state of affairs when this war is over. And when it is over they will have something to say about the peace terms, and without our empire we will be lost.

I hope the minister will have due regard to this fact, that the surrender of our military and political initiative and of our resources to our friends in the United States is one of the vital mistakes we have made in this war, and brought about by the absolutely criminal defenceless position of this country when war came, because that is what it was. Not one party alone is to blame. All parties almost aided disarmament. We threw away our defences and our friends, with the result that when war broke out we had to start all over again. Let us remember that the United States need Great Britain the same as Great Britain needs the United States. It is not Great Britain's fight alone; it is America's fight as well. We are allies and friends. The people of the United States need us as much as we need them. We are allies, and we must see this thing through together.

I have been much displeased with some of what I have read of the record of the proceedings at Washington. These are the words of Lord Haig in the most critical days of the war of 1918, which is our motto now.

> The safety of our homes and the freedom of mankind depend on each one of us at this critical moment being of good cheer. The British empire will win in the end. People's thoughts on war should not be distracted by secondary matters to a total war.

I was going to ask the Minister of Munitions and Supply one or two matters about this particular transaction on the Saguenay river, and about the settlement of war contracts after the war. This is a very large country. One of the vital mistakes we made was that at the close of the last war hundreds of thousands of men and women who had been working in war work, and men who had been overseas were out of jobs. We should not make the same mistake this time.

This matter has been referred to in Washington, in an article in the March, 1943, issue of the *National City Bank Review*. It speaks of the dislocation of business and of working capital, and the cost of unemployment. Let us not forget the millions of workers in the munitions plants. In addition to them, there are those who are at war and who will come home. It goes on:

> For there is involved the question whether the industries will be able to take up peacetime work quickly after their war work is over, or whether their working capital will be frozen in war production and its release subject to interminable delays and litigation.
>
> This concerns a great many people. It concerns the possibly twenty million persons who will be working in the war industries, most of whom will need peace time jobs after war production is suspended. It concerns the millions in the armed forces who will be back looking for work after peace is restored. It concerns all who sell to the industries now producing war products, and all who will be looking for a market among their workers.
>
> The producers of automobiles, radios, farm machinery and consumers' durable goods generally, who have converted wholly or in large part to production of a different kind than they normally carry on, will be particularly affected.

Reference is made to the dislocation of business that will occur, especially in Canada where production to-day is ten times what it was in the last war. It is also suggested that there should be a standard form of contract regarding payment. It continues:

> Promulgation of such a code during the war would prevent confusion and avert friction after the war. Necessarily the code would be on general lines, for except as to the elements of cost there can be no one method of keeping books which can fit the character and provisions of all contracts or be equally acceptable to everyone concerned. Nevertheless, it would seem practicable to set forth principles which would make it feasible for the government to approve the method of bookkeeping that a contractor is following, or to tell him what method he should follow on a specific contract.

The hope is expressed that we shall not have a repetition of what happened after the last war, when it took years and years to settle up. It is proposed that there should be an immediate part payment made on account. I commend these suggestions to the minister. I am a public ownership man and I have never faltered in that belief. I do not know everything about this deal, but I think it is a bad one. I am sorry the people of Quebec did not long ago adopt the principles which I thought they would, of taking over the water powers of the province for the benefit of the people. I would refer hon. members to what happened

years ago in connection with the Beauharnois deal and the proposed give-away of all the water powers in the Ottawa valley in 1927, which I opposed. This happened, and the opposition opposed it and won in 1927, and it went on for many weeks.

I have a great deal of sympathy with what in some ways hon. gentlemen to the left say. I have always been a supporter of public ownership. The government of the day will have to take the responsibility for this contract as a war measure to defeat Hitler. The minister probably cannot give us all the information we should like to have about it and about the international agreements which have been made, no doubt, with our allies regarding this work, but we can all rejoice in the fact that although in Munitions and Supply we made a slow start, the work which has been done since the war got under way is commendable and is a splendid chapter on the whole. No doubt mistakes have been made. I remember about three years before the war, in 1937, I suggested that a national registry should be made of all wholesale and retail plants in the country to find out what each one could do. I was sure that war was coming. I suggested in 1938 that food reservoirs be set up in the old country and that there should be a survey of labour, a survey of water power, a survey of all large and small industrial plants and a survey of shipbuilding plants.

I hope before the minister finishes that he will have something to say about this fifty-mile limitation on bus travel by soldiers. The minister comes from a soldiering family and I do hope he will be able to make some change in this rule. When we took over the street railways in Toronto we had a clause inserted in the act which gave the city power to go into the operation of buses. This has proved a great help to the counties surrounding Toronto as well as the rest of Ontario. The people would not be able to get to the munitions plants if it were not for these buses. There should be some change in this rule, especially for the buses operating out of Camp Borden. Last Sunday we had a bad storm and many of these soldiers were dumped off at a town eleven miles from Barrie and had to walk in.

Some consideration should be given to the need for the extension of certain health and essential public utilities, such as sewers, water supply and that kind of thing; the necessary steel should be released. Something should also be done in connection with housing. I have seen some of the effects of bad housing in the city of Toronto, and I appeal to the minister to do something to relieve the people of the great burden they are carrying.

In conclusion, may I repeat a quotation from Lord Perry I gave before, as follows:

> The industrial revolution made it possible for any man to work his own way from poverty and illiteracy to a commanding position in both industry and the state. Richard Cobden is an outstanding example—the son of a Sussex farm labourer who became a great Lancashire manufacturer and a great statesman. William Cobbett is another example. In fact, industry and commerce during the nineteenth century produced such men not by the hundreds but by the thousands—careful, frugal men, hard of head and often hard of heart, but notable for two qualities above all others, diligence and self-reliance.
>
> These men were self trained into habits of clear commercial thinking, quick and bold decisions, personal responsibility and individual initiative. It was no easy school. Those who lacked the necessary application or the necessary drive had short shrift. The age was kindly only to those who satisfied its needs.

We do not want a repetition of what happened after the Napoleonic and other wars, as outlined in the "History of England," by T. H. Green, Lord Shaftsbury and other historians. We do not want similar conditions to occur in our cities and towns and on our farms. I commend the hon. gentlemen to my left for the part they have taken in this movement. It follows the many reforms which have been brought about in Ontario by the Conservatives with regard to cheap power. I have referred to some of these to-day and there are others. I have grave doubt whether the state has been adequately protected in this Shipshaw deal, but it has been recommended by the minister and by the government, and they will have to take the responsibility. No doubt some of the terms are improvident.

I had a similar experience in connection with the Chippawa deal in the last war when that great plant was a blessing to Canada. It was said at one time in the last war that Ontario was supplying one-half the munitions for the mother country and the allies, and this was possible only because we had cheap power. The water powers of this country should belong to the people. I have great sympathy with the minister who has recommended this particular transaction. I realize that when the deal was consummated there was a grave situation existing. It was predicted after the fall of France that the British empire was done.

I have spoken to-night because I have been attacked. Never on any occasion have I been anything but a friend of the men and women, and the dependents of the men and women who are serving in this war. Yet this attack has been made in this newspaper, and I am being advertised all over Canada as enemy No. 1 of the men in the services. I have

always fought their battles since I have been a member. I want hon. members to know that I have found this house to be a place of much kindness. I have known most of the members for many years and I know they have done splendid work. Some of the best men we have came up here through the municipalities, and when brickbats are thrown at members of parliament it is simply an effort to prevent us from doing our duties as members.

Mrs. NIELSEN: I believe it will be in order under this item to discuss the question of the moneys expended by the government or by the minister and his department in connection with the making of industrial alcohol. I know the minister has promised to make a statement on this question, but I should like to say a little about it and to ask a few questions before that statement is made.

Without doubt the people of western Canada are greatly concerned, and rightly so, about this matter, because they consider that not only have we during this present war emergency conducted our affairs in a way which has not been to our greatest advantage, but that in the spending of moneys for the production of industrial alcohol the future of western Canada has been neglected. From various bodies in western Canada resolutions have been coming in possibly to other western members as well as myself showing the amount of interest which the people of the west are displaying in this question. It is said by certain people that the making of industrial alcohol and synthetic rubber from our large surplus stocks of wheat is a much better way of producing synthetic rubber than from petroleum. I think, when the minister makes his statement, it should be a very full and comprehensive one. I think he should place before the committee the detailed figures that were submitted to him, and let us know from what sources these figures were obtained so that we might be satisfied as to the correctness of the decisions made in this matter. Of course the minister will readily understand that there are very few members of the house who are competent to speak on these technical matters. I certainly am not, and therefore in matters of this kind we are obliged to go to sources which we believe are informed.

Like many other western people, I have been reading a pamphlet recently written by one of our young Canadian scientists, a man from the city of Winnipeg, Mr. Dyson Carter, M.Sc., A.C.I.C., F.C.G.S., registered professional engineer and research consulting science correspondent. The pamphlet he has called, "So that Man may Prosper", and in this pamphlet he gives many facts and figures in substantiation of the claim that it would have been a better thing for Canada both in the war emergency and for the future if we had built distilleries and used our surplus stocks of wheat for the production of industrial alcohol and synthetic rubber. He makes the statement:

> To produce from petroleum the butadiene required to make 200,000 tons of Buna rubber per year requires equipment costing $650,000,000.

But, he says:

> To get butadiene from wheat is quite a different chemical problem, a far simpler one, requiring far less complicated equipment. This is summed up in the fact that to produce from wheat the butadiene required to make 200,000 tons of Buna rubber per year requires equipment costing only $30,000,000.

He also states that to assemble and build the plants, first of all the distilleries for processing the grain, would take roughly only about eight months, but that to build a plant and assemble machinery for the process which uses petroleum as a base takes at least eighteen months or a little longer. Therefore, from the point of view of the war emergency, his argument is that it would have been advisable for us to have built distilleries to use grain.

It is, I believe, a significant fact also that one of the united nations which has made a marvellous contribution in this war, a nation which has unlimited quantities of petroleum and could have used that as a base, if it were advantageous to do so, has nevertheless thought it necessary and expedient to use large quantities of grain for making industrial alcohol. That country, of course, is the Soviet Union. It is, I believe, a well-known fact that engineers and research men from the Soviet Union offered their services at one time to the United States government and offered to give all the information and help necessary to enable the United States to proceed with this process themselves. But the United States had as its advisers some dollar-a-year men who were connected with the great oil corporations and these men prevented the Russian research men from coming to the United States and giving their assistance.

It would be a good thing, I think, if the minister would give some indication whether we in this country were offered any help by any other country on this question and whether we appealed to any other country for suggestions and help when we knew that this process was being used elsewhere.

It is perhaps something which the general public does not know very well, but it should know, that these giant oil corporations in the United States which have subsidiaries in this country, Standard Oil particularly, were guilty

of the most treasonable act of which any corporation or group of men could have been guilty, in that in the year 1939 they sold secret processes which were theirs to the enemy. Of course, at that time the United States was not actually at war with Germany or Italy; nevertheless it must have been known that in the world-wide conflict which was beginning the United States would ultimately become involved, and the fact could not have been ignored by the controllers of these oil companies that they were betraying a trust which was very definitely in their hands in the interests of the people of the United States. The members of the house know only too well the name which is given to women who for various reasons are forced to sell their bodies, but we have not yet coined a term that is fit to be applied to corporations or groups that sell to the enemy secrets, things which are of value and benefit to the people of their own country, for the sake of acquiring personal power and prestige. "Traitors" is too mild a term to apply to them. To call them "financial prostitutes" would perhaps in some degree be giving them their proper title. The same oil corporations which sold the secrets to Germany and Italy refused to sell the same secrets to their own United States government until that government forced them to do so.

Possibly it is also known that it was only when the United States government set up the Baruch committee and the committee's findings were made known that the government of the United States realized to what a degree the dollar-a-year men who were responsible to the oil companies had been in control of the whole war production of that government.

In the pamphlet to which I have referred, Mr. Dyson Carter has outlined in some degree the findings of that Baruch report. He says on page 16 that the Baruch report "stressed that the new grain alcohol plants, and the factories for making the alcohol into butadiene, and the factories for making butadiene into synthetic rubber, should and must be built in the grain-growing areas, in the farm lands" (of the United States).

Some hon. members may say what does this matter so far as we are concerned? This matter is of importance to us on account of the similarity between the two nations, because of the similarity of our needs, the similarity of our sources of supply both of oil and of wheat.

One of our own Canadian correspondents, Chester Bloom, reported from Washington:

> Reading between the lines, it is apparent the Baruch committee agreed with congressional criticisms that the big oil companies were attempting to establish synthetic rubber monopolies after the war, by preventing production of synthetics from grain.

Mr. Carter goes on to outline under headings what he believes to be the final conclusions to which we are able to come. He says:

1. With all natural rubber sources seized by the Japs, the united nations had to start manufacturing synthetic rubber immediately, on a vast scale.

2. Butadiene will be the principal substance used in making this rubber.

3. Butadiene can be made from petroleum and grain.

4. The Russians who have unlimited petroleum, have for years been making high quality synthetic rubber with alcohol from farm crops, and not using petroleum.

5. Secretary of Agriculture Wickard has strongly recommended that America should make rubber on a large scale from farm crops.

6. The petroleum trust killed this recommendation, even though American-Canadian rubber plans were getting nowhere very quickly.

7. Mr. Thurman Arnold had made sensational exposures of how Standard Oil had given secret rubber processes to Germany, Italy and Japan, but refused to give the processes to United States companies.

8. Baruch revealed that the oil trust had planned to get a monopoly on synthetic rubber production.

9. Baruch recommended a colossal expansion of alcohol plants, and plants to make synthetic rubber from the alcohol, all these factories to be built in the grain-growing regions.

Finally, the United States is now putting the Baruch report into practice.

In the same way, Mr. Chairman, I would suggest that we in this country must understand more thoroughly than we do at present why our own government has proceeded along the lines which it has followed. At the present time we are using precious supplies of oil as the base for the making of synthetic rubber, while on the prairies there lie millions of bushels of wheat, and because our farmers are not able to dispose of their wheat they, in many instances, lack the cash which is necessary for them to carry on their farming operations, and to some extent we as a nation have suffered on that account.

Mr. Carter goes on a little later, at page 20 of his pamphlet, to give some idea of more recent discoveries which make it even more necessary that wheat should be used. I quote again from this pamphlet:

> In Iowa State College laboratories Dr. L. A. Underkofler, Dr. Ellis I. Fulmer and a Chinese scientist Dr. Lu Chen Hao, have discovered how to eliminate the use of malt in producing

alcohol. Instead of malt they use a special "mold," similar to the kind of mold that makes bread spoil. Details of the mold and the method of using it cannot be released at this time, because the process is of vital military importance to the united nations.

Why is the process important? For the reason that the mold method gives from 100,000,000 bushels of wheat at least 25,000,000 more gallons of alcohol than are obtained from the same quantity of wheat by means of the standard malt-yeast process. . . .

The Seagram Company (known in Canada mostly for the liquor it manufactures, but familiar to chemists as one of the world's largest producers of industrial alcohol) has announced that its famous Russian-American scientist, Dr. Paul J. Kolachov, has perfected a revolutionary new system of fermenting mash. The new process is continuous. Instead of fermenting the mash in enormous batches, the Kolachov apparatus carries out the process continuously. . . .

Chemical engineers are well acquainted with this method applied to industrial processes. Thus in the continuous fermentation process for making alcohol, the time required for complete fermentation is reduced from 50 hours to only 5 hours. In effect this makes one piece of apparatus do the work of ten. The cost of erecting large-scale equipment is thus drastically reduced, and the cost of production of alcohol considerably lowered. The new method is therefore expected to have a very favourable effect upon the future manufacture of industrial alcohol from wheat. . . .

When wheat is fermented to make alcohol, naturally a large quantity of fermented mash is left behind. Most of the starch in the wheat has been removed from this material, in the form of alcohol. The remaining mash is thus rich in wheat proteins. And proteins are the food substances that build muscle—meat—in cattle and chickens. . . .

When large-scale grain alcohol plants are established in the farm lands, the farmers will have a source of feed of the highest quality. This feed will be a by-product of the alcohol industry. In this way the cost of raising beef cattle, sheep, hogs and poultry will be sharply reduced. There will be a large and dependable source of supply of the feed. And the feed will be one of the finest known to science. This combination of advantages will place the wheat farmer in a very much better position for carrying on mixed farming, a matter of vital concern in post-war Canada.

When our people in western Canada read of these things, they realize that vast horizons would open out to them if only they were in the position to establish the basis, which is the industrial alcohol, for many of the new industrial uses to which it could be put. I have noticed during this debate that a number of members have paid high tribute to the boys in the armed forces. I do not disagree with that. There have not been any tributes paid to the boys which they do not deserve; none are high enough, none good enough for them. But I submit that if some hon. members were a little more alert in guarding the interests of these same boys when they return and have to take up their ordinary occupations in this country, many of them as farmers, it would be a great advantage. I feel sure that every one of these boys would rather know that this government and this parliament had looked after their interests in this particular matter and made it possible for them to know that a livelihood would be waiting for them when they come back. When all is said and done, I believe that all members in this house, no matter on which side they sit, are agreed that in the future we need to decentralize our industries rather than keep them centralized to the degree they are in eastern Canada. Eastern Canada is well developed. If we had these grain alcohol plants on the prairies, besides the fact that, as Mr. Carter has pointed out, they could have been built more quickly and would have been in operation sooner, they would have used something of which we have a surplus, rather than using oil, which is scarce. It is possible that this would have formed the basis of other industries after the war is over.

Mr. Carter admits, I believe, that actually to use molasses as a base for industrial alcohol is cheaper than to use wheat and grains, but he goes on to say that were distilleries built in western Canada, and the other subsidiary industries, such as plastics and other things, developed, the lessened cost of transportation and the increase of industry from these subsidiary industries would automatically help to lower the cost. He states very definitely—and again I quote from his report—at page 24; that industrial alcohol is needed not just as a war measure but for various industries of the future. He says:

> Alcohol is vital to the production of solvents, cleaners, varnishes, paints, lacquers, shellac, rayon, radio and electrical equipment, plastics, gasoline, food products and flavours, artificial leather, dyes, moving picture film, linoleum, ink, glue, rubber goods, cosmetics, perfumes, medical necessities such as antiseptics, anaesthetics and drugs, and explosives for both war and peace time.

Our farmers are beginning to realize that if they had in western Canada, as a base for many of these new industries, the alcohol which is needed, we could utilize straw, which as a rule, year after year, has been burned and has gone up in smoke on the prairies. Greater uses could be made of the soya bean, and industrial uses could be found for milk products, for the dandelion, and for such waste agricultural products as corncob and oat hulls. Not long ago, Mr. Mackenzie, chairman of the board of grain commissioners and chairman of the government agricultural subcommittee on reconstruction, stated before one of the com-

mittees of the house that in his opinion many new industries could be started if we could go ahead with the government's assistance in the building of plants for the making of industrial alcohol from wheat. But the farmers had no one to put up their case. They could not actually submit to the government specific figures with regard to costs, and so on.

I do feel that the minister needs to give us a full and detailed account of all that occurred before he and the government made up their minds to go ahead as they have done. It seems, according to certain opinions that have been given, that the use of oil as a base is more expensive and it takes longer to produce and to build the plants, and it uses oil which is needed in time of war emergency. Besides that, the government has neglected to take into consideration the question of the rehabilitation of the west from the point of view of its future prosperity.

I would ask the minister to give us in his report some idea of how long it will be before these plants that are now being erected in Sarnia will pass out of government control. Will he let us know the sums of money which will have been expended by this government and to what degree they will pass into the hands of oil companies? Has the government any guarantee of what future use the oil companies intend to make of these plants after the war is over? These are questions that ought to be cleared up, because the people of the west at the present time feel that not only in a war emergency has a wrong course been taken by the government but the whole future prosperity of western Canada has been pushed into the background in the consideration of these estimates.

Mr. HOWE: I would be glad to make a statement on the rubber situation at this time, but if there is to be further discussion it can wait.

Mr. ROSS (Souris): I was going to make a slight reference to that question, and I shall not take up much time. First of all, in my opinion the statement of the minister last Friday certainly indicated that a big job of production had been accomplished, and in that respect the minister and the industrialists are to be congratulated.

Following the observations of the previous speaker, I well remember, during the first session of this parliament in the fall of 1940, when the hon. member for Victoria-Carleton spoke on this matter, he placed on *Hansard* a formula with regard to the manufacture of grain alcohol and synthetic rubber. This has got beyond the experimental stage, and in this regard I agree with the remarks of the previous speaker. Something should be done to develop the scheme in western Canada. Indeed, the time is long past.

The attitude of the government toward industry and agriculture has been very different throughout our war effort. Apart from capital assistance, industry has produced on a cost-plus basis during this war, and owing to this fact industry has paid a greater rate of wages and this has attracted many of the more efficient farm workers to these centres.

I wish to raise two or three questions, one with respect to farm implements in so far as the minister's department is concerned, and another with respect to the reclamation of used lubricating oil. The hon. member for New Westminster yesterday spoke about the steel monopoly and the agitation that had been carried on against development in his province, and I think he was on sound ground in the arguments he advanced. I have a word or two to say with regard to the allocation of steel for the manufacture of farm implements under the controller. Recently from twenty-five to thirty-five per cent of the 1940 production has been allocated. In the second place, farm implement factories were directed to manufacture vehicles for the armed forces. I am sure no fault could be found with that, although much of this military equipment has been piled up along the railway sidings for the past few months, some of it deteriorated, some of it becoming obsolete—because everyone knows how rapidly models change. While this has been taking place, the farmers have been unable to purchase modern machinery, either for the field or for dairying, and that is true throughout the country. At auction sales, used farm machinery has been selling above the price of new articles in various parts of the dominion.

There has been a distinct lack of planning in production and in the allocation of steel in Canada. If these vehicles were needed for the armed forces, some department has fallen down, perhaps through lack of the necessary water transportation. If that is not the reason, then a greater percentage of steel should have been allocated for the manufacture of farm implements, because the farmers are labouring under great difficulties at the present time.

At the commencement of the war there were 53,000 farm tractors in Great Britain and today they have 120,000. In Canada this year the new tractors supplied will number 5,000, which is less than one-third of the supply we had last year. Most people realize that the acreage under cultivation in this country today is three times that of Great Britain; yet

we have practically the same total number of tractors. The last figures I could obtain showed that there were 107,000 for Canada. In normal times the western agriculturists alone require annually $50,000,000 of farm implements, but they were rather handicapped when the war broke out because, according to the farm implement manufacturers, at that time, owing to the depressed condition of agriculture, there was considerable back-log; $200,000,000 worth of farm implements were required then. So that when the percentage of steel has been reduced to the extent it has, it places agriculture in an embarrassing position.

I should like the minister to make a statement on the allocation of steel for farm implement production, and to indicate how it has been done and what his hopes are for an increased allocation for the production of these implements. How soon may we expect that in the future?

With regard to used lubricating oil, I understand that the minister's department is responsible for supplying oil and gas to the air force and the other departments, and on June 7 we had a statement from the department of air that 209,726 gallons of used lubricating oil had been sold to a private concern, the North Petroleum company at Kamsack, Saskatchewan, for $10,236.75, or approximately five cents a gallon. Statements were made by other hon. members showing that reclaimed oil was sold in Calgary at sixty cents a gallon. It was also pointed out by the department that eighty-five per cent of the oil used in aeroplane motors could be reclaimed. If that is the case, on this one deal these people would sell this product, which they purchased for some $10,000, for $106,959.60, or more than ten times the cost of the used oil, less the cost of transportation and reclaiming. I understand that approximately 150,000 barrels, or 6,750,000 gallons, of lubricating oil were used last year by the air force in Canada alone, which is 32½ times the amount reclaimed in the same period. At sixty cents a gallon that would amount to $3,444,099, and in addition we would be conserving this very scarce product. That was the amount used in the air force alone, and I have no doubt the same thing could be done in other departments of the government today. I hope the minister will make a statement as to the possibilities in connection with the setting up of reclaiming stations throughout Canada which, as I said before, would not only bring about a very great saving in dollars and cents but also conserve a great deal of this very scarce product in this time of war.

Then on May 9 I asked the minister a question with regard to an authorization permitting gasoline and oil service stations throughout rural Canada to remain open on Saturday nights until ten o'clock, at least during the summer and fall months. A year ago, in response to a similar request, these stations were permitted to remain open on Saturday nights until nine o'clock, and a great many people would have appreciated the extension of that limit to ten o'clock. Since that time I have discussed the matter with the minister; I was unable to speak to the oil controller, who was away at the time. A year ago I pointed out what this might mean in the saving of man-hours to agriculture, apart from the savings in gasoline and oil. A great deal of time would be lost throughout Canada if during the busy months of the summer and fall the farmers had to knock off early to get to town before seven o'clock in order to obtain their supplies of gasoline. In addition, it is recognized that, on the prairies at least, all the weekly shopping is done on Saturday evening; everything possible is put off until then, so that if these stations could be permitted to remain open until ten o'clock on those evenings, it would certainly greatly assist the war effort in general and would be appreciated by the agricultural population of the country. I hope the minister will be in a position to make a statement in regard to this matter; I know when I spoke to him about it he said he thought something might be done in that direction. At the same time I trust that he will deal with the other points I have raised.

Mr. MacINNIS: There is not very much I have to say in this discussion, but there are one or two matters to which I should like to draw attention. Before doing so, however, I wish to say a word in regard to a point raised by the leader of the opposition this afternoon. He referred, I think in terms of approval, to the speeches made yesterday by the hon. member for Rosetown-Biggar and the hon. member for Winnipeg North Centre, but he wanted to know what was our solution; what could be done about it. Well, surely a great party like the Progressive Conservatives, who have come out with a new programme for the Dominion of Canada, should not be at a loss as to what could and should be done in a case of this kind. I see no difficulty as to what should be done. If the resources of Canada have been alienated without due recompense to the people of Canada then those resources should be returned to the people of Canada. I remember in 1932, when the former leader of the Conservative party, who was at that time Prime Minister, introduced in this house the bill setting up a publicly-owned radio system, he said there was not a public man in Canada—

I am just quoting from memory now—who did not regret that the natural resources of this country had been given away by those who were supposed to act as trustees of the people's property; and given away, he said, without adequate return. If that has been done, and I think there was sufficient evidence placed on record yesterday to prove that it was done; if the people of Canada are being exploited to-day, when we are engaged in a world struggle in which everyone is supposed to sacrifice, some even to the extent of giving their lives—I say, if the property of the people of Canada has been given away without a proper return to the people, surely no government should have any compunction about returning that property to its rightful owners.

I also remember in 1931 when the group then sitting on this side of the house—the group, I might say, out of which the present Cooperative Commonwealth Federation developed—brought to the attention of parliament another scandal. I remember hearing Mr. Bennett say that the government of Canada could take over the Beauharnois project as a work in the interests of the Canadian people, but that was never done.. The special interests, who have always been held in such tender regard by governments in this country, were too strong to allow the appropriate action to be taken in the circumstances. So that if any government to-day wishes to do something for the people of Canada, it has all the power necessary; all that is required is the will.

I have no hesitation in associating myself with the other hon. members who have already congratulated the minister upon the inspiring report on war production which he presented to this committee last Friday. Without doubt the minister has made a good job of organizing the material factors in our war industries.

Mr. DUPUIS: Hear, hear.

Mr. MacINNIS: All right; I agree. But having said that, I must say that when the Minister of Munitions and Supply comes to deal with the human element in those industries he falls down completely. There are so many cases in point that I have no trouble in showing what has been done, because of the attitude of the minister and his department toward the human factor in industry. It was clearly demonstrated in 1941 in the case of the National Steel Car employees, and it was further demonstrated in the case of the Arvida workers in the same year. In the latter case the workers, suffering under the most terrible conditions, revolted and went on strike; the only sympathy they got from the minister was an order in council enabling the government to send the military in to put them down. A royal commission appointed by the government exonerated the Arvida workers from any subversive intent and brought attention to the terrible conditions under which they had to work, and which still exist. There was no apology made to those employees. That order in council is still in force, with the government having the power to use troops at any time it may consider necessary. I will say this, that if troops ever go to Arvida they will go there to subdue the workers, and not to return to the people of Canada the property that has been improperly taken from them.

An hon. MEMBER: Hear hear.

Mr. DUPUIS: A lonely applauder.

Mr. MacINNIS: Some day it may be bigger; do not worry about it. I am not worrying at all, because I have been in the house too long to pay much attention to applause. It is pretty much the same as at a football match. Each side applauds its own men. It is a rather childish thing, in a way; but I suppose people who have no other way of expressing themselves, should not be denied such a little consolation.

Then, I could refer to the long struggle for union recognition in the plants of various crown companies. The latest case, about which I wish to say a few words, is about the shutting down for several days of the Boeing Aircraft plant at Vancouver. All of these cases show the ineptness, I may say, of the Minister of Munitions and Supply, when he comes to deal with the human factor in industry. And I wish to say that if we do not find ways and means of bringing the workers in industry into active cooperation with the other factors in production, we are not going to get much out of this war, even if we win it—which seems much more likely now than it did a year ago.

Mr. CRUICKSHANK: What do you mean by "even if we win it?"

Mr. MacINNIS: Yes, even if we win it, although it seems more likely now. It is not yet in the bag, if my hon. friend will allow me to say so.

Mr. CRUICKSHANK: By heaven, we think it is in the bag, whether you do or not.

Mr. MacINNIS: All right. Even great minds may differ, you know.

Mr. CRUICKSHANK: You and I will not agree then.

Mr. MacINNIS: Perhaps we never did—and I am not particularly anxious that we should.

The difficulty with the minister is that he does not seem to realize that workers are human, and that they want to be treated as human beings, and not like so many packages of labour power which can be put into industry, in the same manner as steel or brick or mortar or things of that kind.

The stoppage of work, or the shutting down of the Boeing Aircraft plant in Vancouver, was inexcusable. It was entirely owing to the dictatorial attitude of the minister and his director-general of aircraft production. I want to say here and now that it was not a strike; it was a lockout. It was a lockout by the government, at a time when the government was saying that we needed aeroplanes more than anything else. Canadian Pacific Air Lines, which had a plant close to the Boeing plant, had agreed many months before that the employees should have rest periods. They refrained from putting these rest periods into effect—at the request of the government, I think, or the request of the Department of Munitions and Supply—because the government felt that to put the system into effect in a plant situated so close to the Boeing plant would cause dissatisfaction in that plant. When the Canadian Pacific Air Lines moved their plant to the new place at Queensborough they put the rest periods into effect. It was agreed upon between the company and the employees. As a matter of fact, I have been told by the employees that in all these disputes there was at all times the best of understanding between the employees and the companies concerned.

Mr. HOWE: May I straighten the record with respect to Canadian Pacific Air Lines. They took over part of the operation of Boeing. When they took it over they entered into an agreement with the Department of Munitions and Supply that the labour agreement which applied to the Boeing employees would be maintained holus-bolus between the Canadian Pacific Air Lines and its employees, and that there would be no variation between the two agreements. It was a written agreement with Canadian Pacific Air Lines, which was violated by Canadian Pacific Air Lines.

Mr. MacINNIS: It was not while they were at the plant.

Mr. HOWE: But the agreement had not been abrogated.

[Mr. Cruickshank.]

Mr. MacINNIS: My understanding of it is that they were told that as soon as they moved to the new plant at Queensborough there would be no objection to it.

Mr. HOWE: They were told in violation of an agreement between Canadian Pacific Air Lines and the Department of Munitions and Supply. The employees were innocent parties, but Canadian Pacific Air Lines were not.

Mr. MacINNIS: In any event, that is what the employees were told. This is what I wish to draw attention to: In 1942 Mr. Bell was on the west coast, and he was approached in connection with wages and working conditions at the Boeing plant. He told the employees that he could not do anything, and that they would have to take the matter up with the Department of Labour. But the moment that this rest period went into effect at the Canadian Pacific Air Lines plant, it did not take Mr. Bell long to take action and put a stop to the rest periods.

Mr. HOWE: Had the employees taken that up with the Department of Labour?

Mr. MacINNIS: Well, I imagined they had. They had been in negotiation with the Department of Labour from April, 1942.

Mr. MITCHELL: I think I know of what I speak, and—

Mr. MacINNIS: Well, I do not just like that.

Mr. MITCHELL: To keep the record straight—

Mr. NICHOLSON: I cannot hear you.

Mr. MITCHELL: Perhaps if you could it would not make much difference.

Mr. NICHOLSON: It would not matter; no.

Mr. MITCHELL: What happened was that before we had an opportunity to settle it there was a strike. There is no doubt about that. You can call it a lockout, or whatever you wish, but actually there was a strike. We were told that if the thing was not settled by ten o'clock on Wednesday or Thursday morning there would be a walkout, and that is what happened. You can call it a lockout, if you wish; but actually the employees walked out on strike.

Mr. MacINNIS: That is not the case, at all. The Minister of Munitions and Supply gave an order to close down the plant. It is quite true that the employees took fifteen-minute rest periods, and then—

Mr. HOWE: Six times in twenty-four hours.

Mr. MacINNIS: And when they did, the Department of Munitions and Supply gave the order to close down the plant. And the plant was closed down for several days. The men went back and shortly afterward an agreement was entered into. While this did not give them exactly what they wanted, it went part of the way and rest periods or smoking periods were granted.

Mr. MITCHELL: They went back on the advice of their own officers.

Mr. MacINNIS: Quite true, I know that very well because I was in close association with them. I sent the minister a telegram in connection with it, which was signed by the hon. member for Winnipeg North Centre (Mr. Knowles) and myself. I have reams of reports on it right here, but I just wish to draw attention to these things. If the Minister of Labour were wise in the matter, he would not begin at this time making apologies for what had taken place because if he—

Mr. MITCHELL: The Minister of Labour is not making any apologies, and he does not have to when it comes to the settlement of the Boeing strike. The Department of Labour did everything possible in carrying out the normal procedure of industrial negotiations. Probably my hon. friend has not had so much to do with these matters in the last few years, but the thing was settled when they came here. If my hon. friend can justify a six hour and twenty minute day before the bar of public opinion in the middle of the war, he can have that privilege.

Mr. MacINNIS: I am not justifying anything.

Mr. MITCHELL: No?

Mr. MacINNIS: I am not even justifying the attitude of the Department of Labour. Am I to understand now that—

Mr. MITCHELL: You are turning a sharp corner; that is all it is.

Mr. MacINNIS: Am I to understand now that the Minister of Labour does not agree with the settlement made between the Canadian Pacific Air Lines, the Boeing company and their employees, that he is opposed to these rest periods? I am glad to have that on the record.

Mr. MITCHELL: I want to say to my hon. friend—

Mr. MacINNIS: Will the minister please sit down. We shall have something to say on these matters next week, but just now I am talking.

Mr. MITCHELL: On a point of order, I want to throw that back in the teeth of my hon. friend.

Mr. MacINNIS: That is not a point of order. If you have a point of order, address it to the Chair.

Mr. MITCHELL: I want to say to you, Mr. Chairman, that I throw that back in the teeth of my hon. friend. He is putting words in my mouth which I never uttered.

Mr. MacINNIS: What did the Minister of Labour say? He asked if I could justify a six hour and forty minute—

Mr. MITCHELL: Six hour and twenty-minutes.

Mr. MacINNIS: A six hour and twenty minute day in war time. Evidently he does not justify it; he is opposed to it. I am saying that it is time that the workers knew the attitude of the minister in these matters.

Mr. MITCHELL: And the truth.

Mr. MacINNIS: And the truth of it. I am telling you the truth and because I am, it hurts.

An hon. MEMBER: And the boys overseas.

Mr. MacINNIS: They would like to know who ordered the shut-down of the plant, and they know it.

Mr. EVANS: Do you agree with them taking rest periods?

Mr. MacINNIS: They have rest periods now.

Mr. CRUICKSHANK: Do you agree with it?

Mr. MacINNIS: Certainly.

Mr. HOWE: They have no rest periods now.

Mr. MacINNIS: What are the periods?

Mr. HOWE: They are allowed to smoke for ten minutes, but they keep on working.

Mr. MacINNIS: That is pretty much what they wanted. They are allowed to smoke for five or ten minutes, depending upon what part of the plant they are working in. Those are the only rest periods the men asked for.

I should like to draw attention to another matter the minister referred to in his speech to the committee on Friday. Referring to the government arsenal at Quebec, he said that this plant was a model for its type of production, both in efficiency of operation and in the quality and quantity of its production.

I am glad to hear that the government arsenal at Quebec is so efficient, but there is a good deal to be desired there in the way of labour relations with the management of the plant. A delegation came to Ottawa representing the arsenal workers about two weeks ago to put their case before the national war labour board. They are certainly not satisfied with the conditions prevailing in that plant. The government and the minister may be satisfied with the efficiency of the plant, but if that efficiency is attained by means of bad labour conditions and low wages, it is too great a price to pay, so far as the employees and the people of Canada are concerned.

Mr. CRUICKSHANK: Are the wages low in comparison with those paid at the Boeing plant?

Mr. MacINNIS: I am away past that.

Mr. CRUICKSHANK: Are they?

Mr. MacINNIS: When you catch up I will answer the question.

Mr. CRUICKSHANK: You do not want to answer it.

Mr. MacINNIS: Surely something could be done to remove some of the grievances of these employees in this government plant. I submit that a public employer should be a model employer in the wages that are paid and the working conditions that prevail. I was informed by the arsenal employees that they have poorer working conditions than the employees of the United Kingdom inspection board, who work side by side with them in the same building. This is another case of rest periods. The United Kingdom inspection board employees have rest periods, while the employees of the Canadian government, working side by side with them in the same building, have no rest periods. That does not make for good feelings and good relations in the industry and I suggest to the minister that he give some consideration to improving the working conditions in that plant.

Replying yesterday to the hon. member for Rosetown-Biggar (Mr. Coldwell), the minister said that he was fighting a battle against the axis and not against trusts and combines. I may not be quoting his exact words, but I think that is the sense of what he said. I suggest to him that he should not overlook the fact that trusts and combines, inequality as between nation and nation, as between class and class, as between individual and individual, are the root cause of the conflict in which we are engaged to-day. Every effort, even when we are engaged in a war, that can be made to obviate these conditions, should be made.

On another occasion in the house I referred to the speech made in Toronto by the Prime Minister (Mr. Mackenzie King) when he was addressing the convention of the American Federation of Labor in October last. He read a long passage from William James, a beautiful passage. Then he said this:

> Will this war not determine whether we are to go on, in the future, as we have too largely in the past, ever seeking to emphasize the differences between nations and between individuals, or whether "men's lives are to be levelled up as well as levelled down—levelled up in their common inner meaning, levelled down in their outer gloriousness and show!"

Mr. McIVOR: Hear, hear.

Mr. MacINNIS: "Hear, hear" yes, but fine words butter no parsnips. Here are these workers in Quebec who work side by side with other employees in the same plant under poorer conditions, and I say that we should keep in mind that these men, even if they are workers, are still men, with all the hopes and aspirations of human beings. Let me say in conclusion that we cannot educate men and women and put the light of life in their souls, and then treat them as mere serfs or as bits of material no better than the raw materials that enter into production.

Mr. HANSELL: The other day when the estimates of the Minister of National Defence were up for discussion I asked a few questions which were not completely answered, and perhaps the Minister of Munitions and Supply can cover the ground a little more thoroughly. I was asking questions with respect to the salvaging of materials after the work on a plant or building had been completed. My understanding is that contracts for the erection of buildings are made out and signed, and that there is no salvaging so far as the government is concerned of any materials that may be left over, that any left-over materials are sold perhaps by the contractor, who may get whatever he can out of them, and that the country gets no benefit from the sale. If that be so, I would ask the minister what check is made of materials going into new buildings and what check is made of the materials that may be left over when a job is completed. I know for a fact that in the building of a certain air training school vast quantities of materials were left over, mostly lumber, and they were not salvaged so far as any government salvaging is concerned.

Mr. HOWE: May I ask my hon. friend a question? I think he asked for a return on that matter, and if I remember the contract, it was a lump sum contract, and the materials belonged to the contractor. Is that the contract?

Mr. HANSELL: That perhaps is so, but I did not find that answer in the return.

Mr. HOWE: I may be wrong. I was just asking my hon. friend if that was the situation.

Mr. HANSELL: I have the impression that that was the situation, because I know there was nothing salvaged out of it by the government. That was the reason for my question: What check is made of materials entering into these buildings, and what check is made of the materials that may be left over?

While I am on this point I want to mention a grievance. I trust that it will not be considered too small to mention. I know that when we are spending billions of dollars, a few dollars sink into insignificance, but to the people of a community they are not insignificant and there is a principle involved in this matter that I wish to mention.

The property that was bought for this particular school, the Vulcan air training school had upon it a very fine farm dwelling. I say very fine, meaning very fine as farm dwellings go. There was also a very fine barn on the property. On two occasions tenders were advertised, putting these buildings up for sale. The first time they were advertised the contractors persuaded the government to put off the sale because they could use the buildings and the barn. Accordingly the sale was put off. Later, tenders were advertised again. I discovered that some bids were made on this dwelling and on this barn. It may not appear from these bids that the value of these buildings was very great, but of course they had to be moved, and there would be some expenses in moving them, and so forth. I will deal with the barn first. Five offers were made for this barn ranging from $80 to $251.50. It was a good-sized substantial barn, thirty-two by forty, and the height is given as 136 feet, but it could not be that high; I think that should be thirty-six feet high. The barn had two rows of stalls with wooden floors. The stalls were not of any consequence but the materials were. The posts were six by eight. When I called for the return I discovered that while these buildings were put up for sale, they were not eventually sold. The last letter that closes the incident was written by T. Earl Walker, Acting General Purchasing Agent, to the Salvage Officer, treasury office, Ottawa. It is dated August 31, 1942, and reads as follows:

Dear Sir:

With reference to the matter of the disposal of a barn at Vulcan aerodrome, I am to advise you the department is in receipt of a radio-telegram, requesting cancellation of sale of this building as the R.C.A.F. No. 4 have decided to retain the building for their own use.

I should like someone to go out to that air training school and see if he can discover where the barn is. It just is not there. What happened? Well, we had these five bids as well as other verbal bids, and this is where the rub comes; this is where the principle is involved. This occurred last fall, when farmers could not get one board of lumber in town; it was not there. They needed lumber to provide extra storage facilities for their grain, and they bid on this barn because with a little support it would have made an excellent granary. What happened to the barn? In spite of the offers which were made, someone in authority sent two or three tractors on the field, threw a cable around the barn, then threw another cable around it, and one tractor drew one cable, the other tractor drew the other cable, and they simply pulled the barn to pieces. You could go into the corner of the field and find a pile of wrecked lumber. When one gentleman was telling me this story he said, "You know the tracks which these big barn doors run on? You cannot buy one of them at Eaton's for less than twenty-five or thirty dollars, but go over in the corner of the field and you will find nothing left of the tracks but a piece of twisted steel." I am not discussing this incident now from the point of view of saving money as much as on the principle that that sort of thing should not go on.

What do we find in this letter here? We find that the school had "decided to retain the building for their own use."

Well now, about the house. I drove past that air training school, and there was a fine house twenty-four feet by twenty-six feet, with the addition of a twenty-four feet by fourteen feet lean-to. It had four bedrooms, and it was electrically wired, although the wire was put in after the house was built. Offers were received for the purchase of this house, although they did not run very high. I know one woman who wanted to buy it and move it into town to use it for her business. She was going to set up a laundry. Here was an air training school which was to accommodate from fourteen hundred to two thousand men. The population of the town almost doubled. Housing conditions were acute. Young men coming in with their wives could not even rent a room. Some of their young wives had to go to a hotel and pay more for accommodation there than their husbands were earning as airmen, leading aircraftmen, and so forth. As I drove past the school and looked at the house standing there, I said to myself, "I wonder why somebody does not buy that place and move it into town. It could be remodelled into perhaps four apartments." People there

could not even remodel their own apartments because the lumber was not to be had. About three days afterwards I passed the same spot and the building was gone. I said to myself, "Somebody must have bought that and moved it." But I knew it could not have been moved into town because the moving of a building like that into town would have been big news. What had happened? They did the same with that farm residence as they did with the barn.

Mr. MacNICOL: Pulled it to pieces?

Mr. HANSELL: Yes, pulled it to pieces. And I have to add that they did not put men on it to take it apart in order to retain the lumber. Airports do not need to do these things; they have a priority in the purchase of lumber. They could not have done it in the time. The building was wrecked in the same way that the barn was demolished. When I called for a return, nothing was said about this building, so that to make sure of my facts and not to unduly embarrass the government I put a subsequent question on the order paper asking for what purpose that building was now being used, and this is the answer: "The residence and barn in question are no longer existing." Of course I knew that. "On request of No. 4 training command headquarters the residence was retained from sale by the Department of Transport and salvaged for lumber." Well, I would suggest that they did not get half a dozen boards out of it for lumber. It may have been chopped up for firewood. "The barn was disposed of by the Department of Transport. These buildings were hazards to flight."

Mr. MacNICOL: Probably the barn they "disposed of" was torn to pieces.

Mr. HANSELL: Of course, that is the way they disposed of it. Here was a dwelling which people needed, and bids were made on it; and here was a barn that the farmers needed and bids were made on it—both destroyed. I know it is not the money question which is important. I understand that when a minister's department is dealing in billions of dollars a bid of two or three hundred dollars is only a drop in the ocean; but imagine the feelings of the people of the community when they cannot buy lumber to store their grain, when housing conditions are so bad, and two substantial buildings are torn to pieces! That is my complaint, Mr. Chairman; I simply lay it before you.

While I am on this matter might I say one other thing, and I want the minister to answer the question or give us some light on it. It seems that when engineers are sent out to locate a piece of territory for the building of an air training school, or anything else, they should have in mind at least one fundamental, namely, that there should be an adequate water supply. Even when I was a boy scout we were told that the first thing to think of when you went to pitch your tent was whether there was any drinking water nearby. I do not believe that these engineers were even good boy scouts, because when they went out and pitched their tent they did not make certain that there was a drinking water supply at hand. I suppose that since that school was built they have drilled dozens of holes within close proximity to the school to see if they could find enough water to supply the staff and the students. Eventually they concluded that they would have to pipe the water some distance; I do not know how far, but I believe it is anywhere from seven to nine miles. You see what it means. It means wastage of man-power and material, all because somebody made a mistake in not making certain that there was an adequate water supply there before they built.

How do these things happen? I could excuse it if this were the first air training school that had been built, because they had to do things in a hurry, and even then I doubt whether it would be reasonably excusable. But this air training school has been built only recently, having been open for only about a year. Can the minister throw some light on that? What is his explanation? I am told that this is not an isolated case. It is a case I know of, because I have driven past the place time and again, and what is more, they were digging ditches and laying pipes. I did not get out to see what kind of pipes they were, because it was in winter time. They were putting in pipes, but it does not matter whether they were clay or steel pipes. The minister might say whether they were steel pipes that were being put in. We need steel for other purposes and not to fix up engineers' blunders. Moreover, it takes machinery to dig ditches and it takes man-power as well. Somebody is responsible for that and should be taken to task for making a blunder of that kind, if it is as serious as I think it is. I have another question to ask on a different subject, but perhaps the minister could throw some light on that.

Mr. HOWE: At Vulcan airport sufficient water was obtained in the immediate vicinity in the sandstone formation at a depth of approximately 125 feet. The first analyses of this water indicated that it was of approved quality for general use, but after

continuous pumping the quality became poorer and poorer, owing chiefly to sodium sulphate in the sandstone. The quality deteriorated to such an extent that it was unfit for human consumption. Arrangements were completed with the various well-drillers for test drilling, and drilling continued for a period of time, gradually getting further away from the site. The final result was that a sufficient supply of potable water was located six miles from the airport. The construction of the supply main from this source is now practically completed.

The question of water, and pure water, on the prairies, is not a new one. Ever since the railways were built through that country they have been fighting the water problem. It is all very well to say that an engineer going there and test drilling for water and finding it at a depth of 125 feet should have known that continuous pumping would result in a deterioration of the quality of the water. As a matter of fact, he did not, and I do not know how he could have been expected to know it. I think the engineers of the Department of Transport have done a marvellous job in locating so many airports in the prairies, so well distributed across those provinces, in every one of which water has been a major engineering problem, and it is remarkable that they have made so few mistakes. Vulcan was one of them. Fortunately, by exploring the vicinity of the site, they did find ample quantities of good water within six miles. It is rather expensive to find water, but it was found, and the water situation has been straightened out. It may be bad engineering in my hon. friend's opinion, but I can tell him that if the engineers of the department had wanted to play safe with the water situation, there are many parts of Saskatchewan, Alberta and Manitoba that would have had no airports and no training schools to-day. But we distributed the airports as well as we could. We certainly took the water situation into account, but if we had wished to play safe from the start in this regard, the airport map in the west would have been different from what it is to-day.

Mr. HANSELL: All I say in reply to the minister's remarks is this. Farmers have been living around that country a good many years, and I do not think that any of them have died yet from drinking the water. The town of Vulcan has a population of 700 or a thousand, all used to their well water.

Mr. HOWE: What is the population of the air training school?

Mr. HANSELL: About 1,400 I believe. I am inclined to think the water is about the same kind all through that country, and I do not believe that any citizen has died yet. Be that as it may, I will take the minister's answer. Will he answer one other question? He failed to say what kind of pipes are being used in piping that water a distance of six miles.

Mr. HOWE: I shall be glad to obtain the information.

Mr. HANSELL: He did not say anything about the house and barn, but they are demolished. He was not there, but my friends were. I spoke with men who saw it done. So that that is all there is to the barn and the house.

Mr. GILLIS: I wish to discuss for a few minutes with the minister a matter which I think he considers of urgent importance as indicated in his statement to the house when making the presentation for his department. He said at that time that coal was one of our most pressing supply problems. Consumption has increased by more than forty-five per cent since the outbreak of war, and he goes on to set out a statement which clearly indicates that he recognizes the seriousness of that problem and its relationship to the general war production.

I am not going to be critical to-night, but I want to point out to the minister the problem as I know it and as it relates to fuel in Nova Scotia. I shall not attempt to discuss the situation in either British Columbia or Alberta, because I am not familiar with it. The major part of our coal comes from Nova Scotia, and in the light of that statement by the minister, showing that he recognizes the necessity for increasing production generally across the country, I hope that something will be done; otherwise there will be during the next year a serious domestic problem in the matter of fuel.

I am pleased that this matter has been placed under the Department of Munitions and Supply. My experience with the minister has been that he likes to get things done, and his report to the committee indicates that he has done a very successful job in the organization of the industry generally in Canada. I know that since 1940 this matter of fuel and the fuel policy has been discussed in season and out of season in this house, by myself and by others, and it has been handled by many different departments. Labour had it, and it went to the Department of Finance. Various controls were set up, and much assistance given to industry, from the operators' point of view, by way of cash from the treasury. But the fuel situation in Canada indicates that assistance of that kind does not

increase production. That is the position to-day. There are fifteen orders in council that provide subsidies for the movement of coal across the country, and there have been several more with regard to controls that have been set up for emergency purposes since the outbreak of war. Personally I cannot see that very much has been done to date to increase production in the country or to take care of that problem. I think the problem so far as Nova Scotia is concerned is much more serious than the minister realizes, and also much more serious than is realized by those who head his war emergency production board. I believe the government is directly concerned in the matter in view of the assistance it has given and the financial obligations it has undertaken in connection with the industry, as indicated in this return, which is sessional paper 145E dated Monday, May 24, 1943.

According to this return the government has paid out some $4,850,000 in freight subventions and so on. In addition, assistance has been provided to meet part of the cost-of-living bonus paid to coal-mining employees, in the amount of approximately $7,000,000. Assistance has been provided to enable operators to pay certain wage scale adjustments authorized by the national war labour board, to the extent of approximately $500,000 per annum. Production and development subsidies are provided by the emergency coal production board to enable existing operations to be maintained and, where possible, to enlarge the production from existing mines, or to develop new operations. The estimated cost of this assistance for the fiscal year 1943-44 is about $6,500,000. So that the government has accepted financial responsibility to a considerable extent in connection with the coal-mining industry of Canada. Along those lines I think it has done a good job, but I am sceptical of the machinery that has been set up to bring about that increase in production; I think there are factors entering into it with which this board is not familiar. I am not so sure that they will be able to increase production in the mines of Nova Scotia by releasing men from the army and turning them back to coal mining, or by taking them from other industries and putting them back into the coal mines of Nova Scotia. The entire operation in that province is such that it is doubtful whether production can be increased to any appreciable extent without making new openings, and it takes a considerable time to develop new openings to the point where coal is produced. That will not help us out next winter; and if there is an immediate shortage and a serious situation, as was indicated in the minister's statement, then I think other steps will be necessary in order to obtain that production.

There are certain factors which militate against the whole situation so far as Nova Scotia is concerned. I have made it my business to get some figures in this connection, and I have gone into the matter with the reconstruction committee and other bodies for months past, in an endeavour to show them exactly what is the situation. I am not going to go all over the matter, but I wish to point out to the minister that the vice-president of Dominion Iron, Steel and Coal was here recently, and we discussed this whole matter with him. He tried to make the point that the drop in production resulted from the men leaving the various collieries. I questioned him on the basis of the figures I have here, which were obtained from his own offices and which are fairly well up to date, going up to December, 1942. Take the Dominion Coal company, for example, which is the largest operating company in Nova Scotia. The number of men employed by that company in 1938 was 9,500, and at that time they were turning out 19,000 tons of coal a day. In 1942 the number of men employed had dropped to 8,000, and the production to 12,000 tons a day. That much production has been lost in the collieries of the Dominion Coal company; and all the men who have left the employ of that company have not enlisted. I took the vice-president of that company over the trail, colliery by colliery. I pointed out to him where No. 11 colliery, for example, had 950 men on the payroll in 1938, while to-day only half as many are employed. They did not leave their jobs there to go into the armed forces. There has been a constant fight to keep that colliery open for the last four or five years. It is folding up; it is practically worked out, and if the war stopped to-morrow we could not put these men back at work there.

That is one point. Then there is the reserve colliery of this company, which is now closed down. It employed some 450 men. There was a development at No. 25 colliery, which employed a few of those men; only recently that colliery was flooded, and work there is stopped. In 1938 there were 700 men producing coal in that colliery; it is out of production to-day and that production cannot be replaced. Then you could go along to No. 2 colliery, which a couple of years ago was producing 4,500 tons of coal per day. Now the production in that colliery is down to practically 1,000 tons per day, for the reason that the colliery is worked out. It is a pillar operation to-day; they are backing up on it,

and you are not going to put any more men in there when the war is over. You might be able to shove in a few to-morrow and push up your production a little, but not to anything like the extent that is necessary according to the statement made by the minister. All the collieries of the Dominion Coal company are in that position; they are old operations; they are long hauls, and they are on the wane. Coal mining in Nova Scotia, so far as Dominion Coal is concerned, is folding up, and I do not want the illusion built up in the mind of the minister that by passing along these subsidies to the operating companies the problem will be solved, or that by taking men from the army and from other industries and putting them back in these mines the necessary production will be achieved.

I think the solution in that regard can be found only in new openings. I emphasized that point in 1940 and 1941; I pointed to the developing crisis in fuel and outlined the steps which I thought were necessary. Had those steps been taken at that time, we would have had producing mines now, but it will take some time to develop any new mines now. The same situation exists in the Nova Scotia Steel and Coal company, or the old Sydney collieries. It also exists right through that province, and what I am trying to prove to the minister now is that throwing subventions into the laps of the operating companies will not solve the problem of fuel production. Do not make any mistake about that.

There is another matter I should like to bring to the minister's attention, and I want to place responsibility for this problem where it belongs. I mentioned a moment ago that No. 25 colliery was opened in 1938 or 1939, which absorbed about 250 of the men who had been employed in the reserve colliery. That mine is flooded to-day; they brought another old mine into it. That was on account of faulty engineering on the part of the Dominion Iron, Steel and Coal company. I remember distinctly when they were talking of opening that No. 25 mine, just a few years ago. The men who lived in that district, who knew mining from a practical point of view, and the executive board of the mine workers fought with the coal company to develop their new slope, and to tap the old mine from the top and pump it out. In that way they would have obtained immediate production by routing quite a number of men into the old colliery, getting coal from that colliery while they were developing the new slope and tapping another section of it. They emphasized the fact that the mine should be tapped at the top and pumped out; otherwise there was a chance of running into it and flooding the new development. That is exactly what happened. Two men lost their lives in that operation. And it is owing to the stupidity of the engineers of the Dominion Iron, Steel and Coal company; because the men knew better, and made a fight for it. You have lost all the production you had in that particular mine. I do not know how soon it will be over. It will have to be completely pumped out.

You also have a fire in the largest producing colliery of the Dominion Iron, Steel and Coal company. I refer to No. 12 colliery at New Waterford. I wish to place the responsibility for that fire directly at the door of the Dominion Iron, Steel and Coal company. It was caused by a long wall belt. It was a rubber belt which ran through these workings for some 1,500 feet. The men had been emphasizing continually for the past year that that section should be cleaned out, and that the belt should be free. Reports were written on it. Had attention been paid to the reports of the safety committee which travels through the mines every three months, the results would have been different. Had they been listened to with respect to cleaning up that section, and freeing the belt, the fire would not have happened. Two more men lost their lives in that colliery. There is now a fire at that point, which is displacing some 1,100 men.

I am sometimes a little bit sceptical as to whether certain operators do not accept all the financial assistance the government will put in their way, and at the same time use everyone with whom they come in contact as sales agents, while they make their money—by subventions or in some other way.

There is a loss of production in two collieries which can be placed at the door of the Dominion Iron, Steel and Coal company. It is owing to faulty engineering, and to neglect through not keeping that section of the workings, with a belt running through, free and clear. Had it been kept clear, the fire would not have happened. That has been a matter of controversy for some time. We hope that before this matter is closed the provincial government and the mine workers will place the responsibility where it belongs—and we know who is responsible. There has been a loss of four lives, and a serious crippling of an industry which is now essential. It is to be hoped that something will be done about the matter.

We have that problem to contend with, and I want the Minister of Munitions and Supply to understand it, because it now comes directly under his department. As I said before, I think he tries to get things done, and I believe he will do so in this instance.

That is the gloomy side of the picture; that is the actual situation. I would strongly urge the minister that he immediately take into consideration the matter of setting up some kind of organization similar to that in Great Britain. We know that when in 1917 Great Britain had a fuel crisis she had to take things over. She gave to men employed in the industry, and who knew the problem of production from the practical point of view, some responsibilities on the boards administering the order in council. That was done in order to have increased production. I shall not go into that matter in detail. She has had to do it again, during this war. That was done in July, 1942. At that time the British government set up a board composed fifty per cent of operators and fifty per cent of the men themselves. They are working together, and the matter of profit is subordinated to the interests of the state.

Then, Great Britain has stepped a little farther. She has declared that all mineral developments after July, 1942, in that country will be under government ownership and operation. Collieries are still operating and producing on a government-management plan. The important thing is to get the men in who understand the problem from the practical viewpoint, men who can give some practical advice as to how coal is to be produced. After three years of experimentation in the matter of assistance and subsidies, and things like that, surely we have arrived at the point where we have conclusive evidence that procedure of that kind does not solve the problem of production.

There are other factors which militate against the best results. I discussed this matter earlier with the Minister of Munitions and Supply. Provided production on the island of Cape Breton were increased tomorrow—and that is where one finds the major coal production in Nova Scotia—provided it were increased by 100 per cent, it could not be taken off the island.

An hon. MEMBER: Why?

Mr. GILLIS: For the simple reason that the minister has not the shipping facilities. Secondly, it cannot be moved by rail because at the strait of Canso there is a definite stoplock in getting across that strait. Only so many cars can be taken across per day.

Mr. HOWE: I am very much interested in this. But I would say to my hon. friend that if he will give me the ways and means of stepping up production, producing another three or four millions or more tons in Cape Breton, I will take full responsibility for moving it from there, even if I have to put our entire merchant fleet on the job.

Mr. GILLIS: I am glad to hear the minister say that.

Mr. HOWE: We will provide labour to that extent.

Mr. GILLIS: And I believe the minister would do it. But at the same time, in the interests of Canada to-day, and definitely in the interests of post-war production, the building of a bridge or causeway across the strait of Canso is something which should be undertaken. However, I shall not go into that matter now. That is something which is before the committee on reconstruction. A lot of cold water has been poured on the idea by the engineers of the Department of Public Works, and by the representatives of the Canadian National Railways. I have reports on it which evidently they have not seen.

Mr. HOWE: Before we leave the other subject; as I have said, I am very much interested in the views of the hon. member, because I realize he knows a great deal about mining on the island of Cape Breton and I know nothing about it whatsoever. What would be his suggestion for getting another two or three million tons of coal out of that country in the next twelve months?

Mr. GILLIS: I am not so sure the minister could get that within the next twelve months. As I said before, I do not see any solution in the operating collieries. They are old. You cannot step up production in those collieries to any great extent. The only chance of getting additional supplies of coal from the island of Cape Breton is to make new openings. As the minister knows, it takes some time to drift a slope or sink a shaft or tap a coal seam, before the product can be taken out. If a drive is put on, it might be done in seven or eight months. Openings might be made in certain places from which production could be obtained. Perhaps it could be obtained within six months.

For example, here is one proposal contained in a letter from a man in the town of Inverness. This man, Mr. J. H. Henderson, is thoroughly familiar with coal mining, and particularly mining in the county of Inverness. The mine there is producing very little. It is old, and is to-day operated by the government. For some time it was operated as a relief project. Mr. Henderson says this:

> There is lots of coal in Inverness yet, and a little money and good management will yet

put Inverness producing 500 tons a day without any difficulty. And as to the quality of the coal for domestic purposes, you know there is nothing better in Nova Scotia.

It is really a crime how this mine has been worked here. The sinking was down to 13 level when Mr. McColl came here, with a face of coal seven feet of the very best coal Inverness ever produced, and there was every evidence that the seam would flatten just as the late Norman McKenzie said it would. Of course the haul was long, but that could easily be overcome.

If I had the money and a free hand I would have Inverness producing 500 tons of coal a day in six months, and a thousand tons in two years.

Wish you could prevail upon the emergency coal producing board to investigate and I am sure they would be encouraged.

I know this man, and he is familiar with coal production. He knows that area and that particular mine. There is a chance that with the expenditure of a little money, and with someone to take responsibility, the minister might get out as much as 400 or 500 tons a day, in six months.

Here is another one. On the north side of Sydney harbour is a mine known as the Jubilee mine. In the late twenties this mine was fully equipped and a million dollar bankhead was built. The people from that particular area are urging the reopening of this colliery. The equipment is there and I think this mine could be made to produce in a very short time. The minister should examine into this and perhaps he will find that he can get production even more quickly than I anticipate. The bankhead was never used; perhaps it was another investment made to keep wages from the miners.

I have suggested on one or two occasions that there is coal at Thorburn in Pictou county. This is one of the best seams of coal to be found, and people who reside in that area tell me that production could be had very shortly. The hon. member for Pictou (Mr. McCulloch) probably knows of this operation and he could give the committee more information. But they claim that the slope there taps a good seam of coal, and perhaps production could be commenced in three or four months. In the Port Morien area on Cape Breton island is a good seam of coal which is close to the surface. If there is an emergency, you could go in there and make an opening and get production quite quickly. There is a small opening in the field a few miles out of Port Morien which produces 100 or 150 tons a day. This is capable of enlargement and it could possibly turn out 400 tons a day. At the present time they are handicapped by a lack of transportation facilities. The coal is taken out in trucks some seven or eight miles, and the road is in very bad condition. They have no power available, which retards their surface operations to some extent. Representations have been made to certain authorities, particularly in the provincial government, to have this road fixed up and to provide additional power so that the operations can be increased. It is a small operation now, but production could be stepped up and you could get some relief immediately.

These suggestions should be investigated immediately and something should be done. Again I want to emphasize to the minister that if he hopes to get the full cooperation of the men in any of these undertakings, he must recognize the fact, as was mentioned to-night by the hon. member for Vancouver East (Mr. MacInnis), that he is dealing with human beings. The coal miner's life is a miserable one, and in the past he has had little encouragement to buckle down and cooperate with anyone. The reverse has been the case; he has been the goat every time. It would be well to examine into what has been done in Great Britain. Perhaps a board of the type set up there, with regional representatives right on the spot, could be set up here. The men could be given some responsibility in connection with production. They must be shown that you are prepared to cooperate with them. They will go all the way with you if that is done. It is no good just paying a subsidy to the operator and expecting the fellow who produces the coal to slave and sweat without getting anything in return except the knowledge that he is helping out in an emergency, an emergency which was largely created by the people who have made money in the past.

There should be an incentive to the men in the collieries to produce more coal. If this is to be done, there should be a check-up on the income tax arrangements. Just prior to the Easter recess I discussed this matter with the Minister of Finance (Mr. Ilsley) and pointed out that on the basis of a forty-eight hour week, when a man is asked to work an extra one or two shifts it puts him in a higher income bracket. Then the whole thing is levelled back on his total weekly earnings, and the result is that while he has worked overtime to produce an extra sixteen or twenty tons of coal, he does not get anything; the whole thing is taken up in the income tax.

My suggestion was that either this overtime should be tax free or the tax on the overtime earnings should be worked out separately. These men are not objecting to being taxed on their forty-eight hour week, but a man feels that if he stays out to-night and punishes himself to the extent of working an extra

shift or two—they do not want to do it, but they do it because there is an emergency—he should be exempt from paying the tax on those earnings, or at least they should not go back over his total weekly earnings. The thing is absolutely unfair. This applies not only to mining but to practically every industry. Men and women everywhere are adopting this attitude.

Mr. MacNICOL: Is not that one of the reasons for absenteeism?

Mr. GILLIS: I would not call it absenteeism; it is simply a lack of incentive. In many cases these men lose money when they work overtime.

Another thing to be considered is the physical factor. The hours underground are too long. It is almost a physical impossibility to work a six-day week underground, and then follow with a five-night week. When you do that for three or four months you find you are getting pretty draggy and are feeling the need of a few hours rest. It should be recognized that people working under those conditions are entitled to a two weeks' vacation each year. That would give them something to look forward to. They have nothing to look forward to now. Every official, the man who merely checks up and travels the mine, who is not twisting his spine at the end of a shovel, gets a two weeks' vacation every year, but there is no vacation for the man who slaves and sweats. If the man in industry, particularly the man in coal mining, knew that he could look forward to a vacation for himself and his family, that there was something for which he could save and enjoy, there would be less absenteeism. When there is nothing to look forward to, you have more men taking time off during the week-ends.

Mr. MacNICOL: They are certainly entitled to two weeks with pay.

Mr. GILLIS: Certainly they are. If you are going to try to get production, you must give the men responsibilities and recognize the fact that they are human beings. You must check the hours of work and go into the question of vacations with pay. You must also probe the possibilities of industrial medicine. I called this matter to the attention of the Minister of Pensions and National Health and asked him to look into it. The Canadian Car and Foundry company, Montreal, have done wonderful work in this field. They have a doctor who specializes, and they have certain arrangements with their employees. I am told that absenteeism has been cut fifty per cent by this system of industrial medicine. It has proved beneficial. This is another matter the minister should look into. I urge him to check the social conditions under which miners are working if he wants greater production.

I rose to make these few remarks, because in the past this business of getting production in the coal mines has been very much a matter of wishful thinking. You have been placing your faith completely in people who in my opinion have done a very bad job of organizing the fuel industry in Canada. There is too much absenteeism on the part of management. Take the Nova Scotia coal industry, for example. Every decision that has to be made is made in Montreal. The local manager, who knows the mine, knows the employees and knows the operation, whenever a grievance comes up cannot make a decision. It passes through his hands and travels all the way to Montreal if it is a matter of any importance, and after the head office in Montreal have taken two or three weeks fiddling with something they know nothing about, you have trouble on your hands. That machinery is too cumbersome. I would give the mine manager in the local colliery responsibility to deal with the employees in the mines and settle small matters on the spot. These small matters develop into major grievances if they are allowed to drag on for weeks and months awaiting a decision by someone in Montreal, and that has happened many times in the past. Things that could have been settled promptly by the mine manager go to Montreal and are allowed to drag on, and in the meantime the men get tired of waiting for a decision and a colliery stops working here to-day, and another one there to-morrow, on account of this absentee management. If you want to get production you will have to set up regional boards as they have them in Britain, and put on those boards men who know the operation of the mine, competent coal officials who work underground and have grown up with the industry. I have a lot of respect for those fellows. They know their job, but as it is now, they cannot exercise responsibility because grievances have to be referred to Montreal. I would also have on the board some of the miners themselves who know how to get production. Other things that slow up production are a lack of compressed air, a shortage of timber, a shortage of machinery. All these things enter into production. The last time I was home I travelled the local unions and heard man after man discuss these matters and point out these things which militate against production, and which could be cured in fifteen minutes if only someone took hold and went after them.

The minister likes to get things done. He is an engineer and is used to getting things done. If he will take hold of this realistically and work closely with the men and check up at once on whatever is slowing up production, I think production can be increased to a great extent in Nova Scotia.

Mr. MacNICOL: Several days ago there was a question asked with reference to the water supply for Mossbank, Saskatchewan, where there is an airfield and aerodromes. The minister whose estimates were before the committee at the time said that the question did not come within his department but under Munitions and Supply. As I understand it, the water supply of Mossbank is supplied from Moose Jaw.

Mr. HOWE: No.

Mr. MacNICOL: Where from then?

Mr. HOWE: From Johnston lake, seven and a half miles away.

Mr. MacNICOL: The understanding was that water was to be pumped from the Saskatchewan river a distance of some seventy miles to Moose Jaw and that the airport was to be supplied from Moose Jaw. One of the reasons why that piping and pumping was done, I understand, was to supply Mossbank. That is not correct?

Mr. HOWE: No. At the Mossbank site water was obtained by drilling within one and a quarter miles of the site, but it was so highly mineralized that it was unfit for human consumption and it was necessary to continue test drilling, gradually getting farther and farther away from the aerodrome. An adequate supply of potable water was obtained near Johnston lake some seven and a half miles away. This supply was developed by the drilling of a permanent well, the installation of pumping equipment and the construction of a seven and a half mile wood stave pipeline to the airport, and the airport has been supplied from this source since the fall of 1941.

Mr. STIRLING: I had hoped that the minister would reply to the request of the hon. member for Lake Centre for his views as a member of the government with regard to the closing up of the crown companies when the time arises. I wanted in connection with that to make this suggestion to the minister, that he would take into account the fact that several of these crown companies are engaged in operations which bring them into competition with existing industry. There was a variety of reasons why the crown companies were set up. Sometimes they were to produce commodities which Canadian industry was not at that time able to provide. One reason was that certain machinery required in retooling was available only from the United States and the priority list made it difficult to obtain that machinery.

But there are two or three of these crown companies which it appears to me are busy with the production of munitions and tools and instruments which can in ordinary times be manufactured by Canadian industry. Now that the minister has explained the changes that have had to take place in production—a sufficiency of this article has been accumulated, and there will be less of that made and more of this made—it seems to me that the time is arriving when these Canadian industries which have built up their factories, and their reputations as well, in the building of certain lines of endeavour will have competition such as it is not advisable, I suggest, for them to have.

Mr. HOWE: Would my hon. friend give me one or two examples? I cannot think of a crown company in that position.

Mr. STIRLING: I am thinking of the Citadel, and Machine Tools, and Research Enterprises Limited. It appears to me that all these three I have mentioned—there may be others—were brought into being largely to create materials which Canadian industry was capable of creating except under that particular stress of war. It is quite true that some of these things were to be manufactured in secret. There were secret devices which had to be manufactured in secret, and the government may very likely have had excellent reasons for not assisting these Canadian industries to expand to cope with this business. But now we are changing-over production, and the time will shortly arrive when these Canadian industries will find themselves in competition with crown companies, and I ask that the minister in replying to the suggestions of the hon. member for Lake Centre, should bear that point in mind.

Another remark I wanted to make was with regard to the capital assistance given to private companies. In the auditor general's report we have a considerable list of the moneys which have been given to various private companies, and there are described to us the two methods by which this arrangement is carried out. One method is to advance amounts monthly to satisfy the company's estimated requirements. The company submits estimates, which are certified by the treasury officials, and the estimates include a fee, usually a fixed amount. The list in the auditor general's report refers to that fee, but I notice that in the list there are very few

instances in which the fee is referred to at all; and what we do not know, and what the public most certainly does not know, is how that fixed amount is arrived at. I listened with interest this afternoon to the hon. member for Stormont, and I think that he has gone farther in explaining some of these matters than yet has been the case. I am of opinion that it is a great pity that not until this month of 1943 have these explanations been given, because it is all to the advantage of the war effort that the people of Canada should have explained to them how such matters as the fee and how it is arrived at are arranged for.

That applies also to the third matter which I wanted once more to draw attention to, namely the cost-plus contract. I shall read to-morrow the remarks of the hon. member for Stormont, who dealt to an extent with that matter. When the minister last referred to this question—it has been up at least three times in this house before—he gave an interesting illustration of what happens in the manufacture of a rifle, when he explained how a fixed amount was arrived at, in compensation, shall I say, to the manufacturer of that rifle, and then he explained how from time to time that arrangement is reconsidered and perhaps adjustments take place in the fixed amount. But what I have never been able to understand is how the government, how the minister applies that method to some of the very difficult contracts which have had to be undertaken. I remember that on one occasion I asked him whether that method also applied to the case of a contractor who was building a building or creating some work such as, for instance, building a camp. In my own neighbourhood there is a training camp. It was built by contract. It was extended by contract. Some months later, just across the main road, a brigade camp was built. It was extended. It was extended a second time. And I know perfectly well that the local public have it in for the government all the time because they say that all that was done by cost plus contract. Now the minister has explained that in few cases can he remember a cost-plus contract of the type that the public usually understand by the words "cost plus". He has described how the cost plus a fixed amount is the method usually employed. But what I cannot understand is how the case of a camp covering a pretty considerable quantity of territory, with a considerable number of divergent buildings, which is begun, and then increased, can come under that fixed fee.

[Mr. Stirling.]

In one part of the brigade camp work ceased altogether for a matter of weeks, or it may have been months, in the late summer and fall. It was said that material was short. Great pressure was brought to bear where it was necessary, and just before a particularly severe winter came material was forthcoming and I believe that those camp buildings were finished. But in the work which you arrange with a contractor to do there are serious expenses incurred if delay takes place whether on account of lack of material or for any other cause; and I should like the minister to explain a great deal more fully than he yet has done, in an understandable way for the public, how these fees, these fixed amounts, are arrived at. In that case a contractor is given the contract and his head office is many miles, perhaps hundreds of miles, away. He has to bring machinery; he has to bring certain of his people and a good deal of equipment. Freight is incurred to bring all that in. Is that something which goes into the fixed amount calculation? And what else is there that goes into the fixed amount calculation? Obviously, recompense to the contractor for his overhead and his services. That must all go in. But what a carping public is always ready to seize on, I think, is the opportunity, in calculating that fee, in calculating that fixed amount, to make a good deal of profit which it probably is not the intention of the government should be made.

At the time of the last victory loan it was commonly said all around that interior of British Columbia that it was in these camps that the money on construction was wasted, and I am persuaded that it had its effect on the contributions put up by the individuals in that loan. Whether that is the situation or not, it seems to me that a synopsis, perhaps, of what the hon. member for Stormont said to-day could well be produced and then spread all across Canada for the people to get into their understanding how these calculations are made.

Mr. CHEVRIER: Will the hon. gentleman tell the committee the name of the camp?

Mr. STIRLING: Vernon.

Mr. MacNICOL: I should like to know something about how contracts are let for the construction of buildings, and whether, after a contract is let, anyone, associated with the contractor or otherwise, can take away materials which are shipped to the contract for the job on hand. For instance last night I was called on the telphone and told by a workman who appears to be working around

the John Inglis Company in Toronto that a certain building has been erected there—whether that is so or not I do not know—and that this one and that one are carting away lumber, nails and other materials. Is that possible if the whole contract belongs to the government? It is quite possible, I suppose, if the government has let the contract and the contractor has the right to move anything he likes; but if all material belongs to the government, can anyone take it away easily? Has the department any knowledge or reports of material placed on jobs for the government being stolen or taken away without the right to take it away?

Mr. HOWE: I have carefully noted the various questions that have been asked, and I would be very glad to reply to them at a convenient time. Perhaps I can bring the situation up to date at three o'clock to-morrow, at the beginning of the sitting, and then make a fresh start with other inquiries. I will, of course, reply at that time to my hon. friend's question. The answer depends entirely upon whether the contract has been placed as a lump-sum contract with a responsible contractor. In that case the payment for the completed structure is a lump-sum amount and the disposal of the material is a matter for the contractor. He undertakes to supply the material and the labour and furnish the building according to specifications, and the government undertakes to pay him a certain lump-sum amount for doing so. I am under the impression, without having reviewed the situation recently, that all the buildings of John Inglis have been lump-sum contracts, in which case the contractor is responsible to his own pocket-book for the material he puts on the job. I am not sure of that, but I will get the facts to-morrow and look into it. There are two or three types of contracts, and it is hard to discuss contracts generally without knowing the particular one about which information is requested. Most of the contracts are unit price contracts which are in effect lump-sum contracts where the contractor is responsible for furnishing his own material and carrying out the work on a measurement basis, and there are other contracts, the cost plus fixed fee—

Mr. MacNICOL: In the case of the cost-plus contract anyone stealing material—

Mr. HOWE: —is stealing government material.

Mr. MacNICOL: That would be theft.

Mr. HOWE: Yes.

Mr. MacNICOL: And if particulars are given the minister of a theft of that kind—

Mr. HOWE: We will prosecute immediately.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Wednesday, June 16, 1943

The house met at three o'clock.

MADAME CHIANG KAI-SHEK

ADDRESS TO MEMBERS OF THE SENATE AND OF THE HOUSE OF COMMONS TO BE PRINTED IN OFFICIAL REPORT OF DEBATES

Right Hon. W. L. MACKENZIE KING (Prime Minister): I am sure the house will wish to have as part of the permanent records of its proceedings the historic address which was delivered in this chamber this morning by Madame Chiang Kai-shek. I have spoken to my hon. friend the leader of the opposition (Mr. Graydon), and he has kindly consented to second a motion to this end. I therefore move, seconded by Mr. Graydon:

That the address of Madame Chiang Kai-shek, delivered before the members of the Senate and of the House of Commons of Canada in the chamber of the House of Commons this morning, and the record of the morning's proceedings, be included in the *House of Commons Debates* and form part of the records of this parliament.

Mr. M. J. COLDWELL (Rosetown-Biggar): Could not the several addresses be included in the record? I think for example the address of the Prime Minister and particularly the addresses of their honours the Speakers of both houses, should be included.

Some hon. MEMBERS: Hear, hear.

Mr. MACKENZIE KING: I thought "the record of the morning's proceedings" would be broad enough to include all that my hon. friend had in mind.

Motion agreed to.

PUBLIC ACCOUNTS

CONCURRENCE IN THIRD REPORT OF STANDING COMMITTEE

Mr. W. A. FRASER (Northumberland, Ont.) presented the third report of the standing committee on public accounts, and moved that the report be concurred in.

Hon. R. B. HANSON (York-Sunbury): I have no objection to this motion, but I should like to point out to hon. members that if this report is concurred in it establishes a precedent, and there can be no objection raised if other contracts are investigated

under similar circumstances. If the contract referred to in this report is investigated, then we may claim the right to have other contracts investigated.

Mr. MACKENZIE (Vancouver Centre): It means that the committee has the right to ask the house for permission. The house is free to take any action it chooses.

Mr. HANSON (York-Sunbury): I make the observation with a view to notifying hon. members that if this report is concurred in, then hon. members are free to ask that other contracts—with the approval of the house, if you wish—shall be investigated.

Mr. MACKENZIE (Vancouver Centre): That is for the committee to decide.

Motion agreed to.

QUESTIONS

(Questions answered orally are indicated by an asterisk).

SUGAR FOR MANUFACTURE OF SOFT DRINKS, WINE AND CANDY

Mr. NICHOLSON:

1. How many pounds of sugar have been used by commercial firms in each of the last five years for, (a) making of soft drinks; (b) making of wine; (c) making of candy?

2. How many pounds of sugar have been used by housewives for canning purposes in each of the last five years?

3. What is the estimated quantity of sugar to be used in 1943 by commercial firms for, (a) making of soft drinks; (b) making of wine; (c) making of candy?

4. What is the estimated quantity of sugar to be used in 1943 by housewives for canning purposes?

Mr. ABBOTT:

1. The wartime prices and trade board has gathered information respecting the amount of sugar used by commercial firms since 1941. Prior to that year estimates were made by the Dominion Bureau of Statistics but these are not on a comparable basis.

	(a) Soft Drinks refined sugar (lbs.)	(b) Wine raw sugar (lbs.)	(c) Candy refined sugar (lbs.)
1941...	91,724,610	12,962,988	65,489,836
1942...	73,075,217	12,077,275	51,222,345

[Mr. R. B. Hanson.]

The consumption of sugar by industrial users has been restricted since July 1, 1942, the general quota for manufacturers of soft drinks and candy being not more than 70 per cent of the quantity used in the corresponding quarter of 1941, although this quota is subject to adjustment at the discretion of the administrator in case of hardship. Allocation for wine making is on a somewhat different basis, because usage in this industry relates to the crop year rather than to the calendar year. Of the total of 12,077,275 lbs. of sugar used in 1942 5,368,552 lbs. were used in connection with the final processing of the 1941 grapes. The allocation of sugar for the 1942 crop was based on somewhat less than 70 per cent of the average grape tonnage of the three preceding crops used in the making of wine.

2. No statistics are available respecting the amount of sugar used by housewives for canning purposes during the years 1938-41. During 1942 housewives applied for and received 106,000,000 lbs. for home canning, which, in view of restricted supplies of commercially canned fruits and jams, is probably the largest quantity of sugar ever used for this purpose.

3. (a) 66,000,000 lbs.
   (b) 9,100,000 "
   (c) 48,000,000 "

4. 100,000,000 lbs.

TRUCKS DELIVERING SOFT DRINKS

Mr. NICHOLSON:

How many trucks in Canada delivering soft drinks exclusively have been permitted to operate beyond the thirty-five-mile limit?

Mr. ABBOTT: The total number of trucks in Canada, used for delivering soft drinks exclusively, for which permits to operate beyond the 35 road mile limit prescribed in section 3 of administrator's order No. A-314 of the wartime prices and trade board were outstanding and current on 3rd June 1943 is 222.

POST OFFICES WITH REVENUES UNDER $25

Mr. NICHOLSON:

1. How many post offices in each province in Canada reported for the last fiscal year revenue, (a) of less than $10; (b) between $10 and $25?

2. How many post offices in each category are situated less than five miles from the nearest post office?

Mr. MULOCK:

	Revenue under $10.00	Revenue from $10.00 to $25.00
Nova Scotia	6	74
New Brunswick	3	39
Prince Edward Island	—	1
Quebec	7	46
Ontario	5	29
Manitoba	—	11
Saskatchewan	3	37
Alberta	—	22
British Columbia	—	8
North West Territories	1	3
Yukon	—	2
Total	25	272

FARM LOAN BOARD—REPAYMENTS BY FARMERS

Mr. FONTAINE:

What were the number and amounts of the repayments made by farmers, in each province, who obtained loans from the Canadian farm loan board, during the years 1938, 1939, 1940, 1941, and 1942?

Mr. ABBOTT: Statement by provinces of the total number of repayments together with amount of repayments received on account of principal and interest of farm loan mortgages for the fical years ended March 31st as shown hereunder:

Fiscal year ended March 31st	Repayments Number	Amount
British Columbia—		
1938	1890	$ 166,671
1939	1820	154,376
1940	1984	178,018
1941	2237	207,510
1942	2435	211,323
1943	2383	282,730
Alberta—		
1938	3411	522,099
1939	4015	601,390
1940	4953	632,935
1941	6138	713,317
1942	6914	862,674
1943	7438	965,126
Saskatchewan—		
1938	1740	209,305
1939	2472	339,001
1940	4272	764,113
1941	4921	658,860
1942	6260	809,399
1943	7170	870,034
Manitoba—		
1938	2177	464,393
1939	2291	390,130
1940	2887	456,405

SUGAR CONSUMPTION

Mr. PURDY:

1. What was the approximate quantity of sugar consumed in Canada during the calendar year 1942?

2. What percentage of this amount was, (a) produced in Canada; (b) imported?

Mr. ABBOTT:

1. 898,821,003 pounds.

2. (a) 25·5 per cent. (b) 74·5 per cent. The percentage of beet sugar distributed in Canada in 1942 considerably exceeded the production due to the distribution of a substantial carry over from the previous year. The average yearly production of beet sugar would not exceed approximately 20 per cent of the total annual consumption.

SELECTIVE SERVICE—PRIORITY LIST OF FIRMS OR INDUSTRIES

Mr. MacNICOL:

1. Is there a priority list or classification of industries or firms for the guidance of national selective service in placing workers?

2. If so, who prepared this list?

3. If a committee, who were the members of the committee?

4. Is priority given one branch of non-war industry over another?

5. Were representatives of various industries consulted?

6. What is the order of priority?

Mr. MITCHELL:

1. Yes.

2. The list was prepared by national selective service, after consultation with the wartime prices and trade board and the Department of Munitions and Supply.

3. The labour priorities schedule is continually being reviewed and revised by an informal interdepartmental committee of representatives of the wartime prices and trade board, the Department of Munitions and Supply and national selective service. The committee is presently comprised of the following persons: Sheldon Ross (Chairman), Acting Chief, priorities division, national selective service. T. H. Robinson, Assistant Director, national selective service. J. G. Fogo, associate coordinator of controls and labour liaison officer, Department of Munitions and Supply. R. G. Barclay, assistant director, employment service and unemployment insurance branch, Department of Labour. H. R. Kemp, economic adviser, Economic Research Branch, Wartime Prices and Trade Board. G. G. E. Raley, director of general supplies, supply division, wartime prices and trade board.

4. Yes.

5. No.

6. The detailed order of priority is confidential and is continually changing as the war production programme requirements vary. Generally speaking, the highest priority is assigned to industries, activities or establishments primarily and directly engaged in the production of combat materials and implements of war. This group is followed by other industries considered to be highly essential to the promotion and support of war production, to the supply of the armed forces, and to the maintenance of civilian economy. Next in order of priority are those industries which are considered important to civilian life, contributory to war production but not vital to the war effort. The lowest priority group are those for which no labour priority is considered to be justified under present circumstances.

[Mr. MacNicol.]

QUESTION PASSED AS ORDER FOR RETURN

RURAL MAIL CARRIERS

Mr. SHAW:

1. How many rural mail carriers have been appointed since January 1, 1942?

2. How many such appointments were made, (a) by the mere renewal of existing contracts; (b) following the acceptance of competitive bids; (c) in any other manner?

3. How many contracts granted under 2 (c), guaranteed payments in excess of two hundred dollars per annum?

4. How many contracts were renewed at a higher rate of payment than that guaranteed in the original contract?

5. What steps are taken to ascertain the probability of any individual, who tenders a bid for rural mail delivery, being able to render essential service for the amount of his bid?

6. What are the arrangements with respect to any rural mail carrier who requests leave of absence to enlist in the armed forces?

MOTIONS FOR PAPERS

INTERNMENTS—CAMILLIEN HOUDE

Mr. LACOMBE:

For a copy of all letters, telegrams, correspondence, memoranda, evidence, reports and other documents in the possession of the Department of Justice, concerning the appeal of Mr. Camillien Houde, heard on the 28th May, 1943, by an advisory board at Fredericton.

Mr. MACKENZIE KING: This motion was called on Monday last, when the hon. member was not in his seat. At the time the Minister of Justice (Mr. St. Laurent) requested that the motion be allowed to stand until the hon. member was here. To-day it happens that the Minister of Justice is necessarily absent from the house, and I would therefore ask the hon. member to allow the motion to stand until the Minister of Justice is present. He wishes to speak to the motion.

Mr. LACOMBE: I understand there is good reason for the minister's absence, and I would ask that the motion stand.

Mr. SPEAKER: Stands.

NATIONAL FINANCE COMMITTEE MEETINGS

Mr. DORION:

For a copy of the minutes and report of the meetings of the national finance committee, which took place in Ottawa on December 9, 1936, and the following days, under the chairmanship of the Minister of Finance.

Mr. ILSLEY: Mr. Speaker, the minutes of the meetings of the national finance committee which took place in Ottawa on December 9, 1936, and the following days, under

the chairmanship of the Minister of Finance were understood to be for the guidance and information of the members of the committee only, and not to be made public.

I have here the first volume of the minutes, and I would quote a few lines from it to bear out my statement:

Hon. Mr. Duplessis: This is a family gathering. We should keep our meetings closed, unless the committee decides otherwise.

Hon. Mr. Dunning: We cannot of course prevent the press from stating what they want to state. The object of having a stenographic report is solely for the convenience of members of this committee, after they return home. It cannot, of course, be completely typed while each meeting is on.

The procedure and the rule agreed on at that meeting was the same as that agreed on at other meetings, several of which were held, between the Minister of Finance and the provincial treasurers. On no occasion, so far as I can ascertain or recollect, were the minutes regarded as anything other than a record for the convenience of the persons who attended the conference. Indeed it was agreed at the meetings that they were not to be made public, but that press statements were to be given out following each meeting. Under those conditions I must take exception to the production of minutes on this motion. If the hon. member would like to have the press statements, which I presume are not adequate for his purposes, there would be no objection to trying to get them together and producing them. But I must take the position, in view of the arrangement with the provinces, thoroughly understood and agreed upon, that the minutes themselves are not producible.

Mr. GRAYDON: I would point out to the Minister of Finance that having quoted from a public document such as this—

Mr. ILSLEY: It is not a public document.

Mr. HANSON (York-Sunbury): Oh, yes.

Mr. GRAYDON: Just a minute; I have not finished.

Mr. HANSON (York-Sunbury): It is official.

Mr. GRAYDON: In any event it is an official document, and in my opinion comes within the rule which states that when any part of a document such as this has been quoted from the whole document must be tabled. Whatever grounds the minister had to sustain his objection are, I suggest, now swept from under him. I think the minister must now table the document.

Mr. MACKENZIE KING: Surely my hon. friend is raising a point in the nature of a technicality.

Mr. GRAYDON: The rules cannot be interpreted as technicalities.

Mr. MACKENZIE KING: It must be obvious that in the conduct of public business unless some documents may be regarded as confidential by the ministry it would not be possible on many occasions to have brought out the full information the government may wish to secure. Many statements are made in much greater detail by those giving information when it is known that their statements will be protected, or where it is certain—or even uncertain—that the documents themselves containing these statements may not be called for. I know what the rules are, and my hon. friend, does too. But in this instance I submit it is quite clear, from the minister's statement, that the document should not be tabled, and I hope my hon. friend will not press the objection he has raised, one which I think really is more in the nature of a technical objection.

Mr. GRAYDON: I wish to thank the Prime Minister at least for having confirmed my position with respect to the rules of the house. I should not like him to take the position that by urging that the rules of the house be followed one is raising an undue technicality. As I see it, the rules of the house can scarcely be placed in that category. The Prime Minister also implied that the information furnished would contain what the members of the committee may have said. My reading of the suggested order is that it calls for a copy of the minutes and report of the meetings of the national finance committee. I submit that is a long way from tabling the transcript of evidence showing what had actually happened. This asks for minutes, and I think they come within an entirely different category.

I still urge that the Minister of Finance might have been on safer ground if he had used a different objection. May I add that on one or two other occasions in the house the government has offered similar grounds for refusing to produce reports. Perhaps on those occasions the grounds were not quite as poor as those we have heard to-day. Nevertheless I say the house and the public are entitled to the fullest information respecting matters of this kind. Surely there cannot be anything extremely confidential in national war savings committee minutes. That committee deals with a matter of major importance, namely the financing of part of Canada's war commitments. With due deference for the Prime Minister's position, I hope he will not press the technicality on that.

Mr. ILSLEY: If I have inadvertently stumbled into an obligation to produce this, I

would submit that the only part that I am now bound to produce is the preliminary statement of the finance minister and the treasurers of the provinces, because at the moment the notes taken of the conference and the statements regarding the findings would not be part of the two documents.

Mr. HANSON (York-Sunbury): That is quibbling.

Mr. COLDWELL: I do not think advantage should be taken of a technicality in connection with the tabling of these documents. The matter should be placed on higher public ground than that. It seems to me that when so many meetings of different organizations are taking place, dealing not with government business, not with private business, but with public business, this house has the right to know what takes place at those meetings. This motion should be carried by the house. The time has come when this house should insist that the proceedings or minutes of bodies dealing with business which affects the public should be considered as public documents and that we in this house should have access to them.

Mr. DORION: Mr. Speaker, I should like to have this motion stand, because I have not been able to catch what has been said in the discussion that has taken place. We are away down in this corner and I did not hear the statement of the minister; therefore I ask that the motion stand until I have had an opportunity to read the statement.

Mr. ILSLEY: To complete the record, I wish to state that in my judgment it is not in the public interest to produce these.

Mr. HANSON (York-Sunbury): That is hoisting yourself with your own bootstraps.

Motion stands.

UNEMPLOYMENT INSURANCE COMMISSION—PREMISES OFFERED BY ALEX HOULE, NICOLET, QUE.

Mr. DUBOIS:

For a copy of all correspondence, telegrams, memoranda and other documents exchanged, since February 24, 1943, between the superintendent of the unemployment insurance commission, Nicolet-Yamaska, and the Department of Labour, regarding the premises offered by Mr. Alex Houle, of Nicolet.

INTERPRETATION OF P.C. 6072

Mr. KNOWLES:

For a copy of order in council P.C. 6702, dated August 26, 1941, together with a copy of the interpretation of said order in council made by treasury board on October 23, 1941; also for a copy of any memoranda or statements explaining the aforesaid interpretation.

[Mr. Ilsley.]

SELECTIVE SERVICE—FREEZING WORKERS TO THEIR JOBS

Mr. KNOWLES:

For a copy of all orders in council, also any regulations, directives or memoranda relating to or setting out the powers of national selective service officers in the matter of freezing workers to their jobs; also for a copy of any special regulations, directives or memoranda in the aforesaid matter issued to the officials of national selective service at Winnipeg.

OLD AGE PENSIONS—SASKATCHEWAN

Mr. NICHOLSON:

For a copy of all correspondence exchanged between the Saskatchewan provincial government and the federal government since January 1, 1943, regarding increasing old age pensions in the province of Saskatchewan.

Mr. SPEAKER: Is it the pleasure of the house to adopt the motion?

Some hon. MEMBERS: Carried.

Mr. SPEAKER: Carried.

Mr. HANSON (York-Sunbury): On previous occasions the government has taken the stand that communications between the provincial governments and this government are privileged, but this motion has passed to-day without any opposition from the government ranks. Where are we now?

Mr. MACKENZIE KING: My hon. friend can rest assured that there will be communication with the provincial government before the documents are tabled.

Mr. HANSON (York-Sunbury): It is an order of the house now.

TRANSATLANTIC AIR SERVICE

ANNOUNCEMENT OF INAUGURATION OF WAR SERVICE FOR MAILS AND PASSENGERS

On the orders of the day:

Hon. C. D. HOWE (Minister of Munitions and Supply): Mr. Speaker, I desire to inform the house regarding the establishment of a transatlantic air service. Arrangements have been completed for the immediate establishment of a Canadian government war-time transatlantic air service to carry mail to and from the Canadian armed forces in the British isles and to transport members of the Canadian armed forces and of Canadian government departments and technicians engaged in the production of war materials. The new war service is not a commercial or a permanent one. It will carry no fare-paying passengers. Space on the aircraft from Canada will be

allocated by the deputy minister of transport in Ottawa; space on aircraft westward by the Canadian high commissioner in London.

The growing strength of the Canadian armed forces overseas and their increasing activities have made it necessary to establish this quick and effective means of communication with the United Kingdom for men and materials. The need for a speedy and regular troops air mail service is particularly pressing. Over a quarter of a million members of the Canadian armed forces are now in the United Kingdom. During the past year, due to lack of space on aircraft, they have unfortunately not been receiving mail regularly and quickly. It is expected that the initial flight of the new service will occur early in July.

Mr. GRAYDON: I concur in what the minister has said with respect to the difficulty of dealing with air mail for those in the armed forces overseas. Does the minister contemplate that this service will take care of all air mail traffic for the forces overseas?

Mr. HOWE: It is intended that the service will take care of all air mail for the armed services, as well as carrying official passengers who may be travelling on government business. It may not be able to do so immediately, but planes will be added until the entire burden can be carried.

[*Later*]:

Mr. HOWE: May I qualify the reply I gave to the hon. leader of the opposition. I said that all mail would be taken care of, but what I intended to say was that all airgraph mail and all armed forces letters will be taken care of. It is not believed that we can at any time take care of parcels.

Mr. GRAYDON: It was just letters I was referring to.

LABOUR CONDITIONS

PROVISION OF RECREATIONAL FACILITIES FOR WAR WORKERS

On the orders of the day:

Mr. G. K. FRASER (Peterborough West): Mr. Speaker, I should like to ask the Minister of Labour if he is able to make a statement with regard to recreational facilities for war workers. I sent him a note on Monday and the minister said he would make the statement to-day.

Hon. HUMPHREY MITCHELL (Minister of Labour): I should like to indicate the general direction in which we are moving in connection with this matter. We shall be in touch with the provincial governments almost immediately asking for their cooperation in promoting recreational facilities for war workers on a shareable cost basis. The provinces, where the need is urgent will be first approached, but all provinces will be offered federal cooperation. I do not think I should go any further at the moment until details have been worked out with the provinces.

Mr. FRASER (Peterborough West): How soon will that be?

Mr. MITCHELL: Immediately.

FARM MACHINERY

COLLECTION OF MACHINERY NOT IN USE FOR DISTRIBUTION TO RELIEVE SHORTAGE

On the orders of the day:

Mr. J. G. DIEFENBAKER (Lake Centre): I should like to direct a question to the Minister of National War Services having to do with the present shortage of farm machinery. A campaign is under way in the United States to collect usable farm machinery not in use and to assemble it under government supervision. It is then distributed amongst the farmers in need of it. Has consideration been given to a similar campaign in Canada? I realize that the quota on farm machinery has been increased but at the same time there will still be a shortage and it could be met in this way.

Hon. L. R. LaFLECHE (Minister of National War Services): Mr. Speaker, I have not heard anything about the subject mentioned by the hon. member, and I am not quite certain that it would properly come under National War Services, but I shall look into the matter immediately.

MOBILIZATION ACT

INQUIRY AS TO CHANGE IN THE REGULATIONS REGARDING STUDENTS

On the orders of the day:

Hon. R. B. HANSON (York-Sunbury): May I ask the Minister of National War Services whether a change has recently been made in the regulations under the mobilization act regarding the definition of students, or is that in process of change? Just what is the present status? Perhaps the question should be directed to the Minister of Labour. If he cannot answer offhand perhaps he will be good enough to answer to-morrow.

Hon. HUMPHREY MITCHELL (Minister of Labour): I shall be glad to look into it and give an answer to-morrow.

DAIRYING INDUSTRY

EFFECT OF RATIONING UPON THE PRODUCTION OF WHEY BUTTER

On the orders of the day:

Mr. G. K. FRASER (Peterborough West): Mr. Speaker, last week the parliamentary assistant to the Minister of Finance stated that he would make a statement this week in regard to whey butter.

Mr. D. C. ABBOTT (Parliamentary Assistant to the Minister of Finance): I hope to be able to make a statement within the next day or two.

THE COMMUNIST PARTY

HOLDING OF A NATIONAL CONVENTION

On the orders of the day:

Mr. LIGUORI LACOMBE (Laval-Two Mountains) (Translation): Mr. Speaker, I wish to direct a question to the Minister of Justice (Mr. St. Laurent) or, in his absence, to his parliamentary assistant (Mr. Jean).

Even though the communist party has been banned by the Minister of Justice, has the minister authorized or will he permit the holding of a national convention by that party on August 21 and 22 next?

Mr. MACKENZIE KING: The question will stand as notice.

NORTHWEST FIELD FORCE

INQUIRY AS TO PENSION OR OTHER ASSISTANCE

On the orders of the day:

Mr. T. L. CHURCH (Broadview): I do not wish to delay the proceedings more than one minute or two, but I have had a request from several members on all sides of the house that fifteen or twenty minutes be allotted some day to the discussion of a pension or some form of assistance to the members of the Northwest field force, many of whom are in very bad circumstances.

Hon. IAN A. MACKENZIE (Minister of Pensions and National Health): Mr. Speaker, item 239 of the estimates deals with pensions to the men of the Northwest rebellion. I think that will be the appropriate occasion to discuss this matter further.

GALLUP POLL

INQUIRY AS TO METHODS OF VOTING

On the orders of the day:

Mr. T. L. CHURCH (Broadview): Mr. Speaker, I wish to ask the ministry a question about this mischievous Gallup poll which is causing a great deal of trouble. Who are the voters in the Gallup poll? Do any members of the House of Commons vote in these polls? They are causing a great deal of dissension and disunity in wartime in this country. I would like to know whether the defence of Canada regulations can be applied to them. Where is the censor? Canada is not going to be talked out of the British empire; Canada will have to be fought out of it.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Tuesday, June 15, consideration in committee of a resolution to grant to his majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the Chair.

MUNITIONS AND SUPPLY

The CHAIRMAN: Shall item 1 carry?

Mr. PERLEY: The minister was going to answer some questions.

Mr. HOWE: I was asked for a break-down of this item. The total vote for additions and extensions to plants is $195,000,000, of which $150,000,00 is a revote of moneys voted last year for projects which were not finished within the year. The vote therefore for new projects to be undertaken in the year 1943-44 is $45,000,000. There is no large outstanding item in the list, but we are constantly being called upon to convert plants from one type of production to another and to increase the capacity of existing plants. The amount of $45,000,000 is the estimated cost of our requirements in that direction for the present fiscal year.

Mr. HANSON (York-Sunbury): Does the minister call that a break-down? That is just an announcement. What is wanted is a break-down such as we had from the other departments.

Mr. HOWE: It is impossible to give a break-down into particular items, because this is a war situation and we never know in advance what may be required.

Mr. HANSON (York-Sunbury): But the $45,000,000 is not an arbitrary figure. It must be based on estimates put down in black and white, and that I think is what is asked for.

Mr. HOWE: I can give a break-down of last year's vote in this way. For plants owned and operated by the crown we appropriated $18,117,291.01 and spent $12,276,866.62; for government-owned companies we appro-

priated $31,794,329.02 and spent $13,762,413.83; for government-owned plants operated by private companies we appropriated $398,848,051.34 and spent $295,742,378.77; for government-owned aircraft plants we appropriated $7,282,769.37 and spent $4,394,590.64.

Mr. DIEFENBAKER: On which plants were those expenditures made?

Mr. HOWE: They are overhaul plants chiefly, such as the plant operated by Canadian Pacific Air Lines at New Westminster; the overhaul plants on the prairies at Winnipeg, Moose Jaw and Prince Albert; overhaul plants in Ontario, of which there are several, and in the maritime provinces, where there are at least two or three.

Mr. DIEFENBAKER: It did not cover any kind of aircraft plant except overhaul plants?

Mr. HOWE: That is right. Then for additions to government-owned plants operated by private companies we appropriated $53,170,543.50 and spent $21,730,172.94; for government-owned shipyards we appropriated $2,000,000 and spent $1,725,695.30; for government-owned extensions to private shipyards we appropriated $20,824,325.78 and the actual expenditure was $12,221,543.49, which brings the total appropriations to $532,037,310.02, and the total expenditures to $361,853,661.59.

Mr. PERLEY: I understand that the minister is answering several questions now. He stated last night that he intended to answer them.

Mr. HOWE: Yes, I am going to answer a great number of questions as rapidly as I can get along with them.

Mr. HANSON (York-Sunbury): I suggest to the minister that this is a huge commitment and a huge expenditure, $532,000,000 being allotted and $368,000,000 actually expended. The figures which he gave to us are the sum totals only of a substantial number of items, and, they being so large, the committee is entitled to much fuller and more definite information than we now have. I have no doubt the minister has it in front of him. It would be of great advantage if we could know about the spread of this $368,000,000, where it went to, what concerns got it. I have in mind one or two companies which received large amounts of capital assistance but have perhaps made very little progress in production. It is advisable, and I think it would be wholly in the public interest, that before we pass these items we have full information with respect to these allotments of millions.

Mr. HOWE: Well, Mr. Chairman, these items are tabled periodically. The last list of capital assistance to Canadian industries was tabled early in the session and showed the capital assistance given as at December 31, 1942, and is an item by item break-down.

Mr. HANSON (York-Sunbury): That was six months ago.

Mr. HOWE: It is now being brought up to date. It is a great deal of work. But I should be glad to table it as of July first, or we can do it as of the first of June, if that would help hon. members.

Mr. HANSON (York-Sunbury): The house was not in session on the 31st of December.

Mr. HOWE: As of the 31st of December.

Mr. HANSON (York-Sunbury): When was that tabled?

Mr. HOWE: It was tabled early this session in June.

I was asked to give a statement of the reasons for selection of petroleum instead of alcohol as the base for the production of synthetic rubber. As hon. members know, the rubber crisis came on us very suddenly. At the fall of Singapore, or when Singapore was threatened we had occasion for the first time to be concerned about our stocks of rubber. Fortunately we had fairly large stocks on hand, and even larger stocks on order. When the fall of Singapore occurred we had some 21,000 tons in Singapore and Penang. Of course we gave that up for lost, but strangely enough, practically all of that rubber arrived in Canada in due course, some of it after months. One boat had been in Penang harbour loading when the attack on Penang harbour came; it arrived months later with something like thirty or forty shell holes in the hull. It limped along without communicating with anyone and worked its way back into Halifax harbour. That, as I remember it, was a boat owned by the Canadian National Steamships. Other rubber was put on small boats, any sort of craft, and sent to any destination, but it was all billed to Canada and eventually practically all of it found its way here. However, we had to take immediate stock of the situation, and if we were to continue to play a useful part in the war we had to take immediate steps to find a substitute for natural rubber. Our neighbours to the south were in the same position. We pooled our stocks of rubber and we pooled the information as to the best move to make to meet the situation when existing stocks of rubber were to be exhausted. It was decided by consultations in which the best technical men of the United States, joined with the best technical men of Canada, that the only satisfactory sub-

stitute for natural rubber is the type of rubber known as buna-S rubber. It is a compound of two elements, butadiene and styrene. The process is first of producing the two elements that make up that rubber, and then for polymerizing the two into artificial rubber. The best industrial engineers in the United States were engaged to engineer the necessary plans. Arrangements were made that all patents held in the United States for the process would be pooled and made free to both governments for the duration of the war and a certain period thereafter. It was the combined judgment of the two countries that petroleum as a base for butadiene would be the cheapest and most satisfactory.

At the time the decision had to be made, most of the United States programme for production of buna-S synthetic rubber was predicated on use of petroleum as a base stock for the production of butadiene. In order to get the project under way with minimum delay, as part of the over-all north American programme and obtain the necessary priority ratings for equipment and materials which were not procurable from Canadian sources, it was considered advisable to use existing plans, designs, drawings and specifications which had been prepared and developed by the Rubber Reserve Company of the United States.

Extensive development work in the processes involved in the production of butadiene from a petroleum base had been made in the United States, and Canada was offered the use of all information obtained on the same basis as similar projects in the United States.

Canada was given the full benefit of the patent pooling agreements which had been made by the Rubber Reserve company with the companies and industries in the United States whom it was felt were best qualified to help the government overcome the intricate problems which arose out of the manufacture of synthetic rubber on the large scale required for the war programme for the united nations. Under these agreements the processes covered by the valuable patents owned by the Standard Oil Development company covering the manufacture of buna-S and butyl rubber and butadiene, the principal basic material in the manufacture of buna-S, became royalty free for the period of the emergency. A certain percentage—25 per cent—of the materials and equipment required was not obtainable from Canadian sources, and by following the United States programme Canada was able to obtain much specially designed equipment by merely placing duplicating orders with the fabricators. In fact the main Canadian plants are duplicates of the corresponding United States plants.

[Mr. Howe.]

We had at that time no other choice than to go to the United States for the engineering ability and technical skill required in the construction of the necessary plants, and the engineering firms whose services were available were mainly engaged on the petroleum base process.

The main decision made in Canada was to erect a plant capable of producing 34,000 long tons of buna-S per annum and the two basic materials required for its manufacture, namely, butadiene and styrene. Butadiene could be produced either from alcohol or from a petroleum base. The survey showed:

(a) That the total facilities for the production of alcohol in Canada would produce less than one-third of the alcohol that would be required to provide the butadiene equivalent of the rubber required for the Canadian war programme.

(b) That the combined cost of building additional facilities for the production of alcohol and the cost of building plants for the manufacture of butadiene from alcohol, were greater than the costs of building a plant capable of producing a similar quantity of butadiene from petroleum.

(c) That in the cracking processes involved in recovering butadiene from petroleum we could recover ethylene, the principal basic material required for the manufacture of styrene, and could also recover isobutylene, the very cheap basic material used in the manufacture of butyl rubber.

(d) That we could procure the butadiene, ethylene and isobutylene required for the production of 34,000 long tons of buna rubber and 7,000 long tons of butyl rubber without materially detracting from our normal gasoline and oil supplies.

It is generally assumed, I think, that by using an oil base for the production of rubber, the oil so used must be subtracted from the oil available for other purposes in Canada. That is not correct. The part of the oil that is used consists of the lighter fractions that are taken off in the cracking process, and after the requirements of rubber have been obtained there is just as good fuel oil left from the petroleum as would have been obtainable had the lighter fractions not been taken from the oil. The only difference that may be noted in the oil, after the light fractions have been taken out, is that it may not be quite as active in starting a car. The lighter fractions help to liven up the oil in starting a car, but apart from that there is just as good a product, practically as good a gasoline.

(e) That we had in Canada an oil refinery fed by pipe line which would enable us to centralize the operations in one point and be assured of continuous production, whereas production of butadiene and styrene from an alcohol base would be contingent upon having a ready supply of tankers and tank cars.

The projected plan provided a self-contained economical and efficient operation for the following reasons:

(a) The best available location selected provided an adequate area adjacent to one of the largest refineries in Canada, served by water, rail and highway transportation and at a relatively short distance from the plants of the Canadian rubber industry engaged in the production of tires, which will consume about 85 per cent of the synthetic rubber to be produced.

Mr. MacNICOL: How does rubber made from butyl compare with regular rubber in mileage and speed?

Mr. HOWE: The last word about buna-S is not known. It has been produced for only a very short time. Intensive experiments are now going forward and various fabrics are being experimented with but it is believed, from tests made to date, that buna-S rubber with nylon fabric will make a tire that is at least ninety-five per cent as long-lived as the best tire from natural rubber, and it is believed that with further experimentation and the further development of the art a better tire can be produced from buna-S rubber than can be made from the natural product.

Mr. MacNICOL: Forty miles an hour would be quite safe?

Mr. HOWE: Oh, yes; it is a first-class tire.

(b) By extending the cracking facilities of one of the largest refineries in the country, we could obtain the desired quantities of three gases for which a limited use had previously been found, namely, ethylene, isobutylene and butylene, on a relatively low cost basis.

(c) By erecting styrene, butyl and buna-S copolymer plants nearby, these gases can be transferred by pipeline without the costs, complications, difficulties and dangers involved in their transportation by tank cars.

The problems of developing organizations to produce synthetic rubber in satisfactory amounts and qualities and of procuring or training the necessary operating personnel for the various plants in the Canadian project could, for obvious reasons, best be met and solved by following the main lines of the United States programme.

The production of butadiene from a petroleum base did not preclude the possibility of using an alcohol base at some subsequent date, should it be found economical or advisable to do so, but at the present time the low cost of producing butadiene from butane, derived in the oil cracking process, as compared with its cost of production from grain definitely rules out the latter.

It is estimated that the cost of conversion alone in the production of industrial alcohol is approximately 10 cents to 12 cents per gallon from grain. Taking grain at, say, 80 cents a bushel, the cost of production for industrial alcohol from grain would run from 50 cents to 60 cents a gallon. If industrial alcohol is produced from whisky distilleries, the cost may range over 80 cents per gallon. For instance, in order to get our styrene plant into production as early as possible, we have found it advisable to purchase a limited quantity of ethyl alcohol for this purpose. The cost of this material laid down at the plant is 88 cents per gallon and, according to our information, this high cost will have the effect of increasing the cost of finished styrene by about 1,000 per cent. It is estimated that a United States gallon of alcohol yields approximately 2·2 pounds of butadiene and that the theoretical yields of butadiene from alcohol and butane respectively are 59 per cent and 93 per cent by weight, and that the cost of producing butane from industrial alcohol is about three times the cost of production from butane.

In order to equalize these costs, the purchase price of grain would have to be 25 cents to 30 cents per bushel. This is, perhaps, one of the reasons the farm bloc in the United States is not pressing further for the use of grain in the production of butane. Under present conditions it can be applied to many other purposes which will yield the farmer a much higher price.

That is the whole story about the use of wheat for industrial purposes. It can be used for the manufacture of rubber and for other industrial purposes, but to be used in competition with other available substances it must be sold at a very low price, and I am sure no hon. member would wish to encourage the use of wheat which would be predicated on a cost at point of use of from 25 cents to 30 cent a bushel.

In considering Canada's project for the provision of buna-S and butyl synthetic rubbers, it should be borne in mind at all times that the Canadian government owns and controls (a) the plant investment; (b) the operation of the plants and (c) the products and by-products

of the plants. Private interests have only come into the project because the government has enlisted their knowledge, their technical skill and the results of their extensive research and development work. In other words there are no private strings on the Polymer plant at Sarnia, which is wholly owned by the government.

Mr. BENCE: In connection with the very large quantity of industrial alcohol being manufactured at the present time in the various distilleries of eastern Canada, most of which I think is being manufactured from wheat, could the minister tell the house what grade of wheat is being used and what that industrial alcohol is costing per gallon?

Mr. HOWE: I could not say what grade of wheat is used; I presume it is a low grade. Every distillery in Canada is running at full capacity to-day producing industrial alcohol from wheat. As I say, we bought some alcohol from our plants which cost us 88 cents per gallon laid down at Sarnia, but I believe the price at the distillery is somewhere between 72 to 78 cents a gallon.

Mr. EVANS: The minister stated a moment ago that the price of wheat in this connection would be 25 cents a bushel. Is that at the plant or on the farm?

Mr. HOWE: That is delivered at the plant. Perhaps it will be of interest to hon. members concerned with this problem if I table the orders in council having to do with the Polymer project. Therefore I table copies of orders in council P.C. 2369, P.C. 2799 and P.C. 4252.

Mr. DONNELLY: Could the minister tell us about how much alcohol is being made in Canada now?

Mr. HOWE: The estimated production for the year 1943 is 14,000,000 gallons.

Mr. DONNELLY: And that will require about seven million bushels of wheat?

Mr. HOWE: Yes, about that.

Mr. BENCE: Will the minister give some indication of the expansion in connecton with the plants at Sarnia? I believe the one plant is to be ready this fall. Could the minister tell the committee how many plants there will be, and whether it is the intention of the administration to expand production in future?

Mr. HOWE: I have given the estimated production of the plant. Present indications are that the construction of the styrene plant will be far enough advanced to commence the manufacture of ethylene from alcohol by July 1 next, and of styrene at the rate of six thousand tons per year about two weeks thereafter. In other words the styrene plant will be in full operation, we expect, by the middle of July. The copolymer plant can only operate if we are able to secure butadiene from the United States; the butadiene plant will be the last to be finished. If we can obtain supplies of butadiene from the United States we should be operating at about twenty-five per cent of capacity and manufacturing buna-S rubber by the end of August.

Mr. MacNICOL: At how much per pound? What is the estimated cost per pound to the government?

Mr. HOWE: I do not think anyone has an estimated cost to-day. The first large scale operation for the manufacture of butyl rubber came in only about six or seven weeks ago, and it is not operating at full capacity to-day. It will be remembered that there was never a pound of butyl rubber made outside of laboratories or pilot plants, before the fall of Singapore. We are developing a new process and building a plant to carry it out. We are hoping that the price of buna-S rubber will be competitive with that of natural rubber over the average of the years, and perhaps better than that. We think perhaps we can get a better product at a competitive price, but that has yet to be proved.

Mr. BENCE: Do you propose to expand further?

Mr. HOWE: No.

Mr. DONNELLY: You are going to get your styrene by cracking oil?

Mr. HOWE: One component comes from cracking oil, but there are other components which come from nearby plants. I believe they are by-products of the steel industry; I have forgotten just what they are. Styrene is quite a complicated product, though; the one ingredient, ethylene, comes from the cracking of oil. I may add, Mr. Chairman, that the two butadiene units now in the course of construction have been delayed owing to difficulties in securing certain equipment, but it is expected that the A unit, 15,000 tons per annum, will be complete some time in September and the B unit, 15,000 tons per annum, some time in October. So that we should have our plant completed by November 1, and in operation on a full scale basis. The plant at Sarnia was designed to meet the full war needs of Canada, and we expect it to do so. It will not meet the peace-time needs in addition, but after the war is over it will wholly meet the

peace-time needs, with some allowance for industrial expansion. As I say, however, the government is investing between $40,000,000 and $45,000,000 in the production of artificial rubber, and when this programme is finished the government's expansion in that direction will be finished also. If any private industry cares to carry on then, we shall have no objection.

Mr. GRAYDON: What is our usual peace-time consumption of rubber in Canada, does the minister happen to remember?

Mr. HOWE: Yes, it is in the vicinity of thirty thousand tons a year of crude rubber, perhaps between thirty and thirty-five thousand tons. We are making thirty-seven thousand tons of buna-S rubber in this plant and eight thousand tons of butyl rubber. I might add that butyl rubber is not suitable for the outer casings of tires, since it does not withstand abrasion, but it is more suitable than buna for certain other commercial uses. Each is a very valuable rubber for different purposes. Both are chemically pure, and therefore better suited to a great many uses than natural rubber.

Mr. GRAYDON: Then we shall be self-contained so far as rubber is concerned?

Mr. HOWE: Yes.

Mr. GRAHAM: Some few weeks ago the Liberal members from Saskatchewan, who are deeply interested in this question, arranged to meet certain officials of the national research council, and the information the minister has given to-day is the information that we received at that time. I should be glad, however, if the minister would complete his statement in regard to one oft-repeated suggestion dealing with this question of making synthetic rubber from alcohol. I understand that in the United States they are now using both industrial alcohol and petroleum as bases for the manufacture of synthetic rubber. I believe the reason is that the petroleum plants were not capable of handling the total requirements of that country. Would the minister deal with that point, namely as to why the United States is making rubber out of both these basic commodities.

Mr. HOWE: It was realized early that the delay in getting the synthetic rubber programme under way would be in obtaining the cracking units for butadiene. That is the last item on our programme, and it is the last item on every programme. It was known that a butadiene plant from alcohol could be constructed in much less time, and a number of alcohol plants for the manufacture of butadiene were built in the United States, in order to get the butadiene as quickly as the styrene and polymerization units could be used. We hope to start up our plant on butadiene made from alcohol which we will obtain from the United States. Of the plants operating in the United States to-day—I think there are two of them—both will eventually use butadiene made from petroleum, but are operating to-day on butadiene made from alcohol. It is the quick way—although it is expensive—of obtaining butadiene.

Mr. PERLEY: I presume the minister has finished with his explanations respecting the rubber situation?

Mr. MacNICOL: Oh, no.

Mr. PERLEY: Has he anything further?

Mr. HOWE: Several other points were raised.

Mr. NICHOLSON: Last night the hon. member for North Battleford (Mrs. Nielsen) quoted Mr. Dyson Carter. Have any of the officials in the minister's department examined the publication mentioned, and can the minister make any further statement respecting the claims made by Mr. Carter? He seems to be well known as a scientist and an engineer, and there has been considerable publicity in respect of this publication.

Mr. HOWE: The publication of Mr. Dyson Carter has been carefully studied by our experts. We have come to the conclusion that while he may be a very eminent man in certain fields of science, he is not so eminent in the field of artificial rubber. If my hon. friend is interested I should be glad to give him an analysis of the Dyson Carter statement, and the facts which correct the statements he has made. However I do not know that I should take the time of the house in dealing with this, because undoubtedly many hon. members have not read Mr. Carter's statements. They were published in Winnipeg, and were given extensive circulation throughout the west. Those statements were brought to my attention by an officer of the Saskatchewan wheat pool. I had an analysis made by qualified experts, and if my hon. friend wishes I shall be glad to send the information to him.

Mr. NICHOLSON: Would the minister place it on *Hansard*? In view of the fact that the hon. member for North Battleford quoted at some length, I think the house would be glad to have it.

Mr. HOWE: I shall be glad to do so, if I can obtain unanimous consent, and if the king's printer does not object. The statement is as follows:

Comments in regard to the charges, accusations and statements made by one, Dyson Carter, in a publication entitled, "So That Man May Prosper".

The main theme contained in the publication seems to be as follows:

Since butadiene, one of the principal materials required in the production of buna-S rubber, can be produced, either from alcohol or petroleum, and that since we have a surplus supply of grain, Canada has made a grave mistake in deciding to manufacture butadiene from a petroleum base instead of using its surplus grain for the production of this material. That by using a petroleum base, we are unnecessarily consuming valuable supplies of crude oil when we need to make every barrel of crude petroleum available for war purposes. That is the capital cost involved and the material required in the construction of plants to produce butadiene from petroleum is greatly in excess of the cost and quantity of materials and equipment required to produce it from alcohol obtained from grain; and further, that these grain alcohol plants can be constructed immediately in the large wheat growing areas of the country to produce synthetic rubber from wheat as a vital war production measure.

He states that we could produce cheaper rubber by using the alcohol-from-grain process because there are several such processes now "in the course of development" which will lower the cost of production and may be subsequently further improved.

The author of this publication has obviously made considerable study of the subject, but all through the piece he has the habit of jumping to erroneous conclusions and then building up a story of a false hypothesis. In spite of his expressed effort to get at the bottom of the subject and the true facts, he does not appear to have taken the trouble to inquire from any officials of the Department of Munitions and Supply, or of the Polymer Corporation Limited, a crown company formed for the purpose of constructing, equipping and operating a series of Canadian government-owned plants to produce synthetic rubber, as to the basic principles underlying the project or the reasons why they were followed. If he had done so, he would have had to revise a considerable portion of his booklet.

One is inclined to suspect that he was more interested in creating an alarming story which would appeal to sectional prejudice and substantially increase the sale of his publication, than in an accurate presentation of the actual situation. In the course of the article, he raises certain questions and makes an abnormally large number of insidious references for the apparent purpose of leading the Canadian public to believe that the petroleum interests, in both Canada and the U.S., are attempting to secure a monopoly on our synthetic rubber business by what he terms "racketeering and profiteering methods".

The following are a number of questions and statements contained in the publication, with comments in regard to them:

1. "Just who is advising the Canadian government in regard to synthetic rubber production?" (p. 12.)

[Mr. Nicholson.]

If Mr. Carter had really wanted to get an answer to that question it would seem obvious that he should ask someone in the Canadian government who would be in a position to give him an answer.

2. "When the war is over, will the Canadian people be saddled with a rubber industry that requires huge quantities of petroleum imported by the oil trust?" (p. 12.)

If by "requires" he means "consumes", the answer is—No.

3. "Will it operate with excessive costs and profits taken out of the pocket of the man who buys tires for his car, truck and tractor?" (p. 12.)

The answer is again—No. Since the whole project and its products are owned and controlled by the Canadian government, this could hardly be true.

4. "The machinery required to carry them out" (processes for producing butadiene from petroleum) "is costly and difficult to make under present war-time conditions, with an acute shortage of high quality steel. A whole series of plants have to be built to make butadiene from petroleum. To produce from petroleum the butadiene required to make 200,000 tons of buna rubber per year requires equipment costing $650,000,000". (p. 14.)

It is true that the machinery required is costly, but the difficulties of making it at the present time are considerably overcome, as far as the Canadian project is concerned, because we are duplicating, in most cases, equipment being made for similar projects in the United States, which have been fully engineered, designed and fabricated. It is a fact that certain basic refinery equipment is required before the butane can be cracked off to enter a butadiene plant, but where most of this is already available in an existing refinery, as in the case of the Canadian project, the cost of the butadiene plant can be considered separately. Mr. Carter states that to produce from petroleum the butadiene required to make 200,000 tons of buna rubber per year requires equipment costing $650,000,000. In the production of 200,000 tons of buna-S rubber, 150,000 tons of butadiene are required. Canada's project provides for a plant to produce 30,000 tons of butadiene per annum, and the cost of the butadiene plant will be approximately $9,000,000. Five plants with this capacity would, therefore, cost from $40,000,000 to $45,000,000, which is less than seven per cent of the figure quoted by Mr. Carter and rather undermines his argument that the equipment cost for the production of butadiene from alcohol is only one-twentieth of the cost involved in making it from petroleum.

5. "An added trouble is that the oil and chemical companies have been squabbling for years over their countless secret processes and patents for making butadiene from petroleum." (p. 14.)

Mr. Carter, apparently, does not know, or has chosen to overlook the fact that pooling agreements, to which Canada is a party, have been made, under which the patented processes of procuring butadiene from a petroleum base have been pooled and placed on a substantially royalty free basis for the period of the emergency.

6. "It takes about eight months to set up the wheat-butadiene factories compared with eighteen or twenty-four months to get the petroleum butadiene plants operating." (p. 14.)

Mr. Carter completely overlooks the fact that the production of butadiene is only a part of the project involved in producing buna-S rubber. For example, an intricate and complicated plant for the copolymerization of butadiene and styrene into buna-S rubber has also to be constructed and equipped, and although it might only take eight months to set up wheat-butadiene factories, the equipment and its operation are very complicated, on Mr. Carter's own admission; and he further does not take into consideration the time involved in preparing specifications, drawings for and the fabrication of the necessary equipment before it reaches the assembly stage.

7. In his attempt to besmirch the petroleum industry, he refers (p. 15) to an accusation by Thurman Arnold, Assistant Attorney General of the United States, that the Standard Oil Company of New Jersey turned over to Germany a process of making a better and cheaper synthetic rubber out of petroleum. It is assumed that he is referring to the processes involved in the manufacture of butyl rubber. From what we now know on the subject of the production of butyl rubber, if the Germans attempted to follow the original processes for the production of butyl rubber, which, it is asserted, were given to them prior to the war between the United States and Germany, they would not turn out a very satisfactory product. It has taken nearly the past eighteen months of intensive research and development to produce a relatively satisfactory type of butyl rubber. Fortunately, this has now been accomplished by the rubber chemists in the laboratories of the Standard Oil Company and the Humble Oil Company in the United States, but it is hardly conceivable that these subsequent developments are known to Germany. Even if they were, any disadvantages along such lines would be fully counterbalanced by the fact that as a result of the acquisition by the Standard Oil Company of the patented processes involved in the manufacture of buna-S from, I. G. Farben-Industrie, the synthetic rubber industry in the North American continent is now able to use, on a royalty free basis, these patented processes developed by the German Chemical Trust and purchased by the Standard Oil Company of New Jersey at a very substantial cost.

8. Mr. Carter leans heavily on the Baruch report in support of his whole theme and states (p. 16) that according to the Baruch findings, the petroleum interests had greatly exaggerated the possibilities of making synthetic rubber from oil and that the big oil companies were attempting to establish synthetic rubber monopolies after the war by preventing production of synthetics from grain.

The Baruch committee criticized, and perhaps justly so, the early non-use of alcohol processes to produce butadiene in the interests of securing this material as quickly as possible, but Mr. Carter has chosen to ignore certain very important recommendations contained in the committee's report. If he were honestly attempting to put forth the pros and cons of the subject, he would have mentioned that the Baruch committee advocated, in the interests of the early production of buna-S in the United States,—

That no change be made in the programme as then adopted;

That it be pushed forward with all possible speed;

That no new synthetic processes were to be substituted for those approved;

That there should be no delay in getting the greatest possible butadiene production from all sources; and further,

That all methods for the production of butadiene from petroleum and natural gases should be explored.

Mr. Carter also fails to state that the Baruch committee only recommended the production of increased quantities of alcohol for the procurement of butadiene in addition to the increase in butadiene production provided through the refinery conversion programme.

9. Dealing with the Canadian situation, he states (p. 18) it is easy to understand that the Canadian petroleum operators would not want the public to know if Canadian synthetic rubber is to be made from oil because "Canada needs every barrel of available oil for war purposes".

Statements of this nature prove how little Mr. Carter knows of the actual situation, or, if he does know, that he does not hesitate to make erroneous and misleading inferences. The Canadian petroleum operators had nothing whatever to do with the government's decision to produce butadiene from a petroleum base: in fact, the company whose refinery was chosen to provide the basic facilities for cracking off the gases required demurred, considerably, over the prospect of taking any responsibility in the project. Furthermore, the inference that the procurement of butadiene from petroleum deprives Canada of oil for war purposes is entirely incorrect.

10. Mr. Carter asks rhetorically (p. 18), without attempting to answer the question "Is the oil trust going to find some way to import huge extra quantities of petroleum into this country in order to get a monopoly on our synthetic rubber business?"

The answer to this question is—No. One can only assume that Mr. Carter does not want to know the answer.

11. He also asks: "Are we going to make our petroleum problem even more critical by importing oil to make rubber?" (p. 18.)

The same answer can be given to this question as to the previous one.

12. He raises the suggestion (p. 18) that Canada ought to supply the large British demand for synthetic rubber.

That question can be answered by stating that since Canada's project is part of the overall North American programme, and since a very large percentage of the synthetic rubber produced in Canada will be used to manufacture tires and tubes and other rubber products which will be manufactured in Canada and shipped to Britain, the greater percentage of the synthetic rubber produced in Canada will go to meet Britain's requirements.

13. He asks (p. 19): "What prevents Canada from rushing into the large scale manufacture of synthetic rubber from wheat?"

The answer is that we have committed ourselves for a fairly extensive programme for producing the essential requirements from a petroleum base, and while he gibly talks of producing synthetic rubber from wheat, it is presumed that he means producing butadiene from wheat because there is much more involved in the production of synthetic rubber than merely the production of one of its main component materials.

14. He states (p. 19) that "for Canada to go into the manufacture of synthetic rubber from petroleum is not simply a mistake. It is an inexcusable and disastrous blunder".

"It makes us pay much needed Canadian money for foreign petroleum."

It should be unnecessary to refute these statements. Mr. Carter apparently does not even know the basic details of the Canadian project, nor has he taken the trouble to determine them. The statement that it makes us pay much needed Canadian money for foreign petroleum is absurd.

15. He makes the statement that "it (Canada) finances with public funds a wasteful rubber manufacturing industry, one which the Baruch committee exposed as being far more costly than an industry making rubber from farm crops." (p. 19.)

The true facts do not support this statement. Even allowing for a slightly higher equipment cost involved in following the petroleum process, grain would have to be bought at from 25 cents to 30 cents a bushel in order to produce butadiene from farm crops as cheaply as from a petroleum base.

16. He states (p. 19), "not a single phase of this whole question can be neglected."

This statement is fundamentally true and it is by such a policy that the Canadian government and those connected with the Canadian synthetic rubber project have ben guided. Anyone having the history of Canada's undertaking to produce a substitute for rubber for war requirements would know that Mr. Carter has, himself, neglected many phases of the whole question.

In these comments, I have not touched on the transportation problems involved in such a programme as is proposed by the Carter publication. The transportation of grain by boat or rail or butadiene by rail in special tank cars would present many difficulties in the light of the present situation, difficulties which are entirely overcome by the closely integrated project which is now in the course of completion.

Mr. QUELCH: Would the minister report on a statement made by the Doan agricultural service, which I understand is the oldest and largest farm management and appraisal service in the United States? In their publication entitled "Little Journeys to Farm Land", they say:

(a) Rubber can be produced from American agricultural products more quickly than from any other source of material.

(b) The capital costs are about one-half as much for crop-rubber plants as for petroleum rubber plants.

(c) No one knows the large-scale plant operating cost for producing rubber by any process. According to the best estimates agricultural products appear to be fully competitive with petroleum.

(d) The only known-to-be-successful synthetic rubber plants in Europe are based on agricultural crops.

Would the minister comment upon this statement by the Doan agricultural service?

Mr. HOWE: I can only repeat that it is the quickest way to get butadiene, starting from scratch. We examined the cost of facilities very carefully, and, assuming that you must build a plant to make ethyl alcohol, and convert that ethyl alcohol into butyl alcohol, and then into butadiene, we found it a more expensive operation than building a plant to make butadiene from petroleum. A very careful analysis made by the best experts I could obtain in Canada—and including experts associated with our national research council—is that it is competitive, provided wheat can be bought at the plant for from 25 to 30 cents a bushel.

Mr. DONNELLY: The butadiene to be made in the plant at Sarnia is to be from oil.

Mr. HOWE: Yes, that is correct.

Mr. DONNELLY: And the styrene also is to be made from oil

Mr. HOWE: One small component of styrene, namely ethylene, may be obtained from the same cracking process which makes butadiene. But the principal ingredients of styrene are, I believe, a by-product of the coke-from-gas industry and are transported from Hamilton.

The CHAIRMAN: Perhaps the minister would make any further answers he wishes to make with respect to rubber.

Mr. HOWE: If there is to be any further debate in respect of rubber, then it might be well to finish it now. If we can confine ourselves to a discussion of rubber, I shall be glad to answer any other questions.

Mr. DIEFENBAKER: What proposals or schemes are there for the disposal of these plants after the war? I have in mind the Sarnia plant, for instance, and other additions. In the course of his remarks he said that the Sarnia plant, with perhaps extensions or additions, might be sufficient for peace-time needs. I think we should know now what is planned in that connection. It must have been canvassed and considered, otherwise the minister would not have been in a position to make that statement. I have reasons for asking this question, because, in addition to the fact that the government is advancing from $40,000,000 to $50,000,000 to this plant, the people of Canada have a right to know now the government's policy in respect to these plants. I realize an opportunity has not yet been given to the minister to reply to certain questions I asked the other day. I believe the rubber question might be separated from questions connected with government advances to other corporations. I say that because a few nights ago the hon. member for Saskatoon City (Mr. Bence) referred to a statement

made by a consulting chemist of the Dow Chemical company. That statement has received wide circulation and to my knowledge has never been denied or answered by any governmental authority either in Canada or the United States. The statement was made last February before the Minnesota bankers' association, and was to the effect that the outstanding reason for not proceeding with the production of rubber through the use of alcohol manufactured from wheat, and the like, was that some arrangement had been made between the oil companies and the united nations with south African countries, whereby provision was being made now, or had been made under unpublicized treaties, for the destruction of all United States synthetic rubber plants after the conclusion of the war. That has been given wide publicity. According to the minister it will require considerable expenditure to produce rubber from an alcohol base; nevertheless it would build up an industry in war time which would be beneficial in peace time and give Canada an opportunity to dispose of her surplus wheat. Is there any foundation for the statements made by this gentleman? What are the official plans for the disposal of these rubber plants? Does the government intend to turn them over to private industry, or does the government intend to operate them as government enterprises after the war?

Mr. HOWE: I read the statement of the man who my hon. friend says is an official of the Dow Chemical company. I do not believe he is an outstanding official of that company.

Mr. DIEFENBAKER: He is a research consultant.

Mr. HOWE: He is not an executive of the company; he is a research consultant. I was consultant to a great many firms, and I presume this gentleman is a consultant to the Dow company and many others. I do not think it is the duty of a public man to deny everything he reads in the papers, especially statements by a man he never heard of. I have said already that the plant at Sarnia is exclusively the property of the government of Canada; it will be operated by the government of Canada; its products will be at the disposal of the government of Canada; they will be owned by the government of Canada and will be sold in the interests of the government of Canada. So far as I know that situation will continue indefinitely. I know of no change that is contemplated. Governments come and go and policies change with different governments. What the next government will do, I do not know, but it is the intention of this government to continue to operate the plant at Sarnia to make rubber for the country at war and the country at peace.

Mr. DONNELLY: Do I understand the minister to say that alcohol made from wheat costing $1 per bushel will cost something in the neighbourhood of 75 to 80 cents a gallon?

Mr. HOWE: At the distillery.

Mr. DONNELLY: In normal times alcohol is made from molasses?

Mr. HOWE: Yes.

Mr. DONNELLY: For about what price?

Mr. HOWE: I think 25 cents is a good price for alcohol in peace time, although it may be less.

Mr. DONNELLY: I understand that it could be made in peace time for about 15 to 20 cents.

Mr. DIEFENBAKER: While it may not be the custom of the minister to deny what appears in the press, has he any knowledge of any such treaty?

Mr. HOWE: No.

Mr. KNOWLES: The minister has just said that the plant at Sarnia is being operated by the government and that it is the intention of the government, at present at any rate, to continue to operate it. A few minutes ago the minister tabled certain orders in council which have to do with the plant at Sarnia. Some weeks ago these orders and some others were tabled in response to a question of mine. I have not that sessional paper here, but my recollection of the situation, after studying those orders in council, is that the government owns the Polymer Corporation and that the government, through the minister, appointed the directors who are in charge of the plant on behalf of the government. I understand that they serve without fee. As I recall the orders in council, these directors have reported back to the government from time to time and have made certain recommendations. I think it was in April of this year that the directors recommended that the operation of this plant should be turned over to Imperial Oil and its subsidiaries. As I say, I am speaking from memory. Perhaps I should have said that the directors recommended that this government owned company ask Imperial Oil and some of its subsidiaries to come in and operate the plant. Some of us have the fear —the minister may not like our being suspicious in this way—that if Imperial Oil is called in to operate this plant during the

course of the war, when the war is over Imperial Oil will be the only ones who really know anything about it. There would then be a very good chance of their getting control of the plant, unless steps are taken now to guarantee that it will continue as a government owned and government operated plant. I shall be glad if the minister will correct me if my story is not correct.

Mr. HOWE: The cracking process for making butadiene requires oil technicians. Imperial Oil are represented on the board of a company subsidiary to Polymer which is in charge of that operation. The officers of that company and the employees of that company are on the government payroll. Imperial Oil is assisting the government to get that branch of the business under way. Naturally you cannot pick men off the street who know how to crack oil to get the light fractions such as are used to produce butadiene. Imperial Oil are furnishing certain technical assistants, but they are doing it for government account.

Mr. COLDWELL: Are those men on leave of absence?

Mr. HOWE: They are engaged by the government. Many men have come there direct from the universities to be trained, and they are government employees. The Dow Chemical company, who are experts in the production of styrene, are sponsoring operations at this plant in a similar way. They are furnishing the technical experts and have designed that section of the plant. They are training government employees in the manufacture of styrene. The four rubber companies which are the principal users of the product of this plant for the manufacture of tires and other products have joined together to take over the direction of a subsidiary company of Polymer which is operating the polymerization plant. Here again the employees are government employees, the rubber companies simply giving technical assistance to that branch of the enterprise. I may say that the Polymer corporation, which is a wholly government owned corporation—

Mr. MacNICOL: Is that at Sarnia?

Mr. HOWE: The whole operation is at Sarnia. The Polymer corporation owns the property, is responsible for the operations, and will be responsible for the sale of the product. It is a government owned corporation, responsible to the government.

Mr. COLDWELL: What are the relationships between the other companies referred to and Imperial Oil? The St. Clair Processing company was one, I think.

[Mr. Knowles.]

Mr. HOWE: That is the subsidiary of Imperial which at the moment is responsible for the operation of the butadiene end.

Mr. COLDWELL: I believe another one is the Canadian Synthetic Rubber company.

Mr. HOWE: That is the subsidiary formed by the rubber companies to assist the government in the polymerization process.

Mr. COLDWELL: As I understand it, these companies have lent the government certain technicians.

Mr. HOWE: That is right.

Mr. COLDWELL: And the government has taken into these plants a number of young scientists from the universities who are being trained as technicians.

Mr. HOWE: That is right.

Mr. COLDWELL: If I understand aright there will be a competent staff trained by the technicians which in the event of the country desiring to continue the operation of this plant, apart from Imperial Oil or the Dow Chemical company, will be available.

Mr. HOWE: Oh, yes.

Mr. COLDWELL: I am glad to get that assurance from the minister.

Mr. SHAW: Many of us are intensely interested in the experimental work being carried on to produce alcohol from wheat. I have read from time to time that certain distilleries, particularly the larger ones, have been carrying on this kind of experimental work. Has that work been done with or without government financial assistance? If with government financial assistance, under what terms and conditions is the assistance given? Can the minister tell us what quantity of Canadian wheat was used last year in the production of alcohol?

Mr. HOWE: Experiments have been carried on both by the distilleries and by scientific laboratories. Ontario government laboratories and our own national research laboratories have conducted quite extensive experiments in converting alcohol into butyl alcohol. I think that the experiments by the distilleries have been conducted at their own expense. It is pointed out by all that it is a difficult process. The bug that operates on wheat to convert it into butyl alcohol is a very delicate creature requiring great quantities of stainless steel to house the process. At one stage we tried to get the distilleries to make butyl alcohol with their present equipment but were assured that they could not do so and that

reconstruction of the distilleries would be necessary to convert wheat directly into butyl alcohol suitable for butadiene.

Mr. MacNICOL: Mr. Chairman, I think the minister deserves a good deal of credit for what he has already done in trying to bring about the production of rubber in Canada. I am going to ask him to go one step further and during the time that the whole process is under construction, and after it is in operation, to have government auditors make a survey of the exact cost of each process which enters into the construction of rubber in Canada. There is no certainty that after the war we shall be able to obtain raw rubber from Malaya. We read quite frequently that just before the Japs are kicked out of Malaya they will destroy the rubber forests. I hope that will not be so, but they may do that, in which case we shall not be able to obtain rubber from that source. The government is now financing rubber factories, I presume at very heavy cost—I am not blaming the government for that—and that is why I make this suggestion. I am informed by a steam-fitting company which I have known for many years that during the erection of the plant in Sarnia pipe-fitters had to be brought from across the line. That may or may not be so; I do not know. But I was told that these pipe-fitters were paid a very high wage or salary and were paid in United States money, or in Canadian money plus the exchange. I asked how much they drew and I was told that one man drew over $180 in one week for pipe-fitting. That might have included overtime and everything else. Naturally the minister would want to have this plant in operation in the shortest possible time, and to do that the men would have to work overtime. Therefore I am not blaming the minister for the high costs. But assuming that the costs were high, I hope that a careful check will be made by auditors so that if it is necessary for Canada after the war to keep these plants in operation our own tire factories may be supplied with rubber at a price which the government itself will know is reasonable. I am in favour of private industry because I believe that private industry will produce goods at less cost than the government can. Private industry runs its business on a business-like basis. Governments cannot. They have to stick this man in here and that man in there, and that cannot be avoided. But if a careful audit is made of those plants which may continue to produce rubber after the war Canadians will not have to pay too much for the rubber we need.

The more I look into it the more I am amazed at the phenomenal capacity of the Germans in invention. If they had only used their great brains for the world's good, instead of, as they were, producing and inventing for war purposes, how much better it would have been for themselves and for the world! I believe it was Doctor ter Meer who discovered the process of making butadiene from oil. He had his process well developed by the early twenties, at which time Germany was producing oil from coal. It is amazing to me what a long line of products Germany has produced from coal, not only rubber, oil, and explosives—I believe toluol, which forms a basis of TNT, has been produced from coal—but several other products. The German government discovered that rubber could be made from coal through chemical processes, and then what did they do? They brought about the erection of a plant in 1937 to produce 30,000 tons of rubber a year. Another plant was erected in 1939 to produce 30,000 tons of rubber a year, and another of the same capacity was erected in 1940. They were setting out to destroy the world. That was the motive behind their inventions. I think in peace time we can make good use of these inventions.

I should like to find out from the minister what is the connection between those who are producing rubber, or the basis of rubber, at Sarnia and the Standard Oil company. The Standard Oil company owns the patents for America of the process. If on account of the war they are not charging for the use of these patents any more than the mere cost to themselves, that is all right; but if they are charging exorbitant prices for the use of these patents we should know it. They put up a pilot plant at Baton Rouge, and, according to evidence given before a committee of the United States senate, were producing by 1941 eighteen tons of butadiene per day; that is really 7,000 tons a year. On the basis of their costs in their pilot plant at Baton Rouge they took a contract from the United States government to supply 40,000 tons at 13·6 cents per pound. I should like to know what is the difference between the cost of butadiene per pound and of the finished rubber per pound. Then I should like to know if the government is keeping accurate audited costs of these plants that are being erected, and if it proposes to keep accurate costs of the finished rubber per pound produced by the goverment plants, so that the Canadian people will be defended against exploitation after the war and rubber will be sold at the right price. Because I am of the opinion that if the Japanese destroy the rubber forests of Malaya before they retire from that country—as we hope they will be forced to do—our Sarnia plant will prove a great advantage to Canada and incidentally bring

much credit to the industry for having erected it there. The butyl, of course, is made from alcohol and can be made from oil of coal.

Mr. HOWE: No, it is not made from alcohol. That is, it will not be so made here.

Mr. MacNICOL: The Germans say it can be.

Mr. HOWE: Yes, it can be.

Mr. MacNICOL: I agree with what has been said, and I close by expressing the hope that if after the war Canada is compelled to manufacture synthetic rubber from either buna-S or butyl, the minister—and if he undertakes to do it nothing will stop him—will thoroughly consider what has been suggested, and what I have suggested before, that a plant be put up in the west to produce butyl from alcohol. It is the duty of us all to try to free the west from the unhappy consequences of the depression. If a small plant could be established there to use 25 or 50 million bushels of wheat a year in the development of butyl for the production of rubber, we are in duty bound to assist the west to that extent. Certainly the plant at Sarnia will have all it can do to take care of eastern requirements.

I should like the minister to say whether records have been kept as to the cost in advance, to protect the future selling price of rubber to the Canadian people, and I should like to know about what time Canadian users of tires may hope to be able to buy tires made at the plant at Sarnia.

Mr. HOWE: Most careful accounts are being kept of the expenditures. Both the Polymer company and the treasury have cost accountants on the work at the present time. Of course this is an expensive period to build anything, but I think, having that in mind the plant is being built economically. I know of no pipefitters being brought across the line. The Dow Chemical company, our engineers on the styrene plant, may have brought across a few expert foremen to handle the piping. As my hon. friend knows, a chemical plant consists almost wholly of high pressure piping; it is a specialist's task, and I am not saying that men may not have been brought across the line, though I have no knowledge of it. The wages paid at Sarnia are the wages set by the Department of Labour for the various trades; so far as I know they apply to all the employees on the job. The cost of building at the present time is higher than the cost of building in peace time; how much higher, I cannot say. This is specialized work: every piece of material in the plant has to be specially designed and built. I will say this, we shall try to produce rubber at a competitive price, and as a government operation. If there is no other rubber about, it might be good business for the government to sell at a competitive price in any event, whether it can be produced at a competitive price or not; that is a matter for the future.

I have given a lot of study to the manufacture of synthetic rubber and I am confident that we are building an industry which will be effective in peace time as well as during the war. It may not be producing exactly the article that is produced to-day. But when we cast our minds over the great list of products made to-day from the light fractions of petroleum—items of great use in our civilization—I am certain that we are not building a plant at Sarnia with any prospect it will be closed when the war is finished or when natural rubber comes back into free supply from other countries.

Mr. MacNICOL: After the war how will the government or the Canadian people be protected against any exorbitant price which might be charged by Standard Oil—I do not say that they will attempt to impose one—for the processes used in the production of rubber? The company control absolutely the hydrogenation process and the catalytic cracking process, and anyone wishing to produce rubber will have to obtain the right from the Standard Oil, because they received it under the Hague convention of 1939 and they promised to hand it out. But shall we be protected from an exorbitant price for their process?

Mr. HOWE: Yes, Mr. Chairman. All the patents having to do with the manufacture of butyl rubber or buna-S rubber have been pooled with the United States government, and Canada has been included to share with the United States the right to these patents. I would not care to give the house the exact terms, but they are the same for Canada as for all plants being built for the United States government. My recollection is that no royalty is payable during the war and for a certain period thereafter, and that after that there is a royalty payable which has been agreed upon by the United States, by the subsidiaries, and by Canada.

Mr. MacNICOL: Per pound?

Mr. HOWE: I could not say. I do not recall the terms of the agreement, but we have an agreement. It is the same agreement as the United States government has, covering the patents of this process for peacetime use.

Mr. KNOWLES: I should like to refer for a moment or two to the question of the operation of the plant at Sarnia. We were discussing it a short while ago, and the minister and I differed as to the terms of the order in council, which neither of us had before him at the time. I have since looked into the matter, and I have before me a copy of the order in council to which I referred and a copy of the other orders in council dealing with this matter. In P.C. 2799, April 8, 1943, there appears, after the statement that the committee of the privy council have before them the report of the Minister of Munitions and Supply, the following:

That the company reports that
(b) Arrangements have been made with Imperial Oil Limited and its subsidiary, St. Clair Processing Corporation Limited, Dow Chemical Company of Canada Limited, and Canadian Synthetic Rubber Limited, for the operation of the respective units being constructed.

I am alarmed at the wording of a previous order in council, P.C. 2369, of March 27, 1942, which was the order in council that set up the Polymer Corporation Limited, setting out its general terms. Part of the order in council is schedule A, the memorandum of agreement, in which we are advised regarding the functions of the Polymer Corporation Limited. I read, in section 1, subsection (a):

The company will forthwith proceed to acquire, construct, instal and establish the necessary land, buildings, machinery, equipment and plant . . . for the manufacture, production and storage of synthetic rubber.

I call attention to the significant omission from this original order in council of the word operation. Polymer Corporation Limited was set up to acquire, construct, instal and establish the plant, but no mention is made that Polymer corporation, which is owned by the government, should operate the plant. Then thirteen months later the company recommends to the government that the companies which I have named should operate the respective units being conconstructed, and P.C. 2799, of April 8, 1943, approves the recommendation that these companies operate the plant.

Another sessional paper, which was brought down in response to questions of mine, gives us the names of the president, the vice-president, the managing director and the directors of Polymer Corporation Limited. They are: R. C. Berkinshaw, President; D. W. Ambridge, Vice-President; J. R. Nicholson, Managing Director; W. R. Campbell, A. C. Guthrie, A. J. Crawford, G. A. LaBine, and Colonel A. L. Bishop, directors. I will not read in full sessional paper No. 388, to which I am referring, but it shows that these men I have named hold the offices indicated, and that many of them are directors of other companies. It is the usual who's who of big business, and here again is the story of a group—

Mr. HOWE: What big business is Mr. Crawford in?

Mr. KNOWLES: Well, since the minister has asked I will give the details:

R. C. Berkinshaw is general manager and treasurer of the Goodyear Tire and Rubber Co. of Canada Limited. He is a director of the following firms or corporations: Goodyear Cotton Co. of Canada Ltd.; Toronto Elevators Limited (vice-president); Easy Washing Machine Co.: Ltd. (vice-president); Crown Trust Company; Polymer Corporation Limited; Mutual Life Assurance Co. of Canada.

D. W. Ambridge is assistant general manager of the Ontario Paper Company and is now on loan to the Department of Munitions and Supply as director general, naval shipbuilding branch. He is a director of the following firms or corporations: Polymer Corporation Limited (vice-president); Best Yeast Company.

Wallace R. Campbell is president, treasurer and director of the Ford Motor Company of Canada, Ltd. He is also a director of the following firms or corporations: Ford Motor Co. of Australia Pty. Ltd.; Ford Motor Co. of New Zealand Ltd.; Ford Motor Co. of South Africa Ltd.; Ford Motor Co. of India Ltd.; Ford Motor Co. of Malaya Ltd.; Polymer Corporation Limited.

A. C. Guthrie is president of Simmons Limited, Canada. He is a director of the following firms or corporations: Simmons Limited, Canada; Simmons Limited, U.S.A. and its subsidiaries (director and vice-president); The Murphy Paint Co. Limited, Montreal.

A. J. Crawford is employed by Sheet Metal Workers' International Association and as a director of Polymer Corporation. He represents the Trades and Labour Congress of Canada. He is a director of no other firm or corporation.

G. A. LaBine is president of Eldorado Gold Mines Limited. He is also a director of the following firms or corporations: Eldorado Mining and Refining Limited; Gunnar Gold Mines Limited; Howey Gold Mines Limited; Pan-American League Against Cancer, Inc; member of the board of governors of the University of Toronto; Polymer Corporation Limited.

Col. A. L. Bishop is president of the Coniagas Mines Limited; Coniagas Reduction Co. Ltd.; Sturgeon River Gold Mines Limited and The Consumer Gas Co. of Toronto. He is a director of the following firms or corporations: Coniagas Mines Limited; Coniagas Reduction Co. Ltd.; Sturgeon River Gold Mines Ltd.; Consumer Gas Co. of Toronto; Coniaurum Mines Limited (vice-president); The Manufacturers Life Insurance Company; The Toronto General Trusts Corporation; Imperial Bank of Canada; Anglin Norcross Corporation Ltd.; Anglin Norcross (Ontario) Limited; Canadian General Investment Limited; Canadian Locomotive Co. Ltd.; Commonwealth Electric Corporation Limited;

The Consolidated Mining and Smelting Corporation of Canada; Toronto Shipbuilding Co. Ltd. (crown corporation).

J. R. Nicholson is managing director of Polymer Corporation Limited. Formerly Mr. Nicholson was deputy controller of supplies in the Department of Munitions and Supply. Other directorships—none.

I submit that, in the light of this information, the hon. member for Lake Centre (Mr. Diefenbaker) and I, though we may not want the same set-up after the war, are equally entitled to some more definite statement as to what is to happen to these plants at that time. I am not for the moment entering into a discussion of the merits of producing rubber from alcohol or oil, and I am not to be taken as at all deprecating the fact that a synthetic rubber plant is being built. All power to the minister in getting rubber produced. But I am concerned about the set-up which I have outlined. First, we have a company set up, and emphasis is placed on the fact that it is a completely government-owned company and that its directors serve without fee. But as you read the orders in council you discover that the company was given all the functions connected with getting the plant started but not the function of operating it, whereas thirteen months later the company, consisting of the directors whom I have just identified, recommends that the operation of the plant be carried on by the companies that I have named: Imperial Oil Limited and its subsidiary, St. Clair Processing Corporation Limited, Dow Chemical Company of Canada Limited and Canadian Synthetic Rubber Company Limited. Some of us have the genuine fear that when the war is over these are the companies which will be in virtual possession by reason of the fact that they will know how to operate the concern, and there is every possibility that what should continue as a government project after the war—that is just as important then as it is now—will pass out of the government's control.

Mr. HOWE: To me one of the discouraging features of public life is the objection that certain members have to using the experience of men who have gained that experience in the hard way and have emerged as successful men of business. I wonder who my hon. friend would choose to be directors of a great corporation responsible for spending some $40,000,000. I think each of us is wise to follow his own experience. I have been a professional man all my life. I have learned how to do certain things by doing them, and by doing them repeatedly. I have done more work, perhaps, in the building of grain elevators than in any other branch of engineering, and I can tell my hon. friend that the last grain elevator I designed was vastly better than the first one; it was less costly to the owner and more efficient, and that was the result of my experience gained in doing the same work repeatedly.

When my hon. friend and various others rise in their places here and say we should have farmers, and we should have labour men, to direct these corporations, let me tell him that in the days of my private life farmers were my surest clients. The farmers do not do the things certain people in this house say we should do. When farmers spend the money of farmers, they choose men who have experience in doing the thing they want done. When the farmers wanted to build a terminal grain elevator they would come to me, because they knew I had built grain elevators, and they felt that I could give them value for their money. That is the view the farmers have taken; and I can tell you I admire them for the fact that any dollar they spend of cooperative money is well and carefully spent, under expert guidance. And they are not particular how much they pay for that expert guidance; they are willing to pay the current price in order to get the best advice available. That has been my experience in my own professional life, in spending the government's money. I have been spending other people's money for a great many years, and I know it has to be spent carefully. When I was made responsible for spending a few billion dollars belonging to the people of Canada, I got the very best advice I could get in the spending of that money. I have put in charge of every operation, for which I have been responsible to the people of Canada, the men best qualified by experience, and by having done similar work, to look after that operation. I am not apologizing to anyone in this house for having done that. It is all very well for a man of my hon. friend's experience to rise in his place here and sneer at people who occupy positions of trust in this country, but those are the people on whom I am banking. If I have made any success in handling my present portfolio, it is because I have been able to command the services and the devotion of those people in the job I have in hand. So that I wish my hon. friend would discontinue that line of cheap, soap-box oratory in this house.

Mr. KNOWLES: On a question of privilege, Mr. Chairman, my remarks have been referred to as sneering. I wish to state to the minister that I have not objected to his—

Some hon. MEMBERS: No reply there.

The CHAIRMAN: Will the hon. member please come to the point of privilege?

Mr. COLDWELL: Mr. Chairman, I rise to a point of order. The hon. gentleman raised a question of privilege, and was interrupted; you were about to rise, Mr. Chairman, and before you do so I want to discuss a point of order. Have I your permission to do so? I take it that the hon. member has a right to rise and object to his remarks being termed sneering, or to its being said that he has been guilty of soap-box oratory.

Some hon. MEMBERS: Oh, oh.

Mr. COLDWELL: Hon. gentlemen opposite may laugh now, but in a little while the laugh may be on the other side of the mouth. I should like your ruling, Mr. Chairman. Has the hon. gentleman the right to discuss the question of privilege arising out of the remarks of the minister?

Mr. ROSS (Moose Jaw): On the point of order, the hon. gentleman was not discussing a matter of privilege; he was starting to reply to the minister.

Mr. COLDWELL: Why should he not?

The CHAIRMAN: On the point of order, of course a member of the committee has the right to rise and ask to speak to a question of privilege.

Mr. KNOWLES: I wish to point out that at no time did I object to the minister engaging men of experience for the work that is his responsibility. What I was objecting to in this particular instance was that he had not done the very thing he mentioned in the closing part of his speech; that is, he did not himself fully arrange for the operation of this plant. A company was set up; it was given certain functions, but it was not given the function of operating the plant. These men whom I have named have recommended other companies not mentioned in the first order in council to operate the plant; and when I gave the list of their business connections I did so to indicate that I was not surprised that these men had made such a recommendation.

Mr. DIEFENBAKER: In making the statement that the rubber corporation set up by the government will operate after the war, I think the minister has made an epochal announcement. In effect, it means that this government corporation is to be operated after the war by the government, by reason of the fact that the commodity it produces is one that is as necessary in time of peace as it is in time of war, and one which, after the war is over and the Malay peninsula is recovered, may well be scarce for some years. I should like the minister to tell the committee whether or not the decision to operate this industry is the result of an agreement with the other united nations through the joint production board. Does it represent a decision arrived at by those in positions of responsibility in the united nations, such as he occupies, that after the war plants producing certain commodities, such as rubber, magnesium, aluminum and the like, because they are required in peace time as well as in war time, shall be operated by the state?

That is a very important question, for recently, as I mentioned the other day, the national planning board of the United States indicated that there was a very large body of opinion that such crucial commodities as I have mentioned might be manufactured after the war in a partnership between private enterprise and the government of the day. So that the fact that to-day in this house, for the first time, an announcement has been made of a decision by the government, either in cooperation with the other united nations or of itself, that it is going to operate at least this industry after the war, is most significant. I would ask the minister when replying to answer the questions I asked the other day respecting war industries. What decision has been arrived at as to the disposal of other war industries, either through sale, lease or joint operation, and what provision is now being made or has been made with regard to the conversion of war-time industries to peace-time industries? From what the minister has said it is apparent the government has made some decision with respect to the rubber industry.

I pointed out the other day that during war time the government had advanced to industry over $860,000,000. That is a tremendous amount of money, and I should like to know whether a decision has been arrived at with respect to the general post-war policy. I know, as the minister has pointed out, that it would have to be changed in certain particulars. However, a final decision has been made with respect to rubber, and I should like to know what decision has been made in connection with the aircraft industry, or others one might mention.

These are matters of great importance. In addition to Polymer Corporation Limited, I would point out that there are other crown corporations, and we would like to know what the decision has been with respect to them.

The CHAIRMAN: It would seem that we are not making headway, nor shall we do so if

we continue to discuss the whole realm of munitions and supply under the heading of rubber.

Mr. DIEFENBAKER: I appreciate what you say, sir, but my aim in asking the question at this time was to have it dovetail with the discussion on rubber.

Mr. HOWE: I like my hon. friend's sublime confidence that this government will carry on indefinitely after the war.

Mr. DIEFENBAKER: They should make decisions now.

Mr. HOWE: I think it might be answered, logically, that the policy of the government in this regard will be made known in due course.

I might point out, however, that up to this time the function of the Department of Munitions and Supply has been to win the war. We have not built plants with one eye on the post-war world. We have built them because they were required for the war, and only for that reason. We never had a double purpose in building plants. Of course rubber is vital to the war, and also to the post-war period, and perhaps it is unique in that respect. The source of natural rubber has gone—for how long we do not know.

The joint production and resources board examined the needs of war, so far as rubber was concerned, and undertook to plan for the production of that rubber, including the requirements of Great Britain and other allied countries. When the full programme is completed, that will have been provided. Canada took its share of the programme, and undertook to supply its own requirements. The 45,000 tons which will be produced in Canada will supply Canada's war requirements in full, and is somewhat more than the pre-war peace-time requirements. We were interested especially in supplying war-time requirements in full, and it is only incidental that those requirements happen to be a little more than our peace-time requirements.

The hon. member asked me about the future Polymer Corporation Limited. I advised him that the government had no plans, other than to operate the plant as a government property, and that it should be operated by the government during the war and during the peace. Governments change their plans. Any government plan can be changed in very short order. It is quite possible that in the peace-time world, when war considerations have no meaning, this or some other government may decide another policy for the plant. That is the privilege of the government of the day, in any event. Naturally, I am not attempting to commit the government now.

[The Chairman.]

The hon. member for Yale (Mr. Stirling) asked about the future of Citadel Merchandising Company, Limited. The Citadel company was formed to do a war-time job, namely, to find great quantities of machine tools, in bulk. It was quite impossible for individual companies to function in buying machine tools to meet their individual requirements. It was decided that all requirements should be pooled, and that the Citadel company would operate and pay for the pool. It is very fortunate that arrangement was made, because through the Citadel company we got our machine tools, and got them with reasonable expedition.

To-day the Citadel company has pretty well completed its function of buying machine tools, but at this time it is the custodian of some $150,000,000 worth of machine tools, and moves them from plant to plant as required. To-day it is the source of a great saving to Canadian industry, by having possession of a pool of machine tools which can be used by industry as a whole. I assume that after the war the position of the Citadel company will change again. It will probably be the custodian of machine tools owned by the government. How soon they can be liquidated, or what will be done with them, I do not know. Obviously, however, the Citadel company was built up to serve war-time requirements, and will gradually disappear, as it can liquidate its war-time assets.

The hon. member asked about Cutting Tools and Gauges Limited. This company offered a way of filling cutting tools requirements and arranging for their manufacture in Canadian factories. As my hon. friend knows, the value of cutting tools is nil, after they are worn out, or are not required. It would seem that that would be a company very quickly liquidated after industry gets back to a point where it can look after its own cutting tool requirements.

Then the hon. member asked about Research Enterprises Limited. This is a unique company, and was built to fill a position not filled by any Canadian operation. It was built first to manufacture optical glasses by a process worked out by the national research council, and to manufacture certain secret instruments developed by the research council. It still fills a unique spot on this continent, and has expanded enormously owing to the fact that it was built to pioneer in fields of activity in which other companies were unwilling or unable to operate.

I cannot say now what the future of Research Enterprises Limited would be in the post-war period. Obviously the manu-

facture of optical glass should and no doubt will continue after the war. Certain other processes which have been worked out for war processes have great peace-time value, such as the adaptation of radar equipment to peace-time purposes, and arrangements may be made to carry on Research Enterprises. I cannot say at this time whether it will operate as a public or private company.

There is one difficulty about operating under public direction. I think the government corporations and the crown companies are the most efficient plants we have to-day, but I would ask hon. members to keep in mind that these plants are being operated by the cream of Canadian industrial talent. We have persuaded men with interests of their own to give part of their time, often a considerable part, to operating government-owned plants or to act as presidents or directors of government-owned companies. I doubt very much if it will be possible to obtain that kind of service in peace time. These men are doing their jobs to-day as war jobs, and when the war is over I presume that they will wish to return to their own businesses. Therefore, the question of operating a publicly owned plant in peace time is quite different from operating a publicly owned plant in war time, and that must be kept in mind by any government when planning a post-war world.

At the moment we are studying what the plants can be used for, that is, what a plant making war materials can make in the way of peace materials. We have directed our studies to that rather than to how the plants will be operated after the war, whether privately or publicly. I think that is secondary and must be governed by the day to day facts. I do not think it is of great importance fundamentally, or at least it does not seem so to me. Since I came to the government in 1935, I have taken publicly-owned plants that were being operated badly and have sold them to private interests. I have taken plants from private interests that were being operated badly and have made them into government-owned plants.

Mr. DIEFENBAKER: What public plants that were not being operated properly have been sold to private interests?

Mr. HOWE: I would mention the Sorel shipyard for one. My hon. friend was not in the house at that time. There have been others, all in the pre-war period. I have taken over a good many privately owned plants to be operated as publicly owned enterprises and I think they are being operated better to-day than they were when they were privately owned. I believe I have done more than any man in the history of Canada to put the government into public ownership. I am not studying that problem at the moment. I do not know whether two years after the war all the plants that are now publicly operated will be publicly operated. I think it will depend a great deal upon whether they can be publicly operated successfully and efficiently. If they can, there may be no other reason for making other arrangements. If they cannot, it would certainly be in the interests of any government to see that they are placed in private hands for operation.

Mr. PERLEY: When the committee was about to adjourn last night I gave way to the hon. member for Yale (Mr. Stirling) who made a very good contribution to the discussion. There was more meat in what he said in ten minutes than there has been in what has been said in an hour or two on other occasions. At that time I intended to make a few observations with respect to the minister's estimates. One of the matters I had in mind was synthetic rubber, but knowing that the minister was going to deal with this matter to-day, I gave way.

I think it is evident from the questions I have asked with respect to the production of alcohol from wheat, that I am just as much interested in this as any other hon. member. The minister has given us some interesting information this afternoon with regard to the production of rubber from alcohol made from wheat and from petroleum. He went into great detail with respect to the whole problem. His statement that the government will continue to operate the plant at Sarnia for a given term in order that the Canadian people may be supplied with rubber at a fair price was most encouraging. He stated that under an agreement with the United States authorities the patented formula being used for the production of synthetic rubber will be available to this plant for a given time even after the war. I know the minister will be able to operate this plant successfully. He has already stated, and I think rightly so, that he is an adept at choosing the right men for the right jobs. If he chooses the right men to carry on this plant he will be able to produce rubber at a fair price.

The information he gave about the cost of producing rubber from alcohol and from petroleum was most interesting. He has told us that with wheat at eighty cents it would cost about fifty to sixty cents to produce a gallon of alcohol. Then he went on to say

that in order to equalize this cost with the cost of producing rubber from petroleum, wheat would have to be sold for twenty-five cents a bushel at the plant. I do not think there are any farmers in western Canada who will be anxious to sell their wheat at twenty-five cents a bushel or to pay fifty cents a gallon for alcohol. The minister may not have intended to use it in that way, but the figures he has given prove conclusively that the production of rubber from petroleum is the best method. He said that all methods had been thoroughly investigated and that no other course was open to the government than to go to the United States for the raw material. Another interesting point brought out by the minister is the fact that the production of synthetic rubber from butadiene does not decrease the amount of gasoline which may be extracted from the petroleum. Did I understand him correctly?

Mr. HOWE: That is right.

Mr. PERLEY: Then I think the minister should consider the development of oil from the tar sands of Alberta as well as from the oil wells that are now in production in the west. Synthetic rubber could be made from this petroleum without decreasing the amount of gasoline that could be produced. We understand that the production of synthetic rubber from alcohol made from wheat is still in the experimental stages. If these experiments are continued, it may be that a process will be discovered of producing alcohol at a lower cost, which would permit paying a better price for the wheat used.

This concludes my remarks with respect to rubber, and I trust that to-morrow I shall be able to make a few observations on the minister's general statement. The information he has given the committee this afternoon has been of great value and has enabled many of us to understand more clearly the synthetic rubber situation.

Mr. COLDWELL: I, too, think that the information we have received from the minister this afternoon is valuable and will enable us to review the whole situation of the manufacture of synthetic rubber in a way in which we could not have done without that information. I have read a great deal on the subject, and I must say that the minister's figures this afternoon rather nonplussed me. I felt that a great deal of the information I received from other sources must have been based on premises entirely different from the minister's. The more we can have of discussion of this sort, the nearer we shall get to the truth.

There is one other thing I wish to say. The minister spoke with some heat of criticism. I am not blaming him, but I think it is well that those of us in this house, realizing the magnitude of the organization over which the minister presides, should scrutinize with great care every order in council and every contract made by the government. I share some, in fact all, of the suspicions of the hon. member for Winnipeg North Centre. It has been shown by past experience that it is not wise to place in positions of almost absolute control men whose economic associations are such that they are to a large extent governed by them.

When the minister and also the hon. member for Winnipeg North Centre were speaking, there flashed vividly to my mind an incident that occurred in this building less than two years ago, when an outstanding business man connected with one of the great organizations in this country doing war work suggested that it might be wise now to prepare for the post-war situation, particularly regarding government-owned companies and government-owned machines. The suggestion was made that ways and means should now be devised of salvaging this equipment in order that, when the war ended, these new war industries would not interfere with vested and established industry in this country. The further suggestion was made, and there are hon. gentlemen here who will remember it as well as I do, that the same committee of business men might also concern itself with the formation of tariff policies to protect Canadian industry when the war ends.

Mr. HOWE: Who said that?

Mr. COLDWELL: I will tell the minister afterwards.

Mr. HOWE: Was it said in this house?

Mr. COLDWELL: Within this building. I will tell the minister after the house rises. One cannot put that out of one's mind. When we look back at the history of this country over a period of sixty or seventy years we see great natural resources which have been alienated and the building up of great monopolies. It is all very well for the minister to say: We are at war now; we are not fighting combines. I agree. But I think the government could take control out of the hands of those who control the combines, while still retaining the technical men and using their technical ability for the good of the country. It is not a question of breaking up the organization in the middle of the war. It is a question of protecting Canada when we can against the dangers that beset the people of this country. Let us bear in

mind that when we raised this sort of question in the house before the war we were told: This is not the time; we are in the middle of a great depression and we want to encourage business enterprise to meet the difficulties of this depression. Now it is the war. The leader of the opposition said yesterday: What would you do about it? Well, a day or two before the war broke out, we said what we would do about it, and this is what we have repeatedly urged in this house. On September 9, 1939, I said in this house:

> A capital gains tax, properly applied, would prevent fortunes being made out of the agony of the present crisis and provide a large revenue. As we have so frequently urged in this house, the manufacture of arms, munitions and war material should be nationalized.

We said that nearly four years ago, and when we raise that again to-day we are told that we should not bring these things into the discussion because we are now in the middle of a war. I know it is said that we are radicals. I am not ashamed to be called a radical. I saw an article on radicals yesterday in a very conservative paper, and I use the word in all the meanings of the term. I refer to the Montreal *Gazette*. Some hon. members may have read this article by Dorothy Thompson. She says:

> What this country has needed for a long time is radicals in positions of responsibility. I am using the word "radicals" in its exact meaning—of one who goes to the roots of things.

That is what we mean too. She goes on:

> The word has fallen into misuse. All who wanted to take radical action have been considered as "subversive elements". But neither surgeons nor good gardeners are subversive elements, though, if they are any good, they are radical. I tried to teach radicalism to a 13-year-old boy this morning, in connection with the preparation of a bed for seedlings. I told him that unless he spaded the ground deep, cultivated it twice, raking it repeatedly until the soil was pulverized, he would spend the rest of the summer trying to get out the witch-grass without injuring the plants; whereas if he did it properly his work would be largely finished, once and for all.
>
> But the boy was a liberal. He wanted to arrange everything on the surface; rake the fresh and pulverized soil over the clods and appoint a new committee when the weeds came up again. Any other procedure he regarded as exaggeration.

We want to go to the root of these things. We say to the minister that we admire the work he has done in this war. We know his great abilities, and we are not questioning them at all; but as I said once before in this house, the organization that he has gathered round him, representing the great economic interests of this country and with insufficient representation of the ordinary common people of this country, may menace this country when the war is over. That is the point we want to make and drive home. That is why we raise the questions we are raising in the house at the present time. I rose just to say that, because I wanted to keep the record straight. We feel that it is the duty at least of this part of the opposition, and I think it was indicated this afternoon that other parts of the opposition felt the same way, to look into every phase of every contract and every order in council that may be passed right up to the end of this war.

Mr. HOWE: I just wish to say to my hon. friend that I am a technical man and he is a professional man, but my experience leads me to believe that business men are necessary, too. If this company tends to operate as a public trust, I think we are very well advised to let business men run it, because their training and the training of technical or scientific men are poles apart.

Progress reported.

On motion of Mr. Crerar the house adjourned at 5.45 p.m.

MADAME CHIANG KAI-SHEK

Address of Madame Chiang Kai-shek to members of the Senate and of the House of Commons in the House of Commons Chamber, Ottawa, Wednesday, June 16, 1943, at 11 a.m.

Madame Chiang Kai-shek was introduced by the Right Hon. W. L. Mackenzie King, Prime Minister.

Hon. James Allison Glen, Speaker of the House of Commons, presided.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker of the Senate, Mr. Speaker of the House of Commons, Honourable members of both Houses of Parliament: Our country is honoured today by the presence in its capital of a gracious lady who is one of the great personages of the world.

To Madame Chiang Kai-shek I extend the sincerest of welcomes on behalf of the government, the parliament and the people of Canada. We welcome Madame Chiang for what she is in herself. We welcome her as the devoted wife of Generalissimo Chiang Kai-shek, the great leader of the republic of China. And we welcome her as the interpreter of the needs and the virtues of the patient and heroic people of China, the first great power to resist axis aggression.

I should like to thank Madame Chiang anew for having promised, some little time ago, to visit Canada before her return to China; and for having consented, while in Ottawa, to

address the members of Canada's parliament from the floor of its House of Commons. Madame Chiang was obliged to postpone her return to her homeland for some weeks in order that her health might permit her to fulfil the promise she had made. We are deeply conscious of her kindness in so doing.

Madame Chiang speaks today, as it has been given to few individuals in all history to speak. She speaks for the struggles and sufferings, and equally for the highest aspirations, of an ancient race. She speaks for an immemorial culture. Combining with dignity and grace, great spiritual courage, she stands in our midst fully mindful of the toil and sacrifice which, over many cruel years, she has shared with China's valiant defenders. No recital of the noble qualities of her mind and heart could add to the respect and admiration with which we receive her in our halls of parliament to-day.

The inspired leadership of Generalissimo Chiang Kai-shek and his brilliant wife personifies the spirit of China's fight for freedom—freedom not only from aggression, but from all the forces of evil. Moreover it is freedom not for China alone, but freedom which, through understanding and mutual aid among men and nations, will further the well-being of mankind throughout the world. Generalissimo and Madame Chiang Kai-shek voice and exemplify the spirit which animates the defenders of freedom everywhere.

We would ask you, Madame Chiang, to carry to the Generalissimo the expression of our high regard for him, and the assurance that the people of Canada have unreservedly joined with the people of China in putting forth their utmost effort to destroy the evil forces that now seek to dominate the world.

We should like you to tell the men and women of China how unbounded is our admiration of their unswerving fortitude. Their uncomplaining courage has not been surpassed in the annals of human resistance. Canada, in common with all the united nations, is increasingly conscious of the debt that freedom owes to the unconquerable spirit of China.

We are proud to-day to recall that within the expanding circle of the united nations, Canada and China, through the exchange of ministers, have strengthened the ties of friendship between our two countries.

It is the earnest hope of all Canadians, Madame Chiang, that to you and to the Generalissimo may be granted the health and Divine guidance which will enable you together to continue your magnificent work for the unity of your own country and the liberation of all its people.

[Mr. Mackenzie King.]

Our prayers are joined with yours that the day may not be far distant when China, wholly free, may take her rightful place among the free nations of the world.

Hon. J. A. GLEN (Speaker of the House of Commons): Madame Chiang Kai-shek, Mr. Speaker of the Senate, honourable members of both Houses of Parliament: In these war days this parliament has in its deliberations and affairs created many precedents, and to-day we are making further progress. Never before in our history have we heard the voice of a woman, not a member, address us from the floor of the House of Commons. The occasion which provides so unique an event must have attributes and meanings so outstanding and so deep as to render this gathering appropriate and most befitting.

In all grave crises in national and international affairs we have seen great figures and great personalities arise who seem to embody in themselves the issues to be decided. History abounds with such figures. In the records of this present struggle, to the generic term "mankind" must be specifically attached the term "womanhood". Certainly in no other war of magnitude has the power and service of women been so universally employed, and inevitably there have arisen women leaders and world figures who by precept and example have set the standard of devotion, duty and sacrifice—safe guides in an unsafe world. Our distinguished guest to-day is one of those great world figures.

Madame Chiang Kai-shek has honoured us by her presence and it is our privilege to receive that honour. During almost six years she has borne the toil and sorrow of unceasing warfare. She has lived in her country occupied by a remorseless foe who has inflicted on her beloved people unparalleled barbarities. Yet, through it all she has kept alive the high spirit of her people in a manner truly amazing, commanding the wondrous admiration of the whole world. Her very presence with us to-day is an illustration of the spirit which has sustained her through those years which the locusts have eaten, the triumph of mind o'er the ills of the body.

Honourable members of both Houses of Parliament, it is with modest pride that I, a mere mortal, present one of the immortals, Madame Chiang Kai-shek.

MADAME CHIANG KAI-SHEK: Mr. Speaker, Mr. Prime Minister, members of the Senate and members of the House of Commons: I deem it a privilege and pleasure to be here in your midst to-day, for I have been long looking forward to visiting you and your

country. I am conscious of the honour of addressing your parliament, because your national assembly, as an institution, dates back in unbroken lineage to that ancient and worthy institution, the Anglo-Saxon witenagemot. It is an institution which has proven its mettle in weather fair or foul. Parliamentary government to you and to me means that it is built on the basic laws of the land and the common consent of the people carrying out a policy within the mandate given by the people. Based on this authority of ancient usage and the legislative enactment of the supreme authority in the state, we have custom which connotes "unwritten law," and law which is "written enactment." I think it was well put when a great Roman writer of the first century B.C. said: "A people is not an assemblage of men brought together in any fashion but an assemblage of multitude associated by consent to law and community of interest."

We would all agree that a truly parliamentary form of government is the most nearly-perfect system of government human reason could ever evolve. And we say that parliamentary government is run by the "rule of law." In other words, it has its foundation on immemorial custom and right reason. No single individual, no group, no class is above law. Parliament has final competence in expressing law and men can only be punished by breach of law. In this way every individual citizen is within the framework of the law and is thereby protected.

But these ideals and principles were not immediately practised upon their formation; rather they came into being through the passage of time. If we remember, there were indeed fearless men who did not hesitate to speak out their convictions through the centuries. In the sixteenth century, Sir John Elliott, in his celebrated impeachment attacking the favourite minion of Charles I, compared Buckingham to Sejanus. To us, whether Charles I was implied to be a Tiberius or not, matters little. What stays our attention is the implicit demand that a minister should possess the confidence of parliament.

Whatever we may think of Milton's unprincipled opportunism in vacillating between Cromwell and Charles II, we must recognize that Milton did contribute to the fight for the principle of freedom of speech as seen in his "Areopagitica." Much later the *Quarterly Review,* the *Westminster Review,* and the *Edinburgh Review,* as exponents of freedom of speech, grew and flourished and became journals of excellence. They achieved their great purpose inasmuch as they brought public questions before a wide audience. The public became conscious of affairs outside the compressed bounds of their personal lives and voluntarily absorbed their accepted discipline as a great power in the world. Men like Wilberforce and Buxton took their stand and worked against slavery and advocated the freedom of man.

Others like George Grote and John Stuart Mill worked for the freedom of institutions. These are merely a few names amongst the many social and political reformers of your great mother country. I need not, however, tell you that it was due to centuries of incessant struggle by your people against the strongly entrenched absolute powers of unreason that your present parliamentary system of government came into being.

It may be interesting to contrast the system of parliamentary government with axis tyranny which once threatened to engulf the civilized world, and to examine the fascist philosophy and see wherein it differs fundamentally from yours.

Germany during the Weimar republic had all the outward "appearance" of a democracy, but it degenerated and became extinct after an existence of less than two decades. In its place grew up a demoniac Mephistopheles nurturing persecution and miasmic hate. That such a retrogression could take place shows that the majority of the German people were not aware of the true essence of a constitutional form of government and that the integrants of making it a lasting and true democracy were wanting. Some people conjure that democracy implies that individuals may be allowed to engage in activity even when it is directed against the interests of the state. Others regard democracy to be "a charming form of government full of variety and disorder." By permitting activities subversive to democratic ideals that nation denies to itself the right of self-defence, while those who think that chaos lends charm to democracy deny to democracy the right of self-preservation.

Never for a moment should we confuse democracy with ochlocracy. Democracy is disciplined self-rule. Democracy may be likened to beautiful architecture; for every part of the tracery and sculpture, supreme in its individuality, claims a permanent place on its own merit and then surrenders it to the entire composition thereby enriching the whole and relieving it from the tameness of mere qualitative perfection. Ochlocracy, on the other hand, is but the inchoate rococo of mob rule bred on febrile emotions and unrestraint.

Present-day Germany has become an immane dictatorship because it precludes the right of the governed to forensic dialectics.

The fascists believe that a preponderance of force constitutes all legal requirements and justification of a government. They have dragooned and deluded the people into a belief of superstition in the infallibility of their leadership. They have refused the people the right to challenge the fallibility of men holding power in the government. We of the united nations, on the other hand, accept the challenge of query permitting divergent views the right of discussion so that all ideas in the deepest recesses and nethermost corners of the human mind are reexamined and weighed; for we think that this is "a method which produces a better average of humanity and the most scientific of despotism".

Besides the excellent pattern of parliamentary government which Canada represents, I am impressed by the fact that here in your country one finds the greatest example of two steadfast peoples, the French and the British, who in the history of their development of the country were not unmarred by wars and who have now come to live side by side as one people in concord and harmony. In achievement the descendants of the French settlers, as well as those of Anglo-Saxon origin, have contributed in full measure to the progress and prosperity of Canada. This record is indeed noteworthy.

When a part of your vast country was colonized in its early days, the French colonial authorities of Lower Canada instituted in every parish a militia captain chosen from among the "habitants". True enough, this nominee was appointed by the governor. But the commissions were given or withheld according to whether people approved or rejected the nominee at the regular Sunday assembly. That was an outstanding example of public representation, a practice to follow the will and wishes of the people. The natural good manners, social ease, and never-failing liveliness characterizing the French people made them eminently suitable for the adventurous life of early colonizers. One never fails to be reminded in one's travels in the United States that such names as Detroit, St. Louis, Vincennes and Louisiana all bear impress of the adventurous spirit of the French Canadians. The coureurs de bois with their fortitude and understanding of the Red Indians instilled into the new continent a priceless heritage—the opportunity of liberty. The French peasants who came to Canada with their frugal traits worked up to become landowners. Here it was not uncommon for the lord of a manor, his lady and his children, to toil together in the fields. They developed respect for labour and, unlike some countries of the time, they did not look upon manual work as degrading but rather as the natural expression in which every man must participate, and recognized that every labourer is worthy of his hire. Such was the levelling influence of frontier life.

The Gallic church also played a large part in the development of your country. Some of the most colourful and glorious chapters of Christian missions began in North America. The Jesuit priests were explorers, cartographers and teachers. It was Pere Marquette who with Louis Jolliet explored the Mississippi. It was the Catholic Fathers who produced the first maps of lake Superior in 1671 and the northern parts of Michigan and lake Huron. It was the Jesuits who first preached Christianity among the Hurons and aspired to convert and civilize the whole continent of Red Indians.

I recall also the intendant, Jean Talon, who was blessed with vision and foresight. Not content that a few people should profit by the land of milk and honey, he advocated the idea that Canada should be opened up to take the pressure off the increased population in Europe, the great majority of whom were then living in squalor and poverty further accentuated by heavy taxation raised to finance the private wars of kings and princes motivated by selfish ambition of aggrandizement.

Canada, and the world as well, owe a debt of lasting gratitude to men like Poulett Thomson, the first Baron Sydenham, for his wise statesmanship in adopting moral suasion rather than brute force in carrying out his policy during his tenure of office as Governor. Later, Lord Elgin, while representing the crown in Canada, accepted the Liberal party in the formation of the Canadian cabinet, thereby recognizing responsible representative government. Since then your country has made steady and logical progress in unity of government, and your people have evolved cohesion of purpose and action so that to-day you are an effective member of the united nations in the fight against aggression.

In my address to the Congress of your great neighbour, the United States, I mentioned that in the common interest of the united nations, Japan must not be permitted to have undisputed possession of the territories she has seized in China and elsewhere, for with the help of time, she is accumulating added resources to continue the axis war of aggression. The material she has commandeered during the past twelve months reaches staggering figures. From occupied territories within the great wall of China, on the average, every month, three million two hundred thousand tons of raw materials were shipped

to Japan, whilst two million eight hundred thousand tons were shipped from the occupied territories in Manchuria to Japan. In addition, each month, she transported from territories inside the great wall, two million three hundred thousand tons of material for the heavy industries she is building in Manchuria and other parts of Asia. In short, within the last year, Japan has seized and carried away, in round numbers, one hundred million tons of raw material for the use of her armed forces. This figure does not include the foodstuffs her army in China's occupied areas consumed. The importance of driving Japan from China can be further seen when we consider that from Malaya, Japan, the past year, had only shipped approximately six million tons, the ratio of about one to sixteen as compared with what she appropriated from China. She is continually consolidating her position as a vicious world threat and increasing her exploitation of China's resources aimed at the united nations.

My country, China, for six years has hung like a millstone around the neck of the Japanese military, and has succeeded in preventing Japan from utilizing several millions of her armed forces and workers in other parts of the world. With ill-equipped men we have fought with small arms, flesh and blood, and the will to battle. Until a few weeks ago, the Chinese army never had the sort of consistent air protection necessary for even small-scale offensives. The fact that our army with the help of a few planes in the combined American and Chinese air forces was able to rout the enemy in the last upriver Yangtze invasion proved conclusively that comparatively, much can be done with comparatively little. The danger to China and to the united nations, however, is not past; the magnificent will to resist of the Chinese people and army implemented only by inadequate fighting material must not be strained beyond human endurance, for if Japan should succeed in subjugating China, the repercussions to the cause of the united nations would be the greatest cataclysmic disaster civilization has yet to face.

Like that of China, the contribution which Canada has made to our common cause has not been of the spectacular. I am constrained to say that those of Great Britain and the United States as well have rarely been in that domain. Yet we must realize that it is not the occasional brilliant strokes which determine victory; it is the steadfast performance of preconceived plans in strategy backed by the willingness to contribute ungrudgingly to the common effort that will tip the scales. We should constantly bear in mind the fact that contributions to ultimate victory must not be evaluated by the ephemeral criterion of the spectacular. The accumulated heroism of your commandos, the large amount of foodstuff and munitions which your country has sent to England, the manner in which you have utilized your air bases for training of allied effort, and the fact that per capita Canada has produced more for the war effort than any other member of the united nations are indicative of Canada's will to fight to victory.

There are few new doctrines in the world. In fact, to my mind, we do not need any new doctrines but we should see to it that every worthy doctrine is fully developed and practised. In the same way, we should not sit and hope for a fortuitous concourse of events to creating a better world after the war, but should have the moral courage to strike out and explore the possibilities of making a better world. Caraffa (Pope Paul IV) was once told by Cardinal Pecheco of the corruption around him. Far from resorting to anger, he examined the situation and took steps to eliminate those who were responsible for the evils. He was not afraid to rise above the melee surrounding him; he fought against favouritism and won the battle of the will to righteousness.

There are some skeptics to-day who regard all post-war world collaboration with the eyes of cynics. Bacon, a nationalist of the exclusive school, lacked a sense of statesmanship; for he did not realize, as we do to-day, that rulers and statesmen owe allegiance to civilization and to humanity at large. To-day his well-known maxim: "The increase of any state must be from the foreigner; for whatever is somewhere gotten is somewhere lost," sounds to those of us who have the slightest inkling of economics to be risible although his logic to like minds may have seemed to be irrefutable. Compare him to Grotius his great contemporary, and you will immediately understand what a part vision and imagination can play.

If we but possess the pertinacity to bring it into being, what was yesterday regarded as the impossible becomes to-day the reality. In the middle ages, I may point out, papal bulls of excommunication, bloody wars in determining the true Catholic faith, religious pogroms and inquisitions impoverished and tore Europe asunder. What could seem more inconclusive than a question which involved the arbitration of men's souls? Who could have thought, nay, dared hope, that movements of reformation could finally materialize with the religious peace of Augsburg in 1555?

Again, the British North America Act in 1867, providing for the federation of Canada, was thought by many at the time to be alienating Canada from the British commonwealth. In reality it forged stronger bonds of affection and ties between Great Britain and your country.

The world to-day is once more at the crossroads. Let us realize that in planning for a post-war world the transient assets of a policeman in the Hobbesian sense given world-wide application will be far from adequate unless we actualize it with the fundamental and the positive. Should not we of the united nations also strive for foresight and exercise understanding so that the vanquished will be treated as neighbours and as fellow beings while punishment should be limited only to the perpetrators of this war?

Indeed from Canada, through your welding successfully two peoples into one strong and harmonious nation, the world has much to learn in universal brotherhood. The touchstone of human greatness lies in cooperation and collaboration, the antitheses of domination and exploitation of one people by another.

Speech delivered by the Honourable Senator Thomas Vien, K.C., Speaker of the Canadian Senate, on the occasion of the visit of Madame Chiang Kai-shek to the parliament of Canada, Ottawa, Wednesday, the 16th of June, 1943.

Madame,

Your coming to America has captivated our minds and delighted our hearts. In our annals we had already written your name down as one of the eminent women who throughout the ages have brought blessings and honour to mankind.

You have been named "the Joan of Arc of the East" and, like our own valiant Maid from Lorraine, you suddenly appear "because the times are hapless and there is much sorrow in the fair land of China!" Your career is one of simplicity and grandeur, a career that would be handed down to posterity as a splendid legend were it not so real. It is also your mission to drive out the invader and to wage war beside your husband, the illustrious generalissimo, whose chivalrous qualities remind us of Roland, Duguesclin and Bayard, while your own services to your sorely tried people recall the virtues of Jeanne Mance, Marguerite Bourgeoys and Florence Nightingale.

Endowed with a keen intellect and a warm heart, you have not hesitated to jeopardize your life that you might make your appeals to the united nations for justice and liberty, and for that purpose you have come from China that lies across the Pacific—the venerable ancestor of world civilization.

[Madame Chiang Kai-shek.]

While the splendours of Egypt, Greece and Rome were disappearing in the mists of time, China pursued its steady course through the centuries, even assimilating those invaders who had, at times, succeeded in retaining a foothold in the land.

Your people have been an ingenious people. It was they who more than four thousand years ago invented the compass, and discovered the means of making silk. It was they who nine centuries ago invented gunpowder. They devised and used the printing press long before Gutenberg. Three thousand years ago, they were familiar with music, architecture, sculpture and ceramics, and China still holds the secret of its admirable porcelain, which other countries envy but are unable to reproduce. Five centuries before our era, your philosophers laid down the rule that "as ye would that men do to you, do ye also to them likewise", and taught ancestor worship, brotherly love and "the doctrine of the mean", prelude of that "holy indifference" which is the basis of Christian asceticism.

Your personality, may I say, Madame, is a symbol of that wisdom and knowledge which your people, for centuries, have faithfully and reverently held and guarded as a sacred treasure. You have stirred us deeply by the warmth of your eloquence, and if possible, strengthened our determination to go on fighting, not alone for our own freedom, but as well for the freedom and peace of all mankind—our determination not to lay down our arms until there has been a complete and final victory over all our enemies, Germany, Italy and Japan.

There remains, Madame, but to offer you our great good wishes for the success and happiness of yourself and your illustrious husband, with our ardent and sincere faith in the prompt and complete liberation of your heroic motherland—immortal China!

Mr. GLEN: Madame Chiang Kai-shek, I would seek to convey what has been made so manifest by this audience during your address—the deep sense of gratitude that you have evoked by your message, and the privilege which is ours to have heard not only the voice of China, but the voice of freedom, expressed by you in most eloquent terms and phrased in graceful English, comparable with the best in our literature. I speak not for both houses of parliament alone, but for all Canada, when I express the profound admiration of its citizens for Chung Hua Min Kou, or in our language, literally meaning "Chinese People's Country", the lovely name of the new China. And if I may be permitted to say, you have captivated all our hearts.

Your country has furnished great gifts to the world and when the time comes, as it surely will, when those evil people shall be driven from your land, China will once again take pride in its ancient culture and appease its hunger and thirst for the new learning in the new schools and colleges which, even in the midst of universal destruction, your people have built.

May I respectfully request, Madame, that you will as opportunity offers, convey to your noble and heroic husband, Generalissimo Chiang Kai-shek, Canada's abiding sense of obligation to him and to his valiant people. Canada's war is in the Orient as well as in Europe. Our armed forces are now fighting with your armed forces against Japan, and neither Canada nor China will lay down arms until they exact the unconditional surrender of that country.

It is for the good of all mankind that your and our race and peoples should understand and share friendship. May God in His infinite wisdom sustain and preserve you, and on that glorious day when this war shall cease, Canada will gladly join with your people in their long awaited triumph and will joyously repeat with you: Forever China.

Madame, on behalf of Canada I say: We thank you.

The National Anthem having been sung, the gathering dispersed with three cheers for Madame Chiang Kai-shek.

Thursday, June 17, 1943

The house met at three o'clock.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

SHOES FOR ARMY PURPOSES

Mr. BOUCHER:

1. Did the government send a man to England to examine and report back on shoes for army purposes?
2. If so, who was sent?
3. Was a report made? If so, of what nature was this report?

Mr. MACDONALD (Halifax):

1. Yes. A committee was appointed and by the terms of reference the committee was to investigate and bring in a recommendation for the information of the Department of National Defence as to which was the best type of boot for the army and to advise in respect of any other matters regarding army boots referred to the committee.

2. A committee of three men consisting of Mr. A. O. T. Beardmore, president of the Canadian Tanners Association; Mr. Louis Daoust, footwear administrator for Canada; Captain M. B. Steinkopf, R.C.O.C. chief supervisor of non-technical workshops (army boots are repaired and rebuilt in these workshops).

3. Yes. The principal subject dealt with was the merit of high ankle as compared with low ankle boots for military use.

Final consideration of the report of the committee is deferred pending further trials now being conducted overseas.

Among other subjects dealt with are: (a) the merits of a stitched welt constructed boot as compared with boots of nailed construction; (b) the usefulness of clump soles; (c) the usefulness of heel plates and toe caps; (d) the advantages of leather soles as distinguished from rubber soles; (e) army boot repair systems; (f) salvage of used army boots; (g) the advantages of having uniform boot construction for allied nations.

QUESTION PASSED AS ORDER FOR RETURN

MOBILIZATION ACT—REJECTIONS ON MEDICAL GROUNDS

Mr. BLACK (Cumberland):

1. What is the number and percentage of rejections on medical grounds, and the total number of applicants for enlistment in the army in each military district since the beginning of the war?
2. What is the number and percentage of rejections and exemptions on medical grounds, of those called up under the National Resources Mobilization Act, and responding, in each military district, administrative district, or province?
3. What is the number who have responded to such call-up in each military district, administrative district, or province?

MOBILIZATION ACT

DEFINITION OF STUDENTS

On the orders of the day:

Hon. HUMPHREY MITCHELL (Minister of Labour): Mr. Speaker, yesterday the hon. member for York-Sunbury (Mr. Hanson) asked if there had been any change in the regulations under the National Resources Mobilization Act with respect to the definition of students, or if not, whether any change was contemplated. May I say to the hon. member that there has been no change in the definition in question since the passing of P.C. 10924 of December 1, 1942. I shall be glad to send to the hon. member a copy of the regulation.

Hon. R. B. HANSON (York-Sunbury): Did the minister answer the second part of my question, as to whether any change in the definition of students had been contemplated? I do not think he answered that.

Mr. MITCHELL: At the moment the answer is no.

SUGAR

RATIONING—WESTMOUNT AND DISTRICT

On the orders of the day:

Mr. SARTO FOURNIER (Maisonneuve-Rosemont): Mr. Speaker, before the orders of the day are called I should like to ask a question of the Minister of Finance (Mr. Ilsley) or, in his absence, of his parliamentary secretary, who is also the hon. member for St. Antoine-Westmount (Mr. Abbott). Is it true that the people living within the limits of the city of Westmount are entitled to receive thirteen pounds of sugar, while those living outside the limits of that city receive only ten pounds?

Mr. SPEAKER: Order; this question should not be asked on the orders of the day.

Mr. GRAYDON: It is a very important question.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Wednesday, June 16, consideration in committee of a resolution to grant to his majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war.—Mr. Ilsley—Mr. Bradette in the chair.

MUNITIONS AND SUPPLY

1. Additions and extensions to plants, $195,000,000.

Mr. ESLING: Mr. Chairman, I had intended to wait until item No. 5 was up for consideration before making what observations I had in mind, but as this is a general item I suppose it will be permissible for me to speak now.

Anyone listening to the minister's presentation of his estimates last week must have been impressed by the heavy responsibilities which he has to bear. The great volume and variety of supplies needed, not only for our own forces but for our allies, reflect the willingness and readiness of Canada to respond to the appeal of Mr. Churchill to send him the tools. The minister deserves great credit and must have considerable pride and satisfaction in having been so energetic in meeting this appeal. There may be some criticism of his efforts, and no doubt mistakes have been made, but the man who does not make mistakes does not accomplish very much. I intend to make a detour around the sins of omission and commission and endeavour to present to this committee a more pleasing and perhaps more surprising picture of the part that industry has taken in this war effort.

After the house shall have adjourned perhaps hon. members may be persuaded to visit Trail where there is the largest metallurgical plant in the world and one of the most important munitions plants in the Dominion of Canada. Hon. members will then have an opportunity to note at first hand the human as well as the industrial relations which exist between employer and employee. For more than twenty years a committee of employees elected by secret ballot from all departments of that huge plant have been the bargaining agents for their fellow workers. It may be interesting to note that during that twenty years not one hour of operation has been lost through the failure of the management and the committee to reach an amicable arrangement in connection with any matter brought to the attention of the management. This system was introduced by Mr. S. G. Blaylock, president and managing director of the company, and it would be well if other industries throughout the dominion adopted the same system and thereby did away with strikes and slow-downs.

This matter is one of peculiar interest to the residents of the prairie provinces. During the long depression from 1930 to 1940 and the succession of crop failures there was considerable discouragement among the residents of the prairies. Thousands of them put their families and belongings into their little cars and started for the Pacific coast where they hoped to have at least some warmth. In making that journey they had to pass through Trail where the smokestacks offered some hope of earning a dollar. During that ten-year period there must have been ten thousand people from the prairies and the eastern provinces who came into my district. In 1940 there were five thousand more people on the voters' list than there were in 1935.

The plants of this company in the various localities employ some 8,000 people, of which 78·3 per cent were born within the British empire. A total of 1,800 former employees are now enrolled in the armed services, and included in this number are some of the staff of apprentices which usually number 134. In

1942 the payroll of the company was $16,000,000. The basic wage for unskilled labour is $3.85 per day, but to this is added a bonus for metals which is governed by the market quotations, a bonus for silver, a bonus for efficiency and a bonus to cover the cost of living. These four bonuses brought the basic day rate up to $5.44 for unskilled labour during May. In addition other gratuities have been given to the employees. At Christmas time every married man received a cheque for $75, and every head of a family received a turkey as well. The single men also received $75 and an order for merchandise equivalent to the value of the turkey. These are just some of the instances that have occurred in the human relations that exist between employer and employee. There are 12,000 separate shareholders of the company, including many employees who have been given shares gratuitously to a market value of a little over $2,000,000. So that you can readily understand that there is a real human interest in the company.

Now what about the company? They make matters a little more interesting for their employees by providing them with a non-contributory pension, which is governed by the term of service and the employee's earnings. If a man enters the service of the company at the age of twenty-five and retires at the age of sixty, having an average earning of $1,500 he is retired on a pension of $43.75 a month, to which he has contributed nothing. Were he to buy a government annuity at the age of sixty returning him the same amount per month it would cost him $6,100. There I think is evidence of an interest by the company in its employees. They also have an insurance plan to which the employee contributes nothing. After six months in the service he receives a policy for $500 and every six months thereafter there is added to the $500 an additional $100 until the employee receives insurance of $1,500, to which again he contributes nothing. Should he wish to add to his security by taking out another $1,000 insurance he may do so by paying 90 cents a month or $10.80 a year. He pays that; to the other $1,500 he contributes nothing.

Now for a few more considerations on the part of the company. They have advanced to the employees, and I think this ought to be of interest to those who are looking to the deficiency in housing to-day, $4,500,000 for housing purposes. They also have in the pension fund a little more than $3,000,000, and they have made other contributions in every way to contribute to the comfort and security and welfare of the employees.

As to employment, the company paid last year in freight alone the sum of $13,000,000—you will understand the number of railway employees who have profited by that—and $7,000,000 in taxes. I remember a few years back when railway employees had great difficulty in earning a living.

In addition to the $4,500,000 contributed to the housing scheme the company also fills up every employee's coal bin so that there is no danger whatever of an employee being without fuel. His coal requirements are given to the committee and the employee pays for that coal over a period of from eight to twelve months.

I would like to come now to the item covering company contributions during the war. When the British mission first came to Canada it was almost helpless. It had to look around to see where it could secure assistance. It was sent to the Consolidated Mining and Smelting company, and the manager of that company turned over to this government as well as to the British government the services of twenty-three technical engineers and at the same time offered the assistance of key men in that plant whose services might be required. The result was that they built three plants of an approximate value of $16,000,000, and they did so at a price below the unit price estimated by the engineers of this government. The company undertook this work without fee or compensation of any kind. They simply said to the British government: We are going to undertake this work for you without the loss of one dollar and without the profit of one dollar. They carried that through and in most instances completed their work ahead of the allotted time.

At the machine shops of that huge plant they have turned out some of the best marine engines which the Admiralty is using for boats on the Pacific coast.

I want to say a word about metals, just to impress upon the members of this house the fact that there are some industries that are not profiteering and are not obsessed with the one idea of making money out of this war. During the last war this company was not at all behind because when the allies needed lead and zinc the zinc supply was practically cornered by United States interests; and the price of high-grade zinc in the United States during the last war ran from 27 to 45 cents per pound until the company through its research department perfected a means of separating the lead and zinc in ores and was able to supply the allies with zinc at 14 cents. There is a great difference between 14 cents and 27 to 45 cents.

What did the company do in this war? It said to the British government: We will supply you with all the lead and zinc you need in excess of the requirements of the Canadian consumer. The company supplies that lead and zinc to-day to the British government at a price for zinc, for instance, which is less than the average price in the five years prior to the war. In other words this company is supplying the allies with zinc at $3.60 per hundred pounds as against what? As against the New York quotation of $9.25. Is that not something to be proud of? Is that not something which the members of this parliament should consider—3·6 cents per pound as against 9·25 cents per pound in the United States? The price of their lead is also proportionately low. These prices—and I would just like the members to listen to this to see that there is no grasping or profiteering by one company—these prices mean that the British government is receiving its lead and zinc from the Consolidated Mining and Smelting company at a saving of $22,000,000 every year. There is no grasping or profiteering there.

May I add this one word. Responsible for all this loyalty and this endeavour to participate in the war effort is Mr. S. G. Blaylock, the president and managing director of the company. He did not come there as a high-priced official. I happened to be a resident of the city of Trail before the Consolidated Mining and Smelting company came into existence. I saw Mr. Blaylock come to Trail as a student from McGill to take employment in the assay office. He grew up with the plant. He was in daily contact with his fellow workers. He saw their problems, and he made it his purpose in life to solve those problems, and he is solving them to-day. I do hope that these few words may commend the industrial policy of the Trail plant to other industrial institutions in the Dominion of Canada.

Mr. NOSEWORTHY: I was personally very much impressed yesterday afternoon by the minister's defence of the dollar-a-year men upon whom he has relied for production. I am not at all critical of these gentlemen as individuals. I feel as I am sure the house does that the minister, intent as he was on securing the maximum possible production, chose the men that in his opinion would give that result. There are, however, many people across this country, and they are not by any means all C.C.F.'ers, who are critical of that policy and who fear that the minister, intent on getting production during the war, has paid too little regard to the ultimate result in terms of the post-war period of the policy he is following. There are many people in this country who have good reason to remember that these very men who were eulogized here yesterday must take their share of responsibility for what happened in this country in the pre-war years, and a great many people across this country are fearful of a recurrence of those conditions if these same gentlemen are left in control of our economy when the war ends. Certain it is—I think there can be no question in any one's mind—that the policy being followed by the government to-day inevitably affords to big business an opportunity to entrench itself in the economy of this country, and in almost every instance large corporations will come out of this war in a much stronger position than they were in when the war began.

I listened with interest to what the minister had to say of the qualifications of the directors of Polymer. With all due respect to the minister and the admiration which he as a professional man has for the business man, I fail to see why, because a man is president and director of a long string of mining companies, he has by reason of that fact any special qualifications to be a director of a firm the purpose of which is to construct a plant for the production of synthetic rubber. The same applies to the president and director of a yeast company or to the directors of a bank or the directors of a financial institution. I fail to see where these positions give them any special qualifications for this particular position. I was rather surprised that on that list of directors there was not the name of one single construction man. There must have been outstanding men in the business in which the minister himself was interested and it seems to me that would have been the logical place to look for a man of experience of that kind.

As to capital control, I referred on Tuesday to the extent to which the Aluminum company is gaining control over our water powers in this country. There are people in this country, and again they are not confined to the ranks of the Cooperative Commonwealth Federation—there are many in Ontario—who are vitally interested in the publicly-owned Ontario hydro-electric system, who are wondering what will be the effect upon publicly-owned hydro in this province of this cost-free governmental war-time financing of the Aluminum company and its Shipshaw plant. I have correspondence from the mayors of a number of municipalities in Ontario who are very much alarmed at the prospect of the Aluminum company being in a position, because of its low capital charges, to produce after the war electric power more cheaply than any other concern on this continent. They are alarmed at the prospect in the post-

war period of that company being able to block as they have done in the past the further development of publicly-owned enterprises. I do not know to what extent the minister or the members of the house are aware of the powerful international hook-up in connection with the development of the St. Lawrence watershed. I have before me the seventh annual report of the power authority, which on page 44 gives the names of seventeen directors, among them Mr. Arthur B. Davis, Mr. Edward K. Davis, Mr. Geoffrion, and Mr. Leighton McCarthy. Between them in one way or another these seventeen directors control Aluminium Limited, Saguenay Power, Aluminum Company of America, Montreal Light, Heat and Power, Beauharnois Power, Niagara Hudson Power, Shawinigan Water and Power, Quebec Power, International Power Securities, Gatineau Power, and a number of others such as security companies, which are mere holding companies. I have a further table, on page 42 of the same report, showing the international power hook-ups. Heading the list is the Mellon aluminum interests. There are twenty-seven companies in that hook-up. Fully half of them operate in Canada. One of the companies in that hook-up itself controls fifty-seven other companies, which between them produce and distribute 90 per cent of the power which is used in the state of New York to-day.

Mr. HANSON (York-Sunbury): International Power has been ordered to be dissolved, has it not?

Mr. NOSEWORTHY: But that was the situation at the time of the investigation and at the time this report was made up. Our Ontario hydro system to-day is contracting with private companies, all tied up in one way or another with the aluminum interests, for about as much power as it is developing from its publicly-owned plants. I pointed out that the development of Shipshaw was the culmination of a policy which has been followed very definitely through the years, a policy to block the development of publicly-owned water powers, a policy to get control of these, to ring them about. I am sure the minister will agree that we can ill afford in this country to allow the water flowing down our rivers to pass into the control of an international monopoly. That is a menace.

Mr. HOWE: Mr. Chairman, I am sure I do not know under what item the present discussion is taking place. Certainly it is not under item 1, because there is not a dollar of government funds being given to Aluminum company or to any water-power company as capital assistance. However, since the hon. member has said that Aluminum company has been blocking water power for years, and grabbing control of water power for years, perhaps he will tell us what powers have been blocked and what powers are controlled.

Mr. NOSEWORTHY: I wanted to show that from 1921 to 1924, for instance, the hydro electric commission and the government of Canada were committed to the policy of developing a publicly owned development on the St. Lawrence. I pointed out on Tuesday—

Mr. HOWE: We are still committed, are we not?

Mr. NOSEWORTHY: Just a moment. I pointed out on Tuesday that the aluminum interests had engaged a very highly-paid counsel in Canada—

Mr. HOWE: Mr. Chairman, are there no rules at all for this committee? On what item is the hon. member speaking?

Mr. COLDWELL: I thought I heard the minister say a few minutes ago that he would be glad if the hon. member for York South (Mr. Noseworthy) would show in what manner the Aluminum company had blocked development of water power.

Mr. HOWE: I should like to hear him speak on that, but I do not see why he should discuss it on this item.

Mr. COLDWELL: The minister will find that the reference which the hon. member is about to make does bring into the picture the Frontier corporation, which was used by the Aluminum company to block power.

Mr. HOWE: There is no appropriation under this item for the Frontier Corporation.

Mr. COLDWELL: But the minister challenged the hon. member to show how this involved the Aluminum company, and the hon. member is doing so.

The CHAIRMAN: The hon. member for York South is for the most part out of order, but in this instance he is replying to a question asked by the minister himself. I cannot see, however, that there is any relation between hydro development, or Shipshaw, and the item under discussion. So far we have made no progress in the consideration of this item, and while I do not know what the temper of the committee may be at the moment, I venture to say that every hon. member is anxious to have some progress made. I would ask hon. members therefore to comply with the rules from now on and to stick to the item before the committee.

Mr. HANSON (York-Sunbury): The minister invited this.

Mr. NOSEWORTHY: In answer to the minister's question as to how Aluminum company had blocked the development of the publicly owned enterprise on the St. Lawrence, I was pointing out that from 1921 to 1924 both the Ontario government and the federal government favoured the development of that project. In the meantime, I have already shown, the aluminum interests had engaged the services of a very highly-paid counsel to look after their interests in this country. Following that, I find that in 1926 the Ontario government, the Ontario hydro-electric power commission and the federal government had changed their policy with regard to the development of that project as a publicly owned concern. In 1927 the Canadian government, in reply to an invitation from the United States to participate in negotiating for the St. Lawrence treaty, replied that the government's policy must wait on the report of its national advisory committee. Just prior to that the Ontario hydro commission had informed the international commission that they too would be forced to contract for private power. Two months before they made that statement they had already entered into a contract with the Gatineau Power company, and when the national advisory committee reported to the federal government they recommended the development of the all-Canadian section which was to be developed by private ownership. The following is a quotation from their report:

> We believe that if a reasonable time were permitted in which to enable the resulting power to be economically absorbed the development of this national section would be undertaken by private agencies able and willing to finance the entire work, including the necessary canalization in return for the right to develop the power.

That point of view was embodied in the government's report to the international committee in the following year. The interesting feature of that report is that the chairman of that national advisory committee, Doctor McDougald, was one of the men who were first interested in the organization of Beauharnois, and Aluminum company was present and represented.

The CHAIRMAN: Order. I should like to know whether the hon. member is still replying to the question which the minister asked, because I fail to see how the development of the St. Lawrence can have any bearing on the item before the committee. I cannot see any connection whatever.

[The Chairman.]

Mr. COLDWELL: If I might speak to the point of order, the minister asked the hon. member to state specifically how the Aluminum company was involved in the blocking of the St. Lawrence project. In the second place, perhaps I might call the attention of the committee to *Hansard* at page 3555, in which the minister, in the very able statement he gave on Friday last, referring to the subject, made this observation:

> Our great resources of electrical power provide one of the basic reasons why Canada now holds fourth place among the united nations as a war producer.

And so on. The minister himself pointed out the importance of power in connection with the munitions programme in the war effort, and it seems to me that from both points of view the hon. member is in order.

Mr. CHEVRIER: The item under discussion is, "1. Additions and extensions to plants."

Mr. HANSON (York-Sunbury): Is that quite so? Are we not on a general discussion?

Mr. CHEVRIER: If the hon. member will allow me to raise a point of order, the item under discussion is additions and extensions to plants. There is no provision in this item for any money being advanced to Shipshaw or Aluminum or any power company. Therefore under standing order 58, any discussion is out of order as that in which the hon. member is now engaged. My submission is that the discussion should be ruled out of order.

Mr. HANSON (York-Sunbury): If the point which the minister is making—pardon me, not quite so soon; I meant, the parliamentary assistant.

An hon. MEMBER: Later on.

Mr. HANSON (York-Sunbury): If the major premise of the under-secretary is correct, then of course his conclusion is correct, but his major premise is wrong. The minister made a general statement on this and all other items; and in that situation the membership of this house are entitled as of right, not as of grace from the government benches, to deal with that statement. Then when that discussion is exhausted I submit we get down to the particular items in question. We have not yet reached that stage, much as I should like to see that happen. Furthermore the minister himself invited this very discussion, foolishly I thought; but he brought it on his own head under the general order of business covering all items relating to this huge sum of more than three and a half

billion dollars. I want to reserve the rights of hon. members though at times they may be carried to extremes. I suggest to my hon. friend on my left, however, that going back to the McDougald report is referring to ancient history. Perhaps he will come down to earth and be a little more modern.

Mr. HANSELL: I think it is generally conceded that the little programme we have been given, setting out nine points, pretty well covers the minister's department. I believe it is generally understood by all that, as in connection with the regular estimates, on the first item anything not included in the others may be discussed. I appreciate, Mr. Chairman, that you have allowed a fairly free discussion of the minister's department under the first item, as I think you should, and I suggest that the hon. member be permitted to conclude his speech.

Mr. NOSEWORTHY: I repeat my major contention, that this discussion has arisen because of the aid given by the government to the aluminum interests—

Mr. HOWE: On a point of order, Mr. Chairman, this government has never given one dollar of government aid to the Aluminum company or any of its subsidiaries.

Mr. NOSEWORTHY: To my mind the accelerated depreciation given this company is a form of financial assistance. Furthermore, Canada is interested in the assistance that other members of the united nations have given this company, inasmuch as that assistance enables the company to be a competitor of our publicly-owned enterprises in this country.

At the time I was interrupted I was speaking of the Beauharnois contract. I need not remind the committee that this was a very significant contract as far as Ontario was concerned; that the contract the Ontario hydro entered into with that company figured largely in the flotation of the bonds of that corporation. There we had an instance of a publicly-owned enterprise thwarted in its efforts to secure the development of its own resources and placed in a position where it was forced to underwrite the private development of power resources in the Quebec section of the St. Lawrence. My contention is that this reversal of policy was due in part at least to the effective work done by the counsel for the Aluminum company in Canada, engaged for that purpose. I have one item which I think will illustrate that, from the accounts I was quoting yesterday covering the years 1921 to 1926:

Fee on interview with Messrs. Davis, Bishop and others in New York, Pittsburgh and Toronto discussing, considering and advising; interviews and attendances in connection with the appointment of Mr. Charles A. Magrath as chairman for the hydro electric power commission; fee in preparation for and on special interview with Mr. Charles A. Magrath and Mr. Bishop in Toronto on March 29, 1926. . . . fee covering interviews with Prime Minister of Canada and other members of the government discussing developments of St. Lawrence river and reporting thereon. . . .

Incidentally the bill rendered for fees during these five years amounted to $26,678, and I have no doubt the Aluminum company received good value for this money.

Coming down to a later incident I should like to direct attention to an agreement signed by the governments of Canada and the United States in 1932. After that international agreement had been signed it was discovered by the power authority of New York state that it contained a clause calling for the expenditure of over a million dollars to provide a dam and gates at the entrance of the Aluminum company's canal at Lachine. That clause had escaped public notice until after the signing of the agreement. The matter was so serious that it necessitated a revision of that agreement by the governments of both countries. Had that clause remained in the agreement it would have meant that the aluminum company could have diverted one-quarter of the United States share of that water, which would have amounted to a free gift to the Aluminum company of two and a half million dollars.

The Aluminum company has figured in every application that has come before this house for the exploitation of power. The Prime Minister himself recognized that when discussing bill No. 21, to amend the Electricity and Fluid Exportation Act, which was given third reading on March 27, 1938. A white paper which the Prime Minister tabled on that occasion contains an admission that the exportation was required solely for the use of the Aluminum company.

I shall not give numerous other instances which I had intended to mention, since the government does not want this discussion carried on and apparently there is some dispute as to whether it is in order. To me, however, these are clear indications that throughout the years the Aluminum company has carried on a campaign to defeat the public development of that great waterway system. And I am not so sure as the minister seems to be that when the war is over we shall be free to go on with that great enterprise which, in the natural course of events, should provide much employment in that post-war period. For twenty-five years the Aluminum company

has succeeded in persuading the government, either on the other side or this side, that it was not in the interests of this or that country to proceed with the development. With the strategic position they now hold by reason of the assistance they have received in the development of their new plant I am not so sure that they will not still, and for a long time, be able to block that publicly-owned enterprise.

Mr. HANSELL: Mr. Chairman, may I return to yesterday's discussion of the rubber situation. I shall not take a great deal of time in discussing the matter generally, but shall ask the minister a question in respect of one matter which does not seem to have been touched upon. I refer to reclaimed rubber. What is being done in respect of this commodity? I ask the question because in several communities people have spoken to me about their supply of reclaimed rubber, and I have seen huge piles of old rubber tires. I remember one particular pile which must have amounted to many tons, and that pile to my knowledge has been lying there for at least two years. The salvage committee in that community are asking why it is that they cannot dispose of this pile of old tires, because it is an eyesore in the community.

Most of us found on our desks this morning a little booklet called "Canada at War". It is published, I believe, by the king's printer, and issued by the wartime information board. At page 31 of this June issue I find this paragraph:

> Salvage material most urgently needed now is fats and bones to produce glycerine, old tires and tubes, scrap brass, bronze, and copper and rags.

If these old tires are needed, why is it that these piles are allowed to accumulate and to lie for a number of years? The pile I have in mind has been there to my knowledge for at least two years, and there must be a good many tons in it. This is not an isolated incident; I think we would find the same condition throughout the country. Could the minister throw some light on what is being done in respect of reclaimed rubber?

Mr. HOWE: The supply of reclaimed rubber is very good indeed. In fact, collections of old tires have exceeded the capacity to reclaim their rubber content. Reclaiming plants have a limited capacity, and we had a tremendous response to our campaign for the collection of old rubber in the form of tires and other goods. Our stocks of reclaim are high. It is true that we have a considerable stock of old tires waiting to be processed, but I can say that the reclaimed rubber situation is in a very satisfactory condition.

[Mr. Noseworthy.]

Mr. JOHNSTON (Bow River): Are we getting any raw rubber from outside Canada—from Russia, or any other place?

Mr. HOWE: Only a trickle. Most of our crude rubber comes from the united nations' stock pile. We are allocated our war needs from that pile. That is sufficient to make up the deficit in our own stocks, which have been spread over a period sufficiently long so that artificial rubber may take the place of the crude.

Mr. JOHNSTON (Bow River): The minister is referring to that which is already on this continent?

Mr. HOWE: Yes.

Mr. JOHNSTON (Bow River): Are any imports of crude rubber coming from Russia or Great Britain?

Mr. HOWE: There are trickles, but I do not know how much. All imports are pooled and go into the stock pile which is held in the United States. A certain amount comes in from South America, a little from India and Ceylon, and a certain amount from South Africa. Whether any comes from Russia at the moment I cannot say.

Mr. PERLEY: What is the percentage of rubber in old tires which can be reclaimed?

Mr. HOWE: I think a very large percentage of the rubber that is left. The amount reclaimed would depend of course on how badly the tread is worn. But I believe the reclaiming process takes practically all the rubber that is left in an old tire.

Mr. HANSELL: Does the reclaiming of rubber require a specially equipped plant?

Mr. HOWE: Yes.

Mr. HANSELL: And are our reclaiming processes running at full capacity?

Mr. HOWE: Yes; we have two plants in Canada, and we send a good deal of scrap rubber to Akron, where it is reclaimed and sent back to Canada.

Mr. BENCE: Yesterday I could not help feeling that a discouraging picture was given by the minister respecting the utilization of agricultural products in the manufacture of synthetic rubber. I feel that possibly the worst side of the picture was presented by the minister. As one who is keenly interested in this subject, which I believe to be of the utmost importance to the part of the country from which I come, I should like to obtain from the minister certain information before

I am prepared to accept in my own mind the conclusion that the use of agricultural surpluses is not feasible.

Yesterday the minister gave some figures respecting the costs of manufacturing synthetic rubber from wheat. He stated it had been estimated that wheat to be used for this purpose would have to be purchased at 25 to 30 cents a bushel. I believe his words were "it is estimated"; and I also note that in the article he put on the record, which purported to be an answer to Dyson Carter, the same figures are given. Would the minister tell the committee who made the estimate? Was it made by an individual or a group of individuals? Who were they, and what had been their experience along these lines?

Apparently the determination of costs is a difficult matter. Mr. D. G. McKenzie, to whom I referred in my observations the other night, has stated that he discussed this matter with various research scientists, including some of the research foundations and the national research council, and found that he could not get any of these experts to express an opinion as to costs in terms of commercial production. The report made by the national committee of the Canadian chamber of commerce in a booklet called "A Survey of Canadian Research on the Utilization of Farm Products" states this at page 44 of its report, in connection with industrial alcohol:

> There is no such thing as "the cost" of making alcohol, since it may vary with the size of plant, cost of raw materials, process used and utilization of by-products. The approximate cost figures under pre-war conditions were estimated to be 35 to 40 cents per gallon of alcohol at the distillery, if wheat at 60 cents per bushel is used.

These figures are somewhat lower than those given yesterday by the minister, and in a moment or two I shall have some questions to ask in that connection. For the information of hon. members and the public generally may I point out that this matter is by no means considered a hopeless one so far as the national research council is concerned. These questions were asked in the house by the hon. member for Souris (Mr. Ross) on April 15:

> 1. Have scientific investigations been carried on by national research council as to possibility of utilizing Canadian-grown cereals to produce butadiene which is used in manufacturing scientific rubber?
>
> 2. Has the department made scientific research into the possibility of producing alcohol, rubber, starch and other commodities, from certain foreign products?
>
> 3. If so, what have been the results?
>
> 4. What is the cost per pound of rubber made from wheat alcohol as compared to petroleum?

The answers given were as follows:

> 1. Yes.
>
> 2. Yes.
>
> 3. (a) Ethyl alcohol. No experimental work is being done on alcohol production from farm products since the general processes are already well established in industry. Information obtained from the wheat-alcohol commitee of the United States war production board is available to the national research council.
>
> (b) Rubber. Promising results have been obtained from laboratory investigations on the production of butylene glycol from wheat and its conversion to butadiene. A pilot plant scheduled to operate in early summer is under construction. The purpose of this plant is to provide necessary data for the proper design of a full scale industrial plant.
>
> (c) Starch. An improved process for the separation of starch and gluten from wheat flour has been developed on a large laboratory scale. Starch of high purity is obtained by this process without greatly changing the natural properties of the gluten.
>
> 4. Actual production costs are not at present available to the national research council.

This indicates that the question of cost is hard to determine. As Mr. McKenzie put it, so far as rubber production is concerned the research scientists are not in position to give an accurate estimate. From the discussion yesterday it would appear that there is a misconception in connection with the use of wheat. Reference was made to eighty cent and ninety cent wheat, and one member talked about dollar wheat. The position in this country is that we have a great deal of poor grade wheat which would cost considerably less than the price paid for No. 1 northern. There also seems to be a misconception in the minds of some hon. members of the house as to the amount of money obtained from the sale of wheat. We do not get ninety cents for our wheat because we are entitled to sell only 280,000,000 bushels.

Mr. REID: In past years have the lower grades of wheat not been in greater demand on the coast than No. 1? In British Columbia for many years inferior wheat has cost more than the better grades.

Mr. BENCE: I only wish we could obtain more money for the poorer grades of wheat than we do for No. 1. I can assure the hon. member that considerable quantities of the poorer grades of wheat in Saskatchewan would be available to British Columbia if they were ready to pay the No. 1 price for it.

Mr. REID: We cannot always afford to pay that.

Mr. BENCE: I do not think the poorer grade costs more.

An hon. MEMBER: It is a question of freight.

Mr. BENCE: The freight costs might bring the cost of the poorer grades of wheat in British Columbia above what is paid for

No. 1 grade in Saskatchewan. However if you transported No. 1 wheat along with other grades to British Columbia, the No. 1 wheat would cost more. We are capable of producing in western Canada much more wheat than the 280,000,000 bushels we are allowed to sell. Even though we may be able to get rid of all our wheat for a short time after the war, it may be that after a time we shall not again be able to dispose of all the wheat that we can produce. This is what has happened in past years. Therefore we may have to find something else to do with it. Then we may grow other agricultural products. Experiments are being made in the growing of the Russian dandelion—I do not know its technical name—out of which synthetic rubber is being produced in Russia. It may not be that this product can be grown on the western plains, but the fact is that we have a lot of land there and we are in position to grow many agricultural products that could be used.

Yesterday the minister suggested that the total production of the alcohol distilling plants in this country was sufficient to produce only one-third of the alcohol which would be required to produce the amount of rubber which will be manufactured from petroleum. This alcohol now being manufactured is produced from seven million bushels of wheat, consequently I take it that from 21,000,000 to 25,000,000 bushels would be required to produce sufficient alcohol to manufacture the same amount of rubber as will be made from petroleum. We have an ample supply of poor grade wheat to meet this demand and it seems to me that it could be used for this purpose.

Of course the Sarnia plant is established and will be a going concern this summer. However, the investigations that were carried on before the plant was established are matters with which we are all concerned when we consider whether we can have an alternative process. I do not think anything should be done to discourage the use of agricultural products until we have come to a definite conclusion that it is not possible to work out some feasible and economical scheme for the production of synthetic rubber from this base. In order to assist my understanding of the position I should like the minister to tell the committee at what time it was decided that the construction of the Sarnia plant should be proceeded with. What length of time before that was it that these men to whom he has referred were consulted as to the best process that should be used? Can he give us the names of those men? How many of them were consulted? Who consulted with them, so far as our administration is concerned? Were members of the national research council brought into the matter? Generally speaking I should like to have a clear picture of the whole discussion that took place before it was decided to go ahead. I should like to know also whether the representatives of the agricultural interests, that is on the scientific side, were called into consultation. Was this matter discussed with men in the United States who have been actually engaged in the production of this product from agricultural products? Who approached who, if I can put it that way? Did the Canadian administration go to the United States and search out these men to obtain their advice, or were they approached from the outside with the suggestion as to what was the best thing that should be done? When he gave his statement yesterday the minister said, as reported on page 3701 of *Hansard*:

> Taking grain at, say, eighty cents a bushel, the cost of production for industrial alcohol from grain would run from fifty cents to sixty cents a gallon.

Mr. HOWE: I said from 72 to 78 cents a gallon.

Mr. BENCE: I am quoting the minister's exact words as they appear on page 3701, but on the next page he is reported as saying:

> As I say, we bought some alcohol from our plants which cost us eighty-eight cents per gallon laid down at Sarnia, but I believe the price at the distillery is somewhere between seventy-two to seventy-eight cents a gallon.

I should like an explanation of the disparity between those two statements. Is the fifty to sixty cent price based on eighty cent wheat, or is it the seventy-two to seventy-eight cent price that is based on that wheat? It is possible that the difference may be made up by the fact that the distilleries are selling alcohol which they are producing in their own plants and offering for sale to the government, while the other figure may have been an estimate of what it would cost in a plant established by the government. I should like to know whether a recent process known as the Park and Telford process was brought to the attention of the administration. I understand that a new process has been developed in the United States within the last four or five months which it is claimed will effect a saving of around ten cents per gallon in the production of alcohol from wheat, I believe this process eliminates the use of malt barley. Can the minister give us any information in connection with the plant which is being established at Thorold, Ontario, other than the information that was contained in the reply given to this house the other day, which merely was to the effect

that it would be operated by a company known as the Ontario Paper company; I think the name of the manager or president was also given. I would like to know what the approximate capacity of this plant will be, whether it is producing alcohol from wheat, and whether it is the kind of plant that can be turned over to the use and production of industrial alcohol from other products, such as molasses, when the war is over.

Mr. HOWE: The Polymer corporation was formed in February 1942, which fixes the approximate date when the studies of the rubber situation were in progress. Mr. Nicholson, who was at that time assistant controller of supplies, was directed by my department to organize the study. He associated with himself a board of scientists of the research laboratories, and one or two other competent scientists were added to it, of whom the head of the Ontario research laboratories was one, and also one or two industrial practising free lance chemists in Canada were added. It was as strong a board as could be obtained to go into all phases of the situation. This board or delegates from it went to the United States and obtained all the information available there. The United States at the same time was making similar studies. Anything which has been done in Canada has been based on the recommendations of that board.

The facts as set out by the board at that time have been confirmed by a number of recent studies. My hon. friend will remember the Baruch committee of the United States went very fully into the subject. That committee as I recall, was made up of Bernard Baruch, the chairman, president Conant of Harvard, and, I believe, Doctor Karl Compton, the president of the Massachusetts Institute of Technology. That committee reviewed the situation, and while it recommended that alcohol plants be built as an immediate source of butadiene to avoid delay in the programme, it confirmed the fact that the cheapest source of butadiene is petroleum.

My hon. friend has asked me about the alcohol plant which is being opened this week. That was a private venture of the Ontario Paper company. The process is to recover the alcohol content of the waste sulphate from a mill making sulphite paper and pulp. I believe the process came from Europe. It has now been worked out for the first time on this continent, and there is no doubt that it will produce alcohol; but until the process is in actual commercial operation, which it will be shortly, it is impossible to get any very accurate data on costs or other phases of that method of producing alcohol. The production of alcohol from wood has, of course, been going on for a good many years.

What were the other questions?

Mr. BENCE: I asked for an explanation of the difference in the figures given yesterday—

Mr. HOWE: Oh, yes. When we are talking of 80 cent wheat, I think probably my hon. friend is thinking of 80 cent wheat at Fort William and I am thinking of 80 cent wheat at the plant. As my hon. friend knows, recent prices for wheat have been around $1 Fort William for No. 1 northern, plus the freight to Sarnia, and I presume that the 88 cent alcohol which we bought laid down at Sarnia involved at least a dollar for low grade wheat at the distilleries, plus the freight on the alcohol to Sarnia.

Mr. BENCE: It seems pretty high for lower grade wheat.

Mr. HOWE: Well, lower grade wheat is bringing a very good price. As my hon. friend knows, spreads are not very great these days.

Mr. BENCE: Seventy cents basis Fort William.

Mr. HOWE: Seventy cents at Fort William, plus freight to Toronto, plus freight to the nearest distillery; and after the alcohol is made it must be railed back to Sarnia in tank cars.

Mr. COLDWELL: Does the minister think we in this country are quite safe in relying on petroleum as a basis for synthetic rubber?

Mr. HOWE: Yes.

Mr. COLDWELL: As a matter of fact I have before me an extract from the report of the Petroleum Industry War Council to the United States government, which was made quite lately, and perhaps I may put a few items before the minister. Here are some figures on the oil supply:

Year	Maximum efficient capacity	Minimum essential demands	Surplus (S) or deficit (D)
1943.....	4,421,500	4,100,000	S 321,500
1944.....	4,212,000	4,400,000	D 188,000
1945.....	4,022,500	4,400,000	D 387,500

Mr. HOWE: That is the production in the United States?

Mr. COLDWELL: Yes. The report on petroleum production for the week ended May 22 this year is given as follows:

Oil production in the United States had decreased in the amount of 17,285 barrels, or a total output of 3,996,700 barrels per day.

Each of the production figures I have given relates, of course, to per diem production. Canada, I believe, imports around eighty per cent of our requirements.

Mr. HOWE: Eighty-five per cent.

Mr. COLDWELL: About eighty-five per cent of our requirements. If it is the fact that the United States is facing growing deficits in the production of petroleum in that country, even although we are increasing our own output, with our tremendous usage of oil in this country, and the difficulties of transportation, obtaining tankers and so on, we seem to be skating on pretty thin ice from that standpoint.

While I am on my feet there is another question which I should like to put to the minister. Are we sufficiently well informed to be able to decide that petroleum is so much better than alcohol? What do we know about it? How long an experience have we had in this matter? I have before me a question and an answer given before the Gillette committee in the United States on January 6, 1943. The counsel for the committee, Mr. Hadlick, put this question to Mr. Brown, who is assistant deputy petroleum administrator, office of petroleum administrator for war, and formerly director in charge of research and development activities, and patent activities of the Standard Oil company of Indiana:

> You perhaps are not familiar with it, but there was considerable testimony, as the chairman will recall, as to the allocation of the funds in January of 1942 to the petroleum companies, and at that time no consideration was given to the method of producing butadiene from alcohol, which was considered in the chemical knowledge of the day as a practical, feasible method of making it, and we are interested particularly in having you confirm that at that time, aside from the small amount that Phillips was making—

That is the Phillips Petroleum company.

> —and the Shell process, the petroleum companies did not have a process—in other words, the money was allocated to go out and find the process.

Mr. Brown's reply is very interesting. He said this:

> I would not care to go on record to that extent, although I will agree readily enough that the process of producing butadiene from alcohol had been operated in other countries on a large scale, and very successfully, and at the same time that the processes which eventually were selected by which butadiene would be made from petroleum were not ones which had been commercially operated, so far as I know, prior to Pearl Harbor, with the exception mentioned.

I know the minister is depending on his advisers, and that advisers must rely on the information which they are able to secure. But before we rule out the possibility of using alcohol as a base, a much more thorough inquiry should be made.

In answer to the hon. member for Saskatoon, the minister referred to the freight charges to Fort William and on to Toronto and back to Sarnia—or back to Windsor, because there are distilleries at Toronto and Windsor. Our contention would be, of course, that if the alcohol process is feasible and the use of grain is economical, distilleries to distil industrial alcohol should be located on the prairies. There would then be no freight rate except in so far as it is necessary to take the alcohol to the place at which it is used as a base for rubber, and that too might be adjacent to the distilleries. I think a far more careful inquiry should be made into this whole matter than we are able to make in the house in committee. I am satisfied that the minister is giving us the benefit of the advice he is getting, but as a member of this house I am not satisfied that that advice is what would ultimately be given after careful inquiry into all phases of this very important matter. It is important from the point of view of the prairies from which some of us come, and that is why we are so persistent in asking that more consideration should be given to this alcohol process.

Mr. HOWE: Of course Canada obtains in peace time a very large part of its imports of petroleum from other than the United States, and the United States also imports largely in peace time. The reason that our two countries have been driven to depending almost wholly on United States production at the moment is the difficulty of the submarine menace and the desire to reduce to the minimum the demands on tanker capacity. The world position in petroleum, assuming normal transportation, is quite satisfactory. My hon. friend will remember that before the war there was surplus petroleum and distress petroleum all over the world, and I believe that that condition will return.

Regarding the information on which we based our plan to make butadiene from a petroleum base, of course we examined the information which was available from time to time, but the encouraging factor to me is that various other inquiries made subsequently, both by Canadian and United States committees of scientists, have confirmed the wisdom of the decision we made based on the data we had at the time.

I think a discussion of this is futile at the moment. Whether we are right or wrong, a decision has been made, and a plant is nearly

built and ready to operate. After that plant has been in operation for some months, we shall know exactly the cost position of butadiene from petroleum, and of rubber from the present process. We shall then have a base from which to examine the wheat situation, and if a cheaper way of making butadiene is developed immediately afterwards, or at any subsequent time, we shall want the cheapest butadiene we can obtain, and plants will be built in due course and the butadiene supplied at the lower cost.

Mr. McIVOR: I am not going to speak about alcohol, how it may be made, or where secured, or how disposed of. But I have been listening closely to this debate and I have my own practical suggestions to make. I heard the discussion on aluminum, and the reasons why this subject was brought to the front are, perhaps, three: one, to show that too much was paid for the aluminum; two, that some people were making too big a profit from it; three, to add, perhaps, another industrial organization to the number now controlled by the government. My answers to these points are very simple. I do not know a great deal about aircraft, but when I see men sitting and waiting for aluminum I am disposed to tell the Minister of Munitions and Supply to get aluminum if it is possible to get it. What has emerged from this discussion is that the minister has aluminum, and that he is paying, not seventeen cents but fifteen cents a pound, which according to the statements produced in the committee is the lowest price paid anywhere in the world. I think therefore that the minister is to be commended. In the next place, if it be true that the Aluminum company is making a lot of money, presumably the shares would soar sky high. Instead of that, prices have gone the other way. Further, I do not think we should ask the Minister of Munitions and Supply to keep a tab on all those who are making money out of the manufacture of munitions. The eagle eye of the Minister of National Revenue will look after them; and I take this opportunity of paying my tribute to his deputy minister, Mr. Fraser Elliott, who will get revenue from anybody who ought to pay. Therefore why lay this burden on the Minister of Munitions and Supply?

As regards public ownership, I know of no minister in Canada, either in this or in any previous government, who has ever put so many industries under government control as the present minister has done. I am afraid that if he extended his control to the Aluminum company and a few other industrial concerns the Cooperative Commonwealth Federation would not have very much to fight on.

Mr. COLDWELL: That would be fine.

Mr. McIVOR: I agree with the minister in the statement he made yesterday that he wanted to get, to use his own words, the best brains of Canada. I know he has tried. I have suggested to him men from the head of the lakes who I thought and still think are clever men, but they did not get positions in the Department of Munitions and Supply, because he had other men who in his opinion had better brains and were more efficient. Of course I said, "Well, all right, we will just keep on trying."

Again, as to his relations with labour: if there is any minister who has done a great deal to prevent strikes it is the present minister. We know the times when workers have struck; we do not know the times when strikes have been avoided. It is analogous to the case of a man who takes a drink; we know the times when he gets too much; we do not know the times when he is tempted to take too much but refrains.

I can see the Minister of Munitions and Supply sitting with a group of trade union men around him, and if there was a grievance they would go back to work and there would be no strike. I know too that some credit is due the Minister of Labour, where a certain man was dismissed for union activities. The corporation said they had dismissed him for other reasons but he is back at work, and that industry is simply humming with management and union men working together to produce up to the hilt. I think we should state these facts.

Someone said that the small man should be taken care of. I would ask, where is there any industry in Canada, or where is there any work in Canada, where the small man has been so well taken care of as he had been in this department in connection with what is called the bits-and-pieces contracts. In Montreal, Toronto, Port Arthur, Winnipeg, et cetera, there were machine shops where the men were working very busily. They could not get a job, but this department has taken care of them, and the work done has been commendable.

The hon. member for New Westminster (Mr. Reid) stated that when we are trying to produce steel we should carry on the manufacturing as close as possible to the source of production. I do not agree with him when he says that the best quality ore is to be found in British Columbia, because in my opinion the

hematite ore that will soon be flowing through the lakes from Steep Rock will compare favourably with the best in Canada. I give the minister notice now that if we can prevent it we will not allow that ore to be carried down lake Superior in boats in the form of ore, but we will try to influence or perhaps to interest even members of the opposition, who are supposed to be moneyed men, to invest their money in the big smelter concern at the head of the lakes. I believe that the steel produced at the head of the lakes would be much more easily shipped than the ore.

I know that the minister is capable of doing great things and in this discussion it was assumed that he could find oil and steel, fabrics and tools, and could break combines. I heard at one time that he was pretty well loaded—

Some hon. MEMBERS: Oh, oh.

Mr. McIVOR: —with work. I am glad to see that the opposition has a sense of humour. Very often, however, though the minister has done a great job and we are glad to see him in such fine humour, I have wondered that he could take as much as he did.

Some hon. MEMBERS: Oh, oh.

Mr. McIVOR: It illustrates the old proverb, when I see him sitting and listening patiently, as he does—a proverb which I came across the other day and which was new to me: "You can tell the calibre of a man from the size of the thing that gets his goat."

Mr. ADAMSON: There is one question I want to ask the minister in regard to rubber. Some time ago a great deal of publicity was given the Russian manufacture of rubber from some of the dandelion families. I believe the names were guayule and cryptostegia. This was supposed to have solved the rubber problem in Russia and it received a great deal of publicity. I remember reading an article in the New York *Times*. Is there anything in that, or has it been tried?

Mr. HOWE: I know very little about the rubber situation in Russia, and few people do. The Russians are not very communicative of their secret processes. However, the milkweed is used in the rubber process as a polymerizer and Canada is growing a bit of milkweed experimentally for that purpose and possibly will increase the quantity. I would hesitate to suggest how many hundreds of square miles of milkweed would be required to produce a ton of artificial rubber; it would be a great many. However, it happens that the milkweed is useful in the rubber process.

Mr. FRASER (Peterborough West): You want 700 acres planted in Peterborough?

Mr. HOWE: Yes; we are arranging for the planting of 700 acres.

Mr. FRASER (Peterborough West): Is the department putting up a plant?

Mr. HOWE: No. It will go into the Sarnia plant as a polymerizer with other ingredients.

Mr. FRASER (Peterborough West): It will be shipped to Sarnia?

Mr. HOWE: Yes.

Mr. JOHNSTON (Bow River): With reference to the manufacture of rubber, it has been pointed out that there is likely to be a scarcity of oil products, such as gasoline and lubricating oils, and therefore greater attention should be paid to the distillation of alcohol from wheat. Of course we on the prairies are interested in that particular phase of the subject from the standpoint of disposing of our wheat. The minister thinks that would be impracticable at the moment. When speaking, he said that the time was not now opportune to discuss that phase of the matter because there was a plant already nearing completion in Sarnia and if that demonstrated that he could not get enough it might be necessary to start a plant in the prairies. But once the plant is completed at Sarnia and members from the prairies start pressing to have a plant put up in the west the minister will be one of the first to tell us that, having gone to all the expense of putting up a plant at Sarnia, while it might be more expensive to process the product there, nevertheless it would not be feasible to start another plant at tremendous cost in the west.

I would point out that there is great danger of our becoming extremely short in petroleum products. In fact, there is a danger that we may have to depend upon our own sources of supply. I think I am safe in saying that as regards increased production of petroleum products as a result of drilling wells, what has been obtained since the war started is almost negligible. We have not made progress in that field. A number of wells have been drilled but there is not very much production from that source. What astonishes me is this. We know definitely that we have oil in the tar sands. The minister has given his view on this question on many occasions but the fact remains that no one

can deny that a supply is there. We know definitely that it is there in unlimited quantities, to the extent of over one hundred billion barrels. That is a huge supply and there is no guesswork about it. We know that it can be procured from the tar sands because they are doing it. The question, therefore resolves itself into one of expense in the process of separating the oil from the sand. There is a distillery there in which they are producing 400 barrels a day now.

Mr. HOWE: No, they are producing nothing.

Mr. JOHNSTON (Bow River): Well, before the fire they were producing 400 barrels a day.

Mr. HOWE: I do not know; I guess so.

Mr. JOHNSTON (Bow River): I believe it was something like that; it was not a large amount; but the main point is that they were doing it. Now, if we are to face a shortage of rubber, and in fact we are facing such a shortage, why do we not go ahead, even though we have a plant at Sarnia which is going to produce rubber from petroleum products? Why do we not go ahead and separate the oil from those tar sands thus assuring ourselves of both oil and rubber? I am sure if the minister would put his genius to work—because I am not questioning that he has ability—and would get his department on the job in earnest, the production of oil from the tar sands could be accomplished, and I think he is the man to do it. He is not so much concerned, as he said the other day in referring to aluminum, about the price of the product; I think he pointed out that his job is production. I agree with him in that respect; that is the main thing. If profits are being made that matter can be attacked from a different angle; nor am I suggesting that it should not be attacked. In all seriousness, however, I think the minister should review the situation in regard to the tar sands, to see if something cannot be done in this connection. Only a few weeks ago I learned from an authoritative source that at the present time American interests are up in the northern part of Alberta trying to estimate the possibility of bringing about this production; that they are determined it can be done and that they are going to approach or have approached the provincial government to see if there is any possibility of carrying on that work with American capital, because, as they say, they could not get anywhere with the dominion government. There may or may not be something to it, but the point is that people are much interested in this matter. The last time I dealt with this subject I read from an article which appeared in a United States newspaper pointing out the urgent need for Canada to do something in regard to the tar sands in the Athabaska district, saying that this was an essential project for the defence of Alaska and in connection with the hard surfacing of those roads. I believe the minister pointed out some days ago that the sale of the by-products of that process would almost pay for the cost of development. That is a consideration also.

However, that is just incidental to what I was going to talk about. The other day the hon. member for Macleod had something to say in regard to the supply of water at various airports. I do not know whether the minister is aware of the fact, but we are spending a great deal of money on these airports owing to the fact that greater precautions were not taken in regard to locating water before the sites were definitely decided upon. I remember asking some questions in regard to the Shepard airport, which is just a few miles away from Calgary; those questions were made an order for return, which order was brought down as sessional paper No. 166 on Wednesday, February 24 of this year. I was inquiring about the cost of drilling wells and transporting the water from Calgary. It appears that two wells were drilled at the Shepard airport after the site had been decided upon and construction was fairly well advanced. The return did not give the cost of drilling the two wells; no doubt the minister could supply that information, but at the moment it is not material. After drilling these wells, which I believe gave a sufficient supply of water, according to the report the mineral content of the water was such that it could not be used, so that they had to pipe water from the city of Calgary. That was done because proper attention was not paid to the matter of the water supply before the site was decided upon. The cost of piping that water was $22,019.44, and the rates paid for the water are given in the return. To me they seem exceedingly high. The answer to question 7(b) was as follows:

The water obtained from the city of Calgary has not been provided for a full year and is on a graduated scale, payable monthly at command:

	Cents per thousand
First 5,000 gallons	40
Next 5,000 gallons	36
Next 20,000 gallons	33
Next 30,000 gallons	26
Next 90,000 gallons	18
Next 350,000 gallons	16
Next 500,000 gallons	14
Over 1,000,000 gallons	13½

According to the return it is estimated that 40,000 gallons per day would be required at the

airport, which figures at about $403 per month or about $13.30 per day for water alone. When you put that on a yearly basis it runs to about $4,892. If you consider the cost of piping, $22,000, and spread that over a period of say four years, which will give it another three years to go—supposing the war is over in three years—it means that the cost is about $6,000 a year for the piping and roughly about $5,000 for the water, or some $11,000 a year for the water supply alone. That is a tremendous price, all because proper attention was not paid to locating a supply of water before definitely deciding upon the site.

I can quite see that occasions may arise when it may be necessary to locate an airport at a particular point whether or not water is available, in which case it might be necessary to pipe the water to that spot. I do not think that was the case here, however. In the instance mentioned by the hon. member for Macleod the other day, water was located at a distance of about six miles from the airfield. Surely it would have been comparatively easy to move the site another four, five or six miles, especially when you consider that the water supply may cost up to $11,000 per year. I believe that is one thing the minister would do well to take in hand, in case other fields should be constructed in future.

The other day the minister made reference to the production of coal. I am extremely interested in this question; I believe everything possible should be done to increase the production of this commodity. Everything points to the fact that this coming winter we are going to find ourselves worse off, so far as supplies of coal are concerned, than we were last year; yet so far not a great deal has been done to increase our supplies. I believe this matter has come under the control of the minister only recently, and we hope he will be able to do something about it. At page 3551 of *Hansard* for June 11, 1943, the minister said:

> Coal is one of our most pressing supply problems. Consumption has increased by more than forty-five per cent since the war began.

Then further down:

> The result is that we have relied to an increasing extent on imports from the United States. . . . All of this means that Canada faces a possible shortage of 4,000,000 short tons during the current year.

That is quite a shortage. Then he went on to say:

> I appeal to all those who are working in our coal mines to do their utmost to help us obtain increased production.

[Mr. C. E. Johnston.]

I think I can speak for the miners when I say they are just as anxious to increase the production of coal as anyone in this house. In all my meetings with the miners I have not found one who was not just as desirous as we are for increased production. But they do have their problems. And unless some effort is made to solve this problem, the minister will have a bigger job on his hands, as time goes on, than he has at present.

There is no question about supply, particularly where Alberta is concerned. The other day the hon. member for Cape Breton South (Mr. Gillis) spoke with regard to his part of the country. It is estimated, I believe, that fourteen per cent of the world's supply lies in Canada, and that eighty-five per cent of that fourteen per cent lies in Alberta. There is a tremendous volume of coal in that province. The big question is: How are we to get it out? So far as Alberta is concerned, whether or not the minister desires to open up more mines in that area, I can say to him that there is certainly plenty of coal there, if he wishes to go after it. There is an unlimited amount. Why, you can drive down the Drumheller valley and see the coal on the face of the hills. You can go into the Rocky mountains, and in one place you will find a mine with a million tons in it, which has been abandoned entirely. Oh, there is no difficulty there. The difficulty will be to get the supply of labour.

The minister has said that so far as manufacturing industries are concerned he will be able to take care of all the labour that will be moved from one plant to another. So that we shall not get many miners from that. Then, we shall not get many out of the army, because my experience is that when you try to get anyone out of the army you have a difficult proposition. And as time goes on you will necessarily have a more difficult task to obtain a release from the army. I say that because the time is coming when all who are in the army will be needed.

There is a great deal of loss of production through absenteeism, and that applies not only in the mining industry but in other industries as well. We saw it last year when we were travelling across this country, and we knew there was some loss of production in all branches as a result of absenteeism.

It has always been my contention, so far as coal mining is concerned, that a great deal of that absenteeism could be overcome if we modified our method of taxation, to some extent. The hon. member for Cape Breton

South pointed that out the other day, and I did the same on another occasion when I spoke on this question. The hon. member was right when he said that when it comes to increasing production, through overtime, there should be some modification in the tax structure. When a man has worked for seven or eight hours in a mine, and then for patriotic purposes, because the press is appealing to his patriotism, and because the minister himself is appealing to his patriotism, increases his production, and then because he may work another shift loses five or six dollars, I think he is just a fool to do it. And I make no apology for that statement. I would not do it, and you would not do it. I never ran across a business in Canada which would produce more, and be penalized because they did it.

An hon. MEMBER: Yes.

Mr. JOHNSTON (Bow River): Where is it? Name one industry which does.

Mr. HOWE: There is no possible combination of circumstances under the present tax laws which penalizes a man, or which makes him earn less for working more. He earns more by working more, and I defy the hon. member to show any other result. I am sure the Minister of National Revenue will support me in that. It is impossible for a man to work more hours and earn less money in his week's pay.

Mr. JOHNSTON (Bow River): I will give one instance. A lady wrote me the other day—and I have the letter in my office—stating that she received $100 a month for the work she was doing, and received a bonus of $17.45. Because she got the bonus she was taxed. She had to pay more because she got the bonus. That is one instance. Certainly if you raise a man's income from a certain field to a point where it gets into another field of taxation, just at that moment, while he may earn only a dollar more in the new field, he will have to pay more taxes.

Mr. HOWE: No. My hon. friend does not understand the tax structure, and it is destructive for him to talk about something he does not understand. I can assure him I know positively whereof I speak when I say that no possible circumstances can arise under which a man who works for forty-eight hours will get more money than the man who works for fifty hours or forty-nine hours, provided they both get the same rate of pay. I wish my hon. friend would not put on *Hansard* any other story, because he is misleading, and dangerously misleading, the workmen of the country. There are too many destructive stories abroad now without having them spread from this House of Commons.

Mr. JOHNSTON (Bow River): All right; I will give the minister another question. He says he knows all about taxation. If he does, then I say he is one of the few people in this country who do, because we have been trying to make out our income tax returns in the last two or three weeks, and I have information that some have had to send their tax papers to an expert, or have him come and simplify the simplified form. But if the minister knows all about the tax structure—and of course I am not suggesting that he does not—then I say he is one of the few in Canada who do.

An hon. MEMBER: You should not talk about it unless you do.

Mr. JOHNSTON (Bow River): Here is another question: If a married lady is receiving $660, I understand she is subject to taxation. If she earns one dollar more she is going to be taxed, and she will lose in the process.

Mr. GIBSON: No; she is not going to lose in the process. The income tax law provides that where a person is taxable, no tax will reduce her down to or below the exemption level.

Mr. HANSELL: Is there not a case where a coal miner might—

The CHAIRMAN: Perhaps the hon. member for Bow River should complete his statement.

Mr. HANSELL: I was just trying to help him out. But I imagine he does not need my help.

Mr. JOHNSTON (Bow River): In this case he does not, no. But when a miner is producing coal and works another extra shift, he does not get paid in the same proportion, and therefore he loses money in the process.

Some hon. MEMBERS: No, no.

Mr. JOHNSTON (Bow River): Oh, yes, he does, because he is not entitled to the regular scale to which he would be entitled if there were no tax on it.

Mr. GIBSON: May I make one correction? There seems to be some misapprehension that when a man increases his earnings he may get into a higher tax bracket, and that his whole earnings will be taxed at

a higher rate. That is not so. When a man increases his earnings the increased portion may be charged a higher percentage of tax, but the original earnings continue to bear the same rate of tax as the man was paying before. Consequently the earning of an increased amount of money may, as I say, bring such increased earnings into a higher scale of taxation, but the rate of tax on the original earnings is not affected.

Mr. GILLIS: Has that change been made since the budget was presented, because that was not the arrangement when the Minister of Finance presented the budget to the house.

Mr. GIBSON: It has always been the basis of taxation in this country.

Mr. GILLIS: It has not been administered in that way, then.

Mr. GIBSON: Of course it has, always.

Mr. GILLIS: Where deductions are made at the source, and where the worker is employed weekly, as are the great majority in this country the entire earnings are taxed in a higher bracket, by virtue of overtime worked.

Some hon. MEMBERS: No.

Mr. GILLIS: Yes; and hon. members may examine any section of industry in Canada, and they will find that that is the main complaint, so far as the taxation laws are concerned.

Mr. GIBSON: I should like to clear that up. My hon. friend is referring to a tax deduction at the source. The amounts deducted are based on what the taxpayer is earning, or is presumed to be earning, throughout the year. If he works at a given rate of wage, certain deductions are made. They are made on the basis of a percentage of the tax—ninety-five per cent of the tax—that he will have to pay throughout the year. If his earnings increase, then he is presumed to be earning throughout the year at a higher rate, and naturally the deductions for each pay period would increase as well. But those deductions are only on account of the tax that will be payable at the end of the year. When the man has completed the year, filled out his income tax return, shown all the earnings he has made throughout the year and worked out his tax, what has been deducted at the source is applied against that tax. The first $100 over the $660 exemption is taxed at a definite rate, no matter whether a man makes $1,000, $2,000 or $3,000. The tax rate for the entire income does not vary according to the total that a man earns. That is, on the first $1,000 everybody pays at the same rate; then for the second $1,000 they pay a higher rate of tax, but getting into a higher income tax bracket does not raise the taxation scale on the entire income.

Mr. GILLIS: I agree with what the minister has said, but he is merely confirming what the hon. member for Bow River (Mr. Johnston) has been saying. It is no use saying you can get a refund if it means that you have to hire one or two lawyers to fill in the form for you.

Mr. GIBSON: Only if you have overpaid.

Mr. GILLIS: There is a great deal of absenteeism in our plants and factories and mines on account of this. If a man is working a forty-eight hour week and his earnings bring him into the thirty-one per cent bracket, then when he works for seventy-two hours or seventy-six hours as many of them do, he finds he is brought up into the forty-five per cent bracket. Then that rate is assessed against his whole weekly earnings. I have discussed this matter with the minister and have based my arguments upon his own tables to show how the rate changes and is applied to the weekly earnings. He said he was going to look into it to see if something could not be done. This works against our whole war effort. The average man does not understand that he can get it back, and even then it may take a year or two. If the minister will go into his department he will find that people have made applications for refunds two years ago and have not yet received them.

Mr. GIBSON: I quite agree that there may be cases where a man could work a large amount of overtime for a short period and raise his deduction into a higher bracket for that period than he will eventually have to pay. This is causing some concern to the department, and a committee is now studying the problem to see if some other method of deduction can be devised to cover overtime earnings, so that they will equalize the tax and not cause the dissatisfaction that exists in some of these cases.

The CHAIRMAN: I have allowed a great deal of latitude in this discussion, but I believe I heard the same discussion when we were considering the budget. I cannot see how the Minister of Munitions and Supply can do anything about the budget. I think we should come down to earth at some time in this discussion.

Mr. JOHNSTON (Bow River): I wish to abide by your ruling, Mr. Chairman, but with all due deference may I say that the Minister

of Munitions and Supply is directly responsible for production. In my estimation one of the things reducing our production is absenteeism. The matter we are discussing is the cause of considerable absenteeism; this in turn reduces production, and the Minister of Munitions and Supply definitely has to do with production. This condition is to be found not only in the coal industry but in others as well. These men may be able to get a refund of their taxes later on, but that does not satisfy them now. They are staying away from work because they feel that if they put in more hours they will be penalized. This should be sufficient, not only for the Minister of National Revenue but for the Minister of Munitions and Supply to warrant some attempt being made to solve this taxation problem.

There is another matter the minister will have to deal with if he wants greater production. Labour-management boards must be set up, and these boards should have a fifty-fifty representation. It may be said that this has nothing to do with production, but in my opinion it has everything to do with production. Not long ago there was a strike in the Drumheller district when seventeen mines were closed and over 2,000 miners were out and thousands of tons of coal were not produced that could have been produced if there had been proper labour-management representation. It is not correct to say that labour is always to blame. I have evidence right here which I think will convince hon. members that the judge erred when making some of the statements he made in rendering his decision. I have not talked to one of these fellows who was not absolutely disgusted with the whole affair because he felt there had been obvious discrimination. Those men were fighting for a principle, and I have no hesitancy in saying here, as I said to some of the officials, "I think you are right and you should hold out for it."

Some of the actions of some mine managers have not been in the best interests of coal production during war time, but there are others who acted just the opposite. Do not think that it was the decision handed down by the board that settled this strike. The manager of the Red Deer Valley mine hired this man, and the rest of them went back to work. That is one mine in the district where the men get along with the management because an endeavour has been made to have proper labour-management relations. This cannot be said of the Star mine. I do not intend to go into the details of this strike, although I have the evidence right here, because this would come under another department.

I should like to say a few words about the manufacture of guns, to which the minister made reference the other day. On page 3545 of *Hansard* the minister is reported as having said:

> We are now engaged in revising some of our gun schedules downwards. The items most likely to be affected are the 3·7 and Bofors anti-aircraft guns and the 6-pounder anti-tank gun. The scheduled production of 3·7 and 40 mm. Bofors AA guns will carry on at a reduced scale to the end of 1944.

This brings me back to the Ogden shops at Calgary. Not so long ago fifty men were laid off at these shops, and then because they did not have sufficient work, they had to lay off another 200 men. In a return I asked for it was stated that of the 200 laid off, fifty-three had been placed in positions by the selective service, not necessarily in positions in the Ogden shops; sixty-five were receiving unemployment insurance and the others had scattered. The point is that although the minister stated that all would be taken back, to date they have not been taken back and the production of this plant is reduced to that extent. If the schedule of production is to be cut down still more—I am not saying it is not necessary to do so because I realize that once you have sufficient guns manufactured you must change over to something else—something will have to be done. Is any plan under way by which the Ogden shops will be converted to some other type of production so that they will continue to run? As I pointed out on another occasion—I think I drew this to the minister's attention—I was informed not long ago by one of the responsible persons at that plant that unless they got more contracts they would have to fire more men. That is a situation which should be given consideration by the minister.

Mr. HOWE: May I ask my hon. friend if the unemployment situation in the Calgary area is acute?

Mr. JOHNSTON (Bow River): Of 200 men laid off from the Ogden shops, sixty-five were drawing unemployment insurance. That does not speak very well for the labour situation there. These men were all experienced mechanics. The manager of the plant—I think his name is Mr. Gubbins, from Montreal, and a very fine man—told me it was a shame that these 200 men should have been laid off, because they were some of the finest mechanics he had in that place. But that had to take place under the agreement which the company made with the unions. When I consider that sixty-five of these experienced mechanics were drawing unemployment insurance and that the remainder were still not

placed in positions, I would say in reply to the minister's question that there was a serious unemployment situation there which should be looked into.

I wish to say a few words about ships. I know the minister has gone quite a long way in producing ships. I have seen some of these ships, and they are extremely good ones. But our big concern at this time is to win the war. While the minister has done well in the production of ships, I think we can do still better, and we must not idly sit back and be content with things as they are. The minister, when he was speaking of ships, had this to say, as reported at page 3548 of *Hansard:*

> Recently the Burrard Dry Dock Company set a record by delivering the *Fort Wedderburne* in 89 days from the laying of the keel. At West Coast Ship Builders a ship has been launched forty-five days after the laying of the keel.

I think it would be wrong for us to assume that the second ship mentioned was completed and delivered in forty-five days. While the Burrard Dry Dock company completed a ship in eighty-nine days, I wonder how long it took them to launch it. That would not take eighty-nine days by any manner of means; it would be launched in much less time than that. It may be that the West Coast Ship Builders launched a boat forty-five days after the laying of the keel, but do not let us be misled by that statement into thinking that these 10,000-ton cargo ships are being launched in forty-five days. While the *Fort Wedderburne* was delivered in eighty-nine days from the laying of the keel, that was one ship which set a record. I was rather amused by that statement because it at once came to my mind, if we can launch one ship in forty-five days, why do we not go right ahead and keep on launching them as fast as that? It would be a dangerous impression for the public to get that we are launching these 10,000-ton cargo ships in forty-five days and that therefore all is well with our shipbuilding programme. I think the minister himself would be the last one to say that these ships are being launched at this time at anything like that rate of speed. I think the truth is that they are not being launched in anything like forty-five days. I believe that they could be launched much faster than they are being launched, but the companies are not allowed to produce them faster. The minister may excuse that on the ground of a shortage of material, but I remember reading a statement in the Vancouver *Sun* that 200 men were being laid off at one Vancouver shipyard because the increased efficiency of the workers in that plant permitted that lay-off. That is one of the shipyards we visited, Mr. Chairman, and in my opinion that statement in the Vancouver *Sun* was definitely wrong. That is not the reason why these men were laid off, and a statement like that should not be given out to the public. We are not, except in the odd case, launching 10,000-ton cargo ships in anything like forty-five days. Perhaps the minister would tell us what the reason is for our not launching these ships faster. The hon. member for Fort William suggested a little while ago that we should produce steel at the head of the lakes, and with that I am in perfect agreement. If we are not producing ships as fast as we can through lack of steel or some other material, our attention should be turned to speeding the production of these other materials. I recall that the hon. member for New Westminster when he spoke the other day said that five berths at the Star Ship Building Company's plant were not being used, and yet the minister, as reported at page 3548 of *Hansard,* spoke of:

> . . . new shipyards yet to be built and equipped hurriedly.

Why are we not using these five idle berths mentioned by the hon. member for New Westminster? Perhaps the minister would tell us why. He might also tell us if the two shipbuilding companies he mentioned, the Burrard Dry Dock company and the West Coast Ship Builders, are launching their ships regularly every forty-five days after the laying of the keel. That is a good speed. That is the best record yet made. I venture to say it is not the average time in which these ships are built—or anywhere near it. I hope the minister will explain just what the position is so that we may do everything we can to see that our war production is carried on with the maximum speed.

Mr. DIEFENBAKER: I am going to return to a subject with which I dealt the other day, namely, aircraft and aircraft production in this country. I think it is particularly appropriate to do so to-day following the visit of Madame Chiang Kai-shek and the interview she gave to the press to-day in which she said that the greatest contribution Canada could make to China in pursuing the war to a victorious conclusion was aircraft.

The other day I asked a number of questions which I realize the minister has not yet had time to answer, because a variety of other matters have since been brought up. I am going to give a few more details to the end that the minister may be able in his reply to explain the situation in our aircraft industry in Canada.

I believe it can be said without fear of serious contradiction that the war production by this dominion in many phases has been

wonderful. I think in fairness that should be said. But so far as aircraft production is concerned our record has been a lamentable one to date. I feel that at this time, in view of the increasing importance of aircraft production, a larger proportion of the expenditure to be made by the Department of Munitions and Supply this year should be devoted to aircraft production. We have the aluminum. The production of the Mosquito bomber is a matter of plastics. All we in Canada require, having the man-power with the necessary qualifications—to which the minister paid high tribute the other day—is a reorganization of the aircraft production to achieve a greater output. The minister has fifteen controllers in his department, and in each and every case those who have responsible duties to perform have also advisory committees. The only exceptions are those of the coal controller, the power controller, and one other. But from the very beginning, since the appointment of the controller, Mr. Bell, he has been the boss of his branch—of course, under the minister—and he has operated without a committee.

One thing which strikes me as passing strange is that while across the line in the United States very full information regarding production is given, the information which is published by the Department of Munitions and Supply is not as complete and has been on more than one occasion not in accordance with the facts. I wish to refer to one publication in particular of the department, entitled "The Industrial Front," revised to January 1, 1943, and apparently designed to show what a wonderful expansion there has been of aircraft production in Canada. At page 33 it states:

> Prior to this war, less than 40 aircraft were produced each year.

That statement is not a fact.

Mr. HOWE: Make it 240.

Mr. DIEFENBAKER: Yes.

Mr. HOWE: Make it large enough.

Mr. DIEFENBAKER: The minister says, "make it 240," and that would be approximately the truth.

Mr. HOWE: Probably about 140.

Mr. DIEFENBAKER: Yet an official document issued by the department contains this statement, which is not in accordance with the facts. The minister quite frankly admits it now. As a matter of fact, as regards 1938, the year before the war, the minister's own statement in 1940 was that the production was 282. Things like this undermine confidence in official statistics. Official documents published under government authority making statements so far removed from the truth as that only forty planes were produced prior to the war, while the minister frankly says now that the figure should have been 240, undermines confidence in official publications.

In United States one-fourth of the war expenditure of the nation this year is being devoted to aircraft production. The United States realizes that when the war is over, a gigantic aeroplane industry will be of tremendous importance. The war information board of the United States recently stated that when this war is over seventy per cent of civilian overnight travel will be by air.

Canada should augment her aircraft production now. What is the record? All of us admit that idle machines and idle men in aircraft factories or any other type of war industry mean wasted lives. Take the Malton plant. A change was made recently in this plant. There has been something seriously wrong with the production of aircraft in this plant right from the beginning of the war. And the minister acted. In November last he had the plant expropriated and the government obtained outright ownership from that date. The men who operated this plant were paid $4,000,000 therefor, and the government assumed the liabilities in connection with the plant as of that date, liabilities which are estimated at $1,760,000. The sessional paper states:

> All amounts allowed or allowable to the company by way of depreciation . . . will be absorbed in the costs of production of planes manufactured and delivered up to that date.

Special depreciation was taken into consideration in the amount of $2,253,597, and normal depreciation of $791,856.

To-day I think we are entitled to information as to how many planes ever came out of this plant. What is the record? What was the cost per plane? What are the comparative unit costs in this particular plant as compared with plants in the United States?

Let me point out furthermore that this company, the National Steel Car company, made profits during the period it was in operation. The net profits from June 30, 1942, to November 5, 1942, were estimated at $513,665. The return continues:

> . . . that was partly the company's estimate of the profit it hoped would be allowed on contracts providing for audited cost plus a profit mutually acceptable to the government and the company as a fair and reasonable profit.

The question I should like to ask in that connection is, what was the percentage of profit that was finally agreed upon as mutually acceptable to the government and the company?

Mr. HOWE: That is set out in the order in council. It has been tabled.

Mr. DIEFENBAKER: Yes; those details are set out, but not the particulars I have asked for.

Mr. HOWE: Oh, yes.

Mr. DIEFENBAKER: If my understanding is correct, the only particulars that are set out in the order in council are those giving the information I have already mentioned. The total cost of the work received by this plant from the inception to November 5, 1942, was $18,935,472, or almost $19,000,000. It will be a very simple matter, if the minister informs the committee how many planes have been turned out of the different types, to compute whether this plant was efficiently operated.

Mr. HOWE: And deduct the stocks on hand.

Mr. DIEFENBAKER: That is perfectly true: there would be a deduction of the stocks on hand. The general impression among those who are in a position to know is that this plant did not operate efficiently and was permitted to continue so to operate for a long period of time after it must have been realized by the government or the controller that such was the situation.

I realize that the government made no capital advances to this company, but it did provide assistance for machinery, jigs and tools, and the like. What was the value thereof? What control did the government have over the supplies that it gave this plant? Has the amount of the indebtedness of this plant been finally determined yet? Furthermore, even after the taking over of the plant, has there been a continuing small production or the assembling of the bombers that are to be produced there? What is the situation?

We were given to understand, if the press reports were correct, that a Lancaster bomber was expected to be produced in the month of April. The date is now, I believe, a good deal later than that, certainly not during the present month. All these things point to laxity or delay which requires reorganization if Canada is to contribute her share in the aircraft division of the minister's department.

Is there any reason why there should not be set up to-day an advisory committee of industrialists trained in aircraft production, or in other production, to assist the present controller? For the record during the past two years, during the period of the control of Mr. R. B. Bell has been such that in my opinion any fair-minded man must agree that some change, some addition, some counsel must be given him.

I pass on to the matter of the de Havilland plant. All we know about that is that recently a controller was placed in charge of this plant. He has wide authority and is assisted by an advisory board. What are the facts in this connection? Why were changes made? What has been the record of the de Havilland corporation in the production of aeroplanes? These are matters that cannot be helpful to the enemy. The information I ask for is given daily in the United States of America. Production is stated month by month.

Mr. HOWE: For each plant?

Mr. DIEFENBAKER: The total production is stated. We visited recently two plants in Buffalo producing types of fighter planes and there was no attempt at concealment of production.

Some hon. MEMBERS: Oh, yes.

Mr. TRIPP: Did you get that information in Buffalo?

Mr. DIEFENBAKER: Yes. I was present with five others at the time the statement was made.

Mr. HOWE: Tell us what it is.

Mr. DIEFENBAKER: I am not going to be brought into that. I will tell the minister.

An hon. MEMBER: It is an approximation.

Mr. DIEFENBAKER: I can tell the minister.

Mr. HOWE: I can tell the hon. member what it is, but I get it in the strictest confidence myself. It is a secret list. It is carefully guarded in every country.

Mr. DIEFENBAKER: As an hon. member says, it is approximate.

Mr. TRIPP: Some of the rest of us could not get it.

Mr. GRAYDON: Do not blame him for that.

Mr. DIEFENBAKER: I should like information with regard to production since 1942. Is this house and is the country not entitled to information as to production of these planes? According to the press the minister from Canada to Australia gave production figures. Why should we not have information in this house?

Mr. HOWE: He is a good man to give it because he does not know what it is. He cannot violate secrecy there.

Mr. DIEFENBAKER: If the minister of Canada to Australia did not know what he was talking about, that is a tribute coming from the Minister of Munitions and Supply to the appointment of the representative of this government in our sister dominion. In any event, let us have the record prior to September, 1942, in this plant. How many man-hours were taken in the production of planes in this plant? I know the minister has devoted himself to his duties. No one will pay a higher tribute to him for devotion to his job, and in what I am saying I am interested in the improvement of the situation. Many of the criticisms from this side of the house have been so accepted by the government in the past. The only way in which this situation with regard to aircraft will be improved is by adopting the attitude taken by this opposition, asking for information and demanding improvement. In Britain it was Beaverbrook; it was members on the government side of the house, who in May, June and July, 1940, in season and out of season, put before the government the necessity of expanding the war programme. They were told by members of the government that all was well, but they knew differently. It is in that spirit of service that I bring the situation to the attention of this committee.

If these factories are not producing what they should, we should know the reason why. The management in the Malton plant were not removed just for the amusement of the department. The change in the de Havilland plant and the substitution of Mr. Glassco as controller was not made unless there was a reason. Changes were justified, and in the set-up within the Department of Munitions and Supply there should be an aircraft advisory committee similar to those which have done such magnificent work in certain other fields of production. I am not going to say more at this time, except to point out that the appointment of Mr. Glassco as controller indicates that inefficiency did characterize the operation of this plant.

Unless these matters are brought before parliament, as members of the opposition have the right and responsibility to bring them before parliament, how are we to know that the same conditions will not prevail and continue next year? I am asking the minister, within the confines of public security, to give these figures: how many man-hours were required for the production of each type of plane manufactured by these two companies during the past year? If he cannot give us the record as to the number of planes, and apparently he has taken the stand that he will not do so, in spite of the fact that he stated that this plant is expected to produce five Mosquito bombers very shortly—

Mr. HOWE: I will give the hon. member quite a lot of information.

Mr. DIEFENBAKER: Then we have been arguing at cross-purposes.

Mr. HOWE: I have not been arguing. I have been saying that the situation in the United States was not just as easy as the hon. member was suggesting.

Mr. DIEFENBAKER: The minister indicated that this information might not be given.

Mr. HOWE: I did not say so.

Mr. DIEFENBAKER: Then we can get the information. When we read between the lines of the order in council appointing Mr. Glassco, as I say it must be obvious that this plant failed to do its duty; and the circumstances in connection with the taking over of the National Steel Car plant are equally indicative of the same condition. The order in council appointing Mr. Glassco under date of June 7, gives him exclusive power, in conjunction with certain assistants, to operate this plant. In that work he will be a servant of the Department of Munitions and Supply and be under the control of Mr. Bell. Parliament has a right to full information in this regard.

As I remember the minister's statement the other day, it was that there had been a continuing increase in the production of aircraft in Canada since the beginning of the war. I pointed out that a year ago we had the same nine types of planes we are producing to-day; yet now we are producing approximately eighty planes less per month than we were producing at that time. The reply was that in point of tonnage there would be an increase. If that is so, let us have the record for 1941 as to the tonnage of planes produced in Canada and the record for 1942 in that connection. I do say that since other of the organizations and agencies under the Department of Munitions and Supply have arrived at the point of full production, having regard to the need for aircraft both now and in the period after the war, attention should be concentrated now to the end that the conditions which have been prevalent in this country in connection wth aircraft production shall no longer continue to exist.

Mr. HOWE: I have been waiting for some time for an opportunity to answer some of the questions that have been asked. There

seemed to be two inquiries, one as to the National Steel Car plant, which is now called Victory Aircraft, and the other in regard to the de Havilland plant. First let me mention the controller of aircraft. As the hon. gentleman has said, we have fifteen controllers, but Mr. Bell acts in a dual capacity. As controller of aircraft his duties are very light; he simply has the power to determine what the facilities of the aircraft industry will be used for. It is as director-general of aircraft production that he directs the production of aeroplanes. While he has no committee as controller, he has a committee as director-general.

Mr. DIEFENBAKER: Who are on his committee as director-general?

Mr. HOWE: It is a committee representing all the aircraft branches; I could not tell the names.

Mr. DIEFENBAKER: Could we get that list?

Mr. HOWE: Yes, I shall be glad to get it, and we have the production committee under the Department of Munitions and Supply, of which Mr. Bell is a member, under the chairmanship of Mr. Carmichael, and that committee also gives a good deal of attention to the aircraft situation. I do not think the hon. member intentionally led the committee astray when he said that a year ago I mentioned that we were down to nine types of planes. We announced a programme for the future, of nine types of planes.

Mr. DIEFENBAKER: No.

Mr. HOWE: Read your *Hansard*. At that time we had many more than nine types of planes.

Mr. DIEFENBAKER: On a point of order, on May 14, 1942, at page 2435 of *Hansard* the minister said:

> We have now reduced our production to nine types of planes, and the plants are cleaning up old orders and concentrating on one type of production for each plant with accordingly improved results.

Those are the minister's words.

Mr. HOWE: That is what I say. We were cleaning up old orders, for other than the nine types of planes; we were making a number of planes of which we have gone out of production in the last two or three months. In other words, we have cleaned up the programme. Our objective has been to get down to a production of nine types of planes. Unfortunately, two or three of these planes are not in production yet. From the time you get the blueprints of a plane and undertake its manufacture, a certain period must elapse which, for some reason or another, which I cannot explain, is fifteen months. We can set our objective at eleven months, twelve months, or anything else, but from the time we undertake the production of a new plane until that plane is rolling out at maximum volume, the elapsed time is about fifteen months. That interval seems to be inevitable.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. HOWE: Before recess I was discussing the time taken to bring new planes into production.

Mr. HANSON (York Sunbury): The gestation period.

Mr. HOWE: Yes, although I see no reference to that in *Hansard*. As a matter of fact, the new programme is not fully in production as yet. We are producing the new trainer planes included in the programme to full capacity, except in respect of the Anson. I refer to a new type of Anson, and it is not up to full capacity, owing to drastic changes in the type of fuselage. It is now being made of plastics instead of metal, and the plastics plant is not operating to full capacity. However, the trainer programme is well under way, and it is just a matter of weeks until that programme is running at full capacity.

In respect of combat planes I would say the PBY Catalina flying boat programme is progressing favourably. It is not fully up to capacity, but the fact remains that we have turned out a large number of Catalinas. We are not particularly worried about that programme.

The Mosquito programme has been sticky. I think we underestimated the time necessary to get into full production on that item. The hon. member for Lake Centre (Mr. Diefenbaker) asked how many Mosquitoes we had turned out. At the end of last week twenty-one had been accepted. The production is not stepping up as rapidly as we had hoped; but the components plants are now operating well up to capacity, and I think it is only a matter of weeks until we shall have production approaching the objective.

In respect of the Lancaster bomber we are getting very close to production. In about

two or three weeks the first completed Lancaster bomber will be test-flown, and it will be only a matter of hours until the second plane will come off the end of the assembly line.

The navy dive bomber is not in production as yet. There have been many changes in design, and I would hesitate to say just when the navy bomber programme will be well under way. Two plants are engaged in this programme.

Mr. ADAMSON: Is that a plane of United States design?

Mr. HOWE: Yes, it is designed by the Curtiss company.

I now direct my attention to the transaction which resulted in the government acquiring the plant of the National Steel Car company. The aeroplane plant of National Steel Car was a privately built and privately owned plant. It had had a rather unsatisfactory career, so far as management was concerned. There had been a number of changes in management. Finally the department took a hand in the situation and persuaded another firm to give up a very experienced manager. National Steel Car undertook to place this manager in control of the plant, under certain terms agreed upon between themselves and the Department of Munitions and Supply.

The crisis occurred when, without warning to the Department of Munitions and Supply, this new general manager was dismissed by the directors. I might point out that in the meantime Mr. Magor, chairman of the board of the company had died. The fact that arrangements covering the new management were made directly with Mr. Magor, and involved his personal attention had, I think, some bearing on the situation which developed. I think if Mr. Magor had been in charge the situation would not have arisen. However, it did arise, and the board of directors dismissed the manager, and made no suggestion as to any replacement.

Mr. GRAYDON: How long had the manager been there before he was dismissed?

Mr. HOWE: I cannot say, but I would estimate that it would be perhaps ten or eleven months. We received petitions from the men in the plant demanding that the manager be retained, and saying that a general strike would occur if he were not retained. We received a letter signed by a great number of the office workers asking that the general manager be retained. After some discussion with the directors the government decided to expropriate the plant. As a result the plant was expropriated, and a crown company was formed, with Mr. Bickell as president, and with the general manager who had been dismissed as general manager.

I believe I can report to the committee that subsequent events have justified the action taken by the government. Many people well-qualified to judge have visited the plant recently, and have told me that the organization is shaping up splendidly, and that it will be able to produce in volume when the flow of planes begins. I am told that to-day it is a first-class plant.

On the financial side I might explain that we took over the property as a going concern. We went back to the building of the plant, and used the actual building costs. We subtracted from the building costs the depreciation that had been paid to the owners by way of accelerated depreciation. We took account of the profits—possibly I should not say we took account of the profits; we simply took the revenues and expenditures, and we treated the profits as a separate item, and fixed our own margin of profit for the full period that the plant had been operated. We took the stocks in hand and checked them against the books. We took over the assets and liabilities of the company, as a going concern, at an agreed upon price, the details of which are covered fully in the order in council which has been tabled in the house.

Mr. DIEFENBAKER: What was the rate of profit?

Mr. HOWE: I have not the order in council before me. Has my hon. friend a copy of it?

Mr. DIEFENBAKER: I have not it here.

Mr. HOWE: It is two or three hundred thousand dollars.

Mr. DIEFENBAKER: What was the rate?

Mr. HOWE: There was no rate. We simply assessed the work that had been done, and placed on it a profit we considered reasonable. Probably I shall be in a position to give more exact information later on.

Mr. HANSON (York-Sunbury): The company had never been in actual production?

Mr. HOWE: Yes, it had produced.

Mr. HANSON (York-Sunbury): I am glad to be corrected on that.

Mr. HOWE: Yes; it is difficult to represent production as a definite number of planes. A certain number of planes were built. They built Lysanders. An order of Lysanders, for both Canadian and British governments, was built at the plant. It was also engaged on the Anson production. Then, it was engaged

on Hampden and Hurricane wings. As my hon. friend knows—perhaps I should tell him—this plant was in a group of six plants which produced the Hampden bomber. Its part of the Hampden work was completed, as well as the order for Lysanders, and some 200 Anson planes. They were actually built and turned out at the plant. In addition, the plant did a large volume of work on spare parts for Canadian and British orders, and also assembly and overhaul work on Canadian planes.

Mr. HANSON (York-Sunbury): What was the specific charge against the previous management? I do not think that was ever made clear.

Mr. HOWE: There was no charge against the previous management, but a board of directors cannot operate a plant efficiently except through a general manager. The board of directors dismissed the general manager whom we had gone to great effort to provide for them and who had an excellent record in Canada as a producer of aeroplanes. They had no replacement in hand, and they had no suggestion of replacement.

Mr. DIEFENBAKER: What was the explanation for the dismissal?

Mr. HOWE: That he would not carry out the orders of the board of directors. I believe it was an internal quarrel.

Mr. DIEFENBAKER: To keep production up to a certain point?

Mr. HOWE: No; it had nothing whatever to do with production.

Mr. HANSON (York-Sunbury): What was the charge against the previous general manager who did not satisfy the government?

Mr. HOWE: He was not dismissed by the government; he was dismissed by the board of directors.

Mr. HANSON (York-Sunbury): Then you intervened. He was let out because you were not satisfied.

Mr. HOWE: Oh, no. Does my hon. friend mean the last general manager?

Mr. HANSON (York-Sunbury): I mean the man previous to the man you brought in.

Mr. HOWE: They were without a general manager when we took David Boyd from Canadian Car and Foundry and made an arrangement with Mr. Magor that he would be general manager of the plant. To-day the plant is an efficiently operated unit. The first Lancaster bomber will come off the assembly line within a matter of two or three weeks. The plant is completely jigged up and there will be substantial production.

Mr. HANSON (York-Sunbury): The minister has said that the expropriated price was an agreed price. How did that affect the shareholders? Did they suffer a capital loss, or were they protected?

Mr. HOWE: They got their money back.

Mr. HANSON (York-Sunbury): And a profit?

Mr. HOWE: And a profit.

Mr. HANSON (York-Sunbury): They were well looked after.

An hon. MEMBER: They always are.

Mr. HOWE: They got their money back by way of accelerated depreciation paid while they owned the plant, plus the balance which was paid when the plant was taken over.

Mr. HANSON (York-Sunbury): They lost nothing.

Mr. HOWE: So much for Victory Aircraft. The de Havilland plant is a subsidiary of the de Havilland Company of the United Kingdom. This plant had an excellent record. It was perhaps the largest of the pre-war aircraft plants. It was building the Moth plane before the war and it was first in the production of the Moth trainer, of which a great number were needed by the air force. Both the Moth and the Fleet were manufactured before the war and therefore the primary trainer was never a problem as far as supply was concerned. The de Havilland Company undertook a large share of the Anson programme and that was carried out in first-class style. Perhaps the performance of de Havilland on the Anson contract was the best of any of the several plants that were building that plane.

The plant then undertook to organize a very large operation in the building of the Mosquito bomber. This involved subcontracting on a large scale and the organizing of the de Havilland plant for final assembly. Certain objectives were set, but those objectives were not attained. The department put pressure upon the directors and the management of the plant to put their house in order and to obtain production. Differences arose between the management of the plant and the Canadian members of the board of directors—the board was made up of seven members, of whom three were British and four were Canadian, very responsible business men—and these differences reached the point

where the four Canadian directors sent in their resignations. We attempted to get the British company to intervene and straighten out the situation, but no action was taken, and finally the Canadian government stepped in and appointed a controller for the plant, with the Canadian directors a committee to act as advisers to the controller.

The controller believes that with the authority of his position he can straighten out the management troubles. There now has been some change in management and we believe that the controllership will be helpful. As soon as we are satisfied that the management has been properly reorganized, the intention is that the controllership will be lifted. After it has been reorganized, the board of directors of de Havilland will be in charge of the plant.

Mr. ADAMSON: Has a new general manager been appointed, or has the old one been removed?

Mr. HOWE: I am not in full possession of the facts of the situation since the controller was appointed.

Mr. ADAMSON: The de Havilland is to be operated as a private company?

Mr. HOWE: It is a private company being operated under a controller appointed by the government. My hon. friend asked for the number of man-hours and the number of planes, his idea being that we could divide the dollars put into the plant by the number of planes produced and know exactly the cost of a plane. Unfortunately it is not that simple. On its Mosquito work I do not suppose the de Havilland plant produces more than twenty-five per cent of the total value of the plane. For example the complete fuselage for the Mosquito is being produced in the plant of General Motors at Oshawa, and the wings are being produced in one of the plants of Massey-Harris. Various other parts of the Mosquito are being produced in other shops in Canada. If we took the number of dollars that have been paid to de Havilland for the work carried on in this plant and divided them by the number of planes produced, we would get a very low-cost plane. No study is possible as yet of the man-hours used in producing the Mosquito, because to date the work has largely been the production of components. A man-hour study is possible only when the assembly line is rolling at somewhere near capacity.

Mr. DIEFENBAKER: What will be the capacity of the assembly line?

Mr. HOWE: We hope to get a production of five planes a day or 150 planes a month. My hon. friend will see that it will take some speeding up to reach that figure, but that is the capacity for which we have organized, not only at de Havilland but at the component shops. As to the cost of planes produced in Canada, we have taken contracts from the United States for planes which are common types, such as the Harvard which is used by our air training plan as well as by the air training plan in the United States. We took the Harvard contract at the standard United States price and have had no difficulty in producing at that price. We took a Catalina flying boat contract at a competitive price and we are manufacturing for the Canadian as well as for the United States government. We are building the Anson plane in Canada. It is of Canadian design and is being bought by the United States government. Evidently they believe that our production price is reasonable for that plane; at least we had no difficulty in signing a contract with the United States government at our production prices. As for the efficiency of our plants, where they are operating at anything like capacity, they compare favourably with anything built on this continent.

Mr. FRASER (Peterborough West): Do the plans contemplate the building of any helicopters?

Mr. HOWE: No.

Mr. FRASER (Peterborough West): You are just going to buy them from the United States?

Mr. HOWE: The helicopter is a machine of the future. No helicopter has been built that is in actual combat service.

Mr. FRASER (Peterborough West): The British are using them for convoy work.

Mr. HOWE: They are using them or talking of using them? So far as I know, no helicopter has been used in combat service, but there are one or two under test.

Mr. REID: A statement was made public in Vancouver at the time there was trouble at the Boeing aircraft plant on Sea island, and according to a newspaper circulated in the district of Richmond certain charges were made by Elgin Ruddell, shop steward of Aeronautical Lodge No. 756 in the presence, it is stated, of an estimated 20,000 people. The statement alleged to have been made is this:

> Production of P.B.Y. bombers at Boeing Aircraft of Canada Ltd. is ten months behind schedule, and the 54 bombers already built have been rejected.

I know that after that statement was made, some of the test pilots who test the planes when they are ready for acceptance by the

government contradicted that statement of the shop steward, but I want to tell the minister and the committee that a statement of that kind had an extremely damaging effect, and I think the minister should now make a public statement to the committee so that the matter can be put straight on the record. Following this charge, I made an investigation and I was given to understand by the management of the plant that the charge made was entirely untrue. After all, however, facts are facts, and I wonder whether the minister would be good enough to make a statement in the house regarding the charge that production of PBY. bombers at that plant was ten months behind schedule and that fifty-four bombers already built have been rejected.

Mr. HOWE: The charge was absolutely unfounded. The Catalinas go into active service as soon as they are accepted at the plant. When the statement was made the management naturally were disturbed. Affidavits were obtained from the test pilots who had tested the planes and also from the Royal Canadian Air Force inspectors who are responsible for checking the planes out of the plant into service. The affidavits were to the effect that there was not a word of truth in the statement. There could not be. We would know about it, if there were any truth in the charge.

Mr. DIEFENBAKER: The minister has stated that Canada is able to compete with prices in the United States in the production of aircraft. Am I correct in that?

Mr. HOWE: We are not only able to do it; we are doing it.

Mr. DIEFENBAKER: Why, then, should Canada not now expand her aircraft production far and beyond what it is to-day? I pointed out this afternoon the fact that in the United States of America one-quarter of the production expenditure this year on the whole United States war programme is for the production of aeroplanes. In other words, this year, according to the estimates given, 100,000 aeroplanes are to be produced in the United States, many of which will be cargo-carrying planes. Canada as yet has not gone in for cargo-carrying planes, nor has it made any preparations for the after-the-war period when cargo-carrying planes must necessarily be produced on a very largely extended basis. We are just entering the era when Canada to all intents and purposes is becoming the geopolitical centre of the world in air transport. To date our production of aircraft has been small, relatively speaking to production in other phases of our war effort. Only the other day I was reading the figures connected with cargo-carrying planes in Canada, which indicated how important this traffic was before the war and how very much more important it will be after the war. These figures show that in 1920 the total amount of freight, et cetera, that was carried in Canadian aircraft was a matter of only 6,740 pounds. That figure rose until in 1936, 22,947,000 pounds of freight and cargo were carried. Even in 1941, with the tremendous reduction in cargo-carrying into the north country compared with what we had in peace times, over 16,545,000 pounds of freight was carried. This is a matter that is receiving the attention of all the united nations but as yet there has been no declaration on the part of Canada. The United States is producing almost exclusively all the cargo-carrying planes produced in North America. I would ask the minister to explain why it is that Canada is concentrating on the production of bombers of the types he named and why no part of our production programme includes cargo-carrying planes. Are arrangements now being made by the joint production board of the United States and Canada whereby, when hostilities are over and the prospect of post-war trade arises, Canada will have her share of the aircraft necessary for her participation in the tremendous expansion that will take place after the war?

I should like also to have an explanation from the minister in regard to the question which I raised the other day, and which I repeat. If we have arrived at a position in Canada where we can compete with production in the United States of America, why should we not now launch out into the production of aeroplane engines? Australia has done so. I know that her position is different from ours but she has done so. Why has Canada up to the present time not done so? I know what the answer was a year ago or a year and a half ago. It was that it would take two years to build up and expand such an industry. But I remember that in 1940, over three years ago, the minister informed the members of this house that it was the intention of the government to canvass the situation with respect to the production of aeroplane engines in Canada, and he indicated at the same time that he expected that the production of aeroplane engines would be proceeded with in this country. I appreciate the explanation which the minister has given, but it is only in this way, by the asking of questions and by frank statements from the minister, that many things

which appear incomprehensible without explanation are explained to the satisfaction not only of the members of the house but of the country.

One thing more. When I mentioned the other day that there was a reduction of Canadian production within a year of from about 400 planes a month to 320 a month at the present time, and that the same nine models are still being produced that were being produced then, the minister made a statement as to which I should like a further explanation. He said, as reported in *Hansard,* at page 3606:

> May I say to my hon. friend that there would be forty times the number of man-hours in the production of a Lancaster bomber than there would be in the production of a Fleet trainer. That is the reason for the smaller number of planes. But the tonnage of planes goes steadily higher.

If we take that statement at its face value, it means this, that Canada's production in tonnage increases year by year. Would the minister furnish the committee with information showing the tonnage of planes produced in 1941, 1942, and 1943 to date?

If I may be allowed, I will look over some of the questions I asked the other day to ascertain whether or not—

Mr. HOWE: Well, Mr. Chairman, I have a short memory. Why not let me take these in small batches?

Mr. DIEFENBAKER: Very well.

Mr. HOWE: My hon. friend asks why we do not increase the production of aeroplanes. I was trying to explain that we are increasing the production, and working very hard at it. We shall still have to find quite a few thousand men for our aeroplane plants to bring ourselves up to our present objective.

Mr. DIEFENBAKER: Are you short of men at the present time?

Mr. HOWE: Certainly we are short of men.

Mr. DIEFENBAKER: To what extent?

Mr. HOWE: Well, we are adding men to our aeroplane plants. As my hon. friend knows, we are trying to cut down less essential parts of the programme and divert men to aeroplane plants. I cannot say how many we are short, but I can say that any man who has any skill at all that is useful in an aeroplane plant will be hired if he goes to the gates.

Mr. DIEFENBAKER: Are the Department of Labour still calling men out of aeroplane plants?

Mr. HOWE: For the armed services?

Mr. DIEFENBAKER: For service.

Mr. HOWE: For service overseas?

Mr. DIEFENBAKER: No; for the armed services in Canada.

Mr. HOWE: Certainly they are.

Mr. HANSON (York-Sunbury): For the draft?

Mr. HOWE: Certainly they are. I said a while ago that the time had come in our programme when the Department of Munitions and Supply were going to ask for no exemptions from the armed services and that is the situation except in respect of men with very unusual skills. When we had to have men; when we were building up from very small beginnings, there were men whom we regarded as essential. To-day the industry is large enough that we do not regard any individual as essential unless he has a very special technical skill.

My hon. friend points out that the programme of aeroplanes in the United States is twenty-five per cent of the total programme, and he asks why ours is not twenty-five per cent.

Mr. DIEFENBAKER: No; I asked why is it not increased.

Mr. HOWE: Well, it is about twenty-five per cent. Does my hon. friend realize that we have a billion dollars of orders on our books for aeroplanes which we are called upon to deliver about July or August next year?

Mr. DIEFENBAKER: Yes; but it is not a quarter of this year's expenditures.

Mr. HOWE: One billion dollars.

Mr. DIEFENBAKER: It is for the two years.

Mr. HOWE: No, no. We have to-day standing on our books unfilled orders to the extent of a billion dollars, and our programme calls for these orders to be filled within twelve months from now—which is a full quarter of our expected expenditure for the current fiscal year.

Mr. DIEFENBAKER: But how much was the expenditure last year?

Mr. HOWE: Well, there is the tooling-up expenditure. We will throw that in, if you like. I do not know how much it was, but we will throw it in, and call it $50,000,000 spent and $950,000,000 to go, anything my hon. friend likes. I am pointing out that the proportion of expenditure on aeroplanes to

the total expenditure is, roughly, twenty-five per cent in this country, just as it is in the United States.

Mr. DIEFENBAKER: Well, I hope all the reckoning is not as loose as that, that I can take off fifty million dollars.

Mr. HOWE: I can take another fifty million dollars off and it will still be twenty-five per cent. The total expenditure for the current fiscal year is, roughly, three and a half billion dollars, and I am saying that aeroplanes delivered on that programme will represent about twenty-five per cent of that value. It may be twenty per cent and it may be thirty per cent, but it is roughly twenty-five per cent.

Mr. HANSON (York-Sunbury): The minister means that that is the objective, anyway.

Mr. HOWE: Yes. In other words, our programme is about the same proportionately as the programme of the United States, in so far as the current fiscal year calls for provision of aeroplanes.

Mr. DIEFENBAKER: But what was the proportion last year?

Mr. HOWE: I cannot say that. Let us answer one question at a time. We have still several hours to go. Do not shoot questions so fast. The hon. member has four in now. Let him sit down and allow me to answer these four, and then he can ask some more.

Mr. DIEFENBAKER: I am rising—

Mr. HOWE: I have the floor.

Mr. DIEFENBAKER: Mr. Chairman, I am rising to a point of order, even if the minister has the floor, and my point of order is this. I am asking the minister a very courteous question: what is the expenditure—

Mr. HOWE: That is not a point of order.

Mr. DIEFENBAKER: What was the expenditure last year?

The CHAIRMAN: On the point of order, the hon. member for Lake Centre must realize that he has asked many, many questions. It is absolutely impossible for the minister, with the assistance that he has, to answer them all in rotation unless he is allowed the time to do so, without interference. On this point of order I call attention to standing order 41, citation 312 Beauchesne, at page 103:

> Whilst a member is addressing the house, no one has a right to interrupt him by putting a question to him, or by making or demanding an explanation. A member will at times allow such interruptions through a sense of courtesy to another, but it is entirely at the option of the member in possession of the floor to give way or not to an immediate explanation.

[Mr. Howe.]

Mr. HANSON (York-Sunbury): I suggest that that does not apply when the house is in committee. If the Chairman will read the rules he will know that that refers to when Mr. Speaker is in the Chair.

Some hon. MEMBERS: Order.

The CHAIRMAN: With due respect to the hon. member for York-Sunbury, I have read the rules, and I have given my ruling.

Mr. CHEVRIER: The hon. member has no right to cast any reflection on the Chair.

Mr. HANSON (York-Sunbury): What county is heard from? If the hon. member wants to say anything, let him rise in his place.

Mr. HOWE: There can be only one member on his feet at a time. If we can preserve that rule I shall be very glad to carry on.

With regard to the hon. member's question, my officers have made a rough calculation and say that for the last two years the production has amounted, roughly, to twenty-five per cent of the total expenditure. What is the next question? I wish I could answer these one at a time.

Mr. HANSON (York-Sunbury): As to cargo planes and engines.

Mr. HOWE: As a matter of fact Canada has not overlooked the building of cargo planes. We have been building the Norseman for the last year. They are coming off the line as fast as we can turn them out, and they are being eagerly taken up not only by this country but by the United States. We expect to be in production of another cargo plane. I do not like to say anything about it; as a matter of fact I have not said anything about it. It is a transoceanic plane which is built wholly for cargo purposes. We have started also the design of a plane which we believe will be the ideal plane for Canada for transport work.

Mr. HANSON (York-Sunbury): Would that be something like the Commando or the Curtiss-Wright?

Mr. HOWE: The Commando is a twin-engined plane and I believe this is a four-engined plane. But it will be a wholly modern transport plane. I ask hon. members to keep in mind that at the present moment this is in the design stage. It must go from the design stage to the complete design stage and then it must go through the production stage. That means that it is two or three years away. Nevertheless we are designing a plane of all-Canadian design which we think will be the

plane of the future. It is the first time that Canada has ever undertaken that type of designing job.

Mr. GRAYDON: Would the minister object to telling the committee where that cargo plane of the type he has just spoken of will be built? If he has any objection to answering I would not want to press it.

Mr. HOWE: Well, I would rather not, if my hon. friend does not mind. There are reasons why I prefer not to give information about that plane at the moment.

Mr. HANSON (York-Sunbury): It has not reached the stage where you have designed, anyway.

Mr. HOWE: The hon. member was speaking of the plant that I was discussing before?

Mr. GRAYDON: The Norseman.

Mr. HOWE: That is in the Noorduyn plant in Montreal. There is another plane being turned out in another plant which we hope to have coming off the assembly line in September or October of this year. It will be the north Atlantic type of plane. We are starting the design of a plane which will be wholly Canadian designed and Canadian built. It is well on in the design stage at the moment.

The question was asked why we did not start now with the building of engines. I told the house, perhaps two years ago, that I had obtained an appropriation from the government to undertake the building of aeroplane engines in this country and was investigating the situation. As a matter of fact, I once upon a time obtained an appropriation of $40,000,000 to build a plant for aeroplane engines in Canada. Exhaustive studies were made and we decided on a type of engine that we would build here. The construction of the plant, the training of operatives and the installation of machinery were to cost $40,000,000. We got to the point where it was a question of buying machinery. Machine tools at that time were in very great demand. The United States was not in the war at the time, but the munitions business there was stepping up to that point where they were reluctant to allow any unnecessary drain of machine tool capacity from outside. The Canadian industry was expanding rapidly. There was a tremendous demand for machine tools here. I went to the United States with a request that we be authorized to buy machine tools to the value of $15,000,000—critical tools which were in great demand in that country. I was courteously received, but I was told that it was impossible for the United States to authorize that expenditure on tools. I pointed out our position at that time. Our source of engines was England and that had been cut off. It was just after Dunkirk and we could not obtain engines from the other side. I said that I must have engines. I was told that we could get our requirements. A few days' production from their assembly lines would meet our needs, and they said they would undertake to give us engines. Canada has never had an areoplane waiting for an engine since that day. The promise has been kept and kept well. Had we built those engines we would have used a great deal of man-power, and man-power of a skilled type was exceedingly scarce at that time. Indeed, it is no more plentiful to-day than it was then.

The building of engines is an exceedingly intricate job that calls for great care. We could have built engines in Canada, but we would have been building one type of engines whereas we have planes using perhaps fifteen types of engines. We have changed engines in our planes from time to time. For instance, the Anson plane has been re-engined twice, and we are now bringing out still a third type of plane which has a third type of engine, each type being of a somewhat higher horse-power. By having a sure supply of engines, we were able to choose a particular type of engine that would give the best performance in the planes we built.

We obtain other items from the United States. We obtain the larger type of diesel engine used in their tanks. We could build diesel engines here, but we are satisfied to buy diesel engines from the large output in the United States. If we had undertaken a policy in this war of building every part of every munition we have turned out, we would have built far fewer munitions than we have under the present arrangement. I can also say that we build certain parts of munitions in Canada for which we are sole suppliers to the United States. Even the United States have not thought it necessary to be wholly self-contained in its munitions programme. They are quite willing to depend on Canada for certain components for munitions that are built in the United States.

As regards our future in aviation, the government is not in any way handicapped by the fact that we do not build engines in this country. We have a certain source of supply, and we can go on with confidence and build frames with the knowledge that our engine requirements will be met when the time comes. That is the story of engines.

Mr. ROSS (Souris): The day before yesterday I raised two or three questions. The minister has perhaps not yet had time to answer them. Does he care to answer now?

Mr. HOWE: Steel for agricultural implements?

Mr. ROSS (Souris): That was the first question.

Mr. HOWE: We have followed fairly well the policy of the United States in meeting the requirements of the agricultural industry, and necessarily so, because we are a deficit country in steel, and a considerable part of our requirements comes from the United States. In 1942 we followed the policy of the United States in supplying twenty-five per cent of the steel for agriculture which was supplied to that industry in 1940. In this year we have also followed the United States in providing eighty-five per cent of the steel for agriculture that was supplied to agriculture in 1940. In other words, in the current year we have increased the steel allocations to agriculture by about 120 per cent.

Mr. ROSS (Souris): Would the minister say something about the service stations staying open on Saturday nights?

Mr. HOWE: The present regulations provide that they may stay open until 9 o'clock on Saturday evenings.

Mr. ROSS (Souris): That has been passed for this year?

Mr. HOWE: It carries on from last year. The difficulty is that the operators are having a hard time in manning the stations, but the stations that stayed open in the evening last year have the continuing right to stay open this year. The privilege has never been cancelled. and the same stations can do so. There has been no great demand for an extension of the time to 10 p.m. I have discussed the matter with the oil controller, and he says that if there were a large demand for an extension of an hour he would not have any great objection, but he himself had never received that request.

Mr. ROSS (Souris): There was a third question about the reclamation of used lubricating oil.

Mr. HOWE: That does not come within my province. The Department of Munitions and Supply supplies the requirements of the armed services. We supply whatever the armed services requisition, but salvage is a matter for the armed services. Waste lubricants belong to the army, the navy or the air force, as the case may be, and they are entitled to make their own arrangements for salvage. I understand that the army have reclaiming plants.

Mr. PERLEY: I have tried all day to get the eye of the chairman and I have only now succeeded. May I say, first of all, that there seems to have been a misunderstanding as to how this discussion should be carried on. We agreed after the Minister of Finance had made his statement and presented his budget to take up the different services. The ministers of the different departments, we understood, would come on and we would have a general discussion; then we would go into each particular item, and the discussion would then be confined to that item. I thought that was still the understanding when we began this discussion after the minister made his statement last Friday, but we seem to have been jumping all over the map. I can only hope that this will facilitate getting through these items as we come to deal with them, which I expect will be within a few minutes after this first item is passed.

When the house adjourned late yesterday afternoon we had spent practically the whole sitting on the question of rubber, and I thought almost everything had been said that could or should be said. But when we started in again this afternoon the question of rubber came up again, and except for the times when the minister was endeavouring to answer some of the questions asked by the hon. member for Lake Centre we devoted most of the afternoon to the same subject. The only additional contributions that we got this afternoon, as compared with what was brought up yesterday, was the statement that the minister is going to see that investigations are continued into the production of synthetic rubber from alcohol produced from wheat. I think he also agreed that if in their experiments they find a greater possibility than is apparent now that rubber may be produced in this way, then the suggestion of the hon. member for Rosetown-Biggar, which I think I mentioned myself yesterday as well, will be accepted and the industry will be commenced in western Canada where the raw products are produced. I think those were the only two matters of any consequence that came up this afternoon in addition to what was said yesterday.

On Friday last the minister reviewed the work of his department for the past three years, then dealt with the present, and in these estimates is providing for the future. He dealt with the matter from those three aspects. I find that during his statement he mentioned in detail some twenty articles or commodities

produced under the supervision of his department. During the discussion yesterday and to-day, I think we have touched upon half of those commodities; so that, as I said before, I hope that when we come to deal with the specific items the discussion we have had already will facilitate their adoption. The one point which I believe should be kept in mind is the fact that we started practically from scratch in 1939; that was the thought expressed yesterday by the hon. member for Yale. Having that in mind, and looking at the information we have been given as to what has been done since then, I think to be fair we must say that a great deal has been accomplished; I was going to say that the department had done wonders. Of course we must consider also the cost of all this, including the assistance given to industry. I believe the minister was quite frank in that regard and in answering the questions which we asked along that line.

Following the statement made yesterday by the hon. member for Yale, I was impressed also by the statement given by the minister's assistant, the hon. member for Stormont. I think a precedent was established on that occasion. The hon. gentleman outlined to this committee how the whole organization has been set up; how it carries on; how it controls the cost and the price of various commodities, and so on. I believe the minister made the statement that by means of this organization, imperfect though it may have been, a saving of $155,000,000 has been made, and I have no doubt that is correct. I think the minister is entitled to a great deal of credit in that respect. Then the hon. member for Stormont went on to deal with the question of control, and in dealing with the question of auditors said that they had men in the various branches who were capable of properly appraising the value of the component parts going into any article produced. If that policy is continued they cannot but do good work.

Then the hon. member dealt with the question of contracts, how they are let and how they are controlled. I think he divided them into two classes. The first class to which he referred he called contractors who are cost-conscious, which I would interpret to mean in plain English contractors who are honest.

Mr. HOWE: No, Mr. Chairman, that is not fair. By "cost-conscious" we mean contractors who are always looking for a chance to reduce the cost, who keep an open mind and try to improve the methods used.

Mr. HANSON (York-Sunbury): That is honesty, is it not?

Mr. HOWE: But a contractor who takes a job and does it as the manual calls for it to be done is also honest. Perhaps he has not as much inventive genius.

Mr. PERLEY: Perhaps the minister and I are saying the same thing in different ways, but I say that a contractor who appreciates that it is his responsibility and duty to endeavour to produce the article at the lowest cost possible is making a contribution to our war effort. In that connection I believe the hon. member for Kootenay West made a splendid statement this afternoon in which he did credit to himself and to Consolidated Smelters plant at Trail, when he dealt with the cost of the commodity being produced there.

Then the hon. member for Stormont referred to the other class of contractor and went on at some length to discuss the difficulties that have been experienced at times with respect to some of these contractors, showing how they are controlled and so on. In my opinion the hon. member gave a splendid outline of those items which enter into the question of cost and those other items which, practically speaking, do not. I think the precedent established was good, and I believe that if the other departments had followed the same practice, hon. members would have obtained a great deal of information which would have obviated much of the discussion that took place in connection with the three departments with which we have dealt. Then I believe the leader of the opposition made a valuable contribution the other evening when he made a plea for consideration for labour and the little man, as he termed him. If labour and agriculture get the proper consideration in connection with this industrial programme, I think it will go a long way to preserve our democracy, and I hope the minister will take that into consideration. I do not believe any group of people should have the control that we are led to believe some of them have.

Hon. members who have spoken already have reviewed the minister's statement in some detail and in turn have asked for information to which the committee was entitled and which I think the minister gave as fully as possible. Some hon. members have made constructive suggestions, and it is only right that they should do so. On two or three occasions the hon. member for Lake Centre has made a worth-while contribution to the debate when he has asked for certain information. Some of that information he has received and some of the replies may not

have satisfied him. The fact remains, however, that we now have information we did not have before.

The hon. member for Lake Centre dealt with assistance which had been given to industry, the establishing of industry, and conditions in the post-war period. He concluded his speech of a few days ago by offering four constructive suggestions, and hon. members will find them at page 3605 of *Hansard*.. It will be found that he referred to a plan for the demobilization of industries, and outlined what might be done with some industries in the post-war period.

His first suggestion was that there should be a determination of the basis upon which sale or disposition should be made. That recommendation has been covered to a certain extent by the minister, and we hope it may be enlarged upon still farther. He recommended, in the second place, that there be a government plan now for the conversion of war-time industries to peace-time economy and production. His third recommendation was that there should be a determination now as to which plants will be continued after the war for stand-by purposes. His last recommendation was that there be a plan of assistance to small industries after the war by way of loans, to stimulate the change from the war-time to peace-time economy, coupled with technical advice as to the most appropriate use of their facilities in peace-time production.

I believe, if the last recommendation in particular, is considered, some of these industries would be placed in western Canada. One might refer particularly to the implement industry. Surely implements should be produced in western Canada, where they would be needed, and facilities could be set up for refitting or repairing many of the implements which to-day are standing idle. Possibly some of those implements are idle on account of a lack of man-power, but the fact remains that they are not being used owing to the circumstances under which farmers are being forced to farm.

The hon. member for Rosetown-Biggar made a commendable contribution to the debate when he dealt with the aluminum company, and the power development at Shipshaw. I shall not discuss that matter in detail, because when we are considering the item we shall no doubt hear more from the hon. members concerned and the minister.

Listening to the hon. member for Rosetown-Biggar and some other hon. members, I have been disturbed when I have thought of the stranglehold that some of these large industries have upon Canada's resources, and the control they exercise in respect of the development of those resources. This should be dealt with, and in such a way that we shall not lose control.

The hon. member for Davenport has spoken several times about the production of oil from tar sands. I think however, that on the last occasion he spoke he made an exceptionally clear presentation of the subject so much so, in fact, that I believe he impressed the minister. I should hope that the minister might consider carefully the facts presented by the hon. member for Davenport, and that as a result we might see a development in the processing of these sands. The minister pointed out last night that certain ingredients might be removed from the crude oil, but that the quantity of gasoline produced would not be lessened. It would seem, therefore, that careful consideration should be given to the development of these tar sands. One might visualize a great development in this respect in the reconstruction period. I need only add that I am sure agriculturists will do their part and make a worth-while contribution when called upon to do so.

I should like to refer for a few moments to a matter I brought to the attention of the house last Monday, namely, the invention of a new carburettor by Melford J. Ball of Weyburn, Saskatchewan. I refer to the matter now because I do not think I was given the opportunity I should have had on Monday to bring the matter to the attention of the minister. I believe that in speaking when the orders of the day were called I was in order. However, as I was then ruled out of order, I shall place the facts before the minister this evening.

This young man from Weyburn has invented a carburettor. The invention has been tried out on standard models of cars, and has had the result of increasing their gasoline mileage by over fifty per cent. Associated with Mr. Ball is a young man named Lewis Jacques of Edinburgh. Mr. Jacques is a master mechanic attached to the Royal Air Force stationed at Weyburn. This young man says that Ball has something definitely worth while, and something which should be investigated by the government. Mr. Ball only asks that he be given an opportunity of proving that he has a satisfactory invention. He is prepared to give it over to the government, or to any branch of the service, if it will be used to reduce the gasoline consumption not only of the general public but of the different services, in their buses, trucks and other vehicles.

If this man has a worth-while invention, then certainly it should be investigated at once. If it is a good carburettor, the government should have a man try it out. I should not like this invention to suffer the same fate as was suffered by the Pogue carburettor. I happen to know quite a bit about that carburettor, because a close friend of mine had something to do with financing Pogue when he was working on his invention. I know what happened to that carburettor, and I think the minister probably knows, too. I am not going to put that on record, but I know we do not hear much about Pogue to-day. The big interests have obtained control of that carburettor; we know that. I learned that from a man who is so close to me that I can have no question about it. I refer to the man who helped to finance Pogue. He knows what happened to it. I trust the minister will give this matter some consideration and have someone make an investigation. If it is worth while, then let us use it and save millions of dollars we would otherwise spend on gasoline.

I trust that we may make more progress in the next day than we have made in the last two. I have not taken much time of the committee; in fact, I have taken only about ten minutes.

Mr. GILLIS: I would ask a question in respect of item 1 which deals with additions and extensions to plants. A large sum of money is involved. Would the minister give a break-down? How much has gone into the extension of government-operated plants as against privately owned plants? I would presume that when funds are provided for the extension of plants, it would be intended that they should be operated as soon as they are ready for operation. I believe funds were provided last year by the government to extend the blast furnace facilities at the Sydney steel plant. I have received a telegram from the steel workers' union in Sydney stating that this new unit has not been put into operation, necessitating a greater use of scrap by the open-hearth furnaces, thus decreasing production, wages and so on. I understood that when funds were made available for the erection of this blast furnace it was the intention that it would be put into operation when completed, but there seems to be some hold-up. The steel is needed, and I was wondering if the minister could explain why this new unit is not in operation.

Mr. HOWE: The hon. member asked for a break-down of the item. This will be found at pages 3698 and 3699 of *Hansard*, where this is given in some detail. A loan of $3,507,024.50 was made by the government to the Sydney steel plant for a blast furnace and other things. I cannot understand why the furnace is not in operation, and I feel quite sure that there is some part or some auxiliary equipment which has not been finished. It is badly needed because we want to put the plate mill on a three-shift basis. I had thought the furnace was in operation and I am interested in hearing that it is not. I shall make inquiry to see what is the present position.

Mr. GREEN: Will the minister explain the present fuel-wood policy of the government? He did not go into that in any detail when he made his statement on June 11. The minister is reported at page 3552 of *Hansard* as saying:

> Following the announcement in March that the government would pay fuel-wood dealers a subsidy of $1 per cord, some increase in production has been noted. The situation is still serious, however, and many communities may be in short supply next winter unless immediate, local action is taken.

I judged from that statement that the minister was leaving the burden of this problem with the local authorities. If that is the government policy I fear that many communities will be short of fuel wood in the coming winter. I notice in the new volume of orders in council which we received to-day, No. 10, dated June 14, 1943, there is P.C. 4669 which authorizes the wood fuel controller—this control has been set up since the debate on fuel which occurred in this house on March 16—to divert equipment for the production of wood and to make persons who are in a position to do so, produce wood. It also gives him power to purchase and to transport and dispose of wood fuel. It sets out that $1,000,000 has been provided for these purposes. Apparently there has been a change in policy; it would look as though the government is going into the business of producing wood. On May 17 the Minister of Labour stated in the house that he hoped Italian prisoners would be available for the production of wood fuel. There has been mentioned in the press that conscientious objectors are to be used for this purpose; and an order in council has been tabled which gives power to the government to use Japanese in British Columbia for the production of wood fuel. Could the minister give us the exact position at the present time? It will be important to many communities in Canada to know just what help they are going to get from the government in meeting this problem.

Mr. HOWE: The situation is unchanged. My first statement covers the situation to date. The production of wood fuel is a local

problem. In my first statement I offered an active working partnership between the federal government and local communities to assist in meeting fuel requirements. Those local communities that take their obligations seriously and make every effort to solve their own wood fuel problem will have the best time next winter.

Mr. GREEN: It is easier for some communities to do that than others.

Mr. HOWE: That is true. The dominion government is arranging for certain wood fuel operations, and we hope to build up a considerable stock of fuel which may be moved into distress areas next year. This will be simply a safety valve. It will be impossible to promise or even to suggest that any community that does not take an active interest in solving this problem will get wood fuel shipped to it by the dominion government. We are arranging for the cutting of as much wood fuel as we can, and this will be stored where it can be shipped into distress areas.

Mr. GREEN: Is it the intention to use Japanese for that purpose?

Mr. HOWE: We are using anyone we can get. We are using Japanese in British Columbia, but I do not know with what success. We have planned operations for them in the areas where they are at the present time. We have even brought pressure to bear upon certain pulp companies to have them start wood fuel operations before they start their winter cutting. We are doing all we can to get supplies of wood fuel. We must always remember that we are not at all sure that we shall have sufficient coal next winter. In fact, I doubt very much if we shall. Therefore, we are attempting to cut wood fuel with the thought in mind that it will help to take up any shortage there may be in coal.

Mr. GREEN: Will the government move this wood to the different centres, or will the consumers have to pay for the cost of moving it?

Mr. HOWE: We will use it to relieve distress if there is distress. We will move the wood.

Mr. GREEN: To the different centres?

Mr. HOWE: Yes; to the dealers.

Mr. GREEN: Could it not be arranged to have the municipal authorities supervise the distribution of the wood in the various centres?

Mr. HOWE: I should not like my hon. friend to suggest that any municipality will be discharging its obligations if it considers that all it has to do is to supervise the distribution of wood sent in by the federal government. Every municipality must organize efforts to supply wood to the utmost of its ability.

Mr. GREEN: I think the municipalities are doing so.

Mr. HOWE: I think they are. We are helping them with equipment and anything else we can. As I say, we are attempting to accumulate considerable stocks of fuel wood at different points in Canada. We are doing this as a protection against the serious situation which we believe is arising. If we cannot get sufficient coal, we will move wood into areas where the situation is serious. But this is simply a reserve that is being built up, and no community should make its plans in the sure belief that wood will be shipped into it next winter.

Mr. GREEN: Is the government still paying the subsidy of $1 a cord?

Mr. HOWE: Yes. I hope to make a statement about the bonus to-morrow. I announced before that the time would be extended, but I have not given the new time limit. I shall try to do that to-morrow.

Mr. MacINNIS: Is it the intention to build up reserves of fuel wood at certain places and then, if circumstances become sufficiently serious in certain municipalities, those reserves of fuel wood will be shipped in to where there is a shortage?

Mr. HOWE: That is it, yes.

Mr. FULFORD: It was my privilege to accompany a delegation of members who recently visited Buffalo and inspected the plants of the Curtiss-Wright corporation. Anyone who was on that trip would agree that it was an inspiration to see the aeroplanes on the assembly line in process of construction. One of the most outstanding features one noticed was how much of the modern aeroplane consists of aluminum. As one stood at the end of the assembly line and looked hundreds of yards down the line where the aeroplanes are first assembled, the general thought was, I believe: If only Hitler could see this! One of our members expressed it as well, I think, as it could be expressed when he said: Thank God, these people are our allies!

During the course of our visit I asked one of the executives of the company if any of the aluminum which was going into the manufacture of these planes came from Canada, and his reply was, "I do not know what we

should do without the aluminum which comes from Arvida and the aluminum castings which come from Kingston." Even if there are certain people in this country who do not appreciate what the Aluminum Company of Canada has done, certainly no one who has gone through these plants and has seen what our United States allies are doing in the production of aeroplanes, can fail to realize just how much the Aluminum company has done not only for our own country but for the united nations as well. In reply to the clamour and consternation that falls on the Cooperative Commonwealth Federation camp whenever private enterprise makes a great contribution not only to Canada's war effort but to that of all our allies, I can only repeat what has already been said in this house, that we are not fighting monopolies; we are fighting a war. I have no more tolerance for monopolies than have my friends of the Cooperative Commonwealth Federation, but I believe that this is no time to investigate and interfere with the turning out of a product as cheaply and in such large quantities as Aluminum Company of Canada is turning out this vital product.

I do resent one thing, which I think has not been brought out in this debate, but which I believe should have been brought out, namely, the insinuations that have been made against Canada's minister to Washington, the Hon. Leighton McCarthy. It is my privilege to have known the Hon. Leighton McCarthy for a great many years. I have known him as one of Canada's most successful lawyers and as a great business executive. I have known him as a great philanthropist, and now I can appreciate him as a great diplomat. I think it ill behooves anyone at a time like this deliberately to make insinuations against a man of his calibre occupying the high position he does. I know of no surer way to drive men of his type, the very highest type, out of public and diplomatic life in this country. It is my opinion, and the opinion of a great many others, that what the Aluminum company has done so far in this war will rank as one of the great production achievements in this struggle.

Mr. CHEVRIER: The other evening the hon. member for Yale asked some questions in connection with construction contracts generally, and I should like to make an answer to him at this time. If the hon. member will look at what was said the day before yesterday on the subject of contracts, he will see that the statement was made that contracts generally may be divided under two heads, fixed price contracts and contracts of a cost-plus nature, and that four-sevenths, in point of number, of the contracts let were, generally speaking, let on a fixed price basis, and that applies to construction contracts as well. They are let on a competitive basis by tender, and I think it is safe to say that from seventy-five to eighty per cent of those contracts have been let by tender. Exceptional circumstances, however, sometimes make it impossible to let contracts on that basis, and then the contract is let on a cost plus a fixed fee basis.

With reference to the specific case in which the hon. member was concerned, the military camp at Vernon, the contract was let on a cost plus a fixed fee basis.

Mr. MacNICOL: Are you getting away from cost-plus contracts?

Mr. CHEVRIER: Yes, definitely. The number of cost-plus contracts is continually being reduced.

Mr. MacNICOL: They should be wiped out entirely.

Mr. CHEVRIER: It is hoped that they will be wiped out entirely in favour of the fixed price contract, but in this case there was a reason for the exceptional basis. This is the reason.

In 1942 there was an unprecedented request for different defence projects on the west coast, and this coupled with the activities of the United States government on the Alaska military highway and the facilities required in connection with it, made it impossible for the Department of Munitions and Supply or anybody else to obtain competitive tenders.

The contractors were unable to maintain their men on account of the high rates paid on the Alaska military highway. The supplies of material became restricted. Priorities on materials required from the United States became difficult to obtain, and lastly, transportation facilities, particularly to outlying points, were at such a premium that the contractors refused under the combination of circumstances to submit firm price tenders.

It therefore became necessary, in order to meet the demands of the armed services for defence projects, that the work required be placed under way as early as possible and in such a manner as would assure its completion at as early a date as possible.

The director of construction in this case examined the capabilities of the different contractors in the district with regard to their being immediately available, also as to their supply of plant and equipment, the type of their organization, their location and the materials at their command, and selected

Messrs. Bennett and White of Calgary as the most suitable and arrangements were made with them to undertake the work.

The hon. member also asked who was included in the fixed fee; what profit there was. I am informed that the fixed fee covers the following items: (a) the services of the partners of the firm or directors of the company, all of which are available at no charge to the contract; (b) all head office expenses; (c) all costs of financing; (d) all other expenses other than those which are directly incurred on the site of the work; (e) the services of all employees at head office for the use of purchasing, expediting, engineering or the giving of any service ordinarily handled in head office; (f) as the fee is ordinarily set at $25,000 for a million dollars worth of work and all the above services have to be provided out of this fee, it is clearly evident that the amount of profit is unduly small. As a matter of fact, the contractors in this case have complained that by reason of slowness of payment their financing charges have absorbed practically the whole of the fee. The profit is therefore very small.

Mr. SHAW: There is one item I should like to bring to the minister's attention. It may be that we have to leave these matters until a later hour because we are located so far from the Chair.

I do not know to what degree the minister is responsible for the disposition of the various types of commodities for the production of which he is responsible. The matter I wish to bring to his attention is in connection with gasoline, namely, the fact that it appears from correspondence which I have received that there is a great deal of dissatisfaction with respect to the uses made of army vehicles for civilian purposes—if I may put it in that way —or for private purposes.

Mr. HOWE: We have nothing to do with that. The army file requests with us and we fill those requests in full. The distribution of gasoline or the use to which it is put is wholly a matter for the army.

Mr. SHAW: Just one point, then. May I indicate to the minister that he might have less difficulty in providing the gasoline requirements for the army and for civilian purposes if he would bring to the attention of the Minister of National Defence that there is, according to a number of documents which I have, colossal waste, as they state, in the use of gasoline, by virtue of the fact that it is evident to anyone who is in centres where military camps are located that these army vehicles are being used for other than army purposes. I will not elaborate on that now, since the minister has already indicated that it is not his responsibility, but I could produce some interesting evidence in that direction which has come to me. I would ask him to bring this matter to the attention of the Minister of National Defence.

The ACTING CHAIRMAN (Mrs. Casselman): I wonder if we could direct attention particularly to item 1. A very wide discussion has been allowed up to the present, and I have noted that rubber has bounced back more than once—which is of course the usual thing with rubber—but I wonder if we could come to item 1 and get it carried.

Mr. FRASER (Peterborough West): The agenda which has been given to us does not cover many of these items we have been discussing. There was no particular place to discuss synthetic rubber unless it be in these items. I should like to know under what item I could ask a question about gasoline and the oil controller's department?

Mr. HOWE: Departmental administration.

Mr. FRASER (Peterborough West): I wish to put to the minister one question which has been asked of me by two manufacturers. Has he any idea how many civilians in munitions plants it takes to sustain one man in the armed forces? These manufacturers asked that because they are trying to keep up the morale of the men in their plants.

Mr. HOWE: I cannot say. We have at the present time well over seven hundred thousand men in the services. We have close to a million men and women in war production. I assume we have more than two millions in agriculture and civilian industries. That would represent about four to one, would it not? I never saw a figure on that, and I doubt whether any arbitrary figure can be given.

Mr. FRASER (Peterborough West): The minister has not the figure?

Mr. HOWE: No; I have no figure about that. I gave the population distribution as well as I could. I do not think there is any known ratio. It depends upon a good many factors. It would be pretty difficult, I think, to work that out.

Mr. FRASER (Peterborough West): The reason why these men wanted to know is that when they are talking to the men in the plants, telling them that they want to get this production, they wish to be able to say that "it takes ten, or forty, or a hundred of you men and women to keep one man in the

armed forces, and if one of you lays off on a Saturday or a Sunday or a Monday, it means that a man in the armed forces is handicapped that much."

Mr. HOWE: I should like to be able to give my hon. friend a figure, but I do not know that any study has been made. Perhaps I could have one made and give him the result in two or three weeks.

Mr. FRASER (Peterborough West): I believe it would help the manufacturers in that it would stimulate the munitions workers.

Mr. ADAMSON: One word on this item concerning Victory Aircraft. As one of those who have been critical constantly, and I think from what the minister said to-night, with great justification, of the set-up at Malton, I had an opportunity this week of visiting the plant, and in my opinion the management there now is endeavouring to do and, I believe, will succeed in doing a thoroughly capable job of producing Lancaster bombers. Probably they have a little overestimated their capacity. But I am glad to see that the present manager has been maintained by the department. I think he deserves every support because he certainly has had a great deal to try him. For years this plant has gone through frightful vicissitudes and difficulties. I was glad to hear the minister's statement to that effect.

One thing more. I have heard it stated that if the minister will use his great efforts and forceful drive to see that the Weston cut-off is paved for the two or three miles from No. 10 highway into Weston, it will be equivalent in the saving of wear and tear on cars to two Lancaster bombers from now to the end of the year.

Mr. GREEN: Will the minister explain to the committee the assistance which has been given in the Steep Rock iron development in lake Superior district? Apparently the government has given assistance of one kind and another to that development, and it would be interesting to know the nature and extent, and also when it is expected that the mine will be in production, whether the iron ore which is produced is to be all smelted and used in Canada, or whether there is any provision that a certain proportion of it must be smelted and used in Canada.

Mr. HOWE: The government cooperated with the Canadian National Railways in setting rates for transportation which would be competitive with rates from the Mesaba area. The management reached an impasse with the railway in arriving at that rate. There is a certain rate from Mesaba range to lake Superior covering transportation from the mine and loading on to vessels. The mileage from Steep Rock area is longer and the volume of traffic less intensive, with the result that the railway thought it could not justify itself in quoting a competitive rate. The difference was twenty cents a ton for the ore transported. The government arranged to support the transportation by a bonus of twenty cents a ton payable to the railway on the first five million tons moved from the mine to the lakehead. The railway undertook to build the necessary ore dock to transhipthe ore from rail to boat, and the government undertook to lend the money to the railway for that purpose, the loan to be recoverable by an amortization charge sufficient to pay interest on amortization of the amount.

Mr. GREEN: How much does that involve altogether?

Mr. HOWE: The subsidy is $1,000,000—twenty cents a ton on five million tons. The cost of the trackage at both ends, and the ore dock, will be around $2,500,000.

Mr. GREEN: What about the other questions? When will the mine be in production?

Mr. HOWE: I do not know when the mine will be in production. We have nothing to do with anything except transportation from the mine. The only place in which the government has intervened is in the matter of transportation, which we undertook to make competitive with the Mesaba ore. The building of the development is a wholly private enterprise in which the government is not interested in any way.

Mr. GREEN: Apparently that was a new venture in government policy. A press release from the minister's department, dated September 30 of last year, after an announcement about the facilities to be built, contains these words:

> Mr. Howe announced that the policy of assistance was decided upon as a result of a decision of the war committee of the cabinet that the development of Steep Rock iron ore deposits should be proceeded with as a means of protecting Canada against a possible shortage of iron ore to meet war requirements.

If that is correct, it clearly shows that this was government policy and that the government is very much interested in the development. I believe that this spring there were press reports to the effect that production was expected in about a year and a half. Can the minister say whether or not those statements were correct?

Mr. HOWE: I cannot say. I do not think any member of the government could say. Transportation comes after the development is completed. If the development is successful, we are obligated to furnish certain transportation, which we will do; but in the meantime we expect the mine management to advise us when the property will be ready for transportation facilities. They have not done so as yet, and I really do not know how they are getting along. As I understand the problem, in the first place the power plant must be moved and the Seine river diverted, then the Steep Rock lake pumped out, and after that they are in a positon to undertake mining development. I may be very willing to give forecasts, but I am not willing to state the time that will elapse in an operation of that kind over which I have no control.

Mr. GREEN: But this is war policy, according to the minister's own department. Obviously, assistance is being given to help Canada's war production.

Mr. HOWE: Its possible war needs.

Mr. GREEN: Does the minister mean that no steps were taken to find out the approximate time it would take for this mine to come into production? I did not ask for the exact time.

Mr. HOWE: We have the engineers' report. They were estimating that two years would be taken. That may or may not be optimistic, but I have no control over the operation and I do not see why I should be asked to give an estimate. I have given the engineers' estimate and that is the best I can do.

Mr. GREEN: If the minister had given that before, it would have saved a lot of time. Two years from last fall?

Mr. HOWE: Yes.

Mr. GREEN: I asked the minister whether or not there was any obligation on the company to have this iron ore smelted in Canada or to have it used in Canada. They are getting $3,500,000 assistance from the Canadian government. Is there any understanding with regard to where that iron ore is to be smelted and used?

Mr. HOWE: I am told that the Canadian mills will have first call on the output. The underwriting agreement provides for that.

Mr. GREEN: Is that in the shape of an agreement with the government?

Mr. HOWE: No; the agreement with the underwriters.

[Mr. Green.]

Mr. GREEN: The government has no agreement in writing with the company?

Mr. HOWE: No.

Mr. ADAMSON: The underwriters were a firm, Otis and Company, in Cleveland, and the United States government. The Reconstruction Finance Corporation put up $5,000,000, and Cyrus Eaton and his associates in Cleveland put up the rest of the money to finance it immediately.

Mr. HOWE: This government did not interest itself in the financing of the project.

Mr. ADAMSON: That is the point I am trying to get at. The dominion government took no part in financing Steep Rock?

Mr. HOWE: No.

Mr. ADAMSON: The only thing it did was to provide subventions to the Canadian National Railways and build the ore dock.

Mr. HOWE: Well, the ore dock is an obligation of the railway as part of the transportation.

Mr. ADAMSON: And that is included—

Mr. HOWE: The only assistance given by the Canadian government was assistance to the Canadian National Railways, to put the Canadian National Railways in a position to give a competitive transportation rate to Steep Rock Iron Mines Limited. Our only agreement is with Canadian National Railways.

Mr. ADAMSON: I have been rather critical of the deal by reason of the fact that we allowed the development to be financed outside Canada.

Mr. NOSEWORTHY: Has the minister's department interested itself at all in the stock manipulations that have taken place in connection with that property—

Mr. HOWE: Not at all.

Mr. NOSEWORTHY: —on the strength of the help the government has given?

Mr. HOWE: No.

Mr. NOSEWORTHY: That is being used for stock manipulations.

Mr. HOWE: The government has given absolutely no help to Steep Rock mines. The only agreement the government has is with Canadian National Railways. Canadian National Railways have quoted a certain rate to Steep Rock mines to transport ore from the mine and put it on board the boat at the lakehead. That is the only agreement there is between any government agency and Steep Rock mine. How the capital was raised,

I have no knowledge and the government has no knowledge, and I wish to make it clear that if there was manipulation, based on the government's interest in the actual construction, we have none. Our only obligation comes after construction has been completed and the mine is in production. If ore comes out, it is our obligation to transport it from the mine to lakehead and put it on the boat at a certain over-all rate.

Mr. NOSEWORTHY: What was the arrangement for the building of the dock?

Mr. HOWE: The dock will be built and owned by the Canadian National Railways, to whom the government will loan the money required for that purpose. The Canadian National Railways will pay the government six cents on every ton of ore passing over that dock for interest and amortization, until the government loan is fully amortized.

Mr. DIEFENBAKER: I should like to ask a question in regard to the Cherrier plant in Quebec which is operated on a management fee basis by Canada Car and Munitions Limited. I wish to know whether or not the magazine entitled "Employees' Cherrier House Organ" is paid for by the government, directly or indirectly. A recent issue of this magazine, which is put out by that plant, contains a most disruptive statement, which I need not place before the committee. I should like to know whether the government makes payment in any degree for that magazine, and I suggest to the government that there be an investigation into some of the statements made therein, to the end that these statements be excluded from further issues.

Mr. HOWE: I have never seen the publication in question, but my financial adviser tells me that expenditures of that kind are not permitted as an element of cost, so that I presume it does not enter into the cost. However, I shall be glad to make inquiries about the publication about which, as a matter of fact, I have never heard.

Mr. KNOWLES: Despite the fact that the subject of aluminum has been introduced once or twice to-day, I do not intend to continue that discussion to-night. I should like to direct one question to the minister, or perhaps to his assistant. The hon. member for Stormont speaking on Tuesday last, as reported at page 3648 of *Hansard,* said:

> Under existing tax laws no corporation can earn, after tax, a greater amount than seventy per cent of its pre-war standard profit.

As the minister knows, and as is borne out on page 10 of the prospectus of the Aluminum Company of Canada and on pages 11 and 14 of the report of Aluminium Limited, these interests in 1942 were making profits greater than in previous years; in fact, as far as Aluminium Limited is concerned they were the greatest in its history. I wonder if either the minister or his assistant would reconcile these facts with the statement to which I have referred.

Mr. HOWE: Did I understand the hon. member to say that the earnings of the Aluminum Company of Canada this year had been the greatest in its history?

Mr. KNOWLES: I said that the earnings of both the Aluminum Company of Canada and Aluminium Limited were larger in 1942 than in the pre-war years, and in the case of Aluminium Limited the largest in its history. There was one year, 1939, when the Aluminum Company of Canada made, perhaps $100,000 more than in 1942, but if you take the average of the pre-war years it is considerably lower than the profit in 1942.

Mr. HOWE: Yes; but the volume and the facilities had been multiplied several times by then.

Mr. KNOWLES: But I am comparing this situation with the statement by the assistant to the minister, which was to the effect that no corporation can earn, after tax, a greater amount than 70 per cent of its pre-war standard profit.

Mr. CHEVRIER: The statement to which the hon. gentleman refers was made by me on June 15. At the time I was going on to refer to the checks and controls that we exercised in the Department of Munitions and Supply over contracts of a cost-plus nature. I went on to explain that over and above that there were under the jurisdiction of the Department of Finance the corporation tax and the excess profits tax, and the figures I mentioned on that occasion were the figures given by the Minister of Finance in his 1942 budget. I made a further statement saying that no change had been made this year. Now the hon. gentleman asks a question in connection with these aluminum companies and wants an explanation. I have not seen the figures to which he refers and, of course, I cannot explain them, other than the statement I now make.

Mr. NOSEWORTHY: Is it not a fact that the basis is not the total amount of the profits but the percentage of the turnover?

Mr. CHEVRIER: That is a matter for the Department of Finance, not for Munitions and Supply.

Item agreed to.

2. Cargo vessels—Operated by Park Steamship Limited, $45,000,000

Mr. REID: Would the minister be good enough to give the committee some information with regard to the companies which have chartered vessels from the Park Steamship Company? As reported at page 3550 of *Hansard* I note that the minister said:

> Up to the present time twelve vessels of 10,000 tons deadweight; five vessels of 4,700 tons deadweight, and one tanker have been delivered to the company.

It is important, I believe, that the committee be informed as to what steamship companies have chartered these cargo vessels, and I should like to know how many are operating on the Atlantic and how many on the Pacific.

Mr. HOWE: I am sorry to say I have not that list at hand, though I will have it at three o'clock to-morrow. It changes from trip to trip. The boats are allocated to various trades by the Canada shipping board, and a ship is chartered to a particular company operating in the trade to which the boat has been allocated. For instance, if the boat has been allocated to the United Kingdom trade, it would be chartered to Cunard, White Star, the Donaldson line, or the Canadian Pacific. If it were operating to Australia, it would be chartered to the Canadian-Australasian line or some other line that in the past has operated to Australia.

Mr. REID: Do the steamship companies which charter these vessels pay a set fee based on the cost of the vessel, or how is the charter fee arrived at?

Mr. HOWE: The ship is operated for the account of Park Steamship company, and the full returns are made to that company less the amount of the fee retained by the operating company, which is at the rate of $3,500 per annum plus two and a half per cent of the value of the cargo.

Mr. REID: Is the same arrangement entered into with regard to financial payments?

Mr. HOWE: No; we charter ships to the British ministry of war transport for a dollar a year. What arrangements the British ministry of war transport make for their own account, I cannot say.

Mr. MacINNIS: How many of the ships turned over to the Park Steamship company are of Canadian register, or are they all of Canadian register?

Mr. HOWE: They are all of Canadian register.

[Mr. Chevrier.]

Mr. MacINNIS: I should like to say a few words in connection with wage rates on those boats. The minister may have forgotten, but I wrote him in August, 1942, on this point. There is considerable complaint respecting the wage scales for both officers and men. I understand the scale in effect on Canadian ships is the British scale of wages.

Mr. HOWE: For officers.

Mr. MacINNIS: For officers and men.

Mr. HOWE: No; it is higher for men.

Mr. MacINNIS: I have the minister's letter of September 17, 1942, and I find this sentence in it:

> The wage scale in effect on these vessels corresponds to that on vessels operated on the Atlantic coast under the supervision of the Park Steamship Company, and is in exact conformity with the wage rates of the British national maritime board.

Then the minister goes on to say :

> I quite concur in the company's opinion that it would be unwise to operate vessels out of Pacific ports with a wage rate at variance with that of vessels operated by the same company out of Atlantic ports.

It is a matter of fact that wage rates on the Pacific coast have always been higher than those on the Atlantic coast and, generally speaking wage rates on Canadian boats, and more particularly on United States boats, are much higher than wage rates on British boats. I have had considerable correspondence on this matter with the Canadian seamen's union, British Columbia section, and the Canadian merchant service guild, officers' organization. They have been good enough to forward me copies of all the correspondence which passed between themselves and the manager for the Park Steamship company, whom I believe to be Mr. R. B. Teakle. I find there is considerable dissatisfaction with the rates of pay.

In a letter dated September 14, 1942, replying to a letter from Mr. Teakle the officers of the Canadian merchant guild write as follows:

> This guild is very disappointed with the attitude taken by your company on the above question. First, our information is, and we believe it to be authentic, that more than the two vessels you mentioned will be for Canadian register.

Mr. Teakle, in his letter to the guild, said there would be only two of these vessels under Canadian register. The letter continues:

> Secondly, in regard to these ships being fully manned we believe this is correct, due in some

measure, in so far as masters and deck officers are concerned to this organization's attitude, as in nearly every instance we were consulted by the officers who were offered the positions for advice on the advisability of signing on, when we advised these officers that it was not in the policy of this guild to interfere in the manning of these ships, regardless of the scales of pay or other conditions, as we consider this service part of our war effort, and we had, on September 7, 1939, written the then Minister of National Defence, the Hon. Ian Mackenzie, that this guild was prepared to cooperate in any manner which would further our war effort. Our members now feel however that this declared policy is being taken advantage of.

Then the next paragraph reads:

In regard to the comparison made by you to ships operated by the Minister of War Transport for Great Britain, this is, so far as we are aware, the first instance of such vesels being compared to Canadian ships in regard to scales of pay or conditions, as it is well known that in the past British ships have been looked on as being, if not the poorest, at least one of the poorest paid services on the seven seas.

In the wage scale the guild proposed to the Park Steamship company, they pointed out that it was in conformity with the wage scale then in effect on the Pacific coast on vessels which were much smaller. As a matter of fact, it applied to vessels of less than 4,000 tons, and the scale was considerably less than that on United States ships.

In regard to crews, the rates of pay are very much below those on similar ships operating on the Pacific coast. I have before me a list of the rates, as given to me by the officers of the seamen's union, and I shall place them on record for purposes of comparison. In both cases bonuses are not included, but in any event bonuses on the Pacific coast would make the total wage still higher.

The following is a comparison of rates paid on the Pacific coast and those paid by the Park Steamship company:

	Pacific coast	Park Steamship
Boatswain	$110 00	$64 50
Able-bodied seaman	90 00	56 00
Ordinary seaman	70 00	41 70
Fireman	85 00	58 50
Donkeyman	95 00	62 90
Oiler	85 00	60 65
Trimmer	75 00	56 20

That is bad enough, but I hold in my hand the June issue of the *Searchlight,* official organ of the Canadian seamen's union, printed in Montreal. This paper draws attention to the fact that the rates paid by the Park Steamship company on ships at sea is less than those paid in the manning pool, while sailors are waiting to be taken on vessels. In order to show a comparison, I shall place the following table on record:

	Manning pool rate	Park company rate
2nd cook	$57 59	$49 50
A.B. seaman	62 02	56 20
Donkeyman	69 00	62 00
Carpenter	80 85	70 10
Boatswain	70 88	64 50
Fireman	64 23	58 50
Assistant steward	57 59	49 50

When the government is attempting to build up a Canadian merchant marine which will operate not only during the war but after the war, we should surely try to make working conditions for the men who will operate these boats have some relation to conditions on privately-operated ships both in this country and in the United States. I should like to know why the government has adopted the British rate rather than the United States rate.

Mr. MICHAUD: Since merchant seamen come under the jurisdiction of the Department of Transport I shall try to give the hon. member some explanation. It is well known that the basic rate for seamen on foreign going ships has never been uniform. I am informed that the United States rate has always been higher than the British rate. When the seamen were hired to man Canadian ships a Canadian basic rate was tentatively established with the idea of conforming as much as possible to the British rate. The United Kingdom basic rate for able seamen is $62.02, with a war risk bonus of $44.50, making a total of $106.52. The basic rate paid by the Park Steamship company for 10,000-ton ships is $56.20, to which is added a war risk bonus of $44.50, a cost-of-living bonus of $18.42, making a total rate of $119.12, as compared with the British rate of $106.52.

Mr. GREEN: What is the United States rate?

Mr. MICHAUD: So far as we have been able to understand, there is really no basic rate.

Mr. MacINNIS: Does the minister know what the Pacific coast rate is?

Mr. MICHAUD: It varies according to the vessel and the trade and the route and the company. Of course there are union rates on the Pacific coast, and they bear more relation to the United States rates than do the basic rates established for British seamen and the tentative Canadian rates. The Canadian rate has never been definitely established. The

matter has been referred to the war labour board for adjustment and ruling, and that is where the matter stands at the present time.

Mr. MacINNIS: When was the matter referred to the war labour board?

Mr. MICHAUD: I have not the exact date of the reference, but I know the matter has been under consideration. There has been a lot of correspondence and negotiation, and that is the action that has been decided upon.

Mr. GREEN: Why was it necessary to keep the Canadian rate down to the British rate? In making his statement the other day, the Minister of Munitions and Supply said in effect that Canada could have as many ships in her merchant navy as she could man, that the bottleneck was getting crews. It may be that this is one reason why you cannot get crews. The wages on this continent are higher than those in Great Britain; the wages paid in the United States merchant navy are higher than those paid in the British merchant navy. Why should Canada be restricted to the rates paid in the British merchant navy?

Mr. HOWE: I wish my hon. friend would quote me. I said the difficulty was in obtaining qualified officers.

Mr. GREEN: The minister is reported at page 3550 of *Hansard* as follows:

> The United Kingdom is able to furnish crews for these boats whereas Canada cannot do so at this time.
>
> Every effort is being made to obtain the maximum number of crews for the purpose of operating as many ships as possible by Park Steamship Company, and in that connection the company works closely with the director of merchant seamen, Department of Transport, During the war period the size of the Park Steamship Company fleet will be limited only by the number of Canadian crews that can be obtained.

There is the story.

Mr. HOWE: I am quite sure that I explained on another occasion that it was possible to train seamen, but it was impossible to train captains and chief engineers in a short period. As my hon. friend knows, in order to qualify as a captain or a chief engineer a man must have at least four or five years service on a ship. Certain other officers also require a considerable period of service on a ship. Even an ordinary seaman must have four months on a ship to qualify. He signs on as a boy and comes back from his first voyage an able seaman. We can make seamen and we can make officers to the extent of the time at our disposal. We have officers' training schools, but our difficulty is in producing certificated captains, certificated first officers, certificated chief engineers and perhaps certificated firemen. These we are borrowing in part from the British mercantile marine, and the British mercantile marine are willing to lend them to us, provided that our scale of wages for officers is identical with theirs.

Mr. GREEN: For officers?

Mr. HOWE: For officers.

Mr. GREEN: What about the men?

Mr. HOWE: The scale for the men is higher on Canadian ships than it is on British ships.

Mr. GREEN: Not very much.

Mr. HOWE: It is higher.

Mr. MICHAUD: The actual rate paid in the United Kingdom is $106.52. The actual wage in the Canadian merchant marine is $119.12, which includes the war risk bonus and the cost of living bonus. For officers the rate is also a little higher in the Canadian merchant marine than in the British, and that is one of the reasons why we have been able to secure officers for our Canadian ships. We have not the facilities to train them in Canada just now and we secure the officers from Britain. One inducement, I understand, is that the rate of pay is a little higher in the Canadian merchant marine than in the British.

Mr. GREEN: How far is it intended to carry this policy of tying the rates paid to Canadian seamen to the rates paid to British seamen? We have been told in this house in the last few weeks that Canada is going to build up a merchant navy. Do the present rates mean that after the war the Canadian rate is to be tied to the lower British rate? If that is to be done, we may have a whole lot of trouble in building up a merchant navy.

Mr. HOWE: We shall have four times the trouble if my hon. friend keeps agitating against the present policy.

Mr. GREEN: The minister need not fly off the handle and start calling people agitators and everything else. Apparently there is only one person in this house and that is the minister himself. He might give somebody else credit for having a few good motives.

Mr. MICHAUD: The hon. member for Vancouver South realizes that we are just pioneering in building up crews for our merchant ships. We have not been able to secure officers in Canada and we get them from the British merchant service. Fortunately we are building up our own engineers and mechanics. We have two schools

in Canada, but we have not yet reached the stage where we can give instructions in the higher class of engineering and consequently we get these engineers from the British service. We have been successful so far through an understanding with the British government. We are happy to be in that position. But we hope to develop our training facilities to the point where we shall be able to give the initial training in Canada and enable our boys to graduate and eventually reach the stage where they will be capable of taking full charge of our merchant ships. I do not want the hon. member to misunderstand me. There is no move to tie up the rate of pay for Canadian seamen to the rate of pay in the British merchant navy. There is already quite a difference. A second officer in the British merchant navy gets $148.60 a month and in the Canadian merchant navy $192.90 a month. There is a differentiation so far between the United States rate of pay and the British rate of pay. The whole matter is in the process of pioneering. We are doing the best we can to get the crews and pay them a rate that will satisfy them and at the same time meet the shipping conditions that have so far prevailed in Canada.

Mr. MacINNIS: The Minister of Transport has said that we are pioneering in this field and trying to attract men who would serve as officers and crews on our boats. If we want to attract men to serve as officers and crews on these boats, I think the best way to do so would be to pay reasonable wages, wages that would have some relation to the wages which are being paid for similar work on this continent. The minister will not attract Canadians to this work unless he pays Canadian wages. If he is going to keep the wage rates at the British standard he will have to depend for all time on British sources for his officers and crews. He will not get Canadians under those circumstances if they can find work anywhere else. When I hear the Minister of Transport speak in regard to this matter and take into consideration what the Minister of Munitions and Supply said the other day in regard to the Aluminum company, I am forced to the conclusion that the Canadian merchant seamen's guild and the seamen's union are not in a position to demand what the Aluminum company was in a position to demand. The company had the bulge on the minister and on the people of Canada and they used it. But the seamen were patriotic enough not to press for all that they could demand because their country was at war. Consequently they feel that advantage has been taken of their willingness to serve. What is the rate of pay for deck officers on the Pacific coast?

Mr. MICHAUD: I am sorry I have not that information before me. This matter has come up unexpectedly, but I shall have the information when my war estimates are before the house.

Mr. GREEN: This item for cargo vessels is of the utmost importance to those Canadians who live on the Pacific slope, and in fact it has become of the utmost importance to the whole of Canada. The Minister of Munitions and Supply very properly said the other day when he was making his statement that the development in our cargo shipbuilding represents the achievement of building up what is virtually a new major industry for Canada. He went on to point out that there are now 43,000 men and women in this country engaged in building merchant ships. Of that number I believe that over half are working on the Pacific coast, where we are making the majority of these cargo vessels. We have also been told within the last two or three weeks that Canada is going to build up a merchant navy and a substantial naval fleet which will include not only escort vessels but such capital ships as cruisers and possibly submarines. We have also been told something of the ship repairs that are being made in Canada in our various shipyards, and of course there will be more and more of this. In addition to the plants engaged in shipbuilding itself, there are many plants making components for the ships; that is the position on the Pacific coast.

But there, and I am sure all members from British Columbia will agree with me in this, we are greatly concerned as to the permanency of this large industry. In the last war we saw a shipbuilding industry built up there, and then after the war it died right away until there was practically nothing left. We are afraid that something of the same sort will happen after this war unless steps are taken by the government to prevent it. Most of the shipbuilding plants and the industries manufacturing components for ships are dependent largely on steel, and at the present time we are in an unnatural position, in that our steel has to be hauled from eastern Canada or the Eastern United States, and our scrap iron cannot be used on the coast, but is being sent back east under a freight rate which amounts, I believe, to $13 a ton. Therefore, as I say, the situation is unnatural, and unless something is done to change it,

the whole shipbuilding industry may collapse; in fact, it may not be able to carry on at its present capacity during the war itself.

We believe that there should be established on the Pacific an iron and steel industry. We believe that it is a natural industry for that coast, and we would ask the help of the ministry, and hon. members from other parts of Canada in seeing that such an industry is established there eventually. We have the iron and the coal from which to make the coke, and we have the limestone. The provincial government of British Columbia has been greatly concerned over this question for some years, and particularly during the last session. For many years there has been an act on the provincial statute books which provides subsidies to anyone who will establish a steel industry. I believe two million dollars is available for the purpose now. Last year our government had a report made by engineers from the United States, named Arthur G. McKee and Company, on the question of whether we had the iron ore and also the coal and limestone with which to establish the industry. I find in the report of this firm, at page 23, the following:

> The principal raw material requirements for the 75,000-ton plant would be iron ore, coking coal and limestone. These are available in ample amounts and suitable quality on Vancouver island and in the interior of the province. Vancouver island is recommended as a preferable location for the plant because of its more central location with respect to the principal consumers and its facilities for transportation by water.

In addition to this iron ore at the coast, there are several million tons of iron concentrates which have been stored by the Consolidated Mining and Smelting company, to which the hon. member for Kootenay West made reference this afternoon, at their Sullivan mine, located at Kimberley in east Kootenay. From that wonderful mine they get three products: lead, zinc and iron. They are using the lead and the zinc and storing the iron concentrates right there on the spot. That is only a few miles away from splendid coking coal in the Crowsnest pass, which is also in the east Kootenay district.

So that, I repeat, we believe that the iron and steel industry is a natural industry for British Columbia; that it can be made permanent if the government gives help; and we would like to know what the government is prepared to do, whether or not it will give any help. For example, will it consider a subvention to assist in the establishment of a steel and iron industry? We feel that eastern interests are against the project. The hon. member for New Westminster mentioned that the other day, and the opinion expressed by him is held, I believe, by the other members from British Columbia. Therefore we ask assistance from the dominion government. The Minister of Munitions and Supply has already broken ground in establishing a policy of this type, by what was done with regard to Steep Rock. Earlier this evening I read to the committee from a press release made by the Department of Munitions and Supply on September 20, 1942, which stated:

> Mr. Howe announced that the policy of assistance was decided upon as a result of a decision of the war committee of the cabinet that the development of the Steep Rock iron ore deposits should be proceeded with as a means of protecting Canada against a possible shortage of iron ore to meet war requirements.

I have no objection to that help being given. I think it is a wonderful thing to assist the development of iron mines anywhere in Canada, for I suggest that there are some very weak pillars in the edifice which we Canadians are building. One was mentioned this evening; it is that we do not manufacture aeroplane engines. I believe every hon. member will agree that that is a tragedy. It may not be practical to do so; the fact nevertheless remains that it is a tragedy. Another weakness is that we are short of coal; we do not produce enough to keep ourselves warm in the winter. We have had a very sharp taste of what that means during the past winter, and it, too, is a weakness in our Canadian economy. Another is that we produce very little iron. Let there be no mistake about it; that is one of the weaknesses of our Canadian economy. These deficiencies have become clearly visible during the war, and we should exert every effort to make them good. So I urge upon the government that it adopt the definite policy of offering inducements which will help in the establishment of an iron and steel industry on the Pacific coast. It is a matter on which there is no division of opinion; all the people of our province, whether Liberals, Conservative, C.C.F. or Social Crediters, are keen that something should be done along this line. I am afraid that the industry cannot be started without help from Ottawa. I ask the minister to give us some idea of the views of the government on this question.

Mr. HOWE: I was approached early in the war regarding a steel industry for British Columbia. I then stated that the first essential of starting a steel project was to get expert management, and that without expert management nothing could be done. I said that the second problem was to get capital interested. I promised that if the expert management was

obtained and certain local capital was provided, the government would be prepared to examine the situation very carefully with a view toward participation. That offer has never been withdrawn. It was repeated recently.

Mr. GREEN: That is, for a rolling mill or a regular steel industry?

Mr. HOWE: Either one.

Mr. GREEN: That would apply also to a proper steel industry?

Mr. HOWE: Quite. That has been an open offer. I would point out to my hon. friend that Steep Rock was not organized by the government. It was organized by private interests, who spent a great deal of work and money in preliminary examination. They went out and got their management and their finance, and came to the government and said, "We cannot compete for this reason," and the government met the lack in that regard, which was lack of transportation.

Mr. GREEN: It is a little easier for them to do that in the east than it is on the coast.

Mr. HOWE: I cannot say about that, but I know that every steel industry in eastern Canada was started, not by government capital, but by private capital and private initiative.

Mr. GREEN: Well, but they are more firmly established in eastern Canada.

Mr. BLACKMORE: Could the minister say how much capital would be required to establish a workable project?

Mr. HOWE: You have a splendid industry established in your great province, a steel rolling mill of the type discussed for Vancouver. I suppose the capital invested in that is about a million dollars. If we are talking about steel, from the ore to the finished product, at least $40,000,000 would be required initially and probably considerably more before it was through. The report was made on it and the suggestion was that $36,000,000 would be the minimum.

Mr. GREEN: The McKee report sets out between $16,000,000 and $17,000,000.

Mr. HOWE: That is for a small beginning, a blast furnace.

Mr. HANSELL: Are cargo vessels built in Canada burning coal, or have you any burning oil?

Mr. HOWE: The North Sands type are coal burning and the Victory type oil burning, and plans are now being made for the production of a modified North Sands type which will have provision for burning either coal or oil.

Mr. BLACKMORE: The government has contributed a great deal of capital to the establishment of certain industries connected with the war. I have the impression that it has put a great deal of money into various private industries.

Mr. HOWE: No. The government has not put money into private industry, but has built government facilities to be operated by private industry. It has not financed private industry. It is unfortunate that the words "capital assistance" have been used to describe expenditures of this kind. Expenditures for increased industrial expansion are, in ninety-nine cases out of 100, built for the account of the government and are retained in the ownership of the government.

Mr. BLACKMORE: What seems difficult for us in the west to understand is why the government does not contribute capital to the establishment of a steel industry in British Columbia. I sympathize strongly with the people from British Columbia. I do not believe that industry is being conducted for the good of the country. In Ontario and Quebec, where industry is being centralized, the people will ultimately be among the greatest sufferers. Every effort should be made to decentralize industry, and for that reason I do think the government should do more than make an offer. They should actually make an endeavour to establish a steel industry in British Columbia.

Mr. GREEN: Has the government considered providing for a subvention on iron ore produced in the west? It might help in the opening up of iron mines. The provincial government have some provision for assistance, and it might be a great help if the dominion would do something similar.

Mr. HOWE: The dominion government have never subsidized iron ore. They are not subsidizing iron ore anywhere at the moment.

Mr. GREEN: It is a fact, is it not, that Canada is very short of iron ore and will be in the future?

Mr. HOWE: No one at the moment is short of anything. British Columbia is not short of steel and Canada is not short of iron ore. We are doing all right.

Mr. GREEN: We are using United States iron ore at the moment.

Mr. HOWE: Yes.

Mr. HANSELL: I do not quite understand the minister when he speaks about the unfortunate term "capital assistance". In *Votes*

and Proceedings of Friday, March 26, we have a list of companies that have been assisted—page after page of them. There must be hundreds of them. Surely all these companies mentioned do not belong to the government.

Mr. HOWE: Yes, they do. The companies do not, but the assets created by the money shown opposite the companies belong to the government, whether it be machinery or buildings or land.

Mr. HANSELL: And do I understand that none of this represents expansion of the firms themselves?

Mr. HOWE: The firms are using it, either machine tools or the building created at the government's expense, but it belongs to the government and it will be reclaimed by the government after the war.

Mr. HANSELL: But it does result in expansion of the company for the present.

Mr. HOWE: Yes.

Mr. GILLIS: I am interested in the question of Canadian seamen. The Minister of Transport is in his place, and there are a few questions I wish to ask him. The Minister of Munitions and Supply stated that the problem now is not getting ships but getting men to man the ships. I discussed this matter recently with a member of the Canadian seamen's union and he pointed out that Canada had lost 3,000 seamen to United States ships on account of the differential that exists between the wage rates, and more and more Canadian seamen are going in that direction. We can understand why. There is a lot of confusion in regard to wage rates as applied to the Canadian merchant navy. For example, the war risk bonus is a matter of agreement between the shipping companies and the seamen. If they are organized, there is some uniformity in the rates; if they happen to be on ships that are not unionized, then the bonus is not paid in the same way. I do not believe the government has anything to do with the war risk bonus. It is considered a matter of agreement between the seamen and the shipping companies. Second, there is a lot of confusion with regard to the cost-of-living bonus. A certain class of seamen receive it and others do not, and that is something which has not been settled so far as the Department of Labour, and the seamen generally, are concerned. I wish the minister would make some comment on that to show where the matter stands. I had a specific complaint only yesterday in a telegram from the Canadian seamen's union in Halifax, to the effect that a ship engaged in salvage work was about to start on a four months' trip going into waters which they considered entitled them to the war risk bonus. The bonus does not apply to salvage work within a certain area. This was a four months' trip.

Mr. MICHAUD: Is that a government-owned and operated ship, or is it private?

Mr. GILLIS: Private. No bonus applies, but the men are going into waters where the bonus should apply. The company does not pay. It stipulates that if the job is successful, when the men return, half of the risk bonus that applies to other ships in that area will be paid. That is a specific complaint and it may tie up that ship. I tried to get information to-day and succeeded in getting what they had, that as far as the government is concerned there is no authority in the matter. I think it is something that the government will have to interest themselves in. If you allow 3,000 seamen to go into other ships by reason of a difference in wage rates, that is a factor which will have to be taken into account, because there is no use in building ships to carry war materials if the ships cannot be manned. The country is full of war materials, but there is a lack of men to get the material moving. The matter should be clarified. There should be some uniformity on the part of the government.

Mr. MICHAUD: The hon. member has in mind conditions on privately-owned ships. The figures I gave a few moments ago with regard to basic rates were figures pertaining to government-owned ships, our steamships or those of other branches of government or in the Canadian government merchant navy. I agree that no jurisdiction over the seamen on privately-owned ships is now exercised or attempted to be exercised; that is a matter with which we have not dealt as yet.

Mr. GILLIS: That is exactly the point I am making. I do not think there is anything privately owned to-day in Canada, or in any country that wants to prosecute this war successfully. I think any agency that has a definite influence on the progress of the war and is not performing maximum service should be brought under government regulation. In connection with the question of seamen, when the shipment of war materials is definitely retarded by the wage factor I believe the time has arrived when definite regulations should be laid down by the government.

Mr. MITCHELL: I was late in getting into this argument, but I think my hon. friend knows as well as I do that the matter of seamen's wages comes before the national war labour board. If my memory serves me cor-

rectly, at this moment there are cases of this kind before that board. I think he will agree that this chamber is not the place to adjudicate on wage structures.

Mr. GILLIS: I did not make any such suggestion. I was endeavouring to get from the Minister of Transport a clarification of the regulations in regard to the war risk bonus and the cost-of-living bonus, because these are matters which are not understood.

Mr. MITCHELL: If my hon. friend works in between sessions, even he has a right to go before the national war labour board, as an individual, in regard to wages. When I was chairman of the national war labour board we adjudicated on war risk bonuses and we also did the same with regard to the cost-of-living bonus. I am pointing out what I think the hon. member will admit, from his own experience, that this chamber is not the place to negotiate working conditions when there is an agency that has been set up for that very purpose.

Mr. MacINNIS: I should like to know what the Minister of Labour thinks this chamber is for if members are not entitled to raise the grievances of their constituents here. At one time I thought the minister was a radical; as a matter of fact I helped to elect him on that basis when he first came into this house.

Mr. MITCHELL: And my hon. friend almost succeeded in losing that election.

Mr. MacINNIS: I believe I made a mistake, though I do not make mistakes very often. Now he comes along and says this is not the place to raise questions of wages because, he says, those questions will come before another body.

Mr. MITCHELL: I did not say that.

Mr. MacINNIS: The minister said this was not the place to adjudicate upon them. We are not trying to adjudicate upon questions of wages; we are trying to bring grievances to the attention of the ministers, to show them the conditions prevailing in this country. The minister says that anyone can bring a matter to the attention of the national war labour board.

Mr. MITCHELL: Or the regional board.

Mr. MacINNIS: That is quite true; but the minister knows as well as I do that before a person can appear and make proper representations before one of these boards, he must have some experience in negotiation, and the ordinary seaman has no such experience. They have to be organized, and even then they can get their experience only by putting such cases before the boards or by dealing with negotiating committees.

Mr. MITCHELL: They are fairly well represented; I know their officers fairly well.

Mr. MacINNIS: I know them too. Those who are organized are represented, and they have quite capable representatives, but they are not all organized. What has been done here in almost every action by the government has proved conclusively to the workers that they will not get any justice or any consideration unless they are sufficiently organized to demand it. Then you wonder at strikes. Many of our labour difficulties could be met before they developed if employers and the government would agree to meet the representatives of the workers and give proper consideration to their requests. It is a strange and dangerous doctrine to put forward in this house that we are not to raise matters affecting the workers here.

Mr. MITCHELL: It just so happens that my hon. friend is sitting there and we are sitting here. I often wonder how he would run a socialist state on the basis he has been mentioning. My hon. friend was business agent for the street railway union in the city of Vancouver, and he understands as well as I do that negotiations are always the result of a difference of opinion. If you did not have a difference of opinion you would not have two or three or four political parties; if there was not a difference of opinion there would be no need for trades unions. The hon. member gets my point, and if he were sitting here probably he would have to do as we have done; he would set up these agencies like the national war labour board and the regional boards to adjudicate on these things. I wish to say to my hon. friend that I think these boards have done a remarkable job in a big way. They are, however, human institutions; probably they have made mistakes, just as my hon. friend sometimes makes mistakes. I have no doubt he thinks he made a mistake when he came to speak for me in Hamilton; and let me say that we thought we would lose the election after he had been there. But while it is quite logical to bring a grievance before this House of Commons, I do not think this is the place to negotiate trades union agreements.

Mr. MacINNIS: We are not trying to negotiate trades union agreements here.

Mr. HOWE: I think this discussion is rather outside the item, Mr. Chairman. This item is to provide for the construction of boats, not for their operation. If there is any

question in regard to the wages involved in the construction of the boats, that would be quite in order, but I do not think it is in order to raise the question of wages in connection with operating the boats.

Mr. MacINNIS: The whole matter of the operation of these boats should come up here, because the minister referred to the matter of operation during his statement, and I think we have a perfect right to raise the point on this item.

Mr. POULIOT: I wish to ask just one question of the hon. member for Vancouver East, who has just spoken, and the Minister of Labour. Who is true to the old principles of the Cooperative Commonwealth Federation group; is it the Minister of Labour or the Cooperative Commonwealth Federation group?

Mr. COLDWELL: Actions speak louder than words.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Friday, June 18, 1943

The house met at three o'clock.

THE KING'S BIRTHDAY

REPLY OF HIS MAJESTY TO RESOLUTION EXTENDING GREETINGS AND GOOD WISHES

Mr. SPEAKER: I have a communication from His Majesty the King:

Government House,
Ottawa,
16th June, 1943.

Dear Mr. Speaker,

I am desired by the Governor General to enclose herewith a letter addressed to you by the private secretary to the King in connection with the resolution adopted by the House of Commons on the occasion of the official celebration of His Majesty's birthday.

Yours sincerely,
F. L. C. Pereira,
Assistant Secretary to the
Governor General.

Buckingham Palace,
8th June, 1943.

Dear Mr. Speaker,

The King has received from the High Commissioner for Canada a copy of the resolution adopted by the House of Commons of Canada on the occasion of the official celebration of his birthday.

I am commanded by the King to assure the members of the House of Commons of His Majesty's sincere gratitude for this expression of good wishes, and for the generous terms in which they refer to him.

The King shares in full measure their hope that the day may not be far distant when the blessings of peace may be enjoyed throughout the world once more.

Yours sincerely,
A. H. L. Hardinge.

INTERNATIONAL RELIEF

DRAFT AGREEMENT FOR UNITED NATIONS RELIEF AND REHABILITATION ADMINISTRATION

On the order for motions:

Right Hon. W. L. MACKENZIE KING (Prime Minister): On June 11, in reply to an inquiry from the Leader of the Opposition (Mr. Graydon), I stated that I hope to be able shortly to lay on the table the draft agreement for the establishment of a United Nations Relief and Rehabilitation Administration. I now table this draft agreement together with an introductory note explaining the status of the proposals. The draft agreement has been framed by the governments of the United States, the United Kingdom, the Soviet Union and China in consultation together. It was presented on June 10 for the consideration of other united nations by the Secretary of State of the United States on behalf of these four powers. It is contemplated that after the other governments have had an opportunity of examining these proposals they will be submitted for discussion and approval to a conference of representatives of the united nations and the nations associated with them in this war. The proposals are now under consideration by the government of Canada and Canada will be glad to send representatives to the projected conference.

The problems of bringing relief and rehabilitation to the war-torn regions of the world as they are liberated from enemy control are so vast as almost to stagger the imagination. Much preparatory work has been done in estimating the requirements in the occupied territories of our European allies and in planning the means for meeting these requirements as far as possible. An inter-allied committee under the chairmanship of Sir Frederick Leith-Ross has been engaged in this task in London for nearly two years. Relief and rehabilitation cover many things in addition to the supply of essential foodstuffs for the restoration and maintenance of health. Clothing and medicines will be urgent needs from the day of liberation. Throughout an essential purpose must be to restore production and commerce in the occupied countries by the provision or repair of means of transport, by the supply of agricultural seeds, machinery and live stock, and by making available essential equipment and raw materials for local industries, es-

pecially those engaged in the manufacture of consumers' goods. Relief in the narrow sense is only the first stage of feeding the hungry, tending the sick, and clothing the needy. Relief merges into rehabilitation—the restoration of the productive capacity of the occupied territories so that they may as soon as possible return to normal economic life.

The amounts needed to restore the economies of the occupied countries are very great indeed and the supplies available to the united nations are far from adequate to meet all urgent demands. It is, therefore, of the first importance that relief and rehabilitation should be conducted under a carefully planned international scheme, so as to ensure that the best use is made of available supplies and that relief is not denied to those in urgent need because they may lack financial resources or shipping or a stable authority to supervise distribution.

I have already stated that Canada is prepared to play her full part in international relief, and I am sure that this statement is supported in all quarters of this house. Since the draft agreement which I have tabled is tentative and will be revised in the light of the observations received from many governments, I believe that it is not necessary to discuss its terms at present in any detail. It is a first step in building a united nations organization for this purpose. It would establish at once a council on which all countries participating in the administration would be represented. The council would be supplemented by a central committee, a committee on supplies and regional committees. A director general supported by an international staff would be responsible for executive operation. That is the framework which the agreement would set up. After its establishment, the organs of the united nations relief and rehabilitation administration would work out detailed arrangements within this framework.

For the convenience of hon. members, I suggest that the draft agreement should be printed in *Votes and Proceedings* of to-day.

THE FIGHTING FRENCH

THIRD ANNIVERSARY OF CALL TO FIGHT—UNION WITH FRENCH ARMIES UNDER GENERAL GIRAUD

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, on June 18, 1940 in the darkest hour of this world-wide struggle, a small group of Frenchmen issued a call to their countrymen to continue the fight against the enemy until the hour of final victory. Since that day three years ago the strength and striking power of French resistance have steadily increased. To-day, the third anniversary of that significant step, would seem to be an appropriate occasion on which to welcome the recent union of the Fighting French Forces of General de Gaulle with the French armies commanded by General Giraud. The formation in North Africa of the French committee of national liberation is a clear indication of the determination of all Frenchmen to work together to bring about the total defeat of the enemy. Though the way will be hard and long we may now look forward, I trust, to the day when France herself will be free and united.

Mr. COLDWELL: Mr. Speaker, may I ask the Prime Minister whether this means that the government will recognize the Fighting French and the new committee as the true voice of France; and will the Canadian government give recognition in Ottawa to their representatives?

Mr. MACKENZIE KING: I shall make a statement later as to the recognition which Canada will give to the forces just mentioned by my hon. friend.

Mr. HANSON (York-Sunbury): Has the Prime Minister any information with respect to the reconciliation between General de Gaulle and General Giraud? My understanding is that reconciliation is not wholly complete.

Mr. MACKENZIE KING: There are difficulties, but I think that the statement I made is justified in the light of conditions as they exist at present.

CANADIAN ARMY

REFERENCE IN "GLOBE AND MAIL" TO ARRANGEMENTS WITH RESPECT TO PRIZE FIGHTING

On the orders of the day:

Mr. W. C. MACDONALD (Parliamentary Assistant to the Minister of National Defence): Mr. Speaker, on Friday, June 11, in answer to a question by the leader of the opposition (Mr. Graydon), I stated that I would make inquiries into allegations made by the sports columnist of the Toronto *Globe and Mail* with reference to arrangements made by the Canadian army respecting Private Johnnie Greco's boxing bouts.

I find that Greco was enlisted on January 13 last and was granted leave without pay from February 5 to February 20 in order to complete a pre-enlistment contract to fight Cleo Shans in New York on February 19. The army had nothing to do with this fight. Following the fight of February 19, Mike Jacobs on behalf of the Twentieth Century Sporting Club of New York asked for a return

bout to be held in New York and offered ten per cent of the gross receipts as a gift to military district No. 4 athletic fund. Officers of that district felt that the publicity would be of benefit to the army and Greco was given fourteen days' leave without pay to fight in New York on March 26. The athletic fund of military district No. 4 received $5,000 from the Twentieth Century Sporting Club as its share of the receipts.

As a result of Greco's success in New York it was decided to stage a show in Montreal on May 8. This was completely an army show. All details were handled by officers at military district No. 4 and no civilians were involved. Jacobs had nothing to do with this show except obtaining an opponent for Greco. He did not share in any of the receipts, although indirectly he may have benefited through his connection with Madison Square Gardens by participating in any royalties paid by the American Gillette Razor company for the broadcasting rights.

Greco received remuneration for the three fights. For his fight in Montreal he got $2,328, out of which he would have to pay his trainer, also training and incidental expenses. Military district No. 4 athletic fund got $1,586, clear of all expenses, out of the Montreal fight.

Officers in military district No. 4 felt that the Canadian army was receiving favourable publicity by Greco's fights. Consequently when the Twentieth Century Sporting Club offered him an opportunity to fight Bob Montgomery in New York the offer was accepted, subject to the exigencies of the service and to permission being given by National Defence headquarters for Greco to go to New York to fight. Permission was refused, so that the fight will not take place.

Mr. HANSON (York-Sunbury): What an important announcement!

Mr. RALSTON: So important that it was asked for twice by the leader of the opposition.

LABOUR CONDITIONS

TORONTO SHIPBUILDING COMPANY—DISMISSAL OF EMPLOYEES

On the orders of the day:

Mr. CLARENCE GILLIS (Cape Breton South): Mr. Speaker, I wish to ask a question of the Minister of Labour arising out of a telephone conversation this afternoon with union officials in Toronto. They state that 289 men were dismissed this morning by the Toronto Shipbuilding Company without notification. Has the Department of Labour any knowledge of the matter? If so, what steps are being taken to remedy this serious interruption of an essential war plant?

Hon. HUMPHREY MITCHELL (Minister of Labour): Mr. Speaker, no intimation has come to me with reference to the subject matter of my hon. friend's question, but I shall be glad to make immediate inquiries.

SUPPLY

The house in committee of supply, Mr. Bradette in the chair.

DEPARTMENT OF AGRICULTURE

Science service.

10. Entomology, $459,197.

Mr. QUELCH: Could the minister give the committee any information regarding the grasshopper situation in western Canada? We are informed that there is likely to be a serious infestation in various parts of the west.

Hon. J. G. GARDINER (Minister of Agriculture): It is not expected that the situation will be at all serious this year. As hon. members from the west are aware, it is not usual for us to have very bad infestations under conditions such as we had last year, or following last year's conditions.

Mr. QUELCH: I understand from a recent crop report that certain parts of eastern Alberta are very dry.

Mr. GARDINER: Of course, in any limited localities where there are difficulties they will be taken care of, as usual, by arrangements between this department and the departments in Alberta.

Mr. HANSON (York-Sunbury): Are there any new developments in this department? It has done a great deal of good work in connection with the potato industry in New Brunswick. Has the minister anything to report in that connection? I understand that the late director, Doctor Gibson, has been retired on superannuation and that a successor has been appointed.

Mr. GARDINER: So far as Doctor Gibson is concerned, Doctor L. S. McLaine is taking his place.

Mr. HANSON (York-Sunbury): Yes, I understand that. What I want to know is whether the minister has anything to report in the way of progress made last year. In my view this is an important service. Has he anything interesting to tell the country?

Mr. GARDINER: There is nothing at present which would warrant a special statement with regard to this particular section. The

usual work, of course, is going on, and a little later in the season, because of some investigations which are now being held, a statement will be made.

Mr. HANSON (York-Sunbury): Has the minister had any report on an infestation which is affecting the elm trees in my city? Does the department take cognizance of that sort of thing—tent caterpillars and the like—and what help do they lend to treatment?

Mr. GARDINER: The laboratory which deals with that matter is located in Fredericton.

Mr. HANSON (York-Sunbury): Yes.

Mr. GARDINER: And of course they examine into all difficulties which arise in connection with trees or forests in general and make reports on them, and efforts are made to combat such difficulties as exist.

Mr. HANSON (York-Sunbury): Can the minister give us any information as to what progress has been made towards coping with the infestation of the hardwood trees in eastern Canada, and also the sawfly infestation in our eastern forests? A great deal of damage has been done to the hardwood growths; hundreds of thousands of dollars have been lost, I am afraid, by reason of these infestations. The department was taking steps to combat both. Has the minister anything to report?

Mr. GARDINER: I suppose it is the bronze birch borer which is referred to. My understanding is that there has not been discovered any means of combating the attacks that are made by the borer on hardwood trees, but that the department assists in salvaging the wood which is affected as a result of the operations of this insect.

Mr. HANSON (York-Sunbury): Is the department continuing investigations of ways and means of combating it? What progress if any has been made beyond the mere negative which the minister has indicated? This is very important; the infestation is the source of great loss, as I tried to emphasize a moment ago. Has the same situation been met in the United States; what, if anything, has been done down there; and are we utilizing all available sources of information from the continent if there are any such now? Germany used to be very much alive to this sort of thing, but I suppose that source of information is now dried up. No progress has been made; in effect that is what the minister tells us?

Mr. GARDINER: That is quite right.

Mr. HANSON (York-Sunbury): I am sorry to hear it.

Mr. GARDINER: The work has been going on continuously, but we have not yet discovered any means of successfully combating the borer.

Mr. HANSON (York-Sunbury): What about the sawfly? Some years ago a parasite was imported. Has that experiment been successful; that is, in connection with the spruce?

Mr. GARDINER: Yes, Mr. Chairman. The method of fighting that particular insect has been described to the house, I think, each session since I have been down here, and probably for some time before that. The scourge has spread over a very considerable part of the area, particularly in the eastern part of Canada, and we have been breeding parasites and distributing them. I understand that some 800 millions have been distributed, and the insect seems to be under control. The scourge is gradually being reduced in different parts.

Mr. HANSON (York-Sunbury): That is to say, the infestation is not spreading?

Mr. GARDINER: No, it is not spreading; it is being reduced rather than increasing.

Mr. PERLEY: This year, throughout Canada, and particularly in the west, the people responded to the idea of victory gardens, but I understand there has been quite an infestation of the cutworm. I had a letter yesterday from a correspondent who said that this year he put in about another acre of garden to produce vegetables, because of the appeal which was made to do something in that line, but practically the whole thing has been destroyed. He wound up his letter with the words, "No more victory garden for me." Will the minister state what information he has with respect to the cutworm, what damage it has done, and what steps are being taken to deal with it?

Mr. GARDINER: The cutworm, of course, is always present, particularly in western Canada, whether they are victory gardens or whether they are not. Cutworms do not pay much attention to that.

Mr. GRAYDON: They do not make any discrimination.

Mr. GARDINER: No; and at times they become so plentiful that they destroy the crops as well as the gardens. I am not aware that there is any serious infestation this year in connection with crops, but I have no doubt that considerable destruction has taken place, as usual, in gardens. The only thing I can say with regard to dealing with them is that in the experience of the past there has been a

fly which has usually followed the cutworm and which acts in somewhat the same way as any parasite acts upon any of these different pests that we have. The fly darts around and lays an egg in the cutworm which results in the cutworm itself being consumed. That goes on continuously; it is a peculiarity with insect life. I do not know what can be done about the cutworm in gardens, unless one goes out in the garden and sees to it that they are destroyed with poison or otherwise.

Mr. NICHOLSON: I understand that some damage has been caused by the mountain pine bark beetle. Does that come under the supervision of the Department of Agriculture, and if so, how many men are engaged in combating this pest? What success are they having?

Mr. GARDINER: The work is directed by the entomological branch, as is all work done in connection with insects and grubs. The men are provided for that particular task in that area by the mines and resources department, and it becomes a matter of forestry. I am not sure about the number of men employed in the work, but the work is being carried on.

Mr. NICHOLSON: Has the minister any information as to the importance of the work and what the consequence is likely to be if this pest is not controlled?

Mr. GARDINER: If the insect is not controlled it will do a great deal of damage, more particularly to the scenic aspects of that particular area. Much of the pine is jackpine and is not as valuable commercially as some other varieties of pine, but the damaging of any timber anywhere must be controlled if at all possible. I understand that this particular parasite is under control and is not doing as much damage as it would otherwise.

Mr. QUELCH: I wish to call the attention of the Minister of Agriculture to an advertisement appearing in a recent issue of the *Herald* of Hanna, Alberta, under the heading "Sylvatic Plague." A map is shown of the area affected, north, east and south, and for further information readers are directed to write either to the department of health or to the department of entomology. In my opinion this is more a matter for the entomological branch than for the department of health. I quote the advertisement:

Warning

All persons residing, or entering within, the areas shown on the accompanying map are hereby informed:

1. That gophers, and gopher-fleas, infected with sylvatic plague are present in these areas.

2. That sylvatic plague is a very serious human disease.

3. That it is possible for man to contact sylvatic plague by handling infected animals or through the bite of an infected flea.

4. That vaccination against sylvatic plague is not feasible at present.

5. That the only method of control of sylvatic plague in nature is by the control of the gophers.

6. That control of gophers requires a systematic gopher poisoning campaign on each farmstead.

7. That it is imperative that all residents within the infected areas take the following steps to protect their health and welfare.

(a) Do not handle living or dead gophers. Gophers found dead should be buried.

(b) A well-organized "gopher control" campaign using a recognized gopher poison should be carried out on each farmstead. Particular attention should be paid to effective poisoning on the land surrounding the buildings.

This disease is going to spread unless effective action is taken to control it. As a matter of fact it has already spread, and the areas affected are in townships from 24 to 30 miles apart. The farmers in these areas are too sparsely settled to carry out an effective poisoning campaign, and if we are to depend upon them to kill the gophers these animals will not be destroyed. I suggest that the army could very well be utilized for this purpose. In the district south of Hanna in the Tilley area a great deal of work is being carried on experimentally with gas, and I should imagine that gas would be the best means that could be used for destroying gophers in an area of that size, which is 66 square miles. These fleas can be carried by stock or by human beings. Evidence of this may be found in the fact that men carrying on investigational work travel in a car equipped with a bath and as soon as they have finished their field work they take a bath. But invariably they find a number of fleas on their clothes, and these fleas can give the plague. If the fleas are carried out of the area on live stock the disease may spread to other parts of Canada. I suggest that we should do everything in our power to destroy this menace while it is still confined to a limited area. Would it not be possible for the federal government to cooperate with the province in a systematic campaign for the purpose of destroying the gophers? I repeat, if you depend on the farmers to destroy the animals they will not be destroyed and the plague will gradually spread over various parts of the west.

Mr. GARDINER: The work that is being done in this direction is being carried on in the health department and not under this department. I am not sure what the arrangements are between the health authorities in the province and the administration here, but work has been going on for two years constantly.

They have the assistance of our entomologists but the work is really paid for and directed by the Department of Health. I think it would be more helpful to the hon. member if he would discuss it when the estimates of the Minister of Health are before the committee.

Mr. QUELCH: But the department of health would have to depend on the Department of Agriculture for the campaign to destroy the gophers. It is hardly within the purview of the department of health to poison gophers.

Mr. GARDINER: The men out there from the department of health are making a study of the disease itself, the means by which it spreads, and methods whereby it can be avoided. The information thus obtained will be reported to those persons who will use it for the purpose of destroying as far as possible the gophers and the fleas.

Mr. QUELCH: I understand that so far the work done is merely investigational. They have not themselves carried out any work for the destruction of the gophers. They have recommended that the farmers should destroy them but no action has been taken to institute a campaign for the wholesale destruction of these animals. The farmers are not doing it, because in many areas they are operating several thousands of acres and one farmer could not possibly poison such a vast area.

Mr. GARDINER: Investigational work will be carried on by the health department, but the work necessary to combat the disease would, I should think, be carried out by the provincial authorities rather than by the federal department either of agriculture or of health. Matters having to do with health are largely under the administration of the province, and that is true of the destruction of gophers. It is not under my administration but under provincial administration; I am quite sure, however, that the authorities in Alberta are alive to the situation and will deal with it, as it is their duty to do. However, if representations are made here and any assistance can be given by any of our people it will always be given.

Item agreed to.

Science service.

11. Plant protection, $280,591.

Mr. GRAYDON: May I ask the minister to give some description, not in detail, of the work which this plant protection branch of science service actually accomplishes? I believe we had an item before us on a previous occasion, but I am not sure that we have ever had a detailed description of the work for which this vote actually provides.

Mr. GARDINER: The purpose of the vote is for the inspection and treatment, if required, of imports and exports of plants and plant products for insect pests and plant diseases; in cooperation with the British Ministry of Food, inspection of ships at maritime ports for insect infestation, and the supervision and treatment when required prior to loading of food and plant products; in cooperation with the division of entomology the inspection of grain elevators, warehouses, dehydration plants and grain storage ships in great lakes ports for insect pests, and supervision and treatment when necessary; to maintain essential seed supplies inspection in the field, in storage and at shipping points of potatoes entered for certification as seed potatoes, in cooperation with the Department of Trade and Commerce and with the marketing service of the Department of Agriculture; the promotion of the export trade in seed potatoes; potato tuber indexing in greenhouses during winter, to assist growers in the prevention of disease from potato stock; issuance of certificates of health for plants and plant products to meet requirements of importing countries; maintenance of quarantines under the Destructive Insects and Pests Act; the eradication or control of foreign insect and plant diseases, established in Canada, including the Japanese beetle.

Mr. PERLEY: How much of this amount would be spent on inspecting elevators to ascertain the damage caused by the mite which affects grain before it goes into storage?

Mr. GARDINER: I have not the amount shown separately from the total expenditure. But this particular branch takes care of all studies or investigations made in connection with that kind of thing, from Fort William east; and the branch we dealt with a few minutes ago takes care of all the work from Fort William west. So that the whole expenditure would not be made under this vote. Half of it would be made under an earlier vote.

Mr. PERLEY: A great many elevators were inspected, though, even in the interior.

Mr. GARDINER: Yes, many of them.

Mr. COLDWELL: A question was asked the other night with respect to the cultivation of a new species of dandelion.

Mr. GARDINER: That comes under the item for experimental farms.

Mr. PERLEY: When we were in committee a week ago, discussing item 3, the minister said he would table the report of the advisory committee on agricultural services. He said there was a report, and that before going into committee again it would be tabled.

Mr. GARDINER: The only thing available is the minutes of the meetings of the advisory committee. However, I shall make a further check.

Item agreed to.

Experimental farms service.
12. Experimental farms administration, $59,480.

Mr. ROSS (Moose Jaw): Speaking in the house last March I said that when the agricultural estimates were under consideration I intended to move an amendment asking for the allocation of $500,000 to be appropriated by the dominion government for agricultural research in Canada. Looking over the estimates I see no point at which within the rules I could move an amendment of the kind. Perhaps my purpose will be better served if, instead of endeavouring to move an amendment, I initiate a discussion on the subject.

Mr. GRAYDON: The hon. member is not surrendering his position?

Mr. ROSS (Moose Jaw): No, not a bit; if the leader of the opposition can show me where my amendment can be properly moved, I shall move it.

Mr. GRAYDON: That is your job, not mine.

Mr. ROSS (Moose Jaw): As I said in March, in Canada we have not gone very far in the matter of agricultural research. Our experimental farms and our departments of agriculture across the country have done much excellent work in connection with production services, the dissemination of information on cultural methods, the health of animals, the breeding of animals, plant breeding and many other subjects of great interest to agriculturists in Canada. But as yet we have not done any real work in respect of at least two phases which require careful study. One has to do with agricultural research in order further to develop ways and means of distributing foodstuffs throughout the world, and the other has to do with finding ways and means of using agricultural products and by-products in industry.

[Mr. Coldwell.]

In the United States during the past few years four great agricultural research laboratories have been set up. We would do well to follow the United States in that particular. I hold in my hand an article which deals with the different agricultural research laboratories in the United States. It points out that a northern laboratory was established at Peoria, Illinois, a southern at New Orleans, an eastern at Wyndmoor, near Philadelphia, Pennsylvania, and a western in southern California, near San Francisco. The article states:

> When congress provided for the establishment of these laboratories it made clear the type of research it had in mind, and stated it in the act as follows:
>
> "The Secretary of Agriculture is hereby authorized and directed to establish, equip and maintain four regional research laboratories, one in each major farm producing area, and, at such laboratories, to conduct researches into and to develop new scientific, chemical and technical uses, and new and extended markets and outlets for farm commodities and products and by-products thereof. Such research and development shall be devoted primarily to those farm commodities in which there are regular or seasonal surpluses, and their products and by-products.

We would do well to follow the example of the United States in this regard. There are four sections in Canada which should have the services of laboratories. The maritime provinces would compose one section, the central provinces of Ontario and Quebec a second, the three prairie provinces a third, and British Columbia a fourth. In all these areas different types of agriculture are carried on, and there is great scope in all four for work to be done in agricultural research.

First, in regard to foods, we should be able through research to find out and to set up grades and standards which have for their basis complete information from analyses as to the food value of products, their chemical constituents and vitamin values, as well as their nutritional content. Through research we can also find new methods of transportation, cold storage and the handling of farm products for export; the handling of fresh foods, storage conditions, distribution methods and packaging; quick freezing and dehydration methods and the preserving of foods both commercially and for domestic use.

In these different laboratories I suggest that in the maritime provinces, for instance, research work could be done in connection with fruits, potatoes, legumes, grasses, marsh grasses, plastics and substitutes for building materials. In that laboratory a great deal of very necessary information could be gained by studying fish, fish products, fish oils, sea foods and by-products thereof. In Ontario and

Quebec work could be done on tobacco, corn, animal fats and oils, skins, hides and tanning, vegetable products, fruits, soybeans, fibre flax, milkweed, milk products, beans and peas. In the western provinces the work might include corn, wheat, coarse grains, oil seeds, a fermentation pilot plant for the purpose of discovering uses of derivatives from different grains, chemical uses of starch, the development of butylene glycol, sugars, glucose and the industrial uses of starch, alcohols and organic acids.

Mr. GRAYDON: Does that list cover alfalfa?

Mr. ROSS (Moose Jaw): Not in the west; that comes under legumes and grasses in the maritimes.

Mr. GRAYDON: Of course you have alfalfa in Saskatchewan.

Mr. ROSS (Moose Jaw): Yes, but we grow it for seed more than anything else, while in eastern Canada it is grown more for feed or for sale.

Mr. COLDWELL: What about bees in the west? The problem is different there than in the east, I believe.

Mr. ROSS (Moose Jaw): I believe these different laboratories should cooperate with each other, so that the work being done in one would be made known to the others. I am simply laying out certain things that I think might be dealt with in the different laboratories throughout Canada. In British Columbia they might study apples, all types of fruits both small and large, vegetables, milk and milk products, grasses and legumes, seeds, seed crops and the residue from seed crops which are grown in British Columbia; drug plants, which are starting to be grown there; poultry products and by-products and again fish and sea food by-products. The industrial uses of all these by-products in the various parts of Canada could be worked out in the different laboratories.

I do not intend to detain the committee or the minister longer in regard to this matter. I think we are long past the time in this country, with agriculture such an important industry, when we should have expended large sums of money for the purposes I have mentioned. The amount I asked, $500,000, is a very small amount for this purpose; it is only a start. I intimated also that I thought the different provinces of Canada should help by putting up smaller amounts, and also that industry in Canada should be willing to help by giving perhaps a couple of hundred thousand dollars a year to this work, because they too would benefit greatly by the things which might be found out during the course of the work carried on in these laboratories.

I bring up this matter under the Department of Agriculture, knowing that for years we have had a research bureau here in Ottawa, which has done excellent work. Unfortunately for the agriculturist in Canada, however—and this is my opinion—with the laboratory located here in the centre of the industrial area of Canada, quite properly the men in charge have endeavoured to work out the problems that have been placed upon their desks day by day. Therefore to a large extent the problems of industry have been worked out while the problems of the agriculturist have not been properly placed before the bureau here in Ottawa. I think therefore the only way to have this work carried on is to have a separate branch altogether, with money voted for it separately, in order that agriculture might set up its own research bureaus and carry on its own research work. No doubt certain men who are to-day connected with the national research bureau would be taken into these new bureaus, and they would be very good men because already they have done valuable work for agriculture in Canada. We have never had a set-up under which a sufficient number of scientists could be brought together in a laboratory in Canada to work on agricultural products, knowing that from one year to the next they could carry on and the money would be provided.

Mr. GRAYDON: Is there any comprehensive work of this kind being carried on in any of the provinces now, to my hon. friend's knowledge?

Mr. ROSS (Moose Jaw): No great amount, though some work is being done in connection with the research bureau by various agricultural colleges and universities throughout the country.

Mr. GRAYDON: I had in mind soil testing, for instance.

Mr. ROSS (Moose Jaw): Yes, that is done in different provinces, but I am endeavouring to visualize the large programme that is very necessary to this country, and I think my hon. friend agrees that we should start now. Only to-day the Prime Minister made a statement in regard to food after the war. We are not going far enough in endeavouring to find out the things we should find out right now in order that when this war is over we may be able to produce, dehydrate and transport the foods it will be necessary to send to hungry people in other parts

of the world. These are all things that can be worked out in laboratories of the type I have mentioned.

Mr. GRAYDON: Would it be my hon. friend's idea that this scheme should be co-ordinated with the facilities that exist at the present time in the various provinces?

Mr. ROSS (Moose Jaw): Absolutely; I think we should cooperate with anyone in order to get everything possible done. I am sure any laboratories set up by the Department of Agriculture would be only too glad to cooperate with any scientific men throughout the dominion, whether employed by industry or by the provinces.

Mr. GRAYDON: As I understand the hon. member's plan, it would have to be a dominion-provincial scheme.

Mr. ROSS (Moose Jaw): It would have to be started by somebody, and I believe this is the place to start it. In conclusion I want to say that I hope other hon. members, who I know are as much interested as I am in this thing, will stand up in their places this afternoon so that we may have a real expression of opinion on this question. The government will then realize that something of this kind should be done in Canada at the present time.

Mr. GRAYDON: I may have something further to say at a later stage in this discussion. Those of us who come from rural areas are naturally interested in any scheme to improve the position of the farmer. The hon. member referred to this matter earlier in the session, and again on March 17. At that time we were encouraged to think that he was going to make a determined drive upon the government. He took a vigorous stand and said, as reported on page 1330 of *Hansard*:

> When we reach the agricultural estimates it is my intention to move an amendment which I hope the government will see fit to accept.

I am sorry to have seen the member adopt a compromising attitude this afternoon. When he retreated from the strong position which he took on March 17—perhaps it was because it was March 17 that he took that position—I would have preferred that he did so because under the rules of the house a private member is not permitted to move an amendment which will increase the estimates. However, evidently that is not his idea, because he has just taken the position that he will do what he has done so many times—make a recommendation to the government.

I should have liked the hon. member to give us further particulars of his plan, to which no doubt he has given considerable study. Over the years there has been a gradual development in agriculture along the lines of technical research, and farming to-day is a vastly different thing from what it was yesterday. The agricultural industry, however, is a long way behind many other industries in connection with the return obtained for the labour and management and capital invested. These are matters which can be dealt with at a more appropriate time. Farmers and farm labour have seen fit to trek to other lines of endeavour where there are more appropriate returns. Having that thought definitely in mind, the question of a greater production from the same amount of labour becomes a matter of considerable importance.

The question raised by the hon. member with respect to scientific experiments and varied uses of farm products is an important one, but how best we can accomplish it is something which will have to receive considerable study. We must get the best out of any plan that is proposed. Many hon. members who are farmers no doubt will be able to express themselves better than I and from a greater experience, but I think they will agree that in many instances the farmer who has made the most money or has achieved the greatest material success has been the man who has engaged in some specialized type of farming which perhaps has not been subject to the same competition as other lines. This has been demonstrated to me by several farmers whom I know well, many old neighbours of ours on the farm. Keeping that definitely in mind, it seems to me that there is a place for the scheme the hon. member proposed.

I am not finding fault with the minister or with his splendid department, but the fact is that agricultural research is a long way behind. More consideration will have to be given, perhaps under the leadership of the dominion government, to scientific farm research. When the hon. member was speaking I threw in one or two interjections with regard to the position of the existing facilities in the various provinces which have been attempting on a smaller scale to deal with the problems mentioned by the hon. member. In carrying out a scheme such as is envisaged by the hon. member I think it is essential that the department of the government more particularly involved should confer with the provinces in order that there may be proper coordination and cooperation.

Agriculture has been behind other industries in scientific and laboratory experiments. There is a good reason for this. In many instances industry has been in position to

spend considerable sums of private money upon scientific research for the development of the particular industry. But in the past, and at present, our farmers have not been and are not in that position. Most farmers have a difficult enough time now to get along, to pay their debts, to educate their children, to carry on their normal pursuits of life without having anything extra left over to undertake any experimentation or laboratory work. I think all of us can recall instances where particular industries have made considerable progress along scientific lines, but unfortunately agriculture has not had the same opportunities.

If I understood correctly the theme of the hon. member's address this afternoon it is that we should provide for agriculture the same opportunities that are given to industry in order to bring about greater returns. At the proper time the minister and his assistants will be able to give us the necessary technical information. Everything possible should be done to help the farmer along these lines and to at least put him in a position nearer to that of industry. I know of no reason why the farmers of this country should not enjoy the same advantages and opportunities as other industries. On these general lines I am strongly in favour of the suggestion which has been made by the hon. member for Moose Jaw. I think my views are stronger, if possible, than his on this subject, and I was sorry that he started off with such high power only to land up in low gear, as he did this afternoon.

Mr. COLDWELL: Mr. Chairman, the hon. member for Mackenzie (Mr. Nicholson) is going to place our joint view before the house in order to shorten the discussion. I shall content myself by saying that we strongly support the request that has been made by the member for Moose Jaw (Mr. Ross) that a special appropriation be made for conducting this important experimental work. He has quoted from United States records showing to some extent what has been done in that country, but to save time he quoted, I think, only in part. We know the tremendous amount of work that can be done along this line, and we are glad to support in every respect the request he made this afternoon.

Mr. NICHOLSON: Mr. Chairman, I think the member for Moose Jaw has placed the house and the country in his debt by opening up this important subject. I recall that during the early thirties, when wheat was selling at the lowest price in history, the federal government of the day, assisted by the Saskatchewan government, spent large sums of money to bring people from the drought area to the north country to produce more wheat. If half a million dollars had been spent at that time in trying to devise new uses for agricultural products something much more useful would have been accomplished, because many people who were established on farms in the west during the thirties have left the farms and the investment made has been a complete loss in many cases to the federal and provincial authorities.

Members of the committee who would like to have up-to-date information on this interesting subject of chemurgy I feel sure could obtain it from the Saskatchewan Industrial Development board, which issues publications from time to time. I hold in my hand one of their circulations which contains a report of an address given by Thomas B. Hill, Secretary of the Department of Conservation and Development, Olympia, Washington. For the benefit of those who are not familiar with this interesting subject, he explains at the outset what chemurgy is all about. He says:

> Farm chemurgy is chemistry at work on farm products. Heretofore there has been something very scientific about the word to the lay public, and the average person has been inclined to shy away from it. But chemurgy is neither too scientific, nor is there anything mysterious about it. As a matter of fact it is thoroughly practical, and the public in becoming familiar with it is finding out that it means the utilization in industry of surplus and waste crops, and the development of specialty crops.

He goes on to tell of the place of the soybean in our modern economy, and says:

> Less than ten years ago practically no soybeans were being produced in this country. So rapidly was it developed as an industrial raw material, that in 1941, 5,855,000 acres were devoted to the crops, with a production of over 100,000,000 bushels. So great had become the demand for soybean products that for 1942 the farmers of the United States were urged to plant 9,000,000 acres to the crop. Here we have nine million acres of farm land devoted to a crop that was unknown ten years ago. The crushing of the beans to obtain the oil and meal, and the manufacturing of the various by-products, constitute a large industrial operation.

I know that a good deal of experimental work has been done in Canada, but what has been accomplished in the United States shows how important it is to spend a considerable sum of money on experimental work.

Here is another interesting fact given in Mr. Hill's address:

> Comparatively few people know that a fur made from casein, a milk product, is being used in place of rabbit fur in the manufacture of men's felt hats. The extent to which it has thus been used in the last two or three years is astounding. There has been a shortage of rabbit fur, which comes largely from England, Scotland, New Zealand and Australia, because of the war. It is estimated that 50,000,000 felt

hats were made from casein in 1941. Now that a shortage in milk is developing, chemurgy no doubt will produce some other product to take the place of rabbit and casein fur.

I also have here the publication "So That Man May Prosper", from which the hon. member for North Battleford quoted extensively the other night when speaking of synthetic rubber. I shall not take time to make any comment on the reply which the Minister of Munitions and Supply made to the statements in this publication, but I would draw attention to three or four developments dealt with by the author, Mr. Dyson Carter, in this publication. He of course spends a good deal of time in discussing industrial alcohol and I feel sure that the future will demonstrate that wheat and other agricultural products can be used successfully in the manufacture of synthetic rubber.

Mr. Dyson Carter also has an interesting article on plastics. He says:

> Hundreds of thousands of tons of straw and similar material goes to waste on our farms every year—the largest garbage pile in the country. Several processes have been developed to make plastics from straw. Iowa State College scientists have perfected such a plastic in several forms, with the cost as low as 4½ cents a pound. This is about half the price of the cheapest plastic now on the market. The Iowa material can be made into practically any shape or size of product. In large slabs it can compete with the better grades of lumber for construction purposes.

There is also a section on cloth, from which I quote:

> In one process developed by the Ford Motor Company scientists, soybean meal (after the oil has been extracted) is chemically treated so that it becomes liquid. This liquid is handled just as liquid rayon—it is sprayed into a chemical bath, in which the fine jets of liquid instantly turn into firm threads. These threads can be made to resemble either silk or wool. The "soy threads" are at present being woven and knitted, and the cloth is being marketed in the United States for hat felts, suitings, upholstery fabrics, etc.

He tells of several other developments in connection with soybean industries and of new uses for flax and deals with dandelion rubber. Of the latter he says:

> For twenty years Russian scientists and practical farmers have studied the problem of growing natural rubber in cold climates. The tropical rubber tree will not survive. But there are other plants that produce rubber. Among these are Guayule and Kok-Sagyz.

I understand that the minister intends to make a statement on the problem of growing rubber, to which Mr. Dyson Carter devotes half a page in this publication.

Furfural is also discussed, and several miscellaneous projects, such as the wallboard industry, the manufacture of new types of cements, fuel for heating rural homes. The subjects which are discussed by Mr. Dyson Carter in this publication suggest a wide field for study if an appropriation were made such as the hon. member for Moose Jaw suggests. I think he is very modest in asking for only half a million dollars. That does not seem to go very far in these days. When one thinks of the future of western Canada and the importance of finding new uses for agricultural products grown on those plains, the Minister of Agriculture would be wise, I think, to bring in an estimate next year, or as the hon. member for Vancouver East suggests, a supplementary estimate this year, appropriating at least half a million dollars for the purpose of carrying on this experimental work. I am sure that an appropriation such as the hon. member for Moose Jaw proposed would meet with the support of members on this side and of members on the government benches.

Mr. WOOD: I wish to support the suggestion which the hon. member for Moose Jaw has made to the minister. The speech which the hon. member for Moose Jaw made earlier in the session aroused a great deal of interest in my community. I had many comments upon it, all to the effect that for a downright, honest, practical suggestion that actually would bring results to the farmer, the suggestion made by the hon. member for Moose Jaw took the cake. I am passing this compliment on to him because I know that the people of Brant were much interested in the contribution he made in this speech. It revived their belief that those who are championing the cause of agriculture include at least one man who has touched upon something which gives ground for hope in the future. Since the hon. member made that speech I have discussed the problem with many persons who are interested in the subject. In my opinion there is a great opportunity for those who are prepared to interest themselves in finding new outlets for the products of the farm. I know of no better way of encouraging agriculture.

May I say that I am not sure I agree with the leader of the opposition in his remark that the only prosperous farmer is the farmer who specializes.

Mr. GRAYDON: No, Mr. Chairman, that is not what I said.

Mr. WOOD: I understood the hon. gentleman to say that in the great majority of cases the prosperity of our rural people depends upon specialist farming.

Mr. GRAYDON: No; I said that those who interest themselves in special lines of farming

find themselves in perhaps a little better position to be assured of better returns than those who do not.

Mr. WOOD: Well, I think the hon. member and I are very much on common ground. It is true that some specialty farmers have made an unqualified success, but it will be found, I believe, that there have been more financial disasters among those who, in pursuing some special line, put all their eggs in one basket. From experience in my own community I would rather say that the average well-to-do farmer is the man engaged in mixed farming, because if one line fails him he has some other to fall back on. No doubt there are exceptions to all rules; I do not know that either my own viewpoint or that of the leader of the opposition proves invariably correct. There are specialists who have made successes as well as those who have made failures; probably the same applies in the case of mixed farming.

The hon. member for Mackenzie (Mr. Nicholson) spoke of the value of straw, and suggested that it was one of the articles which in this country is most often wasted. So far as Ontario is concerned, my view is that it is a mistake to let straw leave the farm. I do not believe you can get any return from straw which you dispose of that will compensate for its value when applied to the soil.

Mr. GRAYDON: I believe everyone in eastern Canada will agree with what the hon. member says on that particular point. Actually most of the farm leases contain a clause that straw must not leave the farm. As my hon. friend knows, there is very good reason for that provision.

Mr. WOOD: I appreciate the reference of the leader of the opposition to the legal aspect of this matter. There is no doubt that the purpose of inserting that clause in the contract is to protect the fertility of the farm.

Attention was called in the agriculture committee this morning to what has been achieved by disposing of a by-product of the flax mills to the pulp mills, thereby converting 500 carloads this year into various grades of paper. There is one case where research has made use of something which would otherwise have gone to waste. It leads me to recommend to the minister that, in case a research bureau is decided upon, it should cooperate with industry, which already has many research laboratories of its own. A young chemical engineer in one of the food companies whose parent company is in the United States drew my attention to the great possibilities which exist in cooperation with industry, and I believe that industry would welcome the opportunity to cooperate with the government. If we can set them a specific job to do, as they have the necessary equipment and very considerable experience, we may possibly obtain results which will benefit not only the farmer and the industrialist but the nation at large. That is a field wherein we can start something immediately, without incurring any great additional cost, by simply utilizing facilities which are already available.

There are other directions in which such a bureau could enlarge its efforts. I have often wondered why farmers, while so anxious to purchase labour-saving machinery for the production of field crops, completely neglect opportunities of labour saving arrangements in so designing their buildings as to facilitate the doing of work which has to be done every morning, noon and night in the care and feeding of live stock. It seems to me that we have a great field there for planned agricultural architecture. Some people may be inclined to say, let the farmer erect his buildings any way he wants them; it is he who has to do the chores. But in my experience most farmers are only too glad to receive suggestions from those who can assist them, and I believe they would welcome architectural designs for application to farm buildings which would assist them in feeding their stock with less labour and take some of the drudgery out of their lives. In that way, this particular bureau might make an important contribution to the happiness of life on the farm.

I wish now only to emphasize my appreciation, and that of many others with whom I have spoken, of the contribution which the hon. member for Moose Jaw has made to this subject. We hope it will bear fruit.

Mr. JAQUES: At the risk of appearing somewhat old fashioned, or even reactionary, I should like to express myself on the subject which is under discussion. I believe I have some qualifications, because before beginning to farm in Canada now some forty years ago, I happen to have studied analytical chemistry in England. If I have not the respect for science that some members seem to have, as a solution for our troubles, it may be the result of my long experience. I remember a few years ago wandering through our experimental farm here in Ottawa and coming on some men in a laboratory. I asked them what they were doing, and they told me they were experimenting with cider. They were trying to make a really good cider with Canadian apples. I asked them if there was

any difficulty about that. They said, "We have tried apples from different parts of the country, from Prince Edward Island to Vancouver island, but so far we have not been able to find an apple which when fermented will retain the flavour of the apple." They had a number of samples of cider and they kindly gave me a glass. They asked me my opinion of it, and I said, "Well, it is a long time since I left home, but as far as I can remember that seems to me pretty fair cider." One man said to me, "Yes, that is all right; but one-third of the apples came from England." I said to him, "I know something of analytical chemistry and I don't think you will find a solution to that problem in any test-tube." He admitted that he did not think they would. I said, "I will give you another instance. You cannot make Devonshire cream outside Devonshire." Probably my hon. friend will bear me out in this. This scientist on the experimental farm said, "Yes; that is true, I know it, because I lived in Somerset before coming to Canada and we used to make Devonshire cream and sell it. You can make it in the west of England but nowhere else. I thought I would make it when I got to Canada and that I might do very well out of it. I tried it in Nova Scotia. They can make Devonshire cream, yes, but it has no flavour." The same in British Columbia. Friends of mine are Devonshire people and they make Devonshire cream. It looks the same, but there is no flavour. That is the fault of it.

I mention these things just to show that science is not the entire answer to these problems. Agriculture is more than a science; it is an art. People seem to think that we know more about farming through science than our forefathers did a hundred years ago, but in my humble opinion we have forgotten a great deal that they knew then and I think we have to go back and rediscover a lot of the knowledge they had.

I understand that in England it has been rediscovered that by and large, generally speaking, the health of human beings depends more than anything else on the food they eat, the quality of the food; and that again depends on the health of the soil in which that food is grown. You cannot maintain the proper health of the soil through chemical manure. I understand they tried increasing the yield of tobacco in Cuba—of course that is not food—by means of chemical manures, and immediately the quality of the tobacco was found to be very much lower. They are coming to the conclusion in England and elsewhere I suppose, that we shall have to go back to the immemorial customs of China and India, where the soil has been farmed not for half a century but for a thousand years. It is done by the age-old method of returning to the soil what is taken out of it. But that by the way.

I do not wish to throw cold water on the idea, and I think there is room for a scheme of the kind which the hon. member for Moose Jaw (Mr. Ross) has put before the house. But I am wondering whether the main idea behind it is not really economic rather than chemical. Is it not the idea that by turning food or the edible products of the soil into inedible products such as rubber—which I think is pretty hard chewing—it will be possible to raise prices through overcoming the so-called abundance of agricultural products? To me, if this research station is established it would seem desirable that at the same time and perhaps in the same building there be included some really new economists, not the orthodox or even eminent economists, but some really scientific economists who will see what faults there are in the present economic system whereby, though there is a so-called overproduction of food, millions of people in the world are at the same time underfed and undernourished.

The main problem is economic rather than chemical. What we have to do is to increase the purchasing power of the people so that at least they can consume food to the limits of their desires or of our powers to produce. I do not altogether feel comfortable about the idea of turning edible products into chemical substances. I realize of course that in war time, when there is an emergency, everything must give way to the demands of war. You may say that a few million bushels of wheat would provide us with a certain quantity of rubber, but that would be only the beginning. I wonder what the development would be in a hundred years time if we pursued these lines, where the soil is put to the use of producing and supplying industry rather than human stomachs.

I am not comfortable about that and I rose simply to make these observations to the committee. I want to emphasize my belief that the main problem before agriculture, although I do not know that the minister will agree with me, is economic rather than scientific. If the farmer is provided with a really good market and satisfactory prices he can be left to find his own solution for the raising of the best food in the best possible way.

Mr. LEADER: It was not my intention to say anything on this very important subject. What I have to say could have been said on another item. But what the hon. member for Moose Jaw (Mr. Ross) has brought before

the committee, namely, the subject of agricultural research in all its phases, is of very considerable importance, and perhaps I would do well to say a few words. I had intended to say something respecting the improvement of the health and state of our pure-bred cattle in general. Possibly that is a subject which might well be discussed now.

I listened to the hon. member for Wetaskiwin (Mr. Jaques) when he spoke about Devonshire cream. That is something I had never heard of until about a month ago. However I had some of this product known as Devonshire cream at the house of an Englishman who lives just north of Winnipeg. It was made from the milk of Aberdeen Angus cows I had sold him just a few years earlier.

We have in Hull an institution known as the animal diseases research institute. Undoubtedly this branch has done some good work, but in my opinion it has not advanced as rapidly as it should have, nor has it dealt as extensively as it should have with conditions pertaining to live stock. My concern to-day is with a disease known as Bang's disease, or contagious abortion in cattle. I have had many years' experience in the cattle business, and particularly in the pure-bred branch of the business. Every breeder knows that sometimes he will run up against this menace. Not only is it a menace to cattle but it is also a menace to the health of one's own family and to people in general. It is, therefore, of the utmost importance that something be done to find a real, practical and efficient method of ascertaining the cause and finding some remedy for its eradication.

For the information of hon. members I should like to record an experience I had. Some years ago I sold a consignment of cattle, subject to test for Bang's disease. Some of those cattle reacted. Of course hon. members will understand that those cattle were not taken; they remained in my herd. I was not very much concerned about that, because they had been one hundred per cent producers each year. Some of them were nine years old and had produced as many as seven calves. The fact that the sale was cut, however, did cause me some concern, and is the concern of producers who are breeding cattle to-day. Because unless one has a certified Bang's-disease-free herd, or the herd passes the test for Bang's disease, he cannot do much business. One cannot do business either on the other side of the boundary line, or in some of the provinces in Canada. There are breeders throughout Canada who will not buy cattle unless they have passed successfully the Bang's disease test.

I wanted to do a little experimenting. For years I had been reading about the ravages of Bang's disease, and the attempts of different breeders and different governments to try to control them. I had read that in the experiment being made, blood samples had been taken from cattle, that the identical samples had been sent to several laboratories, and that the results of tests had been different in each case. I wondered just what confidence breeders could have in a test of that kind. In carrying out my experiment I asked my son, when in one year he was having our cattle tested for tuberculosis, to have a sample of blood taken from two cows which had reacted two years earlier. I took those two samples, sending one to Doctor Savage, our own animal pathologist in Winnipeg, and another to the laboratory in Hull. My purpose was to have a check, to ascertain whether the two laboratories would show the same results on the test. In regard to the test taken in Winnipeg—and it will be remembered that a test had been taken two or three years earlier—the positive finding was confirmed. The same day I sent exactly the same blood to the pathologist in Hull, Doctor E. A. Watson, and this was the reply I received:

Messrs. Harry Leader & Son,
Portage la Prairie,
Manitoba.

Dear sir,

I am in receipt of two blood samples submitted by you and wish to advise you that blood tests, for the diagnosis of Bang's disease, are conducted at this institute under the following circumstances only:

A. Cattle in herds accepted by the health of animals division, production services, as under their supervision for the control and eradication of Bang's disease; and cattle as replacements or additions to such herds.

B. Cattle selected for export from the Dominion of Canada.

C. Cattle selected for shows and exhibitions at which a blood test is a necessary requirement for their admittance.

Yours truly,
E. A. Watson,
Dominion Animal Pathologist.

I can see no reason why they could not have tested the samples in Hull. I went to a lot of trouble to send those samples by special mail delivery, so that they would reach Hull in plenty of time. However, the reply I received was that they did not have authority to test the samples. I believed they did. If the laboratory at Hull had confirmed the test in Winnipeg my confidence would have been revived. If the tests had been different, as is indicated in what I have read, then I would

have been just as anxious as I am to-day to see that we get something which would be more workable.

Breeders are becoming more and more concerned about Bang's disease. They are willing to cooperate with this or any other government in any workable plan for the protection of cattle. I do not know what the annual loss is in Canada, but it has been estimated that the annual loss in the United States from the ravages of Bang's disease is from $50,000,000 to $175,000,000. Not only that, but as I pointed out earlier the disease is a menace to public health. Many hon. members will have read of the death of Edsel Ford. It is reported that he died at Detroit from undulant fever, which is contracted through drinking milk from cows affected with Bang's disease.

I do not wish to take any more of the time of the committee. We have in this disease the worst known menace to the cattle industry. Certainly it is a subject which should be investigated, and one in connection with which we should do all the research possible. I endorse the suggestion of the hon. member for Moose Jaw (Mr. Ross) and I hope the government will apportion the greatest possible amount of money to bring knowledge to bear on the subject, in an effort to find some workable solution.

Mr. PERLEY: When the estimates were first discussed I asked under what item it might be possible for the hon. member for Moose Jaw to offer his proposal, and it was pointed out that the discussion might be had under the item for experimental farms. My interest was aroused after hearing the hon. member on March 17, and I am sure that when he rose to-day we were looking forward to a most interesting speech. I will admit there was some interest in it, and this may yet develop to be a most interesting and profitable afternoon. However, as the leader of the opposition has said, some of us were a little disappointed, because we thought the hon. member would give more details in regard to some questions connected with possible production in western Canada, and that he would outline what has been done in that part of Canada in the last two or three years. I know the hon. member has been fully alive to changes in agricultural production methods, and I believe he has been doing a considerable amount of experimental work. I rather expected, however, that we would hear from the hon. member somewhat more respecting the production of certain cereals, seeds and the like from which oil and its by-products might be produced.

[Mr. Leader.]

Perhaps he was leaving that for another occasion; perhaps he was rather modest and did not want to boast about what he is doing on his own farm, but I believe he is doing a great deal. I understand that he has nearly five hundred acres of sunflowers this year, and I wish him luck not only in raising the crop but in harvesting it; for I understand that a good deal of his farm is under water at the present time.

Early in the course of his remarks the hon. member quoted from a report showing what has been done in the United States. He also made reference to the fact that agriculture in Canada is very much diversified, so that the farmers of the east have problems different from those of the west. I thought the leader of the opposition made a pertinent remark when he said that in all parts of Canada there were farmers who would be successful if they would specialize in certain lines of agriculture best suited to their district. I know there are farmers in the west to-day who are always a little ahead of their neighbours. My dad always told me, "Boy, it doesn't matter what season of the year it is; always be a week ahead of your neighbour. Start to seed three or four days before you think it is time to seed, and probably you will have your seeding completed while the other fellow is waiting for the ground to dry after a rain." I think if some of the farmers of Ontario had taken that advice this spring they might have been better off.

Mr. MARTIN: Oh, you should have seen the fields.

Mr. PERLEY: The hon. member would not know wheat from apples, so that he need not say anything.

Mr. MARTIN: But I know wet ground when I see it.

Mr. PERLEY: I think the same thing applies at harvest time. I know farmers in the west who are always finished their harvesting about a week before their neighbours, who are hauling out their grain when the other fellow is just beginning to harvest his. So that no matter what type of farming you are carrying on it is important to be four or five days or a week ahead of your neighbour; then you will have greater success.

The hon. member went on to deal with certain cereals, seeds and so on. We in the agriculture committee are now considering many of these matters; there are interesting developments in that committee each day, and we are obtaining a great deal of useful

information. Perhaps the minister will not care to repeat some of the information that is being brought out there, but we are getting it in any event. The hon. member went on to say that he was asking for $500,000. He has not moved any amendment to the estimate, and of course we understand that he cannot do so; I think the public got the idea through the press that he could move an amendment, but we know the situation. However, he has told us that he is going to ask the minister to give consideration to his request, and I hope the minister will favourably consider the suggestions advanced by the hon. member. Perhaps during the course of this afternoon we may have a statement from the minister on that point; it would be most interesting. We should be glad to hear how the minister views the proposals advanced by the hon. member for Moose Jaw, and what he proposes to do about them.

I think hon. members will agree that we have had some good men as ministers of agriculture; Martin Burrell, Doctor Tolmie, Doctor Motherwell, Mr. Weir, and the present minister. Each in turn has tried to keep up with the times and has done much to develop agriculture in this country. If some hon. members of this house, instead of going home week-ends, would spend their Saturdays at the experimental farm here, they would obtain a great deal of useful information. Just before Easter I spent a most profitable afternoon at that farm with the hon. member for Moose Jaw. We were well received; we saw some of the experiments that were being carried on with regard to cereals, with regard to production, with regard to early maturing grain, and that sort of thing. We also went through the laboratories. I think the hon. member for Moose Jaw will agree that each of us learned a good deal on that occasion. The next morning at breakfast in the restaurant in this building I suggested to some hon. members that if they knew how many proteins and vitamins were in the bowls of porridge they were eating, they would be pleased, and I said the way to obtain that information was to go out to the experimental farm.

That was just on the side; I was endeavouring to show that all ministers of agriculture have kept abreast of the times and have done a great deal to help agriculture. The work done in developing early maturing wheat has put millions of dollars into the pockets of the farmers of the west, and more millions have been saved by the practical elimination of rust. Those are just some of the things that have been done at the experimental farm here in Ottawa.

I do not know that it is necessary to occupy more of the time of the committee. I am entirely in accord with the suggestion advanced by the hon. member, which I hope will receive the minister's approval. It may not be possible to set aside $500,000 for this purpose right now, but if part of it could be set aside the work could at least be started. I have one further suggestion to offer. I believe that at Brandon, and particularly at Indian Head, in Saskatchewan, we have two of the finest experimental farms in Canada, where excellent work is being done. I would suggest that some of the research work mentioned by the hon. member for Moose Jaw might be undertaken at the farm at Indian Head; it is near the minister's home, and in my constituency, and he is well acquainted with it. So far as soil erosion is concerned it is the best in Canada; we have all the facilities there for carrying on a great deal of the work, and I believe we should take advantage of them. I hope we may hear from the minister before we rise at six o'clock, in order to learn what he proposes to do and how he regards the suggestion advanced by the hon. member for Moose Jaw.

The CHAIRMAN: If the committee will allow me, quite a number of members rose simultaneously, so that I am going to give the list of speakers I have at the present time: the hon. member for Macdonald, the hon. member for North Battleford, the hon. member for Macleod, the hon. member for Medicine Hat, the hon. member for Lisgar.

Mr. REID: I rise to a point of order. It is something new when the Chairman can rise in committee and give the list of members who are to speak. I think it is unfair. The Chairman probably did not see all the members, but he has singled out four or five of them. I take strong exception to the Chairman of this committee showing any preference in this way.

Mr. PERLEY: There is only one of the official whips in the house—

The CHAIRMAN: I am sorry I put it in that way, but I leave it to the judgment of the committee. As the hon. member for New Westminster knows, I have no list.

Mr. REID: You read one.

The CHAIRMAN: At least ten members rose at the same time; and it will be understood how difficult it is to satisfy everyone; so I thought this would be the best way. There is no partiality as far as I am concerned; if this is not satisfactory to the committee I shall leave it as it was before.

Mr. REID: If you are going to carry on from a list you might well do so all evening.

Mr. BLACKMORE: I believe you are doing very well, Mr. Chairman; just keep right with it.

Mr. WEIR: Mr. Chairman, I should like to take advantage of this opportunity to say a few words. I am sure the committee is indebted to the hon. member for Moose Jaw (Mr. Ross) for his energy and the research he must have carried on to develop his topic. This topic is commanding wide interest throughout the country and, from the discussion that has taken place, it would seem to be commanding considerable interest in this committee. I am sure the hon. member will be gratified to know that he has finally got the leader of the opposition (Mr. Graydon) to fall in line with the idea he is promoting.

The item now being considered has to do with experimental farms. I am not concerned with, nor have I any definite point of view about the type of research institution that might be set up, but I contend that many research activities can be carried on within our experimental farm system. I think it can be said that the discussion which has taken place this afternoon has not cast any reflection upon the activities of our experimental farm system, it has simply suggested further additions to the work of our farms. Agriculture in Canada owes a great deal to the research work and scientific developments of our experimental farm system. I can remember marquis wheat and the contribution it made to the wealth and prosperity of Canada for a number of years. That was a result of the research activities of our experimental farms. There is also the work that has been done with respect to rust-resistant wheat. This has taken much of the speculation out of the growing of wheat in western Canada. These and other research activities have been of far-reaching importance to the industry.

These activities are continuing, and they should continue. Further efforts in this regard are needed, particularly with respect to other grains. I think it can be said that some success is being achieved along these lines. There is still room for the development of new varieties. All this work requires institutions of this kind. The hon. member for Portage la Prairie (Mr. Leader) raised an important point with respect to live stock. Here again our experimental farms are in a position to render a wide variety of services in connection with breeding, feeding practices and other promotional work.

The province of Manitoba is fortunate in having two experimental farms. The older farm is at Brandon, but there is another one in southern Manitoba, at Morden. This is a horticultural farm, and its activities are largely concerned with promoting the production of fruits, vegetables, trees and things of that kind. Just in passing I should like to say a word about our experimental farms in general, based upon what I have seen at the local institution in southern Manitoba. This institution is largely used by the farmers of the surrounding districts. They gather there to see what is going on. I think it can be said that this institution has done more than anything else in that part of the province to promote the growing of shelter-belts around farm homes, and it has given leadership in the production of small fruits and certain types of vegetables which would not have been undertaken otherwise. It has also done considerable work in the distribution of new varieties. Like other institutions, this one is well staffed with people who can meet the public and who give first-class service to those who go there for information.

Coming back to what the hon. member for Moose Jaw said, I think what he had in mind was to arouse public opinion to the idea that more research is necessary in the interests of agriculture. I am sure he will feel satisfied if he has been successful in arousing public opinion in that regard. If he has arrested the attention of the committee and the country, he can live in hopes of seeing something come out of the suggestion he has made. I should like to go a step farther in this connection and indicate the direction in which public opinion points. I have a statement here which I wish to read, as follows:

> No matter how gloomy the outlook, I never cut one single penny from the budget of our research department. . . . The reason for that is something that any modern industrialist knows and understands. The research of to-day is what will be keeping a soundly managed industry alive and healthy five and ten years in the future.

That statement was made by Mr. Walter P. Chrysler, one of the leading industrialists of the country. I have here an advertisement entitled, "Look up, Mr. Farmer." While I am not particularly interested in promoting the wares of the people who put out this advertisement, I think—

Mr. GRAYDON: What are their wares?

Mr. WEIR: I am not sure that I know, but I shall refer in a moment to the particular part in which I am interested. The advertisement reads:

> And from that alcohol came the rubber for the tires, the explosives in the bomb racks, the plastic for the shatterproof windshields. You

couldn't point to a square foot of those planes that isn't somehow dependent on high-proof alcohol.

Then in smaller type it states:

Alcohol for war is used in the manufacture of high explosives, synthetic rubber, drugs and medicines, photographic film, lacquers and varnishes, drawing inks, compasses and other navigation instruments, plastics, shatterproof glass and many other products. All of the Seagram plants in Canada and the United States are engaged one hundred per cent in the production of high-proof alcohol for war.

Mr. GRAYDON: Does my hon. friend intend to table the document from which he is reading?

Mr. WEIR: I shall be glad to send it over to my hon. friend.

Mr. GRAYDON: I did not ask for that, I asked if my hon. friend was going to table it.

Mr. WEIR: I can table it. I also have a publication which was put out by the Canadian chamber of commerce. The part having to do with domestic markets for farm products reads as follows:

The development of synthetic industrial products, based upon recent advances in chemical knowledge (we refer, particularly, to plastics in this connection), may create a new demand for certain crops, hitherto raised only for food; and so may reduce to some extent the size of our agricultural surpluses.

At least for some years to come, the demand for domestically produced vegetable oils may provide the Canadian farmer with worthwhile opportunities; and it is possible that some of the resulting production (that of the soy bean, for example) may find a permanent place in his programme of cultivation.

I refer to these merely to indicate the trend of public opinion. I obtained some satisfaction in looking back into *Hansard* of some years ago. At that time I made some reference to this matter, and I should like to refer to one part of my remarks. I quote from page 523 of *Hansard* of February 1 1939, as follows:

Another thing pointed out was that agriculture in this country was competing not only with the agriculture of other countries, but also with the scientists of other countries. Germany, for instance, is producing from milk casein a material that is a suitable substitute for wool. A large percentage of her clothing both ordinary and high-grade is now being produced from forest products. As illustrative of what industry can do for agriculture, I was fascinated by a statement made by Mr. Henry Ford at the chemurgic conference in 1935. He said he was using in his factory the following agricultural products: 60,000,000 pounds of cotton; 500,000 bushels of corn; 2,500,000 gallons of molasses; 3,200,000 pounds of wool; 1,500,000 square feet of leather; 350,000 pounds of mohair; and an almost unlimited supply of soya beans.

I quote that to indicate some of the activities that have been undertaken. I shall not take the time to refer to other suggestions and observations that were made at that time because reference has already been made to them, to some extent, this afternoon.

As I see the picture, there are two points of view with respect to the need for more agricultural research. First, there is the necessity of providing additional food supplies. From the other point of view there is a need for replacing certain farm products which are not now being produced in the same volume on account of the changes which mechanization has brought about in agriculture. Agriculture, like industry, has become mechanized in this country, and I do not think anyone would take the position that agriculture should not have the advantage of mechanization if it wants it. But agriculture in becoming mechanized has had three things happen to it. In the first place, it has lost what was a potential very substantial horse market. Second, it has lost a hay and oats market, which was really the power for the production of agricultural products. Third, it has increased its efficiency in production. That being so, I think we should not hesitate for a moment to utilize all our energies in developments that may be undertaken to replace what we have lost through the changes that mechanization has brought about, and if we can by scientific research develop means whereby farm products can be utilized more and more for power purposes in agriculture, it means added farm income for the agriculturists of this country, apart altogether from the food supplies that may be developed from this research work. So that I look at it from the two points of view and I say to the minister that it seems logical that encouragement should be given to developments of that kind.

We have already heard a good deal about the production of alcohol and rubber, and within the last few days we have seen some controversy develop with regard to the costs involved. Surely here is an opportunity to find out the exact position. I fear that too often we look upon wheat as the only cereal from which alcohol may be produced—and wheat of the high-grades costing eighty cents a bushel. I think it is possible to produce alcohol from other grain products than wheat which would change materially the cost picture.

One could go on and say many other things with respect to research activities that may be undertaken, but one hesitates to do so at this stage. I shall simply say, as was mentioned by one hon. member who spoke

a little earlier this afternoon, that we have had some gratifying results in the agriculture committee in finding out the methods by which some of these activities of the Department of Agriculture were being undertaken. We are finding out at the same time many of the problems of development. All that speaks well for the suggestion brought forward this afternoon by the hon. member for Moose Jaw. At present it looks to me as though public opinion will recognize the necessity for additional research activities particularly in connection with agriculture, and if that is so, I hope that the minister when he brings in his supplementary estimates, or earlier if it is possible for him to do so, will take kindly to the suggestions that have been urged upon him from all sides of the house this afternoon.

Mrs. NIELSEN: I do not think I have very much to add to what has already been said this afternoon. I only wish it had been possible for the hon. member for Moose Jaw to move his motion, because I for one would have been most ready to support it. Many letters have come to me not only from my own part of Saskatchewan but from other areas of that province in support of the idea which the hon. member for Moose Jaw has brought before the committee this afternoon. The opinion which is expressed by some of our western people is that already we are terribly late in our research activities. I know that for some months now I have been in correspondence with the agricultural research laboratory in the United States and have been receiving from them their regular bulletins. If only I had the time to read all the material they send me I would possibly be better informed, but like other hon. members I find it an impossibility to wade through all this very valuable material. I only wish that time permitted me to do it, because then I would be in a far better position to speak about these matters.

The opinion I gather from letters which come to me from Saskatchewan is that there is a fear in the minds of our people that immediately upon the cessation of war we shall find, as a result of the experimentation which has already been carried on in the United States and their valuable research activities, that the markets of this country will be flooded by all kinds of new materials which have been made from the various resources of the United States. We are a very similar country to the United States, having the same kind of land and the same kinds of products; and if only we were in a position to develop our own industries—I think more particularly of western Canada, coming from that part of the country, but without doubt it applies to eastern Canada also—we would be in a position to give employment to our people. I know the problems that confront us in the reconstruction committee in finding employment for our men when they return home, and it seems to me that here in the field of research we have one avenue which we should explore to the very limit. Only the other morning in the agriculture committee Dean Shaw was telling us that they have already started to get the farmers in one particular area to go in for the growing of milkweed. He stated definitely that it was necessary to have these farmers in just one small area where they would be close to the mill which was to be used to extract the juices from which rubber would be produced. I do not know whether Ontario is the only province where this is being done at the present time, but if this plant is as hardy as the Russians say it is—they say it will grow anywhere, in semi-arid regions and up in the far north—we in the west should have an opportunity to develop it.

After all, eastern people have an opportunity of supplying market garden products because they are adjacent to the big cities, whereas we in western Canada cannot rely to any great extent on that kind of production. If a research department were set up, possibly we should receive a more equitable distribution of these newer types of plants which are necessary to industry. The government should have been prepared a year or two ago to have set aside sums of money for this purpose. I know that in years gone by, in times of peace, when the people of western Canada were asking for money, it was the plea of this government that it did not have the money for the purposes to which our people sought to have it applied. To-day that can no longer be said. We know the government can find money for projects which are essential to the war effort, and I would say that in respect of agricultural research the country's war needs are closely connected with the peace needs which are going to come so closely after. I suggest that the minister do his very best within the cabinet to have appropriations made for agricultural research, because it promises to provide one of the most important means of keeping our men employed in the years to come.

Mr. HANSELL: I believe I can assure the hon. member for Moose Jaw of the support of this group in his presentation this afternoon and his attempt to arouse public opinion with respect to these matters. Of course it is necessary to do more; money for this purpose

must be found; and if the hon. member wants to know where to find that money, this group is able to tell him.

I support the hon. member because I am conscious that there is little Canada cannot do if she puts her mind to doing it. I do not wish anything I say to be misconstrued as a criticism of the work which has already been done by the Department of Agriculture in any branch of research, or a reflection upon the national research council as regards any work it has done. I believe these agencies of the government have done an excellent job as far as they have gone. They could do a good deal more if they had what I may term unlimited funds at their disposal.

Personally I am a little alarmed that Canada seems to be behind other nations with regard to scientific research. I do not believe that our young scientists are really given the opportunity to which they are entitled. What happens to our science graduates when they come out of universities? They look around for positions. They flock over to the United States, only because they can get jobs there with bigger pay. That to my mind is not to the credit of Canada. I wonder if the minister is aware, I wonder if the government is aware, that we have doctors of philosophy in some of the sciences working for the government for less pay than a grade three stenographer. That is a fact; it should not be, but it is. When I hear things and know things of that kind I have to ask myself, what sort of Canada are we building? Surely the government cannot escape all responsibility in this very important matter. There is no reason why we should not be one of the leading nations in scientific research, particularly as applied to agriculture. What was it which prior to the war assisted Germany so greatly in making its military preparations? The Germans, not being able to trade in the markets of the world, were forced into the field of synthetics and produced many materials in their laboratories. I believe I read somewhere that more German scientists carried off Nobel prizes than those of any other nation. I have no brief for the Germans; perhaps it was necessity which caused them to do what they did. But when have we produced any outstanding men who have carried off a number of prizes? Doctor Banting is, I realize, one outstanding figure. But we hear of the United States of America being able to do this and that; more recently we have learned of what Russia has been able to achieve in certain fields of research; where does Canada come in? It is true that we have carried off a number of international awards for wheat, but perhaps that is largely because Providence, with its sunshine and rain, has smiled upon us. It seems to me that our governments act in this regard with the dollar sign stamped on about everything they do. Surely neither this nor any other federal government can escape responsibility for enabling our gifted young men and women to make Canada a first-rate nation in the matter of scientific discovery. There is no reason why this cannot be done. Let us build a Canada worthy of Canadian civilization, a Canada which will be recognized by the world at large as producing many of the world's greatest scientists. I am absolutely certain it can be done. One thing Canada does not lack is genius; it needs only to be given opportunity.

Mr. GERSHAW: I believe that support for the drive which is being started this afternoon will grow, and grow rapidly. I believe, too, that the minister and his advisers will proceed along lines which are sound and proven and hold out hope of being successful. People, particularly in western Canada, are aroused about the possibilities of chemurgy. They hope to make the best possible use of their wheat, their oat hulls, their straw, and all their waste products. Above and beyond this they are looking for further markets for their products, without which their prosperity will not be realized. Surely, in the location of factories or in the distributing of research laboratories, the proximity of the raw product should be the great consideration. Instead of such buildings being erected nearer and nearer to the larger cities, the more remote districts should have the benefit, in these days of easy transportation, of the location and presence of these factories.

I particularly wanted to say a word under this item because I believe that the experimental stations are doing and have still to do a great work in connection with the beef cattle industry. This industry is one of importance. During 1942, 106,741 beef cattle were shipped east to the stock yards and to the feeding lots, and in addition 91,060 were shipped to the United States market. Of course, many thousands were also processed right in western Canada, and in spite of the hardships the ranchers and live stock men have been struggling to meet war demands. The stern and cold winters have developed a type of cattle that are hardy and healthy. Condemnations for tuberculosis in the west have been lower than in any other part of Canada and as low as in any other part of the world. There are still great herds of white-faced Herefords in the ranching districts, and they are of great value, as

shown by the fact that recently at a bull sale in Calgary one sire sold as high as $2,550.

That great short-grass country which has suffered so much from drought seems to be faced with another season of drought, because the reports indicate that the rainfall this year is very much below normal. Still, that area is an asset to the dominion. Countless thousands of buffalo lived on the grass of those plains in years gone by. They were ruthlessly and wastefully slaughtered by the Indians but about 1881 the real ranching industry had its start. The dominion government then adopted a policy of granting large leases for twenty-one years at the rate of about one cent an acre. Those great areas were unfenced at that time and the ranch homes were widely separated. The struggle against prowling enemies and against the forces of nature, against misfortunes of different kinds, developed men and women who have greatly enriched the traditions of ranching history. I am referring now to a class of people who are rapidly passing off the scene. Nowhere else will you find the same spirit that existed in those days. Stories of cowboys, round-ups, the dreaded stampedes, night-herders and thrilling ranch adventures are stories of the past, because the whole situation as regards the ranching industry has changed. In their day they were noted particularly for their hospitality and no stranger was ever turned away hungry from their doors. Now these large ranches are divided up; they are fenced; the cattle graze mostly on deeded rather than on leased lands, and under the present minister great community pastures have been established and pure-bred sires provided to improve the standard of stock.

The Prairie Farm Rehabilitation Act has also made it possible for the farmers to provide thousands of stock-watering reservoirs which have helped greatly in sustaining that ranching industry. There is one ranching experimental station at Manyberries which makes a scientific study of all branches of the industry, and this industry is rapidly becoming more of a science. The breeding, feeding and finishing of cattle require knowledge and care if they are to be at all successful.

At this time I wish to say a word on the need of experimenting not only on the line indicated by hon. members this afternoon but also in the way of making the best possible products that can be turned out for the markets. Although most of the beef cattle are now produced by the mixed farmer rather than by the rancher, yet in these great areas they still live out in the open. The chinook winds still come and the temperature will rise as much as 50 degrees overnight, so that the grazing areas are exposed and the feeding problem is solved. There is, however, the same determination among these people to produce the best product they can. I appeal to the minister to continue the work of the experimental farms and to nourish this great industry, which is the oldest, and all down through the ages it has been the chief industry of mankind—the tending of flocks and herds.

Mr. WINKLER: The proposal of the hon. member for Moose Jaw has been widely and, in my opinion, completely discussed this afternoon, and with great unanimity, so that in rising to support that proposal, I am hesitant about taking up the time of the committee. I shall therefore be very brief.

It seems to me that the matter can be approached from a slightly different angle, and I should like to approach it from the angle of population in the western provinces. We are all aware that there has been a considerable depletion in the man-power of our three western provinces, Saskatchewan particularly and Manitoba next, and we want some day to have these men back. To bring them back, we cannot hope to see them have the openings in agriculture which they had before, because agriculture is becoming more and more mechanized. That process has been going on through the years, and especially in recent years it has been accelerated. Then, of course, the war has taken its toll as it has in other provinces.

I would mention particularly war industries. War industries have not been given to the western provinces to any great extent. In fact, there has been a great scarcity of them, and the younger men who have not gone to the war, and the older men too, have gone into war industries in the eastern provinces, or what are called the central provinces here. It strikes me, therefore, that the best way of getting the eventual return of our population in the west is to get industry in the west. In my opinion that is geared to the proposal of the hon. member for Moose Jaw. We have to get industry, and in order to get industry we have to have research work. I believe research operations are understood at least to some extent by hon. members, some of whom have studied chemistry, others of whom have studied scientific subjects, and possibly a few of whom have done some research work. But while a knowledge of research may be fairly limited, in recent years there has been a great profusion of books on chemurgy, written in a popular manner, and widely read both by the general public and by hon. members. So that,

despite the fact that all of us do not understand the meaning of chemical formulae, the avenues of research are becoming wider and wider.

The importance of costly research work is emphasized. The day when the man in the back shop could produce some new invention has almost passed. These problems are approached by teamwork. In that regard I believe the hon. member for Macleod (Mr. Hansell) might have placed less emphasis on training in this country, because I believe university training in Canada is equal to that of any country in the world of our wealth and size. I am endeavouring to emphasize the point that it is teamwork, coupled with costly research work which is required to lay the basis of industry. We need industry badly in western Canada. Naturally we hear the question: What type of industry do we need most in the west? I would say that first of all the commodity we produce in greatest abundance, and with which we at times have our greatest problems, is wheat. There is no doubt that the uses to which wheat may be put are numerous. One hon. member has told us of the uses to which milk may be put. It is quite possible that there are just as many openings for wheat as there are for milk. Certainly that is a subject which should be thoroughly investigated.

There are other commodities which can be grown on the prairies in greater profusion. For instance, I believe potatoes will grow anywhere in the three western provinces. The natural question is, "Then, why do not western people grow more potatoes?" The answer is that there is no market for them—or at least very little market. The only market available is in the vicinity of the large centres, and it is supplied by the market gardeners. In the vicinity in which I live, removed only twelve miles from the United States border, no one grows potatoes to any appreciable extent, and there are no large potato growers in the community. But immediately across the border one sees practically nothing but potato fields, and from those fields potatoes by the thousands of carloads are shipped to the Chicago market. I believe potatoes could be grown all through the three western provinces, but until we find some other use for them, something in addition to that offered by the ordinary potato market, they will not be grown.

Flax, likewise, grows very well throughout western Canada. Then there are sections in the west where only oats will grow, and where wheat cannot be grown. Generally speaking, however, the drought areas have found that, year in and year out, in dry and moist periods, wheat is their best crop. Other crops are gradually coming in from the south, and are being grown in the prairie provinces. In recent years it has been found that two varieties of soya beans are sufficiently hardy to be grown in western Canada, and that production can be carried on profitably in southern Manitoba.

Peas grow satisfactorily in practically all parts of Manitoba and, I believe, in most sections of the other prairie provinces. Cigar tobacco can be grown successfully in southern Manitoba, and as was pointed out by another hon. member, small fruits do well in that area. Then this year for the first time we are growing considerable quantities of soya beans, rape seed and sunflower seed along the international border. The fact that these crops are grown introduces the subject of by-products derived after the process of pressing the seeds. Certainly the possibilities of those by-products should be explored, and I have no doubt experiments are being made in Ottawa. It develops, however, that most of these seeds have to be shipped in bulk form to the eastern provinces, and particularly to the Hamilton area, for purposes of extraction. This means that the pulp which remains after the pressing is left in the east, and that the product in its finished form is distributed from this part of Canada. In my opinion those by-products should be investigated, and their possibilities for development in western Canada explored.

Before taking my seat I should like to draw attention to another matter which, although not closely allied to chemistry, has been brought to my attention by a friend who lives in the United States, just across the border-line from where I live. I inquired at the Morden experimental station, and learned that certain farm bulletins had been published on the subject I have in mind. The bulletin I have before me is entitled "Farm Production of Sorgo Sirup." Sorghum is grown to some extent in the southern portions of the western provinces, and certainly it is grown at the Morden experimental station. I learned from correspondence with that station that two varieties have proven very successful, namely, early amber and black amber sorghum. These are pressed in small plants in the United States, on a community basis and as a farm process. Apparently this type of production has been done successfully, because this 1938 bulletin, No. 1791, from Washington, describes the construction of a small press costing only $788. To-day costs would vary to some extent, but the materials used are not costly, and the

press could easily be made by any mechanically-minded farmer. I should imagine that under ordinary circumstances the syrup from sorghum could be pressed and used very well indeed. I draw this matter to the attention of the minister, in the belief that a simple process of this kind might well be developed in my district, and would suggest that investigations be carried out with that in mind. May I add that I take much pleasure in supporting the proposal of the hon. member for Moose Jaw.

Mr. CLEAVER: Mr. Chairman, may I have the attention of the committee, and lend my small voice in support of the hon. member for Moose Jaw and other hon. members who have spoken in favour of voting a substantial sum of money for scientific research in agriculture. I need not remind hon. members that large industrial concerns have found that if under present day competitive methods they wish to survive, they must spend large sums of money on research. There is no option about that. Competition is so keen that any industry wishing to survive must conduct a certain amount of research. I need not remind hon. members, either, that agriculutre is the largest single industry in Canada, and I do not know of anything of a more constructive or more positive nature that this government could do than to help our farmers to be better farmers, by making available to them that scientific knowledge which will give them leadership not only in the matter of fertilizing crops and choosing the right types of crops, but in regard to every phase of the industry.

I am thinking now of one little branch of agriculture in which my riding is especially interested, namely the raising of fruits and vegetables. The problem of pest control is becoming exceedingly important, and it is expensive to cope with these pests in the production of fruits and vegetables. Therefore I should like to urge as strongly as I can that a substantial sum of money should be voted for the purpose of scientific research to assist agriculture. With the very modest sums at their disposal our experimental farms have done wonderful work, and I should like to pay a well-deserved compliment to the staffs of those farms for that work. In my opinion, however, those experimental farms are not equipped to do the type of research work that has been suggested by the hon. member for Moose Jaw. We need a central organization for that purpose, and I should like to see a central branch charged exclusively with the duty of carrying on scientific research for the benefit of agriculture alone. I should like to see that plant with the most modern equipment, and I believe the salaries paid should be sufficient to attract the brightest minds in agriculture to-day. I beg the minister not to be too modest in his request. Let us go all-out in this effort, and if we do I am quite sure we shall attract to this work some of the best minds in agriculture and science in this country.

Mr. BLACKMORE: Just about a year ago, Mr. Chairman, Doctor Charles A. A. Stine told an important gathering of chemists in the United States that since 1940 mankind had discovered new continents of matter, and indicated that to-day between ten and one hundred times as much material was available to man as had been available in 1940. Such discoveries as those to which Doctor Stine referred have resulted from appropriations similar to that which the hon. member for Moose Jaw is wisely asking the government to make. I believe the hon. member is entirely right, and I support him completely. I would support him in asking for a much greater appropriation.

There are still great discoveries to be made; we have barely scratched the surface as yet. I believe we can raise the standard of living of all men to a degree not suspected even in the nightmares of men a hundred years ago. We will do this through studies such as the hon. member for Moose Jaw envisages. We will get plenty for the world, provided we learn how to distribute it. There are many products of nature which up to the present we have not learned to use. It may seem strange, but I have often wondered, I suppose in common with nearly all farmers, whether we could not discover some use to which we might put the weeds that grow so profusely in certain parts of the country and which cost a great deal to destroy. If we could turn them into something profitable and useful, they might not be such a great disadvantage as they are now. I believe everything in nature can be made useful and beautiful if we set ourselves to it.

Mr. MacINNIS: What about the mosquito?

Mr. BLACKMORE: Yes, even the mosquito. I believe we could use to advantage all our surpluses that are not required by other peoples. At the present time we are fearful of draining our marshes, of establishing new irrigation projects and of putting too many people on the land; we are afraid we may have too much. Certainly that is not a logical attitude for us to take. Such measures as those proposed by the hon. member for Moose Jaw will help us to overcome these difficulties.

Before I resume my seat I believe I should point out once more that we shall have to

learn how to distribute these goods. If we close our eyes to that problem we shall not be worthy of the position we hold. The time has come when we must have a new scientific method of distribution by which we may enable the people of our own country to buy more of our own products. With respect to the establishment of a plant based upon discoveries resulting from activities such as those suggested by the hon. member for Moose Jaw, the very first question to be asked would be, "Well, where are we going to sell the goods and what kind of prices will we get? Will not the manufacturers of these new kinds of goods bring down the prices of similar goods being manufactured by industries already established, and will not the whole process tend to disorganize the industrial life of the country as it is constituted at the present time?" All such anxieties would disappear if we knew that our people would be enabled to consume the products that might be produced by our industries as a result of activities of this kind.

May I say in closing that I completely favour the proposal of the hon. member for Moose Jaw, and I think in advancing it he has rendered a service to the country.

Mr. GARDINER: Since it is just about six o'clock and I do not intend to go on with my estimates this evening I would ask to be permitted to place on *Hansard* a statement which I had prepared and had intended to read before the close of the discussion this afternoon, if I had been given the opportunity. It merely places on record, as briefly as possible, what has been done in regard to certain matters including dehydration, experiments with soybeans, experiments with the type of dandelion that has been brought here from Russia, and other matters in which hon. members will be interested when they come to discuss this question again. If the committee would permit me to place this statement on record, it would be in print and hon. members would have it in their possession for their consideration.

The CHAIRMAN: By unanimous consent.

Some hon. MEMBERS: Carried.

Mr. STIRLING: Does the minister propose to have it printed as an appendix, or is it to form part of his speech?

Mr. GARDINER: I should like it to go in as a statement by myself. It is as follows:

In view of the inquiries made and opinions expressed by hon. members as to the work done by the experimental farms on agricultural researches of a chemurgic nature, perhaps the following brief statement of work under way, in which marked contributions have been made to the war effort, might be of interest.

1. Fruit and vegetable preservation:

(a) Dehydration. Improved construction of dehydrators and other engineering problems; new methods of preparing material, including blanching, sulphuring, and the like, toward preserving the vitamin content and food values; new processing procedures; new methods of packing, including the gas pack to prevent oxidation and destruction of food values, and the new solid pack method which promises to save tremendously in tin and in transportation; complete study of vitamin content and retention.

(b) Frozen foods. To save tin and prevent undue wastage.

(c) Canning. To deal with present problems in tin shortage and including tin substitutes.

(d) Fruit juices work. In all these, problems continuously arise which involve more research work. For this reason the pilot plant for dehydration research is being constructed at the central experimental farm at the present time.

2. Fibre production. The mechanizing of the flax industry has made possible the enormous increase in acreage to meet war needs. This increase is from 4,000 to 47,000 acres. In 1943 the British ministry asked for 75,000 acres, which production is quite possible in Canada providing labour is available and at rates of pay comparable to the price of lime fibre and tow.

Aside from the few acres of hemp being grown at the central experimental farm no hemp is being produced in Canada. Further research is needed in an attempt to adapt Canadian-grown hemp to processing on hard fibre machinery; also if sisal supplies continue to disappear some methods of treatment of hemp fibre so that it might be used for binder twine purposes.

3. Vegetable Oils: Hon. members are fully acquainted with the objective set in the production of vegetable oils in Canada this year and the great need for these, particularly in view of the fact that south American supplies are very difficult to obtain due to shipping conditions and that the Argentine has placed certain embargoes on sunflower seed oil, and possibly others, to the United States, hence indirectly to Canada.

(a) Flax. It would appear from the estimates of the bureau of statistics that the objective of 2,495,000 acres might almost be reached, although estimates from other sources,

including the Saskatchewan wheat pool and the Winnipeg *Free Press,* claim that the bureau of statistics estimates are too high.

It is hoped that a greater use of wilt-resistant varieties and a greater use of Royal, a rust-resistant variety, may be responsible for maintaining the high yield of 1942.

Considerable research as to the use of linseed oil for purposes other than paints, varnishes, linoleums, etc., is progressing in the states and in one or two institutions in Canada. The problem receiving the most attention is the possibility of making an edible oil from linseed oil. The possibility of producing a high-class rubber substitute is also shown by limited researches. Much of this work might well be done by the Department of Agriculture.

(b) Soybeans. It would appear that the objective of 90,000 acres cannot be reached, but it is hoped that 55,000 acres will be planted. The earlier varieties created by the experimental farms are seeded almost to the limit of seed supplies, particularly the varieties Pagoda and Kabott.

(c) Sunflowers. All sunflower seed that is available has been sown in the west. Two early varieties, easily harvested, created by the experimental farms (Sunrise and Mennonite) have been sown. It would appear, however, that the seed was capable of covering only some 27,000 acres, which is only one-quarter of the objective.

(d) Rape seed. Black Argentine annual rape seed to the limit of seed grown by the experimental farms in 1942 and the amounts which could be purchased from the United States has been sown mostly in Manitoba and Saskatchewan and to a lesser extent in Ontario. This was adequate for only some 4,000 acres, whereas the objective was 2,000,000 pounds of oil which would have necessitated 10,000 acres. Researches by the plant breeders in developing pure, high-yielding, high oil content strains, continue.

(e) Various other oil-bearing plants are still in the experimental stages. These include safflower and mustard. In addition, peppermint oil situation seems to be well in hand and adequate supplies are being produced in Canada.

Again, new hybrid corns in relationship to corn oil and cornstarch are being studied and the values rank high. Starch factories in Canada have used all Canadian corn in 1942.

4. Kapok substitutes. Milkweed floss and cat-tail floss have been collected by the Department of Agriculture, mostly the science service's botany division. In the evaluation of these in contrast to kapok the research council has done the work, the Department of Agriculture having no facilities therefor.

5. Rubber-bearing plants. Thanks to the excellent groundwork of the botany division of the science service, the rubber-bearing qualities of Canadian weeds and plants have been studied for several years. This division also was the first to introduce into Canada the Russian dandelion (taraxacum kok-saghyz).

The Department of Agriculture is covering the experimental and research work in production and evaluation of the dandelion and the native milkweed, while the national research council is studying the industrial use of the rubber produced from these plants.

Experimental farms across Canada have plots of Russian dandelion—seven of the farms having five acres or more 1943 planting.

Commercial studies as to yields, harvesting, and general economy, mechanizing of seed collection and root harvesting, cultural and fertility studies and physiological studies are being conducted.

Milkweed in like manner is being studied in plots on experimental farms across Canada. At the central experimental farm ten acres are planted and are being studied as to mechanizing of pod harvesting for kapok substitute, harvesting of leaves for rubber, etc. In addition the Department of Munitions and Supply have requested that all seed available be planted this year in order that in 1944 milkweed rubber gum up to the maximum amount may be available for blending with buna-S. In consequence with financial assistance from munitions and supply, the Department of Agriculture, with the cooperation of the Ontario department of agriculture, is planting 600 acres.

If the product from the 1943 experiments is as useful as now promised, from laboratory studies conducted by the national research council there may be a demand for 15,000 acres in 1944.

6. Wheat vitamin studies. The cereal division is intensively studying milling methods in order to retain vitamin content of flour in contrast to the British and American methods of re-enforcing white patent flours with chemical vitamins, particularly vitamin B1 as thiamin chloride. Marked success has been achieved to date.

7. Industrial chemurgy not being undertaken: (1) Plastics. No investigational work is being conducted of any consequence as to new plastics which might be made from

grains such as soybeans, corn, flax, and others. It is well known that plastics from by-products of sunflower seeds and other materials might be made of great value to war industry and peacetime industry.

(2) Power alcohol from cereals. No laboratory or pilot plant work is being conducted along these lines. A subcommittee of the national chemurgic committee set up under the Canadian chambers of commerce has had this matter under advisement for three years and a special subcommittee under the chairmanship of Doctor Speakman of the Ontario research foundation, brought in a report in 1941, carefully compiling all available information and based thereon economic calculations with different processes, for example:

(a) European process—a million-dollar plant would absorb 1,800,000 bushels of wheat annually. With wheat at 60 cents, the resulting power alcohol would cost 39·6 cents at the distillery.

(b) American practice—a three-million dollar plant would absorb 1,900,000 bushels of wheat, and with wheat at 60 cents, the resulting power alcohol would cost 53·4 cents at the distillery.

The Department of Agriculture, which has representatives on this committee, has also kept in touch with authorities such as N. M. Rosten, an experienced chemist and distiller now in Canada and formerly from central Europe, who claims the general economic advisability of establishing power alcohol plants to take care of low-grade cereals under war and peace time. This committee has also followed the United States senate subcommittee on agriculture's findings in reference to alcohol from cereals and the possibility of its use in rubber production.

(3) Synthetic rubber from cereals. No pilot plant has been established nor is work being done in Canada along this line. It would appear that Mr. Howe has covered this point satisfactorily in his statement to the House of Commons on Wednesday, June 16. What the future may hold as to the price of rubber in relationship to imported supplies and the long-time sources of petroleum in relationship to annual crops which may be grown for the production of power alcohol and rubber, are matters which time no doubt will solve.

The national research council has recently made a careful review of literature and are doing certain biological researches as to a simpler and more rapid method of bacterial fermentation of cereals toward a more economical production of butadiene from cereals.

Mr. NICHOLSON: The hon. member for Rosetown-Biggar wanted to ask a question about the scale of wages paid at the experimental farm at Indian Head. It was his information that for seasonal work men were getting twenty-seven cents an hour plus the cost-of-living bonus. Has any consideration been given to increasing those wages?

Mr. GARDINER: Consideration has been given every year to the possibility of doing that. We have made a number of increases during the last five years, but the principal difficulty has been that the farm is employing men in competition with farmers and others in the district. At Indian Head we try to come as closely as we can to the going wages in the area for similar work.

Mr. CASTLEDEN: Since I wish to say a few words, Mr. Chairman, would you call it six o'clock?

The CHAIRMAN: Before I call it six o'clock I should like to make a brief statement. Earlier this afternoon I presented a list of speakers to the committee and a point of order was raised by the hon. member for New Westminster (Mr. Reid). I know this was a precedent, but I would not be afraid of creating a precedent if it were accepted unanimously by the committee. As chairman I want to remain within the rules. I make this statement because so far I have had no difficulty when one or more members rise simultaneously to speak. The hon. member for New Westminster was right in raising the point of order, and I shall give no more lists of speakers. I call upon hon. members to bear with me if I do not seem to see them just as soon as they would like me to.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

DEPARTMENT OF PENSIONS AND NATIONAL HEALTH

Direct payments to veterans and dependents.

205. To provide hereby, notwithstanding anything contained in the Consolidated Revenue and Audit Act or in any other statute or law, for the payment out of the consolidated revenue fund of compassionate allowances awarded by the Canadian pension commission to widows of persons who served in the naval, military or air forces of Canada during the war, 1914-1918, who are in necessitous circumstances, at such rates, not exceeding, however, $240 per annum (or $300 per annum in certain exceptional circumstances to be prescribed by the governor in

council), and in such circumstances and upon such terms as may be prescribed by the governor in council, $400,000.

Hon. IAN A. MACKENZIE (Minister of Pensions and National Health): Mr. Chairman, may I say by way of explanation that since this item appeared in the estimates I have had many representations from ex-service organizations asking me to change the suggested administration from the Canadian pension commission to the war veterans' allowance board, and I am going to ask my colleague to move an amendment accordingly, the only effect of which will be to substitute the war veterans' allowance board for the Canadian pension commission.

Mr. MULOCK: I move, Mr. Chairman, that the item be amended accordingly, to read as follows:

205. To provide hereby, notwithstanding anything contained in the Consolidated Revenue and Audit Act or in any other statute or law, for the payment out of the consolidated revenue fund, of compassionate allowances awarded by the war veterans' allowance board to widows of persons who served in the naval, military or air forces of Canada during the war, 1914-1918, who are in necessitous circumstances at such rates not exceeding however $240 per annum (except in such exceptional cases as the war veterans' allowance board may deem it proper to increase the amount to $300 per annum), and in such circumstances and upon such terms as may be prescribed by the governor in council.

Mr. GREEN: Will the minister explain the terms under which this grant is to be administered?

Mr. MACKENZIE (Vancouver Centre): I shall be very glad to. But first of all I should like to give a brief historical review of the last two years. As hon. members are all aware, the Canadian soldiers' non-pensioned widows' association has been making representations for several years in favour of some pension or allowance for the widows of soldiers who have died since the war, leaving destitute families. A delegation from this association appeared before a committee of this house in 1941 and made very fine representations to the committee, impressing, I think, everyone there. That was on April 3, 1941.

The Canadian Legion made a recommendation on this subject to the same committee on March 28, 1941, and a petition signed by seventy-six members of parliament of all parties in the house was presented to the Prime Minister in regard to this problem.

As hon. members are aware, resolutions have been adopted in connection with this subject by cities, municipal councils, women's institutes and many other types of organizations. The number of these resolutions is very large indeed. I need not elaborate on the various

[The Chairman.]

arguments put forward by the widows' association when they appeared before the committee, because they are well known to all.

The recommendation made by the Canadian Legion to the House of Commons special committee on March 28, 1941, read as follows:

That pending introduction by the government of adequate social legislation, which should include widows and their dependents among its beneficiaries, provision be made by an amendment to the War Veterans' Allowance Act to grant an allowance of $20 per month to:

1. The indigent widow of a pensioner who is not otherwise provided for;

2. The indigent widow of a recipient of war veterans' allowance;

3. The indigent widow of an ex-service man who served in a theatre of actual war.

Providing they have reached the age of 55 or are physically unable to earn a livelihood.

We further recommend that widows in the above classes under the age of 55 years with children to support and not otherwise provided for, receive $40 a month until the children have reached the age of 18.

In May 1942, the dominion convention of the Canadian Legion at Winnipeg adopted a resolution urging a "compassionate allowance" for veterans' widows when they are in necessitous circumstances on the same basis as is provided for widows of men dying on service in the present war under section 11(3) of the Pension Act.

The wording of the petition signed by seventy-six members of parliament of all parties urged:

Such amendments to the Pension Act as will ensure that all widows of deceased veterans of the great war (1914-18) who are now in necessitous circumstances be pensioned in an amount sufficient to provide the reasonable necessities of life.

The special committee on the Pension Act and the War Veterans' Allowance Act in 1941 in its report to the house made the following recommendation:

Consideration should be given to the advisability of extending the provisions of the War Veterans' Allowance Act to:

(a) Widows of disability pensioners not now provided for.

(b) Widows of deceased recipients of war veterans' allowance.

It was finally decided that the basic principles involved in the War Veterans' Allowance Act should be adopted as the basis for the proposed allowances.

The War Veterans' Allowance Act applies to members of the forces who served in a theatre of actual war or who were pensioned with respect to their services in the last war. The widows eligible will be those whose husbands' service records can be thus described.

In the case of the War Veterans' Allowance Act, the allowances can be paid when a veteran has reached the age of sixty years, is permanently unemployable, or is incapacitated my mental or physical infirmity from maintaining himself. These conditions will be applied to the widow herself, but the age mentioned will be fifty-five instead of sixty.

Under the War Veterans' Allowance Act, the maximum allowance for an unmarried veteran or widower is $240 a year, with the proviso that only so much of the maximum allowance shall be paid as will bring his total income from all sources to $365 a year. Under the supplementary amendment, however, where there is no other income the allowance may be raised to $300 a year.

These conditions will also apply to the widows' allowances, so that the widow is treated on a parity with the aged or incapacitated veteran.

It was at first intended that administration should be in the hands of the Canadian pension commission. The work of the commission is increasing so rapidly however, due to the casualties of the present war that upon consideration it has been decided to ask the war veterans' allowance board to administer this regulation. The fact that the regulations are similar to those of the War Veterans' Allowance Act means that the board and its staff will have a great deal of experience to guide them in the administration.

Mr. GREEN: Mr. Chairman, this is one of those votes over which there will be no dispute in the house. I am sure that all members of the committee will approve this vote. Many of us, of course, feel that it comes very late. Members on all sides of the house, particularly those who served in the last war, have been pressing for years that some such provision be made for the widows of their comrades who served in that war, so that it is gratifying that now Canada is to give these widows some assistance. But there are several weaknesses which I wish to point out in connection with these provisions that are being made; for example, in the terms under which the widows will become eligible, also the amounts that they are to be paid, and I should like the members of the committee to give careful consideration to these suggestions. I am hopeful that the minister will see fit to make some changes and will not stand firmly on the plan as it has just been announced by him.

In the first place, I think it is a great mistake to make provision for paying money to the widows of these veterans by means of an estimate, because that means that there is no statutory protection for them. It means that each year a vote will have to be brought in, and there is no assurance that the vote will be brought in each year, no assurance that they will continue to get this assistance. So that I suggest to the minister that either a new act be brought in or an amendment be made to the War Veterans' Allowance Act. That was the intention of the special committee on the Pension Act and the War Veterans' Allowance Act which met in 1941. If the minister will refer to paragraph 10 of the recommendations of that committee, he will find that it reads as follows:

> That after further and more complete exploration of the problems involved, consideration be given to the advisability—

And these are the words I wish to emphasize:

> —of extending the provisions of the War Veterans' Allowance Act. . . .

The paragraph goes on to point out the classes of widows for whose benefit the act should be extended. I ask the minister why that recommendation has not been followed, why it is that, instead of considering an act which would become part of the law of the land, we are merely considering a vote. There may be some good reason for provision being made in that way, but on its face it seems the wrong way to go about the business.

My next suggestion to the minister is that there should be some provision for making the payments retroactive, at least as far back as the date when it was announced that this allowance would be paid. I believe the first announcement was made by the minister in this house on February 4, by way of an interjection in a speech being made at the time by the hon. member for Trinity. The minister will correct me if I am wrong.

Mr. MACKENZIE (Vancouver Centre): That is right.

Mr. GREEN: That is the first announcement of which I can find a record. The same day the minister made a statement to the press which gave further particulars. So that ever since that time these widows have been expecting that they were to get these payments; and I suggest that when the order in council is drawn up there should be provision for making the payments retroactive. I take it that the order in council has not yet been drawn?

Mr. MACKENZIE (Vancouver Centre): That is right.

Mr. GREEN: Can the minister give us the draft order in council or a more detailed summary of its terms? Perhaps he will do so later in the evening.

The third suggestion I make to-night is that the amount should not be $20 a month with provision for payment of a further $5 where the widow has no income, but that it should be at least $1 a day. I am convinced that that should be the lowest amount we pay to recipients of the war veterans' allowance; that is, to the men. I think the same is true of the old age pension. This business of paying twenty or even twenty-five dollars a month under present conditions is not right. People cannot live on that amount of money at the present time. It is out of date, and it is out of line with the scale of payments made in any other part of the British commonwealth and in the United States. I suggest that Canada should pay at least $1 a day, not only to the widows for whom provision is made in the vote, but also to recipients of the war veterans' allowance and to old age pensioners.

Another necessary change is that there should be the right to make some casual earnings, or in other words, the right to earn more than now allowed before the earnings cut down the amount of the allowance. The existing rule has caused a great deal of difficulty with recipients of the war veterans' allowance since the present war. Most of these men could go out and earn small amounts, but they are in this danger, that the money they earn over what would bring them a total, with allowance of $365 a year, causes their war veterans' allowance to be cut down by the amount they earn over $125 a year. This has caused a great deal of discontent, and I think in many cases the restriction has proved unwise.

Mr. MACKENZIE (Vancouver Centre): May I interrupt my hon. friend in order to help on the discussion? Casual earnings to the amount of $125 can be added to the permissive income of $365 for widows, just as they are permitted to recipients of the veterans' allowance.

Mr. GREEN: No; but the point I wish to make is that the men can earn only an additional $125 over the payment of $240, which makes a total for the year of $365.

Mr. MACKENZIE (Vancouver Centre): The further $125 is added to the $365 of the permissive income.

Mr. GREEN: Now they can make $490 a year; is that right?

Mr. MACKENZIE (Vancouver Centre): That is right.

[Mr. Green.]

Mr. GREEN: That is possible now? In other words, the recipient of a war veterans' allowance can earn $250 in addition to $240 allowance?

Mr. MACKENZIE (Vancouver Centre): Provided that the $125 can be deemed to be casual earnings and not fixed income—just casual earnings.

Mr. GREEN: What is the definition of "casual earnings"?

Mr. MACKENZIE (Vancouver Centre): I do not think there is any specific definition. It was referred to the 1941 committee. For instance, doing odd jobs like gardening. It is not to be permanent work at all. Casual earnings are considered to be small amounts earned by odd jobs for different employers, not steady, regular or even small wages from one employer.

Mr. GREEN: What that really means is that in addition to the $365 a year of income and war veterans' allowance, the recipient can earn casual earnings up to a further sum of $125?

Mr. MACKENZIE (Vancouver Centre): That is correct.

Mr. GREEN: That improves the situation a great deal. Will the same provision apply in the case of these widows?

Mr. MACKENZIE (Vancouver Centre): Yes.

Mr. GREEN: The vote does not read that way; it reads as though the maximum a widow can get is $300.

Mr. MACKENZIE (Vancouver Centre): That is income; but casual earnings are not classified as income. Casual earnings are an addition to the permissive income of $365.

Mr. GREEN: The widow, then, can get $490?

Mr. MACKENZIE (Vancouver Centre): That is correct.

Mr. GREEN: Just the same as a veteran can?

Mr. MACKENZIE (Vancouver Centre): That is correct.

Mr. GREEN: Another suggestion is that provision be made to give these widows free medical treatment on the same basis as treatment is now given to recipients of the war veterans' allowance who would not be entitled to it by reason of wounds or disability suffered overseas. That would help a great deal, and

I would ask the minister to let us know whether it is possible for some such provision to be made.

I would also suggest that this vote be extended to cover Canadians who served in the imperial forces, and imperials who were domiciled in Canada on or before September 1, 1930, which was the date on which the War Veterans' Allowance Act first came into effect. As the vote now reads, it covers only the widows of those who served in the naval, military or air forces of Canada during the last war. As the minister knows, the War Veterans' Allowance Act itself is much wider than that because it covers any person who was domiciled in Canada before the great war, whether he served in the Canadian or the British army or in any one of the allied armies, and it is only fair that provision should be made for the widows of these men.

Year after year some of us have tried to have the war veterans' allowance extended to cover imperials, those men who served with the British forces in the last war and came to Canada after the war. We have never been able to make headway with that request, but the time has now come when the imperials in Canada should be covered under the War Veterans' Allowance Act, and a good way to start it would be by protecting their widows under the present vote.

I had intended to suggest that the administration of this vote be left with the war veterans' allowance board, and I am glad that the minister has seen fit to make that change. This board has always had the confidence of the members of the house to a marked degree, perhaps largely because of the former chairman, Mr. Walter S. Woods, who is sitting before the minister to-night, and I am sure the board will administer this new vote in the same efficient way that they have administered the War Veterans' Allowance Act.

In conclusion, I repeat that it is of the utmost importance that this assistance be put into legislation and made a statute of Canada, so that it will stand no matter what happens here. Governments come and governments go; members of parliament come and members of parliament go; but if this is in the form of a statute there is far more chance of these widows receiving an allowance without any question, and without any difficulties, than if we leave it in the present position of the house having to vote a special item each year.

Mr. COLDWELL: The minister said that casual earnings up to $125 will be allowed; but he went on to say, in the rough and ready definition he gave, that these must be casual earnings, as the name implies, and not earnings from any one employer. I was thinking of the widow of a veteran who is cleaning a country school and getting $10 a month for ten months of the year. That is $100. She is employed by one employer throughout the year. Would she be debarred?

Mr MACKENZIE (Vancouver Centre): I fear so.

Mr. COLDWELL: That does not seem to be fair.

Mr. MACKENZIE (Vancouver Centre): It would be counted as income, the earnings from that source being steady.

Mr. COLDWELL: I do not think that is fair, because another woman may be earning $125 for the year from a number of persons, scrubbing or cleaning or helping around the home in some way, and while her earnings may not be steady in the sense that she does not receive them from one employer, nevertheless she may have a number of clients, if you like, who employ her fairly regularly and in that manner she is in receipt of casual earnings which none the less are almost as assured an income as the woman who cleans a school receives. I am thinking of a particular woman when I refer to the cleaning of schools. I agree with the hon. member for Vancouver South (Mr. Green) that the improvement suggested by the minister is the very minimum of what should be done. I think the minister feels that himself in all probability.

Look around the world and see what is being done. Only this morning I received from New Zealand a summary of their new budget, and it is interesting to look at the improvements they have made at the present time, in the midst of the strain of war. They have improved their old age pensions legislation, the amount being now thirty-two shillings and sixpence a week, and they have made improvements in their veterans' allowance legislation, in their children's allowance, mothers' allowances and so on. When we consider all that, it certainly does put this very rich country to shame, because Canada with its resources is much richer than New Zealand. I wish the minister would give a different definition of the word "casual" in this connection. I am sure there are other members who know of widows of veterans in small towns or in the country who are doing the kind of job I have indicated, cleaning a church or a school and getting five, six, seven or ten dollars a month. They receive it steadily and therefore under this definition they are debarred. Before this is finally settled I hope that the minister will give

further consideration to the definition of "casual", so that people in that position may not be cut off from this very small pension which the government provides.

Mr. GREEN: Is it not a fact that in almost every case the widow of the veteran would be on a steady job earning a small amount of money? She would not be going from one job to another, so that casual earnings, based upon the principle of the widow taking different jobs all the time, will not help at all.

Mr. MACKENZIE (Vancouver Centre): In the case of women it is largely casual. In reply to the hon. member for Rosetown-Biggar (Mr. Coldwell), I would remind him that last year when the supplementary allowances were granted to recipients of veteran's allowance, "casual earnings" were stricken out. We were able to overcome that, however, by amendments passed during the Easter recess, and this is of considerable advantage. We are getting over the hard statutory provision of permissive income and supplementing it by $125 as a maximum, and I think it is a fairly good beginning. The essential point is that we cannot go farther. This is a provision ancillary to the Veterans' Allowance Act. My hon. friend said that this is an estimate. It is the intention to try this out to discover flaws and weaknesses in the administration, and then introduce legislation to implement it in statutory form. When I first intended to introduce it I was going to do so by order in council. However, I was informed by the Department of Justice that it would not be the proper way to do it. The proper way would be to put an item in the estimates, and that is why this was done. It will be the intention to discover any weakness there may be in the administration of the provisions, and to introduce an amendment to the War Veterans' Allowance Act.

Mr. GREEN: What about a widow with children?

The CHAIRMAN: I believe the hon. member for New Westminster has the floor.

Mr. REID: I think the country generally will receive this legislation with a good deal of satisfaction. Following the remarks of the hon. member for Rosetown-Biggar, I would say that the expression "casual occupation" is one which has caused considerable concern in several parts of Canada. It has to be interpreted in its widest sense. I have had cases drawn to my attention, respecting men who have gone to do some fishing to produce salmon for export to Great Britain. Their earnings would probably reach $165, and they would be cut off the war veterans' allowance. It was some time before the war veterans' allowance was adjusted.

I join with the hon. member for Rosetown-Biggar in asking that the casual earnings clause be widened considerably, and that a little more latitude be allowed, especially at a time when labour is in great demand. I would ask that the line be not drawn too strictly in connection with those who desire to work, and to help out during this time of crisis.

Mr. KNOWLES: Reference has already been made to the interest of hon. members in this item. As one who has come from the outside recently, I may say that I am particularly conscious of the interest not only of the women affected in the part of the country from which I come, but of the general public. Despite the fact that we are not satisfied with the amount proposed, there will be general satisfaction that at last some move in this direction is being taken. In view of the fact that there is nothing we can do in committee to raise the amount—although that is what some of us would like to do—I shall not take time to discuss that point.

There are, however, one or two other points concerning which some remarks have already been made, upon which I should like to comment. First of all, I would support the suggestion of the hon. member for Vancouver South that the effective date of the payment of this allowance should be made as far back as possible. The hon. member suggested that it go back to the date the proposal was first announced in the house. I earnestly hope that may be possible. If there are legal reasons why it cannot go back beyond the beginning of the present fiscal year, I should certainly hope that when the minister draws up the regulations—or whoever draws them up—that April 1 might be the date, if indeed it cannot go farther back than that.

I understand the way these things work sometimes is that after the item is passed, the order in council and the regulations are drawn up, and that it is possible that the effective date might be some day next week, after the item is passed. It seems to me that would be most unfair to these women who would lose a month or two through no fault of their own, but simply because we in the House of Commons have taken this length of time to get around to dealing with this item. Surely it is not their fault, and they should not be penalized to the extent of a month or two by virtue of this fact.

The item as it appears in the estimates is an amount of $400,000 for the fiscal year. I assume that amount was calculated with a view as to how much it would take to cover the cases of which the department is aware, and that it was calculated on the basis of a full year of twelve months. I earnestly hope the minister will see to it that the effective date is taken back at least to April 1, and preferably to the date suggested by the hon. member for Vancouver South.

Mr. MACKENZIE (Vancouver Centre): Before the hon. member proceeds to his next point may I say a word on this one, namely, that in connection with making this provision retroactive I doubt very much if I have the authority, or if the government has the authority to do so. I rather fear the effective date will be when the vote passes this committee—to-night I hope. That is why I introduced it as the first item in my estimates. The regulations were drafted to read from the date of application. The regulations will be announced next Monday, and applications will be invited at once. If possible, I should like to see it made retroactive to April 1, but I doubt if it can be done.

Mr. KNOWLES: I call the minister's attention to the fact that the amount we are voting is for the entire fiscal year, and that as a matter of fact two-sixths of the amount has already been voted. The minister knows I tried to get him to do something on the basis of that some time ago.

Mr. MACKENZIE (Vancouver Centre): I did look into that feature of it, because I thought I might be able to act upon this item, once one-sixth was voted. I was informed that because there was a change in the item, not of destination but of construction, I could not act upon that.

Mr. GRAYDON: The only difficulty with respect to the retroactivity of the provision lies in the fact that it is brought in by way of an item in the estimates rather than by legislation. That is the minister's real difficulty as far as retroactivity is concerned. Had he brought it in by way of a statute, as was suggested by the hon. member for Vancouver South, he could have made the statute retroactive, and this would have surmounted his legal difficulty.

Mr. MACKENZIE (Vancouver Centre): If I had brought it in as a statute, judging from the progress we are making it would not be passed for many months.

Mr. GRAYDON: It would not make a great difference, because in that instance the minister could make provision for back pay. In this instance not only will there be delay, but widows may be suffering at the same time.

Mr. KNOWLES: I think the minister is aware of the fact that all hon. members feel it would be unfair to these women if they were to be penalized by reason of our delay. I certainly hope the minister will do his best to find ways and means whereby the amount we are voting will be for the full year, dated from April 1.

Mr. MACKENZIE (Vancouver Centre): I might also point out that when the Veterans' Allowance Act was introduced in 1930, and subsequent amendments were made no retroactive provisions were inserted in any of those amendments.

Mr. KNOWLES: Another point I have in mind relates to the expression "in necessitous circumstances", which appears in the item, and which suggests that considerable significance will attach to the orders in council and the regulations which may be drawn up for the administration of this allowance. One shudders at the way in which the expression "necessitous circumstances" can sometimes be applied. Sometimes it means a rigorous means test which works a hardship unnecessarily. I am sorry the provisions are not contained in some sort of act, so that we could deal with them here. It will be in the power of the minister to suggest regulations and to define "necessitous circumstances". That being so, I hope he will bear out the reputation he has in some quarters for being kind-hearted, and that he will go as far as he can in realizing that these women ought to be entitled to the full amount being provided for them. I hope he will be very humane when he comes to draft the regulations on that point.

May I say a word or two about the matter of these two sums of $125 of extra income which are allowed. The minister refers to $125 of permissive income, which is characterized as some sort of steady income. Then he says that in addition the recipient of an allowance under this legislation may have another $125 of casual income. As has been pointed out already by previous speakers, one sees immediately how unfair this can be in some cases. On the one hand, a recipient may earn a total of $250 in addition to her allowance; and, because it is casual, because it comes from two or three sources, she is entitled to it. On the other hand, another woman may earn the same amount; but because she receives it from one source, it would be regarded as a steady income, and as a result she would be

penalized. The minister has stated already that we must realize that this is to be ancillary to the War Veterans' Allowance Act. I suggest that this simply increases the strength of the case which many hon. members have been presenting for amendments to the War Veterans' Allowance Act.

Just a few days ago I had a case brought to my attention from the city of Winnipeg, similar to the cases which have been mentioned to-night. This was the case of a recipient of the war veterans' allowance who noted that there was a shortage of man-power and that everyone was asked to pitch in and do his bit in this time of emergency. He answered an advertisement and accepted part-time work as an elevator operator. While he was working his expenses were higher than while not working. In due course it proved to be too much of a strain on his health, and he had to quit the job. Then, lo and behold, he discovered that while he had been working, and spending most of what he was making because of the additional expenses, including extra medical care, he had earned more than he was allowed to receive under the War Veterans' Allowance Act in a twelve month period, so that his allowance was discontinued and he was notified that application for reinstatement would be considered at some future date, I believe in December of this year. Naturally he wonders what he is supposed to do between now and December, and rightly feels that he has been wronged. I quite understand how the act works; I quite appreciate that we must have regulations; but in the human situations that develop one sees the wrongs that can be created in this way. I am simply suggesting to the minister that all the injustices which existed under the War Veterans' Allowance Act in regard to veterans, and which in themselves needed correction, will be doubled when we bring these widows under the same provisions. Therefore I hope the minister will consider bringing down amendments to the War Veterans' Allowance Act this year to take care of these conditions both with respect to the veterans and to the widows, for whom we are now providing some consideration.

The other matter about which I should like to have said a word also has been covered this evening. I hope this provision will become part of the law of this country and that, when it does, the amount will be increased. I was glad to hear the minister say that after a trial period it is his intention to see what can be done by way of legislative enactment. When that time comes—and I hope it will be soon—I trust he will recommend both for the war veterans and for these widows an amount greater than this $20 a month. It has been pointed out already how hopeless it is for these people to try to live on $20 a month. That has been the situation with our old age pensioners and our war veterans from the time these acts were brought in. Now that we have in some cases the paying of a cost of living bonus, with recognition of the fact that as the cost of living goes up people should be given something extra in order to meet that cost, the whole country has realized that it is unfair to ask a group of our people, such as the old age pensioners and these war veterans, who never should have been asked to live on $20 a month, to continue to live on that small amount. I hope, therefore, that when the minister brings in an act to cover these women and makes the necessary changes with respect to the veterans, he will realize the force of these arguments and this opinion throughout the country and will see to it that the amounts are much greater than we are providing at the present time.

Mr. QUELCH: We in this group are very glad to see that at last recognition has been given to the claim of the widows of the veterans of the last war. I recall that when the pensions committee, I think two years ago, recommended that an allowance be given these widows, the minister or the board took the stand that this could be dealt with only through social legislation, so that I am glad to see that the position has been reconsidered.

I have always felt that if we considered $480 as the right amount to pay a man and his wife under the War Veterans' Allowance Act, then when either the husband or the wife dies, the amount paid to the widow or widower should be more than half that total, because certainly it costs one more than half the amount it costs two to live. There is still the rent of the house to be kept up, for example, and matters of that kind. I realize that this cannot be dealt with at the present time, but I am hoping that when an amendment to the War Veterans' Allowance Act is brought in, consideration will be given to increasing the amount paid to the single member of the family remaining.

I am still not clear as to when the total amount of $490 can be accepted as income. We have $125 as casual income, $125 as regular income, and an allowance of $240. How about a widow living on a small farm. Is anything deducted as rent for the house? I have known the case of a soldier, living on a farm, who had a certain amount deducted as rent for the building. I have known of other cases in

which certain amounts have been deducted for stock, though the income from that stock might be much less than $250.

Mr. MACKENZIE (Vancouver Centre): Are these people recipients of war veterans' allowance?

Mr. QUELCH: Yes, and I understand the same legislation will cover payments to the widow. Could the minister explain what would be the position of the widow of a soldier living on a very small farm, we will say, where the income is negligible. Perhaps she has to hire all the labour that is required to operate that farm, and by the time she has paid for the labour and paid her taxes, in all probability the revenue will be considerably below $250. Will she still receive the full amount of $240.

Mr. MACKENZIE (Vancouver Centre): My information is that from the particulars given me by my hon. friend, in that case the widow would be entitled to the maximum allowance available.

Mr. McIVOR: Before I offer any suggestions I wish to say that any cases I have brought before the minister or the board have been considered thoroughly and with kindness. But when I have a case that I think is worthy and they do not agree, then I think there should be some changes. I should like to see some leeway given with regard to imperial veterans, and the case I have in mind is that of a young Scotsman who was wounded three times and gassed. He then went through the university and entered his profession. He came to Fort William and was taken ill with lung trouble. I am not a doctor, but I do not think any man can be gassed without his lungs being affected in the future. I took this case up with the pension board and I was advised to go to the British minister. I did so, and I failed in my application. This man has been in a sanatorium for nearly three years and has not received a five-cent piece from the British government.

My suggestion is that the time in which a pensioner must be domiciled in the country should be shortened. My second suggestion is that the pension board should state what this man should receive, and the British government should pay it. Our pension board knows the man's needs better than those who are accustomed to old country ways. I suggest that these imperial veterans who fought in the last war side by side with Canadians should receive more consideration.

Mr. ADAMSON: This is the culmination of a struggle lasting many years to rectify a very serious wrong. I realize that it is small recompense indeed, but I accept it in the light that half a loaf is better than no bread. I suggest to the minister that the present situation could have been avoided had we had an insurance scheme similar to the armed services insurance provision at present in force in the United States. I bring this up at the present time in an effort to show what is likely to happen after hostilities have ceased. Had we had an insurance scheme there would be no question about subsidiary income. There would be no question, as there is under the present regulations, of a means test in connection with extra earnings. These widows of soldiers of the last war are in a better position than they have been, but they must still prove that they are in almost dire penury before they receive any recompense. I suggest that we remember what has gone before and see to it that after this war we do not make the same mistake, and have another group of dependent women who may be up in years and suffering because their breadwinners have died, chiefly from causes attributable to the war. With proper insurance legislation every dependent of those who serve in this war would be secure for the future.

Mr. GRAYDON: Mr. Chairman, I rise in order to identify the Progressive Conservative party with the remarks which have been made by those colleagues of mine who have spoken in connection with this matter. This particular item in the estimates of the Department of Pensions and National Health has to do with problems of rehabilitation of the veterans of the last war and, as the hon. member for York West (Mr. Adamson) has just suggested, of this war as well. There have been few cases in Canadian public affairs where such pressure has had to be exerted by an organization and others through the years as has been the case in connection with the movement which has finally reached this stage in its development. In many cases such as this a government seems to make a token move—the minister will probably object to my saying that this is a token—to the people involved, but still this is a move in the right direction so far as assisting these women to whom Canada owes so much is concerned.

I repeat the regrets which have been expressed already that the government has not seen fit to bring this about by means of a statute rather than by an experimental estimate. I need not repeat what I said a few moments ago, but there are great difficulties in connection with giving this relief in the way it is being done. With a statute, retroactivity would be possible immediately. The minister has received the opinion of the justice

department and he finds that the question of retroactivity hangs in the balance. I take it from his remarks that he is not very hopeful of the matter being decided in favour of the widows. This is a step in the direction in which many of us have asked the government to move in the past. I suggest that in the time which will elapse between now and next session the minister give careful consideration to the matter of which he spoke a few moments ago and endeavour to incorporate, not only this token movement but a comprehensive and all-embracing scheme into a statute. Then these women to whom we owe so much will be able to feel grateful to this parliament and to this government for making these so-called concessions. I do not, however, regard them as concessions; they are actually overdue rights. Because they fall into the category of overdue rights, an obligation rests upon the government to a greater extent than it otherwise would. We have at least our toe in the door, and I hope the door will finally be opened for those who are so deserving.

This is a general item and I am wondering when it is up again if the minister will permit any further discussion with respect to this matter. There are members of our group, particularly the hon. member for Davenport and the hon. member for Broadview, who have been active in this matter but who are absent from the house on public business this evening, and there will be others in our group who will want to say something on this item.

Mr. MACKENZIE (Vancouver Centre): There is another item in the estimates on which they can discuss this matter.

Mr. GRAYDON: I am glad to have the minister's assurance on that point because members of this group have taken a very active part in trying to secure pensions for these widows. I know the minister is anxious to get this item through, and I shall be glad to expedite its passage with the reservation I have made and the assurance just now given by the minister.

Mr. McLEAN (Simcoe East): Mr. Chairman, I had not intended to speak on this item, but in view of suggestions that have been made from various parts of the house that the government is acting in this matter only after a great deal of pressure and suggestions that the government should go much farther than they have gone, I think in fairness to the minister and the government a few points should be brought to the attention of the committee.

In 1941 a committee on pensions was set up consisting entirely, I think, of veterans of the last war. They certainly could not be said to be unsympathetic to the interests of the veterans of the last war or of this war. I wish to draw attention to the fact that the government in the action they are taking have gone much farther than any recommendations made by that committee. Those recommendations have already been mentioned. That committee recommended that the government consider the advisability of extending the benefits of the War Veterans' Allowance Act to two classes of widows: widows of pensioners of the last war and, second, widows of recipients of the war veterans' allowance. Pensioners of the last war are men who are suffering from a disability incurred as a result of their service during the war. And who are recipients of the war veterans' allowance? Men who become unable to work and are in necessitous circumstances, but whose disability cannot be proved to be due to war service. Because of the fact that they served in a theatre of war—and that is an important condition—a legal presumption was established that their disability was due to the war. Men who are in receipt of a pension because of war disability were also eligible for the war veterans' allowance. As I say, that pension committee recommended that the government consider the advisability of extending the benefits of the War Veterans' Allowance Act to widows of these two classes of men—the widows of men who are suffering war disabilities and the widows of men who had served in a theatre of war and who were suffering a disability which it was legally presumed was due to the war, although that could not be proved. That is as far as that committee went, after hearing the representations of the organizations which spoke on behalf of the war widows. In fairness to the minister and to the government I think that should be pointed out more clearly than it has been because the minister himself was brief in his remarks.

The minister will correct me if I am wrong, but I take it from the wording of this item that the benefits of the order in council which will be passed are not to be restricted to widows of men who fought in a theatre of war or to widows of men who had a pension, but will apply to the widow of every man who was in the army, the navy or the air force during the last war.

Mr. GREEN: That is not what the minister said.

Mr. McLEAN (Simcoe East): Here is how the amended item reads:

To provide hereby, notwithstanding anything contained in the Consolidated Revenue and Audit Act or in any other statute or law, for the payment out of the consolidated revenue fund, of compassionate allowances awarded by the war veterans' allowance board to widows of persons who served in the naval, military or air forces of Canada during the war, 1914-1918, who are in necessitous circumstances. . . .

And so forth. The minister will correct me if I am wrong, but my reading of that item is that these benefits are not limited to the classes of people to whom the recommendations of the pensions committee apply. The benefits of the order in council will apply to the widow in necessitous circumstances of every man who is in the army, navy or air force.

Mr. GREEN: The minister said just the opposite when he made his statement.

Mr. McLEAN (Simcoe East): Perhaps I did not hear what the minister said, but that is the meaning as I read the item. Be that as it may, the government has gone the full distance recommended by the committee which, as I have said, consisted entirely of veterans of the last war.

I have just one other point to make. I think this item will pass without any opposition because it is a popular move which will commend itself to the members of the house, but I want to join with the hon. member for Vancouver South in his suggestion that this be done by statute rather than by an item in the estimates, but not for the reasons he gave. He suggested that this should be incorporated in a statute in order that it would be permanent. I doubt the wisdom of taking this action by way of an item in the estimates and by order in council, but for a different reason. I am not one of those who have been raising general objections to action by order in council. Those who have raised that objection have been very general in their objections and they have not to my knowledge pointed to many specific instances. I know that especially in war time there is a great deal of action that must be executive action recorded by order in council; but it does seem to me that when we have something that is purely legislative such as this, it would be advisable, instead of taking this action by an item in the estimates and by order in council, to have brought in an amendment to the War Veterans' Allowance Act. It may be that the government has felt that there would be no objection to proceeding in this way and that the quicker and easier way was to put an item in the estimates instead of bringing down a bill and having it go through its first, second and third readings. But I suggest that the present procedure is a dangerous precedent and I am not much impressed by the suggestion of the minister that this is more or less of an experiment.

Mr. MACKENZIE (Vancouver Centre): I never said that. What I did say was that we would like a few months to discover any flaws there might be in administering this, and that after the experience of a few months we would introduce legislation.

Mr. McLEAN (Simcoe East): I stand corrected in my statement of the minister's words. I did not state them quite correctly. The idea is, as he says, that by experience we shall find out what weaknesses there are and shall then be in a better position to enact legislation. But if that principle were to be adopted in connection with all legislation, I do not know where we would land. If something which is purely legislative is to be enacted first by the government by order in council, and an item in the estimates, and then, after people have had the benefit of it for a month or a year, legislation making it permanent is to be brought before the house, I think the method of procedure is objectionable. I know the session has been long and we are very anxious to get through; nevertheless I believe, not for the reason expressed by the hon. member for Vancouver South but for a very different reason, that it is a wrong principle that something which is purely legislative should be decided upon by the cabinet, passed by order in council, and be an item in an estimate, instead of an amendment to the act being brought in.

That was not what I rose to say. I rose to point out that, in taking the action they have taken, the government have gone as far as, and if my interpretation of the amendment is correct, much farther than, any recommendation made by the pension committee. If my reading of the amendment is correct, they have introduced a new principle into the Pension Act. They are establishing a new class of beneficiaries, namely the wives of men who served in the armed forces, irrespective of whether their husbands had a war disability or whether they served in a theatre of combat.

Mr. CASTLEDEN: It is now twenty-five years since the armistice of 1918. I think the mark of the greatness of any nation is the manner in which it treats those of its citizens who are unable to take care of themselves, and especially those who are related to the ones who were willing to sacrifice and do all they were asked to do in the war. It is regrettable that it has taken a quarter of a century to bring down what I call token legislation of

this kind, although we are glad that it is here. Yet I cannot understand what logical reason can be given why this grant should be limited to widows of pensionable veterans. Why should not any woman who is the widow of any war veteran be allowed, if she is in necessitous circumstances, to have this grant? Is there any reason? Why does this not apply to the widow of any veteran? I should like the minister's answer. If there is a logical answer, I am sure the committee will be glad to have it. I also wish to know, if the figures are here, how many such persons there are in Canada—that is, widows of pensioned veterans, and also widows of veterans—and whether this grant will be sufficient to take care of all those who may make application.

I regret that the administration is to be pretty well by order in council. If the minister has in mind any of the terms of the order in council, I am sure the committee will be glad to hear them. Surely twenty-five years of administration by the Department of Pensions and National Health should enable that department to bring down the proper type of legislative regulation and present it to this house so that hon. members can be assured the law will be administered so as to bring relief to those who have so long deserved it. That the widows of soldiers of the last war should be in need at all is a sad reflection. I do not suppose that any of them are under fifty years of age, so that in a few years they will be eligible for the old age pension and this provision will not apply to them.

Mr. MACKENZIE (Vancouver Centre): The first question, I understand, was, why was not the legislation applicable to the widows of all those who served. Is that right?

Mr. CASTLEDEN: Yes.

Mr. MACKENZIE (Vancouver Centre): Of course the principle of this estimate is to grant the same privileges to the widows as to the veterans who were eligible for the war veterans' allowance. The principle of service pensions as such has never been admitted in Canada nor, so far as I am aware, in any other country. The provision of the regulations which will follow will be that the word "veteran" will mean in the regulations exactly what the word means in the War Veterans' Allowance Act.

Mr. GREEN: Will that cover the men who served in the British forces?

Mr. MACKENZIE (Vancouver Centre): The limitations will be exactly the same as they are in the War Veterans' Allowance Act.

[Mr. Castleden.]

Mr. GREEN: Of course the limitation in the War Veterans' Allowance Act is wide enough. I refer to section 2, subsection (j), paragraph (ii):

> Any former member of any of His Majesty's forces or of any of the forces of any of His Majesty's allies who was domiciled in Canada at the time at which he joined any such force for the purpose of the war and who served during such war in a theatre of actual war. . . .

It also covers the Canadians who served in the South African war. As I read this vote, neither of these categories is covered.

Mr. MACKENZIE (Vancouver Centre): In the regulations the word "veteran" will mean exactly what the word "veteran" means as defined in the various subsections of the War Veterans' Allowance Act.

Mr. GREEN: In other words, a man who served in the imperials will be covered if he had a Canadian domicile?

Mr. MACKENZIE (Vancouver Centre): Yes, if he is eligible under the provisions of War Veterans' Allowance Act. But there was quite a strong public opinion in this country against making the provisions of the act available to imperials who served in a theatre of actual war unless they were previously domiciled here, when such provisions were not available to Canadians who had served in England.

Mr. POULIOT: The minister shall bear in mind that no man who has lived in the mud and passed winters in the snow and the cold can be normal when he resumes his civilian life two, three or four years after enlistment. It is impossible. And because a soldier—and when I say "a soldier" I include the three branches of the armed forces—is considered fit at the time that he is discharged, it is impossible for him to get any superannuation afterwards, because he cannot establish that the cause of his sickness is on account of his military services. This is the answer that I have received hundreds of times. It is not fair, because I know returned men who suffer from rheumatism—

Mr. MACKENZIE (Vancouver Centre): Mr. Chairman, I am sorry, but I must rise to a point of order. My hon. friend is discussing pensions. This has nothing to do with the Pension Act; it is a special allowance under the provisions of the War Veterans' Allowance Act for certain classes of widows. We have in the estimates another item dealing fully with pensions and veterans' allowances.

Mr. POULIOT: Well, I will ask the minister not to rise before I have finished explaining my case. I know he is very impatient when I

speak. If he wants me to tell him what I think of his department, I will tell him in very clear language, and I want him to be patient.

Mr. MACKENZIE (Vancouver Centre): Go ahead.

Mr. POULIOT: Yes, surely. I want him to be polite. He must remember when everybody was against him I was the first one to speak in his defence.

Mr. MACKENZIE (Vancouver Centre): I am not taking any lessons in politeness from the hon. member for Temiscouata. There is not a more impolite man in the house than the hon. member.

Mr. POULIOT: I have no lesson to receive from the minister or from any other minister. And now I fight for the under-dog.

Mr. PINARD: You should have got your lessons before.

Mr. POULIOT: I will ask the hon. member for Ottawa East to agree with the hon. member for Ottawa South before he interrupts me when I speak.

An hon. MEMBER: "East" and "West"; there is no "Ottawa South."

Mr. POULIOT: Besides that, the hon. member for Ottawa East shines more by his silence than when he talks.

The CHAIRMAN: Order. The hon. member must confine himself to the item before the committee.

Mr. POULIOT: We may discuss the matter in St. Anne's hall before some returned men. I am speaking of men who receive nothing, and I am urging the case of those who depend on the men. The dependents are not only widows; they may be mothers or children, when the mother is dead, or other relations. In my opinion this item is not large enough, because it does not cover the cases that should be provided for in all humanity.

I have written to the Department of National Defence with regard to one man. The facts of the case are all set out in that letter. This is a poor fellow who was driving a baker's wagon delivering bread. He had only his skin and bones, no flesh, the leanest man I have ever seen on earth, very delicate. He used to drive a wagon and he was called to the army. A doctor's certificate was given showing that his health was exceedingly poor and that he was suffering from hyperchlorhydria. He was taken into the army, but he suffered all the time. He went into the hospital and received the last rites of the church—

Mr. MACKENZIE (Vancouver Centre): I rise to a point of order. The item we are discussing relates to widows from the great war, a particular class of persons, and my hon. friend is not making any statement that is germane to the item.

Mr. POULIOT: I am submitting that the item is not wide enough. It should be wider and should apply not only to war widows, legitimate or not, but to other persons, the mothers of those in the army and also children. I believe that the duty of the state is to look after the men who have been suffering by reason of military duty. It is a real shame to think that twenty-five years after the first war we still have a veterans' problem to deal with, and that problem has not yet been solved.

Speaking to the point of order, let me say that my story is not finished. I have two or three sentences to add to this case, and then the minister will realize that I am perfectly in order when I ask that the item should be broadened in order to cover the field I have indicated. Have I not the right as a member of parliament to say that this item is wholly unsatisfactory, that it does not cover cases that are most critical, and that from the human and humane point of view the minister should broaden it to cover at least some essential cases? That is my view, and if I have not the right to say that to-night, we might as well close parliament and all go home, and let the ministers decide what they wish by order in council.

I am speaking as a man who has been offended by the way in which some returned men of the last war, and some men in the army now, have been treated by the army, and I am going to discuss the case of a mother who was deprived of all help because, by false pretences, they succeeded in getting the signature of a young man to his resignation from the army. Telling him that he was getting a pension, by having him sign that paper under false pretences they succeeded in obtaining his resignation, by that action depriving his mother of the allowance to which she was entitled.

The CHAIRMAN: The minister has raised a point of order. The hon. member for Témiscouata must realize that the item under discussion deals with allowances to widows of persons who served in the naval, military or air forces of Canada during the war, 1914-18. I think it should be possible, after the statement made by the minister, for the hon. member to stay within the limits of that item. I must follow the rules. Other

opportunities will be afforded for the hon. member to bring up the matter he is now discussing.

Mr. POULIOT: I abide by your ruling, Mr. Chairman. I respect the Chair.

Let me now take up the matter of a returned man of the first war. This man was shell-shocked. I have sent that case to the minister. This man receives $40 a month. He can hardly speak. What does he do? He sells cards for ten cents—

Mr. MACKENZIE (Vancouver Centre): I must rise to a point of order. There is an item in the estimates dealing with pensions for men of the last war, and an appropriation for this war. I submit that the hon. member is out of order.

The CHAIRMAN: The point of order is well taken. The hon. member for Temiscouata realizes that the matter he is discussing is not relevant to the item before the committee.

Mr. POULIOT: I am not going to argue against your ruling, Mr. Chairman, but I will tell you one thing. The minister of pensions has never understood the rules of the house. However, I will not discuss that case any farther. There are items covering different things; there are items for the veterans of the last war and there are items for the men of this war. Why have we this item before us to-night? Because those two items were not adequate. If they were, why should we have this one? I am arguing that this item is not enough; it does not cover all the cases that should be remedied. I make this statement on behalf not only of the soldiers of my county, but of the soldiers in all parts of Canada, who complain that they are not receiving fair treatment. Is this item only for the female sex? Are we to be told that it is only women who shall enjoy it? In the last war there were very few women except nurses, and what the women received they received through their husband's pay and allowances granted to them. And now we have to fight for these cases, and it is a very hard fight because it is impossible to get any satisfactory answer from the department as it is at present organized.

For a time the board was giving pensions, just the same as the waters flood the fields. To-day conditions are different, and it is hard to get anything. When a man gets a few dollars a month, a meagre pittance, he is considered well off. It affects the condition of the mother; it affects the condition of the children; it affects the condition of the whole family. And it is on behalf of the starving families of many soldiers, and especially on behalf of the classic case of Peter Leclair who wrote to everybody, from the Prime Minister down, seeking redress of his wrongs, that I ask the minister to reconsider that. I say this in the best possible spirit. So long as we are here a society of mutual admiration, making kotows to each other, we shall get nowhere. Soldiers will be most indignant at the way things are going on. How is it we cannot have redress of a wrong on behalf of a poor widow who has been deprived of her rights, when we think of men who get $50 a day for living expenses as dollar-a-year men? And that does not even come before us. There are more allowances for them. We are told it is not under the item. We will take it under the item and wait for it one hour, two hours. I put all these cases before the conscience of the minister and the conscience of my hon. colleagues. It is a shame that in a country like ours we see many soldiers who can hardly walk, who have been shell-shocked, who walk with crutches, who are one-eyed, and who have lost an arm or a leg. We see them in the streets. Sometimes they are begging. The state should have provided work for those who were able-bodied, and should have looked after the returned men who were unfit, whether—

The CHAIRMAN: Order. The Chair has some power if he wishes to use it. I have called the hon. member for Témiscouata to order twice, to have him realize that he is not speaking to the item before us. He knows as Chairman of committee I would be the last man to deprive him of the privilege of speaking his mind. But there are some rules which of necessity I must follow. One rule is that in committee of the whole we must necessarily keep to the item we are discussing; otherwise, we would not make headway. I believe I am voicing the sentiment of an overwhelming majority of the members of the committee when I say that we should keep within the item we are discussing; otherwise I shall have to use the powers I have vested in me.

Mr. KNOWLES: I should like to say another word about the effective date of the payments to be made under the item we are now discussing. I do not feel I can accept as final the word of the minister given a short time ago, when he said he thought there would be no legal power to make payments retroactive to April 1. I wish to say that in putting up a struggle for this point I have no notion that the paying of these widows for the last two or three months will at all make up for what they should have

been receiving over a good many years. It seems to be very niggardly and unfair that these women should have to suffer delay in receiving these payments on account of our delay in reaching this item. I shall call as witness to that point the Prime Minister. Before doing so, however, may I point out that on March 26 the house voted one-sixth supply for the fiscal year commencing April 1, 1943. Then on May 17 we voted another sixth of the year's supply, which means that at all times we have had supply in the treasury, if I may put it in that way.

On May 18, after we had thus voted four months' supply, I asked on the orders of the day whether it would be possible, in view of the supply which had been voted to begin making these payments. The Minister of Pensions and National Health replied that legal advice had been obtained indicating that this would not be possible. A little later on, by way of further response to my question, the Minister of Finance made this reply, as reported at page 2757 of *Hansard:*

> May I point out that whenever interim supply is asked for the opposition always reserves the right to oppose any item; therefore the granting of interim supply does not carry with it the sanction of any particular item.

I point out to the minister that if there was anything to that right of the opposition to oppose any item, the opposition also has a right to take a positive stand, and we are unanimous in urging him to make these payments retroactive at least to the beginning of the present fiscal year.

I said a moment ago I would call the Prime Minister as my chief witness. I refer hon. members seriously to the debate which took place in the house on April 20 and 21 with respect to the voting of money for parliamentary assistants to the ministers. Hon. members will recall that at that time we voted $40,000. The matter went through the committee stage and the various readings on April 20 and 21, and finally passed on April 21. That day an hon. member asked the Prime Minister when these salaries of $4,000 a year to the parliamentary assistants would begin. As reported at page 2397, the Prime Minister replied:

> The payments will start from the date of the appointments, certainly; but I would say to the committee that some hon. members have been giving a great deal of their time to the work of some of the departments and at a later time, possibly in a supplementary estimate, I may ask that they be given some consideration for the time already spent in that way.

Then, a little later on, on the same day—

The CHAIRMAN: I must direct the attention of the hon. member to the fact that he cannot quote from speeches during the present session, unless those speeches deal with a problem we are now discussing. I refer him to standing order 41, citation 293 (a):

> . . . that a member, while speaking, must not:
> (a) refer to any debate of the same session on any question not then under discussion.

I would ask the hon. member to observe that rule.

Mr. KNOWLES: I accept your ruling, Mr. Chairman. However, I shall refer to the sentiment then expressed in the same debate by the Prime Minister when he said, in effect, "I am sure hon. members of this house would not want these parliamentary assistants to fail to get consideration for what they have done already, through the failure of this house to get to the appropriate item in the estimates."

Mr. Chairman, I submit that the position is exactly the same in the present instance. Surely hon. members of this house do not want these women to be deprived of $40 or $60 each to which they are entitled, merely through a failure of the house to reach an item in the estimates. If it was possible to make payments on account of $4,000 salaries to parliamentary assistants retroactive to April 1, in addition to their indemnities, even though the amounts were not passed in the house until April 21, then although I am not a lawyer I cannot for the life of me see why the same thing cannot be done for these women.

As a matter of fact, there is another reference in the same debate I would have read, had I been in order. However, I shall refer to it only from memory. The Prime Minister said that some of these parliamentary assistants had been giving assistance to the ministers during a period even prior to the commencement of the present fiscal year. He said that at a later date he might ask the house to vote a supplementary estimate to make possible payments on account of salary to those parliamentary assistants for the period prior to April 1, 1943.

I wish to make it very clear that I am not objecting to the parliamentary assistants receiving pay for the time they worked. I agree with the principle; in fact, we in this group object to the principle that is followed all too often, of having men work for the government for nothing or for a dollar a year. We claim that is the most costly kind of service one can obtain. We accept the principle with respect to these parliamentary assistants; but if it is possible legally to pay these parliamentary assistants for what they did prior to April 1, as I interpreted the Prime Minister's

remarks, then I impress upon the minister with all the persuasion of which I am capable that I see no reason why the same thing cannot be done for these widows. I ask him to go to battle on this for all he is worth. It will not make up for what they have been denied for twenty years, but the least we can do now is to see to it that those who are entitled to this pension get it back to April 1.

Mr. MACKENZIE (Vancouver Centre): I may repeat what I said before; apparently I did not impress it upon my hon. friend. I have already taken up the very point which is now in debate. The same idea occurred to me that has occurred to him.

Mr. KNOWLES: Did the minister take up with the Department of Justice—

Mr. MACKENZIE (Vancouver Centre): Payments cannot be made until the estimate has been passed by this house. I have explored and am still exploring the question of retroactive payments, and I can tell my hon. friend that if it can be done I shall recommend most strongly that they be paid in that way, but I doubt very much whether I shall be able to do that.

Mr. KNOWLES: Did the minister take up with the Department of Justice the point I have just raised, namely the retroactive payments to the parliamentary assistants? The Prime Minister said that they would be paid.

Mr. MACKENZIE (Vancouver Centre): There is an opinion from justice, an opinion from other law officers and an opinion from the chief treasury officer, all to the same effect. I may be able to make such recommendations in future as may overcome some of these objections. Certainly I shall do my best, but I am afraid I may not succeed, so that I want to warn my hon. friend.

Mrs. CASSELMAN: This extension of the pension to the widows of war veterans is a forward step, and I am sincerely glad that it has been taken. I know personally some of the women who have been trying to bring this about, and even this small amount will be of great help to the women who receive it. I want to urge that it be administered liberally; that is really the main thing I wish to say. I hope those who have charge of the administration will remember that this measure is for the benefit of those who are the recipients of it. While there must be investigations, I hope those investigations will be carried out as fairly, courteously and generously as possible. We really need far more trained workers among those who come into contact with the individual pensioners, because sometimes the good intent of a measure is largely negatived by the way in which it is carried out. I would suggest that quite a number of these administrators should be women, and that if the necessary qualifications can be found in women who have suffered similar losses, they be given consideration above other applicants.

Mr. GILLIS: There are a few points I should like the minister to clarify. I wish to compliment him upon being successful in bringing this matter before the committee at the present time. I know it has been a battle for twenty-five years on the part of some of the members of this house, and I think the minister has always been sympathetic. I know when the pensions committee considered this matter two years ago there was no difficulty in having the present minister of pensions agree to do what he could in the matter. I think the joker behind the scheme has been the treasury board, and I hope he will be able to persuade them along the lines suggested by the hon. member for Winnipeg North Centre.

The hon. member for Edmonton East very well said a moment ago that the test of any legislation is in its administration, and in that connection there are one or two points I should like to put to the minister now. In the first place I understand that this grant is to be administered in accordance with the provisions of the War Veterans' Allowance Act, and that the widows will be subject to the limitations of that act. I would interpret this to mean that only the widow of a veteran who served in a theatre of war, or a veteran who is receiving a five per cent pension and has attained the age of fifty-five years, will be entitled to this grant. Those limitations will cause a great deal of disappointment to a large number of the widows of veterans of the last war who have been actively carrying on a fight for the last fifteen years at least to bring about that which we have under consideration at the present time. I think the general impression of hon. members is that all widows of veterans who served in the last war and who are in necessitous circumstances will immediately come under this grant, but such is not the situation. As I pointed out a moment ago, it is only the widows of veterans who served in a theatre of war, veterans in receipt of pensions and who have reached the age of fifty-five years.

Mr. MACKENZIE (Vancouver Centre): Or who are incapable or likely to be incapable of earning a livelihood; the same provision as we have in the War Veterans' Allowance Act.

Mr. GILLIS: That is right. I believe the veterans of the last war, who filled premature

graves, who were not able to prove entitlement to pension and who did not come under the provisions of the War Veterans' Allowance Act were the subject of the main fight that has been carried on during the years, and I believe hundreds of widows who are in necessitous circumstances will not be able to benefit under this grant. When this measure was brought in I had hoped that the government was making an appropriation which would apply to widows who were not covered by the War Veterans' Allowance Act, or the Pension Act, because those who came under either of those acts received some measure of protection and some consideration.

Mr. MACKENZIE (Vancouver Centre): Only for twelve months.

Mr. GILLIS: That is right. This provision is serving a useful purpose; there is no doubt about that, but I think it should be extended to include the widows of veterans of the last war who saw service and who for years have been living on the border-line of starvation; not old enough to qualify for old age pensions, in many cases physically incapacitated, with no provision of any kind for their care. I think the minister might still press for administrative latitude, where there are extenuating circumstances, regardless of the provisions of the War Veterans' Allowance Act.

Mention was made of the means test. In my opinion the application of the grant on the basis of necessitous circumstances is much preferable to the meritorious service provision in the old act. Under the old act, unless you were a general and had won the Victoria Cross your widow could never qualify for the grant.

I have associated for a long time with those who administer the Pension Act and the War Veterans' Allowance Act, and I have always found them sympathetic and feel sure that they will apply this provision as it is intended to be applied. A large number of applications have been filed on the basis of meritorious service, and I should like to know if these will be considered, or if new claims will have to be made. I have tried to straighten out many cases under the other section, and I am wondering now if we shall have to go back over the ground and make other applications.

Mr. MACKENZIE (Vancouver Centre): If eligibility exists under this estimate, the case will be considered.

Mr. GILLIS: There will be a reexamination of the case?

Mr. MACKENZIE (Vancouver Centre): Yes.

Mr. CASTLEDEN: I asked how many applications had been made and what was the estimated number of applications it was expected would be made.

Mr. MACKENZIE (Vancouver Centre): I do not know how many applications have come in, but the estimate is based upon 1,836 applications for this year.

Mr. CASTLEDEN: How many widows are there in Canada? Are there any statistics on that?

Mr. MACKENZIE (Vancouver Centre): I have not those figures under my hand at the moment. We have the number of widows of pensioners, but I do not think we have the number of widows of veterans.

Mr. CASTLEDEN: How many allowance cases are being paid at the present time?

Mr. MACKENZIE (Vancouver Centre): A total of 24,192.

Mr. CASTLEDEN: No widows are receiving pensions as yet?

Mr. MACKENZIE (Vancouver Centre): Just an allowance for a period of twelve months after the decease of the recipient.

Mr. CASTLEDEN: Has any arrangement been made to enlarge this grant in case it is not sufficient to cover the number of applications made which may be considered eligible?

Mr. MACKENZIE (Vancouver Centre): We can always do that by a supplementary. Financial provision will be made for the number who will qualify under the estimate.

Mr. CASTLEDEN: When shall we receive a copy of the regulations under which this will be administered?

Mr. MACKENZIE (Vancouver Centre): As soon as they are passed. I hope to have them passed next Monday, and they will be tabled the next day.

Mr. QUELCH: I understand that this legislation will apply to the widows of soldiers who were in reecipt of war veterans' allowance on their death, or who had made application and who would have received it had they lived?

Mr. MACKENZIE (Vancouver Centre): And who possessed the necesary military qualifications to receive a veterans' allowance.

Mr. QUELCH: Assuming that a soldier was fifty-four years old when he died and was therefore debarred from receiving a war veteran's allowance, would his widow be

eligible for this on the sixtieth anniversary of her husband's birth, provided the circumstances warranted it?

Mr. MACKENZIE (Vancouver Centre): There is no automatic provision, but I shall be very glad to give that matter consideration.

Mr. GREEN: If a veteran is a widower and has a child or children he is entitled to $40 a month instead of $20. Will the same provision apply to widows?

Mr. MACKENZIE (Vancouver Centre): No.

Mr. GREEN: In other words, if she has a child or children will she get a double allowance?

Mr. MACKENZIE (Vancouver Centre): No; there is no provision, but it is a point we can explore further.

Mr. GREEN: If the War Veterans' Allowance Act is followed, then certainly a widow with a child or children should get $40.

Mr. MACKENZIE (Vancouver Centre): I shall be glad to discuss that further.

Mr. GREEN: Is there any reason why provision should not be made to give free medical treatment to these widows, the same as the recipients of war veterans' allowances get?

Mr. MACKENZIE (Vancouver Centre): They do not get it.

Mr. GREEN: Under class 18.

Mr. MACKENZIE (Vancouver Centre): Only special cases.

Mr. GREEN: The recipient of a war veterans' allowance gets treatment under special conditions. Is there any reason why the same provision could not be made for the widow?

Mr. MACKENZIE (Vancouver Centre): Of course any veteran is entitled to treatment under class 18, but the endeavour here is to give the same benefits to the widow as were conferred on the recipient under the War Veterans' Allowance Act.

Mr. GREEN: There is no intention of giving the widow free medical treatment?

Mr. MACKENZIE (Vancouver Centre): No.

Mr. GREEN: The minister said a few minutes ago that the widow of any veteran who was covered by the War Veterans' Allowance Act could get this payment. As I read the vote, it refers only to the widows of veterans who served in the war of 1914-18.

[Mr. Quelch.]

I think the minister should make it perfectly clear whether or not the widow of a South African veteran can get this allowance.

Mr. MACKENZIE (Vancouver Centre): That is certainly the intention, and it will be made clear in the regulations.

Mr. ROSS (Calgary East): I wish to compliment the minister upon the sympathy he has shown to the widows of war veterans by providing this vote in the estimates. These people are deserving, and I should like to see more done for them. I do not think this goes far enough, but it is a step in the right direction.

Amendment agreed to.

Item as amended agreed to.

POST OFFICE DEPARTMENT

240. Departmental administration, $730,858.

Hon. W. P. MULOCK (Postmaster General): Mr. Chairman, I should like to make a few remarks on the subject and give a general idea of the financial position of the department. In presenting the estimates of the Post Office Department for a period overlapping the fourth and fifth years of the war, I have to report that this service is continuing to the best of its ability to carry out its obligations to the public and its cooperation with other government bodies referred to in the statement which I made to the committee in July last. I have no desire to occupy time unnecessarily by again going over the ground traversed on that occasion, but it may not be out of place to point out that this cooperation has kept pace with the expansion of functions and activities, such as rationing, which has taken place during the past year.

Taking up first the financial position of the department as shown by revenue and expenditure, may I point out that in presenting the post office estimates last year I was able to report receipts for 1941-42 which up to then constituted an all-time high for the department. For 1942-43 the report is the same. The gross revenue shows an increase of $3,697,979 over 1941-42, or 6·6 per cent. The net revenue increased by $2,874,890, or 6·24 per cent. Increase in revenue merely reflects increased mailings. The increase mentioned does not indicate the extent of increased mailings, because it is necessary to consider also the postage value of franked mail which in 1942-43 showed an increase of more than $700,000 over 1941-42. Augmented mail volume necessitates added operational costs—more staff, more salaries and bonus, more space in railway cars, on planes other than T.C.A. and on steamboats, and more expenditure for stationery and equipment of all kinds.

If we now look at expenditure figures for a moment we find that there is an increase over 1941-42 of $3,240,118, or 12·8 per cent, and I wish to call the attention of the committee to the differing conditions in the two years under review.

The first point of difference is in the cost of living bonus. In the months of April, May, June and July of 1941, straight salaries only were paid. Commencing August 1, employees under $2,100 per annum received the benefit of an 11 per cent cost of living bonus.

In 1942-43, the cost of living bonus was operative throughout the whole year, 11 per cent being the rate from April to July inclusive and 17 per cent for the remaining eight months.

So that in comparing the two years it is necessary to take into account the fact that during the first four months of 1942-43 an 11 per cent bonus was paid, whereas during the same period of 1941-42 there was no bonus, and that during the remaining eight months of 1942-43 the bonus rate was 54·5 per cent higher than during the same period of 1941-42. Translated into figures, the bonus payments in 1941-42 amounted to $1,039,369, while in 1942-43 they were almost $2,105,000. Even if there had been no increase in the bonus rate, the expenditure under this heading in 1942-43 would still have been approximately $500,000 greater than in 1941-42.

The second point of difference is the increased volume of mail. Expenditure from the railway mail service vote alone in 1942-43 shows an increase of nearly $600,000 over 1941-42. A large part of this increase is in mail service by railway, but a greater part is in mail service by steamboat. As explained last year, ocean conveyance has been wholly provided for by the Post Office Department since subsidies were withdrawn by the Department of Trade and Commerce. Seaborne mail now consists largely of letters and parcels to troops overseas and letters from them to relatives and friends here.

To illustrate the situation more clearly, may I point out that prior to the war post office estimates provided to the extent of only about $325,000 for mail service by water. Hon. members will note that the estimates for 1943-44 contain provision to the extent of $2,500,000.

A third point of difference is in mail service by air and by ordinary land conveyance. The expenditure from this vote in 1942-43 was $988,000 greater than in 1941-42. This is due to two factors, first the expansion of Trans-Canada and other air services to meet the needs of the public and war conditions, and second, rising costs of service by ordinary land. These are factors over which the department has no control and which must be provided for if service is to be maintained.

The estimates for 1943-44 show an increase of slightly over $3,000,000 as compared with 1942-43. On examination it will be found that this increase is very largely due to the categories of expenditure I have already mentioned, namely, cost of living bonus, mail service by railway and steamboat, also mail service by air and ordinary land conveyance.

With the exception of these items the estimates for this year are practically on a level with those of the preceding fiscal period.

In conclusion, I wish to pay tribute to the loyalty and cooperation of all postal personnel under frequently trying war-time conditions. Postal workers, whether they be paid from parliamentary appropriation, postmasters of revenue offices and their assistants, mail contractors and their couriers, are all contributing to the support of our country's war-time financing, and many of them are giving of their spare time in war activities of various kinds. I am glad indeed to take advantage of this opportunity to express on behalf of the government appreciation of the services rendered by postal personnel, whether acting in their official capacities or as private citizens of this dominion.

Mr. NICHOLSON: I wish to congratulate the minister upon the statement he has just made and to associate myself with the tribute of appreciation he has paid to the members of the post office staff right across this country for performing such valuable services in our national life under very trying conditions. I think it is remarkable that the Post Office Department has been able to give the service it has been giving to the people of Canada and to our armed forces scattered over the entire world with so very few complaints.

I have a suggestion I wish to make in the hope that consideration will be given to it by the minister between now and next year. Of course, we always have to speak in terms of improving these services. It amazes me that the Post Office Department is able to give as good a service as it does with political patronage as it is in this country. I should like the minister to bring in a recommendation while he holds office to set up a public service utility to administer the handling of mail along the lines of the operation of the Canadian National Railways, removing the service entirely from political patronage. I say this as a member of the opposition, expressing a good deal of sympathy for members of the govern-

ment when I read some of the sessional papers and realize how embarrassed the members must be when they recommend the appointments that some of them do, and then have the grief that frequently follows.

I have here a sessional paper in connection with the appointment of a postmaster at Endeavour, in my constituency. I would not take the time to discuss it if it were not a typical case.

Mr. MULOCK: Perhaps the hon. member would not mind waiting until we reach the next item, 241, which deals with post offices. The item before us deals with the general administration of the department.

Mr. NICHOLSON: I was going to cite this case to support my argument but if it will accommodate the minister I shall be glad to resume my remarks when we reach the next item.

Mr. MULOCK: Thank you.

Mr. ADAMSON: I understand that the Post Office Department handles the registration cards. When these forms are sent out to the individual post offices, what is the machinery for registering the people? Are they counted or numbered?

Mr. MULOCK: The names are registered through to the local registrar of the district concerned.

Mr. ADAMSON: Suppose a post office gets 100 or 150 of these forms. Does each individual postmaster have to account for each one of those forms? They are not numbered yet, are they?

Mr. MULOCK: My officials advise me that the postmasters have to account for every form.

Mr. STIRLING: The minister has referred to the increase in revenue, both gross and net. Would he indicate what sum he anticipates receiving from the extra cent postage, dividing it between land and air?

Mr. MULOCK: It is a little early to give any definite information, but it would seem that about $9 millions is indicated at the present time from the one-cent revenue tax placed by the Department of Finance on the post office.

Mr. STIRLING: Including both land and air?

Mr. MULOCK: Yes, all letters.

[Mr. Nicholson.]

Mr. STIRLING: Can he divide it? He is not in a position to say what portion of that will be derived from the seven cents for the air letters?

Mr. MULOCK: Not as yet, no.

Mr. STIRLING: Could the minister give any general statement with regard to the condition of airmail overseas? Is it received at present at both ends, and if it is, can he give any explanation of the extraordinary delays which occur, particularly in the mail coming westbound?

Mr. MULOCK: Yes, I think I can give the hon. member that information. Notices are being sent to the postmasters throughout this country that, commencing immediately, we shall be in a position to take care of the 30-cent half-ounce letter, namely, the ordinary letter which can be handled by air from now on to Britain. Outside of an accumulation on account of very, very heavy mailings of the armed forces letters at Christmas time, there have been very few delays except the ordinary delays which cannot be avoided owing to bad flying weather. I know my hon. friend understands that there have been no delays in the airgraphs. While we are on the point of airgraphs, I might say that we have been able to speed this service up considerably. At first the messages had to be dispatched to the United States, either New York or Rochester for processing. The Canadian airgraph messages received the same treatment in proportion to the number of United States airgraph messages, which they call "V mail." If a very heavy United States mail arrived, there would be delay in getting some of our airgraph messages processed, and considerable delay did occur. I am glad to be able to report to the committee that that work is now being carried on in Canada and will certainly cut the time by at least forty-eight hours, and in many cases, such as delays on account of heavy United States mailings, a great deal more than that.

That relates to mail going to Britain. I would advise the hon. member, although I think he knows, that the Post Office Department of this country is not responsible for mails until they arrive in Canada. We are not responsible for mail dispatched from Britain; that is the responsibility of the Postmaster General of Great Britain. We are no more responsible for them than we are for mail sent from Mexico or any other part of the world. I know they are having trouble. I think I can say, without giving away any confidences—it is, perhaps, clear to everyone—that there are more planes going to Britain than are returning. That is the

story. It is easier to get mail across whereas the Postmaster General of Great Britain at times finds difficulty in obtaining enough planes to handle all the airmail which is destined for Canada and the United States. There is a considerable accumulation of airmail for Canada. The Right Hon. Mr. Morrison, then Postmaster General of Great Britain, discussed the matter with me when I was in England last year, and explained the difficulty. There was just not a sufficient supply of planes to take care of the airmail, and rather than delay it all the way down the line and hold back further airmail which was coming in, he dispatched a very large amount of it on a fast ship to Canada and so cleaned up the accumulation. Had it not been done in that way there would have been delay for months and months before the accumulation could have been disposed of.

Mr. STIRLING: Can I gather from what the minister has said that the westbound airmail for some time has been coming by direct plane and not by a more devious route?

Mr. MULOCK: I think I can say that it has been coming direct for some time.

Mr. HANSELL: Would the minister give us a little more detail with respect to the revenues that have been received? I should like a break-down of the revenues which are produced. How much do we receive, for instance, as a result of overseas mail, of first-class mail, and of second-class mail? I appreciate the difficulty of answering the question in respect to the extra cent tax. We must, however, be receiving quite a revenue from first-class mail, with the rate of four cents on every letter which is posted.

Mr. MULOCK: I can give my hon. friend the information for the year previous but I cannot give it to him yet for the last year. It will be available in a few months.

Mr. HANSELL: If the minister can give it for the year previous it will help to some extent, but we are getting well on in the year and it would seem to me that a balance could be struck. However, I know we can call for a return at any time. Will the minister give us the latest he has?

Mr. MULOCK: I will give the poundage and the revenue: First-class, 22,000,000 pounds, revenue $26,000,000; second-class, 116,420,000 pounds, revenue $1,853,600; third-class, 33,700,000 pounds, revenue $4,500,000; parcels, 77,000,000 pounds, revenue $6,500,000; local letters, revenue $5,100,000.

Mr. HANSELL: Has the minister the overseas amount? Are the figures separated?

Mr. MULOCK: I can give it in pounds, if that will help the hon. member. I have that information here for the last three calendar years. Letters and postcards: 1940, 124,005 pounds; 1941, 275,268 pounds; 1942, 502,909 pounds. Other classes except parcel post: 1940, 569,665 pounds; 1941, 1,307,797 pounds; 1942, 1,975,698 pounds. Parcel post: 1940, 3,953,260 pounds; 1941, 6,470,089 pounds; 1942, 15,806,645 pounds. Tobacco parcels: 1940, not available; 1941, 2,506,606 pounds; 1942, 4,643,375 pounds. Totals: for the calendar year 1940, 4,646,930; 1941, 10,559,760; 1942, 22,928,627 pounds.

Mr. HANSELL: I thank the minister for the information, and now that I have these figures I am not so certain what to do with them. I was more anxious to get a break-down of revenue than of poundage. The minister said that there were more planes going eastward than coming from overseas. Is that on account of the ferry command, the bombers going overseas?

Mr. MULOCK: Yes.

Mr. HANSELL: In connection with the congestion of mail that might result, coming from overseas, is there a priority in the carriage of mail?

Mr. MULOCK: The hon. member no doubt heard the statement of the Minister of Munitions and Supply with regard to the new Canadian service. That, as I understand it, is for the armed services and official mail and not for civilian use. I understand that is the tenor of the agreement. So far as we are concerned, in our mail going to Britain the first priority is airgraph. In airgraph we can move a tremendous number of messages in case of congestion. We can get more letters over and have a faster communication than in any other way. Next comes the armed forces' air letter. That is much lighter material or paper than is ordinarily used, and that is second priority. Letters to troops go first so far as we are concerned, but of course there are exceptions. If there were some urgently required government dispatches or something of that kind that would be an exception. There must be exceptions to every rule.

Mr. GRAYDON: I do not know whether the question I am about to ask is pertinent to this item. With regard to the operation of the Post Office Department, there must be some working relationship with the board of censors, because a good deal of censorship is complicated with the mail service and the

Post Office Department generally. I think it would be of interest to the committee if the Postmaster General would indicate the manner in which the two services, that of censorship and the Post Office Department, actually operate in a mechanical way. I would ask him also if the arrangements between the board of censors and the Post Office Department are working satisfactorily.

Mr. MULOCK: I appreciate the interest the leader of the opposition has in this matter, and I can assure him that my officials and those of the war services are getting on very well. In fact, a large number of them, engaged in postal censorship, were formerly postal employees on the payroll of the Post Office Department until a few months ago. I do not want to go into details because I am not dealing with that matter, but if the censors ask the Post Office Department for requirements we try to cooperate and see that they get them. That is about as much as I can say. Censorship does not come under my department.

Mr. GRAYDON: I was not suggesting that it did. But I did want to know something of the relationship that exists between the two branches. Perhaps it would help the minister in giving the details if he could tell me what is the mechanical arrangement in connection with the submission of letters and other documents that go through the post office. Are there representatives of the board of censors in the Post Office Department, or how is the censorship actually worked out mechanically?

Mr. MULOCK: There is a post office and a dead letter office in the censorship.

Mr. GRAYDON: What the minister means may be perfectly clear to him; but does that mean that, so far as letters that go through the ordinary mail are concerned, a proportion of them are censored, or how is the censorship actually worked with regard to the great volume of mail? I can understand that all letters are not opened, but a certain percentage of them are opened from time to time and I should like to know whether any letters are opened that are posted in Ottawa for instance. Are there any opened and examined by the censor? If so, which letters does the censor actually choose for examination out of the great volume of mail, and how is it actually done, having relation to the position of the Postmaster General?

Mr. MULOCK: I have no information.

Mr. GRAYDON: The Postmaster General is leaving the matter surrounded by an air of mystery. When I first asked the question I did so innocently because I did not know that there was any mystery surrounding it. Surely the Postmaster General is in a position to give a simple answer to my question. Are there representatives of the board of censors in any branch of the Post Office Department?

Mr. MULOCK: No.

Mr. STIRLING: Can the minister explain this: I receive letters from Great Britain which reach me through the machinery of the post office. A very considerable number of them, almost all of them, are opened, and fastened up again with a white strip of paper having black lettering on it. Is that done in Great Britain, or in Canada?

Mr. MULOCK: In Great Britain.

Mr. STIRLING: Is anything similar to that done after a letter has been put into the hands of the officials of the Postmaster General in Canada for dispatch to Great Britain?

Mr. MULOCK: That is really a question for the Department of National War Services. The matter of censorship is under the minister of that department. I know when it was under the post office I learned, when talking to officials from Great Britain, that they were not very keen on information being given; in fact they impressed strongly upon officials of this department and upon myself that we should not give information with respect to the details of the system of censorship. I would rather have the Minister of National War Services deal with this matter, because it comes under his jurisdiction, and he will know the general feeling, particularly in Great Britain and the United States, with regard to censorship. I believe they work along nearly the same lines.

Mr. STIRLING: That is good enough for me.

Mr. GRAYDON: Perhaps the minister might have said that he declined to answer my original question for purposes of security rather than the answer he actually gave. My understanding is that the board of censors has representatives in some of the post offices.

Mr. MULOCK: Our employees have to do the physical act, if that is what the leader of the opposition means. They must perform the physical act of moving the mail to the censor; to that extent the hon. member is correct.

Mr. GRAYDON: For the time being I believe that clears up what I wanted to know, namely, the relationship between the board of censors and the Post Office Department. It seemed to me that from the point of view

of mechanics the two departments would have to work closely together, hand in hand, in order that censorship might be carried out. Naturally the details of censorship would not fall within the purview of the minister's department, but rather within the department headed by the Minister of National War Services. I did want to know what degree of cooperation existed between the two departments.

Mr. LaFLECHE: I take it the leader of the opposition inquired as to the mechanics of dealing with the situation. If I might be permitted, I would say that on the staff of the censorship branch there are two senior employees from the Post Office Department occupying top positions, and they see to all the requirements, including those I am sure in the mind of the leader of the opposition. I shall take note of what has been asked tonight, and at a later time I shall give as much detail as I can.

Mr. GRAYDON: I believe that answers one of the questions I had in mind. It seemed to me there must be some liaison of some description between the Post Office Department and the department of the minister who has just taken his seat.

Mr. MULOCK: If I did not make it clear before, may I tell the leader of the opposition that a considerable number of our employees are on loan to the Department of National War Services. These are experienced men, lifelong employees of the department.

Mr. GRAYDON: Are those employees seconded from the Post Office Department to the Department of National War Services? Do they now come within the jurisdiction of the Department of National War Services, so that they are no longer connected with the Post Office Department?

Mr. MULOCK: That is correct, for the duration of the war, while they are retained in the Department of National War Services.

Mr. GRAYDON: How many officials have been seconded from the Post Office Department to the Department of National War Services?

Mr. MULOCK: Twenty employees. Does the leader of the opposition want the names?

Mr. GRAYDON: No.

Mr. ADAMSON: The minister said censorship from Great Britain to Canada was done by British authorities. With respect to mail going the other way, namely from Canada to Great Britain, is it done by Canadian authorities?

Mr. MULOCK: Yes.

Mr. HANSELL: While this item is before the committee I should like to say only a few words. I do not believe one letter of my Canadian mail has been opened by any censor; I refer to any letter written to me in Canada. But, while I make that statement, I must protest against any mail addressed to any member of parliament being opened by anyone—a censor, or anyone else. The basis upon which I make that objection is simply this: A member of parliament is elected by his people. Those people had absolute confidence in him, or he would not have been elected.

Mr. GRAYDON: The majority of them had, you mean.

Mr. MULOCK: I would draw the hon. member's attention to the fact that censorship is under the Department of National War Services.

Mr. HANSELL: All right; I shall take it up when the estimates for that department are before the committee. I send this envelope to the Postmaster General, and I want him to tell me by whom it was censored. It is addressed to "E. G. Hansell, M.P., House of Commons, Ottawa, Ontario."

Mr. GRAYDON: Where is it from?

Mr. HANSELL: England.

Mr. MULOCK: My officials advise me this was censored in England.

Mr. HANSELL: Then let me have it back, please. I was going to add that that letter was from my mother. I receive from her letters every few weeks. I have never had a letter from her since the war started which has not been censored—not one.

Item agreed to.

241. Post offices, including salaries and other expenses of headquarters and staff post offices and supplies and equipment for revenue post offices, $18,475,433.

Mr. NICHOLSON: A few minutes ago I mentioned a case which I am afraid is fairly typical. This is about the fourth of its kind brought to my attention in my own constituency. While Endeavour is not a very large place—possibly very few hon. members have ever heard of it—the people who live there are just as important in the life of Canada as the people who live at Ottawa, Toronto or Montreal. Those people make their full contribution in war time as in peace time. Unfortunately the majority of them are not permitted to travel across Canada to learn what contribution Canada

is making in the present conflict. They are able to judge what we do with our money by our administration of post offices.

This is the case of a postmaster who in April, 1942, was found to be $386 short in funds when the inspector came to check the cash. He signed a statement to that effect. This is the statement:

> I hereby acknowledge that the sum of $386 of post office funds has not been accounted for by me as required by statute.
>
> I am sure that, in failing to produce these funds, I have rendered myself liable to prosecution and to such other action as the Postmaster General may find it necessary to take, in order to protect the public interest.

Mr. GRAYDON: Is that a sessional paper?

Mr. NICHOLSON: Yes, a sessional paper which was brought down on February 10. In due course I want the Postmaster General to state what has been done about this man who admits that he is liable to prosecution when he is short public funds to the extent of $386. The inspector did what an inspector should do in a situation like this; he canvassed the field, selected an ex-service man and appointed him as temporary postmaster. The wife of this ex-service man is a graduate of Queen's university, and she was to be assistant postmaster. In due course the inspector advised Ottawa and Ottawa advised the defeated Liberal candidate in that riding, telling him what had happened and asking him what to do about it. That was on April 27.

Mr. MULOCK: Perhaps the hon. gentleman means that he was asked for recommendations, not for instructions.

Mr. NICHOLSON: I will read the letter if the minister wishes. In any event Mr. Barrie, who was the defeated candidate, replied:

> After having given the matter of filling the vacancy at Endeavour, Saskatchewan, full consideration, I am attaching hereto the nomination in favour of Nelson R. McGregor.

Then he goes on to give Mr. McGregor's qualifications, and this gentleman was appointed on August 8. The people of the community were kept in suspense from April until August, but then the local Liberal association got together and wrote a letter to the district superintendent, as follows:

> We kindly ask you to hold us abeyance the appointment of the postmaster at Endeavour and the appointment of Mr. McGregor. We, as association, recognize that Mr. McGregor is not a residence of Endeavour and do not wish him to succeed Mr. Izdebski as postmaster. We are taking this matter up with the Postmaster General at Ottawa.

I am reading this letter as it appears in the official file. Then they passed some resolutions, copies of which were sent to the Postmaster General. It was moved:

> That we recommend Mr. Oscar Clementson to succeed former postmaster Mr. Bolas Izdebski.

Another motion was:

> That the committee wait for Mr. Ross Barry to discuss the matter for Mr. Clementson about the post office.

Another motion was that Mr. Starkes arrange to meet Mr. Ross Barrie; another motion was that the committee circulate a petition for the appointment of Mr. Oscar Clementson as postmaster. Those resolutions were passed on August 14. Eventually Mr. McGregor, who was appointed, wrote to Mr. Underwood on August 22 saying:

> Through unavoidable circumstances arriving since I had made my application as postmaster, I am unable to accept the position.

Then the Post Office Department went to a great deal of trouble. Mr. Hunter, the district superintendent in Saskatoon, who is a very efficient man, was put to the expense and trouble of telephoning long distance to see whether Mr. McGregor was taking the office or just what was going to happen. Then it was necessary for Mr. Underwood to write Mr. Barrie again on August 28 telling him of the trouble and of all the applications that had been received. Finally Mr. Clementson was appointed, about August 31. Then on September 26, after a good deal of local trouble, Mr. Clementson declined the position and on October 8 Mr. Avery found it necessary to write Mr. Barrie regarding the situation.

Mr. GRAYDON: Who represents the constituency now?

Mr. NICHOLSON: I happen to be the member. I want to make it perfectly clear that when I am sitting across the floor of the house as a member of the government we shall not have this sort of thing in the administration of the affairs of the Post Office Department in this country.

Mr. MARTIN: What would you recommend now?

Mr. NICHOLSON: I shall come to that in a few moments. A short time ago I said we should set up a public service commission to administer the affairs of the Post Office Department, so that the hon. member for Essex East, for example, would be relieved of the embarrassment which I am sure he has felt when he has had to recommend one person for appointment and thus antagonize a great

many others. Now here is a personal letter from Mr. Barrie, but since it appears in this file I presume it becomes public. He says:

> This office has been very unfortunate in that I have now nominated two returned men for the position and each have for personal reasons and certain circumstances refused the appointment.

He does not want to make another recommendation. The man who was selected by the inspector in April, had been carrying on throughout the summer without a single complaint; he was a returned soldier, but for some reason which Mr. Barrie does not give here Mr. Sinclair was not appointed. Then on October 15 Mr. Avery wrote a long letter to Mr. Barrie, outlining the situation and saying:

> Mr. Sinclair is a returned soldier who saw service in England, in France and in Belgium during the last war. He has conducted the post office satisfactorily from the 17th April, 1942. He first asked to be relieved of the office on the 31st August, but as the person nominated by you declined it was necessary to ask Mr. Sinclair to carry on for a further period. He again asked definitely to be relieved of the office on the 30th September and again your nominee declined and Mr. Sinclair is still carrying on.

On October 30 Mr. Barrie wrote another letter, in which he said:

> I regret that this matter has been so long delayed and then has to end in this manner but it was unavoidable. I trust that this will allow you to settle this matter at least for the time being, if not permanently.

Then the local branch of the legion found it necessary, on November 27, to send a telegram to the Postmaster General, as follows:

> Present postmaster Sinclair appointment be sustained request of executive committee.

So that Mr. Sinclair, the man who was selected in the first place, finally was appointed on December 18. On January 7, 1943, Mr. Underwood wrote Mr. Barrie as follows:

> Mr. Dugald Patrick Sinclair, returned soldier, was appointed permanently as postmaster at the above office dating from the 18th December.

Mr. GRAYDON: May I ask what was the date of the last letter the hon. gentleman read? That would not be during the war-time period, would it?

Mr. NICHOLSON: It was dated January 7, 1943. The correspondence goes back to April 17, 1942. The point I wish to make is that in this community where there were veterans of the last war residing, we see this state of confusion; we see public funds unaccounted for, and no satisfactory investigation carried on. Two men are recommended, for political reasons, and appointed; their appointments are unsatisfactory to the people of the community, and finally the man selected by the inspector in the first place was appointed. I want to urge, Mr. Chairman, that the present Postmaster General give consideration to removing the Post Office Department from the embarrassment and the waste of time and energy entailed in having to write airmail letters and send communications to defeated Liberal candidates before an appointment can be made to a little country post office. I should like the Postmaster General to tell me now what is his policy in connection with cases like this of the former postmaster at Endeavour, who was short $386. I understand that if a postal clerk here in the city post office is caught to-night taking an envelope with a dollar bill in it, he is liable to a very heavy penalty. It appears, however, that if the individual concerned is the postmaster and takes something over $300, nothing very much happens to him. Will the minister tell me what happened in connection with this defalcation and make some comment on my suggestion as to the possibility of removing these appointments from political patronage?

Mr. MULOCK: From what the hon. member has said I would judge that all the persons concerned with this appointment were returned soldiers.

Mr. NICHOLSON: That is right.

Mr. MULOCK: I would judge also from the statements the hon. member has read that it would be a purely departmental matter.

Mr. NICHOLSON: No.

Mr. MULOCK: I do not think it was referred to me.

Mr. NICHOLSON: The minister received a telegram.

Mr. MULOCK: I received a telegram from the legion. I think it is purely a departmental matter and I would have to take it up with the officials. If my hon. friend had mentioned that he was going to bring up this case, I would have seen the officials in charge of it and tried to obtain the information he requires. He will understand that we have not all the details before us.

Mr. NICHOLSON: I have just given some details taken from the minister's own return.

Mr. MULOCK: The officials who dealt with this matter probably had reasons for taking the action they did. I should like to find out those reasons before I pass them on to the hon. member.

Mr. NICHOLSON: If the officials had any good reason for not making the appointment

it should appear in the evidence. I wish to make it clear that an inspector under the minister's supervision made a selection when he found the postmaster was short. After a delay of six months or so, the man he selected was officially appointed in response to public opinion in the community. Apparently the only difficulty was the fact that the defeated Liberal candidate in the constituency was not willing to recommend on the basis of efficiency, but recommended on some other basis which really did not satisfy even the local Liberal executive.

Mr. ROSS (Moose Jaw): Where did you get that?

Mr. NICHOLSON: I read it in the return. The local Liberal executive was dissatisfied with the first appointment because he was a provincial government inspector. He had been an important factor in the last federal election, but he had left the community to go to another part of the province on provincial government business. He was unsatisfactory to the people in the community for that reason. The Post Office Department did not take any exception to the appointment of Mr. McGregor. As a matter of fact, they appointed him, and the inspector in Saskatoon, as is stated in the return, telephoned long distance to try to locate McGregor to find whether he was going to take the position.

Mr. MULOCK: As I understand it, the hon. member's complaint is that one of the officials of the department wrote to the defeated Liberal candidate to ask him for a recommendation, instead of accepting the man who was put temporarily in charge to carry on the office when the postmaster was removed because there had been a shortage of approximately $388. I understand that the hon. member is referring to the man who was actually appointed eventually. He was recommended in the first place by the post office officials.

Mr. NICHOLSON: Yes.

Mr. MacKENZIE (Lambton-Kent): Was the revenue under $3,000?

Mr. MULOCK: In the neighbourhood of $1,200.

Mr. NICHOLSON: The letter dated May 13 from E. J. Underwood, chief superintendent to J. Ross Barrie, Pelly, Saskatchewan, reads in part:

> Would you be good enough to submit your recommendation, for the consideration of the Postmaster General, on the official form attached.
>
> Male persons of military age are not eligible for appointment, but this restriction does not apply to returned soldiers.

[Mr. Nicholson.]

Mr. MULOCK: What is wrong with that?

Mr. NICHOLSON: Nothing wrong about it except that the whole business was dragged out from April until the first week in January. Instead of acting on the advice of the inspector, the departmental administration wrote to the defeated candidate, who has never been in this chamber, who has never received the endorsation of the people of that community. I submit that the whole business is undemocratic and is not in the best interest of this country at this time. I think the Postmaster General should be prepared to give an undertaking that he will change that.

Mr. MULOCK: Am I to understand that, if in the distant future by some accident or some mischance my hon. friend's party should be on this side of the chamber, his party will not consult their defeated candidates about any appointments?

Mr. NICHOLSON: I wish to make it clear that if the Cooperative Commonwealth Federation cannot get a deputy postmaster general, an assistant deputy postmaster general and a staff of post office officials who can select capable and suitable postmasters and mail carriers, we will fire those who are available and we certainly will not have members of parliament making recommendations as to who will be postmasters, who will be mail clerks and who will be mail carriers. I am shocked to hear the Postmaster General make the admission that it is quite satisfactory to have a defeated candidate who has never been elected cause all this confusion in a community like Endeavour. It has affected the war savings campaign and the victory loan campaign. As I said before, the people judge the administration by what they see in their own back yard, and when this sort of thing goes on it does affect the contributions to other more worthy causes.

Mr. GRAYDON: I listened to the declaration of the leader of the Cooperative Commonwealth Federation, or the deputy leader, or the parliamentary assistant to the leader, as the case may be, but I always treat these declarations as being something that will never come to pass. The hon. member for Mackenzie (Mr. Nicholson) read a rather strange document which appeared in the sessional paper, a document containing an admission of liability to prosecution. Does this document represent the policy of the department? What is meant by an admission of liability to prosecution? Is there any special policy behind that? If a man is liable to prosecution, it seems to me that the department would become an accessory if it took such an admission and then went no farther. After

all, we have our criminal code. I think a serious responsibility rests upon the department to do something more than simply to leave that in the file. Perhaps something more was done in this case, but the sessional paper read by the hon. member does not indicate that.

Mr. MULOCK: Perhaps we can give more particulars when I have had an opportunity of taking this matter up with the officials. I understand that the form referred to has been in use in the department for many years; there is nothing new about it.

Mr. GRAYDON: That makes it all the worse.

Mr. MULOCK: Apparently that has been the established system of the department for many years.

Mr. GRAYDON: I do not care if it has been in use for fifty years. There is no reason to condone such a practice even though it is a long established usage. This is the kind of thing we ought to reform, and I think the minister would be well advised to give consideration to the position the department is in with respect to the matter.

Mr. MULOCK: That is being considered at the present time.

Mr. GRAYDON: I am glad because it is a serious matter.

Mr. NICHOLSON: The statement I read appears at page 125 of Sessional paper 159. Will the minister state when his estimates are next before the committee, what has been done in this matter since Mr. B. Izdebski signed this statement on April 17, 1942?

Mr. MULOCK: I think I have made it clear that I shall inquire from the officials, and as soon as I hear from them I shall certainly make a statement.

Item stands.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Monday, June 21, 1943

The house met at three o'clock.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

*NATIONAL FLAG

Mr. LaCROIX (Quebec-Montmorency):

1. Is the union jack, national flag of England, also the national flag of Canada?

2. If so, is the Canadian government taking measures so that Canada may possess a separate national flag?

Mr. MACKENZIE KING: Mr. Speaker, I feel I should direct the attention of the hon. member to the wording of his question. It is not so worded as to permit of its being placed on the order paper; nor do I think it is worded in accordance wth what the hon. member himself has in mind. The first part of his question is:

Is the union jack, national flag of England, also the national flag of Canada?

In these words is an assertion that the union jack is the national flag of England. This assertion is not correct. Apart from this, questions on the order paper are not supposed to be placed there for the purpose of making statements or allegations but for the sake of acquiring information. A Scotsman might take exception to the union jack being regarded as the national flag of England—

Mr. REID: We do.

Mr. MACKENZIE KING: As a matter of fact, it is the flag of the United Kingdom of Great Britain and Northern Ireland. I am not doing more than pointing out that circumstance to the hon. member who has asked the question.

The second part of his question reads:

If so, is the Canadian government taking measures so that Canada may possess a separate national flag?

I assume that the word "separate" is not intended to have an invidious significance; it is rather a distinctive national flag I assume the hon. member has in mind. I mention this point because I feel that any attempt to raise a controversial issue over the question of a flag at this particular time would not be calculated to be helpful to the war effort of our country. It is I think desirable not to raise controversy but as far as possible to avoid unnecessary controversy with respect to all matters, whether in relation to the answering of questions or, speaking generally, to any other subject that may come up in the house. However, I do not wish to avoid giving an answer to the hon. member which I think will provide the information that the country will wish to have, and which should leave the matter in a position that at least for the present ought to be satisfactory.

A national flag is one which normally is used by a single nation only, and which is used to distinguish that nation from others at international gatherings and to serve as a symbol of it. The red ensign, with the union jack in the first quarter next to the staff, and the Canadian coat of arms in the fly has for

over seventy years been very generally used in situations where a flag specially distinctive of Canada was essential. It was first authorized by the government of Sir John A. Macdonald shortly after confederation for use on Canadian merchant vessels. Its use as a distinctive emblem on all buildings owned or occupied by the Canadian government and situated outside Canada was authorized by order in council on January 26, 1924. It has been popularly accepted as a flag distinctive of Canada.

The union jack, while not a flag distinctive of Canada, may correctly be flown on land in any part of His Majesty's domains.

I question whether this would be a suitable time at which to have parliament determine which particular flag—the union jack, the red ensign or some other flag to be specially designed—should be declared to be the national flag of Canada.

QUESTIONS PASSED AS ORDERS FOR RETURNS

CARP, ONT., AIRPORT

Mr. BOUCHER:

1. How many acres of land were purchased for the airport at Carp, Ontario?
2. What price was paid for each parcel of land?
3. How many acres were in each parcel, and from what persons were each of the parcels purchased?
4. Was the price calculated on a per acreage basis separate from any buildings?
5. If so, what price, or prices, were paid per acre?
6. What prices were paid for buildings?

SUPERINTENDENT OF PENITENTIARIES

Mr. NICHOLSON:

1. Who is the superintendent of federal penitentiaries in Canada?
2. What are his qualifications for this position?
3. Who are the inspectors of the federal penitentiaries in Canada?
4. What are their qualifications for their positions?

Mr. ST. LAURENT: Return tabled.

Mr. HANSON (York-Sunbury): We have not succeeded in obtaining much information from the government as a result of these questions. I am wondering why it was made an order for return and tabled when it applies only to one department and the answer must of necessity be very brief. I raise this as a matter of principle.

Mr. ST. LAURENT: If the hon. member will read the question I think he will find it requires a full and truthful answer; that is what was prepared in the department, and it covers four typewritten sheets. That was why I asked that it be made an order for return and tabled instead of being printed in *Hansard*. I sent the hon. member who asked the question a copy of the return. It requires almost a page for the description of the qualifications of each of the officers enumerated. That was the only reason why it was made an order for return.

[Mr. Mackenzie King.]

ONTARIO CONTRACTS FOR TIRES

Mr. FRASER (Peterborough West):

1. Does the government call tenders for the supply of tires used by cars, trucks and other vehicles used by the defence departments in Canada?
2. If so, what firms have contracts in Ontario to supply and service these vehicles?

COLONEL BELCHER HOSPITAL, CALGARY

Mr. BENCE:

1. Is there a building in the city of Calgary known as "The Colonel Belcher Hospital" occupied as a hospital by any department of the government?
2. If so, what is the name of such department?
3. For what purpose is the said hospital used?
4. How long has it been occupied by the said department?
5. What officer of the department is in charge of the said hospital?
6. What is the size of the hospital building?
7. What is the extent of the grounds belonging to and surrounding the hospital?
8. Are such grounds sufficient to enable patients to take suitable exercise and recreation therein?
9. How much accommodation does the hospital provide?
10. Is there a railway line near the said hospital?
11. How close is such railway line to the hospital building?
12. What is the average number of times that a train passes the said hospital on the said line each day?
13. What additions or alterations have been made to the said hospital within the space of the last three years, and what additions or alterations does the government contemplate making?
14. What do such additions or alterations, and/or contemplated additions and alterations consist of?
15. When was this building first used as a hospital?
16. What was it used for prior to it being converted into a hospital?
17. What is the size of, (a) the medical staff; (b) the nursing staff, in the said hospital?

CANADIAN ARMY—OFFICERS RETIRED

Mr. ISNOR:

1. How many army officers above the rank of lieutenant have been retired in the period from, (a) January 1, 1942, to December 31, 1942; (b) January 1, 1943, to May 31, 1943?
2. How many of the retired officers receive pensions or retiring allowances?
3. What number of officers in each rank have been retired, and what amount of pension or retiring allowance, or both, has been paid them?

CHRISTIE STREET HOSPITAL TORONTO

Mr. BRUCE:

1. Was Christie street hospital established in what was formerly a factory building in the city of Toronto?
2. What amount of ground is available for patients?
3. Was the construction of the building of such a character as to lend itself to conversion into a hospital?
4. What was the cost of transforming this building into a hospital?
5. Have any additions to the hospital been built on this site?
6. If so, how many, and at what cost?
7. How near does the railway line run to the northerly boundary of the hospital site?
8. Are there any factories in the neighbourhood?
9. In what proximity is the nearest factory to the hospital?
10. Does the government consider this a suitable site for a hospital for our returned men?
11. Has any protest been received by the government from veterans' organizations in opposition to the use of this site for an additional building?
12. Has the government considered another more suitable site for the hospital?
13. Have any complaints been received by the government as to the unsuitablity of Christie street hospital for the purpose for which it is now being used?
14. On whose recommendation was it decided to attach this new wing to the present Christie street hospital?
15. How many beds are provided in the present building?
16. How many additional beds will be provided by the new wing?
17. Is provision being made in the new wing for, (a) operating rooms, and if so, how many; (b) an X-ray department; (c) pathological laboratories?

FEES FOR LEGAL SERVICES

Mr. DIEFENBAKER:

What legal counsel or solicitors in Manitoba, Saskatchewan, Alberta, have received payment for legal services rendered to the federal government, and what sum has been paid to each during each of the years 1940, 1941 and 1942?

PURCHASE OR LEASE OF PROPERTIES AT HALIFAX AND DARTMOUTH

Mr. BLACK (Cumberland):

1. What properties have been purchased or leased at Halifax and Dartmouth, Nova Scotia, by the government since the beginning of the war?
2. From whom were such properties purchased or leased, and what was, (a) purchase price; (b) yearly rental; (c) legal and agents cost, and to whom payable?
3. What has been the cost to date of repairs and improvements to each such property, and estimate to complete?
4. What is the name of contractor and amount of tenders for each property?
5. Where work is done by government, what are the names of foremen in charge, and number of men employed on each property?
6. What is the cost of furnishings, equipment and supplies for each such property?

PENSIONS AND NATIONAL HEALTH—HOSPITALS

Mr. HANSELL:

1. How many hospitals are operated in Canada by the Department of Pensions and National Health, and where is each hospital located?
2. What is the total bed capacity of each hospital?
3. What is the approximate number of pensioners of world war No. 1 now being cared for in these hospitals?

INTERNMENTS—RELEASES

Mr. ROSS (Souris):

1. How many internees have been released in Canada?
2. How many of these, if any, are employed by the government?
3. What are their duties?
4. How much are they paid?
5. Are any of them employed in censor work?

COLIN MACKENZIE

Mr. GILLIS:

1. Is Colin MacKenzie, of Sydney, N.S., in the employ of the government? If so, in what capacity is he employed?
2. Since when has be been employed?
3. Is he employed at a fixed salary?
4. What sums were paid him for his services during each of the years 1939-40-41-42-43, and for what particular service?
5. Has he been retained for service by the Exchequer Court of Canada?
6. What amounts have been paid him for such service in the exchequer court during the last five years?

INTERNATIONAL NICKEL COMPANY—PATENT RIGHTS—FALCONBRIDGE NICKEL COMPANY

Mr. KNOWLES:

1. Have any patent rights licensed by the government, or any department or branch thereof, to the International Nickel Company, expired? If so, on what date or dates?
2. If the above-noted company has any unexpired patent licences, when will they expire?
3. Have any patent rights been licensed to the Falconbridge Nickel Company? If so, what processes are covered by the same?
4. Has any capital assistance been provided by the government to the Falconbridge Nickel Company since the outbreak of the present war?
5. Have any special depreciation allowances been granted to the Falconbridge Nickel Company since the outbreak of the present war?
6. Are there any known deposits of nickel in Manitoba? If so, where are they located, and who owns the same?

HONEY CONSUMPTION

Mr. COLDWELL:

1. What was the average monthly consumption of honey during the last fiscal year, 1942-1943, for, (a) households; (b) canning factories; (c) wineries; (d) breweries and distilleries; (e) soft drink manufacturers; (f) candy manufacturers; (g) ice cream?
2. What is the estimated consumption of honey in each of the above classifications for the fiscal year 1943-1944?

MOBILIZATION ACT—CONSCIENTIOUS OBJECTORS

Mr. HANSELL:

1. How many men, claiming to be conscientious objectors, have been called by the mobilization board in each of the provinces of Canada?

2. How many of these men in each province have been given postponements, and how many have been interned or sent to work camps?

SUGAR CONSUMPTION

Mr. NICHOLSON:

1. What was the total amount of sugar consumed in Canada during each of the past five years?

2. What percentage of this amount was, (a) produced in Canada; (b) imported?

3. What is the estimated consumption for 1943?

4. What percentage of this amount will be, (a) produced in Canada; (b) imported?

5. What are the possibilities of increasing Canadian production in 1944?

MOTIONS FOR PAPERS

STEEP ROCK IRON MINES LIMITED

Mr. NOSEWORTHY:

For a copy of all orders in council, agreements, letters, telegrams, memoranda and other documents in the possession of the government or any branch thereof, relating to the Steep Rock Iron Mines Limited, or any official or employee of that firm.

SELECTIVE SERVICE—COAL MINING INDUSTRY ADVISORY COMMITTEE

Mr. MacKINNON (Kootenay East):

For a copy of all letters, telegrams, correspondence and other communications which passed between J. Stokaluk, vice-president, district 18 United Mine Workers of America, and the minister or deputy minister of labour, or any official of the said department, relating to the coal mining industry advisory committee of national selective service.

MILITARY SERVICE—POSTPONEMENTS TO FARMERS AND FARM WORKERS

Mr. DORION:

For a copy of all correspondence, telegrams and other documents, dated during the twelve-month period to June 10, 1943, addressed to the government by any provincial government, public corporation or professional body, regarding the postponement from military service of those engaged in the farm industry.

Mr. MITCHELL: Subject to the reservation with respect to privileged documents.

OLD AGE PENSIONS

Mr. REID:

For a copy of all letters, telegrams, correspondence and other documents passing between any provincial government or official thereof and the dominion government, from January, 1941 to the 16th June, 1943, regarding proposed amendments or changes to the Old Age Pensions Act or the amount of pension granted.

[Mr. Coldwell.]

Mr. ILSLEY: I have no objection to this passing, but the practice is to consult the provincial governments as to whether they are willing to have certain of their communications laid on the table of the house. There is no objection to putting on the table any of the rest.

Mr. REID: I simply point out that the other day the member for Mackenzie (Mr. Nicholson) had a question regarding Saskatchewan and it passed without any such provision.

Motion agreed to.

BUSINESS OF THE HOUSE

WEDNESDAY EVENING SITTINGS

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

That on Wednesday, the 23rd day of June, 1943, and all subsequent Wednesdays until the end of the session, the sittings shall in every respect be under the same rules as provided for other days.

Motion agreed to.

LEGATIONS

PRESS REPORT AS TO APPOINTMENT OF TURKISH MINISTER TO CANADA

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): May I direct the following question to the Prime Minister. Reports from Ankara, Turkey, indicate that the Turkish government intends to appoint a minister to Canada. When this announcement was made over the week-end, a spokesman for the Secretary of State is alleged to have told the press that the appointment by Canada of a minister to Turkey was not under active consideration here and that such an appointment was not immediately practicable.

I should be glad if the Prime Minister would amplify the above statement which is alleged to have been made by one of the government officials.

Right Hon. W. L. MACKENZIE KING (Prime Minister): My hon. friend was kind enough to send me a copy of his question. As I read the last part of it I thought the question was whether the Prime Minister would simplify the matter a bit—

Mr. GRAYDON: I have no objection if the Prime Minister wants to do that too.

Mr. MACKENZIE KING: Probably I can do both in the following reply. I have no information whatever about press reports that the Turkish government desires to appoint a minister to Canada. Neither, I am sure, had the so-called "spokesman for the Secretary of State" to whom the comment in question was attributed.

Mr. McLARTY: My hon. friend's remark doubtless refers to the Secretary of State for External Affairs. No official of the department of the Secretary of State would comment on such a matter.

Mr. GRAYDON: I rather fancied that would be the answer, but the press report said "the Secretary of State," and I was anxious to find out, because I am always jealous of the Prime Minister's rights in these things and I thought it was time to call a halt in matters of this kind.

LABOUR CONDITIONS

GLACE BAY GLORY CAFE—DISPUTE BETWEEN MANAGEMENT AND EMPLOYEES

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): Will the Minister of Labour inform the house as to what steps have been taken to settle the dispute between the management of the Glace Bay Glory cafe and its employees?

Hon. HUMPHREY MITCHELL (Minister of Labour): The attention of the federal Department of Labour was drawn to the dispute to which the hon. member refers. An official of my department happened to be in Sydney on the day in question and we got in touch with him. There were twelve waitresses involved in the dispute. Some have already gone back to work. It was agreed by the union and conciliation officials of the federal Department of Labour that the dispute came within the jurisdiction of the provincial government and the matter was left at that. The provincial authorities, I understand, are trying to reach a settlement.

THE COMMUNIST PARTY

HOLDING OF A NATIONAL CONVENTION

On the orders of the day:

Mr. LIGUORI LACOMBE (Laval-Two Mountains) (Translation): Mr. Speaker, I should like to put a question to the hon. Minister of Justice (Mr. St. Laurent). In view of the fact that the communist party has been banned in Canada, will the minister allow that party to hold a national convention on August 21 and 22 next, as announced by the headquarters of the organization?

Hon. L. S. ST. LAURENT (Minister of Justice) (Translation): Mr. Speaker, I was just about to reply to the question put by the hon. member in my absence last Wednesday and which was couched in terms somewhat different from those he used this afternoon. I quote:

> Even though the communist party has been banned by the Minister of Justice, has the minister authorized or will he permit the holding of a national convention by that party on August 21 and 22 next?

The form of the question conferred on the Minister of Justice jurisdiction and authority which he does not enjoy and which he does not intend to assume. The Canadian communist party was declared an illegal organization by authority of the defence of Canada regulations, and the Minister of Justice has but to apply and carry out the existing regulations. I might add that these regulations have twice been submitted to the hon. members of the house for examination, and from what I have learned, they were approved and concurred in by the house.

Now, the Minister of Justice has not authorized and cannot allow any organization declared illegal under the defence of Canada regulations to hold a convention or to do anything within the limits of the law.

I think that the hon. member's question was prompted by a news item which appeared in certain newspapers stating that people who had belonged or who still belonged to the group known as the Canadian communist party had announced that they intended to meet—towards the end of August, I believe—for the purpose of laying the foundations of a new political organization. Evidently, the Minister of Justice cannot prevent Canadian citizens from calling or holding a meeting for legal purposes. If those who formerly belonged to the communist party, recognizing that the Canadian communist party is banned, now wish to form another group whose constitution, object and actions are not contrary to the provisions of the law, it does not concern the Minister of Justice. If, however, the party were formed with the intention of operating in a manner declared illegal by section 133 of the criminal code, it would be the duty of the attorney-general of each province, on the strength of the responsibility vested in him by the constitution, to prosecute them, and if prosecution seemed to depend on intervention by the Department of Justice, it would not hesitate to

intervene. I should like to recall that, according to section 133, a seditious intention is made manifest by the publication of a document of some kind encouraging, or by otherwise encouraging the use of violence to bring about a change in the set-up of the government of the country. If anyone should attempt to form a group for the purpose of preaching such ideas, there is not the shadow of a doubt that someone would bring to bear upon it the provisions of the criminal code.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Thursday, June 17, consideration in committee of a resolution to grant to his majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

MUNITIONS AND SUPPLY

2. Cargo vessels—operated by Park Steamship Ltd., $45,000,000.

Mr. HANSON (York-Sunbury): Before the minister of munitions proceeds, with the permission of the committee I should like to direct to the Minister of National Defence for Naval Services (Mr. Macdonald) a question which he might treat as a notice of motion and bring down the reply before the resolution is carried. I should like to know how many officers there are in the Royal Canadian Navy with the rank of commodore and above. I am told that the rank of commodore in the navy is equivalent to the rank of brigadier in the army. I undertook to get this information from such records as were available to me, but I was not able to compile it. I should like to know if the number of those in the Royal Canadian Navy with the rank of commodore and above is greater comparatively speaking than the number of the same high ranking officers in the Royal Navy. I am told that the number of these high ranking officers in our navy is out of all proportion to the total personnel and when compared with the Royal Navy or the United States navy.

Mr. MACDONALD (Kingston City): I shall have to look into the latter part of my hon. friend's question in order to bring my information down to date. About a year ago the same question arose and after some study I was satisfied that the proportion of high ranking officers in our navy was relatively less than the number in the British navy or the Australian navy. There are seven officers in the Royal Canadian Navy of the rank of commodore or above.

Mr. HANSON (York-Sunbury): Is that just at headquarters, or is it the total staff?

Mr. MACDONALD (Kingston City): That is the total for the Canadian navy.

Mr. HANSON (York-Sunbury): I am going to check on that. I do not believe it, to be candid.

Mr. COLDWELL: Last week the Minister of Munitions and Supply promised to table certain agreements with the Aluminum company. Is he prepared to do that? Could he also give us information as to the adjusted prices of the aluminum we are buying and what we have paid at various periods since the contract was entered into?

Hon. C. D. HOWE (Minister of Munitions and Supply): I am sorry I cannot table the contract between the Canadian government and the Aluminum Company of Canada because there never has been such a contract. The aluminum is bought by our contractors from the company at a price that has been agreed to by the department and the Aluminum company. The government as such has never bought aluminum from the Aluminum Company of Canada, and therefore there is no agreement.

Mr. COLDWELL: What about the prices?

Mr. HOWE: I can give you the prices.

Mr. COLDWELL: The minister said last week that we were paying two cents a pound more than the base price.

Mr. HOWE: The escalator clause for the first quarter of 1942 provided for two cents per pound to all countries; the escalator clause for the second quarter of 1942 provided for three cents a pound; for the third quarter, four cents a pound; for the fourth quarter, four and a half cents a pound and, for the first quarter of 1943, five and a half cents a pound.

Mr. COLDWELL: As I understand it the base price is fifteen cents a pound, Canadian funds, and that to-day we are paying twenty and a half cents a pound.

Mr. HOWE: That is right, except that fifteen cents is United States funds. The base price in Canadian funds is sixteen cents per pound.

Mr. COLDWELL: What does the minister mean by escalator clauses if there is no contract?

Mr. HOWE: The escalator clauses apply to the United States and British contracts. They represent the difference in production costs between the basic period—my hon. friend will ask me when the basic period was, but I do not remember; I think it was 1940, and I shall be glad to look it up—and the particular quarter. The amount of escalation represents the differential in the cost of three items, labour, power and transportation.

Mr. COLDWELL: Is insurance included?

Mr. HOWE: Insurance on transportation, but insurance on plant in Canada would not be an item. Insurance costs bears heavily upon the cost of transportation.

Mr. COLDWELL: I understood that there were four items in the United States contract.

Mr. HOWE: Perhaps there are. I do not remember what the fourth would be, but I know that labour, power and transportation are the three principal items. There may be a fourth, but it would have only a minor effect. There has been a tremendous increase recently in the cost of transportation. Ships used to come direct from British Guiana to the Saguenay, but now water shipment is limited to a port in the United States, it may be New Orleans, New York or Portland, Maine, and then the cargo is shipped by rail to the Saguenay. Transportation cost has gone up steadily in recent years.

Mr. COLDWELL: The minister said that the escalator clause to which he referred was in the United States and British contracts. Is the agreement with regard to the price of aluminum governed by the United States and British contracts? If so, does the clause in the United States contract which refers to prices apply to Canadian contracts?

Mr. HOWE: Our contract is for fabricated aluminum, and the price of fabricated aluminum has not been made subject to the escalator clause. It was agreed on some time ago and still stands for our customers. It happens to be the lowest price at which anybody is buying fabricated aluminum in any part of the globe. I think it is lower than the price at which fabricated aluminum is sold in the United States. By fabricated aluminum I mean aluminum sheets, extrusions and aluminum in the form in which it goes into an aeroplane.

Mr. COLDWELL: Then do I understand that we buy only fabricated aluminum?

Mr. HOWE: I would not say "only". By "we" I mean the Canadian contractors; I do not mean the Canadian government. I would say that ninety-five per cent of the aluminum our contractors buy is in the form of fabricated aluminum.

Mr. COLDWELL: Where does the escalator clause come in with regard to fabricated aluminum? The minister quoted a price of five and a half cents a pound over the base price. Would that apply to virgin aluminum?

Mr. HOWE: That is for aluminum ingots.

Mr. COLDWELL: Our contractors are buying sheet aluminum?

Mr. HOWE: That is right.

Mr. COLDWELL: And the price of sheet aluminum would be the base price plus five and a half cents?

Mr. HOWE: No. Our purchases are not large, comparatively speaking. I think I can speak with some authority because I went into this matter a short time ago. Our prices have never been made subject to the escalator clause; that is, the prices of fabricated aluminum in Canada have not been made subject to the escalator clause. The escalator clause is written into the contract for ingot aluminum with the United States, Great Britain and Australia. I happen to know of these contracts, because at the moment I am agent for the British government in the carrying out of their contract and it is my duty to check with the auditors. The aluminum is sold to Canadian manufacturers at a price which was agreed upon some time ago and which has never been changed. I assume this is so because in relation to the amount of aluminum sold by the Aluminum company it is not an important matter. So far as I know, there has been no application made to change that price in the last year.

Mr. COLDWELL: Is that a price per pound, or a price per square foot?

Mr. HOWE: Per pound.

Mr. COLDWELL: What is the price per pound of the sheet aluminum?

Mr. HOWE: I shall be glad to get that.

Mr. HANSON (York-Sunbury): We have had some information about these aluminum contracts and I do not rise for the purpose of interfering with the cross-examination of my hon. friend, but in an effort to elucidate the situation if I can. The minister has made certain things very clear. The Canadian government as such does not contract with the

Aluminum company for any production at all, but certain Canadian consumers are buying sheet aluminum from the company. As agent for the British government the minister has a great deal to do with these contracts for the British government. He is their agent; he has told us that. What I want to know is this. With the huge increase in production and consumption the basic unit price has remained more or less constant.

Mr. HOWE: Not at all.

Mr. HANSON (York-Sunbury): Hold on, now; the basic unit price has remained at about 15 cents, according to my understanding.

Mr. HOWE: What was it at the beginning of the war?

Mr. HANSON (York-Sunbury): At the beginning of the war—

Mr. HOWE: It was 21½ cents.

Mr. HANSON (York-Sunbury): Oh, yes; less an adjustment made at that time.

Mr. HOWE: The price of aluminum has been reduced with every contract renewal that has been made.

Mr. HANSON (York-Sunbury): Then let us have that information. That is not my understanding, from the remarks of the minister. Now would the minister allow me to proceed?

Mr. HOWE: Just let me correct this, because I do not like these statements going out all over Canada without being corrected. The cost of aluminum to Canada and her allies has decreased steadily. It was 20 cents in 1940 and 18½ cents in 1941, and it has been 16 cents since July, 1942. That is in Canadian funds.

Mr. HANSON (York-Sunbury): All right; I am prepared to accept the minister's statement, because he has the facts and I am looking for information. The minister should tell this committee what was the production of the plant prior to 1940; what was the unit price, and what was the unit cost of production prior to the fixing of the price in that year. Then he should tell the committee what the production is now and what the unit cost of production is now. It is my understanding that the production has increased by many times what it was in peace time, and of necessity the cost per unit must have fallen to a very considerable extent. Yet the price has decreased only to the figure just mentioned by the minister, 16 cents, plus whatever increase might be allowed under the escalator clause. I am quite prepared to accept the minister's statement in regard to the increased cost of production being added to the base price, because anyone who has made a study of the situation knows what the minister said in regard to the increased cost of transportation is in principle absolutely correct. They can no longer transport the bauxite direct from British Guiana to Arvida, as was done before the war; it must come in with a long rail haul from the gulf ports, and that circumstance must have added a substantial amount to the cost of production. But I should like the minister to make clear to the committee and to the country—and I think it would be to the advantage of the Aluminum company—what was the unit cost of production per ton or per pound or whatever unit you wish to use, prior to the war. If the facts are as the minister suggests, he should make this clear to the country. This information must be available to the Department of Munitions and Supply. Then he should state what is the unit cost to-day. I am told that to-day the unit cost is in the vicinity of 5 cents, plus these extras which come under the escalator clause.

Mr. HOWE: Why would my hon. friend make a statement like that? He knows nothing whatever about it, and I can tell him that that is wholly untrue.

Mr. HANSON (York-Sunbury): The minister need not get hot under the collar; if I am wrong he can correct me, but it seems reasonable to me, as it must seem to any business man who makes any study of it, that if you have a unit cost pre-war of x dollars and you increase your production by millions of pounds above the pre-war level, the unit cost of necessity must come down. That is what I think the country would like to have some information about.

Mr. ROSS (Moose Jaw): It must be different from anything else in a war, then.

Mr. HANSON (York-Sunbury): I have not a very great knowledge of economics, but I do know that if you produce things on a mass production basis, as compared with a small, peace-time basis, the unit cost ought to fall. That is true in other classes of production, even though the cost of labour has gone up; and the increased cost of labour is taken care of in the escalator clause. All these increased costs are taken care of in the 5½ per cent; the minister made that abundantly clear. I am not blaming him for it; I think he should not—I was going to say he should not lose his temper. He did not do that, but he rather quarrelled with the position I was trying to elucidate, by indicating that I was talking nonsense. I am not

talking nonsense; I am asking pertinent questions for the purpose of elucidating the situation.

Mr. SLAGHT: You are quoting figures which are not correct.

Mr. HANSON (York-Sunbury): I beg the hon. member's pardon; I do not know what he knows about it, but perhaps he will correct us all.

Mr. SLAGHT: Will you assert that your statement is true?

Mr. HANSON (York-Sunbury): No, I do not know. I have been told, and I am asking the minister for the purpose of obtaining information. I suggest to the hon. member for Parry Sound that I am quite within my rights in doing so; that it is quite a proper thing to do, and that I should not be scolded by him or anyone else for doing so.

Mr. SLAGHT: What I object to is the hon. gentleman putting the statement on record and into the press that he understands 5 cents is the cost.

Mr. HANSON (York-Sunbury): Yes, that is my understanding.

Mr. SLAGHT: The hon. member is quite in error. He may get that information from fishwives' tales or something, but figures should not be stated in this house unless there is some reason to believe their accuracy.

Mr. HANSON (York-Sunbury): Well, that is all right; the hon. member has come to the rescue of the minister but I do not think the minister needs any help. He will be able to give us the exact figures and I shall be quite satisfied. I am prepared to accept the minister's statement, but I want an authoritative figure. I think we should have the cost per unit over this period of time together with the pre-war price, the basic price and to-day's price based on the escalator clause. That is a reasonable request. If the unit cost has remained constant in these three years of huge increase in production, then let us know that. I cannot conceive that this should be the case. Anyone engaged in a manufacturing industry knows that if you double, treble, quadruple or multiply your production by one hundred, your unit cost automatically should come down. The minister must have the figures from the chartered accountants or the cost accountants, or some authority, to show just what that position is; and if the minister is prepared to tell me that the price to-day is based on a constant cost price, I am prepared to accept his statement, but I do think the public should have that information. I am not one of those who joined in the hue and cry against the Aluminum Company of Canada for political purposes.

An hon. MEMBER: Oh, no.

Mr. HANSON (York-Sunbury): No, I have not, though I think that is one of the main objectives of the hon. gentleman who brought forward this matter.

Mr. COLDWELL: I rise to a point of order. The hon. gentleman has no right to impute a motive of that sort to me because I brought this important matter before the house. I may say that there was no political motive behind this.

Some hon. MEMBERS: Oh, oh.

Mr. COLDWELL: There was an endeavour to serve the best interest of this country which, as I have said before, I think has been sold down the river.

Mr. HANSON (York-Sunbury): I do not quite appreciate what the point of order is.

Mr. ROSS (Moose Jaw): I would rise to another point of order. This item was passed the last time we considered these estimates, and we are now supposed to be dealing with cargo vessels.

Mr. COLDWELL: What is your ruling on the point of order, Mr. Chairman?

The CHAIRMAN: If the hon. member for York-Sunbury wishes to speak on the point of order he has the right to do so.

Mr. HANSON (York-Sunbury): I do not think it is out of order to suggest that a topic was brought up here by the leader of a political party and to say that it was done for political purposes. I do not think that is any reflection on him at all; he would be asleep at the switch if he was trying to make political capital to-day. What was he doing yesterday, the sabbath day, in Montreal, if he was not trying to make political capital; and what was he doing the day before?

Mr. COLDWELL: I rise to a question of privilege. I was not in Montreal on the sabbath day; I was here in Ottawa the entire day. I left the meetings Saturday night.

Mr. HANSON (York-Sunbury): Then his friends were desecrating the sabbath day by holding a political convention yesterday in Montreal. I accept the hon. member's statement, absolutely, that he was not in Montreal yesterday; and I respect him much for it. But I do suggest to you, Mr. Chairman, that it is not out of order to suggest that a political

party is raising an issue for political purposes. And I just wish to say that I do not join in the hue and cry against the Aluminum company, notwithstanding the fact that I recognize, as I think most of us recognize, that it is one of the greatest monopolies in the world, and that it has come to Canada—I think we will all agree with this—it has come to Canada, notwithstanding the championship of the minister, to escape in a degree the jurisdiction of the United States courts.

Mr. COLDWELL: Mr. Chairman, what is your ruling on the point of order? The hon. member has concluded his discussion of it.

The CHAIRMAN: On the point of order raised by the hon. member for Rosetown-Biggar (Mr. Coldwell) may I say that I understood the hon. member for York-Sunbury (Mr. Hanson) had accepted the statement of the hon member for Rosetown-Biggar relating to a personal statement.

Mr. COLDWELL: No, I did not hear him say that. I did not hear him withdraw it.

The CHAIRMAN: That is what I heard, if I heard it correctly I thought the hon. member for York-Sunbury had accepted it.

Mr. COLDWELL: I did not hear that.

The CHAIRMAN: That there was no ulterior motive so far as the hon. member for Rosetown-Biggar was concerned.

Mr. COLDWELL: If the hon. member rises and says he withdraws that imputation, that ends it.

The CHAIRMAN: That is what I heard.

Mr. HANSON (York-Sunbury): The basis of my statement was a broadcast statement by a member of this organization, that this was the greatest issue before the Canadian people to-day, and that they were raising it. I am not withdrawing that part of it.

Mr. COLDWELL: That is a different thing.

Mr. HANSON (York-Sunbury): If I am out of order the chairman will rule me out of order, and I will accept his ruling. But until he does, may I say I am not imputing any dishonest or improper motives at all, and that is the basis of the rule. To say that a man brings forward an item for the consideration of the House of Commons, parliament and the country, and is doing it for political purposes, is not imputing any improper or dishonest motive.

Mr. COLDWELL: Yes, it is.

Mr. HANSON (York-Sunbury): It is quite a proper motive.

[Mr. R. B. Hanson.]

Mr. COLDWELL: What is your ruling, Mr. Chairman?

Mr. REID: Before you give your ruling, Mr. Chairman, I think the house should be asked to say what are political motives. What is the definition of a "political motive"?

The CHAIRMAN: On the point of order, I think the point was well taken by the hon. member for Rosetown-Biggar, originally, if there was any motive imputed in the statement made in the House of Commons with respect to the hon. member's actions. But when it comes to be applied to a whole party, then there is no ulterior motive, and there is no point of order.

Mr. COLDWELL: I am referring to myself.

The CHAIRMAN: Then there was a point of order in that reference, and I understand the hon. member for York-Sunbury has accepted the statement of the hon. member for Rosetown-Biggar and has withdrawn that particular statement.

Mr. COLDWELL: But he has not withdrawn it yet.

Mr. ROSS (Moose Jaw): What is your complaint?

Mr. COLDWELL: My complaint is that the hon. member for York-Sunbury said that the leader of this group had introduced this matter of the Aluminum company for political purposes.

Mr. ROSS (Moose Jaw): Is there anything wrong with that?

Mr. COLDWELL: I am asking the hon. member to withdraw the imputation. The hon. member for Moose Jaw asked if there is anything wrong with it. Of course there is something wrong. The hon. member is imputing motives to me which are not proper motives—that it was done purely for political motives.

Mr. GRAYDON: Are you going out of politics?

Mr. COLDWELL: I deny that I did that.

Mr. REID: Perhaps the hon. member for Rosetown-Biggar will agree that it will have that effect.

Mr. HANSON (York-Sunbury): To settle this matter I shall be glad to withdraw that remark with respect to the hon. member for Rosetown-Biggar himself, personally; but I will assert that the political party of which he is the leader has brought forward this topic for political purposes, and for no other purpose.

Mr. COLDWELL: Mr. Chairman, may I point this out, that the political party of which I am leader did not bring this forward in the House of Commons; the hon. member for Rosetown-Biggar did. I ask the hon. member to withdraw the imputation, so far as the bringing forward of this matter by me is concerned, and to withdraw unreservedly.

Mr. HANSON (York-Sunbury): I do not intend to do anything of the kind unless I have to. And I intend to assert that the socialist party in this House of Commons, led by the hon. member for Rosetown-Biggar, has brought forward this attack on the Aluminum Company of Canada for political purposes, and for no other purposes. And I put myself in the judgment of hon. members when I say that.

Mr. COLDWELL: I say that the party of which I am the leader, through me, brought this forward, if you like, purely in the public interest.

Mr. HANSON (York-Sunbury): Oh, oh.

Mr. COLDWELL: Yes, in the public interest.

Mr. ROSS (Moose Jaw): Is that political?

Mr. COLDWELL: And I say that the accusation made by the hon. member for York-Sunbury should be withdrawn, under the rules of the house.

Mr. HANSON (York-Sunbury): No, no; I want to answer that point of order. It is a fundamental principle of the law of defamation that you cannot defame a political party. You may defame an individual, but you cannot defame a political party.

Mr. COLDWELL: That may be true of the Progressive Conservative party.

Mr. HANSON (York-Sunbury): I put myself in the judgment of hon. members of the house when I say it is not defamatory to impute dishonest motives to a political party. If we did, the courts would be full of cases of that kind. But of course it is defamatory to impute dishonest motives to an individual. Surely we have discussed that far enough; I shall now return to the other matters—

Mr. COLDWELL: May we have a ruling?

Mr. McGEER: If I understand the point raised by the hon. member for Rosetown-Biggar it is that he feels it to be an offence to bring a matter into the house for political purposes.

Mr. COLDWELL: Purely for political purposes.

Mr. McGEER: All right, purely for political purposes. I have always understood politics to mean the business of the nation—the public's business. I have always understood that members of the house are here for political purposes.

Mr. COLDWELL: But that was not the meaning given to it.

Mr. McGEER: That is a different thing altogether. We have been rather loose in our use of the expression "political purposes", failing to recognize that politics and political purposes are the public business of the nation. We have come to use the word "political" in the sense of partisan politics, every time the word is used. For those who are desirous of destroying our constitutional methods of conducting the political business and political affairs of our country, that of course is the correct interpretation to put upon it, and in that light everything of a political nature should be condemned and scorned. Now, to rule that it is improper to say that a man is bringing an issue before the House of Commons for political purposes would be to convert the meaning of the term "political" into a meaning it never possessed. Surely we are not going to have any such ruling as that. If the hon. member for Rosetown-Biggar can accuse the hon. member for York-Sunbury of charging him with bringing this matter up for political partisan purposes—

Mr. COLDWELL: That is what he meant.

Mr. McGEER: —and for purely partisan purposes, then I think the point of order would be well taken. But there is no such charge. And no one would have ever thought about it if the hon. member for Rosetown-Biggar had not put that unfortunate interpretation upon it. But I hope, Mr. Chairman, that you will not be led into that trap by ruling that we cannot discuss purely political matters in the House of Commons.

Mr. HANSON (York-Sunbury): We would be out of luck, would we not?

Mr. ADAMSON: On the point of order, to my mind the definition of politics is the science of the well-being of the people. If that is not our duty in the House of Commons, then I should like to know what it is we are doing here.

Mr. McGEER: Speak for yourself; you cannot speak for the rest of us.

The CHAIRMAN: I have already given my ruling on the point of order raised by the hon. member for Rosetown-Biggar. I believe the first objection taken by the hon. member was a proper one, because it was supposed to be almost a personal attack as

far as his political activities were concerned. Then the hon. member for York-Sunbury withdrew the statement he had made.

Mr. COLDWELL: No, he did not.

Mr. HANSON (York-Sunbury): Yes, I did.

The CHAIRMAN: The second statement of the hon. member for York-Sunbury was to the effect that the whole party led by the hon. member for Rosetown-Biggar was using the Aluminum company question for political purposes. I believe the point was well taken by the hon. member for Vancouver-Burrard (Mr. McGeer) because this is out of the realm of a personal matter. It is a general statement, about a party, and surely we cannot stop an opposition party, or in fact any party, from making a statement of that kind so far as the political party is concerned. I do not believe the rules were ever meant to be applied in that way. I cite standing order 41, citation 297 of Beauchesne's Parliamentary Rules and Forms:

> The imputation of bad motives, or motives different from those acknowledged, misrepresenting the language of another, or accusing him, in his turn, of misrepresentation, charging him with falsehood or deceit; or contemptous or insulting language of any kind; all these are unparliamentary and call for prompt interference.

Again my ruling is that there is no attack, and no point of order, so far as the statement made applies to a party as a whole.

Mr. HANSON (York-Sunbury): Let me enlighten the membership of this house with regard to the attitude of the political party on this question. I refer hon. members to an editorial in the Ottawa *Citizen* of Saturday, June 19, entitled "A 'Political Scandal'", which quotes a prominent member of the socialist party in this country, as follows:

> For Mrs. Grace MacInnis, M.L.A., in British Columbia, and wife of Angus MacInnis, M.P., for Vancouver East, told an Ottawa C.C.F. meeting on Thursday night that "Shipshaw is one of the most valuable pieces of ammunition for the C.C.F. in the forthcoming elections."

Let us strip off all this sham—

Mr. COLDWELL: I rise, Mr. Chairman—

Mr. HANSON (York-Sunbury): I have the floor.

Mr. COLDWELL: May I just say this?

Mr. HANSON (York-Sunbury): No, you have taken enough of my time.

Mr. COLDWELL: On a question of privilege, Mr. Chairman, I was questioning the minister when the hon. member for York-Sunbury rose and interfered with what I was saying, and out of courtesy I sat down.

[The Chairman.]

Mr. HANSON (York-Sunbury): I have the right to stand and speak.

Mr. COLDWELL: I have that right too. I rise now just to say that I take no responsibility for statements made by persons other than myself.

Mr. HANSON (York-Sunbury): I do not intend to follow that further. The whole incident speaks for itself and the Canadian public can judge of it just as well as the members of this house.

I should like the minister to give the committee from the records of his cost accountants, or better still from the records of Price Waterhouse and Company, who are the auditors for Aluminum company, and a reputable firm—make no mistake about that—the unit cost price of aluminum at the beginning of the war and the unit cost price to-day, with a greatly increased production. That will, I think, be illuminating—I am not trying to make a pun. We ought to know if the price being paid for aluminum by the allied governments to-day, with the greatly increased production, is too high. After all, it is their business. There is, I understand, in all these contracts a provision for renegotiation, and if the unit price to-day is too high I would say that the minister was derelict in his duty if he did not renegotiate that price. But if the unit cost to-day is substantially the same, then the minister has a clearance, and he will have a clearance in the mind of the public too. I am not approaching this thing by way of an attack on the minister at all, and he must not misunderstand me in that respect. If I wanted to make an attack on the Aluminum Company of Canada I could do so. Anybody who wanted to go into the muckraking business could find enough in the aluminum business to stage an attack any time. Just read the history of the Mellon family—you will find it in any standard work in the library—and you will find that the Mellon family and the aluminum business are entangled together. They control a great proportion of the deposits of raw material for aluminum. I have indicated why they came into Canada. There was the question of cheap power. How they got that power is a matter which I think will have to be settled with the government of Quebec; I do not think it is within our jurisdiction to question the terms upon which they got their power, though I have my views on that.

I want to say this further. If the price agreed to be paid by the allied nations at the beginning of the war was not a fair price, that is their responsibility, but the Canadian government has some share in it

even though we are not the direct contractors. If the price paid was fair I do not think there is any great cause for complaint on the part of anybody, because, as the minister said, this material was absolutely essential for carrying on the war, and the Aluminum company has a monopoly, or very largely so, of the production of aluminum. The first consideration in my mind at least has always been and still is the carrying on and winning of the war. But I am going to add this. As the war has proceeded, in other lines of endeavour prices have been reviewed from time to time, and properly so, with a view to cutting down costs of these essential materials required for the manufacture of aeroplanes and other war munitions. It will not do for the minister to say, as I think he did say, and I do not agree with him in that attitude: Oh well, we get it all back in taxation.

Mr. HOWE: I did not say that at all.

Mr. HANSON (York-Sunbury): That is the effect of what the minister said.

Mr. HOWE: Never.

Mr. HANSON (York-Sunbury): Well, the company is making a lot of money and it is paying huge sums in taxation. But on the other hand this government has agreed to give to a subsidiary of this company a generous depreciation allowance, to say nothing else, and I think I could go a good deal further than that. But what I would like to know from the minister is the basic unit cost—

An hon. MEMBER: You have said that four times already.

Mr. HANSON (York-Sunbury): Then I will say it five times because I am thinking of the taxpayers of this country. I want to know from the minister what the basic cost was pre-war, then at the beginning of the war, and in each year of the war. If the minister will give us those figures substantiated by the certificates of his chartered accountants, I shall not have another word to say.

The CHAIRMAN: I understood that when the hon. member for Rosetown-Biggar rose this afternoon it was to ask a question, on which he had been promised an answer from the Minister of Munitions and Supply. We have dealt with the activities of the Aluminum company at great length on previous occasions. We are now on item 2, dealing with cargo vessels. I think I am expressing the desire of the committee generally when I say that we should stick to the item before us; otherwise it will be impossible to make that progress which the committee and the country expects. The committee has already had a lengthy and fairly thorough discussion.

Mr. COLDWELL: I rose to ask the minister to table some documents which he had promised.

Mr. CHEVRIER: The Chairman said that you were in order.

Mr. COLDWELL: I did not hear his remarks. May I draw the minister's attention to the fact that the record is there. The Aluminum company stated that including the profits of the bauxite and power companies the cost of production in 1938 was 8·93 cents, when the plant was operating at only 50 per cent capacity. In 1929 the company got a price of thirteen cents, for 75,000,000 pounds.

Mr. HANSON (York-Sunbury): That is what they sold for? It is not the cost.

Mr. COLDWELL: Yes, that is the selling price of the article. The hon. member for York-Sunbury spoke of a price of five cents. To be perfectly fair about it the price quoted to me, and I was cautioned that with the usual terms of amortization—and the terms are unusual now—which would enter into the cost of production the price would be in the neighbourhood of six cents a pound. But as I said the other day, I had no figures to substantiate that although it was given to me by somebody who I thought would know what he was talking about.

Mr. HOWE: Mr. Chairman, just to show how far afield hon. gentlemen are, I will give the production figures of the Aluminum company for the years beginning with 1939. In 1939 Aluminum company produced 82,800 short tons of aluminum; in 1940 the production was 109,200 short tons; in 1941, 212,300 short tons; in 1942, 335,800 short tons; and it is estimated that this year the company will produce 503,000 short tons, or over 600 per cent of the production in 1939, which was capacity production.

I might say that I am the custodian of the British contracts in Canada at the present time. That is a confidential mission which I have. I was appointed agent of the British government with the distinct understanding that I would not disclose any contracts that I made on behalf of the British government or any facts which I obtained in that connection.

I have followed very carefully the costs of producing aluminum, and I am satisfied that the price has been kept in a reasonable relation thereto. The British government, having all the facts, have come to the same conclusion; at least I have heard no complaints. So

far as the government of the United States, the other large customer of the Aluminum company, is concerned, they have direct contractual relations with the Aluminum Company of Canada. I am not associated with that contract in any way, but I assume that there again relations are satisfactory. As to price of fabricated aluminum that is purchased by Canadian contractors, I know about that, and I am satisfied that that is a fair and reasonable price.

My hon. friend said that he thought the cost of manufacturing aluminum was five cents a pound. The profits of the Aluminum company, or Aluminum Limited, which incidentally include the profits from a number of operations outside Canada, are known every year; they are published. My hon. friend reasons that, forgetting the escalator clause, if the cost of producing aluminum is five cents on a pre-war basis the profit would be eleven cents.

Mr. HANSON (York-Sunbury): No, I said I thought to-day the cost was five cents—not pre-war.

Mr. HOWE: The hon. member says that the cost is five cents. Well, the cost, of course, would take all factors of cost, including the increased costs appearing in the escalator clause. But I say, drop that out, go back to the unit costs of pre-war, the cost of labour, of power, and transportation; if these are assumed, on that basis the suggestion is that aluminum can be produced for five cents a pound, and the profit would represent eleven cents a pound. If the hon. gentleman will check the profits per pound on the tonnage of aluminum I have given him, against the balance sheet of the company, he will see that he is very far afield indeed in his assumptions of cost. I am afraid that is all the information I can give him.

Mr. HANSON (York-Sunbury): Let us understand the situation. The minister says that because of his financial relationship with the British government he is not able to reveal the figures of cost of production. I would not quarrel with the minister for taking that attitude so far as the British government is concerned; but in his capacity of minister of munitions and in view of his familiarity with the contracts for Canadian consumption in a semi-processed state, possibly that secrecy would not obtain. Now if the minister has said—and he has in effect said—that because of his commitments to the British government he is not able to give us the real cost, I am not going to ask him to break his plighted word to the British government, because after all it is their responsibility and their business, and their money is paying for this. But what has been bothering me all along, in reading the discussion, including the speeches of the hon. member for Rosetown-Biggar here and outside the house, and the minister's reply, is this, that if the production is increased by 600 per cent the unit cost must have fallen very substantially, and the taxpayers, not only of Canada but of the United States and Great Britain, should have had the benefit. That is the only point I desire to make. If I am wrong in my assumption, why, I am wrong. I may say to the minister that the figure which was quoted to me was given by a man who said that he knew something about the aluminum business. I am free to tell the minister that I cannot adduce proof in support of that five cents a pound; if I had it I would produce it; make no mistake about that; I would have been camping on the minister's trail a good while ago. I rose for purposes of gaining information and an explanation as to why, if production has been increased 600 per cent, the price has not gone down. We have not had an answer on that, and apparently we are not to get it.

Mr. HOWE: Mr. Chairman, my hon. friend cannot assume that because volume goes up prices necessarily go down.

Mr. HANSON (York-Sunbury): The base price—with the escalator clause.

Mr. HOWE: The base price has gone down, of course. Nevertheless the freight per ton on bauxite is the same for a million tons as it is for a hundred thousand.

Mr. HANSON (York-Sunbury): Oh, but you cover that in the five and a half cents.

Mr. HOWE: I am not talking of the war increase. I say, had prices remained stable the cost of transporting bauxite, which was a large operation before the war, would not have changed materially for an operation six times the size. The cost of transportation would not have changed, nor would the cost of power. It takes so many kilowatts of power to smelt one pound of aluminum, and the price per kilowatt hour is usually a constant price. Any saving will have been in labour, through the larger operation, and the distribution of overhead, and I think the reductions in the base price which have been made take care of that item.

I have watched this situation very carefully. I have taken into account the obligations of the Aluminum company—obligations taken on in the interests of winning the war, and with my approval—and I am satisfied

that the price of the aluminum contracts today is a reasonable price, and one which does not allow an undue margin to the shareholders of the Aluminum company after their obligations have been discharged.

Mr. MacNICOL: May I ask the minister a question about the transportation of bauxite? I read an item a few days ago to the effect that it is being landed at New Orleans, transported by canal boats up the Mississippi to the Ohio canal, thence through the Ohio canal to a final connection, I assume the Erie canal, and down the St. Lawrence river by boat to the Saguenay.

Mr. HOWE: Did my hon. friend in his travels ever cover that route?

Mr. MacNICOL: Does it go by canal boat or by rail?

Mr. HOWE: It goes almost every other way, and in almost every kind of boat, including canal boats, but it does not go up the Mississippi river. My hon. friend would not expect it to go through the Chicago barge canal, which is hardly a route.

Mr. MacNICOL: It has a nine-foot draft.

Mr. HOWE: Hardly that. About six feet, on the Mississippi.

Mr. MacNICOL: No. Chicago has a nine-foot draught.

Mr. HOWE: It has never gone that way. As a matter of fact it has gone by rail from gulf ports. A certain amount comes from New York up the barge canal to Oswego, where it is transhipped and brought down to the Saguenay by boat.

Mr. MacNICOL: The barges on the Mississippi are 500-ton barges. They have a nine-foot draft. They come up the Ohio river.

Mr. COLDWELL: I think we can arrive at some idea of what is going on by looking at page 3631 of *Hansard* where, in the table given on that page, there is an item, "Provision for depreciation and depletion." There is another item giving the net profit of Aluminium Limited for the year transferred to earned surplus. The total of the two items is $56,870,784. The minister has given the number of pounds involved in this, and if you allow for the normal depletion you can arrive at what the profit per pound is.

Mr. HOWE: After excluding earnings of a number of other companies.

Mr. COLDWELL: The major portion is earned by the Aluminum Company of Canada.

Mr. KNOWLES: One other question with respect to the effect of the escalator clause. The minister said that the amount of adjustment in the first quarter of this year was 5½ cents. That, added to the 15 cent base rate, meant that the American government was paying 20½ cents. The question I wish to ask with respect to the 20 per cent of the contract which was being paid for at the rate of 17 cents per pound, according to the letter which Mr. Jesse H. Jones wrote to Senator Truman on March 24, is this: Does this mean that the American government is paying 22½ cents for twenty per cent of the aluminum purchased?

Mr. HOWE: No, it does not mean that.

Mr. REID: I wish to ask a question with regard to information given to the press to the effect that Austin C. Taylor of Vancouver had been appointed special representative of D. W. Ambridge, director-general of the naval shipbuilding branch of the Department of Munitions and Supply. Are there two branches, one for the building of cargo boats and one for the naval shipbuilding branch, and does Mr. Taylor represent Mr. Ambridge or the minister of munitions in Vancouver? The article states that he represents Mr. Ambridge. I always thought that when a man was appointed he represented the government, but according to this item Mr. Taylor represents Mr. Ambridge. Will the minister give the house some particulars with regard to the naval shipbuilding branch and the appointment of Mr. Taylor?

Mr. HOWE: The merchant shipbuilding programme is under the supervision of wartime Merchant Shipping Limited, of which Mr. H. R. MacMillan is president and Mr. Austin Taylor vice-president in charge of operations of the west coast. All other shipbuilding is under the naval shipbuilding branch of the Department of Munitions and Supply, of which Mr. Douglas Ambridge is director-general. The branch has only one large shipyard on the Pacific coast, namely, Yarrows Limited, whereas Wartime Merchant Shipping have, I believe, five large operations in the Vancouver area. It was felt that in the naval activities there, having to do with Yarrows Limited, one shipyard could be better co-ordinated under the direction of Mr. Taylor, who would thus have the whole steel shipbuilding industry on the Pacific coast under his responsibility. It was considered that a more equitable distribution of labour and a better servicing would result from Mr. Ambridge's delegating his responsibilities on the Pacific coast, in regard to steel shipbuild-

ing, to Mr. Taylor, who will report to Mr. Ambridge as far as naval shipbuilding is concerned.

Mr. HANSON (York-Sunbury): What has become of Mr. Desmond Clarke?

Mr. HOWE: He has changed his position. He is now assistant to myself in charge of certain special duties.

Mr. DIEFENBAKER: In connection with the building of cargo vessels and the like, it is said that the increase in expenditures during the coming year will be approximately 300 per cent over the figure to-day. I would ask the minister to advise the committee how many men are to-day employed in cargo shipbuilding, how many men will be required during the next year in the expansion of the present programme, what measures are being taken to recruit the necessary man-power for this particularly specialized type of work, and what assistance the selective service authorities are giving the minister in securing the necessary man-power.

Mr. HOWE: So far as merchant shipbuilding is concerned, my hon. friend will understand that the appropriation before the committee is in payment for that portion of the ships we build that will be operated by Park Steamship Limited. As to merchant shipbuilding, it is actually stabilized. The yards devoted to merchant shipbuilding are yards that will continue in that work, so far as we can foresee at the moment. They are well staffed, and the components position is first-class. So far as I know there will be no great demand for men in the merchant shipbuilding field, but we are not so happy in the naval shipbuilding yards. That situation is being handled very well by selective service.

Mr. DIEFENBAKER: Has the minister sufficient man-power now without recruiting any further man-power to continue the present plans for merchant shipbuilding as well as the building of cargo vessels by Park Steamship Limited?

Mr. HOWE: Park Steamship Limited does not build boats; it operates boats. We are turning out merchant ships at the rate we have scheduled for the current year. We are quite happy about our production in that field. My hon. friend suggests something about not hiring more men. We are always hiring men, because there is always a turnover in these yards, too much of a turnover; nevertheless if we could be sure we could maintain the number of men in merchant shipbuilding that we have to-day until the programme is completed, we would be happy.

[Mr. Howe.]

Mr. DIEFENBAKER: The minister has raised another point there. He says there is far too much of a turnover, if I heard him rightly. Approximately what proportion of the man-power is leaving the production of shipbuilding and going elsewhere from month to month?

Mr. HOWE: That is really a question for the Minister of Labour to answer. I have not the figures here and there is no reason why I should have them, but he will be glad to give my hon. friend that information when he is discussing selective service.

Mr. DIEFENBAKER: That is not exactly the position. There must be some coordination here between these departments. When the Minister of Agriculture had his estimates before the house the answer he gave, when the question of man-power was raised, was to the effect that he could ask for the assistance of the Speaker to deny the right of members to ask the question, because after all that was the problem of the Minister of Labour. The Minister of National Defence more or less adopted the same attitude, and now the Minister of Munitions and Supply, where there is a very particularized form of demand for labour, gives the same answer. Surely when this question of man-power has to be faced we have the right to know the picture in each of the departments. As a matter of fact the Prime Minister said the other day, if I remember correctly, that one of the reasons why it was necessary to have the Minister of Labour come at the end of the parade of ministers was the fact that by doing that members would have a true picture of the man-power situation. I feel that we are not getting that picture.

There is nothing more important at the moment than the production of vessels both for war and for transportation. The minister made a most significant statement when he said that there is altogether too much change in the personnel of this industry. What is the change he refers to? Where is the coordination between the different departments? Are men engaged in the shipbuilding industry still being called upon under the National Resources Mobilization Act for service in Canada? Has some arrangement been made by the Minister of Munitions and Supply to secure the continuance of the man-power necessary for this production? Has he made arrangements with the Minister of Labour so that trained men will not be taken from shipbuilding where they are performing specialized work and placed in the forces for the defence of Canada? The committee is entitled to this information. These are things which members

should know before the Minister of Labour comes along. We are entitled to have information from each department so that we may have a picture of the man-power situation.

Mr. HOWE: I have already told my hon. friend that we are quite happy about the man-power situation in merchant shipbuilding. We advise the Department of Labour of the number of men we need in each shipyard, and so far as I know the men are forthcoming. At least we have no serious shortage in any yard building merchant ships at the present time. I have no complaint to make to my colleague at the moment about the man-power situation in shipbuilding. I am sure I do not know whether men are being transferred. All I know is that the required number of men are in the yards to turn out the work on the schedule we have put before the shipyards. That schedule is being maintained. Who the men are, where they come from or where they go, is entirely a matter for the Minister of Labour. I am sure that he will be able to give you full information.

Mr. DIEFENBAKER: That answer may satisfy some, but it does not satisfy me. I want to know if men are still being called up from these specialized jobs and being put in the army in Canada. If so, how many have been called up from shipbuilding since the beginning of this year?

Mr. HOWE: I do not know.

Mr. DIEFENBAKER: Does the minister say that he has no information as to whether men are being called up? Is that the answer?

Mr. HOWE: They are being called up if they are in the proper age groups. I made the statement the other day that at this stage we are making no demands on the army, navy or air force for the deferment of any man unless he has a very unusual skill which we cannot obtain otherwise at this time.

Mr. DIEFENBAKER: What did the minister mean by the statement he made earlier in the discussion that the proportionate rate of change in the personnel of the shipbuilding yards was too great, or words to that effect? Did he mean that it is difficult to hold the necessary trained men in the industry?

Mr. HOWE: No. Men drift from yard to yard to some extent. It is a thing we would like to discourage; we would like to keep them where they are.

Mr. REID: Are the ships under charter to the Park Steamship company insured? If so, who bears the loss, if any?

Mr. HOWE: The ships are insured against what is called "P and I", that is protection and indemnity. They are not insured against war risk; but they are insured against a third party risk. These ships are operated for the account of the government, and any profits go to the government. The government has decided, as it has in most insurance matters, that it is willing and able to take the risk on individual ships rather than spend the money that would be required to insure them against war risks.

Mr. FRASER (Peterborough West): Has there been any hold-up in supplies, such as engines and other equipment, for ships that are being built? I think about two weeks ago the Toronto *Star* stated that a number of ships being built for the government were being held up because they could not get equipment.

Mr. HOWE: In the merchant shipbuilding programme components are well ahead of hulls; there has been no delay for many months.

Mr. NOSEWORTHY: Would the minister or his colleague give us a statement with regard to the present labour relations in Toronto? I understand there is a considerable lay-off there at the present time.

Mr. HOWE: The Toronto shipyards have an agreement with the American Federation of Labour which covers all workers in the yard. One day last week a group of 289 workmen, affiliated with a rival union, which is also an affiliate of my hon. friend and his party, as I understand, held a meeting on company time in the shipyards in flagrant violation of the agreement covering the relations between the yard and its employees. Those men were promptly dismissed, and I think properly so. If the men wish to come back individually, they will probably be rehired, but we cannot stand for jurisdictional disputes on company time in any shipyard.

Item agreed to.

3. Housing development, $30,000,000.

Mr. NICHOLSON: On a number of occasions I have discussed this important question of housing. When Wartime Housing Limited was established the minister reported to his colleagues, as outlined in the order in council of February 24, 1941, that there existed at various points throughout Canada such a lack and serious shortage of housing or other living accommodation for persons then engaged or likely to be engaged in the near future upon war work in connection with the production of munitions of war and supplies or upon defence projects, or for the families of such persons, that the war effort of Canada was

likely to be jeopardized unless steps were taken immediately to remedy the situation. The administration deserves credit for recognizing that the amount of housing available for the people of the country will directly affect the production of munitions. In the United States during the last war they found that the lack of housing accommodation in some of their munitions centres resulted in a very large labour turnover and wastages of upwards of twenty-five per cent.

I have in my hand a copy of the brief presented to the committee on reconstruction and re-establishment by the Canadian federation of mayors and municipalities, in which reference is made to the serious housing shortage in Canada as revealed by the 1941 census. One statement is to the effect that twenty-five Canadian cities with populations of over thirty thousand reported that sixty-one per cent of their people lived in rented quarters. Of these tenants 53·6 per cent paid less than $25 a month rent, 36·3 per cent paid less than $20 and 16·5 per cent less than $15. More than 17 per cent of the houses had neither bath nor shower, while 30 per cent had no means of refrigeration, either mechanical or by ice. In mentioning this very serious situation the brief goes on to state that in the city of Hull, for example, 25 per cent of the houses are in the category of those for which the rental is less than $15. Anyone who has had any experience in looking for housing accommodation in Canadian cities can picture the sort of quarters available at $15 per month. The mayors' association made some valuable recommendations, which I shall discuss a little later.

The bureau of statistics reports that urban centres would require 143,314 new housing units to give each family a separate unit; and the estimate of the family units required in rural Canada shows that 82,612 units would be required to provide separate family units. The total number of houses required to give each family in Canada a separate unit would be something over 225,000. In view of this very serious shortage one might anticipate that Wartime Housing Limited could embark upon an ambitious house-building programme without creating a surplus of houses for the post-war period.

I have some reports from typical Canadian cities to which I should like to refer; one very illuminating report deals with the city of Ottawa. Hon. members of this house are so familiar with the shortage here, however, that it is unnecessary for me to quote these comments. Then I have a report on housing in Halifax, made in 1932 under the direction of the citizens' committee on housing. This report contains these words:

> And well it may, for Halifax is infested with a high percentage, per house population, of tumble-down shacks where whole families eat, sleep, bathe and live in a single room, where cellars reek with filth and vermin, where sewage runs riot—hovels unfit for human habitation, and typical of the worst slum conditions to be heard of anywhere. "One-half the world doesn't know how the other half lives," said Jacob Reis.

Something over two years ago the hon. member for Rosetown-Biggar had occasion to refer to housing conditions in Halifax. At that time the senior member for Halifax made an emphatic protest, pointing out that Halifax was a city of beautiful homes. Doctor H. B. Atlee wrote the Halifax *Chronicle* on Wednesday, June 4, 1941, after the hon. member had made his comments here, and in his letter he said:

> Your columns this morning contain the information that Mr. M. J. Coldwell has been "censured in some quarters" for bringing to public attention the condition of the slums of this city. Surely this represents ostrichism in its blatant and unabashed form—that ostrichism which, head hidden in the sand, declares that the thing it does not want to see should not be seen even by more intelligent birds. Mr. Coldwell made no extravagant statement about our slums. No statement could be couched too extravagantly to describe their loathsome squalor. I have worked in the east end of London and in some of the less salubrious environs of Manchester, and I saw nothing there any worse than exists in Halifax. Our slums are a disgrace and a shame to us—a disgrace abounding and a shame reproaching. In tolerating them we have shown a criminal indifference. For they are more than a shame and a disgrace; they are a cancer, eating into our very life and health.

A report from Winnipeg covering the year 1942 states:

> . . . it will be seen that we have reached an all-time low in the number of vacancies, which means that more and more families are having to crowd together. This condition is, of course, in conflict with our health and other by-laws, but it is evident that there is little we can do about it. . . .
>
> The shortage of accommodation for the low-income group has been acute for years and I have referred to this over and over again in these reports. The present plight of the average working man to find moderate but satisfactory living quarters for his family is lamentable. . . .
>
> Surely our present housing shortage cannot continue much longer. The risk to health of our sub-standard housing, not to mention that of the fire hazard in our nondescript tenements, may be brought home to us with painful remorse. Already, we have much evidence of the toll in moral and mental standards, also the cost of crime, in our blighted districts.

My attention has been drawn to a report appearing in the Saskatoon *Star-Phoenix* of

April 23, 1941, with regard to rural housing. This statement is made by a Church of England clergyman, in reference to conditions in northern Saskatchewan, where many heroes of the last war have lived. He said:

I have seen the slums of London and our eastern cities, but I have never seen the abject poverty and want that exists among the settlers of northern Saskatchewan.

In the past, as those responsible for the affairs of our country, we have not faced up to the cost of maintaining these slums. I have here a report on municipal housing by Helen Alfred of the national public housing conference of the United States, in which she says:

American slums are among the worst in the western world. From coast to coast, from Canada to the gulf, the housing conditions which families in the lower income brackets are obliged to occupy are a shocking commentary on what we like to call the American standard of living. Toward no other form of economic maladjustment have we remained more archaic in our attitudes, less progressive in action. While imagination, skill and boldness have marked the attack of American cities on problems of health, education and recreation, the housing problem—the inability of low-income wage workers to secure homes of modern standard at rents within their means, has been treated with vacillation, subterfuges or complete indifference.

A study was made in Winnipeg back in 1935 in regard to the cost to the taxpayers of that city of maintaining their slums. They took into account the cost to municipal hospitals, social welfare agencies, the police department, the children's aid society, the children's bureau, the Winnipeg general hospital and the St. Boniface outdoor clinic, and compared the cost in the worst slum area with the cost in the rest of the city. They found that in this worst slum area the cost of maintenance amounted to $639,000. Had the cost in that area been at the same rate as in the rest of the city it would have amounted to only $189,000, showing a difference of $450,000. In other words it cost the taxpayers of the city of Winnipeg, the gateway to the west, nearly half a million dollars to maintain the slums of that city.

The special committee of this house which investigated housing in 1935 reported that a survey made in Cleveland indicated that where 2½ per cent of the population lived, 22 per cent of the murders were committed, 6·8 per cent of juvenile delinquency existed and 12½ per cent of deaths from tuberculosis occurred. Although the per capita cost of fire protection in Cleveland is only $3.12, the cost in the slum area is $18.12. The estimate for the total cost of the slum area is $1,740,000.

I mention these two or three specific cases to bring to the attention of the committee the fact that the creation and maintenance of a slum area is a costly business. Unfortunately I am afraid that as part of our war-time housing programme we are building some new slum areas. Wartime Housing Limited deserves credit for entering the field fairly early in the war. Houses have been provided in a number of areas, where, had they not been built, there would have been a serious shortage of housing accommodation. I am quite prepared to admit that the houses which have been built by Wartime Housing Limited are superior to a great many other houses found in cities in which there is overcrowding. But I come back to the point I made a year ago, that many of the temporary houses being built by Wartime Housing Limited will be the slums of to-morrow. The taxpayers of Canada have spent a large sum of money to build houses. I am not complaining about the amount of money spent for this purpose. When one considers that this year the Minister of Munitions and Supply will supervise the expenditure of $3,400,000,000, the fairly modest estimate of $30,000,000 for housing seems like a small sum indeed. But as a taxpayer I am concerned that the people should receive good value for these houses. I am also concerned that houses which will be slums in a few years should not be built in areas in which a permanent housing shortage exists.

I have before me some correspondence which passed between the president of Wartime Housing Limited and the Toronto *Globe and Mail,* and I have also an article which appeared in *News* on Saturday, April 3. In this article a good deal of space is devoted to a description of the cost of houses built in Hull. It states:

A return brought down in the house showed 150 houses erected in Hull at a total cost of $577,604. Of the total $117,179 went for land, sewers, water, road-making, street lighting, electric poles and cables. That left $460,425 as the actual cost of the houses. The Hull development, according to Wartime Housing in Toronto had 100 six-room storey-and-a-half houses, of a unit size 24 by 28; 50 four-room one-storey houses, 24 by 24. The Toronto officials estimate the difference in cost between the cost of four- and six-roomed houses at $300. The total outlay of $460,425 for the 150 units works out at $2,968 each, for the 50 four-roomed houses, and $3,169 apiece for the 100 six-roomed houses.

A second return to the House of Commons regarding the same development gave the unit cost of the four-roomed houses as $2,941 and of the six-roomed houses as $2,937, and the cost of land and exterior improvements as $760 per house.

The article goes on to give the cost of a house built in Galt by a firm known as the Franklin Lumber company. It states:

Land for the experiment was bought from the city, close to the Wartime Housing development. It cost $50. The house, a four-room cottage of the same ground dimensions as Wartime Housing's four-roomer, was built to the specifications of the National Housing Act. These require a foundation and cellar. Wartime Housing dwellings are set on posts and have no basements.

The cottage built for comparison with the Wartime Housing model has a 10-inch cement foundation and a dirt-floored cellar. Both houses have bathrooms and electric wiring. Neither has a furnace, but Wartime Housing provides a convection heater installed on the ground floor of each of its dwellings. The cottage the lumber company built was of frame construction, wood sheeted and plastered inside. Wartime Housing units are also of frame, wood sheeted, but are finished inside with plaster board.

The Galt cottage completed, was sold with its lot for at least $569 less than each four-room temporary dwelling at Hull cost the people of Canada. Its sale price netted the builders "a good margin of profit", to quote "Timber", which published a report on the experiment in a recent issue.

The report indicates that a temporary house built without cellar and on posts cost $569 more than a permanent house, on a ten-inch cement foundation, of lumber construction.

The president of Wartime Housing, Mr. Pigott, found occasion to write to the *Globe and Mail* in reply to the article appearing in *News*. In his letter Mr. Pigott states:

The author of these figures states the cost of the house in Hull, Quebec, exclusive of land and exterior improvements, is $2,869. Where this figure was obtained it is impossible to say. The truth of the matter is that the cost of this house in Hull, figures of which cost are available to any auditors, is $1,889.13, quite a different figure from $2,869, which has been given to make the comparison.

On the question of cost: For your information, the average cost of 15,392 houses in various parts of Canada is $2,229 and this average price includes a large percentage of houses with four bedrooms. The average cost of the house under discussion, that is the two-bedroom house, of which we have completed 6,773, is $1,959. This is on the basis referred to in the article "exclusive of land and exterior improvements." This house costs as low as $1,836 in British Columbia, and is lower than this again in North Vancouver. The average price of this house in Ontario is $1,927.

Well, Mr. Chairman, I happen to have some returns here brought down in the house. The minister has supplied them, so that it is not necessary to go to Mr. Armstrong and ask where he gets his information. According to returns brought down, two hundred houses were built in North Vancouver at a cost of $599,395, or an average of $2,996. In turn I must ask the minister where the president of Wartime Housing Limited got the figure he quoted in his letter to the *Globe and Mail*.

With regard to houses in Hull, if the minister will turn to page 951 of *Hansard* for this year he will find the answers to questions I had placed on the order paper. I have also sessional paper 122-i, a return asked for by the hon. member for St. Paul's (Mr. Ross) and dated May 17, 1943. This return shows the cost of a great many of these units. For example, the Hull costs are given. According to this information, 100 houses were built on a lump sum basis, and 50 on the day labour basis. The actual cost up to February 28, 1943, amounted to $530,125. The actual cost per unit for the 100 houses was $2,750, and the actual cost of the 50 houses was $3,935. If one multiplies $2,750 by 100 he gets $275,000, and if he multiplies $3,935 by 50 he gets $196,750, or a total of $471,750. But the total in the other column, up to February 28, is $530,125. That makes a difference of $58,375 in the two totals. That is not a lot of money compared with three billion dollars, but $58,000 is still a lot of money. If you average this difference of $58,379 among the 150 houses it means an extra of over $385 per house. Add that to the cost of the smaller house and you get a total of $3,139, and for the larger house a total of $4,324. I suggest to the minister that he and the president of Wartime Housing should get together and see if they cannot get their figures to tally so that we may know just what these houses cost. As I said, the cost has been very, very high. I urge members of this house to spend a nickel and ride across to Hull some Saturday afternoon. The members of this house have a responsibility to find out whether we are getting good value from our wartime building. We are spending this year over $30,000,000 and hon. members have a right to find out whether we are building a new slum area within a short distance of this capital. I take it that the administration would want to do a very good job within such short distance of the capital, that they would want to put up the best possible house at the least possible cost. But when I was over in Hull recently I noticed that several of these houses have had repairs made to them already, although they have not yet been occupied for a year. Some of the houses had ply board around the base; it has been found necessary to put boards around there because apparently the children were able to kick holes in the wall, and something more substantial had to be provided.

My chief complaint regarding the administration of Wartime Housing has been that the taxpayers are paying a very high unit price

for these houses; the overhead is very high; and we are creating slum areas. I think I should mention that I have seen some of the hostels which have been built and I have very little fault to find with them. They seem to be well managed and remind me somewhat of my university days when we enjoyed quite an interesting life living in residence. While there were some complaints about the food, it looked as though everyone was being well fed and I am sure they had a varied diet; but where you have several people eating in the one place day after day it is bound to become a little monotonous.

Comparing the costs shown in these returns I should like to give the committee a few figures in connection with the building of permanent homes under the national housing administration. Again let me say that I am not satisfied with the National Housing Act, but this does afford a basis for comparison.

A typical borrower under the National Housing Act has a yearly income of $1,800, borrows $3,000 and builds a $3,750 home. The average cost per house is $3,250, and at that he gets a much better house than he would get in Hull even for more money. The average cost per lot, 35 x 120, including improvements, is $325. The cost of equipment, light fixtures and hardware is $100; the legal and financing cost, $75. That brings the total cost of lending value to $3,750. The lending institution's share is $2,250; the government's share, $750, and the borrower's equity, $750. The average borrower would have an income of $150 a month. He would have to pay $26.50 a month to make his monthly payment of principal, interest and taxes. If it is possible to make permanent homes available to people in Canada who are living in crowded quarters, for the payment of $26.50 a month, after the borrower has made an investment of $750, we should be promoting schemes of that sort. It really means that the house is bought for $750, because the $26.50 paid on the monthly basis is less than one would have to pay to rent such a house in the city of Ottawa. People who live in their own homes take a pride in improving the home and its surroundings. They take a great deal more interest in their own homes than they do in a rented house and have a pride in their gardens. Again I am prepared to admit that Wartime Housing has been able to select good tenants and the property is cared for by the tenants in a satisfactory manner. But people cannot look forward to having these as permanent homes. The minister said on one occasion that if it was desired to change these houses into permanent homes, it would be an easy matter to put a cement foundation under the building, but I think anyone who has visited the Hull houses would agree that if one wanted to build a permanent home out of one of these houses in five years' time, the first thing he would do would be to tear the house down and use some of the tactics that were described by the hon. member for Macleod the other day in connection with the buildings on a farm that was taken over by the government for an air training centre. I do not think it is feasible to contemplate making permanent homes out of houses of this type of construction.

As I intimated before, I think the administration costs in connection with Wartime Housing are excessive. A return was brought down some time ago giving the administrative costs in connection with the building of wartime houses. The number of housing units completed by Wartime Housing as at December 31, 1942, was 9,510; total cost of housing units, $36,000,000, with administrative costs of $209,000. Under National Housing, according to an answer given to another question, there were built 23,606 units, with construction costs of $92,000,000, and administrative costs of $550,000. The costs of Wartime Housing administration were much higher, taking into consideration the houses built.

According to questions which were answered in the house, the general manager of Wartime Housing is now getting a salary of $12,000 a year. He started at $10,000 a year. I shall have more to say about this when the Minister of Finance comes before the committee. I must remind him that we have an order freezing executives' salaries, and here is a man who, I am informed by another return, was receiving a better salary in the United States than he is now getting, but who was receiving from this government a salary of $10,000 a year until July 1, 1942, but is now receiving $12,000 a year. I submit that we have some very good people in Canada who might have been available to act as general manager of this corporation and it will be difficult to satisfy some people who are working in essential industries that they are not entitled to an increase when they see other people having their salaries increased by 20 per cent. A 20 per cent increase has been given to a $10,000 dollar man—which is a very large increase.

Then there is the question of architects. I find, in reply to a question I put on the order paper some time ago, asking for the names of all the registered architects employed by Wartime Housing Limited and also the names and addresses of the architects

of Canada who have been engaged on wartime housing, and the amounts paid to each for their services, that there is quite a long list of the architects who are employed, and the salaries paid. Mr. W. L. Somerville, who is a highly qualified architect, has been paid $4,375; Mr. B. H. Wright, $9,001; Mr. B. R. Coon, $4,000; Mr. D. E. Kertland, $9,487; Mr. H. H. Kent, $4,341; Mr. Abe Wilson, $3,033; Mr. L. Forstener, $3,323, and so forth.

In addition to employing high salaried men on the staff, I find that a number of firms have been dealt with very generously. W. and W. R. L. Blackwell, of Toronto and Peterborough, have received for services and expenses over $10,000; D. J. Cameron, of Windsor, $20,000; S. B. Coon and Son, of Toronto, over $8,000; George and Moorhouse, of Toronto, over $9,000; Maurice Germain, of Montreal, over $7,000; Hutton and Souter, of Hamilton, over $10,000; Norman Kearns, of Welland, over $13,000, and McCarter and Nairne, of Vancouver, over $42,000. There is here a very long list of architects, and, having visited a number of housing projects undertaken by Wartime Housing, it is hard for me to understand why such high salaried architects are required and why something more creative has not been produced by architects who apparently have been paid on a handsome basis.

As I said, I feel that the cost in connection with building wartime housing has been unduly high. I hope the minister will be able to give us some information regarding some of these specific cases which I have mentioned. I wish, too, that there should be a reversal of policy in connection with wartime housing and that more consideration be given to the place of these units in our economy of to-morrow. I understand that some permanent houses are being built at Sarnia, but apparently the minister is unwilling to give members of the house as full information as he should regarding what his plans are for permanent housing. Hon. members will recall that early in the session I asked for copies of plans and specifications in connection with housing projects in St. Catharines and in Hamilton, and a strange attitude was displayed by the minister; he refused to bring down that information. I found later that it cost the taxpayers of this country $1,449.47 to prepare the St. Catharines plans and specifications; and then a member of this house is denied the privilege of having this return brought down and made available for his consideration. Usually governments are only too glad to make available their plans for housing.

[Mr. Nicholson.]

Again, if I might refer to the national housing administration, they encourage people in the country to send for their plans, and try to stimulate the interest of the citizens in building projects.

With regard to the future, I hope the administration will give more creative leadership than Wartime Housing Limited has provided. I have here a letter from the Ministry of Health of Great Britain. Under date of March 4, 1943, the assistant secretary writes:

> I am directed by the Minister of Health to state that, from his continuous consideration of the housing situation throughout the country, he is fully aware of the growing oncern of many local authorities at the conditions which have ensued from the enforced stoppage of housing work and of their desire to resume this work at the earliest opportunity. He regrets that he can hold out no hope of new house building at present save the provision which he has recently announced of a small number of cottages for agricultural workers. . . .
>
> But it is clear that the need for houses is already substantial, and the minister is anxious that local authorities should now begin to formulate plans so as to be in a position to make a quick start immediately conditions permit, whether during or after the war. . . .

In a recent letter to the national public housing conference, the President of the United States wrote as follows:

> The recognized need for adequate housing for all of our citizens has been emphasized by the special need of proper housing for civilian and enlisted personnel—and their families—concerned in the effort to win the war. Adequate housing is a morale builder and is essential to the speed and efficiency of our national defence work.
>
> The programme of clearing slums and providing decent homes for the ill-housed of our nation in the years before the war laid the foundation for the intensified housing effort necessary to-day. The job of clearing the slums, which your Conference helped to begin, of necessity must be reduced substantially for the duration. With the scarcity of building materials we can now afford to build homes only in defence areas. But the goal of a slumless America must be preserved. . . .

I have also the report of a speech delivered recently in the United States by the Hon. Walter Nash, who was the sponsor of a housing bill in New Zealand in years before the war. He said.

> We simply cannot afford to pay the tremendous price we have paid in the past by leaving such matters in the hands of those who acknowledge no social responsibility. We cannot afford to leave the way clear in the future for the predatory activities of the speculator, with the repetition of the muddle and the waste that must always result from unplanned development.
>
> There is the problem, too, of considering housing in its proper relationship to other phases of general regional planning. Industry and housing, for example, must be considered

for planning purposes as two parts of a single problem. A building project no longer involves merely the construction of a number of dwellings. The larger the scale of operations, the more we are compelled to pass from purely constructional fields into fields which embrace almost every phase of communal activity. When we commence to plan for housing, on any national scale, we are in effect planning for the future of the nation.

I have two or three illustrated booklets telling what remarkable progress has been made in New Zealand under a labour government in connection with the building of suitable homes for every family. I should like to draw the attention of the committee to an interesting little book entitled "Homes or Hovels", recently published by the Canadian Association for Adult Education and the Canadian Institute of International Affairs. The hon. member for York West (Mr. Adamson) is honoured in having a sketch of himself in it. The hon. member made a telling address at the conference held in Toronto sponsored by the Ontario Association of Architects, that provided the material for this book. It is encouraging to find a representative group from various parts of Ontario showing the initiative to bring Catherine Bauer, who is without doubt one of the best of the English-speaking authorities on housing. I suggest that hon. members secure a copy of this valuable booklet and become familiar with the suggestions.

Mr. MacNICOL: Recently the mayor of Toronto, accompanied by some members of the council, interviewed the minister and the head of Wartime Housing Limited. I am sure the minister will readily admit that the requests of the city of Toronto were reasonable and were presented in a businesslike manner and supported by a well prepared brief. I shall occupy only a few moments, but I intend to read a few paragraphs of the brief, because they clearly indicate what that great city is up against, and how the city itself has tried to help the minister with a problem which now confronts him; for he has been up against a serious problem, and I for one think he has made the best effort he can to solve it. On May 13, Toronto, through the mayor, presented a brief in which a number of reasons are stated to show why the city requires assistance in handling the serious housing problem that exists there. The first clause on page 1 reads:

> We would draw to your attention the housing situation that has been created in Toronto by the great influx of people from other sections of Canada to accept employment in the armament and munition plants located both in the city proper and in the adjacent municipalities.

I might add that immediately north of the city in York township, east of the city in East York and west of the city in West York, many thousands of people reside, a great many of whom work in the city while living in the townships or in the adjacent municipalities, and these municipalities too are congested. They have their housing problem, and for that reason the city honoured them by referring to the equal difficulties with which they are faced. The city itself tried to overcome these difficulties and to help out the minister and his board, first, by making a tabulation of vacant stores throughout the city, and with the consent of the board such stores as could be converted into dwellings were so utilized to the number of 225. But that quickly exhausted the available number of stores which could be turned into dwellings. Some of them are in my own end of the city, and while they are not all that could be desired, they do assist in overcoming the temporary difficulty that exists in consequence of inadequate accommodation. The city then made application to the board, and here I will read what the brief says:

> The civic administration has conferred on several occasions with officers of Wartime Housing Limited. At a recent meeting with Mr. J. M. Pigott and Mr. V. T. Goggin, we presented the city's application for the erection of 300 houses on land provided by the city, 200 of which would be available for war workers' families certified as such, 100 for families of soldiers overseas, and civilians, this latter group to be erected and operated under a similar plan to that provided in the city of Halifax.

The difficulty is that soldiers' families have been particularly affected by the lack of accommodation. For some reason or another, which I do not consider warranted, many landlords have refused to accept soldier tenants. I have a number of them myself and I find them very satisfactory. In fact, I could have rented the buildings for much more, but I would not be guilty of turning out a soldier's wife and family, particularly when he is overseas defending, not only myself, but everybody else. However, everybody does not treat them in that way, and therefore we have a serious problem. To continue with the brief:

> We were advised that directions respecting housing for war workers should emanate from the Department of Munitions and Supply and for those coming within the other groups from the Department of Finance, or more directly the national administrator of real property.

Here is what the city submitted as some of the reasons for its urgent need of help in this regard.

Respecting the provision of houses for war workers' families, it is our intention to confer with the Hon. Mr. Howe, as His Worship the Mayor has been advised by company officers that the Massey-Harris company requires immediate accommodation for 100 families and the Toronto shipbuilding company for at least a similar number. The problem of housing for war workers, however, is part of the general housing prices of the city, which can be coped with only by authority of war-time powers, vested in the national administrator of real property. We therefore request that you give consideration to the problem as a whole, as well as giving particular attention to the housing problems of the specific groups namely, soldiers' and civilians' families.

That paragraph I have quoted indicates the difficulty which the city faces of providing accommodation for the large influx of workers into plants making munitions, such as Massey-Harris company and the shipbuilding company on the bay, both of which are almost wholly engaged in war production, and whose workers should be given accommodation. If they have to go a long distance out of the city, it shortens their hours or tires them out on the job. I believe the city offered to provide a piece of land, forming a part of its property, not far from the Massey-Harris or the shipbuilding company. The city has a good deal of land there which it owns through the harbour commission, and it offered to turn that land over if Wartime Housing would assist in building the necessary houses. What has happened I do not know, but certainly the problem is a serious one. People have been coming in from all over the country, a great number of them from Saskatchewan, Manitoba and Alberta, and they have all shown themselves to be good workers. It is imperative that they be given adequate accommodation for themselves, their wives and families. It is a menace to health, to morale, and to the city generally that men and women should be crowded into such small quarters as many of them are obliged to inhabit. I have before me one report showing that twenty persons, of whom fifteen are children, are crowded into one small house of seven rooms. That is wholly inadequate, and if the ministers' department has not yet acceded to the request of the city, I appeal as strongly as I can that consideration be given that request. The city has contributed extensively to every cause. It contributed almost half of the amount of money raised in Ontario, which was itself about one-half raised throughout the country, in connection with the war loan, and it has also contributed generously to the Red Cross and to every worth-while call that has been made. It has been most devoted in its support to all these causes and is entitled, therefore, to consideration.

[Mr. MacNicol.]

Here is a clause that states what must be done:

Apart entirely from any further aggravation of the problem that would arise from a continued new influx of war workers, the present housing crisis must be solved either by "freezing" the present housing occupancy and prohibiting evictions for the duration of the war, except in cases where other satisfactory accommodations are available, or by the provision of new dwelling units sufficient to take care of the present excess population of the city as it is forced out of its present temporary quarters.

The magnitude and urgency of the problem is indicated by the supporting material attached hereto. In that material, we have submitted a list of some 200 families facing the immediate necessity of vacating their present premises, whose cases are in the hands of our city welfare department. There is no alternative accommodation at present available for these families. One hundred and fifty court orders to vacate are present pending. The "housing questionnaire", uncompleted, shows 603 families needing housing. Much other material is presented showing the urgent need. It has been impossible to prepare figures on the number of notices to vacate that have been served on tenants in Toronto since December 9, when the order requiring a year's notice became effective. There is good reason to believe that the number must be in the hundreds.

This is a big problem, one which has not been brought about by the city itself. These plants, many of them such as John Inglis, belonging to the government, are making munitions and there has been a great influx of people into the city. So far as I can see, it is mainly a government problem because these people have come to the city to work in government plants. When you build a plant in Toronto; when you bring people into the city, then it becomes your problem. I admit that it is a big problem. The city is willing to cooperate in providing accommodation for its people. I do not think I need read any more from this large brief, which speaks for itself, except some recommendations that are made as follows:

1. That the eviction of families of members of the armed forces be prohibited pending construction of new dwelling units, except in cases where other accommodation, considered satisfactory by the proper city authorities, is available.

2. That regulations should be set up to provide that where it becomes necessary for any agency to bring additional families into the city of Toronto, or adjacent municipalities—

York South, York East, York North and York West.

—specific housing accommodation should be provided in advance.

3. That a proper record be established of sale of houses and the issuance of notices to tenants to vacate.

That is only reasonable. The mayor of Toronto, Doctor Fred J. Conboy, has his heart and soul wrapped up in trying to provide relief for his people. I believe he came here to see the minister and his officials after having made a survey of Toronto. I am speaking from memory, but I believe he stated that there were in the city at least 300 large houses which could be converted into apartments, three, four or five units to a building. I understand that something along this line is to be supported by the government. If so, I should like the minister to give us the details. I wish to know also if the minister can consider the suggestion the city made that a considerable number of homes be built on city-owned property.

Mr. ISNOR: Mr. Chairman, I should like to say a few words with regard to wartime housing as it exists in Halifax. I did not intend to take part in this discussion except that my name was drawn into it by the hon. member for Mackenzie (Mr. Nicholson). He was referring to the difference of opinion which had existed between the hon. member for Rosetown-Biggar (Mr. Coldwell) and myself two years ago, but I do not know that that has any great bearing upon the item we are discussing of $30,000,000 for housing development. I wish to approach this question in the same reasonable manner as that of the hon. member for Davenport (Mr. MacNicol). The hon. member asked the minister to consider the problem they have in Toronto and he presented a reasonable case. I am sure that the minister will give consideration to this problem. I propose to approach the minister with the same thought in mind.

For at least two years the hon. member for Mackenzie has been dealing with this question of housing, but it has always been in a critical mood, he has been criticizing expenditures, overhead, stating that costs were excessive and so on. I have studied the figures he has given from time to time, as well as those presented by others who were supposed to know. The chairman of the wartime housing board gave definite figures and I am sure he had available the costs of the various units.

This is a very large project, one which has been developed during the past twenty-eight months. Practically nothing had been done when the board was appointed in February, 1941, but they gathered together the best architects in Canada, drew up plans and decided on the types of home which would best meet the emergency. We are faced at the present time with a shortage of houses, brought about largely by the needs of war workers who have gone to the urban centres. Steps were taken to provide suitable homes of a temporary nature for these workers. Instead of being critical of the Minister of Munitions and Supply for the efforts he has made, I think we should realize that this project has been handled in a splendid manner. I realize that he has not been able to give all centres the number of houses they have asked for, but an effort has been made to meet the situation.

In Halifax attempts have been made from time to time to meet this problem. We approached the minister with the request that something like 600 houses should be erected. This would be in addition to the 1,400 to 1,500 houses which had been erected in and around Halifax. In Canada since December 1, 1942, a total of 17,441 houses, 93 staff houses, 10 dining houses, and 32 special buildings such as administrative buildings and recreation centres have been erected by the government at a total cost of something like $70,000,000. With these figures before us we realize what a large undertaking this has been. When we consider the large number of units that have been erected and the small number of complaints that have been made, I think we must agree that the Minister of Munitions and Supply should be congratulated upon the able manner in which he and Wartime Housing Limited have carried out this project.

I do not know which set of figures is correct, but I have in my hand a copy of an article which appeared in the *Canadian Editorial Digest* and which gives the average cost of the houses erected to date throughout Canada as $1,959. For the province of Ontario the average cost was $1,927, and for the city of Hull, to which the hon. member for Mackenzie has referred so often, the average was $1,889, as against the figure of $2,869 which the hon. member quoted.

Mr. NICHOLSON: What is the hon. member reading from?

Mr. ISNOR: I am giving the figures shown in the *Canadian Editorial Digest,* and I believe a magazine of this kind would make sure of its figures. It goes into the development of the whole scheme in a thorough, businesslike way; it states the number of houses erected and so on, and then gives the average cost. I am not going to say anything further on that point except that these figures certainly are quite different from those given by the hon. member for Mackenzie.

Mr. NICHOLSON: Would the hon. member permit a question?

Mr. ISNOR: I sat quietly and listened to the hon. member, but I shall be pleased to answer his question.

Mr. NICHOLSON: I wonder if the hon. member would believe the figures if he saw them in the contracts. I have them here, and the contract price is given as $2,705, according to a return brought down a year ago. I shall be glad to send them over to the hon. member, and I feel sure he will accept these figures.

Mr. ISNOR: I am quite prepared to accept the hon. member's word that the figures he has quoted were given in a return. I am simply stating the average cost of these homes throughout Canada, and particularly in the province of Ontario and the city of Hull. As a business man naturally I would want to go into these figures which the hon. member has kindly sent over to me, in order to see whether they cover simply the cost of construction or take in other items as well. Perhaps the hon. member for Mackenzie may not have gone into all the factors as closely as he might. Recently the hon. gentleman was good enough to pay a visit to the city of Halifax. I would not, of course, think he went there for political reasons at all, at a time such as this; but with all the publicity the hon. member has obtained through his criticism of Wartime Housing; in spite of the fact that he stayed in Halifax for a few days—and I hope he enjoyed himself while there—and the fact that he was going to speak there, I venture to suggest that he was not waited upon by a delegation of tenants from the wartime houses to lodge a protest. I would go farther and venture to suggest that he did not receive ten individual protests during the time he was in Halifax, or in fact that he did not receive three protests during his stay in that city. If I am correct in my assumptions; if he did not receive any protests following the erection of 1,500 homes in that city, I say the houses built under this scheme must be carrying out the purpose for which they were intended, namely, to house the war workers and others who were brought to Halifax for a particular purpose.

Naturally I am concerned about the situation in Halifax. I want to see more houses there; I think we need more houses, and I ask the minister to give serious consideration to the erection of more homes in that city. The situation that exists in Halifax to-day has been brought about by the fact that Halifax has become a national port, and there has been an influx of an additional twenty-five to thirty-five thousand people. The hon. member referred to the building of new slums. I doubt if any reasonable member who studied the lay-out of that new section, who saw the care that was taken, who looked into the general construction of the homes and observed the general surroundings, would say that we were building new slums in the construction of these wartime houses. I think his statement is a very unfair one to make, and I do not think it will help us in meeting the housing situation as we are endeavouring to do at the present time. I quite agree with the hon. member as to the desirability of permanent basements and solid walls; I emphasized those points when the city of Halifax made application for the additional 600 houses to which I have referred. I suggested that they should be of a little better type and should be constructed in sections of the city which would give a greater resale value when the time came to dispose of them. I believe if the houses could be of a better type, with permanent basements or with provision for the addition of permanent basements later on, not only would it add to the resale or salvage value of the houses, but it would give the people now ocupying them something permanent which they could call their own, thus helping to make them better citizens.

Then the hon. member referred to children kicking holes in the walls. Well, if he would examine the walls of these houses, as I have examined them on more than one occasion, he would not make that statement. A child could no more kick a hole in a wall of that type than in any other wall. The hon. member also said that the overhead is high. He did not elaborate on that point; he did not say what he meant by the overhead, whether it was overhead in connection with the operation or the upkeep. My information is to the contrary, that the overhead is particularly low, as it should be at the present time. We should not have any real depreciation or expenses in connection with repairs to these houses for some four or five years. I do not think the cost of upkeep is a bit higher on a percentage basis than in connection with any other type of construction. It is all very well for us to find fault with efforts of this kind. We can all be critical, but it takes really constructive ability to plan a venture like this, running into $70,000,000. A few mistakes are bound to be made, perhaps in selecting the type of house, or something of that kind. Perhaps the hon. member had in mind something of a more permanent nature, but that could not be undertaken on this basis because the cost would have been very much greater.

Then the hon. member mentioned houses built with an investment of $750. That was under national housing. The people who are occupying these prefabricated houses are not in a position to make an initial payment of anything like $750 or $500 or even $350. They are temporary employees carrying on war work. No doubt Wartime Housing had that in mind when they built houses of this type to accommodate people of this kind. Even if some of these people had $750 in their pockets or in savings accounts, I doubt whether they would want to invest it in houses in the section in which they are now living. So that I say the national housing scheme and the wartime housing development are entirely different. Personally I favour the national housing scheme for permanent homes, except that it should start at a lower figure. I am hopefully looking forward to the day when once again we shall have a measure operating in full force throughout the dominion, and when again we shall have an opportunity to invest and to build homes along the lines laid down by the national housing scheme.

Then the hon. member criticized the Minister of Munitions and Supply for not meeting his request to supply hon. members with a plan. I cannot recall the details, but if I remember correctly that was a plan which had not yet been approved or released. In the same breath the hon. member asked why Wartime Housing did not do the same as the national housing authorities had done, and encourage the people to send for plans. I believe the encouragement given by the national housing authorities was to select a plan which could be purchased for $10.

Mr. NICHOLSON: They had plenty of free ones.

Mr. ISNOR: One could look at plan 10, 11 or 12, or whichever plan he wished, and then he would pay $10 to procure a copy of it. That is quite different from the idea expressed by the hon. member.

Mr. NICHOLSON: Would the hon. member suggest that the national housing authorities would not produce specifications for any member of the house?

Mr. ISNOR: I am not suggesting anything. I am just stating the facts as they exist, and explaining away some of the misconceptions which might arise from the speech of the hon. member. I could say, "We will send to National Housing and procure a set of plans and specifications." We could not get them from Wartime Housing. They are two different things, and they must be approached in a different way.

I have spoken longer than I intended, but I do not wish to lose the opportunity of saying a word respecting the situation in Halifax. Certain groups in that city have organized meetings and passed resolutions which have been sent to the minister. This action has been taken by the city council, and by other social agencies. The minister has given sympathetic consideration and kind attention to the requests made. Some time ago he met a deputation from Halifax, and asked how many houses were required. I believe he was told that at that time the city would require 600 houses. He said, "Well, go ahead with 400, and after you have completed them you may come back and we shall see what can be done about the other 200." The big problem in Halifax, one which no doubt exists in other places, is that the city could not quickly provide suitable sites to take care of 400 houses. The result is that to-day we have only 225 of those 400 houses. So that it is not altogether the fault of Wartime Housing Limited or the Minister of Munitions and Supply that we have not sufficient housing in Halifax.

I would ask that the minister give favourable consideration not only to the recently expressed request for the speeding up of the building of the remaining number of houses, but that fire protection for those houses should be arranged. Fire protection in Halifax involves a heavy additional outlay, owing to the increased population in the city, and the additional number of war-time buildings which have been erected. Then, more police protection is required. While I do not wish to introduce another factor for the consideration of Wartime Housing Limited, still I must urge that fire protection and police protection for these homes are matters closely connected with any building scheme, and I would ask the minister to consider the providing of a lump sum to defray expenses entailed by those increased responsibilities.

There is another subject, namely, that of health protection, which I would bring to the attention of the minister.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. FRASER (Peterborough West): Mr. Chairman, nearly every war-time house at the present time has a victory garden. Throughout the country, wherever there are war-time

houses, community houses have also been put in, and they have been of great help. The people who live in the war-time houses have had meetings in these community houses, and after their day's work the men who work sometimes from seven in the morning until six at night, and perhaps go back for a while to work after supper, and work even on Sundays, have in their spare time cultivated victory gardens. In Peterborough, the city which I represent, some families moved into one section on the first of June and immediately began to cultivate victory gardens. They planted their seeds, and last week were pleased to see that the potatoes were coming up and that the lettuce, radishes and carrots would be ready, too, perhaps this week. Then, without any notice whatsoever to these people, Wartime Housing comes along and planks sheds right down on these victory gardens, tramping the lettuce, radishes and potatoes right into the ground. That was a shame. I know the minister is not to blame for it, nor is the president of Wartime Housing, but somebody is to blame for it. The people who have tended these gardens are mad. A man who telephoned me about it started out by saying, "Now, Gordon, if these telephone wires burn up before I get this thing off my chest I want you to call around and see me on the way to your train." He asked me what I would do if I had been one of these men. I hesitate to say in this house what I would have done. These people are naturally very much upset over it all, and I feel that Wartime Housing, the president of which was here to-day, should see to it that these sheds are not put on these victory gardens without the consent of these people. It is worse than sacrilege to tramp down a man's garden after he has spent hours and hours digging and cultivating it; it is just as bad as tramping on a grave, if not worse. I have no criticism of Wartime Housing. I know that in Peterborough we simply had to have war-time houses or some other kind of housing. We would, of course, have preferred permanent houses to be built under National Housing, but we were given to understand that these houses put up under the war-time scheme would be moved or torn down within six months after the war or as soon as possible thereafter. I hope that will happen.

I also hope that in the future Wartime Housing will not put their houses in restricted districts, because that always causes friction and hard feeling not only toward Wartime Housing but toward the war effort in general.

I have here a letter in regard to putting these sheds on the victory gardens which I wish to read. It was addressed to me and is dated June 20. It states:

I have been instructed to write to you regarding the practice of the Wartime Houses, Limited, in erecting outsheds in the rear of their houses. In many cases these sheds have been erected in exactly the same spot as the occupant of the house has planted his garden.

These people were evidently not advised that these buildings were to be set up and naturally went ahead with the planting of their victory garden as requested to do so through the newspapers and other publicity. It seems too bad to have these gardens destroyed in this manner especially at a time when the production of food is so urgent and we wish to protest strongly this action of the part of the Wartime Houses, Limited.

This action on the part of the Wartime Houses, Limited, certainly does not lend itself to encouraging these people to go ahead with their gardens.

Yours very truly,

G. G. Torrence,
Secretary-Treasurer, Peterborough,
Branch No. 52, Canadian Legion.

Another point that I want to mention in regard to Wartime Housing is that there have been requests from time to time from soldiers' families to occupy these houses. I hope that in the future soldiers' families will not have to go through as much red tape as they have had to do in the past to occupy one of these houses.

Another thing that has come to my attention is the protest that has been made by municipalities right across this country in regard to the smallness of the allowance which the government makes to the municipalities for taxes on wartime housing. It is absolutely too small an allowance to provide for police protection, schools, supply of water and other services which the cities give. Wartime Housing and the government should see to it that in the future the municipalities are reimbursed a little more adequately than they have been in the past.

In regard to Wartime Housing staff houses, I had a return brought down on April 8 of this year. The second question which was answered by the return was as follows:

On what terms are they (the concessionaires) allowed the use of the staff houses?

That is the concessionaires who cater to the different Wartime Housing staff houses in Canada. The answer to that question was:

The agreement between concessionaires and Wartime Housing Limited is generally to the effect that for a fee of 5 per cent of the gross income the concessionaires operate the cafeterias for the account of Wartime Housing Limited. The concessionaire is limited to a maximum fee

of 5 per cent. Out of this fee, he must supply the necessary skilled staff, supervision and the services of his head office. . . .

The head office might be in Toronto, where I believe it is. That is all he has to supply, just his own head office, except perhaps one man. The answer goes on:

There have been variations of the foregoing agreement, namely, at the Prince Rupert and Hamilton staff houses, but these are being standardized in accordance with the above.

Question 3 was this:

Do they pay for (a) breakage and repairs to equipment; (b) wages of the dining room and kitchen staff?

The answer to the first part of the question was:

(a) The breakage and repairs to equipment are for the account of Wartime Housing Limited as part of the cost of food service.

In other words, the concessionaire does not have to pay for breakages, and of course does not have to supply kitchen utensils or anything else. The rest of the answer was:

(b) The wages of the dining room and kitchen staff are for the account of Wartime Housing Limited as part of the cost of food preparation.

In other words, the concessionaire does not have to pay anything at all toward the upkeep of the staff house diningroom. I would ask the minister to explain why the concessionaires were allowed to cater on a contract like that. I understand that in Peterborough alone there is a loss of $5,000 a month.

Another return I got shows the number of men or women occupying these different staff houses. In Peterborough, on December 31 of last year—I do not think the figures have changed since then—there were, according to this return, only ninety people in this staff house.

I suggested when we were on the army estimates that perhaps staff houses could be used for military hospitals. I think it would be wise if that could be done.

I have here another return, dated May 14, 1943, regarding rates charged for meals, single rooms, double rooms, et cetera, in staff houses; and Fort William has preference over all other places in Canada. In Fort William you can get a single room for $12 or a double room for $10 a month. The lowest rate at any other staff house in Canada is $3.50 a week for a single room or $2.50 for a double room. Why is Fort William given preference in the matter of rates? In many instances these rates are too high, and that is why men will not occupy rooms in the staff houses.

Mr. DIEFENBAKER: I do not believe we have yet had particulars as to the distribution of the amount—slightly over thirty million dollars—expended over the past year in the different provinces. I raise this matter also with a view of placing before the minister a situation which prevails in the town of Davidson, Saskatchewan, within my own constituency. About a year or so ago an airport and elementary school were established there. The result is that housing is almost impossible to get for those who are attached to the staff or connected with the development. It is difficult for private individuals to build to-day, for the reason that they are hampered under the regulations. I ask the minister at this time to consider our situation. I would have done so by letter but for the fact that I received this letter to-day and thought the opportunity offered itself at this time to place the matter before him. In various places in Saskatchewan there is a decided shortage of houses and housing accommodation for those connected with the airport. I ask that consideration be given to the erection of some wartime houses in that province.

There is another matter I wish to draw to the attention of the minister. To-day the purpose of government departments should be as far as possible to reduce unnecessary expenditures to the minimum. The Department of Munitions and Supply has the full personnel and machinery necessary to operate the wartime housing plan; yet a new body has been set up in connection with housing; it was established on April 1 and has been materially extended as from June 4 of this year. The relevant order in council is P.C. 4579, and it gives the Minister of Finance the power to relieve the housing situation in the city of Ottawa and elsewhere in the Dominion of Canada, particularly in the cities of Vancouver and Victoria. It gives the Minister of Finance power to acquire by way of lease from the owners thereof not more than forty suitable dwellings located in the city of Ottawa for the purpose of converting the buildings into multiple housing units. It gives the minister power in the cities of Vancouver and Victoria to acquire not more than fifty suitable buildings for the purpose of converting the said buildings into multiple housing units, the terms of the lease to be a period of five years subject to termination within a period of one month at any time prior to the lapse of the said period. Under that scheme, according to a press announcement of June 7 issuing from Ottawa—

. . . several millions may be spent converting large old houses into four and five family dwellings, with plans in many cases by private architects and work by established builders and general contractors.

This news item goes on to say:

> Fifty houses will be converted at $250,000 at Vancouver-Victoria with a Vancouver office to be opened at once, private architects retained variously for sketch planning, preparation of working drawings and possibly in certain specifications, and contracts arranged.

The plan is to be expanded to embrace Toronto, Montreal and other cities.

Now, not only have we Wartime Housing Limited under the Department of Munitions and Supply, but a new set-up has taken place, beginning in April and extended in June, under the Department of Finance, which will mean a duplication of staffs in the various cities affected and an increase in the numbers of those employed in order to furnish war-time housing, when we already have a branch of the Department of Munitions and Supply able to do this work.

I suggest that the information placed before us in the estimates for Wartime Housing does not tell the full story; it makes no reference at all to this new scheme under the Department of Finance.

What is very serious in connection with this latter scheme is that, while parliament was sitting, an order in council was passed without submission to parliament, empowering a setting up by the Department of Finance of a new department to deal with war-time housing or one phase of it and to expend at the present time half a million dollars and it will increase; according to the news item it may run into several millions. Why, in setting up this new type of war-time housing, was it necessary to go outside the minister's department and establish another staff with a new personnel? All these things mean extra expenditure, and thousands of dollars could have been saved by the simple expedient of bringing this phase of war-time housing under the present administration. There is no justification for the action that was taken when man-power is as limited as it is and the money is needed for the war effort. I should be glad if the minister would give an explanation.

Mr. HOWE: Perhaps I should intervene at this stage to answer some of the questions that have been asked. The hon. member for Mackenzie (Mr. Nicholson) has never appreciated the difference between the national housing plan and Wartime Housing Limited, the purpose of each and how each operates; otherwise I do not think he would be constantly comparing the two plans. The national housing plan has been in existence for a good many years; I believe it was put in workable form about 1936 and it has been carrying on since then. Under that plan a private owner desiring to build a home can

obtain certain financial assistance from the dominion government; or as my hon. friend says, partly from loan companies and partly from the dominion government. The loan companies take a certain part of the risk and the dominion government a certain part; the private owner makes a certain original investment, and the house is built by the owner. That opportunity has at all times been available to those desiring to build and own their own homes. Right through the war it has been, and is to-day, available, as it has been for several years. Nothing that Wartime Housing has done interferes in any way with the national plan, but it takes care of a different need for housing.

In comparing the administration of the two plans, the hon. member is again comparing two different things. The national housing administration is in the position of a mortgage company. It is not responsible for building the house, but is simply responsible for the loan making sure that the house is a desirable house on which to place a loan, and in seeing that the details of the loan are worked out. On the other hand, Wartime Housing Limited actually builds houses. It acquires land, and arranges for the sewer, the water and all the facilities; it buys the material and builds the houses, and after a house is built it operates the housing project. National Housing is not responsible for collecting rents or anything of that sort. It must, of course, intervene if the payments on the house are not made over a period, but it is not its job to go each month and collect rents and in general to administer the property, whereas, in the case of Wartime Housing, its job is to collect rents and generally to administer the project. So that in comparing the cost of administration my hon. friend is comparing two totally different operations, operations that are not comparable in any way.

As to the job of Wartime Housing, hon. members know that Canada has been building and enlarging her industrial structure. Large plants have been built in certain communities and there has been a considerable influx of population to these communities. The shift in population is probably temporary, at least in part. There has been a temporary need for housing in order to permit these factories to operate. The function of Wartime Housing, and the only function for which it was originally designed, is to enable the factories and war plants to function by providing houses for the men and women brought in to be employed in these plants.

Wartime Housing does not enter a community unless there is need for industrial workers in excess of those that can be housed in

the community. I would also point out that the location of houses in the community is governed by the proximity to the plant which the houses are intended to serve. It is not the function of Wartime Housing to go in for elaborate schemes of improving cities.

I think Wartime Housing has carried out that job well. Certainly no war-time housing community can be properly called a slum. The houses are as well located as proximity to the plant will permit. The houses are well spaced, playground accommodation is afforded; the houses are attractive in appearance. It has been stated here to-day that the tenants occupying these houses take pride in their property. They go in for victory gardens and for community projects of one kind or another for the betterment of the war-time housing centre in which they live. Here again, I may say, these houses were put up to serve a war-time need. It is anticipated that in most cases the need will pass and that the houses can be dismantled and disposed of, perhaps to be moved into other areas. Therefore they have not been built with a view to permanence. However, they have served and are serving a war-time need. The tenants are satisfied tenants, and to me it is always a pleasure to drop into a war-time development and talk with those resident there.

The hon. member for Mackenzie has given rather an Alice in Wonderland picture of the costs of these developments. He seems to be wholly confused by the returns he obtained. I have not been able to detect that any of the returns were in error, but he seems entirely confused in attempting to interpret the information given in the returns.

There are two items of cost in building a war-time housing development; one is the cost of the houses and the other is the cost of the streets, water-mains, sidewalks and improvements that go with the houses. In building war-time housing, it has been our policy not to place additional burdens on the community in which the houses are built. It is the policy to build and pay for the local improvements incidental to projects of this kind.

We are building houses in considerable numbers. If we were building one, two or three or ten houses, it would be possible to find lots of existing improvements and build on those lots without considerable expenditure for development. In building 100 or 200 houses, that is not possible. The problem therefore is to buy an area of farm land or undeveloped land and to build streets, sidewalks and sewers as part of the project. To March 31 last Wartime Housing had spent some $48,000,000, and of that amount $10,000,000 was for improvements to property.

Mr. TUSTIN: How many houses have been built altogether?

Mr. HOWE: I put that on *Hansard* the other day: 15,802 have been built in seventy municipalities. The average cost of all the houses that have been built was $2,229.

Mr. FRASER (Peterborough West): Would that include the sidewalks?

Mr. HOWE: No. The average cost of the two-bedroom houses alone was $1,959.

Mr. NICHOLSON: What was the average cost of the services for all houses?

Mr. HOWE: Approximately $500 per house. In connection with the Hull project, the costs of the houses according to the contracts, and as taken from the auditor's statement of Wartime Housing Limited, is as has been stated; for the two-bedroom houses, it was $1,889.13, and for the four-bedroom houses, $2,939.87. The remainder of the cost was made up by the indirect items to which I have referred, such as sewers, streets and grading.

Mr. BOUCHER: What would be the average cost of those per house?

Mr. HOWE: I do not know. I brought down the total cost of the project, and my hon. friend can figure that out for himself.

Mr. NICHOLSON: The return brought down on May 17 gives the cost of the Hull houses as $2,750 and $3,935.

Mr. HOWE: Those figures would include improvements and services, would they not?

Mr. NICHOLSON: The minister mentioned $500 for those.

Mr. HOWE: I said that was the average for Canada. My hon. friend has the information; perhaps he can give it to the hon. member for Carleton.

Mr. NICHOLSON: According to the contract which was brought down on May 13 a year ago, the cost per unit for the first 100 houses was $2,705. What happened to that particular contract?

Mr. HOWE: My hon. friend has asked for returns at different times, and he now asks me to reconcile them. He has the returns and I have not. I have given him the average cost of the houses in Hull, obtained after the project was finished and all the costs were in. I ask him why he worries about it anyway. He has the information; let him use it. My hon. friend referred to the salary paid to Mr. Goggin who was engaged in the

early days of Wartime Housing at a salary of $10,000 a year. Since that time the activities of Wartime Housing expanded greatly; it was felt that Mr. Goggin's responsibilities should be extended to that of managing director, and his salary was raised to $12,000 a year. When we engaged Mr. Goggin he had had a great deal of experience in connection with housing projects in the United States. As we all know, he is a Canadian; he was educated in Canada, but he has worked in the United States for a number of years on housing projects. He is an able executive, and I think the success of Wartime Housing is in no small way due to the background of experience that he brought with him. I know something about Mr. Goggin's past experience, and I can say that the salary he has obtained from Wartime Housing has been considerably smaller than any salary he received in the last twenty years.

In the expenditure of government money for any purpose supervision is required, and it has been the policy of Wartime Housing to engage a local architect to supervise the building of houses in his area and to attend to all matters that might come up in a building project of this kind. The fee paid to the architect is a modest one. There is a standard fee of one per cent of the cost of the project up to $1,000,000, and if the cost is more than that, the fee is cut back to three-quarters of one per cent. I think anyone experienced in building will appreciate that these are low fees.

Mr. FRASER (Peterborough West): For that fee they supervise the building?

Mr. HOWE: That is right.

Mr. HANSON (York-Sunbury): While the fee is low, they would have little work to do.

Mr. HOWE: I am not so sure of that. There is a good deal of work to be done in connection with a housing project. I have never known one to flow along just like a millstream even though there is a sameness of design.

Mr. HANSON (York-Sunbury): It is mass construction.

Mr. HOWE: But the materials have to be assembled, checked and approved. I think there is plenty of work. My hon. friend referred to North Vancouver and referred to the answer to questions which appear on page 951 of *Hansard*. This is a good example of the distorted cost that is obtained when such items as clearing, stumping, road building, sewers and water mains are mixed up with the housing cost. The contract unit price for the houses in North Vancouver is $1,688 for the two-bedroom house and $2,177 for the four-bedroom house. The incomplete average cost of the houses, including all the things referred to in the question, is $2,996.97. That is the cost, including stumping, clearing, sewers and grading. I think I have pretty well covered the ground traversed by the hon. member for Mackenzie.

Mr. NICHOLSON: I am still not satisfied with the Hull costs. On March 4 answers are given to some questions which were asked by the hon. member for Lincoln (Mr. Lockhart) with regard to the cost per unit of the dwellings erected in Hull. The answers given were $2,939.87 for the one project and $2,941.10 for the other. The same answers were given on the same day to some questions I had asked. My questions were:

1. What was the per unit price of each of the 100 houses built by Wartime Housing Limited in Hull?
2. What was the per unit price of the group of 50 houses built in Hull?

The answers were:

1. $2,939.87.
2. $2,941.10.

I have the contract here. The contract, without saying anything about the sewers or the streets, gives the price of $2,705 for the original group of 100 houses. I do not see how the minister can reconcile these figures with those he has just given, because in addition to these costs you have approximately $700 for sewers and other services in Hull.

Mr. HOWE: Yes, $760 per house. Let me explain. If my hon. friend will take the average cost of the houses that I gave him and add the $760, he will get $2,941.10, I think. In any event, if he will take the total expenditure in Hull and divide it by the number of houses, he will get that figure.

Mr. NICHOLSON: No; I will not.

Mr. HOWE: Then if he will come down to my office, I will explain it to him. As I say, he takes an Alice in Wonderland look at figures and gets himself all worked up, but we will explain any figures we have given.

Mr. NICHOLSON: I submit that these are not Alice in Wonderland stories; they are from official documents. The minister has the president of Wartime Housing before him, and I think this is the time to get the record straight.

Mr. HOWE: I can give the figures in great detail; I have all the information now, exactly what each house cost. The thing that has

perhaps thrown out the figure is the item of $43,500; is that what the hon. member is worrying about?

Mr. NICHOLSON: No. I have the total as brought down in this return. For the whole project the cost given here is $530,125; that is what it has cost the taxpayers of this country to build these houses. According to the return, the average cost was $2,750 in one case and $3,935 in the other. There is a discrepancy of $58,000 in the minister's own figures, which I wish he would explain.

Mr. HOWE: I can explain $43,000 of it. Certain work was carried out at Hull which was later transferred to Ottawa.

Mr. NICHOLSON: That still leaves $15,000.

Mr. HOWE: I have the entire file here, and if my hon. friend cares to spend a quiet Sabbath studying it, I shall be glad to let him do so.

Mr. NICHOLSON: But I think this committee deserves something better. The president of Wartime Housing gave a statement to the press in which he contradicted the figures brought down in this house by the minister. Then the only reply he made to the request which appeared in *News* was:

Pigott Construction Company Limited
Engineers and Contractors
Pigott Building
Hamilton, Canada

May 6, 1943.

News,
63 Wellesley St.,
Toronto,
Ontario.

Dear Sirs:

Kindly cancel my subscription to *News*.

Yours very truly,

Joseph M. Pigott.

That is not a good reply to charges as serious as these.

Mr. HOWE: Let my hon. friend tell me the charge, if there is one, and we will get to the bottom of it. If my hon. friend makes a charge he stakes his seat on being able to prove it. Now tell us the charges.

Mr. NICHOLSON: The charges are that certain information was given in the house regarding the cost of the houses in Hull, and the information brought down at that time does not correspond with the information given to the press by the president of Wartime Housing or with the information that has been given to the committee to-night by the minister. I submit that since I spoke this afternoon the minister has had plenty of time to examine this sessional paper which gives the costs in connection with the project in Hull. To tell me to come to his office some Sunday afternoon is not good enough. Now is the time; the committee should have full information. I have this return; I shall be glad to send it to the minister if he has not seen it, because the average cost given here for the fifty houses built by day labour in Hull is $3,935, and even if you subtract $760 from that total you do not get the figure the minister mentioned a short time ago.

Mr. HOWE: I have the figures for the Hull project in great detail. I shall be glad to put them on *Hansard* or to give them to my hon. friend, but I cannot sit down now and try to run over the tangled course my hon. friend has been following in connection with this Hull project in the years he has been talking about it. All I can do is give him the accurate information, which balances out to the last cent, and which has been certified by auditors as the correct Hull cost. I shall be glad to give him that and we can start all over again.

Mr. NICHOLSON: But am I to believe the information the minister now places on record?

Mr. HOWE: Is my hon. friend suggesting that he does not believe it?

Mr. NICHOLSON: I do not know which to believe. The information we are getting to-night is not the information that was brought down in this return.

Mr. HOWE: Serious charges are being made here. Supposing we refer the whole matter to the public accounts committee. My hon. friend has made charges, and if he cannot substantiate them his course is clear. If he can substantiate his charges my course is clear.

Mr. BOUCHER: Perhaps, to pour a little oil on the troubled waters, I might ask the minister to consider a return which was brought down on March 4 of this year, in reply to a number of questions by the hon. member for Lincoln, in which the following information was as to the additional charges in connection with the Hull project:

(a)	Land acquisition	$ 2,197 50
(b)	Installation and improvements to sewer and water services	90,560 01
(c)	Grading, paving or surfacing streets	19,079 21
(d)	Construction costs per unit:	
	Hull No. 1	2,939 87
	Hull No. 2	2,941 10
(e)	Landscaping	2,372 49
(f)	Installation of electricity on the street allowances and right of way	1,485 52
(g)	Connecting of electricity to dwelling per unit	9 90

These costs would not bear out the statement made by the minister as to the average cost per unit in Hull; yet this was a return brought down for the hon. member for Lincoln on March 4 of this year. The committee deserves an explanation of these figures.

Mr. HOWE: The explanation is that there were forty houses built as part of the Hull project which were actually in Ottawa as part of a research development. There was work done at Hull; the costs went in with the Hull costs and were later transferred to Ottawa. I think the mix-up occurs in connection with those forty houses.

Mr. HANSON (York-Sunbury): Were 150 houses out of the total project in Ottawa?

Mr. HOWE: No; there were 150 in Hull alone.

Mr. HANSON (York-Sunbury): But the total cost of both projects was $530,000?

Mr. HOWE: Yes. I do not think we need waste any more time on this. If anyone has any doubt about it, or if anyone says there is anything wrong, I will demand an investigation by the public accounts committee, as is my right.

Mr. HANSON (York-Sunbury): I want to know if the actual cost of this project was $530,000, including the local improvements, the clearing and everything?

Mr. HOWE: Yes.

Mr. HANSON (York-Sunbury): That is a definite figure?

Mr. HOWE: To proceed, Mr. Chairman, the hon. member for Davenport was discussing the housing situation in Toronto. Again I would remind hon. members that the purpose of Wartime Housing Limited is to provide accommodation for men and women working in war industries. We have built about a thousand houses in the environments of Toronto near industries which were not properly served with houses. We have not built wartime houses within the city limits of Toronto, and I may add that we have never had an application from any plant in the city of Toronto for wartime houses. There is a difference of opinion in the city council itself as to whether the city of Toronto has adequate housing to meet war needs, or whether it has not. Representations have been made to the effect that it had, and to the effect that it had not, by those in the city administration. However, we have satisfied ourselves that there is sufficient housing in Toronto to meet the requirements of war industries. Therefore, if there is a housing problem, it is a problem having to do with civilian needs, namely, non-war needs; and therefore accordingly it does not come within the purview of Wartime Housing Limited.

My hon. friend, the senior member for Halifax (Mr. Isnor) has spoken of the projects in that city. Halifax has been one of our greatest problems, owing to the congestion which has arisen from the war activities in that area. Up to the present time there has been spent on housing in Halifax the sum of $7,973,016. This has provided 1,464 houses, fourteen large staff houses, two dining halls and other miscellaneous buildings.

Then, the hon. member has mentioned fire protection. Wartime Housing Limited maintains a separate branch which is constantly engaged in fire protection, not only from the point of view of equipment, but in the use to which such equipment is put, and in the fire drills which must accompany it. This must be kept up to schedule.

The hon. member for Peterborough West (Mr. Fraser) has mentioned the situation in his city. The outhouses to which he referred were, I may say, coal sheds, and not the outhouses which are sometimes found in connection with more primitive dwellings.

Mr. FRASER (Peterborough West): I referred to sheds.

Mr. HOWE: It is unfortunate if the sheds were brought on the property, and set up in a way which interfered with victory gardens. However, the hon. member will appreciate that that is not the policy of Wartime Housing Limited, but rather just one of those things which happen when work is being carried out. I speak for Wartime Housing Limited and the government in expressing to the tenants regret that this should have happened.

Mr. FRASER (Peterborough West): One of the officials of Wartime Housing said the sheds were much more important than the victory gardens.

Mr. HOWE: I must say that the time to put in coal is when coal can be obtained, particularly in this year 1943. If a tenant had been unable to put in coal on account of the fact that he did not have a coal shed perhaps the repercussions might have been more serious than those we have heard this evening.

The hon. member for Peterborough West has referred to staff houses. This staff house has been one, of all the staff houses we have built, that has not had a high ratio of occupancy. When representations were made that the staff house was necessary, we were given

a list of some 450 applications from those who could not obtain other accommodation. By the time the staff house was built, those applications were no longer current. The Canadian General Electric company explained that the men were needed then, and are needed to-day. And if they could obtain those men needed in the plant, the staff house would be filled.

Mr. FRASER (Peterborough West): They can take 600 on to-day.

Mr. HOWE: Yes. There seems to be a tight situation in Peterborough. I know the Quaker Oats plant in that city is closed down to-day for no other reason than that the operators are not available to operate the plant; at least I have been told that in the last twenty-four hours. That is the situation, apparently. I do not know whether there is anything wrong with the city my hon. friend represents, that employees will not go there. But if employees will not go there, we can build accommodation there all we like, and it will not be filled.

However, the staff house mentioned by the hon. member is not typical. Occupancy of staff houses across the country, including Peterborough, stands at seventy-seven per cent. That is quite good for accommodation of that kind.

The hon. member has spoken of catering privileges. The difficulty is to find someone who is experienced and can do the job, who will be responsible for the catering. The only difficulty we have with staff houses is in connection with the catering. We had a situation in Prince Rupert where the caterer is a Chinaman, and the shipyard workers went on strike because they did not like his food. It is a problem to obtain first-class food for commissaries of that kind. There are organizations which specialize in organizing catering. We do pay them as the value of their services a fee of five per cent of the turnover in food. We think the fee is justified. It is difficult to obtain responsible people to do the work. There is no rush for that kind of business, even at that fee. If the work can be well done for that fee, I think Wartime Housing Limited is justified in paying it.

Mr. FRASER (Peterborough West): I asked about taking houses down after the war.

Mr. HOWE: We will certainly take the houses down, if the city of Peterborough will permit us. Our fear is that they will be just as badly needed after the war as they are to-day. However, the intention to-day is to remove the houses as fast as they can be removed, or the local housing situation will permit us to remove them.

Then, the hon. member for Peterborough West mentioned that the charges for accommodation in staff houses at Fort William are slightly lower than in eastern centres. The reason is that the local cost of that type of accommodation is lower in Fort William than in eastern cities. The rate was set by the local Y.M.C.A., an organization which early in the war became responsible for organizing that type of accommodation. When the rates were fixed in the staff house they were fixed on the basis that had been established by the Y.M.C.A. for single accommodation of that kind. The president of Wartime Housing Limited tells me that they were set higher, and had to be reduced, owing to the fact that they were out of line with similar accommodation in private hands. That is to say, they were originally set at the same rate as applied in the east; and because they were out of line the rates were reduced to the scale mentioned by the hon. member.

Mr. McIVOR: I think I know something about housing in Fort William. There are three types of people in that city who have a grievance against Wartime Housing Limited. There is the odd individual who does not think the government can do anything right. I think those people are more often wrong than the government. Then, there are the real estate agents who believe that rents, generally, throughout Fort William are too low. And, comparing rentals in that city with those in other places, I believe there is some justification in this suggestion. Then, there are the owners of houses who think rents are too low.

But when I saw the minister to-night close his fist and say that if any charge can be made let it be brought before the public accounts committee, I thought he was absolutely right. I knew conditions in Fort William and district before these houses were built. I saw a good many places where, instead of one extra house there should have been several. I went into one home where there was a father, a mother, seven children and two kittens, all living in two small rooms. A great many people in Fort William had to open up their cellars and put up curtains to make those cellars habitable for people who came in from Saskatchewan and Alberta and who could not bring their houses with them. They could not live in Fort William without a roof of some kind over their heads.

I have visited a great many of these war-time homes, especially after working hours, when I was looking for something else perhaps, and I have yet to hear one complaint from any father or mother who has occupied one of these houses. I can go into these homes without any pre-announcement and I find them neat and tidy. When the minister did close his fist to-night I think he had great justification. I do not care who brings the charge against the usefulness of these houses; I say they have been a great blessing to us. We have street after street filled with them, and I wish we had a great many more of them. We had an Ottawa man living in one of these houses. I might mention the capacity in which he came to Fort William; it was as a government expert. He lived in one of these houses. He had been accustomed to a good house in the city of Ottawa or close by, and he said, after living in one of these houses, "Anybody who will complain of them is extremely hard to please". I certainly agree with him. I think those who are finding fault with these houses and are trying to prove, that they are not needed, not comfortable or not up to standard will have a hard time in proving it.

Mr. GILLIS: That was a most elucidating speech.

While the minister is on the question of housing accommodation and taking Canada city by city, I should like to direct his attention to conditions in the city of Sydney, Nova Scotia. I know that for the last two and a half years the city council have consistently, at least once a month, made representations to Wartime Housing for the establishment of some houses under that plan in Sydney. I know personally that they are needed. The minister knows that there has been a large expansion in the steel plant there. A new steel plate mill has been established, employing 700 men. Other large projects are being carried on in that area, all of which will call for housing, and there has not been a house built in that city under Wartime Housing. I do not suppose there is any city in Canada more congested than Sydney. There is such a terrific influx of military personnel that it is impossible to get a house. Does the minister think there is any prospect of getting a few houses put up in Sydney under Wartime Housing?

Mr. HOWE: I must say again that the function of Wartime Housing is to provide sufficient housing so that industry can function. Industry is functioning in Sydney. We have never had an application from any industrial plant there for additional housing. I know there is a social problem there, that houses are needed for other purposes than war industry, but the remedy is not the function of Wartime Housing. There are other agencies for that—National Housing, for instance. We have made repeated studies of that situation. I have never known industry to be at all backward in applying for houses where houses are needed to permit war industry to function, but as I said we have never had an application from Sydney for war-time housing.

Mr. GILLIS: When it is said that the employees of industry in Sydney are well housed, that is not correct. Another thing that must be taken into consideration is that those who are operating industry in Sydney are also in the housing business and have been for the past thirty years, and they do not want Wartime Housing there. They want that field for themselves at some time in the future. The hon. member for Fort William spoke of people in Fort William living nine people to two rooms. I will show him in Sydney six or seven people living in one room. These are people who are employed at the steel plant or the plate mill. Others drive in to Sydney to work from twenty or thirty miles outside the city and travel the same distance back again at night in order to work in war industry, which is being greatly extended in Sydney.

When Wartime Housing made an examination of the necessity for housing in that city those who made the examination left much to be desired. I have already read into the record letters that I received from members of the city council, including the mayor and the city clerk, who point out that when the representative of Wartime Housing went in there to make an investigation the city council was not consulted. The general manager of the iron and steel company had a little session with the investigator at the yacht club. The investigator spent a very few hours in Sydney to do a job that should have taken at least a week. That was a year ago. At the mayors' convention in Ottawa a few weeks ago the mayor of the city of Sydney gave quite a description of the housing requirements for war purposes in that city. The situation is bad from all angles, and I want to tell the minister that if he is going to depend upon those who operate industry in that section to recommend wartime housing there, they will never do so because it would mean competition in their own business. They want to carry on with that shack community building in which they have been engaged for the last thirty years.

Mr. MAYHEW (Victoria, B.C.): It is not my purpose to take any great length of time in the matter of wartime housing. The housing shortage in the city of Victoria and at other places on the island is acute, and there is very little likelihood of its becoming less and every likelihood of its becoming more acute as the months go by. We hope that in the not too distant future we shall be free of war in Europe and that large forces will then be sent to the Pacific coast, but that will make our housing problem more acute than it is at the present time.

We have had some wartime houses built in the city of Victoria and in the municipality of Esquimalt. I have heard no great complaint about them. In fact, I think they are very comfortable. No one can say they are particularly beautiful. A couple of hundred houses all built within a range in cost of $100 or thereabouts cannot by any stretch of the imagination be attractive or beautiful. We would not want to use them after the war is over, but they are to-day doing the job they were intended to do. They are furnishing comfortable accommodation for people working in the shipyards, and they have been put up at a reasonable cost.

At the same time I think the government might well follow another idea in connection with war-time housing and save themselves some money. I notice it was said to-night that the average cost of these houses is in the neighbourhood of $2,750, perhaps to be done away with when the war is over. I think the government will be lucky if they ever get fifty per cent of the value put into these houses. In other words, they will have lost per house a minimum of $1,375. I maintain that this applies particularly to the city of Victoria. I know it would not apply to many other places, particularly smaller communities where larger numbers of men are required in the munitions industry. But if encouragement were given to the private owner to build his house, even to the extent of allowing him what would be the extra cost, estimated at about twenty per cent, of building that house—in other words a $4,000 house would cost the government $800 if they allowed the extra cost of the bonus—the government would save, at that, $575 on a unit if they allowed the owners of the houses themselves to build. When I was home at Easter time I tried to organize or assist others to organize in our own community a self-help programme both for the cutting of wood and for the building of houses; but in every case, when we would go to talk to the owner about the building of a house, he would say, "I cannot afford to do it to-day, because immediately this war is over I shall have to write off twenty to twenty-five per cent of the cost of building the house." There it would stop, and you could not argue against that. At the same time we have applications to the extent of around 100 houses from people who want to build in Victoria to-day, and who under this scheme would go ahead and build them, and in so doing would save the government another 100 houses under Wartime Housing. I am sure that 100 houses will not give us anywhere near the accommodation we require in that city, and need will continue to grow.

I offer this as a suggestion. It is not a criticism. I think the minister and Wartime Housing Limited have done a good job. Our people are not 100 per cent behind it, because we do not like the possibility of seeing houses demolished which may be of some use when the war is over, nor do we want to face the possibility that houses which are not up to standard will be left in that community.

Mr. HANSELL: I have no brief this evening for any particular city. I know nothing of the intricacies and the figures of the housing situation in Hull; I know only what I see, namely, that Hull needs some new houses. I do not know the situation in Sydney or Victoria or anywhere else as far as housing conditions are concerned, except that there is a congestion in the larger places. But I would ask the minister a question which perhaps is much broader than any we have discussed along this line. We are asked this evening to vote $30 millions to housing development. A gool deal of that will be for labour, of course, and I fancy about $20 millions or less will represent materials. What effect will this have on the lumber supply in Canada? Perhaps I should put it in this way. There has been a shortage of lumber. Will the minister make some statement to the committee with respect to whether or not there is an easing up of that shortage?

While I am on my feet might I say that a little more attention should be paid to the proper distribution of our lumber supply. I have no large cities in my territory, but I know of many communities where people could not purchase a board; it was not to be had; the lumber concerns did not have a board for almost a year. I do not know whether they have any yet. If a person wanted a piece of flooring to do a little repair work, he could not get it; all he could get was some dimension lumber, 2 inches by 4 inches, or something of that kind.

While the minister is thinking that over—I should like him to answer the question because it is of national concern—may I ask if any large quantity of lumber is being exported? It seems to me that when there is a

lumber shortage there should be some control over the export of lumber. Again, is it possible for us to import any lumber? If there is a shortage, I think we should import if that be possible.

Also, would the minister enlighten the committee as to the effectiveness of price control of lumber in this country? I have not gone into the matter to any great extent; I go only by the little experience I have had, and that is that if you buy a few boards in a lumber yard to-day you pay two prices, compared with what you used to pay a year or a couple of years ago.

There is the situation. While we are talking about housing projects and so forth, there is that wider aspect of the supply of lumber throughout Canada, its equitable distribution and its proper price. Would the minister enlighten the committee on these matters?

Mr. HOWE: To answer the last question first: there is no great easing up in the lumber situation. We have tried to make available lumber for low-cost housing, either under the National Housing Act or under the Wartime Housing projects. This has had quite a high priority, in fact just after direct military uses.

I cannot say how effectively the price ceiling is enforced. We enforce it strictly against producers of lumber. How strictly it can be enforced against the retailers I do not know; but if my hon. friend knows of a departure from the prices, I think it is his duty to report it to the enforcement officers, by whom an investigation can be made and the situation further examined.

Mr. HANSON (York-Sunbury): Is not the whole position in respect of lumber greatly accentuated and intensified by reason of the fact that there is no price ceiling across the line?

Mr. HOWE: Oh, yes.

Mr. HANSON (York-Sunbury): I think that is the whole trouble.

Mr. HOWE: It is a very great difficulty.

Mr. HANSON (York-Sunbury): If that position were straightened out, there would be no great difficulty.

Mr. HOWE: Quite. But as my hon. friend knows, supplies are very small, and we are stretching our resources very tight.

The hon. member for Lake Centre (Mr. Diefenbaker) asked for a break-down by provinces of the expenditure under Wartime Housing. I have said several times that we are not running the war by provinces; we are running the war as we can get the best results from all Canada, but I do not mind giving him a break-down by provinces if he wishes it. The expenditure by provinces has been: Nova Scotia, $8,969,583.91; Ontario, $25,659,068.92; British Columbia, $4,833,953.21; Saskatchewan, $140,522.21; Quebec, $7,986,-165.64; New Brunswick, $1,367,595.59.

Mr. ROSS (Calgary East): Alberta?

Mr. HOWE: None in Alberta; Manitoba, zero.

As regards Davidson, Saskatchewan, the purpose of Wartime Housing is to provide houses to permit war industry to function. There is no war industry in Davidson, Saskatchewan. So far as the air training plan is concerned, the air force builds such housing as is required there by reason of air training and, if others go in, they must be satisfied with the accommodation they find there. There is no reason for them to be there, as far as the air training plan is concerned, and certainly there is no job for Wartime Housing. It would be entirely outside its field if it attempted to provide for that sort of requirement. As regards the conversion scheme, that is a matter which has nothing to do with war industries or the functions of Wartime Housing Limited.

Mr. MacNICOL: That is, the conversion of large buildings?

Mr. HOWE: Yes. The real property administrator is an officer of the Department of Finance, and he has found it possible to relieve certain situations by leasing large houses and converting them into suites and small apartments. This is being tried on a limited scale in Toronto and Ottawa and it may be expanded to include other cities. It is not at all parallel with the work of Wartime Housing. My hon. friend suggests that the organization of Wartime Housing could handle the work. It is different work. Wartime Housing produces a large number of houses on a mass-production basis. Altering old houses and converting them into small suites is an individual problem, that requires individual study which is best done by a local architect. If we are to have a conversion plan, I think it is best handled in the manner in which it is handled now.

Mr. NICHOLSON: How many war-time housing units are occupied by the families of service people? In Halifax a few houses have been made available for the families of men in the services. How many such houses are there in different parts of Canada?

Mr. HOWE: War-time houses were built for industrial workers, but there have been local problems having to do with the housing of the families of soldiers overseas. That problem is, of course, a municipal concern, but it is a difficult problem, and certainly the families of men overseas are entitled to preferred treatment as far as housing is concerned. In an effort to cooperate in solving the problem, Wartime Housing Limited has made available to the city authorities, where that problem is a factor, certain houses built in those cities for industrial workers. They have been turned over to the city for administration to take care of cases of that kind. In all we have turned over 200 houses for that purpose. The houses are turned over to the municipality, and the municipality is responsible to Wartime Housing Limited for the renting of the houses. The municipality disposes of the houses to the families of soldiers overseas as it may decide.

Mr. NICHOLSON: When the estimates of the department for naval services were before the committee I discussed the question of having some houses built for the families of men in the naval service. In Halifax and Esquimalt particularly there has been a large increase in the population by reason of the influx of people from the central parts of Canada who have been compelled to go to the coast. Their families will be there for the duration. In the United States a great many houses have been built for the families of such men serving with the navy, and it seems to me that favourable consideration should be given to the question of providing increased accommodation in those centres where the families of men in the naval service will be located for the duration. Some consideration might be given to increasing the number of 200 which the minister mentioned, so that more provision might be made available in the more congested areas.

Mr. HOWE: In the navy as well as in the air force, it is not regarded as entirely necessary that the families should go to war with the husbands. The husbands go there for active service, and it is intended that their wives should stay where they were before the men joined up. I do not think it would be good government policy to provide housing so that every wife could go wherever her husband is stationed on active duty.

Mr. ADAMSON: Is it the policy of the government to discourage wives from following their husbands to congested places such as Halifax?

Mr. HOWE: It is not the policy of the government to discourage them, neither is it the policy of the government to encourage the practice.

Mr. NOSEWORTHY: When the minister was discussing the Toronto situation he said that the city authorities were in considerable disagreement with regard to the need of wartime housing. I wonder if it is not true that, at least within recent months, the city authorities have been fairly unanimous in requesting the building of wartime housing in Toronto. The minister said that about 1,000 houses had been built in the municipalities adjoining Toronto. How far afield does he go from Toronto in the inclusion of houses within that thousand? Again, having in mind the value of the contracts that have been let in that city for war materials, is it the opinion of the minister that 1,000 houses for greater Toronto are sufficient to meet the needs created by the influx of population into that city by reason of those war contracts? What the minister either fails to see or refuses to see is that hundreds of thousands of workers who have come into the city have displaced other tenants and that those other tenants are now thrown back on the city; yet it is the city's responsibility, according to the minister. Actually Toronto has had to accommodate hundreds of thousands of war workers who in turn have displaced a great many other tenants. I think there is the further situation that in Toronto few of the war workers congregate in the vicinity of any one plant, and I can well understand that no plant would apply for housing for its employees. These employees come into Toronto from all over the vicinity, fifteen and twenty miles away. Has the minister given due consideration to the number of people Toronto has had to accommodate by reason of the vast number of contracts that have been let?

Mr. HOWE: In the 1,000 houses I went as far afield as Malton, Long Branch, Etobicoke and Pickering.

Mr. NOSEWORTHY: Pickering would take up the bulk of them.

Mr. HOWE: Six hundred. Then there are some staff houses as well as the 1,000. It is significant that no industry in Toronto has ever reported to us that it could not get the staff it needed on account of lack of houses. Every study we have ever made of Toronto indicates that there is sufficient housing under war-time circumstances to meet the requirements. As I say, we are building to make it possible for industry to function. Industry

is functioning in Toronto. I think the population there will get smaller as the industries on the outskirts increase. Those on the outskirts are on the upgrade, while the industries within the city have passed their peak. We are willing to build wartime housing on the outskirts of the city whenever we find it necessary. We prefer to relieve the housing situation of Toronto in that way rather than to go into Toronto and build houses for industrial workers who are already housed.

Mr. MacNICOL: Do I understand that in the proposed conversion of large houses to apartments, each unit will have to be considered by itself? I assume an architect will have to be engaged to lay out the alterations necessary to convert a house into a three or four-family apartment. Will this work be called for by tender, or will someone just be told to go ahead?

Mr. HOWE: That is under another department of government, and I know little about the operations?

Mr. HOMUTH: What department?

Mr. HOWE: Department of Finance.

Mr. HANSELL: The minister did not answer fully the question I asked with respect to the equitable distribution of lumber. This matter may not appear to him to be important, but to some people it is. Are lumber concerns left to do the best they can in distributing lumber? If someone in the city wants a piece of lumber he can generally get it from a lumber yard—I am not talking about building homes; I am referring to lumber for repair work—but in the small communities one cannot get even a board. There are two communities I know of where the lumber agents have not had a board for many months.

Mr. HOMUTH: There are lots of boards in Ottawa.

Mr. HANSELL: Yet the same company in the city will have lumber for sale.

Mr. HOWE: The distribution of lumber is very closely watched. The estimated total production and distribution is as follows:

	Thousands of feet, board measure
Estimated total production, 1943....	4,000,000
Distribution:	
Armed forces, naval and merchant shipbuilding, and Wartime Housing	480,000
Boxes and crating.....	580,000
Railroads	130,000
Essential mines.....	120,000
Miscellaneous	35,000
Exports to Britain and allies.....	1,800,000

We are going to try to distribute this as equitably as we can to the lumber yards of Canada, but I agree with my hon. friend that unless the lumber is needed for a priority use, it is hard to get.

Mr. ADAMSON: Mr. Chairman, I rise to discuss this question of war-time housing because it affects the constituency which I have the honour to represent and which is located in the suburbs of Toronto. A peculiar thing is happening in the Toronto metropolitan area. Within the last ten years the population of Toronto proper has increased only five per cent, whereas the population of the surrounding municipalities has increased by over one-third. The result has been that large areas in Toronto are blighted by having numbers of houses which are unsuitable for renting or for subdivision, in many ways unsuitable for habitation at all. The shift in population is to the outskirts where new factories are being established.

Another peculiar thing is happening in Toronto. In the city itself the shift is to tenant rather than owner occupancy, whereas in the outskirts the shift is the other way. I am quoting Controller Saunders' article which appeared in *News* and was taken from a recent bluebook published by the city. The assessment commissioner's report shows that in 1934 owner-occupied homes numbered 61,552 as against 58,764 in 1942. The same report shows that tenant-occupied homes in 1934 numbered 45,000 and increased in 1942 to 49,983. This is a significant increase and shows the direction of the trend in the city.

Recently a questionnaire was sent out to employees of the John Inglis company asking whether they had any complaint to make about their present housing conditions. I understand that out of 10,000 questionnaires sent out, only ten reported that their conditions of housing were bad. I do not know whether that is true, but I got it from reliable sources. In my opinion this wartime housing which is being put up in the outskirts of Toronto is an extremely dangerous development. I have no great criticism to make of it as a purely war-time development, but there should be a definite agreement that these houses will be removed after the war is over. Otherwise we shall have around Toronto a belt of slums similar to what was built after the last war.

I can remember at that time when farms were subdivided into thirty- to fifty-foot lots which were sold for a small down payment. There were few if any building restrictions, and in many cases jerrybuilt shacks were built. The builder hoped to make a profit on these Their history has, however, been extremely sad. They built on speculative

land and employed speculative builders, with the net result that the purchasers received very poor value for the money they invested. Two things happened: either the owners felt that they could not afford to continue with the building of the house they started after the last war, or they wished to move to better jobs elsewhere and found that their commitments, either to pay for the lots or to pay for what had been done already on their houses, was a millstone round their necks, and in many cases they were tied to what has proved to be a wasting asset, and in many cases a positive liability.

Then something else happened. The municipalities in the suburban districts of Toronto found that they had to provide sewage, fire, water, police and other services, and their tax rates, based upon land values, rose considerably. The assessment rose, also, and there were large belts of farms surrounding these developments where the farmers found that their taxes made it absolutely impossible for them to continue profitable farming; in many cases they were made bankrupt. To a great extent the land on which these houses were built during the depression came back to the municipalities for taxes, and of course the mortgage money was lost. Taxation mounted to such an extent that it was futile for men to endeavour to own their own homes; economically it was wrong. Then the municipalities got into difficulties, on account of unpaid taxes; one by one they went into receivership with the province, and they are only now recovering.

I want to warn the minister and the country about this wartime housing. If it goes on without definite checks and safeguards we shall have the same condition we found at the end of the last war, only greatly intensified. I believe in the Leaside district some of these houses are built twenty-nine to the acre, and in Toronto township there are more than thirty to the acre, while modern planning would never consider building more than about eight or, at the most, nine houses to the acre. These are the dangers that we are running into; these are the dangers I see, and I want to warn the minister and Wartime Housing Limited that unless care is taken we shall have built around the city of Toronto the greatest belt of slums, the greatest depressed area, we have ever had in Canada. We must take very great care that we do not bring about that result.

Mr. HOWE: The hon. member mentioned nine houses to the acre as the minimum.

Mr. ADAMSON: And in some cases twenty-nine and thirty are being built to the acre.

Mr. HOWE: Not in a Wartime Housing development. Wartime Housing runs seven to eight houses to the acre; each house has a forty-foot lot.

Mr. ADAMSON: But not in Toronto township.

Mr. HOWE: Yes.

Mr. ADAMSON: Oh, I can show you an acre with many more than seven houses on it.

Mr. KNOWLES: Mr. Chairman, a few moments ago in response to a question the minister gave the amounts of money spent by Wartime Housing in the various provinces. I do not for a moment wish to convey the impression that I am going to raise a provincial cry, but in view of the fact that it was stated that no money had been spent by Wartime Housing in Manitoba I feel that I should not let the occasion pass without making it clear to the committee that this does not mean that we have no housing problem in Manitoba. The very opposite is the case. I can speak particularly for the city of Winnipeg, a portion of which I have the honour to represent; and I may say that our housing problem there is very acute. The minister may reply to the effect that we had such a problem before the emergency of the war came upon us, and that is perfectly true; we have had it particularly since the close of the last war. Nevertheless the conditions created by the present war have accentuated that problem. We have had certain increases in the number of industrial workers in greater Winnipeg; we have had increases occasioned by the number of men in the armed forces stationed in and around Winnipeg. The result of these increases has been the accentuation of the old story, the crowding of numbers of people into single rooms and numbers of families into houses intended only for one or two families, with all of the resulting social difficulties to such an extent that the socially-minded people of the city of Winnipeg, on the city council and connected with various organizations, feel keenly about the housing problem. I should like to quote one or two portions of the report on housing made to the health committee of the city of Winnipeg, published in January of this year. In the main I quote from the section headed "General Remarks":

> During the past few years it has been definitely established that many families are living under conditions which are a menace to the health, safety and welfare, not only of themselves, but of the general public.

And a little further down I read:

It would appear, however, that the federal government now realizes the seriousness of the housing situation in Winnipeg, although it is only a few months ago that a government official stated that no housing shortage existed.

The minister will recall who that official was, so that I need not rehearse that incident.

They have now issued an order respecting housing accommodation in congested areas which includes the city of Winnipeg. . . .

The regulation provides that any householder may share his or her housing accommodation with others "notwithstanding the terms, provisions, convenants or restrictions of any law, by-law, conveyance, deed, agreement or lease now or hereafter prevailing."

I am pointing out that the health committee of the city of Winnipeg emphasizes this as the only measure taken by the government in view of its realization of the seriousness of our situation. I quote further:

For some time there has been a gradual extending of the so-called rooming house districts to the more restricted zoned areas. This order . . .

The reference is to the order of the federal government.

. . . for the time being, will legalize such occupation, and, unfortunately, will allow the use of attics without fire escape, unless certain amendments are made to the regulation.

The inadequate plumbing, probable installation of various types of cooking facilities, overcrowding, temporary electric or gas connections, may lead to a more extensive health and fire hazard than exists at the present time.

The report goes on to give a story similar to that in other cities, so far as overcrowding is concerned, and the anti-social results of that overcrowding.

I think I might say by way of confession on the part of the people of Winnipeg that we have been in a bit of a dilemma in this matter. I speak as one who last year was a member of the special committee on housing conditions, set up by the Winnipeg city council. Our dilemma is that we are terribly conscious of our need for increased housing accommodation; yet those representing the city who have inspected the establishments built under Wartime Housing Limited have been dubious as to the desirability of having houses such as have been seen in some other places.

The result of this dilemma, and considerable study on the part of the people of Winnipeg, was correspondence between the city and Wartime Housing Limited, which at one time looked as though it would lead to a new departure. I am referring to the activities of Wartime Housing Limited. The new departure which we thought was in the making was the building, under the direction of Wartime Housing Limited, of homes of a somewhat more permanent nature. I know that this correspondence resulted in several special meetings of the committee to which I have already referred, and a special meeting of the city council itself. Then, somehow or another that which we thought was in the making apparently was not possible for Wartime Housing Limited to carry through. I am wondering if the minister, who might consult with the president of Wartime Housing Limited, could tell us why that new departure did not come to fruition. The hopes of people in Winnipeg were high; and then suddenly they were dashed to the ground.

Mr. DIEFENBAKER: This afternoon, the hon. member for Mackenzie made a careful analysis of the housing situation, and also referred in that connection to the various returns which have been brought down in the house. In spite of the explanation given by the minister, I do not believe there has been any satisfactory explanation for the divergence in detail in those various returns. I cannot understand why there should be such a material difference between the return brought down for the hon. member, and that brought down on March 4 in the name of the hon. member for Lincoln.

In connection with the latter return I should like to secure information regarding the expenditure of $7,570.28 which, according to the return in question, was expended on repairs to sewers and waterworks. It goes on to point out that this is not an expense to Wartime Housing Limited, it being chargeable to funds of the contractor in the possession of Wartime Housing Limited. What was the meaning of that answer? After the work was done, was it necessary to make repairs to sewers and waterworks on account of inferior work, and were the expenses so incurred charged to the contractor? Who was the contractor and what were the circumstances connected therewith?

The Ottawa *Journal* of Friday refers to an expense account sent to Wartime Housing Limited. The item sets out the account in full, and appears to have reference to expenditures in connection with a boat and also a roller skating rink. Has Wartime Housing Limited any roller skating rink, or has it a boat; and what connection have those items with the organization in question?

Mr. HOWE: The hon. member referred first to repairs to the sewage at Hull. The work proved to be defective, after the winter had passed. Apparently the sewer was not down

to grade. Investigation was made, and the report of the investigator is in, although I have not had time to read it. In any event, certain pipe had to be taken up and relaid. The cost of doing this was charged against the contractor who had the contract for laying the sewer in the first instance.

Mr. DIEFENBAKER: Who were they?

Mr. HOWE: The Hull Construction company is the name of the firm.

Then, the hon. member asked about a boat and a skating rink. As he knows, the production of twenty-five-pounder guns was stepped up very rapidly at Sorel, and it was necessary to bring in a number of people. A building project was started there; but to help out the situation while the project was under way, arrangements were made to rent a boat belonging to Canada Steamship Lines which was tied up to the wharf, and to sublet it to tenants. Wartime Housing Limited took on that job. Then, the local skating rink was taken over and divided up into temporary sleeping accommodations while the building project was under way. When the project was finished, this accommodation was no longer required.

Mr. DIEFENBAKER: Apparently the houses built in Hull were the subject of investigation.

Mr. HOWE: Not the houses, just the sewers.

Mr. DIEFENBAKER: Was the total amount the contractor was required to return to the government the sum of $7,570.28, or was there an additional amount?

Mr. HOWE: I would not say the contractor was required to return it to the government. He was required to make good his contract. There were certain specifications. I cannot give my hon. friend all the circumstances, because I have not seen the report. Mr. Arthur Surveyer was appointed commissioner, under the authority of the department, to investigate the situation. I have not read the report, but I shall be glad to table it in the house, if my hon. friend wishes to see it. It tells the whole story.

Mr. JAQUES: I understand that recently the government of Alberta applied for permission to build a hospital for the care of soldiers with tuberculosis after the war. I understand further that permission was refused by the controller of construction. Is this a correct statement, and, if so, on what grounds was the refusal based?

Mr. HOWE: There are a great many types of building projects in Canada for which permits are not issued. Among those for which permits have been applied, and refused, are hospitals to the value of perhaps $10,000,000 or $12,000,000. The reason they are refused is that it is proved on investigation that the only reason the buildings are needed is that the communities happen to have money at the present time. They could have built them ten years ago or five years ago, or they could build them a few years hence. It is our feeling that, while the war is on, priority should be given to defence projects. The time will come when we shall be glad to have any who wish to build hospitals build them. At the present time, however, it is impossible to buy hospital equipment, especially if it is brought in from outside Canada. It would also be a drain on building equipment, which we think might very well be deferred for the moment.

Mr. KNOWLES: Would the minister reply to my question as to what happened to the tentative proposal of Wartime Housing Limited to build houses of a more permanent nature? Perhaps the more significant question would be as to whether any consideration is now being given to such a proposal.

Mr. HOWE: The Winnipeg situation was looked into. Winnipeg did not want temporary housing; they were quite frank about saying that.

Mr. KNOWLES: Correct.

Mr. HOWE: Consideration was given to building permanent housing in Winnipeg and Hamilton, and one or two other cities where there was a demand for permanent housing. A great deal of opposition developed to building permanent housing, and it was reasonably well founded. In any event, Wartime Housing was set up to take care of war-time needs, as the name implies. It was outside their province to build permanent houses, and since the Winnipeg problem was one of permanent housing, Wartime Housing decided that they could not go on with it. It was a problem for other agencies than Wartime Housing.

Mr. KNOWLES: Was there opposition from Winnipeg?

Mr. HOWE: There was a great deal of opposition from Winnipeg.

Mr. GILLIS: I questioned the minister a little while ago as to the policy of Wartime Housing with respect to people occupying these houses who might become involved in a labour dispute with their employer. The minister told me at that time that it was not the policy of Wartime Housing to interfere, on account of a labour dispute, with those residing in these houses. I sent the minister

a specific case at that time. My understanding was that this policy would be adhered to. But Wartime Housing persisted in their attitude in that particular case. I met the person involved only yesterday, and it appears that this case is being used as the thin end of the wedge to set a precedent for mass evictions where a dispute might take place between employer and employees. I bring the matter to the minister's attention again so that if the policy decided upon has been departed from in this particular case, it should be adhered to.

Mr. HOWE: The case in question was very carefully investigated. The facts are these. The man referred to by my hon. friend resigned his job in a war plant long before the labour trouble took place. He was called in and asked if he intended to take work in another war plant and he said he did not know. He signified no intention of doing so. It was explained to him that these houses were reserved for workers in war plants and that if he was not going to work in a war industry he would have to vacate. There are seven men on strike to-day there who are living in wartime houses. If they finally decide that they are not going to work in a war industry they will have to vacate, but as long as they are workers on strike in a war industry they can live in the houses. If they signify that they will not take work in a war industry they will have to vacate.

Mr. GILLIS: The facts as given by the minister are not as I have them.

Mr. HOWE: Nevertheless they are facts. I am sometimes right.

Mr. GILLIS: I am not saying that the minister is wrong, but his informants may be wrong or biased. I believe that in this particular case the man is idle on account of the present dispute.

Mr. HOWE: He left his job long before the dispute.

Mr. GILLIS: No, he did not.

Mr. HOWE: I am telling you he did.

Mr. GILLIS: I am not going to argue with the minister. I have one side and he has the other. I advise him to check on it more closely.

Mr. HOWE: Check your facts.

Mr. GILLIS: I did.

Mr. GRAYDON: Better get a referee.

Mr. CASTLEDEN: What is the estimated yearly rates of depreciation on the Hull war-

[Mr. Gillis.]

time houses valued at $2,900. What would be their salvage value in three, four or five years?

Mr. HOWE: I cannot tell the hon. gentleman. What is his view?

Mr. CASTLEDEN: The minister has a staff of experts in front of him who have been in this business for a long time. My view as to what these houses would be worth in five years might surprise the minister. The minister said that after the war these houses might have to be torn down. What arrangement is being made with the civic authorities with regard to permanent improvements such as sewage and water supply?

Mr. HOWE: From the time the improvements are put in they belong to the city. My hon. friend says that in three or four years these houses may not have much value, but I point out that they may have served their purpose. They are built for war-time use. They are not built for the centuries or for ages. If they were, they would be of a different type of construction. They are built to last through the war and until the slack is taken up by normal building. In three or four years, if the war is over, the houses will be either torn down or disposed of in other ways.

Mr. JOHNSTON (Bow River): Has the minister given consideration to allowing these houses to be purchased by the people living in them and having the monthly rent they pay apply as part of the purchase price? When we visited the war-time housing in Hull there were one or two tenants who were desirous of purchasing these houses, and one complained that the national housing purchase plan was not available to them. I think it would be good business for Wartime Housing to allow these tenants to purchase the houses if they want to by having their monthly payments apply as part of the purchase price. If the house costs the government $2,900, the government could very well afford to sell the house three or four years after the war for, say $2,000 or less, and still be money ahead, because in four years the houses would have very little salvage value. If the tenants were allowed to purchase these houses on a monthly payment basis they would make improvements, fix up the yard and so forth. I think it would be good business to allow them to purchase the houses. Would the minister comment on that suggestion?

Mr. HOWE: The houses were built as temporary houses for war-time purposes. They can only be used for that purpose by agreement with the municipalities. It is not felt that it is good business, while the war is on, to make

any post-war arrangements for these houses. After the war is over and these houses have served their purpose, we shall be glad to sit down with any municipality and hear what they want to do with the houses, but just now we are not going to make any other arrangements about them. Most of them are built on an agreement that the houses will be removed after the war. If the city is still in the same mood after the war, we shall remove the houses, but we are not prepared to make any deal while the war is on.

Mr. JOHNSTON (Bow River): In the meantime the monthly payments made by the tenants will all be thrown away from their point of view. If the tenants could make some arrangement with the municipality they could even at this late date go ahead and put a solid foundation under the house, which would go a long way toward preserving it. Otherwise you are penalizing the tenants.

Mr. ADAMSON: What arrangements have been made for the payment of taxes by Wartime Housing? Is there a blanket arrangement applying all over Canada, or do the arrangements vary from city to city, particularly with regard to school taxes?

Mr. HOWE: It is the same arrangement all across Canada.

Mr. ADAMSON: That is $24 for a two-room house and $30 for a three-room house?

Mr. HOWE: That is right.

Mr. ADAMSON: I see it is estimated that the salvage value will be about twenty-five per cent of the price of the house.

Mr. HOWE: I do not know about that; it all depends. As I say, we built them for the war. After the war we shall have a look. We built them during the war to tear down. The rents are fixed so that without interest on the investment they will write themselves off in ten years. If the war lasts for four or five years, they will be half written off, and we shall have a look at that situation. My feeling is that, whatever happens, these houses will be used; if not on the sites they are now, they will be moved into the country. I would not worry too much about the salvage, because I think they are the type of house that can be salvaged.

Mr. CASTLEDEN: I notice that large quantities of plywood are being used in the construction of these houses. How are these supplies obtained, by contract or tender; how much was purchased up to the end of March, 1943, and what price was paid?

Mr. HOWE: We have used no plywood in houses for the last year. Some may have been used in the earlier houses. I have not the information my hon. friend wants. Of course plywood has got in short supply. It is used for many war purposes, and when it could not be had we got other material.

Mr. CASTLEDEN: Has the minister any idea how much was used up to a year ago?

Mr. HOWE: It was a price which the department negotiated. All materials bought in quantity are bought at prices fixed by the Department of Munitions and Supply. How much we used, or what the price was, I could not say offhand.

Item agreed to.

4. Land and other miscellaneous physical property, $7,000,000.

Item agreed to.

5. Revolving funds for working capital—

Munitions production.....	$100,000,000
Aircraft production	25,000,000
Ship production	100,000,000
Miscellaneous stores	20,000,000

Mr. NOSEWORTHY: I have one question which, I think comes under this item. I have received numerous inquiries regarding boxes and crates of war material lying on the sidings, particularly in the east end of Toronto and Scarborough. I am told by men who work in the railway yards that some of that material has been lying there for more than a year and a half. I understand the difficulties of shipping, but people who are buying Victory bonds and paying taxes for the production of these goods are anxious to know whether large quantities of them have now become obsolete. There is plenty of evidence that material inside the boxes is rusting, and people in the Toronto area, at least, are very much concerned over the large quantities of material which apparently are not being moved from these yards. A certain change is taking place. Anyone who passes these yards in the train can see boxes there which have become weather-beaten during the months that have passed. The same boxes remain there month after month. I am told some of them have been there nearly two years. Would the minister care to make a statement on that situation?

Mr. HOWE: I can relieve the mind of my hon. friend at once. None of the material piled along railway sidings is obsolete. The fact of the matter is that we accumulate material in Canada between operations.

Canada is in itself an arsenal from which goods are moved direct to theatres of war. We had quite an accumulation of stores in Canada prior to the movement into North Africa. At that time everything we had was cleared away. At the present time there is quite an accumulation of vehicles. Only now are we beginning to move with a good deal of rush. But those accumulations take place; they are a part of the game, and we have no objection to having Canada used as a storehouse for the theatres of active war. There is no store piled along the tracks that has been there for two years—I can assure my hon. friend of that—nor for one year. But at the present time there is considerable storage of motor vehicles along the tracks. Perhaps the accumulation is the largest there has ever been. But probably in the next three or four months it will be back again to well below normal. It is a part of the transportation business, and nothing to get alarmed about.

Mr. NOSEWORTHY: I think the important part of the minister's statement, and that part which I am particularly glad to hear, is that none of that material has become obsolete—

Mr. HOWE: That is correct.

Mr. NOSEWORTHY: —and that all will be used.

Mr. HOWE: Yes.

Mr. ADAMSON: I wish to ask the minister some questions regarding shipbuilding, and particularly with relation to the Toronto Shipbuilding Company. I have here a return tabled March 17, 1943, sessional paper No. 212, concerning the Toronto Shipbuilding Company. In brief, it says that sixteen minesweepers were built by this company, the last being in September 16, 1942. I understand that these ships were nearly all fabricated before the government took the plant over and it became a government plant. I pass the Toronto Shipbuilding Company yard practically every day I am in Toronto, and I see the same ships there that have been there since last summer: I know them quite well. I was informed that you could not take those ships down to the St. Lawrence or to tidewater on account of ice conditions, but the ships are still there, the same ships which were there most of last summer, and it is nearly July. What is the matter at the Toronto Shipbuilding Company yards? There have been frequent reports of labour unrest. One, which is quite interesting, appears in to-day's paper; I shall read it to the minister. The last time I happened to be at the Toronto Shipbuilding Company yards, or rather next door, at the Toronto Elevators, a game of quoits was being played on the deck of one of these ships. I understand that that is not uncommon. What is holding up these Algerine mine-sweepers? Is it lack of labour? Is it lack of skilled help? They can be launched all right: why are they still there? How many can we expect will get to tidewater this year? What is behind the continual stories of bickerings and labour unrest in this plant? I see in to-night's newspaper:

> Must quit C.I.O. if they want jobs back
>
> Toronto, June 21.—(C.P.)—Officials of the Toronto Shipbuilding Company said last night that nearly 300 employees dismissed Friday after taking part in a work stoppage Thursday "are not back at work."
>
> "They're through," said the officials adding that the company would consider to-day whether the men would be accepted again for employment.
>
> "If they start, they will first have to dissociate themselves from the C.I.O.," said an official. "They are in the minority."

That is a most peculiar statement.

Mr. HOWE: Whose statement is it? It is not mine, is it?

Mr. ADAMSON: It is a Canadian Press statement in to-day's *Citizen*.

Mr. HOWE: I do not know who gave it to the Canadian Press.

Mr. ADAMSON: All I know is that it is by the Canadian Press and it quotes an official. It is a most peculiar statement concerning this shipbuilding yard, coming on top of the other press statements that they were short of labour and the fact that there was a half-page in the *Globe and Mail* some weeks ago stating that there was such a shortage, and the further fact that I asked the minister for naval services a question in this regard and he said they were not short of labour. Now there is a strike. Why are these people playing quoits on the deck? What is the matter? Why cannot the work be finished? Do they lack engines? We hear of the John Inglis company building all the engines they need. Do these people need wiring or equipment, or do they need the necessary skill? I ask the minister in all fairness, because I know he is trying to do a job: what is the matter at this plant?

Mr. HOWE: There is nothing wrong in the Toronto shipyard. Its production record is good. My hon. friend knows that ships cannot be delivered in the winter, but deliveries of ships in the last month have been satisfactory. We do not give delivery figures

of naval vessels and we have never done so, for reasons which my hon. friend will appreciate. There is a little labour trouble at the moment and I gave a statement on it earlier in the day. The whole fact of the matter is that it is an A.F. of L. yard, fully unionized by the A.F. of L. A rival union, the C.I.O., under the direction of Mr. Millard of the steel workers' union, is attempting to organize the yard, which is perhaps all right, but he held a meeting of his cohorts in the yard in working time, which, we thought, is going a little far. Certainly it is a flagrant violation of the agreement with the management and its workers. Therefore the workers who took part in the meeting were dismissed for a breach of the rules of the yard. The statement my hon. friend read was not put out by any official; I can assure him of that. If the men wish to return to work individually, they will be employed and it will not be necessary for them to separate themselves from their union affiliation. But it is necessary, as long as the yard is organized by the A.F. of L., that the rules that govern the present agreement shall govern all workers, and if there is a jurisdictional dispute it will be held outside the gates.

Mr. GILLIS: I did not intend to discuss this particular matter, but the minister has made a statement which is certainly not in accordance with the facts, and I know that he wishes to be fair and to be informed on matters of this sort. I happen to have been in Toronto over the week-end, specifically on the matter of which the minister speaks. On Friday afternoon I received a telephone call from one of the union men at that particular plant—

Mr. HOWE: What union?

Mr. GILLIS: The steel workers' union.

Mr. MacNICOL: Is it affiliated with the C.I.O.?

Mr. GILLIS: I will explain that.

Mr. HOWE: Have they a plant agreement?

Mr. GILLIS: No. The minister does not understand this matter as well as I know he would like to. I am interested in shipbuilding, and I am interested in every shipbuilding yard in this country operating at the present time.

Mr. HOWE: My hon. friend is personally an official of the steel workers' union?

Mr. GILLIS: No.

Mr. HOWE: What office do you hold?

Mr. GILLIS: Oh, no.

Mr. HOWE: You are, are you not?

Mr. GILLIS: No; I belong to the mine workers. As I was saying, the telephone conversation I had was to the effect that there was a possibility, on account of the action of the company in dismissing 289 skilled men who are necessary to that plant, that there would be serious interruption to the work of that yard, and that if there was anything I could do about it, it would be appreciated. I therefore brought the matter up in the house and the minister made a short statement. What this union official who telephoned to me—and it was not Millard—anticipated, took place. There were 1,200 men idle in the yard on Saturday for the purpose of holding a protest meeting in sympathy with the men who were dismissed. I went to Toronto specifically to attend that meeting. I met with the executive of the steel workers' union who were directly involved in the dispute and got the background of the whole situation. I advised them that they should return to work and that under no circumstances at this time should there be any interruption in the activities of that yard. If the management did wrong in dismissing the men without consultation with the selective service, I pointed out that interrupting the job would not remedy matters, since it precluded the possibility of any negotiations while there was a stoppage of any description in the yard. The men on Saturday morning decided to go back to their jobs, which they did, but the 289 men stayed out. This is what happened in that yard. No meeting was held in the yard, as the minister states. His information in that regard is wrong. The yard is partly organized under craft 7, and there is no interference with the section of the yard that is organized under contract. But a large percentage of the men in the yard who are new war workers are not organized and are not protected by agreements which the craft unions have in the yard, and after carrying on for two years, the men who are now attempting to organize came to the conclusion that they must have some bargaining agency to care for their interests. A representation has been made to the Department of Labour for a vote. They have gone through the machinery provided by government, and last Friday when the 289 men were dismissed this is what took place. It was not a meeting and there was practically no time of the company's involved. At the end of a shift the men are allowed ten minutes to change their clothes and wash up, and on the termination of their shift they utilized that ten minutes to go to the manager's office and ask him if he would cooperate with the Department of Labour and the section of the

union who were endeavouring to get a ballot, and sanction the taking of a ballot. The Minister of Labour had informed them previously that he was favourable to a ballot in that yard to determine the bargaining agency if all concerned were satisfied. The management were not satisfied and they were holding up that function of the Department of Labour. That is the only demonstration that took place.

Mr. HOWE: Are the A.F. of L. men satisfied?

Mr. GILLIS: I do not know whether they are, because they do not enter into the picture anyway, seeing that they have their own agreements for their own crafts. They are not taking part in this dispute, and quite naturally if their field was being invaded they would not be satisfied. But the fact of the matter is that the men who are attempting now to get a spokesman for themselves have no agreement and have not had one for two years.

I have no intention of going into the background of this dispute. I sat in and heard these men discuss this matter. Twenty-five per cent of the men involved are ex-servicemen of this war. They find it hard to understand the attitude of the Toronto Shipbuilding company, particularly since it is a crown company. Some of them have been critical about this. I saw the memorandum which was prepared yesterday, a copy of which I believe has been sent to the minister, and this contains some rather serious accusations against the management of the plant. It is claimed that there has been a wastage of public money.

I did not intend to go into this matter to-night because I wanted to discuss it personally with the minister, but it has been brought before the committee. These 289 men who are idle are skilled welders, mechanics and men of that description, and I think the minister would be well advised to order them back to work and to examine the background of this situation. Some of the stories I heard with respect to the management would certainly leave room for investigation. The minister or some of the departmental officials should have gone down to meet these men. These things do not spring up by themselves; there is always something behind them. There are always two sides to a story.

This company is under the control of the Department of Munitions and Supply, and no local manager should be permitted to take the precipitous action which was taken in this case and which has created this situation. If he does, he should be talked to at least. The Minister of Munitions and Supply should have been consulted, and selective service regulations should have been adhered to. Under those regulations I think these men have a claim for the wages they have lost by reason of this dispute. It is not right to say that these men can go back to work individually. They could not go back yesterday. After these men had terminated their meeting at two o'clock Saturday evening and had come to a sensible understanding, they found that they could not get in touch with the manager of the plant. Regardless of the fact that there were 1,200 men off the job, no one at the plant would talk to them and they could not get the manager's home telephone number. He did not want to be bothered. I think the manager of a plant maintained by the taxpayers of this country has no right to consider that he is too big to talk to people who are just as important to the plant as he is.

I think any man in this country has a right to belong to the organization he wants to. It is not in accordance with the regulations with respect to discrimination when the manager of a plant walks up to a man who has decided to join a particular organization and tells him that he must take off that button or ribbon which designates his organization or get off the grounds. That has been done to men at this plant who are endeavouring to have the steel workers act as their bargaining agent. You can get man after man to make an affidavit that that is the way in which he has been treated by the officials of this plant. The memorandum sent to the minister is self-explanatory. It was prepared by men who have been working on the job for the last two or three years and who know what is going on.

There is reason for investigation of the Toronto shipbuilding yards. They are not turning out ships, and in some cases those that they have turned out have had to be rebuilt. There is rank inefficiency. I believe the minister wants to get the job done, he wants to be reasonable and fair in these matters, but someone should examine into the whole situation. These men should be ordered back to work. They are quite satisfied; their only complaint as far as the government is concerned is in connection with their representations to the Minister of Labour. He agreed that a ballot could be taken provided all concerned were satisfied, but the Toronto Shipbuilding company were not satisfied.

No meeting was held in the yard on company's time and sponsored by the steel workers' union. Charles Millard, the man the minister mentioned, was most concerned to

get these men back on the job. Mr. Sifton, the organizer for the steel workers at that plant, stood up and told these men that in no circumstances must they be off the job. He told them that they must get back on the job and give those who were interested an opportunity of ironing this out with the proper department under the proper regulations. That was their approach to the problem. However, the men had been antagonized by pin-headed foremen who have no business being in a position where they must handle men. Their only function appears to be to stand around and snoop and listen and accuse the men wanting to join an organization where they will have a spokesman to speak for them on matters of wages and conditions. Some of these men who were casualties of this war and who are now employed at the plant stood up in that meeting yesterday and wanted to know where the democracy was they had been fighting for. They contended they had made their contribution and were trying to work, but they were not allowed to work by people who neither had rendered service nor were capable of giving service in the position in which they were employed. I want to sit down with the minister some time and talk this matter over with him, because there are factors in the dispute which I would not want to discuss publicly.

Mr. HOWE: Disguise it as you like, this is the standard technique for the C.I.O. crashing a plant where the contract is held by the A.F. of L. A small group start milling around demanding votes, and members of my hon. friend's party go down and agitate and make speeches. If there is an illegal strike or overruling of a vote or anything of that sort, my hon. friend is right there to take the side against law and order, as he was in this case. This is a case where the contract is held by a reputable international union, and my hon. friend was down there supporting the minority who wanted to crash the plant and upset the present contract.

Mr. GILLIS: I can hardly credit that statement coming from the minister.

Mr. HOWE: It is quite obvious.

Mr. GILLIS: It is 100 per cent wrong. How many of the men employed in that plant are covered by the contract?

Mr. HOWE: A considerable majority.

Mr. GILLIS: There is not a considerable majority.

Mr. HOWE: I will get the figures.

Mr. GILLIS: You should get the figures on that. I want the minister to take back his statement that I am on the side that is against law and order. I am ready to put my record alongside the minister's in that respect from the time I was fifteen years old.

Mr. HOWE: Would the hon. member like me to give him a list of the illegal strikes where he has been advising the striker to act against government regulations?

Mr. GILLIS: Yes, I would.

Mr. HOWE: I shall be glad to look that up.

Mr. GILLIS: I want to tell the minister that since the outbreak of the war there has never been a strike in this country that was called by the employees of any plant. If you will examine your regulations as they exist at the present time, you will find that they make it impossible for anything but a walkout to occur. That is what has taken place. The Minister of Labour shakes his head. If he reads and examines and goes through the regulations he will find that to be true. Before any body of workers employed in a plant in this country can obtain redress for any grievance they must first make application for a conciliation board, and before any application for a conciliation board is granted they are compelled to take a strike vote.

Mr. MITCHELL: That is only nominal.

Mr. GILLIS: Just a moment. You must recognize this, that there is no strike in Canada. Eighty-five per cent of the workers of this country are not organized; they have absolutely no knowledge of trades unionism or its functions, or the road they have to travel. When somebody gets up and tells them there is to be a strike vote taken and that this is to be done for the purpose of redressing their grievances, immediately you take a vote you sow the seeds of a strike in the minds of those uninitiated men; you plant the germs of a strike, and you place the average organizer or the man trying to handle the difficulty in a situation which he cannot control. Why was I in Toronto on Saturday? I was there because the people who telephoned and asked me to go to Toronto said, "These men may listen to you; they will not listen to us." I sat in with the executive, the rank and file of the men off the job. They had a pertinent grievance that has been agitating them for two years. The organizers had lost control; the men were not listening to them. I sat with those men for two hours, persuading them as to what they should do in order to legalize themselves and iron out this grievance through the medium of the machinery provided by the government.

Then the minister rises in his place and tells me I am on the side that is against law and order, that I am trying to promote this, that and the other thing. I tell the minister that I want to win this war; I have already helped to fight one war. It may be that I want to win this war for a different reason from what the minister thinks, but I am not letting anything I can control interfere with the winning of the war. I know the aftermath is too serious. I defy the Minister of Munitions and Supply or anyone else in this house to show that since the outbreak of this war I have gone to a plant or a factory from one end of this country to the other and advocated a strike or a stoppage of work. The reverse has been true. I went to Sudbury; I went to Kirkland Lake; I went all over this country, and I advised the men that the only sensible and safe road to travel was to build up their membership to the point where they would be safe when a ballot was taken at the particular plant. The strike is an obsolete weapon. I know enough about the labour movement to realize that there has never been a strike won in the history of that movement, on the question of recognition. You cannot win; I know that, and it is foolish to think about it. My mission in Toronto was to talk to the uninitiated workers in this plant who perhaps do not understand the situation as well as I do. It is not the technique of the C.I.O. to promote strikes; no such thing. The reverse is true; they are forced into these things.

Mr. HOWE: Then how is it that eighty-five per cent of all the time that has been lost in this country since the beginning of the war has been owing to the C.I.O.?

Mr. GILLIS: The answer is very simple. The A.F. of L. unions are craft unions and are well established.

Mr. MITCHELL: They are not all craft unions; how about the mine workers?

Mr. GILLIS: They are not in the A.F. of L. at the present time.

Mr. MITCHELL: The machinists are not a craft union.

Mr. GILLIS: If the Minister of Labour will wait a minute I will give the Minister of Munitions and Supply a little information; there may be no need to give it to the Minister of Labour. The craft unions are well established. The unions of the A.F. of L. are craft unions now; the ones that were not craft unions broke away from the A.F. of L. when John Lewis and Bill Green disagreed in the United States. Those unions are well organized; they have contracts and leadership, but they stop there. The difficulty was that until about four years ago the mass-production industries of the United States and Canada were not organized. There was no unionism in steel or all those other mass-production industries at all. That was why Green and Lewis quarrelled; then the C.I.O. was formed in the United States, and they are fighting to establish what the A.F. of L. have had for twenty years. The same thing applies in Canada. In these other unions there is no disturbance. They are established; they have machinery, and there is no reason for a fight. But in all the mass-production industries they are trying to establish something that has been recognized in every other country in the world for the last fifty years; that is all.

That is why we are having this scrap. And what are they asking for? You have no objection to the manufacturers' association getting together. That is fine; no one is against that. You have no objection to the mining association getting together; they can come in here and meet you en bloc, and they represent the whole set-up.

Mr. HOWE: I have no objection to labour getting together. The objection I have is to one faction of labour fighting another and losing time which should be devoted to the war.

Mr. GILLIS: I have the same objection; I think it should not be, but neither the minister nor I can do very much about that at the present time.

Mr. MARTIN: What about coal?

Mr. McLARTY: That has been organized for a good many years.

Mr. GILLIS: What about it?

Mr. McLARTY: That is one of the industries in which there has been a tremendous loss of time.

Mr. GILLIS: Yes, and there has been very good reason for it. The Secretary of State will remember also that last summer the mining industry of Canada was working only three days a week. Why were we losing time then? It was the fault of the employers, on account of a lack of organization. We cannot help the row that is going on in the United States; that is their business. Evidently John Lewis thinks his men are entitled to more money. There has been very little lost time in Canada by reason of trouble in union circles.

Mr. McLARTY: I am afraid I cannot entirely agree with that statement. We did have much trouble.

Mr. GILLIS: Where?

Mr. McLARTY: In Cape Breton, where the hon. member comes from.

Mr. GILLIS: What was the trouble?

Mr. McLARTY: The trouble was a slow-down on the one hand and absenteeism on the other.

Mr. GILLIS: What was the reason for it?

Mr. McLARTY: It was purely a jurisdictional fight within the union.

Mr. GILLIS: No such thing. Sit down for a moment and I will tell you what was wrong at that time. I know this is all out of order, Mr. Chairman, but I should like to tell the Secretary of State what was the trouble in Nova Scotia.

Mr. MITCHELL: It was a fight inside the union itself.

Mr. GILLIS: No—well, to a certain extent it was.

Mr. MITCHELL: To a great extent.

Mr. GILLIS: But that was not the basic trouble. We have gone through that twice in Nova Scotia; we went through it in 1925, and the cause of the difficulty was quite apparent to most of us. You were facing a provincial election. The mine workers of Nova Scotia are a potent factor in provincial elections, and you got manipulations from the inside to disrupt that whole organization so that it would not be a factor in that provincial election. That was seventy-five per cent of your trouble, manipulated trouble on the inside of the union to disrupt the whole thing. That was what happened. The men were taken for a ride.

I am sorry I had to take up this time, but I am not the kind of person who can sit quietly and just take the sort of accusation the Minister of Munitions and Supply made across the floor. I tried to be helpful in the Toronto situation; I wanted to discuss it with the minister. There is nothing wrong there. Send those men back to work; that is all. They were dismissed illegally. You need them in that plant. Make an investigation into that plant, as to its management; you owe that much to the taxpayers of Canada. You are responsible. If those men want a vote in that plant, that is democracy. They are quite prepared to take a ballot. They are not talking anarchy, communism or dictatorship. The ballot is the basis of democracy; so let the men settle it on that basis. I do not think Mr. Arnold, who is an employee of the federal government, and managing that plant, has any right to say that anyone in the plant should belong to this, that or anything else. That is something the individual must determine for himself, and that is all there is to that dispute. It is a matter of deciding whether we are prepared to give the people of this country democracy, the thing they are fighting for overseas. If we are not going to do it now, then I am very much afraid of what the situation will be when this war is over.

Mr. HOWE: Before we close the books on that subject, may I say the objection was not that the men belonged to a certain union. They could belong to any union they like, and I am certain no foreman on the job told them differently. The objection was that they held meetings on the company's time.

Mr. GILLIS: They did not; that is not right.

Mr. HOWE: That is the fact given to me. That was the reason for the dismissal, and that is a perfectly good reason for dismissal. The men can do their organizing and hold their meetings outside the yard, and outside business time.

Mr. GILLIS: I agree with that, and I say that if they held meetings in the yard on company time for organizational purposes, the dismissal was justified. But that is not so. We could get many men in the plant who would take their affidavit that the foreman would walk up to them and tell them to "get that button off your coat"—or else.

Mr. MITCHELL: I do not wish to get into this discussion, but I know that there are American Federation of Labour organizations in that plant.

Mr. GILLIS: Yes, certainly there are.

Mr. MITCHELL: Not long ago one of the international representatives of the American Federation of Labor came to my office, and told me that the pot was boiling there, and that there was a scrap between the two organizations. But if it had not been for the closed shop in the plant they could consolidate things, and there would not be any difficulty. I told him the viewpoint of the government with respect to the closed shop was that it was in contradiction of P.C. 2685, and we did not feel that a man should be denied the right to go to work, or that before he should go to work he should join any particular trades union.

I think it can be fairly said that I know something about the difficulties of dealing with green membership. But do not forget there is also green leadership in this country.

Some hon. MEMBERS: Hear, hear.

Mr. MITCHELL: And I want to say to my hon. friend that very few disputes have gone off the track since the war broke out. The government and its conciliatory machinery cannot always be wrong. I am frank to admit that we are human, and that we do make mistakes. But I do not think it is fair to say that every time somebody else makes a mistake it should be put on the doorstep of the Minister of Labour, whether it be a federal minister or a provincial minister.

The leaders in this situation in Toronto—and if they cannot lead they should not be leaders—knew the steps which were necessary to bring that situation, which they thought was dangerous, to a successful conclusion. But no, they waited until the fellows were out on the street. I know it is the easiest thing in the world, as I have no doubt every hon. member knows, to tell people they are right when they are wrong. That is the easiest thing one can do. While I do not hold any brief for any of the employers in this country, yet it has been my experience—and I have probably had as much experience as my hon. friend, and I do not make that statement in any critical sense—to find that trades union agreements are based on character. That comes first, last, and all the time. A trades union agreement is not a legal document, nor is it a legal document in Great Britain. There are some who would try to make it a legal document, but it is not. It is a yardstick arrived at between employers and employees. There is a duty on both sides to make that instrument function. I know some believe that is not very helpful; but it has been my experience that those organizations based on character do not need laws. We can see that all the powerful organizations in this country and in the United States have lasted because their policies and purposes have been functioning on that true, simple fact.

I think my hon. friend will agree with me that when sometimes you get mistakes in leadership on either side, whether it be on the part of employees or employers, you cannot lay it at the feet of the conciliation machinery of the respective governments of the country concerned. If there were more forbearance on both sides it would be better. That is something which cuts both ways, and if there were more forbearance it would be much better in this country and in the United States; because, whether we like it or not, there is a struggle between two organizations for membership. They poach on one another, I suppose, as they have done in the United States.

Mr. GILLIS: Would the minister answer a question?

Mr. MITCHELL: Yes.

Mr. GILLIS: That plant has been operating since the outbreak of the war. The A. F. of L. union that is in the plant, and that has contracts with its own people, has had that field completely to itself up until the last three months, has it not? Now, if the A. F. of L. did not include the whole yard, why have they not done so in the last two and a half years? That is the point. The steel workers were invited to organize themselves, and they were not protected by the agreement. That is the crux of the whole matter.

Mr. MITCHELL: I wish to have that clear. I am not criticizing the steel workers. The hon. member will have to agree with me that I have taken the stand, since I have been Minister of Labour—and I think earlier ministers have; and this is the same position taken in Great Britain and in the United States—that I did not think it was the duty of any government to send in conciliators when the men are on what is known as an illegal strike.

Mr. GILLIS: That is true.

Mr. MacNICOL: On what?

Mr. MITCHELL: When the men are on an illegal strike. When that is gone, everything is gone. If hon. members on the opposition side of the house were sitting where I am sitting, they would see that you have to have some measure of control. The government, by its very nature, is charged with a responsibility to the state, and it cannot permit a group of individuals, whether they be employers or employees, to act at variance with government policy. You find that in connection with the Minister of Munitions and Supply, for instance, when in his judgment he finds it necessary to put in a controller to take charge of a certain industry. That is often done.

We have not yet reached the stage where we have put controllers into these organizations. But if we are to develop responsible trades union leadership, that has to be done. There is no other alternative to it, irrespective of the political party in power.

Those problems exist. They exist in every country in the world in which we find the democratic style of government. And where

democracy is in operation, that is the price we pay for freedom. I realize that the hon. member is trying to get these people back to work.

Mr. CASTLEDEN: Did the company obey the law in this instance?

Mr. MITCHELL: I saw the manager of the company. Perhaps I have not as much knowledge about this as the hon. member for Cape Breton South, but I think it is not within the realm of proper operation of any industry for people to hold meetings in a plant during working hours. That is generally recognized in the day to day operation of any industry.

Mr. GILLIS: I would remind the minister there was no meeting held in that plant on the company's time. It is not correct to say that there was. The Minister of Munitions and Supply is under the impression that there is a contract in that yard which embraces the employees; that is not correct, either. The first step should be that the 289 men should be put back in the plant, where they are needed.

Mr. ADAMSON: May I say that three or four months ago these men came to see me and told me that they were likely to go out on strike, and that they could not continue on account of the inefficiency of the management at this plant, that there was bound to be a strike for that cause alone.

Progress reported.

On motion of Mr. Crerar the house adjourned at 11.05 p.m.

Tuesday, June 22, 1943

The house met at three o'clock.

INCOME TAX

EXTENSION OF FILING DATE FOR T2 QUESTIONNAIRE IN RESPECT OF 1942 CORPORATE RETURN

On the orders of the day:

Hon. C. W. G. GIBSON (Minister of National Revenue): On June 15 the hon. member for Cumberland (Mr. Black) asked whether the time would be extended for the filing of income tax returns for 1942, pointing out that chartered accountants and business firms would find it almost impossible to file their returns by the prescribed date. I said that at that time no change was contemplated; but I should now like to announce that to-day a notice is being sent out to all inspectors of income tax, as follows:

You may advise the public in general that there will be no extension in the time of filing the required individual and corporate income tax returns which are due on 30th June. This does not apply to the information return known as T2 questionnaire which has been introduced for the first time this year and requires considerable care and attention in its preparation. Inasmuch as it is supplementary to the T2 corporate return this is to advise that penalties will not be imposed in respect to the fiscal year ending 31st December, 1942, if the T2 questionnaire is lodged on or before 31st July, 1943, provided that the T2 questionnaire is signed not only by the required officials of the company but also accompanied by the auditor's supporting certificate, without which the time is not extended. No extension will be granted for the filing of T2 questionnaire in respect of fiscal periods ending after 31st December, 1942.

A considerable amount of work is entailed in the preparing and certifying of this questionnaire, and it is considered that by extending the time for filing it, considerable relief will be afforded.

Mr. HANSON (York-Sunbury): Of course that is another question. The questionnaire is another document.

Mr. GIBSON: No, it has to be filed with the return.

Mr. HANSON (York-Sunbury): It has to be filed with the corporate return; but I thought that in the other case referred to the minister was giving consideration to an extension.

Mr. GIBSON: The T2 questionnaire is filed in conjunction with the T2 form, and I understand after consultation with the accountants that it is the T2 questionnaire which has been holding them up, because it requires so much care in preparation, and must be certified by the accountant.

Mr. HARRIS (Danforth): Did I understand the minister to say that firms whose fiscal year ends later than December 31, 1942, would of necessity have to file form T2 questionnaire before June 30?

Mr. GIBSON: No, they do not file this until six months after the close of the business year, so that they would not be filing it by June 30, in any case.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Monday, June 21, consideration in committee of a resolution to grant to his majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

MUNITIONS AND SUPPLY

The CHAIRMAN: We are considering item 5.

Mr. HOWE: At the last sitting there was some discussion about the contract for war-time

houses in the city of Hull. At that time I had not studied the situation as I have this morning. I should like to be fair to the hon. member for Mackenzie (Mr. Nicholson) and therefore I wish to put on *Hansard* a reconciliation of the three returns that were filed. Two of the returns were accurate but the third return failed to allow for certain expenditures made at Hull on account of a project at Ottawa for forty houses. The wood work and framing for the Ottawa project were carried out in the plant at Hull, and the charges were carried with the Hull charges for a time and then charged back to Ottawa in the ordinary course. There was one return that failed to take account of that charge against the Hull houses, with the result that the return brought down indicated that the 50-house project cost about $1,000 per house more than it actually cost. If I can place this reconciliation on *Hansard*, I do not need to read it. It is a series of figures, and my hon. friend will find it is quite satisfactory in reconciling the three returns brought down.

Mr. COLDWELL: In view of the fact that the minister went after the member for Mackenzie rather hard yesterday on this particular matter and now brings in a report indicating pretty much that the member was correct in his statements—

Mr. HOWE: Quite the reverse.

Mr. COLDWELL: The information that the minister had was wrong. I suggest that care should be exercised about these matters. I had an experience of this sort with the Prime Minister with which I have not done yet. I was given quite a castigating in the house for statements I made which were absolutely correct. Every care should be exercised to see that this kind of thing is not done. I noticed the lecture read to the member for Mackenzie yesterday and I felt he had good reason to resent it.

Mr. HOWE: I read no lecture to the member for Mackenzie. He asked whether he could believe my statements. My statements were absolutely correct yesterday, but I found on examining the situation this morning that one of the three returns made failed to make the correction which I have mentioned and indicated a higher cost of the houses than the actual figures show. The other two returns are correct. If my hon. friend is interested in the reconciliation I shall be glad to put it on *Hansard*. If he is not, I will not.

Mr. NICHOLSON: I should like to have the information but if this is another set of answers, that is another thing.

Mr. HOWE: It is not another set of answers. With the permission of the committee I would ask that these figures be put on *Hansard:*

Regarding Hull Costs
(As of May 3, 1943)

Total cost per war-time housing books			$577,604 06
Given in reply *Votes and Proceedings*, No. 22, p. ii, in reply to question No. 2 by Mr. Lockhart.			
The breakdown for this is as follows:			
Project No. 1—Contract for 100 houses		$279,073 38	
Extras in painting, storm sash, etc.—			
Painting	$ 4,439 46		
House numbers	15 12		
Storm sash	10,460 00		
		14,914 58	
		$293,987 96	
As there are 100 houses in Project No. 1, this equals $2,939.87 per house.			
For land, sewers, water, roads, street lighting, heaters, stoves, supervising architect—			
$2,928.87 plus $37,982.96 plus $28,750.04 plus $29,886.82		$ 99,548 79	
Total for project No. 1			$393,536 75
Project No. 2—Costs per war-time housing field force—			
25 No. 1 houses—according to exterior finish—from $1,889.13 each to $1,897.78		$ 47,325 85	
25 No. 21—according to interior finish—from $2,065.56 to $2,073.76		51,713 22	
		$ 99,039 07	
Administrations building, construction equipment, install stoves, etc.		$ 4,389 28	
Land, sewers, roads, walks, street lighting, landscaping, etc.		37,045 14	
Expenditure on wall, floor and roof panels for Ottawa project of 40 houses		43,593 82	
			$184,067 31
Total			$577,604 06

Reconciliation

1. The $577,604.06 checks with figure used in return to Mr. Lockhart's question *Votes and Proceedings,* No. 22, p. ii.

2. In project No. 1, the contract of $279,073.38 plus certain extras amounted to $293,987.96 for 100 houses or $2,939.87 each house. This checks with reply to question by Mr. Lockhart—*Votes and Proceedings,* No. 22, p. iii.

3. In project No. 2—It will be seen from cost statement the average cost of houses was $1,980 or if certain items listed as extras are added (represented in the amount of $4,389.28), the average would be $2,068. These sums do not check with the return given Mr. Lockhart in answer to his question "D", *Votes and Proceedings,* No. 27, p. iii, where the cost was given as $2,941.10—same answer being given to Mr. Nicholson, *Votes and Proceedings,* No. 19, p. ii.

The reason is that at the time return was made the amount of $43,593.82 of fabricating cost on Ottawa houses included in the statement had not been transferred to that project. So we had a cost of $147,022.17 which gave an average unit cost for the 50 houses of approximately $2,940.

Mr. DIEFENBAKER: Under this particular item there are a number of questions I desire to ask, some of which I asked the other day, which so far the minister has not answered. In the statement respecting production of aircraft the minister said the number produced to date is approximately 8,000 planes. I should like to ask him whether the 8,000 planes represent actual production in Canada, except for engines, or whether it includes importations from the United States. On November 14, 1941, the minister gave a statement with regard to the production of planes in this country, and as reported at page 4082 of *Hansard,* he said:

> Our aircraft industry has manufactured in Canada and placed in service since the outbreak of war, or has assembled in Canada, 3,749 aircraft. In addition, we have received from the United States in the same period 1,268 aircraft. The present average rate of production is approximately forty per week for all types, and in this regard it should be pointed out that the present production includes a heavier proportion of advanced trainers and service aircraft than in the earlier months of production.

The other day when I asked the minister why there was a reduction per month in the number of planes being produced, he replied that of course the poundage was very much greater. What has it been each year since 1940? When I look back over the *Hansards* that I have here, since the outbreak of the war, and read the statements made by the minister at each successive sitting of the house, wherein with pride he pointed to the production of aircraft in Canada and the anticipated increase in production, the statement is so much like the statement he made the other day that I feel justified in asking him now to give the Canadian people the picture with regard to aircraft production, not in generalities but in particulars, so that people will be able to understand whether or not aircraft production in Canada is in keeping with munitions production and the like. I therefore ask him to give particulars of the different types of planes that have been produced. How many Ansons have been produced since May 14, 1942, at which time the minister stated in the house that production was over 600 planes? Furthermore the minister said—

Mr. HOWE: Let us have one question at a time. My memory perhaps is not as good as my hon. friend's, and he has notes while I have not.

Mr. DIEFENBAKER: The minister's memory should be fairly good, because that is one question which significantly he has not answered in the past.

Mr. HOWE: The hon. member wishes to know how many Ansons Canada has produced.

Mr. DIEFENBAKER: How is that number of 8,000 planes made up? How many Ansons are there and how many of various other types?

Mr. HOWE: As to the number of Ansons, Canada had produced as at the end of May last, 1,850.

Mr. DIEFENBAKER: What about the other types of planes?

Mr. HOWE: What type does the hon. member want to know about?

Mr. DIEFENBAKER: The types included in the 8,000 planes which the minister says have been produced in Canada.

Mr. HOWE: I shall be glad to put them on *Hansard* if my hon. friend wishes. I have never done this before and I think it is breaking the security rules. However, he has asked for it and he can take the responsibility for the answer.

Some hon. MEMBERS: Oh, no.

Mr. HOWE: Certainly he will.

Mr. DIEFENBAKER: That answer is not fair.

Mr. HOWE: Why not?

Mr. DIEFENBAKER: The people of Canada want to know whether or not the flowery statements with respect to production are justified by the facts. If the minister says—and this has always been my attitude—that in the public interest, for security reasons, he cannot furnish this information, then I ask him how it is that information as to production in various types is furnished by others outside of parliament.

Mr. HOWE: My hon. friend says that the people demand to know, and he is a tribune of the people, and therefore I am certainly going to tell him. If I get into trouble, for security reasons, my hon. friend must share the responsibility.

In the field of elementary trainers Canada has built 1,384 Tiger Moths; 10 Menasco Moths; 126 Wireless Moths; 409 Cornell trainers; 431 Fleet 16 trainers, making a total of planes built in the field of elementary trainers of 2,360.

In the field of advanced trainers Canada has built 1,059 Harvards; 51 Norsemen; 101 Fleet 60's; 367 Bolingbrokes; 1,850 Ansons, and 150 Lysanders, making a total in the field of advanced trainers of 3,578.

In the field of service aircraft Canada has built 15 Sharks; 15 Grummonds; 32 Stranraers; 8 Deltas; 75 Lysanders; 69 Norsemen; 169 Bolingbrokes; 63 PBY boats; 1,451 Hurricanes; 160 Hampdens, and 19 Mosquitos. Those figures are up to the end of May. The figure I gave the other day, of 21 Mosquitos, was up to date.

Mr. HANSON (York-Sunbury): Nineteen Mosquitos?

Mr. HOWE: To the end of May. That makes a total of 2,076 service aircraft, and a grand total of aeroplanes built up to the end of May of 8,014.

Mr. HANSON (York-Sunbury): When was the contract for the Mosquitos let with the de Havilland company on which we had a production of nineteen planes?

Mr. HOWE: I have not the exact date.

Mr. HANSON (York-Sunbury): Was it not placed in the fall of 1941?

Mr. HOWE: The first negotiations were opened in September, 1941.

Mr. HANSON (York-Sunbury): I understand that the contract for the Mosquitos was placed with the de Havilland company late in the fall of 1941, the negotiations having preceded the letting of the contract.

Mr. HOWE: Placed by whom?

Mr. HANSON (York-Sunbury): I did not say by whom.

Mr. HOWE: Who placed the contract?

Mr. HANSON (York-Sunbury): I suppose it is the Department of Munitions and Supply. And the production on that contract has been nineteen Mosquitos.

Mr. HOWE: Nineteen to the end of May. Let us be accurate at least.

[Mr. Diefenbaker.]

Mr. HANSON (York-Sunbury): To the end of May. I am quite glad to take the minister's statement. I have been prompted to make this statement because I hold in my hand an article from a weekly journal, dated the 19th of June, entitled "Hatching Mosquitos", and the statements contained in this article are in a degree a reflection on the minister's department and on the production of Mosquitos. The article gives a pretty lurid description of what has happened. I do not vouch for the truth of it, but it is being broadcast throughout the country, and if it is not true the matter ought to be cleared up. If it is true there ought to be an admission on the record. The article starts off by making a declaratory statement:

> Canada's war-time production is the biggest in the world—for its size. The way tanks, guns, planes and all other munitions of war are turned out by the publicity branch of the Department of Munitions and Supply would astonish even the Russians.

Mr. HOWE: What is my hon. friend reading from?

Mr. HANSON (York-Sunbury): I will show it to my hon. friend when I am through.

Mr. HOWE: Tell me; I am entitled to know.

Mr. HANSON (York-Sunbury): It is an article by Dennis Pratt in the *News*.

Mr. HOWE: What News?

Mr. HANSON (York-Sunbury): Perhaps the minister—

Mr. HOWE: In other words, Judith Robinson.

Mr. HANSON (York-Sunbury): I do not care who it is.

Mr. HOWE: I am entitled to know.

Mr. HANSON (York-Sunbury): I said I would hand the article over to the minister when I am through reading it.

Mr. HOWE: Put it on *Hansard*.

Mr. HANSON (York-Sunbury): It goes on to say:

> A case in point is the production of Mosquito bombers by the de Havilland Company of Canada. The contract for these planes was placed in the fall of 1941, and almost immediately the publicity branch of Munitions and Supply went into action. It had bombers "in production" at the plant in no time, and then turned its attention to other supplies which needed boosting.
>
> But the actual machines at the plant, having got into production, stayed there and never came out.

Now we have the admission from the minister that in two and a half years only nineteen planes have been produced on this contract up to the end of May.

Mr. HOWE: Exactly how does my hon. friend arrive at two and a half years?

Mr. HANSON (York-Sunbury): From the fall of 1941 to the fall of 1942 is one year, and now it is the summer of 1943. That is in excess of two and a half years.

Mr. HOWE: One and a half years.

Mr. HANSON (York-Sunbury): Just under two years—my error. I am not like the minister when I find I am in error I am glad to say that I am mistaken, but the Minister of Munitions and Supply, like most of the members on the treasury benches, never admits an error. I will admit that there is one great exception, and that is the Minister of National Defence for Air. By his very humility and his candor he inspires confidence, which the Minister of Munitions and Supply does not inspire.

Some hon. MEMBERS: Oh!

Mr. HANSON (York-Sunbury): All right; I hear the jeers from across the line, but I am not impressed by them. It would be far better if we could have a little more candor about these things from the treasury benches, and say we made a mistake.

Mr. HOWE: Let us be careful. The hon. member for Lake Centre challenged my statement on the number of planes produced, and I have given him the production by chapter and verse. Just what is my hon. friend blustering about now? It is all very well to bluster, but it is just as well to keep your feet on the ground.

Mr. HANSON (York-Sunbury): I do not usually bluster.

Mr. HOWE: You bluster a great deal.

Mr. HANSON (York-Sunbury): I am not blustering. What I say is this: all down through the years because of the puffing and publicity by the department's publicity branch the Canadian people have been led to believe that production was enormous, immense.

Some hon. MEMBERS: It is.

Mr. HANSON (York-Sunbury): The publicity was always in advance of the production. I think I realize some of the reasons why the production did not come up to expectations; there must have been many bottlenecks, many difficulties encountered by the minister. I think it would be much better for him to be frank and say: We hoped to do thus and so, but for reasons unforeseen we could not do it. That is what I suggest to the minister.

Mr. HOWE: I did not say that we have done thus and so except in the report I made to parliament, and if my hon. friend can successfully challenge any statement in the report I made to parliament I shall be very glad to have him do so now. Otherwise I think we might very well suspend this attack.

Mr. HANSON (York-Sunbury): All right; I am used to taking lectures from across the line, and it does not bother me a bit. I would like the minister to read this article.

Mr. HOWE: I am particular about what I read. That is not one of my favourite authors

Mr. HANSON (York-Sunbury): I see; the minister never wants to learn. I suggest to him that he would be wise to study the criticisms that are made of his department; it might bring constructive and productive results. When I was leader of the opposition I always felt that constructive criticism in newspapers not only had a chastening effect upon my soul but it did me good, and I should think the same thing would apply to the minister. As I said before, the trouble with the minister is that he never admits error, and I suggest that is a weakness. That is why the public have not the confidence they should have had in some of the statements that have been made by the minister's publicity department in the past. The whole history of the Moth contract and the production under that contract is confusing. I do not understand why production has not been greater, and the minister should make that clear. I am not going to blame the minister personally; I think he is just as desirous of seeing production come off the assembly lines of the de Havilland plant as I am.

An hon. MEMBER: Far more so.

Mr. HANSON (York-Sunbury): Maybe. I do not know where that came from—

Mr. CLEAVER: It came right from here, and I meant it.

Mr. HANSON (York-Sunbury): I would expect anything from a back bencher over there. But approaching this matter in the calm light of mild philosophy, if I may use that term, I suggest to the minister that in his statements as to production he should confine himself to what has been done and not give us so much about what is going to be done. That is the point.

Mr. HOWE: When have I given the hon. member anything about what is going to be done? Since my hon. friend has given me his expert opinion, perhaps I might give him the expert opinion of Mr. Butler, the chairman of the board of the de Havilland company in England. I quote from a cable recently received from our London office about Mosquito production:

While Butler admits inevitable mistakes in estimates he states that rate of Canadian production to-day is good and stresses that it compares more than favourably with early production in each of the two factories here.

Mr. HANSON (York-Sunbury): The statement is that Mosquito production is good?

Mr. HOWE: Yes.

Mr. HANSON (York-Sunbury): What is the date of that?

Mr. HOWE: June 4, 1943.

Mr. COLDWELL: Since we are discussing the production of aeroplanes perhaps this would be a good place to ask the minister a couple of questions following the discussion we had yesterday. The minister said he would be glad to tell the house the price per pound of sheet aluminum, and I should like to have that in order to get the record straight. Then I said to the minister yesterday at page 3828 of *Hansard:*

As I understand it the base price is fifteen cents a pound, Canadian funds, and that to-day we are paying twenty and a half cents a pound.

Mr. Howe: That is right, except that fifteen cents is United States funds.

Mr. HOWE: That is right.

Mr. COLDWELL: I did not understand that yesterday. The base price in Canadian funds is 16 cents?

Mr. HOWE: Yes.

Mr. COLDWELL: Not 16½ cents?

Mr. HOWE: No. There are certain adjustments. These prices all have delivery points. The 15 cents in American funds is the base, and to arrive at the Canadian price, adjustments were made against our delivery point as compared to the United States delivery point, and the two represent equal prices, all things being taken into consideration. The actual price came out at sixteen and a very small fraction, and it was made sixteen flat.

Mr. COLDWELL: And is the 5½ cents in Canadian or United States funds?

Mr. HOWE: It is in Canadian funds.

[Mr. R. B. Hanson.]

Mr. COLDWELL: So the last adjustment gave us a price of 21½ cents a pound for the aluminum, 16 plus 5½?

Mr. HOWE: That is right.

Mr. COLDWELL: That is for the ingots?

Mr. HOWE: Yes.

Mr. COLDWELL: What is the price per pound of sheet aluminum, which is required by the companies who are making aeroplanes and so on?

Mr. HOWE: The price of aluminum sheet of common gauge, which means the standard alloy—these sheets are an alloy of aluminum —is 25 cents; that is the base price, with extras up to 35 cents for extra gauges. My hon. friend knows how sheet metal is sold. The base price is 25 cents, and the prices for common gauge run up to 35 cents; there is a long price list.

Mr. COLDWELL: Is that per pound?

Mr. HOWE: Yes. I do not know just what is put in the alloys; and perhaps my hon. friend is not interested in this price, but for the strong alloy the base price is 35 cents and for certain gauges it runs up to 50 cents a pound. For the rods, common gauge, which compare with the common gauge sheets, the base price is the same, 25 cents running up to 35 cents for odd sizes. For the strong alloy in the rods, the price runs from 35 cents to 50 cents.

Mr. COLDWELL: These are the base prices?

Mr. HOWE: These are the actual prices.

Mr. COLDWELL: The base price is from 25 cents to 35 cents?

Mr. HOWE: Twenty-five cents. Always in sheet metal there is a certain gauge which is considered the base price, and gauges above and below that have higher prices, due to mechanical differences.

Mr. ADAMSON: Can the minister tell the committee what percentage of duralumin is used in a modern fighting plane? I understand that the greater part of the metal used is this hard, high tension alloy.

Mr. HOWE: It varies greatly as between planes, as my hon. friend will easily understand. We would need to know the particular plane in question, and check back on it.

Mr. ADAMSON: Take a Hurricane, for instance.

Mr. HOWE: That plane weighs about seven thousand pounds, and the duralumin probably would amount to about 25 per cent of the weight of the plane. That is as near as I can give it to my hon. friend.

Mr. ADAMSON: Can the minister tell us whether the number of Ansons he mentioned includes those which were shipped to Canada from England and assembled here?

Mr. HOWE: No, there were 1,900 Ansons that came from England, which were assembled here, and those were entirely outside the figures I gave my hon. friend.

Mr. ADAMSON: Then there were 1,850 produced here and 1,900 shipped and assembled here?

Mr. HOWE: Yes.

Mr. DIEFENBAKER: Did any part of the 8,000 planes represent parts manufactured in the United States, brought to Canada and assembled here into planes?

Mr. HOWE: No; the only part brought in from the United States was the engine.

Mr. CHURCH: I have one or two general questions I should like to put to the minister. Last night there was some discussion as to the duty of a member of parliament in connection with the various war plants under the control of the minister. I was chairman of the Toronto harbour commission when the plant referred to last night by hon. gentlemen to my left was brought to the city of Toronto in the last war. Since this war began I have taken it to be my duty not to enter a war plant unless I was invited, and I have never received an invitation. One reason has been that since the war began we were supposed to have an honourable agreement among ourselves, as members of the House of Commons, to conduct our affairs during the war without regard to political considerations at all, in order to attain an all-out war effort in this country following the practice that has been adopted and so well carried out in the old country. There the labour unions agreed with the government that there would be no more peace ballots and no more general strikes until Hitler was beaten.

There are no labour unions under the axis powers; they were all abolished. There would be none in this country or on the continent of North America if we should lose this war. This is the most critical year of the whole war; and while I have in my constituency a great many people who work in these plants I have told them that I do not think it is my duty to interfere as to the merits of rival unions, since the onus is upon the government of the day to decide all matters in regard to labour conditions and the conduct of this war. I can tell you, however, that those who are serving in the armed forces, especially in the citizens' army, are doing more work twenty-four hours a day for $1.30 than many people working in our factories at much higher wages. I see these men in uniform on the trains; I know thousands and tens of thousands of them in the three services and I can tell you that the people at the front and those in the services in this country are wondering what we are doing over here, why we are meddling and interfering as we are in war plants and strikes. I have no objection to the stand taken by hon. members to my left; it is their privilege. But they are not the only labour party in the House of Commons. Hon. members in this part of the house have taken the stand that we should not use the war to advance our party. In fact I had not been in a munitions plant since the war started until last Friday, when for about half an hour I visited the de Havilland plant. With the two labour unions contending for mastery in this country, it is the duty of the government to step in with a strong national win-the-war labour policy. The onus is upon the government and it is the government's function, so long as it is in office to see that the war work is carried on and that the war is paramount until Hitler is beaten.

May I say a few words regarding the fifty-mile bus rule. I hope this absurd regulation will be abolished by the minister as soon as possible, because it reacts unfavourably against the troops and their families in various parts of the country. And I can say this further, regarding housing, that if we wait for the government to supply houses in Toronto, both for war workers and the civilian population, we will wait until doomsday. If the government would remove the restraint from private builders, and back them with government finance, with moneys under the housing act obtained through the banks, there would be plenty of houses around the Toronto district, especially houses of the smaller type. If the government would see fit to adopt a forward policy on such a scheme by obtaining money from the banks in the usual way, and thereby help builders to obtain more materials, the situation would be far better both now and after the war.

I believe coal is more or less under the control of the Minister of Munitions and Supply. The shortage is to a great extent a question of transportation and delivery. Is it or is it not true that the municipalities have been promised that they will get their supplies of coal? One of the most dangerous men on

the north American continent is "General" John L. Lewis. I have read the speeches on May 1, May 7 and other dates and heard the radio addresses of that very able man who is President of the United States. I commend the strength of the President to the government of Canada. Let this government adopt some of the measures taken over there to defeat these trusts.

I have no complaint against the hon. member who brought up this question—far from it. In a great many ways I sympathize with labour in some war plants, and I have always been friendly to labour in the province from which I come. But I do say that when our troops overseas are fighting for $1.30 or $1.50 a day, it is not the time for us to have any division as to who shall have control in this plant, that plant or any other plant. We need a national labour policy in Canada, not only for the duration of the war, but when the war is over.

I do not wish to delay the passage of the minister's estimates. I do not know whether the Gallup poll applies to any of the industries over which he has control. But I can tell you that this Gallup poll, in the way it is being conducted throughout Canada, with all these galloping ghosts behind the scenes, is a real source of mischievous propaganda of all kinds for the prevention of the proper conduct of the war. It is political propaganda. The information is being given out by certain newspapers for purposes of political propaganda, and I wish to object to that practice. I hope the minister, his department and the government in general will have nothing to do with the Gallup poll, because it is all "Gallup" and no poll. No one knows who is behind it; no one knows who votes. I doubt if any ministers on the front benches have voted; I doubt if the leader of the opposition has a vote. I can tell you that this poll is no help to the war effort at all; it is a help to political propaganda, and to help some of those people in Canada who think that the empire should be allowed to go by default. This empire will never be allowed to go by default, and Canada is not going to be talked out of the British empire; Canada will have to be fought out of the British empire.

Mr. GRAYDON: On an earlier occasion and again to-day the hon. member (Mr. Church) discussed the fifty-mile bus limit, but I do not believe an answer has been given by the minister. Perhaps the matter has been overlooked. The hon. member referred particularly to transportation of our armed forces. He has taken a vigorous stand with respect to this matter as it affects our fighting men. I believe the minister might very well give the committee an answer.

Mr. HOWE: The transit controller is responsible for transportation within communities, and transportation supplemental to communities, such as interurban bus lines. The hon. member knows that all our transportation is overloaded. Those responsible for allocating transportation facilities have undertaken—and I think successfully—to see that some means of transportation is available to every man who needs to travel. But in doing so they found it necessary to eliminate duplicate means of travel. In other words, if a man can travel by train to his destination, generally speaking he does not have the alternative of travelling by bus to the same destination. As all hon. members know, in general, cities served by railroads are also served by bus lines. For example, in pre-war days one could travel from Windsor to Toronto on either of two railway lines, and he could also travel by bus between those two cities. That was a desirable situation when we could afford to be lavish in our transportation facilities. However, when the war came along a problem developed, having to do with taking care of the short-haul passenger. I do not refer to the man who travelled from Windsor to Toronto, but rather to the man who wished to travel possibly from some country point between those two cities, to Windsor or to Toronto. With the congestion of travel, under the old system a bus would take a full load at Windsor, for Toronto, and would deliver that load in Toronto. That meant that the man living between the two cities was deprived of a necessary bus service, a service which is required to permit him to travel.

The fifty-mile rule was framed to prevent the sort of travelling on buses I have described. It was aimed to prevent a bus from filling up at one terminal and moving to a terminal sixty or seventy miles away with a full load of passengers. The result of the fifty-mile service on the plan I have outlined is that passengers can take a bus at Toronto for any point between Toronto and some twenty miles east of Windsor. In other words, that area is served. Similarly, a man living more than twenty miles from Toronto can take a bus and travel to Windsor. But a man cannot take a bus in Toronto and travel on that bus to Windsor.

We have no objection to a man's travelling from Toronto to Windsor, but he can do his travelling on either of two lines of railways. The fifty-mile rule has accomplished its

objective. We have been able to provide a bus service for people to whom other forms of transportation are not available. It has not worked a hardship on the bus lines because there is plenty of travel of the type I mentioned to use the full capacity of the buses. It has not worked any hardship on the man desiring to travel from Toronto to Windsor. He knows very well that when he gets on the bus it will not take him to Windsor, and that he will have to get out when he has travelled fifty miles. Therefore that man travels by train. Now that the situation is understood I challenge anyone in this committee to tell me of a case of real hardship arising out of the fifty-mile rule.

Mr. SLAGHT: I shall detain the committee but a short time, but I should like to refer briefly to what has been said by the hon. member for York-Sunbury (Mr. Hanson). I see he is visiting on this side of the chamber. If he has had a change of heart and has come over here to support the government and the Minister of Munitions and Supply, perhaps it will not be necessary for me to say what I intended to say. However, assuming that he is going to return I shall continue. In his attack upon the Minister of Munitions and Supply he indicated that the minister was too much inclined to look to the future, to indicate what he hoped and what we all hoped this country would ultimately do in the matter of production. He said that instead of doing that, he ought to furnish more figures and records. He was challenged by the minister, who then paid no more attention to it—I think he was right—to give a single instance in which the minister had quoted figures which he had hoped to attain in the future but which had been wrong. I would commend to the hon. member for York-Sunbury the expression that there is always a far horizon for onward-looking men.

In many matters I have agreed with the hon. member, because I think during the last three years he has made some contributions to the discussion of the war effort. However, I believe if he had considered a little he would not have made the criticism he did. To the Minister of Munitions and Supply alone is due the magnificent Trans-Canada Air Lines which is going to play such a great part in the reconstruction of the nations of the world as soon as this war is over. It is easy to say that men look too much to the future, but I do not believe that that is the kind of criticism the people of Canada are seeking. They want men who have the vision to look into the future, men who are capable of converting this country as it has been converted from peace time pursuits of turning out ploughshares into one of the greatest war production countries in the world.

For the benefit of the hon. member for York-Sunbury, if he is not content to take my statement, let me indicate what that grand little woman who addressed this house on June 16 said. She is reported on page 3721 of *Hansard* as follows:

> . . . and the fact that per capita Canada has produced more for the war effort than any other member of the united nations are indicative of Canada's will to fight to victory.

That is the record we have among the nations of the world. Does my hon. friend dare to challenge her statement? If he is not content with that, let me remind him what Winston Churchill said on March 6 about Canada's war effort in production and in every other way. Mr. Churchill in a considered cable to the Prime Minister had this to say, as will be found on page 1023 of *Hansard:*

> In the darkest days Canada, under your leadership, remained confident and true. Now the days are brighter, and when victory is won, you will be able to look back with just pride upon a record surpassed by none.

Neither our Prime Minister nor our Minister of Munitions and Supply has attempted to take to himself personal credit for the war effort of Canada. They are both always careful to make it clear to the people that those responsible for the war effort which has produced the tributes of the kind I have just quoted are the men and women, the common people of Canada. There has never been any attempt to take unto the government the credit for the war effort of this country. I should be the last to support a government which attempted to usurp the greater credit for the effort. The words of the hon. member are given heed to by the people of this country and it ill behooves him to attack the minister who more than any other—I am not trying to detract from what is due to or to make comparisons with the other hard-working ministers of the government—is responsible for the results of our war effort. It ill behooves a responsible member of this house to send out to the people of Canada that type of personal criticism. I should like to envision the kind of munitions and supply effort we would have had if the hon. member who has been the critic of to-day had been in charge of this department of government. The department and the minister deserve the greatest meed of praise and credit that the people of Canada can accord to them, aside altogether from any political credit or party spirit. I do hope the hon. member for York-Sunbury will not feel that I am putting it too strongly when I deprecate the kind of personal attack I had to sit here and listen to this afternoon.

Mr. HANSON (York-Sunbury): Mr. Chairman, far be it from me to keep the hon. member for Parry Sound in his seat. If he does not like what I am saying he can get up and leave the precincts of the house whenever he wishes. I am at a loss to understand the basis of his lecture to me. I have a responsibility in this house, just as has the hon. member for Parry Sound. Judging by the records of the house I think I take them more seriously than he does. The hon. member for Parry Sound cannot have it both ways. In one breath he said that the ministry, the Prime Minister and the Minister of Munitions and Supply, do not take any personal credit for what has been accomplished by the Canadian people, that it is all the result of the efforts of the Canadian people. Then in the next breath he pours out an encomium upon the head of the Minister of Munitions and Supply which must have made the minister blush. As I say, he cannot have it both ways.

My quarrel with the Minister of Munitions and Supply is not a personal one. What I say is that his publicity department is doing too much puffing in connection with the advance notices it sends out as to what is going to be done. The performance has never measured up to the promises that have been made.

Mr. SLAGHT: That is not what the hon. member suggested.

Mr. HANSON (York-Sunbury): The Canadian people will no longer accept that kind of propaganda. That is the weakness of the wartime information board. The people do not believe what they say; they do not listen to the canned music which is being turned out by so many government departments. We have forty-seven different varieties of propaganda. I am told that there are no less than forty-seven publicity agents in the government turning out canned music for the people of Canada which most of us throw in the waste-paper basket. The newspapers discount all this; they do not publish it. What we would like is more factual information such as the minister has given us this afternoon. I do not feel a bit chastened by the lecture given by the hon. member for Parry Sound. I am quite content to put my performance, to put what I have done in this house toward the war effort of this country, against the record of the hon. member for Parry Sound.

Mr. McIVOR: I would like to add to the list of great men who paid their tribute to the minister, the hon. member for Parry Sound. The leader of the official opposition and the leaders of the other parties and many other hon. members paid their tribute to him, and by doing so have, I believe, added to their stature. Yet this committee has been sitting here since Friday of last week and we have got through only five items. Let us be consistent.

Mr. CHURCH: I ask the minister to make a little better explanation of the regulations with regard to travel. The minister must admit that the city of Toronto, through its transportation commission and otherwise, has given his department a great deal of support, or he would not have been able to locate his plants where he did. Yet we in Toronto are getting little or nothing by way of concession. I have been asked to inquire whether the minister is not now able to make some decision with regard to the fifty mile rule; and if not, can he not make some arrangement with the national railways about transportation, instead of continuing to rely on the old Noah's Ark cars which are utilized to and from Camp Borden on the national railways, while women are charged $2 and $2.40 and children $1.15 or thereabouts to visit the camps. Something should be done to relieve this situation.

The official oposition has given the government pretty good support, much better support than it deserved in the light of some of the answers which have been returned by one minister to questions asked by us on matters of public importance, questions designed to strengthen and support the government in a constructive way.

I ask the minister if he cannot give us some reply with regard to the provision of gasoline and rubber. An appeal was made last Easter and is repeated on every public holiday to the public to refrain from travelling, and soldiers and their families are not allowed transportation facilities, yet when I look around the Toronto district I see large numbers of government officials, not members of the cabinet or of their own civil departments, but connected with controls and subcontrols, making free use of facilities denied to others. It is high time that we paid some attention to the men who are fighting overseas. All our home defence and defence at home organization will not amount to a snap of the finger in the winning of this war, in spite of the great expenditure it entails in gasoline and rubber and other necessary supplies. I ask the minister to confer with his colleagues and see whether something cannot be done to give the troops who are in the camps the proper means of getting home, instead of compelling them to walk along the highway thumbing rides while carry-

ing grips and perhaps a hundred pounds of equipment. The army is the forgotten agency. I have been in some of the camps, and it is clear to me that this is so when one sees the large number of these men still walking around in winter clothing, with no facilities for getting to their homes either by the highways or on the trains. It is a strange state of affairs that we should allow these estimates to go through without a protest, and I protest now. Wars are won by soldiers and sailors and airmen fighting at the front, and when I see some of our army in their Little Lord Fauntleroy costumes on the street cars, it seems to me a reflection on the House of Commons that we allow such a state of affairs to exist, while private transport or the buses and trains are available for civilians and booked by controls weeks ahead, and the railways are making fabulous sums. See what happened when the delegates of the empire parliamentary union arrived last evening at the depot. Between two trains, one coming in and one going out, without any guidance for passengers, hundreds of people might have been killed between the two tracks so close to both trains. When you make a complaint you cannot get results but you are told that you are making a personal attack.

I refer to this because I have seen something of the sufferings of the men in the army during the present war. I wish others could see what I have seen—women and children walking several miles to get on the trains. I do not wish to hold up the estimates, but I hope the three defence ministers and the Minister of Transport will take up this matter and see if something cannot be done, in dog days like these, to help the forces.

Mr. BLACKMORE: Would the minister tell us what is the average cost to the Canadian government of each of the several types of planes that are being manufactured in Canada? The ones I have in mind particularly are the Lysanders, the Harvards, the Ansons, the Mosquitos, the Hurricanes, the Tiger Moths and the Bolingbrokes.

Mr. HOWE: I have not the costs here. Possibly I could get some of them. I have not the figures for the Mosquito or the Lancaster, as the costs of these planes have not yet been established. My hon. friend will understand that the production of at least 100 planes is necessary before production gets stabilized to the point where costs can be determined. Perhaps I can give him information on some of the other types of planes, but I do not happen to have that information here.

Mr. BLACKMORE: Could the minister give that to us to-morrow?

Mr. HOWE: I will try.

Mr. DIEFENBAKER: I do not quite understand the attitude of some members on the government side in condemning the opposition for endeavouring to secure information regarding one of the largest items of expenditures parliament has to deal with, a matter of approximately $700 millions last year and an anticipated expenditure this year of $316 millions less reduction in revolving funds, together with hundreds of millions of dollars of expenditures for and on behalf of the British government. As a matter of fact, we do not properly examine the expenditures which are being made. We cannot do so, for we are invariably met with the type of answer given by the minister a few moments ago to the hon. member for Lethbridge, that the information in regard to costs is not available in certain particulars and regarding certain planes. Yet the minister, in answer to a question from myself, made the statement in the house the other day that we are producing planes in Canada at a price which would permit us to compete with the United States of America.

Mr. HOWE: "Does" permit us.

Mr. DIEFENBAKER: That being so, there is only one way in which the minister is able to make such an optimistic statement, and that is on the basis of information which he has. He has cost accountants, he has an examination made regularly of these various plants; and we want to know what the costs are. As a matter of fact there is no organization in connection with the Department of Munitions and Supply which can so properly be called the department of mysteries and surprises as can this particular part of the department. In everything else, all of us agree and are proud of the fact that Canada is making a good effort in the production of munitions and supplies. I ask the government to visit the aeroplane plants in Canada, send investigators into those plants, talk to the employees free from any surveillance on the part of officials of the department or revelation to them of the information that they give, and, Mr. Chairman, they will tell a story of indifference, of laxity, and of inefficiency—

Mr. HOWE: And you believe it, I suppose?

Mr. DIEFENBAKER: —in the production of aircraft in Canada.

Mr. HOWE: You believe that, I suppose?

Mr. DIEFENBAKER: Mr. Chairman, let us know if there is no foundation for these stories. Let us have the information. Take

the production of Mosquitos. I realize that it requires months to tool up and prepare for production. If my information is correct, it took eleven months to tool and plan and prepare material and the like and to complete other preliminaries to production, before the first plane was built. We have been in production since September last. The minister states that one must be accurate in the figures he gives, and he corrected the hon. member for York-Sunbury a few moments ago for being two planes out in the numbers produced to date. We want accurate figures. We want to know whether these planes are being produced, as they should be produced in the fourth period of the war, economically, having regard to all the circumstances. Canada produced twenty-one planes since September last. What is the number of man-hours that have been expended on each of these planes? The only information I have comes from men who desire to see our fighting aircraft multiplied so that we shall take our part in the air war that is coming and which at present is being waged, and by which Germany is going to be brought down. We want to contribute our part, and it is our duty as an opposition, if there is inefficiency, that it shall not be covered up by optimistic statements in the House of Commons, unaccompanied by actualities within the factories themselves.

I speak now subject to correction, but the information I have received is that so far as Mosquitos are concerned, to date, on the basis of employment in the plant, not less than 570,000 man-hours have been used for each of these planes built. Having regard to the weekly wage payroll of de Havilland, the costs in Canada are simply overwhelming and economically unjustified so far as this particular type of plane is concerned. The minister a while ago read aloud a laudatory letter from the de Havilland Corporation of Great Britain to the de Havilland Corporation of Canada.

Mr. HOWE: It is nothing of the kind.

Mr. DIEFENBAKER: If it be true why was the change made? Why was Glassco placed in charge as controller? Nobody can say seriously to-day that everything was well in this plant, not even the minister. Where the minister has done well he has received the commendation of this opposition and of the people of Canada.

Mr. HOWE: What day was that?

Mr. DIEFENBAKER: Well, Mr. Chairman, day after day that is his one criticism if we do not meet him with a spontaneity of praise that has all the appearance of a directed calisthenic drill, if we do not commend him; but if we think there is something that must be improved he becomes annoyed. With his great organizing ability, he is too prone to retain men in their positions, too loyal to them, even after he finds they are not doing the job he expects them to do. I say this on the basis of information that I have been able to secure.

Mr. CHEVRIER: Give us the source of that information.

Mr. DIEFENBAKER: Go to the factories and the source of information will be available to anyone. On the basis of that information, the cost of Mosquito aircraft in Canada to-day far exceeds that in any other country—far exceeds what is reasonable.

Mr. HOWE: What other countries are making Mosquitos?

Mr. DIEFENBAKER: The minister has all that information, I imagine—

Mr. HOWE: You talk very loosely, it seems to me.

Mr. DIEFENBAKER: —and he needs no information from me. On the basis of present-day production, producing twenty-one planes, with the expenditure of millions of dollars since September last, with the change that has taken place in the removal of one general manager, and the substitution of a controller, parliament and the people of Canada have a right to know what the facts are. How much has been expended? I therefore ask the minister to furnish this committee with a record of the expenditure for wages from September, 1942, to date, and the expenditure prior to September, 1942, during the period when the necessary plans were being made leading to production.

Let me mention another thing that has never been explained, and that is the record of the Avro-Anson and its production. It was chosen early in the war as the two-engine trainer for the commonwealth training scheme. We have asked on this side of the house, on many occasions, questions with regard to the production of engines. We think they should be produced. We realize the difficulties. Canada decided that she would put in these Ansons the Jacobs engine, and she purchased more than 2,000 engines, but they would not operate the planes.

Mr. HOWE: Just a minute. My hon. friend had better take that back, because there are Ansons in great numbers flying with Jacobs engines to-day.

Mr. DIEFENBAKER: Oh, yes.

Mr. HOWE: Please be careful.

Mr. DIEFENBAKER: I admit that, but they had to redesign the Anson in order to build the fuselage around the engine that was purchased. They had to redesign it. That is exactly the point I am making. They are flying Ansons made after considerable delays.

Mr. HOWE: If I had followed the advice of the opposition there would have been no Anson built to-day. Hon. gentlemen opposite wanted to disband the Anson company and start all over again. If any group of men need to apologize about the Anson planes it is my hon. friends opposite. I remember standing here for three or four days when there was demand after demand that the Anson contract be cancelled. I shall be pleased to read *Hansard* to my hon. friend and quote chapter and verse before the day is out.

Mr. DIEFENBAKER: It was not a criticism of building Ansons; it was a criticism of lack of building them by reason of changes made incidental to the purchase of Jacobs engines. Canada had Anson planes and without examination bought 2,300 engines—I believe that is the number—from the United States. These Jacobs engines were brought to Canada and you found you could not operate the planes with them, and the Anson had to be redesigned. That was what we objected to.

Mr. HOWE: I will read presently what the hon. member objected to.

Mr. DIEFENBAKER: We asked that there be conformity with experience and conformity with practical considerations in order to assure a large production of Anson planes. As a matter of fact, the minister in June, 1940, made certain predictions in regard to the production of Ansons. He did the same in November, 1940, and in February, 1941, he found that his predictions were not being fulfilled. No one has any argument to raise because of delays then. We realized the difficulties then. To-day, with the expenditure that has been made in this connection, we feel that we have a right to demand that the maximum contribution which this country can make in the matter of fighting aircraft shall be made now, and that the excuses given in the past shall no longer be accepted. To-day we are asking not promises of production in the future but performance now in the fourth year of the war.

The minister said the other day that Canada was expending upon aircraft and the production of aircraft, 25 per cent of the total amount expended for war supplies, munitions and the like. I am going to ask him to place on the record the amount expended for aircraft in each of the years 1940, 1941, 1942 and 1943 to date for aircraft. In particular I should like to know how much money the government has invested in aircraft plants belonging to the government, first, for the production of aircraft, and second, for the production of parts. Finally, I would ask the minister for a statement showing month by month the expenditures made during the past year in the de Havilland plant and in the Malton plant for wages and general expenses. This information would be of much assistance.

I ask the minister in all seriousness this question. We have produced twenty-one fighting planes of the Mosquito type. Having regard to the fact that we have reduced to seven the number of types of planes we are producing, and regard being had to the months that have elapsed since production was first mooted, does not that record of twenty-one fighting planes produced indicate a lack of drive, a lack of appreciation of the necessity of fighting aircraft being produced now? Does it not indicate that a careful investigation should be made by the minister to the end that aircraft production should be encouraged and increased?

I realize that almost a year ago—on May 14, 1942, to be exact—the minister stated what the aircraft production of Canada had been up to that time—3,749 planes, as I remember. To-day our production is slightly over 8,000. At that time the minister said that production has now been stepped up to 400 planes a month, but that there were some plants not in production. So far as actual production is concerned the promise which the minister made last year has not been failed in. The position, however, in fighting aircraft is such that I feel something should be done to re-form the production of planes, to build up an attitude that does not exist to-day in the aircraft factories in this country, namely, a determination on the part of the men working there to produce at whatever the cost in hours and in effort. The lack is not in the men. The men working in the factories say that they have lost faith—not in the minister, but in those charged with this aircraft production programme. There must be some reason for this; otherwise it would not have become necessary last year to start a morale building campaign in the aircraft plants of this country. Absenteeism in these plants is low and I submit that one way to build morale is to make it possible for the men who work in these factories to know what the issue is. All they require is direction and a goal, and they will endeavor to secure the greatest possible production of aircraft for combat purposes.

It is often said, Mr. Chairman that it is easy to criticize. It is not easy to criticize.

It would be much easier now for me to get up and say to the Minister of Munitions and Supply that his department is getting along well. But we have a responsibility on this side of the house to arouse the government where we believe it should be aroused, and we have a right to inform the people of Canada just what the situation is with regard to the production of these combat planes which will be so necessary in the offensive about to take place.

Mr. FRASER (Peterborough West): Last night the minister had this to say:

There seems to be a tight situation in Peterborough. I know the Quaker Oats plant in that city is closed down to-day for no other reason than that the operators are not available to operate the plant.

Right after the minister said that I got up and said that there was only one flour mill in that plant that was idle. That is not in *Hansard,* but I want to correct the statement of the minister. The Quaker Oats plant has an 80-barrel mill, 80 barrels per hour, a 60-barrel mill per hour and a 20-barrel mill per hour. The 60-barrel mill has not been operating for some time because they have not been able to get the men The 60-barrel mill when working would turn out about 1,500 barrels of flour a day. They need in that plant 75 men at least.

The minister has been asked for figures in regard to the production of aeroplanes. I am not going to criticize the minister on that, but I believe he should give the figures not only with respect to aeroplanes but with respect to the guns that are being produced. Giving these figures would often help his case very considerably. In Peterborough we manufacture the 3.7 gun. I understand that over a year ago that gun cost $100,000 to manufacture in Great Britain. The first one produced in Peterborough cost at least $65,000, and to show you how honest our manufacturers of that gun are, that gun to-day costs, I believe less than $45,000, and the cost is still going down.

I asked the minister the day before yesterday how many civilians working in munitions plants it would take to keep one man in the armed forces. The minister said that he would get me the figures on that; the parliamentary assistant to the minister also promised me those figures and I should like to have them.

I should also like to know how much steel is to be released for the manufacture of bicycles. There is a great shortage of bicycles in Canada. If steel were released for the manufacture of bicycles, a large number of automobiles would be taken off the roads, with a consequent saving in gasoline. It takes very little steel to produce one bicycle. A bicycle weighs only about fifty pounds, and only about thirty per cent of the weight is in steel.

Last year I asked the minister a question as to escape hatches in tanks. Has any improvement been made in the Canadian tank in that respect?

Another question. I was handed the other day a notice which evidently had gone out from the office of the controller of clothing. It is to the effect that a ruling has just been made by the wartime prices and trade board that tropical worsted shall be used in making uniforms for air force officers only. In other words, the army officers cannot have tropical worsted for their uniforms. Worsteds come under the Department of Munitions and Supply, and I should like the minister to say why the army is left out in the heat not in the cold, since all they have now is heavy serge instead of tropical worsted.

On March 27 an article appeared in the press in regard to a chromium plating process for cutting tools. It was stated that the process had been offered to one of the manufacturers in the United States on a royalty-free basis. Has that process been made available to Canadian manufacturers also? I should like to know also if Canada is going to manufacture what they call the new pocket-size machine gun, which was referred to in an article appearing in the *Globe and Mail* on June 7.

Mr. HOWE: My hon. friend has asked so many questions that my memory lags a bit. I believe the first was in regard to the number of civilians it took to keep a man in the armed services supplied. I have not been able to arrive at any information of that kind; as a matter of fact there is no such information, so far as I know. I could give some figures of total population in Britain, which might give some indication of it, but I do not think I should do so without having refreshed my memory. In regard to the plant at Peterborough, it is true that one flour mill unit is not operating. I am sorry it is not, because we need the capacity, and I am looking into the situation to see if some help cannot be given in connection with the matter of man-power. As to bicycles, releasing steel for bicycles would not help the situation. The difficulty is in connection with components, chiefly pedals and brakes, which come from the United States. If my hon. friend will go into any bicycle factory he will find that frame production is well ahead

of the finished output. We can release all the steel needed by the bicycle industry, but apparently the industry cannot obtain the components from the United States.

Mr. FRASER (Peterborough West): Would not your department be able to establish priorities for those parts?

Mr. HOWE: No; that allocation is fixed by the United States authorities. In regard to the chromium plating of cutting tools, that process is well known in Canada; I have seen the process actually being carried out in a plant in the eastern townships.

Mr. NOSEWORTHY: I should like to take just a few moments to discuss with the minister a question I raised in the house on a previous occasion. I think it is in order under item No. 5; it has to do with the development, the mining and the milling of the cobalt ores produced in Canada. On that occasion I called attention to the fact that at the present time we are importing cobalt ore from Africa, refining it and shipping the finished product to Britain as well as using it in essential war fields. In the meantime the ore that is being mined in northern Ontario, particularly in the Cobalt camp, is being stock-piled at Deloro. I pointed out previously that the company owning the refining plant at Deloro is, or was in the early years of the war, a member of an international cartel, of which the company now shipping its ore to Canada was also a member.

Cobalt is an essential mineral to-day, the civilian use of which has been forbidden, or at least restricted to the point where it is practically forbidden. In addition to the cobalt contained in these ores there is a considerable content of silver, nickel and arsenic, all of which are also essential minerals. These ores are being stock-piled; they are not being refined at the present time, because the only plant capable of refining these ores is engaged in refining the African cobalt ores. I understand that during the construction and equipment of the Shipshaw plant it was necessary for the United States government to provide approximately 26,000,000 ounces of silver to be used in place of copper, which would indicate that at the present time there is a demand for all the silver we can produce. Yet considerable quantities of this mineral are being stock-piled without being refined at all. I note also from the reports of two mining companies that they were instructed by the dominion government to institute a search for arsenic. The report of Hard Rock Gold Mines Limited for the fiscal year ended December 31, 1942, contains this statement:

> At the request of the metals controller the company investigated the possibility of producing arsenic as a by-product of its ore treatment.

The annual report of MacLeod-Cockshutt Gold Mines Limited for the year ending September 30, 1942, contains this statement:

> During the year the company carried on a small amount of exploration for strategic minerals and examined several properties and carried on extensive tests in connection with the production of arsenic, at the request of the dominion government, but nothing of beneficial interest to the company has developed from this exploration or research.

I wish to direct the minister's attention to the fact that the cobalt ores which are being stock-piled instead of being refined contain, in addition to their cobalt content, an average of three per cent nickel, 25 ounces of silver per ton and 25 per cent arsenic, and these essential war minerals are not being utilized in Canada's war effort. Practically not one ounce of these materials is being used to-day, although evidently they are necessary, and although there are restrictions on their use by the civilian population.

I would call the minister's attention to the arrangement under which the producers of this mineral sell their products to the Deloro company. To begin with, they receive no credit for any cobalt under eight per cent. Anything less than that goes for nothing. They receive no credit for silver content less than fifty ounces per ton. Any content less than fifty is taken by the Deloro, or the buying company. They receive no credit on nickel content below five per cent. They receive no credit whatsoever for the arsenic content in the minerals.

I have here a list showing a shipment of six carloads of this ore sent by one company to the refinery. All of this is stock-piled at the refinery. In the six carloads the unpaid nickel, silver and arsenic content amounted to $4,168, an average of $65.50 per ton, for which the primary producer received no credit whatever. The six carloads amounted to sixty-five tons. The producers of the metal point out to me that on the basis of the 1940 production that camp to-day is capable of producing or would on the basis of the 1940 production produce, cobalt, silver, nickel and arsenic to the value of over one and a quarter millions of dollars a year, and that there is a ready market for every ounce of those materials. That revenue could be available to the camp, and the mineral could be available to our war effort, if some means

could be found of providing the camp with a small hundred-ton mill and a small twenty-five ton refinery. The only mill available to the producers operates only part of the year, and it is costly. I am told that because of the inefficiency of the mill, arising from the fact that it was built many years ago the producers pay an average of $2 per ton more than would be necessary if an efficient mill were provided.

I am told, further, that there is a loss which makes it almost impossible for many producers in that camp to ship their products to the mill. Incidentally, the mill now in operation was formerly the property of the company which now owns the Deloro plant, namely, the O'Brien interests. I realize that restrictions must necessarily be imposed on the release of building materials. I do not submit this by way of criticism of the minister's department, or of his policy, but I would ask the minister to examine the situation, if he can find time. I believe he would realize more fully than I do the need of getting all essential Canadian minerals into our war effort if it can possibly be done. It is unfortunate that during these war years none of these minerals is going into our war effort. I do not know what the solution would be, but I am asking the minister to survey the situation. I am told that if the minister's department were satisfied, after examining the situation, that such a mill will make a valuable contribution to our war effort, funds are available from the metal reserve control of the United States for just such purposes.

There is a feeling abroad that members of the cobalt cartel are using their influence to restrict the refining of this metal. It is well known that they used their cartel to restrict production and to set prices in pre-war years. I pass this information on to the minister—and may I repeat that it is without criticism, but only as a suggestion that he have the matter looked into, for what it is worth.

Mr. FRASER (Peterborough West): I have no brief for the plant at Deloro, but I know that that plant is the only one in the British empire which at the present time is producing steelite, and other materials which are essential to the war effort. Without the plant the war effort could not go on, and I know the minister will bear me out in that statement. Cobalt is what they have to have; the other materials are not so essential. Since the beginning of the war that plant has expanded greatly.

Mr. NOSEWORTHY: They are not using Canadian ores.

[Mr. Howe.]

Mr. FRASER (Peterborough West): They are doing the work; it does not matter what kind of ore they are using. They are using ore, and they are producing what is needed for the war effort.

Mr. NOSEWORTHY: I am not criticizing that.

Mr. FRASER (Peterborough West): The hon. member acted as if he had stock in the mining company which produced the cobalt. I have no brief for the Deloro company, but I think these facts should be placed on record. Nickel, silver and arsenic are produced in many other mines, and I know from what I have been told by the manager of the Deloro plant—a man who works twenty-four hours out of the twenty-four, who is never idle, and who is at his job morning, afternoon and night—that they are producing to the limit, and that they have to keep a stock of cobalt on hand at all times.

Before I sit down I should like to ask if it is not possible for the minister's priorities branch to release ball-bearings, pedals and other items necessary for the production of bicycles? The workers have to have them to go to work.

Mr. HOWE: My department will release anything they can get their hands on, but the components for bicycles are under quota which is fixed in the United States. All we can release is the quota assigned to Canada.

Mr. NOSEWORTHY: Just to keep the record straight I want to say to the hon. member for Peterborough West (Mr. Fraser) that I do not own one dollar's worth of stock in any mining company, nor am I interested in mining stocks. I do know a number of people who are interested in these properties at Cobalt and who are anxious to see them developed. I made no attempt to deprecate the work being done by the Deloro company; I take it they are doing a good job, but the ores they are refining are brought into the country. This plant is being used to capacity to refine imported ores, and I cannot see why there should not be an opportunity to refine Canadian ores. That is my point.

Mr. HOWE: I am familiar with the situation in relation to cobalt. I may say that it took an extreme effort on my part to provide the stock pile which is the only market for our cobalt ore. Cobalt is a world metal and the Deloro smelter is a customs refinery, the only one in the British empire for this particular ore, as has been stated to-day. The cheapest source of ore happens to be South

Africa, where it is a by-product of another operation. Great Britain requires supplies of cobalt, and she chooses to buy the ore in South Africa, ship it to Canada for smelting and take the product. The only manner in which Canada touches the ore is to transport it across the country to smelt the ore. Cobalt is not a scarce article at the moment; there is plenty of it. My hon. friend is quite wrong when he says that someone here is stopping the metal reserve from financing a mill. As a matter of fact we explored this with the metal reserve, at a time when we were under the impression that the supplies of cobalt were not adequate, but we were told that supplies were adequate. As a matter of fact the metal reserve is not interested in obtaining cobalt in Canada, since they have their own supply.

The camp which produces this is the old silver camp near the town of Cobalt. The price of silver dropped, the mines were old, the cost of producing the metal is up, and this camp is now in a bad situation. I wish the men who are mining cobalt ore would go over to Sudbury and help us mine nickel; that would be a much more useful war effort. However, as long as they insist upon mining cobalt ore we provide a market for it by way of a stock pile against some future need.

Mr. COLDWELL: There is no break-down of this particular item, and it is rather difficult for one to know whether he is in order in discussing a certain matter. This item covers munitions production, aircraft production, ship production and miscellaneous stores. In my opinion too many of the answers given to the questions asked concerning the Department of Munitions and Supply have been given by the minister when relying upon his memory alone. It would have been much better if we had had accurate figures. I am thinking particularly of the figures we were given from time to time on aluminum. I know the minister has a good memory and I sometimes fall into the same trap myself and rely upon my memory rather than having the figures to back it up.

From time to time the first intimation we have of what is going on in Canada or in the minister's department comes from United States sources. As I have said before, there seems to be a policy of almost concealing what this country is doing in regard to certain matters.

Mr. HOWE: We cannot afford press agents.

Mr. COLDWELL: I have the Edmonton *Bulletin* of Saturday, June 19, which was sent to me by air mail yesterday. An article in this issue is dated Washington and refers to statements given at a press conference by Robert Patterson, United States undersecretary of war, in connection with oil reserves on the Mackenzie river to supply fuel for the army and navy. He stated:

> "It has been very successful," he said in reply to questions at a press conference about the oil development which has been a closely guarded military secret.

Then a large part of the story of the development in the Mackenzie area is told in the article. Reference is made to the construction of a pipeline, and to the fact that numerous wells have been put down, almost all of which have been producers. A very fine oil field has been discovered. It seems to me that the minister and the government would be wise to take this house into their confidence from time to time with regard to such matters rather than to have the information seep through from our neighbours to the south. I know the first intimation I got of the aluminum contract was through an article which appeared in the New York *Times* last January.

I should like the minister to tell us something about this great development in the north country, a development in which some of us have been much interested. I have referred to it several times, and we have had long discussions about the matter. As I say, I am not sure whether a discussion of this matter would be in order under this item, but I think we should be told what methods have been adopted to develop this great oil field. As I stated before, the vice-president of Standard Oil has said that this is the largest reserve supply of oil anywhere on earth. We are very anxious that it shall not be alienated from the people of Canada to corporations either in the United States or in our own country. We must insist that this great reserve of oil shall be developed in the interests of the public of Canada. At the opportune time I should like the minister to give us a statement elucidating what Mr. Patterson has said, either confirming or refuting the statement which appears in the Edmonton *Bulletin* and which has every appearance of being authentic.

Mr. HOWE: As my hon. friend has said, this was a military secret. The head of a military department can talk about a military secret, but a mere Minister of Munitions and Supply has to keep a military secret if he is told it is a military secret. There is nothing new about oil at Fort Norman. There have been wells there for many years, but the difficulty has been that Fort Norman is an inaccessible point as far as Canada is

concerned. The production has been confined to what could be used in the immediate area. The boats plying the Mackenzie river have been using this oil for many years. The activities in Alaska, on the Alaska highway, and the requirements of northern aviation, have made production from this area interesting.

The field has been developed by an arrangement between Canada and the United States. Additional wells have been drilled and, as the article states, a pipe-line is to be constructed to carry the oil from Fort Norman to White Horse. A refinery is being built at White Horse.

Mr. COLDWELL: Is this being undertaken purely by the government of the United States?

Mr. HOWE: It has been carried out by arrangement between the government of the United States and the government of Canada, but the actual financing of the new development has been by the government of the United States.

Mr. COLDWELL: And is the work being carried on by a Canadian oil company or by the Standard Oil Company or the Shell?

Mr. HOWE: Chiefly, I believe, by the Imperial Oil company, by arrangement with the government of the United States. I may say the arrangement provides that after the war, I will not say all, but a considerable portion of the wells—at least half—become the property of the Canadian government, as they stand. If my hon. friend asks for a return, perhaps at this time the Department of Mines and Resources will give him the details of the arrangement.

Mr. COLDWELL: As a matter of fact we withdrew it at the request of the Minister of Mines and Resources, who did not wish it divulged.

Mr. HOWE: I know he could not do so before, but I think it may now be possible to give the information. I suggest it may be worth trying.

Mr. COLDWELL: Thanks for the tip.

Mr. HOWE: There is a fine oil field in the vicinity of Norman. I question very much whether it is one of the great oil fields of the world. I do not think there is anything to demonstrate that. It is a shallow field, and I doubt whether it will compare with the Turner valley as a source of oil. That is just a layman's view, from what I have been able to discover about it. Nevertheless it is a useful field. Whereas earlier it was inaccessible it is inaccessible no longer. There is a market for the product and the field is being developed accordingly.

Mr. STIRLING: It has been known for twenty or thirty years.

Mr. HOWE: Yes, at least that.

Mr. HANSELL: Before the item carries, and subsequent to the discussion which has already taken place, I have a series of questions which will appear on the order paper, the basis of which is found in the Ottawa *Citizen* of yesterday. I appreciate the point which has been raised by the hon. member for Rosetown-Biggar (Mr. Coldwell). The question gives me, and should give every Canadian, a good deal of concern, from the point of view that here is a huge development about to take place—

An hon. MEMBER: It is taking place.

Mr. HANSELL: —is taking place, yes, and we did not know a great deal about it until the United States authorities began to make an announcement regarding it. The article to which I have reference in yesterday morning's *Citizen* is dated from Edmonton, June 20, and reads as follows:

> A huge war-time oil development in the Fort Norman area of the Northwest Territories, 400 miles northeast of Whitehorse, Y.T., is under way.
>
> Captain Freeman C. Bishop, public relations officer for the northwest service command of the United States army, said the project probably will be completed this year.
>
> The programme, rivalling the Alaska highway in scope, was started many months ago, but previously the development was hidden under a shroud of military secrecy.
>
> In addition to scores of oil wells, a pipeline extending more than 1,000 miles from Whitehorse, Y.T., to the area will be completed.
>
> Brig.-Gen. James A. O'Connor, commanding general in charge of the Alaska highway, is in charge of operations. He said the project had been made possible only through the unflagging determination of the troops and civilians employed.
>
> Hoping to tap vast oil resources in Canada's northwest, now a military area under the control of the U.S. army, officials have sent huge amounts of equipment and aeroplane loads of workmen into the many oil bearing sections.

It does not tell us whether a Canadian company is developing it, whether the capital is Canadian or American, whether the United States government or the Canadian government is doing the work. The whole thing seems to be shrouded in mystery. We heard something about an aluminum cartel; here is what might appear to be an oil cartel.

The reason why I am a little exercised about this is that I go to Edmonton occasionally; all over this country Edmonton is talked about as being the coming city of

Canada, and I believe it is. I was in a hotel lobby on one occasion and sat on the lounge beside a United States army officer, whose name I do not know. We got into conversation. He had been into the far north. He said, "You folks here have been asleep over the years." I talked to him about returning to the United States, and he said, "You don't think we are going back, do you? Why," he said, "we are going to stay right here; we are going to take over for you people." That is the remark he made to me.

The Minister of Munitions and Supply may say that certain things are guarded for reasons of military secrecy, but he has a tremendous responsibility in producing munitions of war, and yet we are so slow that military officials of the United States have to come over here to develop our resources. That is a condition which bothers a good many of us, and I believe there should be some explanation of it. I get sick and tired of being in a Canada which is always at the tail end of everything. It is about time this country took the initiative in some directions. Surely, with a land of abounding wealth, some initiative should be shown in developing these resources for the good of the Canadian people. Let us not remain behind any longer in regard to natural resources or any other matter. When conferences are held, ours is the weak voice crying in the wilderness after everybody else has spoken. It is about time Canada showed more assertion in some of these things. I suppose the minister's answer must be accepted as sufficient for the moment, but I urge the government to take the initiative and be strong in connection with these issues; it would give Canadians a feeling that we are really getting somewhere. I protest against information on great national developments coming from other than Canadian sources when our own government has known right along that these things are happening, and yet we have not been informed about them.

There is, of course, also the question of to whom these developments will belong after the war is over, whether the people will have a share in their own natural resources, or whether private or alien controls will be so complete that little or no benefit will accrue to the Canadian people.

Mr. FRASER (Peterborough West): I asked the minister before about tropical serge. The item comes under his department. The note I have before me is that the government is supplying the cloth and reserving it for the air force only. Why is that so? Is there a shortage of that material?

Mr. HOWE: I am not aware of it. I think I would be aware if the army, navy or air force had ordered anything from the Department of Munitions and Supply which the department had not furnished. If the army have ordered tropical suits they have been getting tropical suits, and likewise the navy. There is no shortage of that material. The hon. member spoke about the wartime prices and trade board. I have no knowledge of the activities of the board, which reports to the Minister of Finance, but I can assure my hon. friend that we are still able to give the navy, the army and the air force whatever they require in the way of clothing.

Mr. GILLIS: I wish to ask the minister a question with reference to a press dispatch that appears in the New Glasgow *Evening News* of the 18th instant. I am not going to read it, but it refers to a small yard that was operating at Pictou, where the keels for two tugs were being built for the Royal Navy. According to this dispatch, about thirty per cent of the work was finished; they had on hand ninety-seven per cent of the materials necessary to complete the job, and under orders of the deputy minister of munitions last Saturday the work at that yard was discontinued. There are eighty men affected. The reason given for discontinuing the job was that it would interfere with production at the main yard. I understand that this small plant was constructed at quite an expenditure by the Ferguson Brothers; these two nearly completed tugs are on their hands, and apparently there is no understanding as to whether they will be completed. It is said that they cannot be completed anywhere else. Has the minister any comments to make on the situation?

Mr. HOWE: I am familiar with that situation. The contract for the two tugs was placed with the understanding that they would be built at Trenton, and it was not noticed immediately that there would be any difficulty at Trenton as far as labour was concerned. Some weeks later it turned out that the tugs were to be built by Ferguson Brothers at Pictou, which is a different situation. Pictou was a small village—I should not say village, but a small town—when the war broke out, and the government has built that town up into a fair-sized city to-day, having provided houses for two or three thousand workers and their families. All this was for the building of merchant ships. The Ferguson yard was formerly the only large industry at Pictou. A separation was made between the shipbuilding activity and the Ferguson yard, and the Ferguson yard was improved for the purpose of taking care of the repair of naval and mer-

chant ships. The yard is needed for that purpose. In assessing the repair capacity of Canada the Ferguson yard is counted as available. The Department of Munitions and Supply cannot agree that the Ferguson yard should be converted to the building of steel tugs. Steel tugs can be built in many yards in Canada which are not busy at the moment. The Ferguson Brothers were called to Ottawa, and we discussed the situation. It was explained to them that the capacity of their yard was required for other purposes and a mutually satisfactory arrangement was made for moving the material to other yards. The contract with Ferguson Brothers for building these steel tugs has been cancelled. It was an unfortunate mistake that the contract issued by the department should have been diverted in that way, but as soon as the mistake was discovered it was rectified. I assure my hon. friend that there is more work in Pictou to-day than there are men and women to do it. We have no facilities in Pictou which are not fully booked for the rest of the season.

Mr. GILLIS: I appreciate that, but what I cannot understand is that these tugs are thirty per cent completed and ninety-seven per cent of the materials necessary to complete them is on hand—

Mr. HOWE: They were not thirty per cent completed. They are more nearly ten per cent completed by actual cost.

Mr. GILLIS: Is that material to be left there?

Mr. HOWE: No. It will be shipped to Montreal and the contract will be completed. I believe it is the Montreal drydock company who have the bulk of the contract.

Mr. GILLIS: The Ferguson yard is being utilized for other purposes?

Mr. HOWE: For the repair of ships, yes.

Mr. CASTLEDEN: The minister said to-day that 1,850 Anson planes have been produced. What is the present cost of producing them compared with the cost in 1941 or 1942?

Mr. HOWE: The cost of producing Anson aircraft to-day is approximately $45,000. I do not know what it was in 1941.

Mr. CASTLEDEN: Does the break-down given here include overhauling and repairing of engines used in the British empire training scheme operating in Canada?

Mr. HOWE: To what figures is my hon. friend referring?

Mr. CASTLEDEN: I am referring to the estimates we are now discussing.

[Mr. Howe.]

Mr. HOWE: Item 5?

Mr. CASTLEDEN: Yes.

Mr. HOWE: These are revolving funds. The costs of overhauling planes are not voted in the estimates of the department of munitions. They are voted in the estimates of the Department of National Defence for Air. These are simply revolving funds that finance the work from the time the plane is delivered to us for repair to the time it is paid for by the Department of National Defence for Air.

Mr. CASTLEDEN: When the estimates were before the Minister of National Defence for Air I asked about that, and that minister said it was under the department of munitions. That is why I asked.

Mr. HOWE: That is correct.

Mr. GREEN: There has been some discussion concerning the pipeline from Mackenzie river to White Horse and concerning the wells at Fort Norman. Is there any agreement between the dominion and the United States or any board under the United States government with regard to this pipeline? As the minister knows, there is either an agreement or an exchange of notes between the two governments in connection with the Alaska highway. Is there anything of that type in connection with this pipeline?

Mr. HOWE: The proper place for my hon. friend to obtain that information is either the Department of External Affairs, properly that department, or the Department of Mines and Resources. The Department of Munitions and Supply has had no hand in the negotiations, and it would be unwise and improper for me to make a statement about the transaction.

Mr. GREEN: With regard to drilling for oil in northern British Columbia, what is the present situation?

Mr. HOWE: The only drilling for oil in northern British Columbia that I know of is a well drilled by the provincial government, which I understand is not productive. So far as I know there is no other drilling.

Mr. GREEN: There were negotiations between the provincial government and the dominion government concerning the development of that field. Can the minister make a statement in regard to those negotiations?

Mr. HOWE: No definite project has been brought to finality.

Mr. MacNICOL: Under the estimates of the Minister of National Defence for Air I

asked a question about small boats to be built in Toronto in a plant now being built south of the Canadian Pacific railway tracks near Leaside. I understand the boat is made of some kind of plywood and is used as a crash boat in connection with aeroplanes.

Mr. HOWE: I think they were light invasion barges. I understand it is the Howard Furnace company.

Mr. MacNICOL: Yes.

Mr. HOWE: We called for tenders on that boat and this company was low tenderer. The business was split between three companies. I am not defending the wisdom of putting the Howard Furnace company into that business. It is one of those things that happen. The production committee approved the transaction. I must say that it was not drawn to my attention. However, as I say, the Howard Furnace company were low tenderer, and they are now on their way and, I believe, are doing good work. It is a lump sum contract.

Mr. MacNICOL: I am glad to hear they are doing good work. I have known these people for quite a number of years and they are good furnace manufacturers. They know how to make and install hot air furnaces, and their furnaces have given good results. But when I saw that they had a contract for making boats of any kind, I just wondered how that came about. As the minister says, the matter did not come before him. I doubt whether a man of the minister's business experience would have given a contract for making boats to any hot air furnace manufacturer. It might just as well have been given to some farmer or egg producer. I hope the company makes a success of building these boats and makes some money out of it. But it is the sort of contract which makes the public wonder how the thing came about, especially when boat builders in Ontario are not running their plants at full capacity. I believe they are running at only 60 to 65 per cent of their capacity. Any one of the prominent boat-building companies on the Muskoka lakes or Georgian bay would have been glad to make these boats for the government. I think the minister ought to tell us why the men who let the contracts—not the minister himself—let this contract for making boats to a hot air furnace company, when from 25 to 30 per cent of our present boat-building capacity is not being used.

Mr. HOWE: All I can say is that every small boat builder in Ontario had a chance to tender on these invasion barges. The Howard Furnace company were willing to quote a lower price than any other company. I am not suggesting that all good judgment was used in the transaction.

Mr. MacNICOL: I am not quarrelling with giving the contract to the lowest tenderer.

Mr. DIEFENBAKER: There is one other matter I wish to bring to the attention of the minister. It has to do with a problem which has been discussed in the house on more than one occasion, namely, the production of alcohol from wheat. The minister dealt with this problem the other day at some length, and if I understood him aright the argument which he advanced against the use of wheat was that it would mean that the farmer would receive only 25 to 30 cents a bushel for the wheat so used. That argument has been used before. I know it was advanced in all seriousness by the minister, but I want to bring to his attention something which I think is worthy of his consideration. I realize that for the time being a decision has been made on this question, and that the plant at Sarnia has been or is being established. But within the last few weeks a new process has been discovered in the United States which it is claimed will revolutionize the production of alcohol from wheat. I refer the minister to an article in *Business Week* of June 12, 1943. This is an authentic magazine, and the article says:

> The chemurgist's dream of grain alcohol as the answer to farm surpluses may yet come true—and with it a lengthening horizon of post-war possibilities for the rubber, oil and chemical industries.

It goes on to point out:

> Park and Tilford distillery company demonstrated the new process last week at a distillery in Brownsville, Pa.

This was a process which was discovered less than four months ago by Irvin W. Tucker, a young chemist in the department of agriculture of the United States working under the direction of Doctor A. K. Ball, chief of the department's enzyme research laboratory. They have been working on this process for a considerable period of time, and the difficulty of the price to the farmer for his wheat was apparent, as well as the problem of the utilization of the by-products. Yet within the past few weeks, according to this article—I am going to quote only a portion of it—a new era has come in prospect for the wheat producers. The article states:

> With full development of the possibilities, grain alcohol can be reduced to the cost levels of molasses and synthetic alcohol, which are ordinarily about 50 per cent cheaper than grain alcohol. This would make large-scale production of grain alcohol for synthetic rubber and other

industrial purposes a practical post-war possibility, with tremendous implications for industry as well as for the farmer.

Heretofore, chemurgists who grappled with the question of farm surpluses habitually stubbed their toes on two hard problems: There was no market for the tremendous volume of alcohol that could be produced from farm products, and the cost of farm alcohol was prohibitively high.

That was the point made the other day by the minister. The article goes on:

The war has solved the first problem—the synthetic rubber industry can use 250,000,000 gallons of alcohol annually, and there is more possibility that farm alcohol may be needed for motor fuel with petroleum reserves being depleted at global war rates. Ball and Tucker appear to have solved the second.

There is no more important problem than this. I think it is only fair to say that the members generally have not a knowledge of chemistry and of the possibilities of development in this industry to speak authoritatively upon it. The minister stated last night that the war was not being fought by Canada on the basis of provinces or provincial considerations, and with that, at the moment, I am not going to argue, but I feel that we in the western provinces have received too few war industries or industries established or bonused by the government through capital assistance. Our western provinces, and in particular Saskatchewan, have been depleted of a large percentage of their population because war industry has taken them out of those provinces, though not in the same large measure as enlistments for service in the armed forces. This problem of the production of alcohol will become intensified as time goes on and oil reserves are depleted. The minister has unreservedly given the government's approval to the production of rubber from petroleum, but his decision and his statement will not down the cry from all over western Canada for the solution of this problem by utilizing the wheat reserves.

I wish to offer to the minister a suggestion which I think is worthy of serious consideration. We in this house can never arrive at any definite conclusion in regard to this problem, not being possessed of the necessary knowledge of chemistry or the processes involved. In view of the fact that hundreds of millions of dollars have been advanced to industry in eastern Canada, with practically no such advances being made in western Canada, at least as far as Saskatchewan is concerned—as I have said on more than one occasion, the total of capital advances and assistance in that province does not exceed $1,000,000—in the interests of the farmer; in the interests of the liquidation of part of the large reserves of wheat that we have on hand, would the minister give consideration to the appointment of a royal commission to investigate the whole problem? I do not suggest a commission composed of men unacquainted with the problem, but rather one composed of representative chemists, professors of chemistry and commercial chemists, who would look into the whole problem, and arrive at a scientific conclusion with respect thereto. When one reads an article such as that to which I have just referred, appearing in a most authoritative magazine, in which it is stated that this process can be and is being developed in the United States, and that it assures a fair and reasonable price for the farmers' wheat, it becomes a matter for serious consideration.

The setting up of such a royal commission would not be a costly process. Representatives of the chemistry departments of the different universities, industrial chemists and men of that kind could be convened, and during war time most if not all of them would give their services without cost to the state, with a view to contributing to the solution of a very important problem. I bespeak the minister's consideration for this suggestion. I think it would do much to clarify the atmosphere and the thinking of farmers all over Canada who believe that something should be done and that the reason why it is not being done is the attitude of the oil companies. I do not join in that view, though I mention it. By the setting up of a royal commission the whole problem could be considered; the various processes could be discussed and decided upon by men competent to deal with such matters and, if favourable findings were made by this commission and acted upon a very important contribution would be made to the welfare of the western provinces and to the dominion as a whole.

Mr. HOWE: I would point out to my hon. friend that thorough study has been given to this matter already. He asks that a royal commission be appointed, but I would suggest that we have in Canada a permanent body, the national research council, which is set up exactly as my hon. friend suggests. It has scientists from industry and scientists from the teaching profession; it is the focal point for all the scientific knowledge in Canada, and in my opinion it is most ably administered. The president of the national research council was formerly dean of the university of Saskatchewan, which position he occupied for some twenty years or more. Therefore I suggest that he is not unfamiliar with the problems of the

west and not unsympathetic to those problems. The national research council studied this question thoroughly, but sooner or later a stage is reached when a decision must be made, and in this case the decision was made. Since that decision was made, the government has spent a good many million dollars in preparing to produce butadiene from petroleum. It is all very well to suggest that, having spent this money, we should set up a royal commission to say whether we should produce this commodity in some other way. We are building now, and we shall have enough capacity to meet our requirements. I cannot imagine that for a great many years we shall need butadiene in excess of the amount we are organizing to produce. Therefore what would be the purpose of a new study? Perhaps the decision was wrong; but the decision was made; action was taken, and it is very difficult to turn back the clock at this stage. I say the best scientists in Canada studied the question and arrived at the conclusion which the government is implementing. That decision having been taken rightly or wrongly, there is no purpose in reopening the subject at this time.

Mr. JAQUES: I find myself in considerable confusion following the remarks of the hon. member for Lake Centre. On the one hand we are told that every bushel of grain will be needed for food after the war, that millions of people in Europe are literally starving to-day. On the other hand we are told by some hon. members that the only way to dispose of our surplus grain is by spoiling it for human food. I speak as a farmer with forty years experience in western Canada, and I have a little knowledge of chemistry. I wish to say that this idea of turning prime human or animal food into inedible substances is simply the wrong economic solution. People are saying that the economic system under which we operate at the present time cannot provide a decent living for those who are producing the food of the world, and that therefore we have to take some of that food and turn it into chemical substances in order to create a shortage of food so that the price may be increased. It is the same old economy of scarcity. If this house and this country, or the world if you like, have not yet learned that it is possible adequately to reward people for performing the most fundamental of all services, then they have not learned anything, and the outlook for the world after the war is an extremely poor one. There is a proper way of doing this. It is not necessary to spoil food in order to make it scarce. Either there are millions of people in Europe and elsewhere who are hungry, or all the propaganda we have been hearing is false. If that situation does exist, certainly we shall need all the food that can be raised; and the price of that food or the reward to the growers of it is not a question of chemistry but a question of economics, and, I might say, of finance. Monetary reform; that is the solution, not chemurgy.

Mr. WRIGHT: May I ask a question respecting the processing of wheat into butadiene and alcohol. I understand there have been certain recent developments in that process which might change the picture from what it was at the time the government made its decision. Have there been such developments?

Mr. HOWE: I know of no development which would have changed the decision, had we been making it to-day. The government maintains an experienced chemist as liaison officer in Washington, who keeps in close touch with chemical developments in the United States. I receive his reports from time to time. Then, our own officers are studying the position intensively. I know of no recent scientific development which would have changed the decision, had we been making it to-day. I think the decision if made to-day would be the same one we made some twelve months ago.

Mr. GREEN: Apparently employees on the third shift, which is known as the graveyard shift, in shipyards on the Pacific coast are paid on the basis of nine hours' pay for seven hours' work, whereas those who are engaged in the Boeing plant, in connection with aircraft production, are paid on the basis of eight hours' pay for seven hours' work. Is it the policy of the government that there should be the same treatment in all war industries? Why should there be that difference?

Mr. HOWE: The policy of the government is that labour courts have been established to decide wages in every industry. The courts have given their decision with respect to the shipbuilding industry, and the aircraft industry, for reasons which they no doubt found equitable. The government has nothing to do with wages. Wages are determined either by the national war labour board or by regional war labour boards, and the government, the manufacturers and labourers themselves are bound by those decisions.

Mr. GREEN: Has that resulted in the same difference between the practice in shipyards and aircraft plants right across Canada?

Mr. HOWE: I cannot say as to that; but I think my hon. friend would do well if he would do what everyone else does, namely, let the courts decide.

Mr. ADAMSON: I understood the minister to say an amicable settlement had been made or was to be made between the Pictou shipyards and the department with respect to the dispute in connection with tugs. Was the minister referring to Ferguson Brothers?

Mr. HOWE: Yes.

Mr. BLACKMORE: I asked the minister if he would bring to the house to-morrow the prices the Canadian government is paying in Canada for various types of aircraft, and he intimated he would do so. Would he at the same time bring the prices the United States government is paying for the same kind of aircraft in the United States?

Mr. HOWE: I cannot bring the latter information, I am sorry to say, because I do not have it. I can give the hon. member the prices we are able to determine at this time. As I said, the Mosquito and the Lancaster are just coming into production, and a sufficient quantity has not been made to determine prices. However, I can give some prices of other types of aircraft. As I said a while ago, the Anson costs $45,000; the Tiger Moth, $4,800; the Bolingbroke, $62,500; the Lysander, $28,600; the Harvard, $20,000, and the Hurricane, $33,750. These prices are plus sales tax.

Mr. FRASER (Peterborough West): And including engines?

Mr. HOWE: Yes.

Mr. DIEFENBAKER: I asked several questions this afternoon which I realized the minister would not be able to answer immediately. Would he answer them to-morrow?

Mr. HOWE: I shall look through *Hansard,* and if I can furnish the information I shall be glad to table it.

Mr. DIEFENBAKER: I have not yet received a reply to my question respecting the poundage of plane production in each year. The minister indicated that there had been a considerable increase, and I should like to have the yearly record.

Mr. HOWE: I shall furnish that.

Mr. GRAYDON: There is a matter I should like to bring to the minister's attention, and concerning which I would ask for some information. I refer to the manufacture of Bren guns. In his statement on June 11, as reported at page 3545 of *Hansard,* the minister said that the maximum output of Bren guns would be 8,000 a month, which will be reached this month, and will be maintained at that rate until the end of 1944.

I do not think the full information respecting Bren guns has come out, and perhaps in answering my question the minister may be able to satisfy the committee. Has the Bren gun plant during the past year, or the past few months, spent a considerable amount of money to raise the production of that plant to 10,000 rather than 8,000 a month? The minister's statement would mean that instead of a maximum production of 10,000 a month, the reduced amount is now 8,000, and that that number will be maintained until the end of 1944.

I believe it is well known throughout the country that in respect of war contracts, and particularly those having to do with gun production, any reduction in contractual obligations has arisen from a readjustment of British contracts. While the reasons for those reductions need not be discussed here, the fact remains that such reductions would have entailed the transfer and change in employment of a good many men in the plants involved. The minister's statement that 8,000 would be produced until the end of 1944 indicates that at least to some extent the production of Bren guns is being turned from the British contract to a contract for some other country. That brings me to the point connected with the utilization of mutual aid funds. A billion dollars has been appropriated under the mutual aid bill for the purpose of providing war supplies for other countries. Having in mind the fact that there is a contraction in the obligation which this country must now fulfil to Great Britain, would the minister indicate whether there has been some recent arrangement under which the Bren gun plant, and other plants, have now been kept at their normal output by virtue of utilization of part of that billion dollar fund? That being the situation, I think the minister ought to give the committee information with respect to what part of the reduction in the British contract is being taken up by the utilization of the billion dollar fund. I think the minister and hon. members have read that part of the billion dollar fund is being used to take up the slack, if one may use the ordinary term, of these contracts with Britain which have been subsequently cancelled. At her press conference Madame Chiang Kai-shek referred to a matter, which was referred to subsequently in the debate by the hon. member for Lake Centre (Mr. Diefenbaker), namely, the urgent need by China of aircraft. The minister has referred to the expansion which has taken

place in the production of aircraft, and I should like to know if China or other countries have asked for this extra output which would seem to be available by reason of the restrictions in the British contract. Or are we utilizing part of the billion dollar fund for the purpose of keeping our men employed and our plants operating?

Mr. HOWE: I can say at once that we are not carrying on any production for the sake of providing employment. I wish I could get 35,000 or 40,000 men to-day from plants where they are not needed. I would certainly close down any such plants immediately because I know exactly where I would put the men thus released. We do not keep plants going for the sake of employment. My hon. friend is quite mistaken about the contracts in the past for the production of Bren guns. The output of the Bren gun factory has not been going exclusively to England. A large part of it has gone to our own troops. Bren guns have been sent to China, the Philippines, to Australia, to New Zealand. Our production is governed by the combined production and planning board. This board assesses the need for products all over the world and decides how much will be made in Canada, in England and in the other producing countries, and the manufacture is arranged accordingly. Distribution is taken care of by the munitions assignment board; when the guns are made they are assigned to each government by that board. That is the ordinary procedure.

The production of Bren guns has been stepped up continually since the war began. I believe the original rate of production was 5,000 a year. We had an objective of 3,000 a month which we thought would meet the demand, but further pressure was exerted to increase the production, and it has been increasing each month. We have never reached a production of 8,000 a month, but we have passed the 7,000 a month mark. Two other types of automatics were made in the plant, the Colt-Browning and the Boys anti-tank rifle. We thought of stepping up the production of Bren guns to 10,000 a month by converting certain machinery which had been used to manufacture these other types. However, a study of the situation indicated that this would be more than the allied needs, and we levelled our production at 8,000 a month. A production of 8,000 Bren guns a month would seem to meet the requirements of the war as they appear at the present time.

Mr. GRAYDON: Have any men engaged in the production of Bren guns been laid off?

Mr. HOWE: I cannot say what the men were working at, but the number of men and women engaged in the production of Bren guns is greater to-day than it has ever been. A certain number of men who were producing Bren guns two or three months ago may have been laid off for the reason that they had low seniority. The lay-off took place on a plant-wide seniority basis. While I am on my feet, I should like to correct a statement I made a few moments ago. I stated that the cost of the plane included the cost of the engine, but it does not. The costs I gave do not include the cost of the engine.

Mr. BLACKMORE: How many plants in Canada are devoted exclusively to the manufacture of machine tools?

Mr. HOWE: There are a number.

Mr. MacNICOL: Many dozens.

Mr. HOWE: I think perhaps that is true.

Mr. BLACKMORE: Is Canada equipped to manufacture the machine tools which will enable her to change over from war production to peace production?

Mr. HOWE: Yes.

Mr. DIEFENBAKER: The minister said that he could use 35,000 to 40,000 men. In what industries would he use them?

Mr. HOWE: I would start with the highest priority industries and go down the line. I would start off with the aeroplane industry, and the naval shipbuilding industry; I would straighten out the flour-milling situation at Peterborough and give the General Electric the 600 men they need. I would go into the base metal mines and bring them up to the strength they should be, and I would give some help to coal mining and lumbering.

Mr. DIEFENBAKER: Is there a shortage of man-power in the aircraft industry?

Mr. HOWE: Yes. It is still expanding and it needs more men.

Mr. CASTLEDEN: When was Toronto Shipbuilding taken over as a government company, and what has been the production record of hulls and completed vessels?

Mr. HOWE: This company has completed sixteen Bangor minesweepers.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. NICHOLSON: This afternoon the minister gave us additional information in connection with housing, and he has accounted for $43,000, which reduces the cost of the unit of

fifty houses nearly $1,000 per unit, as he explained it, but I must say that the information he has given does not clear the situation. He mentioned last evening, as reported in *Hansard*, at page 3853:

> The hon. member for Mackenzie has given rather an Alice in Wonderland picture of the costs of these developments. He seems to be wholly confused by the returns he obtained.

I must admit, Mr. Chairman, that I am even more confused since the minister gave his information to-day. He gave us a table for the 100 houses showing the average cost to be $2,939.87; that is the figure he gave last night; but the extras in connection with these houses, to provide sewers and streets and so forth, average $995.48 per unit, whereas last evening, in answer to a question, he stated the average in Hull was about $760 per house. Last night he gave the cost of the two-bedroom house as $1,889.13, and this afternoon he gave the cost as $1,980.78. There is a difference there of about $100 per house, and no explanation is given as to whether the figures reported last night were wrong or those read this afternoon were wrong. Then, extras in connection with these fifty houses average $828.68; and as I pointed out before, the minister gave $760 last night as the cost of the extra services. I submit that it is the minister who has given us an Alice in Wonderland picture, and I would appreciate it if he would have his officials make a further study and tell us whether the figures he gave this afternoon, or the ones he gave last night, or some others, are the ones we are to accept.

Mr. HOWE: The department has made three returns on the subject. All three are correct with one exception: one return was not corrected for the money that was spent in Hull on the Ottawa project. If my hon. friend will make that correction he now has the final figures of the whole project, which are entirely consistent with the three returns which were handed down in this house. I do not know that I can do any more for him except give him the final figures as we have recorded them here.

Mr. NICHOLSON: Except that last night the minister stated, as reported in *Hansard*, at page 3853:

> In connection with the Hull project . . . for the two-bedroom houses, it was $1,889.13.

This afternoon he brought down information that the costs of the fifty houses totalled $99,039.07, which gives an average for the fifty of $1,980.78. Either the minister was wrong last night, or he was wrong this afternoon. I hope that in due course he will tell me on which occasion he was wrong.

[Mr. Nicholson.]

Mr. HOWE: There were two types of house in the fifty-house project. I gave the cost of the small house. As the return shows which I put on *Hansard* this afternoon, it is called style No. 1, and the average cost was $1,897.78; as to style No. 21, of which twenty-five were built, the cost depends on the interior finish, but it varies between $2,065.56 and $2,073.76. The figure my hon. friend has taken is the average of the fifty houses, and he has an average house there which is neither type No. 1 nor type No. 21, but is a composite of the two. If he will take into account that in the fifty there are twenty-five of one type and twenty-five of another, he can reconcile the figures.

Mr. NICHOLSON: The figure of $1,889.13 which the minister gave last night was the average for the fifty.

Mr. HOWE: No; I gave it as the cost of the small house.

Mr. NICHOLSON: I wish the minister had made that clear last night.

Mr. HOWE: I make it clear now.

Item agreed to.

6. General production and warehousing expenses, $15,000,000.

Mr. MACKENZIE (Vancouver Centre): Carried.

Mr. GRAYDON: I am prompted to rise at this moment if for no other reason than the anxiety of my hon. friend across the way. I wanted to ask the minister whether this item covers storage of materials which are on this side of the water awaiting transfer overseas.

Mr. HOWE: Yes. I can give my hon. friend the break-down if he would be interested.

Mr. GRAYDON: I would.

Mr. HOWE: It includes a number of items: First, subsidies to private contractors. I might say that certain coal industries and certain freight rates in the steel industry are subsidized by the department. That is one item. Then, payments to municipalities: that is for services to a municipality rendered in the event that the industry itself does not pay taxes.

Mr. CASTLEDEN: Would the minister give the amount of each of these items?

Mr. HOWE: Yes.

Subsidies to private contractors; estimated subsidies for 1942-43, $6,675,665.98, of which there was actually expended $4,294,793.80.

Payments to municipalities, estimate last year $561,965.65, actual expenditure $219,696.73.

Machinery transfers; that is transfers of machinery owned by the crown from one plant to another plant; the estimate of that last year was $10,000, and the actual expenditure was $1,248.73.

Patent rights: the estimate for last year was $1,000,000; instead of an expenditure last year there was actually a revenue of $187,889.49.

Experimental and development costs: the item provided was $2,418,837.50, and the actual expenditure was $474,304.55.

Mr. GRAYDON: Would experimental costs have to do with the matters which the minister referred to this afternoon, namely the research council, or is that an additional amount?

Mr. HOWE: It is in connection with army engineering design, which is carried out for the army by the Department of Munitions and Supply certain testing in the development of army vehicles, and some development work which is carried out for us by the research council, for which we pay; and expenditures of that sort.

Mr. GRAYDON: Does that cover investigation into private inventors' plans and devices?

Mr. HOWE: No. Private inventors' plans are examined by the inventions board, which is not in the Department of Munitions and Supply. I had better furnish the remainder of this break-down, since I am at it.

The next item is operation of storage warehouses: there was an item of $2,000,000, and actually there was a revenue of $52,400.58, instead of an expenditure.

Other production expenses: estimate, $1,181,057.33 actual expenditure $927,275.80.

Duty and taxes on United Kingdom purchases: estimate $15,000,000; actual expenditure, $5,634,847.74. Our agreement with Great Britain provides that no duties shall be assessed against goods moving to the United Kingdom. In other words, if we buy components in the United States they enter Canada duty free for the United Kingdom, but the mechanics of the thing is that we actually pay the duties and then deduct them from the invoice price to England and charge them to this account. It represents Canadian duties paid on United States imports which later went to Britain.

Publicity campaigns in connection with rubber and fuel: estimate $675,750.43; expenditures, $322,182.51.

Mr. GRAYDON: Has the minister an itemized account to show how that amount of $372,000 is made up?

Mr. HOWE: I have the information, but perhaps I may be allowed to put these figures on *Hansard* first.

Operation of chartered vessels: appropriation $435,944.83; actual expenditure, $145,111.02.

Gasoline rationing plan: appropriation, $1,800,000; actual expenditure $938,601.95.

Administration of government-owned companies: $4,000,000 appropriation; actual expenditure, $1,496,740.84.

Loss through cancellation of contracts: appropriation, $10,000; actual expenditure, $3,746.30.

Protective measures; oil storage; appropriation, $85,000; actual expenditure $82,148.68.

Last year's appropriation was $35,854,221.72, of which we expended $14,300,408.74. The item this year is $15,000,000 odd of which $5,000,000 is a revote.

Mr. GRAYDON: As regards subsidies to municipalities, has the department any general policy of compensating municipalities where a property has been expropriated—I have a particular instance in mind—where a crown company has been formed to take over the operation of the plant itself. In these cases, as the minister knows, some serious complications sometimes arise on the question of loss of revenue to the municipalities. What is the department's policy in general with regard to crown companies which are replacing those that have been tax-paying institutions previously?

Mr. HOWE: If the ownership of the property passes to the crown, the property is of course tax-free under the British North America Act, and nothing can be done about that. But if services are rendered by the municipality to the plant itself, it is the custom to pay for them. The payment is payment for services, not payment in lieu of taxes. It is an equitable payment for services rendered.

Mr. CASTLEDEN: What are the companies and private contractors to whom subsidies were paid in connection with the $4,000,000 odd? What are the quantities of coal moved, and where?

Mr. HOWE: The largest item is in connection with the Dominion Steel company. Its ore is at Wabana, and the transportation costs have to be paid. It has also to move coal to its destination up the St. Lawrence. That movement has been seriously interrupted by the war. As hon. members know, a number of

boats owned by the Dominion Steel Company —all the boats—have been sunk by enemy action. The boats now operating carry a very high war risk insurance rate, and in order to make operations of the plant possible, an agreement was entered into about eighteen months ago to the effect that the dominion government, as a subsidy, would compensate the company for increases in the cost of water movement of its raw materials and finished product. That payment last year amounted to, I believe, about $3,000,000.

Mr. CASTLEDEN: That is the Dominion Steel and Coal?

Mr. HOWE: Yes. In addition, certain coal mines in the west have been subsidized to some extent, for opening up new operations or for improving the output of their coal. I have not the break-down of these payments. The emergency coal production board hears the applications for subsidies and recommends the application, or otherwise, to the department. If a recommendation is made by the board and it receives the approval of the department, the subsidy is paid.

Mr. MacINNIS: What was the value of the material moved by the Dominion Iron and Steel Company on which the subsidy was paid?

Mr. HOWE: Iron ore and limestone from Newfoundland and Sydney, and coal moved up the St. Lawrence, would run into a very large figure. I cannot say what the amount would be, but it would be in the order of fifteen or sixteen million dollars.

Mr. GREEN: This item includes charges for warehousing. When one sees these goods stored beside railway tracks in different parts of the country and in all sorts of weather, one wonders why that material is not put under cover. I suppose that question has been given thorough consideration by the minister, but could he tell us why it is not possible to protect these goods from the weather? Do they not depreciate greatly by being left out all winter?

Mr. HOWE: No; the goods do not depreciate. The service vehicles will see much rougher usage after being uncrated than they do while they are in crates, and if there are a few spots on the enamel that is not a very serious matter for war vehicles. The vehicles are well and substantially packed, and I can assure my hon. friend that no damage results from storing them alongside the railway tracks. He realizes that the normal stock of vehicles is about 30,000. Our people advise me that they cannot fill their shipping orders with stocks of much less than that, which represents a little less than two months' output. If stocks get over fifty thousand, as they did on one occasion, we get disturbed. But thirty thousand we consider normal.

Mr. HARRIS (Danforth): I would point out to the minister that his general statement is probably quite all right. But as a matter of real fact many thousands and thousands of dollars worth of these goods—

Mr. FRASER (Peterborough West): Millions.

Mr. HARRIS (Danforth): My hon. friend suggests millions. I am being conservative and saying that many thousands and thousands of dollars worth of these goods are stored alongside the railway tracks, exposed to the weather and with the packages broken. To my own knowledge, in the area fronting on the Don river, thousands and thousands of dollars worth of spare parts to replace the springs on vehicles which were recently used in the North African campaign are lying there exposed to the weather and have been for months. Even rubber tires are lying there exposed to the weather and have been for many months. No doubt they are destined to be replacement parts on vehicles at present in combat areas. But there is no doubt in my mind or in the mind of anyone with ordinary common sense that these goods are perishing.

I am rising on this occasion not so much to criticize the handling of these goods as to point out to the minister and to those charged with the responsibility for taking care of these thousands and thousands of dollars worth of goods that this exposure to all kinds of weather affects these spare parts considerably, and that consideration should be given by those responsible to the depreciation which is taking place in these goods. I can readily understand that there are difficulties in unloading and storing these goods, because it is a new venture for the carrier company and warehousing is not provided. These goods have accumulated as a war-time necessity. At the same time, however, I should like to put on record as a constructive criticism that something should be done to protect the many, many thousands of dollars worth of these goods from the damage which is now being done to them on account of the inadequate warehousing facilities, those facilities being on the ground by the side of the tracks.

I know it is impossible for the Department of Munitions and Supply to have spare parts

for every type of equipment overseas always ready for shipment. I know the difficulty in getting bottoms to transport these goods across the ocean, but in the interests of economy a review should be made of the entire inventory of spare parts lying alongside the tracks all across Canada, because the goods are at present depreciating to an extent which those responsible are perhaps not cognizant of. I refer particularly to the area with which I am perhaps better acquainted, from Windsor through to Montreal, where there are thousands and thousands of dollars worth of goods stored alongside the tracks and perhaps without any destination. I saw the word "Egypt" on many, many hundreds of these packages, some of which were broken, some in a state of disrepair, some spoiling, some depreciating. Some of these goods have been stored alongside the tracks for a period of two years.

It must be remembered that the original destination of these goods may be changed. I realize the difficulties of the department in getting furtherance orders with regard to these goods, because there are no bottoms available in which to ship them. At the same time, however, as a matter of economy in taking care of this costly investment, someone within the minister's department should give consideration to whether these goods are not going to be destroyed through exposure to the weather and depreciation to an extent that they may not be serviceable if and when they eventually reach their destination.

I realize the other difficulty. While these spare parts stored in Canada in the wide, open spaces have depreciated, they may not find their destination in the areas where the original machines of destruction for which they were intended as spare parts were used. The department would be well advised to take an inventory of what is lying out in the open all across Canada to replace as spare parts equipment that has already been shipped by way of Egypt for the North African campaign. These goods may never be used now in North Africa. Their original destination may be changed. I am of opinion that perhaps many scores of thousands of dollars worth of goods lying out in the open in Canada without warehouse covering, but lying as warehouse goods under this particular vote, might be reclaimed for shipment to other theatres of war where they could be used. Perhaps many thousands of dollars worth of equipment has been shipped to the United Kingdom, and we may even find ourselves short of replacement parts for this equipment. We hope that the North African campaign is over, and these goods lying along the track branded "Egypt" may never have to go to Egypt. Could they not as a matter of economy be brought back into supply for some other destination for which we are at present manufacturing supplies?

I am of opinion that this tremendous investment of Canada should be reviewed and an inventory taken, so that the department would know what they have available and what is not necessary for shipment to Egypt and the North African campaign.

Therefore the question I would direct to the minister is this: Has he recently had before him a review of this entire situation, representing a tremendous investment on the part of Canada, and has he any concrete plan for bringing into the asset side of our war effort this tremendous inventory of goods which are at present stored in Canada, some of which might be usable in a present theatre of war, and very much of which I am afraid is depreciating rapidly and should be brought back into supply to service equipment which has already been shipped overseas by the Department of Munitions and Supply?

Mr. HOWE: I would be sorry, Mr. Chairman, if hon. members supposed that these goods were simply placed beside the track and forgotten.

Mr. HARRIS (Danforth): On a point of order, Mr. Chairman, I am not going to have the minister put in my mouth words which I did not say. I did not make the statement that the goods were put beside the track and forgotten. I was doing my best to offer a constructive criticism, and I rarely say anything unless I know what I am talking about. I did not suggest for a moment that they were put there and forgotten. I suggested that they were there now, and that since we had won the battle of North Africa there would be no necessity of sending more of these spare parts to that theatre of war. I was trying to make a constructive suggestion in that regard, and I ask the minister not to put in my mouth words that I did not utter.

Mr. HOWE: My hon. friend is much too sensitive. Certainly I did not intend to put words in his mouth, and I did not think I was doing so. However, there seems to be an impression abroad that we do not have inventories of these goods, that we simply leave them there and let nature take its course. That is not true. We have an organization, headed by a man of great experience in charge of stored goods, not only automobiles but other goods that are stored, and periodic inspections are made.

Mr. HARRIS (Danforth): Just stir up the head of that organization a bit, to see that he is on the job.

Mr. HOWE: I can assure my hon. friend that every week I have an inventory of the goods in store in Canada. It is not an inventory that deals with small figures; it runs into very large figures. We do try to keep our inventories within reasonable proportions, and if we find too large an accumulation we apply for more shipping, which we usually get.

Mr. FRASER (Peterborough West): That organization was formed only this year, since January 1, was it not?

Mr. HOWE: We had men doing the work before that, but we set up a more formal organization perhaps a year ago.

Mr. FRASER (Peterborough West): I believe they have been checking all these deposit places only this year.

Mr. HOWE: Nevertheless we maintained inventories before that. In the matter of spare parts, I may say there is no guesswork in that connection. No vehicle leaves this country without a standard list of spares. I do not think Canada needs to take off her hat to any other country making motor vehicles in the way we have kept up our spare lists. The manufacturers would much rather supply finished vehicles than parts, and it has taken a good deal of pressure to keep our spares up with our vehicles. When a vehicle is put on board ship a complete set of spares for the required period, usually one year, is forwarded with the vehicle to the same destination and on the same boat. I can say also that no vehicle leaves these shores without a final inspection by the inspection board of the United Kingdom and Canada, and there is no danger whatever of a defective vehicle being put on board ship.

I think the damage suggested here has been greatly exaggerated. I know of very little damage and of very few claims for damage to goods. These goods are stored for the account of the owner. I may say that each vehicle as it comes out of the factory, is destined for a certain owner; it is built to fill a certain order. We have certain crates marked for Egypt that have not gone to Egypt; nevertheless the vehicle is what is called a desert-type vehicle in that it has sand tires, is fitted with sand-proof bearings and has certain other characteristics for desert work. It may be true that the fighting is over in North Africa, but perhaps it can be assumed that desert fighting in this war is not over. In any event the desert vehicle is a better made vehicle than the standard, and if it is not required for desert fighting it will be accepted gladly for any other type of fighting.

Mr. MACDONALD (Brantford City): There is one matter I should like to bring to the attention of the committee; it may not come strictly under the heading of general production and warehousing expenses; but since it has not been discussed already, I thought I might bring it up now.

Before doing so, however, since I have not previously taken part in the discussion of the munitions and supply items, I should like to take this opportunity of joining with other hon. members in congratulating the minister upon the great work he has accomplished. There has been some criticism of certain features of the work of his department, but I think members of this house and the great majority of the people of Canada realize that he has performed a magnificent task in bringing Canada's production to the high peak it has attained.

The matter to which I should like to refer is the giving of an award for great accomplishments in the manufacture of materials vitally needed for the winning of the war. There is no doubt that the manufacturing concerns of this dominion have performed a task which most of us thought impossible of achievement when the war started, and I think we should give credit to the executives of these manufacturing concerns as well as to the working men and women who have carried on in these plants. I know in the city of Brantford there are many elderly men who have spent long hours in the munition plants in order that our output might be the very greatest possible. These working people have not hesitated to labour very long hours, often at great sacrifice and to the detriment of their own health. The executives and workers of these companies take great pride in what they have accomplished; they rejoice in their achievements, and I believe some award might be given them. In our fighting forces awards are given for great achievements, for outstanding accomplishments and for heroic acts. This might be applied to the manufacturing concerns of our country. I believe in the United States there is an army and navy E award given to companies which achieve a certain high standard of production. My suggestion to the minister is that in Canada a high standard might be set and that those companies which attain such high standards should receive a reward. This reward might consist of a flag to be flown from their buildings, while each man in the plant might receive a pin bearing some symbol which

would designate great accomplishment. I know the executives and working men would welcome such an award. It would be something toward which they could strive. I believe it would stimulate production, and would keep morale high in such companies. At the present time the company which is not doing a good job is not differentiated from the company which is doing an outstanding job. If some such award as I have suggested were given for great achievement, I am satisfied it would help much in our war effort.

Mr. CHURCH: I do not rise to speak critically of the government; far from it. But I must point out that the people of this country are aware of the vast expenditures made in peace time on our two great railway systems, as they serve on land, and through their steamship connections. The people in your constituency, Mr. Chairman, and in many other constituencies throughout the country, along the rights of way and branch lines of the two railway systems, are very much disappointed in these days with those systems. They see the line-up of package freight and munitions which has existed for a very long time, and into this fourth year of the war. When all these munitions are required to fight the enemy where the enemy is to be found, the people of Canada are wondering what they are getting for their money.

A return to the house has shown that down to the end of 1940, one year and three months after the outbreak of war, the Canadian National Railways had received two billion and a half dollars and the other system about twenty-five per cent more. That is more than they made in the whole four and a half years of the great war. I do not blame the minister for this condition. But I must say those who are overseas are wondering about the reason for this congestion. What is the object of it? Have matters which have come before the house, such as the plebiscite, and the difficulty of deciding the position of the theatre of war, held up these shipments? We may talk as much as we like about this matter, but the people back home in our constituencies see these goods along the rights of way of the two transportation systems. I am very much discouraged when I think of this. The soldiers overseas do not believe in it; and there should be an investigation into it. The two transportation systems are falling down all along the line.

For instance, let us consider the passenger service the two railway companies are giving us. Where is the railway commission, when all this is going on? Under the act they should operate in peace and war, but they have not done one thing to regulate this freight lying along the rights of way of the railways. Home defence does not amount to anything, when it comes to beating Hitler. These munitions are required overseas, and if we hand these supplies to home defence, it will not amount to the snap of a finger in beating Hitler. Hitler will rejoice when he sees what is going on in this country.

Mr. MacINNIS: I was told that the reason why these goods were lying along the railways was that there was a lack of ocean shipping facilities. On account of the length of time the goods have been there, are any of them now obsolete?

Mr. HOWE: No, the goods are not obsolete. As I said some time ago, the practice is to use Canada as an area for accumulating necessary supplies for movement into a new area. As I stated earlier, prior to movement in North Africa we had very large stocks of goods in Canada, including motor cars. The boats which moved to Africa were loaded largely in Canada, and our stocks were sharply reduced at that time. I have no doubt that, if another invasion effort takes place, Canadian stocks will be heavily drawn on again.

In the early stages of the war the practice was to move goods from Canada to Great Britain, and to use Great Britain as storage ground. That is no longer being done. There are accumulations here which may be large or which may be small, depending on the state of the war. But they are part of the general strategy. They are by no means overlooked. I think there has been some exaggeration as to the length of time that any considerable number of items has been in storage in Canada. I am quite sure no article has been here as long as two years, standing alongside railway tracks.

Mr. GILLIS: I was interested to hear the Minister of Munitions and Supply state that Dominion Iron, Steel and Coal were subsidized for 1942 to the extent of $3,000,000. I am not objecting to the payment of these subsidies, provided they serve the purpose for which they are intended. I find an interesting statement in the *Financial Post* of June 12. I do not know whether the minister saw it or not, but it is captioned "Dominion Coal Seeks Subsidy", and it leaves one something to think about. The following appears at page 18:

> Government auditors are now perusing the 1942 statement of Dominion Coal Company to check its claim for special subsidy treatment under the emergency coal production board.
>
> Although it mined 67,000 fewer tons of coal in 1942 than in 1941, it improved its financial position in marked degree—presumably as a

result of the government having underwritten production to the extent of "standard profits" or 15 cents a ton—whichever was the smaller item.

I understand these subsidies are paid, and a new subsidy is being sought from the emergency war production board, with the end in view of increasing production. According to this statement, if these figures are correct, in 1942 while there was a substantial increase in the subsidy paid to that company it mined 67,000 fewer tons of coal than had been produced in the previous year. The statement goes on to say that after depreciation and depletion, from zero to $1,250,000, and after paying what must have been normal increased taxes—because in 1941 with a net loss there could have been no tax paid worth mentioning—the company showed a net profit of $469,618 as against a 1941 loss of $566,125. I am leaving out the tax question. The improvement in the company's position was $2,285,000.

I am now interested in finding out how much of that $3,000,000 was subvention, and how much of it was paid by way of subsidies. Second, I would ask the minister to comment on the observation that the government is underwriting standard profits for that company to the extent of fifteen cents a ton. If the purpose for which these subventions and subsidies are paid is to increase production, rather than to put figures on the right side of the balance sheet of the coal company to the extent shown in this article—an improvement in their own financial position, with a loss in production of 67,000 tons—it would be well for the government now, in the light of the application for new subsidies, to make an examination of the question of subventions with the end in view of guaranteeing that that money will be spent this time in a way which will increase production.

The men who actually produce the coal will have to be taken into consideration. A great deal could be said about this matter, but I want the minister to explain it fully. Do auditors from the finance department check the financial statements of the coal company, or do they accept the statement of the company's auditor? Their balance sheet from time to time shows that they have an income of a million and a half or two millions a year through subventions. Originally the subvention was intended to assist them to pay wages. They charge their wage bill 100 per cent to the cost of production, and I have never seen it shown where they received anything to assist in paying wages. When these subventions are paid there should be more examination into how they are handled. They should not be given to someone who can treat them as income and be able to write off a lot of depreciation and carry on other manipulation of accounts. There should be a full examination of the position of those who are producing coal in order that we may have some benefit from the money being spent this year in this way.

Mr. HOWE: I know of no arrangement between the dominion government and the Dominion Coal company by which the government guarantees standard profits or a subvention of fifteen cents, whichever is the larger. I have been connected with the coal business for only a matter of two or three months. There may be such a subsidy outstanding, but I doubt if there is. The subsidy to which I referred is based on one thing, namely, the increased cost of water transportation. Limestone must be transported from Wabana, and there is an increased cost in moving Brazilian ore from Brazil to Dosco. There is also an increased cost in the movement up the St. Lawrence. These are assessed against the costs of the base period, and the government pays the difference. I can assure my hon. friend that if it did not, there would be no steel produced in the Sydney area at the moment. It is necessary to do this in order to keep the industry alive. This happens to be the one steel industry where the war has made a real impact on transportation costs. We are making up the difference and thereby keeping the industry in production.

Mr. JOHNSTON (Bow River): Is the government storing sugar in Calgary?

Mr. HOWE: The Department of Munitions and Supply does not deal in sugar. That question would have to be asked of the Department of Finance, which have the wartime prices and trade board under their jurisdiction.

Mr. JOHNSTON (Bow River): Would the minister secure space from the Royal Canadian Air Force to provide storage for sugar?

Mr. HOWE: We have nothing to do with sugar.

Mr. JOHNSTON (Bow River): You do not even supply storage for it?

Mr. CHURCH: The tonnage being moved on our railroads in this war is ten times what it was in the last war. In the last war Mr. McAdoo took over the railroads of the United States and administered them for the remainder of the war. What is this government going to do? This government has been spending not millions but billions on the transportation systems of this country. We have appointed

a railway commission to run them in peace and war. Look at the Railway Act which provides for a board of transport commissioners to act for the people of this country. This board has fallen down.

In the United States during the last war the government of the day under Woodrow Wilson took over and administered the railroads on account of the congested condition of passenger and freight traffic. What is the policy of this government regarding the congestion on our railroads, all these boxcars we see along the right of way? We are not getting a total effort. The government is taxing the people of this country five billion dollars, and 30 per cent of it is not being used for war at all. All this storage that is taking place on the railway systems is being wasted. Some of the equipment is obsolete three months after it is furnished. The two transportation systems have fallen down on land, sea and in the air. Who is the minister responsible for it? The country wants to know, because the people are being taxed.

I think we should have some considered statement, not only from the Minister of Munitions and Supply but from other ministers. He is not to blame for this. We should hear from the Minister of Transport (Mr. Michaud), the Minister of Finance (Mr. Ilsley) and other ministers. In view of what the taxpayers are paying for this war, there should be some statement made. If the railway systems have fallen down and the enemy is at our gate, it is the duty of the government to take over the railroads for the benefit of the people and in order to have a total war effort. There should be no more of these boxcars all along the right of way. Look at the way in which the soldiers are treated. They cannot get accommodation on the trains, and then we have the fifty-mile bus rule. The people are sick and tired of it. The House of Commons might as well not meet at all if we have no control over the transportation system of this country.

Mr. MICHAUD: It would not be fair to allow the statement of the hon. member for Broadview to go unchallenged. He knows, as does everyone, that since the beginning of the war the two great transportation systems of the country have not fallen down. On the contrary, they have met the needs of the country most magnificently in spite of the difficulty of replacing rolling stock and getting sufficient labour. Transportation on land within the country is under the control of the transport commissioners to the extent to which the law gives them power to control. Then to take care of essential war services we have another control.

Mr. GRAYDON: Why do you need the transit control and the board of transport commissioners?

Mr. MICHAUD: The board of transport commissioners have duties and powers assigned to them under the Railway Act.

Mr. GRAYDON: Why could these additional duties not have been assigned to the board of transport commissioners?

Mr. MICHAUD: It would have meant adding personnel to the board. We decided to set up a special structure to take care of the essential war needs. This system is working out quite satisfactorily. The accumulation of war materials along the tracks referred to by the hon. member is not owing to lack of facilities to transport them to destination; it is because this is the most convenient place to store the goods until the consignees make requisition and ask that they be sent to the seaboard.

The railways have never fallen down in the transport of war material. They have provided the people who have purchased and paid for that material with storage along the lines, and whenever there is a requisition for a shipment the railways move the material to destination. There has been no hold-up, no delay whatever since the beginning of the war. The material along the lines is well taken care of. The owners are helping in the checking and protecting of the material, and it is done at their request and to meet the conditions which we have to face. As has already been said, Canada has been asked to accumulate war material, for obvious reasons, and the places where it is stored have been found by those who were directly interested to be the most convenient places for the purpose. Nobody is complaining about it—neither the owners of the goods, the manufacturers, nor those who are charged with the responsibility of transporting them. So that it is not fair to give the people of this country the impression that the transportation system of Canada has failed in its task during this war.

Mr. CHURCH: I do not wish to be critical of the present Minister of Transport, an hon. gentleman who I know is trying to do his duty. But I have seen evidences of the money which the Canadian National is spending on the United States portion of its system, and I know something about the comparative luxuriousness of the trains belonging to this road

upon which American soldiers are travelling in the United States. By contrast, last Friday I saw some of the Noah's Arks which were moving in and out of Camp Borden. Our great ally on the other side of the border would not stand for the kind of cattle trains—I call them that because that is what they are, just convertible cars which were formerly used for the transportation of various kinds of freight—which apparently are supposed to be good enough for our men. I have known the minister for many years; he is a kind-hearted man, and I hold him in respect; but I want to point out that ours is a citizens' army, composed of Canadians born in Canada, of many nationalities, and it is the view of a good many hon. members on both side of this chamber that these men are not being properly treated. During the war we are not interested in politics; our duty is to those who serve in the forces. I have talked to many men and have seen the kind of accommodation which the railways provide for them. The cars I saw last Friday going out of Camp Borden were not fit for human occupancy. I demand, in all courtesy, that we realize what our citizens' army is putting up with in return for a daily allowance of $1.30 plus fifty cents. After this war there will be a show-down with the two railway systems of this country. If they do not do their duty the government should take over the systems and administer them for the benefit of the people. We have spent a fortune on them and we are not getting adequate service. Look at the transportation of members of parliament out of this city and back. Look at the scenes at the Union station at Ottawa every night. Last evening when the empire parliamentary delegation arrived, one train was going out and one coming in, and if a car had jumped the track many people would have been killed. We have no explanation of such things. What is the railway commission doing? Are we to sit here as a lot of dummies and yes-men and nodders and approve the way in which the men in our armed forces are treated by the railways? I say, no; it is our duty to protest.

Mr. MICHAUD: Another criticism which has been made does not seem to me to be fair. Facilities for passenger traffic, as we all know, have been taxed to the limit ever since the war began. As regards transportation of the army, none of our soldiers are transported on United States lines; they all travel on Canadian lines, either Canadian Pacific or Canadian National. We all know that our rolling stock is used to capacity and that we cannot manufacture and get out of the shops and factories the renewals and replacements of rolling stock as fast as the two systems would like to have them. There are priorities on locomotives, then on freight cars, and then on railway passenger cars. We have been unable to secure deliveries of orders placed in 1941. Our 1942 programme of over $25 millions for renewals of cars and locomotives has not yet been touched. Neither in the United States nor in Canada can we find factories capable of delivering the rolling stock as fast as we should like to have it. For that reason we have to be satisfied with what is available. I admit that it is necessary to put up with some inconveniences, but conditions are such that we have to serve first the more pressing needs, and then wait until there is a de-congestion of the most needed requirements to turn our shops to the manufacturing of locomotives and passenger cars. Until that stage is reached, it will be impossible to find any better solution than the one we now have to be content with.

Mr. CHURCH: I suggest that the head offices of the National system be transferred to Toronto as Ontario is its best customer.

The CHAIRMAN: Order.

Mr. CHURCH: They make all their money in the province of Ontario, anyway. Then we might get some results. Let the minister get rid of some of the deadwood in the Canadian National and engage some soldiers who know something about railways; it would be far better for the country.

Item agreed to.

7. Loans to commodity companies, $15,000,000.

Mr. HANSELL: Under this item I should like to pursue a little further the discussion which arose a moment or so ago in respect of subsidies to the coal mining industry. The minister has said that he has not a great deal of experience with regard to coal; that is, not longer than during the past two or three months. I might suggest to him that the subventions which are paid on coal—and perhaps the same would apply to steel to which he referred—are not paid to the coal companies, but specifically for the transportation of coal, and these subventions usually find their way into the hands of transportation companies such as the railroads.

I do not know what is involved in the item "loans to commodity companies." There is a wide range of subjects embodied in each of these. We pass $100,000,000 here in a few minutes, and that must cover an extensive field. Surely we do not spend $100,000,000 on

pins; we must spend it on more than one commodity. However, with regard to loans to commodity companies, the government have been spending, for commodity companies, a certain amount on capital equipment which has expanded the companies. The government claim that they still own this capital equipment and that at the end of the war it will be returned to them, provided, of course, it is not worn out. It means anyway that the company itself has been expanded in its productive capacity, and expanded by the money which has been provided through war loans and so on. I ask the minister whether any money at all has been paid to coal mining companies for capital equipment in order to facilitate the production of more coal. Let me elucidate a little further in regard to the money that has been spent in connection with subventions to coal companies.

Two terms have been used in the last little while—subventions and subsidies. I do not know whether they are interchangeable. I do not think they are, because I believe that, in the truest sense of the word, subventions as applied to coal companies are payments for the movement of coal, while, in the true sense, subsidies may be given to coal mining companies. I doubt whether any subsidies have been given to coal mining companies. Perhaps they have; I may not have the whole picture or be well enough informed on that. I know, however, that year in and year out this house votes subventions for the movement of coal, and because that vote is not statutory, because it comes up every year, it could be dropped any year, and that means, of course, that coal mining companies will not expand their capital equipment. They will not say, "We will open up another mine here or sink another shaft there; there is good coal here and we will expand our capital equipment to develop it." The reason why they do not take that attitude is that after putting a good bit of money into such expansion of capital equipment, they may find the next year that the subsidy is reduced. They take a chance if they do that, and the result is that they will not do it.

A few weeks ago the Prime Minister announced a national emergency on account of a shortage of fuel. If there is an emergency by reason of a shortage of fuel, then in all probability we are in danger of our war production slowing up. There is now a serious situation of a huge coal strike in the United States. If our coal production should be reduced materially, it would not take very much to stop, perhaps almost overnight, the largest part of our production of munitions.

I do not know whether the minister is alarmed at that situation, but I should like to know from him whether his department have done anything or contemplates doing anything toward the expansion of the coal mining industry of Canada in order to produce more Canadian coal for the Canadian production of munitions. The Minister of Labour is not at the moment in his seat to come to the minister's aid to-night. Someone will telephone him and he will come here in a couple of minutes. However, I should like to know whether the Minister of Munitions is entirely dependent upon the genius, if there is such a thing, in the labour department to see that the coal mining industry is not slowed up; for if it is, it will create a serious situation in Canada in the production of munitions.

Would the minister care to make a statement along that line? There are two points I am putting to him. First, is he dependent upon the Minister of Labour to see that the coal mining industry is kept continuously up to the fullest productive capacity, and, second, has he subsidized, or does he contemplate subsidizing that industry for the purpose of expanding coal production?

Mr. HOWE: I should explain that this item covers loans to commodity companies. As hon. members know, the government has from time to time accumulated large stocks of commodities, such as rubber, silk, wool, kapok and certain strategic metals. These are held by government-owned companies of the type called commodity companies, and the item in question covers the funds required by these companies to maintain stocks of strategic materials. My hon. friend was discussing the item we have just passed, namely, subsidies to coal companies. There is a difference between a subsidy and a subvention, as the terms are being used to-day. As the hon. member has said, a subvention is a sum of money paid to the transportation company to reduce the cost of transportation of coal, and therefore to enlarge the area which can be served from a coal-producing unit. Subsidies have been given for the purpose of increasing production. If it can be shown that by expending a certain sum of money more coal can be obtained from an operation, if equipment is required in a strip operation to step up production therefrom, these funds are advanced on terms that seem to be reasonable after a study of the individual case.

Under present conditions I would not hesitate to make any expenditure that promised any considerable increase in the production of coal. My hon. friend asks whether I am alarmed about the situation. I am alarmed about it, and I have said so in the house many times. Canada is a deficit country as

far as coal is concerned, and the deficit has reached extreme proportions. Naturally, with perhaps fifty per cent or more of our entire consumption of coal dependent upon sources over which we have no control, we are in an unpleasant position with trouble brewing in the coal fields on which we depend. He asks whether I am dependent on the Minister of Labour for stepping up coal production in Canadian mines. I do all I can to step up production within the jurisdiction of my portfolio, and the Minister of Labour does all he can in the administration of his portfolio to the same end. Naturally we work in close cooperation. I know of no operation which can be stepped up and which is not being stepped up by reason of lack of funds. If my hon. friend knows of such an operation, I would be very glad to be informed. One of our experts would go there immediately, and I can assure my hon. friend that if we were convinced that the output could be stepped up, the necessary funds would be forthcoming.

Mr. HANSELL: What would be the procedure? The minister has made quite a liberal statement which will go out to the country. If a coal mining company says: "If we can get another fifty men we will put in another shaft, but we are not going to do it out of our own funds," what procedure would it have to adopt to get assistance? The coal mining industry of Canada over a period of years has been running pretty close to the edge, and a few cents reduction in the price of coal might mean putting them out of business. Would the coal mining company have to get in touch with the minister, or what?

Mr. HOWE: The procedure would be for the secretary of the company to write to the secretary of the emergency coal production board, with headquarters in Ottawa, and state the position. The board would immediately delegate one of its experts to go and examine the situation on the ground, and if the expert reported favourably the board would take action immediately.

Mr. ADAMSON: May I ask what has happened to Allied Brass? Is it still under the same management?

Mr. HOWE: Yes, it is turning out brass to capacity and has been, I think, since the present management took charge.

Mr. GILLIS: When the hon. member for Macleod was speaking a moment ago, he made a statement which I think the minister overlooked, and which may confuse those reading *Hansard* in the future. He stated that no subvention is ever paid directly to a coal company. That statement is not correct. At the present time the water-borne coal coming up the St. Lawrence is subsidized to the extent of one dollar a ton. The Dominion Coal company own the boats that bring that coal, the shipping company being a subsidiary of the coal company. In that way the subvention is paid directly to the coal company. So that subventions do go direct to the coal companies in some cases.

Mr. MacNICOL: The minister said yesterday that I might bring up the question of magnesium metal on this item.

Mr. HOWE: Yes.

Mr. MacNICOL: The minister a year ago gave us a glowing account of what he hoped at that time to achieve from the plant that was proposed to be erected. He stated that the market price on May 20, 1942, of magnesium metal was between 33 and 34 cents a pound. Then he aded, "We expect to get it for about half that, but I would not care to be too specific about it." Well, this new plant was put in at a cost of $4,169,500, of which $820,000 was working capital, according to a return which was brought down some days ago, but instead of getting magnesium metal from this plant at half the price of 33 or 34 cents a pound, or 16 to 17 cents a pound, we are paying, according to the return that was brought down on May 24 of this year, 39·7 cents a pound. Would the minister explain why the price of magnesium metal is so high?

I remember when I brought up the subject of magnesium metal in 1941—this was before it came into the minister's department—I asked the Minister of Mines and Resources a question arising out of an article which had appeared in the paper about a magnesium plant. My question was about magnesium metal, but the Minister of Mines and Resources in his reply spoke of magnesium—two different things entirely. Magnesium is an explosive; magnesium metal is a metal. The Minister of Mines and Resources said at that time that a plant was being erected up the Gatineau to produce magnesium. Later on the plant to produce magnesium metal, the plant likely referred to in the article, was erected at Haley. At that time I was interested in the question of magnesium metal, because I knew a man in Hamilton—I have known him for quite a few years—a man by the name of Ralph Keemle, a regular genius who had developed a process for the production of

magnesium metal from dolomite through the use of electricity, and I was informed that he could produce magnesium metal at from 8 to 10 cents a pound, which is from one-fifth to one-quarter of the price we are now paying. I think the minister said that Mr. Keemle had been consulted, or had been invited to Ottawa, but if he was invited to Ottawa he got rather short shift, because the government, as everyone knows, took up the process that had been developed by our own national research, and brought about the formation of a crown company. I never did think that Mr. Keemle got a square deal or was treated fairly. I always felt that anyone who was capable of developing a process that worked, as he did, should be given a chance. But that is all past now. What I am anxious to know now is why the price of magnesium metal is so high? Why is it so much higher than the minister informed the house it would be when this new plant got into operation? I should also like to ask him how many pounds of magnesium metal are used in the average aeroplane? The return that was brought down on May 24 of this year showed that we have produced up to the end of April, 1943, 1,186 tons of magnesium metal, and if the amount which was reported on a former occasion as the approximate amount which was used per plane, or 2000 pounds, that would mean that we have produced up to the end of April this year enough for more than 500 planes.

What in the world are we to do with this plant after the war? Magnesium metal is a light metal, two-thirds the weight of aluminum, but it cannot take the place of aluminum in every respect. Aluminum has to be used as an alloy to prevent an explosion of magnesium metal, and this latter metal is used as an alloy in aluminum to give rigidity. It is quite an investment we have made in this plant. I have no fault to find with the plant having been built. On the contrary I am inclined to congratulate the minister for having the plant put up to produce magnesium metal. But why is the metal so costly, so much higher than the minister thought would be the price when the plant was in operation?

Mr. HOWE: My hon. friend will appreciate that the government embarked on a new process for the manufacture of magnesium metal. The process was moved from a small pilot plant into large scale production. Certain tests were made as a result of studies of the results from the pilot plant, from which certain assumptions were made as to the cost of large-scale operation. I am optimistic enough to think that those predictions were not so far out of line as the costs during the month of April, which my hon. friend has given, would indicate. There has been some difficulty in the metallurgy of the retorts; there has been a great deal of distortion and breaking there, which has been a source of considerable cost in the matter of supplies. The cost of quarrying, milling and reduction has not yet been brought down to a reasonable level. As my hon. friend knows, we have opened up a new quarry, and we have not really got the quarrying costs shaken down. The other large item is the cost of ferro-silicate, which is mixed with the powdered rock to make briquettes. The cost of that operation is considerably higher than had beeen anticipated, owing to the war situation. I would point out, however, that the capital expenditure for this plant has been very low as compared to alternative processes. We investigated the cost of a chemical process for producing ten tons of magnesium a day, and the estimated cost given us was something over $9,000,000. This plant has been built for a little over $3,000,000; it is producing to capacity, and I am optimistic enough to hope that the price will be brought down to a competitive level with the chemical process.

Then my hon. friend asked about the future of magnesium after the war. At the present time this plant is supplying all Canada's needs for magnesium metal, with a fair surplus left over for export. Magnesium is a metal that is much stronger than aluminum pound for pound; it has that advantage over aluminum. The disadvantage is that magnesium is subject to corrosion, whereas aluminum is not. The two are competitive in the light metal field for certain uses, particularly in the building of aeroplanes and aeroplane engines; in many uses magnesium is essential and has great advantages over aluminum. Undoubtedly there will be a market, and a considerable market, for magnesium metal after the war. Whether Canada can have a share of that market will depend upon whether our costs can be brought down so that they will be competitive with other types of production. In any event, Canada has an assured supply of magnesium for the war and for the post-war period.

Mr. FRASER (Peterborough West): Has Canada tried to obtain magnesium from salt water, as they are doing in Britain?

Mr. HOWE: The extraction of magnesium from salt water is a well known processs; it is used in the United States and in Britain. It is the old chemical process. Canada went to a thermal process, which we believe to be the

process of the future and which involves a very much smaller capital expenditure. But, as I say, I have not been able to bring the cost of production down to the cost which I was once optimistic enough to give the house.

Mr. GREEN: Last year serious shortages developed in some of the base metals such as zinc, lead, copper and several others. As a result of that shortage, the government entered upon a policy of stimulating the production of certain metals through the agency of a crown company known as Wartime Metals corporation. Apparently that corporation has taken over the operation of certain mines; a return brought down in the house on March 24 listed twelve that had been so taken over. What progress has been made in stimulating the production of base metals, and what is the policy of the government in regard to supplying miners for base metal mines? In British Columbia, mines operated by private companies are under a handicap as compared with those which have been taken over by Wartime Metals corporation. I understand that priority for labour is given to the mines operated by the crown company; yet in at least some cases production could be increased more rapidly by sending ten men, let us say, to a mine operated by a private company than by sending the same ten men to a mine operated by the crown company. I think the government would be well advised to revise its present policy and at least give a private company with an operating mine equal priority in labour with the mine operated by the crown.

Then I should like to know from the minister whether any loans have been made to private companies; whether consideration has been given to extending the policy by loaning money to operating companies. Again it might be that if this were done it would result in greater production, and getting that production more quickly, than by putting the same amount of money into a mine operated by the crown. Would the minister explain what the policy is with regard to these mines?

Mr. HOWE: My hon. friend will understand that Canada has not been short of the metals he mentions. Canada is the largest exporter of metals in the world, but there has been a world shortage of copper, lead, nickel and zinc, and Canada has succeeded in helping to meet those shortages to a considerable extent. Our production of refined metals has increased as follows:

	1939 Tons	1942 Tons
Refined copper.....	232,000	270,600
Refined lead.....	191,000	243,800
Refined nickel.....	64,500	93,300
Refined zinc.....	175,600	216,000

[Mr. Howe.]

This indicates that the efforts of the government to increase the production of metals of which there is a world shortage for war purposes have met with a good deal of success. Wartime Metals corporation has been the instrument of the government in certain operations, more particularly in the field of rare metals such as chrome, tungsten, molybdenum and metals of that kind, of which Canada has not sufficient. The company has been quite successful. It has brought in a chrome mine in the eastern townships; it is operating what we believe to be the richest tungsten mine on the continent, which we hope will make Canada self-contained in regard to tungsten.

Mr. GREEN Which mine is that?

Mr. HOWE: It is out in British Columbia.

Mr. GREEN: The Emerald mine?

Mr. HOWE: Yes, I believe so. It is actually carrying on certain developments for the production of strategic minerals. These are developments which private industry has not been willing to undertake, owing to the fact that the use of these strategic minerals in peace time is so small that no peace-time future for the mines could be assured, sufficient to permit private enterprise to finance.

The hon. member has asked if the government has financed the development of mines. The Canadian government has not done so. I am not sure I can say it has never done so, but it has not been the practice because the Canadian government has not been short of standard base metals. But it has arranged with the Metals Reserve Corporation of the United States to finance certain properties, the output of which would be helpful to the metals situation in the United States.

Mr. GREEN: That is all under the direction of the metals controller in Canada.

Mr. HOWE: That is correct. We have encouraged any production that would be helpful to the war effort, and we have arranged for financing by the Metals Reserve corporation of properties which promised to be immediately helpful to the war effort. I know of no proposal that had real merit and which promised quick results which has not had help extended to it, through the agency of the metals controller or by Wartime Metals corporation.

Mr. GREEN: Does the government operate these mines through Wartime Metals Corporation, or in some cases is money loaned to a private company, and operations carried on by that private company?

Mr. HOWE: Both procedures are followed. Wartime Metals Corporation is actually operating certain mines—perhaps three or four or five. In addition, the government either as principal or as agent is lending money to certain mines on a self-liquidating basis to encourage the production of minerals.

Mr. GREEN: In the latter type of cases the private company is in charge of the operation.

Mr. HOWE: Yes.

Mr. GREEN: The minister said nothing about priority with respect to labour, one of the most serious features in the whole situation. I understand a private company does not receive the same priority for miners as does a mine operated by the crown. Is that correct?

Mr. HOWE: There is no difference in priorities, whether the mine is owned by the government or by private interests. My hon. friend will have ample opportunity to go into that when the estimates of the Department of Labour are before the committee, as soon as I have finished with mine.

Mr. GREEN: Of course, mind you, it affects the minister's department, because it affects the amount of metals produced.

Item agreed to.

On item 8—Departmental administration, $9,300,000.

Mr. SHAW: I should like to refer to the question of the expropriation of property carried out by the department, or by an administrative body within the department. Has each government department machinery to handle the expropriation of land or other property, or is there one body within the government which handles that particular aspect of government enterprise?

Mr. HOWE: The Department of Munitions and Supply has retained the land department of the Canadian National Railways to handle the expropriation and acquisition of property required by the department, either for airports or for industrial purposes. The other departments either have their own officials, or use some other agency of government.

Mr. SHAW: I was particularly interested in learning whether any uniformity of policy as between the departments exists? Ordinarily when an expropriation takes place the individual concerned is compensated to a higher degree than would normally obtain if the property were sold on the open market. In most instances property is taken which the individual may not be desirous of selling. I have in mind a case where an individual purchased a parcel of land for $150, and had paid $50 taxes. He considers the property worth every cent put into it, but the departmental officials assert that $10 is a fair price for it, in their expropriation proceedings.

In certain departments we have found no such condition. In fact one sometimes thinks they are generous to the extreme. In a matter of this kind we ought to have facilities for preventing the development of any unfair situation. What final say does the individual have, if he wishes to protest against any expropriation? Must he abide by the decision of the department?

Mr. HOWE: No, not at all. Once expropriation is taken, the matter goes before the Exchequer Court of Canada. The owner need not accept any offer made by the department, and the department is not bound to make an offer to the owner. Expropriation involves adjudication by the exchequer court. To save litigation, an attempt is usually made to settle with the owner without going to court. In small purchases an expert for the department makes up his mind as to what he believes to be a fair value for the land, and makes an offer to the owner. If the owner, the officer and the department agree, the matter can be settled without going to court. But no property owner need necessarily accept any offer made by the department; he can let the exchequer court make the decision.

Mr. CASTLEDEN: I understood the minister's department took over some property in the town of Renfrew, in connection with the development of magnesium. I believe it was the property of the Ottawa Valley Packing company.

Mr. HOWE: That is another transaction; it has nothing to do with magnesium.

Mr. CASTLEDEN: It was taken over by the minister's department?

Mr. HOWE: Yes.

Mr. CASTLEDEN: What was paid for the property, and to whom was it paid?

Mr. HOWE: I doubt if settlement has been made. The property was expropriated. I think no settlement has been reached, and in due course a decision will be handed down by the exchequer court.

Mr. CASTLEDEN: Is the matter under litigation?

Mr. HOWE: Yes, it is under expropriation.

Mr. CASTLEDEN: It has been taken over?

Mr. HOWE: Yes.

Mr. FAIR: Since there are now several million bushels of wheat on farms in western Canada, and since it appears that within a couple of months another crop will be coming on, I am wondering whether sufficient lumber can be provided so that storage can be built on the farms to provide cover for the crops which will be taken off.

Mr. HOWE: I put on *Hansard* last night the amount of lumber available for civilian supplies. I assure the hon. member we will make all the lumber available for civilian supplies that the high priority requirements of the war will permit.

Mr. GRAYDON: When we were debating the munitions and supply bill I raised the matter of better representation of labour in the Department of Munitions and Supply. I should like the minister to comment upon the possibilities of that. The Department of Munitions and Supply is a specialized department which covers a multitude of matters, but it does seem to me that there is one serious lack, namely, representation of labour in the so-called munitions and supply empire. What is the reason for this? What steps has the minister in mind to cure the situation?

Mr. HOWE: As my hon. friend knows, the predecessor of the Department of Munitions and Supply was the war supply board. This was made up of four men, one of whom was a representative of labour in the person of Mr. Howard Chase, the highest ranking member of the railway brotherhoods in Canada, a man of exceptional ability. When the department was formed Mr. Chase was made director-general of labour relations. I believe he performed excellent service for labour and for the department. His work was outstanding, but inside of twelve months the one desire of organized labour in Canada was that Mr. Chase should be severed from the Department of Munitions and Supply. The only time I have known the Canadian congress of labour and the trades labour council to be unanimous was when they pointed out quite vigorously that it was the duty of the Department of Labour to attend to all labour matters and that the Department of Munitions and Supply should not have a director-general of labour relations. The position was abolished at about the time the national war labour board was formed, and this board took over the functions which were being performed by Mr. Chase. We certainly had the approval of organized labour generally in that step.

[Mr. Castleden.]

We have appointed representatives of labour to operating boards. There are very few operating boards, such as Wartime Housing, Toronto Shipbuilding and so on that do not have representatives of labour. Almost any operating board that my hon. friend can name I am sure will have a representative of labour. These men have been most helpful to the different projects. I would certainly add a labour man to any operating board that might be appointed in the future. If there are any difficulties in my department through not having labour representation, I am very much surprised to hear it.

Mr. ROSS (St. Paul's): The minister has been told about the housing situation in Toronto. I notice that under the new scheme of converting larger houses into apartments about $250,000 will be expended in Toronto to convert fifty houses. When they asked for applications for conversion I understand they got over a thousand. The conversion of fifty houses in Toronto will not do very much good. A great deal has been done to provide war-time housing in other cities, but no housing of this type has been provided in Toronto.

The minister states that workers can find places to go in Toronto, that there is no lack of accommodation. The fact is that people are being crowded. As I said before, families of four are crowding into one or two rooms in the slum districts, because that is the only place they can go. Unless some relief is given, I do not know what will happen. Some of these districts will be converted into slums. The minister said that there would be an exodus of people from Toronto as time went on, because not so much work would be done in the city. He must remember that there are many industries in the small communities around Toronto, and there is an exodus of workers out of the city every morning and back again at night. In some cases the beds are never allowed to get cold; one man gets up to go to work and another man goes to bed. I wish the minister would give some consideration to Toronto in this connection.

Is the administration of this conversion plan to be under Wartime Housing or under National Housing? I have looked at the different figures given in *Hansard*, but I find one set of figures in one return and another set in another return. I do not understand just what they are. I notice that in connection with the administration of Wartime Housing, rentals of $2,308.59 a month are being paid. I should like to know why fifty-five different premises are necessary. In addition, there is an archi-

tectural staff, and outside architects are employed as well. There is also a manager of public relations who is also the editor of *Home Life* magazine who receives a salary of $260 a month.

Mr. MacNICOL: What for?

Mr. ROSS (St. Paul's) He is the manager of public relations in Wartime Housing.

Mr. HOWE: The man to whom my hon. friend has just referred is associated with Wartime Housing Limited. His work is to organize community services, and I am told that he is doing excellent work.

Mr. ROSS (St. Paul's): What is the necessity for paying these rentals?

Mr. CHEVRIER: What rentals?

Mr. ROSS (St. Paul's): The rental of fifty-five premises throughout Canada for Wartime Housing Limited. For instance in one place in Toronto a total of 10,496 square feet are rented.

Mr. HOWE: Naturally Wartime Housing must have office space in which to function. My hon. friend has mentioned the space occupied by the head office in Toronto where a considerable staff is maintained to handle the business of Wartime Housing. Wherever there is a considerable concentration of houses, an administrative office is necessary for the collection of rents and to carry on the duties incidental to operating a number of houses.

Mr. GILLIS: The minister made a statement a moment ago to the effect that on all operating boards in his department he has labour representation.

Mr. HOWE: I did not say, "all". I said, on operating boards, certain operating boards.

Mr. GILLIS: The minister mentioned the Toronto Shipbuilding company.

Mr. HOWE: Yes.

Mr. GILLIS: Would the minister put on record who his labour representative is on the Toronto Shipbuilding company board? The minister might also tell the committee how the representatives are appointed, who recommends them, and how the selection is made.

Mr. HOWE: The representative on the Toronto Shipbuilding company is Mr. William Jenoves. The men are appointed after consultation with the Minister of Labour. I believe the practice is to distribute the appointments among various labour organizations.

Mr. ROSS (St. Paul's): Are the rents collected at these various points?

The CHAIRMAN: On the question of the hon. member for St. Paul's, he will realize that I have allowed him to ask several questions, with which I believe the committee was satisfied, that came under item 3. I do not think the committee would be in the mood to reopen a discussion of which the committee is fully seized. I ask the hon. member to be brief.

Mr. ROSS (St. Paul's): This is under a question of administration, and surely is appropriate on this item.

Mr. CHEVRIER: That was discussed last evening.

Mr. ROSS (St. Paul's): Are all these rents collected at various points?

Mr. HOWE: Yes, they are all collected at various points.

Mr. FAIR: I would draw to the attention of the minister that binder twine is of great importance to our farmers, who use it to take care of their crops. On February 15 last an order was passed forbidding the manufacture of 550 or 600 foot twine after that date. These are the kinds which are most in use, the 500 foot variety is of less tensile strength, and farmers who use it are likely to run into a whole lot of trouble. It may also disagreeably affect the farm labour situation, because one of the greatest vexations in harvest time comes from poor twine. This is a condition which should be remedied, and if there is any possible way of doing so, we should get back to our old supply of 550 and 600 foot twine.

Mr. HOWE: As my hon. friend knows, the supply of twine has been seriously interfered with by the war. I will bring the remarks of my hon. friend to the attention of those responsible for our supply.

Item agreed to.

9. Air services:	
To provide for special radio services, weather observation and teletype services—	
Radio	$1,761,325
Meteorological	1,366,000
17 additional radio range stations (maintenance): new division office at Vancouver; additional staff at headquarters	374,460
Subsidization of radio-operator students	100,000

Mr. GRAYDON: These air services are bulked under four different totals. Would the minister break down these items, which are rather large, in order that we may have the record on *Hansard?*

Mr. HOWE: These items are the expenditures made by the air services for carrying on the war. They are apart from the ordinary estimates of the department which are contained in the civilian estimates. The department builds radio services for the armed forces in the northwest and along all the operational routes of the air services, and in many cases the department operates the services. The department has greatly expanded its weather services in order to provide accurate weather information for the armed forces. This vote covers functions performed which are apart from the ordinary operations covered by civilian estimates. The break-down is: Radio service, which contains a revote of $377,500, $1,671,325; meteorological service, $1,366,000; civil aviation service, that is air traffic control, $680,000; operation and maintenance of municipal airports used by the armed services, $336,600; Moncton to Newfoundland airport, a revote of $181,500, $976,700; construction and improvements of Montreal airport, $500,000; a total of $5,620,625. For radio services, a supplementary estimate, to subsidize radio operator students. We have put in a school for radio operators.

Mr. GRAYDON: Where is that school?

Mr. HOWE: I am not sure of the details. It is a new plan put into operation some months ago when there was an acute shortage of radio operators.

Mr. REID: Are the students assisted financially?

Mr. HOWE: Yes; they are paid a small salary while they are going through the school. The subsidization of radio operator students, $100,000; maintenance of seventeen additional radio stations, a new division office at Vancouver, and additional staff at headquarters, $374,460; bringing the grand total to $6,095,085.

Mr. SHAW: I assume that these additional student operators carry on in a civilian capacity?

Mr. HOWE: Yes.

Mr. SHAW: Even though the service may be rendered on behalf of one of the three branches of the armed services. How are those students chosen?

Mr. HOWE: I could not say. I think we have advertised for operators. Many of them are girls; in fact, the number of girls studying for this branch of the service is probably three or four to one compared with men.

[Mr. Graydon.]

Mr. SHAW: Are they regarded as civil servants after they complete their course?

Mr. HOWE: No, they are purely war temporaries. There is no permanency about it. Anyone desiring to take the course can write the deputy minister of transport and be advised.

Mr. GILLIS: In connection with these particular radio and meteorological services, are they not carried on in conjunction with the armed forces? At Rockcliffe here, for example, the Department of Transport operate this service, and quite a percentage of the girls and young students who are not qualified for aircrew and so forth are routed into this work and trained.

Mr. HOWE: Yes; the civilian operators operate with the air force. There is no real pattern about it. I think practically all the meteorological service is handled by civilians of the Department of Transport. The control of airports, I would say, was 75 per cent civilian. If an airport is handling largely operational work by the armed services, it may be that the traffic officer is a man in uniform. But where civilian traffic and military use are combined, ordinarily the control of the airport is civilian, under an officer of the Department of Transport. It is by arrangement between the civilian operators and the armed forces, and there has been no difference of opinion to date that has not been ironed out quickly. It is a question of who can do the work more efficiently. The purpose is to have the work done by civilians, provided it can be carried out efficiently in order that trained men may be used for other duties.

Mr. GILLIS: I have heard a complaint to the effect that some of the boys in the armed service were taken in and were actually performing this work in uniform at soldier's pay, under transport, and their objection was that if they were doing the work they should be paid the rate of wages that would be paid to civil servants doing similar work.

Mr. HOWE: I think that would be a temporary situation. Perhaps it was impossible at the time to get civilians in sufficient numbers to carry on the work, and I am sure that would never be a permanent condition, where there would be men in uniform working alongside civilians, one getting civilian pay and the other army pay.

Mr. MacNICOL: Will the minister explain the significance of, and state what is included in, the item of $100,000 for the subsidizing of radio-operator students.

Mr. HOWE: I have just explained that. Perhaps the hon. member was out of the house at the time. There was an acute shortage of trained radio operators, and courses were opened to train operators. The students are subsidized while taking the course. They are paid a small salary while taking the course, and the $100,000 is to make funds available so that this may be possible.

Mr. MacNICOL: I am sorry the minister had to repeat that, but I did not hear the explanation.

Mr. ROSS (St. Paul's): With regard to radio, and the item "meteorological," is that for equipment as well as for personal services?

Mr. HOWE: No. This is an operating vote for services. It does not include capital.

Item agreed to.

10. Civil aviation:	
Extra airport traffic control systems	$680,000
Operation and maintenance of municipal (terminal) airports	336,600
Additional facilities—Moncton to Newfoundland airline	976,700
Improvements to North Bay airport	.....
Operation and maintenance—Northwest air route	.....
Montreal airport improvements	500,000

Mr. REID: Can the minister explain the situation in regard to the airport at Sea Island? That airport was purchased many years ago by the city of Vancouver, and Trans-Canada came into being and later a plant was established on that property. I am interested to know the exact situation and whether Vancouver city still owns the property. Are we renting the property on which the operations are now being carried on?

Mr. HOWE: At the outbreak of the war the Sea island property was leased by the city to the government for a dollar a year. Since then, the government has maintained the property and used it, and, I may add, greatly improved it. Additional property has been added; runways have been made and improved, and of course a great many buildings have been put up there which will no doubt be returned to the city at the end of the war. My hon. friend asks about the property occupied by Boeings. My memory fails me at the moment in that regard. I know that an attempt was made to work out an amicable arrangement with the city by which the government could acquire the property, and expropriation proceedings were instituted. I believe a settlement was effected, and the area is being occupied by Boeings. Owing to the large expenditure involved in completing the Boeing plant and equipping it, it is absolutely necessary that the government should own it.

Mr. REID: Do I understand that all the property outside Boeings, leased by the city council for one dollar a year, will revert to the city after the war, buildings and all?

Mr. HOWE: Yes.

Mr. McKINNON (Kenora-Rainy River): There are a few remarks I wish to make with reference to civil aviation and also post-war civil aviation and its relationship to the development of northern Canada. First of all, I wish to congratulate the minister upon recently informing us of the opening up of the transatlantic airline service. I know he mentioned then that it was not for commercial purposes, but I do hope it is the beginning of a post-war civil aviation programme. In the meantime, however, it will greatly facilitate the carriage of mail for the overseas forces. During the last few years we have had very important construction development in northern Canada, undertaken largely by the United States forces for the purpose of supporting United States operations in the Aleutians and Alaska, or to assist in the ferrying of aircraft to Alaska. The project that has received the most notice is, of course, the Alaska highway, which has been constructed and is now in operation. However, there are many other projects of equal importance. For instance, there is the development of the oil fields in the Fort Norman area and the survey of a railroad from Prince George to Fairbanks.

I note by press reports of the last few days that the United States army has done a great deal of development work in the Fort Norman oil fields. I feel sure that it will be of great assistance to Canada, not only now but after the war when we open up this territory as we all hope and expect we shall. These developments have stirred the imagination of Canadians, and the question is being asked, why not develop these resources, and also, what is Canada prepared to do when the war is over?

At this point I should like to pay a tribute to one of the pioneers of civilian aviation, Don Martin of Montreal, whose untimely passing

from among us a few days ago removes one of those pioneers with great vision of aviation. He will be greatly missed by the old-line bush pilots and bush operating companies, for whom he has done so much in the help he gave them in building up bush routes in northern Canada.

We in Canada have entered into an agreement with the United States government whereby all immovable facilities constructed by the United States in Canada will revert to this country at the end of the war or within a specified time thereafter. If we are to carry on the development of our northern areas when the United States forces withdraw, a definite programme of post-war development should be planned now. The present flying operations in northern Canada have been essentially a war-time undertaking. However, this flying is really airline flying with modern heavy transport aircraft and with radio aids to navigation that are found on Trans-Canada air liners. It goes without saying that at the end of the war the vast majority of the war-time projects in northern Canada will be discontinued, and the necessity for the present transport operations in that area will cease. The continuance of post-war flying in northern areas with the exception of bush operations is dependent on active economic development there. Therefore, I ask, is Canada making adequate and proper preparations to develop our arctic regions? The economic development of Canada up to date has largely been confined to the southern part of our country. However, it is now being realized that the northern regions have tremendous resources which are capable of development.

That very important and profitable development of these resources is not only feasible but practicable has been amply demonstrated by the Russians, who for a good many years past have had an active programme of exploration and exploitation in Siberia. To-day, with the help of the present advances in aviation, Canada's north assumes ever-increasing importance. Trans-polar flying, which is already a practical undertaking, awaits only a little further advance in long-distance stratosphere flying to make it a commercial possibility. In view of these events, the Canadian arctic regions can no longer be regarded as a wilderness but must be looked upon as a vital thoroughfare linking North America by air with Asia and the continent of Europe.

There are many reasons, then, to support the belief that Canada's post-war expansion will be northward toward the arctic. This expansion has been made possible by war-time advances in aviation, but its permanent basis must rest on the economic development of the arctic regions. If this development is to be undertaken successfully and promptly as soon as the war is over, steps should be taken immediately to embark on a programme of investigation and exploration. Therefore I suggest that a strong interdepartmental committee of the government should be formed to explore all possible avenues of development. I understand that an international committee has already been formed to coordinate the economic development of northwestern Canada and Alaska; but we need more than that. We need a national committee to be responsible for the whole of northern Canada. Incidentally it might be observed that the United States government has already organized a very strong group to undertake similar investigations. This indicates that the United States is taking a great interest in the post-war international air routes which traverse northern Canada. We have many competent and experienced men available, men who pioneered northern Canada and the many bush flying routes working in cooperation with mining men, who through the use of aircraft developed our northern mining areas.

We also have to-day a great airline company, the C.P.A., who have taken over many of the bush-line companies and are operating a successful service in many parts of Canada.

Mr. CRUICKSHANK: What company is that?

Mr. McKINNON (Kenora-Rainy River): I do not know whether my hon. friend has ridden on many of their planes, but I assume he has ridden on some of their trains and I hope he enjoyed the ride.

We have available in Canada men who are well acquainted with the north, but the knowledge and ability of these men must be focused collectively on specific problems and, further, their efforts must be correlated for the purpose of definite action under the strongest possible government support.

A few of the problems to which such a committee, if it is set up, should give consideration, are the following:

1. The post-war development of Fort Norman oil fields and McMurray tar sands.

2. Active exploration for new oil fields.

3. The post-war disposition of the Alaska highway.

4. The development of post-war air routes to Europe by Hudson bay, Greenland and Iceland; and to Europe and Asia via the northwest staging route and the Mackenzie river route.

5. The investigation of trans-polar air routes to Europe and Asia, including the selection of suitable bases and plans for development.

6. Meteorological investigations, particularly as they relate to trans-polar flying.

7. Investigations of low-temperature flying, involving low temperature operation of engines and accessory equipment. The United States is already carrying out an extensive programme of research in this field.

8. Investigation of problems connected with the construction of airfields on permanently frozen soils.

9. The study of suitable types of buildings for arctic regions.

10. Extension of the navigation season out of Churchill by the coordinated use of aircraft and powerful ice-breakers.

In addition, Mr. Chairman, I know, and I think the committee knows, that there are many other problems of tremendous importance to the people of Canada so far as the north and the development of aviation are concerned, which I believe go hand in hand together. I hope the government will take action now to see to it that we in Canada have our place in the aviation picture of the universe when this struggle is over.

Mr. KNOWLES: I should like to say a few words on this item, with particular reference to the subsection which deals with the operation and maintenance of municipal airports. I refer particularly to Stevenson field at Winnipeg. This is a matter of definite interest not only to the people of the part of the country from which I come; it is one of those cases where a local interest is also a national interest. Previous speakers already have emphasized the importance of Canada's future in the air and the necessity of our realizing the steps that should be taken to assure our position in the post-war world. Winnipeg, as is well-known, lies in the centre of the country on an east and west line, and practically in the centre of the continent of North America; and we feel that it is important to Canada's future in the air that we have in Winnipeg an adequate airport. By "adequate" I mean an airport with facilities that make it possible to take care of the largest planes now flying, or that may fly in the near future.

Perhaps the minister is aware that I have been endeavouring to get some information in connection with the attitude of the government toward Stevenson field by certain questions which I have placed on the order paper. I may take a moment or two to summarize what I have done. First of all, on May 13 I gave notice of a motion asking for the tabling of documents relating to the possible enlargement of Stevenson field, but on May 17 the Minister of National Defence for Air advised me across the floor of the house that the material for which I was asking was quite voluminous and suggested that perhaps I would look at it privately and indicate what portions I should like to have brought down. Subsequently his department gave me the privilege of looking through that file. I found it very interesting; it dealt with many improvements to the field for which the government was responsible and which I was glad to note, but it did not make any reference to ways and means of lengthening the runways, which is the matter we feel should be given immediate attention, both for war-time needs and for the post-war period. After having looked over the file which I was shown by the Department of National Defence for Air, I placed a question on the order paper on May 18, in which I asked:

1. Has any consideration been given by the government, or by any department or branch thereof, to the question of re-routing the Souris branch of the Canadian Pacific Railway in order to permit a northward extension of Stevenson field at Winnipeg?

2. Have any representations in the above matter been made to the government, or to any department or branch thereof, and if so, by whom?

That question was passed as an order for return, and when the return was brought down the answer to question No. 1 was "no." The answer to question No. 2 was "yes," that representations had been made by the St. James-Winnipeg airport commission. Subsequently, on June 16, the house passed a motion in my name calling for the tabling of a copy of those representations, together with any replies made by the government. Of course that was only a few days ago, and the return has not been brought down as yet.

The department of mines and natural resources of Manitoba is taking a keen interest in this matter and has prepared a folder which contains two quite interesting maps, one of North America by itself and the other showing North America in relation to the north pole and to Europe, Asia and Africa which lie on the other side of the north pole. This map indicates the strategic position held by Winnipeg, not only for Winnipeg but for Canada as a whole, in the air map of the world which as we now realize centres around the northern part of the globe. In addition to the efforts

being made by the department of mines and natural resources of Manitoba, one of the Winnipeg newspapers has been doing what I regard, in spite of its political opposition to the group to which I belong, as a commendable job in emphasizing the importance of the taking of action at the present time. The Winnipeg *Tribune* has pointed out that at Stevenson field we have the possibilities of an airport to serve the whole of Canada in the post-war world. It is located conveniently to the city, being only three miles from the centre of Winnipeg. As we all know, it is rather unusual on the North American continent to have airport facilities quite so close to the centre of a great city. Even before the government, under the stress of war, assumed a major share of the responsibility for the operation of the field, the airport had facilities which were quite modern; in fact it had everything but runways of sufficient length for the largest planes flying to-day. On May 15 of this year, in a feature article dealing with this matter, the *Tribune* said:

> All types of planes which so far have come here—big bombers included—have been able to land at Stevenson field, but it took skilful piloting to bring them down safely. On the present runways they could just make it, with little or nothing to spare.

A little later in the same article, after the assets of Stevenson field had been recounted, I find this further statement which I should like to quote:

> But its runways are not long enough. . . .

Mr. HOWE: What is my hon. friend quoting from?

Mr. KNOWLES: From the Winnipeg *Tribune* of May 15, 1943.

Mr. HOWE: Who was it said he could not land there, or just made it?

Mr. KNOWLES: This is an article signed by Mr. L. F. Earl who said, if I may quote that part again, that all types of planes have been able to land at Stevenson field but that it took skilful piloting to bring them down safely.

Mr. HOWE: I do not think it would require an exceptionally skilful pilot to land at that field.

Mr. KNOWLES: The article goes on to say:

> A modern aerodrome, so say the engineers, should have minimum runways of 4,000 feet and should be capable of expansion to 5,000 feet. This is on a sea level basis. Winnipeg is about 800 feet above sea level, so these distances should be extended to 4,200 and 5,300 feet respectively.

The point at issue at the present time, in view of the fact that our longest runway is only 4,400 feet, is the necessity, if these runways are to be lengthened, of re-routing a portion of the Souris branch of the Canadian Pacific railway which runs just north of the present limit of Stevenson field. At the present time there is a good deal of vacant land there, and the railway could be shifted to make possible the lengthening of these runways. The newspaper to which I have already referred has been dealing with this matter at some length. It has carried reports from Ottawa to the effect that no consideration is being given to this matter as yet, and it expresses apprehension lest the matter be put off too long, and something happen to that vacant land north of Stevenson field, with the result that in order to have longer runways it might be necessary to go farther out into the country, or that Winnipeg might be by-passed altogether.

Despite the fact that the answer in the return which I have already mentioned was "no", would the minister state whether any consideration has been given to the shifting of the railway line to which I have referred, to make possible the northward extension of that field, and the subsequent lengthening of the runway?

I should also like to ask—and I confess I do so on the basis of rumours I have heard; I cannot substantiate them, but they are disquieting—whether any plans are being made for establishing in Manitoba an airport at some point other than Stevenson field, where such a fine start has been made. Would the minister authoritatively set aside that rumour, and let us know that any future enlargement of airport facilities will be at the field where, as I say, considerable progress has already been made and where facilities are in close proximity to the centre of a great city which, as I have pointed out, is situated in the centre of the continent, and is in a location strategic to the future of air travel in Canada?

I should hope the minister would reply to my question as to whether any consideration is being given to the measures necessary to lengthen these runways, and whether in

his knowledge plans are under way for any other airport in Manitoba to take the place of Stevenson field.

Mr. HOWE: Stevenson field is a first class airport, by any standards. It is used by Trans-Canada Air Lines, by the ferrying service, and by the Royal Canadian Air Force. It is quite satisfactory for any use to which it is being put at the moment. The approaches are ideal. There is much more to an airport than the length of its runways. There are many airports with longer runways than those on Stevenson field which are not nearly so good as Stevenson field. The services using the field to-day are satisfied with the present conditions, and it is a very busy airport.

Recently the city has interested itself in exploring the possibilities of extending the runways. The department has given the city certain advice in that matter. A plan was sent out about a week or ten days ago, containing the department's suggestion for any future expansion of the airport. May I point out that the airport is not the property of the dominion government, but rather that of the municipality of St. James. The department is the lessee of the airport only for war purposes. If during the war the need for a larger airport presents itself, that need will be met by the dominion government. After the war the airport will be turned back to its owner, and the government will at any time discuss with the owner the possibility of enlargements.

Mr. KNOWLES: Will the minister answer my other question? Are there any plans for replacing Stevenson field with any other airport so far as Manitoba is concerned?

Mr. HOWE: No.

Item agreed to.

DEPARTMENT OF NATIONAL DEFENCE FOR AIR

Hon. C. D. POWER (Minister of National Defence for Air): While the estimates for the Department of National Defence for Air were under consideration, some questions were asked. Those answers are now ready, and could be presented in about fifteen minutes, if we are allowed to place the answers on *Hansard*. My assistant will be only too glad to do so, if the committee approves. These are non-contentious matters.

Mr. GRAYDON: The minister is perfectly sure it will not take more than fifteen minutes?

Mr. POWER: If it is more than fifteen minutes, we will stop.

Mr. GRAYDON: Often it takes longer than we think, and it is now almost eleven o'clock. However, I have no objection to going on until eleven o'clock. Most of us find it a long day, even as it is.

Mr. POWER: These are questions asked by hon. members, and no doubt they would like to have the answers on *Hansard*. Some of the answers involve long schedules, and I would ask permission of the committee to place this information on *Hansard*. For instance, someone has asked the amount of money spent on aerodromes in different parts of the country. The answer will probably be lengthy, and there would be no point in reading it. I would suggest that it be put on *Hansard*, without having it read.

The CHAIRMAN: By unanimous consent.

Hon. CYRUS MACMILLAN (Parliamentary Assistant to the Minister of National Defence for Air): Mr. Chairman, the hon. member for Lake Centre (Mr. Diefenbaker) asked respecting the amount of money paid in the past year for insurance premiums in the various schools; the amount paid by each school per year, and the names of the agents with whom the said insurance is placed. With the consent of the committee I would ask that this be placed on *Hansard;* it is quite long.

The CHAIRMAN: It is understood that the committee is giving unanimous consent that this be done.

Mr. MACMILLAN: The information follows:

The hon. member for Lincoln (Mr. Lockhart) asked for an analysis or details of those aerodromes included in the central western provinces, excluding British Columbia and Ontario. He asked for information particularly with respect to Alberta, Saskatchewan and Manitoba. This return is very lengthy and complicated, comprising four pages. With the consent of the committee I ask that it be placed on *Hansard*. It is as follows:

Schedule "A"

Department of National Defence for Air

Summary of commitments for construction of new projects for the purposes of training in the provinces of Manitoba, Saskatchewan and Alberta
Period April 1, 1941, to May 31, 1943

	Manitoba	Saskatchewan	Alberta	Total
B.C.A.T.P. units	$6,929,001 27	$ 1,878,870 51	$4,410,494 23	$13,218,366 01
R.A.F. units	1,371,765 12	8,990,294 15	4,539,020 61	14,901,079 88
Total	$8,300,766 39	$10,869,164 66	$8,949,514 84	
Grand total				$28,119,445 89

Note.—The amounts committed for R.A.F. units are recoverable from the government of the United Kingdom but they are included in this summary and the supporting schedules because reference has been made in the house to construction at places where R.A.F. units are located.

Note.—All the above amounts relate to construction for training purposes and nothing is included for construction for the purposes of defence.

Schedule "B"

Department of National Defence for Air

Commitments for construction of new projects in the province of Manitoba
Period April 1, 1941, to May 31, 1943

	Aerodrome development	Works and buildings development	Total during period

Note.—Where no amount appears under "Aerodrome Development", commitment for such development was made before April 1, 1941, excepting in the case of No. 3 Manning Depot, Edmonton, for which no aerodrome is required.

The hon. member for Qu'Appelle (Mr. Perley) inquired about the procedure in settling estates of deceased members of the air force. The answer to this question is long. However, I suggest it should be placed on *Hansard,* because hon. members will doubtless be asked questions of a similar character. These four pages—

Mr. GRAYDON: Mr. Chairman, I can see many reasons why this information should go on *Hansard,* with unanimous consent. But if it does, it should be understood that if, after having perused this information, hon. members wish to ask supplementary questions, they may be permitted to do so.

Mr. POWER: I agree to that.

Mr. MacINNIS: Mr. Chairman, I am afraid we are embarking on a dangerous precedent in putting material of this kind on the record, without first having it read. In the past we have accepted tables, and that sort of thing; but my understanding since I came to this house thirteen years ago has been that matter of this kind was not to be put on the record without its being read. I know that in the United States congress complete speeches may be put in without being read, but that has never been done here. I do not think it would be wise to depart from the practice which has been followed for so long.

The CHAIRMAN: The point of order raised by the hon. member for Vancouver East is well founded. There must be unanimous consent before material can be placed on the record.

Mr. MACMILLAN: As I shall not be able to read this in ten minutes I shall leave it for another time. The hon. member for Davenport (Mr. MacNicol) asked if the publication *Wings* pays for itself. It does not. The monthly revenue more than covers the purchase of materials and the typesetting that is done by a civilian firm. In effect, the only public expense is for salaries of service personnel and for the shipping of the paper to the stations. It is still a new venture and has every right to expect that, as it develops, expenditures will be reduced. The hon. member for Qu'Appelle asked about the cost of publishing *Wings.* The total cost is $1,487 a month. The revenue for the first three months was $540 a month. The monthly deficit is $947 at the present time. The cost is made up of $346 for materials; $112 for typesetting; $265 for shipping; and $764 for editorial staff; or a total of $1,487.

The hon. member for St. John-Albert (Mr. Hazen) asked if buses are attached to the Pennfield Ridge station to take personnel to the city. Buses are not attached to this station to take personnel to the city. Saint John is thirty-nine miles from the station, and a civilian bus service is in operation. He asked also if orders have been issued to restrict the use of staff cars. The answer is, yes. The King's Regulations and Orders for the Royal Canadian Air Force, Canadian air publication No. 23, gives specific instructions with regard to restricting the use of staff cars. Orders are issued periodically with regard to this procedure.

The hon. member for Prince Edward-Lennox (Mr. Tustin) inquired about the cost of posters. One hundred and fifty thousand posters, size twenty-five by thirty-eight inches, were produced at a cost of $25,302, or, roughly, seventeen cents each. Twenty thousand posters in French were produced at a cost of $6,000. Fifty thousand posters in connection with recruiting for the women's division were produced at a cost of $6,900, or, roughly, fourteen cents each.

The hon. member for Peterborough West (Mr. Fraser) asked whether helicopters can land on water. They can be fitted with flotation bags which will permit them to be so landed.

The hon. member for York West (Mr. Adamson) asked if the Jacobs engine has been satisfactory. Since the original teething troubles were overcome, the Jacobs engine has given good satisfaction. A recent survey has shown that accidents on account of engine failure in aircraft fitted with Jacobs engines occur at a rate of only one in about twenty-nine thousand hours of flying, a rate which compares favourably with other engines. I think these are all the questions I can answer before eleven o'clock.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Wednesday, June 23, 1943

The house met at three o'clock.

POST-WAR RECONSTRUCTION

Second report of special committee on reconstruction and reestablishment.—Mr. Turgeon.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

CLOSING OF PAPER MILL

Mr. DORION:

1. Have the paper mills at Riverbend, Jonquiere, and Kenogami, been shut down?
2. If so, (a) by whose orders; (b) on what date; (c) for what reasons; (d) for how long?
3. To whom do these mills belong?
4. By whom have they been operated?
5. By whom is the electric power furnished for each of these mills?
6. Do these mills receive any compensation while shut down? If so, how much, from whom, and for what reason?

Mr. ABBOTT:

1. The three mills have been partially shut down on a number of occasions since September 1, 1942, and completely shut down on one occasion.

2. The partial shut downs were caused by curtailment of power, repairs and holidays. The Riverbend mill was also shut down at various intervals during the month of January, 1943, and up to February 3, owing to the storm conditions causing car shortages in that area.

On April 7, 1943, the newsprint administrator was notified by Price Brothers & Co. Ltd., that the Riverbend mill had gone out of operation at 10 p.m. on April 6, 1943, and the Kenogami mill at 8 a.m. April 7, 1943, due to a walk-out on the part of the workmen. The Jonquiere mill was similarly shut down. These shut downs lasted until April 26, 1943.

3. The Riverbend, Jonquiere and Kenogami mills belong to the shareholders of Price Brothers & Co. Ltd.

4. The Riverbend and Kenogami mills have been registered with the newsprint administrator as being operated by Price Brothers & Co. Ltd. The Jonquiere mill is operated by the same company.

5. According to information received from Price Brothers the electric power for these mills is supplied by the Saguenay Power Company and from plants owned by Price Brothers & Co. Ltd.

6. No decision has yet been reached as to whether the Kenogami and Riverbend mills will be entitled to receive any compensation while shut down and no definite settlement has yet been made with the mills in connection therewith. The Jonquiere mill does not receive any compensation while shut down.

*BRITISH COLUMBIA CANNED SALMON

Mr. FRASER (Peterborough West):

1. Will British Columbia canned salmon be released to the trade this year for home consumption?
2. If so, how many cases will be released?

[Mr. Macmillan.]

Mr. BERTRAND (Laurier): There will be 200,000 cases of salmon of 48 pounds each released for domestic consumption this year.

WARTIME PRICES AND TRADE BOARD—HALIFAX RENTAL ADMINISTRATION

Mr. BLACK (Cumberland):

1. Is Mr. Joseph F. McManus, Halifax, Nova Scotia, employed by the wartime prices and trade board as rental administrator?
2. If so, what is he paid for, (a) salary; (b) expenses?
3. What offices does he occupy, what is paid for rental, and to whom is such rental payable?
4. Are any ex-service men employed at this work at Halifax? If so, what are their names?

Mr. ABBOTT:

1. No. Mr. Joseph F. McManus, who is the chief assessor for the city of Halifax, has been loaned to the rentals administration by the municipal council for part time to act as a rentals committee of one man for the city and district of Halifax. The functions and responsibilities of this committee are to fix, under the authority of the rentals administration, the rates charged to occupants of boarding houses and rooming houses in that city.

2. (a) Mr. McManus has received an allowance of $100 a month up to May 31, which has been reduced to $50 a month because the bulk of the work has been completed.
(b) None.

3. He uses part of the regional office of the wartime prices and trade board and no additional rental is involved.

4. See answer to question 1.

*CANADIAN ARMY—OVERSEAS REINFORCEMENTS

Mr. ROY:

Considering that the references mentioned by the government, on June 7, in answer to questions regarding the number of divisions available as reinforcements overseas, do not disclose the facts sought in the said question, why is not this information given to the house?

Mr. MACDONALD (Halifax): In answer to this question, I would say that it is considered that the information sought was fully covered in the references listed in the answer tabled.

OIL DEVELOPMENT IN FORT NORMAN AREA

Mr. HANSELL:

1. Is there any portion of country in Canada's Northwest which is under the control of the United States army, and if so, what portion of territory, and what are the boundaries?
2. Is there any war-time oil development taking place in the Fort Norman area, and if

so, how many oil wells are being drilled, and is such development being done under Canadian or American military authorities?

3. Is a pipeline being constructed in any part of this territory, and if so, is this being done under control of Canadian or American military officials?

4. If a pipeline is being built, what is the extent of this pipeline?

5. If war-time oil development is taking place in this territory, is equipment and men being supplied by Canadian or American authorities?

6. Have oil rights been sold or leased in this territory; if so, to whom?

Mr. MACKENZIE KING:

1. There is no portion of Canadian territory under control of the United States army.

2. The answer to the first part of this question is in the affirmative, but it is not in the public interest that the number of wells should be disclosed. The project is being carried out by the United States army with Canadian approval and cooperation.

3. The construction of a pipeline is part of the project mentioned in the answer to No. 2.

4. It would not be in the public interest to answer this question.

5. Both.

6. For many years the Northwest Company, a subsidiary of Imperial Oil Limited, held five leases and one permit obtained under departmental regulations authorized from time to time by order in council. The wells on these have been producing oil supplies for use in the Northwest Territories. These leases and permit now stand in the name of Imperial Oil Limited and that company has obtained thirty-six permits under regulations authorized by order in council P.C. 742, dated January 28, 1943.

QUESTIONS PASSED AS ORDERS FOR RETURNS

SELECTIVE SERVICE—COAL MINING INDUSTRY ADVISORY COMMITTEE

Mr. CARDIFF:

1. When was the coal mining industry advisory committee to national selective service formed?
2. Who comprised said committee, and what interests in the industry did each member represent?
3. Upon what dates did said committee meet with the minister or deputy minister of labour, or officials of national selective service?
4. Was a draft of order in council P.C. 4092 submitted to said advisory committee before it was approved by council?
5. If so, was said draft unanimously approved by said advisory committee?
6. Subsequent to date of said order in council, did any member or members of said advisory committee tender their resignation from said committee?
7. If so, who so resigned, and what were the reasons given for such action?

Mr. MARTIN: Return tabled.

COAL PRODUCTION, EXPORTS AND SUBVENTIONS

Mr. HANSELL:

1. What is the total tonnage of coal produced by each province in Canada for each of the years 1939 to 1943?
2. What is the total tonnage of coal exported, and to what countries, for each of the years 1939 to 1943?
3. What are the total amounts paid to each of the provinces by way of subventions for the movement of coal for the years 1939 to 1943?
4. What amounts, and to whom or what firms, were paid by way of subventions for movement of coal for the year 1942?

MOBILIZATION ACT—"R" RECRUITS

Mr. GREEN:

1. Of the number of "R" recruits shown at page 3089 of unrevised *Hansard* for the present session as having been accepted in the various military districts, how many, by districts, were subsequently discharged or released from service?

2. What were the various grounds upon which they were discharged or released, and the numbers upon each ground, by military districts?

MOTION FOR PAPERS

AIRCRAFT AGREEMENTS—MANITOBA

Mr. DIEFENBAKER:

For a copy of all agreements between the government of Canada and each of the following companies: MacDonald's Aircraft Company, Midwest Aircraft Company, and Standard Machine Works, each being located in the province of Manitoba.

WAR PLANTS

PROPERTY DAMAGE CAUSED BY EXPLOSIONS

On the orders of the day:

Mr. LIGUORI LACOMBE (Laval-Two Mountains) (Translation): Mr. Speaker, I wish to direct a question to the hon. Minister of Munitions and Supply (Mr. Howe) or, in his absence, to his parliamentary assistant, the hon. member for Stormont (Mr. Chevrier). Has the minister heard that, in the parish of St. Louis de Terrebonne, the ceiling of a church has been demolished by explosions in a war plant of the district and that damages have also occurred in the parish of St. François de Sales? What does the government intend to do to avoid such damages in the future?

Mr. LIONEL CHEVRIER (Parliamentary Assistant to the Minister of Munitions and Supply) (Translation): Mr. Speaker, the hon. member has not notified me of his intention to ask this question. However, I may say to him...

Mr. SPEAKER: Order. Perhaps the hon. member will explain whether this is a question that should be asked on the orders of the day or whether it should be placed on the order paper.

Mr. CHEVRIER: I think there is no doubt that it should not be asked on the orders of the day. It is a question which concerns damage alleged to have been done in the parish of Terrebonne in connection with tests being made by the inspection board of the United Kingdom and Canada.

JUDGES

PRESS REPORT AS TO STATEMENT OF FORMER MEMBER OF PARLIAMENT

On the orders of the day:

Mr. T. L. CHURCH (Broadview): Since no one else has seen fit to do so I should like to direct a question to the attorney general relating to a dispatch appearing on page 4 of the Toronto *Globe and Mail* of this morning. A former member of this house, an old parliamentarian and a lady with a keen sense of humour, is alleged to have stated in Kenora last night that "she had never met a progressive judge" and that "judges are all political heelers or they would not be judges." I am aware of the parliamentary rules, but I want to say that many of these overworked judges have lost their sons in this war, and I think some statement ought to be made in this connection by the Minister of Justice.

Hon. L. S. ST. LAURENT (Minister of Justice): My attention was directed to this short dispatch just a few moments ago. Certainly it is regrettable that declarations of this kind should be made by or attributed to persons so well known as Miss Macphail, who for a number of years was a member of this house. The statement is as unfortunate as it is unfounded. Declarations of this kind can have no other effect than to diminish the respect of the people for the administration of justice in this country, and as such they are most deplorable. I shall direct the attention of the censors to this dispatch, and see if arrangements cannot be made that publicity will not in future be available for matters of this kind.

Mr. CHURCH: The censors should have stopped it.

CANADIAN ARMY

REPORT OF COMMITTEE INQUIRING INTO MEDICAL SERVICES OF ARMED FORCES

On the orders of the day:

Mr. J. J. McCANN (Renfrew South): I understand that some months ago a committee was set up to inquire into medical services in Canada, and more particularly medical services in the armed forces. Has the report of that committee been received and, if it has been received, will it be tabled?

Hon. J. L. RALSTON (Minister of National Defence): I do not think it has been received yet; it has not been brought to my attention. I understood that it was in course of preparation and may be expected very shortly.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Tuesday, June 22, consideration in committee of a resolution to grant to his majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

DEPARTMENT OF LABOUR

Hon. HUMPHREY MITCHELL (Minister of Labour): Mr. Chairman, the man-power situation in Canada has been much in the public mind in recent months and has been the subject of considerable debate in this chamber. It has been charged from across the floor that there is a man-power "muddle" in Canada, yet one hears few constructive suggestions which would help the government to improve matters. In my opinion, and I believe the opinion of a great majority of this house, we have the best possible man-power policy that can be devised. I say that having in mind all we are doing to help win this war, our limited population, the vast territory over which this population is spread, there will be widespread agreement with this statement.

Mr. GRAYDON: Not very widespread.

Mr. MITCHELL: Not as far as my hon. friend is concerned, of course. No apology need be made for the selective service programme of Canada. There are and will continue to be labour shortages, emergency conditions will arise which will necessitate emergency measures, but we are engaged in a total war and things cannot be as normal as in peace time. In fact if we did not have labour shortages we could not claim to be waging total war. Of course we have a man-power problem in Canada. We will have it for the duration of the war. As our main concern is the provision of adequate fighting forces there must of necessity be improvisation and adjustment of the available forces for work on the home front. Hundreds of thousands of our finest men have joined the

navy, army and air force. Thousands of women also are in uniform. We have the greatest combined fighting forces we have ever had in our history.

The strength of our armed forces alone is enough to create a man-power problem on the home front. But in addition we have a huge number of men and women working in our war plants. This naturally has led to shortages in agriculture, mining, fishing and timber operations and in other industries closely associated with our war effort. You cannot take five from ten and still have ten. That is elementary.

Hon. members should keep uppermost in mind the magnitude of our navy, army and air force and the fact that our industrial output and food production is now the greatest in our history. It must be admitted that this is a wonderful achievement by the Canadian people.

The leader of the opposition has stated that—and I quote—"the problem of man-power in Canada is the major issue facing the Canadian people." All warring countries have man-power problems and we in Canada are striving to meet our problem in the most effective way.

In a progress report on man-power issued by the office of war information of the United States, No. 1844, there are several paragraphs of interest to us in discussing our situation.

I quote:

> Evidence that shortages have been met so far lies in the fact that production has been maintained and increased.

And further:

> Mere statement of the main phases of man-power prove it is a national problem of the utmost importance. More advanced over-all programming might have headed off many of the dislocations and difficulties that harass us now—but the solution of man-power problems, it must be emphasized, is almost entirely local, in the hands of every citizen, every community.

I would like the house to note this official view in Washington:

> National Service Act or not, man-power problems will be with us throughout the war and after. We will meet them, as we have met those so far, community by community, plant by plant, through better use of workers, training the untrained, by eliminating the causes of wasteful turnover and absenteeism and by working harder for longer hours, up to the maximum of efficient production. Our needs for munitions, essential civilian goods and food will be met, because they must be met, but only by hard and unremitting work.

That is the end of the quotation, Mr. Chairman. I submit in all sincerity that we have been striving since early in the war to grapple with our problems in much the same way as our good friends to the south of us.

To-day in Canada 5,100,000 men and women out of a total population of 8,720,000 aged 14 and over are in the armed services or at work. That is almost 60 per cent of those aged 14 or over. It is a good record. It is something to be proud of.

I shall lay on the table and request permission to publish in *Hansard* various statistical tables. One of the most important of them breaks down Canada's total population aged 14 and over. This table shows the distribution of that population by sex, according to those in the armed forces, those at work and those not at work. It gives comparative figures for August, 1939, June, 1941, and January, 1943, the distribution for the last two dates being shown as between civilian employment and war employment. This table will show the house that since the start of the war there has been an increase of about 1,000,000 in the number of persons in our forces and at work; that we have to-day a total of 1,700,000 in the armed services and our war plants and associated industries; that in addition we have 2,100,000 persons in agriculture and essential civilian employment. These groups include 70 per cent of all males in Canada 14 years and over.

Mr. DIEFENBAKER: Are those figures the result of a survey?

Mr. MITCHELL: My hon. friend may ask questions when I am through. I shall be quite prepared to answer.

The table further indicates that during the year and a half ended January 30, 1943, there was an increase of 915,000 in the number of persons in the armed forces or war industry. Meanwhile there was a decline of 92,000 in the number of those engaged in civilian employment which largely represents a drain of man-power from work unnecessary in wartime.

Our man-power policy is quite clear. It is to provide the greatest possible number for our armed forces, while at the same time supplying the necessary men and women for our war industries, farms, base metal mines, lumber camps, railways—inland and sea-going shipping.

To meet this problem we have diverted men and women from low to high priority industries, according to their skills and physical strength, without depriving any young men or women in this country from the privilege and honour of serving "voluntarily" in the armed forces of this nation, with the single exception of coal mining.

Because of the great increase in our army of workers we must maintain more of certain civilian services than would otherwise be

needed, such as manufacturing, trade, distribution, transportation, communications and construction of homes. But through controls administered by the wartime industries control board, wartime prices and trade board and selective service there has been a sharp drop in the employment of persons engaged in the production and sale of things we can do without until the war is over.

The commendable desire of our young men and women to volunteer for service in the navy, army and air force naturally led to shortages of labour for the jobs at home. These shortages have been added to by the thousands of men called up for service in Canada under the National Resources Mobilization Act. In addition to the drain of man-power into the armed services, the movement of men and women into war plants creates difficult problems with which we are dealing every day.

A year ago—in March, 1942—we placed restrictions on the exodus of man-power from the farms, we also restricted employment of able-bodied men and women in certain occupations by requiring government permits. These controls were tightened in June, 1942, when order in council P.C. 5038 was passed by which among other things and subject to certain conditions, no employer can take any person into employment without notifying a local national selective service office. And in August, 1942, to establish more extensive controls over employment than those in force at the time, the national selective service regulations were enacted by order in council P.C. 7595.

We rapidly expanded our employment office organizations, because that is the very basis of our policy. It consists now of 216 offices and a staff of 4,400 against 75 offices and a staff of 425 in 1940. This will give hon. members some indication of the expansion of the placement machinery under the jurisdiction of the Department of Labour. On February 1, 1943, in order to amend and consolidate the various orders and regulations affecting man-power we adopted the national selective service civilian regulations as covered by P.C. 246.

On April 2, 1943, we secured authority by order in council 2665 for the compulsory transfer of persons to more essential jobs. The order covers single men 19 to 40 years of age and married men 19 to 25 years of age, the classes designated under the call-up regulations.

Under the authority given to the minister two orders have been made covering transfers from specified industries and occupations. The purpose is to assure that men found not fit for military service should do important work at home, not be left in non-essential occupations. These orders are the logical sequence to the system of call-ups for army service in Canada. Men now are to be called for vital civilian jobs to fill in the gaps in our production programme.

As the Prime Minister told the house on May 17, the production of coal officially has been declared a national emergency. A shortage of labour in coal mining has been accentuated by the greatly increased demand for coal in war industries. Last October we arranged to have coal miners receive special consideration for postponement of military service and instructed national selective service officers not to issue any permits for coal miners to seek any other employment. Then we arranged to have coal miners granted leave from the armed services in Canada if they were willing to return to the mines. Subsequently we established the emergency coal production board after full consulation with the national selective service advisory board and the man-power advisory committee of the coal industry.

We have issued an order requiring all ex-coal miners to return to coal mining regardless of their present occupations and are guaranteeing them full employment. We have also, in this same connection, authorized the employment of women in surface operations at the mines.

While all means of locating ex-coal miners are being used, we should not overlook how much the country owes to the men who have been mining our coal. By their exertions they have done their best not only to maintain coal production of the individual, but to increase it with marked success. In continuing at their hazardous occupation these men are making their greatest contribution to victory. Most assuredly they deserve the nation's thanks. I would like here to appeal to union officers in the coal mining industry to give the government and the people of Canada full support in this grave emergency. We invite cooperation and we need it.

Within the past week, some further measures have been taken for the direction of man-power to essential employment, in the light of present conditions. These are:

Increased control has been taken over the employment of youth 16, 17 and 18 years of age, by making persons of these ages subject to compulsory transfer orders in the same manner as men in the age groups liable for military service.

To provide man-power for fuelwood-cutting operations in view of the threatened fuel-

wood shortage for the coming winter, selective service officers have been authorized to give compulsory direction for the employment of men between the ages of 16 and 65 in this work. A similar provision has been made for direction to employment in fishing and fish-processing, in order to meet the pressing needs of the fishing industry of the maritime provinces and to bolster production of this necessary food.

Following upon representations from the provincial departments of education, provision has been made by amendment to selective service (civilian) regulations to retain in the teaching profession the services of teachers presently employed in schools, colleges, and universities which are not operated for gain. The new regulation forbids the employment of a bona fide teacher in any other occupation without the issuance of a special permit from a selective service officer, which permit will be issued only in accordance with conditions and directions approved by the Minister of Labour.

We have a priority plan for certain munitions industries—assuring that military call-ups would not adversely affect vital production. Care has been taken to see that there has not been abuse of this arrangement. It will be appreciated by the house that the contribution being made to the war effort of Canada by our munitions plants is of a character that will stand tremendously to the credit of our country years after the war is over. We had to keep this in mind while at the same time giving prime consideration to seeing that men were made available for the armed forces. That was our first task and I think it is the demand which was made in this house of members of the official opposition. It is axiomatic, however, that without the necessary munitions of war it would not help to have a large force of fighting men—unless we were to depend on others to supply them with equipment.

We also established a priority list which gave preference to labour needs in base metals and other very essential occupations. The priority arrangement has been the heart of our selective service system.

The question of farm labour has already been discussed in this house. Much ground was covered on June 3 when the house adjourned the regular order of business to deal with the problem. At the time I expressed disappointment that this phase of the man-power problem should be picked out for separate discussion from all others. If we are to use our man-power resources with the greatest possible efficiency we must look at the problem as a whole and not by individual industries or occupations.

We do not need to be ashamed, Mr. Chairman, of the way we have handled the agricultural phase of our man-power problem. Rather can we feel satisfied with what has been done. Many of the criticisms which have been made during discussions of farm labour have been based on what some hon. member has heard, or on some letter which he has received, or on individual circumstances which have come to his attention.

We must view the agricultural labour problem as a national one, and as part of the total war effort of this country. Also we must appreciate that we can point to a record of achievement all over Canada in farm production which has even exceeded the fondest hopes of my colleague the Minister of Agriculture.

Some hon. members criticize the government because men and women have been allowed to leave the farms for service in the armed forces or to work in war industry. If we had not permitted this exodus from agriculture, the man-power resources of this nation would not have been used anywhere nearly as effectively as they have been used.

Coincident with the drain of man-power from agriculture during each year of the war, production on our farms has continued and is still continuing to soar. This actually represents a great increase in the efficient use of our man-power, when we find fewer people doing more work.

It is true, Mr. Chairman, that older people on the farms have been working harder than ever before. It is true that some farmers have been labouring under the additional difficulty of being unable to secure what new mechanical equipment they may need. It is also a fact that their task has been made harder by many war-time restrictions which they find irksome and annoying. But Mr. Chairman, is not this evidence of our waging total war? Can any of us escape this, should we want to, if we mean what we say when we ask for an all-out effort? Let us be frank and honest about this question. We should be working harder, we should be tired, we should be working under added difficulties if we truly are engaging in total war. Farmers knowing this have attained a very high standard, one at which we might all well aim.

While my colleague the Minister of Agriculture is more familiar with the detail than I, we find that in this fourth year of war, more dairy products are being raised than

ever before, larger numbers of live stock are on farms than ever before, greater flocks of poultry are being kept than ever before.

According to the bureau of statistics "Intentions to Plant Survey", farmers planned this spring to sow more acres to field crops than ever before. It is true that in many areas farmers' plans have been seriously disrupted by the weather, and, regrettable as it is, hon. members cannot hold me responsible for much of the land being under water for the whole month of May.

Mr. GRAYDON: We will let you off on that.

Mr. MITCHELL: Thank you, but that is about the only thing you will let me off on.

Mr. HANSON (York-Sunbury): You always take the credit when there is a good crop.

Mr. MITCHELL: What our farmers have done is to produce more and more with fewer people. This record of achievement by our farmers, their wives, their children, and their hired men and women will be read some day as one of the glorious chapters in our history. I should like as Minister of Labour to pay special tribute to the hired men and women on the farms. They are too often forgotten in plans for social betterment. Their lot is not an easy one or an exciting one. They are doing a grand war job to-day for this nation.

May I say this to my hon. friends, that when Mr. Churchill gave his rallying call to the British people when they had almost nothing left to fight with but their bare fists, he did not set up a wailing wall but gave them leadership.

Mr. HANSON (York-Sunbury): That is what we have never had here.

Mr. MITCHELL: Oh yes, and I think it is proven conclusively by the figures I have given on the farm situation. You cannot expect our farmers, if they are approached in a negative way, to rise to the occasion when a special effort is required, any more than you can expect it of people engaged in any other industry.

Men and women have left the farms by the hundreds of thousands for the armed services and war industries. Those left at home have done and are doing a bigger job than ever.

I have not said these things, Mr. Chairman, to suggest that all is well and that there is no problem on the farm labour front. We know that this problem is great and full of difficulty. But I do implore members of this house to examine and discuss this problem from a national viewpoint, and to consider it as part and parcel of the total war effort of this nation.

Neither would I wish it to be inferred from what I have said that we could go on for ever taking more people out of agriculture and still go on producing more and more. We obviously could not. It is more than a year ago since the government took steps to protect the agricultural labour supply by placing restrictions in the way of men and women leaving agriculture for other civilian employment. It was evident at that time that such restrictions were necessary if our war effort was to be kept in proper balance. The reasons were made abundantly clear by the Prime Minister in his address to this house in March, 1942, on national selective service policy. As we have progressed and have gained experience, amendments have been made to the original order, so that the effectiveness of the agricultural freezing regulations would be increased.

If any hon. member who is a farmer is sceptical about our meaning business in the administration of this feature of our regulations, he might go into an employment office and try to get a permit to leave agriculture. That is the best test, I think, of the effectiveness of the policy. Undoubtedly there has been some evasion of this regulation. Even to-day there will be individual cases of men getting away from the farms when they should have been refused permits. But in the main, this policy has proven effective. It is safe to say that there are thousands of men and women now in agriculture who would not be there now had this regulation not been administered in a resolute way.

In stabilizing labour in agriculture the government had to face the fact that during some periods of the year farm man-power can be more productively employed elsewhere. Our civilian man-power regulations enable a person, under certain conditions, to accept employment in another essential industry when he can be spared from agriculture.

But selective service went further than merely enabling such persons to take other work. It undertook an intensive appeal last fall to all farm workers not needed in agriculture during the winter months to work in other essential industries. In particular they were urged to go to logging, saw mills, coal mines, and base metal mines, where men were urgently needed.

This appeal was the first large scale attempt by national selective service to direct man-power from one industry to another. Its success was due, to a large extent, to the excellent cooperation we received from the interested provincial government departments. As a result of it, farm man-power which might otherwise have been relatively idle helped to meet the growing shortage of labour in these other strategic wartime activities.

The following table shows the distribution of temporary permits issued to farmers by regions, as at May 27, 1943, and the number of permits which were actually cancelled in order to ensure return to agriculture:

Province	Male	Female	Total	Permits cancelled
Maritimes...	16,379	368	16,747	2,805
Quebec.....	38,428	1,149	39,577	1,394
Ontario.....	27,187	1,907	29,094	8,397
Prairies.....	15,043	482	15,525	8,822
British Columbia..	3,782	18	3,800	2,542
Total....	100,819	3,924	104,743	23,960

It will be seen that the number of permits cancelled falls far short of those issued. The great majority of these did not require specific cancellation because the farmers returned to agriculture on their own account before or at the time when the permits expired.

The main reason for this as given by our offices was lateness of the season in many areas when return of men to the farms at the expiry date of the permits would have resulted in wasted time. There were a few permits not cancelled for reasons of health, on compassionate grounds, or because of the extreme importance of the work being done at the time of the expiry date.

Altogether it has been estimated that 175,000 from farms worked in other industries during last winter. The table shows that only 104,819 temporary permits were issued. The difference is explained by the fact that many working in other industries outside of urban centres were employed for less than sixty days. Under these circumstances permits are not required under our civilian regulations. I am sure hon. members will agree that this seasonal movement of man-power between industries is sound, and in keeping with climatic and economic conditions in this country.

Mr. HANSON (York-Sunbury): It always has been.

Mr. MITCHELL: Yes; I have just said so. But it has to be given direction. My hon. friend will agree with me in that. There has admittedly been some loss of workers but in so large a movement as this, there are bound to be some errors of judgment. In the main the policy has worked well and is now being closely integrated into our whole labour programme. This I submit is making selective service work.

I would like now to refer for a few minutes to the selective service mobilization regulations affecting agriculture. In March, 1942, these regulations were amended to strengthen the policy of stabilizing employment in agriculture. This amendment incorporated a provision for the postponement of farm workers distinct from the method to be used in granting postponements to all other workers, no matter how high the priority of their work might be.

The new regulations provide that on receipt of an application from a farm worker, the mobilization board was required to grant postponement, "until further notice" unless the board was satisfied that the worker was not essential to agriculture. In other words, the boards must prove that farm workers are not essential whereas in the case of all other workers they themselves have to prove to the boards that they are essential. Essential farm workers get postponement "until further notice", while postponements for all other workers at present are for not longer than twelve months for the first call, and for not longer than six months for subsequent calls.

We freely admit that there have been individual cases decided in such a way as to merit criticism. More might have been done to make clearer to the farmers themselves the significance of the special provisions in the regulations which affected them.

An hon. MEMBER: Agreed.

Mr. MITCHELL: I am glad someone agrees with something I have said. It should be said, however, that in connection with our appeal made last fall to farmers to work in other industries during the winter months, if they could be spared from agriculture we distributed very widely a copy of a little pamphlet called, "A Message to Farmers." This book explained the farmers' position in respect to military postponement and that their status would not be affected if they engaged in essential work away from agriculture during the seasons of the year when they could be spared.

But again, Mr. Chairman, we must not base a final conclusion, as to the efficiency with which these regulations have been administered, on individual cases without at the same time examining the over-all result. Before May, 1942, 23·4 per cent of the applications for postponement for farm workers were refused. Out of 20,887 applications only 15,996

were granted. Since May 1942, only 9·9 per cent of the farmers' applications for postponement were refused. There were 93,900 applications up to April 16, 1943 and 84,595 were granted.

It must be remembered that the basis for granting or refusing postponement for agricultural workers making application is essentiality to agriculture. There is no blanket postponement for farm workers. Since the interpretative letter was sent out on February 1, 1943, a decided improvement has resulted. As evidence of that improvement, I wish to quote a few excerpts from communications which I have received recently from provincial ministers of agriculture. Hon. members opposite from Saskatchewan have perhaps been most vocal in their criticism of this particular question; and I am not quarreling with that.

An hon. MEMBER: We have reason to be.

Mr. MITCHELL: I said I am not quarrelling with that.

Mr. GRAYDON: That makes it unanimous.

Mr. MITCHELL: My hon. friend is making it unanimous?

Mr. GRAYDON: I said you two had made it unanimous.

Mr. MITCHELL: I say, as evidence of the improvement I wish to quote a few excerpts. Perhaps hon. members will listen carefully as I quote an excerpt from a telegram dated May 19, which I received from the Hon. J. G. Taggart, Minister of Agriculture in Saskatchewan.

Mr. GRAYDON: We can take that as read.

Mr. MITCHELL: I quote.

Clarification of mobilization regulations has greatly assisted agriculture—

My hon. friend says we can take that as read. I think the vindication of this telegram is in the fact that the whole of the wheat crop in Saskatchewan is under the ground, and that, in addition, they took off three million acres left over from last year. There is the vindication.

An hon. MEMBER: They don't like to hear the truth.

Mr. MITCHELL: I have just told them the truth. I was in close touch with the situation last fall and it gave me a great deal of worry, but unfortunately I could not control the weather.

Mr. HANSON (York-Sunbury): That is too bad; you control everything else.

[Mr. Mitchell.]

Mr. MITCHELL: May I read the telegram:

Clarification of mobilization regulations has greatly assisted agriculture. Postponements granted since February 1st major factor in seeding crops on farm affected. I believe present policy will result in labour being generally available for year 'round work but severe shortage at harvest time possible.

Several hon. members from Alberta have complained about the performance of the board in that province. Yet, since March last year, 96·3 per cent of applications from Alberta farmers for postponements were granted. This figure speaks for itself.

The Minister of Agriculture for Ontario, Hon. P. M. Dewan, wrote to me on May 22. The following is quoted from his letter:

Clarification of the mobilization regulations has assisted very materially and latterly it seems to me the boards have done a very excellent job with reference to applications for deferment for farm boys.

The premier of Quebec, the Hon. Adelard Godbout, stated in his telegram, dated May 21:

. . . Expect great help will derive from clarification of mobilization regulations.

An hon. MEMBER: These are all from Liberals.

Mr. HANSON (York-Sunbury): Were these telegrams solicited or were they voluntary? It all depends.

Mr. MITCHELL: I will let my hon. friend answer that.

Mr. HANSON (York-Sunbury): I assume they were all solicited and all from political friends just to help the minister out. You know how the game is played.

Mr. MITCHELL: My hon. friend should know how the game is played.

Mr. HANSON (York-Sunbury): Yes, you bet I do. I am not denying it, and you should not either.

Mr. MITCHELL: The premier of Prince Edward Island, the Hon. Walter P. Jones, states in his telegram:

. . . clarification of mobilization regulations assisting agriculture.

We have in the past checked and will continue to check individual complaints, but I believe I have submitted evidence to prove that these regulations are being administered in a manner which should result in general satisfaction so far as agriculture is concerned.

I announced our farm labour policy in the house on February 26. One of the main features of that policy was to extend the basis of cooperation with the provinces, with farm

organizations, and with local agricultural committees. Three weeks after that policy was announced, every province had been visited by officials of the Department of Labour.

Mr. HANSON (York-Sunbury): Has the minister left the telegrams? Has he read all the telegrams he intends to read from ministers? I ask because I want to request the production of telegrams from ministers to the provincial authorities, to which these are answers.

Some hon. MEMBERS: Order.

Mr. HANSON (York-Sunbury): Yes, we are entitled to have the whole correspondence.

Mr. MITCHELL: My hon. friend is a grown-up man like myself, a member of the House of Commons, and he knows that all he has to do is to ask for that and he will get it under the rules of the house.

Mr. HANSON (York-Sunbury): I am asking for it now so that it will be available for this debate.

Mr. MITCHELL: Discussions were held with provincial agricultural authorities as to the best plan for united action. Farm labour agreements between the dominion and each province have now been negotiated and completed. Local, county, parish, township or municipal committees are now set up all over the country. Active farm labour programmes are under way. No province is excepted.

On June 3 I reviewed the substance of telegrams and letters received from the provincial ministers of agriculture. This can be found on page 3321 of *Hansard* and I will not take time to review these again, only to say that, without exception, the provincial agricultural ministers reported progress and expressed appreciation for the action taken by and the cooperation received from the Department of Labour.

Our farm labour policy provides for the payment of transportation of workers recruited for farm work so that they can be readily moved to where they are needed. This feature is written into all of the agreements. The policy also makes provision for the use of all miscellaneous sources of farm labour, such as conscientious objectors, prisoners of war, treaty Indians, high school and university students and women.

Mr. HANSON (York-Sunbury): Not Doukhobors?

Mr. MITCHELL: Well, we will come to that, too. Of course I shall hear from my hon. friend about Doukhobors.

Mr. HANSON (York-Sunbury): The minister will hear from my hon. friend to my left.

Mr. MITCHELL: Over three hundred treaty Indians were recruited this spring to finish the threshing in Alberta. Word has just come to us from Manitoba that about one thousand will be working on farms in that province during the summer and harvest time. Recruiting of women and student help is active in practically all provinces. Our universities deserve the nation's thanks for the way they have cooperated with your government.

One of the main objects of our compulsory employment transfer orders is to supply experienced help to farmers. Instructions have been sent to employment offices that single men, in the industries affected, who have had experience in farm work and who are physically fit, are to be directed to farms.

We know that the farm labour problem will never be completely solved so long as this war continues. If it were solved to the satisfaction of everybody, we could probably be properly accused of not using our man-power with the maximum degree of efficiency in an all-out war effort. Everything that we can conceivably do, and wisely do, will be done to assist farmers in securing help. Our efforts will not be relaxed.

As of May 25 last mobilization boards had postponed 4,747 men as Mennonites, Doukhobors or conscientious objectors. On May 1 the employment of men thus postponed was placed under the direction of alternative service officers attached to the employment offices of national selective service. The mobilization boards no longer direct the placement of the men they postpone as conscientious objectors. As of May 1 ,1,270 men were located in camps. Some 500 of these are under contract with the British Columbia government and are engaged in essential work on Vancouver island and the mainland. The remainder, approximately 770, were located at various points from Ontario west. Some think that these men should be placed elsewhere, especially in agriculture. They have been engaged in the production of wood, lumber and pit props for coal mines, and, quite aside from their essential forest fire protection activities on the Pacific coast, they have produced much needed lumber and fuel, both of which items have the highest priority. In any case, it is essential to maintain camp organizations for those who are either unwilling or not well trained to undertake useful work on farms or in industry.

Prior to May 1 mobilization boards had returned some 1,200 men from camps almost entirely to agriculture, and since May 1, approximately 250 men have been returned from camps, other than those on the Pacific coast, to agricultural employment, and an additional 50 men still in camps have started the production of pit props for coal mines in Alberta and British Columbia under our coal expansion programme. The number of men at camps has been reduced to a minimum, and, while individual cases may be dealt with, it will be necessary in future to place as many men in camps as are removed. An approximate summary of the position at the moment is that some 900 conscientious objectors are in camps with 500 of these especially engaged in Pacific coastal protection work under contract arrangements, leaving about 400 men located at seven interior camps from British Columbia to Ontario, making the average per camp about 60.

Considering the general distribution of conscientious objectors, approximately 3,807 are engaged in essential work—almost entirely agriculture—under the direction of alternative service officers, in addition to the 900 employed in essential work in camps. The idea that a large supply of labour for agriculture exists in the camps must be discounted, and I would like to point out that many more requests for the employment of conscientious objectors in agriculture and in industry have been received than can possibly be filled.

With regard to the distribution of conscientious objectors, mobilization divisions "A", London, and "J", Winnipeg, contain the largest number, and it is fair to say that they originate on farms where intensive agriculture is the rule. The number of conscientious objectors postponed in Quebec and the maritime provinces is small, and I believe not more that 50. During May one quite large camp in Ontario was closed, and 174 men were transferred to employment on farms and to the sugar beet area surrounding Chatham. In Manitoba also an effort is being made to organize the employment of conscientious objectors in such a way that the seasonal requirements of sugar beet production can be met.

It has been suggested that conscientious objectors be used in various industries where labour in scarce or in hospitals where it has been most difficult to maintain a supply of orderlies and other help or that there are a number of conscientious objectors who possess professional training or educational qualifications that are being wasted. A detailed examination does not support many of the suggestions made, and it is either not practical or in the national interest to meet some of the proposals put forward.

Among the whole group there are a few university graduates—

Mr. NICHOLSON: How many?

Mr. MITCHELL: Just a minute—as far as I am aware not more than ten, and efforts are being, and will be, made to place such men to advantage. However, even here there are difficulties since these men are not always prepared to undertake war work, and it is increasingly difficult to avoid doing so under the present conditions.

It should be remembered that the great majority are best fitted to undertake farm or camp work. A few hundred are not especially equipped, physically, mentally or by experience, to undertake hard work of any kind.

Where it is possible to place an individual to special advantage, whether it be in a hospital or in an industry, an attempt will be made to do so, I am sure, by alternative service officers, but sweeping generalities that do not take into account the numbers of men involved or the actual individual problems that must be met are not especially helpful to those charged with this responsibility.

To sum up, I am satisfied that agriculture is receiving distinct benefits from the utilization of the labour of conscientious objectors, and that the work being done in camps is valuable as measured in various ways including the amount of lumber, pit props and wood produced.

By closer direction and more detailed planning it may be possible further to increase the value of the work done at some camps or transfer a few more men from camps to seasonal work in agriculture, but on the whole the position with respect to this matter is good and is well organized.

I would like to say that, however much anyone may differ with the point of view or the religious beliefs of conscientious objectors, it would be difficult to complain of the amount of work these men are prepared to do or the enthusiasm with which they undertake it, especially when you consider that while engaged in camps they receive $15.00 per month plus board and lodging and while working outside of camps they receive $25.00 per month plus board and lodging. The balance of their earnings goes to the Canadian Red Cross Society as stipulated in order in council P.C. 2821, and since their employers must pay going wages although the men do not receive the benefit, their financial contribution to this good cause is considerable.

By order in council 2326 of May 10, 1943, we have decided to make use of the services of prisoners of war. We hope to employ many of them in selected types of agricultural work, in wood-cutting and mining. Hon. members will understand that use of these prisoners involves measures for public security and discipline of the prisoners. But the number we are able to use will be that much help in easing our problem.

Mr. GREEN: Would they be Germans or Italians, or both?

Mr. MITCHELL: All nationalities. Already we have some Germans working in the beet fields of Alberta. The employable men and women among the 21,000 Japanese evacuated from the protected area of the Pacific coast are being gradually placed in employment wherever they will be of most use in the war effort.

The production of foodstuffs has absorbed many thousands of these people, and will absorb many more this season. In every province from British Columbia to Quebec farmers are applying for Japanese labour, especially in regions where they proved themselves in this work last year. Our present sugar ration is partly dependent on the labour of 4,000 Japanese in 1942 and again in 1943 in the sugar beet areas of Alberta, Manitoba and Ontario.

The fruit growers of British Columbia and Ontario are using several hundred Japanese, and want many more this season. Over a thousand Japanese were employed last year in British Columbia, Alberta and Ontario in raising cannery crops—tomatoes, corn, beans, peas, etc.—and in the actual canning operations. Market gardeners, especially in southern Ontario, have found them very efficient labour. Dairy, poultry, tobacco, and grain farmers are applying for Japanese farm hands, and are finding them industrious labourers. In all, between 5,000 and 6,000 Japanese men, women and children are now working on Canadian farms.

In lumbering and fuel-cutting the Japanese are also filling an urgent need for labour. During the last winter, almost one thousand Japanese men were employed in logging camps and sawmills from the interior of British Columbia to northern Ontario.

A plan is now being developed between the Departments of Labour and of Munitions and Supply to use most of the remaining employable men in the Japanese housing centres of British Columbia in cutting fuel wood for the British Columbia market. Both lumbering and fuel-cutting operations using Japanese labour will be expanded during 1943.

Some 800 or 900 Japanese men are being used to build British Columbia highways of strategic and national importance.

In a wide variety of less important occupations, Japanese are proving themselves useful —as domestics, cooks, gardeners, restaurant workers, tanners, dry cleaners, truck drivers, construction workers, etc.—and, are satisfying the public requirements for such services, in various parts of Canada.

I have mentioned our system of priorities for labour. Classification, I think everyone will agree, is absolutely essential for the allocation of man-power to its most effective uses in the war effort. The minister's authority to classify industries, etc., is exercised by the labour priorities division in the labour supply branch of the Department of Labour. Consultation with the Department of Munitions and Supply and wartime prices and trade board is provided by regular meetings of an informal committee on labour priorities. A carefully worked out analysis of Canadian industries has been prepared as an industrial classification manual by the statistics branch of the Department of Labour. This manual serves as the basis on which industries are selected for designation with respect to essentiality. All industries are given one of four labour priority ratings, "A" meaning very high; "B" meaning high; "C" meaning low; and "D" meaning no labour priority. Occasionally the priority rating of an industry for men is different than for women.

On application to the priorities division and on recommendation of various associations and governmental departments, individual firms are considered by the priorities committee for special ratings. Members of the committee investigate the authenticity of claims and, where justified, the firms are specially named with a rating other than that of their ordinary industrial classification, depending on the proportion of essential production carried on by the firm.

Each local employment and selective service office is provided with, (a), an industrial card index which consists of a card for each industrial classification, showing the labour priority rating for the industry, and in some instances key occupations in the industry; (b) a list of named firms, which includes those establishments and construction projects which are considered individually by the priority committee and are assigned special ratings other than those of the industries under which the firms are classified.

Local offices are advised at once of priority revisions by the labour priorities division, after consultation with interested departments. On receiving an order for labour, local office officials decide the applicant's

priority rating by reference to this industrial card index or list of named firms. Available labour is referred to the highest priority vacancy for which it is suitable or qualified.

The movement of man-power between and within priority groups can be and is being checked by the quarterly employment survey report. The industrial classification manual is used as the basis for these reports.

There are of course frequent changes in our war production programme, and because of this our priority schedule is subject to revision from time to time. But generally speaking we have a good priority picture for our available labour.

Not long ago a report of our employment service division on unfilled job vacancies and unplaced applicants led to some criticism that we were not meeting the demands of vital operations. The report was based on information which is kept in our employment offices. The likelihood is that few of those listed as unplaced had been idle for long and that they would be referred to jobs within a matter of days from issuance of the report. There always are some not qualified to fill vacant positions or who are remote from suitable vacancies. It takes a little time to fit them into the most suitable places.

The figures of available jobs also need explaining. Employers are asked to estimate their requirements for a reasonable period ahead. Some are very generous in such estimates, not wishing to be short when the time of need is reached. These "deferred vacancies" inflate the figures and suggest an immediate shortage which does not always exist.

I would like the house to remember that the labour department is handling a placement undertaking in which we have had only about two and one half years' experience. Britain benefits by having placement machinery of thirty years' testing—the United States ten years.

The entire system of employment and placement has been revolutionized. The absolute freedom to seek employment and employees has been changed to a system of controlled placement through government agencies. It is to the credit of our working people and the employers that this necessary imposition of control has been accepted willingly and has met with full cooperation. The work of selection and placement may not be perfect but, as I have said, Canada was comparatively inexperienced in an undertaking of such magnitude.

The work of our employment and selective service offices steadily has improved and labour given increasingly effective direction to the most essential jobs. The volume of business of our employment service has increased 500 per cent within a year. The average weekly number of vacancies reported is 50,000 and slightly more than 50,000 applicants are registered and slightly less than that number referred to the vacancies.

When military men in the committee are told of the magnitude of the placement machinery to take care of 50,000 people, they will understand the problem confronting us, and more particularly that which has confronted us in the last six months.

Shortage of men in the base metal mines has been met by the transfer of gold miners. Employees of paper plants where operations were curtailed were also diverted to base metal mines. Halifax freight handlers were used in slack periods in fish processing plants. In British Columbia we dovetailed vegetable and fruit canning with fish canning.

Selective service has given special attention to the supply of men for lake navigation—realizing its importance in our war-time transportation.

We have done everything possible to see that more women were employed in war industries, and recently we undertook through our employment office to point out to women and girls the attractions and value of service with the armed forces. Between February 22 and April 29 our staff interviewed 12,815 women and 1,420 were referred to the armed forces. There were 10,917 who were not interested in this branch of the war effort. The number of women referred to vacancies other than the armed services—in the same period—was 87,825.

For the mother who must go out to work, the care of her children is a vital and often distressing problem. Her peace of mind requires assurance that the smallest children are in safe hands throughout the day and that the older ones have supervision after school hours. Only then can she give her mind fully to the job in hand. Some mothers have relatives or friends who can take care of their children during their absence but with the rise in the employment of women, this type of care often fails and time is lost while the mothers make other arrangements.

With these facts in mind the agreement on the day care of children was drawn up and is now in force in the two most industrialized provinces, Ontario and Quebec, and in both, provincial advisory committees have been set up. Committees, both provincial and local, are established on the same basis and include representatives of family and child welfare, labour, health and educational organizations

or authorities. Operation of the plan is under provincial direction, subject to the approval of the dominion government.

We now have fourteen nurseries, six in Toronto, four in Montreal and one each in Brantford, Oshawa, St. Catharines and Galt. There also are five after-school supervision projects in Toronto and one in Hamilton. The programme will be developed as the needs grow. Plans for nine after-school supervision projects have been approved. Plans for eighteen additional nurseries have been developed.

Mr. NICHOLSON: How many children are being cared for?

Mr. MITCHELL: I shall answer the hon. member when we reach the discussion stage. If I gave all the figures I have in my mind I would be here until Christmas. But I shall be glad to try to get the specific information my hon. friend wants.

Attendance must be maintained at a monthly average of not less than twenty per day, but it is unlikely that the numbers will fall below this level. Where fewer than twenty are to be cared for, arrangements may be made with local child caring organizations on a unit cost per day per child basis. Children may be admitted to any project whose mothers are working in non-war industries, provided that the total of such admissions does not exceed at any time twenty-five per cent of the approved maximum capacity of the unit and provided also that there are no unfilled applications in the hands of the committee for children of mothers working in war industries. This term "war industry" has been given a wide interpretation under the agreement and provides for many categories of workers.

The standards set up for war-time day nurseries were given very careful consideration by a committee representative of health, child welfare and education.

The dominion-provincial agreement in addition to day nursery care, provides for the sharing of the cost incurred in providing for the care of the school child. Care would include the provision of a hot dinner at noon with milk and biscuits before and after school and supervised play or handicrafts in the hours before and after the regular school day.

Last September we held a special registration of women, ages 20 to 24, and more than 258,000 registered. Of that number 58,000 were willing to take full time jobs and 23,000 part time work.

In the past twelve months about 426,152 women were placed in jobs by our employment offices. The number engaged in war work increased from 95,000 in February, 1942, to 248,000 at the present time. There are localities where the number of women prepared to work is greater than the demand. Through the diversion of men to more essential work this idle surplus will be reduced.

If I had unlimited time I would amaze this house by reciting the occupations in which women are now employed. I will simply mention that they are now employed in saw-mill operations, in the delivery of ice, in surface operations at the International Nickel Company's mines, and we are to use them at surface work in our coal mines.

As the war progresses there are changes in production requirements, greater emphasis being placed on the importance of a particular type of output by the war plants.

When selective service began just over a year ago the estimated man-power requirements for the ensuing twelve months were 100,000 for industry and 193,000 for the armed forces, a total of 293,000. In the twelve months, March 1, 1942, to March 1, 1943, the strength of the armed forces increased by more than 220,000 and the number of persons in war plant production and associated industries rose by 320,000. Hon. members will appreciate the problem created by this shift of so many from civilian jobs to the armed forces. I suggest that in some small measure this is an indication of the willingness of the people of Canada to lend their aid in these difficult times for the advancement of the war effort, in the broadest possible sense. It is to some extent a refutation of the criticism that has been made that we have a man-power muddle in this country. When you move 320,000 men and women, with all the detail that involves, into industry in a country the size of Canada, I think it must be agreed that in its very essence that is a gigantic undertaking.

During the twelve months following April 1, 1943, it is expected there will be a net increase of 127,000 men and 24,000 women in our armed forces, a total of 151,000.

Due to the successful conclusion of the Tunisian campaign and the consequent readjustment in our production programme of which the Minister of Munitions and Supply recently spoke in this house, it is not possible to give you a precise estimate of the man-power requirements of our war industries for this fiscal year. As of last February, however, the programme called for an increase of something like 20,000 men and 60,000 women in war plant production and associated industries.

The number engaged in agriculture will be maintained at a better level than heretofore through the exercise of our permit control system.

To meet the male man-power requirements, some will be obtained by a reduction in the number of those temporarily unemployed and of students. The natural increase in the adult population will provide about 55,000. The balance will be met by a curtailment of employment in the less essential industries and services.

Of the women needed for the armed forces and for essential industry, the large part will be obtained from the natural increase in population of about 60,000. We cannot expect to get a great many from less essential industries and services because preferably we shall take men from these fields. Therefore we must look to housewives and others not now working in urban areas to fill the gap.

I would like to emphasize to the committee that the figures I have given are net. Because of discharges and casualties the armed services will require a higher gross total of men and women.

Industry also, because of labour turnover and transfers from war production to the armed forces, from civilian to war production, will need a higher gross total. Selective service is confident of meeting these needs if the present trend of replacing men by women and girls in civilian employment continues and there is the necessary reduction in the less essential industrial and business operations.

As I have indicated, the more serious labour shortages are in mining, agriculture, logging and other primary industries. The jobs largely demand able-bodied men. The work is heavy. We are doing our best to solve the problem.

With the cooperation of the armed forces and industry and through our plan of compulsory transfer of men, the situation, I am sure, will be eased.

National selective service-mobilization regulations provide:

> that any employer may submit, at any time, for consideration by a mobilization board, a plan for the postponement of the military training of any group of its employees and a mobilization board may instruct any employer to submit such a plan if in its opinion such action is advisable.

Out of this provision we have developed not too recently an industrial mobilization survey plan. Basically the plan is to facilitate the orderly withdrawal of replaceable workers from essential industries into the armed services and to provide for their replacement with the least possible disturbance to production. The survey requires the employer to report all employees, of military age, along with a description of the work they are doing and the length of time required to train replacements, particularly stressing the use of women.

The mobilization survey plan is reviewed by a local committee, located at each of the mobilization board centres. This committee is composed of a technically qualified chairman, familiar with modern production methods and a knowledge of the various skills and trades. Other members are, namely, a representative of the employment service, mobilization board, and the particular department of government involved. A plan, after passing through the committee is submitted to the mobilization board for approval; if approved it becomes an official schedule by means of which the employer is advised of the order in which his employees will be called.

Without going into details, I think the members will readily appreciate that any survey of this sort is also of utmost value to the employment service; first, to acquaint them of the employers' need for replacement; second, to inform them of any surplus labour.

It will be readily seen that the plan coordinates in a functional manner those agencies or departments of government most vitally concerned in a concerted effort.

The industrial mobilization survey has progressed to the point where we have a factual picture of fifty-eight companies, engaged in war production, employing a total of 81,070 people—of which 55,083 are men and 25,987 are women. Of the total number of men employed it was found 13,689, or 24·8 per cent were within the designated age classes, subject to military training. It should be borne in mind that a considerable percentage of those subject to call are medically unfit. For the fifty-eight companies referred to these surveys show 1,464 men in the designated age classes can be replaced by women. They also indicate a total of approximately 6,913 men have enlisted in the armed services.

Some of the plants show a high percentage of women employed. One in Toronto, the General Engineering company, had 2,848 women out of a total of 4,382, and only 114 of the men were subject to military call-up. This will give hon. members some idea of the manner in which we are combing out industry for men for the armed forces and for transfer to more essential or other industries.

The John Inglis Company at Toronto, with 16,491 employees, had 7,493 women and 8,998

men, with 2,080 of the men subject to military service. The survey to date appears to represent a fairly good cross-section of the industrial set-up.

Man-power of course is not indicated entirely by the number of men employed. The continuity of work and the production per man day are important aspects.

I am glad to tell the committee that labour turnover has shown a great improvement. In shell filling operations based on total payroll, the percentage was 9·2 in July, 1942, and 5·7 in February. 1943

Other changes in the same period were:

Aircraft—6·6 to 4·3.
Steel and base metals—6·3 to 5·0.
Automotive—7·5 to 4·7.
Tanks—3·6 to 2·3.
Small arms—7·0 to 5·3.
Explosives and chemicals—8·4 to 4·9.
Small arms ammunition—5·2 to 3·3.

From August, 1942, to February of this year the general change for all reporting firms was 8·3 to 4·8, or close to 50 per cent betterment. I think this has been largely the result of the mechanics of selective service and, of course, the permit system which goes along with it.

There has been some instability in the general labour situation, but as I have said before it is a natural condition in war time and under the high pressure of war-time industrial operations. There are different situations arising requiring different conciliation approaches, and I am not one of those who feels that by a simple statement of labour policy the millennium will be reached. They have the Wagner act in the United States, a national labour relations board, a national war labour board, and still there are industrial disturbances in the country of our good friends to the south of us. There must be more give and take on the part of employers and labour, a greater appreciation of the fairness of arbitration, and acceptance of the results of arbitration.

Recognition of the rights of labour to organize for collective negotiation of agreements is fundamental in a democracy such as ours. But we need more recognition of the responsibility which rests on both partners in industry.

It has been suggested in various quarters that the government has not made use of the experience and counsel of representatives of organized workers in matters touching Canada's war effort, particularly where the welfare of the workers is involved. I wish to refute this charge. I shall show that it has no foundation whatsoever in point of fact.

Connected with the Department of Labour, national selective service, the unemployment insurance commission and the national war labour board, are eight national councils, committees or boards, on all of which organized labour is represented. I might add that in and about the Department of Labour we have no boards or committees—except those which by their nature are restricted to our own officials—without labour representation.

I sometimes think, Mr. Chairman, particularly as regards national selective service on the employment side and on the conciliation side, that we have possibly taken too many men with stability and leadership out of the labour movement. I sometimes wonder whether it would not have been better to leave them where they were so that they could give the necessary leadership and stability that is required in an expanding industrial labour organization.

Mr. GRAYDON: Does that apply from the minister down?

Mr. MITCHELL: That may be true too, but I have always had a reputation for stability in my own community anyway, although I will say this to my hon. friend; it is not going to be said about me when this war is over that I sold the Canadian people down the river.

The eight national organizations to which I referred are: National Selective Service Advisory Board; Consultative Committees of the Ministry of Labour; National War Labour Board Committee; Advisory Council to Inter-departmental Committee on Labour-Management Production Committees; Vocational Training Advisory Committee; Unemployment Insurance Commission; Unemployment Insurance Advisory Committee; Unemployment Insurance National Employment Committee.

In addition to the national bodies which have labour representation, there are the nine regional war labour boards, the western labour board, and five regional employment advisory committees, on all of which labour is represented. Further there are some forty local employment advisory committees, all of them with labour representation, to advise in regard to employment matters; and there are thirty courts of referees under the Unemployment Insurance Act, to pass upon insurance claims which are questioned, and also to perform the important function of passing upon appeals taken under national selective service civilian regulations.

In all, therefore, speaking for the Department of Labour and the administrative units for which I, as Minister of Labour, am responsible to parliament, labour is represented on eight national bodies, fifteen regional bodies and seventy local or district committees.

The contribution made by labour's representatives to the work of these various groups is quite invaluable. In all cases the labour representatives take their duties with due seriousness, so that the public interest benefits materially through their work.

To charge that labour is not given proper representation is to ignore the efforts—given voluntarily and without recompense in most cases—of about 300 leading members of the labour movement. I do suggest that for anyone to claim that labour has not proper representation is to do a great deal less than justice to these many conscientious labour people, who are so generously assisting in administration at this time.

Of course there are two great partners in industry, employers and employees, and in every case labour and employer representation on our boards and committees parallel one another. I should add this, that the contribution made by the employers has been of equal importance to the contributions made by the representatives of the employees of whom I have just spoken. We have found that sitting around a common table, confronted with problems of deep import at the present time, these partners in industry do not look so bad after all to each other when they get down to talking together and examining the many problems that confront the ministry of labour to-day. I only hope that when I am finished with my stewardship in this department one contribution I shall have made to the industrial life of this country will have been to bring about cooperation between the representatives of the employers and of the employees in this country in attempting to solve the problems that confront industry at large.

As far as the Department of Labour is concerned, and as far as the government is concerned, we are fully aware of the need of labour representation on various bodies, and I take this opportunity to record our appreciation of the unstinted help we receive from the workers' representatives. In dealing with this matter of labour representation I am referring only to the agencies of government for which I have some degree of responsibility. Labour has representation on a variety of other government bodies, but the summary which I have given does not relate to the situation in general.

[Mr. Mitchell.]

Most valuable assistance has been rendered by the national selective service advisory board. The board was established by order in council P.C. 2254 of March 21, 1942. It then consisted of the members of the interdepartmental committee on labour coordination and the members of the national war labour board.

The board was reconstituted by order in council P.C. 1788 of March 5, 1943, and now consists of five representatives nominated by organized labour, five representatives nominated by organized employers, one representative nominated by organized farmers, one representative of organized veterans, and a number of senior civil servants representing the departments which are most directly interested in problems of man-power, namely, Labour, Munitions and Supply, Agriculture, National Defence, Finance, and the Wartime Prices and Trade Board.

The board meets regularly on the second and fourth Wednesdays of every month and otherwise on special call.

The duties of the board are twofold: First, to bring to bear on all questions of man-power policy and on all major questions of man-power administration the points of view and advice of the interests or departments represented. Since its establishment, no significant regulation about man-power has been issued without prior discussion with, and approval by, the national selective service advisory board. Second, when its recommendations have been approved by the man-power committee of the cabinet and the governor general in council, to interpret and explain the policy thus approved to the interests or departments represented.

In other words, the national selective service advisory board is the major instrument for consultation and collaboration between government, organized employers, organized farmers and organized workers. I have been asked to explain how quotas are set for the call-up by military districts. The question itself is somewhat misleading since we are no longer operating on a district quota basis. The system is as follows: After the cabinet has authorized a given establishment the army requisitions the number of men required by military districts in accordance with the available facilities in its training centres. Those requisitions are transferred to the divisional registrars but are not regarded as quotas since their instructions are to call from within the designated age classes as many men as the machinery will permit.

Originally, since the army quotas were generally based on the population in the military

age groups in each district, the divisional registrars were given quotas based on population. Our present system, however, is to provide that all divisional registrars are calling at any given time from the same age classes. If, for example, the married men aged 19 to 25 are exhausted in one division sooner than in others, that division will not begin calling older married men until the other division has exhausted the younger age class.

On May 26 the hon. member for Lake Centre referred to what he considered an inequality in the percentage of the call-up for men for military service as between the different military districts. The fact that the percentage of enlistments and call-ups are both low in the same district or division would indicate that in such districts there is a higher percentage of men unfit for military service or that more men are required for farming and essential industry, or perhaps both. If the percentages of fit and unfit men were the same and the demands of farming and industry equal in each district or division, the district or division having a high percentage of volunteers would have a smaller percentage liable to the regulations and, consequently, a smaller percentage of men called up. The instructions to all mobilization divisions are to bring the men in the designated classes under the regulations as quickly as possible and to deal with them as rapidly as the machinery available permits. The districts vary in size. Some have greater difficulty in getting accommodation and staff. Therefore, the speed of selection varies, but, in the end, the result sought for is obtained—that is, all men fit for service, in the designated class, who are not given postponement and have not volunteered for service in the armed forces, are selected.

The hon. member for Lake Centre stated that there were some 91,800 Canadians, males, between the ages of 18-38 at present residing in the United States who have not given any indication that they will apply for United States citizenship and asked what was being done to secure the availability for service in the Canadian army of such men.

Canadians residing in the United States are subject to American mobilization regulations. They have the option of electing to serve in the Canadian forces. When a mobilization board has knowledge that a Canadian is residing in the United States the board does not proceed under the mobilization regulations. They are left for disposal by the American mobilization section.

The hon. member for York-Sunbury on the same day said that he had made inquiry as to the basis of allocation of the quota for each military district and to his surprise had found that it was not on the available man-power but on the record of the voluntary enlistments in the district. That is not the case in so far as mobilization is concerned.

Mr. HANSON (York-Sunbury): That was the case as stated by the Minister of National Defence for Air based on the theory of the number of non-permanent active militia units in the different military districts. That is where they got their volunteers and therefore it was on the basis of the volunteers that the call-up was made. I shall argue that question later.

Mr. MITCHELL: In districts where there has been high voluntary enlistment the national defence training facilities would be taxed and the tendency might be to lower the allotment from such a district. That adds up to what my hon. friend has just said.

On the other hand it might happen that a district which supplied a very high number of volunteers in the past might have cleared its training centres and at present have more training facilities available, but these matters would not affect the number selected under mobilization. If there were not training facilities for men selected in their own districts they would be moved to a training centre where there was room.

The committee will bear in mind that call-up of men for medical examinations and military training and service did not come under the jurisdiction of the Department of Labour until December 1. The change became effective through P.C. 10924 of which there have been subsequent amendments.

Mr. HANSON (York-Sunbury): Why was the change made?

Mr. MITCHELL: We followed the British precedent, and we followed a precedent which probably our good friends to the south would like to have followed, and that was to have as much as possible of the man-power of the nation under one tent, if I may put it that way.

Mr. HANSON (York-Sunbury): I have an idea it was because the other service failed.

Mr. MITCHELL: I do not think that is fair. Speaking for myself, I was one who argued that we should do it that way, never thinking that it would land on my doorstep, but it did.

The national war services regulations, 1940 (recruits), were then revoked and the order established the present national selective service mobilization regulations.

Subject of course to the acceptable medical categories and deferments for essential agricultural and other workers, the military call-up at present applies to the following:

(a) Every man born in any year from 1917 to 1924 (inclusive) who has reached age 19.

(b) Every man born from 1902 to 1916 (inclusive) who, at July 15, 1940, was: (i) unmarried; or (ii) divorced or judicially separated; or (iii) a widower without child or children.

(c) Every man born from 1902 to 1916 (inclusive) who has since July 15, 1940, become a widower without child or children now living.

(d) Every man born from 1902 to 1916 (inclusive) who, since July 15, 1940, has been divorced or judicially separated.

I shall table a statistical summary covering mobilization activities under the National Resources Mobilization Act, 1940, for the period March 20, 1941, to April 16, 1943. That is the latest available.

Before the call-up was transferred to the Department of Labour the Minister of National War Services had started an audit of the records of the divisional registrars. This is being continued.

This past winter we required all single men to report who had failed to receive or acknowledge their notices of medical examination, or to present themselves for medical examination. We announced an amnesty to those who complied as required by March 15. This resulted in 144,973 men re-registering, but a considerable number of these cases were men who did not need to do so. However, it did result in accounting for a large number of men who were in default or had been overlooked and has well justified itself. A break-down of the total by military districts is as follows:

London	A	6,174
Toronto	B	24,994
Kingston	C	4,399
Port Arthur	D	4,373
Montreal	E	23,741
Quebec	F	13,507
Halifax	G	9,575
Saint John	H	1,302
Charlottetown	I	593
Winnipeg	J	10,181
Vancouver	K	12,566
Regina	M	24,281
Edmonton	N	9,287
		144,973

Every designated man—single, aged 19 to 40 inclusive, and married, aged 19 to 25 inclusive—except those in the armed forces or on postponement, to whom the regulations apply, will have evidence of unfitness. Through employers and otherwise, we shall therefore, be able effectively to enforce the regulations. Further than that all medical rejections are being reviewed and the majority of men previously certified as unfit for military service are being called for medical reexamination by army medical boards. These reexaminations will be completed in about two months.

Our war emergency training programme, in cooperation with the provinces, has been of substantial assistance in relieving labour shortages, chiefly for semi-skilled jobs and meeting needs of the armed forces. As of March 31 last, nearly 218,248 men and women has been enrolled in the vocational and plant school classes since the beginning of the programme. In quoting that figure, Mr. Chairman, I suggest to hon. members that they look up the same kind of figures for the other united nations and they will find that, in a comparative sense, Canada's contribution redounds greatly to the credit of this country. This training programme has been most valuable to our war effort, and I believe that, as regards the work undertaken in these classes, we as Canadians can almost defy comparison. May I here pay tribute to our industrialists for the part played by them in these training classes which they carried on and which have permitted the erection of the gigantic industrial structure that we have built in the past four years. I would also, of course, express gratitude to the teachers in the schools, to the provincial governments and their officials, and to all those who have spent their time and labour unselfishly in this great cause.

This total included 135,438 trained or training for industry, and 72,810 for the armed forces. There were 30,591 women in the industrial classes.

On May 10 this year an order in council was passed providing for the extension of our war emergency training programme to include the training of secondary school students in farm work with the minimum age of 14 years.

A critical shortage of engineering, scientific and other technical personnel developed because of heavy enlistment in the armed forces. Control of their employment has been exercised through our wartime bureau of technical personnel under the permit system. More than 3,000 technicians were transferred to war jobs in the past year. The bureau was established in February, 1941, and in cooperation with the Engineering Institute of Canada, Canadian Institute of Mining and Metallurgy and Canadian Institute of Chemistry, set up a registry of all scientific and technical personnel in Canada. I would like to record now my deep appreciation of the valuable help given by the

organizations I have mentioned, also that provincial associations of professional engineers and other scientific and technical bodies. They have been most cooperative.

Through government financial aid to deserving students and promotion of summer employment of undergraduates in work which would contribute to their professional advancement we are preparing for future needs of technical personnel.

Our university science students regulations provide that all scientific and technical students must be medically examined and decide if they wish to volunteer for active service in the armed forces as technical officers. If not they must accept such essential employment as the Minister of Labour may require.

As well as endeavouring to keep up a good supply of engineers and other technical men we have also assisted students in medicine and dentistry. All told we have helped 2,022 students; 840 in science and engineering; 439 in training to become teachers; 462 in medicine; 91 in dentistry; and 190 in other faculties.

The government has sponsored short courses at our universities in personnel management. The objective is improved human relations in industry and as a natural sequence, improved production through more efficient use of labour.

As chairman of the industrial disputes inquiry commission when our industrial structure was expanding very rapidly, I personally saw the absolute need of the provision of personnel managers in many of the large industrial companies with which I came into contact. I think it is fair to say, while we have many brilliant engineers, the engineering of men is much more important and, may I say, much more difficult than the engineering of material things. I believe that the courses which have been carried on in our universities in cooperation with labour organizations and employers have been of tremendous assistance in building up this small army of personnel managers which will be of great benefit to our industrial structure not only at the moment but also in the days of peace which we hope are not very far away.

We have conducted job instructors' and job relations' courses and have been ready and willing to adopt any plan which would make our labour more skilled and thus more useful in the war effort.

That is our man-power achievements and programme. Criticize it if you like. But, and I appeal to you in all earnestness, please make your criticisms specific and practical. The problem is a national one, meriting the attention of all serious-minded citizens. Its solution demands the best effort that any of us can devote to it.

I would like to take this opportunity of recording my deep appreciation of the conscientious, efficient work of the staff of the Department of Labour.

With emergency conditions demanding emergency measures, new regulations constantly being drafted, the staff of selective service and our employment service have had a real job to do. They have, in my opinion, done it well.

Too often we heed only the glamorous things; sometimes I envy the ministers of the fighting departments, but we must remember that there can be exceptional devotion to duty in the routine, more or less humdrum tasks of life. So I say thank you to all my staff. I know they will carry on loyally and unselfishly to the war's end.

I also would like to extend my thanks to my colleagues of the government for constant cooperation. The man-power question is one affecting many departments of government. I have been strengthened by the understanding of my colleagues of the task assigned to me.

My colleague, the Minister of Munitions and Supply, in his statement in this house on June 11, set before hon. members the fine record of Canada in the matter of production of implements and munitions of war. Every Canadian will be proud of this record and rightly so. I point out to you that the marvellous achievement was accomplished because of the wholehearted support of the working men and women of Canada in the war effort. It is evidence that the working people have done their full part, which I have stated on numerous occasions in this house and elsewhere would be the case.

At this time, Mr. Chairman, I would like to place on the record the text of the statement which was made by the Right Hon. Ernest Bevin, British Minister of Labour and National Service, at a press conference which was arranged when I visited London last autumn. I think it shows the appreciation in Britain of what Canada is contributing to the common war effort. I quote:

> I would like to say that the British government are very anxious that the press should do proper justice to Canada for the effort she is making in the war.
>
> She came in on the first day of the war and threw in her all and I can tell you, from the man-power side and from the production side, what is very gratifying is that Canada moves very quickly on the basis of the rationalization of arms production; that is to say, we get a

quick and cooperative response whether it is in shipbuilding, aircraft, or anything else, to fit in with the problems we have in this country.

In the discussion that goes on between the Minister of Labour in Canada and myself, and between Captain Oliver Lyttelton and his opposite number, Mr. Howe, in Canada, we are all four of us working very closely together, and now that we are in a tight corner for man-power in England it is a great advantage to us to be able to make the necessary adaptations so that Canada in the design of her war output fits in and dovetails in so well with the strategy of the war that we can get a good deal of relief by the use of man-power on the other side.

I do not think there has ever been a case in which the labour force, the productive effort, of two countries has been more complementary and more helpful.

Our relationships are so good; it is not a question of our telling them or they telling us, but immediately we have to make changes and to go in for this type or that type of production we are able to marry the Canadian effort with our own in such a practical way that it is a tremendous help to the total war effort.

It is not only volume, but it is types, and the quick adaptation of types and as the strategy of the war changes and fresh demands are made upon us, the facility with which Canada cooperates with us is a tremendous asset in this war. I do not want it to be measured merely in terms of volume. You may get a lot of things you cannot use. The essential thing in this business is to get the things you can use and use quickly and to supplement and build up the output of your own arsenal at home.

In the contacts we have had with Canadian ministers, through Mr. Vincent Massey, who has been a tower of strength to this country in the war effort, we have met with ready cooperation and I am very anxious that the proper place should be given to Canada and her contribution to this tremendous struggle.

In that critical period when we did not have very many friends, at least active friends, from 1940 onwards, the weight of the Canadian output and their resilience and turnover to production during that period played a very big part in enabling us to equip the middle east army and equip the forces in this country at a speed much greater than would have been possible if we had not had, not merely the volume, but willing adaptation to the kind of weapons and materials we wanted.

Now, with the loss of a great many of our raw materials, particularly certain types of metals, Canada means salvation to us. The way she has moved her men about in order to increase the output of, say, nickel and raw materials of that character has been a great gain not only to us but to the whole of the united nations and in that spirit I would like Mr. Mitchell to convey to Mr. Mackenzie King and his colleagues what I know is the feeling of everybody not merely in the government but those who have to design and make and deliver the equipment, appreciation of those two factors, volume, and, what has been so vital, I repeat, adaptability, which has fitted in so well with our war strategy.

If you will take that message back I shall be very grateful, a message as coming from all the British people. Thank you very much.

In conclusion, let me emphasize that no matter what any government can do there will be shortages of labour in many essential lines as long as the war lasts. We must be prepared for the need of a greater number of men for our armed forces. This will serve to tighten still more the labour situation at home. It means an increasing responsibility on us remaining at home. Harder work—more and more of our time and energies in a greater share of this fight for freedom.

No matter what is asked of us, it is worth doing and giving. Ours is the easier role. The men who fight and die give the most. So let us all pull together. Have our fighting men proud of the way we backed them up at home.

Now I would like to have the various statistics which I mentioned go on *Hansard* to complete the record.

Statistics on National Selective Service and Man-power

(a) Distribution of Canada's human resources, 14 years of age and over—table and explanation.

(b) National selective service (civilian) operations—separations from employment notified, and permits issued (table).

(c) Placement operations of employment and selective service offices: Table I—application, vacancies and placements, May 1, 1942, to April 29, 1943; and Table II—vacancies remaining unfilled, by industries, as at April 29, 1943.

(d) Numbers directed to employment under national selective service and certain other orders.

(e) Summary of mobilization statistics—two tables and explanations: Table I—Medical examinations, postponements, military training; and Table II—special registrations, prosecutions and investigations.

Items (a), (b), (c) and (d) above are as compiled by Research and Statistics Branch.

Item (e) is as compiled by Mobilization Branch, Department of Labour.

June, 1943.

Distribution of Canada's Human Resources, 14 Years of Age and Over

The table which follows, entitled "Distribution of Canada's Human Resources, 14 years of Age and Over, as at January 30, 1943", undertakes to show a brief classification of the population in the age class mentioned, in relation to occupation.

Sources: Figures used in the table are derived from several official sources, including a survey of employment as at January 30, 1943, made by the Department of Labour; figures compiled by the Department of Munitions and Supply; and figures gathered by the Dominion Bureau of Statistics, through the census and otherwise.

Basis: The following explanations regarding the basis of classification will be helpful in interpreting the table:

1. In section I "Armed Forces", figures used refer to those in the forces on January 30 last.

2. In section IIA, "In Industry", figures given under (a), (b), (c) and (d) correspond respectively to classes A, B, C and D in the labour priorities system. B. "In Agriculture", as will be seen, includes only male agricultural workers, including farm operators.

3. In section III, "Farm Women" are set as a class apart, since much of the work of women on the farm goes beyond ordinary housekeeping duties, especially at busy seasons.

4. In section IV, all students, 14 or over, even though they work during holiday seasons, or engage at part-time work at other times. "Other women (including non-farm housewives)" would be largely housewives, not gainfully employed. Wives in gainful employment are included in II, "In Industry".

5. "(c) Employable men temporarily not at work", includes those seasonally unemployed and those in process of changing jobs at January 30.

Priorities: In examining the table, some of the difficulties of attaining precision when applying priority tables to large numbers of workers, might well be borne in mind. The following illustrations will indicate a few of these difficulties:

Manufacture of a given article for the armed forces would carry a high priority—if for civilian consumption, a low priority. Hence, an estimate of those on high priority work and those in low priority work, within the same plant, must be attempted.

Retail stores in general may rate a low labour priority. If, however, labour shortages threatened to interfere seriously with the distribution of important civilian supplies, a temporary rise in the priority would be indicated.

It is not simple to determine, in all cases, what are "essential" civilian services. Of two services, perhaps one may be dispensed with, providing the other remains: both could be spared only with interference with war production.

Other illustrations might be cited, but the foregoing will serve to emphasize the difficulties in assessing the relative worth in relation to the war effort, of particular lines of employment.

Comparisons: The table makes comparisons for August 31, 1939; June 1, 1941; and January 30, 1943.

[Mr. Mitchell.]

DISTRIBUTION OF CANADA'S HUMAN RESOURCES, 14 YEARS OF AGE AND OVER

(Estimates, given in thousands, are from various official sources)

	August 31, 1939			June 1, 1941			January 30, 1943			Percent total to grand total

National Selective Service (Civilian) Operations

Separations from Employment Notified, and Permits Issued
September 1, 1942, to May 27, 1943

(Present permit regulations became effective at September 1, 1942)

Separations	Males	Females	Total
Notified by employer	393,979	123,138	517,117
Notified by employee	664,757	252,340	917,097
Total	1,058,736	375,478	1,434,214
*Permits to leave agriculture and to accept other employment (temporarily)	100,817	3,824	104,641
Permits to seek or enter employment	1,552,613	755,582	2,308,195

*Virtually all permits were cancelled or expired and holders returned to agriculture, on resumption of spring farming operations.

REVISED EDITION

Placement Operations of Employment and Selective Service Offices

Table II

Vacancies Remaining Unfilled, by Industries, at April 29, 1943
(All Canada)

Industry	Number of vacancies unfilled For males	For females	Total
Agriculture	4,299	412	4,711
Fishing, hunting and trapping	74	2	76
Forestry and logging	22,141	34	22,175
Mining:			
Coal	2,337	11	2,348
Oil, gas wells and quarrying	333	8	341
Other mining	2,601	66	2,667
Manufacturing:			
Animal foods	1,470	740	2,210
Leather and fur products	1,216	1,299	2,515
Vegetable foods	2,628	1,413	4,041
Other vegetable products	1,296	1,827	3,123
Pulp and paper products and printing	2,618	1,692	4,310
Sawmills	3,116	102	3,218
Other wood products	2,147	729	2,876
Textile products	3,901	8,040	11,941
Iron and its products	23,795	10,924	34,719
Non-ferrous metal products	3,944	1,598	5,542
Non-metallic mineral products	1,828	304	2,132
Chemical products	3,061	643	3,704
Miscellaneous products	808	921	1,729
Electricity, gas and water supply	914	50	964
Construction:			
Building	15,490	140	15,630
Highway	1,754	55	1,809
Railway and all other	1,590	28	1,618
Communication	617	517	1,134
Transportation:			
Air	1,038	192	1,230
Railway (including express)	4,643	248	4,891
Water	2,291	70	2,361
All other	3,786	131	3,917
Trade	8,394	4,882	13,276
Finance and insurance	1,149	674	1,823
Services:			
Business	576	369	945
Hotel and restaurant	3,818	7,760	11,578
Professional and public	6,169	4,114	10,283
Recreational	808	412	1,220
Domestic	373	4,839	5,212
All other	2,741	2,613	5,354
	139,764	57,859	197,623

Unplaced applicants, April 29, 1943:
Male, 48,543; female, 28,186; total, 76,729.

[Mr. Mitchell.]

72537—250½

REPORT ON NUMBERS OF MEN DEALT WITH UNDER VARIOUS PHASES OF TRANSFERS OF LABOUR

(Excluding Placements made in ordinary course, by Employment and Selective Service Offices)

(Figures cover March, 1943, to June 12, 1943, except in cases of compulsory and coal orders, on which see footnote)

—	Total Transfers	1st and 2nd Compulsory Orders	Coal Order	Conscientious Objectors	From Armed Forces	Farm Workers Returned to Agriculture on Cancellation of N.S.S. Permits
(1) Total dealt with	131,535	18,658	1,916	4,747	6,214	100,000
(2) Directed to higher priority work: total	113,672	2,397	314	4,747	6,214	100,000
(a) Agriculture	109,775	156	.....	3,847	5,772	100,000
(b) (1) Mining—coal	1,015	259	314	.....	442	
(2) Mining—other	68	68				
(c) Lumbering and logging	180	180				
(d) Other high priority work	2,634	1,734	.....	900*		
(3) Reported to alternative service officer, as refusing direction	12	12				
(4) Given permits to return indefinitely to previous employment	5,663	5,663				
(5) Given permits to return temporarily to previous employment by reason of being returned soldiers, or of having dependents	3,647	3,647				
(6) Not disposed of:	8,132	6,939	1,193			
(a) Available for transfer (but given temporary permits at previous work)	5,476	5,476				
(b) Awaiting further particulars from Registrar; appeals pending, etc.	1,463	1,463				
(7) Incapable of returning to coal mines	409	.....	409			

*900 conscientious objectors are in work camps.

NOTE:—1st compulsory employment transfer order was announced on May 5, 2nd on May 15: the 2nd had not closed at June 12, the date of the above compilation. The coal order was announced on May 17, 1943.

[Mr. Mitchell.]

SUMMARY OF MOBILIZATION STATISTICS

(March 20, 1941, through April 16, 1943)

Table I shows medical examination, postponements and military training.

The difference of approximately 380,000 between the number of men sent notices-medical, and the number examined, is accounted for by notices undelivered, men who joined the forces voluntarily either before or on receiving notice-medical, men sent notices to whom the regulations do not apply, and some defaulters. Men registered from January to March 15, 1943, as not receiving notice-medical (see Table II) narrows the difference between notices sent and men examined. But without doubt voluntary enlistments account for a very substantial portion of the total difference.

The reduction of approximately 319,000, in the number called for military training, compared to the number examined, is accounted for by men being medically unfit, men being granted postponements—and again (but no doubt fewer in number) voluntary enlistments. Defaulters would also add to the difference.

Voluntary enlistments, as well as postponements, account for most of the difference of 129,000 between the numbers called for military training and those reporting. Also, of course, some defaulters enter into this phase of the process, too.

Physical reasons, on further medical examination, are responsible for the reduction in the number accepted for training, compared to the number called.

Table II shows the special registration already referred to, and in addition, prosecutions and investigations.

It has not been possible to have carried through the vast amount of clerical work necessary to secure a statistical reconciliation as between the various related totals.

TABLE I

Medical Examinations, Postponements, Military Training

Administrative Divisions	Medical Examination		Postponements			Military Training

Mr. DIEFENBAKER: My first words, Mr. Chairman, must be of congratulation to the minister on the lengthy and complete statement he has made to-day in connection with the man-power situation. With regard to many of the matters of which he has spoken I am in complete agreement with him. In what he had to say during his peroration as to production, I know he spoke the views of all Canadians in that we are proud of Canada's record of achievement. However, I cannot agree with him when, in expressing his viewpoint in regard to the man-power situation in Canada, he used words to the effect that we have the best man-power policy that can be devised. In the use of those words, having regard to the conditions which have prevailed during—

Mr. MITCHELL: My hon. friend is laughing, himself.

Mr. DIEFENBAKER: I have to laugh at that description. In regard to conditions prevailing in industry, shortages of man-power on the farms and the man-power situation in general the minister's opinion seemed to be that the steps taken were the best which could have been taken. That statement is a fine example of extravagance in overstatement. Great things have been done. The mobilization of Canada is something of which we are all proud. That is the attitude I have taken at all times, that when the government or the people of Canada are entitled to commendation, they should receive it.

The minister placed on record the numbers of men who are serving overseas to-day in the various forces, and the number engaged in industry. To keep the record clear, it would be well to point out that at the time of the last war, with a population some forty-two per cent less than it is to-day, we enlisted 628,462 men for our armed forces, of whom 424,589 went overseas. As I listened to the minister to-day, I felt that in many respects he was apologetic for what he would like to carry into effect, namely, a system of selective service whereby men mobilized in Canada would be available for service at any point in the world. But that is denied to him because he and those associated with him have been shackled by considerations concerning which no further reference need be made.

The minister referred to a matter which I have raised on more than one occasion, namely, the need for equality of call and equality of administration of the National Resources Mobilization Act in every part of Canada. The answer he gave to-day does not meet the situation revealed by the records issued by the government. I am not going into detail in that connection, but I would refer the committee to *Canada at War,* in the February issue of which is set forth in detail the record of call-up in the various parts of Canada. I raised this matter in the house earlier in the session, and then indicated what the percentages were. I showed that under the call-up those provinces which were contributing the largest percentage of volunteers were also contributing the largest percentage of men called up for service in Canada under the measure of conscription in effect. The minister's answer to-day is not a denial of the accuracy of my statement, so far

as the percentages of call-up are concerned. London, Ontario, has a tremendous record for voluntary enlistments, and the call-up was 8·52 per cent of the available man-power; that of Kingston was 6·9 per cent; Halifax, 10·54 per cent, and Saint John, 9·89 per cent. On that earlier occasion I referred in detail to the various military districts, and I showed by figures which have not been contradicted that in other parts of Canada, where voluntary enlistments are a great deal lower than in the districts I have mentioned, the call-up was from forty per cent to fifty per cent less than in those districts in which voluntary enlistments were the most.

The minister says that is being corrected. Well, let us have the details. Interestingly enough, when this matter was discussed in the house, government statistics were available to the Canadian people, but since then, such information has been deleted from every issue of *Canada at War*. I ask again, as I asked the Minister of National Defence: Why was that deleted? I ask the minister in charge of the Department of Labour again to have that information restored in *Canada at War* in a form in which it will be readily available, so that there may be no misunderstanding as to whether or not the serious situation revealed therein that improper and unfair calls were being made has been terminated. If it has, then I will be the first to commend the government for having done so, just as I condemned the government before for having one system or rate of call in one part of Canada and another system of call in another part.

The minister stated to-day that recently a large number of changes have been made in the matter of compulsorily transferring men for service in various industries. I do not know what the record has been in the last few days, but I do know that up until June 6, 1943, only 9,000 men had been registered under the two orders then in effect. Those orders required that men working in various industries should register. I repeat that only 9,000 had registered, and of those registering, only ten per cent had been transferred. The minister claims that great work has been done by way of compulsorily transferring men to other branches of industry. I repeat that up to June 6 the record showed a total of ten per cent of 9,000.
