Commentaires supplémentaires:

This item is filmed at the reduction ratio checked below/
Ce document est filmé au taux de réduction indiqué ci-dessous.

The copy flimed hare has been reproduced thanks to the generosity of:

Université de Sherbrooke

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the fliming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or Illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated Impression.

The last recorded frame on each microfiche shall contain the symbol $\rightarrow$ (meaning "CONTINUED"), or the symbol $\nabla$ (meaning "END"). whichever applies.

Maps, plates, charts, etc., moy be filmed at different reduction ratios. Those too large to be entircly included in one exposure ere filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams lllustrate the method:

L'exemplaire fllmé fut reproduit grâce ala gendrosité de:

## Université de Sherbrooke

Les images suivantes ont oté reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filme, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en pepier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernibre page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la premidre page qui comporte une empreinte d'impression ou d'illustration et en terminant par le dernidre page qui comporte une telle empreinte.

Un des aymboles suivants apparaitra sur la dernidre irnage de chaque microfiche, salon le cas: le symbole $\rightarrow$ signifie "A SUIVRE', le symbole $\boldsymbol{\nabla}$ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul clichd, il est filmé à partir de l'angle supérieur gauche, de gauche è droite. et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

## VOYAGES AND TRAVELS.

TRAVELS IN FRANCE.<br>A JOURNET TO PARIS IN THE TEAR 1698.<br>BY DR. MARTIN. LISTER.

## DEDICATION.

TO His Excellency, John Lord Somers, Baron of Evefham, Lord High Chancellor of England, and one of the Lords-Juftices of England.
My Lord,

WISDOM is the foundation of juftice and equity, and it feems not to be perfeet, without it comprehends alfo philofophy and natural learning, and whatever is of good relifh in arts. It is certain, my Lord, for the honour of your high ftation, that the greateft philofopher of this age, was one of your predeceffors; nor is your Lordhip in any thing behind him; as though nothing infpired people with more equity than a true value for ufeful learning and arts. This hath given me the boldneff to offer your lordfhip this fhort account, of the magnificent and noble city of Paris, and the court of that great king, who hath given Europe fo long and vehement difquiet, and coft England in particular fo much blood and treafure. It is poffible, my lord, you may find a leifure hour to read over thefe few papers for your diverfion, wherein I promife myfelf, you wilt meet with nothing offenfive, but clean matter of fact, and fome thort notes of an unprejudiced obferver. Bút that I may no longer importune you, perpetually bufied in fo laborious and ufeful an employment, I beg leave to fubfribe myleif,

My Lord,
Your Lordhip's moft humble and moft obedient fervant,
Martin Lister.

## $(2)$

A JOURNET TO PARIS, Eri.

## Introduction to the Reader.

THIS tract was written chiefly to fatisfy my own curiofity, and to delight myfelf with the memory of what I had feen. I bufied myfelf in a place where I had little to do, but to walk up and down ; well knowing, that the character of a franger gave nee free admittance to men and things. The French nation value themfelves upon civility, and build and drefs moftly for figure : this humour makes the curiofity of frangers very eafy and welcome to them.

But why do you trouble us with a journey to Paris, a place fo well known to every body here? For very good reafon, to fpare the often telling my tale at my return. But we know already all you can fay, or can read it in the Prefent State of France, and Defrription of Paris; two books to be had in every fhop in London. It is right, fo you may; and I advife you not to neglect them, if you have a mind to judge well of the grandeur of the court of France, and the immenfe greatnefs of the city of Paris. Thefe were fpectacles I did indeed put on, but I found they did not fit my fight, I had a mind to fee without them; and in matrers of this nature, as vaft cities and vaft palaces, I did not care much to ufe microfcopes or magnifying glaffes.

But to content you, reader, I pronife you not to trouble you with ceremonies either of thate or chiurch, or politics; for I entered willingly into neither of them, bur only, where they would make a part of the converfation, or my walk was ordered me. You will eafily find by my obfervations, that I incline rather to nature than dominion; and that I took more pleafure to fee Monfieur Breman in his white waiftcoat digging in the royal plyyfic garden, and fowing his couches, than Monfieur de Saintot making room for an ambaflador; and I found myfelf better difpoled, and more apt to learn. the names and phyfiognomy of a hundred plants, than of five or fix princes. After all, thad much rather have walked a hundred paces under the meanelt hedge in Languedoc, than any the fineft alley at Verfailles or St. Cloud; fo much I prefer fair nature and a warm fun, before the moft exquifite performances of art in a cold and barren climate.

Another reafon, that I give you litte or no trouble in telling you court matters, is, that I was no more concerned in the embaffy, than in the failing of the fhip which carried meover: it is enough forme, with the reft of the people of England, to feel the good effects of it, and pals away this life in peace and quietnefs. It is a happy turn for us, when kings are made friends again. This was the end of this embaffy, and I hope it will laft our days. My lord ambaffador was infinitely careffed by the king, his minifters, and all the princes. It is certain the French are the mof polite nation in. the world, and can praife and court with a better air than the reft of mankind. However the generality of the kingdom were through. great neceffity well difpofed to receive the peace: the bigots and fome difbanded officers might be heard at our firft going to grumble, but thofe alfo gave over, and we heard no more of them when we came away. But to the bufinefs.

I happily arrived at Paris after a tedious journey in very bad weather; for we fet out of London the tenth of December, and I did not reach Paris till the firf of January; for I fell fick upon the road, and faid five days at Bologne, behind the company, till
may fever abated; yet notwithftanding fo rude a journey, I recovered, and was perfeetly cured of my cough in ten days; which was the chiefeft reafon of my leaving London at that time of the year, and never had the leaft return of it all the winter, though it was as fierce there as I ever felt it in England. - This great benefit of the French air 1 had experienced three feveral times before, and had therefore longed for a paffage many years; but the continuance of the war was an infuperable obftacle to my defires. Therefore the firft opportunity which offered ittelf I readily embraced, which was ny Lord Portland's acceptance of my attendance of him in his extraordinary embaffy; who ordered me to go before with one of my good friends, who was fent to prepare matters againft his arrival.

Now that I might not wholly truft my memory, in what I faw at Paris, I fet down my thoughts under certain heads.

## I. Of Paris in Gcneral.

THOUGH I had much fare time the fix months I faid in that city, yet the rudenefs of the winter feafon kept me in for fome time. Again, I believe I did not fee the tithe of what deferves to be feen, and well confidered; becaufe for many things I wanted a relifh, particularly for painting and building; however I viewed the city in all its parts, and made the round of it; took feveral profpects of it at a diftance, when well thought on, 1 muft needs confefs it to be one of the moft beautiful and magnificent in Europe, and in which a traveller might find novelties enough for fix months for daily entertainment, at leaft in and about this noble city. To give therefore a frict and general idea of it, and not to enter far into the vain difputes of the number of inhabitants, or its bignefs, compared to London; fure I am, the ftanding croud was fo great, when my lord ambaflador made his entry, that our people were ftartled at it, and were ready the next day to give up the queftion, had they not well confidered the great curiofity of the Parifians, who are much more delighted in fine fhews than the people of London, and fo were well near all got into the way of the cavalcade. One thing was an evident argument of this humour, that there were fome hundreds of coaches of perfons of the beft quality, even fome bifhops and lords which I faw, who had placed themfelves in a file to line the ftreets, and had had the patience to have fo remained for fome hours.

It is allo almoft certain, that for the quantityof ground poffeffed by the common people, this cit $\therefore$ much more populous than any part of London; here are from four to five and to ten nenages, or diftinct families in many houfes; but this is only to be underfood of certain places of trade. This difference betwixt the two cities alfo is true, that here the palaces and convents have eat up the people's dwellings, and crouded them exceffively together, and poffeffed themfelves of far the greateft part of the ground; whereas in London the contrary may be obferved, that the people have deflroyed the palaces, and placed themfelves upon the foundations of them, and forced the nobility to live in fquares or ftreets in a fort of community: but this they have done very honeftly, having fairly purchafed them.

The views alfo which it gives upon the river arc admirable: that of the Pont-neuf downwards to the Tuilleries, or upwards from the Pont-Royal; and in fome other places, as from Pont St. Bernard, the Greeve, $8 \& \mathrm{c}$. The river Seine which paffes through the midft of the city, is all nobly banked or keyed with large free fone; and inclofes in the heart of the city two iflands, which caufes many fine bridges to be built to pafs over them. One of thefe illands called l'ffle de Palais was all Paris for fome ages

The houfes are built of hewn flone intirely, or whited over with plaifter: fome indeed in the beginning of this age are of brick with frec-ltone, as the Ilace-Royal, Place-Dauphin, \&c. but that is wholly left off now; and the white plaitter is in fome tew places only coloured after the fafhion of brick, as part of the atbay of St. Germain. The houfes every where are high and ftately; the churches numerous, but not very big; the towers and Iteeples are but few in proportion to the churches, yet that noble way of fteeple, the domes or cupolas, have a marvellous effect in profpect; though they are not many, as that of Val de Grace, des Invalides, College Mazarin, do l'Alliumption, the Grand Jefuits, la Sorbonne, and fome few others.

All the loufes of perfons of dininction are built with porte-cocheres, that is, wide gates to drive in : coach, and confequently have courts within; and moftly remifes to fet them up. There are reckoned above 700 of thefe great gates; and very many of thefe are after the moft noble patterns of ancient architecture.

The lower windows of all houfes are grated with frong bars of iron; which muft be a valt expence.

As the houfes are magnificent without, fo the finifhing withinfide and furniture an. fiver in riches and neatinefs; as hangings of rich tapeftry; railed with gold and filver threads, crimfon damafk and velvet beds or of gold and filver tiffue. Cabinets and bureaus of ivory inlaid with tortoifefhell, and gold and filver plates in a 100 different manners: branches and candlefticks of cryftal : but above all moft rare picturcs. The gildings, carvings and paintings of the roofs are admirable.

Thefe things are in this city and the country about, to fuch a varicty and excefs, that you can come into no private houfe of any man of fubftance, but you fee fomething of them; and they are obferved frequently to ruin themfelves in thefe expences. Fvery one, that has any thing to fpare, covets to have fome good picture or fculpture of the beft artift; the like in the ornaments of their Gardens, fo that it is incredible what pleafure that vaft quantity of fine things give the curious © franger. Here as foon as ever a man gets any thing by fortune or inheritance, he lays it out in fome fuch way as now named.

Yet, atter all, many utenfils and conveniencies of life are wanting here, which we in England have. This makes me remember what Monlicur Juftell, a Parifian formerly, told me here, that he had made a catalogue of near threefcore things of this nature which they wanted in Paris.

The pavements of the ftreets is all of fquare ftone, of about eight or ten inches thick ; that is, as deep in the ground as they are broad at top; the gutters fhallow, and laid round without edges, which makes the coaches glide eafily over them.

However, it muft needs be faid, the freets are very narrow, and the paffengers a-foot no ways fecured from the hurry and danger of coaches, which always paffing the ftreets with an air of hafte, and a full trot upon broad flat tlones, betwixt high and large refounding houfes, makes a fort of mufic whici fhould feem very agreeable to the Parifians.

The royal palaces are furprifingly flately; as the Louvre and Tuilleries, Palais Laxembourg, Palais Royal.

The convents are great, and numerous, and well built; as Val de Grace, St. Germains, St. Victor, St. Genevieve, the irand Jefuits, \&c.

The fquares are few in Paris, but very beautiful; as the Place Royal, Place Victior, Place Dauphine, none of the largeft, except the Places Vendofme, not yet finifhed.

The gardens within the walls, open to the public, are vally great, and very beautiful; as the Tuilleries, Palais Royal, Luxembuurg, the Royal Xhyfic Garden, of the arlenal,
arfenal, and many belonging to convents, the Carthufians, Celeftias, St. Viftor, St. Genevieve, \&c.
But that which makes the dwelling in this city very diverting for people of quality, is the facility of going out with their coaches into the fields on every fide $;$ it lying round, and the avenues to it fo well paved; and the places of airing fo clean, open, or thady, as you pleafe, or the feafon of the year and time of the day require: as the Cour de la Reyne, Bois de Bologne, Bois de Vincennes, les Sables de Vaugerarde, \&c.

But to defcend to a more particular review of this great city, I think it not amifs to fpeak firf of the freets and public places, and what may be feen in them; next of the houfes of note; and what curiofities of nature or art, alfo of men and libraries, I met with : next of their diet and recreations; next of the gardens, and their furnitue and ornaments; and of the air and health. We fhall conclude the whole with the prefent fate of phyfic and pharmacy here.

To begin with the coaches, which are very numerous here and very fine in gilding : but there are but few, and thofe only of the great nobility, which are large, and lave two feats or funds. But what they want in the largenefs, beauty, and neatnefs of ours in London, they have infinitely in the eafinefs of carriage, and the ready turning in the narroweft freets. For this purpofe, they are all crane-necked, and the wheely before very low; not above two feet and a half diameter; which makes them eafy to get into, and brings down the coach box low, that you have a much better profpect out of the foremoft glafs, our high feated coachmen.being ever in the point of view. Again, they are moft, even fiacres or hackneys, hung with doubleiprings at the four corners, which infenfibly breaks all jolts. This I never was fo fenfible of, as after having practifed the Paris coaches for four months, I once rid in the eafieft chariot of my lord's, which came from England; but not a jolt. but what affected a man: fo as to be tired more in one hour in that, than in fix in thefe.

Befides the great number of coaches of the gentry, here are alfo coaches de Remife, by the nonth, which are very. well gilt, neat harnefs, and good horfes: and thefe all ftrangers hire by the day or month, at about three crowns Englifh a day. 'Tis this fort that fpoils the hackneys and chairs, which here are the moft nafty and miferable voiture that can be; and yet near as dear again as in London, and but very few of them neither.

Yet there is one more in this city, which I was willing to omit, as thinking it at firft fight fcandalous, and a very jeft; it being a wretched bufinefs in fo magnificent a city; and that is the Vinegrette, a coach on two wheels, dragged by a man, and pufhed behind by a woman or boy, or both.

Befides thofe, for quick travelling there are great number of pof-chaifes for a fingle perfon: and Roullions for two perfons; thefe are on two wheels only, and have each theirdouble fprings to make them very eafy; they run very fwiftly; botia the horfes pull; but one only is in the thilles. lhe coach-man mounts tie Roullion; but for the chaife, he only mounts the fide horfe. I think neither of thefe are in ufe in England; but might be introduced to good purpofe.

As for their recreations and walks, there are no people more fond of coming together to fee and to be feen. This converlation without doubt takes up a great part of their time: and for this purpofe, the Cour de la Reyne is frequented by all people of quality. It is a treble walk of trees of a great length, near the river fide, the middle
walk laving above double the breadth to the two fidn ones; and will hold cight files of coaches, and in the middle a great open circle to turn, with fine gates at both ends. Honfe that would have better and freer air, go further, and drive into the Bois de Bologne, others out of other parts of the town to Bois de Vincennes, fcarce any fide mils. - In like manner thefe perfons light and walk in the 'luilleries, Luxembourg, and other gardeus, belonging to the crown and princes, (all which are very fpacious) and are made convenient, with many feats for the entertainucnt of all people; the lacquies and mob excepted. But of this more hereater.

No fort of people make a better figure in the town than the bifhops, who have very fplendid equipages, and variety of fine liveries, being moft of them men of great families, and preferred as fuch, icarning not being fo neceffary a qualification for thofe dig. nities as with us; though there are fome of them very deferving and learned men. I fay, they are moit noblenen, or the younger fons of the beft families. This indeed is for the honour of the church; but whether it be for the good of learning and piety is doubtful. 'They may be patrons, but there are but few examples of erudition among them. "lis to be winhed that they exceeded others in merit, as they do in birth.

The abbots here are numerous from all parts of the kingdom. They make a confiderable figure, as being a gentile fort of clergy, and the moft learned; at leaft were io from the time of cardinal Richelicu, who preferred men of the greatel learning and parts to thefe polls; and that very frankly, and without their knowing it before-hand, much lets foliciting him for it. He took a fure way, peculiar to himfelf, to enquire out privataly men of defert, and took his own time to prefer them. This filled the kinglom of France with learned men, and gave great encouragement to fudy; whereof France has yet fome feeling.
'Tis pretty to ubferve, how the king difciplines this great city, by fmall inflances of obedience. He caufed them to take down all their figns at once, and not to advance them above a foot or two from the wall, nor to exceed fuch a finall meafure of fquare; which was readily done: fo that the figns obfeure not the fireets at all, and make little or no figure, as though there were none; being placed very high and little.
'There are great number of honels in Paris, by which word is meant public iuns, where lodgings are let; and alfo the notlemen and gentiemen's houfes are fo called, moltly with titles over the gate in letters of gold on a black marble. This feems as it were, to denote that they cauce at firft to Paris as frangers only, and inned publicly; but at length built them inns or houfes of their own. It is certain, a great and wealthy city cannot be without people of quality; nor fuch a court as that of France without the daily infpection of what fuch people do. But whether the country can fpare them or not, I queftion. The people of England feem to have lefs manners and lefs religion, where the gentry have left them wholly to themfelves; and the taxes are raifed with more difficulty, inequality, and injuftice, than when the landlords live upon the defmaines.

It may very well be, that Paris is in a manner a new city within this forty years. It is certain fince this king came to the crown, it is fo much altered for the better, that it is quite another thing; and if it be true what the workmen told me, that a common houfe, built of rough fone and plaiftered over, would not laft above twentytive years, the greacett part of the city has been lately rebuilt. In this age certainly moft of the great hoftels are built, or re-edified; in like manner the convents, the bridges
$t$ files of $h$ ends. Bois de uny fide nbourg, acious) le; the
and churches, the gates of the city; add the great alteration of the freets, the keys upon the river, the pavements; all thefe have had great additions, or are quite new.
In the river amongt the bridges, both above and beiow, are a valt number of boats, of wood, hay, charcoal, corn, and wine, and other commoditics. But when a fudden thaw comes, they are often in danger of being fplit and crufhed to picces upon the bridges; which alfo are fometimes damaged by them. 'There have been great loffes to the owners of fuch boats and goods.

It has been propofed to dig near the city a large bafin for a winter harbour; but this has not had the face of profit to the government; fo they are ftill left to execute their own project. There are no laws or projects fo effectual here, as what bring profit to the government. Farming is admirably well underfood here.

Among the living objects to be feen in the Areets of Paris, the counfellors and chief officers of the courts of juftice make a great figure; they and their wives have their trains carried up; fo there are abundance to be feen walking about the ftreets in this manner. It is for this that places of that nature fell fo well. A man that has a right to qualify a wife with this honour, fhall command a fortune; and the carrying a great velvet cufhion to church is fuch another bufinefs. The place of a lawyer is valued a third part dearer for this.

Here are alfo daily to be feen in the freets great variety of monks, in Arange unufual habits to us Euglifhmen; thefe make an odd figure, and furnih well a picture. I cannot but pity the miltaken zeal of thefe poor men; that put themfelves into religion, as they call it, and renounce the world, and fubmit themfelves to moft fevere rules of living and diet; fome of the orders are decently enough cloathed, as the Jefuits, the fathers of the oratory, \&c. but moft are very particular and obfolete in their drefs, as being the ruftic habit of old times, without linen, or ornaments of the prefent age.

As to their meagre diet, it is much againft nature, and the improved diet of mankind. The Mofaic law provided much better for Jews, a chofen people; that was intlituted for cleanlinefs and health. Now for the Chriftian law, though it commands humility and patience under fufferings, and mortification and abflinence from finful fults and pleaftures; yet by no means a diftinct food, but liberty to eat any thing whatfoever, much lefs naltinefs; and the papifts themfelves in other things are of this mind; for their cluurches are clcan, ponipounly adorned and perfumed. It is enough, if we chance to fuffer perlecution, to endure it with patience, and all the miferable circumftances that attend it ; but wantonly to porfecute ourfelves, is to do violence to Chriftianity, and to put ourfelves in a worfe ftate than the Jews were; for to choofe the wortt of food, which is four herbs and fifh, and fuch like tralh, and to lie worfe, always rough, in courfe and nafty woollen frocks upon boards; to go barefoot in a cold country, to deny themfelves the comforts of this life, and the converfation of men; this, I fay, is to hazard our healths, to renounce the greatef bleflings of this life, and in a manner to deftroy ourfelves. Thefe men, I fay, cannot but be in the main chagrin, and therefore as they are out of humour with the world, fo they muit in time be weary of fuch flavifh and fruitefs devotion, which is not attended with an aetive life.

The great multitude of poor wretches in all parts of this city is fuch, that a man in a coach, a-foot, in the fhop, is not able to do any bufinels for the numbers and importunities of beggars; and to hear their miferies is very lamentable; and if you
give to one, you immediately bring a whole fwarm upon you. Thefe, I fay, are true monks, if you will, of God Almighty's making, offering you their prayers for a farthing, that find the evil of the day fufficient for the day, and that the miferies of this life are not to be courted, or made a mock of. Thefe worhip, much againt their will, all rich men, and make faints of the reft of mankind for a morfel of bread.

But let thefe men alone with their miftaken zeal ; it is certainly God's good providence which orders all things in this world. And the flefl-eaters will ever defend themfelves, if not beat the-Lenten men; good and wholefome food, and plenty of it, gives men naturally great courage. Again, a nation will fooner be peopled by the free marriage of all forts of people, than by the additional ftealth of a few ftarved monks, fuppofing them at any time to break their vow. This limiting of marriage to a certain people only is a deduction and an abatement of mankind, not lefs in a papift country than a conftant war. Again, this leflens alio the number of God's worflippers, inftead of multiplying them as the ftars in the firmament, or the fand upon the fea fhore; thefe men wilfully cut off their pofterity, and reduce God's congregation for the future.

There is very little noife in this city of public cries of things to be fold, or any difturbance from pamphlets and hawkers. One thing I wondered at, that I heard of nothing loft, nor any public advertifement, till I was flewed printed papers upon the corners of Âreets, wherein were in great letters, Un, Dcu:, Cinj, Dix jufg; a Cinquante Louis à a gagner, that is, from one to fifty louis to be got; and then underneath an account of what was loft. This fure is a good and quiet way; for by this means without noife you often find your goods again; every body that has found them repairing in a day or two to fuch places. The Gazettes come out but once a week, and but few people buy them.

It is difficult and dangerous to vend a libel here. While we were in town, a certain perfon gave a bundle of them to a blind man, a beggar of the hofpital of the Quinzevint, telling. him he might get five pence for every penny; he went to Noftredame, and cried them up in the fervice time; La vie $\mathcal{E}^{\circ}$ Miracles de l'Evefq; de Rbeims. This was a trick that was played the archbifhop, as it was thought, by the Jefuits, with whon he has had a great conteft about Molinas, the Spanifh J. doctrines. The libel went off at any rate, when the firlt buyers had read the title further, and found they were againt the prefent archbifhop, duke, and firf pecr of France.

The flreets are lighted alike all the winter Jong, as toll when the moon flines, as at other times of the month; which 1 remember the rather, becaufe of the impertinent ufage of our people at London, to take away the lights for half of the month, as though the moon was certain to fhine and light the fireets, and that there could be no cloudy weather in winter. The lanthorns here hang down in the very middle of all the ftreets, about twenty paces diftance, and twenty foot high. Thy are made of a quare of glafs about two foot deep, covered with a broad plate of iron; and the rope that lets them down, is focured and locked up in an iron fumel and little trunk faltened into the wall of the houfe. Thefe lanthorns have candles of four in the pound in them, which laf burning till after midnight.

As to thefe lights, if any man break them, he is forthwith fent to the gallies; and there were three young gentlemen of good families, who were in prifon for having done it in a frolic, and could not be relealed thence in fome months, and that not without the diligent application of good friends at court.

The lights at Paris for five months in the year only, coft near 50,0001 . fterling. This way of lighting the ftreets is in ufe alfo in fome other cities in France. The king is faid to have raifed a large tax by it. In the preface to the tax it is faid, "that confidering the great danger his fubjects were in, in walking the freets in the dark, from thieves, and the breaking their necks by falls, he for fuch a fum of money did grant this privilcge, that they might hang out lanthorns in this manner."

1 have faid, that the avenues to the city, and all the ftreets, are paved with a very hard fand ftone, about eight inches fquare; fo they have a great care to keep them clean; in winter, for example, upon the melting of the ice, by a heavy drag with a horfe, which makes a quick riddance and cleaning the gutters; fo that in a day's time all parts of the town are to admiration clean and neat again to walk on.

I could heartily with their fummer cleanlinefs was as great ; it is certainly as neceffary to keep fo populous a city fweet; but I know no machine fufficient, but what would empty it of the people too; all the threats and infcriptions upon walls are to little purpofe. The duit in London in fummer is oftentimes, if a wind blow, very troublefome, if not intolerable; in Paris there is much lefs of it, and the reafon is, the flat ftones require little fand to fet them faft, whercas our finall pebbles, not coming together, require a valt quantity to lay them fall in paving.

But from the people in the ftreets, to the dead ornaments there. There are an infinite number of bufto's of the grand monarch every where put up by the common people; but the noble flatues are but few, confidering the obfequious humour and capacity of the people to perform.

That in the Place-Victoire is a foot in brafs, all over gilt, with Victoire, that is a valt winged woman clofe behind his back, holding forth a laurel crown over the king's head, with one foot upon a globe. There are great exceptions taken at the gilding by artifts; and indeed the flining feens to fpoil the features, and give I know not what confufion; it had better have been all of gold braffed over; which would have given its true lights and fhadows. and fuffered the eye to judge of the proportions. But that which I like not in this, is the great woman perpetually at the kings back; which is a fort of embarras, and inflead of giving victory, feems to tire him with her company. The Roman vitory was a little puppit in the emperor's hand, which he could difpofe of at pleafure. This woman is enough to give a man a furfeit.

The other are flatues oi three of the laft kings of France, in brafs a horfeback.
That an the Pont-neuf is of Henry the fourth in his armour bare-headed, and habited as the mode of that time was.

The other of Lewis the thirteenth in the Palace-Royal, armed alfo after the mode of the age, and his plume of feathers on his head-piece.

The third is of this prefent King Louis the fourteenth, and defigned for the Place Vendofme. This Coloffus of brafs is yet in the very place, where it was caft; it is furprifingly great, being 22 feet high, the feet of the king 26 inches in length, and all the proportions of him and the horfe fuitable. There was 100,000 pound weight of metal melted, but it took not up above 80,000 pounds; it was all caft at once, horle and man. Monfieur Girardon told me, he wrought diligently, and with almof daily application at the model eight years, and there were two years more fpent in the moulding, and furnaces, and cafting of it. The king is in the habit of a Roman emperor, without ftirrups or faddle, and on his head a French large periwig a-la-mode. Whence this great liberty of fculpture arifes, I am much to frek.

It is true, that in building precifely to follow the ancient manner and fimplicity is very commendable, becaufe all thofe orders were founded upon good principles in mathemavol. iv.
ties: hut the cloathing of an emperor was no more than the weak fancy of the onll. For Louis le Grand to be thus dreffed up at the head of his army now a-day. id be very comical. What need other emblems, when truth may be had; as th.. ,n the pretent age need be afhamed of their modes, or that the Statua lequeftris of lienry the fourth or Louis the thirteenth were the lefs to be valued for being done in the truedreds of their times. It feems to me to be the effect of miltaken flattery; but if regarded only as a piece of mere art, it is methinks very unbecoming, and has no graceful air with it.

1 remember I was at the levee of King Charles the fecond, when three models were brought him to choofe one of, in order to make his ftatue for the court at Windfor; he chofe the Roman emperor's drefs, and caufed it alfo to be executed in that other erected for him in the old Exchange in London. The like is of King James in Whitehall, and at Chelfea college, our invalids. Now I appeal to all mankind, whether in reprefenting a living prince now-a-days thefe naked arms and legs are decent, and whether there is not a barbarity very difpleafing in it. The father of thefe two Kings, Charles the firf, was the prince of this age of the beft relifh, and of a found judgnent, particularly in painting, fculpture, architecture by fea and land, witnefs the valt fums of money he beftowed upon Rubens and his difciple Vandyke. Alfo the great efteem he had for the incomparable Inigo Jones, who was the firft Englifhman in this age that underllood building. I heard M. Auzout fay, when he had viewed the banquetting-houfe at Whitehall, that it was preferable to all the buildings on this fide the Alps; and I ought to believe him, he having fudied Vitruvius more than 40 years together, and much upon the place at Rome. Alfo the fhip the Sovereign, which was truly the nobleft floating caftle that ever fwam the fea. Yet after all this, that King had a Statua Equeftris of himfelf crected, now at Charing-crofs, calt in the full habit of his own time, and which I think may compare with the beft of that fort at Paris.

I fhould beg leave in the next place to vifit the palaces and men of letters and converfation : but I muft take notice firft of the valt expences that are here in iron baluftrades, as in the Place-Royal, which fquare is compaifed about with one of ten feet high. Of this fort and better there are infunite every where in Paris; which gives indeed a full view of the beauty of their gardens and courts.

Firft, therefore, I faw the Palais Mazarin, in which are many good piftures, but the low gallery is furnifhed with a great collection of ancient Greek and Roman ftatues, and is what I moft took notice of. They were moft brought from Rome by the Cardinal. Thofe which are togate and cloathed, are as they were found; but fuch as were made nudx or naked, are miferably difguifed by the fond humour of the Duke de Mazarin, who in a hot fit of devotion caufed thens to be caftrated and mangled, and then frocked them by a fad hand with I know not what plaifter of Paris, which makes them very ridiculous. Cicero fomewhere tells us, that fome of the ancient wife men thought there was nothing naturally obfiene, but that every thing might be called by its own name; but our Celfus is of another mind, and begs pardon, being a Roman, that he wrote of thofe things in his own tonguc. It is certain upon our fubject, the Duke fhould not have furnifhed his cabinet and gallery with naked pictures, but with the togata only; or if it had once pleafed him to do otherwife, he fhould not have cloathed them; which was at beft but a vain oflentation of his chaftity, and betrayed his ignorance and diffike of good things; that is, fpoils and hides the noble art of the fculpture, for which only they are valuable.

But why thould nudity be fo offenfive, fince a very great part of the world yet defies cloaths, and ever did fo; and the parts they do moft affect to cover, is from a certain neceflity only.
onde.
id be 34 the my the tedrels garded eful air rected 11 , and renting here is ie firt, irly in he be. or the ritood Vhiteto beon the oating tris of hich I

It is plain by thefe and many other elegant flatues I faw at Verlailles, mof of which were taken out hence, that the Roman cloathing was the moft fimple thing inaginable, and that a Roman was as foon undreffed, as 1 can put off my gloves and fhoss. The men and women went drefled much alike. As for the fallhion of the Roman habit, it is evident by thefe ancient fattes, (which Oct. Ferrarius has well and reatonably followed in explicating the feveral garments of the ancients) that the tunica or flirt was without a collar or fleeves, and girt high up under the brealts; alfo, that the toga or gown was a wide and long garinent open at both ends, and let down over the head, and fupported by the selt hand thruft under the tkirts of it, whilft the top of it refled upon the left fhoulder. The right hand and arm was naked, and above the gown, to that the gown was ungirt and always loofe. Now for the purpofe, whell a Roman made himfelf naked for a bath, (as he daily did jult before eating) he had nothing to do but draw up his left hand, and the gown fell down at his feet; and at the fame time to loofe the girdle of the tunica, and to draw up both his arms from under the tunica, and that alfo fell at his fect.

In the firft ages of the commonwealth they wore a toga or gown only, afterwards they put on next the 1kin a tunica or fhirt, and never added more in the very fplendour and luxury of the empire; all other matters of cloathing, of whatever nature foever, have been invented fince.

I much admired, that in the great number of ancient fatues to be feen in and about Paris, I could never meet any one but what was cloathed with a toga pura, and no reprefentation of a bullated one.

This toga and tunica both were made of fine white wool or flannel : they had not a rag of linen about them. This flannel, I fay, was very fine; for their folds are fmall, and it falls into them eafily; and feems to be very light, by the handling of it, to raife it by the finger and thumb only, as is the air of fome of the ftatues, and the whole garment to be fufpended by the left fhoulder. Upon the leaft Itraining of it, the breafts and nipples arc vifible through it ; alfo the proportions of the thighs.
This wearing all woollen in a hot country brought on the ufe and neceffity of frequent bathing: otherwife they could never bave kept themfelves fweet and clean; and the neceflity of baihing kept thens to this fort of loofe garment; and much bathing brought in oils, and oils perfumes infufed in them.

But in my mind a fair linen flirt every day is as great a prefervative to neatnefs and cleannefs of the fkin and health, as daily bathing was to the Romans. It is certain, had they not ufed either fimple oils of olives, fometimes unripe and old, for the aftringency, and fometimes ripe and perfumed, the warm water mult have much decayed nature, and made the $\mathfrak{f k i n}$ intolerable tender and wrinkled. The naked indians and blacks fecure their Rins by oils at this day from all the injuries of the weather, both from heat and cold.

But the beft rule of health and long life is to do little to ourfelves. People are not aware what inconveniences they bring upon themfelves by cuitom, how they will plead for things long ufed, and make that pleafant, which is very deftructive to their healths; as in the cafe of cloathing, tobacco, flrong waters, fteel remedies, the drinking mineral watcrs, bathing, tea, coffee, chocolate, \&c.

One little ftatue I took more particular notice of, for the elegance of the fculpture, and the humour of the drefs; it llood upon a table; it was the figure of a fybil. The face of the old woman was cut very deep into the ftone, within the quoifure, like a hood fulled over the forehead, a very emblem of an oracle, which is hid, dark, and ambiguous,
as the woman herfelf, who would have neither her face feen, nor her faying cafily under-ftood-that is, the is as it were, aflamed of her cheat.

What was the fancy of the men of the firlt ages to make old women propheteffes, to utter oracles, and to interpret the will of the gods by the eating of animals; to make them Sagx and Veneficx is realonable enough; for old age makes all people fpiteful, but more the weaker fex. To poifon and bewitch are the fecret revenges of impotent people.

The Jews were impatient of the company of women in their religious rites, left they fhould contamiuate and fpoil all their devotion. The Romans on the contrary thought religion became women better than men, for befides the general parts they had in common with the men in adoration of their gods, they had alfo peculiar ones, where the men were not concerned. Tully bids his wife fupplicate the gods for him; for he tells her, he thought they would be kinder to her than him. Upon fome fuch principle, probably, their propheteffes were in efteem.

I faw the apartment of Monfieur Viviers in the arfenal ; it confifts in feven or eight ground rooms looking into the great garden; thefe rooms are fmall, but moft curioully furnifhed, and have in them the greateft variety and beft forted china ware I ever faw, befides Pagods and China pictures: alfo elegant and rich bureaus, book-cafes, and fome paintings of the beft mafters.

That which pleafed me moft, amongft the paintings, were the pieces of Rembrants, that incomparable Dutch painter.

A girl with a cage in one hand, and looking up after the bird that had got out, and was flying away over her head: fhe had fright, amazement, and forrow, in her looks. The other is an unlucky lad leaning upon a table, and looking with inifchief in his eyes, or that he watched to do fome unhappy turn. The third is a young gentleman in a fur cap, en difhabille, after his wonted manner. The two firlt are the moft natural thoughts and drefs that can be; but nothing certainly ever came near his colouring for flefh and garments. This part he ftudied paffionately all his life, and was ever trying experiments about it ; and with what fuccef, thefe and many other pieces fhew.

Thefe three pictures of Rembrant are all of young people, and are fimihied with all the art and perfection of colouring, as fmooth as any limning; which makes the judgment of Philibien of him appear not juft: for he fitted his paint according to the age and nature of the fubjects he wrought. I had the pleafure of feeing them again and again.
Monfieur le Noftre's cabinet, or rooms, wherein he keeps his fine things, the controller of the king's gardens, at the fide of the Tuillerics, was worth fecing. He is a very ingenious old gentleman, and the ordinance and defign of moft of the royal and great gardens in and about Paris are of his invention, and he has lived to fee them in perfection. This gentleman is 89 years old and quick and lively. He entertained me very civilly. There were in the three aparments, into which it is divided, (the uppermolt of which is an octagon room with a dome) a great collection of choice pictures, porcellans, fome of which were jars of a moft extraordinary fize: fone old Roman beads and butios, and intire ftatucs; a great collection of famps very richly bound up in books; but he had lately made a draught of his beft pictures to the value of 50,000 crowns, and had prefented them to the king at Verfailles. There was not any thing of natural hiftory in all his cabinet.

I was feveral times with him, and once he carried me into an upper clofet, where he bad a great collection of nedals in four cabinets, molt modern; anonglt them there
were four large drawers, three of which were the medals of King William, near 3 co as he told me. The fourth drawer was of King William's anceftors and family; he had been forty years in making this collection, and had purchafed many of them at vaft rates. He has certainly the beft furniture for an Hiftoria Metallica, that I ever faw. The French king has a particular kindnefs for him, and has greatly enriched him, and no man talks with more freedom to him; he is much delighted with his humour, and will fit to fee his medals, and when he comes at any meda!, that makes againft him, he will fay, Sire, cioy'a une, qu' $\in f$ bien contre nous! as though the matter pleafed him, and he was glad to find it to thew it to the king. Monfieur le Noftre fpoke much of the good humour of his mafter ; he affirmeed to me he was never feen in paffion, and gave me many inftancis of occafions, that would have caufed moft men to have raged; which yet he put by with all the temper imagima:le.
In this cabinet I faw many very rare olf china veffels, and amongf them a fmall Roman glafs urn, very thick made, and ponderous, of a blue fea colour; the two ears were feet divided into four claws, but the very botton of this veffel was fmooth, and very little umblicate; and for this reafon I cannot tell whether it might not be caft, and not blown.

The Palace of Luxembourg is the moft finifhed of all the royal buildings; it is very magnificent, well deligned, were it not for the trifling interfections or round and deep jointings of the columns, which looks like a cheefemonger's fhop, and which is below the grandeur of the orders; fo hard a matter it is to have a true relifh of the ancient fimplicity, and not to add impertinent ornaments. And to fay the truth, there are not many things in Paris where this chaftity is ftrictly preferved; anong thofe, where little is to be blamed, are the fouth ealt front of the Louvre, the facade of St. Gervais, and the whole building of Val de Grace. And this wantonnefs in additional ornaments may. perhaps be one reafon, why the Doric is more practifed there at this day, the modillions naturally admitting greater variety, and according to the intended ufe of the building.

In this palace is that famous gallery, where the hiftory of Maria of Medicis is painted by Rubens. Though this was donc $7 \circ$ years ago, it is as frefh as at the firft; fo great a mafter he was in colouring. His floh is admirable, and his fcarlet, for which, if he had not a fecret, not now underllood, he had lefs avarice, and more honour, than moit of our modern painters. It is certain the goodnefs of colours was one of the great carcs and ftudies of the late famous painters; and that which feems moft to have obliged them to it, was the neceffity they put themfelves upon, to paint all their own defigns, and more partucularly the prefent drefles. And though Kubens in his hiftory is too much a libertine m this relpect, yet there is in this very place, which we now defcribe, much truth in the habit of his primcipal figures, as of King Henry the fourth, the queen, her fon, the three daughters and the cardinal ; though indeed the allegoric afittants in all the tableaux are very airy and fancifully fet out. His fcholar St. Ant. Vandyke did introduce this novelty too much in England, where the perfons would bear it; as the female fex were very willing to do, who feem in his time to have been mighty fond of being painted in difhabille. It was this that cut out of bufincfs the beft Englifh painter of his time, Cornelius Johnfon, and fhortened his life by gricf. It is certain with a little patience all drels becomes difhabille; but 1 appeal, whetner it is not better and much moie pleafing to fee the old faflion of a dead friend, or relation, or of a man of diftinition, painted as he was, than a for pifh sight-gown, aud oudd quoifure, which never bzlonged to the perfon painted.

But that which led me into this refection was, that the modern painters hnve therely an opportunity to be idle and to have others to work under them; it is fufficient to fuinh the face, and to fend it out to be dreffed at the block; whereas were they obliged in honour to paint the whole dreffes, this would make them accurate in colouring. through the great variety which would daily occur, and that noble art be in far greater efteem.

A good artite might eafily reduce it, and command the purfes of thofe he paints, to pay well for his labour and time, for it is the lot but of very few men to excel in this noble art.

In the anti-clamber of the queen's apartment there are other paintings of Rubens, as, in three diftinct tableaux, at the upper end of the roon the ceremonies of the marriages of her three daughters, to Savov, Spai:, and Fingland. Alfo in another hiftorical tableau, on the fide of the fame room, he has painted his own picture, in a very free and eafy polture, next the cye, up in the very comer, looking out, as unconcerned in is own tablean, upon the three ladies. He has done his wite in fome of the tablean, in the great gallery; but in the laft, where the queen is mounting up to Heaven, fhe is drawn up after her; but whether it be her full and heavy body, or her mind, fle is painted in a very uriwilling pofture, bending back. It feems her hufband liked her company too well to part with her cafily, or fhe with him.
Several of the rooms of this apartment were wainfooted with cedar, wrought in flowers, as her drefling-room and oratory; which is rare in Paris. The floors were made of fmall pieces of wood put together in figures; the inward knots were inlaid with threads of filver, which have a marvellous effect; but the firmnefs, duration, and intirenefs of thefe floors, after fo long laying, I molt admired: whereas with us in London, and elfewhere in Paris, they prove fo noify to tread on, and faulty, that they are in a few years intolerable.

It is pity the king has fo great an averfion to the Iouvre, which if finifhed, (which he might eafily do in two or three years) would be the moft magnificent palace, perhaps, that ever was upon the face of the earth; and, indeed, except that be done, Paris will never arrive at its full bcaury.

There are two fones in the fronton of the fouth eaft facade of the Louvre, which are fhewed to all ftrangers, covering the very top of it, as flates do, and meet in an angle. Thefe are very big, viz. 54 feet long a.piece, eight feet broad, and but 14 inches thick. The raifing fo high thefe two vaft and tender ftones was looked upon as a mafter-piece of art, equalling any thing of the ancients of that nature. They were taken out of the quarries of Meudon, where monficur the dauphin dwells.

I faw in the gallerics of the Louvre fome of the battles of Alexander by I.e Brun; which are by the French the moft admired pieces of painting, that have been (fay they) done by any man on this fide the $A l_{p s}$; and of which they are not a little proud.

Alfo a large piece of Paulo Verenefe, prefented by the Senate of Venice to the king.
I cannot pafs by unmentioned the vaft number of great cafes in one of the galleries, wherein are the play things or puppets of the dauphin, when a child: tiney reprefent a camp in all its parts, and coft 50,000 crowns.

But, indced, that which moft furprifed me in the Louvre was the Attellier or workhoufe of monfieur Gerradon; he that made Cardinal Richelicu's tomb, and the Statua Equeftris defigned for the Place de Vendofme; he told me he had been almoft ten years in making the model and moulding and other things as I faid before, with affiduity and daily application.

He hath in the Lourre alfo two rooms, in one of which are many ancient marble fare tues, and in the other are brafs ftatues and Vafs, and a hundred other things relating to natiquity. There is nothing in Paris deferves more to be feen.
In this laft, I faw a fort of Egyptian Jamas, with Silemus on one fide, and a Bacchus on the other : with many other Egyptian figures well defigned; all of them with a hole in the crown of the head.

Alfo a lion of Egypt very large of brafs; but the defign rude, and more like an Indian Pagod. This allo liad a large fquare hole in the back, near the neck. The Siamites, that came in an embafly to Paris, were well pleafed to fee this figure, and faid it was not unlike one of theirs; and that that hole ferved to put the incenfe in, that the fmoak might come out of the body and noftrils of the lion. I doubt not but that alfo was the ufe of the open crowns of the reft of the Egyptian figures, which I had feen elfewhere, as well as here; and their heads ferved for perfuming pots for themfelves: and hence alfo might arile, that other ornament of radiated heads; in imitation of a bright flame kindled within, and cafting rays out of and round the head.

There was alfo a fimall image of a lean man, caft bent, in a fitting pofture, with a roll of parchment fpread open upon his knees, and he looking down upon it, reading it. This was of folid brafs, the head and all: this was found inclofed in a mummy. He feemed to have a thin linen garment on, perhaps fuch as the Egyptian priefts ufed to wear.

Alfo he fhewed us the mummy of a woman intire. The fcent of the hand was to me not unpleafant; but I could not liken it to any perfume now in ufe with us; though I make no queftion, but naptha was the great ingredient; which indeed is fo unufual a fmell, that the mineral waters of Hogfden near London, (wherein the true naptha is fubftantially, and of which I have fome ounces by me, gathered off thofe waters) have impofed upon the ignorant in natural hiftory; who would make them come from a chance turpentine effufion, or the mifcarriage of a chymical experiment.
Here were alfo great variety of urns and funeral vafa of all materials and fafhions.
Alfo an antient writing pen coiled up, with two ends erected both alike, reprefenting the head of a fnake.
The antient heads and buftos in brafs are numerous and of great value. This gentleman is exceeding courteous to all frangers; efpecially to fuch, as have the leaft good relifh of things of this nature, to whom he fhews them gladly. It cannot be otherwife, that a man educated in that noble art of fculpture, who fhall daily ftudy fo great a variety of originals of the beft mafters, but muft far excel the reft of mankind, who practice without good example, and by fancy moftly.
I was to fee Monfieur Baudelot, whofe friendhip l-highly value: I received great civilities from him. He is well known by his books about the utility of voyages: he has a very choice and large collection of books of Grcek and Roman learning. I made him feveral vifits, and had the pleafure of perufing his cabinet of coins, and fmall images of copper, which are many and of good value : as Egyptian, Phrygian, Grecian, and Roman.

Amongft his Egyptian, the moft curious was a Deus Crepitus of admirable worknanhhip, with a radiated crown: it was an Ethiopian, and therefore befpoke its great antiquity; for they very ufually reprefented their kings under the figures of their gods.

There was alfo the fkeleton of a woman of folid copper, found in the body of a mumny, in a fitting pofture; not unlike that other mentioned above in Monfieur Girardon's clofet.

An Apis or a heifer in copper.

A Phrygian Priapus of elegant worknanfhip: the l'hrygian Cap pointed and hanging down behind, as our caps in difthabille are now worn.
Of all which, and many more, this learned antiquary intends to write.
In his cabinet of medals I could not find one of Palmyra, for which I carefully enquired; for I was willing to add what could be fomad in lrance upon this fubject.

He has alfo many marbles from Greece; moll of which have been publifhed by Spon; fave one, and that is the moft antient and moft curions of all; concerning which he is ready to publifh a differtation. It is a catalogue in three columus, of the names of the principal perfons of Erectheis, one of the chiefert tribes of Attica, that were killed in one and the fame year in five feveral places, where the Athenians fought under two generals, as in Cyprus, in legypt, in Phoenicia, in Egina, in Halies. Hare are 177 nanes in the three columns.

The Mantis cloles the column, who died in E.gypt, that is, the plyfician. Magic and phyfic went together in thofe days: may, the very comedians and poets, thofe neceffary men of wit, fought ; for none were exempt from being inrolled that were born in the kingdom or republic of Attica.

The antiquity of this marble, befides the known hiltory and names which jullify the time of thole men: the figure of the letters are an undoubted argument; for thereare no double letters here; no $n$, no $a$, but all graved with e, $o$; alfo the leters, $L, p, 11, R, s$, are very Roman. So that it is alfo an cvidence, that the Romans borrowed their letters from the antient Greek alphabet.
The invention and borrowing of letters was a great happinefs to mankind. The embarras in which wriling is in Clina, is owing to the misfortunc of wanting an alphabet; fo that the Chinefe are forced to exprefs every fentence and thought by a different character, which has multiplied their writing to 120,000 characters; of which yet they have lefs need, than we in Europe, who perform all with 24 letters, (whereof five add life to the other 19, faidh Hippocrates, which is an argument of the age he wrote in : the knowledge of grammar, i. e. reading and writing, Jepends upon feven figures, de Dieta. 1.) The Chinefe know much lefs than we; they have no other morals, they have lefs philofophy, lefs mathematics, fewer arts, and yet much narrower knowledge of natural hiftory, becaufe they can have the knowledge only of that part of nature which they have at home: in what therefore fhould they employ this multitude of characters; It is, I fay, their misfortune not to have thought of an alphabet: their common language is as eafily learnt, and confequently might as eafily be writ as any in Europe.

But to return to Monfieur Budelot's flores. In this cabinet I alfo faw fome bafferelieves: one of Praxiteles well defigned; one of Mufos the comedian: amongtt the reft of the marbles there is a bafferelief, very extant, and finely fuifled, of a cupid afleep, leaning his head upon his left arm; in his hand he holds two poppy heads. It is probable the poppies were emblematic from the power they have in love:aftairs. Indeed moft poifons alfict thofe parts chiehy, being the great fluce of the habit of the body, or circle of the blood; and no people ufe poppy wore, and ftand more in need of it, than the men who delight in polygamy, the Mahometans, or underlland it beter; as Olearius teftifies.

Ife had an antic bulto of Zenobia in marbic, with a thick radiated crown; of which he very obligingly gave me a copy, well defigned from the original : this was brought out of Afia by Monfieur Thevenot.

He thewed me a dilfertation he had written out fair for the prefs, about a certain ancient Intaglia of Madames, of Ptolomens Auletes, or the player epon the flute: In
this the thin mufler is the moft remarkable thing, which covers the mouth and nofe. This head is engraved upon an amethyf.

I enjoyed this gentleman's company very often ; and had much difcourfe with him about his books of the utility of voyages; and in one converfation took the freedom to diffent from him about the interpretation of that coin in Monfieur Seguin, which he calls Britannick.
Monficur Boudelot reads it thus, Fovi Vicfori Saturnali Io! or Jori Vicforia Sat. Io! I had rather read it thus, Io! Sat. Vifforia Io! upon the occafion of his returning with the foldiers, filling their head-pieces with the fhells they had gathered off the fea-flore; and the little ufe of his new invented letter the digamma, which he inflituted or borrowed from the E $\begin{gathered}\text { Elique to exprefs } V \text { confonant. }\end{gathered}$

The flells were a triunuph much like this fmall addition to the alphabet; which lafted no longer than his time : that is victory enough : (for fo ftupid a prince as Claudius) let us return with the fpoils of the ocean, and adorn his new invented letter with a palm branch : the reverfe of this coin being a laurel-crown: both the figns of vietory.

About the Bouftrophedon way of writing, mertioned by Suidas and Paufanias, or turning again as the $o x$ ploughs, or the racers about the meta in the cirque, in my opinion it could be nothing elfe, but the ferpentine manner of writing found in Swedeland in runique letters.

He fhewed me alfo a fone taken lately out of the body of a horfe at Paris, which wa: his death ; and dying ftrangely, they diffected him, that is, certain ignorant people; in the lower part of the body, (probably the bladder) was found this fone: it weighs, as I guefs, two pound ; it is as round as a cannon ball; it is laminated like an onion; for the firf couche was broke up in fume places, of a dark hair colour, and tranfparent; or like fome cloudy agats which I have feen: it was very ponderous. Such like tranf. parent foncs I had a patient voided often in Yorkflire. I faw another tranfparent one, which was cut out of the buttock of an alderman at Doncafter; he was twice cut in the fame place, at fome years' diffance. Another I had in fome meafure tranfparent, voided by a patient, which was of the very colour of a coffee berry when burnt; but of this horfe ftone Monficur Bondelot wrote me a letter before I left Paris, which! defign to publifh.

I was by invitation from Monfieur Caffini at the Obfervatoire Royal, built on a rifing ground juft without the city walls. This building is very fine, and great art is ufed in the vaulted cut roofs and winding faircafes. The fones are laid infide, outfide, with the moft regularity $I$ ever faw in any modern building. In all this building there is neither iron nor wood, but all firmly covered with ftone, vault upon vault. The platform a-top is very fpacious, and gives a large and fair view of all t'aris, and the country about it; it is paved with black flint in finall fquares, which I make no doubt are fet in coment or tarras, that is, the Pulvis Puteolanus.

We were fhewed a room well furnifhed with models of all forts of machines; and a very large burning ghafs, about three feet diameter, which at that time of the year, viz. in the beginning of February, did fire wood into a flame, in the very moment it came into and paffed through the focus.

I was indifpofed, and fo could not accept of the favour which was offered me of feeing the moon in their telefoopes; and to go down into the vault, which was contrived for feeing the fars at noon-tide, but without fuccefs. I was told by Monfieur Roman afterwards, that he faw there a rock formed in the cave by the dropping of a fpring of petrifying water ; of which nature are all the wells in Paris.

In the floor of one of the octagon towers they have defigned with [reat accurate. nefs and neatne fs with ink an univerfal map in a valt circle. 'The north pole is in the centre. 'This is a correction of other maps upon the latelt and beft obfervations.

His nephew Monfieur Moraldi was with him; as for his only fon, he was in London at that time: I afterwards was with him at his father's, a very hopeful young genIt man, and well inftructed by his father in the mathematics, and all other ufeful tarning.
The trimphal arch out of the gate of St. Antoine is well worth fecing; for in this the French pretend not only to have imitated the ancients, but to have out-done then. They have indeed, ufed the greateft blocks of fone that could be got, and have haid then widhout mortar, and the leall fide outward, after the manner of the ancients; but I am afraid their materials are very fhort of the Roman, and their fone is ill chofe, though valtly great.

Indeed the defign is moft magnificent ; it is finifhed in plaifter, that is, the model of it, in its full beauty and proportions.

1 fuppofe it was intended for a gate of entrance into the city: for it fronts the great ftreet of the fuburbs, and has a valt walk planted with trees leading from it towards Bois de Vincennes.
There is nothing more built but the four parts of the foundation of the true building, raifed only to the feet of the pedeflals; the foumdation is laid twentyet wo feet deep.

Amongtt the valt blocks of fone, which take up a great compafs before the building, 1 found feveral forts, all brought from the quarries not far from Paris; all of then are of a kind of coarfe grit, which will not burn into lime. They diftinguill thefe ftones into four forts; 1. Pierre d'arcueil, for the firft two or three couches or lays above the foundation. This is the heft, and hardeft of all. 2. That of St. Clou, which is good, and the next beft. I did not find by the blocks defigned either for the walls of the building; or the rounds of the pillars; that the beds of fone of St. Clou are above two feet thick. 3. That of S. lieu; this is but indifferent, but yet much better than that fone, which is taken up out of the fone pits in and about Paris, which makes the fourth fort of flone. If it be wrought up into walls, as it is taken out of the pits, it is very apt to be flawed by the froft : but if it be laid in the air, and kept under cover for two years, then it becomes dry and n. re durable.

I faw but one piece in Patis of the ruins of an old Roman building; it was in La Rue de la Harpe. 'the vaults are very high and large. The maner of building is near the fame I formerly caufed exactly to be figured and deferibed at York, and which is publifhed in the Philofophic Tranfactions: that is, the infide and outfide of the walls are compofed of fix ruws of fmall fquare flones, and then four rows of flat, thin and broad Roman bricks, and fo alternatively trom the top to the bottom. Which makes it probable it was built after Severus's time: for this was the African manner of building, as Vitruvius tells us; and therefore might well be, what tradition here fays of it, viz. part of Julian the emperor's palace or therme.

St. Innocent's church-yard, the public burying-place of the city of Paris for a 1000 years, when intire (as I once law it) and built round with double galleries full of dkulls and boncs, was an awful and venerable fight: but now 1 found it in ruins, and the greateft of the galleries pulled down, and a row of houfes built in their room, and the bones removed 1 know net whither: the reft of the church-gard in the molt negleted and naflicf pickle 1 evor faw any confecrated place. It is all one, when men, even the Roman catholics have a mind, or it is iheir intereft, to unhallow things or places, they can do it with a grood flomach; and leave the tombs of chancellors and other great
curatc. sin the in Lon. ng gen-- uleful this the thein. ve laid is ; but chole, odel of

men without company or care. What nobody gets by, nobody is concerned to repair: but it is trauge amougft fo many millious of dead men, not one wonder-working faint fhould ftart up to prefierve ittelf and neighbours from contempt and fcandal. That fo much holy earth, brought, as it is faid, fo far off, thould never produce one faint, but rather lpew up all its inhabitants, to be thus fhuffled and diflipated.

Amonght the many cabincts of Paris there is nothing finer than the collection of Montieur Buco, Garile-Rolles du Parlement. You pafs through a long gallery, the one fide of which is a well furnilhed library, and alto well difpoled in wired cafes. This gallery leads into two rooms very finely adorned with pictures, Vafa's, fatues and figures in brafs, alfo with china, and the famous enammel vcffels, formerly made in Poicu, which are not now to be had; a thoufand other curious things.

I very particularly examined his large quantity of fhells, confifting in near fixty drawers. There were indeed very many of a fort, and but few but what I had feen before, and figured. He very obligingly lent me thofe I had not feen, to have the deligns of them done. He had many very perfect and large ones of land and frefh-water buccina; but yet a great number were wanting of thofe very tribes which I have publifhed in my Synop/is Concbyliorum.

Here were alfo two or three very fair ones of that fort of compreft fnail, which have their tail on the fame fide with their mouth; and the vulgar name, by which thofe men of cabinets diftinguifh them, is not amifs, viz. des lampes.

He fhewed me a bivalve, which is not uncommon (a large blood red fpondille) for which the late duke of Orleans gave goo livres, which is above sol. fterling; and he alfo affured me, that the fame perfon offered a Parifian for thirty-two fiells 11000 livres. Which fum was refufed; but the duke replied, that he knew not who was the greater fool, he that bid the price, or the man that refufed it.

I allo faw in this collection an hippocampus about four inches long, the tail fquare thick bellied and breaft like a miller thumb, winged not unlike a fort of flying fifh, but the fins were fpoiled; the membranes being tore from the bones of the wings, the head long and fquare like the tail, with a fort of tufted muffel. This fifh I took to be of the Hippocampus kind; and (as he told me) it was given him by my Lady Portfmouth, poffibly out of Kiug Charles's collection, who had many curious prefents made himin: (as one of the fhells from the States of Holland, many of which I have feen in other hands but he fuffered them all to be diffipated and loft.

Here alfo was a Vefpetum Canadenie of a moft elegant figure, and admirable contrivance ; of which I have a drawing. This is intire in all its parts; it is as big as a niddle-fized melon, par-fanhion, with an edge running round, where it is thickelt, from which edge it fuddenly declines and leffens into a point; at the very end of the point, on one fide, is a little hole, with pulvinated or finooth edges inclined in. waril; otherwife it is whole, and wrought upon the twig of a tree, of a very fmooth fatin-like fkin.

Alio the ftriated fin of an African afs, fupple and well cured, which I hat never feen before. It is certainly a moft beautiful animal; and, I admire, after fo many ag:s that it has been known to the people of Europe, it could never be tamed, and made of common ufe, as the reft of the horfe kind. This was only of two colours, viz. broad lifts of white and bay or chefinut colour drawn from the back down the fides to the belle, "hich was all white: the lifts were parted at the back by a very narrow ridge of thort hair; which lifts alfo went round the legs like garters. The hair coloured itripes of the Africin als were, near the back, three or four fingers broad, alfo the lift down the back was very broad.

Another ikin of a cap-afs I afterwards faw at Dr. 'Tourncfort's ; and the fripes were the fame, but much broader and darker coloured; it may be from the different age. This fort of friping feenis to be peculiar to the afs; for the mott common to be feen with us have all a black lift down the back ; and two more, that is, on each fide one, running down the houlders.

- I faw Monfieur 'Tournefort's collsction of thells, which are well chofen, and not above one or two of a fort; but very perfea and beautiful, and in good order, confifting of about 20 drawers.

There was amongt them a very large land fhell, the fame which I have figured from the mufum at Oxford, having its turn from the right hand to the left. Alfo many very excellent and large patterns of other land fnails; alfo a frefh-water muffel from Brafil, which I had never feen before; a pair of then he gave me; and many fpecies of frefh.water buccina from the Carribee illandr. silfo an auris marina fpine echinata; which was new to me.

Anong the fhells the thin oyfter, which fhins within like mother of pearl, and has in the uppermoft end of the flat valve, near the hin a hole. Thefe he brought with him, and took them up alive from the rocks in opain; he faid they were very offenfively bitter to the tafte. Thefe beins patect, I had the opportunity of feeing that hole fhut with a peculiar and third thell, of the falhion of a pouch or fhepherd's purfe.

Ithall fay nothing of his valt collection of feeds and fruits, and dried plants which alone anount to 8000, and in this he equals, if not exeels, all the moit curious herbarifs in Europe. His herbarifations about Paris he gave me to carry for England, juft then printed off; alfo he thewed the the defigns of about 100 European non dc ficript plants, in Svo. which he intends next to publifh.

He allo fhewed me ten or twelve fingle fheets of vellom, on each of which were painted in water colours very lively, one fingle plant, moflly in flower, by the beft artift in Paris, at the king's cliarge. Thofe are fent to Verfailles, when the doctor has put the names to them, and there kept: in this mamer the king has above 2000 rare plams, and they work daily upon others. The limner has two louis's for every plant he paints.

1 faw there alfo the Vefpetum Canadenfe Maximum, about 12 inches long, and fix in diameter; of a pear falhion; it hangs by a long and broad loop to the twig of a tree : the broad or lower end is a little pointed, and rifing in the midele; the outward fin in as fmooth as vellum, and of a whitih grey, next to the pearl colour. The latton at the bigger end in this being broken, and the outward ikin pilled oft, I could fee a hole of about half an inch diameter in the very middle, into which the walps go in and out. The cells are fexangular, but of a very fmall fize, not much bigger than a duck quill, or very fmall goofe quill; and confequently appear very thick fit and numerous.

He fhewed me alfo a wint julus from Brafil, at leaft fix inches long, and two about, round like ac as is insing, of a kind of copper or brazen co. lour: the feet infinit, liza a double fringe on each fide: this he had from F. Plumier, who afterwards gave me a defign of it drawn by the life, and in its proper colours.

Dr. Tournefurt thewed me a prefent which was made him by his countryman of Provence, Monfieur Buyeur d'Aguilles, of a large book in folio in curious ftamps. This is only the firt part of his cabinet, all graved at the author's charge; and he is faid to be another Peirefk, which would be happy for mankind, and a great honour to that country to have produced two Mrecenass in one age.

I was to fee Monfieur Verney at his apartment at the upper end of the royal phyfic garden; but miffing my vifit, went up with a young gentlemen of my lord ambaffador's retinue, to fee Mr. Bennis, who was in the diffecting room, working by himfelf upon a dead body, with its bruall open and belly gutted: there were very odd things to be feen in the room. My companion, it being morning, and his fenfes very quick ald vigorous, was Arangely furprifed and offended; and retired down the ftairs much faller than he cane up. And indeed, a private anatomy room is to one not accuftomed to this kind of manufacture, very irkfome, if not frightful; here a basket of diffecting inflruments, as knives, faws, \&cc. And there a form with a thigh and leg flayed, and the mufcles parted afunder: on another form an arm ferved after the fame namer. Here a tray full of bins of Hefh, for the more minute difcovery of the veins and nerves; and every where fuch lifcouraging objects. So, as if reafon and the good of mankind did not put men upon this ftudy, it could not be endured: for inftinct and nature moft certainly abhors the mployment.

I faw Monficur Merrie, a moft painful and accurate anatomift, and free and cornmunicative perfon, at his houfe Rue de la Princeffe. His cabinet confifted of two chambers: in the outward were great r riety of ikcletons; alf, entire preparations of the nerves ; in two of which he thewe me the millake of Willis, and from thence gathered, that he was not much ufed to diffect with his own hand. The pia mater coating the fpinal nerves but half way down the tack where it ends: the dura mater coating the lowermof twenty pair. Which, Willis, (as he faid) has otherwife reported.

But that which much delighted my curio , was the demonfration of a blown and dried heart of a foetus; alfo the heart of a $\quad$ ife.

In the heart of a foetus, he thewed it que open, and he woukd have it that there was no valve to the foramen ovale; which (emed equally open from the left ventricle to the right, as the contrary : that its ameter well near equalled that of the aorta: that the two arteries which afcend up 1. o the two lobes of the lungs, (and are the ramifications of the pulmonic artery, at or it has parted with the canal of communication, which goes betwixt the pulmonic utery, and the lower or defending branch of the aurta) both put together, far exceed, if not double, the diameter of the aorta itfelf.

He therefore, not without good reafon, affirme, that of all the blood which the vena cava pours into the right ventricle of the heart, and is thence in a feetus forced up into the pulmonic artery, a great part is carried by the camal of communication into the dsfcending trunk of the aorta, and is fo circulated atout the body, the lungs (as to that part) being wholly flighted: alfo that of the two remaining thirds of the blood, which is carried about the lungs, when it comes down the pultnonic vein, that which cannot be received by the aora, (and all cannot, becaufe the aorta is much lefs than the two branches of the pulinonic artery put together) is therefore difcharged back through the foramen ovale into the right ventricle of the heart, and fo thrown up again with the reft of the blood, coming from the vena-cava. So that one part of the two remaining parts of the blood is daily carried about the body, as in an adult foetus, and a third part only circulates in the lungs, paffing by the body or grand circulation.

That all this is done to abbreviate and reduce the circulation to a leffer compafs, is certain ; and fo for the fame reafon and end, that other leffer circulation of the liver is fighted by the blood, which returns from the placenta; by a canal of communica. tion betwixt the forta and the vena cava.

The reafon he gives of this, I cannot at all allow of, as being very ill grounded; and therefore I hall not trouble myfelf to confute, or fo much as name it.
As for the heart of the land tortoife, it was preferved in fpirit of wine, and all the three ventricles thereof flit and opened; fo that I had not all the fatisfaction I could have wifhed : but the left ventricle in this animal had no artery belonging to it, but did receive only the blood, which defcended from the lungs, and convey it by the foramen ovale into the right ventricle : that the third or iniddle ventricle was only an appendix to the right, and had the pulmonic artery iffuing from it. So that the blood in a tortoife was in a manner circulated like that in a toetus, through the body, the lungs as it were or in good part llighted.

This thought of Monfieur Merrie's has made a great breach betwixt Monfieur Verney and himfelf; for which reafon I had not that freedon of converfation as I could have wifhed with both of them; but it is to be hoped there may come good from an honeft emulation.

Two Englifh gentlemen came to vifit me, Mr. Bennis and Mr. Probie. They were lodged near the royal garden, where Monfieur Verney dwells, and makes his anatomies, who in three months time fhewed all the parts of the body to them. He had for this purpofe at leaft twenty human bodies, from the gallows, the chatelet, (where thofe are expofed who are found murdered in the ftreets, which is a very common bufinefs at Paris) and from the hofpitals.

They told me, Monfieur Verney pretended to fhew them a valve, which did hinder blood from falling back into the right ventricle by the foramen ovale. This valve they faid he compared to the papilla in the kidncys, mufculous and flefly: that if wind was blown into the vena pulmonalis, it did not pals through the foramen ovale, but ftop there, by rcafon of the valve: that he did believe contrary to Mr. Merric, that no blood did circulate through the lungs in an embrio.
Again, in another converfation with Monfieur Merrie, he fhewed me the blown heart of an embrio, and that of a girl of feven years o'd. I faw clearly, that the fkin of the fuppofed valve of the foramen ovale, was as it were fulpended with two ligaments: and that in the girl's, the two fides of the foramen ovale were trawn one over the other, and fo clofed the hole; but were eafily to be feparated again by a briftle thruft betwixt them.

Alfo it feemed to me, that this membrane in an embrio might cover the foramen ovale, like the membrana nictans in a bird's eye, that is, be drawn over it, and fo hinder the ingrefs of the blood from the vena cava, as often as the right auricle beats: but the dilating iffelf might give way to the defcending blood of the vena pulmonalis; and poffibly, the embrio living as it were the life of an infect, can by this artifice command the heart.

I remember in difcourfe that day with him, he told me, that Monficur Verney had an old cat, and a young kithing juft born, put into the air-pump before the Academic Royalle de Sciencts: that the cat died after fixteen pumps, but the kitling furvived five hundred punps; which favours in fome meafure the command young animals have of their harts.

At another vilit Morfieur Merrie obligingly procured for me the heart of a human embrio, with the lungs intire. He tried betore me the experiment upon blowing, and alfo fyringing water into the aorta, both which filled the auricles and ventricles, and frecly came out at the vena cava only. Then he oponed the right auricle and ventricle, where the foramen ovale was open only at one corner, not the tenth part
about the iflands with this cargo. He was more than once fhipwrecked, and loft his fpecimens of all things, but preferved his papers, as having fortunately lodged them in other veffels; fo that the things themfelves I did not fee. He had defigned and diffected a crocodile; one of the fea tortoifes; a viper, and well defcribed the diffections.

His birds alfo were well underftood, and very well painted in their proper colours. I took notice of three forts of owls, one with horns, all diftinct fpecies from our European. Several of the hawk kind and falcons of very beautiful plumage; and one of thofe, which was coal black as a raven. Alfo (which I longed to fee) there was one fpecies of the fwallow kind, very ditinct from the four feecies we have in Europe.

Amongt the fifh there were two new fpecies of American trouts, well known by the flehy fin near the tail.

Amougt the infects there was a fcolopendra of a foot and an half long, and proportionably broad; alfo the julus very elegantly painted, which I had feen before in Dr. 'Tournefort's collection.

Alfo a very large wood-frog, with the extrenity of the toes webbed.
Alfo a blood-red polypus, with very long lege, two of which I could difcern by the draught were thick acetabulated. This, he told me, was fo vencmous, that upon the leaft touch, it would caufe an infupportable burning pain, which would laft feveral hours.
There were alfo fome few fpecies of the ferpent and lizard kind.
There were but few fhells; but amongt them there was a murex, which dies purple, with the fifh as it exerts itfelf in the fea. Alfo that land buccinum, which lays eggs with hard Thells, and for bignefs, and fhape, and colour, fcarce to be diftinguilhed from the fparrow eggs. And bectufe the murex and this buccinum was drawn with the animals creeping out, I defired a copy of them, which he freely and in a mott obliging manner granted me. He defigned the buccinum terreftre in the ifland of St. Doningo, where he found it.

Amongft the vaft collection of plants, I obferved the torch kind and ferns were of all others the noft numerous; of each of which there were an incredible number of fpecies. There were two or three fpecies of goofeberries and currants; and fome fpecies of wild grapes; all which F. Plumier told me were good to cat.

He told me thefe drawings would make ten books, as big as thofe he had pub. lifhed; and two books of animals. He had been often at Verfailles to get them into the king's Imprimerie, but as yet unfuccefsfully; but hoped ere long to begin the printing of them. Note, that the bookfellers at Paris are very unwilling, or not able, to print natural hiftory; but all is done at the king's charge, and in his preffes.

I vifited Monficur Dacier and his lady, two very obliging perfons, and both of great worth, and very learned.

I think our profeflion is much beholden to him, for his late elegant tranflation of Hippocrates into French, with learued notes upon him. I wihh he may live to finifh what he hath fo happily begun. I read over the two volumes he has printed with great delight.
He feems to favour the opinion of thofe who think, the circulation of the blood was known to him; in which he errs undoubtedly. It is manifeft his anatomy was rude, dark, and of little extent; but it is alfo as manifeft, that he knew very-well the effect of the circulation. As for example, 2 de Diata. c. 12. "All the body, (fays he) is
purged
purged by refpiration and tranfpiration, and what humour thickens, is fubtilized and thrown out by the fkin, and is called fweat."

Again 3. de Diata. c. 5. fpeaking of a fort of foul and impure bodies, he fays; "More is by labour melted out of the flefh, than the circular inotion (of the blood) hath purged off. There are a great number of infances of this nature." In converfation I put this to him, which he avowed was all he thought.

He told me he had two more volumes ready for the prefs, and did intend not to give it over till he had gone through all the works of Hippocrates. In which volumes will be thefe treatifes: Of Dreams: of Regimen in acute Difeafes: the Prognofticks: the Prorrhetiques: the Aphorims: the Coaques.

On that aphorifm he feemed to me to have a very happy thought, cocla non, fed cruda purganda funt; which makes it of the fame fenfe with that other, fi quid movendum cf, move in principio.
I muft needs fay this for Madame Dacier, his wife, though I knew her by her writings before I faw her, the moft learned woman in Europe, and the true daughter and difciple of Tanaquil Faber; yet her great learning did not alter her genteel air in converfation, or in the leaft appear in her difcourfe, which was eafy, modeft, and nothing affected.

1 vifited Monfieur Morin, one of the Academie de Sciences, a man very curious in minerals; of which he flewed me fome from Siam, as jafpers, onyxes, agates, Loadfones, \&c. He fhewed me alfo excellent tin ore from Alface. Alfo from France, a great block of a fort of amethylt, of two or three hundred weight. Some parts of it, (for he had feveral plates fawed and polifhed,) were very fine, and had large fpots and veins of a deep coloured violet. It was defigned for a pavement in marchetterie, of which he fhewed me a Carton drawn in the natural colours.
This puts me in mind of a valt amethyif I had feen at London, brought from New Spain, and expofed to fale; it weighed, as I remember, eleven pound odd ounces; and was moft perfectly figured both point and fides, after the manner of a Briftol dianond, or common rock chryftal; but this block here was rude, and without any fhape.

I cannot fay much of the meeting of thefe gentlemen of the Acad. Royal de Sciences, there are but few of them, about twelve or fixteen members; all penfioned by the king in fome manner or other.

They endearoured in the war time to have printed Monthly Tranfactions or Memoirs after the manner of ours in London; but could not carry them on above two volumes or years, for without great correfpondence this can hardly be done. And ours is certainly one of the beft regifters that ever was thought on, to preferve a valt number of feattered obfervations in natural hiftory, which otherwife would run the hazard to be loft, befides the account of learning in printed books.

I heard Mr. Oldenburgh fay, who began this noble regifter, that he held correfpondence with feventy odd perfons in all parts of the world, and thofe be fure with others: I afked him, what method he ufed to anfwer fo great varicty of fubjects, and fuch a quantity of letters as he muft reccive weekly; for I knew he never failed, becaufe I had the honour of his correlpondence for ten or twelve years. He told me he made one letter anfwer another, and that to be always frefh, he never read a letter before he had pen, ink, and paper ready to anfwer it forthwith, fo that the multitude of his letters cloyed him not, or ever lay upon his hands.
vol. IV.
r.

The

The Monthly Regiter, or Philofophic Tranfantions, is one of the beft copies which hath been printed in this age; it is now fold for 13 l. ferling, and not many remaining to be had of them neither.

The abbot Bignon is prefident; nephew to Monficur Pontchartrain. I was informed by fome of them, that they have this great advantage to encourage them in the purfuit of natural philofophy, that if any of the members fall give in a bill of charges of any experinent which he fhall have made, or thall defire the impreflion of any book, and bring in the charges of engraving required for fuch book, the prefident allowing it and figning it, the money is forthwith reimburfed by the king. As it was done in Dr. 'lumetort's Elements de Botanique, the cuts of that book colt the king 12000 livics. And the cuts intended, and now engraving for another book of new plants found in his voyages into Portugal and Spain, will coft rool. fterling.

Alfo, if Monfieur Merric fo: example, hall require live tortoifes for the making good the experiments about the heart, they fhall be brought him, as many as he pleales, at the king's charge.

Thele, befides their penfions, I fay, were fome of the advantages they have enjoyed; but the war, for this reafon, has lain heavy upon the philofophers too.

Mr. Butterfield is a right hearty honelt Englifhman, who has refided in France thir-ty-five years; is a very excellent artift in making all forts of mathematical inftruments, and works for the king and all the princes of the blood, and his work is fought after by all the nations of Europe and Afia.

He more than once fhewed me (which is his great diverfion) a mighty collection of loadftones, to the value of feveral hundred pounds fterling.

Some he had as hard almoft as fteel, and others foft and friable; yet of thefe he had thofe which were of as great virtue as any of the hard; that of the equally hard there were very great difference.

He had one which weighed naked not above a drachm, and would naked take up a drachm and an half; but fhod would take up 144 drachms of iron, if rightly applied, that is, if the iron to be taken up did firmly and in a plain touch alike both the feet.

The beft fhod were theee that follow :

1. A flate loadfone, which I noted not fo much for its ftrength, but becaufe of its peculiar make, being fairly and diltinctly laminous throughout, weighing one ounce and an half, draws up one pound.
2. A fmooth loadftone, weighing one drachm, two fcruples, fourteen grains, draws up eighteen ounces, that is, eighty two times its weight.
3. Another fmooth loaditone, weighing fixty-five grains, draws up fourteen ounces, that is, one hundred and forty-four times its weight.

It is furprizing to fee a loadifone no bigger than a hazel nut, take up a huge bunch of keys.

We have a very large flate loadftone in the repofitory at Grefham college, at leaft fix inches over; this alfo is but weak: whiether the lamine do fpoil the virtue, as though they were fo many diftinct fones packed together. And yet a loadftone which takes up, ex. gr. 6 pound weight, cut by the axis in two halves, and both halves flood again, will take up eight pound.

It is plain, that experiments are better made with a terrella, or fpherical loadflone, than a fquare one; and his way of capping the terrella is very well contrived.
jies which remaining as informin the pur. of charges on of any prefident king. As book colt or another coft 10 ol .

caufe of its one ounce ins, draws en ounces, uge bunch re, at leaft virtue, as :one which nalves fhod rical loadontrived. A fquare

A fquare londfone made into a terrella, will near take up as much weight as it did before, though a great deal of the fone is loft in the rounding, by virtue of the different fhoeing.
He entertained us full two hours with experiments neatly contrived about the effects of the loadtone.

The experiment of approaching a loadfone to the fpring of a watch is very fine; it caufes the balance to move very fwift, and brought yet nearer, to fop quite and ceale moving.

Another experiment was an inch broad plate of iron, turned into a ring of about four inches diameter, which had evidently two north and two fouth poles, which he faid he had feen in a loadfone, and had contrived this in imitation of nature. The working of them with filings of fleel, drigged upon a plate, fot upon the ring, did clearly manifect the double polarity.
Alfo the fufpending of a needle in the air, and a ball of feel upon the point of it, by a thread, which a weight kept down, that it could not afeend higher than fuch a diftance within the fphere of the activity of the loadfone.

Again, the free working of the needle in water, through brafs, gold, ftone, wood, or any thing but iron. He told us, he had a ftone, which would work through a ftone wall of eighteen inches.

Laftly, he demonfrated by many experiments, how the effluvia of the loadftone work in a circle, that is, what flows from the north pole comes round, and enters the fouth pole; on the contrary, what flows from the fouth pole, enters the north, and in its way puts in order all fuch filings of fteel it meets with; that is, according to the difpofition of its own whirling, and the circular lines it keeps in its flying about the loadfone. Indeed, it is pleafant to fee, how the fteel filings are difpofed; and in their arrangement, one clearly fees a perfect image of the road, which the whirling invifible matter takes in coming forth, and re-entering the poles of the loadftone.

He fhewed us a loadftone fawed off that piece of the iron bar, which held the ftones together at the very top of the fteeple of Chartres. This was a thick cruft of ruft, part of which was turned into a ftrong loadfone, and had all the properties of a ftone dug out of the mine. Monfieur de la Hire has printed a memoir of it ; alfo Monfieur de Vallemont a treatife. The very outward ruft had no magnetic virtue, but the inward had a frong one, as to take up a third part more than its weight unfhod. This iron had the very grain of a folid magnet, and the brittlenefs of a ftone.

Thefe gentlemen, who have writ of this, have in my opinion miffed their purpofe, when they enquire, how it comes to pals to be thus turned; for it is certain, all iron will in time go back into its mineral nature again, notwithftanding the artifice of melting and hammering. I have feen of thofe hammered Spanifh cannon, which had hain many years buried in the ground, under the old fort at Hull in Yorkhire, which were thoroughly turned into brittle iron fone, or mine again; and would not own the loadftone, no more than the reft of our Englifh iron mine, till it was calcined, and then fhewed itfelf to be gr odiron again. Allo I have feen and had by me, a picce of wood taken out of Lough-Neah in Ireland, which was not only good iron mine, but a loadftone too; fo that it is evident nature, in this fort of mine, goes backwards and forwards, is generated and regene raied; and therefore Monfieur de la Hire has well ufed the term of vegetation in this affair, which 1 had done many years hefore him, in $m y$ book "De Fontibus Medicis Anglia," that is, out of iron mine will grow; and out of mine, a loadftone; as in the petrified wood.

I do not relate thefe things as though they were new difeoveries; the world has'long fince known them by the great indultry of our moft learned countryman, Gilbert of Colchefter, to whom little has been added atter near 100 years, though very many men have written on this fubject, and formed divers hypothefes to folve thefe phoenomena. A Dutchman, Mr. Hartfocker, one of the Academie de Sciences, has publifhed a treatife of the principles of natural philofophy, and has accounted for thefe and many more experiments of this nature, which he had fhewn him by Mr. Butterfield, whom be mentions very hono:ably.

And yet after all, the nature of thefe eflluvia are little known, and what is faid by Des Cartes of fercw-falhioned particles, and the invifible channels and pores and pipes of the loadfone, are all mere fancies without any foundation in nature. It is well called by fome a certain magnetic matter, but what properties it hath is little underfood.

It is very ftrange to me that a little loadtone of that prodigious force, fhould have fo fhort a fphere of activity, and not fenfibly to affect iron from above an inch or two ; and the biggeft and frougeft not above a foot or two. We fee the vortices in water, how wide they work round about them, valtly increafing the circles; and what little refiftance the air can make to a body of that fubtilty, as the effluvia of the loadftone, which can with eafe penetrate all bodies whatfoever, marle, flints, glafs, copper, gold, without any fenfible diminution of its virtue. Again, we fee the flame of a lamp in oil, or tallow, or wax, how fhott it is; and how long and tapering it is in fpirit of wine. If therefore the magnetic matter was darted out of infinite finall pipes, and was of the nature of a more fubtile and invifible flame, why dees it not continue its courfe in a direct line to a great length, but return fo fuddenly? We fee the perfipiation of our tkins to rife into the air, and continue to mount, which yet has but a weak impulfe from the heart, being interrupted and broke off when it comes out of the road of the blood into the ductus excretorii. But the circle of the magnetic matter is without any impulfe, that we know of, from the flone; and moves in a double circle, and with a double and contrary ftreain in the fame pipes, contrary to the laws of the circulation of the blood in amimals; which has naturally but one carrent, and one road round; for the whole mats of veffels in which the circulation of the blood is concerned, is but one continued pipe.

Until the nature of the effluvia is better known, no very fatisfactory account can be given of the moft common phœnomena of the loaditone, ex. gr. why it does not draw to it all bodies alike? Why a great loadftone, though weak, extends its virtue much fat ther than a fmall one, though ftrong? Why a loadtone communicates its virtue to iren, as foon as it touches it, nay even at fome diftance, and gives it the properties of a loadtione.

The truth is, the earth's being a great magnet feems to me a mere vifion and fable; for this reafon, becaufe it is not iron. It is true, iron mine is the moft common of all minerals, and found almolt in all places; but it holds not any proportion with the reft of the foflils of the earth; and is not, at a guefs, as a million to other foffils. This feems evident to any one, who has well confidered the chalky mountains and cliffs, the bigh rag- Itone mountains and lime-ftone cliffs, the feveral quarries and pits funk into the bowels of the earth for coal and lead, \&c. how little iron there is to befound in comparifon of other matters. Add to this, that very little of that very iron mine, which is to found any where, is magnetic, or capable of obedience to the magnet, till it is calcined. Whence therefore fhould all thofe magnetic eflluvia arife, which are

Id has'long Gilbert of very many re phœnu. as publilh. thefe and 3utterfield, is faid by and pipes It is well ttle under-

## uld have fo

 two; and vater, how th little re. loadftone, per, gold, a lamp in it of wine. vas of the :ourfe in a on of our k impulfe oad of the ithout any nd with a circulation ad round; led, is butcount can does not its virtue tes its virte proper-
and fable; mon of all $h$ the reft ils. This clifs, the funk into e found in ron mine, agnet, till which are fuppofed
fuppofed every where plentifully to encompafs the carth? and why fhould they be fuppofed to be every where wandering in the air, fince it is evident, they make hafte to return to the fone, that emitted them, and are as afraid to leave it, as the child the mother before it can go?

Towards the difcovery of the nature of the eflluvia of the loadtone, fuch particulars as thefe, in my opinion, ought chiefly to be confidered, and profecuted with all induftry. The loadtone is very good, if not the beft iron mine The fole fufion of the loadntone turns into iron. The fire deftroys its very virtue, and fo does vitrification iron. Fire will make iron mine own the loadfone, and turn to a magnet. Ruft, (into which all jron will naturally turn) and the reduction of iron again to its nine, will take away all the magnetic capacity of iron. A loadfone cannot be made to alter its poles, but iron may ; nor be dei royed, but by the fire. A great and long bar of iron is naturally a loadftone, if held up perpendicularly, and it changes its poles at the pleafure of him that holds it: a frong loadfone loofes much of its virtue by touching iron, but after a few days recovers it agair. A fmall and weak loadfone cannot touch to give its virtue to a great lump of iron. A loaditone expofed to the air is fpoiled in time. The deeper the vein of iron mine is, where loaditone is found, the better the tlone, and how far this holds true, is to be confidered: for I do not doubt, but a very hard ftone may be found near the day, as well as deeper. A ruler or long plate of fteel is much better touched with the virtue of the loadfone, than a plate of mere iron of the fame figure; but on the contrary a plate of iron fticks much fafter to the loadfone than a plate of fteel; fo as if a loadfone draws up a plate of fteel of three ounces, it will draw up a plate of iron of four ounces and nore. Why iron faftened to the poles of a magnet does fo vaftly im. prove its ftrength, as to be 150 times ftronger than when naked.

Since therefore a loaditone is nothing elfe but good iron mine, and may be turned into iron; and iron moft eafily and of itfelf into loadtone, the way to find out the nature of thofe magnetic effluvia, feems to be to inquire frictly into the nature of iron mine, and iron it felf; and not to run giddily into hypothefes, before we are well ftocked with the natural hiffory of the loadfone, and a larger quantity of experiments and obfervations relating to iron and its mine, with all the differences and fpecies of them; which I think has hitherto been little heeded. For nature will be her own interpreter, in this, as well as in all other matters of natural philofophy.

Mr. Butterfield, in another converfation, told me he had obferved loaditones, which were ftrong without arming ; and being armed, had not that great advantage by it, as one could have expected : and that on the contrary, there were others, which had a more incredible virtue when armed, than they did promife.

That it feldom happens, that a loadfone has as much virtue in one of its poles, as in the other; and that a bit of iron is touched equally well at either of the poles of one and the fame loadfone.

That there are loadtones which take up much, and which notwithftanding are incapable of well touching iron: fo that a flone armed, which takes up feven pound, yet cannot communicate to a ruler of iron the virtue of taking up a very fmall needle.

That a loadftone of ten ounces, being reduced to the weight of fix ounces or thereabouts, did almoft the fame effect as before.

I caufed Mr. Butterfield to make the flate loadfone into a terrella, and when fhod, it was indeed but of little force; but I oblerved its poles to lie level with the lamina, of which it was compofed.
N. B. A flrong loadfone ought to have large irons, and a weak one but thin irons; fo that a fone may be over-flood.

I waited upon the abbot Droine to vifit Monfieur Guanieres, at his lodgings in the Hontel de Guife. This gentleman is courtefy itfelf, and one of the molt curious and induftrious perfons in Paris, his memoirs, manuferipts, paintings, and ftamps are infinite, tut the method in which he difpofes them, is very particular and ufeful. He flowed his portefeuilles in folio, of red Spanifh leather finely adorned. In one, for example, he had the general maps of England: then the particular maps of the counties: then the maps of London, and views about it : then the flamps of all the particular places and buildings of note about it : and fo of all the cities in Eingland, and places and houfes of note of the counties.

In other book-cales, he has the ftamps of the flatefmen of lingland, nobility of both fexes, foldiers, lawyers, divines, phyficians, and men of diftinction. And in this method he has all Europe by themfelves.

His rooms are filled with the heads of a vaft number of men of note in oil paintings and miniatures or water-colours. Among the reft, an original of King John, who was prifoner in Engliand, which he greatly values.

He fhewed us the habits in limuing from the originals, done by the beft mafters, of all the kings and queens and princes of France, for many ages backwards. Alfo the turnaments and juftings at large; and a thoufand fuch things of monuments.

He was fo curious, that he told me, he feldom went into the country without an Amanuenfis, and a couple of men well fkilled in defigning and painting.

He fhewed us amongt other curious manufcripts, a capitularie of Charles V. alfo the gofpel of St. Matthew wrote in golden letters upon purple vellum. This feemed to me to be later than that manufeript I faw at the abby of St. Germains; that is, the letters lefs and more crooked, though indeed, the letters of the title page are exactly fquare.

One toy I took notice of, which was a collection of playing cards for 300 years. The oldeft were three times bigger than what are now uled, extremely well limned and illuminated with gilt borders, and the pafteboard thick and firm; but there was not a complete fet of them.

Among the perfons of diftination and fame, I was defirous to fee Mademoifelle de Scuderie, now 91 years of age. Her mind is yet vigorous, though her body is in ruins. I confefs, this vifit was a perfect mortification, to lee the fad decays of nature in a woman once fo famous. To hear her talk, with her lips hanging about a toothlefs mouth, and not to be able to command her words from flying abroad at random, puts me in mind of the Sybil's uttering oracles. Old women were employed on this errand, and the infant-world thought nothing fo wife as decayed nature, or nature quite out of order, and preferred drams befure realonable and waking thoughts.

She fhewed nee the fkeletons of two canneleons, which the had kept near four years alive. In winter fle lodged them in cotton; and in the fierceft weather the put them under a ball of eopper full of hot water.

In her clofet fhe flewed me an original of Madame Maintennon, her old friend and acquaintance, which the affirmed was very like her: and, indeed fhe was then very beautiful.

The marquis d'Inpital, one of the Acadenie de Sciences, whom I found not at home, returned my vifit very obligingly. I had a long converfation with him about philofophy and learning; and I perceived the wars had made them altogether ftrangers to what had been doing in England. Nothing was more pleafing to him than to hear of Mr. Waac Newton's preferment, and that there were hopes, that they might expect fomething more from him: he exprefled a great defire to have the whole fet of the Philofunhic Tranfantons brousht over, and many other books, which he named, but had not

## an Ama.

## . alfo the

 ed to me he letters quare.10 years. aned and as not a a de Scu. in ruins. in a wos mouth, its me in ind, and of order, ur years ut them iend and hen very
yet feen. He told me, it was not poffible for them to continue the Monthly Memoirs, as they tiad de - for two years only, becaufe they were but very few in number of that fociety, ane .d very little correfpondence. Indeed I did inquire once of fome of that body, why they did not take in more, fince there were very many deferving men in the city, as I inftanced in F. Plumicr. They owned be would be an honour to the bolly : but they avoided to make a precedent for the adnifion of any regulars whatfoever.

I repaid the Marquis his vifit: he lives in a fine houfe, well furnifhed: the garden pretty, with neat trelliage, wrought with arches and other ornaments.

He expreffed a great defire to fee Fingland, and converfe with our mathematicans, whofe works he coveted above all things, and had ordered all to be brought him over.

His lady alfo is very well ftudied in the mathematics, and makes one of the learned ladies in Paris; of which number are Mad. Dacier, the Duchefs of Main, Mad. ScuJerie, Mad. de Vicubourg, Mad d'Efpernon the daughter, Mad. Pref. de Ferrand, and others, whofe names I have forgot.
I bought the works of Pere Pezaron, a Bernardin, now Abbot de Charmoyfe near Rheims. This is a very learned and difinterefted author, and by his free way of writing has got him enemies anonglt the regular clergy. The booksi bought were his "Antiquities or Account of Time ;" "The Defence of it againft Two Monks;" "An Eflay or Commentary upon the Prophets;" "The Hiftory of the Gofpel."

He is now upon giving us the "Origin of Nations," where he will fhew, that Greek and Latin too came from the Celtique or Bas-breton; of which country he is. He told me he had eight hundred Greek words perfect Celtique. I fettled a correfpondence betwixt him and Mr. Ed. Floid; which he moft readily granted, and which he faid he had long coveted.

Monfieur Spanheim, now Envoy Extraordinary from the Duke of Brandenburgh at Paris, told me, that the King of France's collection of medals is far the beft in Europe, or that ever was made. Having the opportunity of difcourfing him often, his fick lady being my patient, I inquired more particularly of him, what he had feen of Palmyra, of Zenobia, Oedenatus, Vabalathus. He defired a memoir of me, which I gave him, of what I would have him fearch for in the king's cabinet, and promifed me all the fatisfac tion he could give me in that affair.

I told him I had met with nothing yet, but a fair butto in white marble of Zenobia, in the cabinet of M. Baudelot ; which was part of Monf. Thevenot's collection of marbles from the Eaft.

I was to wait on Monf. Vaillant at his apartment in the Arfenal. I found only his fon at home, who very civilly entertained me; and thewed me a book in quarto of his fathers of Greek Medals, near printed off; but without cuts. The title was "Nummi Graci Imperatorum ;" he goes down no lower than to Claudius Gothicus. He has added a large appendix, with references to all the moft remarkable heads about the citics and the people.

I left a memoir with his fon; and in a fccond vifit, I found the old gentleman at home, very bufy in his flower garden; of which I fhall fpeak hereafter.

He told me, as to the memoir I had left, he had never feen any coins of Oedenatus; yet he had very lately parted with one of Zenobia to the Duke of Maine. As for Vabalathus, he had feen fome of him in brafs; and one he had in filver, which he very obligingly made me a prefent of ; and that this was the only filver coin he had ever met with of him.

This is his reading of it.

VABALATHUS. V. G. R. IMP. R.<br>Vices gercns Imperii Romani.<br>Les autres y lijent mal. YCRIMOR.

He gave mealfo the ftamps of the heads of Zenobia and Vabalathus, done from the king's medals. Thefe were defigned for a fhort hiltory of all the emperors and emprefles, which he has by him written in French, but not publifhed. Nothing could be more civil and frank than this gentlenan, whom I believe to be the beft medalift in Europe : he told me he had made twelve voyages all over Europe and Afia minor on purpofe. That he had feen and deficribed the contents of more cabinets, than any man ever did before him; and it is evident by his works, that he has made good ufe of them.

I had a vifit from Mr. Cunningham, tutor to my Lord Lorne, a very learned and curious man in books. 1 atked hin (knowing him to have been lately at Rone) very particularly about the papers of Monfieur d'Azout. He told me that he faw him not above half a year before he died, and was very intimately acquainted with him, and faw him for a twelvemonth very often. That he told him that he had about eighty difficult paffages in Vitruvius, which he had commented and explained; and the correction of a great number $o^{\prime}$ errata in the text. Alfo that upon Julius Frontinus (though that was a much lefs book) he had much more to fay, than he had upon Vitruvius. What is become of his japers I could not learn from him, nor any in Paris.

Monfieur d'Azout was very curious and underftanding in architecture; for which purpofe he was feventeen years in Italy by times; I do remember, when he was in England about fourteen years ago, he thewed me the defign of feveral of our buildings drawn by himfelf; but of that of the banquetting-houfe at Whitehall, he expreffed himfelf in very extraordinary terms, telling ne, it was the moft regular and moft finifhed piece of modern workmanhip he had leen on this fide the Alps, that he could not enough praife it : that $\operatorname{lni}, \mathrm{o}$ Jones, the architect, had a truc relifh of what was noble in that art.

It is now time t.) (eave the private houfes, and to vifit the public libraries; and with them fuch perfons, as are more particularly concerned in the hiftory of learning.

Monfieur l'Abbe Drouine came to vifit me at my lodgings. I returned the vifit the next day at his apartment in the College de Boncourt. He had four or five little rooms well furnifhed with books; in the biggeft he hada colleation of catalogues of hooks, and of all fuch, who had wrote the accounts of authors ; above 3000 in all languages.' He told me, he had fudied the Hiftory of Books with the utmoft application eighteen years, and had brought his memoirs into a good method; that he had thoughts of printing the firft tome this year, which would be of the moft ancient authors, Greek and Latin; that he intended to continue them throughout all the fucceeding ages down to our times; which he faid he had performed in good part.

He fhewed me the Catalogue of authors in four very thick folio's; alphabetically difpofed by family names, under fome fuch title as this: "Indcx alphabeticus omnium Scriptorum, cujufcunque facultatis, temporis $\xi^{\circ}$ linguce. Thofe caune to about 150,000.

He alfo thewed me his alphabetic menoirs in theets of the authors and books they had wrote, and in great forwardnefs. And laftly, the Chronological Catalogue, in which form he intends to print the whole.

He is a very civil and well tempered perfon, very lcarned and curious, and of a midHle age, fit to continue and finifh fuch a laborious work. I was infinitely obliged to him for his frequent vifits.
from the rs and conthing could medalift in ia minor on an any man fe of them. earned and at Rome) that he faw ainted with e had about d ; and the s Frontinus upon Vitru. Paris.
; for which was in Eng. $r$ buildings preffed tim. ooft finifhed not enough n that art. ; and with ning. the vilit the little roons books, and languages. on eighteen hts of primtGreck and lown to our
petically difinium Scrippoo.
ks they had in which
d of a midiged to him

I was

I was to wait on Monfieur Gurni we of the Sirs of Miunfieur Thevenot, to fee the remains of that famous man's library 'There a a great number of Oriental MSS. yet unfold.

He thewed me the MS. of Abulfeda, with its Iatin verfion, done by Monfieur Thevenot; and the matrices and forms of arabic letters, which he had, at his own charge, caufed to be cut for the printing of certain proper names in it.

He went or defigned to go into England and Holland to get it printed, but was called back by Monfieur Louvois's order to print it in France at the king's charge; but the late wars coning on, it was fet afide, and is like to be fo; for he was turned out of his place of library-keeper to the king, and died in difgrace.

Thofe great number of Orieutal books he had moft from his nephew, whom he fent abroad for that purpofe, and who died in his travels.

This man was, as it were, the founder of the Academic des Sciences, and was in his own nature very liberal, and gave penfions to many fcholars.

Amongtt other things I faw there a large dietionary or grammar of the Algonquin tongue; one of the nations of the Weft-Indies. The fugitive jefuit, who wrote it, dwelled among them twenty years. Here I alfo faw a hiftory, with large and accurate defcriptions of the quadrupeds of that part of the Weft-Indies by the fame author.

As for the papers of Swammerdam, which indeed were the things I moft coveted to fee, they were much beneath my expectation, not anfwering the printed catalogue of Thevenot, p. 239. There were indecd fome corrections of the figures of his genera! Hiftory of Infects, and fome additions, as though he intended another edition of that book.

Alfo towards a particular hiftory, there were fome finall treatifes, or rather fome figures only of the tadpole. Again, figures relating to the natural hiftory of a certain day butterfly; of the afilus; of the fcuttle fifh; of the Scarabæus Naficornis; and fone confiderable number of fnails, as well naked, as fluviatil, and fea diffected; at leaft figured with their bodies exerted, and fome of their bowels extracted; and which feemed to me to be well underftood and delinented. There were two or three ftiched books in Dutch of four or five Cheets apiece, belonging to thofe plates or figures. But the gentleman would not part with any of them, becaufe, he faid, they had been fecured by the abbot Bignon, for the King's ufe. However, all thefe I judge were worth printing, when it flall pleafe that fociety to do it.
Laftly, I faw in his cuftody a fair MS. of Michael Scrvetus, with a treatife at the end of it, which, as he faid, was never publifhed; being a comparifon of the Jewifh and Chriftian law, its juftice and charity.

Monf. l'Abbe de Brillac, almoner to the Prince of Conti, very obligingly offered to carry me to the king's library; but I civilly declined it, for I had been told, it was better to make vifits by one's felf: for no ftranger but was very welcome at all times; not only on the days it was publicly open, as it is upon Tuefdays and Fridays.

Monf. Clement, the deputy library keeper, made us welcome, and invited us to come again, and fend a whole day with him. He made me in particular a very great compliment, as a confiderable bencfactor to that place, fhewing me mott of the books, and the names of the relt, I had publifhed in Latin; and fhewed a great fatisfaction, that he had got the Synopfis Conchyliorum, which he had caufed to be bound very elegantly. I told him that I was very forry to fee it there, and wondered how he came by it; for it was, 1 affured him, but a very imperfect trial of the plates, which I had difpofed of to fome few friends only, till I thould be able to clofe and finifl the defign; which I now had done to my power, and would redeens that book with a better copy at my revol. iv.
turn into England: the fame promife I renewed to the abbe Louvois, the library keeper, at his own inftance, when I had the honour to dine with him. 'Ithe reader will pardon me the vanity, if I Icll him, tha: this book was no incontiderable prefent, even for fo great a prince, as the King of France; for that befides the time that it took me up (ten years at leaft) at leifure hours, to difpofe, methodife and figure this part of natural hiftory, it could not have been performed by any perfon elfe for lefs than 200:1. Aerling; of which funn yet a great thare it ftood me in, out of my private purfe. This young gentlenaan is brother to Montieur Barbefieux, intendant of the affairs of war; he takes great care to apply himfelf to his fudies, and for that purpofe has two of the Sorbone conftantly with him to inftruct him. He lives great, and has a houfe, which joins upon the king's library, of which he is keeper. We were entertained by him with all the civility imaginable, and freedon of converfation.

This library is now placed in a private houfe, and taken out of the Louvre, but it is intended to be removed to the Place de Vendofime, where one fide of that magnificent fquare is defigned for it. In the mean time it is here moft commodioully difpofed into twenty:two rooms; fourteen above nairs, and eight below and above. Thofe below are philofophy and phyfic, and the fhelves are wired, to fecure them. Above are the books of philofophy and human learning; and it is in thofe rooms only the promifcuous crowd are admitted twice a week. In the middle rooms, which makes the great body of the library, are, for example, catalogues of books; hiftories in one of England and Holland; in another the hiftories of France and Germany ; in another the hiftories of Italy, Spain, \&cc. in another bibles of all forts, and the interpretations; in another Greek MSS. in another Latin MSS. in another the civil and municipal laws of all nations; in another the original papers of the ftate; in another flamps, where, by the by, the king had the collection of Monf. Marolles to divert him, in one of his fickneffes, bought in at a valt fum. The catalogue alone of thefe ftamps, no bigger than two fimall almanacks, coft me fourteen livres; fo much ftrangers are impofed upon by the crafty bookfellers of Rue St. Jacques; but it is not in France alone where people are made to pay for their humour.

They have two indexes of this library; one relating to the matter and contents of books; and another index of authors, wherein are all the works they have of them, and the titles of all likewife that they know of, that are wanting, with an afterifm to fuch in the margin ; which is well Jone, that they may know what they have to buy in. It is indeed a valt collection, and worthy fo great a prince. This library confifts at leaft of fifty thouland volumes of printed books; and fiftecn thoufand MSS. in all lan. guages.

IThey work daily and hard at the catalogue, which they intend to print ; I faw ten thick folio's of it, fairly tranferibed for the prefs. It is difpofed according to the fubject matter of the books, as the bibles and expofitors, hiftorians, philofophers, \&c. They purpofe to put it into the prefs this year, and to finifh it within a twelvemonth.

In the king's library I was fhewn an ancient Greek MS of Diofcorides, wrote in a fort of thin or narrow capitals, with the plants painted in water-colours; but the firft book was wholly wanting, and therefore the animals not there, which yet was what I mort defired to fee; for there are fome things relating to them, which we are at this day in great doubt of; and it would have been fome fatisfaction to have feen by the pictures, what the middle ages, at leaft, had thought of them.

In the fame room alio we were thewn the epittles; which was one part of the fame MS. which we have at Cambridge, which is the gofpels only. Beza was poffeffed of ours, from whom we had it. It is written in fquare capitals, and very fhort lines, and
much worn out in many places. This comes much thort of the Alexandrian MS. at St. Jalles's for beauty and antiquity.

There was another MS. of the gofpel of St. Matthew, which was but of late difcover. ed; a very fair volume in a large folio. This was cut to pieces in the back, and had been Muffled and bound up again; and another book overwritten in a fimall modern Greek hand, about 150 years ago. The firlt writing was turned fo pale that they took no pains to rub it out. One of the library keepers obferving this, hath reduced it again by paging it a-new; and with a little heeding it is yet very legible. The letter is as fair a fquare capital as any I have feen. There are fome interpolations very notorious, as about the defcent of the fick man into the pool of Bethefda; which I fuppofe will be accounted for by the induftrious and learned collator.

I obferved the China manufcripts which father Beauvais brought this ycar as a prefent to the king. They are about forty four packs of fmall books, of a long quarto fathion, put up in loofe covers of a purple fatin glued on pafteboard; of natural hiftory, of dictionaries relating to the expofition of their characters, \&c.

The king had a fet much of the fame before in white fatin, with their titles.
Here alfo I faw the third decad of Livy, a large quarto in vellum, withuut diftinc. tion of words in fair large capitals. It is fuppofed by Monfieur Baluze to be wco years old.

Yet the manufcript of Prudentius Hymnes, which was alfo fhewed us, is a much fairer letter, and therefore thought to be older by one century at leaft.

Here alfo I faw a fanous Latin roll or volume, written on EEgyptian paper, intitled, Charta Plenaria Sccuritatis, taken the 38th year of Juftian; it is fairly engraved and interpreted letter by letter upon copper by Monfieur Thevenot. I faw the print thereof: it is wrote long-ways the roll and not crofs, in three columns: the column in the middle is three times as long as the two end colunns. The roll is not above a foot broad.

They thewed us alfo in this houfe the apartment of Monfieur Huygens, which was very noble, and well for air, upon the garden : but here he fell melancholy, and died of it in Holland. 1le fhewed the firft tokens of it by playing with a tame fparrow, and neglecting his mathematic fchemes. It is certain, life and health of body and mind are Hot to be preferved, but by the relaxation and unbending the mind by innocent diverfions. For lleep is nothing elfe that I know of, but the giving up the reins, and letting nature to act alone, and to put her in full poffeffion of the body. We have a convincing inftance of this, in being in bed awake. No man can lie fill fcarce three minutes without turning; and if it come not prefently upon us, we muft turn again and again, and at length we become fo intolerably weary, that our bed is a very rack to us. Whereas, if we chance to fall afleep, though we lie in one and the fame pofture feven hours, we fhall wake frefh and without pain, as though the body did not weigh at all upon itfelf in fleep. It is certain, the nerves and mufcles are in little or no tenfion in heep; but when we are awake, are always frctched and comprefied, whence wcarinefs: which, if upon our feet or fitting, we are not fenfible of, becaufe we remove quick and with eafe, and of courfe; but laid, we foon find ourfelves very uneafy, till we change the pofture.

But this is not all in the king's library : there are other things to be feen, viz. a confiderable number of ancient Roman and Egyptian antiquities; as lamps, pateras, and other veffels belonging to the facrifices; a fiftrum or Egyptian rattle with threc loofe and running wires crofs it.

Amongft the great variety of Egyptian idols, there was one betwixt two and three feet long of black touch-flone, with hieroglyphics engraven down before. I took particular notice of the grain of this flone; and at my return, having had the honour of a paper from Mr. Molyneux from Dublin, giving an account of ihe vaft and feupendous natural pillars to be feen in Ireland, fome of them of fifty feet high, and thick in proportion, and that the ftones or joints, which conftitute thefe pillars, are of the Lapis Lydius, or Bifaltes kind, having feen one of the joints at Grelham college, I eafily agree with him ; but much admire that the pebble kind fhould produce fuch regular figures; which is certainly the very hardeft fone to be found in Europe, and which no tool of ours will cut.

This allo is another inftance (the carved obelifks being one) of the different make and goodnefs of the Egyptian chifels, of which, and of the retrieving the ancient temper of fecl, I have publifhed a difcourfe in the Ph . Tranfactions fome years ago.
I hould have had more fatisfaction in this kind, had I met with what I carnefly fou:ght for, the Egyptian tombs, which were a long time in the garden of Monfieur Valentine at Paris; but were unluckily fent away to his houfe at Tours, not long before our coming to Paris. One of thefe tombs is faid to be of black touch-Itone, to have been brought out of the higher Egypt, and to be full of hieroglyphics. Of this in particular Kircher has written.

There is in this collection a large piece of tin ore from England, very curious; it has on one fide of it a great numier of tair and large opaque cryftals of tin, fhining like polifhed fteel. The planes of thofe cryftals I could not eafily reckon; but fure I am, having with care examined all the fone cryftals I could meet with, both precious and more common, and alfo the cryftals of all foffil falts, I never before obferved that figure in any of them, but believe them of a peculiar nature, proper to tin oar. I call them cryftals, though opaque, becaufe angular and of one conftant figure.

I was at the college of Clermont with Pere Hardouin; he fhewed me the library with great civility; it confifts of two long galleries; the galleries are well furnifhed with books, having lights only on one fide, and the windows are not over large; with tables under each light, very commodioufly placed for writing and reading. Alfo certain clofets for manufcripts, and others for forbidden books. In this he thewed me a great collection of Janfenius's original letters. In the other a Greek manufcript of the prophets, of Eufebius's own hand writing; it was in capitals, but of a different character from any I had feen: the letters very erect, but fomething thinner, and not fo fquare.

Alfo a vulgar Latin in capitals, very ancient.
I told him I was well pleafed with his Pliny in ufum Delphini; and that it was to the honour of the French nation to have laboured more particularly upon that author; Dalechanpius firft, then Salmafus's Exercitationes Pliniante; and laftly, this.his moft elegant edicion.

The books are well difpofed under gilt titles, as Medici in fulio, and over againft them, where the windows will permit, the Medici in quarto: in the other gallery runs a ba!uffrade, within which are placed the octavo's and twelves.

At one end of the upper gallery is a very large tableau, an orignal of Nicolo, of the maffacre of Agamemnon; in it there is this commendable, that in fuch a horrid fury, and fuch variety of murders in half naked ligures, no one indecent pofture is to be feen.

Pere Hardouin feemed to doubt of the Infcription of Palnyra put out by M. Spon; that the Greek was faulty, and the Syriac very queltionable. I told him we had had it
lately copied, carefully and truly by one at Rome : which took away his objection of the multiplicity of letters.

Both he and Vallant agreed, that they had never feen any inedal of Oedenatus. He very obligingly anfwered my memoir about Palmyra, Zenobia, and Vabalathus, with a tranfcript of all the coins he had feen, and had in his poff. fion: which follows:

## Nummi Zenobia.

The library of the Grand Jefuits, near the gate St. Antoine, is a very fair gallery of great length and breadth, and well furnifhed with books, on the very top of the houfe. They find, that books keep much drier and fweeter there, than in lower rooms, befides the advantage of a clear fky -light.
P. Danicl is library keeper, and was very civil to me; he fhewed me a letter, which he hau juft then received from Monfieur Huetius, the learned bifhop of d'Auranches near Mont St. Michael's in Normandy; wherein he told him, that having lately received the catalogues of books printed in Holland and England during the war; he found, that learning was much alike at a kind of tand in Holland and H rance ; but, that it had yet life and vigour in England, which he rejoiced at.

And, indeed, I had had the fane thought from more of the French before. Even the Jefuits themfelves will be little confidered, if learning fall into neglect and difgrace. Oratory ceafed with the commonwealth of Rome; and fo will all forts of learning without emulation and rewards.

He fhewed me P. de ly Chaife's cabinet of medals.
Alfo a veltal of copper found at Dee in the country of le Foref.
Alfo a very intire loaf or Roman ten pound weight of red copper, on which was infcribed Dce. Sec. P. X.

Alfo a fquare ftone urn, or fmall tomb, well carved and infcribed

> D. M.
> SVLPICIO
> NOTO. ADESTE
> SVPERI.

I faw the choir of the abbey of St. Germains, and the altar near the lower end of it; in which pofition allo I remember to have feen an altar in the choir of St. John's
church
church at Lyons; both plain tables. Monf. l'Abbe de Villiers, who has an apartuent in the convent, a learned man, went with me, and to the library alfo; which is two large galleries well furnihed; at the end of one of them is a large clofet of manufcripts; alfo another armoir in the great library, where the mof ancient manuferipts are kept, yet with more care. In this I faw the palter, as it is believed, of St. Germain, who lived in the fixth century; it is certainly very ancient; being a large quarto of fine purple vellum, and on it are wrote the pfalms in large capital letters, with commas or points. The letters feem to have been of filver; and the great initial capitals of gold.

They fhewed alfo a pfalter in the fhort notes of 'Tyro, Tullius's Libertus; with a difcourie concerning the ufe of fuch fhort hand in the beginning of the manufcript; it was wrote very fair on vellum, with red ink, as I remember.

The codicils or waxen table books of the ancients; which were thin cedar boards about fourteen inches long, and five broad, fix or eight of them glued together by fhreds of parchment : the rims were a little raifed, with a flat and broad border, the better to preferve the black wax, which was fpread over them. I faw more of thefe afterwards in the king's library; and by the letter it is manifeft, they were in ufe much later than I could have imagined. This was in Latin, and I could read here and there a word, for the ground was much torn up, as Pro duobus Filconibus, छ'c. The Ryle or fteel pen had cut through in many places; fo that with a good eye-glafs I could fee the board bare. I take this pafte to be nothing elfe, but what the etchers in copper ufe at this day to cover their plates with, to defend from the aqua-fortis; which is a compofition of bitumen and bee's wax.

Here alfo I faw a manufcript of three or four leaves written upon true Egyptian paper, in which with an eye-glaf's it was eafy to difcern, how the flags were difpofed, lengthways and acrofs one over another. The letters which remained, which were but few, were large and fuir fquare capitals. This fragment I take to be the moft ancient writing they have.

I vifited in this convent, at his chamber Pere Mabillon, who has fo well deferved of the commonwedth of learning by his writings, and particularly that excellent book De Re Diplomatica; he feemed to me to be a very good natured and free-hearted man; and was very well pleafed to hear, that our catalogue of Englifh manuferipts was fo forward in the prefs at Oxford. He thankfully owned the favour of the Cotton library; and was very forry to hear of Dr. Bernard's death, of whon he fpoke yery kindly; but he expreffed a wonderful efteem for 1)r. Gale, the Dean of York.

In another converfation I had with P. Mabillon, (for he was my neighbour, and I was often with him) telling hin the account we had brought us of Palinyra, and the tracts that were written of it, and that more was intended to be publifhed about it : he was much concerned, that thofe accounts, which were pure matters of learning in general, were written in Finglih; and he told me, he was afraid it migh be with us, as it was with them, fince they cultivated their own language fo much, they began to neglect the ancient tongues, the Greek and Latin.

He thewed me certain figures not ill taken with red chalk, of fome very ancient monuments obferved by fome of the fathers of their order ; one of which was prefent in the chamber, upon the mountain of Framond near Salme, which lies in the iniddle of that tract of the mountain, called la Vague, betwixt Alface and Lorraine. There were great remains of an ancient city. Thefe figures, which the fathers thewed me, were about twelve n all; but five or fix of them were of Mercury; a cock at his foot; a chlamys ki.n'ted upon the right Phoulder, hanging at his back; his hair haid in curls about his face, and tied with a ribband, whofe two ends might be feen on the

## apartuicht

 lich is two anufcripts; $s$ are kept, main, who to of fine onımas or Is of gold. widh a difufcript ; itar boards gether by order, the of the fe afufe much and there he dyle or ald fee the per ufe at compofi-

ancient prefent iniddle
There ed me, is foot; laid in on the
top
top of his head, like horns; a caduceus in his hand, which was very differently reprefented in all the figures of him; fometimes held up, other times the point refling at his feet; fometimes the fnakes were twifted about a ftick; and again in others without one, or the defigner had taken no notice of it ; fometimes the tail of the ferpent fpread and flying about, and again in others clofe twifted with many braids; a girdle came round the bottom of his belly, and which had in the middle of it two rings, one faftened to the other, and hanging betwixt his legs. Thefe many ftatues of Mercury in a French country are a confirmation of what Cafar fays of the religion of the Gauls, in his fixth book, Derm maxime Mercurium colunt: bujus funt plurima fimulacra.

There were fome few Roman letters on fome of them, which were fo imperfect, that I could make nothing of them.

The library of St. Genevieve is a very large and fair gallery, upon the very top of the houfe, well fored with hooks on both fides up to the top, and kept in cafes wired with brafs; which is a good fecurity, andhinders not the books from being feen.

Alfo it is adorned with fair bufto's of the ancient men of learning.
The mufeum is a little clofet on the fide of this gallery; of which there is a book lately publifhed: I faw in it very little of natural hiftory, that was remarkable. They keep half a dozen joints of a large cornu amnonis, which they fhew as a rarity. But it is well fored with ancient idols, and facrificing veffels, lacrymatoirs, pateras, ftrigils; alfo ancient weights and meafures; coins, and particularly the As, and its firlt and latter divifions.

There we faw an ancient As, with Etrufcan letters of a kind of red copper; the letters feem to be a-kin to the old Greek characters. Thefe are the capital letters about the coin going round, and bringing every letter before you.

As quafi EEs: this is very reatonable; for before the Greeks had invented double letters, the Romans were fiilled in their writing. So Vitruvius * tells us Erugo was in the Etrufcan tongue called Eruca. Whence undoubtedly by tranflation the common caterpillar had its name, from its bluenefs; which alfo is an evidence, that the Tufcan uriting was in the old Greek character.

But nothing pleafed me more than to have feen the remains of the cabinet of the noble Pierefc. the greateft and heartieft Mrecenas, to his power, of learned men of any of this age.

Amongt the firft and very old brafs Roman coins there was a fextans, with a caduceus of Mercury on one fide, and a fcallop fhell on the other; probably, becaufe they might have at firf had the ufe of fhell money, as fome parts of both the Indies and Africa have at this day, till Mercury, whofe emblem that flaff is, taught them the ule of metallic money.

Alfo in this cabinet are wet meafures, as the ancient congius, of which they have an old one, and an exact copy of that of the capitol; alfo a fextarius, and a quartarius Now the congius containing 120 ouices; the lextarius 20 ounces; the hemina ten ounces ; the quartarius five ounces. I doubt nut, but the cyathus, by reafon of the aforefaid divifion, held two ounces and an half; which is the meafure, fo frcquently to be met with in old phyfic authors, and of fo great concern in dofes.

In that Etrufcan as before-mentioned, one cap coifs or covers the double head of Janus. I faw an ancient ftatue of Mercury in the garden blonging to the King's library in Paris, where Mercury has upon his head a long cap doubled, or laid double

[^0]upon his head, as though there were fome affinity betwixt thofe two inventors of trade, arts and learning.

Here alfo we faw the fteel dyes of the Paduan brothers, by which they flamped and fallified the beft ancient medals fo well, that they are not to be diftinguifled but by putting them into thole moulds; which makes them very valuable, there being 100 and nore of them, and are prifed at 10,000 crown. They flamped upon old niedals whereby the cheat was the greater; for by this means they were of the ancient metal, had the green coat, and the fame ragged edges.

I faw a picture here of about fix incics over, fincly painted in Mofaic, the very little fquarcs were fcarcely vifible to the naked eyc, but the whole appeared like the fineft hatchings in ftamps; yet by the application of a good cye-glafs, I could readily diftinguifh the fquares of all colours, as in other Mofaics. This fort of painting had a very admirable effect, befides the duration.

Here was alfo the leg of a mummy weil preferved, the toes only bare, black and flining as pitch: the bandage was very curious, and was difpofed in o lique circles, decuflated; but the filleting very narrow. I told the father, that it was ftill flefh; and that munmy therefore in Venice treacle did break lent, if given at that time: he anfwered, he did not believe it : I told him how he fhould be convinced, viz. if that leg was kept a good while in a damp cellar, it would yield and ftink like very carrion, though it was at leaft 3000 years old; which thing happened to one in London, fo carelefsly laid by.

There was one thing very curious, and that was an ancient writing inftrument of thick and frong filver-wire, wound up like a hollow bottom or fcrew ; with both the ends pointing one way, and at a ditance; fo that a nal might eafily put his fore-finger betwixt the two points, and the ferew fills the ball of his hand. One of the points was the point of a bodkin, which was to write on waxed tables: the other point was made very artificially, like the head and upper beak of a cock, and the point divided in two, juft like our fteel-pens; from whence undoubtedly the moderns had their patterns; which are now made alfo of fine filver: and gold, or princes metal ; all which yet want a fpring, and are therefore not fo uffeful as of theel, or a quill: but a quill foon fpoils. Steel is undoubtedly the bef, and if you ufe China ink, the mott lafting of all inks, it never rufts the pen, but rather preferves it with a kind of varnifh, which dries upon it, though you take no care in wiping of it.

I faw the library of the late Monficur Colbert, that great patron of learning. The gallery, wherein the printed books are kept, is a ground room, with windows on one fide only. alonr a fine garden. It is the neateft library in Paris, very large and exceedingly well furnifhed. At the apper end is a fair room, wherein the papers of fate are kept ; particularly thofe of the adminiftration of Cardinal Mazarine, and his own accounts, when he was in eniployment. Thefe make up many hundred folios, finely bound in red maroquin and gils.

The manufeript library is above-ttairs, in three rooms, and is the choiceft of that kind in Paris: It contains 6610 volumes. The catalogue of them Monfieur Baluze fhewed me; which he faid was defiyned fhortly for the prels.

He fhewed me many rare books, Carolus Calvus's bible, a valt folio in vellum, and his prayer book or hours, all writ in gold letters.

Alfo the Miffa Beari Rhenani, whereof all the copies were burnt but four. The original deed of the agrement of the Greik and Roman church at Florence, the Regalia agreed upon at Lyons, and many others, which I have forgot.

1 faw neither Greek nor Latin mumieript, but what had the marks of the Goths upon them: that is, the letters maimed, and confequently not very ancient.

He fhewed us Servieto's book, for•which he was burnt at Geneva; which con Monfieur Colbert at an auction in Englandtwenty-five crouns. The title is, De Trinitatis Erroribus Libri 7. fer Michaelem Serveto alias Reves ab Aragonia Hifpanum 153'. I had forgot the particular place where the circulation of the blood through the lungs is mentioned: but he told me very civilly, I hould have it tranfribed at any time.

We told him, we came to fee him as well as the library: he replied, it was his hap to have more reputation than merit. He was a little old man, but very cheerful, and of a quick wit.

He complained much of the refufal of the Emperor's people concerning the manufcripts of Vienma, in order to the publication of the capitulaires: for he faid, letters were never at war: that for his part he had moft willingly given lcave for at leaft twen-ty-four manufcripts to be collated for Dr. Mill's edition of the New 'Teftament.

The library of the Sorbonne is a very long and large gallery, reafonably well ftored with books ; no catalogue printed.
Amongft the manufcripts, they fhew, Titus Livy in French, upon vellum, in a very large folio, bound in two books: the firt is almoft throughout illuminated with very finc miniatures. The book is dedicated to King John, by Peter Berchorius: and in the title page is a very curious defign of that king receiving the prefent from the. author of the tranlation.

Amongt the illuminations and ornamental piaures in the margin, I could not but take notice of a brafs cannon fired, well painted, with two large arms or gudgeons one on each fide near the touch-hole; which evinces cannon to have been in ufe at that time.

This manufcript confirms the lofs of Titus Livy, and that it was deficient in that age, as to what is now wanting, there being nothing more in this than what is in the printed copy. This was the gift of Cardinal Richlieu to the library; who in a manner re-built the whole college, and beautified it as it is. His tomb is in the middle of the quire, before the great altar, in white marble; and is for plainnefs and exquifite performance, the beft thing of that kind I ever faw.

I faw the library of St. Vietor : this moft ancient convent is the beft feated of any in Paris; has very large gardens, with fhady walks, well kept. The library is a fair and large gallery: it is open three days a week, and has a range of double defks quite through the midule of it, with feats and conveniencies of writing for forty or fifty people.

Ihe catalogue was not finifhed, nor intended to be printed; which yet I think is alw ys necefiary in all corporations, for check of lofs of books, for the ufe of ftrangers, for benefactions.

In a part of it, at the upper end, are kept the manufcripts; they are faid to be 3000; which, though not very ancient, have yet been found very ufeful for the moft correct editions of many authors. This is one of the pleafanteft rooms that can be feen, for the betuty of its profpect, and the quict and freedom from noife in the middle of fo great a city.

In this convent is very prettily lodged, in an outward court, Monficur Morin, another phyfician of that name. In his apartment, he hath a large and excellent collection of phylic books and natural hiflory. He faluted me with the greateft kindnefs imagimable; and at firf word, afked me, if there was any more of Sir Francis Willoughby's works printed befides his hiftory of fifhes, and that other of birds; both which he had. He !ad in another room a well ftored mufeum of natural hiftory, of all forts, and of comparative anatomics: a cabinct of fhells, another of feeds, among which were fome from Chima: varicty of ikeletons, \&c.

[^1]G
I faw

I faw the Celeftins. The library is an upper gallery, very pleafant, and plentifully furnithed with books. This is a very fine convent; with the nobleft Dortoire, having open galleries round : alfo, very large gardens, with alleys and fhady groves; and divers kitchen-gardens, well cultivated. Alfo a vineyard of white-wine grapes, well kept ; which is the only thing of that kind within the walls of Paris.
Here I alfo faw the clofet or cell of P. Hochereau; who had a very choice collec. tion of original paintings, of very many of the beft mafters: amongtt the reft, I took notice of the originals of Rambrant, excellent pieces. St. Peter and the cock: the nativity of our Saviour: and, the maffacre of the innocents. His colouring is not to be imitated : his invention great and natural, and the defign moft correst.

I was to vifit Pere Mallebranche of the fathers of the oratory: they live very neatly together in a kind of community, but under no rule : he was very handfomely lodged, in a room well furnifhed: he is a very tall, lean man, of a ready wit and cheerful converfation.

After an hour's difcourfe, he carried me into the public library of the houfe: a fair gallery well lighted, and well furnihed with books; with an apartment at the upper end for manufcripts, where were many Greek and Hebrew. Amongft the reft, the library-keeper fhewed us the Samaritan Pentateuch, of which Morin made ufe. It feemed to me to be much later than that of Sir John Cotton's library with us, becaufe it was of a much fmaller letter, and more broken in the writing, which was all I am capable to judge by.

They were bufy in reforming the difpefition of the library ; and making a good catalogue, according to the method of the late archbifhop of Rheins; and which 1 liked well of, they had drawn out fome hundreds of books, and expofed them in the middle of the library, upon a long table, for fale, as being duplicates; and from the fale of them to furnifh themfelves with what they wanted.

The books which were written by proteftants, I obferved, they were locked up in wire cafes, not to be come at without particular leave.

The freedom and nature of this order puts me in mind of what I heard of a certain rich and learned man, Monfieur Pinet, of the law; who put himfelf at length into religion, as they fay, amongtt the fathers; but firf perfuaded his cook to do fo too; for he was refolved not to quit his good foups, and fuch difhes as he liked, whatever: became of his penance and retirement. This compliment the elegant and learned Monfieur Peletier, in Monfieur Colbert's place, Compt. oller General of the Finances made his guefts at his country-houfe near Choify, having voluntarily quited all his employments at court: he faid, he referved his cook, though he retrenched the reft of his retinue ; they might therefore expect a flender philofopher's dinner, though well dreft.

It is wonderful to confider how moft of the reft of the orders abufe themfelves for God's fake, as they call it. Hunger and ill diet not only deftroys a man's health, but maugre all his devotion, put him out of humour, and makes him repine and envy the reft of mankind: and well if it do not make him alfo curfe in his heart his maker; Job is not every man's roll to act. The original and rife of natural philofophy and phyfic was to invent a more wholefome and better food, than the beafts have, and to eat bread and flefh inftead of herbs and corn; to drink wine inftead of water; thofe and a thoufand other things were the bleffings of phyfick, and fill the good management of thefe things, both in health and ficknefs, are under the directions of the phyficians. Now for a fort of melancholy and wilful men, to renounce thefe comforts,

## emfelves for

 health, but nd envy the his maker; lofophy and ave, and to vater ; thofe od manageof the phye comforts,and deftroy t'er healths, and all this upon a pretended principle of religion and dcvotion, feems to me, I confefs, great ingratitude to God the author of it.

Indeed I heartily pidied F. P. an induftrious honeft man, after his return from the Indies, who was nothing but fkin and bone; and yet by the rules of his order he could not eat any thing that was wholefome and proper for his cure; nothing but a little flimy nafty fifh and herbs: and though he took, as he told me, hypocochoana five times, it had no effect upon him. It is truc, I never heard him complain; but what will not blind prejudice do againtt all the reafon of mankind!

I know fome of thefe men have been ufeful to mankind by their ftudies; but the very fame men would have been much more, had they ftaid with their neighbours, and taught the world by their converlation and example; wifdom, and juftice, and innocence, and temperance, which they highly pretend to, are not things to be hid in corners, but to be brought forth to inttruct and adorn the age we live in : to abandon the world, and all the conveniences of life and health, is (let them fay what they pleafe) the height of chagrin, and not religion.

There were fome other public libraries I faw, as that of the Grands Auguftins, College Mazarin, College Navarre, and a great many more I did not fee for want of an opportunity; but there is nothing particular I remember about them.

There is fuch a paffion of fetting up for libraries, that books are come to moft unreafonable rates.

I paid to Anifion thirty-fix livres for Nizoleus; twenty livres for the two fmall quartos of the memoirs of the Academie de Sciences, that is, as I may fay, for two years philofophic tranfaction ; for they began thofe monthly memoirs ititimitation of ours, out of the regifters of the academy, but did not think fit to continue them above two years.

As to ftamps, I had a mind to have bought a complete fet of Melans, that incomparable mafter; but I was afked 200 livres, and twelve excepted, which might anount to as much more; for fome of his gravings in octavo done at Rome, they afked me a piftole a-piece; and for the head of Juftinianus a louis; which yet is his mafter-piece.

I was at an auction of books in the Ruc̈ St. Jaques, where were about forty or ffty people, moft abbots and monks. The books were fold with a great deal of trifling and delay as with us, and very dear; for Hippania illuftrata Aud. Sciotti, of the Frankfort edition, from twenty livres, at which it was fet, they bid up by little and little to thirty fix livres; at which it was fold. The next was a catalogue of French books in thin fol. in an old parchment cover by De la Croix de Maine, cight livres. And fo I left them to fhift it amongit themfelves.

After laving faid fo much of the public libraries, I cannot but congratulate their happinefs, to have then fo well fecured from fire; it being one of the perfections of this city to be fo built and furmifhed, as not to have fuffered by it thefe many ages; and, indeed, I cannot fee how malice itfelf could deftroy them, for the houfes here are all built of fone, walls, floors, flaircafes and all, fome few rooms excepted; no wainfot; woolen or filk hangings, which caunot be fired without giving notice by the intolerable ficnch, and the fupply of much fuel. It is well for us in London, that there are very tew public libraries, and thofe fimall and inconfiderable, and that the great number of books are diltributed into a thoufand hands, (no country in Europe can compare to us for private libraries) for if they were together in fuch valt quantities as in Paris, learning would run the hazard of daily fuffering. Here with us, methinks, every man that hoes to bed, when afteep, lies like a dead Roman upon a funeral pile, dreading
fome unexpected apotheofis; for all is combuftible about him, and the paimt of the deal boards may ferve for incenfe, the quicker to burn them to alhes.

In the next place I will account for what I faw, that feemed to me fingular and new in the improvement of arts, or wanting in our country.

I faw the pottery of St. Cloud, with which I was marvelloufly well pleafed, for I confefs I could not diltinguifl betwixt the puts made there, and the finct china ware I ever faw. It will, I know, be eafly granted me, that the paintings may be better defigned and finilhed, (as indeed it was) becaufe our monare far better malters in that art than the Chinefe; but the glazing came not in the leall behind theirs, not for whitenefs, nor the fmoothnefs of running without hubbles; again, the inward fubftance and matter of the pots was to me the very fame, hard and firm as marble, and the felf fame grain, on this fide vitrification. Farther, the tranfparency of the pots the very fame.

I faw them alfo in the mould, undried, and before the painting and glazing was applied, they were as white as chalk, and nelted upon the tongue like raw tobateco-pipe clay, and felt betwixt the teeth fott like that, and very little gritty; fo that I doubt not, but they are made of that very clay.
$\Delta s$ to the temper of the clay, the man frcely owned to me, it was three or four times well beaten and wet, before it was Fut to work on the wheel ; but I believe it mult firf be melted in fair water, and carefully drawn off, that the heavielt part may firlt fink; which alfo may be proper for coarfer works.

That it required two, and fometimes three or four fires to bake it, to that height we faw it in the moft finifhed pots; nay fome of them had had in fires.

I did not expect to have found it in this perfection, but inagined this might have arrived at the Gomron ware; which is indeed little elfe but a total vitrificition; but 1 found it far otherwife, and very furprizing, and which I account part of the felicity of the age to equal, if not furpafs, the Chinefe in their fineft art.

As for the red ware of china, that has been, and is done in England, to a far greater perfection than in China, we having as good materials, viz. the foft hxmatites, and far better artilts in pottery. But in this particular we are beholden to two Dutchmen, brothers, who wrought in Staffordhire, (as I have been told) and were not long fince at Hammerfmith.

They fold thefe pots at St. Cloud at exceflive rates; and for their ordinary chocolate cups afked crowns a-piece. They had arrived at the burning on Gold in neat chequer works. He had fold fome furnitures of tea tables at 400 livres a fer.

There was no moulding or model of China ware, which they had not imitated; and had added many fancies of their own, which had their good effects, and appeared very beautiful.

Monficur Morin in converfation told me, that they kept their fand as a fecret to themfelves; but this could not be for other purpofes than colouring; alfo he faid they ufed falt of kelp in the compofition, and made a thing not uulike frit for glafs, to be wrought up with white clay; neither could this be, for 1 did not tafte it in the raw pots.

The ingenuous mafter told me, he bad been twenty-five years about the experiment, but had not attained it fully till within this threc years. I and other gentiemen brought over of thele pots with us.

The glafs-houfe out of the gate of St. Antoine well deferves feeing; but I did lament the foundery was nelonger there, but removed to Cherborne in Normandy for cheap. nels of fuel. It is certainly a mott confiderable addition to the glafs-making. For I
tof the deal lar and new cafed, for I china ware $y$ be better iters in that t for white$d$ fubitance le, and the ots the very
ing was ap. bacco.pipe doubt not,

- four times it muft firft firft fink ; heighi we ht have arion; but I felicity of
far greater atites, and Jutchmen, long fince

1 chocolate at chequaer
tated ; and eared very
fecret to c faid they lafs, to be in the raw
speriment, n brought

## did lament

 for cheap. g. For I fawfaw here one looking-glafs foiled and fimifhed, eighty-eight inches long, and forty-eight broad, and yet but one quarter of an inch thick. This I think could never be effected by the blaft of any man; but I fuppofe to be run or cat upon fand, as lead is; which yet, 1 confefs, the toughnefs of glafs metal makes very much againf.

There they are polifhed; which employs daily fix hundred men, and they hope in a little time to employ one thoufand in feveral galleries. In the lower they grind the coarfe glafs with a fand-ftone, the very fame they pave the ftrects in Paris; of which broken they have great heaps in the courts of the work-houfes: this fone is beat to powder, and lifted through a fine tamis. In the upper gallery, where they polifh and give the laft hand, they work in three rows, and two men at a plate, with ruddle or powdered hæmatites in water.

The glafles are fet faft in white putty, upon flat tables of fone, fawed thin for that purpofe. The grinding of the edges and borders is very troublefome, and odions for the horrid grating noife it makes, and which cannot be endured to one that is not ufed to it; and yet by long cultom thefe fellows are fo eafy with it, that they difcourfe together as though nothing were. This is done below, and out of the way of the reft.

It is very diverting to fee the joint labour of fo many men upon one fubject. This has made glafs for coaches very cheap and common; fo that even many of the fiacres or hackneys, and all the remifes have one large glafs before.

Amongft the bioux made at Paris, a great quantity of artificial pearl is to be had, of divers forts; but the belt are thole which are made of the falles of bleaks. Thefe bleaks they fifh in the river Seine at Paris, and fell them to the pearl-makers for that purpofe.

Monfieur Favi, at the Pearl d'Angleterre, told me, that he pail for the filh only of the little river Yier of Ville Neuve Sit. George, four leagues off of Paris, by the year 110 piftoles. This fifh in French is called de la Bellette; fometimes in winter he has had thirty hampers of the fifh brought him, for the fcales only, which he ufes in pearlmaking. He fells fome frings for a piftole; and they have formerly been fold much dearer. This fort is very neat and lalting.

Enquiring of a goldfmith, a great dealer in pearl, about thofe which were made of the fcales of fifhes, he told me that it was fo; that the fales were beat to powder, and that made into a liquid pafte with ifing-glafs, and caft into the hollow glafs beads, and fo gave the colour by way of foil from the infide.

I afked him if he had any frefl-water and mufcle pearl; and he forthwith fhewed me one of twenty-three grains, of a blufh colour or faint carnation, perfectly globular; he told me, he valued it at 400 . for that it would mix or match better with the oriental fea pearl, than the bluifh ones. Further, he aflured me, he had feen pearl of fixty odd grains of frefh-water mufcles; and fome pear-fathioned. That in Lorrain, and at Sedan, they filhed many pearls in the rivers thereabout.

The formerly fo famous a work-houfe, the Goblins, is miferably fallen to decay; perhaps becaule the king, having furnifhed all his palaces, has little more to do for them.

Here I faw the making marble tables, inlaid with all forts of coloured fones.
Alfo the Atteliers or work-houfes of two of the famous feulptors Tuby; in which was a Lacoon copied in white marble admirably; alfo that other of Quoifivox, in which was, amongft other rare pieces, Caftor and Pollux, in white marble, exccedingly beautiful and large; a copy allo after the antique.

At Hubin's, the eyc-maker, I faw drawers full of all forts of eyes, admirable for the contrivance, to match with great exadnefs any Jris whatfoever; this being a cafe where mif-matching is intolerable.

He himfelf alfo formerly wrought in falfe pearl, and affirned, that the glafs pearls were painted within with a pafte made of the feales of the bleak only; which he faid was a good trade here to the fifhermen, who fold the feales for fo much the ounce. Thefe necklaces were formerly fold at great prices, two or three piftoles a-piece.
I faw the platreric, or plafter quarries near Montmartre, and the manacr of burning of it. It is burst with open fire fet up againft it ; the hardell flone is burnt enough in two or three hours' time.
The fup band or bed is very hard like a free-fone: they diftinguifh the beds by feveral names, i. c. 1. Mutton, 2. I.ane, 3. Buzier, 4. Clikar, 5. Groflan, 6. Pilliernoir, \&c.
That which they call Lane is like Taik, or Selenites tranfparent, and folits in thin flakes; but there is but little of it, and the beds are finall; this feens to be but a fluor to the greater beds of grey-ftone. This rock is covered with a kind of grey fand to a great depth; which is not of the nature of plaifter.
Though this plaifter burnt is never ufed (that I could learn) to fertilize cither cornground or pafture, as our lime.fone is; yet I fee no reafon why it may not, it being full of nitre, if it has lain long in damp caves.

This is not peculiar to l'aris only: for 1 have feen quarries of it nean Clifford-Moore in Yorkflire; where it is called hall-plaiter.
I cannct omit the mill-ftones, which they grind their wheat with at Paris, as upon the river of the Gobelins, out of the eate St. Bernard, where it falls into the Seine, and all throughout licardy down to Calais, where I have feen great numbers of them.
Thefe mill-ftones are very ufeful, and fo fweet, that not the leaft grit is ever found in their bread: they are moftly made up of pieces, two, three, or more fet together by a cement, and hooped round with iron to keep the pieces falt together. They are made of a kind of honey-comb fone, wrought by the petrifaction of water, or ftalactites. The very felf-lame flone I have feen rocks of on the river banks at Knarefborough, at the dropping-well in Yorkfhire; therefore I advife my countrymen to put thefe excellent flones in practice; for certainly no place ftands in more need of it ; for the bread in the north of England is intolerably grity, by reafon of thofe fand or moor flones with which they grind their corn.

Thefe flones are fold at 500 livres a pair; whence they come 1 forgot to be in. formed.

In the next place, we will fee how the Parifians eat, drink, and divert themfelves.

## Of the Food of the Parifiaus.

The diet of the Parifians confifts chiefly of bread and herbs; it is here as with us, finer and coarfer. But the common bread, or pain de gonefie, which is brought twice a week into Paris from a village fo called, is purely white, and firm, and light, and made altogether with leaven; moflly in three pound loaves, and 3 d. a pound. That which is baked in Paris is coarfer and much worfe.

As for the fine maschet, or French bread, as we call it, I cannot much commend it; it is of late, fince tioe quantity of beer that is brewed in laris, often fo bitter, that it is nut to be caten, and we far exceed them now in this particular in I.ondon.

The grey falt of France (which there at table is altogether in every thing made ufe of) is incomparably better and more wholefome, than our white falt. This I the rather mention, becaufe it feems not yet to enter fully into the confideration and knowledge of our people; who are nice in this particular to a fault. Bur I mult take leave to tell them, that our falt fpoils every thing that is intended to be preferved by it, be it fifl or flefh. For whether boiled from the inland falt-pits, or the fea water, it is little lefs than quicklime, and burns and recfes all it touches; fo that it is pity to fee fo much good filh, as is caught upon the northern line of coaft, particularly the cod and ling, and herring, now of little value, which were formerly the noof efteemed commodities of England. It is certain, there is no making good falt by fierce and vehement boiling, as is uluall; but it mult be kerned eitlaer by the heat of the fun, as in France; or by a full and over-weighty brine, as at Milthrope in the Wanhes of lancalhire; for in no other place in England I ever faw it right made ; but yet that is not there underfood to purpole; for they alfo boil the brine, which poffibly by fome night artifice might be brought to give its falt without Atrefs of fire.

In lent the common people feed much on white kidney beans, and white or pale lentils, of which there are great provifions made in all the markets, and to be had ready boiled. I was well pleafed with this lentil; which is a fort of pulfe we have none of in England. There are two forts of white leatils fold here, one fmall one from Burgundy; by the cut of Briare; and another bigger, as broad again, from Chartres; a third anfo much larger, is fometimes to be had from Languedoc. Thofe excepted, our feed fhops far exceed theirs, and conlequently our gardens, in the pulfe-kind for variety; both pea and bean.
'I he roots differ much from ours. There are here no round turnips, but all long ones and finall; but excellently well tafted, and are of a much greater ufe, being proper for foups alfo; for which purpofe ours are too ftrong: we have indeed of late got them into England; but our gardeners underfand not the managing of them. They fow them here late after midfummer ; and at martinmas or fooner, before the froft begin, they dig them up, cut off the tops, and put them into fand in their cellars, where they will keep good till after Eafter, nay till Whitfuntide: whereas, if the froft take them, they are quite fpoiled; and that piece of ill hurbandry makes them to be defpifed here; having loft their tafle, and they foon grow fticky in the ground. The fandy plains of Vaugerard near Paris are fanmous for this fort of moft excellent root. After the fame manner they keep their carrots.
After we had been two or three days' journey in France, we found no other turnips, but the navet; and fill the nearer Paris the better. Thefe as I faid, are fmall long turnips, not bigger than a knife-haft, and moft excellent in foups, and with boiled and ftewed inutton. I think it very frange that the feed fhould fo much improve in England, as to produce roots of the fame kind fix or ten times as big as there; for I make no queftion but the long turnips, of late only in our markets, are the fame.

The potatoe is fcarce to be found in their markets, which are fo great a relief to the people of England, and very nourifing and wholefome roots; but there are ftores of Jerufalem artichokes.

They delight not fo much in cabbage as I expected, at leaft at the feafon, while we were there, from December to Midfummer. I never faw in all the markets once fprouts, that is, the tender thoots of cabbages; nor in their public gardens any referves of old flalks. The red cabbage is efteemed here, and the favoy.

But to make amends for this, they abound in vaft quantities of large red onions and garlick. And the long and fweet white onion of Languedoc are to te had alfo here. Alfo leeks, rockhamboy, and fhallots are here in great ufe.

It has been obferved, that the northern people of Europe much detight in cabbage, as the Lefles, lobes, Germans, Acc. It is certain, the cabbage thrives beft in cold comntries, and is maturally a northern plant, and the keel is to be found wild upon the maritime rocks, as l lave feen it at Whitby, and the cold ripens it, and makes it more render and palatable.

The fouthern people are pleafol with the onion kind, for the fame reafon, for that the great heats meliorate them, but give a ranknefs to the cabbage. The leeks are here much finaller, than with us; but to recompenfe this, they are blanched here with more care and art, and are three times as long in the white part, which is by finking them carly fo deep in mellow earth. There is no phamt of the onion kind fo hardy as this, and fo proper for the cold mountains, witnefs the ufe the Welf have made of them from all ages; and indeed it is excellent againfl fpitting of blood, and all difeafes of the throat and lungs.

Though the lettuce be the great and univerfal fallad, yet I did not find they came near our people, for the largenefs and hardnefs of them; indeed, about a week before we left Paris, the long Roman lettuce filled their markets, which was imconparable, and 1 think beyond our Silefian.

April and May the markets were ferved with vaft quantities of white beets, an herb rarely ufed with us, and never that I know of, in that manner for foups. The leaves grow long and large, and are tied up, as we do our Silefian or Roman lettuce to blanch, and then cut by the root. The falls are very broad and tender, and they only are ufed, ftripped of the green leaves. They cook thofe ftalks in different manuers.

The afparagus here are in great plenty, but for the firft month they were very bitter and unpleafant; from whence that proceeded I cannot guefs; afterwards I did not much pelccive it.

They are fo great lovers of forrel, that I have feen whole acres of it planted in the fields; and they are to be commended for it; for nothing is more wholefome, and it is good to fupply the place of lemons, againft the fcurvy, or any ill habit of the body.

But after all, the French delight in nothing fo much as mufhrooms, of which they have daily, and all the winter long, fore of frefh and new gathered in the markets. This furprifed me; nor could I gucfs, where they had them, till I found they raifed the on hot beds in thairgardens.

Of forced mufhrooms they have many crops in a year; but for the months of Augufl, September, October, when they naturally grow in the fields, they prepare no artificial beds.

They make in the fields and gardens out of the bar of Vaugerard (which I faw) long narrow trenches, and fill thofe trenches with horfe dung two or three feet thick, on which they throw up the common earth of the place, and cover the dung with it, like the ridge of a houfe, high pitched; and over all they put long ftraw or long horfe litter. Out of this earth fprings the champignons, after rain; and if rain comes not, they water the beds every day, even in winter.
They are fix days after their fpringing or firft appearance, before they pull them up for the market.

On fome beds they have plent;, on others but few, which demonfrate they conce of feel in the ground; for all the beds are alike.

A gardener told me, he had the other year near an acre of ground ordered in this manacr, but he lof a hundred crowns by it ; but moftly they turn to as good profit as any thing they can plant.

They deftroy their old beds in fummer, and dung their grounds with them.
a in cablage, in cold count Id upon the makes it more fon, for that leeks are here re with more inking thenn hardy as this, of them from of the throat

They prepare their new beds the latter end of Auguft, and have plentiful crops of mufhrooms towards chriftmas, and all the fpring, till after March.
I faw in the markets the beginning of April, frefh gathered moriglios, the firt of that kind of muhroom, that I remember ever to have feen: though formerly I had been very curious and inquifitive about this kind of plant, and had diftinguifhed and deferibed thirty fpecies of them growing in England; yet I do not remember ever to have found this fpecies with us; it is blackinh, and becomes much blacker when boiled, whence probably it had its name; but there are fome few of them that are ycllow. They are always of a round pyramidal figure, upon a thort thick foot.f:alk. The footfalk is fmooth, but the ouffide of the mufhronn is all decply plated and wrinkled like the infide of a beafts maw. The moriglio fplit in two from top to hottom is all hollow and finooth, foot, falk, and all. In this hollownefs is fometimes containcd dangerous infeets. The tafte raw, is not ungrateful, and very tender. This muflhroom feems to me to be produced of the tree kind.
This fort of mufhroom is much efteemed in France, and is mofly gathered in woods at the foot of the naks. There were fome of them as big as turkey eggs. They are found in great quantities in the woods in Champagne, about Reims, and Noftre Dame de Lieffe.
They fring them, and dry them ; and they feem to me to have a far better relifh than the champignons.

The French fay, there are no bad moriglios; but there are bail mufhroons. At firf I was very fly of eating them; but by degrees, and that there was fcarce any ragouts without them, I becane pleafed with them, and found them very innocent. I am perfuaded the hazm that comes from eating :hem, is from the noxious infeets and vermin that feed upon them, and creep into them. I have often found them full of fuch animais. Poffibly the garden or forced mufhrooms, being that is done in winter, and in the fyring, may be much freer of this milchief, at what time infects are dead, or not nuch ftirring, than the wild mufhrooms of Auguft.
The city is well ferved with carp, of which there is an incredible quantity fpent in the lent. They are not large, and I think are the better for it, but they are very clean of mud, and well tafted.

They have a particular way of bringing frefh oyfters to town, which I never faw with us; to put them up in fraw baikets of a peck, fuppofe, cut from the fhell, and without the liquor. They are thus very good for Alewing, and all other manner of dreffing.

There is fuch plenty of macreufe, a fort of fea ducks, in the markets all lent, that I adnire, where they got fo many; but thefe are reckoned and effemed as fith, and therefore they take them with great induftry. They have a rank fifhy tafte, yet for want of other flefh were very welcome. I remember we had at our treat at the king's charge at Verfailles, a macreufe pie near two feet diameter, for it was in lent; which being high feafoned, did go down very well with rare burgundy. There is a better argument in Leewenhocke for birds participating fomething of the nature of fifh, though their bleod is hot, than any the council of Trent could think of, and that is, that the globuli of the blood of birds are oval, as thofe of fintee are; but this will take in all the bird kind: which alfo in time thofe gentlemen may think fit to grant.

As for their flefh, mutton, and beef, if they are good in their kind, they come little nhort of ours, I cannot fay they excced them. But their veal is not to be compared with ours, being red and coarfe; and I believe no country in Europe underfands the management of that fort of food like the Finglifh. This was onice proper to Effex; vol. iv. but
but now it is well known, that nothing contributes more to the whitenefs and tendernefs of the flefh of calves, than often bleeding them, and giving them much food of milk and meal, befides fucking the dam. By much bleeding the red cake of the blood is exhaufted, and becomes all white ferum or chyle. The fame effect cramming hath upon poultry, fo as the blood is well near all chyle; and the livers of geefe, fo fed by force, will become for the fame reafon, vaftly great and white and delicious.

I camnot but take notice here of a great prejudice the French lie under, in relation to our flefh. It is generally faid amongft them, that our meat in England will not make fo ftrong broth as the French by a third part. If they fay not fo falt and favoury, and ftrong tafted, 1 agree with them; and yet the French meat is never the better. For firt their meat is moft' leaner and more dry, and (which is all in all in this watter of foups ) is long kept before it be fpent, which gives it a higher and falter tafte; for as meat rots, it becomes more urinous and falt. Now our people, by cultom, covet the freflieft meat, and camnot endure the leaft tendency to putrefaation; and we had good reafon to do fo, becaufe our air is twice as moilt as theirs, which does often caufe in the keeping of meat a muflinefs, which is intolerable to all mankind. Whereas the air of France being fo much dricr, keeping of meat, not only makes it tender, but improves. the tafte. So that could we fecure our meat, in keeping it from that unfavory quality, it would far outdo the lrench meat, becaufe much more juicy.

1 do not remember I eat of above two forts of flefl, but what we have as good or better in England, and that was of the wild pigs, and the red legged partridge. Of thefe laft I eat at St. Cloud, taken thereabouts; as to bignefs, they are much degenerated from thofe in ? anguedoc, and lefs; but far excel the grey partridge in tafte.
As for their fruits, our journey was in the wortt time of the year, from December to Midfummer, fo that we had little fave winter fruits; fome few bon chritens we tafted, not much better than ours, but fomething freer of fones. The Virguleus pears were admirable, but to our forrow they did not laft long after our arrival.

The Kentifh pippin, as we call it, was here excellent; but two other forts of apples ftock the markets. The winter calvil or queening, which though a tender and foft apple, yet continued good till after Eafter. Alfo the Pome d'Apis, which is ferved here for fhew, more than ufe; being a fimall flat apple, very beautiful, very red on one fide, and pale or white on the other, and may ferve the French ladies at their tuilets for a pattern to paint by. However this tender apple was not contemptible atter Whitfuntide; and which is its property, it never fuells ill, though the ladies keep it (as fometimes they do) about thim.

I never met with any thing peculiar in their fiveetmeats but a marmalade of orange flowers; which indeed was admirable. It was made with thofe flowers, the juice of lemons, and fine fugar.

## The Wines follow, and Water to drink.

The wines about Paris are very fmall, yet good in their kind; thofe de Surene are excellent fome years; but in all the taverns they have a way to make them into the fafhion of Champagne and Burgundy.

The tax upon wines is now fo great, that whereas before the war they drank them at retail at five-pence the quart, they now fell them at 1 s .3 j . the quart, and dearer, which has enhanced the rates of all commodities, and workmen's wages; and alfo has caufed many thoufand private families to lay in wines in their cellars at the cheapeft hand, which ufed to have none before.

## lation to.

 ot make ury, and er. For natter of ; for as :ovet the ad good fe in the he air of mproves. quality, good or ge. Of degenete. mber to e tafted, ars were apples fott aped here ne fide, s for a untide; netimesThe wines of Burgundy and Champagne are moft valued, and indeed not without reafon; for they are light and eafy upon the fomach, and give littie difturbance to the brain, if drawn from the hogfhead, or loofe bottled after their fafhion.

The moft efteemed are Vin de Bonne of Burgundy, a red wine; which is dolce piquante in fome meafure, to me it feemed the very beft of wine I met with.
Volne, a pale Champagne, but exceedingly brik upon the palate. This is faid to grow upon the very borders of Burgundy, and to participate of the excellency of both counties.
There is another fort of wine, called Vin de Rheims, this is alfo a pale or grey wine; it is harfh, as all Champagne wines are.

The white wines of value are thofe of Mafcon in Burgundy,
Mulfo in Champagne, a imall and not unpleafant white wine.
Chabri is a quick and tharp white wine, well efteemed.
In March I tafted the white wines called Condrieu, and d'Arbois, but found them both in the muft, thick and white as our wintes ufe to be, when they firt come from the Canarics; very fweet, and yet not without a grateful flavour ; they clear towards fummer, and abate much of the flavour and fweet tafte. Thole wines thus in the muft are called in the prints Viin des Liquers.

There is a preparation or rather fiffing of the white wine in the muft, ufed in Burgundy and elfewhere, which they call Vin Bouru; it gives a fweet tafte, and it is foul to the eye; thofe alfo are called Vin des Liqueurs. This is only drunk a glafs in a morning, as an equivalent to brandy.

Vin de Turene en Anjou of two years old, was one of the beft white wines I drank in paris.

Gannetin from Dauphine : this is a very pale and thin white wine, very like the Verde of Florence, fweet, and of a very pleatant flavour, efpecially while it is Des Liqueurs.

The red wines of Burgundy, Des quatres feuilles, as they fay, or of four years old, are rare; but they are elteemed much more wholefome, and are permitted to the fick, in fome cafes to drink of; they are fine, and have a rough but found tafte; not pricked, as I expected. The term Des quatre feuilles is ufed allo to Folne, or any other fort of wine, which is kept any time.

There are alfo in efteem ftronger wines at Paris, as Camp de Perdris.
Cofte Bruflee, both red wines from Dauphine, of very good tafte, and hot upon the tomach.

De l'Hermitage upon the Rofne.
But the moft excellent wines for ftrength and flavour are the red and white St. Laurence, a town hetwixt Toulon and Nice in Provence. This is a moft delicious Mufcat. Thefe are of thofe forts of wines, which the Romans called Vinum Paffum, that were made of half fun dried grapes: for the grapes (efpecially the white Mufcadine grapes) being ufually fooner ripe than the common grapes of the country, called Efperan, viz. the latter end of Auguft, (as I have feen them in the vintage at Vic, Mirabel, and Frontiniac, three touns near the fea in Languedoc, where this fort of wine is made) they twift the bunches of grapes, fo breaking the flalks of them, that they receive no longer any nourifhment from the vine, but hang down and dry in the then violently hot fun, and are in few days almof: turned into raifins of the fun; hence, from this infolation, the flavour of the grape is exceedingly heightened, and the ftrength and oilinefs, and thick body of the wine is mightily improved. I think the red St. Laurin was the mont delicious wine 1 ever tated in my life.

Befides thefe, here are alfo the white wines of Orleans, Bourdeaux, Claret, and thofe excellent wines from Cahors: alfo Cabreton, white and red, from about Bayonc, Arong and delicious wines: and all forts of Spanifh wines, as fack, palme, mountaine, ma'ha, red and white, fherries, and indeed the French are, of late, very defirous to drink of the ftrongeft wines.

Befides wines, there is no feafting without the drintring at the defert all forts of ftrong waters, particularly ratafia's; which is a fort of checry brandy made with peach and apricot fones, highly piquant, and of a moft agreeable flavour.

The pungent and acrimonious quality of thefe and fuch like kernels was not unknown to the ancients, and very poifonous to lome animals. Diofcorides tells us, a pafte made of the kernels of bitter almonds will throw hens into convulfions, and immediately kill them. Birds have but litte brain, and fo are the fronglier affected with this volatile venom. Not unlike effeds it is poffible ratafia may have in fome tender and more delicate conftitutions, and weak and feeble brains, and may be one caufe of fo many fudden denths, as have been obferved of late.

Vattee is a fort of perfumed frong water from Provence, made (as it is pretended) of mufcat wine diftilled with citron pills and orange flowers.
Fenoulliet de l'Ille de Ree is valued much, it is much like our annifeed water.
Thefe and many more forts of ftrong waters, and ftrong wines, both of France and Italy and Spain, are wont to be brought in at the latter end of the defert in all great feafts, and they drink freely of them. Which cuftom is new : when I was formerly in Fiance, I remember nothing of it. But it is the long war that has introduced them; the nobility and gentry fuffering much in thofe tedious campaigns, applied themfelves to thefe liquors to fupport the difficulties and fatigues of weather :rechings; and at their return to Paris, introduced then to their tables. Sure I anr . Parifians, both men and women, are ftrangely altered in their conftitutions and .. of body; from lean and flender, they are become fat and corpulent, the women efpecially: which, in my opinion, can proceed from nothing fo much as the daily drinking ftrong liquors.

Add to thefe drinks the daily ufe of coffee with fugar, tea, and choculate, which now is as much in ufe in private houfes in Paris, as with us in London: and thefe fugared liquors alfo add confiderably to their corpulency.

I muft not forget, that annongft the drinks that are in ufe in Paris, cyder from Normandy is one. The beft I drank of that kind, was of the colour of claret, reddifh or brown ; the apple that it was made of was called Frequins, which is round and yellow, but fo bitter that it is not to be eaten; and yet the cyder that is made of it, is as fweet as any new wine. It keeps many years good, and mends of its colour and tafte. I drank it often at a priva:c houfe of a Norman gentleman, of whofe growth it was; otherwife, if I had not been affured to the contrary, I cuuld not have believed, but that it had been mixed with fugar.

There are alfo very many public coffeo-houfes, where tea alfo and chocolate may be had, and all the ftrong waters and wine above-mentioned, and inntmerable ale-houfes. I wonder at the great change of this fober nation in this particular; but luxury like a whirlpool draws into it the extravagances of other poople.
It was neceffity, and the want of wine, icither naturally, as in a great part of Perfia and the Indies; or from their religion, as in Turkey, that put men upon the invention of thofe liquors of coffee and tea: chocolate, indeed, was found out by the poor ftarved Indians, as ale was with us. But what elfe but a wanton luxury could difpole thefe people, who abound in excellent wines, the moft cordial and generous of all drinks, to ape the neceffity of others.

Mighty things indeed are faid of thefe drinks, according to the humour and fancy of the drinkers. I rather belisve they are permitted by God's providence for tine leffening the number of mankind by fhortening life, as a fort of filent plague. Thofe that plead for chocolate, fay, it gives them a good fomach, if taken two hours before dinner. Right! who doubts it? you fay, you are much more hungry having drank chocolate, than you had been if you had drunk none; that is, your ftomach is faint, craving, and feels hollow and empty, "and you cannot ftay long for your dinner. Things that pals thus foon out of the ftomach, I fufpeet, are litte welcome there, and nature makes hafte to get thut of them. There are many things of this fort which impofe upon us by procuring a falfe hunger.
The wild Indians, and fome of our people, no doubt digeft it ; but our pampered bodies can make little of it, and it proves to moft tender conftitutions perfect phyfic, at leaft to the ftomach, by cleanfing that into the guts; but that wears it out, and decays. nature.
It is very remarkable with what greedinefs the Spaniards drink it, and how often in a day, five times, fays Gage, at leaft. The women drank it in the churches, and the diforder could fcarce be remedied. This fhews how little it nourilhes.

The old Romans did better with their luxury; they took their tea and chocolateafter a full meal, and every man was his own cook in that cafe. Cæfar refolved to be free, and eat and drink heartily, that is, to excefs, with Tully; and for this purpofe Cicero tells his friend Atticus, that before he lay down to table, Emeticen agebat, which I conftrue, he prepared for himfelf his chocolate and tea; fomething to make a quick riddance of what they eat and drank, fome way or other.

There are two forts of water which they drink at Paris; water of the river Seine, which runs through the town; and the water brought in by the aqueduct of Arcueil, which, by the by, is one of the moft magnificent buildings in and about Paris, and worth going to fee. This noble canal of hewn ftone conveys the water fifteen miles to Paris.

The river water is very pernicious to all ftrangers, not the French excepted, that come from any diftance, but not to the natives of Paris, caufing loofenefs, and fometimes dyfenteries. I am apt to think the many ponds and lakes that are let into it to fupply the fluices upon the canal De Briare, are in part the caufe of it. But thofe who are careful of themfelves purify it by filling their cifterns with fand, and letting it fink through it ; which way clears it, and makes it very cool and palateable.

As for the fpring water from the Maifon des Eaux, it is wholefome in this refpect, and keeps the body firm; but it is very apt to give the flone, which the people of this town are infinitely fubject to. An inftance of this I had by chance, when coming from feeing the aqueduct of Arcueil, in the very road near the wall of the aqueduct, a great number of earthen pipes, which had ferved to convey that water to tome houfe, were caft to mend the highways. I obferved, that of four inches dianeter the hollow of the pipes were all ftopped up to the breadth of a fhilling, with a firm ftone petrified; fo that they were forced to break up the pipes being altogether ufelefs. Now what petrifies in the water-pipes is apt in fome weak conftitutions to petrify alfo in the kidneys and bladder. I think I have put this beyond difpute in my treatife De Calculo Humano, and elfewhere.

In the next place we will fee how the Parifians divert themfelves; which confifts chiefly in plays, gauning, walking, or coaching.

The plays here are divided into two houles: one for the operas, and the other for the comedies.

I did not fee many operas, nit being fo good a Frenchman as to underftand them when fung. The Opera, called l'Europe Gallante, I was at Several times, and it is looked upon as one of the very beft. It is extremely fine, and the mufic and finging admirable: the ftage large and magnificent, and well filled with actors: the fcenes well fuited to the thing, and as quick in the removal of them as can be thought: the dancing exquifite, as being performed by the beft mafters of that profelfion in town : the cloathing rich, proper, and with great variety.

It is to be wondered, that thefe operas are fo frequented. There are great numbers of the nobility that come daily to them, and fome that can ling them all. And it was one thing, that was troublefome to us ftrangers, to dilturb the box by thefe voluintary fongs of fome parts of the opera or other; that the feeftators may be faid to be here as much actors, as thofe employed upon the very fage.

The comedies have another houle in another part of the town; for the operas are under the roof of Monfieur, and it is part of the Palais Royal.

The difpofition of the theatre is much the fame; but fomething lefs. And here the ftage itfelf is to be let; where for ftrangers, the places are moft commodious to hear and fee.

I heard many tragedies, but without guft for want of language: but after them, the little plays were very diverting to me, particularly thofe of Moliere, Vendange de. Surefne, Pourcegnac, Crifpin Medecin, le Medecin malgre luy, le Malade Imaginaire, \&c.

In this all agree, that though Moliere's plays have lefs of intrigue in them; yet his characters of perfons are incomparable, fo true and juft, that nothing can be more. And for this reafon, fo many of them are only of two or three acts; for without an intrigue well laid, the characters would have failed him, in which was his excellency.

However, this is now fo much become a cultom on the French hage; that you ever have one of thefe little pieces tacked to the tragedy, that you may pleafe yourfelf according to your appetite.

It is faid Moliere died fuddenly in acting the Malade Imaginaire: which is a good inftance of his well perfonating the play he made, and how he could really put himfelf into any paffion he had in his head. Alfo of the great danger ftrong and vehement paffions may caufe in weak conftitutions, fuch as joy and fear; which hifory tells us, have killed many very fuddenly. He is reported to have laid, going off the flage, Meffeurs, J'ay jouéle Malade Inaginaire; mais je juis veritablement fort Malade; and he died within two hours after. This account of Moliere is not in his life by Perault, but it is true: and he yet has blamed him for his folly, in perlecuting the art of phyfic, not the men, in divers of his plays.

Moliere fent for Dr. M-- , a phyfician in Paris of great efteem and worth, and now in London, a refugé. Dr. M--fent him word, he would conte to him, upon two conditions; the one, that he fhould anfwer him only to fuch queftions as he foold aik him, and not otherwife difcourfe him; the other, that he fhould oblige himfell to take the $n$ icines he fhould prefcribe for him. But Moliere finding the doctor too hard for him, and net cafly to be duped, refufed thim. His bufinefs, it feems, was to make a comical feene in expofing one of the moft learr ed men of the profeffion, as he had done the quacks. If this was his intention, as in all probability it was, Moliere had as much malice as wit; which is only to be ufed to correct the vicioufinefs and folly of men pretending to knowledge, and not the arts themfelves.

This I muft needs fay, that obfcenity and immorality are not at all upon the French ftage, no more than in the civil converfation of pcople of fathion and good breeding.

One

One afternoon in Lent, I was to hear a fermon at La Charite, preached by an abbot, a very young man. His text was about the angel's defcent into the pool of Bethefda, and troubling the waters. I am not fo good a Frenchman as to underftand all he faid, but he had many good arguments about the neceflity of grace, and the means to at$\operatorname{tain}$ it. I was Arangely furprifed at the vehemency of his action, which to me appeared altogether comical, and like the actors upon the ftage, which I had feen a few days before: befides, his expreffions feemed to be in too farailiar a flile. I always took a fermon to the people to require a grave and ornate kind of eloquence, and not verba guotidiana, with a certain dignity of action; but it is poffible this way here beft fuits with the cuftoms and manners of the people; who are all motion, even when they fay the eafieft and moft intelligible things.

Gaming is a perpetual diverfion here, if not one of the debauches of the town: but games of mere hazard are ftrictly forbid upon fevere fines to the mafter of the houfe, as well private as public, where fuch playing fhall be difcovered. This was done upon the account of the officers in the ariny; who, dusing the winter ufed to lofe the money, which was given them to make their recruits, and renew their equipages in the fpring. And indeed, fuch quick games, as baffet, hazard, \&cc. where fortune in a manner is all in all, are great temptations to ruin, by the fudden paffions they are apt to raife in the players. Whereas games, where ikill, and cunning, and much thought are employed, as well as luck, five a man time to cool, and recover his wits, if at any time great lofs fhall have difmounted his reafon: for he mult quickly come to himfelf again, or forfeit his fkill and reputation in conducting the game, as well as hufbanding his money.

We were in Paris at the time of the fair of St. Germain. It lafts fix weeks at leaft; the place where it is kept well befpeaks its antiquity; for it is a very pit or hole, in the middle of the Faubourg, and belongs to the great abbey of that name. You defcend into it on all fides, and in fome places above twelve fleps; fo that the city is raifed above it fix or eight foot.

The building is a very barn, or frame of wood, tiled over; confifting of many long allies, croffing one another, the floor of the allies unpaved, and of earth, and as uneven as may be: which makes it very uneafy to walk in, were it not the valt croud of people which keep ycu up. But all this befpeaks its antiquity, and the rudenefs of the firf ages of Paris, which is a foil to its politenefs in all things elfe now.

The fair confilts of moft toy-fhops, and Bartholomew-fiair ware; alfo fiance and pictures, joiner's work, linen aid woollen manufactures; many of the great ribband thops renove out of the Palais hither; no books; many fhops of confectioners, where the ladies are commodioully treated.

The great rendezvous is at night, after the play and opera are done; and raffling for all things vendible is the great dive:fion; no fhop wanting two or three raffling boards. Monfieur, the Dauphin, and other princes of the blood come, at leaft once in the fair-time to grace it.

Here are alfo ceffec--fhops, where that and all forts of ftrong liquors above-mentioned are fold.

Knavery here is in perfection as with us; as dexterous cut-purfes and pick-pockets. A. pick-pocket came into the fair at night, extremely well clad, with four lacqueys with good liveries attending him: he was caught in the fact, and more fivords were drawn in his defence than againf him; but yet he was taken, and delivered into the hands of juftice, which is here fudden and no jeft.

I was furprized at the impudence of a booth, which put out the picturcs of fone Indian beafts with hard names; and of four that were painted, 1 found but two, and thofe very ordinary ones, viz. a leopard, and a racoun. I afked the fellow, why he deceived the people, and whether he did not fear cudgelling in the end: he anfwered with a fingular confidence, that it was the painter's fault; that he had given the racoun to paint to two mafters, but both had miltaken the beaft; bui however, (he faid) though the pictures were not well defigned, they did neverthelefs ferve to grace the bcoth and bring him cuftom.

I faw here a female elephant betwixt cight and nine foot high, very lean and ill kept. Nothing could be more docile, than this poor creature. 1 obferved, fhe bent the joints of her legs very nimbly in making her lalutes to the company: alfo that the nails of her fore-toes were large, and almoft five inches long. This was from the continent, having the ears entire. I had leen one about thirteen years ago in I.ondon much lefs, from the inand of Ceylon, of another fpecies with feallopt ears, and the tail with two rows of large, thicis, and fiff black hairs.

Coaching in vifits is the great and daily bufinefs of people of quality: but in the evenings, the Cours de la Reyne is much frequented, and a great rendezvous of people of the beft fathion. The place indeed is very commodious and pieafant, being three alleys fet with high trees of a great length, all along the bank of the river Scine, inclofed at each end with noble gates; and in the middle a very large circle to turn in. The middle alley holds four lines of coaches at leaft, and each fide alley two a-piece: thefe eight lines of coaches may, when full, fuppofing them to contain near eighty coaches a-piece, amount to alout fix or feven hundred. On the field fide, joining clofe to the alleys of the coaches, there are feveral acres of menuow planted with trees, well grown, into narrow alleys in quincunx order, to walk in the grafs, if any have a mind to light; and this muft needs be very agreeable in the heats of fummer, which we flaid not to enjoy.

One thing this Cours is fhort of ours in Hyde-park, for if full, you cannot in an hour fee the company twice you have a mind to fee, and you are confined to your line; and oftentimes, the princes of the blood coming in, and driving at plealure, make a ftrange ftop and embarras.

Befides, if the weather has been rainy, there is no driving in it, it is fo miry and ill gravelled.

Thofe, who have a mind to drive further out of town for the air, have woods, one to the weft, and anc ther to the eaft, moft convenient. I mean, the bois de Bologne, and the Bois de Vincennes; this laft is very opaque and pleafan. There are fome ancient Roman ftatues in the firtt court of this houle.

But for the caftle in the Buis de Bologne, called Madrid, it was built by Francis the rirf, and it is altogether morefque, in imitation of one in Spain: with at leaft two rows of covered galleries running quite round, or the outfide the four faces of the houfe; which fure in a very hot country are greatly refrefhing and delightfful: and this is faid to be built or purpofe for a defence againft a much hotter climate, than where it fands; which that king had no mind to vilit a fecond time.

But let us return to Paris. Cowards eight or nine o'clock in June moft of them return from the Cours, and land ac he garden gate of the 'Tuilleries, where they walk in the cool of the evening. This garden is of the belt ordinance, and now in its full beauty, fo that Monf. Le Noftre has feen it in its infancy, for it is all of his invention, and he enjoys his labours in perfection. Certainly the moving furniture of it at this
time of the evening, is one of the nobleft fights, that can be feen. The night I came away from Paris, a lady of quality, Madam M——when I took my leave of her, afked me, what I had feen in Paris that moft pleafed me; I anfwered lier civilly, as I ought to do; but fhe would not take my compliment, but urged me for anfiver : I told her, (fince fhe would have it fo) that 1 juit then came from feeing what pleafed me beft; that was, the middle walk of the Tuilleries in June, betwixt eight and nine at night. I did not think that there was in the world a more agreeable place, than that alley at that hour, and that time of the year.

And now we are got into the gardens of Paris I fhall give you a flort tafte of all of them of note, at leaft of fuch as I faw.

This of the Tuilleries is vafly great, has fhaded terraces on two fides, one along the river Seine, planted with trees, very diverting, with great parterres in the middle, and large fountains of water, which conftantly play; one end is the front of that magnificent palace the Louvre; the other is low, and for profpects, open to the fields. The reft is difpofed into alleys, and grafs-plots, and copfes of wood; with a great number of feats upon down in all parts, for the accommodation of the weary.
In the Tuilleries there is one thing, which I much liked, and that was an amphitheatre of cut hedges, with the ftage, pits, and feats, and the fcenes leading into the Alage very pretty; from all fides clofe alleys leading into it.

Nothing can be more pleafant, than this garden, where in the groves of wood the latter end of March, black-birds and throftes, and nightingales fing moft fweetly all the morning, and that as it were within the city; for no birding is fuffered here near this city, and the fields round the town, are all, every where, full of partridges, and harcs, and other game.
The garden of the palace of Luxenbourg is alfo vaftly great, and has fomething of champatre in it, like St. James's-park ; it is alfo filled with people daily of good quality ; but becaufe the hard winters have deftroyed many of the walks, by killing the pole hedges, it is not fo frequented, as formerly ; yet it hath its fountains and parterres, and fome well fladed alleys; and for air, I prefer it before the Tuilleries, becaufe it is feated upon a high ground next the fields, in the Fauxbourg of St. Ger. mains.

As to the King's phyfic garden, it is a very great piece of ground, well furnifhed with plants, and open alfo to walk in, to all people of note. There is great variety of ground in it, as woods, ponds, meadows, mounts, befides a vaft level, by which it is fitted for the reception and growth of moft forts of plants.

I firft faw it in March with Dr. Tournefort, and Mr. Breman, a very underfanding and painful gardener. The green-houfes well ftored with tender exotics, and the parterres with fimples; though but few of them then to be feen: yet by the trees and thrubs, and fonse plants, which did not lofe their heads, I could well judge of the furniture.

Dr. Tournefort told me, that he fhewed a hundred plants every leffon, and he had in the fummer thirty leffons, which made three thoufand plants; befides the very carly and late plants, which he reckoned could not be lefs than a thoufand more.

I took particular notice of thefe plants in the green-houfes at that time:
Jofininum Aforicun: fore albo viridarii Regis Lufitanici.
Marum Cortufii, which had been potted thirty years.
Caryophyllus Creticus arborefcens.
Smilax fructu nigro.
Iris bulbofa forc̀ luteo.
vol. Iv.

Symplytun minus Borazinis jorc.
Iraxinus Americana ficride.
Stechas folio forrato Baubini.
This garden is enlowed by the king and duke of Orleans, and has 20001. a year Iterling rents belonging to it, whereof 5001 . is given to the chief phyfician who overdooks all, and the reit to the botanic reader, Dr. Cournefort, and under-gardeners, with lodgings for all.

Mr. Brenan told me, he had the beginning of April made an end of fowing his hot-beds, and had put into the ground two thoufund fpecies of feed.

From the mount in the king's garden, on the other fide of the river, upon the declivity of a high ridge of hills, I had a fair view of the palace or country-houfe of Father la Chnife, the Kiug's confeftor; it is very finely feated againft the fonth fun, and well wooded on both fides. A fit feat for a contemplative perfon.

The garden of the Palais Royal, confidering it is in the midde of the town, is very large, has two or three great balins with their jet d'eaux, but not well kept; nor hath any thing elegant in it, but the good order and difpofition of its tiady walks and par. terres. It is ever full of good company.

The garden of the arfenal is much larger, and finer kept; has the profpects of the fields, and lies open to the ramparts. It is alfo nuch frequented for the beauty of its walks.

There are alfo divers convents, which have fpacious and rvell kept gardens, which are always open and public to people of any note; as the Carthufians, which is vaft and champellre. The Celeftians, very fine and large; that of St. Genevieve, which is great, and very well kept; and the terrace for length and breadth is incomparable; extremely well planted with horfe-cheffuts; having alfo on the fouth-fide upon the terrace, three or four fquare copfes of the fame trees; which have a marvellous effect for fhade in fummer.

Thefe private gardens I faw in Paris.
D'Aumont. Its green-houfe opened into the dining-room: the orange trees feemed to have fuffered, and had their leaves withered; for the room was too broad by half.

The treillage, at the upper end of the garden, was very well adorned with gilding, and had in the middle a pavilion, in which was an old Roman ftatue of a young man, very well preferved. 'The fathion of the toga here was fo evident, that it might well pals for a couviation to thofe, who have thought it to be a plaid, or a garment open before like a cloak.

This treillage is performed with that variety of ornaments, that it refembles filegreen work, and is large. The painting of thefe works in green is not well performed in all places alike ; it is either too yellow, or of a fad dirty green, or fea green; few have hit the right grafs grech colour. To do it well, it is to be primed in yellow, and then to be covered with Vert de Montagne or Lapis Armeniacus; of which latt colour we have plenty in England, about Maham in Craven, in Yorkfhire.

This is the great beneft of treillage in cities, that befides the beauty of it to the eye, it takes away and hides the ill profpect of the neighbouring houles.

Here are very many fig-trecs well grown in fquare boxes; and parterres well focked with flowers; each fort by themfeives; as tulips a part; junkills a part; anemonies a-pant: ranumeuluses a-part : daffatils : part.

Puiffart. This garden is very neat, and open at the and to the Tuilleries. The treilloge walk or arbour at the upper end is very fine, feventy paces long, and eight
20001. a year III who over-er-gardeners, f fowing his upon the dehoufe of Fauth fun, and
town, is very pt ; nor hath falks and par-
profpects of the beauty of
rdens, which which is vaft evieve, which acomparable; fide upon the vellous effect
orange trees too broad by
with gilding, a young man, it might well ment open be-
rembles filc. cll performed a green ; few hed in yellow, of which latt re.
it to the eye,
s well ftocked t ; anemonies
s. The treilng, and eight broan!,
broad, hath three pavilions all open at the top. It is all of iron painted green, and coit fifteen thoufind livres.

The gardener was an artift ; and had fome plants in cafes in good erder, not to be feen elfewhere, as large rofemary bufhes, jacobrea maritima, marum fyriacuin, \&c.

The walls were well covered with fruit trees; he had not cut his peacles; when I afked him the realon, he told me, it was his way, not to cut them till after flowering, which he found by experience to improve the fruit; whereas he faid, the carly cuting tocked them, and impaired the fruit.

The orangery here was the molt beautiful room, for the bignefs, I had feen, paved with marble, and neatly wainfotted with oak, from the top to the bottom, after our Englifh manner, I make no doubt it ferved to eat in in fummer, when cleared of trees.

Bouvillier. I found not any thing more remarkable here, than the treillage at the end.

Cormartin. The trcillage in this garden was moft admirable in the faflion of a triumphal arch; half of it was an aviary, with a fountain in it, well ftored with birds.

Here were large iron vafas upon pedeftals, the firf I had feen of the kind, painted over of a copper colour.

Les Diguieres. This is the only houfe in Paris, I faw kept, in all the parts of it, with the moft exact cleanlinefs and neatnefs, gardens and all.
In the garden there were feveral pieces of treillage; that at the upper end was very noble, and coft ten thoufand livres; another piece of it coft fis: thouland. And I faw a fmall one of iron leaves painted green, the only one of the kind. Here alfo were great vafas of treillage upon pedeftals.

The fountains in this garden were very curious, though fmall, with proper orna. ments, which had a marvellous effct, when the fpouts played off.

The firft court was fet about with cafes of extraordinary large laurus tinus, and in the gardens there were fome cut into fquare pyramids.

A perfon of quality came into the garden to me, who with great civility conducted me up to the apartments.

In the apartment of the duchefs, which was all of her own contrivance, and had an air of flate and agreeablenefs be;ond any thing I had feen, I obferved langing down in the middle of the bed-chamber the fineft chryital candleftick in France: the pieces were all bought fingle by her, and the contrivance and fetting them together was her own : it coft twelve thouland crowns.

But before I left the garden, in an obfcure parterre I faw the tomb of a cat, viz. a black cat couchant upon a white marble cuflion, fringed with gold, and gold taffels hanging at the corners upon a fquare black marble pedeftal. On one of the fides o: that marble is writ in letters of gold:

> Cy gi/t Menine la plus amiable E la
> pilus ainec de toutes les chattes.
> On the other fide.
> Cy gift une chatte jolic:
> Sa maiftrefe, qui $n^{2}$ aimoit ricn,
> L'aime juijques a la folie
> Pour qucy dire! on le acit bien:

This is not the firf inftance of this kind of folly; I have feen fomething of it in Eng. land, and have read much more in hillory.

If you blame me for tranferibing this epitaph, I will fubmit ; but I could never have forgiven myfelf, if I had tranfcribed the many fine infcriptions I met with at Paris, though in moft elegant and truly Roman words; others in pure court French. You may read them in the Defeription of Paris.

De l.orge. We had the good fortune here to find the marhal himfelf walking in his garden; who entertained us with great civility, viz. the dean of Winchefter and myfelf. This garden was not finihhed, and the houfe itfelf was but building; but it is one of the fineft in Paris, and has the advantage of a moft free and extended profpect of the fields and Montmartre : at the end of the garden rifes a terrace equal with the rampart.

That which was in this houfe and garden very commodious and noble, was that betwixt the two courts the coaches drive through a ftately hall upon pillars, and might land on either fide, up a ftep or two, which lead to the ftaircafes and other apartments; and then in the furtheft court, which is only divided from the garden by high palifadoes of iron, they turn, and tak up the company again; fo that no weather offends them. Which is much wanting here; and more with us at London, where we moft need it.

This hall is open upon arches to the garden, and the ftair-cafe itfelf is fo contrived, that you enjoy a full profpect of the garden and Montmartre in defcending.

The marfal very obligingly fhewed us his own apartment; for all the reft of the houfe was full of workmen; and in his bed-chamber his little red damafk field-bed, which he lay in now, and which alfo ferved him, when he commanded upon the Rhine.

He thewed us his great fah windows; how eafily they might be lifted up and down, and ftood at any height; which conerivance of pullies he faid he had out of England, by a fmall model brought on purpofe from thence: there being nothing of this poife in windows in France before.

He alfo had us into a fet of fmall clofets or rooms, after the Englifh fathion, very prettily furnihed, neatly kept, and retired, with his Englifh keys to them, as he told us; and from thence we defcended a back pair of ftairs. We did all we could to hinder him from feeing us take coach : he fent his page after us, to invite us fome day to eat with him.

Hoftel Pelletier. The garden here was very neat, with a treillage at the end, after the manner of a triumphal arch, but not very high, nor well painted; yet its beauty and finifhings differ much from any I liad feen before. In the two niches were placed great iron vafas or flower-pots, right before the middle of a bafin of water, which was fet a playing for our entertainment, which is a compliment the French are willing to oblige ftrangers with.

In the orangery were very large trees, and two pair of myrtles in cafes, cut clobe. wife, the beft and biggeft 1 had feen : large buhhes in pots of Marum Syriacum. Great ftore of tulips, ancmonies, ranunculufes, and other flowers in beds, in the parterre, each by themfelves.

Alfo anemonies and ranunculufes in little earthen pots, as with us; but in very light mould. Great and very fair laurus tinufes in cafes. And, which was fingular, along one of the garden walls were planted Abel trees, whofe tops were difpofed and fpread by an iron treillage into arches at equal diftances, which had a very good effect.

The

The garden of the Hoftel-fullie had nothing remarkable in it.
The beft piece of treillage of iron bars and wood intermixed, is that in the garden of feu Mons Louvois. And this is one of the neateft gardens in Paris. The whole upper end is adorned with a noble treillage after the manner of a triumphal arch; it coft a great fum of money. There are four ftatues difpofed on pedeftals under it, which have a good effect; thefe are antique, rarely good. One of the firf emprefles, a Diana, an Apollo, \&c. Here the walks are hard gravel, but not rolled. On one fide of the treillage is a large aviary well ftored with birds.

The walls of the green-houle are matted; and large pans of iron hang down in the middle of the houfe, at equal diftances, to every window one; they have pullies to let them down, or run them up to what height they pleafe. This way may very well correct the moiftnefs of the air, which the breath of the plants caufe, and fufficiently warm them. Hot beds puff up plants; yet a warm air over their heads may be as ufeful to refrefh and nourih them in winter.

The laft private garden I faw was that of Mr. Furnier, a few days before we left the town, nothing could be prettier. At the upper end a noble treillage, two great vafas of iron, painted of a brafs colour, and gilt.

Here I faw an apple tree potted, as the figs and oranges ufed to be; it was the white queenen, (or calvil d'efte, the fem of the bignefs only of my thumb, full of fruit the firt of June.

Many pots of Sedum Pyramidale, now a moft elegant ormament. But nothing is here fo pompous as double red and Itriped focks; which they multiply with care, and their pains are juftly rewarded; with a thoufand other things, which my fhort turn in the garden would not give me leave to remember.

There are great numbers of thefe private gardens in Paris, which deferve feeing; but the feafon of the year not much favouring our curiofity, we did not much enquire after them.

Hitherto 1 have given a fhort account of what I faw mofly in Paris, as to the people, abroad and at home; the country round about it, is full of populous and neat towns, and many palaces of the king and princes of the blood, which are not to be equalled with any thing we have in England. But I ain unwilling to lead you any further, it being much out of my way and humour to go to court ; but becaule it was my fortune to be at Verfailles, St. Cloud, Marli, and Meudon, I will venture to fay fomething of each.

Thefe four royal palaces and their gardens foflefs a barren and hilly country, as big as moft counties in England; two of them, Meudon and St. Cloud, have the prof. pect of Paris under them; but the former hath it much more open and fully than the latter.

This diftrict may be faid to be les Berceau des Roys, or the nurfery of kings; for the chief of the blood royal are lodged here, viz. the king, Monfeigneur the dauphin, and the tiree grandfons, the dukes of Burgundy, d'Anjou, and Berry, Monfieur or the king's brother, and his fon the duke of Chartres, and Mademoifelle his daughter. All thefe are, or will be (as it is eafy to guefs by the growth and proportions of the youngel) very large and well fhaped beautiful people. The other branch of the blood royal, of the houfe of Bourbon, as the prince of Conde, the duke of Bourbon, and the princeffes his daughters, the prince of Conti, are all of lefs ftature, but very well hhaped and handfome.

The duke du Maine and the conte de Touloufe I did not fee; but the princefs dowager of Conti often, who is without difpute one of the moft graceful and handfomeft
women in France, and methinks exceedingly like the king her father, as I rem ember him in his full beaty, when I firit law him in the year 65 .

Thefe four palaces are all entirely built and furnifhed in this king's time, and all the gardens, and what belongs to them.

St. Cloud is the nearelt Paris, and the cafte is very magnificent, and moft commodious. The great faloon and the gallery are extremely well painted.

The gardens are of a vall extent, twelve or fifteen miles in compals.
The natural woods on the fouth-weft fide the houfe, are well buibanded, and cut into fmall and bigger alleys to fave the trees; which they have had fo great a care of, they have kept them thanding not only in the alleys, but in the very fteps of fone which are made to defcend into the alleys.

In the other parts of the garden the alleys are monlly treble, and well fladed, run out in vaft lengths of feveral miles, every where bafins and jets d'eaux; but there is a calcade, which I law feveral times play, and is faid to be the mof beautiful end beit furnifhed with water of any in France. In the middle of the large bafin among th the woods, I faw a jet d'eau, which threw up a fpout of water minety fect high, and did difcharge itfelf with that force, that it made a mitt and coolnefs in the air a great compafs round about, and gave now and then cracks like the going off of a piftol; fuch tore the vent of wind in the pipes had.

The pipes which convey the water are compofed of iron cylinders three feet long, fome ten, fome twenty inches diameter, till they divide; and then they are of lead.

I was once kindly invited to St. Cloud by Matame's phyfician, Monfieur Arlot, who fent his coach for me to Paris, and nobly treated me; before dimer he carried me in his coach (for this privilege is grantel him) into all parts, and round the gardens; which were well furuifhed with alleys and walks, adorned with cyprefs, pines, and firs, cut into pyramids; and water-works every where playing in ahundance, particularly the gerbes d'eau were very fine, that is, great and thick, feeming ftreams of water thrown up into the air. This is done to humbind the water by a great number of furall pipes like a heaf, to reprefent a folid pillar of water.

Monfieur has adde!, and taken into this valt garden, a new acquifition of a mountainous phain, which overlooks all the country round; and will no doubt, when it is modelled by that admirable contriver Monf. le Nottre, make one of the moft delightful places in the world.

From the baluftrade in the upper garden, the river Seine, and a vaft plain bounded by Paris, is to be feen, and makes a molt delightful profpect.

Thefe vaft riding gardens are unknown to us in England, and fe promencr a cheval, ou ch carroff, is not Engiilh. We camot afford to lufe fo much country as thofe gardens take up. I faw in fome of the quarters not only partridges and hares plentifully, but, which I wondered at, five biches or female reddedeer feeding.

The orangery belonging to this garden is very large and maguificent, paved with marble, and was filled with valt trees in cafes, not to be brought in or out without proper engines, but in it there was nothing but thofe orange trees, oleanders, and laurus tinufes. He goes out of the end of his apartment, that is, the noble painted gallery is continued upon a level with the orangery, which leads directly into an afcending walk of a vaft length; and alfo fronts or flanks all along the parterre or flower garden, where they are difipofed of in funmer. At this treat I eat of a preferve or wet fweatmeat, made of orange flowers, incomparable; and the lady obliged me with the manner of making it.

Though there were high and proper walls for fruit in inany parts of the gerlen, yet nothing of that nature was to be found, only ordinary and infructiferous ge ees were fattened to the treillage, which are the linings of moft walls here. In the garden are many arbours of treillage, pavilions, \&ec. of iron mixed with wood, painted green, with honey-fuckles running up them. Thefe gardens have above one hundred and fifty prople always employed to keep them in order; which ftands in 40,000 livres a year.

Another time I dined with the captain of the cafle, who fhewed ine all the apartinents at leifure. I eat here of the red-legged partridge taken here upon thefe hills; they are much kefs here than in Languedoc, but yet far better talted than the grey partridges taken in the fame place. This was the beginning of April, and we drank our wine in ice, which I was not aware of, till I found the bad effect of it in my throat; and the next day much more; but it went off again without any great trouble. There is no animal that abufes itfelf in meat and drink as man does; we daily drink exceffive hot and excelive cold; in other creatures it is inftinet that guides them, but as for us we neither act by inflinet nor reafon; but betwixt both loofely, and therefore oftener are catched to our own deftruftion.

At the end of ihe apartments of Monfieur, are a fine fet of clofets: the firf you enter is furnifhe with gre t varicty of rock chryitals, cups, agates upon fmall ftands, and the fides of the roon? are lined with large panes of looking-glafs from top to the bottom, with Japziu rumifh and paintings of equal breadth intermixt; which had a marvellous pretty effcc. The other room had in it a vaft quantity of bijou, and many of very : 4 price; but the Siam pagods, and other things from thence, were very odd.

There was alfo one very fmall Roman fatue of white marble, not ten inches high, which colt 20,000 crowns; one leg of it was a little injured. It feemed a piece of admirable workmanfhip. It was a boy, who had in the fkirt of his tunic a litter of puppies, and the bitch lying at his feet and looking up.

I cannot fay much of Meudon, becaufe 1 was notwithin the houfe or park; it will require yet fome sime to bring it to that perfection which is defigned; for that Monfeigneur has been but lately poffeffed of it. The road from Paris to it is yet unpaved; but the fituation is admirable; and the efplanade before the houfe is like a vaft baflion, and commands the full view of all the champagne, and Paris under it. The gardens are very great, but I only coalted them and the houfe.

As to the palace of Verfailles, (which is yet fome miles further within the moun? inous country, not unlike Blackheath or Tunbridge) it is without difpute the moft 1.n. nificent of any in Furope. Yet what of it was firtt built, and much admired thirty years, is now no longer relifhel. However this king intends to rebuild it where it is faulty. It is, as I faid, placed in a very ungrateful foil, without earth proper for herh, or water; but he hath brought that to it in abundance, and made the ground too to be fruifful.

There are books writ to defcribe this famous palace in every part ; to which I refer the reader. The way to it is new, and in fome places the mountains are cut down forty feet, fo that now you enjoy it a mile in profpect before you come to it; it opens and clofes in three courts, the nore remoteft, narrower and narrover; which is a fault; and is, as I was told, defigned to be pulled down, and made into one noble large iquare court, of the fame order of building as that magnificent front is which looks upon the gardens. The gilded tiles and roof have a marvellous effect in profpect. The eplanade towards the gardens and parterres are the nobleft things that can be feen, vaftly great,
with a very large bafin of water in the middle, low walled round with white marble, on which are placed a great number of incomparable brazen vafas, and large brafs figures couchant, of the beft mafters in fculpture; it were endlefs to tell all the furniture of thefe gardens, of marble ftatucs, and vafas of brats and marble, the multitude of fountains, and thofe wide canals like feas ruming in a fraight line from the botom of the gardens, as far as the eye can reach.

In a word, thefe gardens are a country laid out into alleys and walks, groves of trees, canals and fountains, and every where adorned with ancient and modern ftatues and vafas innumerable.

May the 17 th, the water were ordered to play for the diverfion of the Englifh gentlemen. The playing of the fpouts of water, thrown up into the air, is here diverfified after a thoufand faflions. The theatre des eaux, and the triumphal arch are the moft famous pieces. But in the groves of the left hand, you have Afop's fables, in fo many pieces of water-works, here and there in winding alleys. 'This might be faid to be done in ufum delpbini. It is pretty to fee the owl wafhed by all the birds; the monkey hugging her young one, till it fpouts out water with a full throat, and open mouth, \&c.

The orangery, or winter confervatory for tubs of winter greens, is what correfponds to the greatnefs of the reft. It is a ftupendous half fquare of under-ground vaults, like the naves of fo many churches put together, of exquifite workmanhip in hewn fone, well lighted and open to the fouth fun. It contains three thoufand cafas of greens; whereof near two thoufand are orange trecs, and many hundreds of them are as big as generally they naturally grow in the earth. Hence amongt them are fome, which are faid to be in cafes from the time of Francis the Firtt.
They did not think fitting to put them out this year till the latter end of May; and indeed their oleanders, laurels, lentifcufes, and moft other greens, had fuffered nifera'.ly.

In the pottageric (which is part of thefe gardens, and hath its magnificence alfo) there are feven hundred cales of figs, befides wall fruit of all other kinds. By all the gardens in and about Paris, I perceived they are very fond of this fruit.
I obferved in fmall fiance or painted pots a vaft number of the narrow leaved Laurus Alexandrina; allo Thlapfi flore albo, Leucoii folio, latifolium ; alfo the Sedum Pyramidale. Thefe are not yet ornaments in our gardens, that 1 know of, nor a great many other plants, which 1 obferved in fower there; and at my return gave a catalogue of them to Mr. London that he nught fend for them, if he pleafed. The plants I obferved were vivace or perennial.

The $15^{\text {th }}$ of May my lord ambaffador went to Marli, where the waters played for his diverfion.

I mult needs fay it is one of the pleafantelt places I cver faw, or, I believe, is in Europe; it is feated in the bofom or upper end of a bigh valley, in the midft of and furrounded with woody hills. The valley is clofed at the upper end, and gently defeends forwards by degrees, and opens wider and wider, and gives you the profpect of a vaft plain country, and the river Seine running through it.

Marli is a fquare houfe raifed upon fteps, and terraced on all fides : the four fronts all alike; and the doors opening into the garden all the fame. In the middle an octagon-hall, running up domewife, in which all the fide rooms meet; which are all rooms of itate. Above are twelve lodgings, with a narrow gallery leading to them. In the lower rooms at Marli, particularly in the octagon-falon, are extraordinary large, (fix feet at leaft,) marble, or rather agate tables; to the beft of which they may be
ite marble, on e brafs figures e furniture of tude of founottom of the

 middle an hich are all pg to them. inary large, hey may be compared.compared. 'They are veined like wood, and of an amber colour: thefe are the admirable effect of petrifation. Of this very flone l have feen great blocks in the banks of the dropping well at Knardborough in Yorkfhire. I forgot to atk here whence they tead them.

In one of the ground rooms was a femicircular gitt bar or rail, which took off and inclofed the upper end of the room: within the bar was difpofed feveral rous of porcellain or fine china on gilt thelv se. Here at the corners, withir the har, opened tw, fimall doors, whence the ambaffador and his retinue were plentifully ferved with chno colate, tea, and coffee, in a moft obliging manner. Many of the nobility and gentemen of France were ond red to attend him there.

The two fide fronts of the houfe have in profject great alleys cut through the woods, and paved for the more cormmodious coming down to the houfe; which is defcending all the way.

On each fide the valley, clofe under the woods, run along in a line, fix fquare pavillions or fualler palaces of the very fame figure and Feanty with the Mother lhoufe; at equal, but large dillances, as five iandred paces. The fix on the right hand the garden are for the men; the other fix on the left are 'or the women of quality whon the king weekly appoints, upon a lift given, to attend him, and enjoy the pleafure of this retirement, as 1 may fay, from court. Before thofe pavillions, and betwist them, are the finefl alleys and walks imagimable, with fountains, and all the decorations of treillage and flowers. Such a thew of not ordinary tulips in broad beds, of one thoufand paces long, every where, all this val garden over, in their full beauty, was a moft furprifing fight. I could not furbear to fay to the Duke de Villeroy, who was pleafed much to ac. company me in this walk, that fure all the gardens in France had contributed to this profufion of flowers; which he took fo well, that the Marifhal his father, afterwards detached himfelf to fingle me out, and very obligingly embraced me, and faluted m: with a kifs, and follow dit with very kind and familiar difcourfe.

The cafcade coming down from the brow of the hill, on that front of the houfe which refpects and ftands nearit, was new and fingular, and of the king's own invention, as indeed, all the carden befides. From the houfe it appeared a broad river, quietly gliding down the hill; but when I went near it, I found it compofed of fifty-two large fquare and fhallow bafins of water, difpofed at right angles, and not declining, but falling over one into another.

In the garde: were many fountains, nobly adorned, and had variety of water pipes playing up into the air in them. Here are fome gerbes of a fingular faflhion, with a circle of a great number of large pipes, within at leaft two feet diameter; which made the appearance of a raft pillar of water. There was one jet d'eau in the botem of the garden, which we were told thew up water 120 feet high; for of 50 and more fountains, we faw but thofe on the fide alleys to play; mof of the great bafins in the middle were mending and dry. To furnifh ali this water, there is a moft flupendous machine, which was invented by two Liegois This machine forces the water up 560 teet, from the rivir Scine, to the enp of the tower or aqueduet. It throws up 5700 inches of vater hy: almoft continued ructations or quick pulfes. It is wrought by it wheels of 32 feet diameter each, fet in the river, and carried about night and day by its ftrean.

This invention is the fame with what is practifed in the deep coal-pits about Leeds in ${ }^{-}$ Lower-Germany; fo that to fee the engines, and a great number of iron cylinders or water-pipes, lying bare above ground, and running up a vaft mountain, is to imagine a deep coal-mine turned wrongfide outward.
vol, it.

The tree moft in ufe here, was the fmall-leaved horne-beam; which ferves for arcades, berceaus; and alfo ftandards with globular heads: at the foot of which they have planted little fprigs of the fame of a foot and half high; and alfo in fome places in like manner, whole areds full of them; which cut fmooth and level make the fineft green hedges I ever faw ; fome of thefe low hedges were twelve feet broad, and in a barren and dry climate fupply very artificially the ufe of grafs-plots.

It is certainly very commendable in the king, who pleafes himfelf in planting and pruning the trees with his own hand, to make ufe of no other trees but what the neighbouring woods afford; fo that it is admirable to fee whole alleys of pole hedges of great height, and long rows of goodly ftandard globes of eighteen months growth only.

If this great king, as he grows older, flould take a fancy to place himfelf in a warmer climate, (and he has a good one of his own, as any under the fien, in Languedoc) as he does his winter greens in proper houfes; (and methinks, this inftance alone fhould be fufficient, to convince hiin of the neceffity there is to cherifh decaying nature, and that a naturally warm air is a better fence than cloaths or fire) what wonders would not his purfe and paffion for planting do there.
The next wools in Languedoc would afford laurel, and myrtles for pole hedges; lentifcus's and phylarea's in as great abundance, as hazel or thorn with us. Alfo jafmins for arbors and treillage; ciltus's and rofemary, and a hundred other fweet finelling woody thrubs grow every where in the fields, to furnifh the pots and valti.

There the tall cypres's grow of thenfelves, to 60 and 100 feet high, like fo many towers; and alfo tonfil at pleafure, for the molt beautiful pole hedres imaginable. The very ficlds are moft excellent, and well furnifhed parterres of flowers, and are naturally pottageries, or kitchen gardens. The vineyards are very orchards; and all the mott iender fruits with us are there ftandards; as figs, and grapes of ail forts, apricots, peaches, nectarines, jujubs, \&c. The delicious and large cherries; and whatever has been faid to the contrary, pippins and pears there are in far greater perfection than with us, or in any parts of France elfe, befides that happy climate.

What wais it for fo great a king to make a walk from Marli to Montpellicr, or (if I might choofe) to Pe feenas, feated in the bofom of a well watered valley, inclofed with perfumed bills. i: is not half fo far as betwixt Lahor and Agria, two feats the Mogu! has thus joined. Suis would eternife his name, above any palace he has yet built, and bring to himfll much health in his old age. The gardene of the Hefperides, and the labyrinths of Cands, fo famous in hittory, would be nothing to fuch wonderful performances, as his abilities and hupy genius is capable of. For befiles the natural proNuct of the country, the climate allo is capoble of producing, and nourifhing with fmall art and expence, whatever phants both the Indies can afford. Whercas, at this end of the world, we drudge in vain ; and force a pleafure which is dead and gone before we can sell engoy it: we have inded a kind of thew of the fummer delights, but all on a fudlen we drop into a harg and redinu winter again. But we love the places we are ufed to, or bom in. Man, to fay "truth, is a very animal, as any guadruped of them all ; and molt of his actions are refovable into inftinct, notwithItanding the principhes which cuitom and education have luperinduced.

The pazare o! fecing is farce to be tired; but git ifter two or three hours walk in fo finc and erat: garden, I was forced tomate a halt behind the company, and glad to retire to the gilt bureau in the palace again, to refreth myfelf, where I found fome of the king's officers wa:ting, and fome other gentemen of the houfehold, who had made fever.l campaigns in Flandere. I had now more a mind to a glafs of cool Burgund;, then the mfignificant Indian liquors; which though I knw was againft the
ferves for arf which they in fome places rake the finelt oad, and in a
planting and what the neigh. udges of great wth only.
If in a warmer anguedoc) as calone fhould ig nature, and ders would not

, like fo many ginable. The darc naturally d all the molt orts, apricots, 1 whatever has tion than with
llier, or (if I inclofed with ats the Mogut syet built, and erides, and the onderful perie natural propurihing with rereas, at this rad and gone mer delights, It we love the limal, as any inct, notwith-
c hours walk pany, and glad I found tome lld, who had ; of coul Bur$s$ againft the fanctity
fanclity of the place, yet nothing was denied me a franger. Here being alone, we fell into difcourfe of the Engliils, and of their king. They willingly allowed the Englifh to be truly brave; and now in peace they found alfo, that they were as civil, and well bred, as brave; that no nation had given the king and his court that fatistaction that the Englifh had done; being curious and inquifitive after all good things; they did fee a great difference between them and other nations; they did not ftare, and carelefsly run about, or hold up their heads, and defpife what they faw; but had a true relifh of every good thing, and made a good judgment of what was commendable; and therefore the king took pleafure to have them flewed every thing. This difcourfe of the Linglifh they concluded with a great encomium of King William.
As for their own king they were much in the praife of him, as one may eafily imagine: that his retirement hither was moftly for his health ; that he left Verfailles every Tuefday night, and came hither with a feleet company of lords and ladies; that he returned not till Saturday night, and fometimes intermitted ten or fourten days; fo that he fpent half of his time here in repofe; that be was the moft affible prince in the world, and never out of humour, of a pleafant and opea converfation where it pleafed him; eafy of accefs, and never fent any one awaly difcontented; the mof bountiful mafter in the world, of which there were ten thouland infances; mothing of merit in any kind, but he moft readily and cheerfully rewarded, ever, of late years at lealt, preferring the virtuous; fo on the other hand, he neve: lpared the rebellious and obflinate; that the govermment of tis people could not be carried on with lefs feverity and frienefs; nor the taxes which were neceflary to fupport it, raifed; that he delighted not in blood or perfecution ; but that the art of government had different rules, according to the climate and nature of the people, where and upon whom it was to be put in practice. His great wiflom appeared in nothing more, than in preferving himfelf amidit his troops, his converts, his court and numerous family, all in a manner fit for the throne. The greatnefs of his mind, and magnificence, in his buildings. This was the fum of the difcourfe thefe gentlemen were pleafed to entertain me with.

At my return to Paris I was to fee the pipinerie, or royal nurfery of plants, in the Fauxbourg of St. Honoric; where I met the mafter or comptroller of it, Monfieur Morley, one of the ufhers of the bed-chamber to the king.

He, like the reft of the Vrench nation, was civil to me; and fhewed me a written almanac of flowering plants for the whole year, which he faid was an original; it might indeed, be fo in French, but we have had almanacs for fruit and flowers, for every month in the year, printed divers times, for above this 30 years, thanks to Mr. Evelyn.

This ground inclofed with high walls is vaftly big, as it ought to be, to fuppiy the kings' gardens; here are feveral acres of young pincs, cyprofk vues, \&cc. alfo vaft beds of flock July flowers, of all forts of bubles, as tulips, daffodills. "rus's, \&c. and therefore I could eafily believe him when he told me, he had fent fro. ..ence to Marli alone, in four years time, eighteen nillions of tulips and other bulbous tlowers, for which he oliered to thew me his memoirs.

He further told me, that the furiilhing the Trianon (a peculiar houfe of pleafure, with its parterres at the end of the gardens at Verfailles) with flower pots in feafon, every fourteen days in the fummer, took up no lefs than ninety-two thoufand pots from hence.

Alto from hence he could plant and furnifh in fourteen days time, any new garden the king fhould caufe to be made.

Here befides the plants common to us and them, I faw a multitude of pots well con. ditioned of ftechas citrina fulio latiufculo.

Alfo ." fort of cotila, which bore large fun flowers or marigolds, propagated by flips, called by tim Amaroutre.

In this ground are feverai houfes to lodge the tender winter greens; amongft the reft there is one vory large, which I may call the infirmary of fick oringe trees; which coming from Genoa by fea, are here depofited in a peculiar green houfe; and there were in it, and then actually carrying out into the air, (it was the 22 d of May our Ityle) 300 trees ; cafes as thick as a man's thigh; but after ten, and fome after feventeer years cherifhing, had not yet got heals decent enough to be removed, and to appear at court, they being often forced to lop both tops and root, that they might recover th 1 .

After all, it mult be faid, that this nagnificence, and the number of thefe palaces and gardens, are the beft and moft commendable effect of arbitrary government. If thefe expences were net in time of peace, what would be this king's riches, and the extreme poverty of the people? for it is faid, that every three years, fome fay much oftener, he has all the wealth of the nation in his coffers; to that there is a necefity he fhould have as extravagant and incredible ways of expending it, that it may have its due circulation amongt the people.

But when this vaft wealth and power is turned to the difturbance and deftruction of mankind, it is terrible; and yet it hath its ufe too: we and all Furope have been taught, by the imduftry of this great king, mighty improvements in war; fo that Europe has been thefe twelie years an over-match for the Turk; and we for trance by the continuation of the war. The forcy millions fterling which he late war hath, and will coft England, before all is paid, was well befowed, if it had been for no other end, than to teach us the full ufe and practice of war; and in that point to uqual us with our neighbours.

It was obferved by Polybius of the Romans, that wherever they met with an ence my, that had tetter weapons than themfelves, they cianged with them; this docility gained them the empire of the world. On the contrary, thofe late eaftern tyrants have defpifed learning, and conlequently mult fubmit to the more retined valour of Europe. I fay, the effects of arbitrary government, both in war and peace, are flupendous.

The Roman Emperors, beciufe abfolute lords of the people, far out-did the commonwealth in magnificent buildings, both public and private. Auguftus left Rome a marble city, which he found of brick only. Nero burnt it and rebuilt it, and a golden pabace for himfelf, like a city. Vefpafian and Titus built amphicheatres and baths far furpafing any buildings now upon the face of the earth; in one of which 120,000 pertons might fee and hear, and be feated with more convenience than upon our ftages. Adrian vilited mott parts of the world, on purpofe to build cities. Trajum tad his name onevery wall, which he either reftored or built. His pillar, and bridge over the Danube are ftupendous monuments of his expences.

The l gyptian kings buile them monaments, wherein they flaved their whote nation, and which are the wonders of the we:ld to this day, the obclifks I mean, and pyramids.

The Afatic Emperors of China and Japan have outdone the Europeans in this kind of immenfe buildings, as the wali in China, the cut rivers, and fluices, and bridges there. In Japan the buildings are no lefs incredibly great.

Of this abloltie dominion we have examples cyen in thofe two American empires, of Miexico and Peru. In this laft, mere mature forced impolibilities without art, tools, or fience. The Cufco fortrefs was a matter-piece, where fones were laid unon ftones, which no engine of curs could carry, or rufe up; or tools better polill, and fit together; where a country near as tig as all Europe, was turned into a garden, and culivated better than Verfuiles, and water-works brought to play and overfpred fome
gated by flips, nongit the refl trees; which fe; and there May our (tyle) 3 after fevenoved, and to hey might re-
fe palaces and t. If thefe exc extreme poftener, he has ould have as ue circulation

empires, of rt, tools, or mon flones, and fic togre1, and cultipred lome thouands
thoufands of miles, where it never rains. This was the only arbitrary government well applied to the good of mankind, I ever met with in hiftory; where roads and forehoufes of food and raiment were the guides, and numbered the miles for the travellers, and the whole empire turned into an ufeful and intelligible map.

As for the Turks, Perians, and Mogul, the whole empire is intended folely for the pleafure of one man; and here even tyranny itfelf is foully abufed.

Yet I fhould be loth to fee them in any kind exemplified in England. In our happy ifland we fee fuch palaces and gardens, as are for the health and eafe of nian only ; and what they want in magnificence, they have in neatnefs. There is not fuch a thing as a gravel walk in or about Paris, nor a roller of any fort; when it rains the Tuillerics are flut up, and one 'alks in dirt fome days after. The grals plots, or, as they call them bowling greens, are as ill kept, they clip them and beat them with flat beaters as they do their walks. This puis me in mind of what I faw in the garden of the Prince of Condé in Paris; where there was a grafy circle of about four fect wide, round one of the fountains in the middle of the garden; to keep this down, and make it of a finer turf, the gardener had tethered two black lambs, and two white kids, at equal diftances, which fed upon it. Whatever the effect was, I thought it lookel pretty coough; and the little animals were as ornamental, as the grafs.

All the pai tings and prints made of late years of the king make him look very old; which in my mind is not fo; for he is plump in the face, and is well coloured, and leems: healthy, and eats and drinks heartily, which I faw him do; this is certainly an injury to him, and poffibly in complaifance to the Dauphin, or worfe. This is the meaneft compliment I have known the French guilty of towards their prince; for there are every where expreffions of ano her nature all over Paris. See the Defcription of Paris, where they are collected and at laige. I he Romans under Auguftus, (the firf abfolute matter of that people, as this king is of the French had upon this fubject fron the people a much finer thought, and wifh, De noftris amnis tibi Jupiter aegeat annos.

However it be, the king feems not to like Verfalles fo uell as he did; and has an opinion, that the air is not fo good, as elfewhere; he leaves it (as I faid) every week on 'Tuefday night, and goes moft'y to Marli, or Meudon, and fometimes to the !'rianon, which is but at the end of the gardens, and returns not to Verfailles till Saturday night : befides his extraordinary removes to Fontainblean. I wonder no body puts him in mind of that paradife of France, Langucdoc, where he may be with eafe in four days, at the rate that kings ufe to travel. I had this difcourfe at table with one of the introducteurs to the ambafador at Verfailles; but he could not bear it, it being againttthe interelt of all fettled courts to remove, though it were never fo gond for their prince's health. I remember but of one inftance in hiltory, and that was Aurenzebe the (Gre: Mogul, who in his middle age fell defperately tick, and long lanzuithed at Lahor, but took advice of fome body about him, and went in his own kingdom a pro. grels of one thoufand miles to Cafinire, a vary mild and temperate climate, where he recovered, and lived to above a hundred years old, and is yet alive for ought I kuow.

The king now feldom or n ver plays, but coutents himfelf fometimes with looking on; but he hath formerly been engaged, and has loft great fums. Mo fieur S. rooked him of near a million of liveres at baffet, by putting falfe cards him ; but wasimprifond :and banifhed for it form $\%$ ars.

Before I give over s: ulinefs of gardens and country, I will add fome remarks, which feemed particular ard new to mi:

In the kitchen gardens at and ecar Paris, are a gre, number of apric. andarus; but kert low; very full of blewers, and good beate.

They make a conferve of the fruit; which I like above any of their wet tweetmeats; it was made by cutting them into thin flices, and throwing away the fone; which our people fare fometimes, and leave in the llef intire, and lipoils the fiwectmeat, and fets it a fretring.

They enploy the fones in braudy, and Jiflil them in firits.
In the beginning of April w : imithore of alparagus, but they were often fo bitter, to me at lath, that there wa linde deafore in cating them. It is certain they were much worf, than ours in Fughan! in that particular. Which puts me in mind of the wild aparagus, which grows phatintly with on the fea coaft in Lincolnthire. This is very fair to the eyc; yot ho culture of our nas by of ten tramplanting, could make it eatable. If ey the alpares refovers bomang of its nateral force in a warmer climate ; for the fiweet talle is as it were a mark of degoneration. If they would have them goon! here, hicy wali, renew the feed from England or Holland.

The wid alparagus of Languedoc is another plant called Corruda.
I preard out of Languefloc a fort of Preess vine, about fitiy plants, by the Clermont carrier; the whin 1 gave to An. iondn, our king's gardener, for my lord ambandor. This wap is white, very thathoned, and clear as a drop of water; it is wfually ripe at 5 . Jimn's-matio in 'ry at Montpellier, where it is called Des Unies.

There are alfo in his town Pracus grapes, as Dr. Turnefort told me in the phyfic garden; but whether the fams with the Unies I know not.

I have faid they delight much in figs in pots or cafes; but hore is another way of preferving the fig trees fiet in the ground, which is much practifed; and that is to lap, and tie them up in long fraw, from top to bottom; for whicl: they are pliced at a little diftance from the walls. This alfo is practifed to fuch trees as ftand in the middle of the parterre; they did not open them till mid-May.

The exotic trees, which the Parifians molt delight in, for their garden walks, and for the fhate in their courts, are the Maroniers, or horfe chefnuts, of which they have innimerable; for the fruit ripens very well here, and comes up of itfelf. Alfo the Acacia Rovini, which is very common, and makes pretty alleys, and which they lop and turn to pollards, with good effed ; but of thefe laft the leaves are late in putting forth, it being the $15^{\text {th }}$ of May our $\mathrm{ftyl}^{\prime}$, when thefe trees were farce green.

May 25. When I took my leave of Monfieur Valliant, I found him in his flower garden; he thewed me a pareel of ranunculufes, in full tower, which he had received but two years before from Conftantinople; they were very beautiful and rare, at leaft fuch is I had never feen; as pure white, white and green, white and friped with carnation, pure carnation or rofe-colour, thriped carnation, \&c.

Of the fe he had fold fome a piftole a root, and hoped in a year cu two to be more plentifully ftock ed with them, that he might afford them cheaper. I did fee afterwards a few of them in the roval pipinerie, and alfo in the fedfinan's garden, Moniear le Fibre: but both cume from thin.

I alfo took notice of his iron cradles e. r hoops over his beds, which were removenbie, and to be made higher and lower, according to the heigit and nature of the flowers they were defigned to cover. This, :ne thought, was far beyond all the inventions of woocen rovers, and might with fail-ckoth and mats well ferve for a bert of probtable grien houfe, to the less tender phantio.

I faw Le Febre's it semaruen, Man 9 The tulips we in their prime; 'nded, he had a very large ", peatiful collection. The pan ase or Ariped tulips were many, and of great y. He obferved to me, tha rom his large and numerous beds of felf-11 were.. ss, that is, of one colour, as red, yello:v, sc. they expected yearly
t liveetmeats; $e$; which our neat, and fets
en fo bitter, to y were much Id of the will hire. This is s, could make in a warmer y would have
, by the Clerr my lord ann. water; it is )es Unies. in the phyfic
other way of that is to lap, epliced at a in the middle
walks, and for they have inIffo the Acacia lop and turn atting forth, it his flower gard received but , at lealt fuch ith carnation,
to be more fee afterwards Monicur le
vere removenof the flowers inventions of of artable ime; 'nled, 1 tulips were ad numerous they expected yearly
yearly fome ftriped ones, which if perfect, that is, ftriped in all the fix leaves, would but doubtfully continue, and perhaps return to their former fate the next year; but if tyhe laboured, or did not finifh the ftripings of all the fix leaves the firf year, there wer, better hopes of their continuing in that flate.

Though I had no miad to defcend into the fone pits, which are like our nines, wellfafhion, and the flones wound up with great wheels, to hufband tie foil cver them: yet I went to Vanre, three miles from the town, which is a ridge of hills that runs along to the obfervatory. Here the quarries are open on the fide of the hill, as with us. In thofe I obferved two or three layers of fone, two or three foot thick, moflly made up of fhells, or ftones in the fafhion of fhells. Amongtt thefe fhell-ftones the moft remarkable for bignefs was a certain fmooth and long buccinum, tapering with very many fpires. I meafured one whofe firt fpire was cight inches diameter, the full length I could not fo well come at ; yet holding proportion with thofe of the kind which lay flat, and which we could fee in their full length, it muft have been a foot long at leaft. There is no buccinum in any of our feas a quarter fo big. Here are many of this fpecies. Al'o other large turbinated fones, which come near fome of the Weft India kinds of mufic fhells, of which genus yet there are none in the European feas.

Thefe layers of fone mixed with fhell-figured bodies, are at certain diftances in the rock, and other rocks void of fhells interpofed.

Fanciful men may think what they pleafe of this matter ; fure I am, until the hifory of nature, and more particularly that of minerals and foffils is better looked into, and more accurately diftinguifhed, all realoning is in vain. It is to be obferved, where men are moit in the dark, there impudence reigns moft, as upon this fubject : they are not contem fairly to difient, but to infult every body elfe. In like manner upon the fubject of mineral waters ; how many fcriblers have there been without any knowledge of foffils?

I know not whether it be worth the noting, but it flews the humour of the French, that I faw in tome country towns near Paris, the church wall near the top had a two feet broad mouming litt, which compalfed the whole church like a girdle, and on this was at ertain dillarecs, painted the arms of the lord of the manor, who was dead.
1 hatl conclude what lhare to fay further, with the air of Paris, and the fate of health and phyfic there.

The air of Paris is drier than that of England, notwithfanding the greatef part of the city is placed in a dirty miry level; the muddy banks of the river Seine witnefs His; alto the ohd Latim name of Paris, I utitia; but fome of them are unvilling to denie it from Lutum, though there are feveral other towns in France, formorly more conifictrable than it, of that very name; but from the Greek original, as Tclun, Tcloug, which in that language fignify black dirt. We have an undoubted experiment of the diflitent tenper of the air in our Philofophic Tranfactions; where it is demonfrated, that here falls twice as much rain in England, as at Paris; regifters of both having carefully ben kept, for fo many years, both here and in France.
From this quantity of rain with us, our fields are much greener ; and it was a pleafing farprife to me at my riturn, failing up the river of Thames, to fee our green fields and pallures on every fide; but we pay dearly for it, in agues and coughs, and rheumatic diftempers.

The wince was very rude and fierce, as was ever known in the memory of man; the cold wiads very piercing; and the common people walk the ftrcets i.ll in muff, and
multitudes had little brafs kettles of fmall-coal kindled, hanging on their aras; and yet you thould farce hear any one cough.
I never faw a mift at l'aris in the fix monthis I flaid there, but one; thrugh a very broad river runs through the middle of the city, nor any very ltrong winds; but this may be accidental, and the temper of fone one year by chance.

We were very fenfible by the 2oth of February our fyle, though the nights were cold, and the white frofls great in the moraings, that the fun at noon had at much ftronger force and heat, than with us, at that time of the year.

Another argument of the drynefs of the air at Paris, we had from the altcration of health; fuch as were thick breathed, and coughed and fpit much, foon recovered; and the infenfible perfpiration of the fkin was fo clear and free, that the kidneys had little to do; fo that it was obferved by moft, that though we drank pretty freely of the thin wines of Champagne and Burgundy, yet they never broke our lleep to get flut of them; and that very little paffed that way in the morning.

Lallty, a fign of the drynefs and great goodnefs of the air of laris is, the valt number of iron bars all over the city; which yet are mofly intire, and the lealt decayed with ruft, I ever faw in any place; whereas ours in London are all in a few years all over rufty, and miferably eaten.

We were fufficiently ularmed at our firf coming to Paris, with the unwholefomenefs of the river water, and eautioned agamt drinking in ; and yet it was almolt impofible to avoid the badeffects of it; for within the month two thirds ot the tamily fell into lluxes, fome into dyfenteries, and fome very ill of it. The French that come out of other remote countries fuffer as well as the firangers. We were teld bollug it was a good remedy to prevent its griping quality; but that is a mere notion, fur we know mineral waters boiled have a llronger dfe, and this quality can proceed from nothing lefs.
The well waters here are much worle than the river waters, becanfe more mineral. But our fafety was in the water brought from the Maif n des Eans, where the aqueduct of Arcucil empties iffelf to ferve the great palaces and city fountains.

The difeale of the dyfentery being one of the moll common in Paris, the moft celcbrated drug for its cure is now the ipecacuanha; though I never once made ufe of it to any of our peoph, but cured them all as foon, and as well with our ufual remedies. Indeed they have great need of it here, for the poorer fort of people, through ill diet, this water, and herbs, are very fu ject to it; this root is faid to cure it with as much certainty, and as readily, as the jefuits powder an ague; of this hooft of the phyficians and apothecaries agreed. They give it in powder from ten grains to forty, which is the largelt dofe. It moft comm mly vomits, and fometimes purges, but both gently. It is fold here from twenty to fifty crowns a pound. 'They divide it into four forts, according to its goodnefs.

Another popular difeafe here is the fone; and there are men well practifed in the couting tor it. There are alfo two hofpitals, where great numbers are cut yearly, as Ia Cliarite, and Ilotel-Dicu, in bothof thefe there are wived chelts full of flones cut from human bodies; and in the chelt of La Charite is one, which exceeds all belief; it was cut from a monk, whodied in the very operation; it is as hig as a child's head. It is but the mode! or pattern of the flone which is kept in the chelt ; which has this infeription on it :

 de la Charité.

But that which I fhall here moft infift upon is the new way, practifed by Pere Jaques, a monk. About the 2oth of April he cut in the Hotel-Dieu ten in lefs tian an hour's time: the third day after, all were hearty and without pain but one.
He cuts both by the grand and little appareil ; in both he boldly thrufts in a broad lancet or liletto into the middle of the mufcle of the thigh near the anus, till he joins the catheter or Itaff, or the ftone betwixt his fingers; then lie widens the inciforn of the bladder in proportion to the llone with a filwer oval hoop; if that will not do, he thruts in his four fingers and tears it wider; then with the duck's bill he draws it out.

I faw him cut a freond time in the Hoftel-Dieu; and he performed it upon nine perfons in three quariers of an hour, very dexteroufly. He feemed to venture at all; and put me into fome diforder with the cruelty of the operation; and a fouter linglifhman than myfelf. However I vifited them all in their beds, and found them more amazed than in pain.

Pere Jaques cut alfo his way in the other hofpital La Charite, much about the fame time, cleven at twice. Herc Monficur Marfhal, the beft of the furgeons for this operation now in Paris, harangued againft him before the governors, who coldly anfwered, they would be determined by the event, which way was beft.
Atque buc ratione Faminis Calculi omnium facillimè cxciduntur; nempe fcalpcllo intra vaginam :teri in veficam adacto.

Of thofe cut in La Charitè one died; and being diffected, it was found he had his bladder pierced in four or five places; alfo the mufculus pfous fadly mangled; alfo the left veficula feminales cut.

Notwithfanding this, if this method was well executed by a kilfful hand, it might be of good ufe to mankind.

This way of cutting for the ftone, puts me in mind of what I formerly wrote and publifhed in the Phil. Tranfactions, about cutting abdve the os pubis, in the fund of the bladder.

Alfo of that experiment of cutting for the fone of an alderman of Doncafter in the gluteus major, he was thice at in the fame place, and out-lived both. I faw the firf fone, which was very large, at ii. fome meafure tranfparent, cryfal like. This experiment is priated in Dr. Willies's Scarborough Spaw, fourteen years ago at leaft, and is a fair hint for this new method.

Since my return I had a letter from Mr. Probic, a vc. learned and induftrious young gentleman, who was with me to fee the operation,
t part relating to this mitter I fhall here tranferibe. Indeed, I mightily longed for an account of this matter, the fuccefs of which I came away too foon to learn any thing for certain.

Paris, Aug. 2, $9^{8}$
"PERE JAQUE's reputation mightily flackens, nut of forty-five that he cut at the hoftel-dieu, but fixteen of them furvive; and of nineteen in the Charite, but eleven. He has practifed :1' hofpital at Lyons, but, it is faid, with worfe fuccefs than at Paris. I annfenfibic he has got abundance of encmics, which makes me very often queftion, what I may hear faid of him. Dr. Fagon, the king's phyfician, told Dr. 'Tumfort, when he went to prefent his book to him, that he had cut feven at Verfailles, and that fix of them are alive, and as well as if never cut. The perfon that died was fo diftempered, that he was not expected to live, and it was thought, if he had not been cut, he had not lived fo long: the furgeons have a great mind to cry down the man, though they practife his method. For Marfhal has fince cut after Pere Jaque's manner, only with this difference, that Marfhal's catheter was cannulated. Le Rue, the fecond furgeon of the Charity hofpital cut after the old manner, at the yol. iv.
fame time when Marfhal cut Pere Jaque's way, but had not fo good fuccefs as Marfhal had ; for all that Marfal cut are alive and very well, whercas the other loft one or two of his number; befides, thofe that lived were not fo foon cured, 10 , not by a month or fix weeks." 'Thus far Mr. Probie.

The pox here is the great bufinefs of the town; a difeafe which in fome meafure hath concributed to the ruin of phyfic here, as in London. This fecret fervice hath introduced litule contemptible animals of all forts into bufinefs, and hath given then oscafion to infult familics, after they had once the knowledge of thefe misfortunes. And it is for this reafon the quacks here, as with us, do thrive valtly into great riches beyond any of the phyficians, by treating privately thefe calamities.

It was a pleafint diverfion to ine to read upon the walls every where about the town, but more particularly in the Fauxbourgh of St . Germain, the quacks' bills printed in great uncial letters.

> As,

## De par l'ordre du Roy.

Remede infallible \& commode pour la gerifon des maladies fecretes fans garder la chambre.

## Another, <br> Par permiflion de Roy.

Manniere tres aifee \& tres fure pour guerir fans incommodite, \& fans que perfone en appercoive, les maladies veneriennes, \&c.

## Another, <br> Par privilege du Roy.

I'Antivenerien de medicin Indien, pour toutes les maladies veneriennes, telles quelles puiffent eftre, fans aucun retour, \& fans garder la chambre. Il eft tres cominode \& le plus agreable de monde.

## Another,

Remede affure de Sieur de la Brune privilege du 'oy, \&c. fans qu'on foit contraint de garder la chambre, \&c.
By thefe bills it is evident, there is yet a certain modenty and decorum left in the concealing this difeafe, even amongt the French: thr, would be cured fecretly, and as though nothing were doing; which thofe wretches highly promife. But this is that handle which gives thofe mean poople an occafion to infult thei, reputation, and injure them in their health for ever.

Fivery body here puts their helping hand, and meddles with the cure of this difeafe, as pothecaries, barbers, women, and monks; yet I did not find by all the inquiry I could make, that they had other remedies than we. Nay, there is fomething practiled in the cure of this diftemper in England, which they at l'aris know nothing of; but shis old verfe forbids me to fay any thing further :

> Artem puderc proloqui, quan factites.
'The apothecaries' flops are neat enough, if they were but as well fored with medicine: ; and fone are very finely adorned, an!! have an air of greatuefs, as, that of Monfieur Geofferie, who has been provoft des merchinis, in th: Rue Butebur, where he en ry to the Baffe Cour is a port-cochier, with vafas of copper in the niches of the windo vs; within are rooms adorned with huge valas and mortars of bra's, is well for fight, as for ufe. The drugs and compofitions are kept in cabinets dilpoled round the room. Alfo laboratories backwards in great perfection and neatherf. I madk needs commend chis genteman for his civility towards me; and for he care in educating his

um Ieft in the fecretly, and But this is that on, and injure
of this difeafe, the inquiry 1 thing practifed thing of; but
cd with medithat of Montebur, where niches of the is, is well for fied round the I mata needs clacating his
fon, who came over with Count Tallard, a moft hopeful and learned young man ; whom our fociety at Greham-college, at my requef, honoured with admitting him fellow, according to his deferts.

1 had the opportunity of converfing with many of the phyficians in this city; who all agree in the low condition and difelteem it was in, from the boundlefs confidence and intruding of quacks, women, and monks. Monfieur d'Achin, the late chief phyfician, has been ill thought on for taking money, and giving protection to thefe fort of cattle; but the chicf phyfician now, monfieur Fagon, is a man of great honour and learning, and very defirous to promote the art.
It is here as with us, fome practife out of mere vanity, others to make a pemy any way to get bread. The caufe of all this is, I think, the great confidence people have of their own fkill, an arrogance without thinking. To pals a judgment upon cures, and the good and evil practice of phyfic, without doubt is one of the nicelt things, even to men of the faculty; but a jury, that is, the very ordinary men in Eingland, are fuffered now to undertake the queftion; when I may truly fay, that 1 have ever found, no difparagement to them, the moll learned men of the nation, the moft niftaken in thefe matters; and can it be otherwife in fo conjectural an art, when we ourfelves farce know, when we have done ill or well.

A nother caufe of the low efteem of phyfic here, are the forry fees that are given to phyficians; which makes that fcience not worth the application and ftudy. The king indeed is very liberal, as in all things elfe, in his penfions to his chicf phyfician, and gives his children good preferments.

Alfo Mr. Burdelot, who is alfo well penfioned, and lodged at Verfailles, phyfician to the duchefs of Burgundy, a learned man; he is perfectly well tkilled in the hiftory of phyfic; and we may fhortly (as he told me) expect from him, another fupplement to Vauder Linden, of many thoufand volumes, which have efcaped that catalogue, and are not accounted for.
Monfieur, and the dauplin, and all the princes of the blood, have their domellic phyficians; fome of whom I knew, as Monficur Arlot, Monfieur Minot, to the Prince of Conti, of my acquaintance formerly at Montpelier. The two Morins very learned men; alfo Monficur Grimodet, \&c.

Others have the practice of nunneries and convents, which gives them bread; others have parifhes; and fome fuch flifts they make; but all is wrong with them, and very little encouragement given to the faculty.
April 14. The Prince of Conti fent his gentleman and coach at midnight to fetch me to his fon, and to bring with me the late King Charles's drops to give him. . This was a very halty call. I told the meffenger, I was the prince's very humble fervant; but for any drops or other medicines I had brought nothing at all with me, and had ufed only fuch as I found in their floops, for all the occafions I had had to ufe any. I defired he would tell him, that I was ready to confult with his phyficians upon his fon's ficknefs, it he pleafed to command me, but for coming upon any other account I defired to be excufed; but I heard no more of the matter, and the joung prince died. By this it is evident, there is as falfe a notion of phyfic in this country, as with us; and that it is here alfo thought a knack, more than a fcience or method; and little chimical toys, the bijous of quacks, are mightily in requef. 'This herefy hath poffeffed the molt thinking, as well as the ignorant part of mankind ; and for this we are beholden to the late vain expofitors of nature, who have mightily inveighed againtt and undervalued the ancient Greek phyficians, in whofe works only this att is to be learnt, unlefs fingle perfons could live over as many ages, as thofe wife men did.

Men

Mcn are apt to prefcrite "o Howir phytician, before he can poffibly tell what he thall in his judgment think thang to give ; it is well if this was in negatives only; but they are prejudied by the impertinence of the age, and our men, who ought to converfe with the patient and his relations with prognollics only, which are the honour of phyfic ; and not play the phitofopher by tancifal and precarious interpretations of the natures of difeafes and medicines, to gain a fort of credit with the ignorant; and fuch certainly are all thole that have not ftudied phyfie thoroughly, and in earnett.

Thofe drops weredefired of me by other perfons of quality, as the Princefi dEfpinoy, the 1)uchets of Boullon, Monfeur Scfac, sec. and having bethought myfitf howr my mafter, the late King Charles, had commanicated them to me, and thewed me very obligingly the procefs himfelf, by carrying me alone with him into his claboratory at Whitelall, white it was dittilling : alfo Mr. Chevins another time flowed me the materials for the drops in his apartment newly brought in, in great quantity, that is, raw filk: I cauled the drops to be made here. Alfo I put. 1)r. Turnefort upon making of them; which he did in perfection, by diftilling the finelt raw filk he could get. For my part I was furprifed at the experinient often repeated, having never tried it before. One , ound of raw filk yielded an incredible quantity of volatile falt, and in proportion the fineft fpirit I ever tafted; and that which recommends it is, that it is when rectified, of a far more pleafint fiaell, than that which comes from fal armoniac or harthorne; and the falt refined and cohobated with any well feented chemical oil, makes the king's falt, as it is ufed to be called. 'This my lord ambaffador gave me leave to prefent in his name; and the doctor now fupplics thofe which want. Silk, indeed is nothing elfe, but a dry jelly from the infect kind, and therefore very cordial and fomachic no doubt. The Arabians were wile, and knowing in the matcria medica, to have put it in their Alkermes.

This inult be faid for the honour of this king, that he has ever given great encouragements for ufeful difcoveries in all kinds, and particularly in phyfic. It is well known he bought the fecret of the jefuit's powder, and made it public ; as he lately did that of the hypococana.

To conclude, it was my good fortune here to have a bundle of original papers of Sir Theodore Mayerne, and his friends, who correfponded with him, prefented me by the Reverend Dr. Wickar, Dean of Winchefter, who marrying his kinfwoman found them amongtt other writings of law matters. I have not yet had the leifure to perufe them, but thofe who know the worth of that great man, will defire they may be made public; which if they are, they fhall come forth intire, and not difguifed, as fome of his other papers have been, to the great detriment of phyfic; and I think it is the firf example of this nature, that pofthumous papers were ever abbreviated, and made what they never were before, an intire and fu!! publication.
ly tell what he ves only; but ought to conthe honour of tations of the ant ; and fuch ruelt.
rince fs defpihat myiclf how nd thewed me his claboratory thewed me the intity, that is, urnefort upon w filk he could ing never tried whe falt, and in it is, that it is in fal armoniented chemical Iffador gave me h want. Br 」RTHUR 2OUNG, ES@, F.R.S.

## PREFACE.

$I \Gamma$ is a queftion whether modern hiftory has any thing more carious to offer to the attention of the politician, than the progrels and rivalthip of the lirench and Englinh empires, from the miniftry of Colhert to the revolution in lirance. In the ceurle of these 130 years, both have figured with a degrec of fiplendour that has attracked the admiration of mankind.

In proportion to the power, the wealth, and the refources of thefe nations, is the intereft which the world in general takes in the maxims of political oeconomy by which they have been governed. To examine how far the fyftem of that economy has influenced agriculture, manufactures, commerce, and public f licity, is certainly an inquiry of no night importance; and fo many books have been compoted on the theory of thefe, that the public can hardly think that time mifemployed which attempts to give the practice.

The furvey which I made, fome years paft, of the arriculture of England and Ireland (the minutes of which I publifhed under the title of 'Tours), was fuch a ftep towards underitanding the ftate of our hufbandry as I fhall not prefume to characterife; thire are but few of the European nations that do not read thefe lours in their own language; and notwilhtanding all their faults and deficiencies, it has been often regretted, that no fimilar defcription of F. e could be reforted to either by the farmer or the politician. Indeed it could no. ' 'mented, that this vaft kingdom, which has fo much figurd in hiftory, were : main another century unknown, with refpect to thofe circumftances that are t! a my inquiries. An hundred and thirty years have paffed, including one re, e and confpicuous reigns upon record, in
which the Frenclo power a. Europe. How far were .:", 'hoth refources founded on the permanent bafis of an colightencd agriculture: .ow wh on the more infecure fupport of manufactures and commerce? how far have wealth and power and exterior fplendour, from whatever caule they may have arifen, reflected back upon the people the profperity they inplied? very curious inquiries; yet refolved infufficiently by thote whofe political reveries are fun by their fire-fides, or callght lying as they are-whirled through Europe in poftchaits. A man who is not prastically acquainted with agriculture, knows not how to make hof inquirics; he fcarcely knows how to difcriminate the circumftanecs productive of anferv, frem thofe which generate the feticity of a people; an affertion that will not aff ar paradoxical, to thofe who have attended clofely to thefe fubjects. At the fane time, the more agriculturift, who makes tuch journies, fees little or nothing of the connection hetween the practice in the fields, and the refources of the empire; of combinations that take place between operations apparently unimportant, and the general in-
tereft of the flate; combinations fo curious, as to convert, in fome cafes, well cultivated fields into fecenes of mifery, and accuracy of hufbandry into the parent of national weaknefs. Thefe are fubjects that never wilh be underftood from the fipeculations of the mere farmer, or the mere politician; they demand a mixture of both; and the invefligation of a mind free from prejudice, particularly national prejudice; from the love of fyttem, and of the vain theories that are to be found in the clofets of fpeculators alone. God forbid that I fhould be guilty of the vanity of fuppofing myfelf thus endowed!. I know too well the contrary; and have no other pretenfion to undertake fo arduous a work, than that of having reported the agriculture of England with fome little fuccefs. Twenty year's experience, fince that attenpt, may make me hope to be not lefs qualifed for finailar excertions at prefent.

The clouds that for four or five years pan, have indicated a sange in the political fky of the French hemifphere, and which have fince gathered wfo fingular a ftorm, have rendered it more interefting to know what France was previoufly to any change. It would indeed have been matter of aftonifhment, if monarchy had rifin, and had fet in that region, without the kingdom having had any examination profefiedly agricultural.

The candid reader will not expect, from the regifers of a traveller, that minute analyfis of common practice, which a man is cmabled to give, who refides tome months, or years, confined to one fpot; twenty ment, employed during twenty years, would not effect it; and fuppofing it done, not one thoufandth part of their labours would be worth a perufal. Some fingularly enlightened diftricts merit fuch attention: but the number of them, in any country is, inconfiderable; and the practices that deferve fuch a fludy, perhaps, fitl fewer: to know that unlightened prastices exift, and want improvenent, is the chief knowledge that is of ufe to convey; and this rathe: for the ftatefman than the farmer. No reader, if he knows any thing of my fituation, will expeet, in this work, what the adrantages of rank and fortune are neechiary to produce-of fuch I had none to exert, and could combat difficulties with no other arms than unremitted attention, and unabating induftry. Had my aims been feconded by that fuccefs in life, which gives energy to effort, and vigour to purfuit, the work would have been more worthy of the publice eye; but luch fuccefs mult, in this kingdom, be fooner looked for in any other path than that of the plough; non ullus aratro dignus bonos, was not more applicable to a period of confufion and bloolfied at Rome, than to one of prace and luxury in England.

One circumfance I may be allowed to mention, hecaufe it will flew, that whatever faults the enfuing pages centain, they do not flow from any prefumptive expectation of fuccefs; a feeling that belongs to writers only, much more popular than myfelf: when the publifher agreed to run the hazard of printing thefe papers, and fome progrefs being made in the journal, the whole MS. was put into the compofiter's hand to be exanined, if there were a fufficiency for a colume of 60 fheets; he found enough prepared for the prefs to fill 140: and I aflure the reader, that the fucceflive employnent of ftriking out and mutilating more than the hall of what 1 had written, was executed with more indiffer nce than regret, even though it obliged me to exclude feveral chapters, upon which 1 had taken confiderable pains. The publifher would bave printed the whole; but whatever faults may be found with the author, he ought at leaft to be exempted from the imputation of an undue confidence in the public favour; fince, to expunge was undertaken as radily as to compofe. So much depended in the fecond part of the work on accurate figures, that 1 did not care to truft myfelf, but employed a fchoolmafter, who has the reputation of being a good arithmetician, for examining the calculations, and I hope he has not let any waterial errors cfelpe him.

The revolution in France was a hazardous and critical fubject, but too important to be neglected; the details I have given, and the reflections I have ventured will, I truft, be received with candour by thole who confider how many authors, of no inconfiderable ability and reputation, have failed on that difficult theme: the courfe I have flecred is fo removed from extremes; that I can hardly hope for the approbation of more than a few ; and I may apply to myfelf, in this inftance, the words of Swift :-" I have the ambition, common with other reafoners, to wifh at lealt that both parties may think me in the right ; but if that is not to be hoped for, my next wifh fhould be, that both might think me in the wrong; whichl would underttand as anample juftification of myfelf, and a fure ground to believe that I have proceeded at leaft with impartiality, and perhaps with truth."

Raduction of Livres, at ten-pence balfpenny each.

TRAVELS, \&c.

TIIERE are two methods of writing travels; to regifter the journey itfelf, or the refult of it. In the former cafe it is a diary, under which head are to be clafled all thofe books of travels written in the form of letters. The latter ufually falls into the thape of eifdys on dillinet fubjects. Of the former method of componing, alnoft every book of modern travels is an example. Of the latter, the admirable efiays of my valuable friend Mr. Profeffor Symonds, upon falion agriculture, are the mof perfect fpecimens.

It is of very little importance what form is adopted by a man of real genius; he will make any form ufeful, and any information interefting. But for perfons of more moderate talents, it is of confequence to confider the circumfances for and againf both thele modes.

The journal form hath the advantage of carrying with it a greater degree of credibility; and, of courfe, more weight. A traveller who thus regitters his obfervations is detected the moment he writes of things he has not feen. He is precluded fioni giving fudied or claborate remarks upon infuflicient toundations: if he lees little he muft regifter little: if he las few good opportunities of being well informed, the beader is enabled to obferve it, and will be induced to give no more credit to his relations than the fources of them appear to deferve: if he pailes for rapidly through a country as necefliarily to be no judge of what he fees, the reader knows it : if he dwells long in places of little or no moment with private views or for private bufinels, the circumftance is feen ; and thus the reader has the fatisfaction of being as fafe from impofition either defigned or involuntary, as the nature of the cafe will admit: all which adrantages are wanted in the other method.

But to balance then, there are on the other hand fome weighty inconveniences; among thefe the principal is, the prolixity to which a diary generally leads; the very mode of writing almof making it inevitable. It neceflarily caufes repetitions of the fame lubjects and the fome ideas; and that furely muft be deemed no inconfiderable fault, when one employs many words to fay what might be better faid in a few. Another capital objection is, that fubjects of importance, inftad of being treated de fuite for illuf= tration or comparifon, are given by leraps as received, withont order, and without connection; a mode which leflens the effect of writing, and dufroys much of its utility.

In avour of comp, fine allays on the principat objects that have been oberersed, efrat is, giving the refolt of thacls and not the travels themfelres, there is this obvious and
great advantage, that the fubjects thus treated are in as complete a flate of combination and illuftration as the abilities of the author can make them; the matter comes with fuli force and effect. Another admirable circumftance is brevity; for by the rejection of all ufelefs details, the reader has nothing before him but what tends to the full explanation of the fubject : of the difadvantages, I need not fpeak; they are fufficiently noted by fhewing the bencfits of the diary form; for proportionably to the benefits of the one, will clearly be the difadvantages of the other.

After weighing the pour and the contre, I think that it is not impracticable in my peculiar cafe to retain the benefits of both thefe plans.

With one leading and predominant object in view, namely agriculture, I have conceived that I might throw each fubject of it into diftinct chapters, retaining all the advartages which arife from compofing the refult only of my travels.

At the fame time, that the reader may have whatever fatisfaction flows from the diary form, the obfervations which I made upon the face of the countries through which I paffed; and upon the manners, cuftoms, amufements, towns, roads, feats, \&c. may, without injury, be given in a journal, and thus fatisfy the reader in all thofe points, with which he ought in candour to be made acquainted, for the reafons above intimated.

It is upon this idea that I have reviewed my notes, and executed the work I now offer to the public.

But travelling upon paper, as well as moving amongft rocks and rivers, hath its difficulties. When I had traced my plan, and begun to work upon it, I rejected, without mercy, a variety of little circumftances relating to myfelf only, and of converfations with various perfons which I had thrown upon paper for the amufement of my family and intimate friends. For this I was remonftrated with by a perfon, of whofe judgment I think highly, as having abfolutely foiled my diary, by expunging the very paffages that would beft pleafe the mafs of common readers; in a word, that I muft give up the journal plan entirely, or let it go as it was written.- To treat the public like a friend, let them fee all, and truft to their candour for forgiving trifles. He reafoned thus: "Depend on it, Young, that thofe notes you wrote at the moment, are more likely to pleafe than what you will now produce coolly, with the idea of reputation in your head: whatever you flrike out will be what is moft interefting, for you will be guided by the importance of the fubject; and believe me, it is not this confideration that pleafes fo much as a carelefs and eafy mode of thinking and writing, which every man exercifes moft when he does not compofe for the prefs. That I an right in this opinion you yourlelf afford a proof. Your tour of Ireland (he was pleafed to fay) is one of the beft accounts of a country I have read, yet it had no great fuccefs. Why? becaufe the chief part of it is a farming diary, which, however valuable it hay be to confult, nobody will read. If, therefore, you print your journal at all, prini:it fo as to be read; or reject the method entirely, and confine yourfelf to fet difiertations. Remember the travels of Dr. __ and Mrs. __, from which it would be difficult to gather one fingle important idea, yet they were received with applaufe; nay, the bagatelles of Baretti, amonght the Spanifh muletoers were read with avidity.

The high opinion I have of the judgment of my friend, induced me to follow his advice; in confequence of which, I venture to offer my itinerary to the public, juft as it was written on the fpot: requelting wy reader, if much thould be found of a trifing nature to pardon it, from a reflection, that the chiof object of my travels is to be found in another part of the work, to which he may at once have recourle, if he wifh to attend only to fubjects of a more important character.

## JOURNALL.——May 15,1787.

THE Areight that feparates England, fo fortunately for her, from all the reft of the world, muft be croffed many times before a traveller ceafes to be furprifed at the fudden and univerfal change that furrounds him on landing at Calais. The fcene, the people, the language, every object is new ; and in thofe circumftances in which there is moft refemblance, a difcriminating eye finds little difficulty in difco ereing marks of diftinction.

The noble improvement of a falt marf, worked by Monf. Mouron of this town, occafioned my acquaintance fome time ago with that gentleman; and I had found him too well informed, upon vatious important objects, not to renew it with pleafure. I fpent an agrecable and inftructive evening at his houfe.- 165 miles.

The $17^{\text {th }}$. Nine hours rolling at anchor had fo fatigued my mare, that I thought it neceflary for her to reft one day ; but this morning I left Calais. For a fow miles the country refembles parts of Norfolk and Suffoik; gentle hills, with fome inclofures around the houfes in the vales, and a diftant range of wood. The country is the fame to Boulcgne. Towards that town, I was pleafed to find many feats belonging to people who refide there. How often are falfe ideas conceived from reading and report! I imagined that nobody but farmers and labourers in France lived in the country; and the firft ride I take in that kingdom fhews me mainy country feats. The road excellent.

Boulogne is not an ugly town; and from the ramparts of the upper part the view is beautif., though low water in the river would not let me fee it to ad jantage. It is well known that this place has long been the refort of great numbers of perfons from England, whofe misfortuncs in trade, or extravagance in life, have made a refidence abroad more agreeable than at home. It is eafy to fuppofe that they here find a level of focicty that tempts them to herd in the fame place. Certainly it is not cheapnefs, for it is rather dear. The mixture of French and Englifh women makes an odd appearance in the flreets; the latter are dreffed in their own fafhion; but the French heads are all without hats, with clofe caps, and the body covered with a long cloak that reaches to the feet. The town has the appearance of being flourifhing: the buildings good, and in repair, with fome modern ones; perhaps as fure a tell of profperity as any other. They are raifing alfo a new church, on a large and expenfive falce. The place on the whele is chearful, the environs pleafing, and the fea-hore is a flat ftrand of firm fand as far as the tide reaches. The high land adjoining is worth viewing by thofe who have nut already feen the petrification of clay; it is found in the flony and argilaceous flate, juft as I aefcribed at Harwich. (Amals of Agriculture, vol. vi. p 218.)-2 $2+$ miles.

The 18 th. The view of Boulogne from the other fide, at the diftance of a mile is a pleafing landfcape; the river meanders in the vale, and freads in a fine reach under the town, juft before it falls into the fea, which opens between two high lands, one of which backs the town. The vicw wants only wond ; for if the hills had more, fancy could farcely paint a more agrecable feenc. The country improves, more inctofed, and fone parse firongly refombling lingland. Sone fine meadows about Bonbrie, and feveral chateaus. I am not profefledly in this diary on hablandry, bnt mun juld obr ree, that it is $t$ the full as bad as the couniry is good; con mifi rable and yollow with weeds, yet all fummer fallowed with 'olt attention. On the hills, which areat ne great diftance from the fa, the trecs turn their heads from it, fhom of their fuliage: it is not ther fore to the S. W. alone that we flould atributa this effecr. If the French have not huibandry to fhew us, they have roads; nothing can be more beautiul, or i.ept in
more garden order, if I may ufe the expreffion, than that which paffes through a fine wool of Monf. Neuvillier's ; and indeed for the whole way from Samer it is wonderfully formed: a vaft caufeway, with bills cut to level vales; which woald fill me with adniration, if I had known nothing of the abominabls. corvées, that make me commiferate the upreffed farmers, from whofe extorted labour this magnificence has been wrung. Women gathering grafs and weeds by hand in the woods for their cows is a trait of poverty.

Pafs turberries, near Montreuil, like thofe at Newbury. The walk round the ramparts of that town is pretty: the little gardens in the baftions below are fingular. The place has many Englifh; for what purpofe not eafy to conceive, for it is unenlivened by thofe circumftances that render towns pleafant. In a fhort converfation with an Englifh family returning home, the lady, who is young, and I conjecture agreeable, affured me I ftould find the court of Verfailles amazingly fplendid. Oh ! how fhe loved France! and thould regret going to England if the did not expect foon to return. As the had croffed the kingdom of France, I afked her what part of it pleafed her beft ; the aniwer was, fuch as a pair of pretty lips would be fure to utter, "Oh ! Paris and Verf:illes."
Her hufband, who is not fo young, faid "'Touraine." It is probable, that a farmer is much more likely to agree with the fentiments of the hufband than of the lady, notwithitanding her charms.-- 24 miles.
The 1 gth. Dined, or rather ftarved at Bernay, where for the firf time I met with that wine of whofe ill fame I had heard fo much in England, that of being worfe than fmall beer. No fattered farm-houfe in this part of Picardy, all being collected in villages, which is as unfortunate for the beauty of a country, as it is inconvenient to its cultivation. To Abbeville, unpleafant, nearly flat ; and though there are many and great woods, yet they are uninterefling. Pafs the new chalk chateau of Monf. St. Maritan, who, had he been in England, would not have built a houle in that fituation, nor have projected his walls like thofe of an alms-houfe.

Abbeville is faid to contain 22,000 fouls; it is old, and difagreeably built; many of the houfes of wood, with a greater air of antiquity than I remember to have feen; their brethren in England have been long ago demolifhed. Viewed the manufacture of Van Robais, which was eftablifhed by Louis XIV. and of which Voltaire and others have fpoken fo much. I had many enquiries concerning wool and woollens to make here; and, in converfation with the manufacturers, found them great politicians, condenning with violence the new commercial treaty with England.- 30 miles.
The 2 iff. It is the fame flat and cupleafing country to Flixcourt.- 15 miles.
The 22d. Poverty and poor crops to Amiens; women are now ploughing with a pair of horfes to fow barley. The difference of the cuftoms of the two nations is in nothing more itriking than in the labours of the fex; in England, it is very little that they will do in the fields except to glean and to make hay; the firft is a party of pilfering, and the fecond of pleafure: in France, they plough and fill the dung cart. Lombardy poplars feem to have been introduced here about the fame time as in England.
Yicquigny has been the fcene of a remarkable tranfaction, that does great honour to the tolerating fpirit of the French nation. Moní. Colmar, a Jew, bought the feignory and eftate, including the vifcounty of Amiens, of the Duke of Chaulnes, by virtue of which he appoints the canons of the cathedral of Anviens. The bifhop refifted his nomination, and it was carried by appeal to the parliament of Paris, whole decree was in fivour of Monf. Colmar. 'The immediate feignory of Picquigny, but without its dependaucies, is refold to the Count d'Artois.

At Amiens, view the cathedral, faid to be built by the Englifh; it is very large, and beautifully light and decorated. They are fitting it up in black drapery, and a great canopy, with illuminations for the burial of the Prince de Tingry, colonel of the regiment of cavalry, whofe ftation is here. To view this was an object anong the people, and crouds were at each door. I was refufed entrance, but fome officers being ailmitted, gave orders that an Englifh gentleman without thould be let in, ard I was called bark from fome diftance and defired very politely to enter, as they did not know at firlt that I was an Englifhman. Thefe are but trifles, but they fhew liberality, and it is fiir to report them. If an Englifhman receives attention in lrance, becaufe le is an Engli/hman, what return ought to be made to a Frenchman in England, is lufficiently obvious. The chateau d'eau, or machine for fupplying Amiens with water, is worth viewing ; but plates only could give an idea of it. The town abounds with woollen manutactures. I converfed with feveral mafters, who united entirely with thole of Abbeville in condemning the treaty of commerce.- 15 miles.

The 23 d. To Bretuil the co:nntry is diverffied, woods every where in fight the whole journey.- 21 miles.

The 24th. A flat and uninterefting chalky country continues almof to Clermont; where it improves; is hilly and bas vood. The view of the town, as foon as the dale is feen, with the Duke of Fitzjames's plantations, is pretty.- 24 miles.

The 25 th. The environs of Clermont are picturefque. The hills about Liancourt : we pretty ; and fpread with a fort of cultivation I had never feen before, a mixture of vineyard (for here the vines firf appear), garden and corn. A pi ce of wheat ; a fcrap of lucerne; a patch of clover or vetches; a bit of vines; with cherry, and other fruittrees fcattered among all, and the whole cultivated with the fpade: it makes a pretty appearance, but muff form a poor fyltem of trifling.

CLantilly ! - magnificence is its reigning character ; it is never lof. There is not tafte or beauty enough to foften it into milder features: all but the chateau is great ; and there is fomething impofing in that ; except the gallery of the Great Conde's batthe, and the cabinet of natural hiftory which is rich in very fine fpecinens, molt advantageoully arranged, it contains nothing that demands particular notice; nor is there one room which in England would be called large. The table is truly great, and exceeds very much indeed any thing of the kind I had ever feen. it is five nun. dred and eighty feet long, and $f y$ broad, and is fometimes filled $w$ ith two hundred , and forty Englifh horfes. I had been fo accuftomed to the imitation in water, of the waving and irregular lines of nature, that I came to Chantilly prepofifidd againft the idea of a canal; but the view of one here is ftriking, and had the effect which magnificent fcens imprefs. It arifes from extent, and from the right lines of the water uniting wih the regularity of the otjects in view. It is Lard Kaimes, I think, who fays, that the part of the garden contiguous to the houfe fhould partake of the regularity of the building; with much magnificence about aplace, this is almot unavoidable. The ffict here, however, is leffened by the parterre before the caftle, in which the divifims and the diminutive jets-d'eau are not of a fize to correfpond with the magnificence of the canal. The menagerie is very pretty, and exibits a prodigious variety of domeflic poultry, from all parts of the world; one of the beft objects to which a menagerie can be applied; thefe, and the Corfican flag, had allmy attention. The hameau contains an imitation.of an Englifh gardeu; the tafte is but juft introduduced into France, fo that it will not ftand a critical examination. The moft Englifh idea I faw is the lawn in front of the flables; it is large, of a good verdure, and wel!
kept; proving clearly that they may have as fine lawns in the north of France as in England. The labyrinth is the only complete one I have feen, and I have no inclination to fee another: it is in gardening what a rebus is in poetry. In the Sylvae are many very fine and fcarce plants. I wifh thofe perfons who view Chantilly, and are fond of fine trees, would not forget to alk for the great beech; this is the fineft I ever faw; ftrait as an arrow, and, as I guefs, not lefs than eighty or ninety feet high; forty feet to the firf branch; and twelve feet diameter at five from the ground. It is in all refpects one of the fineft trees that can any where be met with. Two others are near it, but not equal to this fuperb one. The foreft around Chantilly, belonging to the Prince of Condé, is immenfe, fpreading far and wide; the Paris road crolies it for ten miles, which is its leaft extent. They fay the eapitainerie, or paramountthip, is above one hundred miles in circumference. That is to fay, all the inlabitants for that extent are peftered with game, without permiffion to deftroy it, in order to give one man diverfion. Ought not thefe capitaineries to be extirpated?

At Luzarch, I found that my :Mare, from illnefs, would travel no further; French ftables, which re covered dung-hills, and the careleffnets of gargons d'ecuries, an exccrable fet of vermin, had given her cold. I therefore left her to fend for from Paris, and went thither poft; by which experiment I found that pofting in France is much worfe, and even, upon the whole, dearer than in England. Being in a poft-chaife I travelled to Paris, as other travellers in poft-chaifes do, that is to fay, knowing little or nothing. The laft ten miles I was eagerly on the watch for that throng of earriages which near I.ondon impede the traveller. I watched in vain, for the road, quite to the gates, is, on comparifon, a parfect defert. So many great roads join here, that I fuppofe this muft be accidental. The entrance has nothing magnificent; ill bupilt and dirty. To get to the Rue de Varenne Fauxbourgh St. Germain, I had the whole city to crofs, and paffed it by narrow, ugly, and cronded ftrcets.

At the hotel de la Rochefoucauld I found the Duke of Liancourt and his fons, the Count de la Rochefoucall, and the Count Alexander, with my excellent friend Monfieur de Lazowki, all of whom I had the pleafure of knowing in Suffolk. They introduced nie to the Duchefs D'Eftiffac, mother of the Duke of Liancourt, and to the Duchefs of Liancourt. The agreeable reception and friendly attentions I met with from all this liberal fanily were well calculated to give me the moft favourable impreflion * * * * *. - 42 miles.

The 26th. So fhort a time had I paffed before in France, that the feene is totally new to me. Till we have been accuftomed to traveling, we have a propenfity to ftare at and admire every thing-and to be on fearch for noveity, even in circumftances in which it is ridiculous to look for it. I have been upon the full filly gape to find out things that I had not found before, as if a ftreet in Paris could be compofed of any thing but houfes, or houfes formed of any thing but brick or ftone - or that the people in them, not being Englifh, would be walking on their heads. I fhall thake off this folly as faft as I can, and bend my attention to mark the character and difpofition of the nation. Such views maturally lead us to catch the little circumftances which fometimes exprefs them; not an eafy talk but fubject to many errors.

1 have only one day to pafs at Paris, and that is taken up with buying neceffaries. At Calais my abundant care produced the inconvenience it was meant to avoid; I was afraid of lofing my trunk, by leavin: it at Deffein's for the diligence; fol fent it to M. Mouron's. - The confequence is, that it is not to be found at Paris, and its contents are to be bought again before I can leave this city on our journey to the Pyrenees. I believe it may be received as a maxim, that a traveller fhould always truft
his baggage to the common voitures of the cunnery, without ary extrandinary "reautions.

After a rapil excurfion, with my friend laznwih; to fee many thines, bur too hatily to form any corret idea, focut the evening of his brother's, where I hat the pleafure of meeting Monf. de Broufionet, ferert iry to the rayal fociety of agricultura, and Mionf. I efmaret, hoth of the academy of Ic nece. As Monticur Lazo cki is went inforand in the manafactures of branes, in the police of which he enjoys a polt of confideation, and as the other gentlemen have paid much att ation to agriculture, the converfation was in no flight degree inflructive, and I regretted that a very early departure from laris would not let me promife myfelf a further enjoyment fo congenial with my feetings, as the company of men, whofe convertation thewed a maried attention to objects of national importuce. On the breaking up of the party, went with Count Alexander de la Rochefoucauld poit to Verlailles, to be prefent at the fete of the day following (Whitfumday). Slept at the Duke de Liancourt's hotel.
The 27th. Breakfatted with him at his apartments in the palace, which are annexed to his office of grand mafter of the wardrobe, one of the principal in the court of France.-Here I found the duke furrounded by a circle of noblemen, among whom was the Duke de la Rochefoucauld, well known for his attention to nat wal miftory; [ was introduced to him, as be is going to Bugnere de Luchon in the Pyrences, where I am to have the honour of being in his party.

The ceremony of the day was, the king's invefting the Duke of Berri, fon of the Count D'Artois, with the cordon blut. 'The queen's band was in the chapel where the ceremony was performed, but the mufical eflect was thin and weak. During the fervice the king was feated between his two brothers, and feemed by his carriage and inattention to wifh himfelf a hunting. He would certainly have been as well employed as in hearng afterwards from his throne a feudal oath of chivalry, I fuppofe, or fome fuch nonfenfe, adminiftered to a boy of ten years ohd. Seeing fo much pompous folly I imagined it was the dauphin, and atked a lady of fallion near me; at which fhe laughed in my face, as if I had been guilty of the rolt egregious idiotifm: nothing could be done in a worfe manner; for the flifling o her expreflion only marked it the more. I applied to Mont. de la Rochefoucauld to learn what grofs abfurclity I had been guily of fo unwittingiy; when, forfooth, it was becaufe dauphin, as all the world knows in France, has the cordon blue put around him as foon as he is born. So umpardonable was it for a foreigner to be ignorant of fuch an important part of French hiftory, as that of giving a babe a blue flobbering bib inftead of a white one!

After this ceremony was finithed, the king and the knights walked in a fort of proceffion to a fim Ill aparment in which he dined, faluting the queen as they pafled.

There app"ared to be more eafe and familiarity than form in this part of the ceremony; her majefly, who, by the way, is the molt beautiful woman I faw to-day, received them with a variety of expreflion. On fome the finiled; to others fhe talked; a few feemed to have the honour of being more in her intimacy. Her return to fome was formal, and to otwers ditant. To the gallant Suffrein it was refpectful and benign. The cermony of the king's dining in pultic is more odd than fplendil. The queen fat by him with a cover before her, but ate nothing; convering with the duke of Orleans, and the Duke of liancourt, who ftood behind her chair. To me it would have been a moft uncomfortable meal, and were I a fovereign, I would fweep away three-fourths of thefe flupid forms; if kings do not dine like other people, they lofe much of the pleaffure of life; their ftation is very well calculated to deprive them of much, and they fubain to nonfenfical cuftoms, the fole tendency of which is to leffen
the remainder. The only comfortable or amufing dinner is a table of ten or twelve covers for the people whom they like; travellers tull us that this was the mode of the late King of Pruffia, who knew the value of life too well to facrifice it to empty forms on one haud, or to a monaltic reterve on the other.

The palace of Verfailles, one of the objects of which report had given me the greateft expectation, is not in the leaft ftriking: I view it without emotion : the impreflion it makes is nothing. What can compenlate the want of unity? From whatever point viewed, it appears an aflemblag? of buildings; a 'plendid quarter of a town, but not a fine edifice; an objection from which the garion front is not free, though by far the noft beantiful.--'The great gall ry is the fineft rom I have feen; the other apartments are nothing; but the pictures and thatuc are w II known to be a capital collection. The whole palace, except tib, chapel, feenis to be open to all the world; we pufhed through an amazing croud of all leats of people to lee the proceflion, many of thein not very well dreffed, whence it apyars, that no queftions are afked. But the oflicers at the door of the apartmont in winch the king dined, made a ditinction, and would not permit all to enter promifcu

Travellers fpak much, even ver late ones, of the remarkable intereft the French take in all that perfonally concerns in ir king, fhewing by the eagernefs of their attention not curiolity only, but love. Whare, how, and in whon thofe gentemca difcovered this I know not. - It is either mitrprefentation, or the people are changed in a few years more than is credible. Dine at Pavis, and in the evening th. Duchels of 1.iancourt, who feems to be one of the beft of women, carried me to the opera at St . Cloud, where alfo we viewed the palace which the queen is building; it is large, but there is wiuch in the front that does not plafe me.- 20 miles

The 28th. Finding wy mare futficiently recovered for a journey, a point of importance to a traveller fo weak in cavalry as mylelf, 1 Ict Paris, accompanying the Count de la Rochefoucauld and my friend Lazowiki, and commencing a journey that is to crofs the whole kingdom to the Pyrenees. The road to Orleats is one of the greateft that leads fron Paris; I expected, therefore, to have my former impreffion of the little traffic near that city removed; but on the contrary it was confirmed; it is a defert compared with thole around l.ondon. In ten miles we met not one fage or diligence; only two meflageries, and very few chaifes; not a tenth of what would have been met had we been leaving London at the lame hour. Knowing how great, rich, and important a city Paris is, this circuintance perplexes me much. Should it afterwards be confirmed, conclefions in abundance are to be drawn.

For a few miles, the ficene is cevery where featered with the fhafts of quarries, the fone drawn up by lanhorn wheels of a great diameter. The country diverfified; and its greateft $w_{i}$ int to pleafe the eye is a river; woods gencrally in view; the proportion of the I rench territory covered by this production for want of coals, mult be prodigious, for it has beel the lame all the way from Calais. At Aipajon, the Maréchal Duke de Mouchy has a fmall houle, which has nothing to recommend it.- 20 miles.

The 2gith. To Ellamps is partly through a llat country, the beginning of the famous Pays de Beauce. To Toury, flat and difagreeable, on!y two or three gentlemen's feats in fight.- 31 miles.

The 3oth. One univerlal llat, uninclofed, uninterefting, and even tedious, though fmall towns and villages are every where in fight ; the features that might compound a landfape are not br ught together. This Pays de Beauce contains by reputation, the crom of French huflandry; the foil excellent; but the manag. ient all fallow.

Pa's through part of the foreft of Orleans belongin' is the duke of that name; it is one of the largeft in France.

From the fteeple of the cathedral at Orleans, the profpect is very fine. The town large, and its fuburbs, of fingle fireets, extend near a league. The vaft range of country, that fpreads on every fin, is an unbomaded plain, through which the mag. nificent Loire bends his flately wiv, in fight for fourteen le:gues; the whole feattered with rich meadows, vineyards, gardens, and forells. The population muft be very great ; for, befide the city, which contains near forty thouland people, the number of funaller towns and villages flrewed thickly over the phain is fuch as to render the whole feene animated. The cathedral, from which we had this noble profpect, is a fine building, the choir raifed by Henry IV. The new church is a pleafing edifice; the bridge a noble Itructure of ftone, and the firt experiment of the flat arch made in France, where it is now fo tafhionable. It contains nine, and is four hundred and ten feet long, and forty-five wide. To hear fome Fnglifhmen talk, one would fuppofe there was not a fine bridge in all France ; not the firlt, nor the laft error I hope that travelling will remove. There are nany barges and boats at the quay, built upon the river in the Butubonnois, \&c. loaded with wood, brandy, wine, and other goods; on arriving at Nantes, the vefiels are broken up and fold with the cargo. Great numbers built with fpruce fir. A boat goes from hence to that city, when demanded by fix paffengers, each paying a louis-d'or : they lie on hore every night, and reach Nantes in four days and an half. The principal ftreet leading to the bridge is a fine one all buly and alive, for the trade is brikk here. Admire the fine acacias fcattered about the town. -20 miles.

The 3 ift. On leaving it, enter foon the miferable province of Sologne, which the French writers call the trifte Sologne. Through all this country they have had fevere fpring frolts, for the leaves of the walnuts are black and cut off. If fould not have expeited this unequivocal mark of a bad climate after paffing the Loire. To La Ferté Lowendahl, a dead flat of hungry fand gravel, with much heath. The poor people, who cultivate the foil here, are netayers, that is, men who hire the land without ability to flock it ; the proprietor is forced to provide cattle and feed, and he and his tenant divide the produce; a miferable fyltem, that perpetuates poverty and excludes inftruction. At la leeté is a handfome chateau of the Narquis de Coix, with feveral canals, and a great command of water. To Nonant-le-Fuzelier, a frange mixture of fand and water. Much inclofed, and the houfes and cottages of wood filled between the fluds with clay or bricks, and covered not with flate but tile, with fome barns boarded like thofe in Suffolk-rows of pollards in fome of the hedges; an excellent road of fand; the general features of a woodland country; all combined to give a ftrong refemblance to many parts of England; but the hufbandry is fo little like that of England, that the leaft attention to it deftroyed every notion of fumilarity. - 27 miles.

June 1. The fame wretehed country continues to La L.oge; the fields are feenes of pitiable management, as the houfes are of mifery. Yet all this country highly improveable, if they knew what to do with it : the property, perhaps, of fome of thefe glittering beings, who figured in the proceflion the other day at Verfailles. Heaven grant me patience while I tie a country thus neglected-and forgive me the oaths I fwear at the abfence and ignorance of the pofieffors.- Einter the generality of Bourges, and foon after a foreft of oak belonging to the Count d'Artois; the trees are dying at top, before they attain any fize. There the miferable Sologne ends; the firt view of Verlion and
its vicinity is fine. A noble vale fyreads at your feet, through which the 'ivec Cheere leads, feen in feveral places to the diftance of fome leagues; a bright furb burnifhed the water, like a ftring of lakes amidft the liade of a vaft woodland. See Bourges to the left. - 18 miles.

The 2d. Pals the rivers Checre and Lave; the bridges well built; the ftream fine, and with the wood, buildings, boats, and adjoining hills, form an aninated feene. Several new houfes, and buildings of good ftone in Verfon; the place appears thriving, and doubtlefs owes much to the navigation. We are now in Berri, a province governed by a provincial affembly, confequently the roads good, and made without corvées. Vatan is a little town that fubfifts chicflv by finning. We drank there excel1 nt Sancere wine, of a deep colour, rich ins. and good body, 208. the bottle; it in the country ten. An extenfive prof ane we arrived at Chateauroux where we viewed the manufactures. - 40 mil -
The $3^{\text {d. Within about three miles of Argencon come upon a fine fcene, beautiful, }}$ ci with bold features; a narrow vale bounded on every fide with hills, covered with ood, all of which are immediately under the eye, without a level acre, except the bottom of the vale, through which a river flows, by an old caftle picturefquely fituated to the right; and to the left, a tower rifing out of a wood.

At Argenton, walk up a rock that hangs almoft over the rown. It is a delicious fcene. $\Lambda$ natural ledge of perpendicular rock pufhes forward abruptly over the vale, which is half a mile broad, and two or three long: at one end clofed by hills, and at the other filled by the town with vineyards rifing above it; the furrounding feene that hems in the vale is high enough for relief; vineyards, rocks or hills covered with wood. The vale cut into inclofures of a lovely verdure, and a fine river winds through it, with an outline that leaves nothing to wifh. The vencrable fragments of a caftle's ruins, near the point of view, are well adapted to awaken reflections on the triumph of the arts of peace over the barbarous ravages of the feudal ages, when every clafs of fociety was involved in commotion, and the lower ranks were worfe flaves than at prefent.

The general face of the country, from Verfon to Argenton, is an uninterefting flat with many heaths of ling. No appearance of population, and even towns are thin. The huibandry poor and miferable. By the circumftances to which I could give attention 1 conceive them to be honeft and induftrious; they feem clean; are civil, and have good countenances. They appear to me as if they would improve their country, if they formed the part of a fyftem, the principles of which tended to national profperity,- 18 miles.

The 4th. Pafs an inclofed country, which would have a better appearance if the oaks had not loft their foliage by infects, whofe webs hang over the buds. They are but now coming into leaf again. Crofs a flream which feparates Berri from La Marche; chefnuts appear at the fame time; they are fpread over all the fields, and yield the food of the poor. A variety of hill and dale, with fine woods, but little figns of population. Lizards for the firft time allo. There feems a connection relative to climate between the chefnuts and thefe harmlefs animals. They are very numerous, and fome of them near a foot long. Sleep at La Ville au Brun.- 24 miles.

The 5th. The country improves in beauty greatly; pafs a vale, where a cauleway ftops the water of a fmall rivulet and fwells it into a lake, that forms one feature of a delicious fcene. The indented outlines and the fwells margined with wood are beautiful; the hills on every fide in unifon; one now covered with ling the prophetic eye of tafte

## IMAGE EVALUATION TEST TARGET (MT-3)

Photographic Sciences
may imagine lawn. Nothing is wanted to render the fcene a garden, but to clear away rabbilh.

The general face of the country, for 16 miles, by far the moft beautiful I have feen in France ; it is thickly inclofed, and full of wood; the umbrageous foliage of the chefnuts gives the fane beautiful verdure to the hills, as watered meadows (feen for the firft time to day) to the vales. Diftant mountainous ridges form the back ground, and make the whole interelting. The declivity of country, as we go down to Baffies, offers a beautiful view; and the approach to the town prefents a landfcape fancifully grouped of rock, and wood, and water. To Limoge, país another artificial lake between cultivated ills; beyond are wilder heights, but mixed with pleafant vales; ftill another lake more beautiful than the former, with a fine accompaninjent of wood; acrofs a mountain of chefnut copfe, which commands a fcene of a character different from any I have viewed either in France or England, a great range of hill and dale all covered with foreft, and bounded by diftant mountains. Not a veftige of any human refidence; no village; no houfe or hut, no finoke to raife the idea of a peopled country; an American fcene; wild enough for the tomohawk of the favage. S:op at an execrable auberge, called Maifon Rouge, where we intended to fleep; but, on examination, found every appearance fo forbidding, and fo beggarly an account of a larder, that we paffed on to Limoge. The roads through all this country are truly noble, far beyond any thing I have feen in France or elfewhere.-44 miles.

The 6th. View Limoge, and examine its manufactures. It was certainly a Roman ftation, and fome traces of its antiquity are ftill remaining. It is ill built, with narrow and crooked freets, the houfes high and difagreeable. They are raifed of granite, or wood with lath and plaifter, which faves lime, an expenfive article here, being brought from a diftance of twelve leagues; the roofs are of pantiles, with projecting eaves, and almoft flat ; a fure proof we have quitted the region of heavy fnows. "ithe beft of their public works is a noble fountain, the water conducted three quarters of a league by an arched aqueduct, brought under the bed of a rock 60 feet deep to the higheft fpot in the town, where it falls into a bafon fifteen feet diameter, cut out of one piece of granite; thence the water is let into refervoirs, clofed by fluices, which are opened for watering the freets, or in cafe of fires.

The cathedral is ancient, and the roof of ftone; there are fome arabefque ornaments cut in flone, as light, airy, and elegant as any modern houfe can boaft, whofe decorations are in the fame tafte.

The prefent bifhop has erected a large and handfome palace, and his garden is the fineft object to be feen at Limoge, for it commands a landfcape hardly to be equalled for beauty: it would be idle to give any other defcription than juft enough to induce travellers to view it. A river winds through a vale, furrounded by hills that prefent the gayeft and moft animated affemblage of villas, farms, vines, hanging meadows, and chefnuts blended fo fortunately as to compole a fcene truly funiling. This bifhop is a friend of the Count de la Rochefoucauld's family; he invited us to dine, and gave us a very handfome entertainment. Lord Macartney, when a prifoner in France, after the Grenades were taken, fpent fome time with him; there was an inftance of French politenefs thewn to his lordfhip, that marks the urbanity of this peoplc. The order came from court to fing Te Deum on the very day that Lord Macartney was to arrive. Conceiving that the public demontrations of joy for a victory that brought his noble gueft a prifoner, might be perfonally unpleafant to him, the bifhop propofed to the intendant to potpone the ceremony for a few days, in order that he might not meet it fo abruptly;
this was inftantly acceded to, and conducted in fuch a manner afterwards as to mark as much attention to Lord Macartney's feelings as to their own. The bifhop told me, that Lord Macartney fpoke French better than he could have conceived poffible for a forcigner, had he not heard him; better than many well educated Frenchmen.
The poft of intendant here was rendered celebrated by being filled by that friend of mankint, Turgot, whofe well earned reputation in this province placed him at the head of the French finances, as may be very agreeably learned, in that production of equal truth and elegance, his life by the Marquis of Condorcet. The character which Turgot left here is confiderable. The noble roads we have paffed, fo much exceeding any other I have feen in France, were amongth his good works; an epithet due to them becaufe not made by corvées. There is here a fociety of agriculture, which owes its origin to the fame diftinguifhed patriot: but in that moft unlucky path of French exertion he was able to do nothing: evils too radically fixed were in the way of the attempt. This fociety does like other focieties,-they meet, converfe, offer premiums, and publifh nonfenfe. This is not of much confequence, for the people, inftead of reading their memoirs, are not able to read at all. They can however fee; and if a farm was eftablifhed in that good cultivation which they ought to copy, fomething would be prefented from which they might learn. I afked particularly if the members of this fociety had land in their own hands, from which it might be judged if they knew any thing of the matter themfelves: I was affured that they had; but the converfation prefently explained it : they had metayers around their country feats, and this was confidered as farming their own lands, fo that they affume fomething of a merit from the identical circumftance, which is the curfe and ruin of the whole country. In the agricultural converfations we had on the journey from Orleans, I have not found one perfon who feemed fenfible of the mifchief of this fytem.

The 7 th. No chefnuts for a league before we reach Biere Buffiere, they fay becaufe the bafis of the country is a hard granite; and they affert alfo at Limoge, that in this granite there grow neither vines, wheat, nor chefnuts, but that on the fofter granites thefe plants thrive well: it is true, that chefnuts and this granite appeared together when we entered Limofin. The road has been incomparably fine, and much more like the well kept alleys of a garden than a common high. way. See for the firft time old towers, that appear numerous in this country.-3 miles.

The 8th. Pafs an extraordinary fpectacle for Englifh eyes, of many houles too good to be called cottages, without any glafs windows. Some miles to the right is Pompadour, where the king has a ftud; there are all kinds of horfes, but chiefly Arabian, Turkif, and Englifh. Three years ago four Arabians were imported, which had been procured at the expence of 72,000 livres ( 31491 .) the price cif cevering a mare is only three livres to the groom; the owners are permitted to fell their colts as they pleafe, but if thefe come up to the ftandard height, the king's officers have the preference, provided they give the price offered by others. Thefe horfes are not faddled till fix years old. They pafture all day, but at night are confined on account of wolves, which are fo compmon as to be a great plague to the people. A horfe of fix years old, a little more than four feet fix inches high, is fold for 701. ; and 151 . has been offered for a colt of one year old. Pafs Uzarch ; dine at Douzenac; between which place and Brive meet the firlt maize, or Indian corn.

The beauty of the country, through the thirty-four miles from St. George to Brive, is fo various, and in every refpect fo ftriking and interefting, that I hall attempt no particular defcription, but obferve in general, that I am much in doubt, whether there be any thing comparable to it either in England or Ireland. It is not that a fine view breaks
now and then upon the eye to compenfate the traveller for the dullnefs of a much longer diftrict; but a quick fucceffion of landfcapes, many of which would be rendered famous in England, by the refort of travellers to view them. The country is all hill or valley; the hills are very high, and would be called with us mountains, if watte and covered with heath; but being cultivated to the very tops, their magnitude is leffened to the eye. Their forms are various : they fwell in beautiful femi-globes: they project in abrupt naffes, which inclofe deep glens: they expand into amphitheatres of cultivation that rife in gradation to the eyc $:$ in fome places tofed into a thoufand inequalities of furface; in others the eye repoles on fcenes of the fofteft verdure. Add to this the rich robe, with which nature's bounteous hand has dreffed the flopes, with hanging woods of chefnut. And whether the vales open their verdant bofoms, and admit the fun to illuminate the rivers in their comparative repofe; or whether they be clofed in deep glens, that afford a paffage with difficulty to the water rolling over their rocky beds, and dazzling the eye with the luftre of cafcades; in every cafe the features are interefting and characteriftic of the fcenery. Some views of fingular beauty rivetted us to the fpots; that of the town of Uzarch, covering a conical hill, rifing in the hollow of an amphitheatre of wood, and furrounded at its feet by a noble river, is unique. Derry in Ireland has fomething of its form, but wants fome of its richeft features. 'The water-fcenes from the town itfelf, and immediately after paffing it, are delicious. The immenfe view from the defcent to Douzenach is equally magnificent. To all this is added the fineft road in the world, every where formed in the perfect manner, and kept in the higheft prefervation, like the well ordered alley of a garden, without duft, fand, fones, or inequality, firm and level, of pounded granite, and traced with fuch a perpetual command of profpect, that had the engineer no other object in view, he could not have executed it with a more finifhed tafte.

The view of Brive, from the hill, is fo fine, that it gives the expectation of a beautiful little town, and the gaiety of the environs encourages the idea; but, on entering, fuch a contraft is found as difgufts completely. Clofe, ill built, crooked, dirty, ftinking freets, exclude the fun, and almoft the air, from every habitation, except a few to. lerable ones on the promenade.- 34 miles.

The gth. Enter a differen: country, with the new province of Quercy, which is a part of Guienne; not near fo beautiful as limofin, but, to make anends, it is far better cultivated. Thanks to maize, which does wonders! Pafs Noailles, on the ft of a high hill, the chateau of the Marhal Duke of that name. Enter a calcareo untry, and dofe chefnuts at the fane time.

In going down to Souillac, there is a profpect that muft univerfally pleafe: it is a bird's-eye view of a delicious little valley, funk deep amongft fome very bold hills that inclofe it ; a margin of wild mountain contrafts the extreme beauty of the level furface below, a feene of cultivation feattered with fine walnut trees; nothing can apparently exceed the exuberant fertility of this fpot.

Souillac is a little town in a thriving flate, having fome rich merchants. They receive ftaves from the mountains of Auvergne by their river Dordonne, which is navigable eight months in the year ; thefe they export to Bourdeaux and Libourn; alfo wine, corn, and cattle, and import falt in great quantities. It is not in the power of an Englifh imagination to figure the animals that waited upon us here, at the Chapeau Rouge. Some things that called themelelves by the courtely of Souillac women, but in reality walking dunghills.-But a neatly dreffed clean waiting girl at an inn will be looked for in vain in lirance. -34 miles.

The 10 th. Crofs the Dordonne by a ferry; the boat well contrived for driving in at one end and out at the other, without the abominable operation, common in ling-
land, of beating horfes till they leap into them; the price is as great a contraft as the excellence; we paid for an Englifh whifky, a French cabriolet, one faddle-horfe, and fix peifons, no more than 50s. (25. Id.) I have paid half-a-crown a wheel in England for execrable ferries, paffed over at the hazard of the horfe's limbs.- This river runs in a very deep valley between two ridges of high hills: extenfive views, all fcattered with villages and fingle houfes; an appearance of great popuiation. Chefnuts on a calcareous foil, contrary to the Limofin maxim.

Pafs Peyrac, and meet many beggars, which we had not done before. All the country girls and women are without hooes or fockings; and the ploughmen at their work have neither fabots nor feet to their ftockings. This is a poverty that frikes at the root of national profperity; a large confumption among the poor being of more confequence than among the rich : the wealth of a nation lies in its circulation and confumption; and the cafe of poor people abftaining from the ufe of manufactures of leather and wool ought to be confidered as an evil of the firft magnitude. It reminded me of the mifery of Ireland. Pafs Pont-de-Rodez, and come to high land, whence an inmenfe and fingular profpect of ridges, hills, vales, and gentle flopes, rifing one … 1:. ${ }^{i}$ nother in every direction, with few maffes of wood, but many fcattered trees. At leait forty miles are tolerably diftinct to the eye, and without a level acre; the fun on the point of fetting, illuminated part of it, and difplayed a valt number of villages and fcattered farms. The mountains of Auvergne, at the ditance of a hundred miles, added to the view. Pafs by feveral cottages, exceedingly well built, of fone and flate, or tiles, yet without any glafs to the windows; can a country be like to thrive where the great object is to fpare manufactures? Women picking weeds into their aprons for their cows, another fign of poverty I obferved, during the whole way from Calais. - 30 miles.

The 11 th. See for the firf time the Pyrenees, at the diftance of one hundred and fifty miles.-To me, who had never feen an object farther than fixty or feventy, I mean the Wicklow mountains, as I was going out of Holyhead, this was interelting. Wherever the eye wandered in fearch of new objects it was fure to reft there. Their magnitude, their fnowy height, the line of feparation between two great kingdoms, and the end of our travels altogether accounts for this effect. Towards Cabors the country changes, and has fomething of a favage afpect; yet houfes are feen every where, and one-third of it under vines.

That town is bad; the ftreets neither wide nor ftrait, but the new road is an im. provement. The chief object of its trade and refource are vines and brandies. The true Vin de Cahors, which has a great reputation, is the proluce of a rande of vineyards, very rocky, on a ridge of hills full to the louth, and is called Vin de Grave, becaufe growing on a gravelly foil. In plentiful years, the price of good wine here does not exceed that of the cafk; laft year it was foid at 10 s .6 d . a barique, or 8 d . a dozen. We drank it at the Trois Rois from three to ten years old, the latter at 305 . (1s. 3d.) the bottle; both excellent, full bodied, great fpirit, without being fiery, and to my palate much better than our ports. I liked it fo well, that I eftablifhed a correfpondence with Monl. Andonry, the inn-keeper *. The heat of this country is equal to the production of ftrong wine. This was the moft burning day we had experienced.

On leaving Cahors, the mountain of rock rifes fo immediately, that it feems as if it would tumble into the town. The leaves of walnuts are now black with frofts that

[^2]happened within a fortnight. On enquiry, I found they are fubject to thefe frofts all through the fipring months; and though rye is fometimes killed by them, the mildew in wheat is hardly known;-a fact fufficiently deftructive of the theory of frofts being the caufe of that diftemper. It is very rare that any fnow falls here. Sleep at Ventillac. - 22 miles.

The $12 t h$. The flape and colour of the peafines' houfes here add a beauty to tha country; they are fquare, white, and with rather flat roofs, but few windows. The peafants are for the moft part land-proprietors. Immenfe view of the Pyrenees before us, of an cxtent and height truly fublime: near Perges, a rich vale, that feems to reach uninterruptedly to thofe mountains, is a glorious feencry: one vaft theet of cultivation; every where chequered with thofe well built white houfes; -the eye lofing itfelf in the vapour; which ends only with that fupendous ridge, whofe fnow-capped heads are broken into the boldeft outline. The road to Cauflade leads through a very fine avenue of fix rows of trees, two of them mulberries, which are the firft we have feen. Thus we have travelled almoft to the Pyrenees before we met with an article of culture which fome want to introduce into England. The vale here is all on a dead level; the road finely made, and mended with gravel. Montauban is old, wuniouill built. There are many good houfes, without forming handfome freets. It is faid to be very populous, and the eye confirins the intelligence. The cathedral is modern, and pretty well built, but too heavy. The public college, the feminary, the bifhop's palace, and the houfe of the firft prefident of the court of aids are good buildings ; the laft large, with a mof thewy entrance. The promenade is finely fituated; built on the higheft part of the rampart, and commanding that noble vale, or rather plain, one of the richeft in Europe, which extends on one fide to the fea, and in the front to the Pyrences; whofe towering maffes, heaped one upon another, in a ftupendous manner, and covered with fnow, offer a variety of lights and fhades from indented forms, and the immenfity of their projections. This profpect, which contains a femicircle of an hundred miles diameter, has an oceanic vaftnefs, in which the eye lofes itfelf; an almoft boundlefs fcene of cultivation; an animated, but confufed mafs of infinitely varied parts-melting gradually into the diftant oblcure, from which emerges the amazing frame of the Pyrenees, rearing their filvered heads far above the clouds. At Muntauban, I met Captain Plampin, of the royal navy; he was with Major Crew, who has a houfe and family here, to which he politely carried us; it is fiveetly fituated on the firts of the town, commanding a fine view; they were fo obliging as to refolve my enquiries upon fome points, of which a refidence made them complete judges. Living is reckoned cheap here; a family was named to us, whofe income was fuppofed to be about fifteen huadred louis a-year, and who lived as handfomely as in England on 5000 . The comparative dearnels and cheapnefs of different countries is a fubject of confiderable importance, but difficult to analize. As I conceive the Englifh to have made far greater advances in the ufeful arts, and in manufactures, than the French have done, England ought to be the cheaper country. What we meet with in France, is a cheap mode of living, which is quite another confidera-tion.- 30 miles.

The 13 th. Pafs Grifolles, where are well built cottages without glafs, and fome with no other light than the door. Dine at Pompinion, at the Grand Soleil, an uncommonly good inn, where Captain Illampin, who accompanied us thus far, took his leave. Here we had a violent form of thunder and lightning, with rain much he:vier I thought than I had known in England; but, when we fet out for Tolouze, I was immediately convinced that fuch a violent flower had never fallen in that king-
don ; for the deftruction it had poured on the noble fcene of cultivation, which but a moment before was fmiling with exurberance, was terrible to behold. All now one fcene of diftrefs: the fineft crops of wheat beaten fo flat to the ground, that I queftion whether they can ever rife again; other fields fo inundated, that we were actually in doubt whelher we were looking on what was lately land, or always water. The ditches had been filled rapidly with mud, had overllowed the road, and fwept dirt and gravel over the crops.

Crofs one of the fineft plains of wheat that is any where to be feen ; the ftorm, therefore, was fortunately partial. Pafs St. Jorry; a noble road, but not better than in Limofin. It is a defert to the very gates of Tolouze; meet not more perfons than if it were a hundred miles from any town.-_ 31 miles.

The 14th. View the city, which is very ancient and very large, but not peopled in proportion to its fize: the buildings are a mixture of brick and wood, and have confequently a melancholy appearance. This place has always prided itfelf on its tafte for literature and the fine arts. It has had a univerfity fince 1215: and it pretends that its famous academy of Jeus Floraux is as old as 1323. It has alfo a royal acadeny of fciences, another of painting, fculpture, and architecture. The church of the Cordelliers has vaults, into which we defcended, that have the property of ipreferving dead bodies from corruption; we faw many that they affert to be five hundred years old. If I had a vault well lighted, that would preferve the countenance and phyfiognomy as well as the fefh and bones, I hould like to have it peopled with all my anceftors; and this defire would, I fuppofe be proportioned to their merit and celebrity; but to one like this, that preferves cadaverous deformity, and gives perpetuity to death, the voracity of a common grave is preferable. But 'Toulouze is not without objects more interefting than academies; thefe are the new' quay, the corn mills, and the canal de Brien. The quay is of a great length, and in all refpects a noble work: the houfes intended to be built will be regular like thofe already erected, in a ftile aukward and inelegant. The canal de Brien, fo called from the archbihop of Toulouze, afterwards prime minifter and cardinal, was planned and executed in order to join the Garonne here with the canal of Languedoc, which is united at two miles from the town with the fame river. The neceffity of fuch a junction arifes from the navigation of the river in the town being abfolutely impeded by the wear which is made acrols it in favour of the corn mills. It paffes arched under the quay to the river, and one fluice levels the water with that of the Languedoc canal. It is broad enough for feveral barges to pafs abreaft. Thefe undertakings have been well planned, and their execution is truly magnificent: there is however more magnificence than trade; for while the Languedoc canal is alive with commerce, that of Brien is a defert.

Among other things we viewed at Toulouze, was the houfe of Monf. du Barrè, brother of the hufband of the celebrated countefs. By fome tranfactions, favourable to anecdote, which enabled him to draw her from obfcurity, and afterwards to marry her to his brother, he contrived to make a pretty confiderable fortune. On the firft floor is one principal and complete apartment, containing feven or eight rooms, fitted up and furnifhed with fuch profufion of expence, that if a fond lover, at the head of a kingdom's finances, were decorating for his miftrefs, he could hardly give in large any thing that is not here to be feen on a moderate fcale. To thofe who are rond of gilding here is enough to fatiate; fo much that to an Englifh eye it has too gaudy an appearance. But the glaffes are large and numerous. The drawing-room very elegant (gilding always excepted).-Here I remarked a contrivance which has a pleafing effect ; that of a looking.glatis before the chimnies, inftead of thofe various fereens
ufod in England: it flides backwards and forwards in the middle of the room. There is a portrait of Madane du Barre, which is faid to be very like; if it really is, one would pardon a king fome follies committed at the fhrine of to much beauty. - As to the garden, it is beneath all contempt, except as an objett to make a man ftare at the efiorts to which folly can arrive: in the fpace of an acre, there are hills of genuine earth, mountains of pafte-board, rocks of canvafs : abbies, cows, heep, and Thepherdeffes in lead; monkeys and peafants, afles and altars, in fone. Fine ladies and blackfmiths, parrots and lovers in wood. Windmills and cottages, flops and villages, nothing excluded except nature.

The 15 th. Meet Highlanders, who put me in mind of thofe of Scotland; faw them firft at Montauban; they have round flat caps, and loofe breeches: "pipers, blue bonnets, and oat-meal, are found," fays Sir James Stuart, "in Catalonia, Auvergne, and Swabia, as well as in Lochabar." Many of the women here are without fockings. Meet thenl coming from the market, with their fhocs in their balkets. The Pyrenees, at fixty miles diftance, appear now fo diftinct, that one would guefs it not more than fifteen; the lights and fhades of the fnow are feen clearly.-30 miles.

The 16 th. A ridge of hills on the other fide of the Garonne, which began at Tculouze, became more and more regular yefterday; and is undoubtedly the moft diftant ramification of the Pyrenees, reaching into this valt vale quite to Toulouze, but no farther. Approach the mountains; the lower ones are all cultivated, but the higher feem covered with wood: the road now is bad all the way. Meet many waggons, each loaded with two calks of wine, quite backward in the carriage, and as the hind wheels are much higher than the fore ones, it fhews that thefe mountaineers have more fenfe than John Bull. The wheels of thefe waggons are all Mod with wood inftead of iron. Here, for the firt time, fee rows of maples, with vines, trained in feftoons, from tree to tree ; they are conducted by a rope of bramble, vine cutting, or willow. They give many grapes, but bad wine. Pafs St. Martino, and then a large village of well built houfes, without a fingle glafs window.- 30 miles.

The 17 th. St. Gaudens is an improving town, with many new houfes, fomething more than comfortable. An uncommon view of St. Betrand; you break at once upon a vale funk deep enough beneath the point of view to command every hedge and tree, with that town cluftered round its large cathedral, on a rifing ground; if it had been built purpofely to add a feature to a fingular profpect, it could not have been better placed. The mountains rife proudly around, and give their rough frame to this exquifite little picture.

Crofs the Garonne, by a new bridge of one fine arch, built of hard blue lime.ftone. Medlars, plumbs, cherries, maples in every hedge, with vines trained.-Stop at Laureffe; after which the mountains almoft clofe, and leave only a narrow vale, the Garonne and the road occupying fome portion of it. Immenfe quantities of poultry in all this country; moit of it the people falt and keep in greafe. We tafted a foup made of the leg of a goofe thus kept, and it was not nearly fo bad as I expected.

Every crop here is backward, and betrays a want of fun ; no wonder, for we have been long travelling on the banks of a rapid river, and mult now be very high, though ftill apparently in vales. The mountains, in paffing on, grow more interefting. Their beauty, to northern eyes, is very fingular ; the black and dreary profpects which our mountains offer are known to every one ; but here the climate cloaths them with verdure, and the ligheft fummits in fight are covered with wood; there is fnow on fill higher ridges.

There is, one -As to re at the genuine nd thepdies and villages, nd ; faw : pipers, ia, Auwithout ets. The guefs it - 30 began at he moft oulouze, but the ny wagid as the ers have wood inrained in cutting, then 2
mething at once dge and if it had ve been frame to
e.ftone.

Stop at ale, the poultry 1 a foup we have though Their ich our ith ver. on ftill

Quit the Garonne fome leagucs before Sirpe, where the river Nefte falls into it. The road to Bagnere is along this river, in a very narrow valley, at one end of which is buile the town of Luchon, the tormination of our journey; which to me has been one of the moft argeeable I ever undertook; the good humour and grood fenfe of my companions are well calculated lor travelling; one renders a journey pleafing, and the other infructive.-Having now croffed the kingdom, and been in many French inns, Ifhall ingeneral oblerv, that they are on an average better in two reipects, and worfe in all the reft, than thofe in lingland. We have lived better in point of eating and drinking beyondoa queflion, than we flould have done in going from London to the Highlands of Scotland, at double the expence. lut if in England the beft of every thing is ordered, without any attention to the e:pence, we fhould for double the moncy have lived better than we have done in France; the common cookery of the Frencla gives great advantage. It is true, they roalt every thing to a chip, if they are not cautioned; but they give fuch a number and varicty of difles, that if you do not like fome, there are others to pleafe your palate. The defert at a French inn has no rival at an Englifh one; nor are the liquors to be defpifed.-We fometimes have met with bad wine, lut upon the whole, far better than fuch port as Englifh inns give. Beds are better in France; in England they are good only at good inns; and we have none of that torment, which is fo perplexing in England, to have the fheets aired; for we never trouble our heads about them, doubtlefs on account of the climate. After thefe twopoints, all is a blank. You have no parlour to cat in; only a room with two, three, or four beds. Apartments badly fitted up; the walls white-wafhed, or paper of different forts in the fame room; or tapeftry fo oid as to be a fit nidus for moths and fpiders; and the furniture fuch, that an Englifh jun-keeper would light his fire with it. For a table, you have cvery where a board laid on crofs bars, which are fo conveniently contrived, as to leave room for your legs only at the end.-Oak chairs with rufh bottoms, and the back univerfally a direct perpendicular, that defies all idea of reft after fatiguc. Doors give mufic as well as entrance ; the wind whiftles through their chinks; and hinges grate difcord. Windows admit rain as well as light; when fhut they are not eafy to open; and when open not eafy to fhut. Mops, brooms, and fcrubbingbrufhes are not in the catalogue of the neceffaries of a French inn. Bells there are foone; the fille muit always be bawled for; and when fhe appears is ncither neat, well dreffed, nor handfome. The kitchen is black with fmoke; the mafter commonly the cook, and the lefs you fee of the cooking, the more likely you are to have a fomach to your dinner; but this is not peculiar to France. Copper utenfils always rreat plenty, but not always well tinned. The miftrefs rarely claffes civility or attentio to her zuefts among the requifites of her trade.- 30 miles.

The 28th. Having been now ten days fixed in our lodgings, which the Count de la Rochefoucauld's friends had provided for us, it is time to minute a few particulars of our life here. Monficur Lazowfin and myfelf have two good rooms on a ground floor, with beds in them, and a fervant's room, for four livres ( 3 s . 6d.) a-day. We are fo unaccufomed in England to live in our bed-chambers, that it is at firlt awkward in France to find that people live no where elfe. At all the inns I have been in, it has been always in bed-rooms; and here I find, that cyery body, let his rank be what it may, lives in his bed-chamber. This is novel; our linglifl cuftom is far more convenient, as well as more pleafing. But this habit I clafs with the aconomy of the French. The day afier we came, I was introduced to the la Rochefoucauld party, with whom we have lived; it confifts of the Duke and Duchefs de la Rochefoucauld, daughter of the Duke de Chabot; her brother, the Prince de Laon and his Princefs, vol. sv.
the daughter of the Duke de Montmorenci ; the Count de Chabot, another brother of the Duchefs de la Rochefoucauld; the Marquis d'Aubourval, who with my two fellowtravellers and myfelf, make a party of tune at dimner and fupper. A traiteur ferves our table at four livers a head for the two neals, two courfes and a good defert for dinner; for fupper one courfe and a defert; the,whole very well ferved, with every thing good in feafon; the wine feparate, at fix fous ! 3d.) a bottle. With difficulty the Counts groom found a ftable. Hay is little fhort of 5 l. Englifh per ton; oats nuch the fame price as in England, but not fo good; Atraw dear, and fo fearee, that very often there is no litter at all.

The States of Languedoc are building a large and handfome bathing-loufe, to contain various feparate cells, with baths, and a large common room, with two arcades to walk in, free from fun and rain. The prefent baths are horrible holes, the patients lie up to their chins in hot fulphureous water, which, with the bealtly dens they are placed in, one would think fufficient to caufe as many diftempers as they cure. They are reforted to for cutancous cruptions. The life led here has very little varicty. Thofe who bathe, or drink the waters, do it at half after five or fix in the morning; but my friend and myfelf are early in the mountains, which are here ftupendous; we wander among them to admire the wild and beautiful fcenes which are to be met with in almoft every dircetion. The whole region of the Pyrenees is of a nature and afpect fo totally different from every thing that I had been accuftomed to, that thefe excurfions were productive of much amufement. Cultivation is here carricd to a confiderable perfection in feveral articles, efpecially in the irrigation of meadows: we feek out the moft intelligent peafants, and have many and long converfations with thofe who underfand French, which however is not the cafe with all, for the language of the country is a mixture of Catalan, Provençal, and French.- This, with examining the minerals (an article for which the Duke de la Rocheloucauld likes to accompany us, as he poffeffes a confiderable knowledge in that branch of natural hiftory!, and with noting the plants with which we are acquainted, !erves well to keep our time employed fufficiently to our tafte. The ramble of the morning finifhed, we return in time to drefs for dinner, at half after tweive or one; then adjourn to the drawing-room of Madame de la Rochefoucauld, or the Countefs of Grandval alternately, the only ladies who haveapartments large enough to contain: the whole company. None are excluded; as the firf thing done by every perfon who arrives, is to pay a morning vifit to each party already in the place; the vifit is returned, and then every body is of courfe acquainted at thefe affenblies, which laft till the cvening is cool enough for walking. There is nothing in them but cards, trick-track, chefs, and fometimes mufic; but the great feature is cards: I need not add, that I abfented myfelf often from thefe parties, which are ceer mortally infipid to me in England, and not lefs fo in France. In the evening, the company fplits into diffcrent partics, for their promenade, which lafts till half an hour after eight; fupper is ferved at nine; there is after it, an hour's converfation in the chamber of one of our ladies; a:d this is the beft part of the day,-for the chat is free, lively, and unaffected; and uninterrupt d, unlefs on a polt-day, when the Duke has fuch packets of papers and pamphets, tuat they make us all politicians. All the world are in bed by eleven.

In this arrangement of the day, no circumftance is fo objectionable as that of dining at noo:, the confequence of eating no breakfalt; for as the ceremony of drefling is kept up, you mult be at home from any morning's excurfion by twelve o'clock. This fingle circumftance, if adhered to, would be fufficient to deftroy any purfuits, except the moft frivolous. Dividing the day exactly in Lalves, deftroys it for any expedition, enquiry,
enquiry, or bufinefs that demands feven or eight hours attention, minterrupted by any calls to the table or the toilette; calls which, after fatigne or exertion, are obeyed with refrefhment and with pleafure. We drefs for dinner in England with propriety, as the relt of the day is delicated to eafe, to converfe, and relasation; but by doing it at noon, too much time is loft. What is a man good for atter lis filk breeches and ttockings are on, his hat under his arm, and his heal bien poutre? - Can he botanize in a vatered meadow? - Can he clanber the recks to mineralize? - Can he farm with the peafant and the ploughman?-Hc is in order for the converfation of the ladies, which to be fure is in every country, but particularly in France, where the women are highly cultivated, an excellent employment; but it is an employment that never re'ifhes better than after a day fent in active toll or mimated purfuit; in fomething that has entarged the fipere of our conceptions, or added to the Itores of our knowledge. -I an iaduced to make this obfervation, becaufe the noon dinners are cufomary all over France, e:cept whith perfons of confiderable fafhion at Paris. They camot be treated with too much ridicule or feverity, for they are abfolutely hoftile to every view of ficience, to every fipited exertion, and to every uleful purfuit in life.

Living in this way, however, with feveral perfons of the firft fafthion in the kingdom, is an object to a foreigner folicitous to remark the manners and character of the nation. I have every reafon to be pleafel with the experiment, as it affords me a conltant opportunity to enjoy the advantages of an unaffeeted and polifhed fociety, in which an invariable fweetnefs of difpofition, mildnels of character, and what in Englifh we emphatically call good temper, eminently prevail:-feeming to arife-_at leaft I conjecture it, from a thoufand little nanelefs and peculiar circumftances-not refulting entirely from the perfonal characher of the individuals, but apparently holding of the national one.- Befides the perfons I have named, there are among others at our affemblies, the Marquis and Marchionefs de Hautfort; the Duke and Duchefs de Ville (this Duchefs is among the good order of beings); the Chevalier de Peyrac; Monfieur l'Abbé Baftard; Baron de Serres; Vifcountels Duhamel ; the Bifhops of Croire and Montauban; Monficur de la Marche; the Baron de Montagu, a chefs player; the Chevalier de Cheyron ; and Monficur de Bellecomb, who commanded in Pondicherry, and was taken by the Englifh. There are allo about half a dozen young officers, and threc or four abbées.

If I may hezard a remark on the converfation of French affemblies, from what I have known here, I hoould praife them for equanimity, but condemn them for infipidity. All vigour of thought feems fo excluded from expreflion, that characters of ability and of inanity meet nearly on a par: tame and elegant, uninterefing and polite, the mingled mais of communicated ideas has powers neither to offend nor inftruct; where there is much polifh of character, there is little argument; and if you neither argue nor difcufs, what is converfation? - Good temper, and labitual eafe, are the firft ingredients in private fociety; but wit, knowledge, or orignality, muit break their even furface into fome inequality of feeling, or converfation is like a journey on an endlefs flat.

Of the rural beauties we have to contemplate, the valley of Larbouffe, in a nook of which the town of Luchon is fituated, is the principal, with its furrounding accompaniment of mountain. The range that bounds it to the north is bare of wood, but covered with cultivation; and a large village, about three parts of its height, is perched on a fleep, that almolt makes the unaccultoned eye tremble with apprehenfion, that the village, church, and poople will come tumbling into the valley. Villages thus perched, like eagles' nelts on rocks, are a general circumftance in the Pyrenees, which appear to be wonderfully poopled. The mountain that forms the weftern wall of the
valley, is of a prodigious magnitude. Watered meadow and cultivation rife more than one-third the height. $A$ foreft of oak and beech forms a noble belt above it; higher ftill is a region of ling; and above all frow. From whatever point viewed, this mountain is commanding from its magnitude, and beaufiful from its luxuriant foliage. The range which clofes in the valley to the eatt is of a character diftereut from the others; it has more varicty, more cultivation, villages, forelts, glens, and cafcades. That of Gouzat, which turns a mill as foon as it falls from the mountain, is romantic, with every accompaniment neceflary to give a high degree of picturefque beauty. There are features in that of Montauban, which Claude Loraine would not have failed transfufing on his canvafs; and the view of the vale from the cheflut rock is gay and animated. The termination of our valley to the fouth is flriking; the river Nefte pours in incefliant cafcades over rocks that feem an eternal refiftance. The eminence in the centre of a faall vale, on which is an old tower, is a wild an! romantic fipot; the roar of the waters bueath unites in effect with the mountains, whofe towering fore l , finithing in thow, give an awful grandeur, a gloomy greatnef to the feene; and feen to raife a barrier of feparation between two kingdoms, too formidable even for armies to pals. But what are rocks, and mountains, and fnow, when oppofed to human am-bition?-In the receflics of the pendent woods, the bears find their habitation, and on the rocks above, the eagles have their nefls. All around is great; the fublime of nature, with impofing majefty, impreffes awe upon the mind; attention is rivetted to the fpot; and imagination, with all its excurfive powers, feeks not to wander beyond the frene.

## Deepens the murmurs of the falling floods,

And breathes a browner hurror d'er the woods.
To view thefe fcencs tolerably, is a bufinefs of fome days; and fuch is the climate here, or at leaft has been fince I was at Bagnere de Luchon, that not more than one day in three is to be depended on for fine weather. The heights of the mountains is fuch, that the clouds, perpetually broken, pour down quantities of rain. From June 26th to July 2d, we had one heavy fhower, which lafted without intermiffion for fixty hours. The mountains, though fo near, were hidden to their bafes in the clouds. They do not only arreit the fletting ones which are paffing in the atmofphere, but feem to have a generative power; for you fee fmall ones at firf, like thin vapour rifing out of glens, forming on the fides of the hills, and increafing by degrees, till they become clouds heavy enough to reft on the tops, or elfe rife into the atmofphere, and pals away with others.

Among the original tenants of this immenfe range of mountains, the firlt in point of dignity, from the importance of the mifchief they do, are the bears. There are both forts, carnivorous and vegetable-eaters; the latter are more mifchievous than their more terrible brethren, coning down in the night and eating the corn, particularly buck-wheat and maize; and they are fo nice in choofing the fiweeteft ears of the latter, that they trample and fooil infinitely more than they eat. The carnivorous bears wage war againft the cattle and theep, fo that no flock can be left in the fields at night. Flocks muft be watched by thepherds, who have fire-arms, ard the affiltance of many ftout and fieree dogs : and catte are fhut up in ftables every night in the year. Sonctimes, by accident, they wander from their keepers, and if left abroad, they run a confiderable ri'que of being devoured. - The bears attack thefe anim.ls by leaping on their back, force the head to the ground, and thruft their paws into the body in the
violence of a dreadful hug. There are many hunting days every year for deftroying them; feveral parifles joining for that purpole. Great numbers of men and boys form a cordon, and drive the wood where the bears are known or fufpected to be. They are the fattelt in winter, when a good one is worth three louis. A bear never ventures to attack a wolf; but feveral wolves together, when huugry, will attack a bear, and kill and eat him. Wolves are here only in winter. In fummer, they are in the very remotelt parts of the Pyrenees - the molt diftant from human habitations: they are here, as every where elfe in France, dreadful to theep.

A part of our original plan of travelling to the Pyrenees, was an excurfion into Spain. Our landlord at luchon had before procured mules and guides for perfons travelling on bufinefs to Saragofla and Barcelona, and at our requeft wrote to Vielle, the firl' Spanifh town acrofs the mountains, for three mules and a conductor, who fpeaks French; and being arrived according to appointment, we fet out on our expedition.

July io. My friend and myfelf are mounted on the two beft mules, which are, however, but finall; his fervant, with our baggage, is on a third, and the owner of the mules, our conluctor, marches on foot, boafting that his legs are good for fifteen leagues a day; this is his bufinefs; but we are not a little difappointed to find his French is pretty much that of a Spanih cow, if I may ufe a common French expreflion. From Bagnere to Luchon, we afcended inceffantly, and, in our way, viewed the paftures in the French mountains, which the Spanifh flock-mafters hire for their fheep in fummer; which in emigrating, make thirteen days march every year from the lower parts of Catalonia. The management of thefe flocks is an object which muft be explained elfewhere. Having fatisfied ourfelves with the examination, we returned to the direct road for Vielle, which quits the river Nelte, about a league from Bagnere; it enters foonafter one of the molt wooded regions of the Pyrenees, and, at the fame time, the mof romantic. The way fo bad, that no horfes but thofe of the mountains could pafs it ; but our mules trod fecurely amidt rolling ftones on the edges of precipices of a tremendous depth; but though fure footed, they are not free from ftumbling; and, when they happen in thofe fituations to trip a little, they electrify their riders in a manner not altogether fo pleafantly as Mr. Walker. Pafs the frontier line which divides France from Spain, and ftill rifing on the mountains, we fee the Spanih valley of Aran, with the river Garonne winding through it in a beautiful manner. The town of Boftofe and the Spanilh cuftom-houfe are at the foot of the mountains. This valley of Aran is richly cultivated; nothing fearcely can be fincr than the view of it from heights fo great as to render the common objects interelling; the road leads under trees, whofe natural arches prefent, at every ten paces, new laudfcapes. The thick woods give fine maffes of hade; the rocks large, and every outhe bold; and the verdant vale, that is lipread far below at your feet, has all the features of benuty, in contraft to the fublimity of the furrounding mountains. Defeend into this vale, and halt at our firft Spanith inn. No hay, no corn, no meat, no glafs in the windows; but cheap eggs and bread, and fome limall trout. 1 gs. ( 7 d. $\frac{1}{2}$ Enghlifh ).
Follow hence the Garonne, which is already a fine river, but very rapid; the inhabitants of the mountains fimat trees to their faw-mills, which are at work cutting boards. The whole valley of Aran is well cultivated and highly peopled; it is a journey of eight hours, or about forty Englifh miles in length, and has thirty-two villages, or rather little towns, which have a pretty appearance, the walls being well built, and the roofs well flated; but on entering, the ipictagle changes at once, for we found them the abodes of poverty and wretchednels; not one window of glafs to be feen in a whole town;
fcarcely any chimies; the rooms of both floors vomiting the fnake out of the windows.

Arrive at Vielle, the capial of this valley, and the paflage from the part of France we had left, to Barcelona; a cireumfance which has given it fome trilling refources. We were here informed, that we could not go into Spain witiout a paffori: we waited, therefore, on the commandant, licutenant-colonel and knight of Colatrava, who prelides over the whole valley, and its thirty-two towns; his houfe was the only one we had feen in this patt that had glats windows. In his anti-room, under a canopy of ftate, hung the king's picture. We were received with the Spanifh formality, and affined, that a few months ago there was an order to fend every foreigner, found wibout a palfport, to the troops, which thews well enough the number of foreigners here. On eiela fide of his excellency's bed was a brace of piftols, and a crucifix in the middle; we didnot ank in which he puts the moft confidence.

At Bagnere we were told that the inn at Vielle was good. We found the lower floor a fable, from which we mounted to a black kitchen, and, through that, to a baking room, with a large batch of loaves for an oven, which was heating to reccive them. In this roon were two beds for all the travellers who might happen to come; if tos numerous, llraw is fpread on the floor, and you may refl as you can. No glafs to the windows, and a large nole in the eicling to clamber into the garret above it, where the windows were without fhutters to keep out either rain or wind. One of the beds was occupied, fo that my companion laid on a table. The houle, however, afforled eggs for an omlet, good bread, thick wine, brandy, and fowls killed after we arrived. The people very dirty, but civil. - 26 milcs.

The 1 th. Left Vielle, and took that route to Barcelona, which is by the porte (paffage acrofs the mountains) of Piafs : another fomewhat fhorter being reprefented as exceediggly fteep and difficult, and the country to that city worle. Pafs feveral of the thirtytwo villages of the valley of Aran, that croud on each other, fo that the population muft be very great. It refuts here, from the divifion of property, and from the plenty of cattle and fuel yielded by the mountairs belonging to every parilh.

Pafs Arteas and Jafa; crofs the river that falls into the Garonne ; there is a fine view of the mountains over the former of thefe places, of wood, rock, and frow. The trees floating down the Garonne flrike their ends againft the rocks in it, and make a moft lingular noife, very much like thunder. Pafs "Salardeau and Tradoze, which is the laft village of the valley, and near it the fource of the river Ciaronne to the left; but a Itream to the right, which we paffed, feems rather larger. All the villages we have feen appear equally wretched; climmies ton great a luxury to look for in any of them. Vaft rocks of granite are rolld promifcuoufly from the mountains, and iunumerable fprings pour down their fides. We then mounted to the very top of the Pyrenees, much above fome of the remaining fnow, and from the fummit have a tremendous view of ridges of mountains, one beyond another, in Catalonia, many of them with finowy tops, to the diflance of fifty or fixty miles. It took us four hours and three quarters to get to the top of the higheft ridge; yct when we began to alcend, we mult have been, if we may judge from the rapidity of the Garome for feveral hundred miles trom hence to Bourdeaux on fome of the highef land in Europe. No wood at the top, but pafturage, amongt rocks of micacecus fchintus, for great herds of cows and oxen that breathe the pure air of this clevated region.

The fpings we now meet with fow towards the Mediterranean ; pafs a chureh that ftands by ittelf in the defeent, and a beautiful cafcade of five or fix different falls, which pour down a torrent not lefs than five hundred feet anong! wood; a valt rock above
it ; the whole a great but favage view. The trees herc (pines) are finer than on the French hills; they are all cut for the Touloufe market, being carried over the mountains, and floated down the Garonne; from which we may draw conclufions on the comparative demand of the two kingdens.

Pafs a fpot where an earthquake threw down part of a mountain, ftopped a ftream, and formed a large pond: it muft have been a dreadful couvulfion, for the fpot is now a wafte of immenfe fragments of rock, large as cottares, that are tumbled about in fuch ruinous confufion as to be truly horrible to view. The tradition is, that four men and their mules were buried under them. Come to the valley of Efteredano, where wheat and rye are cut. Every fcrap on the defcent is cultivated; it commands an extenfive favage view of mountains, with patches of culture fcattered about the declivities. The profpect down the vale beautiful.

Crofs an arch at the junction of two rivers, on which rafters are now formed of plank and trees, and floated down. Reach Scullów; the inn fo bad, that our guide would not permit us to enter it; we therefore went to the houfe of the curć. A fcene followed fo new to Englifh eyes, that we could not refrain from laughing very heartily. As our reverend hoft had a chimney in his kitchen, we did not quarrel with the want of glafs in his windows: he ran to the river to catch trout; a man brought fome chickens, that were put to death on the fpot. For light, they kindled iplinters of pine, and two merry wenches and three or four men collected to fare at us, as well as we at them, were prefently bufy to fatisfy our hunger. They gave us red wine, fo dreadfully putrid of the boraccio, that I could not touch it ; and brandy, poifoned with annifeed. What then were we to do? feeing our diftrefs, they brought out a bottle of rich, excellent white wine, refembling Mountain; all then was well: but when we came to examine the beds, there was but one to be found. My friend would again do the honours, and infifted on my taking it : he made his on a table, and what with bugs, fleas, rats, and mice, flept not. I was not attacked; and though the bed and a pavement might be ranked in the fame clafs of foftnefs-fatigue converted it to down. This town and its inhabitants appcared equally wretched; the fmoke holes, inftead of chimnies, the istal want of glafs windows, the chearfulnefs of which, to the eye, is known only by the want; the drefs of the women all black, with cloth of the fame colour about their heads, and hanging half down their backs, no fhoes, no ftockings; the effect, upon the whole, as difmal and favage as their rocks and mountains.- 32 miles.

The 12 th. The hills on each fide are now almoft clofe, and juft admit the river, the road, and a fcrap of meadow. The rocks lamellated fchiftus, fome micaceous. Lavender, for the firft time, foontaneous. Pafs Briafca, a village perched on a mountain like an eagle's neft. Come to Labourfel, where is an iron work, fteel and iron made at the fame time, and the furnace blown by the fall of water fimply, without bellows. The water falls about ten feet, and, by its motion, drives the air into a fort of tunnel, which points to the centre of the furnace; the bottom of the mals of melted metal is Ateel; the middle of it foft, and the upper part hard iron. They burn charcoal made of pine wood. Pafs Rudáls on the top of a rocky mountain, and come prefently to vines and fruit-trees, yet fnow in fight. As we defcend to the vale, every fpot is cultivated that is capable of it. Crofs the river to Realp, a long town with many fhops, in which hemp fabrics feem a principal article. Hedges of pomegranates in bloffom. Dine at a drcadful auberge, which, inftead of fatisfying, offended all the fenfes we were mafters of.

Hitherto in Catalonia, we have feen nothing to confirm the character given of that province; for fearcely any thing has a tolerable appearance; the towns and the country, appear equally poor and miferable,

Come to Jaré, whofe environs wear a better countenance, on account of an immenfe falt-work belonging to the king. Here firft meet with olives, and going up the mountain, which is all of pudding-ftone, find it cut into terraces fupported by walls, and planted with vines, mulberries, and olives.

The road then led through a pafs in the mountains, which prefented, I think, without exception, the moft flriking feene that I had ever beheld. I remember the impreffion that the ocean made on me the firf time I faw it, and believe it to have been weaker than this; I thall not fpend many words in attempting to defcribe what the pencil itfelf in the hands of a mafter would fail to convey an adequate idea. The paif is above a mile long; the rocks feem rent afunder to make way for the river, which entirely fills the bottom of the chafm. The road was cut out of the rock, and was wrought with gunpowder, a work of prodigious labour and expence. It palles on heights that vary the ficene, and that give a depth below the eye enough to be interefting. The mountains of ftone, which rife on cither fide, are the moft tremendous in their height, magnitude, and pendent form, that imagination can conceive. Were all the rocks of England piled on one another, they would form but pigmy heaps, compared with thefe gigantic and ftupendous maffes. Rocks are commonly, even in their moft bold appearances, detached parts of mountains; and, however great in themfelves, have malics above them, which leffen their effict. It is otheruile here: if we fuppofe the fkeletons of mountains laid bare to the eye, it will be but a vague idea. Valtnefs of fize, perpendicularity of form-pendant-and protruding-every circumftance that can give a powcr to inanimate nature, to command and arreft attention, is fpread forth with an impofing magnificence through every feature of this fublime fcenery.
Pafs Cooiagafe, the features of the country now begin to relax; the mountains are not fo high, and the vales are wider. Arrive at la lobla, after a fatiguing journey of thirty-fix Englifh miles, more than half of which, as in general, we made on foot. Here we fared fumptucully, for report made the inn fo bad, that we took refuge with a fhopkeeper. It feems an extraordinary circumflance, that in thefe parts of Spain you ride to the door of a private houfe, defire lodging and food, and pay of courfe what they demand. However, it mult always be taken into the account of our fare, that the wine of all the country is fo poifoned with the boraccio, that water is the beft beverage, unlefs annifeed brandy thould be to your tafte. Sallads alfo, a principal dilh with them, are not eatable, by reafon of the oil of the country being Hrong and rancid; a quality which the inhabitants feem to think effential to good oil, for they every where gave it the higheft praifes. This town has fome good houfes with glafis windows; and we faw a well drefled young lady, attended in a gallant manner by two monks.${ }_{3} 6$ milus.
The $13^{\text {th. }}$ Leave la Pobla, and crofs the river, which is fixty yards wide ; it compenfates, by the ufe made of its waters in irrigation, the mifchief it does in floods, for we paffed two large tracts deftroyed by it. The mountains around of bold and interefting features; the comery in general a misture of cultivation and walle, for fome fpace plafing enough to the cye; but they have no meadows, to that our mules have met with mething like hay, nraw and batley are their foud; and they tell us, that all over Spain it is the fame thing, with fome exceptions in watered lands for lacerne. Much com threhing every where:

The road leats by Nonte Bifyuien, the whole of which confifts of a white flone and argillaceus marle. Look back over a peat profpect, but deftitute of wood. Ourcató a poor place: there, as every where elfe, the frit floor is a flable, which is cleaned out not more than one or iwice a year, when the land is rady to receive the dung.

The delicio:s avia given to the reft of the houfe, in fo hot a climate, may be conjectured: riling, whe kitchen and the chambers, it there meets with fuch a variety of other unfavory effences, as to form compounds fufficient to puzzle the moft dextrous of the aërial philofophers to analize. All their white wine here is boiled. Defcend mountains terraced for olives, which grow well on rocks, but add no beauty to them; infomuch that cloathing a country with the moft ugly of all trees adds nothing to the pleafure of the eyc.

Pafs in fight of St. Roma, and crofs a diftrict of fhells, and a large wafte entirely covered with lavender.

Pafs up a hill which commands a vaft profpect of diftant mountains, W. S. W., they are in Arragon; very high; and feen one beyond another to a great diftance; alfo the fnowy ones of the Pyrences which we have left. Following the road, we fee it opening to an immenfe view of what at firft appears to be a plain, a great range of country towards the fea; but it is all broken in mountainous ridges, which feen low, merely on comparifon with the greater heights from which we view. The Pyrenees in one great chain to the left, and the mountains of Tortofa to the right. Defcend to Fulca, where we ftop for the night at an inn kept by a confiderable farmer, and meet, for Spain, with tolemable accommodation. We had here, in the evening, a moft tremendous tempeft. The lightning which I have feen in England has been a mere glimmering, compared with the dreadful corrufcations of this ardent and electric atmofphere. A range of the Pyrenees was in fight for one hundred miles in a line; the forked flafhes of the lightning darted in Areams of fire to the length of half that extent, and much of it from an immenfe height. The colour was of the brighteft whitenefs; the fcene was great, awful and fublime.- 28 miles.

The 14th. In the morning the hemifphere was all heavy with clouds, and fome rain fell; we expreffed apprehenfions of being wet, but our landlord faid we hould have a very fine day; we had confidence, and it proved a clear burning one.

Here I may obferve, that in above one hundred miles in Catalonia, we have feen but two houfes that appeared decidedly to be gentlemen's, one the governor's at Viella, and the other in the town of La Pobla; and in the fame line of country not more than one acre probably in two hundred is cultivated. Thus far, therefore, we have experienced an entire difappointment in the expectation of finding this province a garden.

Pafs the fide of a mountain covered with rofemary, box, and brambles, and defeend into a rich vale to the town of Pous. Crofs the river Segre by a molt commodious ferry boat, much better executed and contrived for carriages and horfes, than any I have feen in lingland. I have crofled the Thames, the Severn, and the Trent, but never faw any in which the horfes were not forced to leap through a narrow cut in the fide of the boat to the imminent danger of being lamed: and I have known buth cows, oxen, and horfes killed in the operation. A carriage may be driven in and out of this ferry boat without taking off a horle, or a perfon moving from his feat. The boat croffes the river by a great rope paffing over a lanthorn wheel. The care and attention given to irrigation here cannot be excceded. Much filk windine.

They threfh their corn by driving mules in the oriental method on a circular floor of earth in the open air ; a girl drives; three or four men turn the fraw, move it away, and fupply the floor.

Pafs a wafte of marle, with ftrata of tale in fome places clear and tranfparent, fhining, and brcaking into thin flakes.-Delerts for feveral miles. Pafs Ribelles, a vilo. vol. iv.
lage
lage whofe white church and houfes, on the pinnacle of a rocky hill, have a fingular fflect in the midft of an uncultivated dreary tract. Dine at Senavia; the day exceffively hot, and the flies fo innumerable, as to be a perfect plague. They have a good contrivance for keeping them off the table you eat at, which is a moveable and very light frame of canvas, fufpended from the cieling by two pivots, and a girl keeps pulling it backwards and forwards while you are at table; the motion it gives the air drives of the flics. Where this invention is not adopted, fhe ufes a hand-flapper for the fame purpofe, fanning in a droll manner, and far from difagrecable, when the girl is pretty. Pafs many watered grounds, with peaches, apples, and ripe pears. Pomegranates in the hedges as large now as walnuts in the fhell. To Biofca moftly defert hills, but with fome broad vales. No where any wood to be feen, except olives, and evergreen oaks, which are almoft as fad as olives. Towards Torit the country is more culticated, and has fome fcattered houfes, which I note as a new circumftance. Pals Caftle Follit. The country improves to Calaf, where we arrived after a burning journey of forty Englilh miles, having been fourteen hours on our mules. - 40 niles.

The 15 th. -Sunday. To mals at four in the morning : the church almoft full of muleteers; it was evident that we were in Spain, from the fervency of devotion with which they beat their brealts at fome of the refponles in the fervice. How far this violent attention to religion is connected with the wafte ftate of their province, I thall leave to others to deternine. One thing, which furprifed me a good deal, was feeing great numbers of men going out of town with reap-hooks to cut their corn, juft as on any other day; this mult be with the leave of their priefts; and to give fuch permiffion, fpeaks more liberality than I had been taught to expect.

Crofs a great wafte, and mount a hill, from whence an extenfive view over a naked country; and, for the firft time, we fee Montferrat, the outline of which is interefting. Dine at Camprat, in the midit of a rocky country, of a favage afpect, with fo many waftes, that not one acre in an hundred is cultivated. Arrive at the foot of Montferrat, which, from the defcription given of it by Mr. Thicknefs, was one object of our journey.

It is a remarkably ifolated mountain, but of an inmenfe bafis. An admirable winding road is made, by which we mounted to the convent; to make this way was a great effort in a country where fo few good roads are to be found. Much of this is hewn out of the live rock. In other refpects, it is one of the moft fingular in the work. On the right hand is a wall of mountain fringed with wood, at the top of which are thofe ftupendous rocks, which render it famous: to the left a precipice horrible for depth, but all covered with plants, which in England are fought with anxiety and expence for adorning thrubberies and gardens; and vegetation here has the luxuriance which may be expected in one of the finelt climates in the world. The road fo level, and thefe beautitul plants fo thick, that they altogether refemble the alley of a decorated ground. The fcencry on which you look is every where uncommon; fuch a confufion of hades and maffes; fuch a tumult of forms, that the eye wanders with a kind of amazenent from part to part, without being able to repole in the quiet command of any dillinct object.

We arrived at the convent in time for the evening hymns and mufic. The church is fplendid, fome of the pictures fine, and the multitude of offerings of diamonds, rubies, and all other precious flones, with the quantity of gold and filver lamps, vafes, \&c. are the lalt objects for me to dwell on, fince they never raile any other emotion in my bofom than of difyuft. I hate the folly that gives; and if the monks are honeft, I hate the folly that receives. excefa good d very s pul-- drives fame pretty. ates in ls, but rgreen ivated, Follit. f forty
full of n with ar this I fhall ; feeing $t$ as on niffion, refting. ) many ontferof our

On our arrival we were conducted to a neat, plain apartment in the convent, of two rooms furnifhed with mere neceffaries, and we were fupplied by the fervants with fuch food and wine as we requefted, at a very moderate experce. To this uffeful fpecies of hofpitality, we were obliged for a comfortable night's reft.- 27 miles.

The 16th. The principal object which had induced us to take Montferrat in our way, was the amazing profpect commanded from the top of the mountain, and from the various hermitages defrribed by Mr. Thicknels. This morning we walked up the hill, but the weather proved fo perverfe to our views, both in mounting and defcending, that we were the whole time in the clouds. I fhould moft willingly have ftaid two or three days here, and waited for a better time; but my friend was in fuch a hurry to return to Bagnere to the Count de la Rochefoucauld, that we muft have feparated, had I done it. In fuch tours as thefe, it is always beft to take a fuperfluity of time; a thing very difficult to do when one travels in company; and that of Monf. L. was much too valuable and interefling to me to allow fuch a queftion for a moment. All we could do in our elevated fituation, was to mortify ourfelves with inagining the prodigious profpect before us, without a poffibility of feeing five hundred yards, for the clouds were beneath as well as around us. We ftopped at one of the hermitages, the inhabitant of which, a Maltefe of a gentleman-like deportment and manners, received us hofpitably and politely, fetting out bread, wine, and fruit. He lamented cur ill luck, telling us that the ifland of Majorca was diftinctly to be feen from his little garden, which we viewed with pleafure, but thould have been better plaafed to have feen Majorca. But though the diftant profpect was thus excluded, we had the opportunity to examine and admire the uncommon and friking form of the rocks, of which this moft interefting mountain is compofed; the whole feems one valt mals of pudding ftone.

Leave the convent, and take the road for Barcelona, which, in richnefs of vegetable accompaniment, is inferior to that by which we came; we were feveral miles defcending. Pafs Orevoteau, where is a hredge of aloes four feet high : here we are in a high road, for we meet for the firlt time a cabriolet. Pafs a wretched ftony defert, which yields only aromatic plants, fcattered with difmal evergreen oaks. Efparagara is the firft manufacturing town we met with; woollen cloths, ftuffs, and laces : the town is near a mile long. Near Martorell, fee the triumphal arch, faid to be built by Annibal; it has been lately repaired. In that town every one is employed in lace making; they have, however, another occupation not quite fo agrecable to the cye, that of picking vermin out of each orher's heads, in which numbers of them were employed; nor can any thing be more 隹king or filthy than their perfons, or more dirty than their houfes: to view either, is enough to imprefs the idea, that cleanlinefs is one of the firf of the virtues, and dcubly fo in fuch a hot climate. No new houfes in any of thefe towns. The country is difagreeable, and rendered worfe by many beds of torrents, without a drop of water; arid and hurtful to the eye. Apricots, plumbs, melons, \&c. ripe, and fold in the ttrects.

Come to a noble road, which they are making at the expence of the king; fifty or fixty feet wide, and walled on the fide to fupport the earth, of which it is formed. The counitry now is far more populous and better built, many vines, and much cultivation.

It will probably be found, that the great reputation of this province has arifen from the improvemenis in the lower, flat, and irrigated parts; if fo, it ought to be diferiminated; for by far the larger part of it is mountainous, not lefs in proportion, I fhould conceive, than feven-eighths. Pafs a large paper mill; and continuing on the
fame fine road, join another equally great and well made, that leads to Villa Franca. Turn to the left for Barcelona, and crofs a bridge of red granite, a folid, durable, and noble work, four hundred and forty paces long; but, though built only eight years ago, is in a bad and inelegant ftile. Now mect a great number of carts and carriages, drawn by very fine mules, and mark every appearance of approaching a great city. Within two or three miles of it, there are many villas and good buildings of all forts, fpreading to the right and left, and feen all over the country. I have been at no city fince we left P'aris, whofe approach carrics fuch a face of animation and cheerfulnefs; and confidering P'aris as the capital of a great kingdont, and Barcelona as that of a province only, the latter is more ftriking beyond all comparifon. This noble road does honour to the prefent king of Spain; it is carried in an even line over all narrow vales, fo that you have none of the inconveniencies which otherwife are the effect of hills and declivities. A few palm trees ald to the novelty of the profpeet to northern eyes. The firlt vicw of the town is very fine, and the filuation truly beautiful. The latt half mile we were in sreat hafte to be in time for the gates, as they are fhut at nine o'clock. We had had a burning ride of forty miles, and were a good deal fatigued, yet forced to undergo a ridiculous fearch, as every thing pay's an entrée to government on going into the town; and we had fill two miles I believe to pafs, firf to the French crown, which inn was full, and then to la loonde, where we found good quarters.

My friend thought this the moft fatiguing day he had ever experienced: the exceffive heat oppreffed him much; and, indeed, travellers in general are much more prudent than to ride during the whole day in the middle of July, choofing rather to expofe themfelves to fatigue here in the morning and evening only But after a fucceffion of dog holes, with perpetmal ftarving and mortification in the mountains, the contraft of this inn was great. It is a very good one, with many waiters, active and alert as in England. A good fupper, with fome excellent Mediterranean filh; ripe peaches; good wine; the moft delicious lemonade in the world; and good beds, all tended to revive us ; but Monf. Luzowki was too much fatigued for enjoying them. - 40 miles.

The 17 th. View the town, which is large, and to the eye, in every freet, remarkably populous: many of them are narrow, which may be expected in an old town; but there are alfo many others broader, with good houfes; yet one cannnot on the whole confider it as well built, except as to public cdifices, which are erected in a magnificent ftile. There are fome confiderable openings, which, though not regular fquares, are ornamental, and have a good effect in fetting ofl the new buildings to the beft advantage. One quater of the citv, called Barcelonctti, is entirely new, and perfectly regular; the flrcets cutting each other at right angles; but the houfes are all fmall and low, being meant for the refidence of tialors, litule flop keepers, and artizans: one front of this new town faces the qualy. The flrects are lighted, but the duft fo deep in fome of them, efpcially the brodider ones, that I know not whether they are all paved. 'The governor's houte and the new fountain are on a fcale, and in a file, which thews that there are no mean ideas of embeliiflment her:. The royal foundery for cannon is very great. The builing facions, and every thing feems executed in a manner that proves no "xpence was fared. The guns caft are chiefly brafs: they are fold, ; and fone wenty-four pounders boring; perhaps in all mechanics the moit curious operation, and which can never be viewed without paying fome homage to the genius that firit invented it. In time of war three hundred men are employed bere; but at prefent the number is not contiderabio.

But the object at Barcelona which is the moft ftriking, and which, according to my knowledge at leaft, has no where a rival, is the quay. The defign and exccution are equally good. I guefs it about half a mile long. $\Lambda$ low platform of fone is built but a few feet above the water, clofe to which the hips are moored; this is of breadth fufficient for goods and packages of all forts in loading and unloading the veffels. A row of arched warchoules open on to this platform, and over thofe is the upper part. of the quay on a level with the ftrect; and for the convenience of going up or down from one to the other, there are gently lloping ways for carriages, and alfo ftair-cafes. The whole is moft folidly erected in hewn ftone, and finifhed in a manner that difcovers a true fpirit of magnificence in this moft ufeful fort of public works. The road ty which we travelled for feveral miles-the bridge by which we paffed the river-and this quay, are works that will do lafting honour to the prefent king of Spain. There are now about 140 hlips in the harbour; but the number fometimes much. larger.

It is inpoffible to view fuch admirable works as the quay of Barcelona, without regretting the enormous fums wafted in war and bloodflied. No quarrel happens between two nations, but it cofts twenty fuch quays; a thoufand miles of magnificent road; an hundred bridges; the pavement, lights, fountains, palaces, and public ornaments of fifty cities. To tell a prince or a parliament (the latter wants this leffon to the full as much as the former), that a war is as abfurd as it is cruel, for it will coft fo much money in figures, makes not the lealt imprefion; they never fee the moncy, and the expence is of fomething ideal; but to tell the king of Spain that it would coft the Efcurial, St. Ildefonfo, his palace at Madrid, and all the roads in his kingdom, and he would think very ferioully before he engaged in it. To reafon with a Britifh parliament, when her noify factious orators are bawling for the honour of the Britifh lion, for the rights of commerce, and freedom of navigation; that is, for a war-that fuch a war will coft an hundred millions fterling, and they are deaf to you. But let it coft them thofe roads on which they roll fo luxurioully, the public bridges, and the great clifices that decorate the capital, and our other cities, if the members were willing at fuch a price to hazard a war, the poople would probably pull down their houfes. Yet the cafes are precifely the fame; for if you fpend the money that would form and build fuch things, you in effect fpend the things themfelves. A very little calculation would flew, that the expence of our three laft wars, which had no other effect whatever but to fill blood and fill gazettes, would have made the whole ifland of Great Britain a garden; her whole coalt a quay ; and have converted all the houfes in her towns into palaces, and her cottages into houfes. But to return.

The manufactories at Barcelona are confiderable. There is every appearance as you walk the ftreets of great and active induftry; you move no where without hearing the creak of flocking engincs. Silk is wrought into handkerchiefs, though not on fo great a feale as at Valencia; flockings, laces, and various ftuffs. They have alfo fome woollon fabrics, but not confiderable. The chicf bufinefs of the place is that of commifion; the amount of the trade tranfacted is confiderable, though not many fhips belong to the port.

The induftry and trade, however, which have taken root, and profpered in this city, have withinoed the continued fyllem of the court to dal feverely with the whole province of Catalonia. The famous efforts which the Catalans made to place a prince of the houfe of Aultria on the throne of Spain, were not foon forgoten by the princes of the houte ol Bomben, to their dihonour. Heary taxes have heen laid on the people; and the whole province continues to this day difarmed; fo that a nobleman cannot
wear a fword, unlefs privileged to do it by grace or office; and this goes fo far, that in order to be able to thew this mark of diltinction, they are known to get themfelves enrolled as familiars of the inquifition, an office which carrics with it that liceace. 1 note this correctly according to the information given me; but I hope the perfon who gave it was miftal: en. For the nobility to foop to fuch a meannefs, and the court to drive men to fuch unworthy means of diftinction, fourfoore years after their offence, which was filelity to the prince whom they efteemed their lawful fovercign, fuch an act reflects equal dihonour upon the nobility and the crown. The mention of the inquifition made us enquire into the prefent flate of that holy office, and we were informed, that it was now formidable only to perfons of very notorious ill fame; and that whenever it does act againft offenders, an inquilitor comes from Madrid to conduct the procefs. From the expreffions, however, which were ufed, and the inftances given, it appeared that they take cognizance of cafes not at all comected with faith in religion; and that if men or women are guily of vices, which render them offenfive, this was the power that interpofed; an account, in my opinion, by no means favour-able for the circumftance, which was fuppofed moft to limit their power, was the explicit nature of the offence, viz. being againit the Catholic fairt, and by no means againtt public morals, to fecure which is an object for very different judicatures in every country.

The markets here are now full of ripe figs, peaches, melons, and the more common fruits in great profufion. I bought three large peaches for a penny, and our laquais de place faid, that I gave too much, and paid like a forcigner; but they have not the flavour of the fame fruit in England. In the gardens there are noble orange trees loaded with fruit, and all forts of garden vegetables in the greateft plenty. The climate here in winter may be conjectured from their having green peafe every month in the year.

View the very pretty fort to the fouth of the town, which is on the fummit of a hill that commands a valt profpeet by fea and land. It is exceedingly well built and well kept. Notwithftanding this fort to the fouth, and a citadel to the north of the fown, corfairs in time of war have cut fihing veffels out of the road, and very near the Shore.

In the evening to the play; the theatre is very large, and the feats on the two fides of the pit (for the centre is at a lower price) extremely commodious; each feat is fiparate, fo that you fit as in an ellow chair. A Spanifh comedy was reprefented, and an Italian opera after it. We were furprized to find clergymen in every part of the houfe; a circumftance never feen in France. 'Twice a week they have an Italian opera, and plays the other evenings. In the centre of the pit on buches the common people fat themfelves. I Gaw a blackfmith, hot from the anvil, with his thirt fleeves tucked above his elbows, who enjoyed the entertainment equally with the beft company in the hoxes, and probably mich mori. Every well drefled perfon was in the French fafhion; but there were many who till retaimed the Spanifh mode of wearing their hair without powder, in a thick black net which hangs down the back; nothing can have a worfe effect, or appear more offeative in fo hot a climate.

The 18th. On leaving the town, we were fearched again, which feems both ufelefs and burthenfome. Enter immediatcly an extraordinary feene of watered cultivation, fo fine, that I fuppofe it has given the general reputation to the whole province. The Indian fig, called here figua de Maura, grows fix or feven feet high, very branching and crooked; the arms at bottom as thick as the thigh of a common man; thefe and many aloes in the hedges. At Ballate, two hours from Barcelona, meet with the firlt

felefs ation, The ching c and h the firft
firft vineyards; but the hills here, for the moft part, come down to the fea; and where they do not, the vale is not more than half a mile wide. Lycium in the hedres; oranges in the gardens; a few palm trees with wines around them. All here enclord, and the men mending gaps in their hedges. The appearance of indullry on this coaft is as great as poffible. Numbers of fifhing boats and nets, with rows of good white houfes on the fea fide; and while the men are active in their fifheries, the women are equally bufy in making lace. Dine at Gremah; many large villages and featered houfes all the way. Wherever there is an opening in the mountains, nore difant and fill higher ones are feen; a circumftance which unites with the vaft view from Montferrat, and hews that all behind is mountainous, and that the vales are no where large. Pafs a valley, part highly cultivated, but the reft for a quarter of a mile of breadth totally ruined by a torrent. Reach Martaró, a large town of white and clean well built houfes, the frcets croffing each other at right angles. The inhabitants appear exceedingly indultrious; there are fome flocking engines and lace-nakers at every corner. Every houfe has one large door, which ferves both for door and window to that room; an undoubted proof of the warmth of the climate. I am forry to add, that here allo the induftry of catching vermin in each other's heads is very active.

Pafs Arenys, a large town, where fhip-building feems a bufinefs of fome confequence: making thread lace univerfal here; the thread comes from France. Canet, another large town, employed in fhip-building, filhing, and making lace. All thefe towns are well built, with an equal appcarance of general induftry, and its infeparable companion, private comfort. Every frrap of flat land well cultivated, and the hills covered with vines.

At Callella, a large town like the former, full of induftry, but the inn no better than in the mountains, a flinking, dirty, dreadful hole, without any thing to eat or drink but for muleteers; yet we are now in the high road from Paris to Madrid.36 miles.

The 19th. I.eave Callella, and in lefs than a league come to Pineda, another large town, and pafs Malgrat, which is not fo well built as the preceding, but much lace made in it.

The road here turns from the fea into an enclofed woodland. Pomegranates make very fine thick hedges. There are old caftles on the hills to defend the coaft againft the Africans. Houfes fcattered every where, a feature effential to a fine country, and an agreeable landfcape. Poplars planted in fcme fields, and vines trained from one to another. From reading accounts of this hufbandry, I had formed an idea that it muft be fingularly beautiful to fee feftoons of vines hanging from tree to tree; but there is nothing either pleafing or ftriking in it. The Pyrenees are now in front, with very high mountains to the left, with their heads in the clouds.

Pafs for feveral miles a country much mixed with waftes; and come to a very large one, fpreading over feveral extenfive hills for many miles, that prefents an extraordinary fpectacle to northern eyes. It is a thicket of aromatic plants, and beautiful flowering flhrubs, with but a fmall mixture of plants common in England. Large fpreading myrtles three or four feet high, jeffanines, honey-fuckles, lavender, rofemary, bay, lentifcus, tamarifc, caffia, "Ec. \&c. but all nuifances here even worfe than heath with tis, for we fee neither theep nor goats. Paifs Goronota, and many waftes for fome miles on gentle flopes, and come again to a thick woodland enclofed country, like fome parts of England. Many hedges of the yellow bloffomed prickly acacia, which anfiwers well
for that purpofe. Reach Girona, an old town walled and fortified with fome redobuts, and a fort on the hill above it ; but not kept up, nor indeed would it foop an army half an hour. Here is a cathedral and a bifhop, who gave us his bleffing as we paffed him, drawn in his coach by fix mules. Ilis revenue, is 24,000 French livers; there are curécs, who have from $1: 00$ to $\$ 000$ livres. They tithe no live ftock. They have no manufactures of any confequence, and no refource but that of agriculture; yet, what is extraordinary, Caltilian and French workmen come hither for employment.36 miles.

Snow is on the Pyrences as well as at Bagnere de Luchon.
July 21. Leave Junquerras, where the countenanees and manners of the people would make one believe all the inhabitants were fungglers. Come to a moft noble road, which the king of Spain is making; it begins at the pillars that mark the boundaries of the two monarchies, joining with the French road; it is admirably executed. Here take leave of Spain and reenter France: the contraft is ftriking. When one croffes the fea from Dover to Calais, the preparation and circumftance of a naval paffage lead the mind by fome gradation to a change; but here, without going through a town, a barrier, or even wall, you enter a new world. From the natural and miferable roads of Catalonin, you tread at once on a noble caufeway, made with all the folidity and magnificence that diftinguifh the highways of France. Inftead of beds of torrenis you have well built britges; and from a country wild, delert, and poor, we found ourfelves in the midft of cultivation and improvement. Every other circumftance fooke the fame language, and told us by figns not to be miftaken, that fome great and operating caufe worked an effect too clear to be mifunderfood. The more one fees, the more I believe we fhall be led to think, that there is but one allpowerful caufe that inltigates mankind, and that is government !-Others form exceptions, and give fhades of difference and diftinetion, but this acts with permanent and univerfal force. The prefent inftance is remarkable; for Ruuffillon is in fact a part of Spain ; the inhabitants are Spaniards in language and in cuftoms; but they are under a French government.

Great range of the Pyrenees at a diftance. Mcet flepherds that fueak the Catalan. The cabriolets we meet are Spanifh. The farmers threfh their corn like the Spaniards. 'Ihe inns and the houfes are the fame. Reach Perpignan; there I parted with Monf. Lazowiki He returned to Bagnere de Luchon, but 1 had planned a tour in Languedoc, to fill up the time to fpare.- 15 miles.
The 22d. The Duke de la Rochefoucauld had given me a letter to Monfieur Barri de Laffeufes, major of a regiment at Perpignan, and who, he faid, underfood agriculture, and would be glad to converfe with me on the fubjec. I fallied out in the morning to find him, but being Sunday, he was at his country feat at Pia, about a league from the town. I had a roalling walk thither, over a dry fony country under vines. Monfieur, Madame, and Mademoifelle de Laffeufes, received me with great politenefs. I explained the motives of my coming to France, which were not to run idly through the kingdom with the common herd of travellers, but to make myfelf a matler of their agriculture; that if I found any thing good and applicable to England, I might copy it. He commended the defign greatly; fuid it was travelling with a truly laudable motive; but expreffed much afonifhment, as it was fo uncommon; and was very fure there was not a fingle Frenchman in all Fingland on luch an errabd. He defired 1 would fend the day with him. I found the vincurd the chief pirt of his hutbandry, but he had fome arable land, managed in the fingular manare of that prowince. He here are ey have re; yet, ent. te people oft noble e bounsecuted. Then one a naval ut going e natural ade with uftead of iert, and ery other cen, that d. The one allm excep. nent and a part of are under

Catalan. paniards. th Monf. Languemar Barri agriculmorning gue from er vines. olitenefs. through $r$ of their ght copy laudable very fure defired 1 fhandrv, ce. He pointed
pointed to a village which he faid was Rivefalta, which produced fome of the moft fa. inous wine in lrauce; at dinner I found that it merited its reputation. In the evening returned to Perpiguan, after a day fertile in ufeful information.- 8 miles.

The 2 3d. Take the road to Narbonne. Pals Rivefalta. Uuder the mountain there is the largeft fring 1 ever faw. Otters-Pool and Holywell are bubbles to it. It rifes at the foot of the rock, and is able to turn inmediately many mills; being at once rather a river than a lpring. lafs an uninterrupted flat wafle, without a fingle tree, houfe, or village for a confiderable dillance: by much the uglieft country I have feen in France. Great quantities of corn every where trealing out with mules as in Spain. Dine at Sejean, at the Soleil, a good new inn, where I accidentally met with the Marquis de Treffin. He told me, that I muft be a fingular perfon to travel fo far with no other object than agriculture: he never knew nor beard of the like; but approved much of the plan, and wifhed he could do the fame.

The roads here are ftupendous works. I paffed a hill, cut through to eafe a defcent, that was all in the folid rock, and coft go,000 livres ( 3,9371 .) yet it extends but a few hundred yards. Three leagues and an half from Sejean to Narbonne coft $4,800,000$ livres ( 78,750 I.). Thefe ways are fuperb even to a folly. Enormous fums have been fpent to level even gentle flopes. The caufeways are raifed and walled on each fide, forming one folid mafs of artificial road, carried acrofs the vallies to the height of fix, feven, or eight feet, and never lefs than fifty wide. There is a bridge of a fingle arch, and a caufeway to it, truly magnificent; we have not an idea of what fuch a road is in England. The traffic of the way, however, demands no fuch exertions; one third of the breadth is beaten, one-third rough, and one-third covered with weeds. In thirty-fix miles, I have met one cabriolet, half a dozen carts, and fome old women with affes. For what all this wafte of treafure? - In Languedoc, it is true, thefe works are not done by corvées; but there is an injuflice in levying the amount not far fhort of them. The money is raifed by tailles, and, in making the affeffment, lands held by a noble tenure are fo much eafed, and others by a bafe onc fo burthened, that onc hundred and twenty arpents in this neighbourhood, held by the former, pay 90 livres and four hundred poffeffed by a plebeian right, which ought. proportionally to pay 300 livres, is, inftead of that, affefled at 1400 livres. At Narbonne, the canal which joins that of Languedoc deferves attention; it is a very fine work, and will, they fay, be finifhed next month. - 36 miles.

The 24th. Women without for:kings, and many without fhoes; but if their feet are poorly clad, they have a fuperb confolation in walking upon magnificent caufeways: the new road is fifty feet wide, and fifty more digged away or deftroyed to make ii.
The vintage ittelf can hardly be fuch a fcene of activity and animation as this univerfal one of treading out the corn, with which all the towns and villages in Languedoc are now alive. The corn is all roughly facked around a dry firm fpot, where great numhers of mules and horfes are driven on a trot round a centre, a woman holding the reins, and another, or a girl or two, with whips drive; the men fupply and clear the floor; other parties are dreffing, by throwing the corn into the air for the wind to blow away the chaff. Every foul is employed, and with fuch an air of cheerfulnefs, that the people feem as well pleafed with their labour, as the farmer himfelf with his great heaps of wheat. The fcene is unconmonly animated and joyous. I ftopped and alighted often to lee their method; I was always very civilly treated, and my wifhes for a good price for the farmer, and not too good a one for the poor, well received. This method, which entircly faves barus, depends abfolutely on climate: from my leaving Bagnere de Luchon to this moment, all through Catalonia, Rouffillon, and this part of Languedoc,
vox. 1 iv .
there has becn nothing like rain; but one unvarying clear bright oky and burning fun, vet not at all fuffocating, or to me even unpleafant. I alked whether they were not fometimes caught in the rain? they faid, very rarely indeed; but if rain did come, it is feldom more than a heavy thower, which a hot fun quickly fucceeds and dries every thing fpedily.

The canal of Languedoc is the capital featupe of all this country. The mountain through which it pierees is infulated, in the millt of an extended valley, and only half a mile from the road. It is a noble and itupendous work, goes through the hill about the breadth of three toifes, and was digged without thafts.

Leave the road, and crofling the canal, follow it to Beziers; nine fluice-gates let the water down the hill to join the river at the town.-A noble work! The port is broad enough for four large veffels to lie abreaft; the greateft of them carries from ninety to one hundred tons. Many of them were at the cuuay, fome in motion, and every fign of an animated bulinefs. This is the beft fight 1 have feen in France. Here Louis XIV. thou art truly great!-Here with a gencrous and benignant hand, thou difpenfeft eafe and wealth to thy people!-Si fic omnis, thy name would indeed have been revered! To effect this noble work, of uniting the two feas, lefs money was expended than to befiege 'Turin, or to feize Strafbourg like a robber. Such an employment of the revenues of a great kingdom is the only laudable way of a monarch's acquiring immortality; all other means make their names furvive with thofe only of the incendiaries, robbers, and violaters of inankind. The canal paffes through the river for about half a league, feparated from it by walls which are covered in floods; and then turns off for Cette. Dine at Beziers. Knowing that Monf. l'Abbé Rozier, the celebrated editor of the Journal Phyfique, and who is now publifhing a dictionary of hufbandry, which in France has much reputation, lived and farmed near Beziers, I enquired at the iun the way to his houfe. They told me that he had left Beziers two years, but that the houfe was to be feen from the freet, and accordingly they fhewed it me from fomething of a fquare open on one fide to the country; adding, that it belonged now to a Monf. de Rieufe, who had purchaled the eflate of the Abbe. To view the farm of a man celebrated for his writinge, was an object, as it would at leaft cnable mo, in reading his book, to underfand better the allutions he inight make to the foil, fituation, and other circumflances. I was forry to hear at the table d'hote, much ridicule thrown on the Abbe Rozier's hufbandry, that it had bcaucoup de fantafie mais rien folide; in particular, they treated his paving his vineyards as a ridiculous circumftance. Such an experiment feemed remarkable, and I was glad to hear of it, that I might defire to fee thele paved vineyards. The Abbe here, as a farmer, has juft that character which every man will be fure to have who departs from the methods of his neighbours; for it is not in the nature of countrymen, that any body fiould come among them who can prefume with impunity to think for himfelf. I alked why he left the country? and they gave me a curious anecdote of the Bifhop of Beziers cuting a road through the Able's farm, at the expence of the province, to lead to the houle of his (the bithop's mittres., "tirh occafioned fuch a quarrel, that Monf. Rozier could tay no longer in :1, E.. '... . This is a pretty feature of a goverament that a man is to be forced to fel satibate, and driven out of accuntry, becaufe bifhopsmake love-I fuppofe to their neighbours' wives, as no cther love is falhionable in France. Which of my neighbours' wives will tempt the Bifhop of Norwich to make a road through my farm, and drive me to fell Bradfich? I give my authority fo. 1, is anecdote, the chat of a table dhote: it is as likely to be falfe as true; but Langl:: ian bithops are certainly not Englith ones. Monfieur de Rieufe reccived me po"rety nd fatsined as many of my enquiries as he could; for he knew
knew little more of the Abbés hoibandry than cominon report, and what the farm itfelf told him. As to paved vineyards, there was no fuch thing: the report mult have taken rife from a vineyard of Burgundy grapes, which the Ablie planted in a new namner ; he fet them in a curred form, in a fofs, covering them only with fliuts inflead of carth; this fucceeded well. I walked over the farm, which is beautifuly fituated, on the flope and top of a hill, which commands Beziers, its rich vale, its navigation, and a fine accompanyment of mountains.
$\mathbf{B}$ eziers has a fine promenade; and is beconing, they fay, a favourite refidence for the Englifh, preferring the air to that of Montpellier. Take the rond to Dezenas. It leads up a hill, which commands, for fome time; a view of the Mediterranean. Through all this country, but particularly in the olive grounds, the cricket (cicala) makes a conflant, flarp, monotonous moife; a more odious companion on the road can hardly be thay ined. Pezenas opens on a very fine country, a vale of fis or eight leagues extent . Il culivated; a beautiful mixture of vines, mulberries, olives, towas, and fcattered houfis, with a great deal of fine lucerne; the whole bounded by gentle hills, cultivated to their tops. At fupper, at the table d'hôte, we were waited on by a female without hoes or ftockings, expuifitely ugly, and diffufing odours not of rofes: there were, however, a croix de St. Louis, and two or three mercantile-looking people, who prate i with her very familiarly: at an ordinary of farners, at the poorelt and remoteft market village in England, fuch an animal would not be allowed by the landlord to enter his houfe; or by the guefts their room.- 32 miles.
The 2 g th. The road, in crofling a valley to and from a bridge, is a magnificent walled caufeway, more than a mile long, ten yards wide, and from cight to twelve feet high; with fone pofts on each fide at every fix yards-a prodigious work. I know nothing more friking to a traveller than the roads of Languedoc: we have not in England a conception of fuch exertions; they are fplendid and fuperl); and if I could free my mind of the recollection of the unjuft taxation which pays them, I fhould travel with admiration at the magnificence difplayed by the Sates of this province. The police of thefe roads is however execrable-for I fcarcely meet a cart but the driver is afleep in it.

Taking the road to Montpellier, pafs through a pleafing country; and by another immenfe walled caufeway, twelve yards broad and three high, leading clofe to the fea. To Gigean, near Frontignan and Montbafin, fanous for their mulcat wincs. Approach Montpellier ; the environs, for near a leaguc, are delicious, and more highly ornamented than any thing I have feen in France. Villas well built, clean, and contortable, witi every appearance of wealthy owners, are fpread thickly through the country. They are, in general, pretty fquare buildings; fome very large. Montpellier, with the air rather of a great capital than of a provincial town, covers a hill that fwells proudly to the view. But on entering it, you experience a difappointment from narrow, ill-built, crooked Atreets, but full of people, and apparently alive with butinefs; yet there is no confiderable manufacture in the place; the principal are verdigrafe, filk handkerchiefs, blankets, perfumes, imal liqucurs. The great object for a franger to view is the promenade, or fquare, for it partakes of both, called the Perou. There is a magnificent aqueduct on three tiers of arches for fupplying the city with water, from a hill at a confiderable diftance; a very noble work; a cbateau d'cou receives the water in a circular bafon, from which it falls into an external refervoir, to fupply the city, and the jets d'cum that cool the air of a garden below, the whole in a fine fquare confiderably elevated above the furrounding ground, walled in with a balluftracle, and ot'ur mamal decorations, and in the centre a good equeftrian fatue of Louis XIV'.

There

There is an air of real grandeur and magnificence in this ufeful work, that ftruck me more than any thing at Verfailles. The view is alfo fingularly beautiful. To the fouth, the eye wanders with delight over a rich vale, fpread with villas, and terminated by the fea. To the north, a feries of cultivated hills. On one fite, the valt range of the Pyrences trend away tiil lutt in remotenefs. On the other, the eternal fnows of the Alps pierce the clonis. The whele view one of the moft thependous to be feen, when a clear lisy approximates the fe di!tant objects.-- 32 miles.

The evth. The fair of Beacaire fills the whole country with bufinefs and motion; mect many earts loaded; and nine diligences going or coming. Yefterday and to day the hottelt I ever expericneed; we had none like them in Spain-the flies much worfe than the heat. 30 miles.

The 27 th. The amphitheatre of Nifmes is a prodigious work, which fhews how well the Romans had adapted thefe edifices to the abominable ufes to which they were erected The convenience of a theatre that could hold feventeen thoufand fpectators without confufion; the magnitude; the maffive and fubftantial manner in which it is built without mortar, that has withftood the attacks of the weather, and the worfe depredations of the barbarians in the various revolutions of fixteen cencuries, all frike the attention forcibly.

I viewed the Maifon Quarré laft night; again this morning, and twice more in the day; it is beyond all comparifon the moft light, elegant, and pleafing building I ever beheld. Without any magnitude to render it impofing; without any extraordinary magnificence to furprize, it rivets attention. There is a magic harmony in the proportions that charms the eyc. One can fix on no particular part of pre-eminent beauty; it is one perfect whole of fymmetry and grace. What an infatuation in modern architects, that can overlook the chafte and elegant fimplicity of tafte, manifeft in fuch a work, and yet rear fuch piles of laboured foppery and heavinefs as are to be met with in France! The temple of Diana, as it is called, and the ancient baths, with their modern reftoration, and the promenade, form part of the fame feene, and are magnificent decorations of the city. I was, in relation to the baths, in ill luck, for the water was all drawn off, in crder to clean them and the canals. The Roman pavemens are fingularly beautiful, and in high prefervation. My quarters at Nifmes were at the Louvre, a large, commodious, and excellent inn-the houfe was almoft as much a fair from morning to night as Be:ucaire itfelf could be. I dined and fupped at the table d'hote; the cheapnefs of thefe tables fuits my finances, and one fees fomething of the manners of the people; we fat down from twenty to forty at every meal, moft motley companics of French, Italians, Spaniards, and Germans, with a Greek and Armenian; and I was informed, that there is hardly a mation in Europe or Afia, that has not merehants at this great fair, chictly for raw filk, of which many millions in value are fold in fuur days: all the other commodities of the world are to be fiund there.

One circumitance 1 muft remark on this numerous table d'hote, becaufe it has fruck me repeatedly, which is the taciturnity of the rench. I came to the kingdon expe :ing to have ny ears conflanty fatigued with the infinite volubility and fpirits of the people, of which fo many perfons have written, fitting, I fuppofe, by their linglifh firefides. At Mompellier, though fifteen perfons and fome of them ladies were prefent, I found it impofible to make them break their infle: ible filence with more than a monofyllable, and the whole company fat more like an alfembly of tongle-tied quakers, than the mixed compary of a perple famous for loquacity. Hereath, at Nifmes, with a different party at every meal it is the fame; not a Frenchman will open his lips. Todiy at dinncr, hopelds of that nation, and fearing to lofe the wee of an organ they had fi
little inclination to employ, I fixed myfelf by a Spaniard, and having been fo lately in his country, I found him ready to converfe, and tolerably communicative; and indeed we had nowe converfation than thirty other perfons maintained among themfelves.

The e8th. Farly in the morning to the Pont du Gard, through a plain covered with valt plantations of olives to the left, but much wafte rocky land. At the firlt viow of that celebrated aqueduct, I was rather difappointed, having expected femething of greater magnitude; but foon found the crror: I was, on examining it more ncarly, convinced that it poffeffed every quality that ought to make a frong impreffion. It is a llupendous work; the magnitude, and the maflive folidity of the architecture, which may probably endure two or three thoulaind years more, united with the undoubted utility of the undertaking, to give us a high idea of the firit of exertion which exceuted it for the fupply of a provincial town: the furprife, however, maly ceate, when we confider the natiens enflaved that were the workmen.- Returning to Nimes, meet many merchants returing from the fair ; each with a child's drum tied to his cloak-bag: my own little girl was too much in my head not to love then for this mark of attention to their children ;-but why a drum? Have they not had enough of the military in a kingdom, where they are excluded from all the honours, refpect, and emolument, that can flow from the fivord? - I like Nifmes much; and if the inhabitants be at all on a par with the appearance of their city, I thould prefer it for a refidence to moft, if not all the towns I have feen in France. The theatre however, is a capital point, in that Montpellier is faid to exceed it.- 24 miles.
The 2gth. Paffs fix leagues of difagrecable country to Sauve. Vines and olives. The chatemu of Monf. Sabbatier flrikes in this wild country; he has inclofed much with dry walls, planted many mulberries and olives, which are young, thriving, and well inclofed, yet the foil is to flony, that no earth is vifible; fome of his walls are four feet thick, and one of them twelve thick and five high, whence it feems, he thinks moving the flones a neceflary improvement, which I much queftion. Ile has built three or four new farm houfes; 1 luppofe he refides on this eitate for improving it. I bope he does not ferve; that no moon-fhine purfuit may divert him from a conduct honourable to himfelf, and bencficial to his country.-Leaving Sauve, I was much fruck with a large tract of land, feemingly nothing but huge rocks; yet molt of it inclofed and planted with the moft induftrious attention. Every man has an olive, a mulberry, an almond, or a peach-tree, and vines feattered among them; fo that the whole ground is covered with the oddeft mixture of thele plants and bulging rocks, that can be conceived. The inhabitants of this village deferve encouragenent for their indultry; and if I were a French minilter, they fhould have it. They would foon turn all the deferts aromed them into gardens. Such a knot of active hufhandmen, who turn their recks into feenes of fentility, becaufe I fuppofe their own, would do the fame by the waltes, if aminated by the fame ommipotent principle. Dine at St. liyppolite, with cight proteltant morchants returning home to Rouverge, from the fair of Beacaire; as we parted at the fame time, we travelled together; and from their converfation, I learned fome circumflances of which 1 wanted to be informed; they toh me allo, that matiberios extend beyond Vigan, but then, and efpecially about Milhaud, almonds t.:. . their phace, and are in very great quantities.

My Rouverge fiembis pretted me to pals with them to Mithand and Rodez, affuring me, that the cheapuefs of tha ir province was fo great, that it would tempt me to live fome time amongit them. That I might have a houle at Nilhaud, of four tolerable rooms on a door fumfinct, for twelve louis a-year; and live in the utmoft plenty
wiad al my fanily, if I would bring them over, for a hundred louis a-year : that there weremany faniliss of nobleffe, who fubfifted on fity, and even on twenty-five a-year. Such anecdotes of cheapnefs are only curious when confidered in a political light, as contrbuyg on one hand to the welfare of indiviands ; and on the other, as contributing to the proiperity, wealth, and power of the kingdom; if I fhould meet with many fuch intiances, and allo with others directly contrary, it will be neceflary to confiver them more at large- 30 miles.

The 30 th. Going out of Gange, I was furprifal to find by far the greateft exertion in firtation which I had yet feen in France; and then puts by fome fleep mountains, highly cultivated in terraces. Much watering at St. Lamence. The fecnery very interefling to a farmer. From Gauge, to the mountain of wugh ground which I crofed, the ride has ben the moft interelting which I have tak on in France; the eforts of indufiry the moit vigorous; the anmation the mot lively. An activity has been here, that hasfwept away all difficulties before $i t$, and has cloathed the very rocks with verlure. It woull be a difgrace to common fenfe to alk the caute : the enjoyment of property mut have done it. Give a man the fectere pofieflion of a bleak rock, and he will turn it ints a garden; give him a nine year's leale of a garden, and he will convert it intoa defert. To Montadier over a rough mountain covered with box and lavender; it is a bergarly villare, with an auberge that made me almoft fhrink. Some cut-thoon figures were cating black bread. whofe vifages had fo much of the gallies that I thought theard their chains rattle. I looked at their legs, and conld not but imagine they fred no bulinefs to be frec. There is a feccies of countenance to horribly bad, that it is impofible to be millaken in one's reading. I was quite alone, and abfolutely without arms. Till this moment, 1 lad not treamt of carrying piftols: I hould now have been better fatisfied, if I had had them. The matter of the aulberge, who feemed arlt coufin to his guelts, procured for tae fome wretched bread with difficulty, but it was not black.-No meat, no eggs, no legumes, and execrable wine : no corn for my mule; no hay; no ftraw; no grafs : the loaf fortunately was large; I took a picce, and fliced the reft for my four footd Spanifh friemd, who ate it thankfully, but the aubergille grow-lec.- Defeend by a winding and excellent road to Mandieres, where a valt arch is thrown acros the torrent. Pals St. Maurice, and crofs a ruined foreft amongit fragments of trees. Defend three hours, by a moit noble road hewn out of the mountain fide to Lodeve, adirty, unly, iil built town, with crooked clofe flreets, but populous, and very indultrious.-Here I drank excellent light and pleafing white wine, at 5 s. a bot-the.- $3^{6}$ miles.

The 3 ift. Crofs a mountain by a mifcrable road, and reach Beg de Rieux, which fhares wilh Carcaflone, the fabric of L.ondrins, lor the Levant trade. - Crofs much walle to Beziers.-I met to-day widh an inflance of ignorance in a well dreffed French merchant, that furprized me. He had plagued me with abundance of tirefome foolith queflions, and then afked for the third or fourth time what country I was of. I told him I was a Chinefe. How for off is that comotry ? - I reptisd, two hundred leagues. D. ux conts litux! Diable! cgat un grand chenin! The other day a Frenchman alked me, after telliar him I was an linglilhman, if we had trees in lingland? - 1 replied, that we had a few. Liad we any rivers? - Oh, none at all. Als ma foi c'ell bientrifte! This incredible ignorance, whem compared with the knowledge fo univerfally diffeminated in Eingland, is to be attributed, like every thing elfe, to government.——o miles.

Augult i. Leave Beziers, in order io go to Capeftan by the pierced mountain. Crois the canal of Iangucdec feveral times; and over many waftes to Pleraville.

The Pyrenecs now full to the left, and their roots but a few leagues off. At Carcaffonne they carricd me to a fountain of mudly water, and to a gate of the baraacks; but I was better pleafed to fee feveral large good houfes of manufacturers, that hew wealth. - 40 miles.
The 2d. Pafs a confiderable convent, with a loug line of front, and rife to Fanjour. 16 miles.
The 3 d . At Mirepoix they are building a moft magnificent bridge of feven flat arches, each of fixty.four feet fpan, which will coft $1,800,000$ livres, $(78,7501$.); it has been twelve years erecting, and will he finifhed in two morc. The weather for feveral days has been as fine as poflible, but very hot; to-day the heat was fo difagrecable, that I relled from twelve to three at Mirepoix ; and found it fo burning, that it was in effort to go half a quarter of a mile to view the bridge. The myriads of flics were ready to devour me, and I could hardly fupport any light in the room. Riding fatigued me, and 1 enquired for a carriage of fome fort to cary me, while thefe areat heats flould continue; I had done the fame at Carcaffone; but nothing like a cabriolet of any fort was on be had. When it is recollected that that place is one of the moft confideravie manu'acturing towns in France, contaning fifteen thoufand people, and that Mirepoix is fa" from being a mean place, and yet not a voiture of any kind to be had, how will an Englifliman blefs himfelf for the univerfal conveniences that are fpread through his own country, in which 1 believe there is not a town of fifteen hundred people in the kingdon where poft chaifes and able horfes are not to be had at a moment's warning!. Wiat a contraft This confirms the fact deducible from the little traflic on the roads even around Paris itfelf. Circulation is flagnant in France. The heat was fo great that 1 left Mirepoix difordered with it: this was by far the hottef day that I ever felt. The hemifphere feemed almoft in a flame with burning rays that rendered it impofible to turn one's eyes within many degrees of the radiant orb that now blazed in the heavens. - Crofs another fine new bridge of three arches; and come to a woodland, the frit I had feen for a great diftance. Many vines about Pamiers, which is fituated in a beatiful vale, upon a fine river. The place iffelf is ugly, !tinking, and ill built; with an inn!. Adien, Monf. Gafcit; if fate fend me to fuch another houfe as thine - be it an expiation for my fins !- 28 miles.

The 4th. Upon leaving Amons, there is the extraordinary fpectacle of a river iffuing out of a cavern in a mountain of rock; on crofling the hill you fee where it cnters by another cavern.-- It piesces tite mountain. Nioft countrics, however, have inftances of rivers pating under ground. it St. Gerond's $\varepsilon$, (1) the Croix Blanche, the moit execrable receptacle of fihh, vermin, impudence, and impofition that ever exerefed the patience, or wounded the feclings of a traveller. A withered hag, the demon of beaftinels, prefides there. I laid, not refled, in a chamber over a llable, whofe cflluvie through the broken floor were the leat offenfive of the perfumes afforded lyy this hideous place.-It could give me nothing but two thale erese, for which I paid, exclufive of all other charges, zos. Spain brought aothing to my eyes that equalled this fink, from which an Euglifh hog would turn wilh digeut. Biat the inns all the way from Nifmes are wretehed, except at Lodeve, Gange, Carcaltemes, and Nirepois. St. Gerond's mott have, from its appearance, four or five thoutand poople. Pamiers near twice that namber. What can be the circulating cometion betwen fuch maties of people and other towna and countrios, that can be held tegether and fupported lyy fuch iuns? There have been writers who look upon fech obicreations as arifing tacrely from the petulance of travellers, but it fhews their extreme ig.
norance. Such circumftances are political data. We cannot demand all the books of France to be opened in order to explain the amount of circulation in that kingdom; a politician mult therefore collect it from fuch circumftances as he can :ifcertain ; and among thefe, traffic on the great roads, and the conyenience of the honfes prepared for the reception of travellers, tell us both the number and the condition of thote travellers; by which term I chiefly allude to the natives, who move on bufmefs or pleafure from place to place; for if they be not confiderable enough to caute good imes, thofe who come from a diftance will not, which is cvident from the bad accommodations even in the high road from Calais to Rome. On the contrary, go in Ingland to towns that contain fifteen hundred, two thoufand, or three thoulhand people, in lituations abSolutely cut off from all dependence, or almott the expechation of what are properly called travellers, yet you will meet with neat ims, well drefid and clean people kecping them, good furniture, and a refrclling civility ; your fenfos may not be gratificd, but they will not be offended; and if you dem:mi a p it chaie and a pair of horfes, the coll of which is not lefs than 801. in fipite of a havy tax, it will be ready to carry you whither you pleafe. Are no political conclufons to be drawn from this anazing contraft? It proves that fuch a population in Enghand have comections with other places to the amount of fupporting fuch houfes. The friendly clubs of the inhabitants, the vifits of friends and relations, the parties of pleafure, the refort of farmers, the intercourfe with the capital and with other towns, form the fupport of good inns; and n a country where they are not to be found, it is a proof that there is not the fame quantity of motion ; or that it moves by means of lefs wealth, lefs confumption, and lefs enjoyment. In this journey through languedoc, I have palfed an incredible number of iplendid bridges, and many fuperh cauteways. But this only proves the abfurdity and oppreflion of government. Bridges that colt 70 or 80,0001 . and immenfe caufeways to connect towns, that have no better imms than fuch as I have deferibed, appear to be grofs abfurdities. They cannot be made for the mere ufe of the inhabitants, becaufe one-fourth of the expence would anfwer the purpole of real utility. They are therefore objects of public magnificence, and confequently for the eye of travellers. But what traveller, with his perfon furrounded by the beggarly filth of an inn, and with all his fenfes offended, will not condemu fuch inconfiftencies, and will not wifh for more comfort and lefs appearance of fplendour ?-_ 30 miles.

The 5 th. To St. Martory is an almoft uninterrupted range of well inclofed and well cultivated country. - For an hundred milis patt, the women gencraly without floes, even in the towns; and in the country many men allo. - The heat yefterday and to-day as intenfe as it was before : there is no bearing any light in the rooms; alt muft be flut clofe, or none are tolerably cool: in going out of a light roon into a dark one, though both to the north, there is a very fenfitl coolncfs; and out of a dark one into a roofed balcony, is like going into an oven. I have been advifed every day not to ttir till four o'clock. From ten in the morning till five in the afternoon, the heat makes all excrife moft uncomfortable; and the flics are a curce of lisypt. Give me the cold and fogs of leggland, rather than fich a heat, thouldit he latting. The natives, however, affert, that this intenfity has now continued as lourg as it commonly does, namely, four or five days; and that the greatelt part even of the botection montis is much cooler than the weather is at prefent.- In two lundred and filty miles siltant, I have met on the road two cabiolets only, and three mifera' le things like old Finglith one horfe chaifes; not one gentleman; though many merchants as they call thinlelves, wach with two or three cloak bags behind him: a farcity of traveliers that is amazing. 23 miles.
books of rJom ; a din ; and pared for avellers; ure from hofe who ons even to towns tions ab. properly ple keepgratified, § horfes, to carry anazing ith other rabitants, ners, the ans; and the fame tion, and ble numhe abfurimmenfe defcribed, ae inhabia utility. he eye of fith of an d will not

The 6th. To Bagnere de Luchon, rejoining my friends, and not difpleafed to have a little reft in the cool mountains, after fo burning a ride. $\mathbf{2 8}$ mlles.

The 1oth. Finding our party not yet ready to fet out on their return to Paris, I determined to make ufe of the time there was yet to fpare, ten or eleven days, in a tour to Bagnere de Bigorre, to Bayonne, and to meet them on the way to Bourdeaux, at Auch. This being fettled, I mounted my Englifh mare, and took my laft leave of Luchon. - 28 miles.

The 11. Pafs a convent of Bernardine monks, who have a revenue of 30,000 livres. It is fituated in a vale, watered by a charming chryftal ftream, and fome hills, covered with oak, fhelter it behind.-Arrive at Bagnere, which contains little worthy of notice, but it is much frequented by company on account of its waters. To the valley of Campan, of which I had heard great things, and which yet much furpaffed my expectation. It is quite different from all the other vales I have feen in the Pyrenees or in Catalonia. The features and the arrangement novel. In general the richly cultivated flopes of thofe mountains are thickly enclofed; this, on the contrary, is open. The vale itfelf is a flat range of cultivation and watered meadow, fpread thickly with villages and fcattered houfes. The eaftern boundary is a rough, fteep, and rocky mountain, and affords pafturage to goats and fheep; a contraft to the weftern; which forms the fingular feature of the fcene. It is one noble fheet of corn and grafs unenclofed, and interfected only by lines that mark the divifion of properties, or the channels that conduct water from the higher regions for irrigating the lower ones; the whole is one matchlefs flope of the richeft and moft luxuriant vegetation. Here and there are fcattered fome fmall maffes of wood, which chance has grouped with wonderful happinefs for giving variety to the fcene. The feafon of the year, by mixing the rich yellow of ripe corn with the green of the watered meadows, added greatly to the colouring of the landfcape, which is upon the whole the moft exquifite for form and colour that my eye has ever been regaled with. - Take the road to Lourde, where is a caftle on a rock, garrifoned for the mere purpofe of keeping ftate prifoners, fent hither by lettres de cachet. Seven or eight are known to be here at prefent ; thirty have been here at a time; and many for life-torn by the relentlefs hand of jealous tyranny from the bofom of domeftic comfort; from wives, children, friends, and hurried for crimes unknown to themfelves-more probably for virtues-to languifh in this detefted abode of mifery-and die of defpair. Oh, liberty ! liberty !-and yet this is the mildeft government of any confiderable country in Europe, our own excepted. The difpenfations of Providence feem to have permitted the human race to exift only as the prey of tyrants, as it has made pigeons for the prey of hawks.- 35 miles.

The 12 th. Pau is a confiderable town, that has a parliament and a linen manufacture; but it is more famous for being the birth-place of Henry IV. I viewed the caftle, and was fhewn, as all travellers are, the room in which that amiable prince was born, and the cradle, the fhell of a tortoife, in which he was nurfed. What an effed on pofterity have great and diftinguifhed talents! This is a confiderable town, but I queftion whether any thing would ever carry a ftranger to it but its poffeffing the cradle of a favourite character.

Take the road to Moneng, and come prefently to a fcene which was fo new to me in France, that I could hardly believe my own eyes. A fucceffion of many well-built, tight, and comfortable farming cottages, built of fone, and covered with tiles; each having its little garden, enclofed by clipt thorn edges, with plenty of peach and other fruit-trees, fome fine oaks fcattered in the hedges, and young trees nurfed up with fo much care, that nothing but the foftering attention of the owner could effect any thing vol. iv. R like
like it. To every hoafe belongs a farm, perfectly well enclofed, with grafs borders mown and neatly kept around the corn fields, with gates to pafs from one enclofure to another. The inen are all dreffed with red caps, like the 1lighlanders of Scotland. There are fome parts of England (where funall yeomen fill remain) that refemble this country of Bearne; but we have very little that is equal to what I have feen in this ride of twelve miles from Pau to Moneng. It is all in the hands of little proprictors, without the farms being fo fmall as to occafion a vicions and miterable population. An air of neamefs, warmth, and comfort breathes over the whole. It is vifihit in their new-built houles and trables; in their litte gardens; in their hedges; in the courts before their doors; cven in the coops for their poultry, and the flies for their horgs. A peafant does not think of rendering his pig comfortable, if his own happinets hang by the thread of a nine years leafe. We are now in Bearne, within a few miks of the cradle of Henrv IV. Do thev inherit thefe bleffings from that good priace? The benignant genius of that good monarch feems to reign fill over the country; each peafant has the fowl in the pot.- 34 miles.

The 12 th. The agrecable fcene of yefterday continues; many fimall properties, and every appearance of rural happinefs. Navareen is a fmall walled and fortificd town, confifing of three principal ftreets, which crofs at rieht angles, with a fmall fquare. From the ramparts there is the view of a fine country. The linen fabric fpreads througin it. To St. Palais the country is moflly inclofed, and much of it with thorn hedges, ad. mirably trained, and kept neatly clipped. - 25 miles.

The 14th. Left St. Palais, and took a guide to conduct me four leagues to Anfpan. Fair day, and the place crowded with farmers; I faw the foup prepared for what we fhould call the farmer's ordinary. 'There was a mountain of ficed bread, the colour of which was not inviting; ample provifion of cabbage, greafe, and water, and about as much meat for fome ficores of people, as half a dozen Englifh farmers would have eaten, and grumbled at their hoft for fort commons.- 26 miles.

The 15 th. Bayonne is by much the prettieft town I have feen in France; the houfes are not only well built of flone, but the freets are wide, and there are many openings which, though not regular fquares, have a good effect. The river is broad, and many of the houfes being fronted to it, the view of thems from the bridge is fine. The promenade is charming; it has many rows of trees, whofe heads join and form a thate delicious in this hot climate. In the evening, it was thronged with well drefled people of both fexes; and the women, through all the country, are the bandfonelt I have feen in France. In coming hither from Pau, I faw what is very rare in that kingdom, clean and pretty country girls; in moft of the provinces, hard labour deftroys both perfon and complexion. The bloom of health on the checks of a well dreffed country girl is not the worlt fcature in any landfcape. I hired a chaloup for viewing the embarkment at the mouth of the river. By the water fpreading iffelf too much, the harbour was injured; and government to contract it, has built a wall on the north bank a mile long, and another on the fouth fhore of half in length. It is from ten to twentr feet wide, and about twelve high, from the top of the bale of rough ftone, which ex. tends twelve or fifteen feet more. Towards the mouth of the harbour, it is twemy feet wide, and the fones on both fides crampt together with irons. They are now driving piles of pine fixteen fect deep, for the foundation. It is on the whole, a work of great expence, magnificence, and utility.

The 16th. To Dax is not the beft way to Auch, but I had a mind to fee the famous wafte called Les Landes de Bourdeaux, of which 1 had long heard and read fo much. I was informed, that by this route, I fhould pafs through more than twelve leagues of theu.

them. They reach almoft to the gates of Bayonne; but broken by cultivated fpots for a league or two. Thefe landes are fandy tracts covered with pine trees, cut regularly for refin. Hiftorians report, that when the Moors were expelled from Spain, they applied to the court of France for leave to fettle on and cultivate thefe landes; and that the court was much condemned for refufing them. It feems to have been taken for granted, that they could not be peopled with French; and therefore ought rather to be given to Moors, than to be left wafte- At Dax, there is a remarkably hot fpring in the middle of the town. It is a very fine one, bubbling powerfully out of the ground in a large bafon, walled in; it is boiling hot; it taftes like common water, and I was told that it was not impregnated with any mineral. The only ufe to which it is applied is for wafling linen. It is at all feafons of the fame heat, and in the fame quan-tity- 27 miles.

The 19th. Pafs a diftrict of fand as white as fnow, and fo loofe as to blow; yet it has oaks two feet in diameter, by reafon of a bottom of white adhefive earth like marl. Pafs three rivers, the waters of which might be applied in irrigation, yet no ufe made of them. The Duke de Bouillon has vaft poffefions in thefe lands. A Grand Seigneur will at any time, and in any country, explain the reafon of improveable land being left wafte. -29 miles.

The 18 th. As dearnefs is, in my opinion, the general feature of all money exchanges in France, it is but candid to note inflances to the contrary. At Airé, they gave me, at the Croix d'Or, foup, cels, fweet-bread, and green peas, a pigeon, a chicken, and veal cutlets, with a defert of bifcuits, peaches, nectarines, plums, and a glafs of liqueur, with a bottle of good wine, all for $4 \%$. (20d.) oats for my mare $20 \%$. and hay 10. At the fame price at St. Severe, I had a fupper laft night not inferior to it. Every thing at Airé feemed good and clean; and what is very uncommon, I had a parlour to eat my dinner in, and was attended by a neat well dreffed girl. The laft two hours to Airé it rained fo violently, that my filk furtout was an infufficient defence; and the old landlady was in no hafte to give me fire enough to be dried. 35 miles.

The 19 th. Pafs Beek, which feems a flourifhing little place, if we may judge by the building of new houfes. The Clef d'Or is a large, new, and good inn.

In the two hundred and feventy miles from Bagnere de Luchon to Auch, a general obfervation I may make is, that the whole, with very few exceptions, is inclofed; and that the farm-houfes are every where fcattered, inftead of being, as in many parts of France, colle Cted in towns. I have feen fcarcely any gentlemen's country-feats that feem at all modern; and in general, they are thin to a furprifing degree. I have not met with one country equipage, nor any thing like a gentleman riding to fee a neighbour. Scarcely a gentleman at all. At Auch, met by appointment my friends, on their return to Paris. The town is almoft without manufactures or commerce, and is fupported chicfly by the rents of the country. But they have many of the nobleffe in the province, too poor to live here; fome indeed fo poor that they plough their own fields; and thefe may poffibly be much more eftimable members of iociety than the fools and knaves who laugh at them.- 31 miles.

The 20 h. Pafs Fleuran, which contains many good houfes, and go through a populous country to Ieitour, a bifhoprick, the diocefan of which we left at Bagnere de Luchon. The fituation is beautiful on the point of a ridge of hills. 20 miles.

The 22d. By Leyrac, through a fine country, to the Garonne, which we crofs by a ferry. This river is here a quarter of a mile broad, with every appearance of com-
merce. A large barge paffed loaded with cages of poultry; of fuch confequence throughout the extent of this navigation is the confumption of the great city of Bourdeaux! The rich vale continues to Agen, and is very highly cultivated; but has not the beauty of the environs of Leitour. If new buildings be a criterion of the flourifhing ftate of a place, Agen profpers. The bifhop has raifed a magnificent palace, the centre of which is in a good tafte; but the junction with the wings not equally happy.23 miles.

The 23d. Pafs a rich and highly cultivated vale to Aguillon; much hemp, and every woman in the country enployed on it. Many neat well-built farm-houfes on fmall properties, and all the country very populous. View the chateau of the Duc d'Aguillon, which, being in the town, is badly fituated, according to all rural ideas; but a town is ever an accompaniment of a chateau in France, as it was formerly in inoft parts of Europe ; it feems to have refulted from a feudal arrangement, that the Grand Seigneur might kecp his llaves the ncarer to his call, as a man builds his fables near his houfe. This edifice is a confiderable one, built by the prefent duke; begun about twenty years ago, when he was exiled here during eight years. And, thanks to that banifhment, the building went on nobly; the body of the houfe done, and the detached wings almoft finified. But as foon as the fentence was reverfed, the duke went to Paris, and has not been here fince, confequently all now ftands fill. It is thus that banifhment alone will force the French nobility to execute what the Englifh do for plea-fure-refide upon and adorn their eftates. There is one magnificent circumftance, namely, an elegant and fpacious theatre; it fills one of the wings. The orcheftra is for twenty four muficians, the number kept, fed, and paid, by the duke when here. This elegant and agreeable luxury, which falls within the compafs of a very large fortune, is known in every country in Europe except England; the poffeffors of great eftates here preferring horfes and dogs very much before any entertainmént a theatre can yield. To Tonnance.-- 25 miles.

The 24th. Many new and good country feats of gentlemen, well built, and fet off with gardens, plantations, \&\&c. Thefe are the effects of the wealth of Bourdeaux. Thefe people, like other Frenchmen, eat little meat; in the town of Leyrac, five oxen only are killed in a year; whereas an Englifh town, with the fame population, would confume two or three oxen a wcek. A noble view towards Bourdeaux for many leagues, the river appearing in four or five places. Reach Langon, and drink of its excellent white wine.-- 32 miles.

The 2 th. Pafs through Barfac, famous alfo for its wines. They are now ploughing with oxen between the rows of the vines, the operation which gave Tull the idea of horfe-hoeing corn. Great population, and country feats all the way. At Caftres the country changes to an uninterefting flat. Arrive at Bourdeaux, through a continued village. - 30 miles.

The 26. Much as I had read and heard of the commerce, wealth, and magnificence of this city, they greatly furpaffed my expectations. Paris did not anfwer at all, for it is not to be compared to London; but we muft not name Liverpool in competition with Bourdeaux. The grand feature here, of which I had heard moft, anfwers the leaft; I mean the quay, which is refpectable only for length, and its quantity of bufinefs, neither of which, to the eye of a ftranger, is of much confequence, if devoid of beauty. The row of houfes is regular, but without either magnificence or beauty. It is a dirty, lloping, muddy fhore; parts without pavement, incumbered with filth and atones; barges lie here for loading and unloading the fhips, which cannot approach to what flould be a quay. Here is all the dirt and difagreeable circumftances of trade,

## Ifequence

 of Boarit has not ourihing the cen-ppy.mp, and zoufes on the Duc deas ; but in moft he Grand bles near ;un about ks to that te detache went to thus that for pleaamftance, cheftra is hen here. large fors of great a theatread fet off purdeaux. five oxen n , would for many nk of its
plough the idea c Caftres a conti-
without the order, arrangement, and magnificence of a quay. Barcelona is unique in this refpect. When I prefumed to find fault with the buildings, the river, it muft not be fuppofed that I include the whole; the crefcent which is in . fame line is better. The place royale, with the ftatue of Louis XV. in the middle, is a fine opening, and the buildings which form it regular and handfome. But the quarter of the chapeau rouge is truly magnificent, confifting of noble houfes, built, like the reft of the city, of white hewn ftone. It joins the chateau trompette, which occupies near half a mile of the fhore. This fort is bought of the king, by a company of ipeculators, who are now pulling it down with an intention of building a fine fquare and many new ftreets, to the amount of 1800 houfes. I have feen a defign of the fquare and the ftreets, and it would, if executed, be one of the moft fplendid additions to a city that is to be feen in Europe. This great work flands fill at prefent through a fear of refumptions. The theatre, built about ten or twelve years ago, is by far the moft magnificent in France. I have feen nothing that approaches it. The building is infulated, and fills up a face of three hundred and fix feet by one hundred and fixty-five, one end being the principal front, containing a portico the whole length of it, of twelve very large Corinthian columns. The entrance from this portico is by a noble veftibule, which leads not only to the different parts of the theatre, but alfo to an elegant oval concert-room, and faloons for walking and refrefhments. The theatre itfelf is of a vaff fize; in thape the fegment of an oval. The eftablifhment of actors, actreffes, fingers, dancers, orcheftra, \&c. fpeaks the wealth and luxury of the place. I have been affured, that from thirty to fifty louis a night have been paid to a favourite actrefs from Paris. Larrive, the firft tragic actor of that capital, is now here, at 500 livres ( 211.12 s .6 d. ) a night, with two benefits. Dauberval, the dancer, and his wife (the Mademoifelle 'Theodore of London) are retained as principal ballet-mafter and firf female dancer, at a falary of 28,000 livres ( $\mathbf{1 2 2} 5 \mathrm{l}$ ). Pieces are performed every night, Sundays not excepted, as every where in France. The mode of living that takes place here among merchants is highly luxurious. Their houfes and eftablifhments are on expenfive fcales. Great entertainments, and many ferved on plate: high play is a much worfe thing; - and the fcandalous chronicle fpeaks of merchants keeping the dancing and finging girls of the theatre at falaries which ought to inport no good to their credit. This theatre, which does fo much honour to the pleafures of Bourdeaux, was raifed at the expence of the town, and coft 270,000 . The new tide corn mill, erected by a company, is very well worth viewing. A large canal is digged and formed in mafonry of hewn ftone, the walls four feet thick, leading under the building for the tide coming in, to turn the water wheels. It is then conducted in other equally well form. ed canals to a refervoir; and when the tide returns it gives motion to the wheels again. Three of thefe canals pafs under the building for containing twenty-four pairs of fones. Every part of the work is on a fcale of folidity and duration, admirably executed. The eftimate of the expence is $8,000,000$ liver ( $350,000 \mathrm{l}$.) ; but I know not how th credit fuch a fum. How far the erection of fleam engines to do the lame bufinefs would have been found a cheaper method, I fhall not enquire; but I thould apprehend that the common water-miils on the Garonne, which flart without fuch enormous expences for their power, muft in the common courle of events ruin this company. The new houfes that are building in all quarters of the town, mark, too clearly to he mifundertood, the profperity of the place. The fkirts are every where compofed of new ftreets; with ftill newer ones marked out, and partly built. Thefe houfes are in general fmall, or on a middling feale, for inferior tradefmen. They are all of white fone, and add, as they are finifhed, much to the benty of the city. I enquired into

the.

the date of thefe new frreets, and found that four or five years were in general the period: that is to fay, fince the peace; and from the colour of the fone of thofe ftreets next in age, it is plain that the fpirit of building was at a fop during the war. Since the peace they have gone on with great activity. What'a fatire on the government of the two kingdons, to permit in one the prejudices of manufacturers and nerchants, and in the other the infidious policy of an ambitious court, to hurry the two nations into wars that check beneficial works, and fpread ruin where private exertion was bufied in deeds of profperity! The rent of houles and lodgings riles every day; they comphain that the expences of living have increafed in ten years full thirty per cout. There can hardly be a clearer proof of an advance in profperity.

The comnercial treaty with England beiug a fubject too interefting not to demand attention, we made the neceflary enquiries. Here it is contidered as a wife meafure, that tends equally to the benefit of both countries.

We went twice to fee Larrive perforn, his two capital parts of the Black Prince in Monf. du Belloy's Piere le Cruel, and Philoctete, which gave me a very high idea of the French Theatre. 'The inus at this city are excellent; the hotel d'Angleterre and the Prince of Afturias; at the latter we found every accommodation to be wifhed, but with an inconfiftence that cannot be too much condemned: we had very elegant apartments, and were ferved on plate, yet the neceflary-houfe the fane tempic of abomination that is to be met in a dirty village.

The 28th. Leave Bourdeaux ; crofs the river by a ferry, which employs twenty-nine men and fifteen boats, and lets at 18,000 livres ( 787 l .) a year. The view of the Garonne is very fine, appearing twice as broad as the Thames at London; and the number of large fhips lying in it, makes it, I fuppofe, the richeft water view that France has to boaf. Hence to the Dordonne, a noble river, though much inferior to the Garonne; the ferry lets at 6000 livres. Reach Cavignac.-20 miles.

The 2gth. To Barbefieux, fituated in a beautiful country, finely diverffied and wooded; the marquifate, of which, with the chateau, belongs to the Duketc la Rochefoucald, whom we met here; he inherits this eftate from the famous Louvois, the minifter of Louis XIV. In thefe thirty-feven miles of country, lying between the great rivers Garonne, Dordonne, and Charente, and confequently in one of the beft parts of France for markets, the quantity of wafte land is furprifing; it is indeed the predominant feature. Much of thefe wattes belonged to the Prince de Soubife, who would not fell any part of them. Thus it is whenever you flumble on a Grand Scigneur, even one who was worth millions, you are fure to find his property a defert. The Duke of Bouillon's and this Prince's are two of the greateft properties in France ; and all the figns I have yet feen of their greatnefs, are wafles, landes, deferts, fern, ling-Go to their refidence, whercver it may be, and you would probably find them in the midlt of a foreft, very well peopled with deer, wild boars, and wolves. Oh! if I were the legiflator of France for a day, I would make fuch great lords tkip * ! We fupped with the Duke de la Rochcfoucauld ; the provincial affembly of Saintonge is foon to meet, and this nobleman, being the prefident, is waiting for their affemblag.

The 30 h. Through a chalk country, well wooded, though without inclofures, to Angouleme; the approach to that town is fine; the country around being beautiful with the fine river Cbarente, here navigable, flowing through it.-25 miles.
The 3 Ift. Quitting Angoulème, pafs through a country almoft covered with vines, and acrofs a noble wood belonging to the Duchefs d'Anville, mother of the Duke de ta

[^3]Rochefoucauld,

Rochefoucauld, to Verteul, a chateau of the fane lady, built in 1459, where we fomm every thing that travellers could wih in a hofpitable manfion. 'The Emperor Charles V. was entertained here by Anme de Polignac, widow of Francis II. Count de la Rochefoucauld. and that Prince, faid aloud "n'avoir jamais éte en maifon qui fontit miens fo grande vertu bonuetete ${ }^{\text {o }}$ seigneurie que cella la."-lt is excellently kept; in thorough repair, fully furnifhed, and all in order, which merits praife, confidering that the family rarely are here for more than a few days in a year, having many other and more contiderable feals in different parts of the kingdom. If this juft attention to the interefts of pollerity were more general, we flould not fee the melancholy fpectacle of ruined chateaus in fo many parts of lirance. In the gallery is a range of portraits from the tenth century; by one of which it appeara, that this eflate came by a Mademoifelle la Rochefoucauld, in 1470 . The park, woods, and river Charente here are fine: the laft abounds greatly in carp, tench, and perch. It is at any time eafy to get from fifty to one hundred brace of filh that weigh from three to ten pound each: we had a brace of carp for fupper, the fwectelt without exception, I ever tafted. If I pitched my tent in France, I fhould choofe it to be by a river that gave fuch fifh. Nothing provokes one fo much in a country refidence as a lake, a river, or the fea within view of the windows, and a dinner every day without fifh, which is fo common in England.- 27 miles.

Scptember ift. P'alis Caudec, Ruffec, Maifons-Blanches, and Chaunay. At the firft of there places, view a very fine flour.mill built by the late Count de Broglio, brother of the Marcchal de Broglio, one of the ablefl and mont active officers in the French fervie. In his private capacity, his undertakings were of a national kind; this mill, an iron forge, and the project of a navigation, proved that he had a difpofition for every exertion that could, according to the prevalent ideas of the times, bencfit his country; that is to fay, in every way except the one in which it would have been effective-practical agriculture. This day's journey has been, with fome exceptions, through a poor, dull, and difagreeable country.- 35 miles.

The 2d. Puitou, from what I fee of it, is an unimproved, poor, and ugly country.. It feems to want communication, demand, and activity of all kinds; nor does it, on an average, yield the half of what it might. The lower part of the province is much richer and better. Arrive at Poitiers, which is one of the worlt built towns I have feen in France; very large and irregular, and comaining fearcely any thing worthy of notice, except the cathedra!, which is well built, aud very well kept. The finelt thing by far in the town is the promenade, which is the molt extenfive I bave feen; it occupies a coufiderable fpace of ground, with gravelled walks, \&cc. excellently kept.-12 miles.

The $3^{d}$. A white chalky country to Chateaurault, open, and thinly peopled, though not without country feats. 'That town has fome animation, by reafon of its navigable river, which falls into the Loire. There is a confiderable cutlery manufature: we were no fooner arrived, than our apartment was full of the wives ant daughters of manufacturers, each with her box of knives, fciflars, toys, \&c and with fo much civil folicitude to have fomething hought, that had we wanted nothing it would have been impoffible to let fo much urgency prove vain. It is remarkable, as the fabrics made here are cheap, that there is tcatcely any diviion of labour in this manufacture; it is in the hands of diflinct and uncomneted workmen, who go through every branch on their. own account, and widhout alfiflance, except from their families.- 25 miles.

The 4 th. Pafs a tetter country, with many chateaus, to Les Ormes, where we ftopt to fee the feat built by the late Count de Voyer d'Argenfon. This chateau is a large handfome edifice of itone, with two very confiderable wings for offices and ftrangers' apartments : the entrance is into a neat veltibule, at the end of which is the faloon, a circular
circular marble roon, extremely elegant and well furnifhed: in the drawing room are paintings of the four French victories of the war of 1744 : in every apartment there is a ftrong difpofition to Englifh furniture and modes. This pleafing refidence belongs at prefent to the Count d'Argenfon. The late Count who built it formed with the prelent Duke of Grafton, in England, the fcheme of a very agreeable party. The Duke was to go over with his horfes and pack of fox hounds, and live here for fome months, with a number of friends. It originated in the propofal to hunt French wolves with Englifh fox-dogs. Nothing could be better planned than the fcheme, for I.es Ormes is large enough to have contained a numerous party; but the Count's death deftroyed the plan. This is a fort of intercourfe between the nobility of two kingdoms, which I am fiurprifed does not take place fometimes; it would vary the common fcenes of life very agrecably, and be productive of fome of the advantages of travelling in the molt eligible way. - 23 miles.

The 5 th. Through a dead flat and unpleafant country, but on the fineft road I have feen in France-nor does it feem poffible that any fhould be finer; not arifing from great exertions, as in Languedoc, but from being laid flat with admirable materials. Chateaus are fcattered every where in this part of 'louraine; but farm houles and cottages thin, till you come in fight of the Loire, the banks of which feem one continued village. The vale through which that river flows, may be three miles over; a dead level of burnt ruffet meadow.

The entrance of Tours is truly magnificent, by a new ftreet of large houfes. built of hewn white fone, with regular fronts. This fine flreet, which is wide, and with foot pavements on each fide, is cut in a ftrait line through the whole city to the new bridge, of fifteen flat arches, each of feventy-five fect fpan. It is altogether a noble exertion for the decoration of a provincial town. Some houfes remain yet to be built, the fronts of which are done ; fome reverend fathers are fatisfied with their old habitations, and do not choofe the expence of filling up the elegant defign of the Tours projectors; they ought, however, to be unroofted if they will not comply, for fronts without houfes behind them have a ridiculous appearance. From the tower of the cathedral there is an extenfive view of the adjacent country; but the Loire, for fo confiderable a river, and for being boafted as the moft beautiful in Europe, exhibits fuch a breadth of fhoals and fands as to be almoft fubverfive of beauty. In the chapel of the old palace of Louis XI. Les Pleffis les Tours, are three pictures which deferve the traveller's notice; a holy family, St. Catharine, and the daughter of Herod; they feem to be of the beft age of Italian art. There is a very fine promenade here; long and admirably thaded by four rows of noble and lofty elms, which for fhelter againft a burning fun can have no fuperior; parallel with it is another on the rampart of the old walls, which looks down on the adjacent gardens; but thefe walks, of which the inhabitants have long boafted, are at prefent objects of melancholy; the corporation has offered the trees to fale, and 1 was affured they would be cut down the enfuing winter.- One would not wonder at an Englifh corporation facrificing the ladies' walk for plenty of turtle, venifon, and madeira; but that a French one fhould have fo little gallantry, is inexcufable.

The gth. The Count de la Rochefoucauld having a feverifh complaint when he arrived here, which prevented our procceding on the journey, it became the fecond day a confirmed fever; the beft phyfician of the place was called in, whofe conduct I liked much, for he had recourfe to very litte phylick, but much attention to keep his apartment cool and airy ; and feemed to have great confidence in leaving nature to throw off the malady that oppreffed her. Who is it that fays there is a great difference between a good phyfician and a bad one; yet very little between a good one and none at all?

Aninng other excurfion, I took a ride on the banks of the Loire fowards Saumur, and found the country the fame as near 'Tours; but the chateaus not fo numerous or good. Where the chalk hills advance perpendicularly towarts the river, they prefent a moll fungular fipectacle of uncommon habitations; for a great momber of houfes are cut out of the white rock, fronted with mafonry, and holes cut above for chimines, fo that you fometimes know not where the houfe is from which you fee the fmoke ifining. Thefe cavern-houfes are in fone places in tiers one ahove another. Some with little feraps of gardens have a pretty effect. In general, the proprietors occupy them; but many are let at 10,12 , and 15 lives a year. The people I talke! with fermed well fansfied with their habitations, as good and comfortable: a proof of the drynefs of the climate. In bingland the sheminatifm would be the chief inhabitant. Walked to the Benediétine convent of Marmoutier, of which the Cardinal de Rohan, at prefent here, is abbet.
The roth. Nature, or the Tours doctor, having recovered the Count, we fet forward ons our journey. The road to Chanteloup is made on an embankment, that fecures a large level tract from floods. The country more uninterelling than I could have thought it poffible in the vicinity of a great river. - View (hanteloup, the mag. ficent feat of the late Duke de Choifrul. It is fituated on a rifing ground, at fome dillance from the I.oire, which in winter, or after great floods, is a fine object, but at prefont is fearcely feen. The ground.foor in frout confifts of feven rooms: the diwing-room of about thirt; by twents, and the drawing room thirty by thirty three: the library is feveaty-two by twenty, fitted up by the prefent poffefor, the Duke de Pomhicure, with very beautiful tapeltry from the Gobelins.-In the pleafurepromed, on a hill commanding a very extenfive profpect, is a Chinefe pagoda, one hundred and twenty fect high, built by the duke, in commemoration of the perfons who vifited him in his exilc. On the walls of the firf rom in it their names are engraven on marble tablets. The number and rank of the perfons do honour to the duke and to themfelves. The itea was a happy onc. The forelt you look down on from this building is very extenfive; they fay deven leagues acrofs: ridings are cut pointing to the pagola; and when the duke was alive, thefe glades had the mifchievous animation of a vall hunt, fippored fo liberally as to ruin the mafler of it, and tansterred the property of this noble eftate and refidence from his fanily to the laft hands I fhould with to fee it in-a prince of the blond. Great lords love too much an conviron of forells, boars, and hameflenc, inilead of marking their refidence by the accompaniment of neat and well cultivated farme, clean cottages, and happy peafants. In fuch a method of thewing their magnificence, rearing forefts, gilding domes, or bidding afpiring columns rilic, might be wanted; but they would have, inftead of them, erections of confort, eflablifments of eafe, and plantations of felicity: and their havelt, inftead of the flefh of boars, would be in the voice of cheerful grati-sude-lhy would fer public profperity fominn on its beft bafis of private happinefs. ... As a farmer, there is one fiture which fows the Duke de Choifeul had fome merit: le built a noble cow-houle; a platform leads along the middle, between two rows of mangers, with dalls fir feruty-two, and another aparment, not fo large, for others, and for calves. 16 imponted one hundred and twemty very fine Swifs cows, and vififed the wint: his company every day, as they were kept conftantly tied up. To this I may add the belt buils theephoufe I have feen in lrance: and I thought if faw from She pageda part of the farm better laid out and ploughed than common in the country, fi that he probably impoted fome ploughmen. - 'This has merit in it ; but it was all the morit of hatifment. Chanteloup would neither have been built, nor decorated, vol. 1 w .
nor furnifhed, if the duke had not been exiled. It was the fane with the Duke d'is guillon. Thefe minifters would have abominated the country, inftead of rearing fuch edifices, or forming fuch eftablifhments, if they had not both been fent from Verfailles. View the manufacture of feel at Amboife, eftablifhed by the Duke de Choifeul. Vineyards the chicf feature of agriculture.- 37 miles.

The inth. To Blois, an old town, prettily fituated on the Loire, with a good ftone bridge of eleven arches. We viewed the cafte, for the hiftorical monument it affords that has rendered it fo famous. They fhew the room where the council attembled, and the chimney in it before which the Duke of Guife was ftanding when the king's page came to demand his prefence in the royal clofet : the door he was entering when Itabbed: the tapeltry he was in the at of turning afide: the tower where his brother the cardinal fuftered; with a hole in the floor into the dungeon of Louis XI. of which the guide tells many horrible Rories, in the lame tone, from having told them fo often, ia which the fellow in Weftminiter Abbey gives his monotonous hiltory of the tombs. The beft circumftance attending the view of the fpots, or the walls within which great, daring, or important actions have been performed, is the impretfion they make on the mind, or rather on the heart of the fpectator, for it is an emotion of feeling, rather than an effort of reflection. The murders; or political executions perpetrated in this cafle, though not uninterefling, were inflicted on, and caufed by men who command neither our love, nor our vencration. The character of the period, and of the men that figured in it, were alike diffulting. Bigotry and ambition, equally dark, infidious, and bloody, allow no feelings of regret. Quit the Loire, and pats to Chambord. 'I he quantity of vines is great; they bave them very flourifhing on a flat poor blowing fand. How well fatisfied would my friend Le Blanc be if his pooreft fands at Cavenham gave him a hundred dozen of good wine per acte per amum! Sce at one coup d'ail two thoufand acres of them. View the royal chateau of Chambord, built by that magnificent prince Francis 1. and inhabited by the late Marechal de Saxe. I had heard much of this cafte, and it more than anfwered my expectation. It gives a great idea of the fplendour of that prince. Comparing the centuries, and the revenues of Louis XIV. and Francis I. I prefer Chambord infinitely to Verfailles. The apartments are large, numerous, and well contrived. I admired the fone fair-cafe in the centre of the houfe, which, being in a double fpiral tine, contains two ditinct flair-cafes, one above another, by which means people are going up and down at the fame time, without feeng each other. The four apartments in the attic, with arched flone roofs, were in no mean talte. One of thefe Count Saxe turned into a neat well contrived theatre. We were thewa the apartment which that great foldier occupied, and the room in which he died. Whether in his bed or not is yet a problem for ancedote hunters to folse. $\Lambda$ report not uncommon in France was, that he was run through the heart in a duel with the Prince of Comi, who came to Chambord for that purpofe; and great care was taken to comeed $i$ from the kin; (Louis XV.), who had fuch a friendthip for the marechal, that he would certainly have driven the prince out of the kingdom. There are fevera aparments modernize , sither for the matechal or for the governors that have refided herefiace. In one there is a fine picture of Louis XIV. on horfeback. Near the call: are the barracks for the reginent of fiften handred horfe, formed by Marechal de Sase, and which Louis XV. gave him, by appointing then to garifon Chambord white their colonel mate it his refidence. He lived here ingreat fpleadour, and highly refpected by has fovercign, and the whole kingdom. - The tituation of the caltle is bad; it is low, and without the leaft profpect that is intereiting; indeed the whole country is fo flat that a high
ground is hardly to be found in it. From the battlements we faw the environs, of which the park or foreft forms three-fourths; it contains within a wall about twenty thoufand arpents, and abounds with all forts of game to a degree of profufion. Creat tracks of this park are wafte or under heath, \&c. or at leaft a very imperfect cultivation ; I could not help thinking, that if the King of France ever formed the idea of eftablifling one complete and perfect farm under the turnip culture of England, here is the place for it. Let him affign the chateau for the refidence of the direcior and all his attendants ; and the barracks, which are now applied to no ufe whatever, for flalls for cattle, and the profits of the wood would be fufficient to flock and fupport the whole undertaking. What comparifon between the utility of fucla an ellablifhment, and that of a much greater cexpence applied here at prefent for fupporting a wretched haras (ftud), which has not a tendency but to mifchief! I may recommend fuch agricultural eftablifhments, but they never were made in any country, and never will be, till mankind are governed on principles abfolutely contrary to thofe which prevail at prefent-until fomething more be thoucht requinte for a national hufbandry than academies and memoirs.- 35 miles.

The 12 th. In two mils from the park wall regain the high road on the Loirc. In difcourfe with a vigneron, we were informed that it froze this morning hard enough to damage the vines; and I may obferve, that for four or five days paft the weather has been conftantly clear, with a bright fun, and fo cold a north-eaft wind as to refemble much our cold clear weather in England in April; we have all our great coats on the whole day. Dine at Clarey, and view the monument of that able but bloody tyrant Louis XI. in white marble; he is reprefented in a knceling pofture, praying forgivenefs, I fuppofe, which doubilefs was promifed him by his priefts for his bafeneffes and his murders. Reach Orleans- 30 miles.

The $3^{\text {th }}$. Here my companions wanting to return as foon as poffibe to Paris, took the direct road thither; but, having travelled it before, I preferred that by Petivier in the way to Fontambleau. One motive for my taking this road was its paffing by Denainvillicrs, the frat of the late celebrated Monf. du Hamel, where he made thofe experiments in agriculture which he has recited in many of his works. At Petivier I was juft by it and walked thither for the pleafure of viewing grounds I had read of fo ofter, confidering them with a fort of claffic reverence. His bomme d'affaire, who conducted the farm leing deat, I could not get many particulars to be depended upon. Monf. Fongeroux, the prefent polfeffor, was not at home, or I fhould doubtlefs have had all the information I wifhed. I examined the foil, a principal point in all experiments, when conclufions are to be drawn from them; and I took alfo notes of the common hufbandry. Learing from the labourer who attended me that the drill-ploughs, \&c. were yet in being, on a loft in one of the offices, I viewed them with pleafure, and found them, as well as I can remember, very accurately reprefented in the plates which :hcir ingenious author has given. I was ghad to find them laid up in a place out of common traflic, where they may remain fafe till fome other farming traveller, as enthufialtic as myelf, may view the vencrable remains of a ufeful genius. Here is a fove and bath for drying wheat, which he has deferibed allo. In an inclofure behind the houfe is a plantation of various curious cxotic trees, finely grown, alfo feveral rows of afh, elm, and poplar along the roads, near the chateau, all planted by Monf. du Hamel. It gave me ftill greater pleafure to find that Denainvilliers is not an inconfider:able eftate. The lands extenfive; the chatcau refpectable; with offices, gardens, \&c. that prove it the refidence of a man of fortune: frem which it appears, that this indefatigable author, however he might have failed in forn of lis purfuits,
met with that reward from his court which did it credit to beftow; and that he was not, like others, left in obfcuity to the fimple rewards which ingenuity can confer on itfelf. Four miles before Malfherbs a fine plantation of a row of trees on each fide the roal begins, formed by Monf. de Malfherbs, and is a friking inftance of attention to the decorating of an open country. More than two miles of them are mulberries. They join his other noble plantations at Malfherbs, which contain a great variety of the moft curious trees that have been introduced in France.- 36 miles.

The 1 th. After paling three miles through the foreft of Fontainbleau, arrive at that town, and view the royal palace, which has been fo repeatedly added to by feveral kings, that the fhare of Francis I. its original founder, is not eatily afcertained. He does not appear to fuch advantage as at Chambord. This has been a favourite with the Bourbons, from there having been fo many Nimrods of that family. Of the apartments which are thewn here, the King's, the Queen's, Monfieur's, and Madame's, are the chief. Gilding feems the prevalent decoration: but in the queen's cabinetit is well and clegantly employed. The painting of that delicious little room is exquifite; and nothing can exceed the extremity of ornament that is here with tafte beftowed. The tapeftries of Beauvais and the Gobelins are feen in this palace to great advantage. 1 liked to fee the gallery of Francis I. preferved in its ancient ftate, even to the andirons in the climney, which are thofe that ferved that monarch. The gardens are nothing; and the great canal, as it is called, not to be compared with that at Chantilly. In the pond that joins the palace are carp as large and as tame as the Prince of Conde's. The landlord of the ian at Fontainbleauthinks that royal palaces thould not be feen for nothing; he made me pay 10 livres for a dinner, which would have coft me not more than half the money at the ftar and garter at Richmond. Reach Meulan. 34 miles.

The igth. Crofs, for a confiderable diftance, the royal oak foref of Senár.Atout Montgeron, all open fields, which produce corn and partridges to eat it, for the number is enormous. There is on an average a covey of birds on every two acres, befides favourite fpots, where they abound much more. At St. George the Seine is a much more beautiful river than the Loire. Enter Paris once more, with the fame obfervation I made before, that there is not one-tenth of the motion on the roads around it that there is around London. To the hotel de la Rochefoucauld. 20 miles.

The 16 th. Accompanied the Count de la Rochefoucauld to Liancourt.- 38 miles.

I went thither on a vifit for three or four days; but the whole family contributed fo gencrally to render the place in every refject arreable, that I faid more than three weeks. At about half a mile from the chatem is a range of hill that was chietly a negleced wafte: the Dake of Liancourt has lately convertel this into a plantation, with winding walks, benches, and covered feats, in the Englifh file of gardening. The fituaion is very fortunate. Thefe ornamented paths follow the edge of the declivity to the extent of three or four miles. The views they command are every where pleafing, and in fome places great. Nearer to the chateau the Duchefs of Liancourt has built a menugene and dairy in a pleafing tafte. The cabinct and ante-room are very pretty; the faloon elegant, and the dairy entrely conftucted of marble. At a village near Liancourt, the dake has eftablifhed a manufacture of linen and ftufts mixed with thread and cotton, which promifes to be of confiderable utility; there are twenty-five homs employed, and preparations making for more. As the finning for thefe looms is alfo edtablithed, it gives employment to great numbers of hands who
were idle, for they have no fort of manufacture in the country, though it is populous. Such efforts merit great praife. Connected with this is the exccution of an excellent plan of the duke's for eftablifhing habits of induttry in the rifing generation. The daughters of the poor poople are received into an inftitution to be educated to ufful induftry; they are inftructed in their religion, taught to write and read, and to fpin cotton; are kept till marriageable, and then a regulated proportion of their earnings given them as a marriage portion. There is another eltablifhment of which I am not fo good a judge; it is for training the orphans of foldiers to be foldiers themfelves. The Duke of Liancourt has railed fome confiderable buildings for their accommodation, well adapted to the purpofe. The whole is under the fuperintendance of a worthy and intelligent officer, Monfieur le Roux, captain of dragoons, and Croix de St. Louis, who examines every thing himfelf There are at prefent one hundred and twenty boys, all dreffed in uniform.-My ideas have all taken a turn which I am too old to change; I fhould have been better pleafed to have feen one hundred and twenty lads clucated to the plough, in habits of culture fupcrior to the prefent; but certainly the eftablifhment is humane, and the conduct of it excellent.

The ideas I had formed, before I came to France, of a country refidence in that kingdon, I found a: Liancourt to be far from correct. I expected to find it a mere transfer of Paris to the country, and that all the hurthenfome forms of a city were preferved, without its pleafurcs : but I was deceived: the mode of living, and the purfuits, approach much nearer to the habits of a great nobleman's houfe in England, than woul ' commonly be conceived. A breakfatt of tea for thofe who chofe to repair to it; riding, fporting, planting, gardening, till dinner, and that not till half after two o'clock, inttead of their old fafhioned hour of twelve; nunfic, chefs, and the other common amufements of a rendezvous-room, with an excellent library of feven or eight thoufand volumes, were well calculated to make the time pafs agreeably; and to prove that there is a great approximation in the modes of living at prefent in the difficrent countries of Europe. Amufements, in truth, ought to be numerous within doors; for in fuch a climate, none are to be depended on without: the rain that has fallen here is hardly credible. I have, for five-and-twenty years paft, remarked in England, that I never was prevented by rain from taking a walk every day without geing out while it actually rains; it may fall hcavily for many hours; but a perfon who watches an opportunity gets a walk or a ride. Since I have been at Iianccurt, we have had three days in fucceffion of fuch incefiantly heavy rain, that I could not go an hundred yards from the houfe to the duke's pavilion, without danger of being quite wet. For ten days more rain fell here, I am confident, had there been a gauge to meafure it, than ever fell in Englanci: : ihirty. The prefent faftion in France, of palfing fome time in the country is new; at this time of the year, and for many. weeks paft, Paris is, comparatively fpeaking, empty. Every body who has a country-feat is at it; and fuch as have none vilit others who have. This remarkable revolution in the French manners is certainly one of the beft cultoms they have taken from England; and its introduction was effected the eafier, being affitted by the magic of Rouffeau's writings. Mankind are much indebted to that fplendid genius, who, when living, was hunted from country to country, to feek an afylum, with as much venom as if he had been a mad dog; thanks to the vile fprit of bigotry, which has not yet received its death's wound. Women of the firt fathion in France are now athamed of not nurfing their own children; and ftays are univerfally profcribed from the bodies of the poor infante, which were for fo many ages tortured in them, as they are ftill in Spain. The country refudence
refidence may not hare effects equally obvious; but they will be no lefs furc in the ond, and in all refpects beneficial to every clafs in the ftate.

The duke of Liancourt being prefident of the provincial affembly of the detion of Clermont, and pafing feveral days there in bufincts, afked me to d ne with the affernbly, as he faid there were to be fome confiderable farmers prefunt. Thefe af?mblics were to me interefting to fec. I accepted the inviation with pleafure. Three comiderable farmers, renters, not proprietors of land, were members, and prefent. I watched their carriage narrowly, to fee their behaviour in the prefence of a great lond of the firt rank, confideratle property, and high in royal favour; and it was with pleafure that I found them behaving with becoming cafe and frectom, ant thow, motet, and without any thing like llippancy, yet without any obfequoulncfs offonive to lengl:f ilcas. They fart d their opinions freely and whered to them with beomine contidence. A more fingular fpectacle was to foe two ladics prefent at a dinner of this fort, with five or fix-andetwenty genilemen; fuch a thing could not happen in Fnglani. To fay that the French manners, in this refpret, are better than our own, is the affertion of an obvious troth. If the ladies be not prefent at meeting: where the conver ation has the greateft probability of turning on fubjeets of more importance than the frivolous topics of common difcouric, the fex mult either remain on the one hand in ignorance, or on the other, be filled with the foppery of cducation, learned, affected, and forbidding. The converfation of men, not engaged in triffing purfuits, is the bell fchool fior the education of a woman.

The political converfation of every company I have feen has turned much more on the affairs of Holland than on thofe of France. The preparations going on for a var with Fngland are in the mouths of all the world ; but the finances of France are in fuch a flate of derangement, that the poople beft informed affert a war to be impofible; the Marquis of Verac, the late Fronch ambafiador at the Hague, who was fent thither, as the Englifh politicians affert, exprefisly to bring about a revolution in the government, has been at Lancourt three days. It may eafily he fuppofed, that he is cautious in what he fays in fuch a mixed company; but it is plain enough, that he is well perfuaded that that revolution, change, or leffening the Stadtholder's power; that plan, in a word, whatcver it was, for which he negociated in Holland, had for fome time been matured and ready for exccution, almolt without a pollibility of failure, had the Count de Vergennes confented, and not fpun out the butinefs by refinement on refinement, to make himielf the more neceflary to the French cabinet; and it unites with the idea of fome fenfible Dutchmen, with whom 1 have converficd on the fubject.

During my fay at Liancourt, my friend Lazowfi accompanied me on a little excurfion of two days to Ermenonville, the celebrated feat of the Marquis de Girardon. We paffed by Chantilly to Morefountain, the country-feat of Monficur de Morcfountain, prevoft des merchands of Paris; the place las been mentioned as decorated in the Englifh tyle. It confifts of two feenes; me a garden of winding walks, and ornamented with a profufion of temples, benches, grottos, columns, ruins, and I know not what; I hope the French who have net been in England, do not confider this as the Finglith tafte. It is in faet as remote from it as the moft regular ftyle of the laft age. The water view is finc. There is a gaiety and checrfulnefs in it that contraft well with the brown and unpleafing hills that furround it, and which partake of the wafte character of the worft part of the furrounding country. Much has been done here; and it wants but few additions to be as perfect as the ground admits.

Reach Ermenonville, through another part of the Prince of Condés foref, which joins the ornamented grounds of the Marquis Girardon. This place, after the refidence and death of the perlecuted but immortal Rouffenu, whofe tomb every one knows is here, became fo famous as to be reforted to very generaliy. It has been deferibed, and plates publifhed of the chicf views; to enter into a particular defcription would therefore be tirefome; I thall only make one or two oblervations, which I do not recollect have been touched on by others. It confifts of three diftinct water feenes; or of two lakes and a river. We were firt flewn that which is fo famous for the fimall ifle of poplars, in which repofes all that was mortal of that extraordinary and inimitable writer. I his fcene is as well imagined, and as well executed as could be wifhed. The water is between forty and filty acres; hills rife from it on both fides, and it is fufficiently clofed in by tall wood at both ends, to render it fequeftered. The remains of departed genius famp a melancholy idea, from which decoration would depart to much, and accordingly there is little. We viewed the feene in a ftill evening. The declining fun threw a lengthened fhade on the lake, and filence feemed to. repofe on its unruffied bofom; as fome poet fays, I forget who. The worthies to whom the temple of philofophers is dedicated, and whofe names are marked on the columns, are Newton, Luccm.-Defcartes, Nil in rcbus inane.-Voltaire, Ridiculum.-Rouffeau, Nuturam.-And on another unfuifind column, Quis boc perficiet? The other lake is larger; it nearly fills the bottom of the vale, around which are fome rough, rocky, wild, and barren fand hills; either broken or fpread with heath; in fome places wooded, and in others feattered thinly with junipers. The character of the fcene is that of wild and undecorated nature, in which the hand of art was meant to be conccaled as much as was confiftent with eafe of accels. The laft feene is that of a river, which. is male to wind through a lawn, receding from the houfe, and broken by wood; the ground is not fortunate; it is too dead a flat, and no where viewed to much advantage.

From Ermenonville we wenr, the morning after, to Braffeufe, the feat of Madame du Pont, fifter of the Duchefs of Liancourt. What was my furprife at finding this Vifcountels a great farmer! A French lady, young enough to enjoy all the pleafures of Puis, tiving in the country, and minding her farm, was an unlooked-for !pectacle. She has probably more lucerne than any other perlon in Europe-two hundred and fily arpents. She gave me, in a moft unaffected and agreeabe manner, intelligence about her lucerne and dairy; but of that more ellewhere. Returned to Liancourt by Pout, where there is a bandfome bridye of three arches, the conftruction uncommon, eich pior confifting of four pillars, with a towing-pa bunder one of the arches for the barge-horfes, the river being navigable.
amongt the morning amufements I partook at limeourt was la claffi. In deer fhooting, the forttincn place themtelves at diftances around a wood, then beat it, and f. Wom more than one in a company gets a thot; it is more tedious than is eafily con-ceived; like angling, incellint expectation, and perpetual difappointment. Partridge and hare thooting are ahiooft as difficent from that of Englams. We took this diverfion in the fine vale of Catnoir, five or fis: miles from Liancourt; arranging ourfelves in a: tile at about thirty yaris from pertion to perfon, and cach with a fervant and a loaded gan, reaty to prefent when his mafter fres ; thus we marched acro's and acrofs the vale, trading up the game. Four or the brace of hares, and twenty brace of paradfes were the fpoils of the day. I like this mode of thooting but little better than wating for deer. The bett circumftance to me of exercile in company (it was: rout foonce) is the feltivity of the dimer at the clofe of the day. To enjoy this, it mult not be pufhed to great fatigue. Good fpirits, after violent exercile, are
always the affectation of filly young folks (I remember being that fort of fool myfelf when I was young), but wih fomething more than moderate, the exlilamation of body is in unifon with the flow of temper, and agrecable company is then delicious. On fuch days as thefe we were too late for the regutar dinner, and had one by "urfeives, with no other dreffing than the refreflment of clean linen; and thefe were not the repafts when the ducheff's champaigne had the worft liavour. $A$ man is a poor creature who does not drink a little too much on fuch occafions: mais prencz-jgurde: repeat it often; and you may make it a mere drinking party, the luftre of the plature tudes, and you becone what was an Englifh fox-hunter. One day while we were thus dining ia l'Anglois, and drinking the plough, the chace, and I know not what, the Duchefs of Liancourt and fome of her ladies came in fport to fee us. It was a moment for then to lave betrayed ill-nature in the contempt of mamers not French, which they might have endeavoured to conceal under a laugh ; - but nothing of this; it was a good hamourd carionty; a natural inclination to fee others pleafed and in fpiriss. fls ont
 Do they drink the gun ? faid amother. Leurs maitrefiss cortainement, added a third. J'cime à les viar on gutać; il y a qualque chofe d'aimable dans tout ccri. To note fuch trifes may feen: fuperfuous to many; but what is life when trifles are withdrawn? They mark the temper of a nation better than objects of importance. In the moments of council, victory, light, or death, mankind, I fuppofe, are nearly the fame. Trifies difcriminate better, and the number is infinite that gives me an opinion of the good tenper of the lrench. 1 am fond neither of a man nor a recital that can appear only on ttilts, and dreffed in holiday geers. It is every-day feclings that decide the colour of our lives; and he who values them the mont plays the beft for the flake of happinefs. But it is time to quit Liancourt, which I do with regret. Take leave of the good old Duchefs d'Eftiffac, whofe hofpitality and kindnefs ought cver to be remembered. 51 miles.

The gth, 10 th, and 1 th. Return by Beauvais and Pontoife, and enter Paris for the fourth time, confirmed in the idea that the roads immediately leading to that capital are deferts, comparatively fpeaking, with thofe of London. By what means can the connection be carried on with the country? The French mult be the molt flationary people upon earth, when in a place they muft reft without a thought of going to another; or the Englifh mult be the molt reftefs; and find more pleafure in moving from one place to another, than in refting to enjoy life in either. If the French nobility went only to their country feats when exiled thither by the court, the roads could not be more folitary.- 25 miks.

The :2th. My intention was to take lodgings; but on arriving at the hotel de la Rochefoucauld, I found that my hofpitable duchefs was the fame perfon at the eapital as in the country ; fhe had ordered an apartment to be ready for me. It grows fo late in the frafon, that I flall make no other flay here than what will be neceflary for viewing public buikdings. This will unite well enongh with delivering fome letters I brought to a few men of feence; and it will leave me the evenings for the theatres, of which there are many in Paris. In throwing on paper a rapid coup d'ail of what I fee of a city, fo well known in England, I Gall be apt to delineate my own ideas and feedings, perhaps more than the objects themfelves; and be it remembered, that I profets to dedicate this carelofs itinerary to trilles, much more than to oljects that are of real confequence. From the tower of the cauhedral, the vicw of Paris is complete. It is a valt cify, even to the cye that has feen London from St. Paul's; a circular form gives an advantage to Paris; but a much greater is the atmofphere. It is now fo clear, that
one would fuppofe it the height of fummer: the clouds of coal-fmoke that envelope London, always prevent a diftinct view of that capital, but I take it to be one-third at leaft targer than Paris. The buildings of the parliament houfe are disfigured by a gilt and taudry gate, and a French roof. The hotel des Monoies is a fine building; and the façade of the Louvre one of the moft elegant in the world, becaufe they have (to the eye) no roofs; in proportion as a roof is feen, a building fuffers. I do not recollect ene edifice of diftinguilhed beauty (unlefs with domes) in which the roof is not fo flat as to be hidden, or nearly to. What eyes then muft the French architects have had, to have loaded fo many buildings with coverings of a height deftructive of all beauty? Put fuch a roof as we fee on the parliament houfe or on the Thuilleries, upon the façade of the Louvre, and where would its beauty be?-At night to the opera, which I thought a good theatre, till they told me it was built in fix weeks; and then it became good for nothing in my eyes, for 1 fuppofe it will be tumbling down in fix years. Durability is one of the eflentials of building: what pleafure would a beautiful front of painted pafteloard give? The Alcefte of Gluck was performed; that part by Mademoifelle St. Huberti, their firft finger, an excellent actrefs. As to fcenes, drefes, decorations, danng, \&c. this theatre is much fuperior to that in the Haymarket.

The $13^{\text {th. }}$. Acrofs l'aris to the rue de blancs Manteaux, to Monf. Brouffonet, fecretary of the Society of Apriculture; he is in Burgundy. Called on Mr. Cook from London, who is at Patis with his drill-plough, waiting for weather to thew its performance to the Duke of Orleans: this is a French idea, improving France by drilling. A man thould kearn to walk before he learns to dance. There is agility in cutting capers, and it may be done with grace; but where is the neceflity to cut then at all? There has been much main to-day ; and it is almoft incre lible to a perfon ufed to London, how dirty the ftreats of laris are, and how horribly inconvenient and da!gerous walking is without a foot-pavement. We had a large party at dinner, with politicians among them, and fonse interefting converfation on the prefent ftate of Jrance. The feeling of every body feens to be that the archbilhop will not be able to do any thing towards exonerating the thate from the burthen of its prefent lituation; fome think that he has not the inclination; others that he has not the contage; others that he has not the ability. By fome he is thought to be attentive only to his own intereft; and by others, that the finances are too much daranged to be within the power of any fyttem to recover, fhort of the Itates-general of the king tom ; and that it is impofible for fuch an affembly to meet without a revolution in the government enfuing. All feem to think that fomething extraordinary will happen; and a bankruptey is an idea not at all uacommon. But who is there that will have the courdge to makeit?

The 1 th. To the Benedictine abbey of St. Germain, to fee pillars of African marbie, \&cc. It is the richeit abbey in fronce: the abbot has 300,000 lives a year ( 13,125 .) I lofe my pationce at feeng lach revous thus hoflow ; confiftent with the finitit of the tenth century, but not with that of the eighteenth. What a noble farm weuld a fouth of this income eltablifh! what tumips, what cabbages, what potatoes, what clover, what fheep, what wool!-Are not thefe things better than a fat ecclefiallic? If an active linglifh farmer were mounted behind this abbot, I think he would do more good to lrance with haff the income than half the abbots of the kingdou with the whole of thairs. Pafs the Batile; another plearant object to make agreeable emotions vibrate in a man's botom. I fearch for good farmers, and run my head at every turn againd monks and ftate prifons. - To the arfenal, to wait on Monf.

Lavoifier, the celebrated chemif, whofe theory of the non-exiftence of phlogiton has made as nuch noife in the chemical world as that of Stahl, which eftablifhed its exiftence. Dr. Priefley had given me a letter of introduction. I mentioned in the courfo of converfation his laboratory, and he appointed Tuefday. By the Boulevards, to the Place Louis XV. which is not properly a fquare, but a very noble entrance to a great city. The façades of the two buildings erected are highly tinifhed. The union of the Piace Louis XV. with the champs Elifees, the gardens of the Thuilleries and the Seine is open, airy, clegant, and fuperb; and is the moft agreeable and beft built part of Paris; here one can be clean and breathe frecly. But by far the fineft thing I have yet feen at Paris is the Halle aux bleds, or corn market; it is a valt rotunda; the roof entirely of wood, upon a new principle of carpentry, to defcribe which would denand phates and long explanations; the gallery is one hundred and fitiy yards round, confequently the diameter is as nany feet. It is as light as if fufpended by the fairies. In the grand area, wheat, pealie, beans, lentils, are ftored and fold. In the furromenting divilions, flour on wooden ftands. You pals by ftair-cales doubly winding within each other to fpacious apartments for rye, barley, oats, \&c. The whole is lo well planned, and fo admirably executed, that I know of no public building that exceeds it either in lrance or England. And if an appropriation of the parts to the conveniencies wanted, and an adaptation of every circumftance to the end required, in union with that elegance which is confifient with ufe, and that magnificence which refults from ftability and duration, be the criteria of public edifices, I know nothing that equals it:-it has but one fault, and that is fituation; it fhould have been upon the banks of the river, for the convenience of unloading barges without land carriage. In the evening, to the Comedie ltalienne; the edifice fine; and the whole quarter regular and new built, a private fpeculation of the Duke de Choifeul, whole family has a box entailed for ever.-L'Aimant jaloux. Here is a young finger, Mademoifelle Rinard, with fo fweet a voice, that if he fung Italian, and had been taught in Italy, would have made a delicious performer.

To the tomb of Cardinal de Richlieu, which is a noble production of genius: by far the fineft ftatue I have feen. Nothing can be imagined more cafy and gracetul than the attitude of the cardinal, nor can nature be more expreflive than the figure of weeping frience. Dine with my friend at the Palais Royal at a confe-houle; wall dreffed people ; every thing clean, good, and well ferved: buc here, as every where elfe, you pay a good price for good things; we ought never to forget that a low price for bad things is not cheapnefs. In the evening to 'Picole des Peres, at the Comedie Françife, a crying larmoyant thing. This theatre, the principle one at Patis, is a fine building, with a magnificent portico. After the circular theatres of France; how can any one relifh our ill.contrived oblong holes of London?

The 16 th . 'To Monf. Lavoifier, by appointment. Madame Lavoifier, a lively, fenfible, fcientific hady, had prepared a dejounc Arglois of tea and cofice; but her converfation on Mr. Kirwan's Efiay on Phiogilton, which the is tranfating from the Englifh, and on other fubjots, which a woman of undertanding, who works with her hufband in his laboratory, knows how to adorn, was the belt repalt. That apariment, the operations of which have been rendered to interelling to the philotophical world, I had the pleafure of viewing. In the apparatus for aerial experimecats, nothing makes fo great a ligure as the machane for buraing inllamable atal vital ar, to make, or depofit water; it is a iplendid in.chine. Three veflets are held in fuppention with in. dexts for marking the immediate variations of their weights; two, tat are as large as half hogheads, contain the one intamable, the other the vital ar, wat a tube of
communication pafles to the third, where the two airs unite and burn; by contrivances, too complex to defcribe without plates, the lofs of weight of the two airs, as indicated by theic refpective talances, equal at every monent to the gain in the third vefo fel from the formation or depofition of the water, it not being yet afcertained whether the water be actually made or depofited. If accurate (of which I mult confefs I have little conception), it is a noble machine. Monf. Lavoifier, when the ftructure of it was commended, faid Mais oiii ; nificur, छo méme par un artife Frangois! with an accent of voice that adnitted their general inferiority to ours. It is well known that we have a confiderable exportation of mathematical and other curious inftruments to every part of Europe, and to France anong the reft. Nor is this new, for the apparatus with which the French academicians meafured a degree in the polar circle was made by Mr. George Graham *. Another engine Monf. Lavoifier fhewed us was an electrical apparatus inclofed in a balloon, for trying clectrical experiments in any fort of air. His pond of quickfilver is confiderable, containing 250 Ob . and his water apparatus very great, but his furnaces did not feen fo well calculated for the higher degrees of heat as fome others I have feen. I was glad to find this gentleman fplendidly lodged, and with every appearance of a man of confiderable fortune. This ever gives one pleafure: the employments of a ftate can never be in better hands than of men who thus apply the fuperfluity of their wealth. From the ufe that is generally made of money, one would think it the affiftance of all others of the leaft confequence in effecting any bufinefs truly ufful to mankind, many of the great difcoveries that have enlarged the horizon of fcience having been in this refpect the refult of means feemingly inadequate to the end: the energetic exertions of ardent minds, burfting from obfcurity, and breaking the bands inflicted by poverty, perhaps by diftrefs. To the hotel des invalids, the major of which eftablifment had the groodnefs to ghew the whole of it. In the evening to Monf. Lomond, a very ingenious and inventive mechanic, who has made an improvement of the jenny for fpinning cotton. Common machines are faid to make too hard a thread for certain fabrics, but this forms it loofe and fpongy. In electricity he has made a remarkable difcovery : you write two or three words on a paper; he takes it with him into a room, and turns a machine inclofed in a cylindrical cafe, at the top of which is an electrometer, a fmall fine pith ball; a wire connects with a fimilar cylinder and electrometer in a diftant apartment ; and his wife, by remarking the correfponding motions of the ball, writes down the words they indicate: from which it appears that he has formed an alphabet of notions. As the length of the wire makes no difference in the effect, a correfpondence might be carried on at any diflance: within and without a befieged town for inftance; or for a purpofe much more worthy, and a thoufand times more harmlefs, between two lovers prohibited or prevented from any better connection. Whatever the ufe may be; the invention is beautiful. Monf. Lomond has many other curious machines, all the entire work of his own hands: mechanical invention feems to be in him a ratural propenfity. In the evening to the Comedie Françaife. Mola did the Bourru Bienfailant, and it is not eafy for acting to be carried to greater perfection.

The 17 th. To Monf. l'Abbé Meffier, aftronomer royal, and of the Acadeny of Sciences. View the exhibition, at the Louvre, of the academy's paintings. For one hiftory piece in our exhibitions at London here are ten; abundantly more than to balance the difference between an annual and biennial exhibition. Dined to-day with a party, whofe converfation was entirely political. Monf. de Calonne's Requéte au Roi

[^4]is come over, and all the world are reading and difputing on it. It feems, however, generally agreed that, without exonerating himfelf from the charge of the agiotare, he has thrown no inconficterable load on the flowders of the archbifhop of Toulouze, the prefent premier, who will be puzzled to get rid of the attack. But both thefo miniflers were condemned on all hands in the fump; as being abfoiutely unequal to the difficulies of fo arduous a period. One opinion pervaded the whole company, that they are on the eve of fome great revolution in the government : that every thing puints to it: the confufion in the fimances great; with a deficit imponfille to provide for withent the llates.general of the kingdon, yet mo ideas formed of what would be the confequence of their metting: no minitler exilting, of to be looked to in or out of power, with fuch decifive talems as to promi'e any other remedy than palliative oncs: a prince on the throne, with excellent ditpofitions, but without the refources of a mind that could govern in fuch a moment without minifters: a court buried inpleature and diffipation; and adding to the diffefs, inflead of enclcavouring to be phaced in a more independent fituation : a great ferment amonft all ranks of men, who are eager for fome change, without knowing what to look w, or to hope for: and a frong leaven of liberty, increafing every hour fince the smerican revolition; altogether form a combination of circumflances that promife ere long to fument into motion, if fome mafter hand, of very fuperior talents, and inflexible courare, be not found at the helm to guide events, inttead of being driven by ham. It is very remarkable, that fuch convertation never occurs, but a bankruptcy is a topic: the curious queflion on which is, would a bankruptey occafion a civil war, and a toal overthrow of the government? 'The anfwers that I have received t" this queltion appear to be juf: fuch a meafure, conducled by a man of abilitios, vinour, and firmels, would cotainly not occalioncither one or the onler. But the fance meafure, attempted by a man of a difierent character, might polibly do both. All ayree, that the thats of the king dom camot aflemble without more literty being the confequence; but I meet with fo few men who have any juft ideas of frecdom, that I quethon much the fpecies of this new liberty that is to arife. They know not how to value the privileges of the people: as to the notility and the elergy. if a revolution added any thing to their icale, I think it would do more midchict than good *.

The sth. To the Gobelins, which is modoubtedy the firf manufacture of tapenry in the world, and fuch an one as could be lupportad by a crowned head only. In the coening to that incomparable comedy La Metronabic, of Pyron, and weliacted. The more Ifee of it, the more I like the luach the ane; and have no doubs in preferring it lar to cur own. Writers, actors, buildings, feenes, decorations, mufic, dancing, take the whole in a mate, and it is mmivalied by lomdon. We have certainly a few brilliants of the firf water; but to throw all in the feales that of England kicks the beam. I urite this pafluge with a lighter leart than I fhould do were it giving the falin to tioc French plough.

The 19th. To Charenton, near Paris, to fee l'Ecole Veterinaire, and the farm of the Royal Society of Agriculture. Mont. Chabert, the dirceteur-general, received us with the molt attentive politenefs. Monf. Flandrein, his affitant, and fon-in-law, 1 had had the pleafure of knowing in Suffulk. They thewed the whole veterinary eftablifhnent, and it docs honour to the government of France. It was formed in

[^5]1766: in 1783 a farm was annexed to it, and four other profeforfips eftablifhed; two for rural ceconomy, one for anatomy, and another for chemittry.-I was intormed that Monf. d'dubenton, who is at the head of this farm with a falary of 6000 livres a year, reads lectures of rural oconomy, particularly on theep, and that a tlock was for that pupofe kept in cxhibition. 'There is a fpacious and convenient apartinent for differting loorfes and oblor amims; a large cabinet, where the mot interdting parts of all domentic animals are preferved in feits; and alfo of fuch parts of the bodies hat mark the vifibe dife of dillempers. Ahis is very rich. This, with a fimilar one near lyons, is $k$ "pt 1 p exclutive of the addition of 1783) at the moderate expence, as appears by the writings of M. Necker, of about 6 ,oso livres ( $26=-1$. ) Whence, as in many other inftuces, it appars that the mofl ufeful things coft the leaft. There are at prefent ahout one hondred deves from difereat pats of the kingdom, as ucl' is from every country in Europe, except Fngland ; a ftrangé exception, confidering how grofly igmont our farriers are; and that the whole expence of fupporting a young man here does not exeed forty louis a year ; nor more than four years neceflary for his complete inftuction. As to the farm, it is under the conduct of a great maturalit, high in royal academiss of fcience, and whofe name is celebrated through Fimrope for arrit in fuperior branches of knowledge. It would argue in me a want ot judgmemt in human nature, th exp.ct good practice from fuch men. They would probsbly think it bencath their purfuits and fituation in life to be good ploughomen, turnip.hoers, and thepherds; I fhould therefore betray my own ignorance of life, if I were to exprefs any firprize at finding this farm in a fituation that I had rather forget than defcribe. In the evening, to a field much more fucceffully cultivated, Mademoifelle St. Huberti, in the Penelope of Picini.

The 2oth. To the licole Militaire, eftablifhed by Louis XV. for the education of one hundred and forty youths, the fons of the nobility; fuch edtablifhenents are equally $n$ ticulous and miuft. To educate the fon of a mim who cannot atford the education himfelf, is a grofs injultice, if you do not fecure a fitu.tion in life anfiwerable to that education. If you do not fecure fuch a fituation, you deftroy the refult of the education, becaufe nothing but merit ought to give that lecurity. If you educate the children of men, who are well able to give the education themfelves, you tax the people who cannot afford to educate their children, in order to cafe thoie who can well afford the burthen; and, in fuch imftitutions, this is fure to be the cafe. At night to l'Ambigu Comique, a pretty little theatre, with plenty of rubbith on it. Coffechoufes on the boulevards, mulic, noifo, and filles without ent; every thing but faven, ${ }^{\text {cers }}$ and lamps. The mud is a foot deep; and there are parts of the boulevards without a fingle light.

The $2 i$ it. Monf. de Brouffonct being returned from-Burgundy, I had the pleafure of patfing a couple of hours at his lodgings very agreeably. He is a man of uncommon aelivity, and poffeffed of a great variety of ufeful knowletge in every branch of natural hillory; and he fpaks Finglith perfectly wel!. It is very rare that a gentleman is feen better qualifid for a poft than Monf. de Brontionet for that which he occupies, as fecretary to a royal fuciety.

The 22d. To the bridge of Neuile, faid to be the fineft in France. It is by far the mont beautiful one I have any where feen. It confits of live valt arches; Hat, from the Florentine model; and all of equal fpan; a mode of building incomparably more elegant, and more friking than our fyllem of different fized arches. To the machine at Marly; which ceafes to make the leaft impreffion. Matame du Barre's refidence, Lufienne, is on the hill juft above this machiue; fie has built a pavilion
on the brow of the declivity, for commanding the profpect, fitted up and decorated with much elegance. There is a table formed of seve porcelain, exquifitely done. I forget how many thoutiand louis d'ors it colt. 'The French, to whom l fooke of Lufieme, exclaimed againlt miftreffes and extravagance with more violence than reafon in my opinion. Who, in common fenfe, woulid deny a king the amment of a mif. trefs, provided he did not make a bulinefs of his play-thing. Mais frederic le Grame avoit il une maitrcife, lui fafoit-il batir de pavillons, al lis monbloit-il de' tabics de percilaine? No: but he had that which was fitty times worf.: a king had better make love to a handfome woman than to one of his neighbour's province's. 'Ihe bing of I rullia's miftrefs colt an hundred millions fterling, and the lives of 500,500 men; and before the reign of that miftrefs is over, may yet coft as much more. The greatelt genius and talents are lighter than a feather, weighed philofophically, if ripine, war, and conqueft be the effecas of them.

To St. Germain's, the terrace of which is very fine. Monfieur de Brouffonct met me here, and we dined with Monfieur Breton, at the Marechal due de Noailles, who has a good collection of curious plants. Here is the fineft fophora japon, ica I have fen. - 10 miles.

The 23 d. To Trianon, to view the Queen's Jardin Anglois. I had a letter to Monfieur Richard, which procurcd admittance. It contains atoont one hundred acres, difpofed in the tafle of what we read of in books of Chinefe gardening, whence it is fuppofed the Englifh flyle was taken. There is more of Sir Willim Chambers here than of Mr. Brown-more effort than nature-and more cxpence than talle. It is not eafy to conceive any thing that art can introduce in a garden that is not here; woods, recks, lawns, lakes, rivers, iflands, cafcades, grottos, walks, tomples, and even villages. There are parts of the defign very pretty, and well executed. The only fault is too much crouding, which has led to another, that of cutting the lawn by two many gravel walks, an error to be feen in almolt every garden I have met with in lrance. But the glory of La Petite Trianon is the exotic trees and flrubs. The world has been fuccefsfully rifled to decorate it. Here are curious and beautiful oncs to pleafe the eye of ignorance; and to exercife the memory of fcience. Of the buildings, the temple of Love is truly elegant.

Again to Verfailles In viewing the king's apartment, which he had not left a quare ter of an hour, with thofe night irdits of diforder that hewed he lived in it, it was amufing to fee the blackguard figures that were walking uncontrouled about the palace, and even in his bed-chamber; men whofe rags betrayed them to be in the lat fage of poverty, and I was the only perfon that flared and wondered how they got thither. It is impofible not to like this carelefs indifference and freedon from furpicion. One loves the mafter of the houfe, who would not he hurt or offended at feeing his opartment thus occupied, if be returned fuddenls; fir if there were danger of this, the inerufion would be preventad. This is entainly a feature of that good ten. per which appears to me fo vifible every where in trance. I defired to fee the Queen's apartments, but I could not. Is her majelly in it? No. Why then not fee it as well as the King's. Ma foi, Monf. $c^{\prime} e f$ sin autre chofo. Ramble through the gardens, and by the grand canal, with abblute aftonifhment at the exaggeration of writers and travellers. There is magnificence in the quarter of the orangerie, but no beauty any where; there are fome flatues good enough to be wifhed under cover. The extent and breadth of the canal are nothing to the eye; and it is not in fuch good repair as at farmer's horfe pond. The menagerie is well enough, but nothing great. Iett thofe who defire that the buildings and eftablimments of Louis XiV. Ahould continue the impreffion
impreflion made by the writings of Voltaire, go to the canal of Languedoc, and by no means to Verfailles. Return to l'aris.- 1,4 miles,

The 24 th. With Monfieur de Brouffonet to the king's eabinet of natural hiftory and the botanical garden, which is in beautiful order. Its riches are well known, and the politenefs of Monfieur 'Thouin, which is that of a mott amiable difpofition, renders this garden the feene of other rational pleafures befides thofe of botany, Dine at the Invalides, with Monticur l'armentier, the celebrated author of many aconomical works, particularly on the boulangeric of France. 'This gentleman, to a confiderable mafs of ufeful knoxiedge, adds a great deal of that fire and vivacity for which his nation has been diftinguifhed, but which I have not recognized fo often as I expected.

The 25 th. This great city appears to be in many refpects the mon ineligible and in. convenient for the refidence of a perfon of finall fortune of any that I have feen; and by far inferior to London. The itreets are very narrow, and many of then crowded, nine-tenths dirty, and all without foot-pavements. Walking, which in London is fo pleafant and fo clean, that ladies do it every day, is here a toil and fatigue to a man, and an impofibility to a well dreffed woman. The coaches are numerous, and what is much worfe, there is an infinity of one-horfe cabriolets, which are driven by young men of fafhion and their imitators, alike fools, with fuch rapidity as to be real nuifances, and render the ftreets exceedingly dangerous, without an inceflant caution. 1 law a poor child run over and probably killed, and have been myfelf many times blackened with the mud of the kennels. 'This beggarly prattice of driving a onehorfe booby hutch about the flreets of a great capital, Hows either from poverty, or a wretched and defpicable ecconomy; nor is it polfible to fpeak of it with too much feverity. If young noblemen at London were to drive their chaifes in ftreets without foot-ways, as their brethren do at Paris, they would fpeedily and juftly get very well threfhed, or rolled in the kemel. This circunflance renders Paris an ineligible refideuce for perfons, particularly fanilies that cannot afford to keep a coach; a convenience which is as dear as at London. The fiacres, hackney-coaches, are much worfe than at that city; and chairs there are none, for they would be driven down in the ftrects. 'Io this ciccumitance allo it meft be afcribed, that all perfons of finall or moderate fortune, are forced to drefs in black, with black fockings; the dufky hue of this in company is not lo difigreeable a circumftance as being too great a diftinction; too clear a line drawa in company between a man that has a good fortune, and another that has not. With the prid:, arrogance, and ill.temper of Englifh wealth this could not be borme; but the prevailing goud humour of the French eafes all luch untoward circumfances. Lodgings are not half fo good as at London, yet conliderably dearer. If you do not tire a whole fuit of rooms at an hotel, you muft probably mount three, four, or give pair of thairs, and in general have nothing but a bed-chamber. After the horrid fatigne of the flreets, fuch an elevation is a delectable circumflance. You muft farch with trouble before you will be lodged in a private family, as gentlemen ufually are at London, and pay a higher price. Servan's' was, es are about the fane as at that city. It is to be regretted that latis thould have thele difidvantages, for in other refpects I take it to be a note eligible refidence for fuch as prefer a great city. The focisty for a man of letters, or who has any fcientific purfuit, cannot be exceeded. The inteicourle betweenfuch men and the great, which, if it he not upon an equal footing, oughe never to cxift at : il, is ralpectable. Perfons of the higheft rank pay an attention so leinece and literature, and emulate the eharater the y confer. I fhould pity the man who ex.ate!, without other advantages o. a very diflerent nature, to be well receved
in a brilliant circle at London, becaufe he was a fellow of the Royal Society. But this would not be the cafe with a member of the Academy of Sciences at Paris; he is fure of a good reception every where. Perhaps this contralt depends in a great meafure on the difference of the goveruments of the two countries. Politics are too much attended to in England, to allow a due refpect to be paid to any thing elfe; and thould the French eftablifh a freer government, academicians will not be held in fuch eftmation, when rivalled in the public eftem by the orators who hold forth liberty and property in a free parliament.

The 28 h. Quit Paris, and take the road to Flanders. Monfieur de Brouffonet was fo obliging an to accompany me to Dugny, to view the farm of Monfem Crette de Palluel, a very intelligent cultivator. Take the road to Senlis: at J: manerin, I met by accident a French gemteman, a Monficur du l'ee du St. Cotin. Hearing me converfing with a farmer on agriculture, he introduced himfelf as an anateur, gave me an account of feveral experiments he had made on his eflate in Champagne, and pronifed a more particular detail; in which he was as good as his word.22 miles.

The 2gth. Pals Nanteul, where the Prince of Conde has a chateau, to Villes-Coterets, in the midth of immente forcts belonging to the Duke of Orleans. 'The crop of this country, therfore, is princes of the blood; that is to fay, hares, phealants, deer, boars!--26 miles.

The 3 oth. Soifions feems a poor town, without manufactures, and chiefly fupported by a corn trade, which goos hence by water to l'aris and Romen.- 25 miles.

The zaft. Coucy is beautifully fituated on a hill, with a fine vale winding befide it. At St. Gobin, which is in the midat of great woods, I viewed the fabuic of plate glafs, the greatef in the norl!. I was in high lank, arriving about half an hour betore they began to runglathe for the day. Pais ha Fere. Reach St. Quintin, where are confulcrable manmatures that employed me all the alternoon. Trom St. Gobin are the mott beamiful hate roofs ! have any where fen.-_ 30 miles.

November 1. Nuar Belle dugleifel turned adide half a league to view the canal of Picardy, of which i had head much. In patfing from St. Quintin to Cambay the country rifes, fo that it was neceflary to carry it in a mind under ground for a confiderable depth, even under many vales as well as hills. In one of thefe vallies there is an opening for vifiting, it by an arched flair-cafe, on which I defechded one hamdred and thirty four heps to the camal, and as this valley is much below the adjacent and other hills, the great deptin at which it is diged may be conceived. Over the door of

 tormes: 'Je fuis fire d'itre homme, quand je vois gu'un de mes femblables a ofe ina-

 lows hambly in thar tain, and as to poor louis X VI. at whof expence the whole was done, thete gentemen a randy though that no name lefs than that of enperow ought to teamead the taver. When inferptions ade fixed to public work, no names ough to be pronival lut the of the king, whof merit patronizers, and of the engineer eratill whele.semis executes the work. As to a mob of intendant, directors, and infecters, let it ata be forgotten. The canal at this pace is ten Firench feet
wide and twelve high, hewn entirely out of the chalk rock, imbedded, in which are many flints-no mafon:y. There is only a fmall part finithed of ten toifes long for a patern, twenty fect broad, and twenty high. live thonfand toifes are already done in the mamer of that part which I viewed; and the whole diltance under ground, when the tumel will be complete, is feven thoufand and twenty toifes (each fix feet) or about nine miles. It has already coft $1,200,000$ liveses ( 52,5001 .) and there want $2,500,000$ livres $(109,3751$.) to complete it ; fo that the total eftimate is near four millions. It is executed by thafts. At prefent there are not above five or fix incles of water in it. This great work has flood ftill entirely fince the adminiftration of the Archbifhop of Toulouze. When we fee fuch works fand Aill for want of money, we flall reafonably be inclined to ank, what are the fervices that continue fupplied? and to conclude, that among ftings, and minifters, and nations, oconomy is the firt virtue:-without it, genius i a meteor; victory a found; and all courtly fplendour a public robbery.

At Cambray, view the manufacture. Thefe frontier towns of Flanders are built in the old ftyle, but the ftreets broad, handfome, well paved, and lighted. I need not obferve, that all are fortified, and that every ftep in this country has been rendered famous or infamous according to the feclings of the [pectator, by many of the bloodien wars that have difgraced and exhaufted chriftendom. At the hotel de Bourbon I was well lodged, fed, and attended: an excellent inn.-_ 22 miles.

The 2d. Pafs Bouchaine to Valencicnnes, another old town, which, like the reft of the Fleminh ones, manifefts more the wealth of former than of prefent times.- 8 miles.

The $3^{d}$, to Orchecs; and the $4^{\text {th }}$ to Lifle, which is furrounded by more windmills for fqueezing out the oil of colefeed, than are probably to be feen any where elfe in the world. Pafs fewer drawbridges and works of fortification here than at Calais; the great itrength of this place is in its mines and other fouteraines. In the evening to the play.

The cry here for a war with England amazed me. Every one I talked with faid, it was beyond a duabt the Englifh had called the Prufian armý into Holland; and that the motives in France for a war were numerous and manifeft. It is eafy enough to difcover, that the origin of all this violence is the commercial treaty, which is execrated here, as the moft fatal ftroke to their manufactures they ever experienced. Thefe people have the true monopolizing ideas; they would involve four-and-twenty millions of people in the certain miferies of a war, rather than fee the interelt of thofe who confume fabrics, preferred to the intereft of thofe who make them. The advantages reaped by four-and-twenty millions of confumers are fuppoled to be lighter than a feather, compared with the inconveniences fultained by half a million of manufacturers. Meet many fimall carts in the tow, drawn each by a dog: I was told by the owner of one, what appears to me incredible, that his dog would draw 700 lb . halfa league. 'J he wheels of thele carts are very high, relative to the height of the dog, fo that his cheft is a good deal beluw the axle.

The 6 th. In leaving Lifle, the reparation of a bridge made me take a road on the banks of the canal, clofe under the works of the citadel. They appear to be very numerous, and the fituation exceedingly advantagcous, on a gently riling ground, furrounded by low watery meadows, which may with eafe be drowned. Pals Darmentiers, a large paved town. Sleep at Mont Caffel-_ 30 miles.

The pth. Caffel is on the fummit of the only hill in Flauders. They are now repairing the baton at Dunkirk, fo famous in hillory for an imperioufnefs in England, - vol. IV.
which the mult have paid dearly for. Dunkirk, Gibraltar, and the fatue of Louis XIV. in the Place de Victoire, 1 place in the fame political clafs of national arrogance. Many men are now at work on this bafon, and, when fininhed, it will not contain more than twenty or twenty-five frigates; and appears, to an unlearned eye, a rid"culous object for the jealoufy of a great nation, unlefs it profefed to be jealous of priva-teers.-l made enquiries concerning the import of wool from England, and was affured that it was a very triting object. I may here obferve, that when I left the town, my little cloak.bag was examined as fcrupuloufly as if I had jult left England with a cargo of prohibited goods, and again at a fort two miles off. Dunkirk being a free port, the cuftom-houfe is at the gates. What are we to think of our woollen manufacturers in England, when fuing for their wool-bill, of infamous memory, they brought one Thomas Wilkinfon from Dunkirk quay, to the bar of the Englifh Houfe of Lords to fwear, that wool paffes from Dunkirk without entry, duty, or any thing being required, at double cuftom-houfes, for a check on each other, where they examine even a cloak-bag? On fuch evidence, did our legiflature, in the true thop-keeping fpirit, pafs an act of fines, pains, and penalties againft all the wool growers of England. Walk to Roflendal near the town, where Monf. le Brun has an innprovement on the Dunts, which he very obligingly fhewed me. Between the town and that place is a great number of neat little houfes, built each with its garden, and one or two fields enclofed of moft wretched blowing Dune fand, naturally as white as fnow, but improved by induftry. The magic of property turns fand to gold. 18 miles.

The 8th. Leave Dunkirk, where the Concierge a good inn, as indeed 1 have found all in Flanders. Pafs Gravelline, which, to my unlearned eyes, feems the flrongeft place I have yet feen, at leaft the works above ground are more numerous than at any other. Ditches, ramparts, and drawbridges without end. This is a part of the art military I like: it implies defence. If Gengifchan or Tamerlane had met with fuch places as Gravelline or Lifle in their way, where would their conquefts and extirpations of the human race have been?-Reach Calais. And here ends a journey which has given me a great deal of pleafure, and more information than I fhould have expected in a kingdom not fo well cultivated as our own. It has been the firf of my foreign travels; and has with me confirmed the idea, that to know our own country well, we muft fee fomething of others. Nations figure by comparifon; and thofe ought to be efteemed the bencfactors of the human race, who have moft eftablifhed public profperity on the bafis of private happinefs. To afcertain how far this has been the cafe with the French, has been one material object of my tour. It is an enquiry of great and complex range; but a fingle excurfion is too little to truft to. I muft come again and again before I venture conclufions.- 25 miles.

Wait at Deffeins three days for a wind (the Duke and Duchefs of Gloucefter are in the fame inn and fituation) and for a pacquet. A captain behaved fhabbily: deceived tne, and was hired by a fanily that would admit nobody but themfelves: -I did not afk what mation this fanily was of.-Dover-London-Bradfield:and have more pleafure in giving my little girl a French doll, than in viewing Verfailles.

$$
1788 .
$$

THE long journey I had laft year taken in France fuggefted a variety of reftcetions on the agriculture, and on the fources and progrefs of national profperity in that king-
dom ; in fpite of myfelf, thefe ideas fermented in my mind; and while I was drawing conclufions relative to the political flate of that great country, in every circumftance connected with its hurbandry, I found, at each moment of my reflection, the importance of making as regular a furvey of the whole as was poffible for a traveller to effect. Thus inftigated, I determined to attempt finifhing what I had fortunately enough begun.
July 30. Left Bradfield ; and arived at Calais._161 miles.
Auguft 5. The next day I took the road to St. Omers. Pafs the bridge Sans Pareil, which ferves a double purpofe, paffing two ftreams at once; but it has been praifed beyond its merit, and coft more than it was worth. 'St. Omers contains little deferving notice; and, if I could direst the legilatures of England and Ireland, fhould contain till lefs:-why are catholics to emigrate in order to be ill educated abroad, inftead of being allowed inflitutions that would educate them well at home? The country is feen to advantage from St. Bertin's fteeple.- 25 miles.

The 7 th. The canal of St. Omers is carricd up a hill by a feries of fluices. To Aire, and Lilliers, and Bethune, towns well known in military fory.- 25 miles.

The 8th. The country changes, now a champaign; from Bethune to Arras an admirable gravel road. At the laft town there is nothing but the great and rich abbey of Var, and this they would not fhew me-it was not the right day-or fome frivolous excufe. The cathedral is nothing. - $17 \frac{1}{2}$ miles.

The gth. Market-day; coming out of the town I met at leaft an hundred affes, fore loaded with a bag, others a fack, but all apparently with a trifing burthen, and in. $\cdots$ of men and women. This is called a market, being plentifully fupplied; but a :...roportion of all the labour of a country is idle in the midft of harvelt, to fi. .. . : town which in England would be fed by q. $^{2}$ of the people: whenever this fwarm of triflers buz in a market, I take a minute and vicious divifion of the foil for granted. Here my only companion de voyage, the Englifh mare that carries me, difclofes by her eye a fecret not the moft agreeable, that the is going rapidly blind. She is moon-eyed ; but our fool of a Bury farrier affured me I was fafe for above a twelve-' month. It muft be confeffed this is one of thofe agreable fituations which not many will believe a man would put himfelf into. Ma foy! this is a piece of my good luck; -the journey at beft is but a drudgery, that others are paid for perforining on a good horfe, and I myfelf pay for doing it on a blind one;-I fhall feel this inconvenience perhaps at the expence of my neck.- 20 miles.

The roth. To Amiens. Mr. Fox flept here laft night, and it was amufing to hear the converfation at the table d'hòte; they wondered that fo great a man fhould not travel in a greater ftile :-I aiked what was his file? Monfieur and Madame were in an Englifh poit-chaife, and the fille and valet de chamber in a cabriolet, with a French rourier to have horfes ready. What would they have? but a file both of comfort and amufement? A plague on a blind uare!-But I have worked through life; and he talks.

The 1 th. By Poix to Aumale; enter Normandy.- 25 miles.
The 12 th. Thence to Newchatel, by far the fineft country fince Calais. Pafs many villas of Rouen merchants.--40 miles.

The $13^{\mathrm{h} h}$. They are right to have country villas-to get out of this great ugly, Ainking, clofe, and ill built town, which is full of nothing but dirt and induftry. What a pitture of new buildings does a flouriding and manufacturing town in England e. hibit! The choir of the cathedral is furrounded by a moft magnificent raifing of folid brafs. They thew the monument of Rollo, the firt Duke of Normandy, and
of his fon; of William Longfword; allo thole of Richard Coeur de Lion; his brother Henry; the Duke of Bedford, regent of France; of their own King Henry V.; of the Cardinal d'Amboife, minifter of I.cuis XII. The altar-piece is an adoration of the fhepherds, by Philip of Champagne. Rouen is dearer than Paris, and therefore it is neceffiry for the pockets of the people that their bellies fhould be wholefomely pinched. At the table d'hôte, at the hotel ponme dupin we fat down, fixteen, to the following dinner: a foup, about 3 lb . of botilli, one towl, one duck, a fmall fricaffee of chicken, a roté of veal, of about 2 lb . and two other frall plates with fallad: the price 4.5 f . and 20 . more for a pint of winc; at an ordinary of 2od, a head in England there would be a piece of meat which would, literally fpeaking, outweigh this whole dinner! The ducks were fwept clean fo quickly, that I moved from table without half a dinner. Such tables d'hôtes are among the cheap things of France! Of all fombres and trifles meetings a French table dhôte is foremoft; for eight minutes a dad filence, and as to the politen'fs of addrefling a converfation to a foreigner, he will look for it in vain. Not a fingle word has any where been faid to me unlefs to anfiver fome queftion: Rouen not fingular in this. The parliament-houfe here is hut up, and its inembers exiled a month paft to their country feats, becaufe they would not regifter the edict for a new land-tax. I enquired much into the common fentiments of the people, and found that the King perfonally from having been here, is more popular than the Parliannent, $t 0$ whom they attribute the general dearnefs of every thing. Called on Monf, d'Ambournay, the author of a treatife on ufing madder green inttead of dried, and had the pleafure of a long converfation with him on various farming topics, interefting to my enquiries.
'The 14th. To Barentin, through abundance of apple and pear-trees, and a country. better than the hufbandry; to Yvoout richer, but milerable management.- 21 miles.

The 1 gth. Country the fame to Bolbeck; their inclofures remind me of Ireland, the fence is a high broad parapet bank, very well planted with hedges and oak and beechtrees. All the way from Rouen there is a fcattering of country feats, which I am glad to fee; farm-houles and cottages cvery where, and the cotton manufacture in all. Continues the fame to Harfleur. To Havee de Grace, the approach itrongly marks a very flourifhing place: the hi'ls are almoft covered with little new built villas, and many more are building; fome are fo cinfe as to form almoft freets, and confiderable addit uns are alfo making to the town. -30 miles.

The 16 th. Enquiries are not neceflary to find out the profperity of this town; it is nothing equivocal: fuller of motion, life, and activity, than any place I have been at in France. A houfe here, which in 1779 let without any fine on a leafe of fix years for 240 livres per annum, was lately let for three years ac 6 co livres, which twelve years paft was to be had at 24 livres. The harbour's mouth is narrow and formed by a mole, but it enlarges into two oblong baions of greater breadth; thefe are full of fhips. to the number of fome hundreds, and the quays around are thronged with bufinefs, ait hurry, bufle, and animation. They fay a fifty gun fhip can enter, bu' ' fuppofe without her guns. What is better, they have merchant-men of five and fix hundred tons: the ftate of the harbour has however given them much alarm and pcrplexity; if nothing had been done to improve it, the mouth would have been filled up with fand, an increafing evil; to remedy which, many engineers have been confulted. The want of a back water to wafh it out is fo great, that they are now, at the King's expence, forming a moft noble and magnificent work, a valt balon, walled off from the ocean, or rather an inclofure of it b ; tolid mafonry, feren hundred yards long, five yards broad, and ten or twelve fiet above the furface of the fea at high water; and for four hundred
yards more it confifs of two exterior walls, each three yards broad, and filled up feven y.urds wide between them with earth; by means of this new and enormous bafon, they wiil have an artificial back-water, capable, they calculate, of fweeping out the harbour's mouth clean from all obftructions. It is a work that does honour to the kingdom. The view of the Seine from this mole is ftriking; it is five miles broad, with high lands for its oppofite fhore; and the chalk cliffs and promontories, that recede to make way for rolling its vaft tribute to the ocean, bold and noble.

Wait on Monf. l'Abbé Dicquemarre, the celebrated naturalift, where I had alfo the pleafure of inecting Mademoifelle le Maffon le Gloft, author of fome agreeable perform. ances; among others, Entrctien fur le Havre, 1781, when the number of fouls was eftimated at 25,000 . The next day Monf. Te Reifeicourt, captain of the corps royale du Gcnie, to whom alfo I had letters, introduced me to Meffrs. Hombergs, who are ranked among the molt confiderable merchants of france. 1 dined with them at one of their country-houfes, meeting a numerous company and fplendid entertainment. 'Thefe gentlemen have wives and daughters, coufins and friends, cheerful, pleafing, and well informed. I did not like the idea of quitting them fo foon, for they feemed to have a fociety that would have made a longer refidence agreeable enough. It is no bad prejudice furcly to like people that like England; moft of them have been there.-Nous. avons affurément en France de bolles, d'agrecables et de bonnes cbofes, mais on trouve une folle enérgie dans votre nation.-

The 18th. By the paffage-packet, a decket veffel, to Honfleur, feven and a half miles, which we made with a ftrong north wind in an hour, the river being rougher than I thought a river could be. Honfleur is a finall town, full of induftry, and a bafon full of hips, with fome Guinea-men as large as at Havre. At Pont au de Mer, wait on Monf. Martin, direftor of the manufacture royale of leather. I faw cight or $t \in n$ Englifhmen that are employed here (there are forty in all), and converfed with one from Yorkflire, who told we he had beer deceived in coming; for though they are well paid, yet they find things very dear, inftead of very cheap, as they lad been given to underftand. -20 miles.

The 19th. 'To Pont l'Eveque, towards which town the country is richer, that is, has more pafturage; the whole has fingular features, compofed of orchard inclofures, with hedges to thick and excellent, though compofed of willow, with but a fprinkling of thorns, that one can fcarcely fee through them : chateaus arc fcattered, and fome good, yet the ruad is villainous. Pont l'Eveque is fituated in the Pays d'Auge, celebraied for the great fertility of its paftures. To Lifieux, through the fame rich diftrict, fences admirably planted, and the country thick inclofed and wooded.-At the hotel d'Angleterre, an excellent inn, new, clean, and well furnifhed; and I was well ferved and well fed.- 26 miles.

The 20ih. To Caen; the road patfes on the brow of a hill, that commands the rich valley of Corbon, ftill in the Pays d'Auge, the moft fertile of the whole, all is under fine Poictu bullocks, which would figure in the counties of Leicefter or Northampton. -28 miles.

The 21f. The Marquis de Guerchy, whom I had had the pleafure of feeing in Suffolk, bring colonel of the regiment of Artois, quartered here, 1 waited on him; he iatroduced me to his lady, and remarked, that as it was the fair of Guibray, and himelf going thither, I could not do better than accompany him, fince it was the fecond fair in France. I readily agreed; in our way, we called at Bon, and dined with the Marquis of Turgot, elder brother of the juftly celebrated Comptroller general: this gentleman is author of fome memoirs on planting, publifhed in the Trimeftres of the Royal

Society of Paris; he fhewed and explained to us all his plantations, but chiefly prides himfelf on the exotics; and I was forry to find in proportion not to their promifed utility, but merely to their rarity, I have not found this uncommon in France; and it is far from being fo in England. I wifhed every moment for a long walk to change the converfation from trees to husbandry, and made many effiorts, but all in vain. In the evening to the fair play-houfe-Richizd Caur de Lion; and I could not but remark an uncommon number of pretty women. Is there no antiquarian that deduces Englifh beauty from the mixture of Norman blood? or who thinks with Major Jardine, that nothing improves fo much as croffing? to read his agreeable book of travels, one would think none wanted, and yet to look at his daughters, and hear their mufic, it would be impoffible to doubt his fyltem. Supped at the Marquis d'Ecougal's, at his chateau a lis Frenaye. If thefe French Marquiffes cannot ficw me good crops of corn and turnips, here is a noble one of fomething elfe-of bcautiful and elegant daughters, the charming copies of an agrecable mother: the whole family I pronounced at the firll fight amiable : they are chearful, pleafing, interefting: I want to know them better, but it is the fate of a traveller to meet opportunities of pleafure, and merely fee to quit then. After fupper, while the company were at cards, the Marquis converfod on topics interefting to my enquiries. $-22 \frac{1}{4}$ miles.

The 22d. At this fair of Guibray, merchandize is fold, they fay, to the amount of fix millions ( 262,5001 .) but at that of Beatcaire to ten: I feund the quantity of Englith goods confiderable, hard and queen's ware; cloths and cotons. A dozen of common plain plaies, 3 livres, and 4 livres for a French imitation, but much worfe; I afkel the man (a Frenchman) if the treaty of commerce would not be very injurious with fuch a difference-C'eft précifincnt le contraire Monf.-quelque mauraife que foit citte imitation, on n'a encore ricn fait d'aulf bien en France: l'année procbaine on fira miecis - nous perfectionerons-et on fin nous l'cmporterous fur wous-I believe he is a very good poliician, and that, without competition, it is not pollible to perfect any fabric. A dozen with blue or green edges, Englifh, 5 livres 5 . Return to Caen; dine with the Marquis of Guerchy, Lieutenant colonel, Major, \&cc. of the regiment, and their wives prefent, a large and agreeable company. View the Abbey of Benedictincs, fo mded by William the Conqueror. It is a fiendid building, fubltantial, maffy, and magnificent, with very large apartments, and fone ftair-cales worthy of a palace. Sup with Monf. du Mefni, captain of the corps de Gcnic, to whom I had letters; he had imtroduced me to the Fingineer employed on the new port, which will bring fhips of three or four hundred cons to Caen, a noble work, aiad among thofe which do honour to France.

The a zd. Monf. de Guerchy and the Abbée de - , accompanied me to view Harcourt, the feat of the Duke d'Harcourt, governor of Normandy, and of the Dauphin; 1 had heard it called the fineft Englith garden in France, but Frmenonville will not allow that claim, though not near its equal as a reflemee. Found at laft a horfe to try in order to profecute iny journey a litle less like Dun Quixotte, but it would by no means do; an uneafy ftumbling beaft, at a price that would have bought a good one; fo my blind friend and I mult jog on flill urther. - 30 miles.

The 24th. To Bayeux; the cathedral has threc towers, one of which is very light. elegant, and highly ormamented

The $25^{\text {th }}$ In the road to Carentan, pafs on arm of the fea at Ifligny, which is fordable. Ai Carentan I found myfelf fo ill, from accumulated colds I fuppofe, that I was feriouny afraid of being laid up-not a bone without its aches; and a horrid dead teaden weight all over une. I went early to bed, wathed down a dofe of antinonial
powdors, which proved fudorific enough to let me profecute my journey. - 23 miles.

The 26. To Volognes; thence to Cherbourg, a thick woodland, much like Suffex. The Marquis de Guerchy had defired me to call on Monf. Doumerc, a great inprover at l'ierbuté near Cherbourg, which I did; but he was then at Yaris: however his bailiff, Monf. Daillio, with great civility thewed me the lands, and explained every thing 30 miles.

The ${ }^{2} 7 \mathrm{~h}$. Cherbourg. I had letters to the Duke de Benvron, who commands here; to the Count de Charagnac, and M. de Meufnier, of the Academy of Sciences, and tranilator of Cook's Voyages; the Count is in the country. So much had I heard of the famous works erecting to form a harbour here, that I was eager to view them without the lofs of a moment: the Duke favoured me with an order for that parpofe; I therefore took a boat, and rowed acrofs the artificial harbour formed by the celebrated cones. As it is poflible that this itinerary may be read by perfons that have not cither time or inclination to feek other books for an account of thefe works, 1 will in a few words iketch the intention and execution. The lirench poffefs no port for flips of war from Dunkirk to Breft, and the former is capable of receiving frigates only. This deficiency has been fatal to them more than once in their wars with England, whofe more favourable coaft affords not only the Thames, but the noble harbour of Portfmouth. To remedy the want, they planned a mole aciofs the open bay of Cherbourg; but to inclofe a fpace fufficient to protect a flect of the line, would demand fo extended a wall, and fo expofed to heavy feas, that the expence would be far too great to be thought of; and at the fame time the fuccefs too dubious to be ventured. I he idea of a regular mol was therefore given up, and a partial one on a new plan adopted; this was to erect in the fea, in a line where a mole is wanted, infulated columns of timber and mafonry, of fo vait a fizz, as to refift the violence of the occan, and to break its waves fufficiently to permit a bank being formed between column and column. Thefe have been called cones from their form. 'They are 140 feet diameter at the bafe; 60 diameter at the top, and 60 feet vertical height, being, when'funk in the fea, 30 to 34 feet, immerfed at the low water of high tides. Thefe enormous broad botomed tubs being conft ucted of oak, with every attention to ftrength and folidity, when finilhed for launching, were loaded with ftone juffifficient for finking, and in that fate each cone weighed 1 coo tons (of $2 c 00 \mathrm{lb}$.) To floa them, fixty empty cafks, each of ten pipes, were attached around by cords, and in ...us ftate of buoyancy the enormous machine • was floner. $: 0$ its deftined foot, towed by numberlefs vefiels, and before immumerable fpectall.s. At a fignal, the cords are cut in a moment, and the pile finks: it is then filied inllautly with itone from voffels ready attending, and capped with malonry. The contents of each filled to within four feet of the furface only, 2500 cinical tuifes of flone *. A valt number of veffels are then emploved to form a bank of llone from cone to cone, vifible at low water in neap tides. Eighteen cones, by one accoumt, but thirty-three by another, woud complete the work, leaving only two entrancest, commanded by two vary fine new-built forts, Ravale and d'Artois, thoroughly we! poovided, it is faid, (for they do not how them,) with an apparatus for heating anoin balls. The number of cones will depend on the diftances at which they are sinced. I found eight fuithed, and the theleton fraties of two more in the dock yard; but all is fopped by the Archbifhop of 'Tot:louze, in favour of the oconomical plans at prefent in fipeculation. Four of them, the laft funk, being moft expofed, are now repairing,
having been found too weak to refift the fury of the florms, and the heavy wenerfy feas. The lalt cone is much the molt damaged, and, in proportion as they advance, they will be ftill more and more expofed, which gives rife to the opinion of many fkillul engineers, that the whole feheme will prove froitlefs, mulefs fiech an expence is beflowed on the remaining cones as would be fufficient to exhautt the revenues of a kingdon. The eight already erected have for fome years given à new appearance to Cherbourg; new houfes, and even treets, and fuch a face of activiry and amimation, that the ftop to the works was received with blank countenanees. They lay, that, quarry-men included, three thoufand were employed. The effict of the eight cones already erected, and the bank of flone formed between them, has been to give perfect fecurity to a confiderable portion of the intended harbour. Two forty gun thips have lain at anchor within them thefe eighteen months patt, by way of experiment, and though fuch llorms have happened in that time as have put all to fivere trials, and, as I mentioned before, coididerably damaged three of the cones, yet thefe fhips have not received the finalleft agitation ; hence it is a harbour for a fmall flect without doing more. Should they ever proceed with the roft of the cones, they mult be built much thronger, perbaps larger, and far wreater precantions taken in giving them firmefs and folidity: in is alfo a queflion, whether they muft not be funk much nearer to each other; at all events, the proportionable expence will be nearly doubled; but tor wars with England, the importance of having a fecure harbour, fo critically fituated, they confider as equal almoft to any expence; at leaft this importance has its full weight in the eyes of the people of Cherbourg. I remarked, in rowing acrofs the harbour, that while the fea without the artificial bar was fo rough, that it would have been unplealant for a boat, within it was quite fmooth. I mounted two of the cones, one of which has this infeription :-Louis XVI.-Sur ce premiere cône èchou le 6 Juin 1784, a vill l'immerfion de celui de $l^{\prime} e f t, l_{2} 23$ Juin 1786.- On the whole, the undertaking is a prodigious one, and does no trifling credit to the fpirit of enterprize of the prefent age in France. The fervice of the narine is a favourite; whether juflly or not, is another queftion; and this harbour fhews, that when this great people undertake any capital works, that are really favourites, they find inventive genius to plan, and engineers of capital talents to execute what ever is devifed, in a manner that does honour to their kingdom. The Duke de Beurron had atked me to dimer, but I found that if I accepted his invitation, it would then take me the next day to view the glafs manufacture; I preferred therefore bufinefs to pleafure, and taking with me a letter from that nobleman to fecure a fight of it, 1 rode thither ia the aftumoon; it is about thre viles from Cherbourg. Monf. de Puye, the dircetor, explained every thing to me in the molt obliging maner. Cherbourg is not a place for a refidence longer than necelfary; I was here fleeced more infamoully than at any other town in France; the two beft inns were full ; I was obtiged to go to the bargus, a vile bole, litte better than a log.tly; where, for a miferable dirty wretched chamber, two fuppers compofed chichly of a plate of apples and fone butter and cheefe, with fome trifte befides too bad to cat, and one miferable dinner, they brought me in a bill of 31 livres, (11.75. 1d.); they not only charged the room 3 livres a night, but even the rery flable for my borfe, afier enornues items for oats, hay, and feraw. This is a feecies of prolligucy whin detafes the mational character. Calling, as I returned, on Minf. Baillo, I thewed him the bill, at which he exclaimed for inpofition, and faid the man and woman were going to leave off their trade; and no wonder, if they had made a pradice of fleceing whers in that manner. Let no onego to Cherbe urg without making a bargain for every thing he has, even to the. llaw and abble; pepper, fait, and tablecloth.- 18 miles.

The 28th, return to Carentan; and the 29th, pafs through a rich and thickly in. clofed country to Coutances, capital of the dittrict called the Cotentin. They build in this country the beft mud houfes and barns I ever law, excellent habitations, even of three fteries, and all of mud, with confiderable barns and other offices. 'The carth (the beft for the purpofe is a rich brown loam) is well kneaded with fraw; and being fpread about four inches thick on the ground, is cut in fquares of nine inches, and thefe are taken with a flovel, and tuffed to the man on the vaill who builds it; and the wall built, as in Ireland, in layers, each three feet high, that it may dry before they advance. The thicknels about two feet. They make them project about an inch, which they cut ofl layer by layer perfectly fmooth. If they had the Jinglifh way of white-wathing, they would look as well as our hath and plaifter, and are much more durable. In good honfes the doors and windows are in ftone work. - -20 miles.

The 3 sth. A fine fea view of the Ines of Chau'é, at five leagues diftant; and afterwards lerley, clear at about forty miles, with that of the town of Grandval on a high pei infula: cutering the town, every idea of beauty is loft; a clofe, natty, urly, ill-w wilt tole; market day, and myriads of triffers, common at a lirench market. The bay of Cancalle, all along to the right, and St. Michael's rock riing out of the fea, conically, with a cafle on the top, a moft fingular and picturefque object.30 miles.

The $31^{\text {fl }}$. At Pont Orfin, enter Bretagre; there feems here a more minute divifion of farms than before. There is a long Itree in the cpifcopal town of Doll, without a ghafs window; a liorrid appearance. My entry into Bretagne gives me an ided of its being a miferable province.- $\mathbf{2 2}$ miles.

S'ptember itt. To Combourg, the country has a Cavage afpect; hufbandry not mucli further advanced, at leaft in fill, than among the Hurons, which appears in. credible amidd inchofures; the poople almolt as wild as their country, and their town of Combourg one of the moft brutal filthy places that can be feen; mut houfes, no windows, and a pavement fo broken, as to impede all paffengers, but eafe none-yet here is a chateau, and inhabited; who is this Monficur de Chateaubriant, the owner, that has nerves ftrung for a refidence amidft fuch filth and poverty? B low this hideous heap of wretchednefs is a fine lake, furrounded by well wooded inclofures. Coming nut of Heds there is a beatififul lake, belonging to Monfieur de Blaffac, intendant of Poictiers, with a fine accompmiment of wood. A very little cleaning would make here a delicious fenery. 'Jhere is a chattran, with four rows of trees, and nothing elfe to be feen from the windows in the true French flyle. Forbid it, tafte, that this thould be the houfe of the owner of that beautiful water; and yet this Monfeur de Blafiac has made at Po:ctiers the fineft promenade in lirance! But that tafte which draws a flrait line, and that which traces a waving ons, are founded on fectings and ideas as feparate and diftine as painting and mufic -as poctry or fculpture. 'T he lake abounds with fifh, pike to 36 lb . carp to 24 lb . perch 4 lb . and tonch 5 lb . To Remes the fame ftrange wild mixture of defert and cultivation, half favage, half human. - 31 miles.

The 2 d . Rennes is well built, and has two gond fquares: that particularly of Louis XV. Where is his ftatue. The parlianent being in exile, the houfe is not to be feen. 'The Benedictnes' gaven, called the Tabour, is worth viewing. But the objet at iacmes molt remarkable at prefent is a camp, with a marfial of France (de Stainville), and four regimetts of infantry, and two of dragome, clofe to the gates. The difontents of the people have licen doubled, firt on accunt of the high price of bread, and fecondly for the banifment of the parliament. 'inc tormer caufe is natural cnough; vol. tv .
but why the people flould love their parliament was what I could not underfand, fince the members, as well as of the flates, are all noble, and the dillinction between the noblefie and roturiers no where flronger, more oflenfive, or more abominable than in Bretagne. 'They allured me, however, that the populace have been blown up to violence by every art of deception, and even by money diftributed for that purpofe. The commotions rofe to fuch a height before the camp was eftablifhed, that the troops here were utterly unable to keep the peace. Monfieur Argentaife, to whom I had brought letters, had the goodnefs, during the four days 1 was here, to thew and explain every thing to be feen. I find Remes very cheap; and it appears the more fo to me jult come from Normandy, where every thing is extravagantly dear. The table d'hôte, at the grand maifon, is well ferved; they give two courfes, containing plenty of good things, and a very ample regular defert; the fupper one good courle, with a large joint of mutton, and another good defert; each meal, with the common wine, 40 fous, and for 20 more you have very good wine, intlead of the ordinary fort; 30 fous for the horfe: thus, with good wine, it is no more than fix livres, 10 fous a day, or 5s. tod. Yet a camp of which they complain has raifed prices enormoully.

The 5 th. To Montauban. The poor people feem poor indeed; the children terribly ragged, if poffille worfe clad than if with no cloaths at all; as to fhoes and fock. ings they are luxurics. A beautiful girl of fix or feven years, playing with a ftick, and fmiling under fuch a bundle of rags as made my heart ache to lee her; they did not beg, and when I gave them any thing, fecmed more furprized than obliged. One third of what I have feen of this province feems uncultivated, and nearly all of it in mifery. What have kings, and minifters, and parliaments, and fates to anfiver for, leeing millions of hands that would be induftrious, yet idle and ftarving, through the execrable maxims of detpotim, or the equally deteftable prejudices of a feudal nobility? Sleep at the lion d'or, at Montauban, an abominable hole.20 miles.

The 6th. The fame enclofed country to Brooms; but near that town improves to the eye, from being more hilly. At the litue town of Lamballe, there are above fifty families of nobleffe that live here in winter, who refide on their eflates in the fummer. There is probably as much foppery and nonfenfe in their circles, and for what 1 know as much happinefs, as in thofe of laris. Both would be better employed in cultivating their lands, and rendering the poor indultrious. - 30 milks.

The 7 th. Upon leaving Lamballe, the country immediately changes. The Marquis d'Urvoy, whom I met at Rennes, and who has a good eftate at St Brieux, gave me a letter for his agent, who anfwered my gueftions. $12 \frac{1}{2}$ mikes.

The 8th. To Guingamp, a fombre enclofed country. Pdfs Chatembandrin, and enter Bas Bretagne. One recognizes at once anoher poople, meoting mombers who have not more French than . le ne fai pas ce que vous dites, or Je' n'entend rich. Enter Guingamp by gateways, towers, and battements, apparently of the cldelt military architecture ; every part denoting antiquity, and in the beft prefervation. The poor people's habitations are not fo good; they are miferable heaps of dirt; no glafs, and fearcely any light; but they haverenh chimnies. I was in my firt fleep at Belleifle, when the aubergifte came to my bedfade, undrew a curtain, that I expected to cover me with fpiders, to tell me that l/ had ane juncont nugloiji jupcrbe, and that a feipneur wihed to buy it of me: I gave himhthalf a dozen flowers of French eioguence for his impertinence, when he thought proper to lave me and his fiders ar peace. There was a great cbaffe affembled. 'Ihefe Bas Bretagne leigneurs are capital hunters, it
feems, who fix on a blind mare for an object of admiration. A-propos to the breeds of horfes in France; this mare colt me twenty three guineas when horfes were dear in England, and had been fold for fixteen when they were rather cheaper; her figure may therefore be gueffed ; yet fhe was much admired, and often in this journcy; and as to Bretague, fice rarely met a rival. That province, and it is the fame in parts of Normandy, is infofted in every fable with a pack of garran poney flallions, fufficient to perpetuate the miferable breed that is every where feen. This villainous hole, that calls itfelf the grand maion, is the beft inn at a poft town on the great soad to Breft, at which marfhals of France, dukes, peers, countelles, and fo forth, mult now and then, by the accidents to which long journeys are fubject, have found themfelves. What are we to think of a country that has made, in the eighteenth century, no better provifron for its travellers! - 30 miles.

The gth. Morlais is the molt fingular port I have feen, It has but one feature, a vale juft wide enough for a une canal with two quays, and two rows of houfes; behind them the mountain rifes fleep, and woody on one fide; on the other gardens, rocks, and wood ; the effect romantic and beautiful. 'Trade now very duil, bui flourifhed much in the war.- 20 miles.

The roth. Fair day at Landervifier, which gave me an opportunity of fecing numbers of Bas Bretons collected, as well as their cattle. The men drefs in great trowferlike breeches, many with naked legs, and moft with wooden fhoes, ftrong marked features like the Welch, with couneenances a mixture of half energy, half lazinefs; their perfons ftout, broad, and fquare. The women furrowed without age by labour, to the utter extinction of all foftnefs of fex. The eye difoovers them at firf glance to be a people abfolutely diftinet from the French. Wonderful that they fhould be found fo, with diftinet language, manners, drefs, \&c. after having been fettled here 1300 years. - 35 miles.

The 1 th. I had refpectable letters, and to refpectable people at Breft, in order to fee the dock-yard, but they were vain; Monficur le Chevalier de Tredairne particularly applied for me carnefly to the commandant, but the order, contrary to its being fhewn either to Frenchmen or foreigners, was too ftrict to be relaxed without an exprefs direction from the mimifer of the marine, given very rarely, and to which, when it does come, they pay but an unwilling obedience. Monfieur Tredairne, however, informed me, that Lord Pembroke faw it not long fince by means of fuch an order: and he remarked himfelf, knowing that I could not fail doing the fame, that it was Itrange to fhew the port to an Englifh general and governor of Portfinouth, yet deny it to a farmer. He however aflured me, that the Duke of Chartres went away but the other day without being permitted to fee it. Gretry's mufic at the theatre, which, though not large, is neat and elegant, was not calculated to put me in good humour: it was lanurge.-Breft is a well built town, with many regular and handfome ftreets, and the quay where many men of war are laid up, and other hipping, has much of that life and motion which animates a fea-port.

The 12 th. Retura to Landernau, where at the Due de Chartres, which is the beft and cleandt inn in the dithoprick, as I was going to dinner, the landlord told me, there was a Monfectr un homnc comme il fout, and the dinner would be better if we united; dic tout monotar:. He proved a bas 1 breton noble, with his fword and a little miforable but nimbenag. 'This feignem' was ignorant that the Duke de Chartres, the other dhe at breft, was mot the duke that was in Monfieur d'Orvilliers fect. Take the road to Nimtes. - 25 miles.

The $3^{3 t h}$. The country to Chateaulin more mountainous; one-third wafle. All this region far inferior to Leon and Traguer: no exertions, bor any marks of intelligence, yet all near to the great navigation and market of Breth water, and the foit good. Qumper, though a bilhopric, hats nothing worth fecing but its promenades, which are among the fineft in France,-- 25 miles.

The 1 th. Leaving Quimper, there feem to be more cultivated features; but this only for a monent ; watles - watles -wattes. - Reach Qumperlay-- 27 miles.
'The 1 gth. The lame fontiore conntry to l'Oricnt, but with a misture of cultivation and much wood. - I found l'Orient fo fall of fools, kaping to fee a nan of war launchod, that I could get no bed for myfelt, nor ftable fur my horle at the epe royale. Ac the chew blanc, a poor hole, I got my horle crammed among twenty others like herrings in a barrel, but couhd have no bed. The Duke de Brillice, with a fuite of oficers, had no better fucecfs. If the governor of Paris could not, without trouble, get a b dat l'Orint, no wonder Arthur Young found obitacles. I went directly to defiver iny letters, found Monl. Befac, a merchant, at home; he received me with a frank civility better than a million of compliments; and the monsent he undertood my fituation, ollered me a bed in his: houfe, which I accepted. The Tourville, of eightyfour guns, wis to be launched at three o'clock, but put off till the next day, much to the joy of the aubergiftes, \&ec. who were well plealed to fee fuch a fwarm of framgers kept another diay. I wifhed the fhip in their throats, for thought only of my poor mare being fqueezed a night among the Bretagne garrans; fixpence, however, to the gargon, had efli ts marvellounty to her eafe. The town is modern, and regnlarly built, the freets diverge in rays from the gate, and are crolled by others at right angles, broad, handfomely built, and well paved; with many houfes that make a good figure. But what makes l'Orient more known, is, being the appropriated port for the commere of India, containing all the thipping and magazines of the company. The latter are truly great, and fpeak the royal munificence from which they arofe. They are of feveral ltorics, and all valutext in thone, in a fplendid thile, and of valt extene. But they want, at healt at prefent, like fo many other magninicem elfablifhnents in France, the vigour and vivacity of an active commerec. The bufinds tranfacting here feems trilling. Three eiphty four gun fhips, the 'lourville, l'Eole, and Jean Bart, with a thirty-two gun frigate, are upon the flocks. They affured me, that the Tourville has becn only nine months building : the feene is alive, and fifteen large men of war being laid up here in ordinary, with fome Indiamen and a few traders, render the port a pleafing fpectacle. There is a beautiful round tower, a hundred fiet high, of white flone, with a railed gallery at top; the proportions light and agreeable; it is for looking out and making lige is. My hofpitable merchant I lind a phin mafected characvr, with fome whimfical originalities, that make him more interelting; he has an agreable dughter, who entertains me with finging to her harp. The next morning the lourville quited her focks, to the mutie of the regiments, and the fhome of thoufands collected to fee it. L, ave ! Orient. Arrive at Hemedon. $\rightarrow \frac{1}{2}$ miles.

The 17th. T'o Auray, the eightern poorell milss I have yet feen in Bretirne. Good hontes of thone and flate, without glats. Auray has a little pert, and fome floops, which always give an air of life to a town. 'lo Vamme, the commery variod, but landes the more permanent teature. Vannes is not an iaconfiderable town, but its grate theany is its port and promenade.
'fhe sth To Mufiliac. Belleife with the fmaller ones, t'Yerdic and J'tionat, are in foght. Mufiliac, if it cantoalt of nothing elfie, may at leaft vaunt its choapocts.

I had for dinner two good flat fifh, a difh of oyfters, foup, a fine duck roafted; with an anple defert of grapes, pears, walnuts, Lifeuits, liqueur, and a pint of good Bourdaus whene: my mare, befides hay, hat threefourths of a peck of corn, and the whole 5 \%s. 2s. to the fille and two to the garçon, in all as. 6d. Pals lamdes-landes -handes -to la Roche Beraard. The view of the river Villaine is beautiful from the bolluefs of the fhores; there are no infipid dats; the river is two-thirds of the width of the river "thames at Weftmintter, and would be equal to any thing in the world if the thores were woody, but they are the favage waltes of this country. - 33 miles.

The igth. 'lurned afide to Auvergnace, the feat of the Count de la Bourdonays, to whom I had a letter from the Duchefs d'Anville, as a perfon able to give me every fpecies of intelligence relative to Bretagne, having for five-and-twenty years been firlt fyndic of the noblete. A fortuitous jumble of rocks and fteeps could farcely form a worfe road than thefe five miles: could I put as much faith in two bits of wood laid over eath other, as the good folks of the country do, 1 hould have crofed myfelf, but my blind friend, with the mott incredible fure footednefs, carried me fafe over fuch places, that if I had not been in the conftant habit of the faddle, I thould have fhoddered at, hough guided by eyes keen as eclipfes; for I fuppofe a finer racer, on whole velocity fo many fools have been realy to lofe their mon:y, mult have good eyes, as well as grood legs. Such a road, leading to leveral vil! ages, and one of the firlt noblemen of the province, theiws what the ftate of fociety muft be;- - 10 commu-nication-no neighbourluod - no temptation to the expences which flow rum fociety; a mere feclufion to fave money in order to $\mathrm{f}_{\mathrm{p}}$-ad it in towns. The Guant received me with great politenefs; I explaned to him my plan and rives for travelling in France, which he was pleated very warnly to approve, exp eilngy his furprife that I Hhould attenpt fo large an undertaking, as luch a furvey of srance, unfupported by my goverament; I told him he knew very fitte of our governmeat, if he fuppofed they would give a fhilling to any agricultural project or projector; that whether the miniter were whig or tory made no differcnce, the party of the plough never yet had one on its fide; and that Lingland has had many Colberts, but not one Sully. This led to mach intereling convertation on the balance of agriculture, manufactures, and commerce, and on the means of encouraging them; and, in reply to his enquiries, I made him undertiand their relations in Enghand, and how our hulbandry flourithed in fipite of our minilters, merely by the protection which civil liberty gives to property: and confequently that it was in a poor fituation, comparatively with what it would have been in, had it recelied the fane attention as manufactures and commerce. I told M. de la Bourdonaye that his provinee of Bretagne feemed to me to have nothing in it but privilges and poverty; he fomiled, and we fome explanations that are impostant; but no nobleman can ever probe this crat as it ought to be done, refulcing as if does from the privileges roing to themfelves, and the poverty to the people. He fhewed me his planations, which are very fine and well thriven, and thelter him tho. rouglily on every fide, ceven from the S.W. fo near to the fea; from his walks we fee Betionle and its netghbours, and a little ine or rock belonging to him, which he fays the King of England took from hinn atier Sir ldward Hawke's victory, but that his majetly was kiad enough to leave him his illand atter one night's poffellion.-20 mils.

The eoth. Take my Leave of Monfieur and Madame de la Bourdonaye, to whofe politenefs as well as frienclly attentions 1 am much obliged. Sowards Nazaire there is a fine view of the mouth of the Loire, from the rifing grounds, but the headlands
that form the embouchure are low, which takes off from that greatnefs of the effect which highlands give to the month of the Shamon. The fwelling bofom of the Atlantic boundlefs to the right. Savanal is poverty itfelf. - -33 miles.

The 2 ift. Come to an improvement in the midt of thefe deferts, four good houfos of fone and fate, and a few acres run to wretched grafs, which have been tilled, but all favage, and become almolt as rounh as the rett. I was afterwards informed that this in:provement, as it is called, was wrought by Finglifmon, at the expence of a genteman they rumed an well as thomelvis.-I demanded how it had been cone? Fare and burn, and fow what, then rye, and then oats. Thus it is for ever and ever! the fame follies, the fame blumbring, the fane ignorance; and then all the fools in the country faid, as they do now, that thefe waftes are grod for mothing. '1 w my amazement find the ineredible circumflanec, that they rach withis three miles of the great commercial city of Nantes! This is a problem and a lefon to work at, but not at prefent. Arrive-go to the theate, new huilt of tine white flone, having a magaificent portico of eight chegant Coriathian pillairs in front, and four uthers, to feparate the portice from a grand veltibule. Within all is yold and painting, and a collod ail at entering, that llruck me forcitly. It is, I believe, twice as large as Drury-Lanc, and five times as magnificent. It was Sunday, and therefore full. Mon Dicu! cricd 1 to myfelf, do all the wattes, the deferts, the heath, ling, firz, brom, and bog, that I have paffed for three humdred miles, Iead to this fpectacle? What a miracke, that all this fiplendour and wealth of the cities in France fhould be fo unconnested with the country! There are no gentle tranfitions from cale to comfort, from confort to wealh : you pafs at once from teggary to profufion, -from mifery in mud cabins to Mademoifelle St. Huberti in fptendid fpectacles at $5=0$ livres a night ( 211.17 s .6 d .) The conntry deferted, or if a gentleman in it, you find him in fome wretched hole, to fave that money which is lavihed with profulion in the luxuries of a capital.-20 miles.

The 22d. Deliver my letters. As much as agriculture is the chiof ohjet of my journey, it is neceliary wacquire fuch intelligence of the fate of commerce, as can he beft done from merchans, for abmadance of whelul information is to be gained, "ithont pouting any gueftions that a man would be camtons of affering, and even without patimg any queflions at all. Monf. Ricidy was very polie, and t.tisfod many of my enguinies; I dincd once wihh him, and was phated to find the converfition take an imporant tum on the relative fituations of Fraice and 1 nghand in trade, particu-
 ment of Remocs, whofe brother, Monl. Fpisent de la Yilliduntuct, is a sery contiderable merchant here. It was nut puffible for ant perfon to be more ohliging than thefe twogmbmen; ther atemions wome were marked and trichaly, and rendered a few days refidence here qualle in metive and agrecthle. The town has that hen of profperity of new buil ings, which nower dectives. The quater of the comedie os magnificent, all the freets at rishtangles and of white flone. I am in doubt whether
 but mither buht, bitted up, nor farmithed like this, which is new. It cott 400,000
 no rent wor the fint yar. It comtans linty heos cor maflers, and twatis-live talls for horte. Some of the aparmens of two roms, very neat, are b bistes a day; one grod 3 livere, but fir merchants 5 livere per dien for dinare, fupper, wane, and chan-

plafiure or trade as the votaries of eitber can wilh. The theatre colt 450,000 livres, and 1 ts to the comedians at 17,000 livres a year; it holds, when full, to the value of 120 louis $\mathrm{j}^{\prime}$ 'or. The dand the in ftands on was bought at 9 livres a foot: in fome parts of the city it fells as high as 15 livres. The value of the ground induces them to build fo high as to be deltructive of beauty. The quay has nothing remarkable; the river is choaked with illands, but at the furthct part next to the lea is a large range of houtes regularly fronted. An inllitution common in the great commercial towns of France, but particularly tlomrilhing in Nantes, is a chambre de lecture, or what we fhould call a book club, that docs not divide its books, but forms a library. There are three rooms, one for realing, another for converfation, and the third is the library; good fires in winter are provided, and was candles. Meffirs. Epivent had the gondnefs to attend me on a water expedition, to view the eftablifhment of Mr. Wilkinfon, for boring cannon, in an illad in the l, oire below Nantes. Until that well known Englifh manufacturer arrived, the lronch linew nothing of the art of calling cannon folid, and then boring them. Mr. Wilkinfon's machinery, for boring four cannons, is now at work, moved by tide wheels; but they have crected a ftean engine, with a new apparatus for boring feven more ; M. de ha Motte, who has the direction of the whole, Thewed us alfo a model of this engine, about fix feet long, five high, and four or five broad; which he worked for us, by making a finall fire under the boiler that is no bigger than a large teakette; one of the beft machines for a travelling philotopher that I have feen. Nantes is as enflammé in the caufe of liberty, as any town in France can be; the converfations 1 witnelfed here prove hou great a change is effected in the minds of the Freach, nor dol befieve it will be peffible for the prefent government to !aft half a cen-. tury longer, mulefs the clearelt and molt decided talents be at the helm. The American revolution has laid the foundation of another in France, if government do not take care of itfelf *. Upon the 23 d one of the twelve prifoners from the Baltile arrived here-he was the mot vivent of them all-and inis imprifonment has been far enough from filencing him.

The 25 th. "h was not without regret that I quitted a fociety both intelligent and arreeable, nor foould I fol comfortably if 1 did mot hope to fee Mattrs. Epivents again; I have litule ciance of being at Nantes, but if they come a fecond time to England, I have a promife of feene them at Brodfich. The younger of thefe gentemen pent a fortnibht wihh loa Sindbumeat Bowood, which he remembers with much plealure; Col. Barre and Dr. Pridtey wore there at the fame time. 'Io Ancenis is all inclofed: for feven miles mader fats--2! miks.

The anth. 'Fo the feene of the vintage lhad not before becn witnefs to fo much advamtage as here; bat amman the beary rains made it a melancholy bufinefs. At prefent all is life and activity. The country all thickly and well inclofed. Glorious view of the Loire froma village, the lath of Bretagne, where is a great barier acrofs the road athd cuthom houts, to tarch every thing coming thence. The Loire here takes the appearance of a lake taren mugh to be interefting. There is on both fides an accompaniment of wood, which is not univerfal on this river. The addition of towns, ftecples, windmills, and a great ratege of hode connary, covered with vines; the charater gray as well as uoble. Eater Anjou. Pas St. George. For ten miles quit the iovire and uert it again at Angers. Letters from Monf. de Brouffonet; but he is unable to inform me in what part of Anjuu was the reffacte of the Marquis de Tourbilly ; to
 wide of the mark when I takne ot lity yaus.
find out that nobleman's farm, where he made thofe admirable improvements, which he defribes in the Memoire fur les defrichemens, was fuch an object to me, I was determined to go to the place, let the ditance out of my way be what it might.- 30 milcs.

The 2 ; th. Among my letters, one to Monf. de la Livoniere, perpetual fecretary of the Society of Agriculture here. I found he was at his comntry feat, two leagucs off at Magnianne. On my arrival, he was fitting down to dinner with bis family; not being paft twelve, I thought to have efcaped this awk wardncfs; but both he himlelf and Madame prevented all embarraffinent by very unaffededly defiring me to partake with them; and making not the leaft derangenent cither in table or looks, placed me at once at my eafe, to an indifferent dimner, garnifhed with fo much chearfulnefs, that I found it a repaft more to my tafte than the moft fplendid tables could afford. An Eng. lifh family in the country, fimilar in fituation, taken mawares in the lame way, would receive you with an unquiet hofpitality, and an anxious politenefs; and after waiting for a hurry-fcurry derangement of cloth, table, plates, fideboard, pot, and fit, would give you perhaps fo good a dinner, that none of the family, between anxicty and fatigue, could fupply one word of converfation, and you would depart under cordial wifhes that you might never return. This folly, fo common in Ehgland, is never met with in lirance: the French are quict in their houfes, and do things without effort. - Monfiem 1 ivoniere converfed with me much on the plan of my travels, which be commonded greatly, but thought it very extraordinary that neither government, nor the Academy of Sciences, nor the Academy of Agriculture, flould at leaft be at the expence of my journcy. This idea is purtly French ; they have no notion of private people going out of their way for the public good, without being paid by the public; nor conld he well comprchend me, when I toid him that every thing is well done in Finglasd, except what is done with public money. I was greatly concerned to find that he could give no intelligence concerning the refidence of the late Marquis de Tourbilly, as it would be a provioking circumilance to pafs through all the province without fincing his houfe, and afterward hear perhaps that I had been ignorantly within a few miles of it. In the evening return to Angers. 20 miles.

The 28 th. To La Flêche. The chateau of Duretal, belonging to the Du hefs d'Ertiffac, is boldly fituated above the hitle town of that name, and on the lanke of a beautiful river, the flopes to which that hang to the fouth are covered with vines. The country chearful, dry, aid pleafint for refidence. I eiguired bore of feveral gendemen for the refidence of the Marquis de Tourbilly, but ail in vain. The 30 noties to La Hêche the road is a noble one, of gravel, fmooth, and kept in admirable order. La Fleche is a neat, clean, little town, not ill built, on the navigatle river that flows to Duretal; but the trade is inconfiderable. My firt bufinefs here, as every where clie in Anjou, was to enquire for the refidence of the Marquis de Tourbilly. I repeated niy criquiries till I found that there was a place not tar from Ia Flêche, called Tourtilly, but not what I wanted, as there was no Monf. de Tourlilly there, but a Marguis de Galway, who inhoried Tourbilly from his taher. This perphedel me more and more; and I ronewed my cnquiries with fo much cagcrnefs, that le veral people, I betieve, thought me half mad. At laft I met with in anciot ladr who folved my difficuly; fhe infermed ne, that Touthilly, about twive mites from Latioche, was the place 1 was in forch of: that it blonged to the matguis of that name, who had witten feme tooks fle believed; that be ciod twenty wars ago intolvent that be father of the pre-
 toming to take a gude thic reat moming, and, as I could nut vifit the marguis, at haft
fee the remains of his improvements. The news, however, that he died infolvent, hurt me very much; it was a bad commentary on his book, and I forefaw, that whoever I thould find at 'Tourbilly, would be full of ridicule on a hufbandry that proved the lofs of the eftate on which it was practiled.- 30 miles.
The 2gth. This morning I executed my project; my guide was a countryman with a good pair of legs, who conducted me acrofs a rarge of fuch ling waftes as the Marquis fpeaks of in his memoir. They appear boundlefs here; and I was told that I could travel many - many days, and fee nothing elfe : what fields of improvement to make, not to lofe eftates! At laft we arrived at Tourbilly, a poor village, of a few fcattered houfes, in a vale between two rifing grounds, which are yet heath and wafte; the chateau in the midft, with plantations of fine poplars leading to it. I cannot eafily exprefs the anxious inquifitive curiofity I felt to examine every frap of the eftate; no hedge or tree, no bufh but what was interefting to me: I had read the tranflation of the Marquis's hiflory of his improvements in Mr. Mill's hurbandry, and thought it the moft interefting morfel I had met with, long before I procured the original Memoire fur les defrichemens; and deternined, that if eve. I fhould go to France, to view improvements the recital of which had given me fo much pleafure. I had neither letter nor introduction to the prefent owner, the Marquis de Galway. I therefore ftated to him the plain fact, that I had read Monf. de Tourbilly's book with fo much pleafure, that I wifhed much to view the improvements defcribed in it; he anfwered me directly in good Englifh, received me with fuch cordiality of politenefs, and fuch expreffions of regard for the purport of my travels, that he put me perfectly in humour with myfelf, and confequently with all around me. He ordered breakfaft a l'Anglois - gave orders for a man to attend us in our walt, who I defired might be the oldeft labourer to be found of the late Marquis de Tourbilly's. I was pleafed to hear that one was alive who had worked with him from the beginning of his improvement. At breakfaft Monf. de Galway introduced me to his brother, who alfo fpoke Englifh, and regretted that he could not do the fame to Madame de Galway, who was confined to her chamber: he then gave me an account of his father's acquiring the eftate and chateau of Tourtilly. His great-grandfather came to Bretagne with King James II. when he fled from the Englifh throne; fome of the fame family are fill living in the county of Cork, particularly at Lotta. His father was famous in that nrovince for his flill in agriculture; and, as a reward for an improvement he had wrought on the landes, the flates of the province gave him a walte tract in the infand of Bellcille, which at prelent belongs to his fon. Hearing that the Marquis de Tourbilly was totally ruined, and his eftates in Anjou to be fold by the creditors, he viewed them, and finding the land very improveable, made the purchafe, giving about 15,000 louis d'ors for Tourbilly, a price which made the acquifition highiy advantageous, notwithftanding his having bought fome lawfuits with the eftate. It is about three thoufand arpents, nearly contiguous, the feigneury of two parifhes, with the haute juftice, \&c. a handfome, large, and convenient chateau, offices very compleat, and many plantations, the work of the celebrated man concerning whom my enquiries were directed. I was almoft bi sathlefs on the queftion of fo great an improver being ruined! "You are unhappy that a man fhould be ruined by an art you love fo much." Precifely fo. But he eafed me in a moment, by adding, that if the marquis had clone nothing but farm and improve, he had never been ruined. One day, as he was boring to find marl, his ill ftars difcovered a vein of earth, perfectly white, which on trial did not effervefce with acids. Itsilruck him as an acquifition for porcelain-he fhewed it to a manufacturer-it was pronounced excellent : the marquis's imagination took fire, and he thought of converting the poor village of Tourbilly into a town, by a fabric of china
-lse went to work on his own account -raifed buiidings-ano got sogether all that was neceflary, except flill and capital. In fine, he made good porcelain, was chated by tis agents, and people, and at laft ruined. A foap manufactory, which he eftablifhed alfo, as well as fome law-fuits relative to other eftates, had their thare in caufing his misfortures: his creditors feized the eliate, but permitted him to adminifter it till his death, when it was fold. The on'y part of the tale that leffened my regret was, that, though married, he left no family; to that his athes will tleep in peace, whout his memory bing reviled by an indigent pofterity. His ancellors acquired the eftate by marriage in the fourtenth century. His agricultural improvements, Monf. Galway obferved, certainly dill not hurt hiin; they were not well done, nor well fupported by himfelf, but they rendered the eftate more valuable; and he never heard that they had brought lim into any difficulties. I cannot but obferve here, that there feems a fataity to attend country gentlemen whenever they attempt trade or manufactures. In England I never knew a min of landed property, with the education and habis of landed proprictors, attempt eittry, but they were infallibly ruined; or, if not ruined, confiderably hurt by them. Whether it be that the ideas and principles of trade have fomething in them repugnant to the fentiments which ought to flow from education - or whether the habitual inattention of country gentlemen to fiall gains and favings, which are the foul of trade, render their fuccefs impoffible; from whatever it may arile, the fact is, not one in a million fucceeds. Agriculture, in the improvement of their ellates, is the only proper and legitimate fphere of their induftry; and though ignorance renders this fometires dangerous, yet they can with fafery attempt no other. The old labourer, whofe name is Piron (as propitious 1 hope to farming as to wit), being arrived, we fallied forth to tread what was to me a fort of claffic ground. I hall dwell but little on the particulars: they make a much better figure in the Menoire fur les defrichemens than at Tourbilly; the meadovis, even near the chateau, are yet very rough; the general features are rough : but the alleys of poplars, of which he fpeaks in the memoirs, are nobly grown indeed, and do credit to his memory; they are fixty or feventy feet high, and in girt a foct : the willows are equal. Why were they not oak ? to have tranfmitted to the farming travellers of another century the pleafure I feel in viewing the more perifhabie poplars of the prefent time - the caufeways near the caftle muft have been arduous works. The mulberries are in a ftate of neglect; Monf. Calivay's father not $b$ ing fond of that culture, defroyed many, but fome hundreds remain, and I was told that the poor people had made as far as twenty-five pound of filk, but none atrempted at prelent. The meadows had been drained and inproved near the chateau to the amount of fifty or fixty arpents, they are now rufhy, bit yet valuable in fuch a country. Near theni is a wood of Bourdeaux pines, fown thirty-five years ago, and now worth five or fix livres each. I walked into the boggy bit that produced the great cabbages he mentioned, it joins a large and moft improveable huttom. Yiron informed me that the marquis pared and burnt about one hundred arpents in all, and folded two hundred and fifty fheep. On our veturn to the chateau, Monficur de Galway, finding what an enthufialt I was in agriculture, fearched among his papers to find a manaficipi of the Marquis de Tourbilly's, written with his own hand, which he had the goodnefs to mée face a prefent of, and which I flatl keep amongt my curiofities in agriculture. The rolite reception I had met from Monl. Galway, and the friendly attention he had given to my views, entering into the fririt of my purfuit, and wifhing to promote it, would have induced me very charfuily to have accepted his invitation of remaining fome days with him; had I not been apprehenfive that the monent of Madame Galway's being in bed would render fuch an unlooked-for vifit inconvenient. I took
my leave therefore in the evening, and returned to La Flêche by a different road.25 miles.

The 3oth. A quantity of Moors to Le Mans; they affured me at Guorces, that they are here fixty leagues in circumference, with no great interruptions. At Le Mans I. was unlucky in Monf. Tournai, fecretary to the Society of Agriculture, being abfent. 28 miles.

Olober 1. Towards Alençon, the country a contraft to what I paffed yefterday; good land, weil inclofed, well built, and tolerably cultivated, with marling. A noble road of dark coloured fone, apparently ferruginous, that binds well. Near Beaumon vineyards in fight on the hills, and thefe are the laft in thus travelling northwards; the whele country finely watered by rivers and freams, yet no irrigation,- 30 iniles.

The ad. Four miles to Nouant, of rich herbage, under bullocks.-- 28 miles.
'The $3^{\text {d. From Gace towards Bernay. Pafs the Marerhal Duc de Broglio's chateau }}$ it Broglio, which is furrounded by fuch a multiplicity of clipt hedges, double, treble, and quadruple, that he muft half maintain the poor of the little town by clipping.25 miles.

The 4th. Leave Bernay ; where, and at other places in this country, are many mud walls, made of rich red loam, thatched at top, and well planted with fruit trees: a hint well worth copying in England, where brick and fone are dear. Come to one of the richeft countries in France, or indeed in Europe. There are few finer views than the firt of Elbeuf, from the eminence above it, which is high; the town at your feet in the bottom; on one fide the Seine prefents a noble reach, broken by wooded illands, and an immonfe amphitheatre of hill, covered with a prodigious wood, furrounding the whole.

The 5th. To Roucn, where I found the hotei royal, a contraft to that uirty, impertinent, cheating hole the pomme de pin. In the evening to the theatre, which is not fo large I think as that of Nantes, but not comparable in elegance or decoration; it is fombre and dirty. Gretry's Caravanne de Caire, the mufic of which, though too much chorus and noile, has fome tender and pleafing paffages. I like it better than any other picee I have heard of that celcbrated compofer. The next morning waited on Monf. Scanegatty, profeffeur de phyfique dans la Sccieté Royale d'Agriculture; he received me with politenefs. He has a confiderable room furnifhed with mathenatical and philofophical inftruments and models. He explained fome of the latter to me that are of his own invention, particularly one of a furnace for calcining gypfum, which is brought here in large quantities from Montmartre. Waited on Meffrs. Midy, Roffec and Co. the moft confiderable wool merchants in France, who were fo kind as to fhew me a great variety of wools, from moft of the European countries, and permitted me to take fpecimens. The next morning I went to Darnetel, where Monf. Curmer fhewed ine his manufacturc. Reiurn to Rouen, and dined with Mowi. Portier, directeur general des fermes, to whom I had brought a letter from the Duc de la Rochefoucauld. The converfation turned, among other fubjects, on the want of new Itreets at Rouen, on comparifon with Havre, Nantes, and Bourdeaux ; at the latter places it was remarked, that a merchant makes a fortume in ten or fifteen years, and builds; but at Roued, it is a commerce of oconomy, in y hich a man does not grow rich fo foon, and therefore unable with pradence to make the fame cxertions. Every perfon at table agreed in another point which was difcuffed, that the wine promees are the pooreft i al France : I urged the producebeing greater per arpent by far than of other lands; they :aifled howrver on the fact as generally known and admitted, In the cvening at the theatre, Madame du Frefue entertained ane grcatly; the is an excellent attrefs, never over-does her
and makes one feel by fecling herfelf. The more i te, of the French theatre, the more $I$ am forced to acknowledge the fuperiority to our own, in the number of grod performers, and in the fewnefs of bad ones; and in the quantity of dancers, fingers, and perfons on whom the bufinefs of the theatre depends, all elrablifhed on a great ficale. I remark, in the fentiments that are applauded, the fame gencrous feelings in the aud: ence in France, that have many times in England put me in good humour with my countrymen. We are too apt to hate the French; for myfilf I lee many reaf mis i, be pleafed with them; attributing faults very much to their government; perh ps in our own, our roughnefs and want of good temper are to be traced to the fame orgia.

The 8th. My plan had for fome time been to go directly to Luglanil, on leatiog Rouen, for the polt-offices had been cruelly uncertain. I iad received no litters for fome time from my family, though I had written repeatenly to urge it; hey pafici 1 to a perfon at Paris who was to forward them; but fome carel thes, or other caufe, impeded all, at a time that others, directed to the tovens I pafied, cane regularly; I had fears that fome of my family were ill, and that they would not write bad news to nee in a fituation whe e knowing the worft could have no influence in changing is for better. But the defire I had wascept the invitation wh Roche Guyon, of the Duchef's d'Anville and the Duc d ka Nochetcucauld, prolnged my journey, and I fet forward on this further excurlion. A trul; nobie view from the road above Rouen; the city at one end of the vale, with the river foxings it perfotly chequered with ifles of wood. The other divides into two great channss, beween which the vale is all fpread with iflands, fome arable, fome neadow, arc audt wood on all. Pafs Pont l'Arch to Louviers. I had letiors for the celebrated me...ifacturer Monf. Decretot, who received me with a kindnefs thar oughe to have fome better epithet than polite; he the wed me his fabric, unqueftionably the firft woollen one in the world, if fuccefs, beauty of fabric, and an inexhauftible invention to fupply with tafte all the cravings of fancy, can give the misit of fuch fuperiority. Perfection goos no further than the Vigonia loths of Monf. Decreiot, at 110 livres ( $41.16 \mathrm{~s} .3^{\mathrm{d}}$.) the aulne. He thewed me his cottonmills alfo, ander the direction of two Englifhmen. Near Louviers is a manufacture of copper-plates for the bottums of the King's fhips; a colony of Englithmen. I fupped with Monf. Decretor, paffing a very pleafant evening in the company of fome agreable ladies.- 17 milies.

The 9th. By G., ion to Vernon; the vale flat rich arable. Among the notes I had long ago taken of cbjects to fee in France, was the plantation of mulberries, and the filk eftablihment of the Marechal de Belleife, at Bufy, near Vernon; the attempts repeatedly made by the ficiety for the encouragement of arts, at London, to introduce filk into Engiand, had made the fimilar andertakings in the north of France more interelling. I accordingly made all the enquiries that were necelfary for difeovering the fuccefs of this meritorious attempt. Biffy is a fine place, purchafed on the death of the Duc de Beileille by the Duc de Penthievre, who has but one amufement, which is that of varying his reficionce at the numerous feats he poffefles in many parts of the kingdom. There is fomething rational in this tate; I thould like myleff to have a fcore of farms from $t^{\prime \prime}$ :" vale of Valencia to the Highlands of Scotland, "and to vifit and direct their cultivation by turns. From Vernon, crofs the Seine, and mount the chaik hills again ; after which to La Roche Guyon, the moit fingular place I have feen. I Itanne d'Ansille ard the Duc de la Rochetoucauld received me mananer that writ ! lave made me pleafed with the place had it been in the midft of a bog. It gave mate to find allio the Duchefs de la Rochefoueneld here, with whon I hai paffer ach agreeable time at Bagnere de Luchon, 1 : roughly good woman, wita it it . plicity
of caracter, which is too often banifhed by pride or family or foppery of rank. The Abbé Rochon, the celebrated altronomer, of the Academy of Sciences, with fome other company, which, with the domeftics and trappings of a Grand Seigneur, gave La Roche Guyon exactly the refemblance of the refidence of a great Lord in Enyland. Europe is now fo much aflimilated, that if one go to a houfe where the fortune is 15 or 20,0001 . a-year, we fhall find in the mode of living much more refemblance than a young traveller will ever be prepared to look for.- 23 miles.

The 10 th. This is one of the moft fingular places I have been at. The chalk rock has been cut perpendicularly, to make room for the chateau. The kitchen, which is a large one, vaft vaults, and extenfive cellars (which, by the way, are magnificently filled,) with various other oflices, are all cut out of the rock, with merely fronts of brick; the houfe is large, containing thirty-eight apartments. The prefent Duchefs has added a handfome faloon of forty-eight feet long, and well proportioned, with four fine tablets of the Gobelin tapeftry, alfo a library well filled. Here I was fhewed the ink-ftand that belonged to the famous Louvois, the minifter of Louis XIV. known to be the identical one from which he figned the revocation of the edict of Nantes, and I fuppofe alfo the order to Turenne to burn the Palatinate. This Marquis de Louvois was grandfather to the two Ducheffes d'Anville and d'Eftifac, who inherited all his eftate, as well as their own family fortune of the houfe of La Rochefoucauld, from which family I conceive, and not from Louvois, they inherited their difpofitions. From the principal apartment there is a balcony that leads to the walks which ferpentine up the mountain. Like moft French feats, there is a town, and a great potager to remove, before it would be confonant with Englifh ideas. Biffy, the Duc de Penthievre's, is juft the fame; before the chateau there is a gently falling vale with a little ftream through it, that admits of the greatef improvements in refpect to lawn and water, but in full front of the houfe they have placed a great kitchen-garden, with walls enough for a fortrels. The houfes of the poor people here, as on the Loire in Touraine, are burrowed into the chalk rock, and have a fingular appearance: here are two ftreets of them, one above another; they are afferted by fome to be wholefome, warm in winter, and cool in fummer; but others thought they were bad for the health of the inhabitants. The Duc de la Rochefoucauld had the kindnefs to order his fleward to give me all the information I wanted relative to the agriculture of the country, and to feak to fuch perfons as were neceflary on points that he was in doubt about. At an Englifh nobleman's houfe, there would have been three or four farmers afked to meet me, who would have dined with the family among ladies of the firft rank. I do not exaggerate, when I fay, that I have had this at leaft an hundred times in the firft houfes of our iflands. It is, however, a thing that, in the prefent fate of manners in France, would not be met with from Calais to Bayonne, except by chance in the houfe of fome great l.ord that had been much in England ${ }^{*}$, and then not unlefs it were afked for. The nobility in France have no more idea of practifing agriculture, and making it an object of converation, except on the mere theory, as they would fpeak of a loom or a bowfprit, than of any other object the moft remote from their habits and purfuits. I do not fo much blame them for this neglect, as I do that herd of vifionary and abfurd wri re of agriculture, who, from their chambers in citics, have, with an impertinence airne increchio, deluged Prance with noulenfe and theory, enough to difguft and ruin
e whole nobility f the kingdom.
The 12 th. l'art with regret from a fociety I lad every reafon to be pleafed with.35 miles.

[^6]The 13 th. The twenty miles to Rouen, the fame features. Firf view of Rouen fudden and Ariking; but the road doubling, in order to turn more gently down the hill, prefents from an elbow the finclt view of a town I have ever feen; the whole city, with all its churches and convents, and its cathedral proudly rifing in the midit, fills the vale. The river prefents one reach, croffed by the bridge, and then dividing into two fine channels, forms a large ifland covered with wood; the rett of the vale full of verdure and cultivation, of gardens and habitations, finifh the fcene, in parfect uniton with the great city that forms the capital feature. Wait on Monf. d'Amburmay, fecretary of the Society of Agriculture, who was abfent when I was here before; we had an interelling converfation on agriculcure, and on the means of encouraging it. I found from this very ingenious gentleman, that his plan of ufing madder green, which many years ago had made fo much noife in the agricultural world, is not practifed at prefent any where; but he continues to think it perfectly practicable. In the evening to the play, where Madame Cretal, from Paris, acted Nina; and it proved the richeft treat I have received from the French theatre. She performed it with an inimitable expreffion, with a tendernefs, a naivete, and an clegance withal, that mattered every feeling of the heart, againft which the piece was written: her expreffion is as delicious, as her countenance is beautiful; in her acting, nothing over-charged, but all kept within the fimplicity of nature. The houfe was crouded, garlands of fowers and laurel were thrown on the flage, and the was crowned by the other actors, but modefly removed them from her head, as often as they were placed there.- 20 iniles.

The 14th. Take the road to Dieppe. Meadows in the vale well watered, and hay now making. Sleep at Tote.- $17 \frac{1}{2}$ miles.

The 15 th. To Dieppe. I was lucky enough to find the paffae boat ready to fail; go on board with my faithful fure-footed blind friend I hall probsably never ride her again, but all my feelings prevent my fulling her in France.-Without cyes fhe has carried me in fafety above 1500 miles; and for the reft of her life the fiatl have no other mafter than myfelf; could I afford it, this foould be her laft labour : fome ploughing, however, on my farm, fhe will perform for me, I dare fay, chearfully.

Landing at the neat new-built town of 13righthelmifone, offers a much greater contraft to Dieppe, which is old and dirty, than Dover docs to Calais; and in the Caftle inn I feemed for a while to be in fairy land; but I paid for the enchantment. The next day to Lord Shefficld's, a houfe I never go to, but to receive equal pleafure and inftruction. I longed to make one for a fhort time in the evening library circle, but I took it frangely into my head, from one or two expreflions, merely accidental in the converfation, coming after my want of letters to lirance, that 1 had certeinly loft a child in my abfence; and I hurried to London next morning, where I lad the pleafure of finding my alarm a falfe one; letters cnow hal been written, but all failed. To Bradfield.- 202 miles.

$$
1739
$$

IN my two preceding journies, the whole weflern half of France had been croffed in various directions; and the information I had received, in making them, had made me as much a mafter of the general huibandry, the foil, management and productions, as could be expected, without penetrating in every corner, and reliding long in various fations; a methot of furveying fuch a kingdom as France, that would demand feveral lives inflead of years. The caltern part of the kingum remained unexamined. The great mafs of country, formed by the triangle, whele three points are Paris, Strafbourg
and Moulins, and the mountainous region S. E. of the laft town, prefented in the map an anple 'pace, which it would be necellary io pafs before I conk have fuch an iden of the kinghom as I willoed to acquire; I determined to make this third effort, in order to accomplifh a defign which appeared more and more important, the more I refected on it; and lefs likely to be executed by thofe whole powers are better adapted to the undertaking than mine. The meeting of the States Gemeral of France alfo, who were now aflembled, made it the more nec flary to lofe no time; for, in all haman probability, that affembly will be the epoch of a new confitution, which will have new effect:, and, for what I know, attended with a new agriculture; and to have the regal fun, in fuch a kingdom, both rife and fet without the territory being known, muft of neceffity be regretted by every man folicitous for real political knowledge. The events of a century and half, including the brilliant reign of Louis XIV. will for ever render the fources of the liench power interefling to mankind, and particularly that its fate may be known previoully to the eftablillhment of an improved govermment, as the comparifon of the efficts of the old and new fyftem will be not a little curious in futare.

June 2. To London. At night, La Generofità d Alefandro, by Tarchi, in which Signor Marchefi exerted his powers, and fung a duet, that made me for fome moments forget all the theep and pigs of Bradfield. I was, however, much better entertained after it, by fupping at my friend Dr. Burney's, and meeting Mils Burney; how feldom is it that we can meet two charafters at once in whom great celebrity deducts nothing from private amiablencts? How many daszling ones that we have no detire to live with! give me fuch as to great talents adci the qualities that make us wifh to fout up doors with them.
The 3d. Nothing buzzing in my ears but the fete given laft night by the Spanifh Ambalfador. The beft fète of the prefent period is that which ten millions of people are giving to themfelves,

## The flaft of reaton and the flow of foul.

The animated feelings of bofoms beating with gratitude for the elcape of one common calamity, and the thrilling hope of the continuance of common c'effin x. Meet at Mr. Songa's the Count de Berchtold, who has much good fenfe and any important views:-Why does not the Emperor call hirn to his own country, and make him a Minitter? The world will never be well governed till princes know their fubjects.

The $4^{\text {th. To Dover in the machine, with two merchants from Stockholm, a Ger- }}$ mas and a Swede ; we thall be companions to Paris. I am more likely to learn fomething ufeful from the converfation of a Swele and a German, than from the chance medley Einglifhmen of a tlage-coach.- 72 miles.
'I'ne gth. Paffage to Calais ; fourteen hoars for reflection in a vehicle that does not allow one power to reflect.- ${ }^{2}$ ! miles.

The 6th. A Frenchman and his wife, and a French teacher from Ireland, full of foppery and affectation, which her own mation did not give he a $1:$ our company, with a young good-natured raw countryman of hers, at whom the played off many airs and graces. The man and his wife contrived to produce a pack of cards, to banifh, they laid, l'enuye of the journey; but they contrived alfo to fleece the young fellow of five louis. This is the firft French diligence I have been in, and flall be the laft; they are deteflable. Sleep at $\dot{r}$ bbeville, $\longrightarrow 8$ miles.

Ther men and womecn, "irls and boys, think thenifelves (except the Swede) very chcora becaufe very noify; they have flunned me with finging; my ears have been
fo tormented with French airs, that I would almoft as foon have rode the journey blindfold on an afs. This is what the French call good fpirits; no truly chearful emotion in their hofoms; filent or finging; but for converlation they had none. I lofe all patience in fuch company. Heaven fend me a blind mare rather than another diligence! We were all this night, as well as all the day, of the rond, and reached Paris at nine in the morning - 102 miles.

The 8th. To my triend Lazowlki, to know lorn were the lodgings I had written him to hire me, but my good Duchefs d'd . . The not allow him to execute my commifion. I found an aparment in 'w horen prepre! fin me. Paris is at prefent in fuch a ferment about the States General, now holding at Verfiilles, that converfation is abfolutely abforbed by them. Not a word of any thing elfe talked of. Every thing is contidered, and jultly fo, as important in fich a crifis of the fate of four-and-twenty millions of people. It is now a lerious contention whether the reprefentatives are to be called the Commons or the Tiurs Etat; they call themfelves Iteadilv the former, while the Court and the great Lords reject the term with a fleec :a apponenfon, as if it involved a meaning not cafily to be fathomed. But this point is of little confequence compared with another, that has kept the ftates for fome time in inactivity, the verification of their power feparately or in common. The nobility and the clergy demand the former, but the Commons iteadily refuef it ; the rafon why a circumftance, apparently of no great confequence, is thus tenacioufly regarded, is, that it may decide their fittug for the future in feparate houfes or in one. Thofe who are warm for the intereft of the people declare that it will be impolible to reform fome of the groffert abufes in the thate, if the nobility, by fitting in a feparate chamber, fhall have a negative on the wifhes of the people: and that to give fuch a veto to the clergy would be ftill more prepolterous; if thercfore, by the veriitication of their powers in one chamber, they thall ouce come together, the popular party hepe that there will remain no power afterwards to leparate. The nobility a d clery forefee the fame relult, and will not therefore agree to it. In this dilemma it is curinus to remark the feclings of the mo. ment. It is not my bufinefs to write memoirs of what paffes, but I am intent to cateh, as well as I can, the opinions of the day moft prevalent. While I remain at Paris, I fhall fee p-ople of all defcriptions, from the coffee-houfe politicians to the leaders in the ftates; and the chief object of fuch rapid notes as I throw on paper, will tee to eatch the ideas of the moment; to compare them afterwards with the actual events that fhall happen, will afford amufement at leaft. The moll prominent feature that appears at prefent is, that an idea of common intereft and con mon danger does not fecm to unite thofe, who, if not united, may find themfelves too weak to oppofe the danger that muft arife from the people being fenfible of a lirengh the refult of their waknefs. The King, Court, Notility, Clergy, Army, and 'arliament, are nearly in the fame fituation. All thefe confider, with equal dread, the ideas of liberty, now afloat; exeerat the firt, who, tor reafons obvious to thofe who know his character, troubles himfeif little, even with circumftances that concern his power the molt intimately. Among the reft, the feeling of danger is cummon, and they would unite were there a head to reuder it ealy, in order to do without the ftates at all. That the Commons thenfelves look for fome fuch hoftile union as more than probable, appears from an id a which gains grourd, that they will find it neceffary, fhould the other two ord scontinue to unite with them in one chamber, to declare themfelves bolsly the re, ntari es of the kingdom at large, calling on the Nobility and Clergy to take their places - and to enter upon deliberations of bufinefs without them, fhould they refufe it. All converfation at prefent is on this topic, but opinions are more divided than I thould have expected. There
fiem to he many who hate the urgy fo cordially, that rather than permit them to form a dinilich chamber, they would venture on a new fyllem, dangerous as it might prove.

The gth. The hufinefs going forward at prefent in the pamphlet flaps of Paris is incredible. I went to the Palais Royal to lee what new things were publifhed, and o procure a catalogue of all. Fevery hour produces fomething new. Thirten came out to day, fistoll yefterday, and minety-two laft week. We think fomerimes that Debectts or situkelale's flops at London are crowded, but they are mere deferts, com. pared to Defen's, and fiome others here, in which one can farcely tquecze from the door tw lice counter. The price of printing two years ago was trom 27 lives to 30 lives per theet, but now it is from 60 lives to 80 livres. This fpirit of reading pelitical trabs, they tay, 'proads into the provinces, fo that all the pretlis of lirance are equally cmphered. Numenementiethe of thefe productions are in favour of liberty, and commenly violent againt the clergy and nolinity; I have to day befpoken many of this eleferip ion, that have reputation ; hut enquiring for fueh as had appeared on the other fide of the queftion, to my aftenifhment I timd there are but two or three that have merit coough to be known. Is it not wooderlul, that while the prefs teems with the meft levelling and even feditious principles, which put in execution would overturn the mouarchy, nothing ill reply appears, and not the leaft flep is taken by the court to reflain this extreme licentioufinels of publication? It is eafy to conceive the fpirit that mult thus be raifed among the people. But the coffee-houfes in the Palais Royal prefent yet more fingular and aftonifhing feetacles; they are not only crowded wihin, but other expectant crowds are at the doors and windows, liftening a gorge de. ployeĉ to certain orators, who from chairs or tables harangue each his little audience $\cdot$ the eagernefs with which they are heard, and the thunder of applaufe they receive for every lentiment of more than common hardinefs or violence againft the prelent government, cannot cafly be imagined. I am all amazemem at the miniltry permitting fuch nefts and bot-beds of fedition and revolt, which diffeminate amongit the people, every hour, principles that by and by mult be oppofed with vigour, and therefore in feems litte fhort of inadnefs to allow the propagation at prefent.

The icth. Every thing confines to render the prefont period in France critical ; the want of bread is terrible: accounts arrive every moment from the provinces of riots and difturbances, and calling in the military to preferve the peace of the markets. The prices reported are the fame as I found at atbeville and Amiens, 5 fous ( 2 !d.) a pound for whith bread, and 3 lous to four fous for the common fort eaten by the poor ; thefe rates are beyond lisir faculties, and occation great mife:y. At Meudon, the police, that is to fay the intendant, orcered that no wheat fhould be fold in the market without the perfon taking at the fame time an equal quantity of barley. What a ftupid and ridienlous regulation, to lay obftacles on the fupply, in order to be better fupplied; and to thew the people the fars and apprehenfions of governmens, creating thereby an alarm, and raifing the price at the very moment they wiff to livik in! I have had lome converfation on this topic with well-informed perfons, who have affured me, that the price is, as ufual, much hisher than the proportion of the crop demanded, and there would have been no real fiarcity if Mr. Necker wouid have let the corn-trade alone; but his ediets of reilriction, which have been mere comments on his book on the legillation of corn, have operated more to raife the price than all other caufes together. It appers plain to nee, that the violent friends of the commons are not difpleafed at the high price of corn, which heconds their views greatly, and makes any appeal to the common feeling of the people more eafy, and much more to their purpole than if the vol. Iv.
price were low. Three days paft, the chamber of the clergy contrived a culning prpofition; it was to fond a deputation to the commons, propofing to name a comnifiom from the three orders to take into confideration the mifery of the people, and to tcliberate on the means of lowering the price of bread. This would bave led to the deliberation by order, and not by heads, confequently mult be rejected, but uupopularly fo from the filuation of the pople: the commons were equally dextrous; in their reply, they prayed and conjured the clergy to join them in the common hall of the flates to deliberate, which was no tooner reported at Paris, than the clemg became doubly an chject of hatred ; and it becane a quellion wath the politicians of the Catle de Foy, whether it were not hawfulfor the commons to decree the application of the ellates of the clergy towaris cafing the dinuefs of the perplo.

The with. I have bect in much company all day, and cannot but remark that there feem to be no feteled ide as of the left means of forming a new conltitution. Yeflerday the Athe Syeyes mate a motion in the houle of commons, to declare bollly to the privilged orders, that if they will not join the commons, the latter will proced in the mational bufinels wihout them; and the houfe decreed it with a finall at moment. This caufes much convertation on what will be the contequence of fuch a proceeding; and, on the contrary, on what may how from the nobility and clergy continuing fteadily to refule to join the commons, and fhould they fo proceed, to proteft againtl all they decree, and appeal to the king to diffolve the fates, and recal them in fuch a form as may be practicable for bufirefs. In thefe moft interefling ditculfions, I find a general ignorance of the principles of goverment; a frange and maccountable appeal, on one fide, to ideal and vifionary rights of nature; and on the other, no fetted plan that hall give fecurity to the pepple for being in future in a much better fituation than hitherto; a fecurity absolutely neceflary. But the nobility, with the principles of great lords that I converfe with, are moft difguttingly tenacious of all old rights, however hard they. may bear on the people; they will not hear of giving way in the lealt to the fipit of liberty beyond the point of paying equal land-taxes, which they hold to be all that can with reafon be demanded. The papular party, on the other hand, feem to confider all liberty as depending on the privileged claftes being lof, and out-voted in the order of the commons, at leaft fur making the new conltitution; and when I wrge the great probability, that flould they once unite, there will remain no power of ever feparating them; and that in fuch cafe, they will have a very queftionable conflituion, parhaps a very bad one; 1 am always told, that the firlt object muit be for the people to get the power of doing goed; and that it is no argument againgt fuch a conduct to urge that an ill ufe may be made of it. But amung fuch men, the common idea is, that any thing tending towards a feparate order, like our houfe of lords, is abfolutely inconfiftent with liberty; all which feems perfectly wild and wnfounded.

The 12 th. To the royal focicty of agriculture, which meets at the hotel de ville, and of which being an affocié, I voted, and received a jetion, which is a finall medial given to the members, every time they attend, in order to induce them to mind the bufinefs of their inflitution; it is the fame at all royal academies, \&c. and amounts, in a year, to a confiderable and ill-judged expence; for what good is to be expected from men who would go merely to reccive their jetton? Whatever the motive may be, it feems well attended; near thirty were prefent; anoong them Parmentier, vice-prefident, Cadet de Vaux, Fourcroy, 'lillet, Definarets, Broufionet, fecretary, and Creté de Palieul, at whofe farm I was two years ago, and who is the ouly practical farmer in the fociety. The fecretary reads the titles of the papers prefented, and gives fume little acount of them; but they are not read, unlefs particularly interefling; then memoirs
are re there
are read by the members, or reports of references; and when they difuls or debate, there is no order, but all fpeak together, as in a warm private converlation. The
 tant fubject ; am! my opinion was afked what it Mould be given for. ( Give it, I replied, in fome way for the introduction of turnips. But that they conceive to be all object of impotfibl attainment ; they have done fo much, and the government fo much more, and all in vain, that they confider it as a hopelefs ohject. I did not tell then that all hitherto done has been ablolute folly; and that the right way to begin, was to undo every thing done. I nom neser prefent at any focieties of agriculture, either in France or lingland, but I an much in doubt with myfelf whether, when bell conducted, they do moft grod or mifichef; that is, whether the benefis a national agriculture may by great chance owe to them, are not more than conntertaline d by the harm they effect. by turning the public attention to frivolous objels, intleal of important ones, or dretfing inmportant ones in fuch a garb as to make them trilles? 'The only fociety that could be really uleful would be that which, in the culture of a large farm, fhould exhibit a perfect example of good humandry, tor the ufe of fuch as would refort to it; confenuently one that thould contit folely of practical men; and then query whether many food cocks would not lpoil a good difh.

Theideas of the public on the great bufinefs going on at Verfailles change daily and even hourly. It now feems the opiaion, that the commons, in their late violent vote, have gone too far; and that the union of the nobility, clergy, army, parliament, and King, will be by far too powerful for them; fuch an union is faid to be in agitation; and that the Count d'Artois, the Queen, and the party ufually kuown by her name, are taking fleps to effect it, againtt the moment when the proceedings of the commons fhall make it neceflary to act with unity and vigour. The abolition of the parliament is a topic of common converlation among the popular leaders, as a itep eflentially neceffary; becaufe, while they exift, they are tribunals to which the court can have refort, fhould they te inclined to take any ftep againit the exittence of the flates: thofe boulies are alarmed, and fee with deep regret, that their refufal to regifter the royal edicts, has created a power in the nation not only hoftile, but dangerous to the exiftence. It is now very well known, and underflood on all hands, that tho :
King get rid of the fates, and govern on any tolerable principles, his edicts wos
enregiftered by all the parliaments. In the dilemma and apprehenfion of the am a . the people look very much to the Duc d'(Orleans as to a head; but with put a $\quad$, general ideas of diftruft and want of confidence; they regret his character. that they cannot depend on him in any levere and difficult trial; they conco be without fleadinefs, and that his greateft apprehenfion is to be exiled fron. ... $p$." tures of Paris, and tell of many litileneffes he practifed before to be recalled trom bre nillment. They are, however, fo totally without a head, that they are contented to look to him as one; and are highly pleafed with what is every monent reported, that he is determined to go at the head of a party of the nobility, and verify their powers in common with the commons. All agree, that had he firmnets, in addition to his valt revenue of feven millions a-year ( 306,2501 .), and four more ( 175,0001 .) in reverfion, after the death of his father-in-law, the Duc do Penthisvre, he might, at the head of the popular caule, do any thing.

The 13 th. In the morning to the king's library, which I had not feen when before at Paris; it is a valt aparment, and as all the world knows, nobly filled. Every thing is provided to accommodate thote who wihh to read or tranfcribe-of whom there were fixty or feventy prefent. Slong the middte of the rooms are glais cafes, containing mo-
dels of the inflruments of many trades preferved for the benefit of pofterity, being made on the mofl exatit feale of propotion; anong others the po:ter's, founder's, brickmaker's, chymin's, \&e. Nc. and lately added a very large one of the Englifh garden, mott miferably imagined ; but with all this not a plou h, or an iota of agriculture; yet a farm might he mach eafier reprelented than the earden they have attempted, and with infiniely more ufe. I have no doabe but there may arife many cafes, in which the prefervation of inftruments, unaterel, mas be of confiterable mility; I thini I fee ckents, than fuch a wfe would refult in agriculture, and, if fo, whe not in other ars? Thefe cafes of mod ta, bowever, haw fo muth the air of chibiren's playhorfes, that I would not antwer for my little girl, it I hal her here, not orvint for them. At the Duchefs d'enville's, where mett the Archbihop of Aix, bithop of Bowe, Drince de Lion, and Due and Dushetide ha Rechetweand, the hare hatt of my old Eagmere de lachon açumance, Lord and Lally Camelford, Lord Eyre, Sic. Eic.

All this day 1 hear nothing hut anxicty of expectation for what the crifis in the flate will produce. The embartathent of the moment is extrene. Every one egress that there is no minis y : the Queen is chefly cometing herielf with the party of the frineses, with the Count d'Artuis at their head who are all fo adeerfe to Monf. Necker, that every thing is in confulion: but the King, who is pertonally the honeftelt man in the world, has but one wifh, which is to do right; yet, being without thofe decifive paris that enable a man to forefee difficultics and to a ood them, finds himfelf in a moment of fur hextreme perplexity, that he knows not what council to take refuge in : it is laid that Monl Necker is alarmed for his power, and anedote reports things to his difadrantage, which probably are not true: - of his trimming-and attempting to connect himelf with the Abte de Vemon, reader to the Queen, who has great infeence in all affairs in which he chufes to intertere; this is hardly creditle, as that party are known to be exceedingly adverfe to Mond. Necker; and it is even faid that, as the Count d'Artuis, Madame de Polignae, and a few others were, but two days ago, walking in the private garden of Vertailles, they met Nadame Necker, and cefcendel oren to hifing her: it half this be true, it is plain eno gh that this minitter mult feedily retire. All who adhere to the antiont conlitution, or wher government, confider him as their mortal enemy; they atiert, and truly, that he came in under circumtances that wonld have enabled him to do every thing he phated-he had King and kingdom at command - but that the errors he was guil $y$ off, for want of fome fettled plan, have been the caufe of all the dilemmas experienced fince. They accufe him heavily of affimbling the notates, as a lille ftep that did nothing but mifchief: and afiert that his letting the King go to the !iates-general, before their powirs were verifed, and the neceflary lleps taken to keep the orders feparate, after giving double the reprefentation to the tiers to that of the other wo orders, wis madnefs; and that he ought to have appointed commifaries to have received the verification before admittance. They accufe himf furcher of having done all this through an exccflive and infufferable vanity, which gave him the idea of guiding the delibration of the liwes by his knowledge and reputation. It is exprefly afferted, however, hy M. Necker's noft intimate friends, that he has acted with good faith, and that he has been in principle a fiem! to the regal power, as well as tw andioration of the rondition ef the pecple. The wort hing 1 kt ow of him is hin feeech to the ftates un their affembling, - a great opportunit, but holt, - no leading or matforly visws, - no decifon on circtmances in whi.h ite people ought to be relieved, athl new principles of goverminent adopied; -it is the facech you would expect from a bask r's
clerk of fome ability. Concerning it there is an anecdote wortl inferting; he knew his voice would not enable him to go through the whole of it, in fo large a room, and to to numerous an alfembly; and therefore he had fpoken to Monf. de Broulfonet, of the A cademy of Sciences, and fecretary to the Royal Society of Agriculture, to be in readinclis to read it for him. He had been prefeit at an annual general meeting of that fecicty, when Monf. de Brouffinct has read a difcourfe with a powerful piercings ice, that was heard dillinctly to the greatelt diftance. This gentleman atrended hin feveral tines to take his intructions, and to be fure of underlanding the interlineations that were made, even aftier the fipeech was finilhed. Monf. de Brouffonct was with him the evening 'sefore whe allembly of the llates, at nine o'clock: and next day, when he came to read it in pullic, he found ftill more corrections and alterations, - Wh Nonl. Necker had made after quiting him; they were chichly in file, and L... wad how very fillicitous he was in ryard to the form and decoration of his matter: the ifeas in my opinion wanted this atemtion more than the flile. Monf. de Brouldoner himielf told me this little ancedote. Ilis morning in the flates three curees of Poitou have joined themfelves to the commons, for the verification of their powers, and were received with a kind of madnets of applate; and this evening at Paris nothing elfe is taiked of. The nobles have been all day in debate, without coming to any conclufion, and have adjourned to Monday.
'The 14 th. Io the King's garden, where Monf Thouin had the goodnefs to fhew me fome fmall experiments lie thas made on plants that promife greatly for the farmer, particularly the lathyrus biennis *, and the melilotus fyberica *, which now make an immende figure for forage; both are hemnal ; but will tall three or four years if not feeded; the Achl'ea fyberica and an aftragalus appear good; he has promifed me feeds. The Chincte hemp has perfected its feeds, which it had not done before in France. The more I fee of Nonl. Thouin the better I like him; he is one of the moft amiable men I hnow.

To the repofitory of the rogal machines, which Monf. Vandermond fhewed and explained to me, with great readinels a d politenefs. What fruck me moft was Monf. Vaucuflon's machine for making a chain, which I was told Mr. Watt of Birmingham admired very much, at which my attendents feemed not dilpleafed. Another for making the cops indented in iron wheels. There is a chaff cutter, from an Englifh onigimal; and a model of the nonkenfial plough to go without horfes; thefe are the only ones in agriculture. Many ot very ingernions contrivances for winding filk, \&c. In the erening to the theatre François, the Siege of Calais, by Monf. de Belloy, not a good, but a popular pertiormanee.

It is now decided by the popular leaders, that they will move to-morrow to decare all taxes illegal not raifed by authority of the fates general, and to grant them for a terin only, either for two years, or fur the duration of the prefent feflion of the flates. This plan is highly approved at Paris by all friends of liberty; and it is certain'y a rational mode of proceeding, lounded on juft principles, and will involve the court in a great dilemma.

The 1 ,th. This has been a rich day, and fuch an one as ten years ago none could bolieve usuld ever arrive in France; a vely important debate being expected on what, in our houfe of commons, would be termed the flate of the nation, my friend Monf. Lazow fki and my fif were at Verfailles by eight in the morning. We went immediately to the hall of the flates to fecure good feats in the gallery; we found fome de-

[^7]puties already there, and a pretty numerous audience collicited. The room is too large; none but Stentorian lungs, or the tinett clareft vices can be heard; hewever the very fize of the apartment, which admits two thoufand people, pave a dignity to the feenc. It was indeed an incerefting one. The fectacle of the reprefentatives of twenty-five millions of people, juft emerging from the evils of two hundred years of arbitrary power, and rifing to the bleflings of a freer conltitution, afiembled with open doors under the eye of the public, was framed to call into animated fedings every latent frark, every emotion of a liberal bofom; to banifl whatever ideas might intrude of their being a people too often hottile to my own country, -and to dwelt with pleafure on the glorious idea of happinefs to a great mation-of felicity to mill ons yet unborn. Monf. l'abbé Syeyes opened the debate. He is one of the moit zealous flicklers for the popular caufe; carrics his ideas not to a regulation of the prefurt government, which he thinks too bad to be regulated at all, but wifhes to fee it abfolutely overturaed, being in fact a violent republican: this is the charater he commonly bears, and in lis pamphlets he feems pretty much to juttify fuch an idea. He fpeaks ungracefuily, and uneloquemly, but logicalty, or rather reads fo, for he read his fpeech, which was prepared. His motion was to declare the affembly the reprefintatives known and verified of the French nation, admitting the right of all abfent deputies (the nobility and clergy) to be received among then on the verification of their powers. Monf. de Mirabeau fpoke without notes, for near an hour, with a warmeth, animation, and eloquence, that entitles him to the reputation of an undoubted orator. He oppofed the words known and verified, in the propofition of the Abbe Syeyes, with great force of reafoning; and propofed, in lieu, that they dhould dechare themfelves fimply Refrefontatioes du peuple Francois: that no veto thould exilt againtt their refolves in any other affembly : that all taxes are illegal, but fhoukd be granted during the prefent feffion of the flates, and no longer: that the debt of the king fhould become the debt of the nation, and be fecured on funds aecordingly. Monf. de Mirabeat was well herd, and his propofition much applauded. Monf. de Mounier, a defuty from Dauphiné, of great reputation, and who has publithed fome pamphlets, very well approved by the public, moved a different refolution, to declare themfelves the legitimate reprefentativis of the majority of the mation: that they fhould vote by head and not by order: and that they flould never acknowledge any right in the reprefentatives of the clergy or nobility to deliberate feparately. Monf, Rabaud St. Etienne, a proteftant from Languedoc, alfo an author, who has written on the prefent affairs, and a man of confiderable talcuts, made likewife his propofition, which was to declare themfelves the reprefentatives of the people of France; to Jeclare all taxes null; to regrant them during the fitting of the flates; to verify and comfolidate the debt; and to vote a loan. Alt which were well appruved except the loan, wheh was not at all to the feeling of the affembly. This genteman feeaks clearly and with precifion, and only paflages of his fpeech from motes. Monf. Bernave, a very young man, from Grenoble, fonke without notes wih great warnth and animation. Some of his periods were fo well rounded, and fo eloquently delincred, that the met with much applaufe, feveral members crying - bravo!

In regard to their general method of proceeding, there are two circumfances in Wheh they are very deficient: the fpectators in the galleries are allow do interfere in the debates by clapping their hands, and by other noify expreffions of approtation : this is groisly indecunt; it is alfo dangerous; for, if they be permitted to exprefs approtation, they are, by parity of reaton, allowed expreffions of llffent; and they may his as w I. as clap; whech, it is caid, they have fomtines done:-this would be, to
over-rule the debate, and influesce the deliberations. Another circumfance, is the want of order among themfelves; more than once todiay there were an hundred members on their legs at a time, and Monf. Baillie abfolutcly without power to keep order. This arifes very much from complex motions being admitted; to move a declaration relative to their title, to their powers, to taxes, to a loan, \&c. \&c. all in one propolition, appears to Englifh ears prepofterous, and certainly is fo. Specific motions, founded on: fingle and fimple propofitions, can alone produce order in debate; for it is endleis to have five hundred members declaring their reafons of affent to one part of a complex propofition, and their diffent to another part. A debating affenbly hould not proceed to any bufinefs whatever till they have fettled the rules and orders of their proceedings, which can only be dene by taking thofe of other experienced afemblies, confrming them as they find ufeful, and altering fuch as require to be adapted to differemt circumitances. The rules and orders of debate in the Houfe of Conmons of England, as 1 afterwards took the liberty of mentioning to Monf. Rabaud St. Etienne, might have been taken at once from Hatfel's book, and would have faved them at leaft a fourth of their time. They adjourned for dinner. Dined ourfelves with the Duc de Liancourt, at his apartnents in the palace, meeting twenty deputics. I fat by M. Rabaud St. Etienne, and had much converfation with him; they all fpoke with equal confidence on the fall of defpotifin. Thy forelee, that attempts very adverfe to the fpirit of liberty will be made, but the firit of the people is too mush exsited at prefent to be crulhed any more. Finding that the queflion of to-day's debate camnot be decided to-day, and that in all probability it will be unfuifhed even to-morrow, as the number that will fpeak on it is very great, return in the evening to Paris.

The 1 Geth. To Dugny, ten miles from Paris, again with Monf. de Brouffonet, to wait on Monf. Creté de Palieul, the only practical tarmer in the Society of Agriculture. M. Brouflonet, than whom no man can be more eager for the honour and inprovement of a riculture, was defirous that I thould witnefs the pratice and improveme.ts of a gentleman who flan's to high in the lift of good French farmers. Called firt on the brother of Mouf. Crete who at prefent has the pofe, and confequently one hundred and forty borfes; walked over his farm, and the crops he fhewed ms of wheat and oats were on the whole very fins, and fome of them fup rior; but I muft confefs I hould have been better plated with them it he had mot had his fables fo well filled with a view diff rent from that of the furril. And to look tor a courfe of crops in France is vain; he fows white corn twiee, thrice, and ev four im is in fucceffion. At dinner, \&c. had much converfation with the tuo broth.r. and thate other neighbouring cultivators prefent, on this point, in "hich I recommended either turnips or cabbages, according to the foil, for breaking th ir rotations of white corn. Bat every one of them, except Monfo de Bronfonet, was agnin!? me, thamed, Can we fow wheat alter turnips and cabbages? On a fmall portwis you mav and with grat fuccels; but the time of confuming the grazer part of the crop rend st impotible. That is fufficient, if we cannot foiv what after the m, they c mant be gend in lrance. This idea is every where nearly the lame in that kingdom. I th in faid, that they might have half their land under wheat, and yet be good farmers; thus-1. Beans;-2. Wheat;-3. Tares; 4. Wheat ;-5. Clover; 6 Wheat ;-1 his they approve! better of, but thought their own courfes more profitable. But the moft intersthing cicumfance of their farms is the chicory (chicorium iniybus). I had the fatisfaction to lind, that Monf. Creté de Palieul had as great an opinion of it as ever ; that his brother hand adopted it ; that it was very flourifining on both their firms, and on thofe of their mighbours alfo: I never fee thas plant but I congratulate myfelf on having travelied for foneching more thin to write
write in my cloict ; and that the introduction of it in Findand would alone, if no nther refult hat how, drom one man's exiltence, have been enough to thew that be did not live in vain. Ot this excellent plant, and Monf. Crete's experimeats on it, more elfewhere.

The 17 th. Converfation turns on themotion of l'Abe Syeyes being accopted, though that of the Count de Mirabedu better redithed. But his character is a dead weight upon him ; there is a fufpicion the he has received 100,00 livers from the $\mathbf{Q}_{\text {a }}$ wen; a blind, inprobable report; for his conduct would in eve ry probability te very different had any fuch tranfaction tak $n \mathrm{P}$ ace: but when a man's life has mit patf 1 are trom grols errors, to ufe the mildett langare, fufpicions are creve raty to lix on him, even when lee is as free from what ought at the moment to give the mputation, as the mont immaculate of their parvots. 'lais report brings out others from the fremsin: hotes; that he publimed, at her inftigation, the ancedotes of the court of $B$.rhin; and that the King of Prulia, knowing the canfes of that pubitation, circulated the memoirs of Madame de la Notte all over Germany. Sushare the etroal tales, futpicions, and majrobalities for which Paris has always been fo fanuas. One clarly, inewer, gathers from the complexion of converlation, even on t'u moft risuhus tupies, provided of a public nature, how far, and for what reaton. confodence is lodecel in cerain men. In every company, of every rank, you bear of the Count de Miraban's filfents; that he is one of the firll pens of France, and the firf orator; and yet that he could not cary from confidence fix votes on any queltion in the lfates. His writings, how,ver, fpread in ['aris and the provinces: he publithed a journal of the fates, writenf for a lew days with fuch force, and fuch feverity, that it was filenced by an exprefs ahet of $g^{\prime}$ overnment. This is attributed to Bonf. Necker, who wo treatel in it with dis litte ceremuny, that his vanity was wounded to the quick. The number of fubferibers to the journal was fuch, that I have herd the profit to Monf. Mirabean calculated at so,oco lives 350 1. a year. Since its fuppreftion, h. publithes once or twice a week a fmall pamphlet, to anfuer the fame purpole, of giving an account of the debates, or rather obfervations on them, entitled, $1,2,3$, Xc. Lettre de Comte de Mirabcau à fes Commetans, which, though viotent, farcaftic, and fevere, the court has not thousht proper to ftop, refpecting, l fuppofe, its tite. It is a weak and miferable conduct, to fingle out any particular publication for prohibition, while the prefs groans with inmumerable productions, whole tendency is abolutely to overturn the prefent govermonent; of perat fuch pamphlets to be circulated all over the kingdom, even by the polts and dilire ces in the hands of govermment, is a hinimefs and folly, from which there are no eflects that may not be expedeal. In the evening to the comic opera; italian mutie, labian words, and Italian peiformers; and the applawe fo inceffint and rapterous, that the ears of the French mult be chaneing apace. What would Jare Jucques have hid, cuad be tave be.n a wituefs to fiech a fuectacle at taris!

The 18 th. Yefliday the commons dereed thenforese, in conf quener of the Abbe Sjeyers intended mobion, the tite of Afferbic Nationale; and allo, contidering th an felves then in ativity, the shagality of all taxes; but granted them during the leffon, Stelaring that they would, wibout deldy, delib rate ro the confoldatins of the debt; and on the relicf of the milerv of the peonle. Thefe thes give great fipirs to the vo-
 apprehenfion, that it will prowe a precupita : meafore. It :s a violent Rep, which may be taken hold of by the court, and converted ary much to the peoples difadvantiad. The reafoning of Monf. de Mirdbeatl againfl it was lorcible and juit -" Si je vom ens employer contre les autres motions les armes dont on le lert pour attaquer la miens,
ne pourrois-je pas dire a mon tour: de quelque maniere que vous-vous qualifiez, que vous foyez les reprélentins connus is verifiés de ia nation, les repréfentans de 25 nillions d'hommes, les repréfentans de la majorité du peuple, dufliez-vous même vous appeller l'Afémblé Nationale, les états généraux, empécherez-vous les claffes privilegicés de continuer des affémbleés que fa majefté a reconnues? Les empécherez vous de prendre des de liberationcs? Les empécherez-vous de pietendre au veto? Empécherez vons le Roi de les recevoir? De les reconnoitre, de leur continuer les mêmes titres qu'il leur a donnés jufqu'a prefent? Finfin, empécherez-vous la nation d'appeller le clergé, le clergé, la noblcfle, la nobleffe ?"'

To the Royal Society of Agriculture, where I gave my vote with the reft, who were unanimous for electing Gencral Wafhington an honorary member; this was a propofal of Monf. fde Brouffonet, in confequence of my having affured him, that the General was an excellent farmer, and had correfponded with me on the fubject. Abbé Commerel was prefent; hr gave a panphlet on a new project, the cloux a fauché, and a paper of the feed.
The soth. Accompanied Monf. de Brouffonet to dine with Monf. de Parmentier, at the hotel des invalids. A prefident of the parliament, a Monf. Mailly, brother-in-law to the chancellor, was the ${ }^{2}$; Abbe Commerel, \&c. \&c. I remarked two years ago, that Monf. Parmentier is one of the belt of men, and beyond all queftion underfands every circumftance of the boulangerie better than any other writer, as his productions clearly manifelt. After dinner to the plains of Sablon, to fee the Society's potatoes and preparations for turnips, of which I thall only fay that I wilh my brethren to ftick to their fcientific farming, and leave the practical to thofe who underftand it. What a fad thing for philofoplical hufbandmen that God Almighty created fuch a thing as couch (triticum repens.)

The acth. News!-News !-Every one flares at what every one might have expected. A meffage from the King to the Prefidents of the three orders, that he fhould meet them on Monday; and, under pretence of preparing the hall for the feance royale, the French guards were placed with bayonets to prevent any of the deputies entering the room. The circunftances of doing this iil-judged act of violence have been as illadvifed as the act itfelf. Monf. Bailly received no other notice of it than by a letter from the Marquis de Brézé, and the Deputies met at the door of the hall, without knowing that it was fhut. Thus the feeds of difgult were fown wantonly in the manner of doing a thing, which in itfelf was equally impalatable and unconflitutional. The refolution taken on the fpot was a noble and firm one; it was to affemble inftantly at the Jeu de paume, and there the whole affembly took a folemn oath never to be diffolved but by their own confent, and to confider themfelves, and act as the National Aifembly, let them be wherever violence or fortune might drive them; and their expectations were fo little favourable, that expreffes were fent off to Nantes, intimating that the National Affembly might poflibly find it neceffary to take refuge in fome diftant city. This moffage, and placing guards at the hall of the ftates, are the refult of long and repeated comicils, held in the King's prelence at Marly, where he has been thut up for fome days, fecing mobody; and no perfon admitted, even to the oficers of the court, without jealouly and circumfpection. The King's brothers have no feat in the council, but the Count d'Artois incellantly attends the refolutions, conveys then to the Queen, and has long conferences with her. When this $n_{c}$. arrived at Paris, the Palais Royal was in a flame, the coffee-houfes, pamphlet-fhops, corridores, and gardens were croided.alarm and apprchenfion fat in every eye,-the reports that were circulated eagerly, tending to flew the violent intentions of the court, as if it were bent on the utter extir-

[^8]pation of the French nation, except the party of the Queen, are perfectly incredible for their grofs abfurdity: yet nothing was fo glaringly ridiculous, but the mob fwallowed it with undicriminating faith. It was, however, curious to remark, among perfons of another deffription (for I was in leveral parties after the news arrived), that the balance of opinions was clearly that the National Affembly, as ir called itfelf, had gone too far -had been too precipitate-and too violent-had taken fteps that the mafs of the people would not fupport. From which we may conclude, that if the court, having feen the tendency of their late procedings, thall purlue a firm and politic plan, the popular caufe will have little to boalt.

The zift. It is impohible to have any other employment at fo critical a moment, than going from houte to houfe demanding news; and remarking the opinions and ideas moft current. The prefont moment is, of all others, perhaps that which is moft pregnant with the future defliny of liance. The itep the Commons have taken of declaring themfelves the National Afimbly, independent of the other orders, and of the King himfelf, precluding a diffolution, is in fact an anlumption of all the authority in the kingdom. They iwe at one flroke converted themelves into the long parliament of Charks I. It needs not the affiftance of much penetration to fee that if fach a prerenfoon and declamation be not done anay, King, Lords, and Clergy are deprived of their flares in the le iflature of trance. So bold, and apparently defperate a ftep, equally deffruitive to the royal authority, the pariaments, and the army, and to every intereft in the r . a. can never be ailowed. If it be not oppoicd, all other powers will lic in ruins and that of the Commons. With what anxious expectation mult one therefore wait to fee :f he crown will excrt ifflf firm on the occanon, with fuch an attention to an imprond fyltem of liberty, as is abfolutely neceffary to the monent! All things confidered, that is, the characters of thote who are in poffeflion of power, no well digefted fyltem and fleady execution are to be looked for. In the evening to the play; Madame Rocquere performed the Queen in Hamlet; it may cafily be fuppofed how that play of Shakefpeare is cut in pieces. It has lowever effect by her admirable acting.

The 22 d . To Verfailles at fix in the morning, to be ready for the feance royale. Breakfalting with the Duc de Liancourt, we found that the King had put off going to the ftates till to-mon fow morning. A committee of council was held laft night, which fat till midnight, at which were prefent Monfieur and the Count d'Artois for the firlt time: an event confidered as extraordinary, and attributed to the influence of the Queen. The Count d'Artois, the determined enemy of Monf. Necker's plans, oppa 1 his fyftem, and prevailed to have the feance put ofl to give time for a council in the King's prefence to day. From the chateau we went to find out the deputies; reports were various where they were affembling. 'To the Récolcts, where they had been, but finding it incommodious, they uent to the charch of St. Louis, whither we followed them, and were in time to fee M. Bailly take the chair, and read the King's letter, putting off the feance till to morow. The fpectacle of this meeting was fingular,-the crowd that attended in and around was great-and the ansity and fufpenfe in every eye, with the variety of expreflion that flowed from different vieus and different characters, gave to the countenances of all the world an impretlion I hall never witncfied betore. The only butinefs of importanec tramacted, bit which lafted till three o'clock, was receiving the oaths and fignatures of fome dopuies, who had not taken them at the Jen de paume; and the union of thres Bifhops and one hundred and fifty of the Deputies of the Clergy, who came to werily their powers, and were received by fuch applauf, with fuch clapping and thouting from all prefent, that the church refounded.

Apparently the inhabitants of Verfailles, which having a population of fixty thoufand people can afford a pretty numerous mob, are to the laft perfon in the intereft of the Commons; remarkable, as this town is ablolutely fed by the palace; and if the caufe of the Court be not popular here, it is eafy to fuppofe what it muft be in all the reft of the kingdom. Dine with the Duc de Liancourt, in the palace, a large party of Nobility and Deputies of the Commons, the Duc d'Orleans amongit them; the Bifhop of Rodez, Abbé Syeyes, and Monf. Rabaud St. Etieme. This was one of the moft ftriking inftances of the imprefion made on men of different ranks by great events. In the Areets, and in the church of St. Louis, fuch anxiety was in every face, that the importance of the moment was written in the phyfognomy; and all the comnon forms and falutations of habitual civility loft in attention: but amonglt a clafs fo much higher as thofe I dined with, I was fruck with the difference. There ware not, in thirty perfons, five in whofe countenances you coulf guefs that any extraordinary event was going forward: more of the converfation was indifferent than I thould have expected. Had it all been fo, there would have been no room for wonder; but obfervations were made of the greateft freedom, and fo received as to mark that there was not the leaft impropriety in making them. In fueh a cale, would not one have expected more energy of feeling and expreffion, and more attention in converfation to the crifis that mult in its nature fill every bofom? Yet they ate, and drank, and fat, and walked, loitered, and fmirked and fmiled, and chatted with that eafy indifference, that made me ftare at their infipidity. Perhaps there is a certain nonchalence that is natural to people of fafhion from long habit, and which marks them from the vulgar, who have a thoufand afperities in the expreffion of their feelings, that cannot be found on the polifhed furface of thofe whufe manners are fmoothed by fociety, not worn by attrition. Such an obfervation would therefore in all common cafes be unjuft; but I confefs the prefent moment, which is beyond all queftion the moft critical that France has feen from the foundation of the monarchy, fince the council was affembled that muft finally determine the King's conduct, was fuch as might have accounted for a behaviour totally different. The prefence of the Duc d'Orleans might do a little, but not much; his manner might do more; for it was not without fome difgult, that I obferved him feveral times playing off that fmall fort of wit, and llippant readinefs to titter, which, I fuppofe, is a part of his character, or it would not have appeared to-day. From his manner, he feemed not at all difpleafed. The Abbé Syeycs has a remarkable phyfiogmony, a quick rolling eye; penetrating the ideas of other people, but fo cautioufly referved as to guard his own. The:e is as much character in his air and manner as there is vacuity of it in the countenance of Monf. Rabaud St. Etienne, whofe phyfiognomy, however, is fir from doing him juftice, for he has undoubted talents. It feems agreed, that if in the council the Count d'Artois carries his point, Monf. Necker, the Count de Montmorin, and Monf. de St. Prieft will refign; in which cafe Monf. Necker's return to power, and in triumph, will inevitably happen. Such a turn, however, mult depend on events. - Evening. The plan of the Count d'Artois accepted; the King will dechre it in his fpecel tomorrow. Monf. Necker demanded to refign, but was refufed by the King. All is now anxiety to know what the plan is.

Tine 23 d. The important day is over: in the moming Verfailles feemed filled with troops: the ftreets about ten o'clock, were lined with the Trench guards, and fome Swifs regiments, \&c. : the hall of the flates was furrounded, and centinels fixed in all the paffages, and at the doors; and none but deputies admitted. This military preparation was ill judged, for it feemed admitting the impropriety and unpopularity of the intended mealure, and the expectation, perhaps fear, of popular commotions. They
pronounced, before the King left the chatcan, that his plan was adverie to the people, from the military parade with which it was uthered in. The contrary, however, proved to be the fact ; the propofitions are linown to ill the world: the plan was a good one; much was granted to the people in great and effential points; and as it was granted before they had provided for thofe publie neceflities of finates, which occafioned the fates being called together; and confequeritly left them at full power in future to procure for the people all that opportmity might prefent, they apparently ought to accept them, provided fome fecurity be given for the future meetings of the flates, without wheh all the reft would be infecure; but as a little negotiation may eafily fecure this, I apprehend the deputies will accept them conditionally: the ufe of foldiers, and fome imprudencies in the manner of forcing the King's fytem, relative to the interior conltitution, and affembling of the deputies, as well as the ill-blood which had had time to brood for three days palt in their minds, prevented the commons from receiving the King with any exprefions of applaufe ; the clergy, and fome of the nobility, cried "vive le Roi!" but treble the number of mouths being filent, took off all eficet. It feems they had presoufly determined to fubmit not to violence: when the King was gone, and the clergy and nobility retired, the Marquis de Brezé waiting a moment to fee if they meant to obey the King's exprefs orders, to retire alfo to another chamber prepared for them, and perceiving that no one moved, addrefled them - " Meflieurs, vous connoifiea les intentions du Rei." A dead filence enfued; and then it wats that fuperior talents bore the fway, that overpowers in critical moments all other confiderations. The eyes of the whole affembly were turned on the Count de Mirabeau, who inftantly replied to the Marquis de Brézi-" Oui, Monfieur, nous arons entende les intentions, qu’on a fuggércés au Roi, \& vous qui ne fauriez ćtre fon organe auprés des etats généraux, vous qui n'àvez ici ni phace, ni voix, ni droit de parter, vous n'etes pas fait pour nous rapeller fon difcours. Cependant pour eviter toute équivoque, \& tout delai, je vous dechare que fi l'on vous a chargé de nous faire fortir d'ici, vous devez demander des ordres pour cmployer la force, car nous ne quiterons nos places que par la puifince de
 They then immeliately panfed a confirmation of their preceding arrets; and, on the motion of the Comt de Nirabeau, adeclaration that their perions, iadividually and collectively, were facred; and that all who made day attempts againt them fhould be deemed infanous trators to thair country.

The 2 2th. The ferment at lawis is beyond conception; ten thoufand peopls have been all this day in the I'alais Royal; a full detail of yefterday's proceedings was brought this moraing, and read by many apparent leaders of hitte parties, with comments to the people. To my furprife, the King's propofitions are reccived with univerfal diffutt. He faid nothing explicit on the periodical meeting of the ftates; be declared all the old feudal rights to be retained as property. Thefe, and the change in the balance of reprefentation in the provincial afiemblies, are the articles that give the greateit offence. But, inftead of looking to, or hoping for further concefions on thefe points, in order to make them more confonant to the general wifhes, the people feem, with a fort of phrenzy, to reject all idea of compromife, and to infilt on the neceflity of the orders uniting, that full power may confequently refide in the commons, to effect what they call the regeneration of the kingdom ; a favourite term, to which they affix no precife idea, but add the indefinite explanation of the general reform of all abufes. They are alfo full of fofpicions at M. Necker's offering to refign, to which circumflance they feem to look more than to much more effential points. It is phan to me, from many converfations and harangues I have been witnefs to, that the conflant meetings at
the Palais Royal, which are carried to a degree of licentioufnefs and fury of liberty, that is fearcely credible, united with the innumerable inflammatory publications that have been hourly appearing fince the affembly of the flates, have fo heated the people's expectations, and given them the idea of fuch total changes, that nothing the King or court could do would now fatisfy them; confequently it would be idlenefs itfelf to make conceflions that are not fteadily adhered to, not only to be obferved by the King, but to be enforced on the people, and good order at the fame time reftored. But the fumbling.block twis and every plan that can be devifed, as the people know and declare in every corner, is the fituation of the finances, which cannot poffibly be reftored but by liberal grauts of the flates on the one hand, or by a bankruptcy on the other. It is well known, that this point has been warmly debated in the council: Monf. Necker has proved to them, that a bankruptcy is inevitable, if they break with the fates before the finances are reftored; and the dread and terror of taking fuch a ftep, which no minifer would at prefent dare to venture on, has been the great difficulty that oppofed itfelf to the projects of the Queen ar, ic Count d'Artois. The meafure they have taken is a middle one, from which they hope to gain a party among the people, and render the deputies unpopular enough to get rid of them: an expectation, however, in which they will infallibly he mithaken. If, on the fide of the people it be urged, that the vic; of the old government make a new fyftem neceffary, and that it can only be by ti. firmeft meafures that the people an be put in poffeffion of the bleflings of a free sucrument; it is to be replicd, on tice other hand, that the perfonal character of the King is a jult foundation for relying that no meafures of actual violence can be feriounly feared: that the ftate of the linances, under any poffible regimen, whether of faith or Gankruptcy, muft fecure their exiftcnce, at leaft for time fufficient to fecure by negotiation, what may be hazarded by violence; that by driving things to extremities, they rifque an union between all the other orders of the ftate, with the parliaments, army, and a great body even of the people, who muft difapprove of all extremities; and when to this is added the poffibitity of invol-ing the kingdom in a civil war, now fo familiarly talked of, that it is upon the lips of all the world, we muft confefs, that the commons, if they fteadily refufe what is now held out to them, put immenfe and certain benefits to the chance of fortune, to that hazard which may make pofterity curfe, inflead of blefs, their memorics as real patriots, who had nothing in view but the happinefs of their country. Such an incerfamt buz of 1 , Sitics has been in my ears for fome days paft, that I want to night to the Italian opera, for relasation. Nothing could be better calcubuted for that effect, than the piece pertimed, "La Villanella Rapita," by Bianchi, a delicious compofition. Can it be believed, that this people, who fo lately valued nothing at an opera but the dances, and could hear nothng but a fquall - now attend with feeling to Italian melodics, applaud with tatte and rapture, and this without the meretricious aid of a fugle dance! The mufic of this piece is charming, elegantly playful, airy, and pleafing, with a duet, between Signora Mandini, and Viganoni, of the firft luftre. The former is a moft fafcinating finger-her voice nothing, but her grace, expreffion, foul, all frung to exquifite fenfibility.

The 25 th. The criticifms that are made on Monf. Necker's conduct, even by his friends, if above the level of the people, are fevere. It is pofitively afferted, that Abbe Syeyes, Mefrs. Mounier, Chapellicr, Bernave, Target, Tourette, Rabaud, and other leaders, were almoft on their knees to him, to infit peremptorily on his refignation being accepted, as they were well convinced hat his retreat would throw the Queen s party into infinitely greater difficulties and cmbarrafiment than any other circumitance. But his vanity prevailed over all their efforts to liften to the infidious perfuafions of the Queen,

Queen, who fpoke to him in the ftyle of afking it as a requef, that he would keep the crown on the King's head; at the fame time that he yiel ed to do it, contrary to the intereft of the friends of liberty, he feemed fo pleafed with the huzzas of the nivb of Verfailles, that it did mush mifchief. The minit seever go to and from the King's apartment on foot, acen the court, which Monf. iVccker took this opportunity of doin r. though he himfelf had not done it in quiet times, in order to court the flattery of bow. called the father of the people, and moving with an inmenfe and houting multitule it his heels. Nearly at the time that the Queen, in an audience almofl private, fipoke as above to M. Necker, fhe ree jived the deputation from the nobility, with the Whundin in t.ir hand, whom the prefented to then, claiming of their honour, the protection of her fon's rights; clearly implying, that if the flep the King had taken was mot fleadily purfued, the inonarchy would be lift, and the nolility funk. While M. Neeker's mob was heard through every apartment of the chateau, the King paffed in his coach to Marly, through a dead and mournful filence-and that juit alter having given to his people, and the caufe of liberty, more perhaps than ever any monarch had done before. of fuch materials are all mobs made-fo impofible is it to fatisty in moments like inefe, when the heated imagination dreffes every vifionary project of the brain in the bewithing colours of liberty. I teel great anxiety to know what will be the refult of the deliberations of the commons, after their firt protefts are over, againft the military violence which was fo unjultifially and injudicioully ufed. Had the King's propofition come after the fupplies wete granted, and on any inferior queftion, it would be quite another affair ; but to offer this before one fhilling is granted, or a ftep taken, makes all the difference imaginable.-Evening. - The condust of the court is inexplicable, and without a plan: while the late ftep was taken, to fecure the orders fitting feparate, a great body of the clergy had been permitted to go to the commons, and the Due d'Orleans, at the head of forty-leven of the nobility, has done the fame : and, what is equally a proof of the unfteadinefs of the court, the commons are in the common hall of the flates, contrary to the exprefs command of the King. The fact is, the feance royale was repugnant to the perfonal feelings of the King, and he was brought to it by the council with much difficulty; and who in aterwards became neceffary, as it did every hour, to give new and effeative ordes to lupport the fyftem then laid down, it wes requifite to have a new battle for every puime, and thus the fcheme was only opened, and not perfifled in:-this is the report, and apparently authentic : it is cafy to fec, that that thep had better, on a thoufand reafons, not have been taken at all, for all vigour and effect of government will be loft, and the people be more afluming than ever. Yefterday, at Varlailles, the mob was violent - they infulted, and even attacked all the clergy and nobility that are known to be ftrenuous for preferving the feparation of orders. The Bifhop of Beausais had a flone on his head, that almoft ftruck him down ". The Archbihop, of Paris had all his windows broken, and forced to move his lodgings; and the Cardinal de la Rochefoucauld hiffed and hooted. The confufion is fo great, that the court have only the troops to depend on; and it is now faid confidently, that if an order be given to the French guards to fire on the people, they will refufe obedience: this aftonifhes all, except thofe who know how they have becn difgufled by the treatment, conduct, and manouvres of the Due de Chatelet, their colonel: fo wretchedly have the affairs of the court, in every particular, been managed; to miferable its choice

[^9]of the men in offices, even fuch as are the moft intimately conneded with its fafety, and cen exillence. What a lefon to princes, how they allow intriguing courtiers, women, and fouls, to interfere, or aftume the power that can be lodged, with latety, only in the hands of ability and experience! It is afferted exprefsly, that thefe mois have been excited and infligated by the leaders of the commons, and foone of them pail by the D. . d'Orleans. The diftraction of the miniftry is extreme.-At night to the theare François; the Earl of Effex, and the Maifon de Moline.
The 26th. Every hour that pafies herefeems to give the people frefh fpirit: the mentings at the Polais Royal are more munerous, more violent, and more allured; and in the aflembly of clectors, at Paris, for fending a deputation to the N dional Afembly, the language that was " ed, by all ranks of people, was nothing lefs than a revolution in the goven the eftablifhment of a free condimion: what they mem by a free conftion on wine of the times iuns 'very day the kingden oughe to be a monan In the fireets one is llumed by the . . pretended events, that all tend to keep ! undertood-is republic; for the docwore to that point; yet they profefs, tha' ", at leall, that there ousht to be a king. fectitions parphtets, and deferiptions of fupin snels, and even flupidity of the conm, is without example: the moment demands the greated decifion-and yofterday, while it was actually a queltion, whether he foould be a Dore of Venice, or a King of France, the King went a hunting! The fpectacle of the l'abiis Royal prefented this night, till eleven o'elock, and, as we afterwards heard, almoft till morning, is curious. The croud was prodigious, and fire-works of all forts were played oft, and all the building was illuminated: thefe were faid to be rejoicings on account of the Duc d'Orleans and the nobility joining the commons; but usital with the execflive fiecolom, and eren licentioufinets of the orators, who havangus the penple; with the general movement which before was threatening, all this buille and noile, which will not leave them a moment tranquil, has a prodigious effect in preparing then for whatever purpofes the leaders of the commons thall have in view; confequenty: they are grolily and diametrically oppofite to the interefis of the couri; ;-but all thate are blind and infatuated. It is now underfood by every body, that the King's oniecrs, in the feance royale, are out of the queftion. The moment the commons found a relaxation, even in the tritling point of attembling in the great hali, they difregardel all the refl, and confitered the whole as null, and not to be taken notice of, untefs entorced in a mamer of which there wern figns. They lay it down for a maxim, that they have a right to a great deal more than what the King touched on, but that they will accept of nothing as the conedfion of power ; they will affume and fecure all to themfelves, as matters of right. Many perfons I talk wih, feem to think there is nothing extraordinary in this,-but it appears, that fuch pretenfons are equally dangerous and inadmifible, and lead directly to a civil war, which would be the height of madnefs and folly, when public liberty might certanly be fecured, without any fueh extrenity. If the commons are to affume every thing as their right, what power is there in the flate, thort of arms, to prevent them from affuning what is not their righ? They inftigate the people to the moft extenfive expectatione, and if they be net graified, all mutt be confufion; and even the King himfelf, eafy and lethargic as he is, and indiferent to power, will by and by be ferioully alarmed, and ready to liften to mealures, to which he will not at prefent give a moment's atention. All this fems to point flrougly to great confufion, and even civil commotions; and to make it apparent, that to have aceepted the King's ofers, and made them the foundation of future negocistion, would have been the wifelt conduct-and with that idia! thall leave Iaris.

## IMAGE EVALUATION

 TEST TARGET (MT-3)

The 27 th. The whole bufinefs now feems over, and the revolution complete. The King has been frightened by the mobs into overturning his own act of the feance royale, by writing to the prefidents of the orders of the nobility and clergy, requiring them to join the commons, -in direct contradiction to what he had ordained before. It was reprefented to him, that the want of bread was fo great in every part of the kingdom, that there was no extremity to which the people might not be driven: that they were nearly ftarving, and confequently ready to liften to any fuggeftions, and on the qui vive for all forts of mifchief: that Paris and Verfailles would inevitably be burnt; and in a word, that all forts of mifery and confufion would follow his adherence to the fyftem arnounced in the feance royale. His apprehenfions got the better of the party who had for fome days guided him; and he was thus induced to take this ftep, which is of fuch importance, that he will never more know where to ftop, or what to refufe; or rather he will find, that in the future arrangement of the kingdom, his fituation will be very nearly that of Charles I. a fpectator, without power, of the effestive refolutions of a long parliament. The joy this flep occafioned was infinite ; the whole affembly, uniting with the people, hurried to the chateau. Vive le Roy might have been heard at Marly: the King and Queen appeared in the balcony, and were received with the loudeft thouts of applaufe; the leaders, who governed thefe motions, knew the value of the conceffion much better than thofe who made it. I have to-day had converfation with many perfons on this bufinefs; and to my amazement, there is an idea, and even among many of the nobility, that this union of the orders is only for the verification of their powers, and for making the conllitution, which is a new term they have adopted; and which they ufe as if a conflitution were a pudding to be made by a receipt. In vain I have afked, where is the power that can feparate them hereafter, if the commons infift on remaining together, which may be fuppofed, as fuch an arrangement will leave all the power in their hands? And in vain I appeal to the evidence of the pamphlets written by the leaders of that aflembly, in which they hold the Englifh conftitution cheap, becaufe the pepple have not pt wer enough, on account of that of the Crown and the Houfe of Lords. The event now appears fo clear, as not to be difficult to predif: : all real power will be henceforward in the commons; having fo much inflamed the people in the exercife of it, they will find themfelves unable to ufe it ternperately; the court cannot fit to have their hands tied behind them; the clergy, nobility, pariliaments, and army, will, when they find themfelves in danger of annibilation, unite in their mutual defence; but as fuch an union will demand time, they will find the people armed, and a bloody civil war muft be the refult. I have more than once declared this as my opinion, but do not find that others unite in it *. At all events, however, the tide now runs fo ftrongly in favour of the people, and the conduct of the court fo weak, divided, and blind, that little can happen that will not clearly be dated from the prefent moment. Vigour and abilitie; would have turned every thing on the fide of the court; for the great mafs of nobility in the kingdom, the higher clergy, the parlianents, and the army, were with the crown; but this defertion of the conduct which was neceffary to fecure its power, at a moment fo critical, mult lead to

[^10]all forts of pretenfions. At night the fire-works, and illuminations, and mob, and noife, at the Palais Royal increafed; the expence muft be enormous; and yet nobody knows with certainty whence it arifes: fhops there are, however, that for 12 fous, give at many fquibs and ferpents as would coft five livres. There is no doubt of its being the Duc d'Orleans' money : the people are thus kept in a continual ferment, are for ever affembled, and ready to be in the laft degree of commotion whenever called on by the men they have confidence in. Lately a company of Swifs would have crufhed all this; a regiment would do it now if led with firmnefs; but, let it laft a fortaight longer, and an army will be requifite.-At the play, Mademoifelle Contá, in the Milanthrope of Moliere, charmed me. She is truly a great actrefs; eafe, grace, perfon, beauty, wit, and foul. Mola did the Mifanthrope admirably. I will not take leave of the theatre François without once more giving it the preference to all I have ever feen.

I fhall leave Paris truly rejoiced that the reprefentatives of the people have it undoubtedly in their power fo to improve the conftitution of their country, as to render all great abufes in future, if not impoffible, at leaft exceedingly difficult, and confequently will eftablifh to all ufeful purpofes, an undoubted political liberty; and if they effect this, it cannot be doubted but that they will have a thoufand opportunities to fecure to their fellow-fubjects the invaluable bleffing of eivil liberty alfo. The ftate of the finances is fuch, that the government may eafily be kept virtually dependant on the ftates, and their periodical exiftence abfolutely fecured. Such benefits will confer happinefs on twenty-five millions of people; a noble and animating idea, that ought to fill the mind of every citizen of the world, whatever be his country, religion, or purfuit. I will not allow myfelf to believe for a moment, that the reprefentatives of the people can ever fo far forget their duty to the French nation, to humanity, and their own fame, as to fuffer any inordinate and inprasicable views,-any vifionary or theoretic fyttems,--any frivolous ideas of fpeculative perfection; much lefs any ambitious private views, to impede their progrefs, or turn afide their exertions, from that fecurity which is in their hands, to place on the chance and hazard of public commotion and civil war, the invaluable bleffings which are certainly in their power. I will not conceive it porfible, that men, who have eternal fame within their grafp, will place the rich inheritance on the caft of a die, and lofing the venture, be damned among the worf and moft profligate adventurers that ever difgraced humanity.-The Duc de Liaricourt having made an inmmenfe collection of pamphlets, buying every thing that has a relation to the prefent period; and among the reft, the cabiers of all the diftricts and towns of France of the three orders; it was a great object with me to read chefe, as I was fure of finding in them a reprefentation of the grievances of the three orders, and an expla. nation of the improvements wifhed for in the government and adminiftration; thefe cahiers being inftructions given to their deputies, I have now gone through them all, with a pen in hand, to make extracts, and fhall therefore leave Paris tomorrow.

The 28th. Having provided myfelf a light French cabriolet for one horfe, or gig Anglois, and a horfe, I left Paris, taking leave of my excellent friend Monfieur Lazowiki, whofe anxiety for the fate of his country made me refpect his character as much as I had reafon to love it for the thoufand attentions I was in the daily habit of receiving from him. My kind protectrefs, the Duchefs d'Eftiflac, had the goodnefs to make me promife, that I would return again to her hofpitable hotel, when I had finiflıed the journey I was about to undertake. Of the place I dined at on my road to Nangis, I forget the name, but it is a polt-houfe on the left, at a fmall diftance our of vol. IV.
the road. It afforded me a bad room, bare walls, cold raw weather, and no fire; for, when lighted, it fmoked too much to be borne;-I was thoroughly out of humour: I had paffed fometime at Paris amidft the fire, energy, and animation of a great revolution. And for thofe moments not filled by political events, I had enjoyed the refources of liberal and inftructing converfation; the amufements of the firft theatre in the world, and the fafcinating accents of Mandini, had by turns folaced and charmed the fleeting moments : the change to inns, and thofe French inns; the ignorance in all perfons of thofe events that were now paffing, and which fo intimately concerned them; the deteftable circumftance of having no newfpapers, with a prefs much freer than the Engliih, altogether formed fuch a contraft, that my heart funk with depreffion. At Guignes, an itinerant dancing-mafter was fiddling to fome children of tradefmen; to relieve my fadnefs, I became a fpectator of their innocent pleafures, and, with great magnificence, I gave four $12 f$. pieces for a cake for the children, which made them dance with frefh animation; but my hoft, the pofl-mafter, who is a furly pickpocket, thought that if I was fo rich, he ought alfo to receive the benefit, and made me pay 9 livres iof. for a miferable tough chicken, a cutlet, a fallad, and a bottle of forry wine. Such a dirty, pilfering difpofition, did not tend to bring me into better humour. - 30 miles.

The 29th. To Nangis, the chateau of which belongs to the Marquis de Guerchy, who laft year at Caen had kindly made me promife to fpend a few days here. A houfe almoft full of company, and fome of them agreeable, with the eagernefs of Monfieur de Guerchy for farming, and the amiable naiveté of the Marchionefs, whether in life, politics, or a farm, were well calculated to bring me into tune again. But I found myfelf in a circle of politicians, with whom I could agree in hardly any other particular, except the general one of cordially wifhing that France might eftablifh an indeftructible fyftem of liberty; but for the means of doing it, we were far as the poles afunder. The chaplain of Monfieur de Guerchy's regiment, who has a cure here, and whom I had known at Caen, Monfieur l'Abbé de __, was particularly ftrenuous for what is called the regeneration of the kingdom, by which it is impoffible, from the explanation, to underfand any thing more than a theoretic perfection of government; queftionable in its origin, hazardous in its progrefs, and vifionary in its end; bui ys prefenting itfelf under a moft fufpicious appearance to me, becaufe all its ad es, from the pamplets of the leaders in the National Affembly, to the gentlemen whu aake its panegyric at prefent, affect to hold the conftitution of England cheap in relpect of liberty: and as that is unqueftionably, and by their own admiffion, the beft the world ever faw, they profefs to appeal from practice to theory, which, in the arrangement of a queftion of fcience, might be admitted, though with caution; but, in eftablithing the complex intereft of a great kingdom, in fecuring freedom to twenty-five millions of people, feems to me the very acmé of imprudence, the very quinteffence of infanity. My argument was an appeal to the Englifh conflitution; take it at once, which is the bufinefs of a fingle vote; by your poffeffion of a real and equal reprefentation of the people, you have freed it from its only great objection; in the remaining circumftances, which are but of fmall importance, improve it-but improve it cautioufly; for furcly that ought to be touched with caution, which has given, from the moment of its eftablifhment, felicity to a great nation; which has given greatnefs to a people defigned by nature to be little; and, from being the humble copiers of every neighbour, has rendered them, in a fingle century, rivals of the mof fucceffful nations in thofe decorative arts that embellifh human life; and the mafters of the world in all thofe that contribute to its convenience. I was commended for my attachment to what I thought
was liberty ; but anfwered, that the King of France muft have no veto on the will of the nation; and that the army muft be in the hands of the provinces, with an hundred ideas equally impracticable and prepofterous. Yet thefe are the fentiments which the court has done all in its power to fpread through the kingdom; for will polterity believe, that while the prefs has fwarmed with inflammatory productions, that tend to prove the bleffings of theoretical confufion, and fpeculative licentioufnefs, not one writer of talents has been employed to refute and confound the falhionable doctrines, nor the leaft care taken to diffeminate works of another complexion? By the way, when the court found that the ftates could not be affembled on the old plan, and that great innovations muft accordingly be made, they ought to have taken the conftitution of England for their model; in the mode of affembling, they fhould have thrown the Clergy and Nobles into one chamber, with a throne for the King, when prefent. The Commons thould have affembled in another, and each chamber, as in England, fhould have verified its powers to itfelf only. And when the King held a fcance royale, the Commons fhould have been fent for to the bar of the Lords, where feats fhould have been provided; and the King, in the edict that conftituted the ftates, fhould have copied from England enough of the rules and orders of proceeding to prevent thofe preliminary difcuffions, which in France loft two months, and gave time for heated imaginations to work upon the people too much. By taking fuch fteps, fecurity would have been had, that if changes or events unforefeen arofe, they would at leaft be met with in no fuch dangerous channel as another form and order of arrangement would permit. -15 miles.

The 30 th. My friend's chateau is a confiderable one, and much better built than was common in England in the fame period, two hundred years ago; I believe, however, that this fuperiority was univerfal in France, in all the arts. They were, I apprehend, in the reign of Henry IV. far beyond us in towns, houfes, ftreets, roads, and, in fhort, in every thing. We have fince, thanks to liberty, contrived to turn the tables on them. Like all tre chateaus I have feen in France, it ftands clofe to the town, indeed joining the end of it; but the back front, by means of fome very judicious plantations, has entirely the air of the country, without the fight of any buildings. There the prefent Marquis has formed an Englifh lawn, with fome agreeable winding walks of gravel, and other decorations, to fkirt it. In this lawn they are making hay, and I have had the Marquis, Monf. l'Abbé, and fome others on the fack to fhew them how to make and tread it : fuch hot politicians!-it is well they did not fet the flack on fire. Nangis is near enough to Paris for the people to be politicians; the perruquier that dreffed me this morning tells me, that every body is determined to pay no taxes, fhould the National Affembly fo ordain.-But the foldiers will have fomething to fay.-No, Sir, never:-be affured as we are, that the French foldiers will never fire on the people: but, if they flould, it is better to be thot than ftarved. He gave me a frightful account of the mifery of the people; whole families in the utmoft diftrefs; thofe that work have a pay infufficient to feed them-and many that find it difficult to get work at all. I enquired of Monf. de Guerchy concerning this, and found it true. By order of the magitrates, no perfon is allowed to buy more than two bufhels of wheat at a market, to prevent monopolizing. It is clear to common fenfe, that all fuch regulations have a direst tendency to increafe the evil, but it is in vain to reafon with people whofe ideas are immoveably fixed. Being here on a market-day, I attended, and faw the wheat fold out under this regulation, with a party of dragoons drawn up before the market-crofs to prevent violence. The people quarrel with the bakers, afferting the prices they demand for bread are beyond the proportion of wheat, and proceeding
from words to fcufling, raife a riot, and then run away with bread and wheat for nothing: this has happened at Nangis, and many other markets; the confequence was, that neither farmers nor bakers would fupply them till they were in danger of itarving, and prices under fuch circumftances, muft neceffarily rife enornoufly, which aggravated the mifchief, till troops became really neceffary to give fecurity to thofe who fupplied the markets. I have been fifting Madame de Guerchy on the expences of living; our friend Monf. L'Abbé joined the converfation, and I collect from it, that to live in a' chateau like this, with fix men-fervants, five maids, eight horfes, a garden, and a regular table, with company, but never to go to Paris, might be done for 1000 louis a year. It would in England colt 20co; the noode of living (not the price of things) is therefore cent. per cent. different. There are gentlemen (nobleffe) who live in this country on 6 or 8000 livres, ( 2621 . to 3501 .), that keep two men, two maids, three horfes, and a cabriolet; there are the fame in England, but they are fools. Among the neighbours who vifited Nangis was Monf. Trudaine de Montigny, with his new and pretty wife, to return the firft vifit of cerensony: he has a fine chateau at Montigny, and an eftate of 4000 louis a year. This lady was Mademoifelle de Cour Breton, niece to Madame Calonne; the was to have been married to the fon of Monf. Lamoignon, but much againft her inclinations; finding that common refufals had no avail, fhe determined on a very uncommon one, which was to go to church, in obedience to her father's orders, but to give a folemn no inftead of a yea. She was afterwards at Dijon, and never flirred but the was received with huzzas and acclamations by the people for refufing to be allied with la Cour Pleniere; and her firmnefs was every where fpoken of much to her advantage. Monf. la Luzerne, nephew to the French ambaffador at London, was there, and who informed me, that he had learned to box of Mendoza. No one can fay that he has travelled without making acquifitions. Has the Duc d'Orieans alfo learned to box: The news from Paris is bad : the commotions increafe greatly: and fuch an alarm has fpread, that the Queen has called the Marechal de Broglio to the King's clofet; he has had feveral conferences : the report is, that an army will be collected under him. It may be now neceflary; but woeful management to have made it fo.

July 2. To Meux. Monf. de Guerchy was fo kind as to accompany me to Columiers; I had a letter to Monf. Anveé Dumeé. Pafs Rofoy to, Maupertius, through a country chearfully diverfified by woods, and fcattered with villages; and fingle farms fpread every where as about Nangis. Maupertius feems to have been the creation of the Marquis de Montefquieu, who has here a very fine chateau of his own building; an extenfive Englifh garden, made by the Count d'Artois' gardener, with the town, has all been of his own forming. I viewed the garden with pleafure; a proper advantage has been taken of a good command of a fream, and many fine fprings which rife in the grounds; they are well conducted, and the whole executed with taft. In the kitchen-garden, which is on the flope of a hill, one of thefe fprings has been applied to excellent ufe: it is made to wind in many doubles through the whole on a paved bed, forming numerous bafons for watcring the garden, and might, with little trouble, be conducted alternately to every bed as in Spain. This is a hint of real utility to all thofe who form gardens on the fides of hills; for watering with pots and pails is a miferable, as well as expenfive fuccedancum to this infinitely more effective method. There is but one fault in this garden, which is its being placed near the houfe, where there fhould be nothing but lawn and fcattered trees when viewed from the chateau. The road might be hidden by a juticious ufe of planting. The road to Columiers is almirably formed of broken flone, like gravel, by the Marquis of Montefquieu, partly at his own ex-
pence: Before I finifh with this nobleman, let me obferve, that he is eftemed by fone the fecond family in lrance, and by othcrs, who admit his pretenfions, even the firlt; he claims from the houfe of Armagnac, which was undoubtedly from Charlemagne: the prefent Fing of France, when he figned fome paper relative to this family, that feemed to admit the claim, or refer to it, remarked, that it was declaring one of his fubjects to be a better gentleman than himfelf. But the houfe of Montmorenci, of which family are the Dukes of Luxembourg and Laval, and the Prince of Robec, is generally admitted to be the firt. Monf. de Montefquieu is a deputy in the ftates, one of the quarante in the French academy, having written feveral pieces: he is alio clief minifter to Monfieur, the King's brother, an office that is worth 100,000 livres a year, ( $4,375 \mathrm{l}$ ) Dine with Monf. and Madame Dumeé ; converfation here, as in every other town of the country, feems more occupied on the dearnefs of wheat than on any other circumftance; yefterday was market-day, and a riot enfued of the populace, in fpite of the troops, that were drawn up as ufual to protect the corn : it rifes to 46 livres ( 2 l .3 d .) the feptier, or half-quarter, and fome is fold yet higher. To Meux. -32 miles.
The 3 d. Meux was by no means in my direct road; but its diftrict, Brie, is fo highly celebrated for fertility, that it was an object not to onit. I was provided with letters for M. Bernier, a confiderable farmer, at Chaucaunin, near Meux; and for M. Gibert, of Neuf Moutier, a confiderable cultivator, whofe father and himfelf had between them made a fortune by agriculture. The former gentleman was not at home; by the latter I was received with great hofpitality; and I found in him the ftrongeft defire to give me every information I wifhed. Monf. Gibert has built a very handfome and commo. dious houfe, with farming-offices, on the moft ample and folid fcale. I was pleafed to find his wealth, which is not inconfiderable, to have arifen wholly from the plough. He did not forget to let me know, that he was noble, and exempted from all tailles; and that he had the honours of the chace, his father having purehafed the charge of Sccretaire du Koi: but he very wifely lives en fermier. His wife made ready the table for dinner, and his bailif, with the female domeftic, who has the charge of the dairy, \&c. both dined with us. This is in a true farming ftyle; it has many conveniencies, and looks like a plan of living, which does not promife, like the foppin modes of little gentlemen, to run through a fortune, from falfe thame and filly pretenfions. I can find no other fault with his fyftem than having built a houfe enormounly beyond his plan of living, which can have no other effect than tempting fome fucceffor, lefs prudent than himfelf, into expences that might diffipate all his :nd his father's favings. In England that would certainly be the cafe; the danger, howerer, is not equal in Prance.

The 4th. To Chateau Thiery, following the courfe of the Marne. The country is pleafantly varied, and hilly enough to be rendered a conftant picture, were it enclofed. Thiery is beautifully fituated on the fame river. I arrived there by five o'clock, and wifhed, in a period fo interefing to France, and indeed to all Europe, to fee a newf. paper. I afked for a coffee-houfe, not one in the town. Here are two parifhes, and fome thoufands of inhabitants, and not a newfpaper to be feen by a traveller, even in a moment when all ought to be anxiety.-What fupidity, poverty, and want of circulation! This people hardly deferve to be free; and flould there be the leaft attempt wih vigour to keep them otherwife, it can hardly fail of fucceeding. To thofe who have been ufed to travel a midft the energetic and rapid circulation of wealth, animation, and intelligence of England, it is not poffible to defcribe, in words adequate to one's feelings, the dulnefs and fupidity of France. I have been to-day on one of their greateft roads, within thirty miles of Paris, yet I have not feen one diligence, and met but a
fingle gentleman's carriage, nor any thing on the road that looked like a gentleman.30 miles.

The 5 th. To Mareuil. The Marne, about twenty five rods broad, flows in an arable vale to the right. The country hilly, and parts of it pleafant; from one elevation there is a noble vicw of the river. Mareuil is the refidence of Monf. Le Blanc, of whofe hufbandry and improvements, particularly in fheep of Spain, and cows of Switzerland, Monf. de Brouffonet had fpoken very advantageounly. This was the gentleman allo on whom I depended for information relative to the famous vineyards of E.pernay, that produce the fine Champagne. What therefore was my difappointment, when his fervants informed me that he was nine leagues off on bufinefs? Is Madame Le Blanc at home? No, the is at Dormans, My complaining ejaculations werc interrupted by the approach of a very pretty young lady, whom I found to be Mademoifelle Le Blanc. Her mamma would return to dinner, her papa at night; and, if I wihhed to fee him, I had better flay. When perfuafion takes fo pleafing a form, it is not eafy to refilt it. There is a manner of doing every thing that either leaves it abfolutely indifferent or that interefts. The unaffected good humour and fimplicity of Mademoifelle Le Blane entertained me till the return of her mama, and made me fay to myfelf, you will make a good farmer's wifc. Madame Le Blanc, when the returned, confirmed the native holpitality of her daughter; affured me, that her hufband would be at home carly in the morning, as the muft difpatch a meffenger to him on other bufinefs. In the evening we fupped with Monf. B. in the fame village, who married Madame Le Blanc's niece; we pafs Mareuil, through it, has the appearance of a fmall hamlet of inconfiderable farmers, with the houfes of their labourers; and the fentiment ahat would arife in moft bofoms, would be that of picturing the banifhment of being condemned to live in it. Who would think that there fhould be two gentlemen's families in it ; and that in one I fhould find Mademoifelle Le Blanc finging to her fyftrum, and in the other Madame B. young and handfome, performing on an excellent Englifh piano forte? Compared notes of the expences of living in Champagne and Suffolk;-agreed, that 100 louis d'or a year in Champagnc, were as good an income as 180 in England. On his return, Monf. Le Blanc, in the moft obliging manner, fatisfied all my enquiries, and gave me letters for the moft celebrated wine diftritts.

The 7th. To Epernay, famous for its wines. I had letters for Monf. Paretilaine, one of the moft confiderable merchants, who was fo obliging as to enter, with two other gentlemen, into a minute difquifition of the produce and profit of the fine vineyards. The hotel de Rohan here is a very good inn, where I folaced myfelf with a bottle of excellent vin mouffeux for $4 \%$ and drank profperity to true liberty in France.- 12 miles.

The 8th. To Ay, a village not far out of the road to Rheims, very famous for its wines. I had a letter for Monf. Lafnier, who has 60,000 bottles in his cellar, but unfortunately he was not at home. Monf. Dorfé has from 30 to 40,000 . All through this country the crop promifes miferably, not on account of the great froft, but the cold weather of laft week.

To Rheims, through a foreft of five niles, on the crown of the hill, which feparates the narrow vale of Epernay from the great plain of Rheims. The firlt view of that city from this hill, juft before the defcent, at the diftance of about four miles, is magnificent. The cathedral makes a great figure, and the church of St. Remy, terminates the town proudly. Many times I have had fuch a view of towns in France, but when you enter then, all is a clutter of narrow, crooked, dark, and dirty lanes. At Rhems it is very different : the freets are alnoft all broad, Arait, and well built, equal in that
refpect to any I have feen; and the inn, the hotel de Moulinet, is fo large and wellferved, as not to check the emotions raifed by agreeable objects, by giving an impulfe to contrary vibrations in the bofom of the traveller, which at inns in France is too often the cafe. At dinner they gave me a bottle alfo of excellent wine. I fuppofe fixed air is good for the rheumatifin ; I had fome writhes of it before I entered Champagne, but the vin mouffeux has abfolutely banifhed it. I had letters for Monf. Cadot L'aine, a confiderable manufacturer, and the poffeffor of a large vineyard, which he cultivates himfelf; he was therefore a double fund to me. He received me very politely, anfivered my enquiries, and Thewed me his fabric. The cathedral is large, but does not ftrike me like that of $\Lambda$ miens, yet ornamented, and many painted windows. They fhewed me the fpot where the kings are crowned. You enter and quit Rheims through fuperb and elegant iron gates: in fuch public decorations, promenades, \&c. French towns are much beyond Englifh ones. Stopped at Sillery, to view the wine prefs of the Marquis de Sillery; he is the greateft wine.farmer in all Champage, having in his own hands one hundred and eighty arpents. Till I got to Sillery, I knew not that it belonged to the hufband of Madame de Genlis; but I determined, on hearing that it did, to prefume to introduce myfelf to the Marquis, fhould he be at home: I did not like to pafs the door of Madame de Genlis without feeing her: her writings are too celebrated. La Petite Loge, where I fept, is bad enough indeed, but fuch a reflection would have made it ten times worle: the abfence, however, of both Monf, and Madame quieted both my wihes and anxieties. He is in the fates.-_ 28 miles.

The gth. To Chalons, through a poor country and poor crops. M. de Brouffonet had given me a letter to Monf. Sabbatier, Secretary to the Academy of Sciences, but he was abfent. A regiment paffing to Paris, an officer at the inn addreffed me in Englifh. He had learned, he faid, in America, damme !-He had taken Lord Cornwallis, damme! -Marechal Broglio was appointed to command an army of fifty thoufand men near Paris-it was neceflary - The tiers étât were running mad-and wanted fome wholefome correction;-they want to eftablifh a republic-abfurd! Pray, Sir, what did you fight for in America? To eftablifh a republic. What was fo good for the Americans, is it fo bad for the French? Ayc, damme! that is the way the Englih want to be revenged. It is, to be fure, no bad opportunity. Can the Englinh follow a better example? He then made many enquiries about what we thought and faid upon it in England: and I may remark, that almof every perfon I meet with has the fame ideaThe Englifh muft be very well contented at our confufio\%. They feel pretty pointedly what they deferve.- $12 \frac{1}{2}$ miles.

The 1oth. To Ove. Pafs Courtiffeau, a fmall village, with a great church; and though a good fream is here, not an idea of irrigation. Roofs of houfes almoft flat, with projecting eaves, refembling thofe from Pau to Bayonne. At St. Menehoud a dreadful tempeft, after a burning day, with fuch a fall of rain, that I could hardly get to Monf. l'Abté Michel, to whom I had a letter. When I found him, the inceflant flathes of lighting would allow me no converfation; for all the females of the houfe came into the room for the Abbés protection I fuppofe; fo I took leave. The vin de Champagne, which is 40 s. at Rheims, is 3 livres at Chalons and here, and execrably bad; fo there is an end of my phyfic. for the rheumatifm.- 25 miles.

The 11 th. Pafs Inets, a town (or rather collection of dirt and dung) of new feature, that feem to mark, with the faces of the people, a country not French. 25 miles.

The 12 th. Walking up a long hill, to eafe my mare, I was joined by a poor woman, who complained of the times, and that it was a fad country; on my demanding her
reafons, the faid her hubband had but a morfel of land, one cow, and a poor little horfe, yet he had a franchar ( 42 lb .) of wheat, and three chickens, to paly as a quitrent to one Seigncur; and four franchar of oats, one chicken and is. to pay another, befide very heavy tailles and other taxes. She had feven children, and the cow's milk helped to make the foup. But why, inftead of a horle, do not you keep another cow ? Oh, her hulband could not carry his produce fo well without a horfe ; and affes are little ufed in the country. It was faid, at prefent, that fomething was to be done by fome great folks for fuch poor ones, but the did not know who nor how, but God fend us better, car les tailles Ef les droits nous écrafini. - This woman, at no great diftance, might have been taken for fixty or feventy, her figure was fo bent, and her face fo firrowed and hardened by labour,-but the faid the was only twenty eight. An Englifman, who has not travelled, cannot imagine the figure made by infinitely the greater part of the countrywomen in France ; it lpeaks, at the firft fight, hard and fevere labour: I am inclined to think, that they work harder than the men, and this united with the more miferable labour of bringing a new race of flaves into the world, defroys abfolutely all fymmetry of perfon and.every deminine appearance. To what are we to attribute this difference in the manners of the lower people in the two kingdonss? To government.-2 23 miles.

The 13 th. Leave Mar.le Tour at four in the morning: the village herdfuan was founding his horn; and it was droll to fec every door vomiting out its hogs or fheep, and fome a few goats, the flock collecting as it advances. Very poor fleep, and the pigs with mathematical backs, large fegments of fmall circles. They muft have abundance of commons here, but, if I may judge by the report of animals carcafes, dreadfully overfocked. To Metz, one of the Atrongeft places in France; pafs three drawbridges, but the command of water muft give a ftrength equal to its works. The common garrifon is ten thoufand men, but there are fewer at prefent. Waited on M. de Payen, fecretary of the Academy of Sciences; he afked my plan, which 1 explained; he appointed me at four in the atternoon at the acadeny, as there would be a feance held; and he promifed to introduce me to fome perfons who could anfwer my enquiries. I attended accordingly, when I found the academy affembled at one of their weekly meetings. Monf. Payen introduced me to the inembers, and, before they proceeded to their bufinefs, they had the goodnefs to fit in council on my enquiries, and to refolve many of them. In the Almanach de Trois Evechés, 1789, this academy is faid to have been inflituted particularly for agriculture; I turued to the lift of their honorary members to fee what attention they had paid to the men who, in the prefent age, have advanced that art. I found an Englifhman, Dom Cowley, of London. Who is Dom Cowley? - Dined at the table d'hôte, with feven officers, out of whofe mouths, at this important moment, in which converfation is as free as the prefs, not one word iffued for which I would give a flraw, nor a fubject touched on of more importance, than a coat, or a puppy dog. At tables de hotes of officers, you have voluble garniture of bawdry or nonfenfe; at thofe of merchants, a mournful and flupid filence. Take the mafs of mankind, and you hav: more good fenfe in half an hour in England than in half a year in France.-Govermment Again:-all—all-is government.- 15 miles.

The 14th. They have a cabinct literaire at Metz, fomething like that I defcribed at Nantes, but not on fo great a plan; and they admit any perfon to read or go in and out for a day, on paying 4s. To this I eagerly reforted, and the news from Paris, both in the public prints, and by the information of a gentleman, 1 found to be interefting. Verfailles and Paris are furrounded by troops: thirty-five thoufand men are
affembled, and wenty thouland more on the road, large trains of artillery collected, and all the preparations of war. The affembling of fuch a number of troops has added to the fcarcity of bread ; and the magazines that have been inade for their fupport are not eafily by the people diftinguifhed from thofe they fufpect of being collected by monopolitts. This has aggravated their evils almoft to madnefs; fo that the confufion and tumult of the capital are extreme. A gentlenan of an excellent underftanding, and apparently of coufideration, from the attention paid him, with whom I had foine converfation on the fubject, lamented, in the inoft pathetic terms, the fituation of his country; he confiders a civil war as impolfible to be avoided. There is not, he added, a doubt but the court, finding it impoffible to bring the National Affembly to terms, will get rid of them; a bankruptey at the fame moment is inevitable; the union of fuch confufion muf be a civil war; and it is now only by torrents of blood that we have any hope of eftablihing a freer conftitution : yet it muft be eltablifhed; for the old government is rivetted to abufes that are infupportable. He agreed with the entirely, that the propofitions of the feance royale, though certainly not fufficiently fatisfactory, yet, were the ground for a negociation, that would have fecured by degrees all even that the fword can give us, let it be as fuccefsful as it will. The purfe $\rightarrow$ the power of the purfe is every thing; ikilfully managed, with fo neceffitous a governinent as ours, it would, one after another, have gained all we wifhed. As to a war, Heaven knows the cvent; and if we have fuccers, fuccefs itfelf may ruin us; France, may have a Cromwell in its bofom, as well as Eagland. Metz is, without exception, the cheapeft town I have been in. The table d'hote is 3 bs. a head, plenty of good wine included. We were ten; and had two courfes and a defert of ten difhes each, and thofe courfes plentiful. The fupper is the fame; I had mine, of a pint of wine and a large plate of chaudics, in my chamber, for 105 . a horfe, hay, and corn 25 s . and nothing for the apartment; my expence was therefore 7 is . a day, or 2 s .11 d d.; and with the table d'hôte for fupper, would have been but 97 s. or 4 s. old. In addition, much civility and good attendance. It is at the Faifan. Why are the cheap, eft inns in France the befl? -- The country to Pont-a.Moufion is all of bold features. The river Mofelle, which is confiderable, runs in the vale, and the hills on cach fide are high. Not far from Metz there are the remains of an ancient aqueduet for conducting the waters of a fpring acrofs the Mofelle: there are many arches left on this fide, with the houfes of poor people built between them. At Pont-a-Moullon Monf: Pichon, the fub-delegue of the intendant, to whom 1 had letters, received me politely, fatisfied my enquiries, which he was well able to do from his office, and conducted me to fee whatever was worth viewing in the town. It does not contin much; the école militaire, for the fons of the poor nobility, alfo the couvent de Premontrí, which has a very fine library, one hundred and feven feet long, and twenty five bread. I was introduced to the abbot as a perfon who had fome knowledge in arriculture. 17 miles.

The 15 th. I went to Nancy, with great expectation, having heard it reprefented as the prettieft town in France. I think, on the whole. it is net undeferving the character in point of building, direction, and breadth of ftrcets.-Bourdeaux is far more magnificent ; Bayonne and Nantes are more lively; but there is more equality in Nancy; it is almoft all good; and the public buildings are numerous. The place royale, and the adjoining area are fuperb. Letters from Paris! ail confufion! the miniftry removed: Monf. Necker ordered to quit the kingdom without noife. The effect on the people of Nancy was confiderable.-I was with Nonl. Willemet when bis letters arrived, and for fome time his houfe was full of chquirers; all agreed, that vOL. IV.
c c
it was fatal news, ind that it would occafinn great commotions. What will be the refult at Nancy? 'The anfiver was in effect the fame from all I put this queftion to: We are a provincial town, we muft wait to fee what is done at Paris; but every thing is to be feared from the people, becaufe bread is fo dear, they are half farved, and are confequently ready for commotion.--This is the general feeling; they are as nearly enicerned as Paris; but they dare not flir; they dare not even have an opini in (f their own till they know what Pars thinks; fo that if a farving populace were not in queftion, no one would dream of moving. 'This confirns what I have often heard remarked, that the deficit would not have' produced the revolution but in concurrence with the price of bread. Does not this thew the infinite confequence of great eities to the liberty of mankind? Without laris, I quettion whether the prefent revolution, which is rapidly working in France, could pollibly have had an origin. It is not in the villages of Syria or Diarbekir that the Grand Signor meets with a murmur againft his will; it is at Conftantinople that he is obliged to manage and mix caution even with defpotifm. Mr. Willemet, who is demonfrator of botany, fhewed me the botanical garden, but it is in a condition that fpeaks the want of better funds. He introduced me to Monf. Durival, who has written on the vine, and gave me one of his treatifes, and alfo two of his own on botanical fubjects. He allo conducted me to Monf. l' Abbc Grandpére, a gentleman curious in gardening, who, as foon as he knew that I was an Englifman, whimfically took it into his head to introduce me to a lady, my countrywoman, who hired, he faid, the greatelt part of his houfe. I remonftrated againft the impropricty of this, but all in vain; the Abbe had never travelled, and thought that if he were at the diftance of Eingland from France (the French are not commonly good geographers) he fhould be very glad to fee a Frenchman ; and that, by parity of reafoning, this lady muft be the fame to meet a countryman the never faw or heard of. Away he went, and would not relt till I was conducted into her apartment. It was the Dowager Lady Douglas; the was unaffeted, and good enough not to be oflimded at fuch a llange intrution. - She had been here but a few days; had two tine daughters with her, and a beautiful Kamehatka dog; fhe was much troubled with the intelligence her friends in the town had juft given her, fince fhe would, in all probability, be forced to move again, as the news of Monf. Necker's removal, and the new minittry being appointed, would certainly occafion fuch dreadful tumults, that a foreign family would probably find it cqually dangerous and difagrec-able.- 18 miles.

The 16 th. All the houfes at Nancy have tin eave troughs and pipes, which render walking in the flreets much more caly and agreeable; it is alfo an additional confumption, which is politially wfeful. Both this phace and J.uneville are lighted in the Finglifh manner, infead of the lamps being Ifrung acrof the flreets as in other French towns. Before I quit Nancy, let me caution the unwary traveller, if he is not a great hord, with plenty of moncy that lie does not know what to do with, agamf the hotel d'Angleterre; a bad dimer, 3 lives, and for the room as much more. A pint of wine and a plate of chandic zos. which at Metz was 10 . and in adlition, I liked folittle my treatment, that I changed my quarters to the hotel de Halle, where, at the table d'hote, I had the compmy of fome agreeable officers, wo grod courfes, and a defert for j ss. with a bottle of win. The chamber zos. ; for buiding, however, the hotel d'ingleterre is much fuperior, and is the firft im. In the evening to Luneville. The conntry about Nancy is pleafing.- 17 miles.

The 17 th. Luncville being the refflence of Mon? Lazownis, the father of my much eftemed frisul, who was advertifed ef my jouncy, I wated on him in the morning;
he received me with not politenefs only, but hofpitality-wilh a hofpitality I began to think was not to be fomid on this fide of the kingdon,-From Mareuil hither, I had really been fo unaccuftomed to receive any attentions of that fort, that it awakened me to a train of new feelings agreeable cnough.-An apartment was ready for me, which I was preffed to occupy, defired to dine, and expected to ftay fome days: he introduced me to his wife and family, particularly to M. l'Abbé Lazowfki, who, wilh the moft obliging alacrity, undertook the office of fhewing me whatever was worth feeing. - We examined, in a walk before dinuer, the eftablithment of the orphans; well regulated and contucted. Luneville wats fuch eltablithments, for it has no manufactory, and therefore is very poor; I was affured not lefs than half the population of the place, or ten thoufand perfons are poor. Luneville is cheap. A cook's wages two, three, or four louis; a mad's, that dreffes hair, three or four louis; a common houfemaid, one louis; a common footnan, or a houfe lad, three louis. Rent of a good houfe fixteen or feventeen louis. Lodgings of four or five rooms, fome of them finall, nine louis. After dimer, wait on M. Vaux dit Pompone, an intimate acquaintance of my friend; here mingled hofpitality and politenefs alfo received me; and fo much was I preffed to dine with him to-morrow, that I thould certainly ftay, were it merely for the pleafure of more converfation with a very fenfible and cultivated man, who, though advanced in years, has the talents and good humour to render his company univerfally agreeable: but I was obliged to refufe it, having been out of order all day. Yefterday's heat was followed, after fome lightning, by a cold night, and I laid, without knowing it, with the windows open, and caught cold, I fuppofe, from the information of my bones. I am acquainted with frangers as eafily and quickly'as any body, a habit that much travelling can fcarcely fail to give, but to be ill among them would be enuyante, demand too much attention and encroach on their humanity. This induced me to refufe the obliging wihhes of both the Meffrs. Lazowfkis, Monf. Pomponc, and alfo of a pretty and agreeable American lady, I met at the houfc of the hater. Her hiftory is fingular, and yet very natural. She was Mifs Blake, of New.York; what carried her to Dominical know not ; but the fun did not fpoil her complexion : a French officer, Monf. Tibalić, on taking the ifland, made her his captive, and in turn became hers, fell in love, and married her; brought his prize to lrance, and fettled her in his native town of Luneville. The regiment, of which he is major, being quartered in a difant province, fle complained of feeing her hubband not more than for fix months in two years. She has been four years at Luncville; and having the fociety of three children, is reconciled to a feene of life new to her. Monl. Pompone, who, fhe allured me, is one of the beft men in the world, has partics every day at his houfe, not more to his own fatistaction than to her comfort.-This gentleman is another inftance, as well as the major, of attaclment to the place of nativity; he was born at Luneville; attended King Staniflaus in fome refpectable office near his perfon; has lived much at Paris, and with the great, and had firf minifters of ftate for his intimate friends; but the love of the natale folum brought him back to Luneville, where has lived belowd and refpected for many years, furrounded by an elegrant collection of books, amongt which the pocts are not forgotten, having himfelf no inconfiderable takents in transfufing agreeable fentiments into pleaning verfes. He has fome couplets of his own compofition, under the portraits of his friends, which are pretty and eafy. It would have given me much pleafure to have fpent fome days at Luneville; an opening was made for me in two hotfes, where I fhould have met with a friendly and agreeable reception: but the misfortunes of tra-
velling are fometimes the accilents that crofs the monents prepared for enjoyment; and at others, the fyftem of a journey inconfiftent with the plans of deffined pleafure.

The 8 sth. To Haming, through an uniuterefting country.-_ 23 miles.
The igh. To Savern, in Alface: the country to lhalibourg, a lanall fortified town, on the frontiers, is much the fame in appearance as hitherto. The women in Alface wear fraw hats, as large as thofe worn in England ; they fheiter the face, and fhould fecure fome pretty country girls, but I have feen none yet. Coming out of Phallbourg, there are fome hovels mifcrable enough, yet have chimnies and windows, but the inlabitants in the loweft poverty. From that town to Savern all a mometain of oak timber, the defent fteep, and the road winding. In Savern I found myfelf to all appearance trily in Germany; for two days palt much tendency to a change, but here not one perion in an hundred has a word of lirench; the rooms are warmed by ftoves; the kitchen-hearth is three or four fect high, and various other trifles fhew, that you are among another peoplo. I.ooking at a map of France, and reading hiltories of houis XIV. never threw his conqueft or feizure of alface into the fame light, which travelling into it did: to crofs a grear range of momntains; to coter a level plain, inlabited be a poople totally diltinta :ad different from France, with manners, language, ideas, prejudices, and habits all diferent, made an impreflion of the injuftice and ambition of fich a conduct, much more forcible than ever readng had done : fo much more powertul are things than words. - 22 miles.

The 2cth. To stratbourg, through one of the richeft feenes of foil and cultivation to be met with in lrance, and exeeded by llanders only. I arrived at Stridbourg at a critical noment, which I thought would have broken my neck; a detachment of horfe, with their trumpets on one fide, a party of infantry, with their drums beating on the other, and a great mol hallooing, frightened my French mare; and 1 could farcely keep her from trampling on Meftirs. the tiers étit. On arriving at the inn, hear the interelting news of the revolt of Paris.-The Gardes trançifes joining the people; the little dependence on the reft of the troops; the taking of the Batlile; and the inftitution of the milice bourgeoife; in a word, of the ablohte overthrow of the old government. Lecry thing being now decided, and the kingdom in the hands of the affombly, they have the power to make a now conflitution, fuch as they think proper; and it will be a great fectacle for the world to view, in this entightemed are, the repretatives of twensy-five millions of people fitting on the condrtation of a new and better order and fabric of liberty, than Furope has yet offered. It will now be feen, whether they will copy the conflitution of Eughend, freed from its faults, oratempt, from theory, to frame fonething ablolutcly fpeculative: in the lormor catic, they will prove a bleffing to their country; in the latter, they will peobably involve it in inextricable confufions and civil wats, perhaps not in the prefent period, but sertainly at fome fume one. 1 hear not of their removing from Verfalles; if they thay there under the controul of an armed mob, they muth make a goverment that will pleafe the meb; but they will, I fuppofe, be wife enough to move to fome contral town, Tours, Blase, or Oilems, where their deliberations may be free. But the Parifian firit of commotion faceads quickly; it is here; the troops, that were near breaking my neek, are employed to keep an eye on the people who thew tigns of an intended revolt. They have broken the windows of fome magilnates that are no favourites; and a great mob of them is at this moment affembled, demanding clamoroully to have meat at 5 s . a pound. They have a cry among then that will conduct them to pood lengths,-" Point d'impot \& vivent les ćtàts." -Waited on Monf. Herman, profefior of natural hiftory in the Uni-
verfity here, to whom I had letters: he replied to fome of my queftions, and introduced me for others to Monf. Zimmer, who having been in fome degree a practitioner, had underfanding enough of the fubject to afford me fome information that was valuable. View the public buildings, and crofs the Rhine paffing for fome little diftance into Germany, but no new features to mark a change; Alface is Germany, and the change great on defcending the mountains. The exterior of the cathedral is fine, and the tower fingularly light and beautiful ; it is well known to be one of the higheft in Europe; commands a noble and rich plain, through which the Rhine, from the number of its inlands, has the appearance of a chain of lakes rather than of a river. Monument of Marechal Saxe, \&c. \&c. I am puzzled about going to Carlfrhue, the refidence of the Margrave of Baden: it was my intention formerly to do it, if ever I were within an hundred miles; for there are fome features in the reputation of that fovereign, which made me wifh to be there. He fixed Mr. Taylor, of Bifrons, in Kent, whofe hufbandry I defcribe in my Eaftern Tour, on a large farm; and the œeconomiftes in their writings, or rather Phyfiocratical rubbifh, fpeak much of an experiment he made, which however erroneous their principles might be, marked nuch merit in the prince. Monf. Hermarn tells me alfo, that he has fent a perfon into Spain to purchafe rans for the improvement of wool. I wilh he had fixed on fomebody likely to underftand a good ram, which aprofeffior of botany is not likely to do too well. This botanift is the only perfon Monf. Herman knows at Carlithee, and therefore can give me no letter thither, and how I can go, unknown to all the world, to the refidence of a fovereign prince, (for Mr. Taylor has left him) is a difficulty apparently infurmountable.-2 $22 \frac{1}{2}$ miles.

The 21 Al . I have fpent fome time this morning at the cabinet literaire, reading the gazettes and journals that give an account of the tranfactions at Paris: and I have had fome converfation with feveral fenfible and intelligent men on the prefent revolution. The fpirit of revolt is gone forth into various parts of the kingdom ; the price of bread has prepared the populace every where for all forts of violence; at Lyons there have been commotions as furious as at Paris, and the fame at a great many ciher places: Dauphine is in arms: and Bretagne in abfolute rebellion. The idea is, that the people will, from hunger, be driven to revolt; and when once they find any other means of fubfiftence than that of honeft labour, every thing will be to be feared. Of fuch confequence it is to a country, and indeed to every country, to have a good police of corn; a police that hall, by fecuring a high price to the farmer, encourage his culture enough to fecure the people at the fame time from famine. My anxiety about Carlfrhue is at an end; the Margrave is at Spaiv; I fhall not therefere think of going. - Night -I have been witnefs to a fcene curious to a foreigner; but dreadful to Frenchmen that are confiderate. Paffing through the fquare of the hotel de ville, the mob were breaking the windows with ftones, notwithflanding an officer and a detachment of horfe were in the fquare. Perceiving that their numbers not only increafed, but that they grew bolder and bolder every moment, I thought it worth ftaying to fee what it would end in, and clambered on to the roof of a row of low ftalls oppofite to the building, againit which their malice was directed. Here I beheld the whole commodioully. Finding that the troops would not attack them, except in words and menaces, they grew more violent, and furioufly attempted to beat the doors in pieces with iron crows; placing ladders to the windows. In about a quarter of an hour, which gave time for the aflembled magitrates to efcape by a back door, they burft all open, and entered like a torrent with an univerfal flout of the fpectators. From that minute a hower of cafements, falhes, fhutters, chairs, tables, lophas, books, papers, pictures, \&c. rained inceflantly from all the windows of the houfe, which is feventy or eighty feet long, and which
which was then fucceeded by tiles, \&kirting boards, bannifters, frame-work, and every part of the building that force could detach. The troops, both horfe and foot, were quiet fpectators. They were at firlt too few to interpofe, and, when they became more numerous, the mifchief was too far advanced to admit of any other conduct than guarding every avenuc around, permitting none to go to the feene of action, but letting every one that pleafed retire with his plunder; guards being at the fame time placed at the doors of the churches, and all public buildings. I was for two hours a fectator at different places of the fcene, fecure myfelf from the falling furniture, but near enough to fee a fine youth crufhed to death by fomething, as he was handing plunder to a woman, I fuppofe his mother, from the horror that was pitured in her countenance. I remarked feveral common foldiers, with their white cockades, among the plunderers, and inftigating the mob even in fight of the officers of the detachment. There were amongt them people fo decently dreffed, that I regarded them with no fmall furprife: -they deltroyed all the public archives; the freets for fome way around flrewed with papers; this has been a wanton mifchief; for it will be the ruin of many familics uncomnected with the magill rates.

The 22d. To Scheleftadt. At Strabbourg, and the country I pafied, the lower ranks of women wear their hair in a toupee in front, and behind braided into a circular plait, three inches thick, and moft curioufly contrived to convince one that they rarely pats a comb through it. I could not but picture them as the nidus of living colonies, that never approached me (they are not burthened with too much beauty), but I fcrarclied my head from fenfations of imaginary itching. The moment you are out of a great town all in this country is German; the inns have one common large room, many tables and cloths ready fpread, where every company dines; gentry at fome, and the poor at others. Cookery alfo German: fchnitz is a difh of bacon and fried pears; has the appearance of an infamous mefs; but I was furprizei, on tafting, to find it better than pafiable. At Scheleftadt I had the pleafure of finding the Count de la Rochefoucauld, whofe regiment (of Champagne), of which he is feeond major, is quartered here. No attentions could be kinder than what I received from him; they were the renewal of the numerous ones I was in the habit of experiencing from his falmily ; and he introduced me to a good farmer, from whom I had the intelligence I wanted. - 25 miles.

The 23 d. An agreeable quict day, with the Count de la Rochefoucauld: dine with the officers of the regiment, the Couat de Loumené, the colonel, nephew to the Cardinal de Loumenć, prefent. Sup at my friend's lodgings; an officer of infantry, a Dutch gentleman, who has been much in the Laft ludies, and fpeaks Englifh. This has been a refrething day; the fociety of well informed people, liberal, polite, and communicative, has been a contraft to the fombre flupidity of tables d'hotes.

The 24 th. To ffenheim, by Colmar. The country is in general a dead level, with the Voge momatains very near to the right; thofe of Suabia to the left; and there is another range very diflant, that appears in the opening to the fouth. The news at the table dhote at Colmar cmriou that the Queen had a plot, nearly on the point of execution, to blow up the National Affembly by a mine, and to march the army intantly to maffacre all Paris. A French officer prefent prefunced but to doubt of the truth of it, and was immediately overpowered with numbers of tongues. A deputy had written the neus; they had feen the leter, and not a hefitation conld be admitted: I fremoufly contended, that it was folly and nonfenfe, a mere invention to render perfons odius who, ior what I knew, might deferve to be fo, but certainly not by fuch means; if the an; el Gabrich had defecnded and taken a chair at table to convince them, it would not have

## Shaken t.:o fools belie ath. Thus it is in revelutions, one rafcal writes, and an hundred thoufand

The 25 th From llenhein, the country changes from the dead flat, to pleafant views and inequalities, improving all the way to Befort, but neither fcattered houfes nor inclofures. Great riots at Refort :--laft night a body of mob and peafants demanded of the magiftrates the arms in the magazine, to the amount of three or four thoufana flands; being refufed, they grew riotons, and threatened to fet fire to the town, on which the gates wereflut; and to day the regiment of Bourgogne arrived for their protection. Mon: Necker pafled here to-day in his way from Bafle to Paris, efcorted by fifty Bourgeois horfemen, and through the town by the mufic of ali the troops. But the moft brilliant period of his life is paft; from the moment of his reinftatement in power to the affembling of the ftates, the fate of France, and of the Bourbons, was then in his hands; and whatever may be the refult of the prefent confufions they will, by pofterity, be aitributed to his conduct, fince he had unqueltionably the powerof afembling the ftates in whatever form he pleafed: he might have had two chambers, three or one; he might have given what would unavoidably have melted into the conflitution of England; all was in his haads; lie had the greateft opportunity of political architecture that ever was in the power of man: the great legiflators of antiquity never pofficfed fucha moment: in my opinion he miffed it completely, and threw that to the chance of the windsand waves, to which he might have given impulfe, direction, and life. I had letters to Monf. de Bellonde, commiffaire de Gucrre; I found himalone: he afked me to fup, faying he fhould have fome perfons to meet me who could give me information. On my returning, he introduced me to Madame de Bellonde, and a circle of a dozen ladies, with three or four young officers, leaving the room himfelf to attend Madame, the princefs of fomething, who was on her flight to Switzerland. I wifhed the whole company very cordially at a great diftance, for I faw, at one glance, what fort of information I fhould have. There was a little coterie in one corner liftening to an officer's detial of leaving Paris. This genteman informed us, that the Count d'Artois, and all the princes of the blood, except Monfieur, and the Duke d'Orleans, the whole connccion of Poliguse, the Marechal de Broglio, and an infinite number of the firtt nobility had fled the kingdom, and were daily followed by others; and lally, that the King, Quecn, and royal fumily, were in a fituation at Verfailes really dangerous and alarning, without any dependence on the troops near them, and, in fact, more like prifoners than free. Here is, therefore, a revolution cffected by a fort of magic; all powers in the rem are defloyed but that of the commons; and it now will remain to lee what fort of architects they are at rebuilding an edifice in the place of that which has been thes marvelloully tumbled in ruins. Supper boing announced, the company quitted the room, and as I did not pufh my foff forward, I remaincd at the rear till I was very whimlically alone; I was a little thruck at the turn of the moment, and did not advance when I fomen myflt in fuch an extraordinary fituation, in order to fee whether it would arrive at the point it did. I then, fimiling, took ay hat, and walked thirly out of the houfs. I was, however, orertaken below; but I taiked of bufinefsor plafure - or of fomething, or nothing-and hurried to the inn. I fhould not have related this, if it had not beon at a moment that carried with it its apology : the anxiety and diftration of the time muts fill the head, and occupy the attention of a gentleman; -and, as to ladies, what can French ladics think of a man who travels for the plough? -5 milcs.
The 26 h . For twenty miles to Lifle fur Daube, the country nearly as before; but after that, to Bawnes les Dimes, it is all mountaincus and rocky, much wood, and many pleafing fenes of the river flowing beneath. The whole country is in the greatelt agitation ;
agitation; at one of the little towns I pafed, I was queftioned for not having a cockade of the tiers entit. They faid it was ordained by the tiers, and if I were not a Seigneur, I ought to obey. But fuppofe I am a Scigneur, what then, my friends?What then? they replied fternly, why, be hanged; for that moft likely is what you deferve. It was plain this was no moment for joking, the boys and girls began to gather, whofe affembling has every where been the proliminaries of mifchief; and if I had not declared myleiff an Englifhman, and ignorant of the ordinance, I had not efcaped very well. I immediately bought a cockade, but the huffey pinned it into my hat fo loofely, that before I got to Lifle, it blew into the river, and I was again in the fame danger. My afferiion of being linglifh would not do. I was a Scigncur, perhaps in difguife, and without doubt a great rogue. At this moment a prieft came into the ftreet with a letter in his hand: the people immediately collected around him, and he then read aloud a detail from Befort, giving an account of M. Necker's palfing, with fome general features of news fromi Paris, and affirances that the condition of the people would be improved. When he had finifhed, he exhorted thems to abltain from all violence; and aflured them, they muft not indulge themfelves with ary ideas of impofitions being abolifhed; which he touched on as if he knew that they had gotten fuch notions. When be retired, they again furrounded me, who had attended to the letter like others; wcre very menacing in their manner; and expreffed many fufpicions: I did not like nyy fituation at all, efpecially on hearing one of them fay that I ought to be fecured till fomebody would give an account of me. I was on the fleps of the im, and begged they would permit me a few words; I affured them that I was an Englifh traveller, and to prove it, I defired to explain to them a circunifance in Englifh taxation, which would be a fatistactory comment on what Monfieur l'abbé had told them, to the purport of which I could not agree. He had afferted, that the impofitions muft and would be paid as heretofore: that the impofitions mutt be paid was certain, but not as heretofore, as they might be paid as they were in England. "Gentlemen, we have a great number of taxes in England, which you know nothing of in France; but the tiers état, the poor do not pay them: they are laid on the rich; every window in a man's houfe pays; but if he has no more than fix windows, he pays nothing; a Seigncur, with a great eftate, pays the vingtiemes and tailles, but the little proprietor of a garden pays nothing; the rich for their horfes, their voitures, their fervants, and even for liberty to kill their own partridges, but the poor farmer nothing of all this; and what is more, we have in England a tax paid by the rich for the relief of the poor; hence the affertion of Monficur l'Abbe, that becaufe taxes exifed before they muft exift again, did not at all prove that they mult be levied in the fame manner; our Einglifh method feemed much better." There was not a word of this difcourfe they did not approve of; they feemed to think that I might be an honelt fellow, which I confirmed by crying, "vive le dirs, fans impofitions," when ther gave me a bit of a huzza, and I had no more interruption from them. My mifuable French was pretty much on a par with their patois. I goi, however, another cuckade, which I took care to have fo fallened as to lofe it no more. I do not like travolling in fuch an unquiet and fermenting moment; one is not fecure for an hour belorehand.35 miles.

The 27 th. To Befançon; the country mountain, rock, and wood, above the river; fome feenes are fine. I had not arrived an hour before I faw a peafant pats the inn on horfeback, followed by an officer of the garde hurgeoife, of which there are twelve hundred here, and two hundred under arms, and his party-coloured detachumen, and thefe by fome infantry and cavalry. I athed why the militia took the pas of the ki g's
troops? "For a very good reafon; they replied, the troops would be attacked and knocked on the head, but the populare will not refift the militia." This peafant, who is a rich proprietor, applied for a guard to protect his houfe, in a village where there is much plundering and burning. The mifchiefs which have been perpetrated in the country, towards the mountains and Vefoul, are numerous and fhocking. Many chateaus have been burnt, orhers plundered, the feigneurs hunted down like wild beafts, their wives and daughters ravilhed, their papers and titles burnt, and all their property deftroyed; and thefe abominations not inflicted on marked perfons, who were odious for their former conduct or principles, but an indifcriminating blind rage for the love of plunder. Robbers, galley-lhaves, and villains of all denominations, have collected and inftigated the peafants to commit all forts of outrages. Some gentlemen at the table d'hote informed me, that letters were received from the Maconois, the Lyonois, Auvergne, Dauphiné, \&c. and that fimilar commotions and mifchiefs were perpetrating every where; and that it was expected they would pervade the whole kingdom. The back wardnefs of France is beyond crediblity in every thing that pertains to intelligence. From Strafbourg hither, I have not been able to fee a newfpaper. Here I afked tor the Cabinet Literaire? None. The gazettes? At the coffec-houfe. Very eafily replied; but not fo eafily found. Nothing but the Gazette de France; for which, at this period, a man of common fenfe would not give one fol. To four other coffee-houles, at fome no paper at all, not even the Mercure; at the Caffé Militaire, the Courier de l'Europe a fortnight old; and well-dreffed people are now talking of the news of two or three weeks paft, and plainly by their difcourfe know nothing of what is paffing. The whole town of Befançon has not been able to afford me a fight of the Journal de Paris, nor of any paper that gives a detail of the tranfactions of the fates; yet it is the capital of a province, large as half a dozen Englifh counties, and containing twentyfive thoufand fouls-and, frange to fay! the poft coning in but three times a week. At this eventful moment, with no licence, nor even the leaft reftraint on the prefs, not one paper eftablifhed at Paris for circulation in the provinces, with the neceffary fteps taken by affiche, or placard, to inform the people in all the towns of its eftablifhment. For what the country knows to the contrary, their deputies are in the Baltile, inftead of the Baftile being razed; fo the mob plunder, burn, and deftroy, in complete ignorance: and yet, with all thefe fhades of darknefs, this univerfal mals of ignorance, there are men every day in the ftates, who are puffing themfelves off for the firf nation in Europe! the greatef people in the univerfe! as if the political juntos, or literary circles of a capital conftituted a people; inftead of the univerfal illumination of knowledge, acting by rapid intelligence on minds prepared by habitual energy of reafoning, to receive, combine, and comprehend it. That this dreadful ignorance of the maifs of the people, of the events that moft intimately concern them, arifes from the old government, no one can doubt; it is, however, curious to remark, that if the nobility of other provinces are hunted like thofe of Franche Comte, of which there is little reafon to doubt, that whole order of men undergo a profcription, and fuffer like fheep, without making the leaft effort to refift the attack. This appears marvellous, with a body that have an army of one hundred and fifty thoufand men in their hands; for though a part of thofe troops would certainly difobey their leaders, yet let it be remembered, that out of the forty thoufand, or poffibly one hundred thoufand nobleffe of France, they might, if they had intelligence and union amongt them. felves, fill half the ranks of more than half the regiments of the kingdom, with men who have fellow-feelings and fellow-fufferings with themfelves; but no meetings, no affociations among them; no union with military men; no taking of refuge in the vol. iv.
ranks of regiments to defend or avenge their caufe; fortunately for France, they fall without a fruggle, an 1 dic without a blow. That univerfal eirculation of intelligenee, whith in England tranfmits the leaft vibration of teeling or alarm, with electric fenfitiity, from one end of the kingdom to another, and which unites in bands of comece. tion men of fimilar intcrefts and fituations, has no exiftence in France. Thus it may ke faid, perhaps with truth, that the fall of the King, courr, fords, nobles, ar:uy, chureh, and parliaments, proceeds from a want of intelligence being quickly circulated, confequently from the very eficets of that thradom in which they held the people: it is therefor a rettibution rather than a punifhmut. - 8 miles.

The 28 th. At the t.ble thote lat night a perfongave an account of beins fopped at Salias for want of a paffiport, and fuffering the greatett inconveniences; I found it neceflary, ther fore, 10 denand one for mylelf, and went accordingly to the Burean; but went in vain: this was an air vertablement d'un commis. - Tbele palfiports are new things from new now, in now power, and thew that they do nut bar their new honours too meckly. Thus it is impolfible for me, without roming my hear aganalt a wall, to vilit the Salins or Arbois, where I have a letter from M. de Brouflonet, but I mult take my chance and get to lijon as falt as I can, where the prefident de Virly kne ws me, having fyent fome days at Bradield, undefs indeed being a prefident and a n bleman, he has becuknocked on the heal by the tiers ctat. At night to the play; mifirable performers; the theatre, which has not been built many yars, is heavy; the arch that parts the flage from the houfe is like the entrance of a cavern, and the line of the amphitheatre, that of a wounded eet; I do not like the air and manaers of

- the people here. The nuffic, and bawling, and fqueaking of l'Epreuve Villageoife of Gritty, which is wretched, had no power to put nee in better humour. I will not take leave of this place, to which I never defire to come again, without faying that they have a fine promenade; and that Monficur Arthau !, the arp nteur, to whom I applied for information without any letter of recommendation, was liberal and polite, and anfwerd my inquiries fatisfactorily.

The :oth. To Orechamp the country is bold and rocky, with fine woods, and yet it is not agreeable; it is like many men that have eftimable points in the ir char.teters, and yet we cannot love them. Poorly cultivated too. Coming out of St. Veti, a pretty riant landflip of the river doubling through the valc, enlivened by a village and fome fattered hou'es; the molt pleifing view I have feen in lranche Comté. 23 miles.

The 3oth. The mayor of Dole is made of as good fuff as the notary of Befinçon; he would give no paffiport; but as he accompanied bis refufal with neither airs nor graces, 1 let him pats. To avoid the cent $n$ l., I went round the town. The country to Auxonne is cheerful. Crofs the Soan at Ausonne; it is a fine river, through a region of flat neadow of beau fut verdure; commons for great herds of catule; valtly flooded, and the hay-cocks under water. To Dijon is a fine country, but wants wood. My palfort demanded at the fall; and as I had none, two bourgeois mufqueteers concucted me to the hotel de vilie, whire I was quettioned, but finding that I was known at Dijon, they let me go to my inn. (Out of luck; Monfeur de Virly, on whom I molt depended for Dijon, is at Burbon 'e Bains, and Monfieur de Morveau, the celebrat a chemift, who I expected would have had leters for me, had none, and thou h he received me very politely, when I was torced to announce myfelt as his brother in the Ruyat Society of London, yet If te very awkwardly; however, he defird to fee me again next morning. They teil me here, that the intendant is fled; and that the Prmee of Conde, who is governor of Burgundy, is in Geimany;
they pofitively affert，and with very little ceremony，that they would both be langed， if they were to come hither at prefent；fuch ideas do not mark too much authority in the milice burgeoife，as they have been inflituted to ftop and prevent hanging and plun－ dering．They are too weak，however，to keep the peace；the licence and fpirit of de－ predation，of which 1 heard to much in croffing Franche Compté，has taken place，but not equally in Burgundy．In this inn，la Ville de Lyon，there is at profent a gentle－ man，unfortunately a feigneur，his wife，family，three fervants，an infant but a few months old，who elcaped from their flaming chateau half naked in the night ；all their property loft except the land itfelf；and this family valued and efteemed by the neigin． bours，with many virtues to command the love of the poor，and no oppreflions to pro－ voke their enmity．Such abominable actions mult bring the greateft deieftation to the caufe from being unneceftary；the kingdom might have been fettled in a real fytem of liberty，without the regeneration of fire and fword，plunder and bloodfhed．Three hundred bourgeois munt guard every day at Dijon，armed，but not paid at the ex－ pence of the town：they have alfo fix pieces of cannon．The nobleffie of the place，as the only means of fafety，have joined them－fo that there are croix de St．Louis in the ranks．The palais des ciats here，is a large and fplendid building，but not ftriking pro－ portionably to the mafs and expence．The arms of the Prince of Conde are predomi－ nant；and the great falon is called the Salle à manger de Prince．A Dijon artift has painted the battle of Seniff，and the grand Condé thrown from his horfe，and a cieling， both well executed．Tomb of the Duke of Bourgogne，1494．A picture by Reubens at the Chartreufe．They talk of the houfe of Monl．de Montigdy，but not ©hewn，his fifter being in it．Dijon，on the whole，is a handfome town；the ftres＇：though old built，are wide and very well paved，with the addition，uncommon in France，of trottoirs．－ 28 miles．

The 3 ift．Waited on Monf．de Morveau，who has，moft fortunately for me，re－ ceived，this morning，from Monf．de Virly，a recommendation of me，with four let－ ters from Monf．de Brouffonet；bat Monf．Vaudrey，of this place，to whom one of them is addreffed，is abfent．We had fome converfation on the interefting topic to all philofophers，phlogifon ；Monf．de Morveau contends vehemently for its non－ exiftence；treats Dr．Prieftley＇s laft publication as wide of the queltion；and decla－ red，that he confiders the controverfy as much decided as the quettion of liberty is in France．He fhewed me part of the article air in the New Encyclopædia by him，to be publ fhed foon；in which work，he thinks he has，beyond controverfy，eftablifhed the tuth of the doctrine of the French chymifts of its non－exiftence．Monf．de Morveau requcfed me to call on him in the evening to introduce me to a learned and agreeable lady；and engaged me to dine with him to－morrow．On leaving him I went of feareh cofice－houfes；but will it be credted，that I could find but one in this capital of Bur． gundy，where I could read the newfpapcre？－At a poor little one in the fquare，I read a paper，after waiting an hour to get it．The people 1 have found every where defirous of reading new！papers；tut it is rare that they can gratify themfelves：and the general ignorance of what is paffing may be collected from this，that I found no－ body at Dijon had heard of the riot at the town－houfe of Stralbourg；I defcribed it to a gentleman，and a party collected around me to hear it；not one of them had heard a fyllable of it，yet it is nine days fince it happened；had it been nineteen，I quef－ tion whether they would but jult have received the intelligence；but，though they are flow in knowing what has really happened，they are very quick in hearing what is impe fible to happen．The current report at prefent，to which all poffible credit is given，is，that the Queen has been convicted of a plot to poilon the King and Mon－
fieur, and give the regency to the Count d'Artois; to fet fire to Paris, and blow upthe Palais Royal by a mine! - Why do not the feveral parties in the fates caufe papers to be printed, that thall traufmit their own fentiments and opinions only, in or: der that no man in the nation, arranged under the fame ftandard of reafoning, may want the facts that are neceffary to govern his arguments, and the conclufions that great talents have drawn from thofe facts? The King has been advifed to take feveral fleps of authority againf the fates, but none of his minifters have advifed the eftablifhment of journals, and their fpeedy circulation, that fhould undeceive the people in thofe points his enemies have miifreprefented. When numerous papers are publifhed in oppofition to each other, the pegple take pains to fift into and examine the truth ; and that inquifitivenefs alone-the very act of fearching, enlightens them; they become informed, and it is no longer ealy to deceive them. At the table d'hote three only, myfelf, and two noblemen, driven from their eftates, as I conjecture by their converfation, but they did not hint at any thing like their houfes being burnt. Their defcription of the fate of that part of the province they come from, in the road from Langres to Gray, is terrible; the number of chateaus burnt not confiderable, but three in five plundered, and the poffeffors driven out of the country, and glad to fave their lives. One of thefe gentlemen is a very fenfible well informed man ; he confiders all rank, and all the rights annexed to rank, as deftroyed in fact in France; and that the leaders of the National Affembly having no property, or very little themfelves, are determined to attack that alfo, and attempt an equal divifion. The expectation is gotten among many of the people; but whether it take place or not, he confiders Franc: as abfolutely ruined. 'That, I replied, was going too far, for the deftruction of rank did not imply ruin. "I call nothing ruin," he replied, "but a general and confirmed civil war, or difmemberment of the kingdom; in my opinion, both are inevitable; not perhaps this year, or the next, or the year after that, but whatever government is built on the foundation now laying in France, cannot ftand any rude hocks; an unfucceffful or a fucceffful war will equally defroy it." He fpoke with great knowledge of hiforical events, and drew his political conclufions with much acumen. I have met with very few fuch men at tables d'hôtes. It may be believed, I did not forget M. de Morveau's appointment. He was as good as his word; Madame Picardet is as agreeable in converfation as the is learned in the clofet; a very pleafing unaffected woman; fhe has tranilated Scheele from the German, and a part of Mr. Kirwan from the Englifh; a treafure to M. de Morvedu, for the is able and willing to converfe with him on chymical fubjects, and on any others that ten:d either to infruct or pleafe. I accompanied them in their evening's promenade. She told me, that her brother, Monf. de Poule, was a great farmer, who had fown large quanties of fainfoin, which he ufed for fattening oxen; the was forry he was engaged fo clofely in the municipal bufinefs at prefent, that he could not attend me to his farm.

Auguft I. Dined with Monf. de Morveau by appointment ; Monf. Profeffeur Chaufie, and Monf. Picardet of the party. It was a rich day to me; the great and juft reputation of Monf. de Morveau, for being not only the firt chymift of France, but one of the greatef that Europe has to boalt, was alone fufficient to render his compa. ny interefting; but to find fuch a man void of afiectation; free from thofe airs of fuperiority which are fometimes found in celebrated characters, and that referve which oftener throws a veil over their talents, as well as conceals their deficiencies for which it is intended-was very pleafing. Monf. de Morveau is a lively, converfable, clo. quent man, who, in any flation of life, would be fought as an agreeable companion.

Even in this eventful moment of revolution, the converfation turned almoft entirely on chvmical fubjects. I urged him, as I have done Dr. Priefley more than once, and Monf. La Voifier alfo, to turn his enquiries a little to the application of his fcience to agriculture; that there was a fine field for experiments in that line, which could fcarcely fail of making difcoveries; to which he affented; but added, that he had no time for fuch enquiries: it is clear, from his converfation, that his views are entirely occupied by the non-exiftence of phlogifton, except a little on the means of eftablifhing andenforcing the new nomenclature. While we were at dinner a proof of the New Encyclopadia was brought, the chymical part of which work is printed at Dijon, for the convenimes of Monf. de Morveau. I took the li erty uf telling him, that 2 man who can devife the experiments which thall be mott conclufive in afcertaiuing the queftions of a fcience, and has talents to draw all the ufeful conclufions from them, fhould be entirely employed in experiments, and their regiter ; and if I were king or minitter of France, 1 would make that employment fo profitable to him, that he fhould do nothing elfe. He laughed, and afked me, if I were fuch an advocate for working, and fuch an enemy to writing, what I thought of my friend Dr. Prieftley ? And he then explained to the two other gentlemen that great philofopher's attention to metaphyfics, and polemic divinity. If an hundred had been at table, the fentiment would have been the fame in every bofom. Monf. M. fpoke, however, with great regard for the experimental talents of the Doctor, as indeed who in Europe does not? I afterwards reflefied on Monf. de Morveau's not having time to make experiments that fhould apply chymiftry to agriculture, yet having plenty of it for writing in fo voluminous a work as Pankouck's. I lay it down as a maxim, that no man can eftablith or fupport a reputation in any branch of experimental philofophy, fuch as fhall really defcend to pofterity, otherwife than by experiment; and that commonly the more a man works, and the lefs he writes the better, at leaft the more valuable will be his reputation. The profit of writing has ruined that of many (thofe who know Monf. de Morveau will be very fure I am far enough from having him in my eye; his fituation in life puts it out of the queftion); that compreffion of materials, which is luminous; that brevity which appropriates facts to their deftined points, are alike inconfiftent wih the principles that govern all compilations; there are able and refpec. table men now in every country for compiling; experimenters of genius thould range themfelves in another clafs. If I were a fovereign, and capable confequently of rewarding merit, the moment I heard of a man of real genius engaged in fuch a work I would give him double the bookfeller's price to let it alone, and to employ himfelf in paths that did not admit a rival at every door. There are whe will think that this opinion comes oddly from one who has publifhed fo many books as I have; but I hope it will be admitted, to come naturally at leaft from one who is writing a work from which he does not expect to make one penny, who, therefore, has ftronger motives to brevity than temptations to prolixity. The view of this great chymift's laboratory will thew that he is not idle:-it confifts of two large rooms, a! mirably furnifhed indeed. There are fix or feven different furnaces, (of which Macquer's is the mott powcrful,) and fuch a variety and extent of apparatus, as I have feen no where elfe, with a furniture of fpecimens from the three kingdom, as looks truly like bufinefs. There are little writing defks, with pens and paper, fcattered every where, and in his library al!o, which is convenient. He has a large courfe of eudiometrical experiments going on at prefent, particularly with Fontana's and Volta's cudiometers. He feens to think, that eudiometrical trials are to be depended on: keeps his nitrous air, in quart bottles, ftopped with common corks, but reverled; and that the air is always
the fame, if made from the fame materials. A very fimple and elegant method of alcertaining the proportion of vital air he explained to us, by making the experiment; putting a norfel of phofphorus into a glafs retort, confined by water or mercury, and inflaming it, by holding a bougie under it. The diminution of air marks the quantity that was vital on the antiphlogittic doctrihe. After one extinction, it will boil, but not cnflame. He has a pair of fcales made at Paris, which, when loaded with three thoufand grains, will turn with the twentieth part of one grain; an air puinp, with glafs barrels, but one of them broken and repaired; the Count de Buffion's fyitem of burning lens; an abforber; a refirator, with vital air in a jar on one fide, and lime water in another; and abundance of new and moft ingenious inventions for facilitating enquiries in the new philolophy of ait. Thefe are to various, and at the fame time fo well contrived to anfwer the purpofe intendel, that this fpecies of invention feems to be one very great and effential part of Monf. de Murvent's merit; I with he would follow Ir. Prieftley's idea of publifhing his tools, it would add not inconfiderably to his great and well earned reputation, and at the fame time promote the enquiries he engages in amongtt all other experimenters. M. de Morveau had the goodnel's to accompany me in the afternoon to the Academy of Sciences: they have a very handfome falon, ornamented with the bufts of Dijon worthies; of fuch eminent men as this city has produced, Boffuet-Fevret-De Broffes-De Crebillon-Pyron-Bonhier -Ramean-and laftly, Buffon; and fowe future traveller will doubtlefs fee here, that of a man inferior to none of thefe, Monf. de Morveau, by whom I had now the honour of being conducted. In the evening we ripaired again to Madame Picardet, and accompanied her promenade : I was pleafed, in converfation on the prefent diflurbances of France, to herr Monf. de Morveau remark, that the outrages committed by the peafants arofe from their defects of lumeres. In Dijon it had been publicly recommended to the curées to enlighten them fomewhat politicilly in their fermons, but all in vain, not one would go out of the ufual routine of his preaching.-Quere, Would not one newfpaper enlighten them more than a fcore of priefts? I aiked Monf. de Morveau, how far it was true that the chateaus had been plundered and burnt by the peafan's alone; or whether ty thofe troops of brigands, reported to be formidable? He affured me, that he has made tirict enquiries to afcertain this matter, and is of opinien, that all the violences in this province, that have come to his knowledge, have been committed by the peafants only; and much has been reported of brigands, but nothing proved. At Befançon 1 heard of eight hundred; but huw could a troop of eight hundred banditti march through a country, and leave their exiftence the leaft queftionable ?-as ridiculous as Mr. Baye's army incog.

The ad. To Beaune; a range of hills to the right under vines, and a flat plain to the left, all open, and too naked. At the little infignificant town of Nuys, forty men mount guard every day, and a large corps at Beaune. I am provided with a palifort from the Mayor of Dijon, and a flaming cockade of the tiers état, and therefore hope to avoid difficulties; though the reports of the riots of the peafants are fo formidable, that it leems impolible to travel in falcty. Stop at Nuys for intelligence concerning the vineyards of this couniry, fo famous in liratce, and indeed in all Europe; and exa mine the Clos de Voujaut, of one hundred j rurnaux, walled in, and belonging to a convent of Bernardine Monks.——When are we to find thele tellows chufing badly "? The fpots they appropriate thew what a righteous attention they give to things of the fpirit.-L 22 miles.

[^11]The 3d. Going out of Chagnie, where I quitted the great Lyons road, pafs by the canal of Chaulais, which goes on very poorly; it is a truly ufeful undertaking, and therefore left undone; had it been for boring cannon, or coppering men of war, it would have been finihed long ago. To Montcen:s a dilagreeable country; fingular in its features. It is the feat of one of Monf. Weelkainlong's eftablifhments for cafting and boring cannon: I have already defcribed one near Nantes. The French fay, that $t$ is active Englifhman is brotiner-in-law of Dr. Prieftly, and thercfore a friend of mankind; and that he tauglit them to bore camon in order to give liberty to America. The eltablifhment is verv confiderab'e; there are from five hundred to fix hundred men employed, befides colliers; five fteam engines are erected for giving the blalls, and for boring; and a new one building I converfed with an Englifhman who works in the glats-houle, in th. cryilal branch; there were once many, but conly two are left at prefent: he compained of the country, faying there was nothing yood in it but wine and brandy; it which things I queftion not but he makes a fufficient ufe.25 mites.

The $4^{\text {th }}$, By a miferable country moft of the way, and through hideous roads to Autun. The firlt feven or eight miles the agriculture quite contemptible. From thence to Au un all, or nearly all, inclofed, and the firt fo for many miles. From the hill before Allun an immenle view down on that town, and the flat country of the Bourbonnois for a great extent. - View at Autun the temple of Janus-the wids -the carthe-dral-the abbey. The reports here of brigands, and burnitg and plundering, are as numerous as before; and when it was known in the inn that I came from Burgundy and Franche Compté, I had eight or ten people introducing themfelves, in order to afk for news. The rumbur of brigands here increafed to one thoufand fix hundred frong. Thev were much furprife:I to find that I gave no credit to the exittence of brigands, as I was well perfiaded, that all the outrages that had been committed, were the work of the peafints only, for the fake of plunderiag. Ilis they tad no conception of, and quoted a lit of chateaus bur $t$ by them; but on analyling thefe reports, they plainly appeared to be ill founcled.-20 miles.
the sth. The extrome heat of yefterday made me feverifh; and this morning I waked with a fore throat. I was inclined to wafte a day here for the fecurity of my health ; but we are all fools in trifling with the things molt valuable to us. Lols of time, a d vain expinc, are always in the head of a man who travels as much en philofophe as I am forced to do. To Maifon de Bourgogne, I thought myfelf in a new world; the road is not only excellent, of gravel, but the country is inclofed and wooded. There are nany gentle inequalities, and feveral ponds that add to the beauty of the councry. The weather, fince the commencement of Augult, has been clear, bright, and burnine; too hot to be perfectly agrecable in the middle of the day, but no flies, and thercfure I do not regard the heat. This circumftance may, I think, be fixed on as the teft. In Languedoc, \&c. thefe heats, as I have experienced, are attended by myriads, and confiquently they are tormenting. One bad need be fick at this Mailon de Bourgogne; a he.lthy fomach would not eafily be filled; yet it is the poft-houfe. In the evining to Lafy, another milerable polt-houfe. Note, througn all Burgundv the women wear flappet men's hats, which have not nearly fo good an effect as the ftraw ones of Alface. - 22 miles.
the 6th. To efcape the heat, out at four in the morning, to Burbon Lancy, through the fame country inclofed, but wretchedly culivated, and all annzingly improveable. It I had a large tract in this country, I think I fhould not be long in making a fortune; climate, prices, roads, inclofures, and every advantage, except government. All
from Autun to the Loire is a noble field for improvernent, not by expenfive operations of manuring and draining, but increly by fubftituting crops adapted to the foil. When Ifee fich a country thus managed, and in the hauds of flarving metayers, inftead of lat farmers, I know not how to pity the feigneurs, great as their prefent fufferings are. I met one of then, to whom I opened my mind: - he pretended to talk of agriculture, finding I attended to it ; and allured me he had Abbé Roziere's corps complet, and he believed, from his accounts, that this country would not do for any thing but rye. I ufked him, whether he or Abbé Roxier knew the right end of a plough? He affured me, that the Abbé was un homme de grand merite, beaucoup d'agriculteur. Crofs the Loire by a ferry; it is here the fame nafly feene of thingle, as in Touraine. Finter the Bourbonnois; the fame inclofed country, and a beautiful gravel road. At Chavanne le Roi, Monf. Joly, the aubergifte, informed me of three domains (farms) to be fold, adjoining almolt to his houfe, which is new and well built. I was for appropriating his inn at once in my imagination for a farm houle, and was working on turnips and clover, when he told me, that if I would walk behind his ftable, I might fee, at a fmall diftance, two of the houfes; he faid the price would be about 50 or 60,000 livres ( 2,0251 ), and would altogether make a noble farm. If I were twenty years younger, I thould think ferioully of fuch a fpeculation; but there again is the folly and deficiency of life; twenty years ago, fuch a thing would, for want of experience, have been my ruin; and, now I have the experience, $I$ am too old for the undertaking. - 27 miles.

The 7 th. Moulins appears to be but a poor ill built town. I went to the Belle Image, but found it fo bad, that I left, and went to the Lyon d'Or, which is worfe. This capital of the Bourbonnois, and on the great poft road to Italy, has not an inn equal to the little village of Chavanne. 'Jo read the papers, I went to the coffee-houfe of Madame Bourgeau, the belt in the town, where I found near twenty tables fet for company, but, as to a newfpaper, I might as well have demanded an elephant. Here is a.feature of national backwardness, ignorance, Atupidity, and poverty! In the capital of a great province, the feat of an intendant, at a moment like the prefent, with a National Aflembly voting a revolution, and not a newfpaper to inform the people whether Fayette, Mirabeau, or loouis XVI. were on the throne. Companies at a cof-See-houfe, numerous enough to fill twenty tables, and curiofity not active enough to command one paper. What impudence and folly !__Folly in the cuftomers of fuch a houfe not to infift on half a dozen papers, and all the journals of the affembly; and impudence of the woman not to provide them! Could fuch a people as this ever have made a revolution, or become free? Never, in a thoufand centuries! The enlightened mob of Paris, amidft hundreds of papers and publications, have done the whole. I demanded why they had no papers? 'They are too dear; but the made me pay $24 \%$ for one difh of coffee, with milk, and a picce of butter about the fize of a walnut. It is a great pity there is not a camp of brigands in your coffeeroom, Madame Bourgeau. Among the many letters for which I am indebted to Mont. Brouffonet, few have proved more valuable than one I had for Monf. l'Abbé de Bars., pin. cipal of the college of Moulins, who entered with intelligence and animatic 1 ins: object of my journey, and took every ftep that was poffible to get me well ints....ed. He carried me to Monf. le Count de Grimau, lieutenant-general of the Balliage, and director of the Society of Agriculture at Moulins, who kept us at dinner. He appears to be a man of confiderable fortune, of information, and knowledge, agrecable and polite. He difcourfed w. " me on the flate of the Bourbonnois; and affured me, that eftates were rather givea ss : "han fold: that the metayers were fo miferably poor, it was impoffible for theru to is: 'ivate well. I farted fome obfervations on the modes
which ought to be purfued; but all converfation of that fort is time loft in France. After dinner, M. Grimau carried me to his villa, at a fmall diftance from the town, which is very prectily fituated, commanding a view of the vale of the Allier. Letters from Paxis, which contain nothing but accounts truly alarning, of the violences committed all over the kingdom, and particularly at and in the neighbourhood of the eapital. M. Necker's return, which it was expected would have calmed every thing, has no effect at all; and it is particularly noted in the National Affembly, that there is a violent party evidently bent on driving things to extremity: men who, from the violence and conflicts of the moment, find themfelves in a pofition, and of an importance that refults merely from public confurion, will take efiectual care to prevent the fettement, order, and peat., which, if eftablihed, would be a mortal blow to their confequence: they mount by the form, and would fink in a calm. Ainong other perfons to whom Moni. l'Abbi Barut introduced me, was the Marquis de Goutte, chef d'efcadre of the French fleet, who was faken by Admiral Bofcawen at Louifbourg, in 1758, and carried to England, where he learned Englifh, of which he yet retains fomething. 1 had mentioned to Monf. 1'Abbé Barur, that 1 had a comnifion from a perfon of fortune in Englind, to look out for a good purchafe in France; and knowing that the marquis would fill one of his eftates, he mentioned it to him. Monf, de Goutte gave me fuch a defcrip ion of it, that I thought, though my time was fhort, that it would be very well worth bellowing one day to view it, as it was no more than eight miles from Moulins, and, propofing to take me to it the next day in his coach, I readily confented. At the time appointed, 1 attended the Marquis, with M. L'Abbé Barut, to his chateau of Riaux, which is in the midft of the eftate he would fell on fuch terms, that I never was more tempted to fpeculate: I have very little doubt but that the perfon who gave me a commiflion to look out for a purchafe, is long fince fickened of the fcheme, which was that of a refidence for pleafure, by the difturbances that have broken out here: fo that I fhould clearly have the refufal of it myfelf. It would be upon the whole a more beneficial purchafe than I had any conception of, and confirms Monf. de Grimau's affertion, that eftates here are rather given away than fold. The chateau is large and very well built, containing two good rooms, either of which would hold a company of thirty people, with three fmaller ones on the ground floor; on the fecond ten bedchambers, and over them good garrets, fome of which are well fitted up; all forts of offices fubllantially erected, and on a plan proportioned to a large family, including barns new built, for holding half the corn of the eftate in the fraw, and granaries to colltain it when threfhed. Alfo a wine prefs and ample cellaring, for keeping the produce of the vineyards in the moft plentiful years. The fituation is on the fide of an agreeable rifing, with views not extenfive, but pleafing, and all the country round of the fame features I have defcribed, being one of the fineft provinces in lrance. Adjoiniag the chateau is a field of five or fix arpents, well walled in, about half of which is in culture as a garden, and thoroughly planted with all forts of fruits. There are twelve ponds, through which a fmall frram runs, fufficient to turn two mills, that let at 1000 livres ( 43 l .1 gs .) a-ycar. The ponds fupply the proprietor's table amply with fine carp, tench, perch, and eels; and yield befides a regular revenue of 1000 livres. There are twenty arpents of vines that yield excellent white and red wine, with houfes for the vignerons; woods more than fufficient to fupply the chateau with fuel; and laflly, nine domains or farns let to metayers, tenants at will, at half produce, producing, in cafh, 10,5000 livres, ( 4591.7 s .6 d .) confequently the grofs produce, farms, mills, and fifh, is 12,500 livres. The quantity of land, I conjecture from viewing it, as well as from notes taken, may be above 3000 arpents or acres, lying all contiguous and near the chateau. The out-
vul. iv.
goings for thofe taxes paid by the landlord; repairs, garde de chafie, game-keeper (for here are all the feigneural sights, haute juflice, \&c.), fteward, expences on wine, \&c. amount to about 4400 livres, ( 1921.105 .) It yields therefore net fomething more than 8000 livres ( 3501 .) a year. The price afked is 300,000 livres ( $13,1251$. ; hut for this price is given the furniture complete of the chateau, all the timber, amounting, by valuation of oak only, to 40,000 livres, ( 17501 .) and all the catte on the eftate, viz. on cioufand theep, fixty cows, feventy-two oxen, nine mares, and many hogs. Knowing, as $I$ did, that 1 could, on the fecurity of this eftate, borrow the whole of the pur-chafe-meney, 1 withllood no trifing temptation when I refilted it. The finef clinate in Irance, pelhaps in Europe; a beautiful and healthy country; excellent roads; a navigation to Paris; wine, game, fith, and every thing that ever appears on a table, except the produce of the tropics; a good houle, a fine garden, ready markets for every fort of produce; and, above all the reft, three thoufand acres of inclofed land, capatle in a very little time of bing, wihout expence, quadrupled in its produce, altogether formed a picture fufficient to tempt a man who had been fine and-twenty years in the comtant | rectice of the hufbandry adapted to this foil. But the llate of govern-ment-othe fallbility that the leaders of the laris democracy might in their wildom atolifh proputy as well as rank ; ard that in buying an eftate 1 might be purchafing my finare in a civil war-detured me from ongaging at prefent, and induced me to requeft only that the Marquis would give me the refulal of it, before he fold it to any body elfe. When I have to trat with a perfon for a purchafe, I thall wifh to deal with fuck an one as the Narquis de Goutte lle has a phytiogmony that pleafes me; the cate and politencss of his nation is mixed with great probity and honour; and is not rondered lefs amiable by an appearance of dignity that flows from an ancient and refecta' le tamily. To wie lie feems a man in whom one might, in any tranfaction, place implicit confidence. I could lave fpent a month in the Bourbonnois, looking at eftates to be fold ; adjuining to that of M. de Goutte's is another of 270,000 livres purchafe, Ballain; Nonf. l'Ablé Barut having made an appointment with the proprictor, carritd me in the afternom to lee the chateau and a part of the lands; all the country is the fame foil, and in the fame management. It con' fts of eight farms, flocked with cattle and fheep by the lindord; and here too the pon's yich a regular revenue. In. come at prefent 0,000 linte ( 437 l. 1es.) a ytar: price 260,000 livres ( 11,3751 ) and re,eo, lives for word-wemy five y ars, purthafe. Alfo near St. Poncin another of 400,000 livres, $(17,5001$.) ite weuls of which, four lundred and fifty acres produce 5000 herts a yar; eigh:y aces of vines, the wincs fo good as to be fent to Paris; good hard ier shetat, atd n.uch iown; a modern chatem, avec toutes les aifances, \&c. And I heard of nam others. I wijgeture that one of the finetl contiguous eftates in Europe mint at frelent be laid thether in the Bourtonoois. And I am further informel, wat there ane ar predont fix thoumd elutes to be fold in France; it things go in as shey do at prectut, it will mot be a quetion of buying etiates, I ur kinedons, and France widf will be mader the hammer. I bove a tyit on of poliey that intpires fuch contidence as to give a value to lata, and dat acndurs man io comburtable on their eflates as to make the fale of them the hat ef their ideas. Return to Mustins.30 miles.

The eoth 'Fook my leave of Moulirs, where eflates and farming lave criven even Maria and the peplar from my head, ad left me no ro m for the tonb a de Monmos. re ci; having faid extrava, antly for the mud walis, cobuch tap, itry, and untivory feens of the Lyon d'Or, I tumed my mare toward Chatauncut, on the roal to ruvergne. 'The accompaniment of the river mikis the comiry pleafint. Itomal the
inn full, bufy, and bufling; Monfeigneur, the bifhop, coming to the fète of St. Laurence, pation of the parifh here. Aiking for the commolite, I was defired to walk into the garden. This has happened twice or thrice to me in France; I did not before find out that they were fuch good cultivators in this country; I am not well made for difpenfing this fort of fertility; but my lord the bifhop and thirty fat prielts will, after a dinner that has employed all the cooks of the vicinity, doubtlel's contribute amply to the amelioration of the lettuces and onions of Monf. le Maitre de la Polte. T'o St. Poncin.- 30 miles.

The 1 ith. Early to Riom, in Auvergne. Near that town the country is interefting; a fine wooded vale to the left, every where bounded by mountains; and thole nearer to the right of an interefting outline. Riom, part of which is pretty enough, is all volcanic ; it is built of lava from the quarrics of Volvic, which are highly curious to a naturalift. The level plain, which I palfed in going to Clermont, is the commencement of the famous Limagne of Auvergne, afierted to be the moft fertile of ali France; but that is an error, I have feen richer land $i n$ both Flanders and Normandy. This plain is as level as a fill lake; the mountains are all volcanic, and confequently interefting. Pafs a fcene of very fine irrigation, that will ftrike a farming eye, to Mont Ferrand, and after that to Clermont. Riom, Ferrand, and Clermont, are all built, or rather perched, on the tops of rocks. Clermont is in the midft of a moft curious country, all volcanic; and is built and paved with lava; much of it forms one of the worlt built, dirtieft, and moft ftinking places I have met with. There are many ftreets that can, for blacknefs, dirt, and ill ficents, only be reprefented by narrow channels cut in a night dunghill. The contention of naufeous favours, with which the air is impregnated, when brifk mountain gales do not ventilate thefe excrementitious lanes, made me envy the nerves of the good people, who, for what I know, may be happy in them. It is the fair, the town full, and the tables d'hôtes crowded.- 25 miles.
The 12 th. Clermont is partly free from the reproach I threw on Moulins and Befan. çon, for there is a falle à lecture at a Monf. Bovares', a bookleller, where I found feveral newfpapers and journals; but at the coffee-houfe I enquired for them in vain : they tell me allo, that the people here are great politicians, and attend the arrival of the courier with inpatience. The confequence is, there have been no riots; the moft ignorant will always be the readieft for mifchief. The great news juft arrived from Paris, of the utter abolition of tythes, feudal rights, game, warrens, pidgeons, \&c. have been received with the greatelt joy by the mals of the people, and by all not immediately interefled; and fome even of the latter approve highly of the declaration: but I have had much converfation with two or three very fenfible perfons, who complain bitterly of the grofs injuftice and cruclty of any fuch declarations of what will be done, but is not effected and regulated at the moment of declaring. Monf. l'Abbe Arbré, to whom Monf, de Brouffonet's letter introduced me, had the goodnefs not only to give me all the information relative to the curious country around Clermont, which, particularly as a naturalift, attracted his enquiries, but alfo introduced me to Monf. Chabrol, as a gentleman who has attended much to agriculture, and who anfwered my enquiries in that line with great readinefs.
The $1^{\text {th }}$. At Roya, near Clermont, a village in the volcanic mountains, which are fo curious, and of late years fo celebrated, are fome fprings, reported by philofophical travellers to be the finett and moft abundant in France; to view thefe objects, and more ftill, a very fine irrigation, faid alfo to be practifed there, I engaged a guide. Report, when it fpeaks of things of which the reporter is ignorant, is fure to magnify; the irrigation is nothing more than a mountain fide converted by water to fome tolerable inea-
dow, but done coarfely, and not well underfood. That in the vale, between Riom and Ferrand, far exceeds it. The fprings are curious and powerful : they gufh, or rather burf from the rock in four or five ftreams, each powerful enough to turn a mill, into a cave a little below the village. About half a league higher there are many others; they are indeed fo numerous, that fcarcely a projection of the rocks or hills is without them. At the village, I found that my guide, initead of knowing the country perfectly, was in. reality ignorant; I therefore took a woman to conduct me to the fprings higher up the mountain; on my return, the was arrefted by a foldier of the garde bourgeoife (for even this wretched village is not without its national militia) for having, without permifion, become the guide of a flranger. She was conducted to a heap of fones, they call the chateau. They told me they had nothing to do with me: but as to the woman, fhe fhould be taught more prudence for the future: as the poor devil was in jeopardy on my account, I determined at once to accompany them for the the chance of getting her cleared, by attefting her innocence. We were followed by a mob of all the village, with the woman's children crying bitterly, for fear their mother thould be imprifoned. At the cafte, we waited fome time, and were then fhewn into another apartment, where the town committee was affembled; the accufation was heard; and it was wifely remarked by all, that, in fuch dangerous times as thefe, when all the world knew that fo great and powerful a perfon as the Queen was confpiring againft France in the moft alarming manner, for a woman to become the conductor of a ftranger-and of a ftranger who had been making fo many fufpicious enquiries as I had, was a high offence. It was immediately agreed, that fhe ought to be imprifoned. I affured them fhe was perfectly innocent; for it was impolfible that any guilty motive Thould be her inducement; finding me curious to fee the fprings, as I had viewed the lower ones, and wanted a guide for feeing thofe higher in the mountain, fhe offered herfelf: and could have no other than the induftrious view of getting a few fols for her poor family. They then turned their enquiries againft me, that if I wanted to fee fprings only, what induced me to alk a multitude of queftions concerning the price, value, and product of the lands? What had fuch enquiries to do with fprings and volcanoes? I told them, shat cultivating fome land in Fingland, rendered fuch things interefting to me perfonally : and lafily, that if they would fend to Clermont, they might know, from feveral refpectable perfons, the truth of all I afferted; and therefore I hoped, as it was the woman's firt indifer tion, for I could not call it offence, they would difmifs her. This was refufed at firlt, but afiented to at laft, on ny declaring, that if they imprifoned her, they flould do the fame by me, and anfiver it as they could. They confented to lat her go, with a reprimand, and I departed; not marvelling, for I have done with that, at their ignorance, in imagining that the Queen fhould confpire fo dangeroufly againft their rocks and mountains. I found my guide in the midtt of the nob, who had been very buly in putting as many quelions about me, as I had done about their crops.There were two opinions; one party thought I was a commiffaire, come to afcertain the danage doue by the hail: the other, that I was an agent of the Queen's, who intended to blow the town up with a mine, and fend all that efcaped to the gallies. The care that mult have been taken to render the character of that princefs detefted among the people, is incredible; and there feem every where to be no abfurdities too grofs, nor circumfances too inmpoffile for their faith. In the evening to the theatre, the Optimift well atted. Before I leave Clermont, I muft remark, that I dined, or fupped five times at the table d'hôte, with from twenty to thirty merchants and tradefmen, officers, \&c. and it is rot ealy for me to exprefs the infignificance, -the inanity of the converfation. Scarcely any politics, at a moment when every bofom ought to beat with none but po-

litical fenfations. The ignorance or the ftupidity of thefe people muft be abfolutely in. credible; not a week paffes without their country abounding with events that are analyzed and debated by the carpenters and blackfnitiths of England. The abolition of tythes, the deftruction of the gabelle, game made property, and feudal rights deftroyed, are French topics, that are tranflated into Finglifh within fix days after they happen, and their confequences, combinations, refults, and modifications, become the difquifition and entertainment of the grocers, chandlers, drapers, and thoemakers of all the towns of England; yet the fame people in France do not think them worth their converfation, except in private. Why ? becaufe converfation in private wants little knowledge ; but in public it demands more; and therefore I fuppofe, for I confefs there are a thoufand difficulties attending the folution, they are filent. But how many people, and how many fubjects, on which volubility is proportioned to ignorance? Account for the fact as you pleafe, but with me it admits no doubt.

The 14 th. To Izoire, the country all interefting, from the number of conic mountains that rife in every quarter ; fome are crowned with towns;-en others are Roman cafles, and the knowledge that the whole is the work of fubterranean fire, though in ages far too remote for any record to announce, keeps the attention perpetually alive. Monf. de l'Arbre had given me a letter to Monf. Brés, doctor of phyfic, at Izoire: I found him, with all the townfmen, collected at the hotel de ville, to hear the newfpaper read. He conducted me to the upper end of the room, and feated me by himfelf: the fubject of the paper was the fuppreffion of the religious houfes, and the commutation of tythes. I obferved that the auditors, among whom were fome of the lower clafs, were very attentive; and the whole company feemed well pleafed with whatever concerned the tythes and the monks. Monf. Brés, who is a feufible and intelligent gentleman, walked with me to his farm, about half a league from the town, on a foil of fuperior richnefs; like all other farms, this is in the hands of a metayer. Supped at his houfe afterwards, in an agreeable company, with much animated political converfation. We difcuffed the news of the day; they were inclined to approve of it very warmly; but I contended, that the National Affembly did not proceed on any regular well digefted fyftem; that they feemed to have a rage for pulling down, but no tafte for rebuilding : that if they proceeded much farther on fuch a plan, deftroying every thing, but eftablifhing nothing, they would at laft bring the kingdom into fuch confufion, that they would even themfelves be without power to reftore it to peace and order; and that fuch a fituationwould, inits nature, be on the brink of the precipice of bankruptcyand civil war. I ventured further, to declare it as my idea, that without an upper houfe, they never could have either a good or a durable conflitution. We had a difference of opinion onthefepoints; but I was glad to find, that there could be a fair difcuffion; and that, in a company of fix or feven gentlemen, two would venture to agree with a fyftem fo unfafhionable as mine.- 17 milcs.

The 15 th. The country continues 'nterefting to Brioud. On the tops of the mountains. of Auvergne are many old caftes, and towns, and villages. Pafs the river, by a bridge of one great arch, to the village of Lampdes. At t'at place, wait on Monfieur Greyfficr de Talairat, avocat and fubdelegue, to whom I had a letter; and who was fo obliginr as to anfwer, with attention, all my enquiries into the agriculture of the neighbourhood. He enquired much after Lord Britol; and was not the worfe pleafed with me, when he heard that I came from the fame province in Eugland. We drank his Lordfhip's health, in the ftrong white wine, kept four years in the fun, which Lord Briftol had much commended. -18 miles.

The 16 th. Early in the morning, to avoid the heat, which has rather incommoded me, to Fix. Crofs the river by a ford, near the fpot where a bridge is building, and mount gradually into a country, which continues interefting to a naturalif, from its volcanic origin ; for all has been cither overturned, or formed by fire. Pafs Chomet ; and defcending, remark a heap of bafaltic columns by the road, to the right ; they are fmall, but regular fexagons. 「oulaget appears in the plain to the left. Stopped at St. Gcorge, where I procured mules, and a guide, to fee the bafaltic columns at Chilliac, which, however, are hardly ftriking enough to reward the trouble. At Fix, I faw a field of line clover; a fight that I have not been regaled with, I think, fince Alface. I defired to know to whom it belonged? to Monf. Coffier, doctor of medicine. I went to his houle to make enquirics, which he was obliging enough to gratify, and indulged me in 2 walk over the principal part of his farm. He gave me a bottle of excellent vin blanc mouffeux, made in Auvergne. I enquired of him the means of going to the mine of antimony, four leagues from hence ; but he faid the country was fo enrage in that part, and had lately been fo mifchievous, that he advifed me by all means to give up the project. This country from climate, as well as pines, mult be very high. I have been for three days paft melted with heat ; but to-day, though the fun is bright, the heat has been quite moderate, like an Englifh fummer's day, and I am affured that they never have it hotter; but complain of the winter's cold being very fevere; and that the fnow in the laft was fixteen inches deep on the level. The interefting circumflance of the whole is the volcanic origin: all buildings and walls are of lava: the roads are mended with lava, pozzolana, and bafaltes; and the face of the country every where exhibits the origin in fubterranean firc. The fertility, however, is not apparent, without reflection. The crops are not extraordinary, and many bad; but then the height is to be confidered. In no other country that I have feen are fuch great mountains as thefe, cultivated fo high ; here corn is feen every where, even to their tops, at heights where it is ufual to find rock, wood, or ling (erica vulgaris)-42 miles.

The 17 th. The whole range of the fifteen miles to Le Puy en Velay, is wonderfully interefling. Nature, in the production of this country, fuch as we fee it at prefent, muit have proceeded by means not common elfewhere. It is all in its form tempeftuous as the billowy ocean. Mountain rifes beyond mountain, with endlefs variety: not dark and dreary, like thofe of equal height in other countries, but fpread with cultivation (feeble indeed) to the very tops. Some vales funk among them, of beautiful verdure, pleale the eye. Towards Le Puy the fcenery is fill more ftriking, from the addition of fome of the moft fingular rocks any where to be feen. The caftle of Polignac, from which the duke takes his title, is built on a bold and enormous one; it is almoft of a cubical form, and towers perpendicularly above the town, which furrounds it at its foot. 'The family of Polignac claim an origin of great antiquity; they have pretenfions that go back, I forget whether to Hector or Achilles; but I never found any one in converfiation inclined to allow them more than being in the firft clafs of French families, which they undoubtedly are. Perhaps there is no where to be met with a caftle more formed to give a local pride of family than this of Poliguac : the man hardly exilts that would not feel a certain vanity, at having given his own name, from remote antiquity, to fo fingular and fo commanding a rock; but if, with the name, it belonged to me, I would fcarcely fell it for a province. The building is of fuch antiquity, and the fituation fo romantic, that all the feudal ages pafs in review in one's imagination, by a fort of magic influence; you recognize it for the refidence of a lordly baron, who, in an age more dif tant and more refpectable, though perhaps equally barbarous, was the patriot defender of his country againft the invafion and tyranny of Rome. In every age, fince the hor-
rible combuftions of nature which produced it, fuch a fpot would be chofen for fecurity and defence. To have given one's name to a caftle, without any lofty preeminence or fingularity of nature, in the midft, for inftance, of a rich plain, is not equally flattering to our feelings: all antiquity of family is derived from ages of great barbarifin, when civil commotious and wars fwept away and confounded the inhabitants of fuch fituations. The Bretons of the plains of England were driven to Bretagne; but the fame people, in the mountains of Wales, ftuck fecure, and remain there to this day. About a gun-fhot from Polignac is another rock, not fo large, but equally remarkable; and in the town of Le Puy, another commanding one rifes to a valt height; with another more fingular for its tower-like form - on the top of which St. Michael's church is built. Gyplum and lime-ftone abound; and the whole country is volcanic ; the very meadows are on lava: every thing, in a word, is either the product of fire, or has been ditturbel or toffed about by it. At Le Puy, fiur day, and a ta'le d'hôte, with ignorance, as ufual. Many coffee-houfes, and even conifiderable ones, but not a fingle newfpaper to be found in any. - 15 miles.

The 18 th. I.eavins Puy, the hill which the road mounts on the way to Cofterous, for four or five miles, commands a view of the town far more picturefque than that of Clermont. The mountain, covered with its conical town, crowned by a valt rock, with thofe of St. Michael and of Polignac, form a molt fingular fcene. The road is a noble one, formed of lava and pozzolana. The adjacent declivities have a frong difpofition to run into bafaltic pentagons and fexagons; the ftones put up in the road, by way of poofs, are parts of bataltic columns. The inn at Pradelles, kept by three fifters, Pichots, is one of the worft I have met with in France. Contraction, poverty, dirt, and darknefs. - 20 miles.
The oth. To Thuytz; pine woods abound; there are faw-mills, and with ratchet wheels to br ng the tree to the faw, without the conftant attention of a man, as in the Pyrenees : a great improvement. Pafs by a new and beautiful road, along the fide of immenfe noountains of granite; chefnut trees ipread in every quarter, and cover with luxuriance of vegetation rocks apparently fo naked, that earth feems a Aranger. This heautiful tree is known to delight in volcanic foils and fituations: many are very large; I meafured one fifteen feet in circumference, at five from the ground; and many are nine to ten feet, and fifty to fixty high. At Maiffe the fine road ends, and then a rocky, almolt natural one for fome miles; but for half a mile before Thuyiz recover the new one again, which is here equal to the fineft to be feen, formed of volcanic materials, forty feet broad, withour the leaft fone, a firm and naturally level cemented furface. They tell me that one thoufand eight hundred toifes of it, or about two and a half miles, coft 180,000 livres ( $\times 2501$.) It conducts according to cuftom, to a miferable inn, but with a large Itable; and in every refpect Monfieur Grenadier excels the Demoifelles Pichots. Here mulberries firft appear, and with them flies; for this is the fir't day I have been incommoded. At Thuytz I had an object whirh I fuppofed would demand a whole day: it is within four hours ride of the Muntagne de la coup au Colet d'Sifa, of which M. Faujas de St. Fond has given a plate, in his Refearches fur les volcanues eteints, that fhews it to be a remarkabe object: I began to make enquiries, and arrangements for having a mule and a guide to go thither the next morning; the man and his wife attended me at dinner, and did not feem, from the difficulties they raifed at every monent, to approve my plan: havin, alked them fome qu ftions abour the price of provifions, and other things, I fuppofe they regarded me wita fulpictous tyes, and the u it that I had no good intentions. I defired however to have the mulv-mome dufficuties were made-I muft have
have two mules - Very well, get me two. Then returning, a man was not to be had; with frefh expreffions of furprile, that I hould be eager to fee inountains that did not concern me. After raifing frefh diffeculties to every thing I faid, they at lat plainly told ine, that I fhould neither have mule nor man; and this with an air that evidently made the cafe hopelefs. About an hour after, I received a polite meffage from the Marquis Deblou, feipneur of the parifl, who hearing that an inquifitive Englifhman was at the inn, enquiring after volcanoes, propofed the pleafure of taking a walk with me. I accepted the offer with alacrity, and going directly towards his houfe met hin on the road. I explained to him my motives and my difficulties; he faid, the people had gotten fome ablurd fufpicions of me from my queltions, and that the prefent time was fo dangerous and critical to allaravellers, that he would advife me by no means to think of any fuch excurfions from the great road, unlefs I found much readinefs in the people to conduct me: that at any other moment than the prefent he fhould be happy to do it himfelf, but that at prefent it was impofible for any perfon to be too cantious. There was no refifting this reafoning, and yet to lofe the moft curious volcanic remains in the country, for the crater of the mountain is as diftinct in the print of Monf. de St. Fond, as if the lava were now running from it, was a mortifying circumflance. The Marquis then thewed me his garden and his chateau, amidtt the mountains; behind it is that of Gravene, which is an extinguifhed volcano likewife, but the crater not difcernible without difficulty. In converfation with him and another gentleman, on agriculture, particularly the produce of mulberries, they mentioned a fmall piece of land that produced, by filk only, 120 livres ( 5 l. 5s.) a year, and being contiguous to the road we walked to it. Appearing very fmall for fuch a produce, I tepped it to alcertain the contents, and minuted them in my pocket-book. Soon after, growing dark, 1 took my leave of the gentlemen, and retired to my inn. What I had done hait more witneffes than I dreamt of; for at eleven o'clock at night, a full hour atter I had been alleep, the commander of a file of twenty milice bourgeoife, with their mufquets, or fwords, or fabres, or pikes, entered my chamber, furrounded my bed, antidemanded my paffport. A dialogue enfued, too long to minute; I was forced firt to give then my pallport, and, that not fatisfying them, my papers. They told me that I was undoubtedly a confpirator with the Queen, the Count d'Artois, and the Count d'Entragues (who has property here), who had employed me as an arpenteur, to ineafure their fields, in order to double their taxes. My papers being in Enylifh faved ine. Thty had taken it into their heads that I was not an Eng-lifhman-only a pretended one; for they fpeak fuch a jargon themfelves, that their ears were not good enough to difcover by my language that I was an undoubted foreigner. Their finding no maps, or plans, nor any thing that they could convert by fuppofition to a cadaltre of their parifh, had its effect, as I could fee by their manner, for they converfed entirely in Patois. Perceiving, however, that they were not fatiffied, and talked much of the Count d'Entragues, I opened a bundle of letters that were fealed-thefe, gentlemen, are my letters of recommendation to various cities of France and Italy, open which you pleafe, and you will find, for they are written in French, that I am an honeft Englifhman, and not the rogue you take me for. On this they held a freth confultation and debate, which ended in iny favour; they refufed to open the letters, prepared to leave me, laying, that my numerous queftions about lands, and meafuring a field, while I pretenced to come after volcanoes, had raifed great fufpicions, which they obferved were natural at a time when it was known to a certainty that the Queen, the Count d'Artois, and the Count d'Entragues were in a confpiracy againt the Vivarais. And thus, to my entire fatistaction, they will.ed me a good night,
and left me to the bugs, which fwarmed in the bed like flies in a honey-pot. I had a narrow efcape-it would lave been a delicate fituation to have been kept prifoner pro. bably in fome common gaol, or, if not, guarded at my own expence, while they lent a courier to Paris for orders.- 20 miles.

The 20th. The fame impofing mountainous features continue to Villeneuve de Berg. The road, for half a mile, leads under an immenfe mafs of bafaltic lava, run into configurations of various forms, and refting on regular columns; this valt range bulges in the centre into a fort of promontory. The height, form, and figures, and the decifive volcanic character the whole mafs has taken, render it a moft inteiefling fpectacle to the learned and unlearned cye. Juft before Aubenas, miftaking the road, which is not half finifhed, I had to turn; it was on the flope of the declivity, and very rare that any wall or defence is found againft the precipices. My French mare has an ill talent of backing too freely when fhe begins: unfortunately fhe exercifed it at a moment of imminent danger, and backed the chaife, me and herfelf down the precipice; by great good luck, there was at the fpot a fort of thelf of rock, that made the immediate fall not more than five feet direct. I leaped out of the chaife in the moment, and fell unhurt: the chaife was overthrown and the mare on her fide, entangled in the harnefs, which kept the carriage from tumbling down a precipice of fixty feet. Fortunately fhe lay quietly, for had the fruggled both muft have fallen. I called fome lime-burners to my affiftance, who were with great difficulty brought to fubmit to directions, and not each purfue his own idea to the certain precipitation of both mare and chaife. We extricated her unhurt, fecured the chaife, and then, with fill greater difficulty, regained the road with both. This was by far the narroweft efcape I have had. A bleffed country for a broken limb-confinement for fix weeks or two months at the Cheval Blanc, at Aubenas, an inn that would have been purgatory itfelf to one of my hogs: alone-without relation, friend, or fervant, and not one perfon in fixty that fpeaks French. Thanks to the good providence that preferved me! What a fituation-I fhudder at the reflection more than I did falling into the jaws of the precipice. Before I got from the place there were feven men about me, I gave them a 3 livre piece to drink, which for fome time they refufed to accept, thinking, with unaffected modefty, that it was too much. At Aubeans repaired the harnefs, and, leaving that place, viewed the filk mills, which are confiderable. Reach Villeneuve de Berg. I was immediately hunted out by the milice bourgeoife. Where is your certificate? Here again the old objection that my feztures and perfon were not defcribed. Your papers? The importance of the cafe, they faid, was great: and they looked as big as if a marfhal's batton was in hand. They tormented me with an hundred queftions; and then pronounced that I was a fufpicious looking perfon. They could not conceive why a Suffolk farmer could travel into the Vivarais. Never had they heard of any perfon travelling for agriculture! 'They would take my paffport to the hotel de ville-have the permanent council affem. bled-and place a centinel at my door. I told them they might do what they pleafed, provided they did not prohibit my dinner, as I was hungry ; they then departed. In about half an hour a gentleman-like man, a Croix de St. Louis came, alked me fome queflions very politely, and feemed not to conclude that Maria Antonietta and Arthur Young were at this moment in any very dangerous confipacy. He retired, faying, he hoped 1 fhould not meet with any difficulties. In another half hour a foldier came to conduct me to the hotel de ville; where I found the council affembled; a good many quettions were afked; and fome expreffions of furprife that an Englifh farmer fhould travel io far for agriculture-they had never heard of fuch a thing; but all was in a polite liberal manner ; and though travelling for agriculture was as new to them, as if
it tad been like the antient philofopher's tour of the world on a cow's back, and living on the milk; yet they did not deem any thing in my recital improbable, figned my palfport very readily, aflined me of every aflittance and civility I might want, and difmint:d we with the politenefs of gentemen. I deferibed ony tratment at Thaytz, which they loudly condemned. I took this opportunity to beg tis know where that Pradel was to be found in this country, of which Oliver de serres was leigneur, the well known French writer on agricultare in the reign of Itenry IV. They at once pointed out of the window of the room we were in to the houfe, which in Villeneuve de Berg belonged to iom, and inlormed me that Pradet was within a leagus. As this was an object I had noted before I came to France, the infornation gave me no flight fatisfaction. The mayor, in the courfe of the examination, prefented me to a gentleman who nad tranfated Sterne iato French, but who did not fpeak Englifh: on my return to the auberge I found that this was Monf. de Boiflere, avocat general of the parliament of Grenoble. I did not care to leave the place without knowing fomething more of one who had diftinguilhed himelf by his attention to linglifh literature; and I wrote to him a note, begging permilion to have the pleafure of fome converfation with a genteman who had made our inimitable author fpeak the language of a people he loved fo well. Monf. de Boifficre canae to me immediately, conduted me to his houfe, introduced me to his lady and fome friends, and as I was much interetted coneerning Oliver de Serres, he offered to take a walk with me to Pradel. It may eafily be fip-pofed that this was too match to my mind to be refuled, and few evenings have been more agrecably fint. I regarded the refdence of the great parent of lirench agriculture, and who was undoubtedly one of the firft writers on the fubject that had then appeared in the world, with that fort of vencration, which thofe only can feel who have addicted themfelves lifongly to fone predominant purfint, and find it in fuch moments indulged in its molt exquifite feelings. 'Two hundred years after his exertions, let me do honour to his memory, he was an excellent farmer, and a true patriot, and would not have becn fixed on by Henry IV. as his chief agent in the great project of introducing the culture of filk in France, if he had not foldefled a confiderable reputation; a reputation well earned, fince pofterity has confirmed it. The period of his pratice is too remote to gain any thing more than a general outline of what may now be fuppofed to have been his farm. The bafis of it is limetnone; there is a great oak wood near the chateau, and many vines, with plenty of mulberries, fome apparently old enough to have been planted by the hand of the venerable genius that has rendered the ground elafic. 'I he eflate of Pradel, which is about 5000 lirres (2181. 155.) a year, be!ongs at prefent to the Marguis of Mirabel, who inherits it in right of his wife, as the defcendant of De Scres. I hope it is exmpted for ever from all taxes; he whofe writings laid the foundation for the improvement of a kingdom, fhould leave to his pofterity tome marks of his country men's gratitude. When the prefent bithop of Sitteron was thewn like me, the farm of De Serres, he remarked, that the nation ought to crect a flatue to his memory. The fontiment is not without merit, though no more than common funf-box chat; but if this bithop has a well cultivated farm in his hands it does him honour. Supped with Moni. and Madane de Boilhere, \&c. and had the pleafure of an agreable and interefting converiation.-- 21 miles.

The 2 tt . Monf. de loifliere, willing to have my atrice in the improvement of a farm, which he has taken into his hands, tix or feven miles from Berg, in my rond to Viviers, accompanid me thither. I alvifed him to form one well executed and well improved inclcfure every year-to fuith as he advances, and to do well what he attupts to do at all ; and I cautioned him againt the common abufe of that excellent
hufbandry, paring and burning. I fufpeat, however, that his loomme d'affaire will be too potent for the J:nglifh traveller. I hope he has received the turnip-feed I fent him. Bine at Viviers, and pafs the Rhone. 'After the wretche ns of the Vivarais, dirt, filth, bugs, and flarving, to arrive at the hotel de Monfieur, at Montilimart, a great nnd excellent inn, was fomething like the arrival in France from Spain : the contraft is flriking; and Ifecmed to hug myfelf, that I was again in a chriftian country, anong the Milors Ninchitreas, and my ladi Bettis, of Monf. Chabot. - 23 miles.

The 22d. Having a letter to Mouf. Fanjas de St. Fond, the cebrated naturalift, who has favoured the world with many important works on volcanocs, ac̈roftation, and various other branches of natural hillory, I had the fatisfaction, on enquiring, to find, that he was at Montilimart; and, waiting on him, perseived that a man of diftinguifhed merit was handfomely lodged, with every thing about him that indicated an eafy fortunc. He received me with the frank politenels inherent in his character; introduced me, on the fpot, to a Monf. l'Abbé Berenger, who refided near his country-feat, and was, he faid, an excellent cultivator; and likewife to another gentleman, whofe tafte had taken the fame good direction. In the evening Monf. l'aujas took me to call on a female friend, who was engaged in the fame enquiries, Madame Cheinet, whofe hufband is a member of the National Affembly; if he have the good luck to find at. Verfailles fome other lady as agreeable as her he has left at Montilimart, his miffion will not be a barren one ; and he may perhaps be better employed than in voting regenerations. This lady accompanied us in a walk for viewing the environs of Montilimart; and it gave me no fimall pleafure to find, that the was an excellent farmerefs, practifes confiderably, and had the goodnefs to anfiver many of my enquiries, particularly in the culture of filk. I was fo charmed with the maiveté of character, and pleafing converfation of this very agreeable lady, that a longer ftay here would have been delicious-but the plough!

The 23d. By appointment accompanied Monf. Faujas to his country-feat and farm at l'Oriol, fifteen miles north of Montilimart, where he is building a good houfe. I was pleafed to find his farm to amount to two hundred and eighty lepteres of land: I hould have liked it better, had it not been in the hands of a metayer. Monf. Faujas pleafes me much; the livelinefs, vivacity, phlogifon of his character, do not run into pertnefs, foppery, or affectation; he adheres fteadily to a fubject; and fhews, that to clear up any dubious point, by the attrition of different ideas in converfation, gives him pleafure; not through a vain fluency of colloquial powers, but for better underftanding a fubject. Monf. Abbé Berenger, and another gentleman, paffed the next day at Monf. Faujas': we walked to the Abbe's farm. He is of the good order of beings, and pleafes me much ; cure of the parifh, and prefident of the permanent council. He is at prefent warm on a project of re-uniting the proteftants to the church; fooke, with great pleafure, of laving perfuaded them, on occafion of the general thankfiving tor the eftablifhucnt of liberty, to return thanks to God, and fing the Te Deum in the catholic church, in common, as brethren, which, from confidence in his character, they did. He is firmly perfuaded, that, by both parties giving way a little, and foftening or retrenching reciprocally fomewhat in points that are difagrecable, they may be brought together. The idea is fo liberal, that I queftion it for the multitude, who are never governed by reafon, but by trilles and ceremonies, -and who are ufually attached to their religion, in proportion to the abfurdities it abounds with. I have not the leaft doubt but the mob in England would be much more fcandalized at parting with the creed of St. Athanafims, than the whole bencls of hifhops, whofe illumination would perlays reflect correctly that of the throne. Monf. l'Abbé Berenger has prepared a
memorial, which is ready to be prefented to the National Affembly, propofing and explaining this ideal union of the two religions; and he had the plan of adding a claufe, propofing that the clergy fould have permiffion to marry. He was convinced that it would be for the intereft of morals, and much for that of the nation, that the clergy Should not be an infulated body, but holding by the fame interefts and connections as other people. He remarked, that the life of a cure, and efpecially in the country, is melancholy; and, knowing my paffion, obferved, that a man could never be fo good a farmer, on any poffeffion he might have, excluded from being fucceeded by his children. He fhewed me his memoir, and I was pleafed to find that there is at prefent great harmony between the two religions, which mult be afcribed certainly to fuch good curés. The number of proteftants is very confiderable in this neighbourhood. I ftrenuoufly conteaded for the infertion of the claufe refpecting marriage; affured him, that at fuch a moment as this, it would do all who were concerned in this memorial the greateft credit; and that they ought to confider it as a demand of the rights of humanity, violently, injurioufly, and relative to the nation, impolitically with-held. Yefterday, in going with Moni. Faujas, we paffed a congregation of proteftants, affembled, Druid like, under five or fix fpreading oaks, to offer their thankfiving to the great Parent of their happinefs and hope. In fuch a climate as this, is it not a worthier tem. ple, built by the great hand they revere, than one of brick and mortar? This was one of the richeft days I have enjoyed in France; we had a long and truly farming dinner; drank a l'Anglois fuccefs to THE PLOUOH; and had fo much agricultural converfation, that I wifhed for my farming friends in Suftolk to partake of my fatisfaction. If Moni. Faujas de S. Fond come to England, as he gives me hopes, 1 hall introduce him to them with pleafure. In the evening return to Montilimart.- 30 miles.

The $\mathbf{2}$ 5th. To Chateau Rochemaur, acrofs the Rhone. It is fituated on a bafaltick rock, nearly perpendicular, with every columnal proof of its volcanic origin. See Monl. Faujas's Recherches. In the afternoon to Piere Latte, through a country Iteril, uninterefting, and far inferior to the environs of Montilimart.- 22 miles.

The 26th. To Orange, the country not much better; a range of numbains to the left: fee nothing of the Rhone. At that town there are remains of a large Roman building, feventy or eighty feet high, called a circus, of a triumphal arch, which, though a good deal decaycd, manifells, in its remains, no ordinary decoration, and a pavement in the houfe of a poor perfon, which is very perfect and beautiful, but much inferior to that of Nilines. The vent de bize has blown ftrongly for feveral days, with a clear iky, tempering the heats, which are fometimes fultry and oppreffive; it may, for what I know, be wholefome to French conflitutions, but it is dreadful to mine; I found myfel very indifierent, and, as if I were going to be ill, a new and unufual fenfation over my whole body: never dreaming of the wind, I knew not what to atribute it to, but my consplaint coming at the fame time, puts it out of doubt; befides, intinet now, much more than reafon, makes me guard as much as I can againft it. At four or five in the morning it is fo cold that no traveller ventures out. It is more penetratingly drying than I had any conception of; other winds fop the cutaneous ferfiration; but this piercing through the body feems, by its fenfation, to dry up all the interior humidity. - 20 miles.

The 27th. To Avignon. - Whether it were becaufe I had read much of this town in the hiftory of the mildle ages, or becaufe it had been the refidence of the Popes, or more probably from the ftill more interefting memoirs which Petrarch has left concerning it, in poenss that will laft as long as Italian elegance and human feelings fhall exift, I know not-but I approached the place with a fort of intereft, attention, and expect-

[^12]gy not for the reafon you give; it appeared to us to originate from their complexions being naturally fo much better than that of the other French women, more than their head-drefs, which differs as much from ours as it dues frem the firench. "Note by a female friend."
they were well perfuaded their governincnt was the beft in the world; that it was a monarchy, and no republic, for which I contended: and that the Einglifh thought fo too, lrecaufe they would unqueftionably abolith tincir houfe of lords, in the enjoyment of which accurate idea I left them.-In the evening to lidle, a town which has loft its name in the world, in the more fplendid fame of Vituclufs. 'There can hardly be met with a richer, or better cultivated tract of fixteen miles; the irrigation is fuperb. Lille is molt ugrecably fitunted. On coming to the rarge of it I found fine plansations of chas, with delicious freams, bubbling over pebbles oa cither fide; well dreffed people were enjoying the eveniag at a fpot, which I had conceived to be only a mountainous village. It was a fort of fairy feche to me. Now, thought I, huw detelthate to leave all this fine wood and water, and enter a mally; beggarly, walled, hot, tinking town, one of the contralls molt offenfive to my feclings? What an agreeable furprife, to find the inn without the town, in the midtt of the feenery I had admired! and more fo, as it was cheap, and the accommodations groal. I walked on the banks of this claflic ftream for an hour, with the moon gazing on the waters, that will run for ever in mellifluous po. etry: retired to fup on the moll expuifite trout and craw fith in the world. To morrow to the famed urigin.-- 16 milcs.

The 2gth. 1 am delighted vith the environs of Lille ; beautiful roads, well plantel, furround and pafs off in different directions, as if from a capital town, umbrageous enough to form promenades againtt a hot fun, and the river is divided into fo many ftreams, and conducted with fo much attention, that it has a delicious effect, efpecially to an eye that recognifes all the fertility of irrigation. To the fountain of Vauclufe, which is juflly faid to be as celebrated almolt as that of Helicon. Crofling a plain, which is not fo beautiful as one's idea of 'compe; the mountain prefents an almolt perpendicular rock, at the foot of which is an immente and very fine cavern, half filled with a pool of ftagnant, but clear water ; this is the famous foumtam; at other feafons it fills the whole cavern, and boits over in a vaft ftrean among rocks; its bed now marked by vegetation. At prefent the water guthes out two hundred yards lower down, from beneath mafies of rock, and in a very fimall diitance forms a confiderable river, which almon immediately receives deviations by aut for mills and irrigation. On the fummit of a rock above the village, but much below the mountain, is a ruin, called, by the poor people here, the chateau of Petrarch-uho tell you it was inhabited by Monf. Petrarch and Madame Laura. The feene is fublime; but what renders it truly interefting to our feelings, is the celebrity which great talents lave given it. The power of racks, and water, and mountains, even in their boldeft features, to arreft atention, and fill the bofom with fenfations that banifh the infipid feelings of common life-holds not of inanimate nature. To give energy to fuch feafations, it mutt riceive anmation from the creative touch of a vivid fancy: defcribs by the poet, or conmeded with the refidence, actions, purfuits, or paffions of great geniufes; it lives, as it were, perfonifica by talents, and commands the interefi that breathes around whitever is confecrated by fime. To. Orgon. Quit the Pope's territory, by crothing the Durance; there view the feleton of the navigation of Boifgelin, the work of the archbifhep of Aix, a noble project, and, where finithed, perfectly well executed ; a hill is pierced by it for a quarecr of is mile, a work that rivals the greateft fimilar exertions. It has, however, ftood flili many years for want of money. The vent de biacenene, and the: hatancreated, the und now S. W., my health better to a moment, which proves how pernicious that wind is, even in Augult.- 20 miles.

The 3 oth. I forgot to oblerve that, for a feew days paft, I have been peftered with all the mob of the country thooting : one would think that every rully gun in Provence is
at work, killing all forts of birds; the floot has fallen five or fix times in my chaide and about my cars. 'The National Aflembly have dechared that every man has a right to kill gane on his own lams; and advancing this maxim fo abfurd as a declaration, though (i) wile as a law, without any fatute or provifion to fecure the right of the gane to the poffeffor of the foil, according to the tenor of the vote, have, as I am every where informed, filled all the fields of France with fportfmen to a great detriment. The farne effects have flowed from decharations of right relative to tythes, taxes, feulial rights, \& s. In the declarations, conditions and compenfations are talk cod of ; but in unruly, ungovernable muletude feize the benefit of the abolition, and langh at the obligations or recomponte. Out by day lrak for Salon, in order to view the Grau, one of the molt fingular diftricts in France for its foit, or rather want of foil; being apparently a region of featlints, yet feeding great herds of theep: view the improvenent of Monfieur Pafquali, who is doing great things, but roughly: I willed to fee and converfe with him, but unfortunately he was ablent from Salon. At night to St. Canta.- 46 miles.
The zitt. To Aix. Many houfes wihout glafs windows. The women with men's hats, and no wooden thoos. At dix waited on Monf. Gibelin, celebrated for his tranflations of the works of Dr. P'rieftley, and of the Philofophical Tranfactions. He received me with that ealy and ageeable politenefs natural to his character. He took every method in his power to procure me the information I wanted, and engaged to go with me the next day to 'Your D'digues to wait on the baron of that name, prefident of the partiment of dix, to whom allo I had leters; and whofe efliys, in the 'Primeftes of the Paris Society of Agriculture, are among the moft valuable on rural weonomics in that work. -12 miles.
September itt. Tour in'digues is twenty miles north of Aix, on the other fide of the Durance, which we crofled at a ferry. The country about the chatean is bold and hilly, and fiwells in four or five miles into rocky mountains. The prefident received me in a very fuicudly manner, with a limplicity of mamers that gives a dignity to his character, void of affectation; he is very fond of agriculture and planting. The afternoon was palfed in viewing his home-farm, and his noble woods, which are uncommon in this naked province. The chateau of 'Tour d'Aignes, before much of it was accidentally, confumed by fire, mult have becn one of the nowit confiderable in France; but at prefent a melancholy fpectaele is leff. The baron is an enormons liffery by the revolution; a great extent of country, which belonged in abfolute right to lis anceftors, was formerly granted for quit-rents, cens, and oolher teudal payments, fo that there is no comparifon between the lands retained and thofe thus granted by his family. The lofs of the droits honorifiques is much more than has becn apparent, as it is an utter lofs of all influence; it was natural to look for fome phan and fimple mode of compenfation; but the dectaration of the National Atembly allows mene; and it is feelingly known in this chateau, that the folid payments which the AEfembly have declared to be rachetable are every hour falling to nothing, without a hadow of recompenle. The people are in arms, and at this moment very unquier. The fituation of the nohility in chis country is pitiable; they are under apprehenfons that nothing will be left them, but funply fuch houfes as the moh allows to fland unburnt ; that the metayers will retain their farms without paying the ladilord his, half of the produce ; and that, wh cafe of fuch a refufal, there is actually neithos law nor authority in the country to peevent it. Here is, however, in this houfe, a large and asi agrecoble fociety, and chee ful to a minale, confidering the times, and what fach a great baron is loting, who has inherited from his anceftors, immenfe poffellions, now frittoring to nothing by the revolution. This chatean, foplendid even in runs, the rencrable woods, park, and all the entigus of fanily and
command, with the fortune, and even the lives of the owners at the mercy of an armed rabble. What a fpectacle! The baron has a very fine and well filled library, and one part of it totally with books and tracts on agriculture, in all the languages of Europe. His collection of thefe is nearly as numerous as my own.- 20 miles.

The 2d. Monf. Le Prefident dedicated this day for an excurfion to his mountainfarm, five miles off, where he has a great range, and one of the fineft lakes in Provence, two thoufand toifes round, and forty feet deep. Directly from it rifes a fine mountain, confining of a mars of thell agglutinated into fone ; it is a pity this hill is not planted, as the water wants the immediate accompanimeat of wood. Carp rife to 25 lb . and eels to 12 lb . (Note, there are carp in the lake Bourgeat, in Savoy, of 6olb.) A neighbouring gentleman, Monf. Jouvent, well aequainted with the agriculture of this country, accompanied us, and feent the reft of the day at the cattle. I had much valual le information from the Baron de Tour d'aigues, this genteman, and from Monf. l'abté de ——, I forget his name. In the evening I had fome converfation on houfe.k eping with one of the ladies, and found, among othcrarticles, that the wages of a gardent $\mathbf{r}$ are 3 colivres ( 131.12 s . 6d.) ; a commom man fervant, 150 I vres ( 7 l . '; a Bourgeois cook, 75 to oo livres ( 90 livess are 3 l .18 s . cid.) ; a houfemai !, no to 70 liveres (3l. $1 \mathrm{~s} . \mathrm{j}^{\mathrm{d}}$.) Kent of a grood houfe for a Buargeois 700 or 8 c livres ( 3 j l .) 10 miles.
The 3d. Took my leave of Monf. Tour d'Aigues' hofpitable chatcau, and returned with Monf. Gibelin to Aix. - 20 miles

The 4th. 'The country to Marfeilles is all mountainous, but much cultivated with rines and olives; it is, however, naked and uninterefting; and much of the road is left in a fcandalous condition for one of the greatell in France, not wide enough, at places, for two carriages to pafs with convenisuce. What a deceiving pimter is the imagination!-_I had read I know nor what lying exaggerations of the buft des albout Marieilles being counted not by hundreds, but by thoulands, with aneclotes of lowis XIV. adding one to the number by a citadel. I lave feen other towns in France, where they are more numerous: and the environs of Montpellier, without external commerce, are as highly decorated as thofe of Marleiles; yet Montpellier is not fingular. The view of Marfeilles, in the approach, is not friking. It is well buit in the new quarter, but, like all others, in the old, clofe, ill built, and dirty; the p pulation, if we may judge from the throng in the flreets, is very great ; I have met with none that exceeds it in this refpect. I went in the evening to the theare, which is new, but not Itrikisg; and not in any refpect to be named with that of Bourdcaux, or even Nantes; nor is the gencral magnificence of the town at all equal to Bourdeaux; the new buildings are seither lo extenfive, nor fo good - the number of fhips in the port not to be compared, and the port itfelf is a horfe-pond, compared with the Garomne-- 20 miles.

The sth. Marfeilles is abfolutely exempt from the reproaches I have fo often eaft on others for want of newfpapers. I breakfalled at the Caté d'Acajon amidit many. Deliver my lettens, and receive information concerning commerce; but I am difappointed of one I expected for Monf. I Abté Raynal, the celcbrated autior. At the table d'hote, the Count de Mirateau, both bere and at dix, a topic of converlation; I expected to have found h'm $m$ re popular, from the extravagancies conmitted in his favour in Provence and at Marcilles; they confider him mercly as a politician of great abilitics, whofe principles are favourable to theirs; as to his private character, they think they have nothing to do with it ; and affert, that they had much rather tru!l to a rogue of abilites, than put anv $\mathbf{c}$ nfidence in an honeft man of no talents; not, however, meaning to affert, that Musf. de Mirabeau deferved any fuch appellation. They lay he bas
an eftate in Provence. I obferved, that I was ghad to hear he had moperty: for in fuch revolutions, it was a neceffary hold on a man, that be will not drive every thing to confufion, in order to poffefs a confequence amd importance which camot attend him in peaceable aind quiet times. But to be at Marteilles without feeing Abbe Raynal, one of the undoubted precurfors of the prefent revolution in France, would be mortifying. Having no time to wait longer for letters, I took the reiolution to introduce myfelf. He was at the houfe of his friend NIonl. Bertrand. I told the Abbe my fituation: and with that cafe and politenefs which flows from a man's knowledge of the world, he replied, that he was always happe to be of wfe to any gentleman of my nation ; and, turning to his friend, faid, hereallo is one, Sir, who loves the Englifh, and underftands their language. In converfing on agriculture, which I had mentioned as the object of my journcy, they both expreffed sheir firprife to find, by accounts apparently authentic, that we imported great quantities of wheat, inftead of exporting as we formorly diel; and defired to know, if this were really the cafe, to what it was to be afcribed: and recurring, at the fame time, to the Mercure de France for a fatcment of the export and import of corn, they real it as a quatation from Mr. Arthur Young. This gave me the opportunity of faying, that I was the perfon, and it proved a lucky introduction; for it was not pollible to be reccived with more politenefs, or with more offers of fervice and alliftance. I exphaned, that the change had taken place in confequence of a vaft increafe of population, a caufe ftill increafing more rapidly than ever.- We had an interefling converfation on the agriculture of France, and on the prefent fituation of affairs, which they both think going on badly; are convinced of the neceflity of an upper houfe in the legiflature, and dread nothing more than a mere democratical government, which they deen a fpecies of republic, ridiculous for fuch a kingdom as France. I faid that I had often reflected with amazenent, that Monfieur Necker did not affemble the ftates in fuch a form, and under fuch regulations, as would have naturally led to adopt the conllitution of lingland, free from the few faults which time has difcovered in it. On which Monf. Bertrind gave me a pamphlet he had publifhed, addreffed to his friend Abbé Raynal, propofing feveral circumftances in the Englifh conftution to be adopted in that of France. Monf. l'Abbé Raynal remarked, that the American revolution had brought the lirench one in its train: I obferved, that if the refult in France floould be liberty, that revolution had proved a blefling to the world, but much more fo to England than to smerica. This they both thought fuch a paradox, that I explaised it by remarking, that I believed the profperity which England had enjoyed fince the peace, not only much exceeded that of any other fimilar period, but alfo that of any other country, in any periol fince the eftablifhment of the luropean monarehies : a fact that was fupported by the increafe of population, of confumption, of indultry, of navigation, fhipping, and failors: by the augmentation and improvenent of arriculture, manufactures, and commerce; and in a peculiar mals and aggregate, flowing from the whole, the rifing eafe and felicity of the people. I mentioned the authentic documents and public regiters which fupported fuch a reprefentation; and I found, that Abbe Raynal, who attended clofely to what l faid, had not feea or heard of thefe circumftances, in which he is not fingular, for I have not met with a fingle perSon in France acquainted with them; yct they unquettiomally form one of the mof remarkable and fingular experiments in the fience of politics that the world has feen ; for a people to lole an empire-tiintecn provinees, and to gain, by that bofs, an increafe of wealth, felicity, and power! When will the obvious conclufions, to be drawn from that prodigious event, be adopted? that all tranfarine. or ditant domivol. iv.
nions, are fources of weaknefs: and that to renounce them would be wifdom. $\Lambda$. ply this in France to St. Donningo, in Spain to Peru, or in England to Bengal, and mark the ideas and the replies that are excited. I have no doubt, however, of the fact. I complimented him on his gencrous gift to the fociety of arriculture at Paris, of 1200 livres for a premium; he faid they had thanked him, not in the ufual form, by the fecretary figning alone, but had every one prefent figned it. He faid, that he thould do the fame by the academies of fciences and belles lettres; and he has given the fame fum to the academies at Marfeilles, for a premium relative to their commerce. He faid alfo, that he had formed a plan he fhould execute when he has faved money enough, which is to expend, by means of the fociety of agriculture, 1200 livres a year in purchafing models of all the ufeful implements of huibandry to be found in other countries, efpecially in England, and to fpread them over Prance. The idea is an excellent one, and merits great praife ; yet it is to be queltioned, whether the effect would anfwer the expence. Give the tool itfelf to a farmer, and he will not know how to ufe it, or will be too much prejudiced to like it ; a model he will ftill lefs take trouble to copy. Gentlemen farming cvery where their own lands, with enthufiafin and paffion for the art, would apply and ufe thofe models; but 1 fear that none fuch are to be found in France. The fpirit and purfuits of gentlemen muft be changed from their prefent frivolous turns, before any fuch thing could be effected. He approved of my recommending turnips and potatoes; but faid, that good forts were wanted; and mentioned a trial he had made himfelf, a comparifon of the Englifh and Provençal potatoes in making bread, and the Englifh produced one-third more flour than the French. -Among other caufes of bad hufbandry in Prance, he named the illegality of ufury; at prefent moneyed people in the country locked it up, inftead of lending it for improvement. Thefe fentiments of a jufly celebrated writer do him honour ; and it was pleafing to me to find, that he gave attention to objects which have almoft monopolized mine; and yet more fo to find, that though not young, he is in good fpirits; and likely to live many years to enlighten the world by the productions of a pen that has never been employed but for the benefit of the human fecies.

The 8th. To Cuges. For three or four miles the road leads through rows of baftides and walls; it is made of powdered white ftone, anid without exception, the moft dufty 1 ever faw; the vines, for twenty rods on each fide, were like a drefled head; the country all mountains of rock, with poor pines.-Uninterefting and ugly ; the plains, of no great breadth, are covered with vines and olives. Mect capers firit at Cuges. At Aubagne, I dincd on fix dilhes, not bad, a defert, and a bottle of wine, for 24s. and by myfelf too, for there was no table d'hote. What Mouf. Dutens could mean by calling the poft houfe at Cuges a grool auberge, is inexplicable; it is a miferable hole, in which I have one of the beft roons, without glafs to the win. dows.- 21 miles.

The 9 th. The country to Toulon is more interefing; the mountains are bolder; the fea adds to the view; and there is one paffage among the rocks, where are fublime features. Nine-tenths are walte mountain, and a wretched country of pines, bors, and miferable aromatics, in fpite of the climate. Near Toulon, efpecially at Olioules, there are ponegranates in the hedges, with fruit as large as nonpareils; they have a few oranges allo. The bafon of 'Toulon with ranges of three deckers, and other large men of war, with a quay of life and bufinefs, are fine. 'The town has nothing that deferves defcription; the great and only tiing that is worth feeing, the dock-yard, 1 could not fee, yet I had letters; but the regulation forbidding it, as at Breft, all applications were vain.- 25 miles.

The roth. Lady Craven has fent me upon a wild chafe to Ityeres-one would think this country, from her's and many other defcriptions, was all a garden; but it has ben praifed much beyond its morit. 'The vale is every where richly cultivater, and planted with olives and vines, with a mixture of fome mulberrics, figs, and other fruit trees. The hills are either rocks, or fpread with a poor vegetation of evergrens, pines, lentifus, \&c. The vale, though feattered with white baftides which animate the foene, yet betrays that poverty in the robe of nature, which always offends the eye where olives and fruis form the principal cloathing. Fwery view is meagre, on comparifon with the rich foliage of our northern forcts. The only fingular features are the crange and lemon trees; they here thrive in the open air, are of a great fize, and render (wery garden inieretting to thofe who travel to the fouth; but latt winter's froft has flom them of their elory. They are all fo nearly deftroyed as to be cut almoft to the rot, or to the truak, but are in general flooting again. I conjecture that thefe trees, even when in heahh and foliage, however they may be feparately taken, add but little to the general eflect of a view. They are all in gardens, mixed with walls and houfes, and confequently lofe much beauty as the part of a landfcapa. Lady Craven's tour fent me to the chapel of Notre Dame de confolation, and to the hills leading to Monl. Glapiere de St. Tropes ; and I afked for father Laurent, who was, however, very little fenfible of the honour fhe had done him. The views from the liills on both fides of the town are moderate. The iflands Portecroix, Pourcurolle, and Levant, (the neareft joined to the continent by a caufeway and faltmarfh, which they call a pond,) the hills, mounts, rocks, all are naked. The pines that fpread on fome of them have not a much better effect than gorfe. The verdure of the vale is hurt by the hue of the olives. There is a fine outline to the views; but for a climate, where vegetation is the chief glory, it is poor and meagre; and does not refrefh the imagination with the idea of a thick fhade againft the rays of an ardent fun. I can hear of no cotton in Provence, which has been reported in feveral books; but the date and piftachio fucceed : the myrtle is indigenous every where, and the jafminum, commune, and fruticans. In l'Ille de Levant is the genifta candefcens, and the teucrium herba pona. Returning from my ride to the hotel de Necker, the landlord worried me with a lift of Englifh that pafs the winter at Hyeres; there are many houfes built for letting, from two to fix louis a month, including all the furniture, linen, neceffary plate, \&c. Moft of thefe houfes command the profpect of the vale and the fea; and if they do not feel the vent de bize, I hould fuppofe it muft be a fine winter climate. In December, January, and February perhaps it may not incommode them, but does it not in Marcu aus April? There is a table d'hôte, very well ferved, at the hotel de Necker in winter, at 4 livres a-head each meal. View the King's garden here, which may be ten or twelve acres, and nobly productive in all the fruits of the climate, its crop of oranges only laft year was 21,000 livres ( 9181.15 s .) Oranges at Hyeres have produced as far as two louis each tree. Dine with Monf. de St. Cefaire, who has a pretty new built houfe, a noble garden walled in, and an eftate around it, which he would fell or let. He was fo obliging as to give me, with Dr. Battaile, much ufe. ful information concerning the agriculture and produce of this country. In the evening return to Toulon, - $3+$ miles.

The 1 th. The arrangement of my journey in Italy occupied fome attention. I had been often informed, and by ment that have travelled much in Italy, that I muft not think of going thither with my one-horfe chaife. To watch my horfe being fed would, they affured me, take up abundantly too much time, and if it were omitted, with refipect to say, as well as oats, both would be equally ftolen. There are alfo
parts of Italy where travelling alone, as I did, would be very unfife, from the number of robbers that infeft the roads. Perfuaded by the opinions of perfons, who I fuppofe mult know much better than myfelf, I had determined to fell my mare and chaife, and travel in Italy by the veturini, who are to be had it feems every where, and at a cheap rate. At Aix they offered me for both 20 louis; at Marfilles, eighteen: fo the further I went I expected the price would fink; but to get cut of the hands of the aubergiltes, and the garçons d'écuries, who expected every where to make a pro. perty of me, I had it drawn into the ftreet at Toulon, with a large label, written it vendre, and the price 25 louis: they had colt me at Paris 32. My plan fucceeded, and I fold them for 22 ; they had brought me above tweive haiadred miles, but yet were a cheap bargain to an officer who was the purchater. I had next to coufider tine method to get to Nice; and will it be believed, that from Marfeilles with a hundred thoufand fouls, and 'Toulon with thirty thoufand, lying in the great road to Antibes, Nice, and Italy, there is no diligence or regular voiture? A genteman at the tuble d'hote aflured me, they alked him 3 louis for a place in a voiture to Antibes, and to wait till fome other perfon would give three more for another feat. To a perfon accuftomed to the infinity of machines that fly about Fngland, in all directions, this mult appear hardly crodible. Such great cities in France have not the hundredth part of connection and communication with each other that much inferior places enjoy with us: a fure proof of their deficiency in confumption, activity, and atimation. A gentleman who knew every part of Provence well, and had been from Nice to Toulon, by fea, advifed me to take the comnon barque, for one day, from Toulon, that I might at leaft pafs the iffes of Hycres; I told him I had been at Hyeres, and feen the coaft. I had feen nothing, he faid, if I had not feen them, and the coalt from the fea, which was the fineft objeet in all Provence; that it would be but one day at fea, as I might land at Cavalero, and take mules for Frejus; and that I hould lofe nothing, as the common rout was the fame as what I had feen, mountains, vines, and olives. His opinion prevailed, and I fpoke to the Captain of the barque for my paflage to Cavalero.

The 12 th. At fix in the morning, on board the barque, Captain Jaffoirs, of Antibes; the weather was delicious; and the paffage out of the harbour of Toulon, and its great balon, beaviful and interefting. Apparently it is impoflible to imagine a harbour more completely fecure and land-locked. The inner one, contiguous to the quay, is large, and feems formed by art; a range of mole, which it is buil on, feparatiing it from the great bafon. Only one flip can enter at a time, but it could contain a fleet. There are now lying, moored in two ranges, one lhip, the Commerce of Marfeilles, of 130 guns, the fincft Thip in the French Navy, and feventecn others of 90 guns each, with feveral funaller: in the great bafon, which is two or three miles acrofs, you feem abfolutely inciofed by high lands, and it is only on the moment of quitting it, that you can guefs where the outlet is, by which you are connected with the fea. The town, the flipping, the high mountain, which riles immediately above it, the hills, covered with plantations, and fpread every where with baftides, unite to form a friking coup d'oul. But as to the iffes of Hyeres and the fine views of the coalt, which I was to enjoy, my informant could have no cycs, or was abfolutely without tafte : they are, as well as all the coaft, miferably barren rocks and hills, with pines only to give any idea of vegetation. If it were not for a few folitary houfes, with here and there a fquare patch of cultivation to change the colour of the mountains, I fhould have imaginel thet this coalt muft have borne a near refenble to thofe of New Zealand, or New Holland-wark, glomy, and filent;-a favage fombre air fyread
over the whole. The pines, and ever-rreen fhrubs, that cover the greateft part, cover it with more gloom than veriure. Landed at night at Cavalero, which I expected to have found a litle town; but it confits of three houfes only, and a more wretched place not to be imagined They fpread a mattrafs on a fone floor for me, for bed they had none; afier farving all diy, they had nothing but fale egrs, bad bread, and worfe wine; and as to the mules which wore to take me to Frejus, there was neither horfe, afs, nor mule in the place, and but four oxen for ploughing the ground. I was thus in a pretty fituation, and muft have gone on by fea to Antibes, for which alfo the wind gave tokens of being contrary, if the captain had wot promifed me two of his men to carry my baggage to a village two leagues off, where mules were certainly to be had, with which comfort I betook myfelf to my mattrefs.----24 miles.

The $13^{\text {th }}$. The capain fent three failors; one a Corfican, another a mongrel Italian, and the third, a Provençal: among the three, there was not French enough for half an hour's converfation. We croffed the mountains, and waidered ly crooked unknown paths, and beds of torrents, and then found the village of Gaftaig on the top of a mountain, which, however, was more than a league from that to which we intended to go. Here the failors refrefhed themfelves, two with wine, but the third never drank iny thing except water. I afked if he had equal ftrength with the others that dravk winc? Yes, they replied, as frong for his fize as any other man: I rather think, that I hall not foon find an Englifh failor who will make the experiment. No milk; I breakfatted on grapes, rye bread, and bad wine. Muks were reported to abound at this village, or rather that which we mified; but the matter of the only two we could hear of being abfent, 1 had no other refource than agrecing with a man to take my baggage on an afs, and myfelf to walk a leaguc further, to St. Tropes, for which he dentanded thrce livres. In two hours reached that town, which is prettily fituated, and tolerably wall built, on the banks of a noble inlet of the fea. From Cavalero hither, the country is all mountain, cighteen-twentieths of it covered with pines, or a poor wildernefs of evergreen fhrubs, rocky and miferable. Crofs the inlet, which is more than a league wide; the ferrymen had been on board a king's flip, and complained heavily of their treatment--but faid that now they were free men, they fhould be well treated; and in cafe of a war, they fhould pay the Englith by a different account-it would now be man to man; before it was free men fighting with flaves. Land at St. Maxime, and there hire two mules and a guide to Frejus. The country the fame mountainous and rocky defert of pin and lentifcus; but towards Frejus, fome arbutus. Very little culture before the plan near Frejus. I pafied io-day thirty miles, of which five are not cultivated. The whole coatt of Provence is nearly the fanc defert; yet the climate would give, on all thefe mountions, productions valuable for feeding fheep and cattle; but they are incumbered with fhrubs abfolutely worthlefs. The effect of liberty had better appear in their cuitivation, than on the decks of a man of war.-_ 30 miles.

The $14^{\text {th }}$ Staid at Frejus to reft myfolf;-to examine the neighbourlood, which, however, contains nothing - and to arrange my journey to Nice. At ircoius are remains of an amphitheatre and aquedue. On enquiring for a voiture to go poft, I found there was no fuch thing to be had; fo I had no refource but mule:. I employed the garçon d'écurie (for a poftmatter thinks himfelf of too much confequenee to take the leaft trouble), and he reported, that I hould be well ferved fur twise livers to Eitrelles; this price for ten miles, on a miferable mule, was a very entertaining idfa; I bid him half the money; he afliured me he had named the lowelt price, and left me, certainly thinking me fate in his clutches. I took a walis round the town to gather fome
phants that were in blofiom, and meeting a woman with an aff-load of grapes, I afked her cmployment; and found, by help of an interp: ter, that the carried grapes from vineyards for hire. I propofed loading her afs to Etredtes with my hagage-and demanded her price- 40 fols. I will give it. Break of day appointed ; and I returned to the inn, at leaft an occonomift, faving io liveres by walk.

The 25 th. Myfiff, my female, and her aff jogred merrily over the mountains; the only misfortune was, we did not krow one word of each other's language; 1 could juft difcover that fle had a hufband and three children. I tricd to know if he were a frood hufband, and if fhe lored him very much; but our language failed in fuch ex-phamanons-it was no mater; lier ats was to do my befinels and not her tongue. At Eiftrelks 1 took polt horfes; it is a fingle houfe, and no women wiha afis to be had, or 1 fhould have preferred them. It is not caif for me to defcribe, how agreeable a walk of ten or filten mils sis to a man who walks well, atter fitting a thouland in a carringe. 'To day's pourney all hrough the fame bud country, mountain beyond mountain, incumbered with worthefs evergreens, and not one m.l. in twenty cuhtivated. The only relicf is the gardens at Grafie, where fingular exations are made. Rofes are a great article for the famous otter, all of which is commonly fuppofed to come from 13engal. They fay that fifteen hundred flowers go to a ingle drop; twenty flowers fell for one ful, and an ounce of the otter ;o0 liveres (171. 108.). Tuberofes, \&c. are alfo cultivated for perfumes in immenfe quantities, for Paris and London. Rofemary, lavender, bergamot, and oranges, are here capital articles of culture. Ifdf Europe is fupplied with effences from hence. Cannes is prettily fituated, clofe on the fhore with the ifes of St. Marguerite, where is a deteflable ftate prifon, about two miles off, and a diftant boundary of the Eftrelles momtains, with a bold broken outline. Thefe mountains are barren to excefs. At all the villages fince Toulon, at Frejus, Eftrelles, \&ic. I afked for milk, but no fuch thing to be had, not even of goats or theep; the cows are all in the higher mountains; and as to butter, the landlord at Eitrelles told me, it was a contraband commodity that came from Nice. Good heaven!-what an idea northern people have, like myfelf, before I knew better, of a fine fun and a delicious climate, as it is called, that gives myrtles, oranges, lemons, pomegranates, jafmins, and alocs, in the hedges; yet are fuch countrics, if irrigation be wanted, the verielt deferts in the world! On the moft miferable tracts of our heaths and moors, you will find butter, milk, and cream; give me that which will feed a cow, and let oranges remain in Provence. The fault, however, is in the people more than the climate; and as the people have never any faults (till they become the mafers), all is the effect of government. The arbutus, lauruftinus, ciltus, and Spanifh broom, are found fcattered about the waftes. Nobody in the inn but a merchant of Bourdeaux returning home from Italy; we fupped together, and had a good deal of converfation, not uninterefting; he was inclancholy to think, he faid, what a fad reputation the French revolution has wherever he has been in Italy. Unhappy France! was his frequent ejuculation. He made many inquirics of me, and faid, his letters confirmed my accounts; the Italians feemed all convinced that the rivalry of France and England was at an end, and that the Englith would now have it in their power amply to revenge the American war, by feizing St. Domingo, and indeed all the poffeffions the French have out of France iffelf. I faid the ilea was a pernicious one, and fo contrary to the perfonal interells of the men who governed England, that it was not to be thought of. He replied, that if we did not do it, we fhould be marvelloufly forbearing, and fet an example of political purity fufficient to eternize that part of our national claracter, in which the world thought us moft deficient, moderation. He complained bitterly of
the conduct of certain leaders of the National Affembly, who feemed to be determined on a bankruptcy, and perhaps a civil war.- 22 miles.

The 16th. At Cannes I was quite without a choice; no poft-houfe, carriage, nor ${ }^{-}$ horfes, nor mules to let; I was therefore forced again to take refuge in a woman and her afs. At five in the morning I walked to Antibes. This line of nine miles is chiefly cultivated, but the mountains rife fo immediately, that, in a general idea, all is wafte. Antibes, being a frontier town, is regularly fortified; the mole is pretty, and the view from it pleafing. Take a polt-chaife to Nice; crofs the Var, and bid adieu for the prefent to France. The approach to Nice is pleafing. The firlt approach to that country fo long and jufly celebrated, that has produced thofe who have conquered, and thofe who have decorated the world, fills the boion with too many throbbing feelings to permit a bufh, a fone, a clod to be uninterefting. Our percipient faculties are expanded; we wifh to enjoy; and then all is atteution, and willingnefs to be pleafed. The approach marks a llourining town; new buildings, the never-failing proof of profperity are numer, pus. Pals many gardens full of oranges. Arrive in time for dinner at the table d'hote, ilotel de Quatre Nations, and agree with the mafter of it for my apartment, which is exceedingly good, and dinner and fupper at five Piedmontefe livres a-day, that is five fhillings. Here 1 am , then, in the midft of another people, language, fovercignty, and country-one of the moments of a mans life that will always be interefting, becaufe all the fprings of curiofity and attention are on the ftreteh. Several. Frenchmen, but more Italians, at the table d'hote; and the French revolution only talked of. The Frenchmen all in favour of it, and the Italians all againft it, and abfolute victors in the argument.- 25 miles.

The 19 th. I have no letters for Nice; and therefore, knowing nothing of the infides of the houfes, I mult be content with what meets the eyc. The new part of the town is very well built; the freets flrait and broad. The fea-view is fine, and for enjoying it in greater perfection, they have an admirable contrivance, which I have feen no where elfe. A row of low houfes forming one fide of a ftrect, a quarter of a mile long, has flat roofs, which are covered with a fucco floor, forming a noble terrace, open immediately to the fea, aifed above the dirt and annoyance of a treet, and equally free from the fand and fhingle of a beach. At one end fome fincly fituated lodging-houfes. The walk this terrace affords is, in fine weather, delicious. The fquare is handfone, and the works which form the port are well built, but it is fmall and difficult to enter, execpt in favourable weather; admits fhips of near three hundred tons; yet, though free, has but an inconfiderable trade. The number of new frects and houfes building at prefent is an uncquivocal proof that the place is flourifhing, chiefly on the account of the refort of for hners, prisipilly Englifh, who pafs the winter here, for the bencfit and pleafure of the climate. I Lhey are difinally alarmed at prefent, with the news that the difturbances in France will prevent many of the Englifh from coming this winter; but they have fome confolutim in expecting a great refort of French. Laft winter, there were fifty-ieven Einglifh, and nine French; this winter, they think it will be nine Enghifh, and fitiy-feven leurch. At the table d'hôte informed, that I muft have a paffport for travelling in Itai, , and that the Englifh conful is the proper perfon to apply to. I went to Mr. C the who informed me that it was a miftake, there was no want of any paffipori; tut if I wifhed to hare one, he would very readily give it. My name occurring to him, he took the opportunity to be very polite to me, and officred any thing in his pe ver to affitt me. On my telling him the object of my travels, he remarked, that the gardens here, and mixure of half garden and half farm, were rather fingular, and if I called on bim in the evening, he would walk and fhew me fome. I
accepted lis obliging invitation, and when I went again, met a Colonel Rofs, a gentle . man from Scothand, fecond in command in the King of Sardinia's marine, and at pre. fent in chief: having been much in Sardinia, I made fome enquiries of him concerning that illand, and the circumftances he inftanced were curious. The intemperia is fo prevalent in fummer, from the quautity of evaporating water leaving mul expofed to the fun, as to be death to a ftranger: but in winter it is a good climate. The foil wonderfully rich and fertile, but valt plains that would produce any thing are uncultivated. He has paft one line of lifty miles by thirty, all plain and the land good, yet without one houfe, and mofly a neflected defert. The people are wretehed, and deplorably ignorant : there are diltricts, he has been informed, where there are olives, and the fruit left rotting under the trees, for want of kuowing how to make oil. In general, there are no roads, and no inns. When a traveller, or other perfon, goes into the ifland, he is recommended from convent to convent, or cure to curce, fome of whom are at their eafe; you are fure to be well entertained, and at no other expence than a trifle to the fervants. The plenty of game and wild.fowl great. The horfes are fimall, but excellent; all fallions. One has been known to be rode four-and-twenty hours without drawing bit. I demanded to what could be attributed fuch a neglected flate of the illand? To government, I fuppofe? By no means; government has manifetted cvery difpofition to fet things on a better footing. It certainly arifes from the feudal rights of the nobility, keeping the people in a flate of comparative flavery. They are too wretched to have the inducencent to indullry. Such is the cafe at prelent in many other countries befides Sardinia. When I fee and hear of the abominable depredations and enormities committed by the French peafants, I deteft the democratical principles; when I fee or hear of fuch waftes as are found in Sardinia, I abhor the ariftocratical ones. Accompany Mr. Green to view fome gardens, which have a luxuriance of vegetation, by means of watering, that makes then objects worth attention; but the great product, and a moft valuable one it is, are oranges and lemons; chicfly the former, and a few bergamots for curiofity. We examined the garder of a nobleman, fomething under two acres of land, that produces thirty louis u'or a- year in oranges only, befides all the crops of common vegetables. The great value of thefe products, fuch is the perverfity of human life, is the exact reafon why fuch gardens would be deteftable to me, if under the oconomical managenent of the gentry of Nice. An acre of garden forms an object of fome confequence in the income of a nobleman who, in point of fortune, is recksned in good circumilauces, if he has 1501 . to 2001 . a year. Thus the garden, which with us is an object of pleafure, is here one of ceconomy and income, circumftances that are inconpatible. It is like a well furnifhed room in a man's houfe, which he lets to a lodg. ger. They fell their oranges fo ftriatly, that they cannot gather one to eat. A certain momentary and carelefs confumption is a part of the convenience and agreeablen ts of a garden; a fyftem, which thus conftrains the confumption, deftroys all the pleafure. Oranges may certainly be fold with as much propricty as corn or timber, but then let them grow at a diftance from the houfe; that open apartment of a refidence, which we call a garden, flould be free from the flackle of a contract, and the fcene of pleafure, not profit.
'The s Sth. Walked to Ville Franche, another little fea-port of the King of Sardiuia's, on the other fide of the mountain, to the eaft of Nice. Call on Mr. Green, the conful, who has given me letters to Genoa, Alexandria, and Padoua: he has behaved with fo friendly an attention, that I cannot omit acknowledging warmly bis civilities. Learn this morning from him that Lord Briltol is fomewhere in Italy, and that Lally Erne is probably at Turin ; my flars will not be propitious if I do not fee them both,

The 19th. I have now waited two days merely for the means of getting away; I can go either by a felucea to Genoa, or with a vetturino to Turin; and there is fo much for and againft both fchemes, that priority of doparture is as good a motive for a preference as any other. If I go by Genoa to Milan, I fee Genoa and a part of its territory, which is much, but I lofe fixty m: ics of fuperb irrigation, from Coni to Turin, and I lofe the line of country between $\perp$ urin and Milan, which I am told is better than that between Genoa and Milan ; as to Turin itfelf, I flould fee it in my return. But here is Laigi Torini, a vetturino, from Coni, who fets out on Monday morning for Turin, which decides me ; fo with Mr. Green's kind affiftance I have bargained with him to take me thither for feven French crowns. He has got two officers in the Sardinian fervice, and is not to wait longer for filling the third place. We have every day, at the table d'höte, a Florentine Abbé, who has been a wonderful traveller-no man names a country which he has not traverfed; and he is fingular in never having made a note, making rather a boaft that his memory retains every particular he would wifh to know, even to numbers correctly. The height and meafures of the pyramids of Egypt, of St. Peter's church at Rome, and St. Paul's at London, \&c. with the exact length and breadth of every fine ftreet in Europe, he has at his tongue's end. He is a great critic in the beauty of cities; and he clafles the four fineft in the world thus, 1. Rome.2. Naples.- 3. Venice.-4. London. Being a little inclined to the marvellous, in the idea of an old Piedmontefe colonel, a knight of St. Maurice, a plain and unaffected character, and apparently a very worthy man ; is piqued at the authority of Signore Abbate, to the amulement of the company.

The 20th, Sunday. Mr. Conful Green continues his friendly attentions to the laft ; I dined, by invitation, with him to day; and, for the honour of Piedmontefe grazing, ate as fine, fiveet, and fat a piece of roalt beef as I would ever wifh to do in England, and fuch as would not be feen at the table d'hôte at the quatre nations in feven years-if in feven ages. An Englifh mafter and miftrefs of the table, with roaft beef, plumb pudding, and portcr, made me drop for a moment the idea of the formidable diftance that feparated me from England. Unknown and unrecommended at Nice, I expected nothing but what could be fhot flying in any town; but I found in Mr. Green, both hofpitality, and fomething too friendly to call politenefs. In the evening we had another walk among gardens, and converfed with fome of the proprietors on prices, products, \&c. The defcription Mr. Green gives me of the climate of Nice in the winter is the moft inviting that can be imagined; a clear blue expanfe is conftantly over head, and a fun warm enough to be exhilarating, but not hot enough to be difagreeable. But, Sir, the vent de bize! We are fheltered from it by the mountains; and as a proof that this climate is by far more mild than where you have felt that wind, the oranges and lemons which we have in fuch profufion will not thrive either in Genoa or Provence, except in a very few fpots, fingularly fheltered like this. He remarked, that Dr. Smollet, in his defeription, has done great injuftice to the climate, and even againft the feelings of his own crazy conltitution; for he never was fo well after he left Nice as he had been at it, and made much intereft with Lorl Shelburne to be appointed conful, who told him, and not without fome foundation, that he would on no account be fuch an enemy to a man of genius; - that he had libelled the climate of Nice fo feverely, that if he were to go again thither the Niflards would certainly knock him on the head. Mr. Green has feen hay made, and well made, at Chriltmas.

The 2 ift. Commenced my firft Italian journey ; of my two military companions, one was as ftupid as a brick-bat, and the other too lively for me :-there are few things more repugnant to my nerves than the vivacity of inanity; I am not young enough for it.

$$
\text { voL. 1v. } 11 \text { Hi mere }
$$

Here was alfo a friar, who made no compenfation for the deficiencies of his countrymen : -low, vulgar, and ignorant ; could fpe:k no Frenel, end but little Italian: I looked in vain for fo many of his Piedmontefe words in my dictionary, that I was foon tired of following him. We dincd at Scareno, and Ilepe at sofjello, at both which places we joind the company of another vetturino, confilitits of the Piedmontefe cotonel I had met at the table d'hote, his brother an abbe, and another abbe a frim, , all well bred polite men, who were very attentive to me as a forcigner, and had great readinets to anfwer all my enquiries : I reaped a gooddeal of information from their converlation. The three tirlt days of this jonracy are employed in croling three momans; to-day we pafied the Col de Pruls. The features in the heights are intereling, will, and great. The defent to Soppello is piaturdque - 26 miles.

The 2aJ. My frima, the old liedmontede colond, eommends the Finglifh charater greath, whon it is ruly loglials; that is, as a gum d by his aplanations, when it is net a herryan, bunting, expenfive young man of "reat dortune, aganft whom he threw out fine Cibure reflections. He defiredmy name, and wherellived in Fongland, whith he begged me to write down fore him; and commended very much the ofjeot of my journcy, which app ard fo extraodiary to him, that he could mot holp puting many quations. The mountia we crofld to day is yet more favage than that of yefteray ; mach of it whand even fulline. The little town of Sargio and its catle are fiteated muft romanacally, thek againal the fide of a mountain, like a fwallow's nelt againt the tide of a houte. I had no orpertunity of atking how many necks are breken in a year, in going peaceally to and fro; but the bheknets of this town, and the tota! want of glats, make it gloomy as wel! as romantic: iadeed the view of all thefe momtainotowns, where there may te fo much happinef; with fo little apparance of it, is forbidting. Tende, which is the capital of a diftrict, and gives name to this great ridge of mountain (Col de Tende, is a horrid place of this tort, with a vile inn; all black, dirty, ftioking, and no glafs.-30 miles.

The 23d. Uut by four in the morning, in the dark, in order to crofs the Col de Tende as lion after brak of day as pofible, a neceffary precaution they fay, as the wind i , then moft q nit ; if there be any thom, the pallage is dangerous, and even impracticable; not fo much from height as from fituation, in a drayght of wind between lyedmont and the fan. The pais in the rochs, for fome diftance before mounting the hill, is fublime ; hemmed in among finch nomous momatains and rocks, that they re.. minded tue a hittle of the amazing pals in the lyrences, but are much inferior to it. In the face of cne of them is a leng Gifeription to the honour of Victor Amadeus III. for making the roall ; and near it an old ouc, purporing that the eleventh duke of sawy made the old road, 10 comed Piednont and Nies, a proprie feefe con tuta diligroza. This and road is pathable hy mules only, mad is that by which Mr. Dutens palled the Col de Tende. 1 lhall oblerve once for all, $t$ at the new one is a mote wfiful and princely madertaking. From within a few miles of Nice, where it is not fuifhed, to Limon colt $3.500,000$ livere, $(175,0001$.) It winds prodigioully, in order to pats the feepeft incumaine, in fuch angles as to a lmit carrages uithout difificulty. The worlt part is
 a the reft, perhaps becaute they bave begun to excute a valt dign of perforning the montan. At prefen, not ithambins the goolnets of the roul in fammer, it is abfolut ly impailable in winter for chmace, and with dificoly tometimes ven with mules, hy reafon of the immenfe fils of fow. They have opened a cavern bike a
 it foon divides into two palliges, one fur going and another for returning, which 1.
found
found cheaper than one large enough for both; the whole will be above five hundred trebulchi, and will demand fich an expence as leaves little hope of feeing it executed in this century. Take the now road, however, for all in atl, and it is a work that docs lonour to the king and comatry. Defeend inte the rich and beautiful vale of Piedmont, a few miles before Coni, and between the Alps and Appenines, which here feparate, one sange ruming from licnce to Calahoia, I helieve unmterruptediy, wat the other to Conftantinople. Amougt the maps never made, but much warica, is one of the mountains of Europe, to thew at one coup d'ecil which are conneqed, and which feparate: this feparation of the Alps and Appenines is for narros, that they would, on a map on any fale, appear as one range; they conned whath all the mountains of lrance, by Daphinc, Vivarais, and Auvergnc, but mot with the Pyences: I law myfot travelled the whole rarge of thofe from featolat. Surere, in they comeet with Cermany, Poland, \&ic.? Perhaps they may with thole of he hee ditary dominions of the Iloufe of Auftria. This woutd make but twa anges of monnains on the continent of Europe, the $\Lambda$ ps and the Pyrenees; for all the Spanifh comace with the latier, unlefs thofe of Norway and Sweden do not join the Ruflim, Polifh, ace. Reach Coni, which is ftrongly fortified, and well fituated; but as for ims, the Croce Bianca, which they fpeak of as being excellent, afforded me a good rom enough, but without a fingle pane of glafs in the windows, only ragged paper --and fuch a commolite- lat ine drive the recollection from my memory! Here we loft the company of the old colonel. his brother, and friend; they went five miles further, to the eflate of one of them at Centelle. Sup at the table d'hote. Our landlady is a tall well looking virago; the officers made love to her with one hand, while they lupped with the other. They then alked me a thoufand queftions about Englifh duelling. Was it in a circle? At what diftance? On 'rorfeback? With what piflu!s? \&c - 37 miles.

The 24th. The friar and one of the oflicers proceeded no further; the other and niyflef for Turin. Un leaving Coni, the vicw from the fortifications of the Alps is very fine; a range of them, capped with fnow, is now feen by us to the left; Mont Vifo among then very high. At Centalle we were ftopped by the fervant of my friend, the colonel, who had orders to conduct us to the houfe of the curé, to take chocolate. The brother of the colonel is, it feems, cure and archiprêtre of the parifh. It was impofible to be received with more kindnefs and hofpitality than I was here. The colonel ftarted a plan for keeping us to dinner, and his brother immediately beaged we would change our intention of fleeping at Carignan for Ratcconis, which would enable us to dine with him. To this we readily afiented. I now found, that the colonel was the Chevalier Brun, on a vifit to his brother, who has built an excellent parfonage-houfe, as we fhould call it, at his own expence, and has two curées under him as archiprètre; he has archhofpitality alfo; gave us an admirable dinner, well ferved, and excellent wine, and wifhed I would make a longer ftay. As this was the firt Italian houfe I had been in, except inns, it was interelting enough to excite all my curiofity and attention. Expreffing a wifh to have fome converation with a pratical cultivator, they had the goodnefs to walk with me to the Count de Bonifante, who lives on his own eftate here, and farms it. I foon found that this nobleman loved the fubject; for he feemed to take a pleafure in anfwering my enquiries. We walked over lis, and fome of his neighbours' farms for more than two hours; and though my cuetions were precty numerous, he was to kind as to meet them with the utmoft willingnefs of explanation. If I have many fuch days as this in Italy, I frall be equally vell pleafed and informed. Centalle was the refidence of the Marquis de Suza. Take my leave of this agreeable and ho'pitable family, which I flall long remember with pleafure. Pafs Savignan, a confiderable and
pretty town; and what is nuch better to my cyes, a fine range of level plafu, all rich and much watered. The ferne in fome places is charning: the road is like a fine alley, palfing through a new mown garden; the meadows are as level as a die, without a mole calt, or act hill ; thanks to watcring! the mowing neat; the hay now cocking; rows of tress every where, and not being in frait lines, the appearace is pleafing. It is an obfersation I have more than one made, and it is no where fo excmplition in this conatry, that there are beatiss whating from extreme fertility that bokng to a that which would be hurt be ineguatitics of foil. The approach to Raccomis is by a double row of trees on cach fide of the read, with two nady paths, very plafing even by moon-light; but my Ellow-traveller, wih his drawn fword, ready of pals at the break of a mober, thould any attack as, did not prople thefe floder with the mont agrecathe fegures of the fancy. He lays there are many robbers in Piedtume ; and that travelling in the dark is always tangerous. Such things are to be bid to the acemunt of government ; and a pretty fatere it is ondefpotifin, not to be able to kepp its rods clear from robbers. At Racconis, a great trade in winding filk: a beggarly inn-paper windows, \&c. - 7 miles.

The ${ }_{5}{ }_{5}$ th. Purfuing our road, pafs a country feat of the Prince of Catiznan, with a great inclofure of plantation, and nany Lombardy poplars. Crofs the Po by a mont commodious ferry; a platorm on two boats; the coach drove on and off without our moving. Why have we not luch ferries in Englans? All a rich level country till we come near the mountain of 'Turin, and pafs the chateau of Moncaglia, the prefent refidalace of the Count d'Artois. Reach Turin; drive to the Hotel Roval; all full. 'To the 'hotel d'Angleturre; all taken for the Prince of Condé. To the Bonne Femme, where a good landlady reccived me. I was in time for the table d'loote, at which were feveral Fresch refugees, whofe ace unts of alldirs in France are drealful. Thefe were driven from their chateaus, fome of which were in flames; it gave me an opportunity of enquiring by whom fuch enormities were comnitted; by the peafants, or wandering brigands? they faid by peatants, undoubtedly; but that the rreat and indifputable origin of moft of thofe villanies, was the fettled plan and condact of fome $I$ aders in the National Aflembly, in union with, and by the money of, one ther perfon of great rank, who would defurve the cternal execrations and reproaches of all true lirenchmen and every bonelt man: that when the affembly hal rejected the propofat of the Counr de Mirabeau, to addrels the King to eftablith the milice bourgeoife, couriurs were foon after fent to all quarters of the kingdom, to give an uniereral alarm of great troops of brigands being on the actual march, plundering and burning every where, at the inftigation of arillocrats, and calling on the people to arm immediately in their own defence: that by intelligence afterwards received from different parts of the kingdem it was found, that thefe couriers muft have been dilpatched from l'aris at the fame time ". Forged orders of the King in Council were likewife fent, directing the people to burn the chateaus of the ariltocratical party: and thus, as it were by magic, all lirance was armed at the fame moment, and the peafatits infligated to commit the enormities which have fince difgraced the kingdom.-22 miles.

The 26th. This being the firft ltalian city of renown for beauty that I have feen, I have been all cyes to-day. Some travellers have reprefented it as the prettieft town in Europe, and the Strada di Po the fineft ftrect. I hurried to it with eagernefs. 1 was in the middle of it, afking for it. Qucita, quefta! replied an officer, holding up his

[^13]hands,
hands, as if to point nut an object of great beauty which I did not fee, and in truth I faw it not. It is flrait and broad, and nearly regular. Two rows of briek barns might be fo equally. The houfis are of an ugly obfufcated brick; a few have ftueco, and that ohl and dirty: the feaffold holes in the walls of all the rat are left unfilled; fome of them are cularged by time, and feveral courfes of bricks between thofe holes, not pointed, which has as bad an effect ; the windows are narrow and poor; fome with inon balconies, fome without; the arcades, tor there is a row on cach fide of the ftreet, would alone be dellrustive of beauty : the arehes are plaiftered, which patches the line with whise: and hrough them are exhibited nothing but poor theps that incumber their fyans with all forts of lumber ; the lamps are filty or fixty yards alunder. In a word, there are fifty Ilreets at London to which this camot be compared. If thofe who have tavelled in Italy think this flreet fine, what an I to meet with in other towns? 'The Strada della Dora Groffa is by far a finer ftret than that of the Po, but the houfes are greatly too high. There is a beautiful arca te entrance to the herb-market, which feems to have furnifhed the idea of that at the now huildings of Somerfet-houfe. The flreets are almoft all quite regular, and at right angles. 1 expected that this circumflance would have been atended with much more beauty than it :s. It gives too great a fancoefs; the conftant return of the fame angles tires the eye; and I am convinced, that a city would be much more ftriking, and more admired, thit hat varied lines inHead of uniform ones. (ircles, femi-circles, crefcents, femi-elipfes, fquares, fem:fquares, and compounds, compoted of thefe, mixed with the common oblones, wouhd give a greater air of grandeur and magnificence. The moft fplendid dyjet I have feen at Turin is the fair-cafe and faloon in the chateau contiguons to the royal palace, There is nothing at Verfailles, except the gallery, to be compared with it. 'The front of this edifice is fine, and the whole toes honour to Juvara. This moning I hould have delivered my letters, but am unlucky. The Narchefe de Patavicino, prefident of the Agratian Saciety, and Signore Billatit, the fecretary of it, are both in the country. Signore Capriata, the pretident en feemen, 1 met with, but he is no pratical farmer; he has been obliging enough, however, to promife me an introdution ta fome perfons who are converfan withagriculture. Mecting with thefe dilappointments, I began to fear I might want the intelligence that was necellary to my defign; and be in that inelinible fintaon of feeme only the outfides of houles, and knowing nothing of the perfons within. With time thus on my hands, I enquired for a bookfeller, and was direeted so Signore Briolo, who prints the memoirs of all the learnd bodies here; among others, thofe of the Agrarian Society, which I bought, and atterwards turning over, fund that I made a pretty conficuous listure ia one written by the Cavaliere di Capra, colonel of the regiment of Tortona, on the fize of farms. He is a bitter enemy to large ones; not content with frietures on Piedmont, he prefies England into his fervice, and finds it necellary to refute me, as I appear in the tranilation of Monf. Freville, from which he quotes pallages which 1 never wrote. I wifhed to afiure the author that it was the French tramfuror, and not the luglith farmer that he had refuted. I laughed very heartily with Signore Capriata at this adventure of the memois. In the evening to the opera; the theatre is a fine one, though not the principal; the houfe neally full, yet all the world is in the country.

The 27 th. The Cavaliere Capra having feen Signore Capriata, I this morning recrived a vifit from him: I was ghat of an opportunity to semark to him that he had quoted paifages crroneoully from my Political Arithmetic. He faid, he was forry he fhould mifunderfand me; and beginning at once to declaim againt great farms, I begged to remark, that my opinion was exactly the fame at prefent as it had always
tere, thet the fize of farms fhould be left abfolutely free. He was violent againt great mes in Piedmont, which he faid ruined and depopulated the country, as I fhould find wheal came among the rice-grounds in my way to Milan. Signore Capra was polite, tendered me every fervic. in his power, and expreffed the utmoft readinets to affilt my aquiries. Signore Briolo, as foon as he undertood who I was, fhewed me every attention in-his powr; and that I might have the bencfit of converfing with fuch perions as he thoucht molt fuitable to my enquirics, he made known my arrival to Signore Fortana, a pratical chemift and deputy fecretary to the Agrarian Socicty; to Signore (ii). P'ict. Mariadana, profeflor of botany in the univerfity; to Signore il Dotore Buaiva, his alliftant, who travelled in France and England as a naturaliit. Fre on thefe gentlemea I had this morning a vifit, and an interefting convertation on the pretent agricultural flate of Italy. To Signore briolo I was alfo indebted for an introduction to Signore Giobert, academician, and of the Agrarian Socicty, who has gained a prize by a memoir on the quality of carths and manures. Viewed the King's palace, not fo fphendid as to raife difagrecable emotions in the breaft of a philofophical fpectator; and no marks of provinces having been opprefled to raife it. Of the pietures, which are numerous, thofe which pleated me bett, are a virgin, child, and St. John, by L.orenzo Sabatini; Apollo flaying Marfias, by Guido; a Venus, by Carlo Cigmani; a fick woman, by Gerard Dow; a virgin and child after Rapacl, by Saffa Ferrata. Vandyke thines greatly in this collection; there are the children of Charles I. finely done; a man and woman fitting; but above all, Prince Tomarafo di Carignano on horfeback, which for life and force of exprefion is admirable. In the eveaing to the opera, and being Sunday the houfe was full. The Lafea Fiera; there is a pretty duet, between Contini and Gafipar:, in the firlt ate.
The 2Sth. Walked to Moncaglia carly in the morning. The palace is boldly fituated on a hill, the Windfor of Piedmont :-commands noble views of the Po, and a rich fecme of culture. After dinner, on horfe back to Superga, the burying phace of the royal family; where the bodies of thefe princes repofe more magnificently thaia the Bourbons at St. Denis. The view from the tower is, I fuppofe, the fineft farmer's profpect in Europe. You look down on much the greater part of Piedmont as on a map, and the eyc takes in Milan at cighty miles diftance; the whole, with fuch an horizon of nountains, as is no where elfe to be found,- for the enormous maffes of fnow, which the Alps prefent, are eafier conccived than deleribed.

The 29th. Signore Briolo was this morning my conductor to Gruliafcho, to view the farm, by appointment of Signore Bracco, to whom Signore Capriata had fpoken for that purpole; we walked by the nobly planted road that leads to Suza, and l was glad to fand, that my Turin bookfeller was a farmer, though à la meta, and anfwered thofe utcful enquirics, which 1 have long found abundantly convenient, always to have ready arranged in my head, and adapted to the people into whofe hands chance may throw me. We dinet together at the village, in a villainous hole, much better adapted to fflend the fentes than to gratify them. Our repalt finifhed, we fallied forth to find Signore Bracco; he flewed us feveral watered meadows, and explained all the particulars; after which, coming to the houfe, lo! inttead of a farmer or metayer, as 1 expected, I found a large houfe, in a fyle fuperior to any farm one, and that he was a bailiff to a Signore, I do not know whom, jeweller to the King and court; an awkward explanation of this came on, and then I tound this perfon knew of my coming two day's before: - to mend the matter, after making us wait fome time he flewed himfelf. I was prefied to enter:-whether it were, that a hot walk, or a bad dinner had fretted me, or, in finc, that I did not like the jeweller's phyfiognomy, itnow not, but I lxg-
ged to be excufed, and perfifted in my refufal. A rich citizen at his country villa is to me a formidable animal. Had he faid he was a farmer, and would converfe on the fubject, or any thing of that tendency, it had been otherwife; but I departed brufqumeat, with a character, I believe, molto felvaggio. In the evening fome beautiful parfages in the Paftorella Nobile brought me into better temper.

The 3 th. The intendent 13 if ti rewned to Turin, and I had the pleafure of a vifit from him; he carried me to the univerfity, and fome other places which I had not feen before; Signore Capra alfo, and Dr. Buniva favoured me with their company. The knight, I find, is as complete a croaker as coul 1 ever iffue from the fchool of Dr. Prige himelf. Piedmont furnifhes :a inftance, which if I had touched upon to Signore Capra, he would have prefie. '...t his fervice on the queftion of farms. But there are not many circumftances more curious in politics, than the contraft between great ard fimall dominions. Here is a court fufficiently fplentid; a palace well kept; an army (not equally well kept) of thiry thonand men; fortifications many, and among the firt in the world, and a power of re iving with hofpitality and fpendor the princes of the blood of France; all this is done with thity millions of French moncy: if the comparifon had been made in the bate king's reign, the circumftances would have been ftronger. The King of France had fix hundred millions; that is to fay, tiwenty times as much: he could, therefore, with equal proportions, have twenty fuch palaces, or more exactly an hundred, as there are five in Piedmont; twenty fuch courts, and an army of fix hundred thoufand men. Lut inftead of this, the difference between the palaces of the two Kings and their courts, their parade and their vanity, is not in the ratio of one-fourth of their revenue; and as to the army of the King of Sardinia 'proportions preferved), it is fix times more powerful than that of the King of France : but the contraft goes further; for, while the debts of this country are inconfiderable, thofe of France are fo great, that the deficit alone is more than five times the whole revenue of Sardinia.

October ift. The poiitical fate of Piedmont at prefent depends almoft entirely on the perfonal character of the King, who is efteemed an eafy good natured man, too much impoled on by a fer of people without merit. The confequence of which is, that talents and all forts of abilities, inftead of being in the pofts for which they are qualified, are found only in retirement. I an told, that he often takes bank-notes in his pocketbook, and at night, if he have not given them away, exprefles uncafinefs; yet this is with an conpty treafury, and an incomplete ill-paid army. This conduet is renarkably different from that of the princes his Majefy's predeceflors, who, as all the world knows, were good aconomifts, and kept themfelves fo well prepared, that they were able to turn opportunities to their notable advantage, which muit have pafficd harren of cvents under a different fyffem of government. The King's motives, however, are excellent, and no faults are found with his government that do not flow from that fort of goodncfs ot heart which better befits a private flation than a throne. Similar errors are not expected from the prince of Piedmont, who is repref nited as a main of good madertanding, with, however, rathe: two great a tincture of religion. N thing can be more regular and decent than the conduct of all the court; no licentions plealures are bere counteranced; and very little that looks like diflipation. How the Count d'Artois paffes his time is not caly to conceive; for a prince who was dyins with cmui in the midtt of Verfailes, for want of pleafures that had not lott the ir hutre, one would fuppofe that of all the courts in Europe there was farcely one to be found lels adapted than this to his feelinge, whatever it might be to his convenicnce.

The ad. To Verceil, by a vetturino; I find but one agreeable circumftance in this way of travelling, which is going as flow and fopping as often as you pleafe: I walked molt of the way, and generally out-walked the coach, except when there was any litthe defcent. A gentleman, a proprictor and cultivator of rice near Verceil, fupped with us who was communicative.- 45 miles.
'The $3^{\mathrm{d}}$. To Novara much rice; fome yet uncut ; they are threfhing it every where, and we meet gleaners loaded with it; a nalty country, as ill to the eye as to the health: there hang the limbs of a robber in the trees, in unifon with the fombre and peftiferous afpect of a flat woody region. Crofs the Tefino, deep, clear, and rapid. This river parts the dominions of the King of Sardinia from thofe of the Emperor. At Buffalora erofs the naviglio grande, the greatell canal for irrigation that was ever made. Sleep at Magenta. - 30 miles.

The $4^{\text {th, }}$, Sunday. Reach Milan in the forenoon. This great city ftands in the midft of a dead level country, fo thickly planted that you fee nothing of it till you are in the flreets. To the Albergo del Pozzo, in time to wait on the Abbate Amoretti, fecretary of the Patriotic Society, to whom I had letters from Monfieur de Brouffonet and Signore Songa of London: I found the Abbate admirably well lodged, in the palazzo of the Marquis de Cufani : this, laid I to myfelf, looks well, to find a man of letters in a fplendid apartment, and not poked, like a piece of lumber, into a garret: it is a good feature in the Italian nobility. I entered his apartment, which is a cube of about thirty feet, from a great faloon of forty or fifty. Hie received me with eafy and agreeable politencfs, which impreffes one at firft fight in his favour. Soon after he returned my vifit. I find him an agreeable, well-informed, and interefting character. Waited alfo on the Abbate Oriani, aftronomer royal, who exprefied every wifh to be of ufe to me. At night to the opera; a moft noble theatre; the largeft as well as handfomeft I have fcen; the feenes and decorations beautiful. Though it is Sunday, I look with amazement at the houfe, for it is three parts full, even while much of the world are in the country ; - how can fuch a town as Milan do this? Here are fix rows of boxes, thirtyfix in a row; the three befl rows let at 40 louis d'or a box. This is marvellous for an inland town, wihout commerce or great manufactures. It is the plough alone that can do it. I am delighted with the accommodation of the pit; one fits on broad eafy foplas, with a good face to ftir one's legs in : young perfons may bear being truffed and pinioned on a row of narrow benches, but I am old and lazy, and if I do not fit at my eafe, would not care to fit there at all.- 10 miles.
The 5 th. In the morning, deliver letters to Signore Bignami and Vafiali, and the Meflieurs Zappas, gentemen in commerce, from whom I might receive information relative to the exports, \&.c. of the Milanefe. At noon, to the Socicty of Agriculture (called the Patriotic Society), which fortunately for me, who am a momber, had a meeting to-day: the Marelide di Vifeonti in the chair, with ten or a dozen members prefent, to all of whom Signore Amoretii introduced me. I never expect much from focieties of this fort ; but this of Milan was to day employed on a button and a pair of fciffors: it feems they want at this city to make the fincer forts of hardware, in order to rival thofe of England, and leflen the import, which, in fipite of every obflacle is ver; great : the idea originates with the government, and is worthy of its little ideas; a true pediline fpirit at prefent throughout Europe. An artift in the town had made a butoon ard half a pair of feifors, ons half Englith, and the other half of his own masufactur', for which he claimed and had a reward. Similar are the employments of Societics every where! In Eingland, bufied about rhubarb, filk, aind drill ploughs:-
at Paris, about fleas and butterflies;-and at Milan, about buttons and feifors! I hope I ihall find the Georgofili at Florence cmployed on a top.knot. I looked about to iee a practical farmer enter the room, but looked in vain. A goodly company of i Mirchef, i Conti, i Cavalieri, i Abbati, but not one clofe clipped wig, or a dirty pair of breeches, to give authority to their proceedings. We met, in what was the Jefuits' college, in the Brera, a noble building, containing many apartments equally fplendid and convenient. The Marchefe Vifconti afked me to his country feat; and the Cavaliere Caftiglioni, who has travelled in America with the views of a natural hiftorian, and who intends to print the journal of his voyage, hopes to meet me foon at his brother the Count's. Milan has been reprefented as very dear, and may be fo when no thought is taken to fave expence, ordering what you want, and leaving the bill to the hoft; but as fuch methods do not agree with my purfe, I pay by agreement, for my room, dinner and fupper ferved $\mathrm{i}_{1} \mathrm{it}$, as there are few tables d'hotes in ltaly, 6 livres of Milan a-day, or an ecu, equal to 4s. Englifh. The pit at the opera, is 2 livres 5.5 and coffee for breakfaft 75 . in ail about 55.8 d . a-day ; but fueing buildings, \&c. adds fomething. I am very well ferved for this, except in foups, which are deteflable, for I hate macaroni and abominate paftc. I have read fo much of the horrors of Italian inns, that I am very agreeably furprized to find them in the great towns, Turin and Milan for inftance, as good as in France; yet I an not at the beft here, -for I underftand the Alberghi Reale and Imperiaie are the firft; and I was not at the beft at Turin. But village ones between the great towns are bad enough. In France, one is rarely waited on at inns by men; in Italy, hitherto never by women; I like the French rinom beft. l'erret anong the bookfellers, and find more tracts, in Italian, upon
$\therefore$ :ulture than I expected. At night to the opera; the pit is fo commodious and
a sable, that it is a good lounge; the fophas and chairs are numbered; they give you a ticket, which marks your feat ; but the performers are poor. It was the Imprefario in Augufta, by that beautiful compofer, Cimarofa; there is a quintetto in it, than which nothing could be more pleafing, or repeated with more applaufe.
'The 6th. Signore Amoretti, whofe attentions and affiduity are fuch as I hall not fonn forget, this morning introduced me to Signore Beecken, a couniellor in the court of his Imperial Majelly; and then we went together iuto the country, fix or feven miles, to a farm in the road to Pavia, belonging to the Marquis Vifconti, to fee the method of making the Lodefan cheefe; attended the whole operation, which is fo totally different from what we ufe in England, that flill in making may have a great effect in rendering this product of Lombardy fo fuperior to all others. The cheefe, and the enquiries, took up the whole day; fo that it was five in the evening before we got back to Milan, where they dined with me at the pozzo ; an itinerant band of mufic giving a ferenade under the windows to the illuafrifimi, eccellentiffimi, nobili Signori Inglefi. This day has palled after my own heart, a long morning of activity, and then a dinner, without one word of converfation but on agriculture. Signore Beecken is a fenfible well-informed German, who underftands the importance of the plough; and Abbate Amoretti's converfation is that of a man who adds the powers of inflruation to the graces that euliven company.
The $7^{\text {th. Attended the Marquis de Vifconti, and Signore Amoretti to Mozzate, }}$ the country-feat of the Coumt de Caftiglione, about fixteen miles north of Milan. Stop very near the city to view the Chartreufe, which, fince the Emperor feized the revenues, and turned the monks out, has been converted into a powder magazine. View in paffing, the fine church of Ro, and the Marquis of Litta's villa at Leinate, in which the gardens are confpicuous. The Italian tafte was the undoubted origin of what
vol. Iv.
we fee in France; but decoration is carried much higher. Marble bafons, with fine ftatucs, too good for the fituation : jets d'eau, temples, colonades, and buildings, without end, almoft connected wilh the houfe; latticed, and clipped bowers and walks; miles of clipped hedges - terraces and gravel walks, never well kept, with abundance of orange-trees, are the features; and they are all in profufion. The expence enormous, both to form and to keep. There is a pinery, and not more than five or fix others in the whole duchy of Milan. Reach Mozzate. The countefs appeared what we call a genteel good fort of woman with nothing of that fpecics of foppery and affectation that forms the fine lady. The :avment I faw the Count de Caftiglione, I was prejudiced in his favour ; his phyfiognomy is pleafing; and the inftantaneons eafy affability, mixed with great quicknels and vivacity, tells one in a moment, that time would not be loft in his company. I was not deceived. He entered prefently on the object of my travels; and I was highly pleafed to find, that he was a practical farmer. After dinaer, we made an excu fion to a confiderable plantation he has executed with great judgment and fpirit. The count thewed me a part of his farm alfo, -but this is not equally fuccefsfu!.' In the evening, while the relt of the company were at cards, he fatisfied my numerous enquiries concerning the hufbandry, \&c. of the neightourhood, in a manner that left me little to wifh. After breakfaft, the next morning I returned to Milan. The feature which ftruck me mof in this vifit to an Italian nobleman, at his country.feat, is the great fimilarity of living, and of manners in different countries. There are few circumftances in the table, attendance, houfe, and mode of living, that vary from a man of fimilar rank and fortune in England or France. Only French cuftoms, however, predominate. I fuppofe one muft go for new manners to the Turks and Tartars; for Spain itfelf, among people of rank, has them not to give : and this circumftance throws travellers, who regifter their remarks, into a fituation that fhould mees with the candour of readers: thofewho record faithfully, muft note things that are common, and fuch are not formed togratify curiofity. Thofe who deal much in adventures, io contray to our own manners as to excite furprife, muft be of queftionable authority; for the fimilarity of European manners, among people of sank or large fortune, can hardly be doubted: and the difference among their irferiors is, in many cafes, more apparent than real. I ann much pleafed with this farn:y : the Countefs is a good woman, for the loves her children, her hulband, and the country. Her hufband has life, animation, quicknefs of conception, and that attention to agriculture, which made me wifh him for a neighbour. In our return, ftop at Defio, the villa of the Marguis of Cufino, which is in a ftyle that pleafes me. The houfe is not upon too great a fcale, and therefore finifhed and furnihed: the rooms are more elegant than fplendid-and more comfortable than fhewy. There is one apartment, in encauftic painting, faid to be the firf execu ted in Italy. The fecond floor contains thirteen bed-chambers, with each a fmall fervant's.room, and light clofet: and they have all fuch a comfortable, clean, Enclifh air ; and are fo neat, without any finery, that, had the floors been deal, inftead of brick, I fhould have thought myfelf in my own country. I h. a read travels that would make us believe, that a clean houfe is not to be met with in Italy; if that were once true, things are abundantly changed. I like this villa much better than the mafter does, for he is rarely here for a fortnight at a time, and that not often. The gardens are fplendid in their kind; latticc-frames of lemons twenty feet high, with efpaliers of oranges, both full hung with fruit, have, to northern eyes, an uncommon effect ; but they are all covered with glafs in the winter. Here is a pinery alfo. Dine in the village on trcut, treh from the lake of Como, at 3 livres the pound, of twenty-eight ounces. In the evening return to Milan, after an e:curfion inftructive in my princi-
pal object, and equally agreeable in the little circumftances that have power fufficient either to gild or fhade every object. Pals the houfe of the Marchefa di Fagnani, who has been much in England, and celtbrated here for being the lady with whom our inimitable Sterne had the recontre at Milan, which he has defcribed fo agreeably.- 32 miles.

The gth. This day was appointed for vifiting a few objects at Milan, for which Signore Beecken had the goodnefs to defire to be my cicerone; his chariot was ready af. ter breakfaft, and we went from fight to fight till five o'clock. Buildings and piatures have been fo often and fo well defcribed, that for modern travellers nothing is left, if they expatiate, but to talk of themfelves as much as of the objects. I hall note, in a few words, the things that fruck me moft. I had read fo much of the cathedral, and came to it with fuch expectation, that its effect was nothing. There are comparative meafurements given of it with St. Paul's and St. Peter's, that feen to rank it in the fame clafe for magnitude : to the cye it is a child's play-thing compared to St. Paul's. Of the innumerable ftatues, that of St. Laurence flayed is the fineft. The architecture of the church of St. Fedele, by Pellegrino, is pleafing; it contains fix columns of granite ; and there are other fine ones alfo in that of St. Alefandro. But I found Padro Pini, profeffor of natural hiftory, a better object than his church; he has made a great and valuable collection of foffils, and has taken the means neceffary for felf-infruction, much travel, and much experiment. At St. Celfo, there are two fatues of Adam and Eve, by Lorenzi, that cannot be toc much admired; and a Madonna, by Fontana. Here alfo are pictures by the two Procacinis, that will detain your fleps. The great hofpital is a valt building, once the palace of the Sforzas, Dukes of Milan, and given by Duke Francis for this ufe. It has a net revenue of a million of livres, and and has at prefent above one thoufand three hundred patients. At the Abhey of $\mathrm{St}_{\text {r }}$ Ambrofe, built in the ninth century, and which has round arches, anterior to Gothic ones, they fhewed us a MS. of Luitprandus, dated 721, and another of I.othaire, before Charlemagne. If they contained the regitter of their ploughs, they would have been interefting; but what to me are the records of gifts to convents for faving fouls that wanted probably too much cleaning for all the fcrubbing brufhes of the monks to brighten ? Unqueftionably the moft famous production of human genius at Milan is the laft fupper of Lionardo de Vinci, which fhould be ftudied by artifts \%ho underftand its merit, as it is not a picture for thofe who, with unlearned eyes, have only their feelings to direct them. View the Ambrofian library.

The roth. The climate of Italy, I believe, is generally in extremes; it has rained almoft inceflantly for three days paft, and to-day it pours. I have made a fad blunder, I find more and more, in felling my French equipage; for the dependence on hiring and on the vetturini, is odious. I want to go to morrow to Lodi, Sic. and have lult much time in finding a horfe and chaife; and after all can have only a miferable thing, at $7 \frac{1}{2}$ livres a day.-In the evening, at the opera, Signore Beecken came to me in the pit, and afked me if I would be introduced to one of the prettieft ladies at Milan? Scnza dubbio. He conducted me to the box of Signora Lamberti, a young, lively, and beautiful woman, who converfed with an eafy and unaffected gaiety, that would make even a farr ier wifh to be her cicibeo. The office, however, is in the hands of another, who was feated in his poft of honour, in the front of the box, vis-a-vis the lady. -Refrehments-fuppers-:nagnificent ridotto. Having menrioned the cicifbeo, I may obferve, that the cuftom feems to flourifh at Milan; few narried ladies are without this neceflary appendix to the flate : there were to night a great number of them, each attending his fair. I afked an Italian genteman why he was not in his polt as a
cicibeo? He replied, he was not one. How fo? If you have cither bufinefs or other purfuit, it takes too much time. They are changed at pleafure, which the ladies defend, by laying, that when an extention of privileges not proper to give is expected, to part with is better than to retain them.

The 11 th. To Lodi, through twenty miles of fuch amazing exertions in irrigation; that we can have in lighland no idea of it. At that tow: I found myfelf in the midtr of the world; it was the night of terminating the opera feafon of the fair: this had drawn fo much company from the neighbouring towns, that the great inn of the Columbina, formed out of a monaltery, was full in an hour. At night the opera houfe formed a gorgeous difplay:--we waited balf an hour for the arch-duke and arch-duchefs. The houfe was well lighted with wax; new to me, for in common their theatres have only darknefs vifible. It is funall, but molt elegant, new built this year: the decorations are neat; but the boxes, which are fitted up by the proprietors, are finifhed with great fhew and expence; as tine as glafs, varnilh, and gilding can make then ; and being lighted within made a blazing figure: the company crouded and well dreffed; dimmonds fparkled in every part of the houfe, while the expectation of pleafure, more animated in Italian than in lirench or Englifh eyes, rendered the coup d'oeil equally flriking and agreeable; the profufion of dancers, dreffes, fcencs, \&c. made me ftare, for a little place of not more than ten or twelve thoufand fouls. No evening could pais with a more animated feltivity; all the world appeared in good humour : the vibrations of pleafurable emotions feemed more refponfive than common, for expreffion is one great feature in Italian phyfiognomy. I have dwelt the nore on this fpectacle, becaufe I confider it in a political light, as deferving fome attention. Lodi is a little infignificant place, without tride, and without manufactures. It is the part of a dominion that may be faid to have neither, and cut off from all connection with the fea: yet there is not a town in France or England, of double the population, that ever exhibiced a theatre fo built, decoraied, filled, and furnifhed, as this of Lodi. Not all the pride and luxury of commerce and manufactures - not all the iron and fteel-the woollen or linen-the filk, glaffs, pots, or porcelain of fuch a town as Lodi, ever yet equalled this exhibition of butter and cheefe. Water, clover, cows, cheefe, money, and mufic! Thefe are the com-binations-that flring Italian nerves to enjoyment, and give leffons of government to northern politicians. The evening would have been delicious to me, if I had had my little girl with me; I could not help picturing her by my fide, fuppofing the expref. fions of her pleafure, and giving an inaginary prefence to her fmiles, her enquiries, and her enjoyment. In truth it was better adapted to her age than to mine.-- 20 miles.

The 12 th. I had brought a letter to a Signore Mayer, lieutenant of dragoons, who yefferday, when I waited on him, introduced me to the Cavaliere Don Bafiano Bona Moma, who promifed to find a perfon this morning for conducting me to a celebrated dairy of his near Lodi; he was as good as his word, and by his means I was intreduced into two dairies, one of ninety cows, and affifted in making the cheefe. In tue afternoont to Codogno, through fifteen miles of dead flat, of a fingular afpect ; it is interfected by ditches, without hedges, but a row of pollard poplars and willows on each fide. '!le heads of thefe trees form a woodland, as the fields are very fmall, and looking through the ftems, under the covert of their heads, is fonething like the prints I have feen of the forefts of Taffo, but without the wildnefs or enchantment. The inhabitants here are nuither wi:ches, nymphs, nor knights, but cows and frogs : the mufic of the latter not fo agrecable as laft night's warblings of Senefino. In truth this country is better for thefe two animals than for man. The whole is a water fpunge; the ditches innumer-
able; now water, now mud ; the climate hot; and ventilation excluded by a crowd of aciuatics. I figured ficknefs and difeale in every quarter: and the want of fcattered labitations renders the whole filent and folitary, in fipite of a conliderable population, that is concealed by the endlefs pollards. Willows, ditches, mud, and frogs! thefe are features in perfec contraft to the fcenes of lait night ! yet they are attended by a fertility that gives warbling to the throat, and quivering to the fantallic toe of beanty. At Codogno waited on Signore Bignami, a confiderable cheefe-merchant. I was in luck; a munerous company fpent the evering with him, from whom he felceted a party well acquainted with grafs and cows; and retiring into another apartment, they had the goodnefs, with him and his ton, to dedicate fonte time to the fatisfying of my enquiries; and 1 fhould be very backward if I did not obferve that the free and agreeable manner in which they did it, proves equally their liberality and politenefs. Codogno is a neat litte town of about eight shouland people. And note (for the thing is extraordinary, an opera here too; another new built theatre, of this year. It is not fo large, or fo much decorated as that of Lodi, but the form is more pleafing and more commodiose; it is more circular. Thereare apartments contiguous for the firlt lingers and dancers, communicating with a noble inn, the albergo del teatro.- 15 miles.

The 1 th. This morning Signore Bignami had kindly appointed for examining one of the principal dairies in the country, noted for making good cheefe; fortunately the farmer proved communicative and liberal,--conducted us to the fene of action very readily, and directed his dairy-man to anfiver my enquiries. We attended thomaking of a cheefe, and then walked over the farm : the farmers feem much at their eafo, Take leave of my very friendly conductors, and rach Crema, in the Venetian Qat: Here alfo a new-built opera-houfe, and the Mara from London firtt finger; they did not appear to relifh too much her altitudes of divifion, - yet fhe was confiderably applauded. Great powers in finging, when much exerted ii difficult paffages, furprize much more than they pleafe. The airs that touch the heart, are what the poet calls " lengthened fweetnefs long drawn our," that breathe a continuity of melody, flowing, not broken notcs. The number of theatres in this part of Italy is altonifhing: two great ones at Milan ; in twenty miles, another, at Lodi; in filteen, one way, Codogno; in ten, another, Crema; in ten, anoth Plaifance, \&cc--yet trade and manufacture are very incoufiderable.- 15 miles.

The 14 hh. To Lodi, through ten miles more of the fame country; bad road throught th ate of Venice; but the moment you enter the Milanefe, you find an excellent one. Return to Milan. - 30 miles.

The 15 th. The country continues flat, much of it watered, but without fuch exertions as to Lodi; all a crowded fcene of willows. - Vaprio, where we flopped, is a poor place, with a dirty, miferable, wretched inn: here an I in a chamber, that finks my fpirits as I fit and look around me; my pen, ink, and tablets, are ufelefs Lefore me; I want them for two or three fubjects that have paffed acrofs my mind in the journey, but I can do nothing; to arrange ten words with propricty, is an infurmountable effort. I never in my life wrote three lines to pleafe myielf, when the circumftances around were untoward or difagreeable; a clean, ueat apartment, a good fire, fomething to eat better than pafte-foup, with tolerable wine, give a lightefef tc the bofom, and a facility to the ideas. I have not yet read any of the Abbate Amoretti's picces; but if he writes badly in that elegant apartment, and with all the circumftances of eafe and luxury around him, I hail not have fo good an opinion of his head, as I think I fhall always have of his hears. This chamber of Vaprio is contraft fufficient to his in the Palazzo Cufani.

I cannot write, fo nuft nefle in this nidus of fleas and bugs, which they call a bed.20 miles.

The 16 th. So much rain has fallen in the night, that the Adda has rifen too much to permit a carriage to reach the ferry; we waited, therefore, four hours till the water funk. This is a circumftance to which a traveller is liable every day in Italy; for the rivers are fo little under cornmand, that a night's heavy rain will fop him. An inpatient traveller, waiting on the banks of a river for the water's flowing, might, by equal genius, be fet off as well in poetry, as a patient one is reprefnnted expecting till all was paffed. The environs of the Adda here are fine; on the fide of the Vaprio, high land, that commands the wooded vale. Arrive, at laft, at Bergamo. I had a letter to Dr. Maironi da Ponte, fecretary of the academy of Bergano, to whom I went directly. I mounted a fteep hill into the city, which is on the top of it, and iearched hard for the doctor; after examining feveral freets, a lady from a window, who feemed to pity my perplexity (for I had been sonducted to three or four ftreets in vain,) informed me, that he was in the country, - but that if I returned in the moining, I fhould have a chance of feeing him. What a black, dirty, ftinking, difmal place! I tared at fome well dreffed people I met, wondering what they had to do there; thanking my ftars that I was not an inhabitant of Bergamo; foolihly enough, as if it were the brick and mortar of a place that give felicity, and not the connections formed from infancy, and matured by habit. - 12 miles.

The ${ }_{17}$ th. Mount the hill again, in fearch for Signore Maironi; and hearing he has a brother, to find him, hould I fail. I repaired to the ftreet where the lady gave me information the night before; The was luckily at her window, but the intelligence crofs to my wihes, for both the brothers were in the country; I need not go to the door, fhe faid, tor there were no fervants in the houfe. The dufk of the evening in this dark town had laft night veiled the fair incognita, but looking a fecond time now, I found her extremely pretty, with a pair of eyes that hone in unifon with fomething better than a ftreet of Bergamo. She afked me kindly after my bufinefs, Spero che non è un gran manceminto? words of no import, but uttered with a fweetnefs of voice that rendered the pooreft monofyllable interefting. I told her, that the bofom muft be cold, from which her prefence did not banifh all teeling of difappointment. It was impoffible not to fay fomething a little beyond common thanks. She bowed in return; and I thought I read in her expreffive eyes, that I had not offended; I was encouraged to alk the fa. vour of Signore Maironi's addrefs in th country - Con gran piacere ve lo darò.-I took a card from my packet; but her window was rather too high to hand it. I looked at the door: Forzi $\grave{\text { c aperta.-Credo che si, the replied. If the reader be an electrician, }}$ and have flown a kite in a thunder-ftorm, he will know, that when the atmofphere around him becomes highly electric, and his danger increafes, if he do not quickly remove, there is a cobweb fenfation in the air, as if he was inclofed in an invifible net of the filmieft goffimer. My atmofphere, at this moment, had fome refemblance to it: I had taken two fteps to the door, when a genthman palling, opened it before me, and food upon the threfhold. It was the lady's hulband; the was in the paffage behind, and I was in the ftreet before him, the faid, Ecco un Siznore Inglefe che ba bifognc d'una dirczione a Sig. Mairoun. The hufband anfwered politely, that he would give it, and, taking paper and pencil from his pocket, wrote and gave it me. Nothing was ever done fo concifely: I looked at him afkance, and thought him one of the uglieft fellows I had ever feen. An-ill-natured by-ftander would have faid, that his prefence prevented a farming from becoming a fentimental traveller. Certain it is, one now and then meets
with terrible eyes in Italy; in the north of Europe they have attractive powers; here they have every fort of power; the fphere of the activity of an eye beam is enlarged, and he who travels as I do for the plough, muft rake care, as I Mall in future, to keep out of the reach of it. From the ramparts of the town, below the houfe of the count de Brembate, there is a profpect of fertile land, hardly to be equalled. In front, to the fouth, 2 range of Appenines rifes above the fog, that hangs over a part of the plain. To the weft, an immenfe curve of the Alps, that bound the Milanefe and Piedmont; their heads uninterruptedly in fnow, form one of the fineft mountain barriers to be innagined. To the eaft, the view an unbroken, unlimited level. This valt plain, at one's feet, feems a level wood, with towns, churches, towers, and houfes. Near Bergamo, the angle of vifion permits the fields to be feen, and therefore more picturefque. Similar features muft give fimilar profpects, this refembles that of the Superga. It is as hot today, and every day of fun-thine, as in England in June.

The 18th. Yefterday I agreed with a vetturino, to take me this morning, at fix o'clock, to I irefcia; but not being perfectly well, I infifted that he fhould not come for me with out his vetura, nor before the time. The rafcal knocked me up at five, and then without the carriage; it was only four fteps, he faid, and wanted to hurry away my trunk. I begin to know them, and therefore fteadily refufed to ftir: after much vain perfuafion, away they went, and in three quarters of an hour returned. The fellow drove me a full mile and half, on th: road to Brefcia, to an inn, where there was another vetturine, to whom he had fold me; and there I found myfelf, packed with three other perfons, in the wort place; to the contrary of all which the fcoundrel had figned an agreement. My expreffions of anger only got me laughed at. The world has not fuch a fet of villains as thefe vetturini. I have read guides and directories, and travels, that fpeak of this way of journeying as paffable;-if not good, very bearable; but they muft be very partial, or very carelefs, if they mention them without indignation. Their carriages are wretched, open, crazy, jolting, dirty dung-carts; and as to their horfes, I thought, till I faw them, that the Irifh garrans hed no rivals on the globe; but the cavalli de vetturini convinced me of the error. My company were two merchant-like people, and a young man going to the univerfity of Padua; the two firt repeating prayers, and counting beads. How the country came to be well irrigated, is a queftion? Pater-nofters will neither dig canals, nor make cheefe.- 32 miles.

The 19 th. I had letters for Signore Pilati, fecretary to the fociety of agriculture; he was in the country at his brother's farm, whither I went with pleafure; he was to introduce me to Count Corniano, the prefident, but he is abfent, twenty miles out of my road. In the evening to the opera; the houfe large, but ugly: the Avara, badly acted; and the tafte of the audience (the pit, not the boxes, fhew a nation) fill worfe. Puns, conceits, diftortions, and exaggerated action, gained great applaufe. A child, telling his name, of ten or a dozen hard fyllables, and an exaggerated mimickry of attempting to repeat them, were encored more violently than the fineft airs would have been. This depravity of national tafte is amazing, amongtt a people that have produced fuch proofs of genius in almoft every walk of life.

The zoth. After a repetition of the old plagues, to find a vetturino for Verona, agree at laft at the extravagant price of 33 lire. Depart, after dinner, with a young woman and a boy of eight or nine years old. She had not two ideas beyond her fnuff-box, and a crucifix. I have no opinion of Venetian police, from the villainous roads through all their territory ; they confift every where of great ftones, broken pavements, or mud. The country is not near fo rich as the Milanefe, but all thickly inclofed with hedges, full of mulberries; and incumbered, to ufe Profeffor Symonds's juft expreffion, with pollards
pollards for traning vines. Reach Dofenzano in the dark. What my religious companien did with hereff, I knownot; Ifupped alone, thanking God the had not the eyes of the Bergamafyue fair. In the night, I thought the noife of water was different from that of a frean, and opening the windows in the morning, found it the waves of a fine lake. The Lago di Garda was out of my recollection.- 15 iniles.

The 2 ift. Coalt the lake, with good views of it for feveral miles. From Brefcia to Verona, but efpecially to Defenzano, I believe there are fitty croffes by the fide of the road for deaths. When a perfon is murdered they fet up a crois for the good of his foul. They had better inflitute a police for that of his body. What a fematal to a govermment are fuch proots of their negligence! yet that of Venice is called a wife onc. Impaffable roads, towns unlighted, and a full harveft of affaffinations; with men counting their beads, and women croffing themfelves, are the chicf figns of wifdom thave yet feen. Arrive at Verona in time to deliver a letter to Signore Cagniola, altronomer and fecretary of the Agrarian Society: this muft be a pretty inititution, a lociety of farmers, with an altronomer for their fecretary. He introduced me at the colfee houfe of the Piazza to fome lovers of agriculture; and made an appointment with the prelident of the fociety fur to-morrow. - 25 milcs.

The 22 d . Ill luck: the prefident is obliged to go into the country; and he thir'ss me, I fuppofe, like Italian theorifts, tied to a town. Signore Cagnola directed his fervant to thew me to the houfe of Signore Michael Angelo Locatelli, to whom he had named the object of my journey laft night. I found this gentleman, who is engaged in commerce, but who has two farms in his hands, ready to converfe with me on the fubject of my enquiries ; of Signore Cagnioha, I faw or heard no more. I felt myfulf unconfortable at Verona, till I had feen the amphitheatre, which is in tre:th a nobte remain of antiquity, lolid and magnificent enough yet to lalt perhaps fome thoufands of years; that of Nifmes, cluttered up with houfes, mult not be named with this. As I ftood on the verge of this noble building, I could not but contemplate in idea, the imamerable crouds of people who had been fpectatore of the feenes exhibited in it : the reflection was attended with what is to me a melancholy inpreffion-the utter oblivion in which fuch hotts are now loft! tine has. fwepe their memorics trom the carth has left them notraces in the records of mankind; yet here were uit and beauty, wealth and power ; the vibrations of hope and fear ; the agitations of cxertion and enterprize——all buried in the filence of feventeen hundred years!-I read the works of to few pets, that I know not if the idea of fuch oblivion have been to them as melancholy as it is to me; if fo, they have doubtlefs given energy to the lentiment, by the force and beauty of their exprefions.

The 2.3d. This morning, I took a cicerone to attend me to view churches and palaces, an uncomfortable miethod, but when a rraveller has one principal purfuit, fuch fecondary objects muft give way. The great aule here, as every where elle, is being carried to too many things. Nothing frikes more at Veroua than the works of an archited, whofe name is litle known in Fngland, San. Michael Michicli ; they are of diftinguifhed merit, and muft pleafe every cyc. The chapel of the Pellegrini family, in the Bernardine church, and the rotunda of St . Gcorgio, are beautiful editices. 'There is fonething fingular in the Palazzo Bevilaqua, an idea which might have been copied with more fuccefs, than many ohers that have been repeated oficn. The Palazzo di Configlio is fimple and elagant, and prefents one of the moft pleafing examples of an arcade, for a flrcet or iquare. The theatre is large, but nothing after Milan. My expences at Brefcia, and at Verona are, dinner 3 pauls, fupper 2, chamber 2 ; which at gd. Englifh, are 2s. idd. a. day; and as I have rooms not at all bad, good bede, and am as well ferved at the meals 25 I require, it is remarkably cheap.

The

The 24 th. The country to Vicenza is all flat, and moftly of a fingular face; rows of elm and maple pollards, with vines trained up, and from tree to tree; between the rows arable. This fyftem is not difagreeable till it grows tedious to the eye,-_32 miles.

The 25 th. Wait on Count Tiene, to whom I had a recommendation; he opened the Ictter, but found it was to another Count Tiene, who lived in the country, near Vicenza; reading in it, however, fome expreflions of commendation, which friends are apt to ufe in fuch letters, he with great eafe and politenefs, as he returned me the paper, offered me any alliftance in his power: "Yours, Sir, is an errend that ought to recommend you to all mankind; and if you find the leaft difficulties with others, I beg you will return to this houfe," which is one of the Palazzi di Palladio. I waited then on the Abbatc Pierropan, profeffor of phyfics and mathematics. He had the direction, for lome years, of the oconomical garden, given by the flate for experiments in agriculture, now in the hands of the Agrarian Academy: he received me with great politenefs; and not only exprefled every wifh to affift me, but entered immediately on the bufinefs, by propofing a walk to call on the Count de Boning, prefident of that academy, in our way to the garden. I have a poor opinion of all thefe eftablifmments on a fmall fcale; in any hands they are not calculated to do much; and in hands not truly practical, they are calculated to do nothing. The Count de Boning, finding that I wihed to converfe with fome real common farmers, appointed the afternoon for going into the country, about three miles, to a farm of his, where I Thould find an intelligent perfon: he then took his leave for the prefent,-and Signore Pierropan and myfelf proceeded to the villa of the Count de Tiene; as he was abfent for an hour only, we employed that time in walking a little further, to view the celebrated rotunda of Palladio, belonging to Count Capra, one of the three greateft works of that great genius they poffel's at Vicenza. It is of a beautiful mean, between decoration and fimplicity; the diffribution feems a new and original thought, much more adapted, however, to Italy than to England; for, in the fpace of one hundred Vicentine feet, we might, relativcly to our climate and manners, have a houfe far exceeding it. I am concerned to fee to delicious a morfal fuffered to go much to decay; the plaifter on the brick columns is wearing off, and other neglect vifible. The beauty of the environs of Vicenza exceeds any thing I have feen in Italy, viewed from the hill on which thefe houfes, and the church, Santa Maria del Monte, are fituated; the city in the rich plain, and the hills fpread with white buildings, crowned by the Alps, are fine. The Count de Tiene, with the alliftance of another nobleman, of more experience, who happened to be prefent, gave me fome information, relative to the part of the Vicentine, in which their eflates are fituated. Quitting him, I begged the Abbate Pierropan to favour me with his company at dinner, by which means I had the benefit of his converfation fo much longer on the favourite topic. The Abbate de Traico, vice-prefident of the academy, joined us. After dinner, according to appointment, to the Count de Boning, whofe coach was ready, and carried us to the farm. Fortunately the farmer, a fenfible and intelligent man, was ready to anfwer all fuch enquiries as I put to him. At night, returned to the city, after a rich day, that pays for the trouble of travelling.

The 26th. My friendly Abbate, continuing his obliging offices, had the goodnefs to accompany me this morning to a very famous woollen fabric, at prefent under the direction of an Englifhman; and to a magazine of earthern-ware, in imitation of Mr . Wedgwood. It is furely a triumph of the arts in England, to fee in Italy Etrufcan forms copied from Englifh models, It is a better imitation than many I have feen in
vol. iv.
K $k$
France.

France. View the Olympic theatre of Palladic, which pleafes all the world; nothing can to more beautul than the furm, or more clegant than the colonate that furrounds in. Of atl his worke here, I like the Palazeo Bartarama leath. I am forry to fee, that moflo of Patlatio's chitices are of brichs tenceovd, except the ladazao Ragione, which is of durable flone ; and that there is hardly one of the m which is not out of repair. 'I he root of the balazo di Ragionc, which mult oftend every eye, is not of Palladio; n:ly the cale of areades that firround the buiding, which is one valt room of two hundred fol by eighty, wred fion the courts of juflice, and alfo as a common jakes by the thot, and dreaiffily gamithed. A pretty ufe to which to apply an edifice of Paltatio. 'The brick colmme of this great archited are of the fined work I ever faw; and fome of the theco bat now tailing, after two humdred years. At Verona and Vieenza, thereare wey few new homfes, and no figns, that I could fee, of the wealth and profperity of the prefent age. 'There are exceptions, but they are few. A filk mercham here has built a good houfe; and Signore Cordelina, an advocate at Venice, a large and handfome one, that coft 100,000 ducats, without being finifhed: he made his fortune by pleading.

The 27th. 'To ladua. The country, which has been called a garden by travellers, not at all beter cultivated than before, but deeper and richer. The ame flat, lined into rows of pollards and vines in the fame manner ; very little irrigation, except fome rice. Waited on Signore Arduino, experimenter in agriculture, on a farm, or rather a garden of welve acres, given by the thate. I had heard much of this oceonomical garden, and of the great number of ufeful experiments made in it ; fo much, indeed, that it weighed confiderably with me in the arrangement of my journey; Venice was no object; and I could not, if I took l'adua, have time for the Pontine marthes and Rome, which, by the direct road, I could have reached trom Milan; but an experimental farm, the firfl I was afliured in Europe, and $u$ hich had thrown light on various impurtant enquiries, was an olject which I ought, as a farming traveller, to prefer to any city, and I determined accordingly. Signore Arduinoreceived me politely, and appointed to-morrow for that gratificaion. At night to the opera, the Due Baroni, of Cimarofa, whofe mufic to me has always fomething original and pleafing; but though the parts Were not ill performed, and the orcheftra powerful, yet the houfe being almolt empty, and thofe in it wearing fueh a fhabby appearance, and all the muticiaus fo dirty and undreffed, that I telt here, what I have often done before, that half the charms of a theare depend on the audience; - one mult be in good bumeur-a certain extilaration mult be fpringing in the bolom; willingnefs to enjoy mult be expanded into cujoyment by the fympathy of furrounding objects. Ileafure is caught from eyss that farkle with the expectation of being plealid. Empty boxes, and a dirty pit, with a theatre but hall lighted, made the mufie, with all its gaiety, fombre; 1 left Gulielmi's Paltorella nobile, for the filence of my cbamber.- 21 miles.
'The 28th In the morning, viewing buildings, of which fome are worth the trouble: then to deliver letters, but I was not formate in tinding Mcflieurs the profeflors at home: S:gnore Arduino was fo by appointment, and thewed me the experimental farm, as it ought to be catled, for he is profeflor of pra tical agriculture in this celebrated univerfity. I will enter into no detail of what I haw here. 1 made my bow to the profefor; and only thought, that his experimens were hardly worth giving up the capital of the world. If I kerp my refolution, this fitall be the latt occonomical garden that I will ever go near. Among tha buildinge, I viewed today, I was much Itruck with the church Santa Jutina: theugh built in aup pertect Ityle, it has, on entering, an tfict unufually impofing. It is clean, and well kept; the pavement a very fine
one, of marble-and the magnitude being confiderable, forms, on the whole, a fphondid coup d'ceil. 'That of St. Anthony is little, on comparifon, and made lefs by multiplied divifions and num rous decorations. Numbers were on their knees before the fainted flurine, to which millions have reforted. Here mingled faith, folly and enthuthalin, have fought confolation, and found more than they merited. The Palizan di Configlio, which we fhould call the town hall, is one of the greatelt-if not the greatelt room in Europe. It is three hundred feet long, and one hundred broad; it does nut want the excremomitious garniture of that of Vicenza.

The 2gth. Waifed, by appuintment, on Siznore Carbury, profefor of chemilly; a lively pleafing man, with whom I wilhed to converfe a little on the application of his fcience to agriculture; but that was not eafy. Politics came acrofs him, in which-I happence to mention the extraordinary profperity of Eingland fince the American war:; and he took the clue, and conducted it throunh fuch a labyrinth of admirals, genemals, red-hot balls, and floating batteries:-Rodncy, Ellliot, Necker, :and Catharine, with Lord knows what befides, that I thought he meant to make a tour as great as Mr. Wraxall's. He however gave me a note to the elebrated attronomer, Signore T'oaldo, to whom I wanted an introduction, and whole obfervatory I viewed. He aflured me, that he continues firmly of the fame opinion, of which he he:s always been, relative to the influence of the moon on our feafons, and the importance of attending to the lunar period of eighteen years. I begged the titles of his memors, as I wat yet procured only his Meteorologia applicata all' 'Igricolura; he faid the others vere lifficult to find, but he would give me them. For this generous offer, I expreffed my warmeft thanks, and readily accepted it. On defcending into his library, tr prefented me with the fupplement to what I had; and alfo his tract, Della Vera Infl cusis, \&c. After fome other converfation, he told me, the price was 8 lire, and the fu, pleatent, 30 foldi. I was at a lofs to know what he meant, by telling me the price of his book; for, to offer him money, would, I feared, affront him. After fome minutes, he again reminded me, that the price was $9 \frac{1}{1}$ lire : on which I took out my purfe. The Vera Influenza, he faid, was only fix lire; but being farce, he muft have eight for it, which, with $3 \rho$. for the other, made $9 \frac{1}{2}$ livres. I paid him, and took my leave. There was not the leaft reafon to expect Signore Toaldo to make me, an utter flranger, a prefent of a farthing; but lis manner made me linile. I had left a letter yefterday at the houfe of the Abbate Fortis, well known in England by his travels in 1)almatia; to day I received a vifit from him. He has that livelinels and vivacity which diftinguifh his nation; was polite in his offers of fervice, and entered into converfation concerning the vines of his country. He travelled, many years ago, with Lord Briftol and Profeffor Symonds; and I was glad to find, that he fooke as haudfomely of them bo is as I have heard them both mention him.
'I his is the third evening I have fpent by oll at Padua, with five lettars to ir ; I do not even hint any reproach in this; they are wife, and 1 do traly commend their good fenfe: I condemn nobody but myfelf, who have, for fifteen or twenty gears pall, whenever a foreigner brings me a lette;, which tome hundreds have done-given bim an Englifh welcome, for as many days as he would favour me wihh his company, and fought no other pleafure but to make my houfe agreeable. Why 1 muke this minue at Padua, I know not; for it has not been peculiar to that place, but to feven cighthe of all 1 have been at in Italy. I have millaken the matter through life abundanly-and find that foreigners underftand this point incomparably better than we do. I an, however, afraid that I fhall not learn enough of them to adopt their cuftoms, but comtinue thole of our own nation.

The 3 oth. I had been fo fick of vetturini, that I was glad to find there was a co. vered paffage boat that goes regularly to Venice; I did not expect much from it, and
therefore was not difappointed to find a jumble of all forts of people; except thofe of fortune. There were churchmen, two or three officers, and foine others, better dreffed than I fhould have looked for, for in Italy people are obliged to be ceconomical. At Dolo, the half way place, I formed, for dinner a little party, of two Abbati, an officer, and a pretty Venetian girl, who was lively and fenfible. We dined by ourfelves, with grcat good humour. After leaving Fufina, there is from the banks of the canal (I walked much of the journey), at the diftance of four miles, a beautiful view of the city. On entering the Adriatic, a party of us quitted the bark, and to fave time, hired a large boat, which conveyed us to this equally celebrated and fingular place; it was nearly dark when we entered the grand canai. My attention was alive, all expectancy : there was light enough to fhew the objects around me to be among the moft interelting I had ever feen, and they ftruck me more than the firft entrance of any other place I had been at. To Signore Petrillo's inn. My companions, before the gondola came to the lteps, told me, that as foon as Petrillo found me to be a Signore Inglefi, there would be three torches lighted to receive me:-it was juft fo: I was not too much flattered at thefe three torches, which fruck me at once as three pick-pockets. I was conducted to an apartment that looked upon the grand canal, fo neat, and every thing in it fo clean and good, that I almoft thought myfelf in England. To the opera. A Venetian audience, a Paduan, Milanefe, Turinefe, \&c. exactly fimilar for dancing. What with the ftupid length of the ballets, the importance given to them, and the almoft exclufive applaufe they demand, the Italian opera is become much more a fchool of dancing than of mufic. I cannot forgive this, for of forty dances, and four hundred paffages, there are not four worth a farthing. It is diflorted motion, and exaggerated agility; if a dancer places his head in the pofition his heels fhould be in, without touching the ground; if he can light on his toes, after twirling himfelf in the air; if he can extend his legs, fo as to make the breadth of his figure greater than the length; or contract them to his body, fo as to feem to have no legs at all; he is fure to receive fuch applaufe, fo many bravos, and bravifimos, as the moft exquifite airs that ever were compofed would fail to attract. The ballarine, or female dancers, have the fame fury of motion, the fame energy of diftortion, the fame tempef of agility. Dances of fuch exquifite elegance, as to allure attention, by voluptuous cafe, rather than frike it by painful exertion, are more difficult, and denand greater talents: in this fuperior walk, the Italians, where I have been, are deficient.- 24 miles.
The $3^{1}$ fl. My firft bufinefs was to agree with a gondolier, who is to attend me for 6 paoli a day. This fpecies of boat, as all the world knows, is one of the moft agrecable things to be found at Venice; at a trifling expence, it equals the convenicnce of a coach and a pair of horfes in any other city. I rowed out to deliver letters. Venice is empty at prefent, almoft every body being in the country; but I met with Signore Giovanne Arduino, fuperintendant of agriculture throughout the Venetian dominions, who has a confiderabic reputation, for the attention he has given to this object, and for fome publications on it. It may be fuppofed, from his refidence in this cily, that he is not himfelf a practical hufbandman. Spent a few hours among palaces, churches, and paiatings. Fivery where ia Italy, the number of thefe is too great to dwell on. I flall only note, that the picture which made the greateft impreflion on me, was the family of Darius at the feet of Alexander, by Paul Veroncfe. The expreffion of the moment is admirably caught; the ftory well told; the grouping fkilful; the colouring mellow and brilliant ; the wnole nature ; all is alive; the figures fpeak; you hear the words on their lips; a calm dignity is admirably mixed with the emotions of the monent. Here was a fubject worthy of employing a genius. It is in the Palazzo Pifani. Titian's prefentation in the Temple, in the Scuola della Carità, pleafed me greatly. His be-
witching pencil has given fuch life and luftre to fome figures in this piece, that the eye is not foon fatisfied with viewing it. The Doge's palace contains fuch a profufion of noble works by Tiziano, Tintoretto, Paolo Veronefe, Baffano, and Palma, as to form a fchool for artifts to ftudy in. Cochin, in his Voyage d'Italie, has given the particulars, with criticifms that have lefs offended the Italians, than moft other works of a fimilar kind. The brazen horfes, given to Nero by Tiridates, carried to Conftantinople by Conftantine, and brought thence by the Venetians, when they took that city, are admirable: pity they are not nearer to the eye. The mouths of the lions, not lefs celebrated than Venice itfelf, are ftill in exiftence; I hope regarded with deteftation by every man that views them. There is but one accufation that ought to enter them; the voice of the people againt the government of the ftate. In the evening at the theatre, (a tragedy) I was agreeably difappointed, to find that the Italians have fomething befides harlequin and punchinello.

November 1. The cheapnefs of Italy is remarkable, and puzzles me not a little to account for ; yet it is a point of too much importance to be neglected. I have, at Petrillo's, a clean good room, that looks on the grand canal, and to the Rialto, which, by the way, is a fine arch, but an ugly bridge; an excellent bed, with neat furniture, very rare in ltalian inns, for the bedttead is ufually four forms, like trufsles, fet together; fine fheets, which I have not met with before in this country; and my dinner and fupper provided at the old price of 8 paoli a-day, or 3 s. 4 d . including the cham. ber. I am very well ferved at dinner with many and good difhes, and fome of them folids; two bottles of wine, neither good nor bad, but certainly cheap; for though they fee I drink fcarcely half of it in my negus at fupper, yet a bottle is brought every night. 1 have been affured, by two or three perfons, that the price at Venice, à la mercantile, is only 4 to 6 paoli; but 1 fuppofe they ferve a foreigner better. To thefe 8 paoli, 1 add 6 more for a gondola; -breakfaft 10 foldi; if I go to the opera, it adds 3 paoli;-thus, for 7 s. 3d. a.day, a man lives at Venice, keeps his fervant, his coach, and goes every night to a public entertainment. To dine well at a London coffeehoufe, with a pint of bad port, and a very poor defert, cofts as much as the whole day. here. There is no queftion but a man may live better at Venice for 100l. a year, than at London for 500. ; and yet the difference of the price of the common neceflaries of life, fuch as bread, meat \&c. is trifling. Several caufes contribute to this effect at Venice; its fituation on the Adriatic, at the very extremity of civilized Europe, in the vicinity of many poor countries; the ufe of gondolas, inftead of horfes, is an article perhaps of equal importance. But the manners of the inhabitants, the modes of living, and the very moderate incomes of the mafs of the people, have perhaps more weight than either of thofe caufes. Luxury here takes a turn much more towards enjoyment, than confumption; the fobriety of the people does much, the nature of their food more; paftes, macaroni, and vegetables are much eafier provided than beef and mutton. Cookery, as in France, enables them to fpread a table for half the expence of an Englifh one. If cheapnefs of living, fpectacles, and pretty women, are a man's objects in fixing his refidence, let him live at Venice: for myfelf, I think I would not be an inlabitant to be Doge, with the power of the Grand Turk. Brick and flone, and fky and water, and not a field or a buth even for fancy to pluck a rofe from! My heart cannot expand in fuch a place: au admirable monument of human. induftry, but not a theatre for the feelings of a farmer!-Give me the fields, and let others take the tide of human life, at Charing-crofs and Fleet-ditch *. Called again on.

[^14]Signore Arduino; converfe on the flate of agriculture in Italy, and the caufes which have contributed to accelerato or retard it; and from him to a confervatorio at the Ofpalletto. Dr. Burncy, in his plealing and elegant tour, has given an account of them.

The 2d. A tour among Chicfe, Scuole, e Palazzi; but there is fuch an abundance of buildings and collections to which books fend one, that much time is always loft. The only traveller's guide that would be worth a farthing, would be a little book that gave a catalogue of the beft articles to be feen in every town, in the order of merit. So that if a man in paffing have but one hour, he ufes it in fecing the beft object the place cont.uns; it he have three days, he takes the bett the three days will give him ; and if he ftay three months he may fill it with the like gradation; and what is of equal confequence, he may flop when he pleafes and fee no more; confident, as far as he has extended his view, that he has feen the objects that will pay him beft for his attention. There is no fuch book, and fo much the worfe for t"avellers. In the library of St. Mark among the antiques, are Commodus, Auguflus, and Adrian; and more particularly to be noted, a dillen gladiator: a fingular and whimfical Leda, by Cocenius. In the Palazzo Barbarigo, the Venus and the Magdaien of Titian, are beautiful, though they have loft anch of their glowing warmth by time. Two Rembrandts in the Palazzo Farfeti. A Holy Family, by Andrea del Sarto. Titian's portrait, by himfelf. I finified by going up St. Mark's tower, which is high enough to command a diflinet view of all the iflands on which Venice is built, and a great range of coaft and mountains. The country fecms every where a wood. Nothing rivals the view of the city and the inles. It is the moft beautiful, and by far the moft fingular that I have feen. The breadth of the Giudecea canal, fpread with hips and boats, and walled by many noble buildings, with the ifles diflinet from Venice, of which the eye takes in four-and-twenty, form, upon the whole, a coup d'ocil, that exceeds probably every thing the world has to exhibit. The city, in general, has fome beautiful features, but does not equal the idea I had formed of it, from the pictures of Canaletti. $\Lambda$ poor old Gothic houfe makes a fine figure on canvas. The irregularity of frent is greater perhaps than in any other city of equal importance ; no where preferved for three houfes together. You have a palace of three magnificent flores, and near it a hovel of one. Hence, there is not that fpecies of magnificence which refults from uniformity; or from an uninterrupted fucceffion of confiderable edificio. As to ftreets, properly focalled, there is nothing fimilar to them in the world; twelve feet is a broad one ; I meafured the breadth of many that were only four and five. The greater part of the canals, which are here properiy the flreets, are fo narrow, as to take off much from the beanty of the buildngs that are upon them. St. Mark's place has been called the fineft lquare in Europe, which is a fine exagreration. It appears large, becaufe every other fipace is Imall. 'I he buildings, however, diat furround it are fome of them fine ; but they are more interefting than beautiful. This foot is the immediate feat and heart of one of the moft celebrated republics that has exifted. St. Mark's church, the Doge's palace, the library, the Doge himielf, the nobles, the famous cafinos, the coffechoules: thus, St. Mark's fquare is the feat of government, of politics, and of intriguc. What Venice oflers of power and pleafine, may be fought here; and you can ufe your legs commodioufly now where effe. Wenice flines in churches, palaces, and one fine fiuare; and the beauty of the large canals is great. What the wants are good common houfes, that mark the wealth and cafe of the people; intead of which, the major part are Gothic, that feem atmoft as old as the republic. Of modern imon's there are few-and of new ones fewer; a fure proof that the itate is not flourithing. Take
it, however, on the whole, and it is a moft noble city ; certainly the the moft fingular to be met with in the world. The canal of the Giudecca, and the grand canal, are unrivalled in beauty and magnificence. Four great architects have contributed their talente for the fine buildings to be met with here ; _- Palladio, St. Micheli, Sanfovino, and Scamozzi. The church of St. Georgio Maggiore, by the firt, is of a noble fim. plicity ; and that of St. Maria della Saluta, by St. Mieheli, has parts of admirable beauty ; he feems always happy in his domes; and the portal of this church is truly elegant. If a genius were to arife at prefent at Venice, as great as Palladio, how would he find employinent? The tafte of builling churches is over: the rich nobles have other ways of fpending their incomes. Great elifices are ufually raifed by newly acquired fortunes; there are now cither none, or too inconfiderable to decorate the city. In England, all animated vigour of exertion is among individuals, who aim much more at comfort within, than magnificence without ; and for want of public firit and police, a new city has arifen at London, built of baked muland afhes, rather than bricks; without fymmetry, or buauty, or durition; but diftinguihed by its cleannefs, convenience, and arrangement. At a prova, or rehearfal of a new opera, Il Burbero benefico, by Martini of Vienna, much to my entertainment.
The 3 d . To the the arfenal, in which there is very little indeed worth the trouble of viewing ; rravellers have given ftrange exaggerations of it ; the number of fhips, frigates, and gallies is inconfiderable; and 1 came outof this famous arfenal, with a much meaner opinion of the Venctian naval force, than I had entered it. Yet they fay there are three thoufand men conftantly employed: if there are half the number, what are they nbout? The armoury is well arranged, clean, and in good order. The famous bucentaur is a heavy, ill built, $u$ ily gilded monter, with none of that light airy elegance which a decorated yachit has. A thing made for pleafure only, fhould have at leaft an agreeable phyfiognony. I know nothing of the ceremony fo good as Shenfone's Itanza, comparing the vanity of the Doge's fplendour on that day, with the real enjoyment which a hermit on her thore has of his ducal cara fofa. The fhips in this arlenal, even of eighty eight guns, are built under cover; and this is not fo great an expence as might be thought ; the buildings are only two thick brick walls, with a very light ronf: bur the expence is probably nuch more than faved in the duration of the ihip. Imsunted by the feaffilds, and catered one of eighty-cight guns, that has been tweniy five years building, and is not above four-fifths finifhed at prefent. At the opera- The fex of Venice are undoubtedly of a diftinguifhed beauty; their complexions are dhate, and, for want of rouge, the Frencis think them pale; but it is not perfon, nor complexion, nor features, that are the charaterific ; it is expreffion, and phyfiognomy; you reognize great fweetnefs of difpofition, without that infipility which is fometimes net wnh it ; charms that carry a magic with then, formed for fenfibility more than a nimpor to make hearts feel inach more than tongues feak. They muit be generally i a tifinh here, or they would be hideous from their drefs; the common one, at prefer an ©rir cloth cloak, and a man's cocked hat. The round hat in England is ren aminine by feathers and ribbons; but here, when the petio. coats are conceale wow truin at a figure before you recognife the fex. The
 indee their region. At produtions in all the fine and elegant arts have fhewa a fendity, a facility menion, mat furpalfes every other nation; and if a reaton be fought, for the wat energy of charact. 1 with which the modern tralans have been repronchel (perha;s unjulit ) we may pofibly find it in this exquifte tatte-perhaps incomiftent in the fane chanater: with thofe rougher and more rugged feelings, that
refult from tenfion, not laxity, of fibre. An exquifite fenfibility has given them the empire of painting, fculpture, architecture, poetry, and mufic; whether or nos to this it may be imputed that their beautiful country has been left under the doninion of Germars, Frenchmen, and Spaniards, is a quefton not difficuit to decide.

The 4 th. I am in double luck; two perions, to whom 1 had letters, are returned from the country. I waited upon one of them who received me in a very friendly siamer, and eatered into a converfation with me intere mg, becaufe on fubjects of importance. I explained to him the object of my travels; and told him that I refided a few days in great cities, for the advantage of converfation on thofe topics of political ceconviny, which concerned the general welfare of all nations. He told me very frankly that he was no farmer, and therefore for the practical part of my en@̣uiries could not fay much : that as to the other objects, which were without doubt important, he would give me any ;nformation in his power. I faid, that I wifhed for none on points which the nature of the government made improper to alk about ; and if inadvertently I fhould demand any thing of that complexion, he would have the goodnefs te pardon and pafs it by. He interrupted me haftily, "foreigners are flrangely apt to entertain falfe ideas of this republic ; and to think that the fame principles govern it at prefent as are fuppofed to have been its guidance fome centurics paft. In all probability balf of what you lave heard about it is erroncous; you may converfe as freely at Venice as at London; and the ftate is wife enough (for in fuch cafes it is really very moderate and tendir) to concern itfelf not at all with what does not tend directly to injure or difturb the eftablifhed order of things. You have heard much of fpies, and executions, and drownings, \&c. but, believe me, there is not one circumftance at Venice that is not changed, and greatly too, even in twenty years." Encouraged by this declaration, I ventured to put enquines on population, revenues, taxes, liberty, \&c. and on the government as influencing thefe; and it gave me no flight fatisfaction to find that he was the man he had been reprefented; -able, keen, and intelligent; who had feen much of the world, and underfood :hofe topics perfectly. He was fo obliging as to afk me to fpend what time I could with him-faid, that for fome days he fhould be conftantly at home; and whenever it fuited ine to come, he defired me to do it without ceremony. I was not equally fortunate with the other perfon; who feemed fo little difpofed to enter into converfation on any fubject but trifles, that I prefently faw he was not a man for me to be much the wifer for: in all political topics it was eafy to fuppofe motives for filence; but reladively to points of agriculture, or rather the produce of eftates, \&c. perhaps his ignorance was the real caufe of his referve. In regard to cicibeifm, he was ready enough to chat; he faid that foreigners wer every illiberal in fuppofing that the cuftom was a mere cloak for vice and licentioufnefs; on the contrary, he contended, that at Paris, a city he knew well, there is juit as much freedom of manners as at Venice. He faid as much for the cuftom as it will bear; mollifying the features of the practice, but not removing them. We may however hope, that the ladies do nt: merit the fcandal with which foreigners have loaded thern; and that the beauty of fome of them is joined with what Petrarch thought it fo great an enemy to:

Dele gran nemiche infiem: crano aggiunte
Bellezza ed onefta
At night to a new tragedy of Fayel, a tranflation from the French; well acted by Signore and Signora Belloni. It is a circumftance of criticifm, amazing to my ears, that the Italian language lbould have been reprefented as wanting force and vigour,
and proper only for effeminate fubjects. It feems, on the contrary, as powerfully expreffive of lofty and vigorous fentiments, of the terrible and the fublime, as it is admirable in breathing the fofteft notes of love and pity; it has even powers of harfh and rugged expreffion. There is nothing more flriking in the manuers of different nations, than in the idea of fhame annexed to certain neceffities of nature. In England a man makes water (if I may ufe fuch an expreffion) with a degree of privacy, and a woman never in fight of our fex. In France and Italy there is no fuch feeling, fo that Sterne's Madaue Rambouillet was no exaggeration. In Otahite, to eat in company is fhameful and indecent; but there is no immodefty in performing the rites of love before as many feectators as chance may affemble. There is between the front rowof chairs in the pit and the orcheftra, in the Venetian theatre, a fpace of five or fix fert without floor ; a welldrefled man, fitting almoft under a row of ladies in the fide-boxes, ftepped into this phace, and made water with as much indifference as if he had been in the flreet; and nobody regarded him with any degree of wonder but myfelf. It is, however, a beaftly trick : Shame may be ideal, but not cleanlinefs; for the want of it is a folid and undoubted evil. For a city of not more than one hundred and fifty thoufand people, Venice is wonderfully provided with theatres; there are feven; and all of them are frid to be full in the carnival. The cheapnefs of admiffion, except at the ferious opera, undoubtedly does much to fill them.
The 5th. Another tour among palaces, and churches, and pictures; one fees too many at once to have clear ideas. Called again on -__, and had another converfation with him better than a fcore of fine pictures. He made an obfervation on the goodnefs of the difpofition of the common people at Venice, which deferves, in candour, to be noted; that there are feveral circumftances, which would have confiderable effect in multiplying crimes, were the people difpofed to commit them: ift, the city is abfolutely open, no walls, no gates, nor any way of preventing the efcape of crininals by night, as well as by day :-2d, that the manner in which it is built, the narrownefs and labyrinth direction of the freets, with canals every where, offer great opportunities of concealment, as well as efcape: 3d, the government never reclaims of any foreign power a criminal that flies: 4th, there is no police whatever; and it is an error to fuppofe that the fyitem of efpionage (much exaggerated) is fo directed as to anfwer the purpofe: 5 th, for want of more commerce and manufactures, there are great numbers of idle loungers, who muft find it difficult to live: 6th, and laftly, the goverument very feldom hangs, and it is exceedingly rare otherwife to punifh.-From this union of circumftances it would be natural to fuppofe, that rogues of all kinds would abound; yet that the contrary is the fact; and he affured me, he does not believe there is a city in Europe, of equal population, where there are fewer crimes, or attempts againft the life, property, or peace of others, that he walks the ftreets at all hours in the night, and never with any fort of arms. The conclufion in favour of his countrymen is very fair; at the fame time I muft remark, that thefe very circumftances, which he produces to fhew that crimes ought to abound, might, perhaps with as much truth, be quoted as reatons for their not being found. From the want of punilhment and police may probably be drawn an important conclufion, that mankind are always beft when not too much govenned; that a great deal may fafely be left to themfelves, to their own management, and to their own forings; that law and mer lation, neceffary as they may be in fome cafes, are apt to be carried much too, that frequent punifhments rather harden than deter offenders; and that a maze of tiuws, for the profervation of the peace, with a fwarm of magiftrates to protect it, hath much fironger endency to break than to fecure it. It is fair to cornect this circumfance of womaravol. iv.
tive freedom from crimes, with feven theatre: frr only one hundred and fifty thoufand people; and the admiffion fo cheap, that the lowelt of the people frequent them; more, perhaps, in favour of ineatrical reprefentations than all that Rouffeau's brilliant genius could fay againft them. At night to another theatre, that of the tragi-comedy, where a young aarefs, apparently not twenty, fupported the principal ferious patt with fuch juftefs of action, without exaggeration, and ipoke this charming languse with fuch a clear articulation and expreflion, as, for her age, was amazing.

The 6th. Another vifit to iflands and man factures, \&c.
The 7 th. My latt day at Venice; i made, thereforc, a gleaning of fome fights I had before neglected; and called once, niere on my friend -_, flurina his tras, that it would give me pleafure to fee him in lingland, er to be of any fervice to hins there. The Corricre di Bologna a cosered barge, the only conves: nce, fe": off tonight at eleven o'clock. I have taken my plac:', paid my money, and delivered my baggage; ant as the quay from which the barge t parts is on eniently near the operahoufe, and $I$ i $i$ 'urbero di buon Cuore atted for the firft night, I took my leave of Sig. nore Pet itho's excellent inn, which deferves every commendation, and went to the opera. I found it equal to what the prova had indicated; it is an inimitable performaance; not ody abounding with many very pleating airs, but the whole piece is agreeable, atd dees honsw to tio senius and tafte of Signore Martiai. Switt, in cue of his letters to Stella, after dineriblorts Ovord and Bolingbroke, and going in the evening to fome ferub, fays, be hises to be a prince and a fcoundrel the fane day. I had to-night ail the feeliag wis $\mathbf{v e r g e}$, $n c e$. From the reprefentation of a pleafing and elegant perforntince, the muis of which was well adapted to ftring one's feelings to a certain pitch, in rlear mifion with the pleafure that fparkled in fo many eyes, and founded from fo many hands-1 ltepped at once, in full contralt, into the bark Detto Corricre di Bologna; a cabin about ten feet fquare, round which fat ia filence, and lie darknefs vifibic of a wretched tamp, a company, whofe rolling eyes exammed, without one word of reception, each pafienger that entered. The wind howled, and the sim beat in at the bele left for entering. My feelings, that thrilled ciuring the cevening, were diffipated in a moment, and the gloom of my bofom was foon in unifon with the $\begin{gathered}\text { of the feene. }\end{gathered}$

Of this woyage from Venice to Bologn, ali the powers of language would fail ine to give the ide : would wifh to imprels. The time I pathed in it I rank among the moft difagreeable days I ever experiencel, and by a themand degrees the worf fince I left Fugland; yet i had no choice: the roads are fo intamonfly bad, or racher fo impracticable, that there are no vetturia; even thofe whele fortune admins polting, make this palage by water; and when I found that Monlieur de la Lande, feeretary to the Fresch ambafiador at Turin, had made the fame journey, in the fame conveyance, and yet in his book fays ner a word againlt the acconmondation, how was I to have divined, that it could prove fo execrable? A littemore thought, however, would have told me that it was too cheap to be gond, the price, for the whole voyage of 125 miles, is colly 30 fooli ( $1 ; \mathrm{s} .6 \mathrm{~d}$. ), for which you are bourds. Ather a day's fpitting of a
 the grounce, and you relt on them as you can, pecked alnot hee herrimes in a barrel; they aic then rolled up and tumbled under a bulk, without he leaf at ontion which fode is given you the night after ; add to this the odurs of valous , its a to imagine. At dimer, he cabin is the kite en. and the podene the co $k$, sts fnuff, wipes his rote with his flaters, and the hofe wilh has anderchicf, wh. prepares the vicuals, which he handles befor au, till gou are fick of the. ${ }^{7}$. ir ung. Bur,
on clanging the bark to one whofe calin was too fmall to admit any cookery. he brought his fleaks and faufages, roiled up in a paper, and that in his flay of :bomination (as Smollett calls a continental handkerchicf), which he fipread on his knees as he fat, opening the grealy treafure, for thofe to eat out of his lap with their fingers, whofe ftomachs conld bear fuch a sepaff. Will an Englifh reader believe thit there were perfons pretent who fubmitted, without a murnur, to fuch a vogage, and who were be. yond the common mercantile crews one mets wihh in a vettura? --fome well dratted, with an appearance and converfation that betrayed nothing mean. I draw conclufions, operating throngly agandt the private and domeftic comforts of life, from fuch public vehicles: this is the only one for thofe who pafs to and from Venice, Bokogn', Forence, Rome, and Naples, and of courfe mult be exceedingly frequented; and there are no qoitures by land to rival it. If thefe people were clean, decent, and comfortable at home, is it credible that they would futmit to fuch a mode of travelling? The contraft would fhock them as it would Englifhmen, who would nove heaven and earth to eftablifh a better conveyance, at a higher price. The people who travel thus form the great mats of a nation, if we except the poor; it is of litte confequence how the Comari and the Morofini live; they live probably like great lords in other countries; but the public and national profperity is intimately comected with the comforts and accommodations of the lower clafles, which appear in Italy to be, on comparion with Fingland, miferably inferior. Their excellences, the ariftocrats of Venice, do not travel thus; and as to the pcople, whether they go on their heads, or in the mud, is all one to the fpirit of their government. For myfelf, I walked much of the jommey, and efpecidily on the banks of the $P_{0}$ o, for the better view of that great river, now $r$ n. dered immenfe by the late dreaciful lloods, which have deluged fo much of the country. Along the bauks, which are high dykes, raifed many feet againft its depredations, there are matted huts at every hundred or tevo hundred yards, with men ftationed, called gruardia di Po, ready to affemble with their tools at a moment's warning, in cafe of a breach; they have fires all night. Soldiers alfo make the rounds, night and day, to fee that the men are at their flations,-and to give affiftance if wanted. There is a known and curious picce of roguery, againd which much of this caution is bent; the mifchict of a breach is fo great, that when the danger becomes very imminent, the farmors in the night, crofs the river in boats, in order to bore holes in the banks, to enable the water the eafier to make a breach, that by giving it a direction contrary to that of their own lands, they may render themfelves fecure. For this reafon, the guards permit no navigation, except by privileged barks, like the corricri, firing at all others that are feen on the river. It is now an immenfe body of water, twice, and in fome places prope even thrice as broad as the Thames at London. As to the face of the country, from the Lagunes to Ferrara, it is every where nearly the fame as what I have fo ofien deli ribed; whether grafs or arable, haid out into rows of pollards, with vines traned to thens, at various diftamers, but ahways near enough to give the whole the apperance of a wood, when viewed from the lealt dillance. It does not feem to want people, towns and villages being numerous; and there are all the figns of a confiderable nevigaion; every villase being a port, with abundance of barges, barks, bore. A.e. CuF houfs remarkably atomen in the Venetian dominions, at all towns, am.. . en whages, where we paffed, they are to be found, fortunately for me, as they
remy refomee, to make amends for the dirty fingers and beafly handkerchief of
 dance., with which 1 was favoued by an Italian, who refided fome time in that city, and had abilitics that would not allow me to doubt of his capacity in forming a true
eftinate of any political circumftance, to which he directed his attention. His account of the principal nobility of the republic is fuch as would explain much mese than I have feen or heard in their dominions. He fays, "the education of the great is the difgrace of Venice. Men of the firlt families are not only ignorant to a degree fhameful in fo enlightened an age, but they are educated in a bad ton; with ill manners, from ideas that are fuffered to be inftilled by depundents, which do not quit them through life; fixing, from early habit, the tafte for bad company; while a pernicious indulgence excmpts them from all learning; that this is fo general, and is fo extenfive in its influence, that, had the interior organization of this government been lefs admirable, it would, from this very caufe, heve mouldered to nothing long ago: that the pride, of which they are accufed, is aferibable equally to bad company and to ignorance ; the firft gives them vague and improper ideas of their own importance, and the fecond infpires them with referve, to conceal their want of that knowledge which others, and efpecially foreigners, poffers: that the ill effects of this bad educ;tion will be feen more and more; the governments of Furope being at prefent infinitely more enlightened than in times paft; and improved confiderably even in the laft twenty years. There is of neceflity, a flruggle anong all nations, emulous to make the greatell progrefs in ufeful knowledge, and to apply all knowledge to the moft ufeful purpoles; in fuch a period, therefure (he added), any people who are fationary, and more particularly any government that is fo , will be outltripped in the great courfe by their competitors, and perhaps trampled on, like the monarchy of France, by thofe in whom light hath taken the place of ignorance." Pitythat the richeft blood in European veins fhould at prefent experience fuch an education!

Here are about forty families, unqueflionably the moft ancient in Europe. All other countries, except Venice, have been conquered, or over-run, or fo deftroyed, that the oldeft families may be dated comparatively from only modern periods; he who looks back to a well defined anceftry, from the tenth and eleventh centuries, and who can thus trace his lineage feven or eight hundred years, is in every country refpected for antiquity; of this flanding are the families of Bourbon, d'Efté, Montmorency, Courtenaye, \&e. which are commonly efteemed the firft in Europe: but they are not efteemed to at Venice. Some of the Ruman families, which, from the ravages of the Huns, took fhelter in the ifles of Venice, and which were then confiderable enough to be entrufted with the government of their country, yet remain, and are unquefliouably the moft ancient in Europe. De la Lande, from Prefdrotti, confines the electors of the firt Doge to twelve-Badoer, Contarini, Morofini, Ticpolo, Micbiel, Sanudo, Ciadenigo, Memo, Falier, Dandolo, Barozzi, and Polano, which is of late extinct. In the next clafs he places Zuftiniani, Cornaro, Bragadin, and Bcmbo; then come the families il ferrare del configlio, Querini, Dolfini, Soranzo, Zorai, Marcello, Sagredo, Zane, and Salomon. But fince Monf. de la Lande wrote, they have publifhed at Venice a Dizionario forico di Tutte le Venetc Patrizie Fumiglie, 1780; compiled from a manufeript in Si. Mark's library ; this work does not accord with the preceding table; I have extracted from it the following lift:

Badoer; fua origine con la republica.-Bollani; antichi tribuni.-Bragadin; nei piu rimoti fecoli della republica.-Celfi; dagli antichi Marj di Roma, anticbi tribuni.--Ciorun; negli elettori del primo Doge.-Contarini ; uno nesli clettori del primo Dgge.-Cornaro; dagli anticbi Corveli di Roma, d'aprimifimi tonnpe tenuta in Y'eneziat-EEmo; nacque colla medifima republica, - Fofarini; Venncro 867 ; antichi tribuni.-Gradenigo; delle prime venute in Vcnezia.-Magno; dalla prima fondazion di Venczid; tribuni.-Marcello; pare, che non fo pofa metter in dubio, che quefla famiglia difccnda dagli anticiji Marcelli di Rom',
antichi tribuni--Michieli; antichifima di Venesia; gli elettori del primo Doge.-Mocenigo; delle prime venute in Venezia.-Molin; Aabilita in Venezia 877 ; anticbi tribuni. - Morofni; rijugitit per le incurrioni di Attila; fra gli clettori del primo Doge, e anticbi tribuni.-Da Mofta; Vennero 454 rifusiati per Attila.-Nani; Venncro in Venczia fin dalla prima fua fondazione; antichit tribuni--Orio; rifusiati per Attila; anticbi tribu-ni.-Pifani; dagli anticbi Pijoni di Roma; dell'antico configlio.-Querini; elettori del primo Doge.-Sagredo ; Vennero nel 485-Salomon; trà ie elettrici del primo Dose.Sanudo ; dei primi fondatori della citta.-Semitecolo; fin dal 843; antico configlio.Soranzo, fenza dubbio delle prime rifugite in Venczia ; antichit tribuni.-Tiepolo, gli clettori del primo Doge: antichi tribuni.-Trevifan, Vennero per l'irruzione d'A Attila.-Valicr, rifugiti per le incuffione di Attila fino dal 423 ; tribuni anticbi.-Venier, Veishero per Attila; antichi tribuni.- Zane, antichiffrma faniglia di Venezia ; antico confglio.-Zen, dei 12 elettori del primo Doge. Bembo, Coco, Dandolo, Falier, Fojcari, Gritti, Malipicro, Marini, Minio, Minotto, Moro, Muazzo, Nadal, Pefaro, Da Riva, Ruzini, Tron, Zuffo, all thefe antichi tribuni.
Fron the details of thefe families it appears, that many have an origin as old as Attila the Hun, who invaded Italy in 452 . If all thefe families be allowed to date from that period, (and no reafon appears againft it) their origin may be traced to more than $1: 300$ years. The election, however, of the firt Doge, in 697, by the twelve heads of the republic, is one of the moft authentic and the moft noted acts in the eftablifhment of any government. Too this undifputed origin the preceding lift affigns the families of Civran, Contarini, Michieli, Morofini, Querini, Salomon, Thiepolo, and Zen, rejecting thus feveral fanilies which have been con:nonly etteemed the firt in the republic, and which former writers have exprefslv ranked among the electors of the firt Doge. The only families in which hoth lifts agree are Contarini, Michieli, Morofini, and Tiepolo: whether the others were, or were not, electors of the Doge, there is no queftion about their great antiquity ; and it is equally certain that there are now actually at Venice from forty to fifty families which, in point of antiquity well afcertained, exceed all that are to bc found in the reft of Europe.
And here I take leave of the Venetian lion; I am tired of it:-a thr fate were to build a pig.flie, I believe they would decorate it with his figure. It is a veaft of no merit ;-for what is ferocity without humanity,-or courage without honour? -It wars only to deflroy; and fpreads its wings not to prote¢t, but to cover, like the vulture of Mr. Sheridan, the prey that it devours. At Ferrara, the Padrone's bufinefs fopped him a whole day; but he pretended it was a want of oxen to draw the coaches, that carried us ten miles by land, from canal to canal. This was not amifs, for it enabled me to fee every thing in that town, which, however, does not contain much. The new part-new in compariion with the reft, was built by Hercules II. Duke of Ferrara, who has laid out and diftributed the ftreets and a fquare in a menner that does honour to his memory. They are all of a fine breadth, well paved, with irotoirs of brick, every where defended by tone pofts. I have feen no city fo regularly 'mid out, except Turin. The Patazzo of the Marchefe di Villa is an object to examine; ,u: $\because$ that fpot there is a very advantayeous view of two noble ftreets. The Palazzo di Bentivoglio is another confilderable building, with a valt garden, full of bad flatues; and even fome of footmen, with laced hats and fhoulder-knots, in a fyle fully as ridiculous as M. du Barre's at Toulouze. In the cathedral, a fine Guercino; and a marriage of Cana, by Bonona, a Ferrarefe painter, at the Chartreufe. I paid homage to the tomb of Ariofo, a genius of the ?nft luftre; fince al! modern ages have produced but three diftinguifhed epic poct", wat a glory to Italy to have given birth to two of then! the wonder is greater,
however, that the third was not of the fame country. From Ferrara to the canal, which leads to Bologna, the road is, withont any idea of comparion, the wort in Europe, that pretends to be great and paffable. It is the matmal rich foil of a flat w.t country, rendered deeper by the late heavy rains; fiven horfes drew a conch about a mile and a half an hour. Making and mending are philofophical experim nos not tried here ; and the country being inclofed, the hedges and diecias combine the carriages to poach through the mod of one direction. an of many. I walked for the mott part in the adjowing fields, the better :.. .. dem. Arrived ar Bulogna at twelve o'clock at night.- 125 miles.
The 12 th. 1) eliver letters. 1 iound Signore Bignami at home. He is a confuderable merchant, who has attended to agricultues, fentible and intelligent. Su Finglith merchant, at the Thre Moors, informing me, that Mr. Taylor, who was at Carlfrhue for fome time, was now buled at Botoma, I detcrainad to wat on him, baing the genthman of whofe huthadry, at Bifrons in Kent, ! gave an accoun in my Eatern
 handfome apartments in the Palazzo Zampieri, and lives here aspeably wih his beautiful and amiable fanily; a liner progeny of daughers and fons is bardly to be feen, or that forms a more pleafing focity. As I did not how, till I got to bologna, that Mr. Tayfor had hef in: Court of Carlfinue, I was ceser to hear why he had quited a firuation which was in congenial with his love of agriculture. This gent man, travelling in Germany, became known to the Margrave of Baden, where that enthufattic love of agriculture, which, for the grod of martind, fome minds feel, induesd him to take a farm of that prince. Thus was a gemtiman, from the beft cultivated part of Kent, fixed on a farm of five humdred aceses in Cormany. Dhe carried his point, innproved the farm, thaid four yars, and would have combucd to the infinite advantage of the country, if the minifters of the Margrave had had as much undertanding, and as liberal a mind as their mafter. 1 am inelined to b. Weve that mom man fucceed on the emtineme of Europe (unkefs under a prince with a charater of fuch decided ar ryy as the late King of Prutia) provided he be really practical. He has no ch. nee if he be not well furnifhed with the rubl ilh which is found in acadenies and fucieties: give him a jargon of larning, the fience of mames and words, letting things and practice go clfewhere, and he will then make his way, and be looked up to. To the opera, where there is nothing worth hatang or feeing, eacept enfy a yount finger, Signora Nava, whole voice is one of the clearelt and fwectell tomes I ever hard; the has great powers, and will have, for the is very young, oreat expretion. It was he Thecdero re di Corfica of Paiefello.
The $13^{\text {th }}$. The Pcllegrino and St. Marcoteing full, has fixed me in this brutal hole, ITre Munretti which is the only excerabie inn 1 Iase bean imn (in a city) fince I entered Italy. It has every circumilance that can render it deteltable ; dirt, negligence, filh, vermin, and impudence. You fit, walk, ed', drink, and fecp wirh equal ineon. venicnec. A tour anong the palacer "nd churches. The great cot ation of paintings in the Kampicri palace contans a fow pieces of fuch exquifice memt, that they rivet the fp:ctator by admiration. The St. Peter, of Guido; the Hizar, of Gucrcino ; and the

 re-union de totetes les partios di la feinture que a. Hallie. It is certainly a molt noble piece of two ligures, but wante, of neceliny, the , wetry of a tade told by many. To pleafe me, the Guercime, of which be fays lime more than its heing tris beat, has an eaprefies dicious, that works on a fine fubject to a great ffict: it is more nature
than painting. Hagar's counl ance fpeaks a language that touches the heart; and the pathetic fimplicity of the chatd is in unifon with all the mother's feelings. The mellow warmeth and tender foftulfs of the colouring of the Albano, with the fiveetnefs of the expreflion, are inimitable. In the church of St. Giovanne in Monte, there is the famons St. (iecilia of Rephacl, of which Sir Robert Strange has given fo fine a print, and in which he has done ample juftice to the original. The St. Agnes of Doe menichino, in the church of that name, and Job on his throne, by Guido, at the Mendic,nti, are two others that muft be vifited. Dine with Signore Bignami; he is a confiderable merchant, and therctore I need not fare at this hofpitality in Italy; with great fitisfaction I find that no minute is loft in his company, as he is obliging enough to pardon the number of my enquivies. In the evening to Mr. Taylor's; this gentleman's difcourfe is interefting to my purfuit, for he has always had a great prediledion for a riculture, and has practifed it with intelligence and fuceels. The Marchefe di Maretchoti, who is marricd to a very pretty linglifh lady, prefent alfo; a fenfible man, who fomed pleafed with the opportunity of explaining to me feveral circumftances, relative to ty hes and taxation, that I was enquiring into. He is a fingular inftance at 1301 gna, of going into company with his wife, and confequeitly fuperfeding the necoflity or want of a cicilbeo. He is regaded by his countrymen for this, pretty much as he wrull be if he walked on his head, infead of his fect. How frangely doth it apperar to them, that an Inslian nebleman fhould prefer the company of a woman he narrod from aftection, and think there is any pleafure when he enbraces his children, in belicting them his own! Here I met alfo the Baron de Rovrure, a French noblem.nt, and Madame la Narquife de Bouille, both in their way to Naples; they feem agrecable peiple. Mr. 'Taylor, and his two charning daughters, have apparently a plafing fociety here. Thefe ladies fpeak French and German like natives, and betore they lave thaly will to the fame with Italian; they paint agrecably, and have confiderable nufical talents; thus acemplifhments will not be wanted to fecond the graces th y owe to the beneficence of nature. I had fome information from Mifs Taylor, tonight, relative to the expences of houlekeeping, which will give an idea of the cheap. nefs of halv; promifing (of which more in another place that the paolo is fixpence, and that there are 10 baincchi in it. As to beef, muton, bread, \&e. they are all over Furop tho nearly on a par to demand much atcontion; where meat is very fine, it is mommally dear: and wi,ere it is bat, it is called cheap: but the difference deferves lin!' notice. Mr. 'aylor contrats with a trateur for his table, nine in the parlour arou sive in the kitchen, 20 pacli a day for dimer; for fupper he pays extra, and is fupplicat th his fatistaction-a proof, if any be wanted, of the cheapnefs of Bologna. In is re tha kath that hare is not the difference between the prices of any of the articles, and the bane thing in Fngland, that there is berween the contracting prices, and the ratio whith a few per cent. in the former, but fome hundred per cent, in the latter; a ture proof that dearnefs and cheapnefs of living docs not depend on prices per pound, but on the moles of living. Livery tavern-keeper, tainar, or other contractor of any fort in England, will fave a price that flall give him a fortune in a few years; and fervants, initead of fubmitting to the ceconony which their mafters may think it necefliary to eftablith, will not live an hour with them if they are not permitted to de. vour them.

The $14^{\text {th }}$. with Signore Bignami and his family, to his country feat, aboct five miles frem Bologina, on the road to Piftoia; fpend an agrecable day, entirely dedicated to farming. The houfe is landfome, and finely fituated: the entertainment trily hofpitable, and the information, given in a cool confilerate walk, through every fild of the
farm, fuch as is little liable to error. A circumfance at this country feat A.ferves noting, as it $m$ irks the abundance of thieves: the chambers had the window, "thoc fo clote, and faftened with fo much attention, that I enquired the realion; and was anfiwered, that if the greateft care be not taken, thieves will break in, and plunder a houfe of every thing portable. The flutters, to both windows and doors, were inhaid with bars of iron, to prevent their being fawn through. The conclufion we muft draw from fuch a circumfance is certainly little favourable, at firt fight, to the lower claflos, but that is always unjuf, for they are ever what the police, law, and government of a country make them. In the evening, again at Mr. Taylor's; a houfe, in which mo one will have the entri, and want the inclination. The Marchefe Marefchoti there, who had the goodnefs to continue his attentions to my enquiries, and to give me fome valuable information: I had alfo the pleafure of converfing, on the fame fubjects, with the Conte di Aldrovandi.

There is a room, at the Tre Maurctit, which, communicating with feveral apartments, the guelts have it in common: among them was a young Ballatrice, watting here for an Englithman, to attend her to Venice ; the was pretty and communicative; had fome expenfive trinkets given her, to the amount of a confiderable fum, by her lover, who proved (for fecrecy was not among he: qualities; to be a rider, as we fhould call him, to a manutacturing houfe in England. An ltalian merchant prefent remarked, that the profit of the Engliilh on their manufactures, muft be enormous, or they could not fupport commiffrrii at fuch an expence, fome of whom trave! in Italy pott, fron town to town, and, when arrived, amufe themfelves, it is plain, with fuch comforts as the good humour of the country throws in their way.
The 1 sth . The rencontre at Mr. Taylor's of the French genteman, the Baron de Rovrure, and Madame de Houille, has been productive of an engagement to travel together to Florence, with Signore Grimaldi, and Mr. Stewart, a Scotch gentleman ", juft arrived trom Geneva, and going alfo to Florence. We fet off in three vetture this morning. The country from Bologna to Florence is all mountainous; moft of it poor and barren, with fhabby, ragged, ill preferved wood, fpotted with a weak and ftraggling cultivation. Houfes are fiattered over moft of it, but very thinly. We dined at Loiano, much in the fyle of hogs; they fpread for us a cloth, that had loft, by the fnuff and greafy fingers of setturini, all that once was white; our repait was black rice broth, that would not have difgraced the philofophy of Lycurgus, liver fried in rancid oil, and cold cabbage, the remmant of the preceding day. We pleaded hard for faufage, egys, or good bread and onions, but in vain. We laid, not flept in our clothes at Covigliano, hoping, not without fears, to efcape the itch. Such accommodations, on fuch a road, are really incredible. It is certainly one of the moft frequented that is to be found in Europe. Whether you go to Florence. Rome, and Naples, by Parma, Milan, or Venice ; that is, from all Lombarily, as well as from France, Spain, England, Germany, and all the north, you pafs by this rouic, conlequently one would expect, at every polt, a tolerably good inn, to calch the perfons whom accident, bufinefs, or any other derangement of plan might induce to ltop between Bologna and Florence. The only place poffible to Hleep at, with comfort, is Mafchere, about forty miles from Bulogna, but, for traveller: who go any other way than poft, forty miles are no divifion of fixty-four. If the road were in England, with a tenth of the traffic, there would be an excellent inn at every four or five miles, to receive travellers properly, at whatever dillance their accidental departure made moft convenient: but England and laly have a gulph between them

[^15]in the comforts of life, much wider than the channel that parts Dover and Calais.27 miles.
The 16 th. On entering Tufcany, our baggage was examined, and plumbed for Florence; the firft moinent I fet foot in this country, therefore, I find one grofs error of the ceconomiftes, who have repeated, from one another, in at leaft twenty performances, that the grand Duke had adopted their plan, and united all taxes in one, upon the net produce of land. Having croffed the higheft ridge of the $\Lambda$ ppenines, for feveral miles in the clouds, and therefore feeing no profpee, defcended at Mafchere, for a while, in a better region; from the inn, the view is rich and fine. We noted here a wonderful improvement in the figure and beauty of the fex; the countrywomen are handfome, and their drefs is very becoming; with jackets, the fleeves puckered and tied in pufis, with coloured ribbons; broad hats, fomething like thofe worn by ladies in England with riding habits; their complexions are good, and their eyes fine, large, and expreffive. We reached Florence, with juft light enough to admire the number of white houfes fpread thickly every where over the mountains that furround the city. But before we enter, I muft fay a word or two of my French fellow travellers: Monf. le Baron is an agreeable polite man, not deficient in the power to make obfervations that become a perfon of fenfe: the life of Madame de lBouille would, if well written, form an entertaining romance; fhe went, early in the laft war, to St. Domingo with her hufband, who had a confiderable property there; and on her return fhe was taken in a French frigate, by an Englifh one, after a very fmart engagement of three hours, and carried into Kinfale, whence fre went to Dublin, and to London: this is an outline which fle has filled up very agreeably with many incidents, which have kept her in perpetual motion; the prefent troubles in France have, I fuppofe, added her and the Baron to the infinite number of other French travellers, who fwarm, to an incredible degree, every where in Italy. She is lively, has much converfation, has feen a good deal of the world, and makes an agreeable compagnon de voyage.-- 37 miles.
The 17th. Laft night, on arriving here, we found the Aquila Nera, and Vanini's fo full, that we could not get chambers; and the great Mr. Meggot looked into our cabriolets to examine us, before he would give an anfwer, pretending, that his wer befpoken; and then affured us, as we bad no air that promifed good plucking, , h's were engaged. At the Scudi di Francia, where there are many excellent and we: nifhed apartments, we found all we wanted, but dearer than common, ten $p$ b a-day ; our merchant leaves us to-morrow morning, for Leghorn, and the to company divide, to find lodgings. Waited on Monf. de Strcinefberg, the private fecretary, for whom I had letters: I am out of luck, for he is imrte nefs and engagements, as the court goes to Pifa to-morrow morning, for This, I fuppofe, is of no confequence to me, for what court is there in the world that would give or receive information from a farmer? The objects for which I travel are of another complexion from thofe which fmooth our paths in a court. And yet the Grand Duke has the reputation of being, in refpect to the objects of his attention, the wifeft prince in Europe. So much for the fovereign of this country-let me but find fone good farmers in it, and thall not be difcontented.

The 18th. Fixed this morning in lodgings (del Sarte Inglefe via dei Foffi,) with the Marchionefs, the Baron, and Mr. Stewart. My friend, Profeffor Symonds, had given me a letter to his Excellency Philippo Neri, who I found was dead; but hearing that his brother, Signore Neri, was not only living, but prefident of the Georgofili Society, I waited on hiin, and gave him the letter that was defigned for his late brother ; be received me politely, and recollecting the name of Young, being quoted by the Marquis

VOL. IV.
de Caffaux, in his "Mechanifin des Societes," and being inforned that I was the perfon, remarked, that this ingenious writer had made fome ule of my calculations, to found his theory of the national debt of England; a very curious fubject, on which he fhould like much to converfe with me: and afked, if I looked upon that debt as fo harmelefs? I told him, that I thought Monf. de Caffaux's book full of original and ingenious remarks, and many important ones, particularly his condemnation of the colonizing fyftem ; but that as to the national debt of England, it originated in the Fnavery of thofe who borrowed, and in the folly of thofe who lent; perpetuating taxes that took money from indultrious people, in order to give it to idle ones. That the liberty of England cmabled it to flourifh beyond that of any other fociety in the world, not becaufe it had a national debt, but in fyite of fo great an evil. - Well, Sir, he replied, I have jutt the idea of it that you have, and I could not conceive how a country could pay eight or nine millions of guineas a year, in intereft, without being the weaker and poorer. He then enquired into my plan, commended highly the object of my journey, which, he wass pleafed to fay, had fo little refemblance to that of the great mafis of my countrymen, that he hoped I met with no impediments in gaining the information I wilhed; and added, that he was very forry he was going to Pifia, or he thould have been happy in procuring me all in his powe, though he was no practical farmer. Signore Neri appears to be well informed, fenfible, and judicious; has a large collection of books, on ufeful fubjects, particularly the warious branches of political aconomy, which he fhews, by his converfation, to have confulted with effect.

After all I had read and hearl of the Venus of Medicis, and the numberlefs catts I had feen of it, which have made me often wonder at defcriptions of the original, 1 was eager to hurry to the tricura, for a view of the dangerous goddets. It is not eafy to ljeak of fuch divine beauty, with any fobricty of language; nor without lyperlacle to exprels one's admiration, when felt with any degree of enthufiafin : and who but mult feel admiration at the talents of the artif, that thus almoft animated marble? If we fuppofe an original, beautiful as this flatue, and doubly animated, not with life only, but with a pafion for fome favoured lover, the marble of Cleoments is not more inferior to fuch life, in the eyes of fuch a lover, than ail the calts I have feen of this celebrated tiatue are to the imimitable original. You may view it till tle unfleady eye doubst the truth of its own fenfation : the cold marble feems to acquire the warmth of nature, and promifes to yield to the impreflion of one's hand. Nothing in painting to miraculous as this. A fure proof of the rare merit of this wonderful production is, its exceeding, in truth of reprefentation, every idea which is previoufly formed ; the rality of the chiffiel goes beyond the expectancy of imagination; the vifons of the fancy may play in fields of creatic:, may people them with nymphs of more than human beauty; hut to imagine life thus to be fallioned from flone; that the imitation thall exced, in perfection, all that conmon nature has to offer, is beyond the compafs of what ordinary minds have a $:$ awer of conceiving. In the fame apartment there are other ftatues, but, in the prefence of Venus, who is it that can regard them? They are, however, fome of the finctl in the world, and mult be referved for another day. Among the pictures, which indeed form a noble collegtion, my eyes were rivetted on the portrait of Julius II. by Raphacl, which, if 1 poffefied, I would net give for the St. John, the favourite idea he repeated fo often. The colours have, in this piece, piven more life to canvals, than northern cyes lave be en accullomed to acknowledge. But the litian!-enough of Venus;-- at the fame momont to anmate marble, and breatio on canvats, is toe much. By halbanding the luxury of the fight, iet us keep the eye Ir.m being latiated with fuch a parade of charms: retire to repofe on the infipidity of emmon objects, and retam another day, to gaze
with frefh admiration. In the afternoon, by appointment, to Signore Prepofito Laftri, author of the Corfo d'Agricoltura, and other much efteemed works, to whom I had letters. He was to have carried me to Signore Zucchino, director of the oeconomical garden, for whom alfo I had recommendations; I hoped to efeape feeing this gardenand the rain feconded my wifhes, fcr it would not allow us to fir ; and that gentleman comine to Signore Laftri's, I had the pleafure of a converfation on our favourite topic. Signore Zucc! ino feems an ammated character, fpeaks of agriculture in a fyle that gives me a good opinion of his purfuits; made ne very friendly offers of whatever affiftance was in his power, daring my flay at Florence, and appointed another day for viewing the ceconomical garden. At inght to the opera, the Trame del Ittl), of Cimarofa; the rufic as good as the finging bat, and the dancing execrable. An Englifh gentloman,
the name of Ilarrington (the younger, whom I bad met at Mr. Taylor's, at Bologna, entering into converfation, mentioned, among other topics, that the Margrave of Anfpach, who is here with Lady Craven, wifhed to know me perfonally, in order to fpeak to me on the fubject of Spanifh fleep, his highnefs havimg imported them to Anfpach. 1 replied, that, on a farming topic, I flould be happy in the converfation of any prince, who loved the fubject enough to import a better breed. The father foon after joining us, and probably having been told, by his fon, what had paffeci, oblerved to me, that the Margrave was very fond of agriculture, and had made great improvements; adding, "that if I wanted to be introduced to him, he would introduce me." This was another bufinefs; -my exprelling a dicfire to be prefented to a fovereign prince, not at his own court, appeared to be an awkward intrufion; for no idea could be more difgultful to me, than that of pufhing myfelf into fuch company. 1 replied, therefore, that if it were the defire of the Margrave to have any converfation with me, and he would inform me of it, in any way he thought proper, I would certainly pay my refpects to him, with great readinefs. The Margrave was at the opera ; Mr. Harrington quited me, as if to go to him. I fuppofe the converfation was mifunderfood, for Lady Craven does not fcem, by her book, to be much of a farmer.

The ipth. Call on Signore Tartini, fecretary to the royal acadeny Georgofili, and on Lord Hervey, our minifter here; both abfent. Another turn in the gallery brought a repctition of that pleafure which is there to be reaped, in the exuberance of a plentiful harvelt. The woman, lying on a bed, by Titian, is probably the fineft piture, of one figure, that is to be feen in the world. A fatyr and nymph, by IFanibal Caracci; a Correggio; a Carlo Dolci. Among the flatues-the Apollo, the Wreflers, the Whetter, as it is called, the Venus rifing from the bath, the Ganimede. What an amazing collection! I have been many years amufing myfelf with looking at the flatues in England! very harmlefsly:-my pleafure of that kind is at end. In fpite of every effort to the contrary, one cannot (unlefs an attift, who views not for pleafure but as a critic) help forming eternal comparifons, and viewing very coldly pieces that may perhaps have merit, but are inferior to others which have made a deep imprefion. But the pintings and ftatues in this gallery are in fuch profufion, that, to view them with an attention adequate to their merit, one ought to walk here two hours a day for fix months. In the afternoon, waited on Signore Fabbroni, author of fome works on agriculture, that have rendered him very well known, particularly a little treatife in French, entituted, RcAlevions furr l'ctit acturl di l'Agricultarc," printed at Paris in 1780, which is one of the bett applications of the modern difcoveries in natuial philofophy to agriculture, that has been attempted; it is a work of confiderable merit. I had two hours very agreeable and inftru'tive converfation with him : he is lively, has great fire and vivacity, and that va-
luable talent of thinking for himfelf, one of the beft qualities a man can pofiefs; with out which; we are litte better than horfes in a team, trammelled to follow one another. He is wery well inftructed alfo in the politics of Tufcany, connected with agriculture.

The 20th. Early in the morning, by appointment to Signore Tartini, to whofe attentions I am obliged, not only for a converlation on my favourite fubject, but for fome books of his writing, which he prefented me with; among others, the Giornale d'Agricolt:ru di Firenze," which was dropped for want of encouragenent. He accompanied me to Siynore Lattri's, and then we went together to the ceconomical garden of Signore Zucchino, for which the Grand Duke allows three hundred crowns a-year, befides fuch tabour as is wanted; and the profefier reads lectures in fummer. The eftablifhment of fuch a garden does honour to a fovereign ; becaufe it marks an attention to objects of importance. But it is greatly to be regretted they do not go one ftep further, and, inftead of a garden, have a farm of not lefs than three hundred Englith acres; moft of them are poficfiors of farms; a well fituatel one might calily be cholen, and the whole conducted at an expence that would be amply repaid by the pratical benefits flowing from it. Signore Zucchino's garden is nuch clemer, and in neater order than any other 1 have feen in Italy: but it is not caty to torm experimentsin a few acres, that are applicable to the improvement of a national agriculture. He is :m active, animated character, attached to the purfuit (no fimall merit in Italy;) and uould make a very good ufe of his time, if the Grand Duke would do with him as the King of Naples has done by his friend Signore Balfamo-fend him to practife in England. I told him fo, and he liked the idea very much. We had fome converfation concerning Signore Balfamo, agreeing that he had confiderable talents, and great vivacity of character. I regretted that he was to flay oniy a year in England; but admitcod, that there were few men who could make fo good a ufe of fo fhort a pariod. Signore Zucchino fhewed me the MS. account of my farm, which Signore Baifano had fent him*. A profeffor of agriculture in Scily, being fent by his fovercign, and witely fent, to England for inftruction in agriculture, appears to me to be an epoch in the hillory of the human mind. From that ifland, the moft celebrated of all antiquity for fruitfulnefs and cultivation, on whofe exuberance its neghbours depended for their bread - and whofe praclice the greatelt nations confidered as the moft worthyof imitation: at a period too when we were in the woods, contemned for barbarity, and hardly confidered as worth the trouble of conquering. What has effected fo enormons a change ? Two words explain it, we are become free, and Sicily enflaved. We were joined, at the garden, by my good friend from Milan, the Abbate Amoreti, a new circumftance of good fortune for me. To-day, in my walk in the gallery, I had fome converfation with Signore Adamo Fabbroni, brother of the gentleman I mentioned before, and author alfo of fome differtations on agriculture; particularly Sopro il quefito indicarc le sere teori delle fime die terran", trom which I inferted an extract in the Amals of Agriculture,--alfo a Journal of Agriculture, publifhed at Perugia, where he refided feven years; but as it did not fucceed for more than three, he dropped it. It is remarkable how many writers on this fubject there are at prefent at Florence : the two Fabbronis, Laftri, Zucchino, Targioni, Paoleti, whom I am to vifit in the cometry, attended by Signore Amoretti; they fay he is the moft practical of all, having refided conllantly on his farm. I fpent an hour very agreeably, contemplating one fatue to-day, namely, Bandinelli's copy of the Laocoon, which is a pro-
duction that does honour to modern ages; I did not want this copy to remind me of another moft celebrated one, and of the many very agrecable and inftruetive hours I have fpent with its noble owner the Earl of Orford.

The 21ft. Signore Tartini had engaged the Abbate Amoretti, and myfelf, to go this day to his country-feat, but it rained inceffantly. The cimate of Italy is fuch as will not make many men in love with it ; on my confcience, I think that of England infinitely preferable. If there were not great powers of evaporation, it would be uninhabitable. It has rained, more or lefs, for five weeks paff; and more, l fhould conceive, has fallen, than in England in a year. In the evening to the converfazione of Signore Fabbroni, where I met Signore Pella, director of the gallery ; Signore Gaietano Rimaldi, director of the pofts; another gentleman, zdminiftrator of the Grand Duke's domains, I forget his name; the Abbate Amoretti, scc. It gave me pleafure to find, that the company did not affemble in order to converfe on the trivial nonfenfe of common topics, like fo many coteries in all countries. They very readily joined in the difcuffions I had with Signore Fabbroni ; and Signora Fabbroui herfelf, who has an excellent undertanding, rid the fame. By che way, this lady is young, handfome, and well made; if Titian were alive, he might form from her a Venus not inferior to thofe he has immortalized on his canvafs; for it is evident, that his originals were real, and not ideal beauty. Signora Tabbroni is here, but where is Titian to be found?

The :2d. In the forenoon to the converfazione of the fenator Marchefe Ginori, where were aflembled fome of the letterati, \&c. of Florence; the Cavaliere Fontana, fo well known in England for his eudiometrical experiments, Zucchino Laftri, Amoretti, the Marchefe Pacci, who has a reputation here for lis knowledge of rural aff iirs, Signore Pella, \&c. The converfazioni are commonly in an evening, but the Marchefe Ginori's is regularly once a week in a morning; this nobleman received me very politely: indeed he is famous for lis attention to every object that is really of importance; converfes rational'y on agriculture, and has himfalf, many years ago, ctablifhed, in the neighbourhood of Florence, one of the moft confiderable manufactories of porcelain that is to be found in Italy. Dine with his Majefty's envoy extraordinary, Lord Hervey, with a great party of Englifh; among, whom were Lord and Lady Elcho, and Mr. and Mifs Charteris, Lord Hume, Mr. and Mrs. Beckfort, Mr. Digby, Mr. 'Tempeft, Dr. Cleghorn, profeflor of hiftory at St. Andrew's, who travels with lord Hume, with ten or a dozen others. I had the honour of being known to Loid and Lady Hervey in Suffolk, fo they were n't new faces to me; of the othres, I bad never: feen any thing: the company was too numerous for a converfation, from which much was to be gained. I fat by the fellow of an Englifh college ; and my heels hat more converfation with his fword than I had with its owner: when a man begins every fentence with a cardinal, a prince, or a celebrated heauty, I generally find mys ${ }^{\prime 4}$ in too good company; but Mifs Charteris, who feems a matural charater, and was at her cafe, confoled me on the other fide. At this dinner (which, by the way, was a fplendid one), I was, according to a cultom that rarely fails the wortt drefled man in the cumpany; but I was clean, and as quietly in repole on that head, as if I had been eit $r$ fine or elecrant. The time was, when this fingle circumittance would have made me out of countenance, and uneafy. Thank iny ftars, I have huried that folly. I have but a poor opinion of Quin, for declaring that he coula not afford to go plain: he was rich enough, in wit, whave worn his brecches on his head, if he had pleafed; thet a man like myfelf, with ut the talent of converfation, before he haswell arranged his feelinge, fan, s reli it ina giod cont of a diamond ring. Lort Hervey, in the modt triendly manner, deford I wo th make his thble m:own, while I was at Flormee, -that 1 fiouid always tind a cover, ar suree o'd chs, firs dimers are
not the cuftom here, and you will very rarely find me from home. This explains the Florentine mode of living; at Milan, great dinners are perpetual, here the nobility never give them. I have no idea of a fociety worth a farthing, where it is not the cultom to dine with one another. Their converfazioni are good ideas, when there are no cards,but much inferior to what one has at a dinner for a felect party. In England, without this, there would te no converfation; and the French cuftom, of rifing immediately after it, which is that alfo of Italy, deftroys, relatively to this object, the beft hour in the whole day.

The 23 d. To the galle:y, where the horrible tale of Niobe and her children is told fo terribly well in ftone, as to raife in the fpectator's bofom all the powers of the pathetic. The action of the miferable mother fhielding the laft of her children againft the murdering fhafts of Apollo, is inimitable; and the figure of that youngeft of the children, perfection. The two figures, which ftrike me moft, are the fon who has gathered his drapery on his left arm, and the companion, a daughter, in the oppofite corner. The expreflion of his face is in the highelt perfection, and the attitude, and whole figure, though much repaired, incomparable. The daughter has gathered har drapery in one hand, behind her, to accelerate her llight; fhe moves againft the wind, and nothing can be finer than the pofition and notion of the body, appearing through the drapery. There are others of the group alfo, of the greateft force and fire of attitude; and 1 am happy not to be a critic inftructed enough to find, as Monf. de la Lande fays, that the greateft part of the figures ane bad. They certainly are not equal ; they are the work of Scopas, a Greek fculptor. Di .e with Lord Elcho, at Meggot's hotel; Lord Hume, Mr. T.mpeft, Mr. Tyrrhit, as well as Lord Elcho's family and Dr. Cleghorn, prefent: fome agreeable converfation; the yung perfons have engaged in fport to walk on foot to Rome; right-I like that. If the Italians be curious in novelty of character, the paffing Englifh are well framed to give it.

The 24th. In the morning, with Abbate Amoretti, and Signore Zucchino to the porcelain manufacture of the Marchefe Ginori, four miles to the north of Florence. It is faid to be in a flourifhing flate, and the appearance of things anfwers the defcription. It is a good fabric, and many of the forms and the defigns are elegant. They work cafts of all the antique ftatues and bronzes, fome of which are well executed. Their plates are a zcchin each (9s.) and a complete fervice, for twelve covers, 107 zechins. To the Marchefe Martelli's villa; a very handfome refidence. This nobleman is a friend of Siznore Zucchino, and, underllanding our intention, of making it a farming day as well as a manufacturing one, ordered a dinner to be prepared, and his factor to attend for giving information, apologizing for his own abfence, on account of a previous engagement. We found a very handfome repaft; too much for the oc-cation:--and we drank-alla Inglefe, fuccefs to the pluagh! in excellent wine. The factor then conducted us over the farm: he is an intelligent man, and anfivered my numerous enquiries, apparently with confiderable knowledge of the iabject. Returned at night to illorence.

The 25 h. Early in the murning, with Signore A moretti, to Villa Magna, feven miles to the fouth of Florence, to Signore Paoletti; this gentleman, cure of that parift, had been mentic ned to me as the noft practical writer on agriculture, in this part of Italy, having refided always in the country, and with the reputation of being an excellent farmer. We found him at bome, and paied a very intituctive day, viewing his farm, and receiving much inforn wion. But I muft ncte, that to this expreffion, farm, muft not be annexed the Engilifh idea; for Signore Paoletti's confifts of three poderi, that is, of three houles, each with a farmer and his family, alla nutcà, who cul-
tivate the ground, and have half the produce. It is unneceffary to obferve, that whenever this is the cafe, the common hulbandry, good or bad, mult be purfued. It will furprife my Englifh readers to find, that the moft practical writer at Florence, of great reputation, and very defervedly fo, has no other than a metayer farm. But let it not be thought the lealt reflection on Signore Paoletti, fince he claffes in this refpect, with his fovereign, whofe farms are in the fame regimen. Signore Poletti's maples for vines appeared to be trained with much more attention than common in Tufcany, and his olives were in good order. This day has given me a fpecimen of the winter climate of Italy; I never felt fuch a cold piercing wind in England. Some fnow fell ; and I could fcarcety keep myfelf from freezing, by walking four or five miles an hour. All water not in motion from its current or the wind, was ice; and the ificles, from the dripping fprings in the hills, were two feet long. In England, when a fierce N. E. wind blows in a tharp froft, we have fich weather; but, for the month of November, I believe fuch a day has not been felt in England fince its creation. The provifion of the Fiorentines againft fuch weather is truly ridiculous: they have not chimnies in more than half the rooms of common houfes; and thofe they do not ufe; not becaufe they are not cold, for they go fhivering about, with chattering teeth, with an idea of warmth, from a few wood afhes or embers in an earthen pan; and another contrivance for their feet to reft upon. Wood is very dear, therefore this miferable fuccedaneum is for economy. Thank God for the coal fires of England, with a climate lefs fevere by half than that of Italy! I would have all nations love their country; but there are few more worthy of fuch affection than our bleffed iffe, from which no one will ever travel, bet to return with feelings frefh ftrung for pleafure, and a capacity renovated by a thoufand comparifons for the enjoyment of it.

The 26. To the Palazzo Pitti. I have often read about ideal grace in painting, which I never well comprehended, till I faw the Madonna della Sedia of Raphael. I do not think either of the two figures, but particularly the child, is frictly in nature; yet there is fomething that goes apparently beyond it in their expreflion; and as paffion and emotion are out of the queftion, it is to be refolved into ideal grace. The air of the virgin's head, and the language of the infant's eyes, are not eafily transfufed by copyifts. A group of four men at a table, by Rubens, which, for force and vigour of the expreflion of nature, is adnirable. A portrait of Paul III. by Titian, and of a Medicis, by Raphael. A virgin, Jefus, and St. John, by Rubens, in which the expreffion of the children is hardly credible. A Magdalen, and portrait of a woman in a a fcarlet habit, by Titian. A copy of Corregio's holy family, at Parma, by Barrocio Cataline, a copy of Salvator Rofa, by Nicolo Caffalve ; and laft, not leaft, a marine view, by Salvator. - But to enumerate fuch a valt profufion of fine pieces, in fo many fplendid apartments, is impofible; for few fovereigns have a finer palace, or better furnifhed. Tables inlaid, and curiofilies, both here and at the gallery, abound, that deferve examination, to mark the perfection to which thefe arts have been carried, in a country where you do not find, in common life, a door to open without wounding your knuckles, or a window that huts well enough to exclude the Appenine fnows. The gardens of this palace contain rround that Brown would have made delicious, and mary fine things that itineraries, guides, and travels dwell amply on.

The 27 th. To the pilace Po. gio Imp..: ie, a country-feat of the grand Duke's, only a mile from Florence, which is an exceilent houfe, of good and well proportioned rooms, neatly fitted up and furnithed, with an air of confort withou magniticence, except in the article beds, which are below par. There is a fine velthbule and faloon, that, in hot weather, mult be very pleafant; but our party were frozen through all
the houfe. Lord IVervey's rooms are warm,' from sarpets and good fires; but thofe are the only ones I have feelin here. We have a fine clear blue iky and a bright fun, with a fharp froft and a cutting N. E. wind, that brings all the fnow of the Alps, of Hungary, Poland, Rufia, and the frozen ocean to one's fenfation. You have a fun that excites perfipiration, if you move falt; and a wind that drives ice and fnow to your vitals. And this is Italy, celebrated by fo many hafty writers for its delicious climate! To-day, on returning home, we met many carts loaded with ice, which I found, upon micalure, to be four inches thick; and we are here between latitude 43, and 44. The green peafe in December and January, in Spain, flew plainly the fuperiority of that climate, which is in the tame latitude. The magnitude and fubftuntial folidity with which the Palazzo Ricardi was built, by a merchant of the Florentine republic, is aftonilhing; we have, in the north of Europe (now the moft commercial part of the globe), no idea of merclants being able to raife fuch edifices as thefe. The Palazzo litti was another inftance; but as it ruined its mafter, it deferves not to be mentioned in this view; and there are at Florence many others, with fuch a profufion of churches, that they mark out the fame marvellous influx of wealth, arifing from trade. To a mind that has the leaft turn after philofophical inquiry, readin whod ma hitory is generally the moft tormenting employment that a man can have; UT is plagued with the actions of a deteftable fet of men, called conquerors, heroes, a. rreat generals; and we wade through pages loaded with military details; but winci you want to know the progrefs of ag:iculture, of commerce, and induftry, their effect in ent ages and nations on each other-the wealth thar refulted-the divifion of that wealth-its employment-and the manners it produced-all is a blank. Voltaire fet an example, but how has it been followed? Here is a cieling of a noble faloon, painted by Laca Giordano, reprefenting the progrefs of human life.' This invention and poetry of this piece are great, and the execution fuch as mult.pleafe every one. The library is rich; I was particularly itruck with one of the roons that contains the books, having a gallery for the convenience of reaching them, without any difagreeable cffect to the eye. In England we have many apartments, the beauty of which is ruined by thefe galleries: this is thirty-fix feet by twenty-four, within the cafes, well lighted by one mederate window; and is fo pleafing a room, that if I were to build a library, I would imitate it exactly. After vifiting the gallery, and the Palazzo Pitti, we are naurally nice and faftidious,-yet in the Palazzo Ricardi are fome paintings that may be viewed with pleafure. In the evening to the converf one of Signore Fabbroni; the affembly merits the name ; for fome of the beft inftructed people at Florence meet there, and difcufs topics of importance. Signore Fabbroni is not only an ceconomifte, but a friend to the 'Tuican mode of letting farms alla netà, which he thinks is the beft for the peafants; his abilities are great ; but facts are too ftubborn for him.

The 29th. Churches, palaces, \&c. In the afternoon to St. Firenze, to hear an oratorio. At night to a concert,' given by a rich Jew on his welding: a folo on the violin, by Nardini.-_Croods-candles -ice -fruits-heat-and-fo forth.

The 30 th. 'To Signore Fabbroni, who is licond in command under il Cavatiere Fontana, in the whole muteum of the Grand Duke; he fhewed me, and our party, the cabinets of natural hifory, anatomy, machines, pnetuatics, magnetifm, optics, \&c. which are ranked among the fineft colleations in the world; and, for arrangement ${ }_{2}$ or rather exhibition, exceed all of them; but note, no chamber for agriculture; no collection of machines, relative to that firl of arts; no mechanics, of great talents or abilities, employed in inproving, eafing, and funplifying the common tools ufed by the huf-
bandman, or inventing new ones, to add to his forces, and to leffen the expence of his efiorts! Is not this an object as important as magnetifm, optics, or aftronomy? Oc rather, is it not fo infinitely fuperior, as to leave a comparifon abfurd? Where ann I to travel, to find agricultural eftablifhuents, on a fcale that fhall not move contempt? If I find none fuch in the dominions of a prince reputed the wifett in Europe, where am I to go for them?

Our Annual Regiter gave fuch an account, a few years paft, of the new regulations of the Grand Duke, in relation to burials, that I have been anxious to know the truth, by fuch inquiries, on all hands, as would give me not the letter of the law only, but the practice of it. The fact, in the above-mentioned publication, was exiggerated. The bodies of all who dic in a day are carried in the night, on a bier, in a linen cover. ing (and not tumbled naked into a common cart), to the church, but without any lights or finging; there they receive benediction; thence they are moved to a heufe, prepared on purpofe, where the bodies are lide, covered, on a marble platform, and a voiture, made for that ufe, removes then to the cemetery, at a diftance from the city, where thev are buried, without diftinction, very deep, not more than two in a grave, but no coffins ufed. All perfons, of whatever rank, are bound to fubmit to this law, except the Archbihop, and women of religious orders. This is the regulation and the practice; and I flall frecly fay, that I condemnit, as an outrage on the common feelings of mankind ; chicfly, becaufe it is an unneceflary outrage, from which no ufe whatever flows. To prohibit lights, finging, proceflions, and mummery of that fort, was rational; but are not individuals to drefs, and incafe the dead bodies, in whatever manner they pleafe? Why are they not permitted to fend them, if they chufe, privately into the country, to fome other burying place, where they may reft with fathers, mothers, and other conuctions? Prejudices, bearing on this point, may be, if you pleafe, ridiculous; but gratifying them, though certainly of no bencfit to the dead, is, however, a confolation to the living, at a moment when confolation is moft wanted, in the hour of grief and inifery. Why is the impafioned and fill loving hufband, or the tender and feeling bofom of the father, to be denied the laft rites to the corpfe of a wife or a daughter, efpecially when fuch rites are neither injurious nor inconvenient to fociety? The regulations of the Grand Duke are, in part, entirely rational, -and that part not in the leaft inconfiftent with the confolation to be derived from a relaxation in fome other points. But, in the name of common fenfe, why admit exceptions? Why is the Archbifhop to have this favour? Why the religious? This is abfolutely deftructive of the principle on which the whole is founded; for it admits the force of thofe prejudices I have touched on, and deems exe:nption from their tie as a favour! It is declaring fuch feelings follies, too abfurd to be indulged, and, in the fame breath, afligning the indulgence, as the reward of rank and purity! If the exemption be a privilege fo valuable, as to be a favour proper for the firtt ecclefiaftic, and for the religious of the fex only, -you confefs the obfervance to lie directly, in fuch proportion, a burthen, and the common feelings of mankind are fanctioned, even in the noment of their outrage. Nothing could pardon fuch an edia, but its being abfolutely free from all exemptions, and its containing an exprefs declaration and ordinance to be executed, with rigour, on the bodies of the Prince himfelf, and every individual of his fa. mily.

December I . To the fhop of the brothers Pifani, fculptors, where, for half an hour l was foolifh enough to wifh myfelf rich, that I might have bought Niobe, the gladiator, Diana, Venus, and fome other cafts from the antique flatues. I threw away a few paols, inftead of three or four hundred zechins. Before I quit Florence, I muft obvol. Jv.
ferve,
ferve, that befides the buildings and various objets I have mentioned, there are numberlefs, which I bave not feen at all;-the famous bridge Ponte della Santa Trinita deferves, however, a word: it is tlie origin of that at Neuillé and others in France, but much more beautiful; being indeed the firft in the world. The circumftance that frikes one at Florence, is the antiquity of the principal buildings; every thing one fees confiderable, is of three or four hundred years flanding; of new buildings, there are next to none; all here remind one of the Medicis: there is hardly a freet that has not fome monument, fome decoration, that bears the ftamp of that fplendid magnificent family. How commerce could enrich it fufficiently, to leave fuch prodigious remains, is a queftion not a little curious; for I may venture, without apprehenfion to affert, that all the collected magnificence of the Houfe of Bourbon, governing for eight hundred years twenty millions of people, is trivial, when compared with what the Medicis family have left, for the admiration of fucceeding ages - fovereigns only of the little mountainous region of Tufcany, and with not more than one million of fubjects. And if we pafs on to Spain, or England, or Germany, the fame altonifhing contraft will frike us. Would Mr. Hope, of Amferdan, faid to be the greatelt merchant in the world, be able, in this age, to form eftablifhments, to be compared with thofe of the Medicis? We have merchants in London, that make twenty, and even thirty thoufand pounds a year profit, but you will find them in brick cottages, for our modern London houfes are no better, compared with the palaces of Florence and Venice, erected in the age of their commerce; the paintings, in the poffeffion of our merchants, a few daubed portraits; their ftatues, earthen-ware figures on chinnney pieces; their libraries-their cabinets,-how contemptible the idea of a comparifon! It is a remarkable fact, that with this prodigious commerce and manufature, Florence was neither fo large nor fo populous as at prefent This is inexplicable, and demands inquiries from the hiltorical traveller:-a very ufeful path to be trodden by a man of atiliries, who fould travel for the fake of comparing the things he fees with thofe he reads of. Trade, in that age, muft, from the fewnels of hauds, have been a fort of monopoly, yielding immenfe profits. From the modern fate of Florence, wihout one new houfe that rivals, in any degree, thofe of the fourteenth or fifteeth centuries, it might be thought, that with their commerce, the Florentines loft every fort of income; yet there is no doubt, that the revenue from land is, at this moment, greaser than it was in the moft flourifling age of the republic. The revenue of Tuicany is now more equally fpent. The govermment of the Grand Dukes I take to have been iar better thas the republican, for it was not a republic equally formed from all parts of the territory, tut a city governing the country, and confequently impoverifhing the whole, to enrich itfelf, which is one of the worft feecies of goverument to be found in the world. When Italy was decorated with fine buildings, the rich nobles muft have fent their incomes in raifing them: at prefent, thofe of Florence have other methods of applying their fortunes; not in palaces, not in the fine arts, not in dinners; - the account I received was, that their incoines are, for the greateft part, confumed by keeping great crowds of domeflics; many of them married, with their fanilies, as in Spain. The Marchefe Ricardi has forty, each of which hath a family of his own, fonse of them under-fervants, but all maintained by him. Ilis table is very magnificent, and ferved with all forts of delicacies, yet never any company at it, except the family, tutors, and chaplains. The houfe of Ranuzzi hath a greater fortune, and alfin a greater number of domeftics in the fame ltile. No dinners, as in England ; no luppers, as in France; no parties; no espenfive equipages; little comfort; but a great tram of idle lounging penfioners, taken from ufeful labour, and kept from productive induftry; one of the worf ways of
fpending
fpending their fortuttes, relatively to the public good, that could have been adopted. How inferior to the encouragement of the fine or the uffful arts!
The manner in which our little party has paffed their time has been agreeable enough, and wonderfully cheap: we have been very well ferved by a traiteur, with plenty of good things, well dreffed, at 4 paols a head for dinner, and a flight repaft at night; fugar, rum, and lem~+s for punch, which both French and Italians like very well, added a tritte more. Thefesticles, and the apartment, with wood, which is dear, and the weather, as I noted, very cold, mäde my whole expence, exclufive of amufements, 3 s. 6d. a day Eng ilh , which furely is marvelloufly cheap; for we had generally eight or ten things for dinner, and fuch a defert as the fealon would allow, with good wine, the beft I have drunk in Italy. The Abbate Amoretti, who, fortunately for me, arrived at Florence the fance day as myfelf, was lodged with a friend, a canon, who being obliged to be abfent in the country moft of the time, the Abbate, to fave the fervants the trouble of providing for him only, jued our party, and lived with us for fome days, adding to our common bank no flight capital in good fenfe, information, and agreeablenels. Madamede Bouille's eafy and unatfected character, and the good humour of the Baron, united with Mr. Stew urt, and his young friend, to make a mixture of nations-- fideas - of purfuits-and of tempers, which contributed to render converfation diverfified, and the topics more in sontraft, better treated, and more interefting; but $n$ ever one idea, or one fyllable, that caft even a momentary fhade acrofs that flow of eafe and good humour, which gives to every fociety its beft relifh. There was not one in the party which any of us wifhed out of it; and we were too much pleafed with one unother to want any addition. Had I not been turning my face towards my family, and the old friends I left in England, I fhould have quitted our little fociety with more pain. Half a dozen people have rarely been brought together, by fuch mere accident, that have better turned the little nothings of life to account (if I may venture to ufe the expreffion) by their beft cement-good iumour.

The 2d. The day of departure mult needs give fome anxiety to thofe who cannot throw their fmall evils on fervants. Renew my connection with that odious Italian race, the vetturini. I had agreed for a compagnon de voyage; but was alone, which I liked much better. To ftep at once from an agreeable lociéty, into an Italian voiture, is a kind of malady which does not ag ve will my nerves. The beft people appear but blanks at fuch a moment: the mind having gotten a particular impulfe, one can not fo foon give it another. The inn at Maichere, where I found no fire, but in partnerfhip with fonse Gernans, did not *ad much to revive chearfulnefs, fo I clofed myfelf in that which Sancho witely fays, covers a man all over like a cloak.-- 18 miles.

The 3 d. Dine at Pietra Mala, and, while the dinner was preparing, I walked to the volcano, as it is called. It is a very firgular fpectacle, on the flope of a mountain, without any hole or apparent crevice, o: any thing that tends towards a crater; the fire burns amoug fome fones, as if they were its fuel; the fla ne fills the face of a cub: of about two feet, befides which there are ten or twelve fimaller and inconfiderable flames. Thele 1 extinguifhed in the manner Monf. de la Lande mentions, by rubbing hard with a ftick among the fimall flones: the flame catches again in a few moments, but in a manner that convinces me the whole is merely a vent to a current of inflammable air, which Signore Amoreti informed me has been lately afferted by fome perfon who has tried experiments on it. The flame revives with fmalt explofions, exactly like thofe of inflammable air fired from a fmall phial; and when I returned to the ini, the landlord had a bottle of it, whict he burns at pleafure, to thew his guefts.

The onufe of this phenomenon has been fought in almont every thing but the real fate. 1 and furprifed the fire is not applied to fome ufe. It would boil a confiderable copper coallantly, withoue the expence of fapthing. if 1 hall $i$ at Bradfied, I would burn brick or lan , and buil or bake potan of for bullocks and hags at the fame time. Why not huild a noufe on the fpet? and let the kitchen-chimeney lurround the forn? there would he no danger in living in fuch a houfe, certainly as 1 ng as the flame wntinued to burn. It is true the idea of a mine of inflammat le air, juft under a houfe, would fom times, perhaps, alarm oue's female vifitors: they would be afraid of a magazine of vital ar miting with it, and at one explation blowing up the ceconomical edifice. On the wholn, the idea is rather too volcanic for liradfield: laly has things better worth importing than burning mountains. The King of I'Mad's brother, the primate, תopping at Pictra Mala a day for illnefs (the $25^{\text {th }}$ or 26 th November!, the weather was fo fevere that it froze his Cyprus wine; milk was as hard as fone, and burft all the veffels that contained it. Oa whatever account Finglifhmen may travel to Tufcany, let not a warm winter he among their induccmenis. - Sleep at that hideous hole Lciano, which would be too bad for hogs accuftomed to a clean flye.-- 26 miles.

The ath. The paflage of the Appenines has been a cold and comfortlefs journey to nee, and would have been much worle, if I had not taken refuge in walking The hills are almoft co:ered with fnow: and the road, in many defents a fleet of ice. At the St. Marco, at Bologna, they brought me, according to cullom, the book to write my name for the commandant, and there I lee Lady Erne and fua figlia, and Mr. Hirvey, October 14. Had my flars been lucky enough to have given mee more of the fociety of that cultivated family, during my ftay in Italy, it would have fmoothed fome of my difficultics. I miffed Lord Brittol at Nice, and again at Paiua. He has travelled, and lived in Italy, till he knows it as well as Derry; and, unfortunately for the fociety of Suffolk, ten times reter than Ickworth. Call on Mr. Taylor, and find, to my great concern, two of his chidicen very ill. Abbate Amoretti, who left Florance a fow days agn, is here to my com? rt, and we fhall continue together till we come to Parma. This is indeed fortuma, for one can hardly wifh fur a beter fellow traveller. - 20 miles.

The $g^{t h}$. Vifit the Infitute, which has acquired a greater reputation than it merits. Whoever has read any thing about modern italy, knows what it contains. I never view mufeums of natural hiftory, and cabinets of machines for experimental philofophy, but with a fpecies of difguft. I hate expence, and time thrown away for vanity and Shew more than utility. A well arranged lahoratory, clean, and cvery thing in order, in a holy-day drefs, is deteftable; but I found a combination of many pledfures in the diforderly dirty laboratories of Mefirs. de Morveau and la Voficr. There is a face of bufinefs; there is evidutly work going forwards; ind if fo, there is ufe. Why move here, and at Florence, through rooms well garnithed with pneumatical influmelits that are never ufid? Why are not experiments going forward? If the pufffors have not time or inclination for thofe experiments, which it is their duty to muke, 1 it others, who are willing, convert fuch macnines to ufe. Half theic iniplemens grow good for nothing from relt; ans, before they are ufed, demand to be new arranged. You fhew me abun'ance of tools, but fay not a word of the difcoverics that have been made by them. A prince, who is at the expence of making fuch great collections of mathines, Should always order a feries of experiments to be carrying on by their means. If I were Grand Duke of Tufcany, I Thould lay, "You, Mr. Fontana, have inventel an cudiometer; I defire that you will carry on a feries of trials to afcertain every circunftance
 per urn 1Cr'e wed suld pine fice. etter pri. urlt
which changes the refult, in the qualities of airs, that can be alcertained by the nitrous teft; and if you have other inquiries, which you hink more important, enpley fone perfun ufon whom you can depend." - And to Mr. John Fabbroni, "You have made five trials on the wight of seoponic foils, taken tydroflaticaliy; make five bundrud more, and let the fpecimens be cholen in conjunction with the profefor of arriculture. You have explained how to analy ze foils -a' alye the fame fecimens." When inen have opened to themfelves careers which they tho not purfue, it is uiuaty for wana of the means of profecuting them; but in the mufeum of a prince; in fuch cabinets as at Florence or Bologna, there are no difficulties of this fert, - and they would be better amployed than in their prefent fate, painted and patched, like an opera girl, for the idle to ftare at. What wuld a Watfor a Miner, or a Priefley fay, upon a propofal to have their laboratories brufhed on ow 1 pruce? I believe they would hick out the operator who came on fuch an ca like manner; I hate a library well gilt, exatiy arranged, and it a book pleafed wih the reputation of his in for machines applicable to mechanic: feet high, wilh large axles; what expe - c; I all apt to think the owner better with reading them. Here is a chamber country is full of carts, with wheels two lave been made in this chamber to inform the people on a point of fuch confequence to the conduct of almoft every art? I have, however, a greater quarrel than this with the laftitute. There is an apartment of the art of war and fortification. Is there one of the machines of agriculture, and of fuch of is proceffes as can be reprefented in miniature?-No : nor here, nor any where elfe have I feen fuch an exhitition; yet in the King's library at Paris, the aut of Englifh gardening is reprefented in wax-work, and makes a play-thing pretty enough for a child to cry for. The attention paid to war, and the negleet of agriculture in this Inflitute, gives me a poor opinion of it. Bologna may produce great men, but the will not be indebted for them to this eftablifhnent. View fome churches and palaces, which I did not fee when here before. In the church of St. Dominico, a fau;hter of the Innocents, by Guido, which will command attention, how little inclined foever you may be to give it. The mother and the dead chi'd, in the fore-ground, are truly pathetic, and the whole piece fincly executed. The number of highly decorated churches at Bologna is furprifing. They count, 1 think, above an hundred; and all the towns, and many villages in ltaly, offer the fame fpectacle; the fums of money invefted in this manner in the fifteenth and fixteenth centurics, and fome even in the feventeenth, are truly amazing; the palaces were built at the fame time, and at this period all the reft of Europe was in a ftate of barbarifin: national wealth muf have been immenfe, to have fpared fuch an enormous fuperfluity. This idea recurs every where in Italy, and wants explanation from mudern hiforians. The Italian republics had all the trade of Eu* rope; but what was Europe in that age? England and Holland have had it this age without any fuch effects; with us architecture takes quite a different turn; it is the diffufion of comfort in the houfes of private people; not concentrated magnificence in public works. But there does not appear, from the fize and number of the towns in Ltaly, built in the fame ages, to have been any want of this; private họfes were numerous and well erected. A difference in manners, introducing new and unheard-of luxuries, has probably been the caufe of the change. In fuch a diary as this, one can only touch on a fubject-but the hiltorians fhould dwell on them, rather than on battles and fieges.

The 6 th . l.eft Bologna, with Abbate Amoretti, in a vettura, but the day fo fine and frofty, that we walked three-fourths of the way to Modena. Pafs Anfolazen, the feat of the Marchefe Abbergant, who, after having paled his grand climacteric, has juf

## IMAGE EVALUATION TEST TARGET (MT-3)

Photographic Sciences

married a ballarina, of feventeen. The country to Modena is the fame as the flat part of the Bolognefe; it is all a dead level plain, inclofed by neatly wrought hedges againt the road, with a view of diftinguifhing properties. I thought, en entering the Modenele dominions, acrofs the river, that I obferved rather a decline in neatnefs and good management. View the city; the ftreets are of a good breadth, and molt of the houfes with good fronts, with a clean painted or well walhed face-the eflect pleafing. In the evening to the theatre, which is of the oddelt form I have feen. We had a hodge-podge of a comedy, in which the following paffage excited fuch an immoderate laugh, that it is worth inferting, if only to fhew the tafte of the audience, and the reputation of the ballarine; "Era un cavallo sì bello,'sì fvelto, sì agile, di bel petto, gambe ben fatte, groppa grofa, che fe foffe fato una cavalla, convercbbe dire che l'anima della prima ballcrina del teatro trafmigrata in quella." Another piece of miferable wit was received with as much applaufe as the moft fterling:-Arlech. "Cbie quel ré che ba la più gran corona del mondo? -Brighel. "Quello che ba la tefta piu piicola."- 24 miles.

The 7th. To the ducal palace, which is a maguificent building, and contains a confiderable collection of pictures, yet a melancholy remmant of what were once here. The library, celebrated for its contents, is fplendid; we were fhewn the curious MS. of which there is an account in De la Lande. The bible made for the D'Efé family is beautifully executed, begun in 1457, and finifhed in 5463 , and coft 1875 zechins. In the afternoon, accompanied the Abbate Amoretti to Signore Belentani; and in the evening to Signore Venturi, profeffor of phyficks in the univerfity, with whom we fpent a very agreeable and inftructive evening. We debated on the propriety of applying fome political principles to the prefent ftate of Italy; and I found, that the profeffor had not only confidered the fubjects of political importance, but feemed pleafed to converfe upon them.

The 8th. Early in the morning to Reggio. This line of country appears to be one of the beft in Lombardy; there is a neatnefs in the houfes, which are every where fcattered thickly, that extends even to the homefteads and hedges, to a degree that one does not always find, even in the beft parts of England; but the trees that fupport the vines being large, the whole has now, without leaves, the air of a foreft. In fummer it muft be an abficlute wood. The road is a noble oure. Six miles from Modena, we paffed the Secchia, or rather the vale ruined by that river, near an unfinifhed bridge, with a long and noble caufeway leading to it on each fide, which does honour to the Duke. $\boldsymbol{n}!$ ftates of Modena. It being a fif $a($ (the immaculate conception), we met the country people going to mafs; the married women had all muffs, which are here wedding prelents. Another thing I obferved, for the firft time, were children fanding ready in the road, or running out of the houfes, to offer, as we were walking, affes to ride: they have them always faddled and bridled, and the fixed price is 1 fol per mile. This thews attention and induftry, and is therefore commendable. A countryman, who had walked with us for fome diflance, replied to them, that we were not Signora d'afini. In the afternoon to Parma. The country the fame, but not with that air of neatnefs that is between Reggio and Modena; not fo well inclofed, nor fo. well planted; and though very populous, not fo well built, nor the houfes fo clean and neat. Pafs the Eufa, a poor milerable brook, now three yards wide, but a bridge for it a quarter of a mile long, and a fine vale, all deflrojed by its ravages; this is the boundary of the two duchies. - 30 miles.

The gth. At the academy is the famous picture of the holy family and St. Jerome, by Correggio, a mafter more inimitable perhaps than Raphael himfelf. To my unlearned eyes, there is in this painting fuch a fuffufion of grace, and fuch a blaze of beauty,
as Arike me blind (to ufe another's expreffion) to all defects which learned eyes have found in it. I have admired this piece often in Italy in good copies, by no ordinary mafters, but none come near the original. The head of the Magdalen is reckoned the chef d'auvre of Correggio. The celebrated cupola of the Duomo is fo high, fo mush damaged, and my eyes fo indifferent, that I leave it for thofe who have better. At St. Sepolcro, St. Jofeph gathering palms, \&c. by the fame great hand. There are works by him alfo in the church of St. John, but not equally beautiful, and a copy of his famous Notte. At the academy is a fine adoration, by Mazzola. The great theatre here is the largeft in the world. In the afternoon to the citadel; but its governor, Count Rezzonico, to whom I had a letter, is abfent from Parma. Then to the celebrated reale typografia of Signore Bodoni, who fhewed me many works of fingular beauty. The types, I think, exceed thofe of Didot at Paris, who often crowds the letters clofe, as if to fave paper. The Daphne and Chloe, and the Amynta, are beautifully executed; I bought the latter as a fpecimen of this celebrated prefs; which really does honour to Italy. Signore Bodoni had the title of the printer to the King of Spain, but never received any falary or even gratification, as I learned in Parma from another quarter; where I was alfo informed, that the falary he has from the duke is only 150 zechins. His merit is great and diftinguihed, and his exertions are uncommon. He has thirty thoufand matrices of type. I was not a little pleafed to find, that he has met with the beft fort of patron in Mr. Edwards, the bookfeller, at L.ondon, who has made a contract with him for an impreffion of two hundred and fifty of four Greek poets, four Latin, and four Italian ones-Pindar, Sophocles, Homer, and Theocritus; Horace, Virgil, Lucretius, and Plautus; Dante, Petrarca, Ariofto, and Taffo. In fearching bookfellers' fhops for printed agriculture, I became poffefled of a book which I con. fider as a real curiofity - "Diario di Colorno per l'anno 1789 ," preceded by a fermon on this text, Ut feductores et veraces : Corinth. cap. vi. ver. 8. The diary is a catalogue of faints, with the chief circumftances of their lives, their merits, \&cc. This book, which is put together in the fpirit of the tenth century, is (marvelloufly be it fpoken!) the production of the Duke of Parma's pen. The fovereign, for whofe education a conftellation of French talents was collected-with what effect let this production witnefs. Inftead of profanely turning friars out of their convents, this prince has peopled his palace with monks; and the holy office of inquifition is found at Parma, inflead of an academy of agriculture. The duchefs has her amufements, as well as her hufband: doubtlefs they are more agreeable, and more in unifon with the character and practice of this age. The memoirs of the court of larma, both during the reigns of Don Philip and the prefent duke, whenever they are pubiifhed, for written I thould fuppofe they muft be, will make a romance as intereftiry as any that fiction has produced. IfI lived under a government that had the power of fleecing me to fupport the extravagances of a prince, in the name of common feclings, let it be to fill a palace with miftrefles, rather than with monks. For half a million of French livres, the river Parma might be made navigable from the Po: it has been more than once mentioned; but the prefent duke has other and more holy employments for money ; Don Philip's were not fo directly aimed at the gates of Paradife.

The 1oth. In the morning, walked with Signore Amaretti to Vicomero, feven miles north of Parma towards the Po, the feat of the Count de Schaffienatti. For half the way, we had a fine clear frofty fun-fhine, which fhewed us the conftant fog that hangs over the Po; but a flight breeze from the north rifing, it drove this fog over us, and changed the day at once. It rarely quits the Po, except in the heat of the day in fine weather in fummer, fo that when you are to the fouth of it, with a clear view of the

Appenines, you fee nothing of the Alps; and when to the north of it, with a fine view of the latter, you fee nothing of the Appenines. Commonly it does not fpread more than half a mile on each fide wider than the river, but varies by wind, as it did to-day. The country, for four miles, is moftly meadow, and much of it watered; but then becomes arable. Fntered the houfe of a metayer, to fee the method of living, but found nobody; the whole family, with fix or eight women and children, their neighbours, were in the flable, fitting on forms fronting each other in two lines, on a fpace paved and clean, in the middle of the room, between two rows of oxen and cows: it was moft difagreeably hot on entering. They flay there till they go to bed, fometimes till midnight. This practice is univerfal in Lombardy. Dine with the Count de Schaffienatti, who lives entirely in the country with his wife. He fhewed me his farm, and I exanined his dairy, where cheefes are made nearly in the fame way, and with the fame implements as in the Lodefan; thefe cheefes may therefore, with as much propriety, be called Parmefan, as thofe that come from Lodi. My friend, the Abbate Amoretti, having other engagements in this country, I here took leave of him with regret. 14 miles.
The ith. Having agreed with a vetturino to take me to Turin, and he not being able to procure another paffenger, I went alone to Firenzola. It is fine fun-hine weather, decifively warmer than ever felt in England at this feafon : a fharp frof, without aflecting the extremities as with us, where cold fingers and toes may be claffed among the nuifances of our climate. I walked molt of the way. The face of the country is the fame as before, but vines decreafe after Borgo St. Donnino. An inequality in the furface of the country begins alfo to appear, and every where a fcattering of oak timber, which is a new feature.- 20 miles.

The 12th. Early in the morning to Piacenza, that I might have time to view that city, which, however contains little worthy of attention. The country changed a good deal today. It is like the flat rich parts of Effex and Suffolk. Houfes are thinner, and the general face inferior. The inequalities which began yeflerday increafe.-The two equeftrian flatues of Alexander and Rannutio Farnefe, are finely expreffive of life; the motion of the horfes, particularly that of Alexander's, is admirable; and the whole performance fpirited and alive. They are by John of Bologna, or Mocz his éleve. Sleep at Caftel St. Giovanne.- 26 miles.

The $\mathrm{I}_{\mathrm{j}} \mathrm{th}$. Crofs a brook two miles diftant, and enter the $\mathrm{Kin}_{\ell}$ jardinia's territory, where the fculls of two robbers, who, about two months ago, robbed the courier of Rome, are immediately feen : this is an agreeable object, that ftrikes us at our entrance into any part of the Piedmontefe dominions; the inhabitants having in this refpect an ill reputation throughout all Italy, much to the difgrace of the government. The country, to Tortona, is all hill and dale; and be:ag cultivated, with an intermixture of vines, and much inclofed, with many buildings on the hills, the features are fo agreeable, that it may be ranked among the moft pleafing I have feen in Italy. Within three miles of Vaghera, all is white with fnow, the firt I have feen in the plain; but as we approach the mountains, fhall quit it no more till the Alps are croffed. Dine at Voghera, in a room in which the chimney does not fmoke; which ought to be noted, as it is the only one free from it fince I left Bologna. At this freezing feafon, to have a door conflantly open to aid the chimney in its office; one fide burnt by the blaze of a faggot, and the other frozen by a door that opens into the yard, are among the agrémens of a winter journey in lat. 45. After Voghera the hills tend more to the fouth. The fun fetting here is a fingular object to an eye ufed only to plains. The Alps not being vifible, it feems to fet long before it reaches the plane of the horizon. Pafs the citadel of

Tortona

Fortona on a hill, one of the ftrongeft places in the poffeffion of the King of Sardinia - 33 miles.

The 14th. Ford the Scrivia; it is as ravaging a ftream as the Trebbia, fubject to dreadful floods, after even two days rain; efpecially if a Scirocco wind melts the fnow on the Appenines: fuch accidents have often kept travellers four, five, and even fix days at miferable inns. I felt myfelf lighter for the having pafied it ; for there were not fewer than fix or feven rivers, which could have thus ttopped me. This is the tatt. The weather continues fharp and frolty, very cold, the ice five inches thick, and the fnow deep. Dine at Alexandria, joined there by a rentloman who has taken the other feat in the vettura to Turin. Juft on the outfide of that town, there is an uncommon covered bridge. The citadel feems furrounded with many works. Slcep at Felliham, a vile dirty hole, with paper windows, common in this country, and not uncommon even in Alexandria itfelf.- 18 miles.

The 1 th. The country, to Afti and Villanova, all hilly, and fome of it pleafing. Coming out of Afti, where we dined, the country for fome miles is beautiful. My vetturino has been travelling in company with another, without my knowing any thing of the mafter till to day; but we joined at dinner, and 1 found him a very finfible agreeable Frenchman, apparently a man of fafhion, who knows every body. His converfation, both at dinner, and in the evening, was no inconfiderable relicf to the dullnefs of fuch a frozen journey. His name Nicolay.-22 miles.

The 16 th . To Turin, by Moncallier; much of the country dull and difagreeable; hills without landfcape; and vales without the fertility of Lombardy. My companion, who is in office as an architect to the King, as well as I could gather from the hints he dropped, lived nine years in Sardinia. The account he gives of that inland, contains fome circumftances worth noting. What keeps it in its prefent unimproved fituation, is chiefly the extent of eftates, the abfence of fome very great proprietors, and the inattention of all. The Duke of Affinara has 300,000 livres a-year, or 15,000 . fterling. The Duke of St. Piera 160,000. The Marchefe di Palcha, very great. Many of them live in Spain. The Conte de Girah, a grandec of Spain, has an eftate of two days journey, reaching from Poula to Oliuftre. The peafants are a miferable fet, that live in poor cabins, without other chimuies than a hole in the roof to let the fmoke out. The intemperia is frequent and pernicious every where in fummer; yet there are very great mountains. Cattle have nothing to eat in winter, but brouzing on fhrubs, \&c. There are no wolves. The oil fo bad as not to be eatable. Some wine almoft as good as Malaga, and not unlike it. No filk. The great export is wheat, which has been known to yield forty for one; but feven or eight for one is the common produce. Bread, if. the pound; beef, $2 f$; mutton, $2 \frac{1}{2} /$. There are millions of wild ducks; fuch numbers, that perfons fond of flooting have gone thither merely for the incredible fort they afford.

The 17th. Waited on our ambaffador, the Honourable Mr. Trevor, who was not at home; but I had an invitation to dinner fooin after, which I accepted readily, and paffad a very pleafant day. Mr. Trevor's fituation is not compatible with his being a practical farmer; but he is a man of deep fenfe, and much oblervation; all fuch are political farmers, from conviction of the importance of the fubject. He converfes well on it ; Mr. Trevor mentioned fome Piedmontefe nobles, to whom he would have introduced me, if my fay had been long enough; but he would not admit an excufe refpecting the Portuguefe ambaffador, of whom he fpeaks as a perfon remarkably well informed; and who loves agriculture greatly. In the evening, accompanied Mirs. Trevor to the great

TOL. IV.
00
opera-
opera-houfe; a rehearfal of l'Olympiade, new-fet by a young compofer, Frederici; Marchefe fung.

The 18th. I am not a little obliged to Mr. Trevor for introducing me to one of the bet informed men I have any where met with, Don Roderigo de Souza Continho, the Portuguefe minifter at the court of Turin, with whom I dined to-day; he had invited to mect me the Medico Bouvicino, l'Abbate Vafeo, author of feveral political pieces of merit, and Signore Bellardi, a botanit of confiderable reputation, whom I had known before at Tuen. What the young and beamifal Madame de Souza thinks of an Eng. lifh farmer, may be eafily guclled; for not one word was folken in an inceflant converfation, but on ascriculture, or thofe political principles which tend to cherifh or reftrain it. To a womin of fathion in England this would not appear extraordinary, for fhe now and thon meets with it; but to a young licdmontefe, unaccultomed to fuch converfitions, it muft have appeared odd, uninviting, and unpolite. M. de Souza fent to the late l'rince of Beazil, one of the beft and moft judicious offerings that any ambaniador ever made to his fovereign; Portugal he reprefents as a country capable of valt improvements. by irrigation, but almoft an entire franger to the practice; thercfore, with a view of introducing a knowledge of its importance, he ordered a model, in diflerent woods, to be confructed of a river; the method of taking water fromit; and the conduating of it by various channels over the adjoining or diftant lands, with all the machinery ufed for regulating and meafuring the water. It was made on fuch a fcale, that the model was an exhibition of the art, fo far as it could be reprefented in the diftribution of water. It was an admiisble thought, and might have proved of the greatelt importance to his country. This machine is at Libbon; and, I take it for granted, is there confidered (if Lifbon be like other courts) as a toy for children to look at, inftead of a fchool for the inftruction of a people. I was pleafed to find the lortuguefe minifter among the moft intimate acquaintances of Mr. Trevor ; the friendflip of men of parts and knowledge, does them reciprocal honour : I amforry to quit Turin, juf as I am known to two men who would be fufficient to render any town agrecable; nor fhould I be forry if Don Roderigo was a farmer near me in Suffolk, inftead of being an ambaflador at Turin, for which he is doubtlefs much obliged to me.

The 1 gth. The King has fent a meflage to the Academy of Sciences, recommending them to pay attention to whatever concerns dying. The minifter is faid to be a man of abilities, from which expreflion, in this age, we are to underfand, a perton who is, or feems to be active for the encouragement of manufactures and commerce, but never one who has juft ideas on the importance of agriculture in preference to all other objects. To multiply mulberries in Piedmont, and cattle and theep in Savoy-to do fomething with the fertile waftes and peffiferous marthes of Sardinia, would give a minifter reputation among the few real politicians only in any country : but dyiug, and buttens*, and fciffars, and commerce, are calculated to pleafe the many, and confequently to give reputation to thofe who build on fuch foundations. Dine with Mr. Trevor, and continue to find in him an equal ability and inclination to anfwer fuch of my cmquiries as I took the liberty of troubling him with. In the evening he introduced me to Count Granari, the fecretary of ftate for home affairs, that is the p pime minitter, under an idea that he had an intention of introducing Spanifh fheep: he was ambaffador in Spain, and feems, from his converfation, well informed concerning the Spanifl flocks. This minitter was called home to fill his prefent important fituation, to the fatisfaction of the people, who have

[^16]wery gencrally a good opinion of his ability and prudence. To-momow I leave Turin: 1 have agreed with a vetturino for carrying me to Lyons acrofs Mont Cenis, in a cha riot, and allowed him to take another perfon: this perfon he has found; and it is Mr. Grundy, a confiderable merchant of Birmingham, who is on his return from Naples.

The zoth. Leave Turin; dine at St. Anthony, like hogs; and fmoked all the dinner like hams. Sleep at Suza, a better inn.——32 miles.

The 21 ift. The fhorteft day in the year, for one of the expeditions that dcmand the longeft, the paffage of Mont Cenis, about which fo much has been written. To thofe who, from reading, are full of expectation of fomething very fublime, it is almoft as great a delufion as is to be met with in the revions of romance: if travellers are to be believed, the defeent, rammafint on the fnow, is made with the velocity of a flafh of lightning ; 1 was not fortunate enough to meet with any thing fo wonderful. At the grande croix we feated ourfelves in machines of four fticks, dignifed with the name of traineau: a mule draws it, and a conductor, who walks between the machine and the animal, ferves chiefly to kick the fnow into the face of the rider. When arrived at the precipice, which leads down to Lanebourg, the mule is difmiffed, and the rammafing begins. The weight of two perfons, the guide feating himfelf in the front, and directing it with his heels in the fnow, is fufficient to give it motion. For moft of the way he is content to follow very humbly the path of the mules, but now and then crofles to efcape a double, and in fuch fpots the motion is rapid enough, for a few feconds, to be agreeable; they might very cafily fhorten the line one half, and by that method gratify the Englifh with the velocity they admire fo much. As it is at prefent, a good Englifh horfe would trot as faft as we rammafcd. The exaggerations we have read of this bufinefs have arifen, perhaps, from travellers paffing in lummer, and relying on the defcriptions of the muleteers. A journey on finow is commonly productive of laughable incidents; the road of the traineau is not wider than the machine, and we were always meeting mules, \&c. It was fometimes, and with reafon, a queftion who fhould turn out; for the finow being ten feet deep, the mules had fagacity to confider a moment before they buried themfelves. A young Savoyard female, riding her mule, experienced a complete reverfal; for, attempting to pafs my traincau, her beaft was a little reftive, and tumbling, difmounted his rider: the girl's head pitched in the fnow, and funk deep enough to fix her beauties in the pofition of a forked poft ; and the wicked muleteers, inftead of affifing her, laughed too heartily to move: if it had been one of the ballcrine, the attitude would not have been diffreffing to her. Thefe laughable adventures, with the gilding of a bright fun, made the day pafs pleafantly; and we were in good humour enough to fivallow with chearfulnefs, a dinner at Lanebourg, that, had we been in England, we fhould have configned very readily to the dog-kennel. 20 miles.

The 22d. The whole day we were among the high Alps. The villages are apparently poor, the houfes ill built, and the people with few comforts about them, except plenty of pine wood, the forefts of which harbour wolves and bears. Dine at Modane, and fleep at St. Michel.- 25 miles.
The 23d. Pafs St. Jean Maurienne, where there is a bifhop, and near that place we faw what is much better than a bihop, the prettieft, and indeed the only pretty woman we faw in Savoy; on enquiry, found it was Madame de la Coite, wife of a farmer of tobacco; I fhould have been better pleafed if he had belonged to the plough.-The mountains now relax their terrific features: they recede enough, to offer to the willing induftry of the poor inhabitants fomething like a valley; but the jealous torrent feizes it with the hand of defpotifm, and like his brother tyrants, reigns but to deftroy. On
fome flopes vines: mulberries begin to appear; villages increafe ; but fill continue rather thapelefs beaps of inhabited itones than ranges of houles; yet in thefe homely cots, beneath the fnow-clad hills, where natural light comes with tarily beams, and art feens more fedulous to exclude than admit it, peace and content, the companions of honelty, may refide; and certainly wound, were the penury of nature the only evil felt ; but the hand of defpotifn may be more heavy. In feveral places the view is picturefque and pleafug: inclofures feem hung againt the momman fates, as a piature is fufpended to the wall of a room. The people are in general execedingly ugly and dwarfilh. Dine at La Chambre; fad fare. Slecp at Aguebelle.- 30 miles.

The 2 yth. The country to-day, that is to Chambery, improves greatly; the mountains, though high, recede; the vallies are wide, and the fopes more cultiyated; and towards the capial of Savoy, are many country houles which enliven the feene. Above Mal 'Taverne is Chatcaune uf, the houfe of the countefs of that name. I was forry to fee, at the village, a carcan, or feigneural flandard, erected, to which a chain and heavy iron collar are faftened, as a mark of the lordly arrogance of the nobility, and the flavery of the people. I atked why it was not burned, with the horror it merited? 'I he queltion did not excite the furprize I expected, and which it would have done before the French revolution. This led to a converfation, by which I learned, that in the buut Savoy, there are no fcigneurs, and the people are generally at their cafe; poffelling little properties, and the land in fpite of nature, almoft as valuable as in the lower country, where the people are poor, and ill at their eafe. 1 demanded why? Becanye there are feigncurs every zubcre. What a vice is it, and even a curfe, that the gentry, inflead of being the cherifhers and benefactors of their poor neighbours, fhould thus, by the abomination of feudal rights, prove mere tyrants? Will rothing but revolutions, which caufe their chateunx to be burme, induce them to give to reafon and humanity, what will be extorted by violence and commotion ? We hal arratged our journey, to arrive early at Chambery, for an opportunity to fee what is moft incerefting in a place that has but little. It is the winter refidence of almoft all the nobility of Sivoy. The beft eftate in the duchy is not more than 60,000 Piedmontefe livres a year ( 300 c . ) , but for 20,000 livres, they live en grand fogigneur here. If a country gentiman have 150 louis d'or a year, he will be fure to ipend three months in a town ; the confequence of which mult be, nine uncomfortable ones in the country, in order to make a beggarly figure the other three in town. Thefe idle people are this Chrittmas difappointed, by the court having refufed admittance to the ufual company of French comedians; the government fears importing among the rough mountaineers the prefent firit of French liberty. Is this we.knels or policy? But Chambery had objects to me more intcrefting. I was cager to view Charmettes, the road, the houfe of Nadame Warens, the viacyard, the garden, every thing, in a word, that had been delcribed by the inimitable pencil of Roufleau. There was fomething fo delicioully amiabic in her charater, in fipite of her frailtiesher conftant gaiety and good humour - her tendernefs and humanity - her farming fpeculations - but, above all other circumfances, the love of Rouff.it, have written her name amonglt the few whofe memoirs are comected with us, hy ties more eafily felt than defcribed. The houfe is fituated about a mile from Chambery, fronting the rocky road which leads to that city, and the wood of chcfnuts in the valley. It is fmall, and much of the fame fize as we fhould fuppofe, in England, would be found on a farm of one hundred acres, withour the leaft luxury or pretenfion; and the garden, for fhrubs and flowers, is confuncl, as well as unafloming. The fcenery is pleafing, being fo near a city, and yet, as he obferves, quite fcqueftered. It could not but intereft are, and I viewed
viewed it with a degree of emotion; even in the leaflefs melancholy of December it pleafed. I wandered about fome hills, which were afluredly the walks he has fis agreeably deferibed. I returned to Chambery, with my heart full of Madime de Warens. We had wilh us a young phylician, a Monfieur Bernard, of Mobanne en Maurimue, an agreable man, conneted with people at Chambery ; I was forry to find, that he knew nothing more of the matter, than that Madame de Warens was certainly dead. With fouse trouble I procured the following certificate:

Estract from the Mortuary Regijfcr of the Pari/3 Church of St. Peter de Lemens.
" The 3oth of July was buried, in the burying ground of Lemens, Dame I.ouifa Frances Fleonor de la Tour, widow of the Seignor Baron de Warens, native of Vevay, in the canton of Berus, in Switzerland, who died yefterday, at ten in the evening, like a good Chriftian, and fortified with her latt facraments, aged about fixty-three years. She abjured the Proteftant religion about thirty-fix years paft ; fince which time the lived in our religion. She finithed her days in the fuburb of Nefin, where fhe had lived for about eight years, in the houfe of M. Crepine. She lived heretofore at the Rectus, about four years in the houfe of the Marquis d'Alinge. She palfed the reft of her life, fance her abjuration, in this city. (Signed) Game, rector of Lemens."
" I, the underwritten, prefent refor of the faid Lemens, certify, that I have extracted this from the mortuary regifer of the parifh church of the faid place, without any addition or dinninution whatloever ; and, having collated it, have found it conformable to the original. In witnefs of all which, I have figned the prefent at Chambery, the 24th of December, 1789.

## (Signed) A. Sachod, rector of Lemens.

-23 miles.
The 25 th. Left Chambery much diffatisfied, for want of knowing more of it. Roulfeau gives a good character* of the people, and I wihhed to know them better. It was the worft day I have known, for months palt, a cold thaw, of fnow and rain; and yet in this dreary feafon, when nature fo rarely has a fmile on her countenance, the environs were charming. All hill and dale, tofled about with fo much wildnefs, that the features are bold enough for the irregularity of a foreft fcene; and yet withal, foftened and melted down by culture and habitation, to be eminently beautiful. The country inclofed to the firft town in France, Pont Beauvoifin, where we dined and flept. The paffage of Echclles, cut in the rock by th - Gvereign of the country, is a noble and flupendous work. Arrive at Pont Beauvoilh, once more entering this noble kingdom, and meeting with the cockades of liberty, aud thofe arms in the hands of the people, which, it is to be wifhed, may be uled ouly for their own and Europe's peace.- 24 miles.

The 25. Dine at Tour du Pin, and fleep at Verpiliere. This is the moft advantageous entrance into France, in refpect of beauty of country. From Spain, England, Flanders, Germany, or Italy by way of Antibes, all are inferior to this. It is really beautiful, and well plamed, has many inclofures and mulberries, with fome vines. There is hardly a bad feature, except the houfes; which, inftead of being well built, and white as in Italy, are ugly thatched mud cabins, without chimnies, the fmoke iffuing at a hole in the roof, or at the windows. Glafs feems unknown; and there is an air of poverty and inifery about them quite difionant to the general afpect of the country.

- S'l eft une petite ville au monde où l'on goûte la douccur de la vie dans un conmerce agréable ©s fur, c'ifl Clambery.

Pafs Bourgoyn, a large town. Reach Verpiliere. This day's journcy is a fine variation of hill and dale, well planted with chateaux, and farms and cottages fpread about it. A mild lovely day of fun-fhine threw no flight gilding over the whole. For ten or twelve days part, they have had, on this fide of the $\Lambda \mid p s$, fine open warm weather, with fun-fline; but on the Alps thenifelves, and in the vale of Lombardy, on the other fide, we were frozen and buried in fnow. At lont Beauvoifin, and Bourgoyn, our paffiports were demanded by the milice bourccoife, but no where elfe: they aflure us, that the country is perfectly quiet every where, and have no guards mounted in the villages-nor any fufpicions of fugitives, as in the funmer. Not far from Verpilicre, pafs the burnt chateau of M. de Meau, in a fine fituation, with a noble wood behind it. Mr. Grundy was here in Augult, and it had then but lately been laid in affics; and a peafant was langing on one of the trees of the avenue by the road, one among many who were feized by the milice bourgcoife for this atrocious act.- 27 miles.

The 27th. The country changes at once; from one of the fimeft in France, it becomes almoft flat and fombre. Arrive at l.yons, and there, for the laft time, fee the Alps; on the quay there is a very fine view of Mont Blanc, which I had not feen beefore; leaving ltaly, and Savoy, and the Alps, probably never to return, has fonething of a melancholy fenfation. For all thofe circumitances which render that claffical country illuftrious--the feat of great men-the theatre of the molt diftinguifhed ac-tions-the exclufive field in which the elegant and agreeable arts have loved to range -what country can be compared with Italy? to pleafe the eye, to charm the ear, to gratify the enquiries of a laudable curiofity, whither would you travel? In every bofom whatever, Italy is the fecond country in the world-of all others, the fureft proof that it is the firf. To the theatre; a mufical thing, which called all Italy by contraft to my ears! What fuff is French mufic! the difortions of embodied diffonance. The theatre is not equal to that of Nantes ; and very much inferior to that of Bourdeaux. - 18 miles.

The 28th. I had letters to Monf. Goudard, a confiderable filk merchant, and, waiting on him yefterday, he appointed ne to breakliaft with him this morning. If tried hard to procure fome information relative to the manufactures of Lyons; but in vain: every thing was folon and fuizamt. 'To Monf. l'Abbé Rozier, author of the voluminous dictionary of agriculture, in quarto. I vifited him as a man very much extolled, and not with an idea of receiving information in the plain practical line, which is the object of iny enquiries, from the compiler of a dictionary. When Monf. Rozier lived at Beziers, he occupied a confiderable farm; but, on becoming the inhabitant of a city, he placed this motto over his door-Laudato ingchtiar rura, cxiguum colito, which is but a bad apology for no farm at all. I made one or two efforts towards a little practical converfation; but he flew off from that centre in fuch eccentric radii of fcience, that the vanity of the attempt was obvious in a moment. A phyfician prefent, remarked to me, that if I wanted to know common practices and products, I fhould apply to common farmers, indicating by his air and mamer, that fuch things were b neath the dignity of fcience. Monf. l'abbé Rozier is, however, a man of confiue able knowledge, though no farmer ; in thofe purfuits, which he has cultivated with inclination, he is juftly celebrated-and he merits every culogium, for having fet on foot the Journal de Phyfique, which, take it for all and all, is by far the belt journal that is to be found in Eivurope. His houfe is beautifully fituated, commanding a notle profpect; his library is furnifhed with good bcoks; and cvery apperance about him points out an eafy fortune. Waited then on Monf. de Froflard, a proteltant
minifter, who, with great readinefs and liberality, gave me much valuable information; and, for my further inftrustion on points with which he was not equally acquainted, introduced me to Monf. Roland la Platerie, infpector of the Lyons fabrics. 'This gentheman had notes upon many fubjects, which afforded in interelling converfation; and, as he communicated freely, I liad the pleafure to find, that I fhould not quit 1 .jons without a good portion of the knowledge I fought. This gentleman, fomewhat atvanced in life, has a young and beautiful wife-the lady to whom he addrefled his letters, written in Italy, and which have been pubtifhed in five or lix volumes. Mont. Froflard defiring Monf, de la Platerie to dine with him, to meet me, we had a great deal of converfation on agriculture, manufactures, and commerce; and differed but little in our opinions, except on the treaty of commerce between England and France, which that gentleman condemned, as I thought, unjufly; and we debated the point. He warmly contended, that Gilk ought to have been included as a bencfit to France; I urged, that the offer was made to the Firench miniftry, and refufed; and I ventured to fay, that had it been accepted, the advantage would have been on the fide of Eugland, iaftead of France, fuppofing, accorcing to the vulgar ideas, that the benefit and the balance of trade are the fame things. I begged hin to give me a reafon for believing that France would buy the filk of licdmont and of China, and work it up to underfell Fingland; while Eagland buys the French cotor, and works it into fabrics that underfell thofe of France, even under an accumulation of charges and dutics? We difcuffed thefe, and fimiliar fubjects, wilh that fort of attention and candour that render them interelting to perfons who love a liberal converfition upon important points.Among the objects at Lyons, that are worthy of a ftranger's curiofity, is the point of junction of the two great rivers. Soanne and the Rhone; Lyons would doubtlefs be much better fituated, if it were really at the junction; but there is an unoccupied fipace fufficient to contain a city half as large as Lyonsiffelf. This fpace is a modern embankment, that coft fix millions, and ruined the undertakers. I prefer even Nantes to I.yons. When acity is built at the junction of two great rivers, the imagination is apt to fuppofe, that thofe rivers form a part of the magnificence of the fcenery. Without broad, clean, and well built quays, what are rivers to a city but a facility to carry coals or tar-barrels? What, in point of beauty, has London to do with the Thames, except at the terrace of the Adelphi, and the new buildings of Somerfet-place, any more than with Flect-ditch, buried as it is, a common fhore? I know nothing in which our expectations are fo horribly difappointed as in citics, fo very few are built with any greneral idea of beauty or decoration!

The 2yth. Farly in the morning, with Monf. Froflard, to view a large farm near lyons. Mouf. Frofiard is a feally advocate for the new contlitution eftablifting in France. At the famie urac, all thofe I have converfed with in the city, reprefent the ftate of the manufacture as melancholy to the laft degree. Twenty thoutiand people are fed by charity, and confequently very ill fed; and the mafs of diltefs, in ail kinds, among the lower clafles, is greater than ever was known-or any thing of which they hat anidea. The elief caute of the evil felt here, is the fagnation of trade, oceafioned by the emigrations of the rich from the kinglom, and the general want of confidence in merchants and manufacturers; whence, of courfe, bankruptcies are common. At a moment when they are little able to bear additional burthens, they raife by voluntary contributions, for the poor, immenfe fums; fo that including the revemues of the holpitals, and other charitable foundations, there are not paid, at prefent, for the ufe of the poor, lefs than 40,000 louis d’or a ycar. My fellow traveller, Mr. Gruady, being deffrous to get foon to Paris, perfuaded me to travel with him in a poft-cinaife,
a mode of Havelling which I deteft, but the feafon urged me to it; and a fill fronger motive, was the having of more time to pafs in that city, for the lake of obferving the extraurdinary itate of things-of a King, Qucen, and Danphine of lirance, actual pritoners: I therefere accepted his propofal, and we fet off after dimer to-day. In about tell miles come to the mountains. The country dreary; wo inclofures, no mul. berries, no vines, mush waile, and nothing that indicates the vicinity of luch a city. At Arnas, lleep at a comfortable inn - 17 miles.

I he goth. Contime carly in the morning to larar; the mountain of which nate is more formidable in reputation than in reality. 'Io St. Syphorien the fame features. 'The buildings increafe, both in number and goodnefs, on approaching the Seine, which we crofled at Roane; it is here a good river, and is navigable many miles higher, and confequently at a valt diftance from the fea. There are many flat bottomed barges on it, of a confiderable fize. 50 miles.

The 3 fit. Another clear, fine, fun-fhine day; rarely do we fee any thing like it at this featon in England. After Droiturier, the woods of the Bourbonnois commence. At St. Gerund le I'uy the country improves, enlivened by white houfes and chateaux, and all continues fine to Moulins. Sought here my old friend, Monf. L'Abbé Barut, and had another interview with Monf, le Marquis Degouttes, concerning the fale of his chateau and eftate of Riaux ; I defired Itill to have the refufal of it, which he promifed me, and will, I have no doubt, keep his word. Never have I been to tempted on any occafion, as with the wift of poffefling this agrecable fituation, in one of the fineft parts of lirance, and in the fineft climate of Europe. God grant, that, foould he be pleafed to protract nuy life, I may not, in a fadold age, repent at not clofing of once with an offer to which prudence calls, and prejudice only forbids! Heaven fend me eafe and tranquillity, for the clofe of life, be it palled cither in Suffolk, or the Bourbonnois ! $3^{8}$ miles.

January 1,1790 . Nevers makes a fine appearance, rifing proudly from the Loire; but, on the firft entrance, it is like a thoufand other places. 'lowns, thus feen, refemble a group of women, huddled clofe together: you lee their nodking plumes and fparkling gems, till you fancy that ornament is the herald of beauty; but, on a nearer infpection, the faces are too often but common clay. From the hill that defcends to Pouges, is an extenfive view to the north; and after Pouilly a fine fcenery, with the Loire doubling through it.- 75 miles.

The 2d. At Briare, the canal is an object that announces the happy effects of indutry. There we quit the Loire. The country all the way diverffifed; much of it dry, and very pleafant, with rivers, hills, and woods, but almolt every where a poor foil. Pafs many cladeaux, fome of which are very good. Sleep at Nemours, where we meet with an inn-keeper, who exceeded, in knavery, all we had met with, either in France or Italy: for fupper, we had a fospe maigre', a partridge and a chicken roafted, a plate of celery, a fuall caulilower, two boules of poor siln du Pays, and a deffert of two bifcuits and four apples: here is the bill:-Potage 1 liv. $10 \%$-Perdrix, 2 liv. $10 \%$ Ponlet, 2 liv.-Celeri, 1 liv. $4 /$ - Choufleur, 2 liv.-Pain et delfert, 2 liv.-Weu \& apartment, 6 liv.-Total, 19 liv. $8 f$. Againlt fo impudent an extortion we remonfrated feverely, but in vain. We then infifted on his figruing the bill, which after many evafions, he did, a l'ctoilc; Fulliare. But having been curried to the inn, not as the far, but the écu de France, we fufpected lome deceit; and going out to examine the premifes, we found the firn to be really the coth, and leanned, on enquiry, that his own name was Roux, inflead of Fouliarc: he wat: nut prepared for this detection, or for the execrasion we poured on fuch an infamous conjuct : but he ran away in an inftant, and hid himfelf
himfelf till we were gone. In jutice to the world, however, fuch a fellow ought to be marked out.-Go miles.

The 3d. - Through the foreft of Fontainhleau, to Melun and Paris. The Go pofes from I.yons to Paris, makiug three hundred Englifh miles, coft us, including 3 louis for the hire of the poit-chaife (an old French cabriolet of two wheels) and the charges at the inns, \&c. ' sl. Euglifh; that is to fay, 18 . per Englifh mile, or 6 d . per head. At Paris, I went to my old quarter, the hotel de la Rochefoucauld; for at Lyons I had received a letter from the duke de liancourt, who defired me to make his houfe my home, juft as in the time of his mothor, my much lamented friend, the duchefs d'Eftifac, who died while I was in Italv. I found my friend Lazowni well, and we were a gorge deployée, to converle on the amazing feenes that have taken place in France fince 1 left Paris.46 miles.

The 4 lh. After breakfalt, walk in the gardens of the Thuilleries, where there is the moft extraordinary fight that cither French or Englifh eyes could ever behold at Paris. The King, walking uith fix grenadiers of the milice bourgcoife, with an oficer or two of his houfehold, and a page. The doors of the gardens are kept Thut in refpect to him, in order to exclude every body but deputies, or thofe who have admiffion-tickets. When he entered the palace, the doors of the gardens were thrown open for all without diftinction, though the Queen was Itill walking with a lady of her court. She alfo was attended fo clofely by the gardes bourgeoifes, that fhe could not fpeak but in a low voice, without being heard by them. A mob followed her, talking very loud, and paying no other apparent refpect than that of taking off their hats wherever the paffed, which was indeed more than I expected. Her Majefty does not appear to be in health; the feems to be much affected, and fhews it in her face; but the King is as plump as eafe can reuder him. By his orders, there is a little garden railed off, for the Dauphin to amufe himfelf in, and a fmall room is built in it to retire to in cafe of rain; here he was at work with his little hoe and rake, but not without a guard of two grenadiers. He is a very pretty good-natured looking boy, of five or fix years old, with an agreeable countenance; wherever he gocs, all hats are taken off to him, which I was glad to obferve. All the family being kept thus clofe prifoners (for fuch they are in effeet) afford, at firt view a flocking fpectacle; and is really fo, if the act were not effectually neceflary to effect the revolution; this I conccive to be impoflible; but if it were neceffary, no one can blame the people for taking every meafure pofible to fecure that liberty they had feized in the violence of a revolution. At fuch a moment, nothing is to be condemned but what endangers the national freedom. I muft, however, treely own, that I have my doubts whether this treatment of the royal family can be juftly efteemed any fecurity to liberty; cr, on the contrary, whether it were not a very dangerous ftep, that expofes to hazard whatever had been gained. I have fpoken with feveral perfons to day, and have flated oljections to the prefent fyftem, ftronger even than they appear to me, in order to learn their fentiments; and it is evident, they are at the prefent monent under an apprelenfion of an attempt towards a counter-revolution. The danger of it very much, if not abfotutely, refults from the violence which has been ufed towards the royal family. The National Aflembly was, before that period, anfwerable only for the pernament conftitutional laws paffed for the future: fince that moment, it is equally anfwerable for the whole conduct of the government of the flate, exccutive as well as legiflative. This critical fituation has made a conftant firit of exertion neceffary amongit the Paris militia. The great object of M. La Faycte, and the other military leaders, is to improve their difcipline, and to bring them into fuch a form as to allow a ration 1 dependence on them, in cale of their being wanted in the field; but fuch is the fpirit of vol. iv.
freedom, that, even in the military, there is fo little fubordination, that a man is an officer to day, and in the ranksto-morrow; a mode of proceeding, that makes it the more difficult to bring them to the point their leaders fee necelliry. Eight thoufand men in Paris may be called the ftanding army, paid every day $15 / \mathrm{a}$ a man; in which number is included the corps of the French guards from Verfailles, that deferted to the people; they have alfo eight hundred horfe, at an expence each of 1500 lives (621. 15s. Gd.) ayear, and the officers have double the pay of thofe in the amy.

The 5th. Yefterday's addrels of the National Affembly to the King has done them credit with every body. I have heard it mentioned by people of very different opinions, but all concur in commending it. - It was upon the queftion of naming the amm:l fums which floould be granted for the civil lift. They determined to fend a deputation to His Majefy, requefting him to name the fum himfelf, and praying him to conlult lets his fipirit of ceconomy, than a fenfe of that dignity which ought to environ the throne with a becoming fplendor. Dine with the Duke de Liancourt, at his apartments in the Thuillerics, which, on the removal from Verfailles, were afligned to him as grand mafter of the wardrobe; he gives a great dimer, twice a-week, to the deputies, at which from twenty to forty are ufually prefent. Half an hour after three was the hour appointed, but we waited, with fome of the deputies that had left the Affembly, till feven, before the duke and the reft of the company came.

There is in the allembly at prefent a writer of character, the author of a very able book, which led me to expect fomething much above mediocrity in him; but he is made of fo many pretty littleneffes, that I flared at him with amazement. His voice is that of a feminine whiper, as if lis nerves would not permit fuch a boiterous exertion as that of fpeaking loud enough to be heard; when he breathes out his ilens. he does it with eyes half clofed; waves his head in circles, as if his fentiments were to be received as oracles; and has fo much relaxation and pretention to cafe and delicicy of manner, with ao perfonal appearance to fecond thefe prettinellis, 'that I wondered by what artificial means fuch a mafs of heterogencous parts became compounded. How ftrange that we fhould read an author's book with great pleafure; that we fhould fay, this man has no ftuff in him; all is of confequence; here is a character uncontaninated with that rubbifh which we fee in fo many other men-and after this, to meet the garb of fo much littlenefs!

The 6 th, 7 th, and 8 th. The Duke of Liancourt having an intention of taking a farm in his own hands, to be conducted on improved principles after the liuglifh manner, he defired me to accompany him and my friend Lazowiki, to Liancourt, to give my opinion of the lands, and of the beft means towards exceuting the project, which I very readity complied with. I was here winels to a feene which made me fmile: at no great diftance from the chatcou of Liancourt, is a piece of walte land, clofe to the road, and belonging to the duke. I law fome men very bufy at work upon it, hedgring it in, in fmall divifions; levelling, and digging, and beflowing much labour for fo poor a fpor. I aked the fteward if he thought hat land worth fuch an expence? He replied, that the pour people in the town, upon the revolution taking place, declared that the poor were the nation; that the walte belonged to the nation; and, proceeding from theory to practice, tock poffelion, without any further authority, and began to cultivate ; the duke not viesing their induftry with any difipleafure, would offer no oppofition to it. 'This circumbance thews the miverfal fpirit that is gone forth; and proves, that were it pufhed a little farther, it might prove a ferious mater for all the property in the kingdom. In this cafe, however, I cannot but commend it; for if there be one public nuifance greater than another, it is a man preferving the polleflion of
wate land, which he will neither cultivate himfelf, nor let others cultivats. The miferable people dic for want of breal, in the fight of wattes that would leed thoufands. I think them wife, and rational, and philofophical, in feizing fuch tracks: and I heartily wifh there was a law in England for making this action of the French peafants a legral one with us. - 72 milcs.

The gth. At breakfalt this morning in the Thuilleries. Monfieur Definarets, of the Academy of Sciences, brought a Mcinier, prejenté par la Societé Rovale, d' Agriculturc, al'Al/mblic Nationale, on the means of improviag the agriculture of Prance; in which, among other things, they recommend great attention to bees, to panification, and to the obftetrick art. On the eftablilhment of a free and patriotic government, to which the national agriculture might look for new and halcyon days, thefe were objects doubtlefs of the firt importance. There are fome parts of the memoir that really merit attention. Called on my fellow traveller, Monf. Nicolay, and find him a confiderable perfon; a great hotel; many fervants; his father a marechal of lrance, and himfelf firft prefident of a chamber in the Parliament of Paris, having been elected a deputy, by the nobility of that city, for the fates general, but declined accepting it; he has defired I would dine with him on Sunday, when he promifes to have Monf. Decretot, the celcbrated manufacturer and deputy of Louviers. At the National Affembly - The Count de Mirabean, lipaking upon the queltion of the members of the chamber of vacation, in the parliament of Remnes, ras truly eloquent-ardent, lively, energetic, and impetuous. At night to the affembly of :he Duchefs d'Auville; the Marquis and Madame Condorcet there, \&ec. not a word but politics.

The roth. The chief leaders in the National Affembly, are, Target, Chapellier, Mirabeau, Bernave, Volncy the traveller, and, till the attack upon the property of the clergy, l'Abbé Syeyes; but he has been to much difgutted by that fep, that he is not near fo forward as before. The violent democrats, who have the reputation of being fo much republican in principle, that they do not admit any political neceflity for having even the name of a king, are called the conragés. They have a meeting at the Jacobins, called the revolution club, which alfiembles every night, in the very room in whien the famous league was formed, in the reign of Henry III.; and they are fo numerous, that all material bufinefs is there decided, before it is difcuffed by the National Affembly. I called this morning on feveral perfons, all of whom are great democrats; and mentioning this circumfance to them, as one which favoured too much of a Paris juntu governing the kinglon, an idea, which muft, in the long run, be unpopular and hazardous; I was anfiwered, that the predominancy which Paris affum:ed, at prefent, was abfolutely necefliary for the falety of the whole nation; for if nothing were done, but by procuring a previous common confent, all great opportunitics would be loft, and the National Affembly left conftantly expofed to the danger of a counter-revolution. They, however, admitted, that it did create great jealoufics, and no where more than at Verfailles, where fome plots (they added) are, without doubt, hatching at this moment, which have the King's perfon for their object : riots are frequent there, under pretence of the price of breall : and fuch movements are certainly very dangerous, for they cannot exift fo near Paris, without the ariltocratical party of the old government endeavouring to take advantage of them, and to turn them to a very different end, from what was, perhaps, originally intendel. I remarked, in all thefe converfations, that the belict of plots, among the difguftul party, for fetting the King at liberty, is general; they feem almoft perfuaded, that the revolution will not be abfolutely finifhed before fome fuch attempts are made; and it is curious to oblerve, that the general voice is, that if an attempt were to be made, in fuch a manner as to have the leait appearance of fuccefs, it would undoubt-
edly cof the King his life: and fo changed is the national character, not only in point of affection for the perfon of their prince, but alfo in that fofnnefs and humanity, for which it has been fo much admired, that the fuppofition is made without horror or compunction. In a word, the prefent devotion to liberty is a fort of rage; it abforbs every other paffion, and permits no other object to remain in view than what promifes to confirm it. Dine with a large party at the Duke de la Rochefoucauld's; ladies and gentemen, and all equally politicians; but I may remark another effect of this revolution, by no means unnatural, which is, that of leflening, or rather reducing to nothing, the enormous influence of the fex ; they mixed themfelves before in every thing, in order to govern every thing.: I think 1 fee an end to it very clearly. The men in this kingdom were puppets, noved by their wires, who, inflead of giving the ton, in queftions of national debate, muft now receive it, and muft be content to move in the political fphere of fome celebrated leader-that is to fay, they are, in fact, finking into what nature intended them for; they will become more amiable, and the nation better governed.

The 1 th. The riots at Verfailles are faid to be ferious; a plot is talked of, for eight hundred men to march, armed, to Paris, at the infigation of fomebody, to join fomebody; the intention, to murder La Fayette, Bailly, and Necker; and very wild and improbable reports are propagated every moment. They have been fufficient to induce Monf. La Fayette to iffue, yefterday, an order concerning the mode of affembling the militia, in cafe of any fudden alarm. Two pieces of cannon, and eight hundred men, mount guard at the Thuilleries every day. See fome royalifts this morning, who affert, that the public opinion in the kingdom is changing apace ; that pity for the King, and difguft at fome proceedings of the Affembly, have lately done much: they fay, that any attempt at prefent to refcue the King would be abfurd, for his prefent fituation is doing more for him than force could effect, at this moment, as the general feelings of the nation are in his favour. They have no fcruple in declaring, that a well concerted vigorous effort would place him at the head of a powerful army, which could not fail of being joined by a great, difgufted, and injured body. I remarked, that every honelt man muft hope no fuch event would take place; for if a counter revolution fhould be effected, it would eftablifh a defpotifm, much heavier than ever France experienced. This they would not allow ; on the contrary, they believed, that no government could, in future, be fecure, that did not grant to the people more extenfive rights and privileges than they poffeffed under the old one. Dine with my brother traveller, the Count de Nicolay; among the company, as the count promifed me, was Monf. Decretot, the celebrated manufacturer of Louviers, from whom I learned the magnitude of the diftrefies at prefent in Normandy. The cotton mills which he had hewn me, laft year, at Louviers, have ftood ftill nine months; and fo many !pinning jennies have been deftroyed by the people, under the idea that fuch machines were contrary to their interefts, that the trade is in a deplorable fituation. In the evening, accompanied Monf. Lazowfki to the Italian opera, La Berbiera di Seviglia, by Paiefello, which is one of the moft agreeable compofitions of that truly great malter. Mandini and Raffanelli excellent, and Baletti a fweet voice. There is no fuch comic opera to be feen in Italy, as this of Paris, and the houfe is always full : this will work as great a revolution in French mufic, as ever can be wrought in French government. What will they think, by and by, of Lully and Rameau? And what a triumph for the manes of Jean Jaques!

The 12 th. To the National Affembly :-a debate on the conduct of the chamber of vacation in the parliament of Rennes, continued. Monf. l'Abbé Maury, a zealous royalift, made a long and eloquent fpeech, which he delivered with great Huency and precifion, and without any notes, in defence of the parliament : he replied to what had
been urged :" the Count de Mirabeau, on a former day, and fpoke ftrongly on his unjuftifiabls c a the people of Bretagne, to a redoubtable denombrement. He faid, that it would $b_{\text {t. . : }}$ become the members of fuch an affembly, to count their own principles and duties, and the fruits of their attention, to the privileges of the fubject, than to call for a denowbrement, that would fill a province with fire and bloodfhed. He was interrupted ty the noife and confufion of the affembly, and of the audience, fix feveral times; but it had no effect on him ; he waited calmly till it fubfided, and then proceeded, as if no interruption had been given. The fpeech was a very able one, and much relifhed by the royalifts; but the enragés condemned it, as good for nothing. No other perfon fpoke without notes; the Cuunt de Clernont reac a fprech that had fome brilliant paffages, but by no means an anfwer to l'Abbé Maury, as indeed it would have been wonderful if it were, being prepared before he heard the Abbe's oration. It can hardly be conceived how flat this mode of debate renders the tranfactions of the Affembly. Who would be in the gallery of the Englifh Houfe of Commons, if Mr. Pitt were to bring a written fpeech, to be delivered on a fubject on which Mr. Fox was to fpeak beiore him? And in proportion to its being uninterefting to the hearer is another evil, that of lengthening their fittings, fince there are ten perfons who will read their opinions, to one that is able to deliver an impromptu. The want of order, and every kind of confufion, prevails now almolt as much as when the Affembly fat at Verfailles. The interruptions given are frequent and long; and fpeakers, who have no right, by the rules to fpeak, will attempt it. The Count de Mirabeau preffed to deliver his opinion after the Abbe Maury; the prefident put it to the vote, whether he fhould be allowed to fpeak a fecond time, and the whole houfe rofe up to negative it; fo that the firft orator of the $\Delta$ ffembly has not the influence even to be heard to explain - we have no conception of fuch rules; and yet their great number mult make this neceffary. I forgot to obferve, that there is a gallery at each end of the faloon, which is open to all the world; and fide ones for admillion of the friends of the members by tickets: the aumence in thefe gallerics are very noily : they clap, when any thing pleafes them, and they have been known to hifs; an indccorum which is utterly defruciive of freedom of debate. Il ff the houle before the whole was finiffed, and repaired to the Duke of Liancourt's apartments in the Thuilleries, to dine with his cuftomary party of depuies; Meff. Chapellier and Demeufniers were therc, who had both been prefidents, and are ftill inembers of confiderable diftinction; M. Volney, the celebrated traveller, alfo was prefent; the Prince de Poix, the Count de Montmorenci, \&c. On our waiting for the Duke of Liancourt, who did not arrive till half after feven, with the greateit part of the company, the converfation almoft entirely turned upon a ftrong fulpicion entertaincd of the Kinglifh having made a remittance for the purpofe of embroiling matters in the kingdiom. The Count de Thiard, cordon blue, who commands in Bretagne, fimply ftated the lact, that fome regiments at Breft had been regular in their conduct, and as much to be depended on as any in the fervice; but that, of a fudden, money had found its way among the men in confiderable fums, and from that time their behaviour was changed. One of the deputies demanding at what period, he was anfwered "; on which he immediatly obferved, that it followed the remittance of $1,100,000$ livres ( 48,1251 .) froin England, that had occafioned fo much conjecture and converfation. This remittance which had been particularly enquired into, was fo myfterious and obfcure, that the naked fact only could be dilcovered; but every perfon prefent afferted the truth of it. Other gentlemen united the two facts, and were ready to fuppofe them connected. I remarked,

[^17]that if England had really interfered, which appeared to me incredible, it was to be prefumed, that it would have been either in the line of her fuppofed intereft, or in that of the King's fuppofed inclination ; that thefe happened to be exactly the fame, and if money were remitted from that kingdom, moft afluredly it would be to fupport the falling intereft of the crown, and by no means to detach from it any force whatever; in fuch a cafe remittance from Eng'and might go to Metz, for keeping troops to their duty, but would never be fent to Breft to corrupt them, the idea of which was grofsly abfurd. All feemed inclined to admit the juftnefs of this remark, but they adhered to the two fais, in whatever manner they might, or might not, be conneted. At this dimner, according to cuflom, moft of the deputies, efpecially the younger ones, were dreffed an polifon, many of them without powder in their hair, and fome in boots; not above four or five were neatly dreffed. How times are changed! When they had nothing better to attend to, the faflionable Parifians were correctnefs itfelf, in all that pertained to the toilcte, and were, therefore, thought a frivolous people; but now they have fomething of more importance than'drefs to eccupy them ; and the light airy character that was ufually given them, will have no foundation in truth. Every thing in this world depends on government.

The $133^{\text {th. A }}$ great commotion among the populace late laft night, which is faid to have arifen on two accounts-one to get at the Baron de Befneval, who is in prifon, in order to hang him'; the other to demand bread at 2 . the pound. They eat it at prefent at the rate of twenty-two millions a-year cheaper than the reff of the kingdom, and yet they demand a farther reduction. However, the current difeomric is, that Favras, an adventurer alfo in prifon, muft be hanged to fatisfy the people; for as to Befineval, the Swifs cantons have remonftrated fo firmly, that they will not dare to execute him. Early in the morning, the guards were doubled, and eight thoufand horfe and thot are now patrolling the ftrects. The report of plots, to carry off the King, is in the month of every one; and it is faid, thefe movements of the people, as well as thole at Verfailles, are not what they appear to be, mere mobs, but inftigated by the arifocrats; and if permitted to zife to fuch a height as to entangle the Patis militia, will prove the part only of a confpiracy againft the new govermment. That they have reafon to be alert is undoubted ; for though there fhould actually be no plots in exiltence, yet there is fo great a temptation to them, and fuch a probability of their being formed, that fupinenefs would probably create them. I have met with the licutenant-colonel of a regiment of horfe, who is come from his quarters, and who afferts, that his whole regiment, officers and men, are now at the King's devotion, and would march wherever he called, and would execute whatever he ordered, not contrary to their ancient feelings; but that they would not have been inclined to be fo obedient before he was brought to Paris; and from the converfation he has had with the officers of other regiments, he believes that the fame firit pervades their corps alfo. If any ferious plans have been laid for a counter-revolution, or for carrying off the King, and their execution has been, or flall be prevented, pofterity will be much more likely to have informalion of it than this age. Certainly the eyes of all the fovereigns, and of all the great nobility in Europe, are on the French revolution; they look with amazement, and even with terror, upon a fituation which may poffibly be hereafter their orey cate; and they mult ex. pect, with anxiety, that fome attempts will be made to reverfe an example, that will not want copies, whenever the period is favourable to make them. Dine at the Pallais Royal, with a felect party; politicians they mult be, if they are lirenchmen. The queftion was difcufied, Are the plots and confpiacies of which we hear fo much at prefent, real, or are they invented by the leaders of the revolution, to keep up the

The

## huch at

 up the fpiritsfpirits of the militia, in order to enable themfelves to fecure the government on its new foundation irreverfibly ?

The 14th. Plots! plots!-the Marquis La Fayette, laft night, took two hundred prifoners in the Cbamps Elyjëes, out of eleven hundred that were cc:lected. They had powder and ball but no mufquets. Who? and what are they? is the queftion; but an anfwer is not fo eafily to be had. Brigands, according to fome accounts, that have collected in Paris for no good purpofe; people from Verfailles by others; Germans by a third: but every one would 'make you believe, they are an appendix to a plot laid for a counter-revolution. Reports are fo various and contradictory, that no dependence is to be placed on them; nor credit given to one-tenth of what is afferted. It is fingular, and has been much commented on, that La Fayette would not truit his ftanding troops, as they may be called, that is the cight thoufand regularly paid, and of whom the Freneh guards form a confiderable portion, but he took, for the expedition, the bourgcoife only; which has elated the latter as much as it has difgufted the former. The moment feems bir with events; there is an auxiety, an expectation, an uncertainty, and fufpence that is vifible in every cye one meets; and even the beft informed people, and the lealt liable to be led away by popular reports, are not a little alarned at the apprehenfion of fome unknown attempt that may be made to refcue the King, and overturn the National Affembly. Many perfons are of opinion, that it would not be difficult to take the King, Qucen, and Dauphin away, without endangering them, for which attempt the Thuilleries is particularly well fituated, provided a body of troops, of fufficient furce, were in readinefs to receive them. In fuch a cafe, there would be a civil war, which, perhaps, would end in defpotifm, whatever party came off victorious; confequently fuch an atteupt, or plan, could not originate in any bolom from true patriotifin. If 1 have a fair opportunity to palis much of iny time in good company at Paris, I have alfo nos fmall troule in turning over books, MSS. and papers, which I cannot fee in England: this employs many hours a day, with what I borrow from the night, in making, a,tes. I have procured allo fome public records, the copying of which demands time. He who withes to give a good account of fuch a kingdom as France, mult be indefatigable in tin? fearch of materials; for let him collect with all the care poffible, yet whea he comes to fit down coolly to the examination and arrangement, will find, that much has been cut into his hands, of no real confequence, and more, poffibly, that is abfolutely uleteds.

The $1{ }_{5}$ th. To the $\Gamma^{\text {P lais Royal, to view the pictures of the Duke of Orleans, which }}$ I had tried once or twice before to do in vain. The collection is known to be very rich in pieces of the Dutch and Flemih mafters; fome finihed with all the exquifite attentiou which that fchool gave to minute expreffion. But it is a genre little interefting, when the works of the great Italian artifts are at hand: of thefe the collection is one of the firtt in the world: Raphael, Hanibal Carracci, Titian, Dominichino, Correggio, and Paul Veronefe. The firft picture in the collection, and one of the fineft that ever came from the cafel, is that of the three Maries, and the dead Chrift, by H. Carracci ; the powers of expreffion cannot go further. There is the St. John of Raphael, the fame picture as thofe of Florence and Bologna ; and an inimitable Virgin and Child; by the fame grat mafter. A Venus bathing, and a Magdalen, by Titian. Lucretia, by Andrea del Sarto. Leda, Ly Paul Veronefe, and alfo by Tintoreto. Nars and Venus, and feveral others, by Paul Veronele. The naked figure of a woman, by Bonieu, a French painter, now living, a pleafing piece. Some noble pictures, by Poulfin and Le Seur. The apartments inult difappoint every one:-I did not fee one good room, and all inferior to the rank and immenfe fortune of the poffeffor, certainly the
firf fubjcet in Europe. Dine at the Duke of Liancourt's: among the company was Monf. de Bouganville, the celebrated circumnavirator, agrecable as well as feufible; the Count de Caftellane, and the Count de Montmorenci, two young legifators, as anrage's as if their $n$ ::mes were only Bernave or Rabeau. In fome allufions to the conftitution of England, I found they hold it very cheap, in regard to political liberty. Tise ideas of the moment, relative to plots and confpiracies, were difenfed, but they feemed very generally to agree, that, however the contitution might, by fuch means, be delayed, it was now abfolutely impoffible to prevent its taking phace. At night to the national circus, as it is called, at the Palais Royal, a building in the gardens, or mea of that palace, the moft whimfical and expenfive folly that is eafily to be imarinel: it is a large ball room, funk half its height under ground; and, as if this circumitance were not lifficiently adapted to make it damp enough, a garden is planted on the roof, and a river is made to flow around it, which, with the addition of fome fipirting jets d'cau, have undoubtedly made it a delicious place, for a winter's entertainment. The expence of this gew-gaw building, the projcet of fome of the Duke of , orleans' friends, 1 luppofe, and executed at his expence, would have eftablifhed an linglih farm, with all its principles, buidings, live flock, toals, and crops, on a leale that would have done honour to the firlt fovereign of Europe; for it would have converted five thouland arpents of defert into a garden. As to the refult of the mode that has been purfued, of invelling fuch a capital, 1 know no rpithet equal to its merits. It is meant to be a concert, ball, coffee, and billiard room, with thops, \&c. defigned to be fomething in the ttyle of the amufements of our Pantheon. 'There were mufic and finging to night, but the room being almoft empty, it was, on the whole, cqually cold and fombre.

The 16 th. The ided of plots and confpiracies has come to fuch a height as greally to alarm the leaders of the revolutio'. The difgult thal (preads every day at their tranfactions, arifes more from the King's fituation than from duy other circumflance. 'Wey cannot, after the feenes that have palled, venture to fet him at liberty before the conftitution is finifhed: and they dread, at the fane time, a change working in his favour in the minds of the people : in this dilemma, a plan is laid for perfuading his Majefty to go fuddenly to the National Allembly, and, in a fpeech. to declare himfelf perfectly fatisfied with their proceedings, and to conitiver himfelf as at the head of the revolution, in terms fo couched as to take away all idea or pretence of his being in a ftate of confinement or coercion. This is at prefent a favourite plan; the only difficulty will be, to perfuade the King to take a flep that will apparently preclude him from whatever turn or advantage the general feeling of the provinces may work in his favour; for, after fuch a meafure, he will have reafon to expect that his friends will fecond the views of the democratical party, from an abfolute defpair of amy other principles becoming efficient. It is thought probable, that this fcheme will b. brought about; and fhould it be accomplifhed, it will do more to eafe their apprehenfions of any attempts than any other plan. I have been anong the bookfellers, with a caralogue in hand to collect publications, which, unfortunately for my purle, I find I mutt have on various topics, that concern the prefent fate of France. - Thefe are now every day fo numerous, efpecially on the fubjects of commerce, colonics, finances, taxation, deficit, \&c. not to fpeak of the fubject immediately of the revolution itfelf, that it demands many hours every day to leffen the number to be bourht, by reading pen in hand. The cuilection the Duke of Liancourt has made from the very commencement of the revolution, at the firft meeting of the notables, is prodigious, and has coit many hundred louis d'or. It is uncommonly complete, and will hereafter be of the greateft value to confult on abundance of curious queftions.

The 1 7 th. The plan I mentioned yefterday, that was propofed to the King, was urged in vain : his Majefly received the propofition in fuch a manner as does not leave any great hope of the fcheme being executed; but the Marquis la Fayete is fo flrenuous for its being brought about, that it will not yet be abandonel ; but propofed again at a more favourable moment. The royalifts, who know of this plan, (for the public have it not) are delighted at the chance of its failing. The refufal is attributed to the Queen. Another circumftance, which gives great difquiet at prefent to the leaders of the revolution, is the account daily received from all parts of the kingdom, of the diftrefs, and even ftarving condition of manufacturers, artifts, and failors, which grows more and more ferious, and mult make the idea of an attempt to overturn the revolution fo much the more alarming and dangerous. The only branch of indultry in the kingdom, that remains flourilling, is the trade to the fugar-colonies; and the feheme of emancipating the negrocs, or at leaft of putting an end to importing them, which they borrowed from England, has thrown Nantes, Havre, Marfeilles, Bourdeaux, and all other places connected fecondarily with that commerce, into the utmof agitation. The Count de Mirabeau fays publicly, that he is fure of carrying the vote to put an end to negro flavery-it is very much the converfation at prefent, and principally amongft the leaders, who fay, that as the revolution was founded on philofophy, and fupported by metaphyfics, fuch a plan cannot but be congenial. But furely trade depends on practice much more than on theory; and the planters and merchants, who come to Paris to oppofe the fcheme, are better prepared to fhew the importance of their commerce, than to reafon philofophically on the demerits of flavery. Many publications have appeared on the fubject-fome deferving attention.

The 1 sth. At the Duke of Liancourt's dinner, to-day, meet the Marquis de Cafaux, the author of the mechanifin of focictics; notwithifanding all the warmeth, and even fire of argument, and vivacity of manner and compofition for which his writings are remarkable, he is perfectly mild and placid in converfation, with little of that effervercence one would look for from his books. There was a remarkable affertion made today, at table, by the Count de Margueritc, Lefore near thirty deputies; fpeaking of the determination on the Toulon bufinefs, he faid, it was openly fupported by deputies, under the avowal that more infurrections were neceffary. I looked round the table, expecting fome decifive anfiver to be given to this, and was amazed to find that no one replied a word. Monf. Volney, the traveller, after a paufe of fome minutes, declared that he thought the pcople of Toulon had acted right, and were jullifiable in what they had done. The hiftory of this Toulon bufinefs is known to all the world. This Count de Marguerite has a tetć dure and a fleady conduct -it may be believed that he is not an enrage. At dinner, M. Blin, deputy from Nantes, mentioning the conduct of the revolution club at ihe Jacbins, faid, we have given you a good prefident; and then afked the count why he dial not come among them? He anfwered, ${ }^{\text {te }}$ me trunc bou-
 fonctions font puldifucr, at quacller teazent aijenent fe remplir fuss affociations purticulicres. He got no reply bere. At might, Monf. Decretot, and Monf. Blin, carricd me to the revolution club at the dacobin; the ronm where they afiemble, is that in which the famous league was figned as it has been obferved above Thore were above one hundred doputies prefont, will a prefident in the clair; 1 was handed to him, and announced as the author of the Arithyctique Politique; the prefident ftanding up, repated my name to the corpany, and demanded if there were any objections- None; and this is all the ceremony, not merely of an introduction, bot an election: for I was told, that now I was cmpowered to be prefent when I pleafed, being a furcigner. 'Ten vol. ${ }^{1 v}$.

Q 8
or
or a dozen other elections were made. In this club, the bufinefs that is to be brought into the National Affembly is regularly debated; the motions are read, that are in. tended to be made there, and rejected or corrected an approved. When thefe have been fully agreed to, the whole party are engaged to lupport them. Plans of conduct are there determined; proper perfons nominated for bsing of committees, and preftdents of the Afembly named. And 1 may add, the fuch is the mij rity of numbers, that whatever paffes in this club, is almoft fure to pals in the sffembly. In the evening at the Duchefs d'Anville's, in whefe houfe I never failed of fanding my time agreeably.

One of the moft anufing circumfances of travelling into other countries, is the opportunity of emarking the difference of cufloms among differmentions in the conmon occurrences of life. In the art of living, the French have generally been efleemed by the reft of Lurope to have made the greatelt proficiency, anl their manners have been accordingly more iunitated, and their cuftons more adopted than thofe of any other nation. Of their cookery, there is but one cpinion; for every man in Europe, that can afiord a great table, either keeps a French cook, or one inftructed in the fame mames. That it is far beyond our own, 1 have no doubt in affrring. We have about half a dozen real linglifh difhes, that exceed any thing, in my opinion, to be met with in l'rance; hy linglith difhes 1 mean, a turbot and loblter fauce-han and chick=n-turte-a haunch of venifon-a turkey and oyfters-and after thefe there is an end of an Englifh table. It is an ille prejuclice to clafs roant beef among thenn; for there is not better beef in the world than at Paris. Large handfome pieces were almolt con. flanty on the confederable tables 1 have dined at. The variety given by their cooks, to the fame thing, is allonithing; they drefs an hundred dithes in an hundred different ways, and molt of them excellent; and all forts of vegetables have a fivourinels and flavour, from rich fauces, that are ablolutely wanted to our greens boiled in water. This varicty is not ftriking, in the comparifon of a grat table in France with another in England ; but it is manifect, in an inflant, between the tables of a French and Englifh family of fmall fortune. The Englifh dinuer, of a joint of meat and a podding, is it is called, or pot luck, with a neighbour, is bad luck in England; the fame fortune in France, gives, by means of cookery only, at leaft four difh to one among us, and fpreads a finall table incomparably better. A regular defert with us is expeited at a contiderable table only, or at a moderate one, when a formal entertainment is siven; in lrance it is as effential to the funallefl dinner as to the largelt ; if it comfift of a bunch of dried grapes only, or an apple, it will be as regularly ferved as the foup. I have net with perfons in England, who imagine the fobrity of a French table carried to fuch a length, that one or two glafes of wine are all that a man can get at dimer ; this is an crror: your fervant mixes the wine and water in what propertion you ploak; and lar ce bowls of clean glafies are fot before the maller of the loufe, and home trimeds of the family, at different parts of the table, for ferving the richer and racer forts of wins, which are dronk in this mamer freely enough. The whole nation are frupulouny neat ia refufug to drink out of glafles ufed by other people. At the houfe of a
 mon beverage being, wine and witer; but if at a large tabl! as in Binglan!, there were porter, beer, chder, and pery, it would be impollible for three or four tumblers or ars lets to thand by every plate; ; and equally fo for the fervants to kep p tach a number feparate an! dithat. In table-linen, they are, 1 think, cleaner and wifer than the Forslifh; that the change may be incellime, it is every where comt. The idea of dining without a mapkin fcems riviculous to a fruchman, hut in Finghad we cinc at the tables
of people of tolerable fortune, without then. A journeyman carpenter in France has his napkin as regularly as his fork; and at an inn, the fille always lays a clean one to every cover that is fpreal in the kitchen, for the lowelf order of pedeftrian travellers. The expence of linen in Figland is enormous, from its finencfs; furcly a great change of that which is coarfe, would be much more rational. In point of cleanliaefs, I think the merit of the two nations is divided; the French are claner in theic perfons, and the Englifh in their houfes; I fyeak of the mafs of the people, and not of individuals of confiderable fortunc. A bidet in France is as univerfally in every apartment, as a ba. fon to wah your hands, which is a trait of perfonal cleanlinefs I with more ermmon in England; on the other hand their necefliry houfes are temples of abomiation; and the prasice of fpitting about a room, which is amongt the bigheft as well the loweft ranks, is deteftable; I have feen a gentleman fpit fo near the clothes of a duchefs, that I have flared at his unconcorn. In every thing that concerns the flables, the Eny, ifin far exceed the French; horfes, grooms, tharnefs, and change of equipare; in the provinces you fee cabriolets of the laft century; an Englifiman, however finall his fortune may be, will not be feen in a carriage of the faflion of forty years palt; if he caunot have another, he will walk on foot. It is not true that there are no complete equiparcs at Paris, I havefeen many; the carriage, horfes, harnefs, and attendance, without fault or blemifh;-but the number is certainly very much inferior to what are feen at London. Englihh horfes, grooms, and carriages, have been of late years largely imported. In all the articles of fiting up and furninhing houfes, including thofe of all ranks in the eftimate, the Englifh have made advances far beyond their neighbours. Mahogany is fcarce in France, but the ufe of it is profufe in England. Some of the hotels in Paris are immenfe in fize, from a circumflance which would give me a good opinion of the people, if nothing elfe did, which is the great mixture of families. When the eldet fon marries, he brings his wife home to the houfe of his father, where there is an apartment provided for them; and if a daughter do not wed an eldett fon, hor huband is alfo received into the family, in the fame way, which makes a joyous number at every table. This cannot aliogether be attributed to œcononical motives, though they certainly infuence in many cafes, becaufe it is found in familics poffefing the firft properties in the kingdom. It does with French manners and cuftoms, but in England it is fure to fail, and equally fo amonglt all ranks of people : may we not conjecture, with a great probaliility of truth, that the nation in which it fuceecds is therefore better tempered? Nothing but good humour can render fuch a jumble of fanilics agreeable, or event toler2. ble. In drefs they have given the ton to all Europe for more than a century; but this is not among any but the highelt rank an objcet of fuch expence as in Enghand, where the mafs of mankind wear nuch better things (to ufe the language of common conver. fation) than in France : this ftruck ine more amongf ladics who, on an average of all ranks, do not drefs at one half of the expence of Englifh women. Volatility and changeablenels are attributed to the French as national charasteriftics,-but in the cafe of drefs with the groffelt exaggeration. Fidhions change with ten times more rapidi:y in Fingland, in form, colour, and affemblage; the vicifitudes of every part of drefs are fantaft:c with us: I fee little of this in France; and to inftance the mode of dreffing the gentemen's hair, while it has been varied five times at London, it has remained the fane at Paris. Nothing contributes more to make them a happy people, than the chearful pliancy of difpofition with which they alapt themfelves to the circumflances of life: this they polfils much more than the high and volatile fpirits which have been attributed to thein; one excellent confequence is, a greater exemption from the extravagance of living beyond their fortunes, than is met with in England. In the higheft ranks of life, there
are inftances in all countries; but where one gentleman of finall property, in the provinces of France runs out his fortune, there are ten fuch in England that do it. In the blended idea I had formed of the French character from reading, I am difapp sinted as to three circumftances, which 1 experted to find predominant. On comparifoa with the Englifh, I looked for great talkativenefs, volatile fpirits, and univerfal politenef's. I think, on the contrary, that they are not fo talkative as the Englifh; have not equally good fpirits, and are not a jot more polite: nor do I fpeak of certion claftis of people, but of the general mafs. I think them, however, incomparably better tempered; and I propofe it as a queftion, whether good temper be not more realonally expected under an arbitrary, than under a free government.

The 1 gth. My latt day in Paris, and, thervfore, employed in waiting on my friends, to take leave; amongt whom, the Duke de Liancourt holds the firt place; a nobleman, to whofe uninterrupted, polite, and friendly offices I owe the agrecable and happy hours which I have pafied at liaris, and whofe kindnefs continued fo much, to the laft, as to require a promife, that if 1 hould return to lirance, his houfe, either in town or country, fhould be iny home. I fhall not omit obferving, that his conduct in the revolution has been direct and manly from the very beginuing; bis rank, family, fortune, and fituation at court, all united to make him one of the firt fubjects in the kingdom; and upon public affairs being fufficiently embroile, t, to make affemblies of the nobility neceflary, his determined refolution to render himfelf mafter of the great queftions which were then in debate, was feconded by that attention and application which were requifite in a period, when none but men of bufinefs could be of importance in the fate. From the firf affembling of the States Gencral, he refolved to take the party of freedonn ; and would have joined the ti irs at firf, if the orders of his conftituents had not prevented it; he defired them, however, either to confent to that fep or to elect another reprefentative; and, at the fame time, with equal liberality, he declared, that if ever the duty he owed his country became incompatible with his office at court, he would refign it ; an act that was not only unneceffary, but would have been abfurd, after the King himfelf had hecome a party in the revolution. By efpoufing the popular caufe, he acted conformably to the principles of all his ancetors, who in the civil wars and confufions of the preceding centuries, uniformly oppofed the arbitrary proceedings of the court. The decifive tteps which this nobleman took at Verfiilles, in advifing the King, \&c. \&c. are known to all the world. He is, undoubtedly to be efteemed one of thofe who have had a principal thare in the revolution, but he has been iuvariably guided by conltitutional motives; for it is certain, that he has been as much averfe from unnceffary violence and famgunary mealures, as thofe who were the moft attached to the ancient governiaent. With my exectlem friend Lazowfi, I fpent my latt evening; he endeavoured to perfuade me to refise upon a farm in France, and I emicing him to quit French buftle for Englifh tranquillity.

The zoth-25th. By the diligence to London, where I arrived the 25 th ; though in the moft commodious fear, yet languithing for a horfe, which, after all, affords the beft means of travelling. Jaffing from the firt company of laris to the rabble which one fometimes meets in diligences, is contralt fufficient,-but the idea of returning to England, to my family and fricnds, made all things appear finooth, - 272 miles.

The 3 oth. To Bradfield; and here terminate, lhope, my travels. After having furveyed the agriculture and political refources of Fugland and Ircland, to do the fame with France, was certainly a great object, the importance of which animated me to the attempt: and however pleafing it may be to hope for the ability of giving a bener account of the agriculture of France than has ever been laid before the public, yet the
greatef fatisfaction I feel, at prefent, is the profpect of remaining, for the future, on a farm, in thit calm and undifturbed retirement, which is fuitable to my fortune, and which, I trult, will be agreeable to my difpofition. -72 miles.

## PART THE SECOND.

## Char. I. - Of the Extent of France.

THE circumfances which are moft apt to command the attention of mankind, for giving importance to a country, are really valuable no farther than as they contribute to the cafe and profecrity of the inhabiants. Thus the extent of a kingdom is of no other confequence than affording nourilhment for a people too numerous to be reafonably apprehenfive of furcign conqueft. When a territory is much more confierable than for this purpofe, it tends to infpire ambitious projects in the minds of the men that govern, which have proved, perhaps, more difattrous than the deficiency of power that endangers the national defence. France, under Lewis XIV. was a remarkable inflance of this fact. The fituation to which the ambition of that prince had reduced her immenfe territory, was hardly preferable to that of Holland, in 1672, whofe misfortunes, flowed from the fame origin. Of the two extremes, France has undsubtcdly more to apprehend from the ambition of her own rulers, than from that of any neighbour. Authoritics vary confiderably in deferibing the extent of this fine kingdom. The Maréchal de Vauban makes it 30,000 leagues, or 140,940,000 arpents; Voltaire 130,000,000 arpents. - The accuracy of round numbers is always to be doubted. Templeman gives it an extent of $1,38,837$ fquare geographical iniles, of fixty to a degree; a meafurement, which renders his tables abfolutely ufelefs for any purpofe, but that of comparing one country with another, a degree being fixty-nine miles and a half, which makes it $119,220,574 \frac{1}{6} \frac{2}{0}$ acres. - Patucton reduces his meafure to French arpents, and makes the number 107,-90,000. The Lincyclopædia, article France, alligns $100,000,000$ of arpents as the contents; and obferves, that, by Callini's maps, the amount is $125,000,000$. A late author * calculates it at 105,000,000: and another $\dagger$ at $135,600,000$. Nonc of thefe accounts feem fufficiently accurate for the purpofe of giving a correet idea. The authority on which I am inclined moft to rely is that of M. Necker $\dagger$, whin calculates it (without Corfica) at 26,95 ! leagues fquare, of $22 \delta 2 ;$ toifes; this, I find, amounts to $156,024,213$ arpents of Paris, or $131,722,295$ Englifh acres. Paucton, by covering his map with hot to every indenture of outline, with the greateft care, found the kinglom to contain $10,3,021,140$ arpents, each of 100 perch, at 22 feet the perch, or $1344 \%$ toifes fquare to the arpent ; inftead of which the arpent of Paris contains bur 900 toifes:-this meafurement makes $81,687,016$ Englifh acres 6. - Notwithltanding the credit ufually given to this writer for i:s accuracy, 1 muft here reject his antherity in favour of that of M. Necker. Paucton's calculation, which gives $81,687,016$ Enylifh acres to France, afligns by the fame rule to England $2 \cdot 4,475,315 \|$; yct Tompleman's furvey, at 60 miles to a degree, and thercfore confeffedly below the truth, makes it $31,048,000$, which, at $69 \frac{1}{2}$ to a degree, are

[^18]$42,463,26{ }^{2}+$; a greater difference than is found between them in eftimating the fur. face of France, which, by Paucton, is made 81,587,016 Einglifh acres, with a general admillion of about a million more; and by 'Templeman, $88,855,683$; or at 69 , is $19,220,87+49_{0}^{2}$.

It is vain to attempt reconciling thefe contriry accounts. I flall therefore ahtopp, with the author of the Credit Nationale *, the ellimation of M. Necker, which fuppofes $156,024,113$ arpents of Paris, or $131,722,205$ linglifh acres.
For a comparifon of the lirench and Englifh dominions, I muf for the latter adopt 'Cempleman's meafurement, who gives to

| England, Scotand, Ireland, | $\begin{aligned} & 49,4: 0 \text { fquate miles. } \\ & 27,79,7 \\ & 27,457 \end{aligned}$ |  | lirance, | 138,837 fyrure mila. |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Calculated at ${ }^{10401} 60$ to a degree; but at 69 thete numbers become, |  |  |  |  |  |
|  |  |  |  |  |  |
| England, Scotland, Ircland, | 8,1 miks $66,3+3$ |  | France, | $186,23_{2}$ | $110,220,8_{7} .$ |
|  | 37,292 | - 23,867,016 |  |  |  |
|  | 36,840 | - 23,577,630 |  |  |  |
|  | 10,480 | 89,907,910 |  |  |  |

Hence it appears, that France, according to thefe proportions, contains $29,312,96.4$ acres more than the three Britih kingdoms; and it is to be noted, that as the extent of France is taken trom the more modern and correct authorities, whence M. Neck: : deduced his meafurement at $131,722,295$ Engliih acres, which is confequently much more cxact than that of Templeman; fo it is equally fair to fuppofe, that the latter is as much below the fact in the contents of our illands, as he was in thofe of France. Corrected by this rule, the areas will be

| England $t$, $46,915,933 \ddagger$ acres. <br> Scotland,  <br> Ireland,  | $26,369,695$ <br> $25,049,961$ | France, | $131,722,295$ acres. |
| :--- | :--- | :--- | :--- |
|  | $99,35,589$ |  |  |

Thefe numbers, I an upon the whole inclined to belicve, are as near to the truth as may reafonably be expected from calculations, when the data are not abfolutely correct.

## Ciatr. II. - Of the Suil, and Face of the Country.

THE modern French geographers, in a branch of that fcienc" ? which they have properly given the epithet pleyfichl, have disided the kingdom into "t , it y call ba/fin,
 which are formed of feveral ridges of mountains, cither original, on as they term it, of grinite, or fecondary of calcareous and other materials. Of thefe ba/fins the chicf

[^19]are, 1. Of the Loire and all the rivers that fall into it. 2. Of the Seine and its branches. 3. Of the Garonnc. 4. ()f the K hone and Soane. There are tikewife fome fimaller ones, but of much lefs account. The reader who wifhes to confult the detail of thefe, may turn to the Journal Phyfifuc, rom. 30. fur a memoir by M. la Metheric.
In refpect to the gemponic divifion of the foils of the kingdom, the rich calcareous phain of the north-catlery quarter firf calls for our attention. I croiled th's in feveral directions, and from the ubfervations I made, the following are the limits I would affign to it. On the coall it may be fait to extend from Detukirk to Carentan in Normandy, for the northern promontory of that province, which projects into the fea at Cherbourg, \&ec. is of a difieremt toil. In M. la Metherie's map is marked a ridge of granite mou... tains in this promontory; I flould remark, that I faw nothing in that country which teferves the name of a mountiin, amy more than at Alençon; merely hills, and thofe not confiderable onss. 1 may terminate the rich track at Carentan, as thence to Coutances the land is chictly poor and flony, and holds, with many variations, quite to Breft. in the line a little to the S. of the coalt, before Gaen, is feen the firf confiderable change of fuil from Calais; it there hecomes a red fone brafh; this rich tratt is here, therefore, narrow. On re-entering Normandy on the fide of Alengon, from Anjou and Maine, I firt met with the rich loams on a calcareous bottom at Beaumont; at Al neon there is a noble foil, which 1 then lof no more in advancing northwards. In another line I entered this rich diftrict about ten miles to the fouth of Tours. The hills on the Loire, though all calcarcous that I noticed, are not all rich, though on fome the foil is deep and good. Directly to the fouth of Orleans begins the miferable Sologne, which, though on a calcareous bottom of mall, is too po re to be included in the pretent diftrict. From Orleans to Paris, and alfo Fontainhleau, no exceptions are to be made, but in the fimall fpace of poor fand fone in the royal foreft of the latter town. In a fourth direction this diflriet is entered, but no- fo decifively as in the preceding calfes, a few miles to the fouth of Nemours. At Croificre the firft chalk is vifible to the traveller. Advancing to the N. E. very good land is found near Nangis, and then bearing N. I entered the fertile plain of Bric. Some of the vales through which the Marne flows are rich and what I faw calcarcous; but the hills are poor. The plain of Rheims may be chafed in the prefent diftrict, but at soifions and thence due $N$. all is excellent. Thefe limits inclufe one of the finctl territories that I fuppofe is to he found in Furope. From Dunkirk to Nemours is not lefs than one hundred and eighty miles in a right line. Frońn soifons to Carenaan is another right line of about two hundred miles. From Eu, on the Norman coafl, to Chantres is one hundred miles; and though the breadth of this fich diflriat at Caen, Baycux, \&c. is not confiderable, yet the whole will be found to rontain not a trilling proportion of the whole kingdom. This noble territory includes the deep, level, and fertile plain of Flanders, and part of Arons, than which a richer foil can hardly be defired to repay the induftry of mankind; two, three, and even four feet de p of moift and putrid, but friable and mellow loam, more inclining to clay than fand, on a celcareous bottom, and from its marine origin for there can be little doubt but that the whole plain of Flanders and Hollam has been covered by the fea, long fince our globe has taken its prefent appearance) abounding with particles that add to the rommon fertility, refuhting from fuch compounds found in other fituatons. The putridity ot the bomms in Flanders and its pofition, being a dead level, are the principal circunftances that dialtugnill it from the better foils of the reft of this fertile part of Eu. repe. Fwory fop ot the way from the very gate of Paris to near Soiffons, and thence to Comatray, with bat litede variation of fome inferior hills of fall extent, is a fandy Whan of admirable texture, and commonly of confiderable depth. About Mcaux it
is to be ranked among the fineft in the world; they call it bleaunemenu-it tends much towards an impalpable powder, which betrays few figns of fand, even when, to the eye, it has the appearance of a fandy loan. It is of an admirable texture and friability. Monf. Gibert informed me, that it is of the depth of eighteen feet where his well is digged, and under it a fratum of white marl, found under the whole country, at difierent depths. This marl has the appearance of'a confolidated palte. The line through Picardy is inferior, yet, for the moft part, excellent. But all the arable part of Normandy , which is witlin thefe limits, is of the fame rich friable fandy loan, to a great depth; that from Bernay to Elibeuf can fcarcely be exceeded; four to five feet decp of a reddifh brown loam on a chalk bottom, and without a fone. As to the paftures of the fame province, we have, I believe, nothing either in lingland or lreland equal to them; I hold the vale of Limerick to be inferior. The famous Pays de Beauce, which I croffed between Arpajon and Orleans, refembles the vales of Meaux and Senlis; it is not, how. ever, in gencral, fo deep as the former. The limits 1 have traced are thofe of great fertility; but the calcarcous diftrict, and even of chalk, is much more extenfive. To the E. it reaches acrofs Champagne; a ftrong change, not having occurred to me till about St. Menehould. From Metz to Nancy all is calcarcous, but not chalk. Lime-ftone land I found plentifully in the fouthern parts of Alfice; and from Befort acrofs Franche Compté to Dole, all the ftones I tried, and many from quarries were ealcarcous. Immenle diftricts in Dauphiné and Provence, \&c. \&c. are the fame; I fhall therefors only obferve, that 1 remarked the chalk country to extend E. to about St. Menehould, and S. to Nemours and Montargis * in one line. In another, that all of the Angoumois which I faw is the fame; much in Poitou, and through Tourain to the Loire. Had I penetrated more to the W. I foould probably have found the chalk of Angrumnis, and that of the Loire to be connected uninterruptedly. Moft of the courfe of the Loire is, I believe, chalk, and the whole of it calcareons. Henec it appears, that the chalk enuntry of France is of very confiderable extent; not lels than two hundred miles E. and W. and about as much, but more irregularly, N. and S. and comprifes, by far, the richeft and moft fertile provinces of the kingdom.

The next confiderable diftrict, for fertility, is that which I may call, without inpropriety, the plain of the Garonne. Pafling to the S. from Limofin, it is entered about Creiffenfac, with the provinee of Quercy, and improves all the way to Montauban and Touloufe, where it is one of the fineft levels of fertile foil that can any where be feen. It continues, but not equally fruifful, to the foot of the I'yrenees, by St. Gaudents, \&c. very even to the eye, when viewed from the promenade at Monsanban, which commands one of the richeft, as well as magnificent profpects, in toe met with in l'rance. This plain I found, however, to be much indented and irregular; for whe W. of Auch, and all beyond it to Bayonne, is too inferior to be adnitted ; and to the I. Nitropoix, Pat miers, and Carcaffonne are among the hills, and all the way from Agen to lourdeans, though the river flows through one of the richeft vallises that is to be fien in the wortd, yet the breadth appeared to be every where ineonderatle. Throug all this pain, wherever the foil is found excellent, it confifls ufually of a coep molion friahle find y loam, with moiflure fufficient for the produdion of any thing; much of it is calcarcons. White lime-fone and white chalky loans are found about Cahors. \&ce and white loams more tenacious near Montauban. At Tonnan ce, on the Garonnc, they are red, and apparently as good at ten feet deep as on the fiufluce.

- I lelieve much further: and there is the ume reafon to think fo. becaufe Mr Towt ficnd furnithat

In travelling from Narbome to Beziers, Pezenas, Montpellier, and Nifmes, every one I converfed with reprefented that vale as the moft fruitful in France. Olives and mulberries, as well as vines, render it very productive; but in point of foil (the only circunftance I confider at prefent,) much the greater part of it is inferior to all I have named. The bas Poitou, as I was informed by a perion who refides in it, is of a fertility that deferves to be claffed with the richeft foils of France, extending eighteen leagues by 12 , or 216 fquare leagues, which, at 5,736 arpents per league, are $249,7,6$ arpents. 100,000 arpents of rich marlhes have been draised there *. Being alfo informed at Nantes, that there was a very rich track to the S. of the Loire, in the quarter of Bourgneuf and Macheoul, I have extended the region of good land to that river, as feen in the annexed map.

The narrow plain of Alface, the whole fertile part of which bardly exceeds the furface of one thoufand fquare miles, muft be clafted anong the richeft foils of France. It refembles Fianders a good deal, though inferior to that province. It confifts of a deep rich tandy loam, both moilt and friable, equal to the large production of all forts of crops. A more celebrated dillritt is the Limagne of duvergne, a flat and chiefly a calcareous vale, firrounded by great ranges of volcanic mountains. It is certainly one of the finett foils in the world. It commences at Riom; the plain there is of a beautiful dead level of white calcareous loam, the whole furface of which is a real marl, but fo mixed with bumus as to be of prime fietility. The French naturalifts, that have exanined it, affert the depth to be twenty feet of beds of earth, formed of the ruins of what they fyle the primitive (granite) and volcanized mountains. At Iffoire, Dr. Brés shewing me his farm, in an inferior part of the Limagne (for the beft of it reaches no farther than from Riom to Vaires, which is ficarcely more than twenty miles), made me obferve, that the river had, in all probability, formed the whole plain, as it was adding rapidly to his land, and had given him a depth very perceptible in a few years, having buried the gravelly fhingle of its bed, by depoliting a rich furface of fandy mud. The vale here, on the banks, is feven or eight feet deep of rich brown fandy loam. On the contrary, there are philfophers who contend for the whole having been a lake. , The mountains that furround this vale are various. The white argillaceous fone, in the hills between Rion and Clermont, is calcareous. The volcanic mountains are found to be better than the others, except in the cafe of tiafa or cinders, which are fo burnt as to be good for nothing. The calcareous and clayey ones good, and the bafaltes decompofed and become clay excellent. Their bafe is commonly granite. The calcarcous fandy fones, and the argillacenus calcareous carths are heaped on them by the action of volcanoes, according to the theory of the French philowiphers. The fertility that refults from the voleanic origin of mountains, has been often remarked, and efpecially in the cafe of Itina; the fame fact appeared in many traits of country as I paffed from Le Puy to Montelimart, where many confiderable mountains are covered with beautiful chefnuts, and various articles of cultivation, which in diltrits not volcanic are walte, or in a great meafure ufelefs.
I have now noticed all the diftricts of France, which, to my knowledge, are of any remarkable fertility: they amoun', as it will be thown more particularly in another place, to above twe aty eight millions of Enclifh acres.
of the ober provinces, Bretagne is gencrally gravel, or fravelly fand, commonly deep, and on a gravelly bottom, of an inferior and barren nature, but in many places on fand thone rock. I tried various fpecimens, but found none calcareous; and having

- Des Canaux de Maris par Mo de la Lande, p. 391.
feen a hip at Morlaix unloading lime-fone from Normandy, I may conclude, that the fact does not contradict the conclufion which I drew from the eye. All that I faw in the two provinces of Anjou and Maine are gravel, fand, or fone-generally a loainy fand or gravel ; fome imperfect fchiftus on a bottom of rock ; and much that would in the weft of England be called a Itone brafh, and that would do excellently well for turnips: they have the friability, but want the putrid moillure and fertile particles of the better loams. Immenfe tracks, in both thefe provinces, are walte, under ling, fern, furze, \& c. but the foil of thefe does not vary from the cultivated parts, and, with cultivation, would be equally good. Touraine is better ; it contains lome confiderable diftricts, efpecially to the fouth of the Loire, where you find good mixed fandy and gravelly loams on a calcareous bottom; confiderable tracks in the northern part of the province are no better than Anjou and Maine; and, like them, it is not without its heaths and waftes. Sologne is one of the pooreft and moft unimproved provinces of the king. dom, and one of the moft fingular countries I have feen. It is flat, confilting of a poor fand or gravel, every where cn a clay or marl bottom, retentive of water to fuch a degree, that every ditch and hold was lull of it : the improvement of fuch a country is fo obviounly effected on the eafielt principles, that it is a fatire on the French government, and on the individuals who are owners or occupiers of eftates in this province, to fee it remain in fuch a miferable condition. Berry is much better, though both fandy and gravelly ; but good loams, and fome deep, are not wanted in fome diltricts, as that of Chateauroux, on quarries, and near Vatan on calcareous ones. La Marche and Limofin confilt of friable fandy loans; fome on granite, and others on a calcareous bottom. There are tracts in thefe provinces that are very fertile; and I law none that thould be efteemed fteril. Of the granite they diftinguifh two forts; one hard, and full of micaceous particles; the grain rather coarfe, with but little quartz, hardening in the air in maffes, but becoming a powder when reduced to finall pieces; - this is ufed for building. The other fort is in horizontal frata, mixed with great quantities of fpar, ufed chiefly for mending roads, which it does in the moft incomparable manuer. I was affured at limoges, that, on the hard granite, there grow neither wheat, vines, nor chefnuts; but upon the other kind, thofe plants thrive well : I remarked, that this granite and chefnuts appeared together on entering Limolin; and that, in the road to 'louloufe, there is about a league of hard granite without that tree. The rule, however, is not general ; for fo near as to the S. of Souilac, chefnuts are on a calcareous foil. Yuitou confifts of two divifions, the upper and the lower; the laft of which has the reputation of being a much richer country, efpecially the grafs lands on the coaft. The foil of the upper divifion is generally a thin loam, on an imperfect quarry bottom - a fort of Itone-brath; in fome tracts calcareous: it muft be efteemed a poor foil, though admirably adapted to various articles of cultivation. I have already oblerved, that all I faw of Angoumois is chalk, and much of it thin and poor. Thole parts of Guienne and Gatcoign, not ine cluded in the rich vale of the Garonne, of which I have already fooken, mult be confidered in refpect of foll as poor. The landes (hearhs of Bourdeaux,) though neither unproductive, nor unimproveatle, are in their prefent flate to be claffed amongtt the worft foils of France. I have been affured, that they contain two hundred leagues fquare; and the routs of the Pyrenees are covered with immenfe waltes, which demand much induftry to render profitifle. Rouffillon is in general calcareous; much of it flat and very ftoney, as well as dry and barren: but the irrigated vales are of a noft exuberant fertility. The vaft province of Languedoc, in productions one of the richeft of the kingdom, docs not rank high in the fcale of fill: it is by far too ftoney:-r take feveneighths of it to be mountainous. I travelled near four hundred mikes in it, without fee.
ing any thing that deferved the name of an extenfive plain, that of the Garonne, already mentioned (part of which extends within the limits of Languedoc), alone excepted. The productive vale, from Narbonne to Nifmes, is generally but a few miles in breadth; and confiderable waftes are feen in moft parts of it. Many of the mountains are productive, from irrigation, as I have obferved too in the volcanic territory of the Vivarais. Some parts of the vale are however very rich; and indeed there are few finer foils in France than what I daw near the canal, in going from Beziers to Carcaffonne. A rich mellow loam, tenacious, and yet friable; in fome ftates the particles adhere into clods; in others they recede and melt with friability. Provence and Dauphiné are mountainous countries, with the variation of fome lovely plains and vallies, which bear a very inconfiderable proportion to the whole. Of thefe two provinces, the former is certainly the drieft, in point of foil, in the kingdom. Rock and quarry-land, with fandy gravels, abound there: and the courfe of the Durance, which in fone countrics would be a fine vale, is fo ruined by fand and fhingle, that, in a moderate calculation, above 130,000 acres lave been deftroyed, which would have been the fineft foil in the country, if it had not been for that river. All 1 faw in both the provinces is calcareous; and I was informed, that the greater part of the mountains of Provence are fo. Thefe, towards Barcelonette, and in all the higher parts of the province, are covered with good grafs, that feeds a million of emigrating fheep, befides vaft herds of cattle. With fuch a foil, and in fuch a climate, a country muft not be thought unproductive becaufe mountainous. The vales which I faw are in general fine: that of the Rhone at Loriol, in Dauphiné, is rich,-an admirable fandy clay, five or fix feet deep, on a bed of blue marl with many fones in it. But more to the S . from Montelinart to Orange, this great river paffes through foils much inferior. The north plain of this province, as we go from Savoy to Lyons, confifts much of a good deep red loam, on a gravel bottom. The county of Venaifin, or diftrict of Avignon, is one of the richeft in the kingdom. Its admirable irrigation, is, of itfelf, fufficient to make it appear fo; but I found the foil to confift of rich deep loam, with white and calcareous clays. The whole coaft of Provence is a poor fony foil, with exceptions of very finall fpaces under happier circumflances. About Aix, the land is all calcareous, even the clays that are red and ferrucinous. This province, however, contains one of the moft fingular diftricts in the kingdom, namely, that of the Crau, which is a fony plain to the S. E. of Arles, nuc containing lefs than 350 fquare miles, or 224,000 acres. It is abfolutely covered with round ftones of all fizes, fome of which are as large as a man's head. 'The foil under them is not a fand, but appears to be a kind of cemented rubble of fragments of fone, with a fmall mixture of loam. The naturalift who has defribed this province, fays, they are of a calcareous nature, with neither the grain nor texture of fint; in fome quartzofe molecules predominate-and others are metallic *. Vegetation is extremely thin, as I fhall mention more particulatly when I treat of the pafturage of fheep in France.
The Lyonois is mountainous, and what I faw of it is poor, ftony, and rough, with much wafte land. In palfing from Lyons to Moulins, it is, near Roanne, on the limits of the province, before the gravelly plain of the Loire commences, the fame which M. La Metherie calls the calcareous plain of Montbriffon.

Auvergne, though chielly mountainous, is not a poor province; the foil, for a hilly country, is in general above mediocrity, and the higheft mountains feed vaft herds of cattle, which are exported to a confiderable amount. Befide a variety of volcanic foils, Auvergne is covered with granite and gravelly and fandy loams.

The Bourbonnois and Nivirnois, form one vaft plain, throl:gh which the Loire and Allier pafs; the predominant foil, in much the greater part, in gravel ; I believe commonly on a calcareous bottom, but at confiderable depths. Some tracks are fandr, which are better than the gravels; and others are very good friat le fandy loams. The whole, in its prefent cultivation, mult be reckoned amongt the moft unproductive provinces of the kingdon, but capable of as great improvement, by a different management as any diftrict in France.

Burgundy is exceedingly diverfified, as I found in crofling it from Franche Compté to the Dourbonnois by Dijon, I faw the beft of it ; that line is shrough fandy and gravelly loams; fome good vales, fome mountains, and fome poor granite foils. The fubdivifion of the province called Brefle, is a miferable country, where the ponds alone, moflly on a white clay or a marl, amount, as it is allerted by an inhabitant *, to fixty-fix fquare leagues of two thoufand toifes, not much lefs than two hundred and fifty thouland acres. This is credible from the appearance of them in the map of Caflini.

Franche Compté abounds with red ferruginous loams, fchiltus, gravel, with limefone in the mountains very common; and I thould remark, that all the ftones I tried, fome of which were from quarries between Befort to Dole, effervefeed with acids. From Befançon to Orechamps the country is rocky, quite to the furfuee much limeflone; a reddifh brown loam on rock; with iron forges all over the country. The whole province is very improveable.

Loraine is poor in foil; from St. Menehould to the borders of Alface I faw fcarcely any other than ftony foils, of various denominations; molt of them would in England be called fone-brafh, or the broken and triturated furface of imperfect quarries, mixed by time, foreft, and cultivation, with fome loam and vegetable mothld-much is calcareous. There are indeed diftricts of rich, and even deep friable fandy loams; but the quantity is not confiderable enough to deferve attention in a general view. I have al. ready remarked, that the predominant feature of Champagne is chalk; in great tracks it is thin and poor; the fouthern part, as from Chatons to Troyes, \&c. has from its poverty, acquired the name of poullcux, or loufy. The appropriating of fuch land to fainfoin is little known there.

I have now made the tour of all the French provinces, and hall in general obferve, that I think the kingdom is fuperior to England in the circumftance of foil. The proportion of poor land in England, to the total of the kingdom, is greater than the fimilar proportion in lrance; nor have they any where fuch tracts of wretched blowing fand, as are to be mat with in Norfolk and Suffolk. Their heathe, noors, and waltes, not mountainous; what they term lande, and which are fo frequent in Bretagne, Anjou, Maine, and Guienne, are infinitely better than our northern moors; and the mountains of Scotland and Wales cannot be compared, in point of foil, with thofe of the Pyrenees, Auvergne, Dauphiné, Provence, and Lauguedoc. Another advantage alinoft ineftimable is, that their tenacious loams do not take the character of clays, which in fome parts of England are fo ftubborn and harfh, that the expence of culture is alinoft equal to a moderate produce. Such clays as I have feen in Suffex, I never met with in France. The fmallnefs of the quantity of rank clay in that kingdom, is indeed furprifing.

[^20]
## Face of the Country.

The chief diftinction that marks the faces of different countrics, is that of being mountainous or level. In the language, as well as the ideas common in France, mountains are fpoken of, to which we thould give no other appellation than that of hills: the tracks really mountainous in that kingdom are to be for nd in the S. only. It is four hundred miles S . of Calais before you meet with the mountains of Auvergne, which are united with thofe of Languedoc, Dauphineé, and Provence, but not with the Pyrenees, for I croffed the whole S. of France, from the Rhone to the ocean, either by plains or ranges of inconfiderable hills. The mountains of Voge, in Loraine, de. ferve, perhaps, that name, but yet are not to be ranked with the fuperior elevations I have noticed. The inequalities of all the reft of the kingdom are fufficient to render the profpects interefting, and to give variety to the face of the country, but they deferve not to be called mountains. Some of the hilly and mountainous tracks of France receive a very confiderable beauty from the rich and luxuriant verdure of chefinuts. To thofe who have not viewed them, it is not eafy to believe how much they add to the beauty of the Limofin, the Vivarais, Auvergne, and other diftrits where they are common.

There is no doubt that the Pyrences are more flriking than all the other mountains of France; I have defribed them fo particularly in the Journal, that I would only obd ferve in general here, that their verdure, their woods, their rocks, and their torrents have all the characters of the fublime and beautiful. I faw nothing among the Alps that ofiered fuch pleafing feenes as thofe of the northern parts of Dauphine'; which, however, are lefs varied than thofe in the neighbourhood of Chambery fo abounding in landfapes. According to every account, the comfe of the Ifer is a fiene of perpetual beauty. The Vivarais, and part of Velay, are moft romantic.

Of the great rivers of France I prefer the Seine, which is every where an agreeable object. I fhould fuppofe the reputation of the Loire mut have originated from perfons who either had never feen it at all, or only below Angers; where in truth it merits every eloge. From that city to Nantes it is, probably, one of the fineft rivers in the workd, the breadth of the ftrean, the inauds of woods, the boldnefs, culture, and richnefs of the coaft, all confire, with the animation derived from the fwelling canvafs of antive commerce, to render that line eminently beautiful; but for the reft of its in. menfe courfe, it exhibits a ftreain of fand; it rolls fhingle through vales inftead of water, and is an uglier object than I could polfibly have conceived, unlefs I had actually feen it. The Garonne receives more beauty from the country through which it flows than it confers upon it ; the flat banks, fringed with willows, are deftrutive of beanty. I am not equally acquainted with the Rhone; where I faw it, from Montelimart to Avignon, and again at Lyons, it does not intereft me like the Seine. The courfe of the Soane is marked by a noble track of meadows.

In regard to the general beauty of a country, I prefer Limofin to every other province in France. The banks of the Loire below Angers, and thole of the Seine, for two hundred miles from is mouth, fuperior, undoubtedly, in point of rivers, the capital feature of the country; but the beauty of the Limofin does not depend on any particular feature, but the refult of many. Hill, dale, wood, inclofures, ftreams, lakes, and fcattered farms, are mingled into a thoufand delicious landfeapes, which fet off cvery where this province, Inclofures, which add fo much ormament to the face of a
country, would furnifh obfervations, but I muft treat of them exprefsly in a more ithportant view.

Of the provinces of the kingdom, not already named, none are of fuch fingular features as to demand particular attention. The benuties of Normandy are to be found on the Seine, and thofe of Guienne on the Garome. Bretarne, Maine, and Anjou have the appearance of deferts; and though fome parts of 'louraine are rich and pleaf. ing, yet moft of the province is deficient in beauty The fertile tervitories of Flanders, Artois, and Alface are diftinguined by their utility. Picardy is uninterefting. Champagne in general, whete I faw it, ugly, almo!t as much fo as Poitou. Loraine, and Franche Compté, and Bourgogne are fombre in the wooded dillrikts, and want clearfulnefs in the open ones. Berry and La Marche may be ranked in the fame clafs. Sologne merits its epithet, triffe. 'There are parts of the Angoumois that are gay, and confequently pleafing.

It may be ufeful to thofe who fee no more of France than by once paffing to Italy, to remark, that if they would view the finett parts of the kingdom, they fhould land at Dieppe and follow the Scine to l'aris, then take the great road to Moulins, and thence quit it for Auvergne, and pafs to Viviers, on the Rhone, and fo by Aix to ltaly. By fuch a variation from the trequented road, the traveller might fuffer for want of good inns, but would be repaid by the fight of a much finer and more fingular country than the common road by Dijon offers, which paffes, in a great meafure, through the worft part of France.

## Chap. III.-Of the Climatio of France.

OF all the countries of Europe there is not, perhaps one that proves the importance of climate, fo much as France. In the natural advantages of countries, it is as effential as foil itfelf; and we can never attain to an idea tolerably correct, of the profperity and refources of a country, if we do not know how clearly to afcertain the natural advantages or difadvantages of different territories, and to difcriminate them from the adventitious effects of induftry and wealth. It fhould be a principal object with thofe who travel for the acquifition of knowledge, to remove the vulgar prejudices which are found in all countries among thofe who, not laving travelled themfelves, have built their information on infufficient authorities.

France admits a divifion into three capital parts; 1 , of vines; 2, of maize; 3, of olives-which plants will give the three diftricts of, 1. the northern, where vines are not planted; 2, the central, in which maize is not planted; 3 , the fouth, in which olives, mulberies, vines, and maize are all found. The line of feparation between vines and no vines, as I obferved myfelf, is at Coucy, ten miles to the N. of Soiffons; at Clermont, in the Beauvoifois; at Beaumont, in Maine; and Herbignac, near Guerande, in Bretagne. Now there is fomething very remarkable in this, that if you draw a itrait line on the map from Guerande to Coucy, it paffes very near both Clermont and Beaunont; the former of which is a little to the north of $i t$, and the latter, a little to the fouth. There are vines at Gaillon and Ia Roche Guyon, which is a little to the N. of this line; there are alfo fome near lleauvais, the molt remote from it which I have feen; tut even this difance is inconfiderable; and the melancholy fpectacle of the vintage of 1787 , which I faw there in the midf of incelfant rains, is a proof that they ought to have nothing to do with this branch of culture: and at Angers I was informed, that there are no vines, or next to none, between that place and Laval and Mayenne. Having made this remark on the vine climate of France, I widhed to know
how far the fact held true in Germany ; becaufe if the circumftance arofe from a difference of climate, it ought, by parity of reafon, to be confirmed ly vines in that country being found much farther north than in France. This happens precifely to be the calie; for I find, by a late author, that vines in Germany are found no farther north than lat. $52^{*}$. The meeting with thefe in that latitude is a fullicient proof of the fact in queftion, fince in France their limit is at 49 g . The line, therefore, which I have drawn as the boundary of vines in France, may be continued into Germany, and will probably be found to afcertain the vine climate in that coun'ry, as well as in France. The line of feparation between maize and no maize is not lefs fingular; it is firf feen on the weftern fide of the kingdom, in going from the Angoumvis and entering Poitou, at Verac, near Ruffec. In crolling Loraine, I firft met with it between Nancy and Luncville. It is deferving of attention, that if a line is drawn from between Nancy and Luneville to Ruffic, that it will rum nearly parallel with the other line that forms the feparation of vines: but that line acrofs the kingdom, is not formed by maize in fo un. broken a manner, as the other by vines; for in the central journcy, we found it no farther north than Douzenach, in the S. of the Limofin; a variation, however, that does not affect the general fact. In crofling from Alface to Auvergne, I was nearelt to this line at Dijon, where is maize. In croffing the Bourbonnois to Paris, there is an evident reafon why this plant flould not be found, which is the poverty of the foil, and the unimproved hufbandry of all that country, being univerfally under fallow, and rye, which yiclds only three or four times the feed. Maize demands richer land or better management. I faw a few pieces fo far north as near La Fleche, but they were fo miferably bad, as evidently to prove that the plant was foreign to that climate. In order to give the reader a clearer idea of this, I have annexed a map, explaining, at onc coup d'ail, thefe zones or climates, which may be drawn from the productions of France. -I he line of olives is pretty nearly in the fame direction. In travelling fouth from Lyons, we fee them firft at Montelimart; and in going from Beziers to the Pyrenees, I lof them at Carcaflonne: now, the line on the nap drawn from Montelimart to Carcaffonne, appears at once to be nearly parallel with thofe of maize and vines. Hence we may apparently determine, with fafety, that there is a confiderable difference between the clinate of trance in the eaftern and weftern parts: that the eaftern fide of the kingdom is two and a half degrees of latitude hotter than the weftern, or if not hotter, more favourable to vegetation. That thefe divifions are not accidental, but have been the refult of a great number of experiments, we may conclude from thefe articles of culturc in gencral gradually declining before you quite lofe them. On quitting the Angoumois, and enterin, Poitou, we find maze dwindling to poor crops, before it ceafes to be cultivated; and in going from Nancy to Luneville, I noticed it in gardens, and then bui in fmall pieces in the fields, before it became a confirmed culture. I made the falle remark with refpect to vines. It is very difficult to account for this fact; it feems probable that the clinate is better when remote from the fea, than near it, which is contrary to numercus other facts; and I have remarked, that vines thrive even in the fea air, and almoft tully expofed to it, at the mouth of the river Payonne, and in Bretagne. A great many repeated obfervations muft be made, and with more att" "tion than is in the power of a traveller before fuch a fubject, apparently very curious, can be thoroughly afcertained. In making iuch inquiries as thefe, a general culture sale ne to be regarded: vines will grow in England; I have maize now on my own farm-and I have feen it at Paris; but this is not the queftion; for it turns folely on

[^21]the climate being fo well adapted to fuch articles as to enable the farmer to make them a common culture.
Of the northern climate of lirance I may remark, that though vines will yield little profit in it for winc, yet there is a ftrong diftinction, in refpect of heat, between it and Fingland, at the fame time, that much of it is, I believe, to the full as humid as the S . and E. of England. The two circuminances to be attended to in this inquiry are, the quantiiy of fruit and the verdure and richnefs of piftures. In regard to heat, we muft attend neither to the thermometer nor to the latitude, but to the vegetable productions. I travelled in the fruit feafon through Artois, licardy, Normandy, Bretagne, Anjou, and Maine, and I found at every town, I might properly fay at every village, fuch a plenty of fruit, particularly plumbs, peaches, late cherries, grapes, and inelons, as never can be feen in England in the very hotteft fummers. The markets of all the towns, even in that poor and unimproved province of Bretagne are fupplied with thele in a profufion of which we have no ided. It was with pleafiure I walked through the market at Rennes. If a man were to tee no other in France, lighting there from an Fnglift balloon, he would in a moment pronounce the climate to be to al'y different from that of Cornwall, our moft foutherly county, where myrtes will fand the winter abroad; and from that of Kerry, where the arbutus is fo ac-climated, that it feems indigenous, though probably brought from Spain ty the original inhabitants of the country. Yet in this province of Bretagne I faw ro maize nor mulberries, and, except in the corner I have mentioned, it has no vineyards. Paris is not fupplied with melons from provinces to the S ., but from H arfleur, at the mouth of the Sei e.
For the humidity of the climate, I may quote the be iutiful verdure of the rich paftures in Normandy, which are never irrigated. And I was a witnefs to three weeks of fuch rain at Liancourt, four miles only from Clermont, as I have not known, by many degrees, in Englan!. 'To the great rairs in the N. of France, which render it difagreeable, may be added the heavy finows and the fevere frofts, which are experienced there to a greater degree than in the S. of England. I am affured that the N. of Europe has not known a long and fharp frolt, which has not been much feverer at Paris than at London.
The central divifion that admits vines without being hot enough for maize, I confider as one of the fineft climates in the world. Here are contained the provirce of Touraine, which, above all others, is moft admired by the French; the pifturefque province of Limofin; and the mild, healthy, and plealant plains of the Bourbonnois; perhaps the molt eligible countries of all France, of all Europe, as far as foil and climate are concerned. Here you are exempt from the extreme humidity which gives verdure to Normandy and lengland ; and yet equally free from the burning heats which turn verdure itfelf into a ruflet brown in the S.; no ardent rays that opprefs you with their fervor in fummer; nor pinching tedious frolls that chill with their feverity in winter; a light, pure, elantic air, admirable for every conflitution except confumptive ones. But at the fame time that I muit commend thefe central provinces of France, for every circumfance of atmofphere that can render a country agrecable to inhabit, I mutt guard the reader againit the idea of their being free from gleat inconveniences; they are certainly fubject to thofe in relation to agriculture, which are heavily felt by the farmer. They are fubject, in common with the olive diftrict, to violent ftorms of rain, and what is worfe, of hail. Two years ago, a ftorm of hail fivept a track of defolation in a belt acrofs the whole kiugdon, to the damage of feveral millions of our monev. Such extended ruin is not common, for, if it were, the finelt kingdons would be laid wafle; but no year ever paffes without whole parihes fulfering to a degrec of which
we have no conception, and on the whole to the amount of no inconfiderable proportion of the whole produce of the kingdom. It appears, from me friend Dr. Symond's paper on the climate of Italy ", that the mifchief of hail is $i$. Iful in that country. I have heard it calculated in the S. of France, that the danage in fome provinces amounted to one-tenth of the whole produce of them upon an average. A few days before my arrival at Barbefieux, there had fallen, at the Duke de la Rocleffoucauld's feat in the Angoumois, and fome neighbouring parifhes, a thower of hail that did not leave a fingle grape on the vines, and cut them to leverely, as to preclude all hope of a crop the year tollowing, and allowed no well-founded expectation of any bencficial produce even the thirl year. In another place, the geefe were all killed by the fame ftorm; and young colts were fo wounded that they died afterwards. It is even afferted, that men have been known to be killed by hail, when unable to obtain any thelter. This form deftroyed a copfe of the duke's, that was of two years growth. With fuch effects, it mult be obvious to every one, that all forts of corn and pulfe muft be utterly deftroyed. At Pompinian, between Montauban and Touloufe, I was witnefs to fuch a flower of rain as never fell in Britain; in that rich vale, the corn, before the ftorm, nade a noble appearance; but imagination can hardly picture a more entire deftruction than it poured over the whole; the fineft wheat was not only beaten flat to the ground, but ftreams of liquid mud covered it in many places, in a manner that made all expectation of recovery hopelefs. Thefe hafty and violent fhowers, which are of little confequence to a traveller, or to the refidence of a gentleman, are dreadful fcourges to the farmer, and immenfe drawbacks from the mals of national products.

A circumftance of lefs confequence, but not undeferving attention, is the frofts which happen in the fpring. We know in England how injurious thefe are to all the fruits of the earth, and how much they are fuppofed to danage even its moft important product. Towards the end of May 1787, I found all the walnut trees with leaves turned quite black by them, S. of the Loire; and farther to the S., at Brive, we no fooner faw fig-trees, for the firft time feattered about the vineyards, than we remarked them bound about with fraw to defend them from the frofts of June. Still more to the S., about Cahors, the walnut trecs were black on the soth of June by frofts, within a fortnight; and we were informed of rye being in fome years thus killed; and that rarely there is any fpring month fecure from thefe unfeafonable attacks. In the N. E. quarter I found, in 1789 , the froft of the preceding winter had made a fad havock amongft the walnut trees, moft of which were killed in Alface, and the dead trees made a frange figure in fummer ; they were left in expectation of their fhooting again, and fome few did. From Autun in Burgundy, to Bourbon Lancey, the broom was all killed. Spring frofts were alfo complaind of as much as on the other fide of the kingdom. About Dijon, they faid that they have them often late, and they damage or deftroy every thins. And all the countries within reach of the mountains of Voge are affected by the finow that falls upon them, which was in 1789 , on the 29 th of June. This renders the vineyard an uncertain culture. Perhaps it may arife from the late frofts in the fpring, that we meet with fo few mulbervies in France N. of the olive diftrict. The profit of that tree is very great, as I thall explain fully in another place; yet the diftricts, where they are found in France, are very inconfiderable, when compared with the extent of the whole kingdom. It has been conceived in England, that the mildew is owing to late frotts; when I found myfelf in a region where rye was fometimes thus killed in June, and where every walnut hung with black, I naturally en-

* Amals of Agriculture, vol. iii. p. 1;7.
vos. iv.
quired for that diftemper, and found in fome places, near Cahors for inflance, that their wheat was perfectly exmpt from that madady in many frings, when other plants fulfered the molt fevertly; and we met evell with farmers whofe lands were fo little fubject to the diftemper that they hardly knew it. This floweld feem to fet afide the theory of frofts being the canfe of that malady. As fyring frolls are as milichievous in France as they can be with us, fo alfo are they troubded with autmmal ones earlier than is common with us. On the 2oth of September $1-5,7$, in going on the S. of the Leire, from Ciambord to Orleans, we lad fo finart a one, that the vines were hurt by it; and there had been, for feveral days, fo cold a N. F. wind, yet with a brighe fun, that none of us ftirred abroad without great coats.

The olive-climate contains but a very incontiderable portion of the kingdom, and of that portion, not in one acre out of fifiy is this tree cultivated. Several other plants, befide the olive, mark this climate. Thus at Montelinart, in Dawo hine, befides that tree, you meet with, for the firtt time, the pomegranate, the arbor judx, the paliurus, figs, and the evergreen oak; and with thete plans, I may add alfo that deteltable animal the mofquito. In crofling the mountains of Auvergne, Velay, and Vivarais, I met, between Pradelles and Thuyte, mulberties and lies at the fame time; by the term flies, I mean thofe myriads of them, which form the moft difagreable circtumftance of the fouthern climates. They are the firft of torments in Spain, Italy, and the olivediftriat of France: it is not that they bite, fling, or hurt, but they buz, iceze, and worry: your mouth, eyes, ears, and nofe, are full of them: they fwarm on every eatable, fruit, fugar, milk, every thing is atacked by them in fuch myriads, that if they are not driven away inceflantly by a pe:fon who has nothing elfe to do, to cat a meal is impoffible. They are, however, calught on prepared paper, and other contrivances, with fo much cafe, and in fuch quantities, that were it not from negligence they could not abound in fuch incredible quantitis. If If firmed in thote countries, I think If fould manure four or five acres every year with dead lies. Two ohler articles of culture in this climate, which deferve to be mentioned, though too inconf derable to be a national object, are capers in l'rovence, and oranges at lieres. The latter platut is fo tender, that this is fuppofed to be the only part of France in which it will thrive in the open air. The whole of Rouffillon is to the fouth of this, yet none are to be found there. I went to Hieres to viaw them, and it was with pain I found them almolt, without exception, fo damaged by the frolt, in the winter of 1338 , as to be cut down, fome to the ground, and others to the main flem. Vailt numbers of olives were in the fame fituation throughout tie whole olive-diflrict, and abundance of them athfolutely killed. Thus we find, that in the mon foutherly part of frame, and even in the moft fhetered and fecure fituations, fuch fevere frofts are known as to celtroy he art cles of common cultivation.

In the defription I took of the climate of Provence, from Monf. le Prefident, Baron de la Tour d'Aigues, he informed me, that hail, in fome years, docs not break glafs; but it was mentiond as an extrablinary thing. The only featons in which is to be expected rain with any degee of certainy, are the cquiances, when it comes viol nely for a time. No dependence tor a limple drep in dene, July, or Auguft, and the quantity always very finall; whilh thrs momis, and mot the winter ones, are the pinchang fation for all grat catls sametimes not a drop falls for fix months together *. They have white frofts in March, and fomertimes in spril. The great heats

[^22]are never till the $\mathbf{r} 5^{\text {th }}$ of July, nor after the 15 th of September. Harveft begin ne 24th, and ends July $15^{\text {th }}$-and Michaelnas is the middle of the vintage. In sy years no fnow is to be feen, and the frofts not fevere. The fpring is the wort tan In the year, becaufe the cuent de bize, the majlrale of the Italians, is terrible, and fuff cient, in the mountains, to blow a man oft his horfe ; it is alfo dangerous to the health, from the fun, at the fame time, being both high and powerful. But in December, January, and Febmuary, the weather is truly charming, with the bize very rarely, but not always frec from if; for on the 3 d of January 1786, there was fo furious a majefralc, with fnow, that flocks were driven four or five leagues from their paftures; numbers of travellers, thepherds, flueep and affes in the Cran perifled. Five flepherds were conducting eight hundred theep to the butcheries at Marfeilles, three of whom, and almoft all the fleep, perifled ". To make a refidence in thefe provinces agreeable, a man fhould alfo avoid the great fummer heats. For during the laft week in July, and fome days in Auguft, I experienced fuch a heat at Carcaffonne, Mirepoix, Pamiers, \&c. as rendered the leaft exertion, in the middle of the day, oppreflive; it exceeded any thing I felt in Spain. It was impofible to fupport a room that was light. No com. fort but in darknefs; and even there reft was impoffible from nyyriads of flies $\dagger$. It is true, fuch heats are not of long duration; if they were fo, nobody, able to quit the country, would refide in it. Thefe climates are difagreeable in fpring and fummer, and delicious in winter only. In the Bourbonnois, Limofin, and Touraine, there is no vent de bize. On the mountains above Tour d'Aigues, are chiefly found lavendula-thymus-ciftus rofea-cifus albidus-foralia bitumina-buxus femper virens-quercus ilex-pinus montana - rofmarinus officinalis - rhamnus cathartica-geniftis montis ven-tofa-genifta Hifpanica - juniperus Phocnicir-fatureja montana—bromus fylvatica, \&c. In the ftubbles of all the olive-diftrict, and in every wafte fpot are found centaurea ca-lycitropa-centaurea folfitialis,-alfo the eryngium campeftrum, and the eryngium amethyftinum :-they have fown in Provence the datura ftrimonium, which is now habituated to the couniry. In the mountains, from Cavalero to Frejus, and alfo in that of Eftrelles, the lentifcus-myrtus-arbutus-lavendula-ciftus-and lauruftinus.

Upon a general view of the climate of France, and upon comparing it with that of countries, not fo much favoured apparently by nature, I may remark, that the principal fupcriority of it arifes from adapting fo large a portion of the kingdom to the culture of the vine; yet this noble plant is moft unaccountably decried by abundance of writers, and efpecially by French ones, though the farmer is enabled to draw as extenfive a profit from poor and otherwife barren, and even almoft perpendicular rocks, as from the richeft vales. Hence immenfe tracks of land may be ranked in France among the moft valuable, which in our climate would be abfolutely wafte, or at leaft applied to no better ufe than warrens or fheep walks. This is the great fuperiority which climate gives to that kingdom over England:-of its nature and extent, I fhall treat fully under another head.

The object of the next importance is peculiar to the olive and maize diftricts, and confifts in the power of having, from the nature of the climate, two crops a-year on

[^23]vaft tracks of their arable land: an early harveft, and the command of plants, whichi will not thrive equally well in more northern climates, give them this invaluable advantage. We fee wheat ftubbles left in England, from the middle of Auguf, to yield a few fhillings by theep, which, in a hoter climate, would afford a fecond crop, yielding food loreman, fuch as millet, the fifty day maize (the cinquantina of the Italians \&c.; or prove a better feafon for turnips, cabbages, \&c. than the common feafon for them here. In Dauphine, 1 faw buck-wheat in full bloffom the 23d of Auguft, that had been fown after wheat. I do no more than name it here, funce, in another place, it muft be examined more particularly. Mulberries inght in France be an object of far greater importance than they are at prefent, and yet the furing frofts are fatal impediments to the culture: that this plant mult be confidered for all important purpofes, as adapted only to fouthern climates, appears from this, that Tours is the only place 1 know in France, nurth of the maize climate, where they are cultivated for filk with any fuccefs; confiderable experiments have been made (as I hall hew in the proper place) for introducing them into Normandy and elfewhere, but with no fuccefs; and the force of this obfervation is doubled, by the following fact - that they fucceed much better in the olive climate than in any part of the kingdom. But that they might be greatly extended, cannot for a moment be doubted. In going fouth, we did not meet with them till we came to Caufade, near Montauban. In returning north, we faw them at Auch on!y - A few at Aguillon, planted by the Duke- the promenade at Poitiers planted by the intendant-and another at Verteul, by the Duke d'Anville; all which are experiments that lave not been copied, except at Auch. But at 'Tours there is a fmall diftrift of them. In another direction, they are not met with atter Moulins, an.l there very few. Maize is an object of much greater conlequence than mulberries; when \& give the courfes of the lirench crops, it will be found that the only good hulbandry in the kingdom (fome fmall and very rich dithricts excepted) arifes from the poffeflion and management of this plant. Where there is no maize, there are fallows; and where there are fallows, the people flarve for want. For the inhabitants of a country to live upon that plant, which is the preparation for whent, and at the fame time to keep, their catle fat upon the leaves of it, is to poife'fs a treafure, for which they are indebted to their climate. The quantity of all the common lorts of fruits, which, through the greater part of France, is fuch as to form a confiderable object in the fubfiftence of the great mafs of people, is a point of more confequence than appears at firft fight. To balance thefe favourable circumflances, other countries, not fo happily fituated (efpecially England) have advantages of an oppofite nature, which are very material in the practice of their agriculture : that humidity of atmofphere, which the French provinces north of vines enjoy - which Fngland has in a greater degree, and lreland ftill more, and which is better marked by the hygrometer than by the rain gage, is of fingular importance in the maintenance of cattle by pafturage, and in adapting the courles of crops to their fupport. Artilicial graffes, turnips, cabbages, potatocs, \&e. thrive beft in a humid climate. It would take up too much room here fully to explain this; to mention it will be fufficient for thofe who have reflected on finilar fubjects. From a duc attention to all the various circumftances that affect this queftion, which, relatively to agriculture, is the beft climate, that of France, or that of England?-I have no hefitasion in giving the preference to France. I lave often heard, in converfation, the contrary affertet, and with fome appearance of reafon-but 1 believe the opinion has arifen more from confidering the actual flate of hufbandry in the two countrics, than the dif-
ind properties of the two climates. We make a very good ufe of our's ; but the French are, in this refpect, in their infancy, through more than half the kingdom *.

## Cuap. V.-Of the Population of France.

AS the fubject of population is beft treated by an inquiry into the induftry, agriculture, divifion of landed property, \&c. I fhall at prefent merely lay betore the reader fome facts collected with care in France, that afford ufeful data for political arithmeticians. Monf. l'Abbé Expilly, in tis Dictionnairc de la France, makes the number $21,000,000$. And the Marqu's de Mirabeau $\dagger$ mentions an enumeration of the kingdomin 1755; total 18,107,000. In Normandy 1,665,200, and in Bretagne 847,500. Monf. de Buffon, in lis Ilifoire Naturellc, affigns for the population of the kingdom 22,672,077. Monf. Meflance, in his Recherches fur la Population, 4to. 1766, gives the details from which he draws the conclufion, that in many towns in Auvergne the births are to the number of inhabitants as 1 to $24 \frac{1}{2}$ 直而 $\frac{1}{0}$; the marriages per annum 1 to 114 inhabitants; and families, one with another, compofed of $5 \mathbf{r}^{\prime}$ 'rs, or 24 fa milies contain 124 inhabitants. In various towns in the Lyonnois, birtlis are to the inhabitants as a to $23 \frac{3}{}$; the n:arriages per annum 1 to 111 perfons; and families compofed 44 ' 1 the births to the inhabitants as 1 to $27 \frac{1}{1}$ 'g ; marriages per annum 1 to 114 perfons; families are compofed of 3 ! 42 's ; 20 reprefent $; 6$ inhabitants. In the city of Lyons fanilies are compofed of $5!\frac{1}{6}$; to reprefent 316 inhabitants; and there are a few above 24 perfons per houfe in that city. In the city of Rouen families are compofed of $6 \frac{1}{16}$ perfons; and there are $6 \frac{1}{5}$ perfons per houfe. At Lyons 1 in 35 dies annually ; at Rouen 1 in 27 1. Mean life in fome parifhes in the generality of Lyons 25 years; ditto in the generality of Rouen 25 years 10 months. At Paris 1 in 30 dies annually : a family confifts of 8 , and each houfe contains $24 \frac{1}{1}$ perfons. By comparing the number of births in every month at Paris, for forty years, he found that thofe in which conception flourihed moft were May, June, July, and Auguft, and that the mortality for forty years was as follows:

| Months. | Deaths. | Month. | Death. | Months. | Deaths. |
| :--- | :--- | :--- | :--- | :--- | :--- |
| March, - 77,803 | February, | 66,789 | October, | 54,997 |  |
| April, - 76,815 | December, | $60,9.6$ | September, | 54,339 |  |
| May, - | 22,198 | June, | 58,272 | November, | 54,029 |
| January, | 69,166 | July, | 57,339 | Auguft, | 52,479 |

It fhould appear from this table, that the influence of the fun is as important to human health as it is to vegetation. What pity that we have not fimilar tables of ciises in all the different latitudes and circumftances of the globe.

[^24]At Clermont Ferrand 1 in 38 dies annually. - At Carcaflome 1 in 22 I . - At Valence 1 in $24 \frac{1}{1}$ - At Vitry le François 1 in $23 \frac{1}{2}$. - At Elbouf 1 in $29 \frac{1}{2}$. - At Loviers 1 in $31 \frac{1}{2}$ --At Honfleur 1 in 24.-At Vernon 1 in 25 .-At Gifors 1 in 29.-At Pontau-deMer 1 in 33.-At Neufchatel 1 in 24 . - At Pont l'Eveque 1 in 26 . - At le Havre I in 35. Upon a comparifon in feven principal provinces of the kingdom, population in fixty ears $^{2}$ has augmented in the proportion of 211 to 196 , or a thirtcenth. General deduction; - that the number of people in France in 176; was 23,909,400. Monl. Moheau * gives to the beft peopled provinces 1700 inhabitants per fiquare league; and to the worlt 500 ; the medium 872 , at which rate he makes the total $23,500,000$, and an increaie of a ninth fince 1088. The ine of Oleron is peopled at the rate of 2886 per league, and that of Ré 4205 . He alfo calculates that 1 in 36 dies, and 1 in 26 is bom every ycar. Monl. Necker, in his work de l'Admimifration des Finances de la France, has the following particulars, which it is alfo neceflary to have in our at-tention:-Births in the whole kingdom per annum, on an average, of $1776,77,7^{8}$, 79 , and 80 , were 963,207 : - which, multiplied by $25 \frac{3}{4}$, the proportion he fixes on, Gives 24,802,580 inhabitants in France. He notices the grofs error of the aconomifles, in eftimating the population of the kingdom at 15 or 16 millions.-A later authority, but given in whole numbers, and therefore not accurate, flates the population of the kingdom at $25,500,000$, of which the clergy are fuppofed to be 80,000 , the nobility 110,000 , the proteltents $3,000,000$, and Jews $30,000 \dagger$ : the committee of impolts aflert, that to multiply the births in the cities of France by 30 , will give their population with fufficient truth; but for the country not fo high $\ddagger$. The rule of 30 would make the population $28,896,210$. But much later than all thefe authorities, the National Affembly has ordered fuch enquiries to be made into the population of the kingdom, as have produced a much greater degree of accuracy than was ever approached before: this has been done by the returns of taxes, in which all perfons, not liable to be charged are entered in what we fhould call the duplicates; and as the directions for making thefe lifts are pofitive and explicit, and no advantage whatever refults to the people by concealing their numbers, but on the contrary, in many inftances, they are favoured in taxation, by reaton of the number of their children, we may furely conclude, that thete returns are the fafeft guides to direct our calculations. Here follows the detail :

Efibuating the acres at $131,722,295$ ，and the people as here detailed，we find that it makes，whin a fmall traction，five acres a head．That proportion would be $131, \$ 15,270$ acres．If lengland were equally well peopled，there fhould be upon $46,015,9.33$ acres， malier more than $9,000,000$ fouls．And for our two iflands，to cqual France in this refect，there thould be in them $19,867,117$ fouls；inftead of which theie are not more than $15, \mathrm{cc} 0,000$ ．

An whemaikn，rather curious，may be made on this detail；it appears，that lefs than one－fourth of the people inhahit towns；a vory remarkable cercumbance，becatio it is commonly obferved，atd foubtels founded on cortain fates，that in thourihing commies the hatt of a mation isfound in towns．Many writers，I believe，have looked upon this as the proportion in Fngland：in Ilolland，and in Lombardy，the richef countries in Furope，the fame probably exifts， 1 am much inclined to connect the fingular fact，re－ hatime to France，wink thet want of ehet and fuccefs in its agriculture，wheh thave re－ maked in almott wery part＂the kingdom；refulting alto from the eateme diviton of the loil into little propertice．It appears likewile，from this detail，that then towns
are not confiderable enough to give that animation and vigour to the induftry of the country, which is beft encouraged by the activity of the demand which cities atford for the products of argriculture. A more certain and unequivocal proof of the juftice of my remarks, on the too great and mifchievous divifion of tandel property and farms in that kingdom could hardly have arifon : and it yields the cleareft conviction, that the progrets of national improvement has been upen the whole but fmall in France. The manufactures and commerce of the kingdom mult have made a lefs advance than one would have conceived poffible, not to have effected a proportion far different from this of a fifth. A really active induftry, proportioned to the real refources of the kingdom, fhould long aro have purged the country (to ufe an expreffion of Sir James Stuart's) of thofe fuperfluous mouths, -I do not fay hands; for they eat more than they work; and it is their want of employment that ought to drive them into towns. Another obfervation is fuggefted by this curious table of population: I have repeatedly, in the diary of my journey, remarked, that the near approach to Paris is a defert compared to that of Iondon; that the difference is infinitely greater than the difference of their population; and that the want of traffic, on the high roads, is found every where in the kingdom as well as at Paris. Now it deferves notice, that the great refort, which is every where obfervable on the highways of England, flows from the number, fize, and wealth of our towns, much more than from any other circumftance. It is not the country, but towns that give the rapid circulation from one part of a kingdom to the other; and though, at firt fight, France may be thought to have the advantage in this refpect, yet a nearer view of the fubject will allow of no fuch conclufion. In the following lift, the Englifh column has furely the advantage:

| Englin. | French, |
| :--- | :--- |
| London, | Paris, |
| Dublin, | Lyons, |
| Fdinburgh, | Bourdeaux, |
| Liverpool, | Marfeiles, |
| Briftol, | Nantes, |
| Newcalle, | Iavre, |
| Hull, | Rochelle, |

Englifh. Manchefter, Birmingham, Norwich, Cork, Glafgow, Bath,

French. Rouen, Lille, Nifmes, St. Malo, Bayonne, Verfailles.

The valt fuperiority of London and Dublin, to Paris and Lyons, renders the whole comparion ridiculous. I believe, London, without exaggeration, to be alone equal to Paris, Iyons, Bourdeaux, and Marleilles, as appears by the lifts of population, and by the wealth and trade of all. But if we reflect, that the towns of England, \&c. are portions of a population of fifteen millions only, and thofe of France parts of twenty-fix millions, the comparifon fhews at once the vaftly greater activity there mult be in one country than in the other ":

Of all the fubjects of political ceconomy, I know not one that has given rife to fuch a cloud of errors as this of population. It feems, for fome centuries, to have been confidered as the only fure teft of national profperity. The politicians of thofe times, and

[^26]the majority of them in the prefent, have been of opinion, that, to enumerate the people, was the only ftep neceffary to be taken, in order to afcertain the degree in which a country was flourifhing. Two-and-twenty years ago, in my "Tour through the North of England, 1769, , I entered my caveat againft fuch a doctrine, and prefumed to affert, "that no nation is rich or powerful by means of mere numbers of people; it is the indutrious alone that conflitute a kingdon's Arength; that affertion I repeated in my "Political Arithmetic, 1774 ;" and in the fecond part, 1779 , under other combinations. About the fame time a genius of a fuperior caft (Sir James Stuart,) very much exceeded my weak efforts, and, with a mafterly hand, explained the principles of population. Iong fince that period, other writers have arifen who have viewed the fubject in its right light; and of thefe none have equalied Monf. Herenfchwandt, who, in his "Economie Politique Moderne, 1736;" and his "Difcours jur la Divificn des Terres *, 1788," has almolt exhaufted the fubject. I hall not, however, omit to name the report of the committee of Mendicite in the National Affembly. The following paffage does the higheft honour to their political difeernment:-" $C$ 'eft ainfi que malgré les afertions, fans ceffe rópetées depuis vingt ans, de tous les écrivains politiques qui placent la propperité d'un empire dans fa plus grande population, une potulation eucefive fans un grand travail E funs des productions abondantes, feroit au contruire une dévorante furcbarge pour un etat; car, il faudroit alors que catte exceffive population partageat les benefices de celle qui, fans clle, cutt trouvé une fubfiftcnce jufijante; il faudroit que la nícme fomme de travail fut abandonnsés à une plus grande quantité de bras; il faudroit enfin neci.juircment que le prix de ce travail baifut par la plus grande concurrence des travailleurs, d'on refulteroit une indigence complctte pour ceux qui ne trouveroient pos de travail, छ une fubfifance incomplette pour ceux-memes aux quels il ne foroit pas rcfufé $\dagger$ '一France itfelf affords an irrefragable proof of the truth of thele fentiments; for I am clearly of opinion, from the obfervations I made in every province of the kingdom, that her population is fo much beyond the proportion of her indulliry and labour, that the would be much more powerful, and infinitely more flourifling, if the had five or fix millions lefs of inhabitants. From her too great population, fhe prefents, in every quarter, fuch fpectacles of wretchednefs, as are abfolutely inconfiftent with that degree of national felicity, which fhe was capable of attaining even under her old government. A traveller much lefs attentive than I was to objects of this kind, mult fee at every turn moft unequivocal figns of diftrefs. That thefe fhould exift, no one can wonder who confiders the price of labour, and of provifions, and the mifery into which a limall rife in the price of wheat throws the lower claffes; a mifery, that is fure to increafe itfelf by the alarm it excites, left fubfiftence fhould be wanted. The caufes ui this great population were certainly not to be found in the benignity of the old goverument yielding a due protection to the lower claffes, for, on the contrary, it abandoned them to the mercy of the privileged orders. It is fair, however, to obferve, that there was nothing in the principles of the old government, fo directly inimical to population, as to prevent its increafe. Many croaking writers in France have repeatedly announced the depopulation of that kinglom, with pretty much the fame truth and ingenuity that have been exercifed on the fame fubject in England. Monf. Necker, in a very fentible paflage, gives a decifive anlwer to them, which is at the fame time thoroughly applicable to the ftate of England, as well as to that of France $\ddagger$. Nor can the great population of France be attributed to the climate, for the tables of births

[^27]and burials offer nething more favourable in that kingdom, than in our own. And a much worfe climate in Holland and Flanders, and in fome parts of Germany and ltaly, is attended with a flill greater populoufnefs *. Nor is it to be imputed to an extraordinary profiperity of manufactures, for our own are inuch more confiderable, in proportion to the number of people in the two countrics.

This great populoufnefs of France I attribute very much to the divifion of the lands into fmall properties, which takes place in that country to a degree of which we have in England but little conception. Whatever promifes the appearance even of fubfiftence, mduces men to marry. The inheritance of ten or twelve acres to bedivided amongft the children of the proprietor, will be löoked to with the views of a permanent fettement, and either occafions a marriage, the infants of which die young for want of fuficient nourifhment $\dagger$; or keeps children at home, diftreling their relations, long after the time that they thould have emigrated to towns. In diftricts that contain immenfe quantities of wafte land of a certain degree of fertility, as in the roots of the Pyrenees, belonging to communiies ready to fell them, cconomy and indultry, animated with the views of fettling and marrying, flourifh greatly: in fuch neighbourhoods foonething like an American increafe takes place; and, if the land be cleap, little diftrefs is found. But as procreation gees on rapidly, under fuch circumftances, the leaft check to fubfiftence is attended with great milery ; as waftes becoming dearer, or the beft portions being fold, or difficulties arifing in the acquifition; all which cafes I met with in thofe mountains. The moment any impediment happens, the diftrefs of fuch people will be proportioned to the activity and vigour which had animated population. It is obvious, that in the cafes here referred to, no diffrefs occurs, if the manufactures and commerce of the diftrict are fo flouribing as to demand all this fuperfluity of rural population as faft as it arifes; for that is precifely the balance of employments which prevails in a well regulated fociety; the country breeding people to fupply the demand and confumption of towns and manufactures. Population will, in every ftate, increafe perhaps too faft for this demand. England is in this refpect, from the unrivalled profperity of her manufactures, in a better fituation than any other country in Europe; but even in England population is fometimes too active, as we fee clearly by the dangerous increafe of poor's rates in country villages; and her manufactures being employed very much for fupplying forei/on confumption, they are often expofed to bad times; to a flack demand, which turns thoufands out of employnment, and fends them to their parifhes for fupport. Since the conclufion of the American war, however, nothing of this kind has happened; and the feven years which have elapfed fince that period, may be nanied as the mof decifively profperous which England ever knews It has been faid to me in France, would you leave uncultivated lands wafte, rather than let them be cultivated in finall portions, through a fear of population?-1 certainly would not: I would on the contrary, encourage their culture; but I would prohibit the divifion of fmall farms, which is as mifchicvous to cultivation, as it is fure to be diffreffing to the people. The indifcriminate praife of a great fub-divifion, which has found its way unhappily into the National Affembly, muft have arifen from a want of examination into facts: go to diftricts where the properties are minutely divided, and you will find (at leaft I have done it univerfally) great diftrefs, and even mifery, and probably very bad agriculture. Go to others, where fuch fub-divifion

[^28]has not taken place, and you will find a better cultivation, and infinitely lefs mifery; and if you would fee a diflrict, with as little diffrefs in it as is confiftent with the political fyitem of the old government of France, you muft afluredly go where there are no little properties at all. You mult vifit the great farms in Beauce, Picardy, part of Normandy, and Artois, and there you will find no more population than what is regularly employed and regularly paid; and if in fuch ditricts you thould, contrary to this rule, meet with much diftrefs, it is twenty to one but that it is in a parifh which has fome commons that tempt the poor to have cattle-to have property-and, in confequence, mifery. When you are engaged in this political tour, finifh it by feeing England, and I will fhew you a fet of peafants well cloathed, well nourihied, tolerably drunken from fuperfluity, well lodged, and at ducir eafe; and yet amongtt them, not one in a thoufand has either land or cattle. When you have viewed all this, go back to your tribune, and preach, if you pleafe, in favour of a minute divifion of landed property. There are two other grofs errors, in relation to this fubject, that fhould be mentioned; thefe are, the encouragements that are fometimes given to marriage, and the idea of the importance of attracting forcigners. Neither of thele is at all admiffible on juft principles, in fuch a country as France. The predominant evil of the kingdom, is the having fo great a population, that the can neilher employ nor feed it : why then encourage marriage? would you breed more people, becaufe you have more already than you know what to do with? You have fo great a competition for food, that your pcople are farving or in mifery; and you would encourage the production of more to encourage that competition. It may almoft be queftioned, whether the contrary policy ought not to be embraced? whether difficultics hhould not be laid on the marriage of thofe who cannot make it appear that they have a profpect of maintaining the children that fhall be the fruit of it? But why encourage marriages which are fure to take place in all fituations in which they ought to take place ?-There is no inftance to be found of plenty of regular employment being firf eftablifhed, where marriages have not followed in a proportionate degree. The policy, therefore, at beft is ufelefs, and may be pernicious. Nor is the attraction of foreigners defirable in fuch a kingdom as France. It does not feem reafonable to have a pealantry half ftarved for want of employment, arifing from a too great populoufnefs; and yet, at the fame time, to import fereigners, to increafe the competition for employment and bread, which are infufficient for the prefent population of the kingdom. This muft be the effect, if the new comers be induf rious; if they belong to the higher claffes, their emigration from home muft be very infigr ificant and by no means an object of true policy; they muft leave their own country, not in confequence of encouragement given in another, but from fome ftrokes of ill policy at home. Such infances are indeed out of the common courfe of events, like the perfecutions of a Duke d'Alva, or the revocation of the edict of Nantes. It is the duty of every country, to open its arms, through mere humanity, to receive fuch fugitives; and the advantages derived from receiving them may be very confiderable, as was the cafe with England. But this is not the kind of emigrations to which I would allude, but rather to the eftablifhment of fuch colonics, as the King of Spain's, in the Sierre Morena. German beggars were imported, at an immenfe expence, and fupplied with every thing neceflary to eftablifh little farms in thofe deferts; whilitt at the fame time, every town in Spain fivarmed with multitudes of idle and poor vagrants, who owed their fupport to bihops and convents. Supprefs gradually this blind and indifcriminate charity, the parent of infnite abufe and mifery, and at the fame time give fimilar employments to your own poor; by means of this policy, you uill want no foreigncrs; and you may fettle ten Spanifl families for the expence of one German. It is very common to hear of the want of population in Spain, and fome
other countrics; but fuch ideas are ufully the refult of ignoranes, fince all ill go. verned countries are comm only too popalots: Spain, from the happinefs of its climate, is greatly fo, notwithitanding the apparent fareity of inhabitunts; for, as it las been Ghewn above, that country whish has more pesple than it can maintain by indutry, who mult either ftarve, or remain a dead weight on the charity of others, is manifetly too populous "; and Spain is perhaps the bett peopled country in Europe, in proportion to its induftry. When the great evil is having more people than there is wifdom, in the political inftitutes of a country to govern, the remedy is not by attracting foreigners -it lies mach nearer bome.

## Consumption.

Thefe are the quantinies for which duties are paid; but it is calculated by the officers of the cultoms, that what enters contraband, and for which nothing is paid, amounts to one-fixth of the whole + .

The confumption of flour is 1500 facks per diem, each weighing 320 lb . requiring nine feptiers of corn to yield four of thofe facks, or 3375 feptiers per diem. This is, per annum, $1,231,875$ feptiers; the French politicat arithmeticians agree in calculating the confumption of their people per head, at three feptiers for the whole kingtom on an average; but this will not lead us to the population of the capital, as the immenfe confumption of meat in it muft evidently reduce confiderably that proportion. It may probably be eftimated at two feptiers, which will make the population $615,9,37$ fouls. Monf. Necker's account of the population was 660,000 . The enumeration in 1790 made the numbers no more than 550.8 co ; and there are abundant rafons for believing the affertion, that this capital was diminilhed by the revolution in that proportion at leaft. This point is, however, atcertained by the confumption, which is mow 1350 facks a day, or reduced one-tenth, which, at two leptiers of corn, impliss a population of

- An Italion author, with whom I had the pleafure of convelfing at Tiuri, jufly obferves, "Quanto la popolazione proporionata ai prodotti dellt natura e dell' arte è vantagniofst ad uua nadione, alterctanto è popolazione poplazione foverchia." L'..fboate Vafoo, Rifpofia al quefito propollo da hia keale dicad. delle Scienze, \&c. 1ivo. 178.. p. 55.
$\dagger$ To fome is may appear Atrange, hov fuch a commodity as live oxen, can be fimuggled in great quantities; but the meanso: doing it are numeroas; one was difcusered, and many moere of the hane fort are fuppofed to exith nudifcovered: a fuhterraneout paffige was pected nuder the wall, going from a coun--ard withunt the wall, to a bum her's yadd within; and whole doves of uxen, \&c. entected by it in the nightis for a long time, thafire it was known. The officeri of the barierse are conviliced, that on an average of commoditics, onefixth is finuggled.

554,244 ; and as this comes within 2000 of the actual enumeration, it proves that two feptiers a head is an accurate eftimate; and though it does not perfectly agree with Monf. Necker's account of the former population of Paris, yet it is much nearer to it than the calculations made to correct that account, by Dr. Price, and by the very able and ingenious political arithmetician, Mr. Howlet. As the late enumeration thews the population of Paris to have been (proportionably to the confumption of corn) 6:5,937 fouls, when its births amounted to 20,550 , this fact confirms the general calculation in France, that the births in a great city are to be multiplied by thirty; for the above mentioned number fo multiplied, gives 616,500 , which comes fo near the truth, that the difference is not worth correcting. M. Necker's multiplier is confirmed clearly; and the event, which gives to France a population of 26,:00,000, has proved, that Dr. Price, who calculated thern at above $30,000,000$, was as grofly miftaken in his exaggeration of French populousnefs, as Mr. Howlet has fhewn hin to be in his diminution of that of England. It leems indeed to have been the fate of that calculator to have been cqually refutec. upon almolt every political queftion he handled; the milchief of inclofures-the depojalation of England-the populoufnefs of France-and the denunciation of ruin he pronounced fo authoritatively againft a variety of aunuitant focieties, that have flourilhed almoft in proportion to the diftreffes be afligned them. The confumption of wine at Paris, on an average of the latt twenty years, has been from 2,30,000 to 260,000 muids per annum; average, 245.000 . In 1789 it funk rather more than 50,000 muids, by frnuggling, during the confufions of that period. In 245,000 muids there are $70,560,00 j$ Paris pints, or Englifh quarts, which makes the daily confumption ' 93.315 quarts; and if to this, according to the computation of the commis of the barriers, one-fixih is to be added for finuggling, it makes 225,534 , which is one-third of a quart, and one-tenth of that third per h ad per diem. The confumption of meat is very difficult to be calculated, becaufe the weight of the bealts is not noted; I can guefs at it only, and therefore the reader will pay no other attention to what follows than to a mere conjecture. I viewed many hundreds of the oxen, at different times, and eftimate the average at fixty fone; but as there are doubtlefs many others fmaller, let us calculate at 50 , or 700 b . and let us drop fmuggling in thefe cafes, fince though it may on the whole, be one-fixth yet it cannot be any thing like that in thefe commodities; the calves at 12 clb . the fheep at 60 lb . and the hogs at $10=\mathrm{lb}$.

This quantity divided amorght a population of 615,937 , gives to each perfon $\mathbf{1}_{3} 6 \mathrm{lb}$. of meat for his annual confumption, or above onc-third of a pound per diem. During the fame twenty years, the contumption of London was on an avcrage, per annum, $9^{2}, 539$ oxen, and $6.49,369$ fherp t. Thefe oxen probably weighed $8+c \mathrm{lb}$. each, and the fheep 1001b.; which two articles only, without calves or hogs, make 142,669,660;

[^29]yet thefe quantities do not nearly contain the whole number brought to London, which for want of fuch taxes as at Paris, can be difcovered with no certainty. The confumption of Brelt is regiftered for the year 1778, when 22,000 people, in 1900 houfe; confumcd 82,000 boifean, each 150 lb . of corn of all forts; 16,000 bariques of wine and brandy, and 1000 of cyder and beer ${ }^{*}$. This confumption amounted to per headcorn $2 \div$ feptiers, of 240 lb . per annum; - wine, brandy, beer, and cyder, one third of a quart per head per diem. Nancy, in 1733, when it coatained 29,645 fouls, confumed,

Oxen, 2402.-Calves, 9073.-Shicep, 11,863 -Total, 23,3,3.
It onfumed, therefore, more than one of thefe pieces per head of its population. In 1738, when it contained 19,831 fouls, it confumed,

Oxen, 2309.-Calves, 5038 .-Sheep, 9549.——Total, $16,896 \dagger$;
above threefourths each. The confumption of Paris is three fourths of one of thefe beafts per head of population. As the tineft cattle in the kingdom are fent to the capital, the proportions in mumber ought to be lefs; but the wealth of that capital would have juftified the fuppofition of a fill greater comparative confumption.

## Chap. XVII.-Of the Police of Corn in France.

OF all fubjects, there is none comparable to the police of corn, for difplaying the foliy to which men can arrive, who do not betray a want of common fenfe in reafoning on other topics. One tells us (I confine myfelf chiefly to lirench autiorities, engaged as I am at prefent in refearches in that kingdom) that the price is in exact proportion to the quantity of corn, and to the quantity of money at the fame time in the kingdom $\ddagger$; and that when wheat fells at 36 livres the feptier, it is a proof there is not half nough to laft till harveft \$. He propofes to have magazines in every market, and to prohibit, under fevere penalties, a higher price than 24 livres. This would be the infallible method to have it very foon at 50 , and perhaps 100 livres. That the price of corn does not depend on the quantity of money, is proved by the fudden rife proceeding from alarms, of which this author might have known an inftance in the year he printed; for Monf. Necker's memoir to the National Afiembly was no looner difperfed, than the price rofe in one week 30 per cent.; yet the quantity in the kingdom, both of money and corn, remained juft as before that memoir was publifined. But it has already been fufficiently proved, that a very fmall deficiency of the crop will make an enormous difference in the price. I may add, that the mere apprehenfion of a deficiency, whether ill or well founded, will have the fame effect. From this circumftarce, I draw a conclufion of no trifling import to all governments ; and that is, never to exprefs publicly any apprehenfion of a want of corn; and the only method by which government can exprefs their fears, is by proclamations againft export: prohibitions; ordonances of reyulation of fale; arrets, or laws againit monopolizers; or vain and frivolous boalts, like thofe of Monf. Necker, of making great imports from abroal-all thefe meafures have the fame tendency; they contirm amongtt the pcople the apprehenfion of want ; for when it is found amongh the loweft orders, that government is alarmed as well as they themfelves, their own fears augment; they rife in a rage againt monopolizers, or fpeculators, as they ought rather to be called, and then every flep they take tas the never-

[^30]fuiling effett of increafing the evil ; the price rifes fill higher, as it muft do inevitably, when fuch furions obll ructions are thrown on the interior trade in corn, as to make it a matter of great and ferious danger to have any thing to do with it. In fuch a fituation of madnefs and folly in the people, the plenty of one diftrict cannot fupply the want of another, without finch a monnt rous premium, as fhall not only pay the expence of tranfport, but infure the corn, .nen lodged in granaries, againt the blind and violent fufpicions of the people. To raife this fipirit, nothing more is necellary than for government to iffiue any decree whatever, that difeovers an alarm ; the people immediately are apprehenfive of famine; and this apprehenfion can never take place without creating the reality in a great meafure. It is therefore the duty of a wife and enlightened government, if at any time they fhould fear a fhort provifion of corn, to take the moft private and cautious meafures pollible, either to prevent export, by buying up the corn that is collected for exportation, and keeping it within the kingdom, a meafure eafy to be done through individuals, or to encourage import, and to avoid making any public decree or declaration. The hiftory of corn, in France, during the year 1789, was a moft extraordinary proof of the juilnefs of thefe principles. Wherever I patfid, and it was through many provinces, I made inquiries into the caufes of the fcarcity; and was every where alfured, that the dearnefs was the moft extraordinary circumftance in the world: for, though the crop had not been great, yet it was about an average one; and confequently that the deficiency muft certainly have been occafioned by exportation. I demanded, if they were fure that an exportation had taken place? -They replied, no; but that it might have becn done privately: this anfwer fufficiently fhewed, that thefe exports were purely ideal. The dearnefs, however, prevailed to fuch a degree, in May and June particularly, (not without being fomented by men who fought to blow the difcontents of the people into abfolute outrage, that Monf. Necker thought it right not only to order inmenfe cargoes of wheat, and every other fort of corn, to be bought up all over Europe, but likewife in June, to announce to the public, with.great parade, the fteps that he had taken, in a paper called Memoire infructif, in which lie ftated, that he had bought, and ordered to be bought, $1,404,463$ quintaux of different forts of grain, of which more than $800,0 c 0$ were arrived. I was a perfonal witnefs, in many markets, of the effect of this publication; inttead of finking the price, it raifed it directly, and enormoufly. Upon one market day, at Nangis, from 38 livres to 43 livres the feptier of 24 Clb .; and upon the following one to 49 livere, which was July 1 it ; and on the next day, at Columiers, it was taxed by the police at 4 livres 5. and 4 livres $6 f$, the 2 jl . ; but as the farmers would not bring it to market at that price, they fold it at their farms at $5 \frac{1}{2}$ livres, and even 6 livres, or 57 livres the feptier. At Nangis it advanced, in fourteen days, 11 livres a feptier ; and at Columiers a great deal more. Now, it is to be obferved, that thefe markets are in the vicinity of the capital, for which Monf. Necker's great foreign provifion was chiety defigned; and confequently if his meafures would have had any where a good effect, it might have been expected here; but fince the contrary happened, and the price, in two markets, was raifed 25 per cent. we may reafonably conclude, that it did good no where; but to what was this apparent fcarcity imputable? Abfolutely to Monf. Necker's having faid in his memoir, à mon arivée dans la miniftere je me bátai de prendre des informations fur le produit de la récolte छ fur les befoins des pays ćtrangers *. It was from thefe unfeafonable inquiries in September

1738,

[^31]1788, that all the mifehief was derived. They pervaded the whole kingdom, and fpread an univerfal alarm; the price in coufeguence arofe; and when once it rifes in France, mifchief immediately follows, becaule the populace, by their violence, render the internal trade infecure and dangerons. The bufinefs of the minifter was done in a moment; his confummate vanity, which, from having beell confmed to his chatacter as an author, now became the fcourge of the kingdom, prohibited the export for 1 o other reafon, than becanle the Archbifhop of Sens had the year before allowed it, int contradiction to that mafs of errors and prejudices; which M. Necker's book upon the corn trade had diffeminated. It is curious to lee him, in his Memoir ingrulif, alfermen, that lrance, in 1787 , ctoit livercoun commerie de's grains dans tout li' roynme', avec plus
 Now, to fee the invidious manner in which this is pat, let us turn to the regiter of the Burcau Gencral de la bidunce du Comnere;, where we fhall find the following tatement of the corn-trade for 1787 :

| Wheat, Rice, | Imports. |  | Exports. |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | - | 8,1 16,000 liv. | Corn, |  | 3,165,603 liv |
|  | - | 2,040,000 | Wheat, | - | 6,5;9,900 |
| Barley, | - | 375,000 | Legumes, | - | 94),2<0 |
| Legumes, | - | 9+5,000 |  |  | 0,674,700 |
|  |  | 1,476,000 |  |  |  |

n'en avoir attun d'immuable mais a defendre "u permette celte exportation felon le temps \& felon les cirennftances." When a man farta upou a rotten foundation. he is fure to Hounder in this manner ; the fimplicity of a fyftem to he new-moulded every moment, "felon le temps is felon les cincomitances!" And who is to judge of thefe fafons and circumitances? A minither? A goverument? Thele, i. feens, ate to promngate laws, in confequace of their having mule inguiries into the lla e of erops and late a on hand. What prefumption; what an excefs of vanite mult it he, which impels a man tu fuppofe, that the truth is within the verge of fuch inquiries; or, that he is one line, or ore point nedrer to it, alter he has made then beiore be hegan. Gotorhe lntendant in France or whe Lond licutcnant in Eugland, and
 low him to his table for concoration on crops, - or in his ride ameng the farmers (an ilea that may obtain
 the defintory, broken, and falfe feecimenn of the intelligence lie freives, ... and then recur to ble finplicity of the fyflem that is co be founded onfuch inguines. Monf Necker writes as if we were ignornot of the fources of his infomation. He cught to have known that miniters can never prowere it ; and that they cannot le fogood an authority for a whole kingdom, as a country gememan, thilled in agriculture, is for his uwn parifh; yet what genteman would pretunce to prosumece upon a crop the the 3 ooth put of its amonnt, or even to the acth? But it mult te obleived, that all Moni. Necker's fimple operatiuns, which caufed an unlimited import, at an unlinited expenec, afiscted not one twemieth part of a jear's confump-

 intintely mone lekely to lave effert, than fuch patiy. decritul, and falfe imparies as this mi.,ider, wheth his

 no ftep whatever in this affoir, thare wond m", have been fuch a wost as fiarcity heard in the bingdum. He converted, by his mamernent, an modmarily font cron into a farcity; and he onde that featcity a famine; to temedy which, he alfumes for much uterit, as to hatiate a common reader.

This account fhews pretty clearly how well founded the miuiter was，when he at－ tempted to throw on the wife meafure of his predeceffor the nifchiefs which arofe from his own pernicious prejudices alone；and how the liberty of commerce，which had taken place moft advantageoully in confequence of the free trade in 1787，had been more an import trade than an export one；and of courfe，it fhews，that when he advifed his fovercign to prohibit that trade，he acted directly contrary even to his own principles；and he did this at the hazard of raifing a general alarm in the kingdom， which is always of worfe confequence than any poffible export．His whole condukt， therefore，was one continued feries of fuch errors，as can，in a fenlible man，be attri－ buted only to the predominant vanity that inftigated him to hazard the welfare of a great nation to defend a treatife of his own conpofition．But as this minifter thought proper to change the fyftem of a natural export and import；and to fpread，by his meafures，an alarm amongt the people，that feemed to confirm their own appre－ henfions，let us next examine what he did to cure the evils he had thus created．He imported，at the enormous expence of $45,543,697$ livres（about $2,000,000$ fterling） the quantity of $1,404,465$ quintaux of corn of all forts，which，at 24 olb ．make $58 \mathrm{j}, 192$ feptiers，fufficient to feed no more than 195,064 people a year．At three feptiers per head，for the population of $\mathbf{9} 6$ millions of mouths，this fupply，thus egregiounly boafted of，would not，by 55,908 \｛eptiers，feed France even for three days；for her daily con－ fumption is 213,700 feptiers，nor have I the leaft doubt of more perfons dying of fa－ mine，in confequence of his meafures，than all the corn he procured would feed for a year＊＊So abfolutely contemptible is all importation as a remedy for famine！and fo utter－ ly ridiculous is the idea of preventing your own people from being flarved，by all owing an import which，in its greateft and moft forced quantities，bears fo trifing a proportion to the confumption of a whole people，even when bribed，rather than bought from every cosntry in Europe！But a conclufion of much greater importance is to be deduced from thefe curious facts，in the moft explicit confirmation of the preceding principles， that all great variations in the price of corn are engendered by apprehenfion，and do not depend on the quantity in the markets．The report of Mon．Necker＇s meafures we have found，did not fink，but raifed the price：providing France with lefs than three days bread，when blazed forth with all the apparatus of government，actually raifed the price in the markets，where I was a witnefs， 25 per cent．Of what poffible confequence was three days provifion added to the national fock，when compared with the mifery and famine implied－and which actually took place in confequence of puth－ ing the price up fo enormoully，by Monf．Necker＇s meafures？Would it not have been infinitely wifer never to have ftopped the trade，which I have proved to have been a trade of import？－Never to have expreffed any folicitude？－Never to have taken any public iteps，but to have let the denand and fupply quietly meet，＂without noife and without parade？The confequence would have been，faving forty－five millions of the public money，and the lives of fome hundred thoufands，farved by the high price that was created，even without a fcarcity；for I am firmly perfuaded，that if no pubiic ftep whatever had been taken，and the archbifhop of Sens＇edict never repealed，the price of wheat in no part of France would have feen，in 1789 ，fo high a rate as 30 livres，inftead of rifing to 50 and 57 livres．If there is any truth in thefe principles， what are we to think of the firft miniter hunting after a little popularity，and boalting
－At a moment when there was a great flagnation in every fort of employment，a high price of bread， inftead of a moderate one，muft have deftroyed many；there was no doubt of $g$ eat rumbers dying for wam in every past of the kingdom．The people were reduced in fome places to ea－brat and boiled geafs． Journa de l＇Alf Nat．tom．i．

VOL． 1 V.
in his Memoirc, that the King allowed only bread of wheat and rye mixed to be ferved at his own table? What were the conclutions to be looked fir in the people, but that it fuch were the extremities to which Franee was reduced, all were in danger of death for watht of briad. 'Ihe confequence is palpable; a blind rage againlt monopolizers, hanging bakers, feizing barges, and fetting fire to magazines; and the inevitable effoct of a fudden and enomous rife in the price, wherever fuch meafures are precipitated by the populace, who never are truly active but in their own deltruction. It was the fame fpirit that dictated the following parlage, in that Memoire in/Iruclif, "I.es accaporemens font la promiere caufe à laquelle la multitude attribue la chorie des grains, שo en effit on fourent cu licu de fe plaindre de la cupidité des fpeculateurs "." I cannot read thefe lines, which are as mutrue in tad as crroneous in argument, without indignation. The mulituele never have to complain of fpeculators; they are always greatly indebted to them. There is no luch thing as monopolizing corn but to the benefit of the peoplet. And all the evils of the year 1789 would have been prevented, if monopolizers, by raifing the price in the preceding autumn, and by leflening the confumption,

[^32]hal dividal the fupply more equally through the year. In a country like France, fubdivided mifchievoufy into little farms, the quantity of corn in the onarkets in autumn is always beyond the proportion relerved far fupplying, the reft of the jear; of this evil, the heft remedy is, enlarging the fire of farms; but when this does not take place, the dealings of monopolizers are the only refource. They t wy when corn is cheap, in order to hoard it till it is dear; this is their fpeculation, and it is precifely the conduct that keeps the people from flarving; all inagimable encourarement fhould be given to fuch merchants, whofe bufnefs anfiversevery purpefe of public granaries, without any of the evils that are fure to flow from them". It may eafily be conceived, that in a country where the people live ahmont entirdy on breal, and the blind proceedings of mols are encouraged by arrets of parlianents, fecomed by fuch blunders of government as I have deferiled, and unaided by the beneficial exilence of real monopolizers; it may eafily be conceived, I fay, that the fupply muft be irregular, and in many inflances infufficient; it mult be infufficient, exakly in proportion to the violence of the populace; and a very high price will be the unavoidatle conlequence, whatever may be the quantity in the kingdom. In June and July 1789 , the markets were not openel before troops arrived to protect the farmers from having their com feized; and the magiftrates, to avoid infurrections among the prople, fet the afize too low upon corn, bread, and butcher's meat; that is, they fixed the prices at which they were to be fold, which is a moft pernicious regulation. The farmers, in confequence, refrained from going to market, in order to fell their wheat at home at the beft price they could get, which was of courfe much higher than the affize of the markets. How well thefe principles, which fuch ample experience proves to be jult, are undertood in France, may be collected from the cabiers, many of whom demand meafures which, if really purfued, would fipread abfolute famine through every province in the kingdon. It is demanded at one place, "that as France is expofed to the rigours of fanine, every farmer fhould be obliged to regifter his crop of every kind, gerbs, bottes, muids, \&c.; and alfo every month the quantity fold $\dagger$." Another requires, "that export be feverely prohibited. as well as the circulation from province to province; and that importation be always allowed $\ddagger$." A third 9, " that the feveref laws be paffed againft monopolizers; a circumftance which at prefent defolates the kingdom." A fyttem of prohibition of export is demanded by no lefs than twelve cabiers $\|$. And fifteen demand the erection of public magazines If. Of all folecifins, none ever equalled Paris demanding that the tranfport of corn from province to proviace fhould be prohibited. Such a requef is

[^33]really edyfying, by offering to the attention of the philofophical obferver, mankind under a new feature, worthy of the knowledge and intelligence that ought to reign in the capital of a great empire ; and Monficur Necker was exactly fuited to be minifter in the corn department of fuch a city!-The conclufions to be drawn from the whole bufinels, are evidennenough. There is but one policy which can lecure a fupply with entire fafety to a kingdon fo populnus and fo ill * cultivated as France, with fo large 2 portion of its territory under wood and vines; the policy 1 mean is an entire and abfolute liberty of export and import at all times, and at all prices, to be perfifted in with the fame unremitted firmnefs, that has not only refcued lufcany from the jaws of periodical famines, but has given her eighteen years of plenty, wihout the intervention of a moment's want. A great and important experiment! and if it has anfiw red in fuch a mountainous, and, in comparifon with France, a barren territory, though full of people, afluredly it would fultil every hope, in lo noble and fertite a kingdom as France. But to fecure a regular and certain fupply, it is neceffary that the farmer be equally fecure of a fleady and good price. The average price in France vibrates between 18 and 22 livres a feptier of $240 \mathrm{lb} \dagger$. I made enquiries through many provinces in 1789 , into the common price, as well as that of the moment, and found (reducing their meafures to the feptier of 24 clb .) that the mean price in Champagne is 18 livres; in Loraine $17 \frac{1}{2}$; in Alface 22 livres; in Franche Conté 20 livres: in Bourgogne 18 Livres; at Avignon, \&c. 24 livres; at Paris, 1 believe, it may be calculated at 19 livres. -Perhaps the price, through the whole kingdom, would be found to be about 20 livres. Now, without entering into any analyfis of the fubject, or forming any comparifon with other countries, France ought to know, at leaft fhe has dearly learned from experience, that this is not a price fufficient to give fuch encouragement to the farmers as to fecure her a certainty of fupply: no nation can have enough without a furplus; and no furplus will ever be raifed, where there is not a free corn trade. - The object, therefore, of an abfolutely free export, is to fecure the home fupply. The mere profit of felling corn is no object; it is lefs than none; for the right ufe thereof is to feed your own people. But they cammot be fed, if the farmers have not encouragement to improve their agriculture; and this encouragement mult be the certainty of a good.

price. Experience has proved fufficiently, that 20 livres will not do. An ablolute freedom of interior circulation is fo obvioully neceflary, that to name it is fufficient ".

A great and decided encouragement to monopolizers $\dagger$ is as neceflary to the regular fupply, as that feed fhould be fown to procure a crop; but resping, in order to load the markets in winter, and to flarve the people in funmer, can be remedied by no other perfon but an accupareur. While fuch men are therefore objects of public hatred; while even laws are in force againft them, (the moft prepofterous that can difgrace a people, fince they are made by the mouth, againft the hand for lifting food to it,) no regular fupply can be looked for. - We may expect to fee fanine periodical, in a kingdom governed I y the priur: les which mult take place, where the populace rule not by enlightened reprefentativ., out by the violence of their ignorant and unmanageable wills. Paris governs the National Affembly; and the mafs of the people, in great cities, are all alike abfolutely ignorant how they are fed; and whether the bread they eat be gathered like acorns from a tree, or rained from the clouds, they are well convincel, that God Almighty fends the bread, and that they have the beft poffible right to eat it. The courts of London, aldermen and common councilmen, have, in every period, reafoned juft like the populace of Paris $\ddagger$. The prefent fyftem of France, relaive to agriculture, is curiuss:

## To encourage inveftments in land, 1. Tax it Tbree Hundred Millions.

- The internal' hachles on the corn trade of France, are fuch as will greatly impede the eftablifhment of that perfect freedom which alone forms the proper regulation for fuch a country. M. Turgot, in his Lettres fur les Grains, p 126, notices a mulk abfurd dute at' Bourieaux, of $2=\int$. per feptier on all wheat cunfumed there, or even depofi ed for fureign commerce, a duty which ought to have prevented the remark of the author of Credif National, $\because$.222, who mentions, as an extraordinary fact, "that at Touloufe there is a duty of $r 2 f$ per feptier oan grinding, yet bread is chearer there than at Bourdeanx." Surely it would be fo; it ought to be $8 \%$. the feptier cheaper.
+ Tlre word fpeculator, in various panages of this chapter, bould be as proper as monopolizer, they mean the fame thing as accapareur; a man who buys corn with a view to felling it at a higher price; whatever terin is ufd, the thing meant is every where underllood.
$\ddagger$ Aldermen, common councilmen, and mobs, are confilent when they talk nonfenfet but philofophers are net fo eafily to be pardoned; when M. P'Abhé Rozier declares, que la France recollié anné ordinuire près du couble plus de Vled qu'relle n'en confomme, (Recueil de Mémoires fur la C'ullure for le Rouifuge du Cbiauvre, 8vo. 1787. P. 5. he write what has a direat tendency to inflame the people; for the conclufion they muft draw is, that an immenfe and incredible expert is always going on. If France produces in a common year donble her confumption, what becomes of the furplus? Wliere are the other 25 millions of people that are fed with Fiench corn? Where do the 7800,000 of feptiers gov that France has to fpare ; a quantity that would load all the Chips poffelfed by that kingdon above thitty times toourry it. Inttead of the common crop equalling two yearn confur p:ion, it certainly does not iynal thitten momits common confumption; that is fucli a couftrmation as taken place at an average price. Aud all the difference of cropen ${ }^{5}$, that confumption is moderate with a bad prusuct. and plentitil with a good one. The failure of a crop in one province in a very fmall degree, which, under a good government, and entire liberty of trade, would not even be felt, will, under a fyllem of reftrictions and prohibitions, raife the price through the whole kingdom enormuuly; and if meafures are taken to correct it by gevernment, they will convert the high price into a famine. The anthor of Iraite d'Economir Politique. Bvo. 1783, p. 59;, dose not talk quite fo greatly, when he fays a guod crop will feed France a year and a half; but pretty near it. The abfurdities that daily appear on thio fu'ject ate attomith'ng. In a work now publifhing: it is faid, that a moderate crop furuifhes England tor three years, and a good one fur five. Encyc upedie Metbodique Economie tol. pt. i tom. i. p 7i. 'This affertion is copied fiom an Italan, viz Zanoni delP Agricoliwr $\boldsymbol{d}_{0}$ 1763, 8vo tom i. p. 10 , who took iz verhatim from t Juis fur divers Sujels interréfuans de Politique el de Niorale, 8 vo. 76 p. 210 It is thus 'hat fuch nonfenfe becomet propagated, whell authors are content to copy one another, without knowledge or confideration.

To enable the land to pay it, II. Probibit the Export of Corn. That cultivation may be rich and fipirited,
III. Encourage finall Firms.

That cattle may be plentiful,
IV. Forbid the Inclofure of Commons.

And that the fupply of the markets may be equal in fummer as in winter.
V. Hang all Monopolizers.

Such nay be called the agricultural code of the new government of France!

## Chap. IV. Of the Commerce of France.

AGRICULTURE, manufactures, and commerce, uniting to form what may be properly termed the mafs of national induftry, are fo intimately connected in point of intereft, under the difpenfations of a wife political fytem, that it is impoffible to treat amply of one of them, without perpetually recurring to the others. I feel, in the progrefs of my undertaking, the impoffibility of giving the reader a clear idea of all the interefts of French agriculture, without inferting, at the fame time, fome details of manufactures and commerce. The opportunities I poffeffed of gaining fome valuable intelligence, enable me to infert feveral accounts hitherto unpublifhed, which I believe my comnercial readers (fhould I have any fuch) will not be difpleafed to examinc.

Expianation, - The contraband trade of export and import itas been calculated, and the true balance found to be about $25,006,0: 0$ liv. ( $1,093.75 \mathrm{ct}$, the provinces of Luraine, Alface, the three bifhoprics, and the Wedl-Indits, not ineluded.

## - Obfcrvations.

The preceding accounts of the trade of France, for thefe two years, are correct in all probability in the articles noted; but that they are imperfect there is great reafon to believe. In 1787 there is an import of raw matals to the amount of above twenty mihons: but in the agcount of $178+$ there is no fuch article in the lift, which is plainly an omifion. And though coals are among the exports in 1784 , there are none in the im. ports, which is another omifion. In the manufactured articles alfo are various omiffions, not eafily to be accounted for, though the treaty of commerce explains forie articles, as that of cotton manufactures, \&c. : the idea to be formed of the exports and imports of France thould be gathered from an union of the two, rather than from either of them feparate. No idea, thus to be gained or acquired by any other combinations, willallow for one moment the poffibility of a balance of commerce of $70,000,000$ livres, ( $3,062,5001$.) in favour of France, which Monf. Necker has calculated it to be, in his book, De l'Adminifration des Finances, and which calculation the Marquis de Caflaux, in his Mechanifm des Socictés, has refuted in an unanfiverable manner. It will be curious to examine what is the amount of the imports of the produce of land, minerals excluded.
In 1784 the imports of the produce of land amounted to,

In 1787 the fame articles are,

She may be faid, therefore, to inport in a common year about $14: 0000,000$ livre 3 ( $6,343,7 \mathrm{jol}$.) of agricultural products: and thefe imports are a ftriking proof, that I was not wide of the truth when I condemned fo feverely the rural oconony of France in almoft every particular, the culture of vines alone excepted. For the conary, of all Furope, the beft adapted by mature to the proluction of wool, to import fo immenfely, Shews how wretchedly they are upderftocked with fheep; and how much their arriculture fuffers for want of the fold of thefe five or fix millions, in which they are delici nt even for their own demand. The import of fuch great quantities of other forts on live flock alfo feraks the fame language. 'Hucir hubandry is weak and languifhing in every
part of the kingdom, for want of larger focks of cattle, and the national demands cannot be fupplied. In this trade of live fock there is, however, one circumftance which does the higheft honour to the good fenfe and policy of the ald French government; for though wool was fo much wanted for their fabrics, and many meafurcs were takien for increafing fheep and improving the breed, yet was there no prohibition on the export either of live fheep or wool, nor any duty farther than for afcertaining the amount. It appears that they exported above 100,000 fheep annually; and this policy they embraced, not for want of experience of any other (for the export was prohibited for many years, ) but finding it a difcouragernent to the breed, they laid the trade open, and the fame plan has been continued ever fince ; by this fyftem they are fure that the price is as high in France as amongft her neighbours, and coniequently that there is all the encouragement to breed which fuch equality of price can give. The export of woollen manufac. ture in 1784 , amounts to $24,995,800$ livres, or not equal to the import of raw wool. On the general account, therefore, France does not fupply herfelf; and the treaty of commerce having introduced many Englifh woollen fuffs, fhe is at prefent further renoved from that fupply. Confidering the climate, foil, and population of the kingdom, this fate of her woollen trade certainly indicates a moft grofs neglect For want of having improved the breed of her fheep, her wools are very bad, and fhe is obliged to import, at a heavy expence, other wools, fome of which are by no means good; and thus her manufactures are under a heavy difadvantage, on account of the low fate of agriculture. The fteps fhe has taken to improve her wools, by giving penfions to acadenicians, and ordering experiments of enquiry upon obvious points, are not the means of improvement. An Englif2 cultivator, at the head of a fheep farm of three or four thoufand acres, as I obferved atove, would, in a few years, do more for their wools than all the academicians and philofophers will effe $\mathcal{A}$ in ten centuries.

Bayonne. - Trade here is various, the chief articles are the Spanifh commerce, the Newfoundland fifhery, and the coafting trade to Breft, Nantes, Havre, Dunkirk, \&cc.: they have an export of wine and flour, and they manufacture a good deal of table linen. They build merchant fhips, and the king has two frigates on the focks here under Gated roofs. Of a merchantman, the workmanhip alone amounts to about 15 livres a ton. They reckon two thoufand failors and fifhermen, including the bafque men, about fixty fhips of different fizes, belong in the place, eight of which are in the American trade, feventeen in the Newfoundla: ifhery, of from eighty to one hundred tons average, hut fome much larger; the reft in the Spanifh, Mediterranean, and coafting trades. . men here are paid in the Newfoundland fifhery 36 liv. a month wages, and one quintal in five of all the fifh caught. To Dunkirk 27 liv. to Nantes 45 liv. per voyage; to the coaft of Guinea 50 liv per month; to Bofton and Philadelphia 50 liv, to St. Scbaftian 24 liv. the voyage; to Bilboa 36 liv. to St. Andero 40 liv. to Colonia and Ferrol 46 liv. to Lifbon and Cadiz 30 liv. a-month, and for three months certain.
Bourdeaux. - All the world knows that an immenfe commerce is carried on at this city $;$ every part of it exhibits to the traveller's eye unequivocal proofs that it is great ; the thips that lye in the river are always too numerons to count eafily; I guefs there are at prefeit between three and four hundred, befides fmall craft and barges; at fome feafons they amount to one thoufand or fifteen hundred, as I was affured, but know not the truth of it; I rather queftion it, as it does not feem ablolutely to agree with another account, which makes the number of fhips that enter the harbour ten on an average every day; or, as aflerted by others, three thoufand in a year. It mav be fufficient to fay, at prefent, that here are every fign of a great and flourifling trade; crouis of men all em-
ployed, bufy, and active ; and the river much wider than the Thames at London, anlmared with fo much commercial motion, will leave no one in doubt.

Ship-building is a confiderable article of their trade; they have built fixty fhips here in one year; a fingle builder has had eight of his own on the focks at a time; at prefent they recken the number on an average from twenty to thirty; the greater number was towards the termination of the war, a fpeculation on the effel of peace; there are fixty builders who are regiftered after undergoing an examination by an officer of the royal navy; they reckon from two to three thoufand fhip.carpenters, but including the river Garonne for many leagues; alfo fifteen hundred failors, including thofe carpenters; the expence of building rifes to 5l. a ton, for the hulk, mafks, and boats; the rigging and all other articles about 4l. more; thirty-three men, officers and boys included, are eftimated the crew for a veffel of 400 tons, eight men for one of 100 tons, and fo on in. proportion ; they are paid all by the month from 30 to 36 liv. fome few 40 liv. carpenters 40 to $5 \%$. a day, and fome 3 liv. There are private hip-owners, whofe whole trade confifts in the poffefion of their veffels, which they navigate on freight for the merchants; they have a calculation, that hips laft one with another twelve years, which would make the number poffefled by the town three hundred, built by themfelves; a number I hould apprehend under the truth; the Bretons and Dutch build alfo for them.

Ships of a larger burthen than feven hundred tons cannot come up to the town but in fpring tides.

The export of wine alone is reckoned to amount to eighty thoufand tons, befides which brandy muft be an immenfe article.
Havre de Grace.-There is not only an inmenfe commerce carried on here, but it is on a rapid increafe; there is no doubt of its being the fourth town in France for trade. The harbour is a foreft of mafts; they fay, a 50 gun flip can enter, I fuppofe without her guns. They have fome very large merchantmen in the Guinea trade of 5 or 600 tons, but by far their greateft coinmerce is to the Well-India fugar inlands; they were once confiderable in the fifheries, but not at prefent. Situation muft of neceffity give them a great coafting trade, for as fhips of burthen cannot go up to Rouen, this place is the emporium for that town, for paris, and all the navigation of the Seine, which is very great.
Sailors are paid 40 liv. a month.
There are thirty Guineamen brionging to the town, from 350 to 700 tons; one hundred and twenty Weft.Indiamen; one hundred coafting trade; moft of them are built at Havre. The mere building a thip of 300 tons is 30,000 livres, but fitted out 60,000 lives.

The increafe of the commerce of Havre has been very great in twenty-five years, the expreffion ufed was, that every crown has become a louis, and not gained by rivalling other places, but an increafe nationally, and yet they confider themfelves as having fuffered very confiderably by the regulations of the Maréchal de Caftries, in relation to the colonies; his permitting foreigners to ferve them with falt provifions, lumber, \&c. opened an immenfe door to fmuggting manufectures in, and fugar out, which France feels feverely.

Honfleur.-The bafom full of hips, and as large as thofe at Havre, I faw fome of at leaft 600 tons.

Chrrbourg.-Sailors 36 liv. 1040 liv. a month.
St. Brieux.-The fhips belonging to this little port are generally of 200 tons, employed in the Newfoundland figheries, carrying fixty men of all forts, who are paid
not by fhares, but wages by the voyage : feamen two hundred livres, to two hundred. and fifty livres, and fome to five hundred livres.
NANTEs.-The accounts I received here of the trade of this place, made the number of hips in the fugar trade one hundred and twenty, which import to the amount of about thirty two millions, twenty are in the flave trade ; thefe are by far the greateft articles of their commerce; they have an export of corn, which is confiderable from the provinces wafhed by the Loire, and are not without minoteries, but valtly inferior to thofe of the Garonne. Wines and brandy are great articles, and mamufackures even from Switzerland, particularly printed linens and cottons, in imitation of Indian, which the Swifs make cheaper than the French fabrics of the fame kind, yet they are brought quite acrofs France ; they export fone of the linens of Bretagne, but not at all compared with St. Maloes, which has been much longer eftablihed in that bufinefs. To the American States they have no trade, or next to none. I alked if Bourdeaux had it ? No. Mari:illes ? No. Havre? Nu. Where then is it? Tout en Angleterre.

The accounts they give here of the trade to the Sugar illands is, that Bourdeaux has twice as much of it as Nantes, and Havre to the amount of twenty-five millions, this will make it,

The whole commerce of thefe ifles they calculate at 900 millions liv. by which I fuppofe they mean exports, imports, navigation, profit, \&c. icc.
The trade of Nantes is not at prefent fo great as it was before the American war; thirty fhips have been buildiug here at once, but never half that number now; the decline they think has been much owing to the Marifhal de Caftries' regulations, admitting the North Americans into the Sugar Inands, by which means the navigation of much fugar was loft to France, and foreign fabrics introduced by the fame channel. The 40 lives a ton given by government to all flips that carry flaves from Africa to the Sugar Illands, and return home with fugars, and which I urged as a great favour and attention in government, they contended was juit the contrary to a favour ; it is not near equal to what was at the fame time taken away; that of favouring all cargoes of fugar in fhips under that defcription, with paying only half the duties, $2 \frac{1}{2}$ intead of 5 per cent. and which equalled 60 liv. per ton inftead of 40 .
A hip of 300 tons in the fugar trade thirty hands, but not more than fixteen or eighteen good ones, becaufe of the latw which forces a certain proportion of new hands every voyage.
Wef-India eftates in general render to their owners at Nantes 10 per cent. on the capital fo invefted.
They affert, that if the Eaf-India trade was laid open, numbers here would engagein it. There is a fhip of 1250 tons now at Pambon, idle for want of employ.

A circumftance in thip building deferves attention. It was remarked in converfation, that many Spanifh Rlips laft incomparably longer than any other; that this is owing to maltic being laid on under the copper botton. Monf. E:pivent, a confiderable merchant here, has tried it and with the greatefl fuccefs; copper bottoms all with copper bolts inflead of iron ones.

Building a fhip of 300 tons, 30 to 35,000 livres; ten now building.
L'Orient.-Every thing 1 liw in this port fpoke the declenfion of the Indian commerce, the magazines and warehoules of the company are immenfe, and form a fpectacle of which I had feen nothing of the: kind equal, but the trade is evidently dead, yet they talk of the company poffeffing ten fhips from 600 to 900 tons, and they even fay, that five have gone this year to India and China. In $177+5,6$, it was great, amounting to fixty millions a year. What aativity there is at this port at prefent, is owing to its royal dock for building fome men of war. It is the port at which the farmers general import their American tobacco, the contract of which was for 25,000 hogfheads, but dwindled to 17,000 .
Marsetilizs. - I found here as at the other great ports of France, that the cominerce with North America is nothing, not to a greater amount than a million of livres a year. The great trade is that of the Levant.

I was informed here, that the great plantation of Monf. Galifet, in St. Domı Igo, has 1800 negroes on it, and that each negroe in general in the ifland produces grols 660 liv. feeding himfelf befides.

Wages of feamen 33 to 40 liv. a month; in the Mediterranean 33, America 40 liv. A thip of 200 tons building here cofts for timber only 25,000 liv. of 300 tons 40,000 liv. of 400 tons 75,000 liv., the wood is from 50 to $70 \%$ per cubical foot ; fitting out afterwards for fea, cofts nearly the fame.

Mefz India Trade.
The following is the flate of the trade in $\mathbf{1 7 7 5}$, as given by Monfieur l'Abbe Raynal.
Products exported to France of St. Doningo, Martinique, Guadaloupe, and Cayenne.

Ships that carried on Trade the fome Mar.

In 1786 , the imports from thefe colonies into France were,

$$
\text { - } \overrightarrow{1.74,831,000}
$$

Of thefe,-Sugar, 174,222,000lb.-Coffee, 66,231,000lb.-Cotton, 7,595,coolb.
The navigation in 569 hips, of 162,311 tons, of which Bourdeaux $\dagger$ employs 246 hips of 75,285 tons.

Cotton has been increafing in demand by foreigners, who took in 1785 , more by $1,495,0001$ b. than in 1784 ; and in 1786 more by $1,798,0001$ b. than in 178.5 .
In 1784, France fent to Africa 72 fips of 15,198 tons. In 1785 , the number 102 fhips of 36,429 tons, and in 1786, he employed 151 hips of 65,521 tons, the cargoes worth $22,748,000$ liv. of which navigation Nantes poffeffed 42 lhips ; the cargoe confifted of

\footnotetext{

- Total in $178+$ wat 139,000, coo liv. What can Monficur Brgouev, of Havre, menn by railing this to 230, 00,000 ? -800 fhips ? -1200 fips ? -25 ;coo framen ? and I do Hot know what other extravagancee.
 fmall ones, and value iso millione! Opinion de Menficur Blin. p. 7. How thefe calculations ave made, 1 do not conceive.
$\dagger$ Bourdeaux I take to be a place of greater and richer trude than any proviucial town in the Britifh dominions. Our greatelt are,

The returns to France in fix fhips of 1180 tons, brought $355,0001 \mathrm{~b}$. of gum Senega, $37,000 \mathrm{lb}$. of elephant's teeth, both worth $1,173,000$ livres.

But the flave trade on French bottoms did not increafe with the increafe of the African trade in general.

$$
\begin{gathered}
\text { In 1784, flaves fold in the ifis, } \\
\text { 1785, ditto, } \\
1786 \text {, ditto, }
\end{gathered}
$$

But as the produce increafed, there feems reafon to think, that foreigners partoo's of this trade.

Thefe in French bottoms, the total numbers mult be much more confiderable, as ap. pears from the following table of St. Domingo only:

| Years, | No N groen fold. | Price. | ' Years. | Cuffee fuld. | Price. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $17^{8} 3$ | 9,370 | $\begin{gathered} \text { liv. } \\ 15,6: 0,000 \end{gathered}$ | 1;83 | lh. $44,57.3,000$ | $\stackrel{\mathrm{lb} .}{33,429,750}$ |
| 178. | $2 ., 025$ | 43,602,000 | $178+$ | 52,485, 00 | 44,951,250 |
| 178: | 21,762 | 43,634,000 | 178; | 57,368,000 | 57,368,000 |
| 1785 | 27,648 | 54,420,000 | 1786 | 52,18=,000 | 57,398,000 |
| 1787 | 30,839 | 60, j63,500 | 1787 | 70,03,000 | 91,003,900 |
| 1788 | 29,500 | 61,936,200 | 1783 | 68,151,000 | 92,00, 8 , ${ }^{\circ}$ |

It deferves obfervation, that while the quantity almof trebled in five years, the price sofe continually.

Exports from France to thefe I/es in 1756 .

[^35]5,000 4,000 13,000 $; 7,00$ 15,000 5,000 5,000 14,000 ienega,

Of which Bourdeaux exports to the amount of $33,761,000$ livres. Foreign articles exported purfuant to the arret of Auguft 3 oth, were $4,967,000$ livres.

Ininports from the ines, 174,831,000 livres. Wxports to them, $64,341,000$ liveres,
Balance againft France, 210,490,000.
The exports in 1786 to the Illes were lefs than thofe of 1785 by $51,761,000$ livres.
But the exports to Senegal were greater by $12,514,000$ livres.
The decreafe was in manufactures.
Linens in 1784, 17,796,000 livres.-1786, 13,363,00: livres.
Auguft 30,1784 , in the Minintry of the Maréchal de Calives, foreigners were permitted, under certain regulations, to trade to the French ugar iflands, after a fpirited controverly in print for and againft the meafure. The trade of 1786, in confequence of this arret, was as follows:

| Imports in the |  | Exports from Dit |  |
| :---: | :---: | :---: | :---: |
| From the United States, | $\begin{aligned} & \text { livice. } \\ & 13,065,000 \end{aligned}$ | To the Americans, | livres. 7,263,000 |
| Englifh, | 4,550,000 | Englifh, | 1,259,000 |
| Spaniards, | 2,201,000 | Spaniards, | 3,189,000 |
| Dutch, | 801,000 | Dutch, - | 2,030,000 |
| Portuguefe, | 152,000 | Swedes and Danes, | 391,000 |
| Danes, | $\begin{aligned} & 68,000 \\ & 41,000 \end{aligned}$ |  | 14,132,000 |
|  | 20,878,000 |  |  |

As the cultivation and exports from the ifles in 1786 , were greater than in 1784 , the demand for French inanufactures ought to have been greater alfo; but this was not the cale;

Export of French linens to the ifles in 1784, $17,796,000$ liv.

It would have licen found fo, if the arret of Augult 30 had not opened the colonies to foreigners, who introduced manufactures as well as lumber and provifions. It is a great quedion, whether this was right policy; the argument evidently turns on one great hinge ; the peculiar benefit to the mothes country, from poffeffing colonies, is their tupply; to fell them whatever they demand, and to fecure the navigation dependent. It is not, to be fure, of fugar and coffee that nations plant colonies; they are fure of thofe, and of any other commodities if they be rich enough to pay for them; a Ruffian or a Pole, is as certain of commanding fugar as a Frenchnan or an Englifh. man ; and the govemments of thofe countrics may raife as great a revenue on the import, as the governments that poffefs the illands. 'The peculiar benefit, therefore, of colonies, is the monopoly of their fupply. It is in vain to fay, that permitting the colonifts to buy what they want at the cheapett and the beft hand, will enable them to raife fo much more fugar, and tend ultimately to the benefit of the mother count:y; fince, let them grow as rich as poffible, and increafe their culture to any degree whatever, ftill the advantage of the mother country arifes from fupply; and if the lofes that to gain more fugar, the lofes all for which the poffefion is defirable. It would be right for every country to open her colnnies to all the world on principles of liberality and freedom; and fill it would be better to go one ftep farther, and have no colonies at all. The fugar iflands of all nations, in the Wef Indies, including the great inland of Cuba, are condiderable enough to form an independent free nation; and it wants not many argue ments to thew, that the exifence of fuch an one would be far more beneficial to the Englifh, lirench, and $S_{\text {paniards, than the poffeffon of thofe iflands as colonies. To re- }}^{\text {and }}$, turn, however, to the arret of Auguit 3 , there is reafon to believe, that the policy which induced the Mar. chal de Cathies to alter the exilling laws relating to foreigners was quetionable, and attended with crits, in proportion to the extent of the trade that took place in confequence.

The refult of the French fugar trade rcfembles nearly that which Fingland carries on vith ner fugar coloniss, namely, an immenfe balance againit her. We have writers who tell us, that this trade ought to be judged by a method the reverfe of every other, the merit of it depending not on the exports, but on the imports: I have met with the fame idea in France; and as it is an object of very great confequence in the national oeconomy, it may be worth remarking,-1, That the advantages refulting from commerce, are the encouragement of the national indultry, whether in agriculture or manufactures; and it is unqueftionably the exports which give this encouragement, and not the imports of a trade, unlefs they are the raw materials of future labour. 2. The real wealth of all trade confilts in the confumption of the commodities that are the object of fuch trade; and if a nation be rich enough to confume great quantities of fugar and coffee, fhe has undoubtedly the power of giving activity to a certain quantum of her own induftry, in confequence of the commerce which fuch confumption oceafions, whether the fugar be the product of her own colonies, or thofe of any other power.

3, The taxes levied on Wefl-Indian commodities are no motive whatever for efteening the poffeflion of fuch colonies beneficial, fince it is the confumption that pays the tax, and not the poffeflion of the land that produces the commodity. 4, The monopoly of navigation is valuable no farther than as it implies the manufacture of flup-building and fitting out ; the poffeffion of many failors, as inftruments of future wars, ought to be efteemed in the fame light as great Ruffian or Pruflian armies; that is to fay, as the means of ambition; and as the inftruments of wide-extended mifery *. 5, The poffeffion of fugar inlands is the inveftment of immenfe capitals in the agriculture of America, inftead of the agriculture of France: the people of that kingdom ftarve periodically for want of bread, becaufe the capitals which fhould raife wheat in France are employed on furar in St. Domingo. Whatever advantage the advocates for colonies may be fuppofed to fee in fuch poffeffions, they are bound to fhew, that the inveftment of equal capitals in the agriculture of France would not be productive of equal and even of infinitely fuperior benefits. 6, It is fhewn, in: another place, that the agriculture of France is, in the capital employed, $450,000,000$. inferior to that of England; can any madnefs, therefore, be greater than the inveftment of capitäls in American agriculture for the fake of a trade, the balance of which is above roo,000,000 livres againlt the mother country, while nothing but poverty is found in the fields that ought to feed Frenchmen? 7 , If it be faid, that the re-exportation of Wefl-Indian commodities is immenfe, and greater even than the balance, I reply, in the firt place, that Monf. Necker gives us reafon to believe, that this reexportation is greatly exaggerated; but granting it to rife to any amount, France bought thofe commodities before fhe fold them, and bought them with hard calh to the fum of the balance againft her; firft lofing by her tranfactions $w$ th America the fums the afterwards gains by exporting to the norch. The benefit of fuch a trade is nothing more than the profit on the exchange and tranfport. But in the employment of capital, the lofs is great. In all common trades, fuch as thofe fhe carries on with the Levant, or with Spain, the has the common profit of the commerce, without invefting any capitals in producing the commodities fhe buys; but in the Welt-Indian commerce the invefts double capitals, to produce the goods the fells, and equally to produce the goods fhe buys. 8, If it fhould be faid that St. Domingo is not to be confidered as a foreign country, with which France trades, nor a colony, but as a part of itfelf; and that the balance between them is like the balance between them and the provinces, then I reply, that it is fo ill fituated a province, that to encourage a deviation of capitals from all other provinces to be invelted in this, is little fhort or madnefs ; firff, from diftance and cultivation by flaves, it is infecure. If it efcapes the attacks of European foes, the natural progrefs of events will throw it into the hands of the United States. Secondly, it demands a great navy to defend it ; and confequently taxes on all the other provinces, to the amount of two millions ferling per annum. Of what expence to languedoc, is the poffeffion of Bretagne? Its proportion of the common defence. Is this fo with St . Domingo ? France pays a marine of two millions, but St. Domingo does not pay one fhilling to defend France, or even to defend itfelf. In commonfenfe, the poffefion of fuch a proviace ought to be deenied a principle of poverty and weaknefs, rather than of riches and of ftrength. 9 , I have

[^36]converfed on this fubject at Havre, Nantes, Bourdeaux, and Marfeilles; and I have not yet met with a man able to give me one oiher folid reafon for fach a fyften than the fact that agriculture in the Weit Indies is profitable, and not fo in France. The fame argument is ufed, and with equal truth, in England. I admit the fact ; and it recurs at once to the pernicious doetrine of laying fuch taxes, reftrictions, prohibitions, and monopolies on land at home, that men inclined to purfue agriculture as a trade muft go with their capitals into another hemifphere, in order to reap an adequate profit. But change this wretched and abominable policy; remove every tax, even to the fhadow of one on land; throw all on confumption; proclain a free corn trade; give every man a power of inclofure. - In other words give in the Bourbonnois what you have given in Domingo, and then fee if French corn and wool will not return greater profits than American fugar and coffee. The poffeffion of fugar iflands, fo rich and profperous as thofe of France and England, dazzles the underftandings of mankind, who are apt to look only on one fide, where they fee navigation, re-export, commercial profit, and a great circulation: they do not reverfe the nedal, and fee, in the mifchievous deviation of capitals from home, agriculture languifhing, canals ftanding nill, and ronds impaffable. They do not balance the culture of Martinique by the landes of Bourdeaux ; the tillage of St. Domingo by the deferts of Bretagne; or the wealth of Guadaloupe by the mifery of Sologne. If you purchafe the riches that flow from America by the poverty and wretchednefs of whole provinces, are you blind enough to think the account a beneficial one? I have ufed no arguments againft the French fugar iflands that are not applicable likewife to the Englift: I hold them to be equal obftacles to the profperity of both kingdoins; and, as tar as experiment of the lofs of North America goes, 1 am juflified by that valt and important fact-that a country may lofe the monopoly of a diltant empire, and rife from the imaginary lofs more rich, more powerful, and more profperous!

If thefe principles be juft, and that they are fo is confirmed by an immenfe range of facts, what are we to think of a politician who declares, that the lofs of Bengal, or the Dutch withdrawing their money from our furds, would ruin England *?

Export of the Products of French Agriculture to the Win- 1 dies, in 1787.

Of which $49,947,000$ livres were French products and manufactures.

## Fijberies.

No trade is fo beneficial as that of fifhing; none in which a given capital makes fucti large returns; nor any fo favourable to thofe ideal advantages, which are fuppofed to flow from a great navigation. The French were always very affiduous in pufhing the progrefs of their fifheries. Suppofing them right in the principles of thofe efforts they have made to become powerful at fea, which, however, is exceedingly queftionable, they have certainly acted wifely in endeavouring to extend thefe nurferies of maritime power.

Trade

The conmerce which France carries on with the North Americans, is all the reward fre reaps from having expendied probably fifty millious ferling to fecure their freedom. Vifions of the deprefion of the Britifh power, played indeed in the imaginations of the cabinet of Verfailles; but peaco was fcarcely returned before thofe airy hopes entirely vanifhed; every hour proved, that lingland, by th cmatcipation of her colonies, was fo far froun lofing any thing, that fhe had gained mumenfely: the detail of this trade will prove, that France was as much deceived in one expectation as in the other.
lives.
On an average of three years preceding the French revolution, the imb-

Exports of France to North America, - - - 1,800,000

The whole commerce of France with the Baltic is faid to employ fix or feven hundred lhips of two liundreds tons*.

Trade to India.
At the period of the Revolution the fate of the trade to India was as follows:
inports from India on a medium of 1785,1786 , and $1787,34,700,000$

| In 1788, | Merchandize. |  |  |
| :---: | :---: | :---: | :---: |
|  |  |  |  |
| Indian manufactures, | - | - | 26,600,000 |
| Spices, tea and coffee of Moka, | - | - | 6,000,000 |
| Silk, cotton, ivory, woods, - - 1,150,000 |  |  |  |
| Drugs, - - - - |  |  |  |
|  |  |  |  |  |  |  |
|  |  |  | 34,610,000 |
| Exports from France at fame time, - - 17,400,000 |  |  |  |
| Exports to the ifles of France and Bourbon on an average |  |  |  |
| Imports, - - | - | - | 2,700,000 |

By the regulation of May 1787, confirmed by the National Affembly, Port Louis, in the Ine of France is made free to foreign Ihips, by which means it is expected that that port will become an entrepôt for the Indian trade.

## Navigation.

There is not much reafon for modern readers to be folicitous concerning the conmerce or navigation of any country; we may reft affured, that the trading fpirit which has feized all nations, will make the governinents anxious to promote, as much as poffible, whatever interefts their commerce, though their agriculture is, at the fanme moment, in the loweft flate of poverty and neglect. All the Englifh authoritics I have met with, refpecting the navigation of France, are of a very old date; ; perfons who are curious in thefe fpeculations, will probably be pleafed with the following account :

Ships in France cleared outwards in 1788.
N. B. The total natigation in Europe and America, either by French or foreign flips, amounts to 9,445 fhips and $55^{1,1,1} 92$ tons.

Monf. Arnould in his treatife $D_{c}$ la Balance du Coimmerce, has given an account of the French navigation for the year $\cdot 787$, which does not well accord with this. I infert an extrack from it here that the reader may have the opportunity of comparing thent.

Table of the Tomage, French and forign, empluyed in the Commerce of framain in 1;37.

The immenfe increafe of the navigation of England, appears by comparing this account with that tirl of commercial writers Lord Shefficld, for the average of three years preceding 1ッ73.

| Foreiza trade, | - |  | Ships.$279$ | Tors. | Men. |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | 30,771 |
| Coaltizy trade, |  | - | $3+58$ | 219,56 | 15,244 |
| Fifthing reffels, | - | - | 141 | 25,339 | 6,774 |
| Totals, |  |  | 7613 | $5^{8} 9,978$ | 52,789 |

This is exclufive of Scotland *.
Monf. Arnould, however, affures us, that at the period of the Revolution, France poffefled 1000 hhips (I do not !ive fuch round numoers, which always betray inaccuracy, of 250 tons, employ d in long, voyages, and in the cod and whale fifheries $\dagger$. The whole mariime enmmorce of exportation employing at the fame time 58 C ouo tuns of all nations; of which 152,000 tons were Frencil.

[^37]Cabotage (confing Trade) the fame Tear.

N. B. There is no diftinction between thip and voyage; if a fhip clears out five times a.year, the is regiftered every voyage. The article Sardinia, which appears fo large in hiips, and fo fmall in tonnage, mult, I hould fuppofe, be for a filhery on the coafts of that ifland.

From the tonuage of the fhips, as they are called, in the fifheries, it appears, that they are little more than boats: thofe in the herring fifhery, are about 30 tons eachand in the mackarel, little more than 10 tous.

The navigation of England for a year, ending the 30th September, 1787, was,

| Englifh, | $\begin{aligned} & \text { Sluips, } \\ & 8,71 t \end{aligned}$ | - | Tonnage. $954,729$ | - | $\begin{aligned} & \text { Men. } \\ & 8+, 532 \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Scotch, | 1,700 | - | 133,034 | - | 13,443 |
| Eaft Indiamen, | 54 | - | 43,629 | - | 5,400 |
| Ireland, |  | - | 60,000 |  |  |
|  | 10,465 | - | 1,191,392 | - | 103,375 |

Without including the Weft-India trade, or that of the North American colonies, or the African or Afian, the Indiamen excepted.

Progrefs of the French Comnerce *.

As the balance, or ideas of a balance, are a good deal vifionary, we fhall find, by adding the two columns together, that the trade of England has fuffered no decline, but on the contrary, is greater than ever; it deferves attention, however, that the progrefs of it has not been nearly fo rapid as that of France, whofe commerce, in the laft period, is 3 ! tintes as great as it was in the firlt; whereas ours has in the fame period not mudh more than doubled. The French trade has almoft doubled fince the peace of 17 , but ours has increafed not near fo much. Now it is obfervable, that the improventents, which in their aggregate mark national profperity, have, in this period of twenty-nine years, been abundanly more active in England than in $\mid$ rance, which affords a pretty frong proof that thole improvements, and that profperity, depend on fomething elfe than foreign commerce; and as the force of this argunent is drawn directly from facts, and not at all from theory or upinion, it ought to check that blind rage for commerce, which has done more mifchief to Europe, perhaps, than all other evils taken together. We find, that trade has made an immenfe progrefs in France; and it is elfewhere flewn, that agricul:ure has made little or none; on the contrary, agriculture has experienced a great increafe in England, though very feldom favoured by government, but commerce an inferior one; unite this with tie vall fuperiority of the latter in national profperity, and furely the leflion affurded by fuch facts needs no comment.

## Of the Preniums for the Encouragement of Commerce in France.

The French adminiftration has long been infected with that commercial fuirit which is at prefent the difgrace of all the catinets of Europe A totaly falice eltimate that has been made of England, has been the origin of it, and the effect has vean an almolt univerfal neglect of agriculture.

The premiums paid in France for encouraging their enmmerce are the following, and the amount for a year, ending the ift of May $17 \xi^{2}$, is added:

Expence of tranfporting dry cod to the American inles, and to various foreign countries, at the rate of 5,10 , and 12 livres per quinal, by the arret of 18 th Sept. 17 $7^{\circ} 5$, and 1 uh Feb. : 787 ,

547,000
Bounty payable on the departure of fhips for the coaft of Guine:a, and for Mozambique, at the rate of 40 liv. per ton, by the arrets of 26 th vet. 1784 , \& c.

Bounty on the negroes tranfported into the Coloniss at the rate of 60 to
co liv. a-h aut, by the arret of 20 h 0 O .1781 , and of : 65 liv. and 203 ico liv. a.hat, by the arrit of 20 th OA. 1781 , and of 163 liv. and 200 liv. by that of the ioth Sept. 1706,

Dounty for encouraging the navigation in the North Sca , at the rate of $3,4,6$, and 10 liv. per ton, by the arrct of 25 th Sept.

4,000
Bounty on the export of refined fugar 4 liv. the quintal, by the arret of 26 th May 1786,
Encouragenents given to feventeen manufactures, 30,000?
To others, - - - 6!,000 $\}$ - - 100,000
Bounty of 4 liv. per 1ooolb. of caft iren, granted to the foundries of Mont Cenis in Bourgogne,
Bounty granted to the people of Nantuket eftablifhed at Dunkerque for the whale fifhery, at 50 liv. per ton of oil,

- 170,000

To the coal mines of the kingdom, - - - 100,000
*3,862,000

I hope it does not at this time of day want much explanation, or many obfervations on this contemptible catalogue of the commercial merit of the old government of France. The fifheries and fugar iflands, if we are to believe the French writers, are the moft valuable and the molt important articles of the French commerce.-How can this be, if they want thefe paltry bountic; to affift them? St. Domingo is faid in France to le the richeit and moft valuable colony there is in the world; I believe the fact; but if we were to confider only a premium on fupplying it with flaves, we fhould be apt to imagine it a poor fickly fettement, fcarccly able to fupport iffelf. If cultivation is vigorous there, it demands flaves without any bounty; if it is not vigorous, no bounty will make it fo; but the object, real or pretended, of bounties, is to induce people to inveft capitals in certain employments, which they would not fo inveft without fuch bounties. This is to profefs giving bounties to the inveftment of capitals in American agriculture, rather than in that of France; the tendency is star; but in this age it furely becomes a quation, whether the landes of Bretapue ans: Aniou would not be as deferving of fuch a bounty as the forefts of Hifpaniola ?

To remark on all thefe promiums is unneceffiry; it is fufficient n werve, that all, except that for coal, is abfurd, and that that is fo given as to be ufelefs.

## Of the Traty of Comancre betweon Griat Brituin and France.

This celebrated meafure was fo thoroughl dhared in England, that I fhall not go again over ground trodden almoof bare; but, with altention chielly to brevity, give fome French anthorities upon if, which are but little knowa in England.

There are in moft of the great commercial towns in France, fociaties of merchants and manufacturers, known under the title of Cbambre du Commerce; thefe gentiemen affociate for the purpofe of giving information to the miniftry ${ }^{\prime \prime}$. . mmercial quetlion upon which their opinion is demandec, and for other purpofes itat concern the trading interefls of their refpective towns. The Chomber du Commerce do Normadia, on occafion of this traty, printed and difperfed (it was mot fold) a pamphet entitled, Oo-

In this work they inform their realers, that in order io draw a fuir comparion between the advantages and dibuantages of the two kingtoms in manfatures, they
hand deputed two merchants of Romen, fufficionty undertanding in the fabrics of Normandy, and who lpoke Englifh, to take a journcy to the manufacturiug parts of Englimd, in order to acquire anthentic intelligence, and upon their return they were defired to make a fimila: tour through the mandactures of Normandy, that they might pollefs themfelves of the knowledge requifite for a fair comparifon; and from their reports, as well as from other materive, the Chambre da Commoree fpeak in their oboblervations:
"But while we are emba king is th is undertaking, the alarm of our commerce increafes every day, and beromes a real evil by a mot active fale of every article of Engtith manutaklure, which can enter inko competition with our fabrics. There is not an article of habitual confimption with which Enghand has not filled all the magazines of France, and particularly thofe of this province, and in the greatef number of thefe articles the Englith lave a victorious preponderance. It is allicting to fee the manufacturers who fuffer by this rivallhip, already 10 na : inas; luceeflively the number of their workmen, and inportant fabrics yielsing in another manner to the fame fourge, by Englith goods being fublituted in the fale for French ones; receiving a preparation agrecable to the contumption, named, marked, and fold as French, to the infinite prejudice of the nat nal indultry.
"' The Chanter is apprehenfive of the immediate eflect of the introduction of Englifh cottons, whre of the perfection of the preparation, the nerit of the lpiming, united with their cheapnefs, has already procured an immenfe fale. A coup d'oil upon the Folio 5 of the table of patterns of Manchefter, and the Fauxbourg St. Sever, at Rouen, will demonltrate the difadvantages of the latter.
" Our potteries cans te efcape a notable prejudice; the low price of coals in England enables. the Englifh to underfell us in thefe articles 25 per cent.; contiderable cargoes have already artived at Rouen.
"S The 36,000 dozen pairs of Aockings and caps of cotton, made in the enerality, are the produce of 1200 looms. Within three months it is calculated, that at Rouen alone, nore than one lundred have flopped. The merchants have made provifion of Englith goods, for more than 36,500 doren pairs of fockings and caps have already been imported.
"Manchefter is the Rouen of England, the immenfe fabrication of cotton Aufis, the induftry of the manufacturers, their activity, the refource of their mechanical inventions, enable them to underfell in from 10 to 15 per cent. Divery circumitance of the fabric proves the riches of the mafter manufacturers, and the folicitude of government for fupporting and favouring the ir indulter.
" In general their fluffs and their linens are finer, of a more equal fpinning, and more beautiful than ours; neverthelefs tney are it a lower price, which proves the im. portance of their machines for carding and pinning the cotton in a perfect and expeditious manner. By the aid os thefe united means, they llater themfelves at Manchefter with cqualling the muflins of India, yef the higheft price of thofe hithero wrought does nust exceed 3 s . a yard, but the fabric is fo coninderable, that they are not afraid to value it at 500,00 liv. a week; however ne nayy be permitted to dowte of this, one muft be amased (effraié) at the inmenfe f. which the Englifh have procured for this article, and the more io, as we have be flur J, that the magazines of the company contained, within a few months, to the value of $80,000,000$ livres, in India mulli.
"We do not know that the Englifh have in their fabrics of linen any other inventions for fimplifying the labour than the fying fhutle and the flax-mill, becaufe the
ns
de-
ight
heir
-
fibres of Pax are not adapted the application of machires for fyinning and carding ; we arr, however, affured that they have found means, by water-mills, to weave many picces of linen at the fame time and in the fame loom.

6 'I he price of coals in the preparation of cotton is of fome importance. The inhabitants of Manchefter pay for coal only gs. a ton, of 200 clb . (French) but at Rouen it is 47 to 50 liv. the ton.
"The linglifh are forced to render juflice to the cloths of Louviers, as well as to thofe of abbeville and Sedan. They cannot difemble that they think them inore foft than their own, and that the colours are more lively and more feducing, but we cannot hope to fell them in lingland. The linglim, whether through a firit of patriotifu, or by tie real agreement of their kind of fabric to the nature of their climate, prefer their cloths extremely fulled, and of colours very fombere, becaufe the fmoak of their coal fires, combined with the humidity of the atmofphere, depofing a greafy duft, might eafily atfect our colours to lively, but of little fotidity; however it may be, the competition at prefent of the Englith in France camot be very hurtful to the manu'actures of Louviers, Sedan, and Abbeville; but as the Englih import as well as we the wools of Spain, they may certainly attain the beanty of the cloths of Louvicrs.
" The fabrics of Filbouf, however profperous, have not the fame refources as the Englith ones of the lame kind, excellent national wools proper for their fabric at a low price. We calculate that the ordinary cloths of five-fourths breadth, and 15 or 16 livres price per auln, can lcarcely withftand the competition of the cloths of Leeds, called briftols, which coft only it liv. the auln.
" The cloths, ratines, efpagnolettes, flannels, and blankets of Darnetal, have moft of them a fuperiority over many fimilar linglith fabrics; but the low price of thefe laft will render their competition fatal. We camot too often recur to the advantages which the Englifh poffefs over all the woollens of lirance, which are wrought like thofe of Darnctal, with the wools of Fiance. 'The high price of our wool, and its inferiority in quality * to that of England is fuch, that this inequality alone ought to have induced the rejection of the treaty of commerce on the terms upon which it has paffid. 'The manufacturers of Darnetal, Rouen, Beauvais, Amiens, Lille, and Rheims, may find it their interelt to import linglifh fabrics before they have received the laft hand, which they can give cheaper than in England, and thus appropriate to themfelves a profit in cheapnefs and beauty of the Lagliih wools, by underfelling the fimilar fabrics entirely french.
" The Englifh ratines cannot fupport the parallel with thofe of Andely, where alfo good kerfermeres are made in imitation of the linglifh, but quite unable to ftand againlt them. Before the traty the Englith kerfeymeres came contraband to France, and were therefore dear, but now all the magazines of the kingdom regorge with them, for at the lame time that they are cheaper, they are in quality more perfect, of a more equal grain, and lels fubject to greale.
"6 The manufacture of cloths at Vire has fallen trom 26,000 pieces per annum to Sooc. During the war they had an export to North America, but on the peace, the cloths of Leeds prefented themfelves with a vistorions fuperiority, and will hold it till we have perfected the breed of our theep, and obtained flecees of a greater length and weight.

[^38]"In resa"d to the fuffis of wool, called ferges, molletons, flannels, formins, fatins, bunts, ciml hots, barac.ms, calmandes, étamines, kerfeymeres, fagathis, ३ec, which were Gurnithed loth to France and forcigners by Darnetal, Aumale, Beanvais, Amiens, Litle, Rhoins, and te Mans, they mult fink under the competition of the fimidar mannfathres of Buyblut. During the late war the Spanards gave comiderable emphoyment in thefe artickes to the manutatures of dmiens, Lills, and Aumale. On the firft report of apace, they not only fulpended their commilions, but even gave comenter orders for what were already befpoke, the Englifh having offered the fance fults 20 p.r cent. cheaper than we could aftord them.
"We may obferve in fine, uponothe conditions of the treaty, that the Fnglifh have contrived to leave excelfive duties upon al the articles, the trate of which weml.! have offered advantages for lirance, and to prohibit the motl interefting, to admit thofe whereof the reciprocity would be wholly to their own advaltage; and to favour in a namucr almoft exclufively, in their importations, fuch as are made in linglith bottoms; circumfances which, mined with the famous act of navigation, explain, in a great meafure the difproportion which exills between the number of Einglifh and French veffels in the commerce of the two mations fince the treaty, which is at keaft twenty to one.
"The opinion we develope upon this treaty is general, and founded on a fimple reflection, that France furnifhes twenty-four millions of confuncrs againft eight millions which England offers in return *.
" The fituation of France cannot have been confidered in the prefent circumftan. ces; at the fame time that the comfumption of its inhabitants, firt, that natural and neceflary aliment of national indultry becomes a tribute to E.igland, who has carried her fabrics to the highett degree of pertection; the Pruch ma: utacturers and workmen, difcouraged whthut labour, and without bread, may offer an eafy conquelt to Spain, who, more colighened at prefent upon the real means of increafing her profperity and her glow, duvdopes with energy the defire of augmenting her population, of extending and periceting her agriculture, and of acquiring the indultry that that futfice for her wants, and exelude as much as thatl be patiable from her markets objects of forcign fabrication. We are aflured that the workmen in the fouthern provinees pafs faccefively into the different manufactures which are eflablifhed; an emigration, which cannot but increafe by the effects of the treaty of commerce with Fingland."
The Clamber of Commerce in the fame memoir dechare, that the Englifh had not augmented their confumption of French wines in confequance of the treaty. And they dwell repeatedly on the fuperior weald of the Englith mandatimers to that of the Firn hones, the intiunce of which, in the comprtition of evary fatric, they feel decifively.

The French minifry, the Arebbiflop of Scas at their head, to remove the imprefion which they feared would follow the precting memoral of the merchants and manufucturers of Normamix, cmployed the celebrated accomi/fic Monf. du Pont, editer of the Fphemerides du Ciegen, a priodieal weik, prined 1767-1770, and fince etced f., Nemours into, the National Affribly, to anfere it, which he dial in detail, and with atility : the followiag extracts will fhew the arguments in favour of the treaty.
"Relative to the wine trate, your information has not heen exact. I an cortain that it has heen confiderably aumental. The differcnce between the dutics

in Eingland upon the wines of Pottugal and France was $34 \%$ of our money the bottle ; it is at prefent but 56.8 den. in fite of the proportional diminuion made upon the wines of Portugal, an approximation of which nuft be very favourable to us. Authentic accounts of the cuftom-houfe at London have been lent to the department of foreign allairs, fating the guantity of French wines imported into that fingle city, and it rifes from the month of May to that of December of the latt year ( $\mathrm{V}^{2} 7$ ) to 6000 tons of four bariques each. In preceding years, in the lame fance of time, the legal importation has ambunted only to 400 tons, and the contratand iniport was eftimated at about an equality. The augmemation, therefore, for the city of London, is at leall 5000 tons, or 20,002 birfiques, which, at 1200 liveres amount to $6,000,000$ livres. The accoums of the balance of commerce for uine years preceding the lat war mark 1 eco tons as the meat expert of our wine to England, Scothand, and Ireland. In 1794, hat export did not exced $=$. co tons. The city of t.onden has theretore inported in the eif hat laft mouns of $7^{3} 7$ form times more than the three kingdoms formerly inported in the courfe of a whinie year.
"The fale of vinegars, bramdy, vil, thap, dried fruits, preferves, cambric, linens, and millinery, has much augrmented. In particular, cambric and linens bave doubled.
"But this is un reafon why the minilltry flould not, on one hand, exert themfelves with all andivity to oblige the 1 ngtifh to adhere to she turns of the treaty (which they have deranged by their tarills and regulations of their cufloms); and, on the other, to favour the national indultry, particularly that of the provinces of licardy, Normandy, and Chanpagne, for whon, fince the treaty, the competition of the Euglifh has certainly been very mifchievous 'trís fichenfe).
"There are five branches of indultry in which the Englifh have over us at prefent in fome refpeets an advantige more or lefs folid; in cotion thuffs, in limatl wootlens, in pottery, in leel, and in lather.
"In regard tw cont,m, Mat. Berneville is in poff flom of a machine, invented by his uncle, which finins threat of a degree of fanghis till now mannown; even to 300,coo au'us of thead from a pound of e then. The find muthe of afia are made
 confideration, has at haft det rmined on the report of M. Defmereft to puri " whis machine, and to dittribute many of them ammong our manuactures.
"It is inconccivable that we hove not a fuperintily over the Englifi "n We have the raw material, and even lell to cur rivals the greater part it ufe. We have provifions and lateour cheop $r$ than they mave". It is ". . which we wam, or rather we danat wam them, for we have the on in en we have aritls capable of pertictiog trem ; we have already the furegn can give prizes, and we have aca lemist to julge t.
" As to the woollen fatrics, we have mothing of fear of competion in fin" chothe, ratines, chagnollettes, molltuns, and caps made of ? panihh wool; wi in whith it enters for the greater part. Our fabrication of this furt is fupsrine to that of the Englifh; our fluffs are fofter ail more durabir, and nur dycing more bambuh. We can initate at uill, all the fombre colours of the Engrifh taicric, but they camut copy any of our lively colours, and efpecially our Icarlet.

* Not fu; a man is fed chenper in France, living hadiy, but provifions ate not cheaper, and libour is really deater, though mominally deaper.
$\dagger$ I mill frile at academies bing mamed amone the manuibebring advantages of i rance: I wouter what acadenies lave done for the manufactures of Engind.
"In the mildling clafs of woollens, which comprizes the tricots and fmall ftafts, we have a marked inferiority. The wools of which thele are made are with us lefis line, l.fs briliant, and higher priced. But this evil is not without a remedy.
" Of the next manufacture it may be obferved, that the Englifh potteries have been imported at all times into Loraine, without paying any duties, and yet that province is full of manufactures of pottery which profper."

Relative to the fteel manufactures, Moni. du Pont cites the following cafe: "Monf. Doffer, after having been a long time at Clignancourt occupied for our Englifh magazines to make bijoux of feel, which have been fold for Finglifh, has been taken under the protection of govermment, who have furnifhed him with the means of carrying on bufinefs. At prefent eftablifhed in the inclofure of the Quinze Vingts, he there fabricates, with at leaft as great perfection as in England, and at a lower price by 30 per cent. * all the beautiful works in fteel, watch chains, fwords, \&cc. \&c. \&c."

Monf. du Pont then infilts at length on the great import of linglifh manufactures, which took place clandeftinely, not only from Fingland directly, but by Flanders, Holland, Germany, and Liege, which it was found impoffible to prevent, and contends, that converting fuch import to a legal one, to the profits of the Rate, was an object of no flight importance.
"It is fome years fince the manufacturers of Sedan, and after its example thofe of Louviers, Abbeville, and of Elbouf, have railed the prices of their cloths 25 per cent. and net without fome reafon, imagining, under the influence of a fpirit of monopoly, to benefit the undertakers of thofe fabrics. But to whatever reafon it might be afligned, certain it is, that German cloths, which never came into the kingdom before, have, fince this rife of price, found a confiderable fale in France, to the prejudice of the national manufactures; the treaty of commerce having been made at the time of the evil being felt, the whole effect has been laid, without much reafon, to the operations of that treaty."
M. Du Pont in like manner examines the ftate of the filk manufacture, which he Thews to be a Lyons in the loweft ftate of mifery and diftrefs, owint to the war in the north of Europe abforbing thofe expences which in peace were otherwife employed; to the fuccefsful exertions in Spain for increafing the fabrics of that country; and to the failure of the crop of filk; yet while the declenfion of that manufacture had thus no thadow of connection with the treaty of commerce, yet happening at the fame time, the evil, like all the others, has been attributed to its influence.
"At all events, the treaty of commerse, fuch as it is, is perhaps the only guarantee of pace between the two empires. I have the ftrongett reafon to bedieve, that its perfpective has haftened the concufion a year or two, and we have thus fparcd $100,000,000$ lives of expence; the impolts which wouk have been necellary to pay the interelt, the lofs of bloot, and the frightul chances which every war entrains in its fuite. It is more than probabie, that without it, we fhould for fix months part have been enga.

[^39]ging in hofilities, the tern of which would have been impofible to forefee. When France and Fingland remain neuter and united, no war can be durable in Europe; for though other powers have caunons, foldiers, and bayonets, yet none of them have refources to fupport a war of any length; not even thofe who reckon upon a treafure, whicls would be diflipated in two campaigns at moft. The only folid trealiure is a good agriculture and an induftrious people. The repofe of the world, and above all our own, holds inerefore almoft folcly by this treaty; which citizens, zealous without doubt, but certainly too little enlightened, would wifh to fee aminhilated.
The argument which has been drawn from the population of the two kingdoms, founded on France cuntaining twenty four millions, and England eight millions, is not juft. France contains nearly twenty cight millions, and the three Brikfh kingdoms ele-

1; but the whole reafoning is a fophifm, founded upon ignorance of the riches of the wo uations. It is not on population that we are to calculate the ineans of buying and felling, of paying and being paid. Unhappily the greateft difference found between the two empires is not in their manufactures; that of their agriculture and crops is nuch more confiderable. The annual crops of Eugland have been calculated with care at $2,235,000,000$ liv. ( $97,781,25 \mathrm{cl}$.) adding thofe of Scotland and Ireland, they caunot amount to lefs than $3,000,000,000$ liv. ( $131,250,0001$.) Thofe of France, calculated with great fagacity, after certain cafes in fome points, and on conjecturcs combined from all forts of views in others, have been valued at the loweft at $3,200,000,000$ liv. and at the higheft at $4,000,000,000$ liv. ( $175,000,00 c l$.) We have therefore, at the moft, but a fourth more crop than Lingland; but we have to fubfift a population two and an half times greater. Before we trade abroad we muft live. Retrench from three milliards the caly fubfiftence of elesen millions of people; retrench from four nilliards the fubfiftence, a little more difficult, of twenty-eight millions of people, and you will foon fee that it is not the nation of twenty-eight millions that furnithes the beft market for foreign commerce, and confequently for luxury, which can only be paid for with a fuperfluity.

The experience of all times has proved, that nations fucceffively rival each other in mandfacturcs. Spain debauches and carrics off our workmen in filk; but the cannot take from us our cultivators, the nature of our foil, our happy expofition, nor the privileged products which we pofiefs ewclufively. It is therefore upon the products of cultivation that muft be founded, in the mofl folid manner, the profiperity and commerce of agreat empire.

And even as to fabrics, you fee by the example of the paft, that excluding competition hass left ours in an inferiority of which you complain. It camot be neceffiry to prove to you, that the beft method of raifing the induftry of a nation to a par with its nei, hbours, is by eftablifhing fuch a communication as fhall place unceafingly models and objects of emulation ender the eyes of fuch as are inferior.

It is clear that by referving to the manufacturers of a nation the exciufive privilege of fupplying it, we deftroy among then a great part of the principle of that ativity which ought to perfect their induftry. Believing themfetves fure of purchafers, and fure alfo of fixing their own price, they negleet, with all proprietors of exelufive privileges, to feek the means of fabrication the moft economical, and thofe whici? would render their labour the inolt perfect.

Monf. du Pont enters into a detail of the courfe fexchange through fify feven pages, from which he deduces the fact, that the balance upon the trade, in conlequence of the treaty, was in favcur of France: from May 1787 to March 1788, he gives a table of exchanges, divided into three epechs; 1. From the ift of January 1785, to the recoin-
vo... 19.
age at the French mint in October; 2. From the recoinage to the treaty of commerce, from ift November 1785 to laft of April 1787; 3. From the treaty to the time of his writing, i. e. from 1 ft May 1787 to laft of March 1788.

## Firf Epoch.

| January, | - | $29 \mathrm{~T}^{\frac{1}{3} 5}$ | May, | - | $28 \div$ | Auguf, | - | 2819 ${ }^{19}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| February, | * | $28+\frac{3}{4}$ | June, | - | $28{ }^{2} \frac{1}{5}$ | September, |  | 29\% ${ }^{\frac{1}{5}}$ |
| March, | - | 28 2 | July, - | - | 2819 | October, |  | $29 \mathrm{~T}^{\text {' }}$ |
| April, |  | $28{ }^{2} \frac{5}{5}$ |  |  |  |  |  |  |

From January to September 1784, exchange was at 30 and 31 , and fell to 29, at which rate it was about 3 per cent. againft France; but it fell in June to $28 \frac{2}{3} \frac{3}{2}$, which was a lofs of 4 per cent. ; and in Augult the lofs was at the height, or $4 \frac{1}{2} \frac{1}{2}$ per cent. which funk in October to $2 r^{1} 2$ per cent.

## Sccond Epoch.

Par of exchange by the alteration in the French mancy counted on gold $28 \frac{1}{5} \frac{1}{3} \frac{0}{3} \frac{5}{6} \frac{8}{8} \frac{5}{8} \frac{5}{6}$,

| Nov. |  | $29 \frac{3}{16}$ | May, | - | $29^{\frac{1}{7}}$ | Nov. | 29\% $\mathrm{T}^{1 / 7}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Dec. | - | $29{ }^{\text {5 }}$ | June, | - | 29.3 | Dec. | - $29 \frac{3}{35}$ |
| Jan. | - | $29 \frac{15}{9}$ | July, | - | $29+$ | 1787 Jan . | $29{ }^{\text {¢ }}$ |
| Feb. | - | $29{ }^{2}{ }^{\text {\% }}$ | Aug. | - | $29 \frac{1}{8} \frac{3}{6}$ | Feb. | $29 \frac{1}{t}$ |
| March, |  | $29{ }^{2} \frac{1}{1} \frac{1}{2}$ | Sept. |  | 29 \% | March, | - $29{ }^{\prime}{ }^{\circ}$ |
| April, | - | 291: | Oct. | - | $27{ }^{\frac{3}{6}}$ | April, | - 29: ${ }^{\text {震 }}$ |

Upon this epoch, Monf. du Pont has a long obfervation concerning a fuppofed tranf port of old louis d'or from England to the French mint, which the chamber of com. merce, in their reply, jully rejects.

Third Efoch.
Par as before.

During thefe eleven months, the mean rate has been $29 \frac{4}{2} \frac{2}{9} \frac{7}{6}$, or about $2 \frac{1}{7}$. per cents in favour of France.

By the accounts of the Bureau General de la Balance du Commerce, the imports of Englinh goods in France for the eight laft months of 1987 , amounted to $35,294,000$ liv., and the export of French goods to England during the fame time to 26,276,000 liv., a difference which Monf. du Pont attempts to convert into the favour of lirance; upon grounds not at all fatisfactory.

The Chamber of Commerce, in their reply, affert, refpecting the navigation employed, that from May to December 1787, there entered the ports of France 1030 Englifh Ghips of 68,686 tons, whereas, in the fame trade, there were only 170 French fhips of 5570 tons.
In the fame reply, the Chamber reject the reafonings of M. du Pont upon the courfe of exchange, and infift that it was affected by collateral changes, and by tranfactions not commercial.

I fhall lay before the reader the refult of the treaty, both according to the Englifh cultom-houfe, and alfo by the regiters of the Burcau de la Balance du Commerce at Paris; which, I hould however remark, is beyond all comparifon more accurate in its eftimations; and whenever it is a queftion between the authority of the two in oppofition to each other, I flould not hefitate a moment in preferring the French authority; indeed it is certain, that in many articles the valuation attached to fome denominations is as old as the reign of Charles II. though the real value is known to have quintupled.

## Englifh Account.

Export of Britif, Manufactures to France.

| 1769, | - | $\stackrel{\text { ¢, }}{8,213}$ | 18 | d. 4 | 1784 | - | $\underset{93,763}{\mathcal{L}}$ | 7 | d. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1770, | - | 93,231 | 7 | 5 | 1785, |  | 244,307 | 19 | 5 |
| 1771 , | - | 85,951 | 2 | 6 | 1786, | - | 343,707 | 1 | 10 |
| 1772, | - | 79,534 | 13 | 7 | 1787, |  | 713,446 | 14 | 11 |
| 1773, | - | 95,370 | 13 | 1 | 1788, | - | 884,100 | 7 | I |
| 1774, | - | $8_{3}^{5,635}$ | 13 | 2 | 1789, | - | 830,377 | 17 | $\bigcirc$ |

The rife in the years 1785 and 1786 , may be attributed to the rage for every thing Englifh, which, I believe, was then pretty much at its height ; the moment the honour of the nation was fecured by wiping off the difgraces of the war of 1756 , by the fuccefs of the American one, the predilection for every thing Englifh fpread rapidly. In order to flew the proportion which our export of manufactures to France bears to our exports to all the world, I fhall infert the total account by the fame authority.

$$
\begin{array}{llllllllll}
1786, & -11,830,194 & 19 & 9 & 1789, & - & 13,779,7: 0 & 18 & 9 \\
1787, & - & 12,053,780 & 3 & 5 & 1790, & - & 14,922,000 & 0 & 0 \\
1788, & - & 12,724,719 & 16 & 9 & & & & &
\end{array}
$$

We know that all thefe fums are incureat ; but we may fuppofe the incorreetnefs as great one year as arother, and that tierefore the comparifon of one year with another may be tolerably exact. The following French accounts have been taken with fingular attention; and as duties have been levied on evcry article, +1.. amount may be more, but cannot be lefs.

## French Account.

Imports from England into France, in 1788.

| Woods, coal, and raw materials, of which conl near 6,000,000 liv. | 16,552,400 |
| :---: | :---: |
| Other raw matcrials, not the direct product of the carth, - | 2,246,500 |
| Manufactured goods, - - - | 19,101,900 |
| Manufactured goods from foreign incuuftry | 7,700,900 |
| Liquors (bsifons) - - | 271,000 |
| Eatables (comefibibe: ) fuch as falt meat, butter, cheefe, corn, \&c. | 9,992,000 |
| Drugs, | 1,975,900 |
| Grocerics, | 1,026,900 |
| Catile and hories, | 7c2,800 |
| Tobacco, | 843,100 |
| Various articles, | 187,200 |
| Wcit Iudia cotton, and Weft India goods, none. |  |
|  | 60,621,600 |

Exports from Frarce to England, in 1;-88.

Explanation. - All manufactured goods, both Englifh and foreign, imported by the Faglifh merchants have been under rated about one-twelfth, which will add $3,235,800$ liv. The Tirench exports muft alfo be increafed for finuggling, \&c. \&c.; fo that there is great reafon to think the real account between the two nations may be thus flated:

| Exports from Englind to France, ———ruace to England, |  |  | $\begin{aligned} & \text { liv. } \\ & 63,327,600 \\ & 33,8,47,470 \end{aligned}$ |
| :---: | :---: | :---: | :---: |
|  |  | - |  |
| Balance againt France, | - | - | 29,480,130 |

| Total Exports of England to France in 1789, |
| :--- | :--- | :--- |$\quad-$| liv. |
| ---: |
| $58,000,000$ |

Hence it appears, that the two cuftom-houfes do not differ effentially in their accounts.

Before I offer any obfervations on thefe accounts, I thall infert a few notes I made at fome confiderable towns of the intelligence I received perfonally.
1787.-Abbeville.-In difcourfe upon the effect of the new treaty of commerce with Fingland, they exproffed great apprehenfions that it would prove extremely detrimental to their manufactures. I urged their cheap labour and provifions, and the encouragement their government was always ready to give to manufactures: they faid, that for their government nothing was to be depended upon; if their conncils had underftood the manufactures of the kingdom, they certainly would not have made the treaty upon fuch terms; that there were intelligent perfons in their town who had been in Eng. land, and who were clearly of opinion, that the fimilar Englifh fabrics were fome cheaper and others better, which, aided by fallion in France, would give them a great advantage; that provifions were by no means cheap at Abbeville, and the workmen in feveral branches of their fabrics were paid nearly as much as in England, without doing the work equally well, at leaft this was the opinion of fome very good judges; and laftly, that all Abbe ville are of this opinion.

Amiens.-I had here fome converfation to the fame purport as at Abbeville; the whole town I was affured had been alarmed from the firf rumour of the terms on which the treaty of commerce had been concluded; they are well convinced that they cannot in any one inftance, as they affert, ftand the competition of Englifh goods. On my alking what reafon they had for fuch an idea, the perfon I converfed with went into a warehoufe, and bringing a picce of fluff and another of flannel, they were, he faid Englifh, and from the price at which they were gotten before the treaty, he drew the conclufion; he was alfo, he faid, well informed of the prices in England. In the cotton fabric, he faid, the fuperiority was yet greater ; in a word, that Amicns would be ruined, and that on this point there was but one opinion.

The manufacturers of all countries are full of thefe apprehenfions, which ufually prove extremely groundlefs. In all probability the effect would be as expected, if a counter fream of emulation and induftry did not work againft it. The introduction of Englifh fabrics may be hurfful for a time, but in the long run may be beneficial, by fpurring up the French manufacturers to greater exertions and to a keener induftry.

Bourdeaux.-The intercourfe between this port and England has been increafed a great deal fince the treaty. Warchoufes of Englih goods are opened. The article which has hitherto fold the beft, and quickeft, is that of the Staffordhire potteries; the quantities of thefe which have been fold is very great: but the hardware fent hither has been found fo dear, that it could nor be fold in competition with French and German, excent in a very few articles. Cffidlery there are feveral fhops opened that have fold largely. Beer has been tried, at would not do ; the Dutch is ftill preferred for the Weft Indies as cheaper; tha: of Fngland has been fold at 90 livres the barique, of 250 French bottles, and fome of it arrived fo bad as not to be merchantable. Wine
has increafed in its export to England, but not fo much as was expected; lefore the treaty it was eight thouland tonneaux a year, and it has not rifen to twelve thoufand; however the courfe of exchange is againft E.ngha : th, and wine, owing to the prefent failure of the crop, has increafed in price 50 per cent. Brandy has alfo increafed.

The Englifh take only the two firlt qualities of wines-or, rather they are fuppoled to do fo; for their merchants eftablihed here mix and work the wine fent in fuch a mantner, that the real quality of it is unknown : this is the account given us. Thofe two firf forts are now at 201. to 221. a barique, which is two hundred and fility French bottles, and two hundred and feventy Englifh ones. The other qualities are fold from 151. to 181 . port charges, cafk and hipping included; freight to London is 50 cs a ton, befides 15 per cent. primage, average, \&cc. The French duty is 28 livers the tonnean, which has been lowered to 5 livres 5. . from laft October to the firf of January next, a regulation which it is faid will not take place longer.
Beauvass. - The opinion univerfal among the manufacturers here is, that the Englifh fabrics are fo fuperior in cheapnets, from the wife policy of the encouragements giver: by government, that thofe of Beauvais, flould they come in competition, muft fink; fo much of the fabrics here as are for the confumption of the lower people might perhaps ftand by it, but not any others; and they think that the moft milchievous war woud not have been fo injurious to France, as this moft pernicious treaty.

Lilif.-I no where met with more violence of fentiment, relative to this treaty, than tere; the manufacturers will not fpeak of it with any patience; they will for nothing but a war; they may be faid to pray for one, as the only mear; of efcaping that ideal ruin, wish they are all fure muft flow ficm the influx of Englifh fabrics to rivill theirown. This opinion fruck me as a moft extraordinary infatuation; for in the examination which took place at the bars of our Houfes of Lords and Commons, this is precifely the town whofe fabrics were reprefented as dangeroufly rivalling our own, particularly the camblets of Norwich; and here we find exactly the counter part of thofe apprehenfions. Norwich confiders Liille as the moft dreadful rival, and Lille regards Norwich as fo formidable to her induftry, that war and bloodfhed would be preferable to fuch a competition. Such factsought to be uleful to a politician; he will regard thefe jealoufies, wherever found, either as impertinence or knavery, and pay no attention whatever to the hopes, fers, jealonfies, or alarms, which the love of monopoly always infpires, which are ufually falfe, and always mifchievous to the national interefts, equally of every country.

Naotes.-In converfation here on this treaty with fome very refpectable commercial gentlemen, they were loud againft it ; infiffed that France fent no fabrics whatever to England in confequence of it, not to the amount of a fingle fol; fome goes, and the fame went before the treaty; and that Fighand has not imported mere wine or brandy than ufual, or at leaf to a very fmall amount; we know at prefent that this was not correct.

Rouen.-The quantity of merchandize of all forts that has been imported here from England fince the treaty, is very confiderable, epecially Staffordhire hardware, and cotton fabrics, and feveral Englifn houles have been eftablifhed. 'They confider the treaty here as highly detrimental to all the manufacures of Normandie.

I am better fatisfied with the real fact than if it were, as the Chamber of Commere of Normandie inagined, much more in favour of lingland; for as the benelit is more likely to laft, fo the treaty is more likely to be renewed; and confequently peace between the two kingdoms to be more durable. The balance of the manufaturing account does not exceed 14 millions, which is very far thort of the lrench ideas, and muft,
in the nature of things, leffen. The 18 millions of raw materials and coals, infead of being an import hurfful to the interefts of French induftry, is beneficial to it; and they themfelves wifely confider it as fuch, and lamented the old duties on the import of Englifh coal, afferting, that there ought to be none at all. Here are 10 millions of inports, and a balance of eight in direct objects of agriculture, as corn and meat. If a people will manage their agriculture in fuch a prepofterous manner, as not to be able to feed themfelves, they fhould efteem themfelves highly obliged to any neighbour that will do it for them. Raw materials, including drugs, with cattle, corn, and horfes, very nearly account for the whole balance, great as it is, that is paid on the total to England; and as fuch: objects are as much for the advantage of France to import, as for the benefit of England to export, the whole trade inuft, both in extent and balance, be deemed equally reciprocal, and of courfe equally tending to advance the proferity of each kingdom. There is, however, a circumftance in which matters are very far from being reciprocal, and that is, in payments. ITe French are paid for their goods, whatever thefe may be, according to agreement; but that is very far from being the cafe with the complaints againt the mode of dealing in France, not only in refpect of payment, but alfo of want of confidence, fince their goods, fairly executed, according to patterns agreed on, are feldom received without difpute or deduction: and while they chearfully do jultice to the punctuality of the Americans, Germans, \&c. they put very little value on the French trade, fpeaking in general. It is the fame with Birmingham, whofe merchants and manufacturers affert ftrenuoufly, that the commercial treaty has been of no fervice to their town; the French having taken as largely their goods by contraband, before the treaty, as at prefent, through a different channel ; with this change, that the Dutch, Germans, and Flemmings, with whom they dealt before, paid better than the French. Thefe circumflances are great deductions fron the apparent merit of the treaty, which cannot be fairly etlimated, unlefs we could know the amount of our exports fent out clandeftinely before it was concluded. The manufacturers are certainly the beft judges; and they unite, with one voice, throughout the kingdom, either to condemn it, or at leaft to affert its lraving been a mere transfer from one channel to another, and not an in. creafe. The henefit of it, however, as a political meafure, which tends to eftablifh a friendhhip and connection between the two countries, cannot be called in quellion with any propriety; for the mere chance of its being productive of peace, is of more confequence than ten fuch balances, as appears on the foot of the above mentioned account:

## Ciap. YIX.-Of the Mamufactures of France.

Picardiz-Abbeville.-THE famous manufafure of Vanrobais has been defcribed in all distionaries of commerce and fimilar works; I fhall therefore only obferve, that the buildings are very large, and all the conveniencies feem to be as complete as expence could make them: the fabric of broad cloths is here carried on upon the account of the matter of the eftablihment, from the back of the fheep to the laft hand that is given. They affert, that all the wool ufed is Spanifh, but this muft be received with fome degree of qualification. They fay that one thoufand five hundred hands are employed, of which two hundred and fifty are weavers; but they have experienced a great declenfion fince the eftablifhment of the fabric at Louviers, in Normandie. They have feveral fpinning jennies, by which one girl docs the bufinefs of forty-fix: fpinners.
An eftablifhment of this kind, with all the circumftances which every one knows attended it, is certainly a very noble monument of the true fplendour of that celebrated
reign to which Monf. de Voltaire jufly enough gave the title of Age; but I have great doubts whether it is pofible to carry on a manufacture to the beft advantage, by thus concentrating, in one eftablifhment, all the various branches that are effential to the completion of the fabric. The divifion of labour is thus in fome meafure lof, and entirely fo in refpect to the mafter of each branch. The man whofe fortune depends entirely on the labour of the fpinner, is more likely to undertand finning in perfection, than he who is equally concerned in fpinning and weaving; and it is perhaps the fame with refpect to drefling, milling, dying, \&c. when each is a feparate bufinefs each muft be cheaper and better done. The appointment of commis and overfeers leffens, but by no means gets rid of the difficulty. In viewing a manufacture therefore I am not fo much ftrack with that great fcale which fpeaks a royal foundation, as with the more diffufive and by much the more ulcful figns of indultry and employment, which fpread into every quarter of a city, raife entire freets of little comfortable houles, convert poor villages into little towns, and dirty cottages into neat habitations. How far it may be neceffary when manufactures are firft introduced into a country to proceed on the plan followed by Louis XIV. I hall not enquire, but when they are as well eftablifhed as they are at prefent, and have long been in France, the inore rivals in fmaller undertakings, which thefe great eftablifhments have to contend with, the better it will generally be found for the kingdom, always avoiding the contrary extreme, which is yet worfe, that of fpreading into the country and turging what ought to be farmers into manufacturers.

Befides fine cloths, they make at Abbeville carpets, tapeftry, worfted ftackings, barracans, a light ftuff much worn by the clergy, minorques, and other fimilar goods. They have alfo a fimall fabric of cotton handkerchiefs.

Amens-Abounds with fabrics as much as Abbeville; they make cottons, camblets, calimancoes, minorques, coarfe cloths; there is fcarcely any wool worked here but that of Picardy and a little of Holland, none of England, or next to none; they would get it they fay if they could, but they cannot. I examined their cotton ftockings carefully, and found that 4 or 5 livres was the price of fuch as were equal to thofe I had brought from England, and which coft at London 2s. 6d.; this difference is furprizing, and proves, if any ching can, the vaft fuperiority of our cotton fabrics.

Breteun.-They have a manufacture here on a fmall feale of feythes and wood hooks, the former at 4.5 . the latter at $30 \%$. the iron comes from St. Diziers, and the coals from Valenciennes. Nails are alio made here for horfe-floes at $8 f$. the lb . but not by nailors who do nothing elfe.

Orleans.- The manufactures are not inconfiderable, they make ftockings of all kinds, and print linens; a fabric of woollen caps has been eftablifhed here fince Louis XIV.'s time, in which two houfes are employed; the chief we viewed. It employs at home about three hundred working hands, and twelve to fifteen hundred others. The caps are entirely made of Spanifh wool, threc ounces of yarn make a cap; they are all for exportation, from Marfeilles to Turkey and the coaft of Africa, being worn under turbans; in drefing they extract the greafe with urine, full and finifh in the manner of cloth.
The fugar refinery is a confiderable bufinefs, there are ten large and feventeen fmaller houfes engaged in it; the firf employ each forty to forty-five workmen, the latter ten to twelve; one of the principal, which I viewed, makes $600,000 \mathrm{lb}$. of fugar, and the reft in proportion. The beft fugar is from Martinico, but they mix then together. Rum is never made from molaffes, which is fold to the Dutch at $3 /$. the lb . the fcum is fqueczed, and the refufe is fpread thick on meadows to kill mols, which it
does very effectually. The price of raw fugar is $3^{3}$ to 45 livres per 100 b . The coal they burn is from the vicinity of Moulins, in the Bourbonnois. Trade in general is now brikk here.

Romorentin.- $A$ fabric of common cloths for liveries and foldiers, carried on by private weavers, who procure the wool and work it up; they are at leatt one hundred in number, and make on an average twenty pieces cach in a year; it is fent to Paris. At Vatan there a $\because$ about twenty of the fame weavers and three hundred finners.

Chateauroux.-AA fabric of cloth, which two years ayo, before the failure of the malter save employment to five hundred hands, boys included, and to one thoufand five hundred to one thoufand eight hundred fpinners in this and the neighbouring pro. vinces; it is a Manufacturc Rovale, like that at Abbeville, of Vanrobais, by which is to be underftood an exemption for all the workmen employed within the walls from cortain taxce, I believe tailles. Some gentlemen of the town keep at prefent one hundred hands at work in the heule, and ther" "ners depending on that number, in order that the fabric might not be loft, nor the poor left entirely without employment; there is true and ufeful patriotifin in this. The cloths that were made here were 1 to $1 \frac{1}{4}$ aulns broad, which fold at $S$ livres to 23 livres the auhn; they make alfo ratteens. In the town re about eighty private weavers, who make nearly the fame cloths as at Romoa atin, but better; fell from 8 lives to is tives the aulh, $1 \frac{1}{}$ broad; thefe private fanics, which do not depend on any great eftabilhment, are vafly preferable to concuntrating the branches in one great incloture ; the right method of remedying fuch a failure as has happened here, is to endeavour by every means to increafe the number of private undertakers. The cloths ars all made of the wool of the country now 20 to 37 . the lb. it has been dearer for two years, and tea years ago was to be had for 15 1020 . from the 2 .fth of Jume it is fold at every market, and in large quantities; manulacturers come from Normandy and Picardy for twalve days together to buy wool, wafh, and fend it off.

At two leagues from Chateaurons are iron forges, which let at 140,000 lives a year, $(6125 \mathrm{l}$.) helonging to the Count d'Artois.
Limones.- The molt confiderable fabric here is that of druggets, the warp of which is of hemp tiread, and the woof of wool, one hundred looms are employed by them. Siamoife It tults are made of hemp ank' witton, fold at 30 to 488 an auln; there are about one thoufand or one thoufand one hured cotton fpinmers in the Limofin, alfo various mixed ftulfs of filk and cotton, and in' :and thread, under many denominations, for gowns, coats, waiflcoats, brecches, $B=$. from + to 6 livres the auln. Some ftuffs, which they call China, are rather dearer; a gown felling for 4 louis, but of filk gauze only 2 louis; this fabric employs about twenty looms, worked each by three or four people, boys included. I took many fpecimens of thefe fabrics, but in general there is a great mixture of thew and fincry with coarfencls of materials and cheapnefs of price, not at all fuitable to an Englifh tafte.

They have alto a porcelane manufikure, purchated by the King two years ago, which work for Seve; it gives empherment to about fixty hands; I bought a lpecinam, bot nothing they make is cheap, and no wonder, if the King is the manufaturer.

They have in the generality of Limoges, which tacludes the Angoumois, feventy paner mills that manuacture all kind they are fuppofed to make every day to the quantity of 19 cact, the contents of which vary according to the fort of paper. A cuse of 13 lb . will make $6 \frac{1}{5}$ reams of large and fine paper, but double that quantity of wher ferts; they calculate that a mill can work abrot two hundred days in a year, LAtivals and repmirs cxcludd; this makes at a cure a day $+5+, z \mathrm{colb}$. for a year's work

of a mill, and 3 t $; 9: 900 \mathrm{lb}$. for the whole generality, and they value it at $20 \%$, the lb. which makns as manv lirres, or $1,390,987$. They confider the manufacture as greatly overlmeded with an cxcife, " moments to about part of the valle, but they hav on allonance for all they we we to be defigned for exporation, in the nature of our dawbacks; the manf gure has increafed notwithtandan. "... duty. They reck here, and in ath the paper mills of France, the cylinder tor gow hing the rast, which they call 1)ithth (and whith we have had fo long in lingland), as a new and great improve? ters; they reckon that half the paper is expurted, much to the B a hic, and fome they fay to Fingland.

They have alio in this sencrality forty iron forges, fome of which cmploy one lan. Wred people, one is a fomadry for whing and bring canom.

Bave.-A filk fibric has been eltablithed here about five and twenty years, filk alone is wrought in it, and alfo mixed with coteon, and grazes of all hinds are made; they fay they have difoovered a mancr of ding raw ialk, will which they make phan gauzes; ths of an auln broad and is long; the price varics according as they are cojinies (waved), or not; a piece vilite, ftaped or uot, is $5+$ livers, (2l. 7 s .3 d .) en-
 make alfo a thick faining fluff in imitation of Manchefter, at 6 tivers the autn, alto filk and tueck handkerchicts of a German tafte, fold chit ily in Germany and Aterergne. A merchant alfo at 13 de, in Swizertand, is fo good a cuftomer as to have taken one thoufand dozen of them. They have fixty or eirchty looms conitantly at work in the town; the weaver having his loom in his houfe and fupplied with the matrial from the manfactory, and puid by the pices; each loom cmploys fye people, women and chidren included. They ute only lrench fiik, which hough not to faining as the Halian, is they fay, fronger, bears the prepratim, and wars beter.

They have alfo her a cotton mill and fabric which is but in its infancy, has on'y noe combing machin. ad thre doulle ones for fpinumg; they fay that this machue, with the affitance of : ont people, does the work of whity; this undertaking has been effablithed and is corried at by Meflrs. Mills and Charke, ton former an linglifinan from Cante:bury, the inter from Irtand, both indued by encouragements to fethe in France.

Souldac- Payra:-Nomanufatures whatever in the country.
Carors. - Sone finall manufatories among them, one of woollen cloth; fome years ago it had near one thoufand workmen, but the company difagreeing, a law-fuit enfued, fo that it decreafed to one hundred and fifty; the fimners are chiefly in the town; work up both lirench and Spauifh wool, but the later not of the firf quality. They fhewed us however fome cloth, made as they fay, entirely of Spanifh wool, at 3 liveres 1 cf . the lb . which is not fo grod as their ratteens made with $\frac{3}{3}$ woot of Navarre and Roufillon, and; Spanilly ; they make fome cloths for the home confumption of the province, entirely with the wool of Navarre, an auln broad, at it livers the auln ; ratreens: of an auln broad, at 22 livres the auln; a lecond fort of ratteens, made with French wool, an auth broad, 11 livres the auln.

Caussane. - This country is full of pafane proprietors of land, who all abound very much with domellic manufactures; they work their wool into common cloths and canblets, and all the women and girls fim wool and hemp, of which they make linen; there are wasers that buy about two quintals of wool, pay for the fpinnine, weave it, and cary the cloth to market, and here are merchants that buy the fuperiluity for export.

Montauasm. - The woollen manufactare here is of fome confanate, comfiting of comwon cloths, crifiecs, half an auln broad, and feveral forts, of ituld; the, give the epithet ryate to one houfe, but in general the fimming and weaving are carted on both in the town and the country, not only on account of the manter manmacturers, but alf, by private wavers, who make and carry their fluff to market manded; the people of the falric 1 viewed aflim, that they wif on'y Spanith woul, but this is every where in Prance a common affertion by way of becomanenting their fabrics, and has been heard in thofe, known on nuch better aublority to wie none at all; another circumfarse to benoted is, that the wool of Roulfillong goes in common manufaturing language wader the dotsmination of Spanith, I fav lloir raw wool, and ann clear, that if it is Spanih, it is of a very inferice fort ; the pual $\quad 1$ the price of the cloms fpeak the fans language ; they dye the choth and $m$ which are the of ant matn wide, at 5 lives iof. 'Twolve hundred ${ }^{1}$ '

The fite mamhachere is alfo com reviounty; they fell their broad cloths,
cauln, (14s. 10!d.) and the croijeis at virons, but of the upper couamy alion to be employed by this fabric. ley work up not only the filk of the enNo Rockings and finall flufts, but the former the chicf; it is executed libe th wo nufabric, both by mafter manafachurers and by private loons; a ftocking engine colls from is to $2=$ louis, and a workman can earn with it to 3 liveres a day.

Tousouss:-IDas a woollen and a fill fabric ; in the firft are worked light fuffs, and has about eighty looms, which are in the town; in the other flockings, Itu:Is, danalks, and other fabrics, worked in flowers; about eighty looms alfo.

St. Maktin. - 'There are here ten manuficturers' houfes, one of which made laft your feven hundred pieces of woollen fulf, cach fix atilns long; on an average each houfe five hundred picces, chicfly bays, fays, and other thufs, the chain of thread; feme for home confumption, but chiefly for exportation to Spain. Their beft is 4 livres 1 \% the canne of cight palms, and ten palms to the auln, hall an auln broad. Other Ituffs 3 limes 1 g. dye in all kinds of colours. There are plemty of fininers of both thread and wool; weavers and fpiners are fpreal over the country, but the combers and carders are at homs. They wfe fome Spailh wool from the Navare tills at $3 \geqslant 0$ the ib. this yoar 3 ? 2 . Wet very dear.
 and thrad mixe:l; the primcipal fabric is a light tuff called Cadis, the greater part of which is exported to Spain.

Bagname d: Lemon.-At half a league from this place is a manufacture of cobalt; it is faid, the onty one in the whole kingdom, which was all fupplied, befure the eftablifhment of this fabric, by a Sason gentlenan, from the works in Saxoay; and what is now mate here is ufed at home and exported as Sason cobat. The ore is brought from Span at a very high price, from a mine in the Pyenees, not more diftant in a Atrait line than fix leagues, but the rowd is fo rocky that the ore is brought by the valley of Lantoufte, which takes up a day and a half. The ore is not found in veins, but in lumps (ragzons), fo that it is often lot and found again.

A sumathabe circumance, and harily credible, is their employing ore alfo from Str ria, which is hipped at Trime for Bourdewx, and brought br the Garone to TouIr ule, and hither by hand, at the cxpesce of 4 if the quiatal. They ufe alfo fome from Pectinont ; of thefe differat ores, that from Styma is the worth, and the Spanifh the beft; they cout at the manafacory, one wiha another, 3 co lives to $3^{6}$ د livers the quintal: the Spanih ore is the firlt defribed by Monf. Fourery, the grey or ath coloured; they do not mett thefe ores fipurate but mised to teher.

married a ballarina, of feventeen. The country to Modena is the fame as the flat part of the Bolognefe; it is all a dead level plain, inclofed by neatly wrought hedges againft the road, with a view of dittinguifhing properties. I thought, on entering the Modenefe dominions, acrofs the river, that I obferved rather a decline in neatnefs and good management. View the city; the flreets are of a good breadth, and molt of the houfes with good fronts, with a clean painted or well wafhed face-the eflect pleafing. In the evening to the theatre, which is of the oddelt form I have feen. We had a hodge-podge of a comedy, in which the following paffage excited fuch an immoderate laugh, that it is worth inferting, if only to fliew the tafte of the audience, and the reputation of the ballarine; "Era un cavallo sì bello, sì fvilto, sì agile, di bel petto, gambe ben fatte, sroppa groffa, che fe foffe fato una cavalla, converebbe dire che l'anima della prima ballerina del teatro trafmigrata in quella." Another piece of miferable wit was received with as much applaufe as the moft fterling:-Arlech. "Cbie quel ré che ba la più gran corona del niondo? Brighel. "Quello che ba la tefta piu piccola."- 24 miles.

The 7th. To the ducal, palace, which is a magnificent building, and contains a confiderable collcction of pictures, yet a melancholy remuant of what were once here. The library, celebrated for its contents, is fplendid; we were fhewn the curious MS. of which there is an account in De la Lande. The bible made for the $D^{\prime}$ Efté family is beautifully executed, begun in 1457, and finifhed in 1463 , and coft 1875 zechins. In the afternoon, accompanied the Abbate Amoretti to Signore Belentani; and in the evening to Signore Venturi, profeffor of phyficks in the univerfity, with whom we fpent a very agreeable and inftructive evening. We debated on the propriety of applying fome political principles to the prefent flate of Italy; and I found, that the profeffor had not only confidered the futjects of political importance, but feemed pleafed to converfe upon them.

The 8th. Early in the morning to Reggio. This line of country appears to be one of the beft in Lombardy; there is a neatnefs in the houfes, which are every where fcattered thickly, that extends even to the homefteads and hedges, to a degree that one does not always find, even in the beft parts of England; but the trees that fupport the vines being large, the whole has now, without leaves, the air of a foreft. In fummer it mult be an abfolute wood. The road is a noble one. Six miles from Modena, we pafled the Secchia, or rather the vale ruined by that river, near an unfinifhed bridge, with a long and noble cauleway leading to it on each fide, which does honour to the Duke. $\boldsymbol{n}$ I fates of Modena. It being a $f_{c} / f a$ (the immaculate conception), we met the country people going of mafs; the married women had all muffs, which are here wedding prelents. Another thing I obferved, for the firft time, were children fanding ready in the road, or running out of the houfes, to offir, as we were walking, affes to ride: they have them always faddled and bridled, and the fixed price is ifol per mile. This fhews attention and induftry, and is therefore commendable. A countryman, who had walked with us for fome diflance, replied to them, that we were not Signora d'afini. In the afternoon to Parma. The country the fame, but not with that air of neatnefs that is between Reggio and Modena; not fo well inclofed, nor to. well planted; and though very populous, not fo well built, nor the houfes lo clean and neat. Pafs the Eufa, a poor nilerable brook, now three yards wide, but a bridge for it a quarter of a mile long, and a fine vale, all deflroyed by its ravages; this is the boundary of the two duchies. - 30 miles.

The 9 th. At the academy is the famous picture of the holy family and st. Jerome, by Correggio, a mafter more inimitable perhaps than Raphael himfelf. To my unlearned eyes, there is in this painting fuch a fuffufion of grace, and fuch a blaze of beauty, againft Moded good houfes In the -podge that it of the groppa ina del : much ona del
a conhere. is MS. family echins. in the om we of ap-propleafed
as Arike me blind (to ufe another's expreffion) to all defects which learned eyes have found in it. I have admired this piece often in Italy in good copies, by no ordinary matters, but none come near the original. The head of the Magdalen is reckoned the chef d'auvre of Correggio. The celebrated cupola of the Duomo is fo high, fo much damaged, and my eyes fo indifferent, that I leave it for thofe who have better. At St. Sepolcro, St. Jofeph gathering palms, \&c. by the fame great hand. There are works by him alfo in the church of St. John, but not equally beautiful, and a copy of his femous Notte. At the academy is a fine adoration, by Mazzola. The great theatre here is the largeft in the world. In the afternoon to the citadel; but Its governor, Count Rezzonico, to whom I had a letter, is abfent from Parma. Then to the celebrated reale typografia of Signore Bodoni, who fhewed me many works of fingular beauty. The types, I think, exceed thofe of Didot at Paris, who often crowds the letters clofe, as if to fave paper. The Daphne and Chloe, and the Annynta, are beautifully executed; I bought the latter as a fpecimen of this celebrated prefs, which really does honour to Italy. Signore Bodoni had the title of the printer to the King of Spain, but never received any falary or even gratification, as I learned in Parma from another quarter; where I was alfo informed, that the falary he has from the duke is only 150 zechins. His merit is great and diftinguifhed, and his exertions are uncommon. He has thirty thoufand matrices of type. I was not a little pleafed to find, that he has met with the beft fort of patron in Mr. Edwards, the bookfeller, at L.ondon, who has made a contract with him for an impreffion of two hundred and fifty of four Greek poets, four Latin, and four Italian ones-Pindar, Sophocles, Homer, and Theocritus; Horace, Virgil, Lucretius, and Plautus; Dante, Petrarca, Ariofto, and Taffo. In fearching bookfellers' fhops for printed agriculture, I became poffeffed of a book which I confider as a real curiofity - "Diario di Golorno per l'anno 1789," preceded by a fermon on this text, Ut feductores et veraces: Corinth. cap. vi. ver. 8. The diary is a catalogue of faints, with the chief circumftances of their lives, their merits, \&c. This book, which is put together in the fpirit of the tenth century, is (marvelloufly be it fpoken!) the production of the Duke of Parma's pen. The fovereign, for whofe education a conftellation of French talents was collected-with what effect let this production witnefs. Inftead of profanely turning friars out of their convents, this prince has peopled his palace with monks; and the holy office of inquifition is found at Parma, inltead of an academy of agriculture. The duchefs has her amufements, as well as her hufband: doubtlefs they are more agreable, and more in unifon with the character and practice of this age. The memoirs of the court of Parma, both during the reigns of Don Philip and the prefent duke, whenever they are publihed, for written 1 fhould fuppofe they mult be, will make a romance as interefting as any that fiction has produced. IfI lived under a government that had the power of fleecing me to fupport the extravagances of a prince, in the name of common feclings, let it be to fill a palace with miftreffes, rather than with monks. For half a million of French livres, the river Parma might be made navigable from the Po: it has been more than once mentioned; but the prefent duke has other and more holy employments for money; Don Philip's were not fo directly aimed at the gates of Paradife.
The 1oth. In the morning, walked with Signore Amoretti to Vicomero, feven miles north of Parma towards the Po, the feat of the Count de Schaffienatti. For half the way, we had a fine clear frofty fun-fhine, which fhewed us the conftant fog that hangs over the Po; but a flight breeze from the north rifing, it drove this fog over us, and changed the day at once. It rarely quits the Po, except in the heat of the day in fine weather in fummer, fo that when you are to the fouth of $i t$, with a clear view of the

Appenines, you fee nothing of the Alps; and when to the north of it, with a fine view of the latter, you fee nothing of the Appenines. Commonly it does not fpread more than half a mile on each fide wider than the river, but varies by wind, as it did to-day. The country, for four miles, is moftly meadow, and much of it watered; but then becomes arable. Fntered the houfe of a metayer, to fee the method of living, but found nobody; the whole family, with fix or eight women and children, their neighbours, were in the ftable, fitting on forms fronting each other in two lines, on a face paved and clean, in the middle of the room, between two rows of oxen and cows: it was moft difagreeably hot on entering. They flay there till they go to bed, fometimes till midnight. This practice is univerfal in Lombardy. Dine with the Count de Schaffienatti, who lives entirely in the country with his wife. He thewed me his farm, and I examined his dary, where cheefes are made nearly in the fame way, and with the fame implements as in the Lodefan; thefe cheefes may therefore, with as inuch propriety, be called Parmefan, as thofe that come from Lodi. My friend, the Abbate Amoretii, having other engagements in this country, I here took leave of him with regret.14 miles.
The isth. Having agreed with a vetturino to take me to Turin, and he not being able to procure another paffenger, I went alone to Firenzola. It is fine fun-fhine weather, decifively warmer than ever felt in England at this feafon: a fharp frof, without aflecting the extremities as with us, where cold fingers and toes may be claffed among the nuifances of our clinate. I walked moft of the way. The face of the country is the fame as before, bur vines decreafe after Borgo St. Donnino. An inequality in the furface of the country begins alfo to appear, and every where a fcattering of oak timber, which is a new feature. - 20 miles.

The $\mathbf{1} 2 \mathrm{th}$. Early in the morning to Piacenza, that I might have time to view that city, which, however contains little worthy of attention. The country changed a good deal today. It is like the flat rich parts of Effex and Suffolk. Houfes are thinner, and the general face inferior. The inequalities which began yefterday increafe.- The two equeftrian fatues of Alexander and Rannutio Farnefe, are finely expreflive of life; the motion of the hories, particularly that of Alexander's, is admirable; and the whole performance fpirited and alive. They are by John of Bologna, or Moca his éleve. Sleep at Caftel St. Giovanne. - 26 miles.

The 1 jth. Crofs a brook two miles diftant, and enter the E: Sardinia's territory, where the fculls of two robbers, who, about two months ag., robbed the courier of Rome, are immediately feen : this is an agreeable object, that frikes us at our entrance into any part of the Piedmontefe dominions; the inhabitants having in this refpect an ill reputation throughout all Italy, much to the difgrace of the government: The country, to Tortona, is all hill and dale; and l,eing cultivated, with an intermixture of vines, and much inclofed, with many buildings on the hills, the features are fo agreeable, that it may be ranked among the moft pleafing I have feen in Italy. With. in three miles of Voghera, all is white with fnow, the firt I have feen in the plain; but as we approach the mountains, fhall quit it no more till the Alps are croffed. Dine at Voghera, in a room in which the chimney does not fmoke; which ought to be noted, as it is the only one free from it fince I left Bologna. At this freezing feafon, to have a door conflantly open to aid the chimney in its office; one fide burnt by the blaze of a faggot, and the other frozen by a door that opens into the yard, are among the agrémens of a winter journey in lat. 45. After Voghera the hills tend more to the fouth. The fun fetting here is a fingular object to an eye ufed only to plains. The Alps not being vifible, it feems to fet long before it reaches the plane of the horizon. Pafs the citadel of

Tortona

Fortona on a hill, one of the ftrongeft places in the poffeffion of the King of Sardinia - 33 miles.

The 14th. Ford the Scrivia; it is as ravaging a fleam as the Trebbia, fubject to dreadful floods, after even two days rain; efpecially if a Scirocco wind melts the fnow on the Appenines : fuch accidents have often kept travellers four, five, and even fix days at miferable inns. I felt inyfelf lighter for thi having paffed it ; for there were not fewer than fix or feven rivers, which could have thus ftopped me. This is the laft. The weather continues fharp and frofty, very cold, the ice five inches thick, and the fnow deep. Dine at Alexandria, joined there by a gentleman who has taken the other feat in the vettura to Turin. Juft on the outfide of that town, there is an uncommon covered bridge. The citadel feems furrounded with many works. Slecp at Fellifham, a vile dirty hole, with paper windows, common in this country, and not uncommon even in Alexandria itfelf.- 18 miles.

The isth. The country, to Afti and Villanova, all hilly, and fome of it pleafing.Coming out of Afti, where we dined, the country for fome miles is beautiful. My vetturino has been travelling in company with another, without my knowing any thing of the mafter till to-day; but we joined at dinner, and 1 found him a very fenfible agrecable Frenchman, apparently a man of fafhion, who knows every body. His converfation, both at dinner, and in the evening, was no inconfiderable relief to the dullnefs of duch a frozen journey. His name Nicolay.-_ 22 miles.

The ${ }^{16 \mathrm{th} .}$ To Turin, by Moncallier; much of the country dull and difagreeable; hills without landfcape; and vales without the fertility of Lombardy. My companion, who is in office as an architect to the King, as well as I could gather from the hints he dropped, lived nine years in Sardinia. The account he gives of that ifland, contains fome circumftances worth noting. What keeps it in its prelent unimproved fituation, is chiefly the extent of eftates, the abfence of fome very great proprictors, and the inattention of all. The Duke of Affinara has 300,000 livres a-year, or 15,000 . fterling. The Duke of St. Piera 160,000. The Marchefe di Pafcha, very great. Many of them live in Spain. The Conte de Girah, a grandec of Spain, has an eftate of two days journey, reaching from Poula to Oliuftre. The peafants are a miferable fet, that live in poor cabins, without other chimaies than a hole in the roof to let the finoke out. The intemperia is frequent and pernicious every where in fummer ; yet there are very great mountains. Cattle have nothing to eat in winter, but brouzing on fhrubs, \&c. There are no wolves. The oil fo bad as not to be eatable. Some wine almoft as good as Malaga, and not unlike it. No filk. The great export is wheat, which has been known to yield forty for one; but feven or eight for one is the common produce. Bread, $1 /$. the pound; beef, $2 f$; mutton, $2 \frac{1}{2}$. . There are millions of wild ducks; fuch numbers, that perfons fond of fhooting have gone thither merely for the incredible fport titcy afford.

The 17th. Waited on our ambaffador, the Honourable Mr. Trevor, who was not at home; but I had an invitation to dinner fooin after, which l accepted readily, and paffed a very pleafant day. Mr. Trevor's fituation is not compatible with his being a practical farmer; but he is a man of deep fenfe, and much oblervation; all fuch are political farmers, from conviction of the importance of the fubject. He converfes well on it ; Mr. Trevor mentioned fome Piedmontefe nobles, to whom he would have introduced me, if my ftay had been long enough; but he would not admit an excufe refpecting the Portuguefe ambaffador, of whom he fpeaks as a perfon remarkably well informed; and who loves agriculture greatly. In the evening, accompanied Mirs. Trevor to the great

[^40]opera-houfe; a rehearfal of l'Olympiade, new-fet by a young compofer, Frederici; Marchefe fung.
The 18 th . I am not a little obliged to Mr . Trevor for introducing me to one of the beft informed men I have any where met wih, Don Roderigo de Souza Continho, the Portugucfe miniter at the court of Turin, with whom I dined to-day; he had invited to mect me the Medico Bonvicino, l'Ablate Vafco, anthor of feveral political pieces of merit, and Signore Bellardi, a botanift of confiderable reputation, whom I had known before at Turn. What the young and beautiful Madame de Souza thinks of an Englifl farmer, may be eafily grecled; for not one word was fpoken in an inceffant conver. fation, but on agriculture, or thofe political principles which tend to cherifh or reftrain it. To a woman of fathion in England this would not appear extraordinary, for fhe now and then meets with it; but to a young Picdmontefe, unaccultomed to fuch converfations, it muft have appeared odd, uninviting, and unpolite. M. de Souza fent to the late I'rince of Bzazil, one of the beft and moft judicious offerings that any ambaflidor ever made to bis fovcreign; Portugal he reprefents as a country capable of valt improvemento by irrigation, but almoft an entire flanger to the practice; thercfore, with a view of introducing a knowledge of its importance, he ordered a model, in different woods, to be conftructed of a river; the method of taking water fromit; and the conducting of it by various channets over the adjoining or diftant lands, with all the machinery ufed for regulating and meafuring the water. It was made on fuch a feale, that the model was an exhibition of the art, fo far as it could be reprefented in the diftribution of water. It was an admisuble thought, and might have proved of the greatell importance to his country. This machine is at Libbon; and, I take it for granted, is there confidered (if Libbon be like other courts) as a toy for children to look at, inftead of a fchool for the inflruction of a people. I was pleafed to find the l'ortuguefe minifter among the moft intimate acquaintances of Mr. Trevor; the friondhnip of men of parts and knowledge, docs them reciprocal honour: I am forry to quit Turin, juft as I am known to two men who would be fufficient to render any town agrecable; nor fhould I be forry if Don Roderigo was a farmer near me in Suffolk, inftead of being an ambaffador at Turin, for which he is doubtlefs much obliged to me.

The $19^{\text {th. The }}$. Thing has fent a meflage to the Academy of Sciences, recommending them to pay attention to whatever concerns dying. The minifter is faid to be a man of abilities, from which exprefion, in this age, we are to underttand, a perfon who is, or feans to be active for the cucouragement of manufactures and commerce, but never one who has juft ideas on the importance of agr:culture in preference to all other objects. To multiply mulberries in Piedmont, and cattle and ihcep in Savoy-to do fomething with the fertile waftes and penfiferous inarfhes of Sardinia, would give a minifter reputation among the few real politicians only in any country: but dying, and buttons*, and fciflars, and commerce, are calculated to pleafe the many, and confequently to give reputation to thofe who build on fuch foundations. Dine with Mr. Trevor, and continue to find in him an equal ability and inclination to anfwer uch of my enquiries as I took the liberty of troubling him with. In the evening he introduced me to Count Granari, the fecretary of ftate for home affairs, that is the prime minitter, under an idea that he had an intention of introducing Spanifh fhecp: he was ambaffiador in Spain, and feens, from his converfation, well informed concerning the Spanifi focks. This minifter was called home to fill his prefent important fituation, to the fatisfaction of the people, who have
very generally a good opinion of his ability and prudence. To.morrow I leave Turin: 1 have agreed with a vetturino for carrying ne to Lyons acrofs Mont Cenis, in a chariot, and allowed him to take another perfon: this perfon he has found; and it is Mr. Grundy, a confiderable merchant of Birmingham, who is on his return from Naples.

The soth. Leave Turin; dine at St. Anthony, like hogs; and fmoked all the dinner like hams. Sleep at Suza, a better inn.- 32 miles.

The 21 ft . The floortef day in the year, for one of the expeditions that demand the longeft, the paffage of Mont Cenis, about which fo much has been written. To thofe who, from reading, are full of expectation of fomething very fublime, it is almoft as great a delufion as is to be met with in the regions of romance: if travellers are to be believed, the defeent, rammafint on the fnow, is made with the velocity of a flafh of lightning ; I was not fortunate enough to meet with any thing fo wonderful. At the grande croix we fented ourfelves in machines of four flicks, dignified with the mame of traineau: a mule draws it, and a conductor, who walks between the machine and the animal, ferves chiefly to kick the fnow into the face of the rider. When arrived at the precipice, which leads down to Lanebourg, the mule is difmiffed, and the ramma/fing begins. The weight of two perfons, the guide fcating himfelf in the front, and directing it with his heels in the fnow, is fufficient to give it motion. For moft of the way he is content to follow very humbly the path of the mules, but now and then croffes to efcape a double, and in fuch fpots the motion is rapid enough, for a few feconds, to be agreeable; they might very eafily fhorten the line one half, and by that method gratify the Englifh with the velocity they admire fo much. As it is at prefent, a good Englifh horfe would trot as faft as we rammafced. The exaggerations we have read of this bufinefs have arifen, perhaps, from travellers paffing in fummer, and relying on the defcriptions of the muleteers. A journey on finow is commonly productive of laughable incidents; the road of the traineau is not wider than the machine, and we were always meeting mules, \&c. It was fometimes, and with reafon, a queftion who fhould turn out; for the fnow being ten feet deep, the mules had fagacity to confider a moment before they buried themfelves. A young Savoyard female, riding her mule, experienced a complete reverfal; for, attempting to pals my traincau, her beaft was a little reftive, and tumbling, difmounted his rider: the girl's head pitched in the fnow, and funk deep enough to fix her beauties in the pofition of a forked poft ; and the wicked muleteers, inftead of affifting her, laughed too heartily to move : if it had been one of the ballcrine, the attitude would not have been diffrefling to her. Thefe laughable adventures, with the gilding of a bright fun, made the day pafs pleafantly; and we were in good humour enough to fiwallow with chearfulnefs, a dinner at Lanebourg, that, had we been in England, we fhould have configned very readily to the dog-kennel. - 20 miles.

The 22 d . The whole day we were among the high Alps. The villages are apparently poor, the houfes ill built, and the people with few comforts about them, except plenty of pine wood, the forefts of which harbour wolves and bears. Dine at Modane, and flecp at St. Michel.- 25 miles.

The ${ }_{3}$ d. Pafs St. Jean Maurienne, where there is a bifhop, and near that place we faw what is much better than a bihop, the prettieft, and indeed the only pretty woman we faw in Savoy; on enquiry, found it was Madame de la Colle, wife of a farmer of tobacco; I fhould have been better pleafed if the had belonged to the plough.-The mountains now relax their terrific features: they recede enough, to offer to the willing induflry of the poor inhabitants fomething like a valley; but the jealous torrent feizes it with the hand of defpotifm, and like his brother tyrants, reigns but to deftroy. On
fome flopes vines: mulberries begin to appear; villages increafe; but fill continue rather thapelefs heaps of inhabited ftones than ranges of houfes; yet in thele homely cots, bencath the fnow-clad hills, where natural light comes with tardy beams, and art feems more fedulous to exclude than admit it, peace and content, the companions of honelty, may refide; and certainly would, were the penury of nature the only cvil folt; but the hand of defpotifn may be more heavy. In feveral places the view is picturefque and pleafing: inclofures feem hung againft the momatain fies, as a picture is fufpended to the wall of a room. The people are in general excecdingly ugly and dwarfilh. Dine at La Chambre ; lad farc. Sleep at Aguebelle.- 30 miles.
The 2 \&th. The country to-day, that is to Chambery, improves greatly; the mountains, though high, recele; the vallies are wide, and the flopes more cultiyated; and towards the capial of Savoy, are many country houles which enliven the feene. Above Mal 'Taverne is Chateauneuf, the houfe of the countefs of that mame. I was forry to fee, at the village, a carcan, or feigneural flandard, ereeted, to which a chain and heavy iron collar are faltened, as a mark of the lordly arrogance of the nobility, and the flavery of the people. I akked why it was not burned, with the horror it merited? 'I he queltion did not excite the furprize I expected, and which it would have done before the French revolution. This led to a converfation, by which I leaned, that in the lonut Savoy, there are no feigneurs, and the people are generally at their eafe; poffelling linte properties, and the land in fpite of nature, almoit as valuable as in the lower country, where the people are poor, and ill at their cafe. I demamed why? Becalle there are feigneurs every welere. What a vice is it, and even a curfe, that the geniry, inflead of being the cherifhers and benefactors of their poor nciphbours, fhould thus, by the abomination of feudal rights, prove mere tyrants? Will sothing but revolutions, which caufe their chateux to be burnt, induce them to give to realon and humanity, what will be extorted by violence and commotion? We had arranged our journey, to arrive early at Chambery, for an opportunity to fee what is moft interefting in a place that has but little. It is the winter refidence of almoft all the nobility of Savoy. The bett eftate in the duchy is not more than 60,000 Piedmontefe livres a year ( 300 c .) , but for 20,000 livers, they live en grand feigneur here. If a country gentleman have 150 louis d'or a year, he will be fure to Ipend three months in a town; the confequence of which mult be, nine uncomfortable ones in the country, in order to make a beggarly figure the other three in town. Thefe idle people are this Chrilt tmas difappointed, by the court having refufed admitance to the ufual company of French comedians; the govermment fears importing among the rough mountaineers the prefent fipirit of Fronch liberty. Is this ueiknels or policy? But Chambery had objects to me more intcrefting. I was cager to view Charmettes, the road, the houfe of Madame Warchs, the viacyard, the garden, every thing, in a wrrd, that lad been defcribed by the inmintable pencil of Roufleau. There was fonething fo delicioully amiable in her character, in fpite of her frailtiesher conftant gaiety and good humour - her tendernefs and humanity-her farming fpeculations - but, above all other circumftances, the love of Roufcult, have written her name amongt the few whofe memoirs are comected with us, by ties more eafily felt than deffribed. The houle is fituated about a mile from Chambery, fronting the rocky road which leads to that city, and the wood of chcfnuts in the valley. It is fimall, and much of the fame fize as we fhould fuppofe, in England, would be found on a farm of one hundred acres, without the leaft luxury or pretention; and the garden, for fhrubs and flowers, is confincd, as well as unalfuming. The feenery is pleafing, being fo near a city, and yet, as he obferves, quite fequeftered. It could not but intereft ue, and I viewed
viewed it with a degree of emotion; even in the leatlefs melancholy of December it pleafed. I wandered about fome hills, which were afluredly the walks he has fo agreeally defcribed. I returned to Chambery, with my heart full of Madane de Warens. We had with us a young phyfician, a Monfieur Bernard, of Molanne en Mandeme, an agreable man, connected with people at Chambery ; I was forry to find, that he knew nothing more of the matter, than that Madame de Warens was certainly dead. With fome trouble I procured the following certificate:

## Estract from the Mortuary Regifter of the Parifls Church of St. Peter de L.cmens.

" The 3oth of July was buried, in the burying ground of Lemens, Dame Louifa Frances Fleonor de la Tour, widow of the Seignor Baron de Warens, native of Vevay, in the canton of Berne, in Switzerland, who died yefterday, at ten in the evening, like a good Chriftian, and fortificd with her laft facraments, aged about fixty-three years. She abjured the Proteftant religion about thirty-fix years paft; fince which time fhe lived in our religion. She finithed her days in the fuburb of Nefin, where fhe had lived for about eight years, in the houfe of M. Crepine. She lived heretofore at the Rectus, about four years in the houfe of the Marquis d'Alinge. She paffed the reft of her life, fince her abjuration, in this city. (Signed) Game, rector of Lemens."
" I, the underwritten, prefent rector of the faid Lemens, certify, that I have extracted this from the mortuary regifter of the parih church of the faid place, without any addition or diminution whatfoever; and, having collated it, have found it conformable to the original. In witnefs of all which, I have figned the prefent at Chambery, the $24^{\text {th }}$ of December, 1789 .

## (Signed) A. Sachod, rector of Lemens.

-23 miles.
The 25 th. Left Chambery much diffatisfied, for want of knowing more of it. Rouffeau gives a good character* of the people, and I wifhed to know them better. It was the worft day I have known, for months paft, a cold thaw, of fnow and rain; and yet in this dreary feafon, when nature fo rarely has a fmile on her countenance, the environs were charming. All hill and dale, tofled about with fo much wildnefs, that the features are bold enough for the irregularity of a foreft fcene; and yet withal, foftened and melted down by culture and habitation, to be eminently beautiful. The country inclofed to the firft town in France, Pont Beauvoifin, where we dined and fept. 'The paflage of Echelles, cut in the rock by the fovereign of the country, is a noble and ftupendous work. Arrive at Pont Beautm, once more entering this noble kingdom, and meeting with the cockades of liberty, and thofe arms in the hands of the people, which, it is to be wilied, may be ufed only for their own and Europe's peace.- 24 miles.

The 26. Dine at Tour du Pin, and fleep at Verpiliere. This is the moft advantageous cntrance ino France, in refpect of beauty of country. From Spain, England, Flanders, Germany, or Italy by way of Antibes, all are inferior to this. It is really beautiful, and well planted, has many inclofures and mulberries, with fome vines. There is hardly a bad feature, except the houfes; which, inftead of being well built, and white as in Italy, are ugly thatched mud cabins, without chimnies, the fmoke iffuing at a hole in the roof, or at the windows. Glafs feems unknown; and there is an air of poverty and mifery about them quite diflonant to the general afpect of the country.

- S'il eft une petice ville au monde où l'on goûte la douccur de la vie dans un conmerce agréable is für, c'ifl Chambery.

Pafs Pourgoyn, a large town. Reach Verpiliere. This day's journey is a fine variation of hill and dale, well planted with chateaux, and farms and cottages fpread about it. A mild lovely day of fun-hline threw no flight gilding over the whole. For ten or twelve days paft, they have had, on this fide of the $A \mid p s$, fine open warn weather, with fun-fline ; but on the Alps themfelves, and in the vale of Lombardy, on the other fide, we were frozen and buried in fnow. At Pont 13eauvoifin, and Bourgoyn, our paffiports were demanded by the milice bourseoife, but no where elfe: they affiure us, that the country is perfectly quict every where, and lave no guards mounted in the villages-nor any fulpicions of fugitives, as in the fummer. Not far from Verpilicre, pafs the burnt chateau of M. de Veau, in a fine fituation, with a noble wood behind it. Mr. Grundy was here in Augult, and it had then but lately been laid in afhes; and a peafant was hanging on one of the trees of the avenue by the road, one among many who were feized by the milice bourgcoife for this atrocious act.- 27 miles.

The 27th. The country, changes at once; from one of the fineft in France, it becomes alinoft flat and fombre. Arrive at Lyons, and there, for the laft imee, fee the Alps; on the quay there is a very fine view of Mont Blane, which I had not feen beefore; leaving Italy, and Savoy, and the Alps, probably never to return, has fonething of a melancholy fenfation. For all thofe circumftances which render that claffical country illuftrious--the feat of great men-the theatre of the molt diftinguilhed ac-tions-the exclufive field in which the elegant and agreeable arts have loved to range -what country can be compared with Italy? to pleale the eye, to charm the ear, to gratify the enquiries of a laudable curiofity, whither would you travel? In every bofom whatever, Italy is the fecond country in the world-of all others, the fureft proof that it is the firft. To the theatre; a mufical thing, which called all Italy by contraft to my ears! What fuff is French mufic! the difortions of embodied difonance. The theatre is not equal to that of Nantes; and very much inferior to that of Bour-deaux.- 18 miles.

The 28 th. I had letters to Monf. Goudard, a confiderable filk merchant, and, waiting on him yefterday, he appointed me to breakfaft with him this morning. I tried hard to procure fome information relative to the manufactures of Lyons; but in vain: evcry thing was flon and fuizant. 'To Monf. l'Abbé Rozier, author of the voluminous dictionary of agriculture, in quarto. I vifited him as a man very much extolled, and not with an idea of receiving information in the plain practical line, which is the object of my enquiries, from the compiler of a dictionary. When Monf. Rozier lived at Beziers, he occupied a confiderable farm; but, on becoming the inhabitant of a city, he placed this motto over his door-Lauduto ingential rura, cxigzuun colito, which is but a bad apology for no farm at all. I made one or two cflorts towards a little practical converfation; but he flew off from that centre in fuch eccentric radii of fcience, that the vanity of the attempt was obvious in a moment. A phyfician, prefent, remarked to me, that if I wanted to know common practices and products, I fhould apply to common farmers, indicating by his air and mamer, that fuch things were $b$ neath the dignity of fcience. Monf. l'Abbé Rozier is, however, a man of confue able knowledge, though no farmer ; in thofe purfuits, which he has cultivated with inclination, he is jufly celebrated-and he merits cvery culogium, for having fet on foot the Journal do Pbyique, which, take it for all and all, is by far the beit journal that is to be found in Europe. His houfe is beautifully fituated, commanding a noble profpect; his library is furnifhed with good books; and very appearance about himp points out an eafy fortune. Waited then on Monf. de liroflard, a proteltant
miniter, who, with great readinefs and liberality, gave me much valuable information; and, for my further intrustion on points with which be was not equally acquainted, introduced me to Monf. Roland la Platerie, infjector of the Lyous fabrics. 'This gentleman had notes upon many fubjects, which afforded in interelling converlation; and, as he communicated freely, I had the pleafure to find, that I fhould not quit L ;ons without a good portion of the knowledge I fought. 'I'his gentleman, fomewhat alvanced in life, has a young and beautiful wife-the lady to whom he addrefled his letters, written in Italy, and which have been publifhed in five or fix volumes. Mont: lioflard defiring Monf. de la Mhterie to dine wish him, to meet me, we lad a great deal of converfation on agriculture, manufactures, and commerce; and difcred but little in our opinions, except on the treaty of commerce between England and France, which that gentleman condemned, as I thought, unjufly; and we debated the point. He warmly contended, that filk ourgh to have been included as a benefit to lrance; I urged, that the offer was made to the French minifry, and refufed; and 1 ventured to fay, that had it been accepted, the advantage would have been on the fide of England, jantead of France, fuppofing, according, to the vulgar ideas, that the benefit and the balance of trade are the fane things. I' begged hint to give me a reafon for believing that France would buy the filk of Piedmont and of Clinna, and work it up to underfell England; while England buys the Prench cottor, and works it into fabrics that underfell thofe of France, even under an accumulation of charges and duties? We difcuffed thefe, and fimilar fubjects, with that fort of attention and candour that render them interefting to perfons who love a liberal converfation upon inportant points.Among the objects at Lyons, that are worthy of a ftranger's curiofity, is the point of junction of the two great rivers. Soanne and the Rhone; Lyons would doubtlefs be much better fituated, if it were really at the junction; but there is an unoccupied fpace fullicient to contain a city half as large as Lyonsiffelf. This face is a modern embankment, that coft fix millions, and ruined the undertakers. I prefer even Nantes to I.yons. When a city is built at the junction of two great rivers, the imagination is apt to fuppofe, that thofe rivers form a part of the magnificence of the feenery. Without broad, clean, and well built quays, what are rivers to a city but a facility to carry coals or tar-barrels? What, in point of beauty, has i.ondon to do with the Thames, except at the terrace of the $\Lambda$ delphi, and the new buildings of Somerfet-place, any more than with Fleet-ditch, buried as it is, a common fhore? I know nothing in which our expectations are fo horribly difappointed as in cities, fo very fow are built witi any general idea of beauty or decoration!

The syth. Farly in the morning, with Monf. Froflard, to view a large farm near 1.yons. Monf. Profiard is a feady adrocate for the new conllitution eftablifling in France. At the hane time, all thofe I have converfed with in the city, reprefent the flate of the manufaclure as melancholy to the laft degree. Twenty thoulimd people are fed by charity, and confequently very ill fed; and the mafs of difters, in all kinds, among the lower claffes, is greater than ever was known-or any thing of which they hat anidea. The ehief caufe of the cvil felt here, is the fagnation of trade, occafioned by the emigrations of the rich from the kingdom, and the general want of confidence in merchants and manufucturers; whence, of courfe, bankruptcies are common. At a moment when they are little able to bear additional burthens, they raife by voluntary contributions, for the poor, immenfe fums; fo that including the revenues of the holpitals, and other charitable foundations, there are not paid, at prefent, for the ufe of the poor, lefs than 40,000 louis d'or a year. My fellow traveller, Mr. Gruady, being defirous to get foon to l'aris, perfuaded me to travel wilh him in a pof-cinaif,
a mode of iravelling which $I$ deteft, but the feafon urged $m e t o$ it ; and a fill fronger motive, was the baving of more tine to pafis in that city, for the fake of obferving the extraurdinary ltate of things-of a King, Queen, and Dauphine of l'rame, actual prifoners; I therefore accepted his propolal, and we fet offafter dimner to-tiay. In about ten miles come to the mountains. The country dreary; no inclofures, no mulberries, no vines, mush waite, and nothing that indicates the vicinity of fuch a city. At Armas, fleep at a comforable inn - 17 miles.

The golh. Contine early in the morning to Tarar ; the mountain of which name is more formidalde in reputation than in reality. To St. Syphorien the fame features. The buildings increafe, both in number and goodnefs, on approaching the Seine, which we crofedat Roane; it is here a good siver, and is navigable many miles higher, and confequently at a valt diftance from the fea. There are many flat bottomed barges on it, of a confiderable fize. - 50 miles.

The 3 If. Another clear, fine, fun-fhine day; rarely do we fee any thing like it at this featon in Eugland. After Droiturier, the woods of the Bourbonuois commence. At St. Gerund le Puy the country iuproves, cnlivened by white houles and chateaux, and all continues fine to Moulins. Sought here my old friend, Mouf. L'Abbé Barut, and had another interview with Monf. le Marquis Degouttes, concerning the fale of his chateau and eftate of Riaux ; 1 defired itill to have the refufal of it, which he promifed me, and will, I have no doubt, keep his word. Never have I been lo tempted on any occafion, as with the wifh of poffeffing this agrecable fituation, in one of the finefl parts of France, and in the fineft climate of Furope. God grant, that, flould he be pleafed to protract my life, I may not, in a fadold age, repent at not clofing of once with an offer to which prudence calls, and prejudice only forhids! Heaven fend me cafe and tranquillity, for the clofe of life, be it palled either in Suffolk, or the Bourbonnois! 38 miles.

January 1, 1790. Nevers makes a fine appearance, rifing prouclly from the Loire; but, on the firt entrance, it is like a thoufand other places. lowns, thus feen, refemble a group of women, huddled clofe together: you fee their nodding plumes and fparkling gems, till you fancy that ornament is the herald of beauty; but, on a nearer iufpection, the faces are too often but common clay. From the hill that defcends to Pouges, is an extenfive view to the north; and after Pouilly a fine fecenery, with the Loire doubling through it. -75 miles.
The 2d. At Briare, the canal is an object that announces the happy effects of indutry. There we quit the loire. The country all the way diverfifiel; much of it dry, and very pleafant, with rivers, hills, and woods, but almolt every where a poor foil. Pafs many chatcaux, fome of which are very good. Sleep at Nemours, where we meet with an inn-keper, who exceeded, in knavery, all we had met with, either in France or Italy: for fupper, we had a foupe maigre, a partridge and a chicken roafted, a plate of celery, a fmaill cauliflower, two hotles of poor win du Pays, and a deffert of two lifcuits and four apples: here is the bill: - Potage 1 liv. I 0 f.-Perdrix, 2 liv. $10 \%$. Poulet, 2 liv.-Celeri, 1 liv. $4 /$--Choufleur, 2 liv. - Pain et deffert, 2 liv. -Fen \& apartment, 6 liv.-Total, 19 liv. 88 . Againgt fo impudent an extortion we remonftrated feverely, but in vain. We then infifted on his figning the bill, which after many evafions, he did, a l'etoilc; Fulliare. But having been carried to the inn, not as the flar, but the écu de France, we fufpected fome deceit; and going out to examine the premifes, we found the fign to be really the écu, and leanned, on unquiry, that his own name was Roux, inftead of Fouliare: he wa: not prepared for this detection, or for the execration we poured on fuch an inflamous conduct : but he ran away in an inftant, and hid himfelf
himfelf till we were gone. In juftice to the world, however, fuch a fellow ought to be marked out.- 60 milcs.

The 3 J , - Through the foreft of Fontainhleau, to Melun and Paris. The Go pofes from I. yons to Paris, makiug three hundred Englifh miles, coft us, including 3 louis for the hire of the poit-chaife (an old French caluiolet of two wheels) and the charges at the inns, \&ce. $\operatorname{gl}$ l. Puglifh; that is to fay, 18. per Englifh mile, or 6 d . per head. At Paris, I went to my old quarter, the hotel de la Rochefoucauld; for at Lyons I had received a letter from the duke de liancourt, who defired me to make his houfe my home, juft as in the time of his mother, my much lamented friend, the duchefs d'Eatifac, who died while I was in Italv. I found my friend Lazownki well, and we were d gorge deployée, to converte on the amazing feenes that have taken place in France fince I left Paris.46 miles.

The th. After breakfalt, walk in the gardens of the Thuilleries, where there is the mott extraordiuary fight that either French or Englifh eyes could ever behold at Paris. The King, walking with fix grenadiers of the milice bourgeoife, with an officer or two of his houfehold, and a page. The doors of the gardens are kept Thut in refpect to him, in order to exclude every body but deputies, or thofe who have admiffion-tickets. When he entered the palace, the doors of the gardens were thrown open for all with. out diftinction, though the Queen was till walking with a lady of her court. She alfo was attended fo clofely by the gardes bourgcoifes, that the could not fpeak but in a low voice, without being heard by them. A mob followed her, talking very loud, and paying no other apparent refpect than that of taking off their hats wherever the paffed, which was indeed more than I expected. Her Majefty does not appear to be in health ; The feems to be much affected, and fhews it in her face; but the King is as plump as eafe can render him. By his orders, there is a little garden railed off, for the Dauphin to amufe himfelf in, and a fmall room is built in it to retire to in cafe of rain; here he was at work with his little hoe and rake, but not without a guarl of two grenadiers. He is a very pretty good-natured looking boy, of five or fix years old, with an agreeable countenance; wherever he gocs, all hats are taken off to him, whicl I was glad to obferve. All the family being kept thus clofe prifoners (for fuch they are in effeet) afford, at firf view a fhocking fpectacle; and is really fo, if the act were not effectually ncceflary to effect the revolution; this I conceive to be impoffible; but if it were neceffary, no one can blame the people for taking every meafure pofible to fecure that liberty they had feized in the violence of a revolution. At fuch a m:oment, nothing is to be condemned but what endangers the national freedom. I mutt, however, freely own, that I have my doubs whether this treatment of the royal family can be jufly efteemed any fecurity to liberty; cr, on the contrary, whether it were not a very dangerous ftep, that expofes to hazard whatever had been gaincd. I have fpoken with feveral perfons to day, and have flated objections to the prefent fyftem, ftronger even than they appear to me, in order to learn their fentiments; and it is evident, they are at the prefent moment under an apprelienfion of an attempt towards a counter-revolution. 'The danger of it very much, if not abfofutely, refults from the violence which has been ufed towards the royal family. The National Alfembly was, before that period, anfwerable only for the permament conftitutional laws paffed for the future : fince that moment, it is equally aniwerable for the whole conduct of the govermment of the flate, executive as well as leginative. This critical fituation has made a conftant firit of exertion neceflary amongit the Paris militia. The great object of M. La Fayette, and the other military leaders, is to improve their dilcipline, and to bring them into fuch a form as to allow a ration I dependence on them, in cate of their being wanted in the field; but fuch is the tpirit of

[^41]freedom, that, even in the military, there is fo little fubordination, that a man is an officer to day, and in the ranks to-morrow; a mode of procecding, that makes it the more difficult to bring them to the point their leaders fee necefliry. Eight thoufard men in Paris may be called the ftanding army, paid every day $15 / \mathrm{a}$ a man; in which number is included the corps of the French guards from Verfailles, that delieted to the people; they have alfo eight hundred horfe, at an expence each of 1500 livres ( 621.15 s. Gd.) ayear, and the officers have double the pay of thofe in the ariny.

The 5th. Yefterday's addrefs of the National Affembly to the King has done then credit with every body. I have heard it mentioned by people of very different opinions, but all concur in commending it. It was upon the queftion of naming the amu:l fum which floould be granted for the civil lift. They determined to fend a deputation to His Majefty, requefting him to name the fum himfelf, and praying him to confult lefs his fipirit of cceonomy, than a fenfe of that dignity which ought to environ the throne with a becoming fplendor. Dine with the Duke de Liancourt, at his apartments in the Thuilleries, which, on the removal from Verfailles, were affigned to him as grand mafter of the wardrobe; he gives a great dinner, twice a-week, to the deputies, at which from twenty to forty are ufually prefent. Half an hour after three was the hour appointed, but we waited, with fome of the deputies that had left the Affembly, till leven, before the duke and the reft of the conpany came.

There is in the affembly at prefent a writer of character, the author of a very able book, which led me to expect fomething much above mediocrity in him; but he is made of to many pretty littleneffes, that I fared at him with amazement. His voice is that of a feminine whifper, as if his nerves would not permit fuch a boifterous exertion as that of fpeaking loud enough to be heard; when he breathes out his ideas. he does it with eyes half clofed; waves his head in circles, as if his femimilts were to be received as oracles; and has fo mueh relaxation and pretention to cale and delicicy of manner, with no perfonal appearance to fecond thefe prettineflis, that I wondered by what artificial means fuch a mafs of heteropeneous parts became compounded. How frange that we fhould read an author's book with great plealure; that we fhould hay, this man has no ftuff in him; all is of confequence; here is a character uncontaninated with that rubbith which we fee in fo many other men-and after this, to meet the garb of fo much littlenefs!

The 6th, 7 th, and 8th. The Duke of Liancourt having an intention of taking a farm in his own hands, to be conducted on improved principles after the Finglifh manner, he defired me to accompany him and my triend Lazowki, to Liancourt, to give my opinion of the lands, and of the beft means towards executing the project, which I very readily complied with. I was here witnels to a fcene which made me fmile: at no great ditlance from the cbatcau of Liancourt, is a piece of watte land, clofe to the road, and belonging to the duke. I faw fome men very bufy at work upon it, hedging it in, in fmall divifions; levelling, and digging, and bettowing much labour for fo poor a pot. 1 atked the fteward if he thought that land worth luch an expence? He replicd, that the poor peepie in the town, upon the revolution taking place, declared that the poor wse the nation; that the walke belonged to the mation; and, proceeding from theory to practice, tork polfellion, without any further authority, and began to cultivate; the duke not viewing their indultry with any dilipleafure, would offer no oppofition to it. 'this circumance thews the univerfal fpirit that is gone forth; and prow, s, that were it pufled a little farther, it might prove a ferious matter for all the property in the kingdom. In this cafe, however, I cannot but commend it; for if there be one public nuilince greater than another, it is a man preferving the polieffion of wafte
wafte land, which he will neither cultivate himfelf, nor let others cultinate. The miferable people die for want of breal, in the fight of waltes that would leed thoufands. I think them wife, and rational, and philofophical, in feizing fuch tracks: and I heartily wifh there was a law in England for makiag tinis action of the French palants a legat one with us.- 72 miles.

The gth. At breakfalt this morning in the Thuilleries. Monficur Defmarets, of the Academy of Sciences, bronght a Mcomine, prafonté par la Societé Rorale, d' figriculturc, al' lifcmblic Nationale, on the means of improving the agricuiture of France;"in which, among other things, they recommend great attention to bees, to panilication, and to the obttetrick art. On the eftablifhment of a free and patriotic government, to which the national agriculture might look for new and halcyon days, thefe were objects doubtlefs of the firt importance. There are fome parts of the memoir that really merit attention. Called on my fellow traveller, Monf. Nicoliy, and find him a confiderable perfon; a great hotel; many fervants; his father a marechal of France, and himfelf firlt prefident of a chamber in the Parliament of Paris, having been eleeted a deputy, by the nobility of that city, for the flates general, but declined accepting if; he has defired I would dine with him on Sunday, when he promifes to have Monf. Decretot, the celebrated manafacturer and deputy of Louviers. At the National Affembly - The Count de Mirabcau, lpaking upon the queftion of the members of the chamber of vacation, in the parliament of Rennes, was truly eloquent-ardent, lively, energetic, and impetuous. At aight to the affembly of the Duchefs d'Aurille; the Marquis and Madame Condorcet there, \&ec. not a word but politics.

The 1 oth. The chief leaders in the National Affembly, are, Target, Chapellier, Mirabean, Bernave, Volncy the traveller, and, till the atack upon the property of the clergy, l'abbe Syeyes; but he has been fo much difyufted by that ftep, that he is not near to forward as before. The violent democrats, who have the reputation of being fo much republican in principle, that they do not admit any political neceflity for having even the name of a king, are called the enrages. They have a meeting at the Jacobins, called the revolution club, which aflembles every night, in the very room in which the famous league was formed, in the reign of Henry 111 ; and they are fo numen ous, that all material bufinefs is there decided, before it is difcuffed by the National Affembly. I called this morning on feveral perfons, all of whom are great democrats; and mentioning this circumfance to them, as one which favoured too much of a Paris jinto governing the kingdon, an idea, which muft, in the long run, be unpopular and hazardous; I was amfivered, that the predoninancy which Piaris affumed, at prefent, was abfolutely neceflary for the falety of the whole nation; for if nothing were done, but by procuring a previous common confent, all great opportunitics would be loft, and the National Affembly left conflantly expofed to the danger of a counter-revolution. They, however, admitted, that it did create great jealoufies, and no where more than at Verfailles, where fome plots (they added) are, without doubt, hatching at this moment, which have the King's perfon for their object : riots are frequent there, under pretence of the price of breal: and fuch movements are certainly very dangerous, for they cannot exift fo ncar Paris, without the aritocratical party of the old government endeavouring to take advantage of them, and to turn them to a very different end, from what was, perhaps, originally intended. I remarked, in all thefe converfations, that the belief of plots, among the difgaffed party, for fetting the King at liberty, is general ; they feem almoft perfuadel, that the revolution will not be abfolutely finifhed before fome fuch attempts are made; and it is curious to obterve, that the general voice is, that if an attempt were to be made, in fuch a manner as to have the leaft appearance of fuccefs, it would undoubt-
edly coft the King his life : and fo changed is the national character, not only in point of affction for the perfon of their prince, but alfo in that lofnefs and humanity, for which it has been fo much admired, that the fuppofition is made without horror or compunction. In a word, the prefent devotion to liberty is a fort of rage; it abforbs every other paffion, and permits no other object to remain in view than what promifes to confirm it. Dine with a large party at the Duke de la Rochefoucauld's; ladies and gentlemen, and all equally politicians; but I may remark another effech of this revolution, by no means unnatural, which is, that of leffening, or rather reducing to nothing, the enormous influence of the fex; they mixed themielves before in every thing, in order to govern every thing.: I think 1 fee an end to it very clearly. The men in this kingdom were puppets, moved by their wires, who, inflead of giving the ton, in queflions of national debate, muft now receive it, and muft be content to move in the political fiphere of fome celebrated leader-that is to fay, they are, in fact, finking into what nature intended them for; they will become more amiable, and the nation better governed.

The 1 th. The riots at Derfailles are faid to be ferious; a plot is talked of, for eight hundred men to march, armed, to Paris, at the inftigation of fomebody, to join fomebody; the intention, to murder La Fayette, Bailly, and Necker; and very wild and improbable reports are propagated every moment. They have been fufficient to induce Monf. La Fayette to iffue, yefterday, an order concerning the mode of affembling the militia, in cafe of any fudden alarm. Two pieces of cannon, and eight hundred men, mount guard at the Thuilleries every day. See fome royalitts this morning, who affert, that the public opinion in the kingdom is changing apace ; that pity for the King, and difguft at fome procecdings of the Affembly, have lately done much: they fay, that any attempt at prefent to refcue the King woild be abfurd, for his prefent fituation is doing more for him than force could effect, at this moment, as the general feelings of the nation are in his favour. They have no feruple in declaring, that a well concerted vigorous effort would place him at the head of a powerful arny, which could not fail of being joined by a great, difgufed, and injured boaly. I remarked, that every honett man muft hope no fuch event would take place; for if a counter-revolution fhould be effected, it would eftablifh a defpotifn, much heavier than ever France experienced. This they would not allow; on the contrary, they believed, that no government could, in future, be fecure, that did not grant to the people more cxtenfive rights aud privileges than they poffeffed under the old one. Dine with my brother travelter, the Count de Nicolay; among the company, as the count promifed me, was Monf. Decretot, the celebrated manufacturer of Louviers, from whom I learned the magnitude of the diftrefles at prefent in Normandy. The cotton mills which he had fhewn me, laft year, at Louviers, have flood fill nine months; and fo many ipinning jennics have been detaroyed by the pcople, under the idea that fuch machines were contrary to their interelts, that the trade is in a deplorable fituation. In the evening, accompanied Monf. Lazowki to the Italian opera, La Bcrbiera di Seviglia, by Paiefello, which is one of the moft agreeable compofitions of that truly great malter. Mandini and Raffanelli excellent, and Baletti a fweet voice. There is no fuch comic opera to be feen in Italy, as this of Paris, and the houfe is always full : this will work as great a revolution in French mufic, as ever can be wrought in French government. What will they think, by and by, of Lully and Rameau? Aud what a triumph for the manes of Jean Jaques!

The 12 th. To the National Affembly:-a debate on the conduct of the chamber of vacation in the parliament of Rennes, continued. Monf. l'Abbé Maury, a zcalous royaliit, made a long and eloquent fpeech, which he delivered with great fluency and precifion, and without any notes, in defence of the parliament: he replied to what had
been urge: by the Count de Mirabeau, on a former day, and fpoke ftrongly on his unjuftifal: it on the people of Bretagne, to a redoubtable denombrement. He faid, that it would : wer become the members of fuch an affembly, to count their own principles and duties, and the fruits of their attention, to the privileges of the fubject, than to call for a dinombrement, that would fill a province with firc and bloodhed. He was interrupted ty the noile and confufion of the affembly, and of the audience, fix feveral times; but it had no effect on him; he waited calmly till it fubfided, and then proceeded, as if no interruption had been given. The fpeech was a very able one, and much relifhed by the royalifts; but the enragés condemned ir, as good for nothing. No other perfon fpoke without notes; the Count de Clermont reac a fpech that had fome brilliant paffages, but by no means an anfwer to l'Abbé Maury, as indeed it would have been wonderful if it were, being prepared before he heard the Abbé's oration. It can hardly be conceived how flat this mode of debate renders the tranfactions of the Affembly. Who would be in the gallery of the Englifh Houfe of Commons, if Mr. Pitt were to bring a written fpeech, to be delivered on a fubject on which Mr. Fox was to fpeak beiore him? And in proportion to its being uninterefting to the hearer is another evil, that of lengthening their fittings, fince there are ten perfons who will read their opinions, to one that is able to deliver an impromptu. The want of order, and every kind of confufion, prevails now almolt as much as when the Affembly fat at Verfailles. The interruptions given are frequent and long; and fpeakers, who have no right, by the rules to fpeak, will attempt it. TheCount de Mirabeau preffed to deliver his opinion after the Ablé Maury; the prefidenc put it to the vote, whether he fhould be allowed to fpeak a fecond tinee, and' the whole houfe rofe up to negative it; fo that the firft orator of the Affenbly has not the influence even to be heard to explain - we have no conception of fuch rules; and yet their great number mult make this neceffary. I forgot to obferve, that there is a gallery at each end of the faloon, which is open to all the world ; and fide ones for admillion of the friends of the members by tickets: the aubience in thofe gallerics are very noily : they clap, when any thing pleafes them, and they have been known to hifs; an iadccorum which is utterly deflructive of freedom of debate. I1.ft the houfe before the whole was finifhed, and repaired to the Duke of Liancourt's apartments in the 'Thuilleries, to dine with his cuftomary party of deputies; Meff. Chapellier and Demeufniers were there, who had both been prefidents, and are fill members of confiderable diftinction; M. Volney, the celebrated traveller, alfo was prefent; the Prince de Poix, the Count de Montmorenci, \&c. On our waiting for the Duke of Liancourt, who did not arrive till half after feven, with the greateit part of the company, the converfation almoft entirely turned upon a ftrong fulpicion entertaince of the Luglifh having made a remittance for the purpofe of embroiling matters in the kinguom. The Count de Thiard, cordon blue, who commands in Bretagne, fiumply ftated the lact, that fome regiments at Breft had heen regular in their conduct, and as much to be depended on as any in the fervice; but that, of a fudden, money had found its way among the men in confiderable fums, and from that tine their behaviour was changed. One of the deputies demanding at what period, he was anfwered " ; on which he immediately obferved, that it followed the remittance of $1,100,000$ livres $(48,1251$.) from Eugland, that had occafioned fo much conjecture and converfation. This remittance which had beeu particularly enquired into, was fo myfterious and obfeure, that the naked fact only could be difcovered; but every perfon prefent afferted the truth of it. Other gentlemen united the two facts, and were ready to fuppofe them connected. I remarked,
that if England had really interfered, which appeared to me incredible, it was to be prefumed, that it would have been either in the line of her fuppofed interef, or in that of the King's fuppofed inclination ; that thefe happened to be exactly the fame, and if money were remitted from that kingdom, moft afluredly it would be to fupport the falling interef of the crown, and by no means to detach from it any force whatever; in fuch a cafe remittance from Eng'and might go to Metz, for keeping troops to their duty, but would never be fent to Breft to corrupt them, the idea of which was grofsly abfurd. All feemed iuclined to admit the jufnefs of this remark, but they adhered to the two facts, in whatever manner they might, or might not, be connected. At this dimer, according to cuftom, moft of the deputies, elipecially the younger ones, were dreffed au polifon, many of them without powder in their hair, and fome in boots; not above four or five were neatly dreffed. How times are changed! When they had nothing better to attend to, the faflionable Parifians were correctnefs iffelf, in all that pertained to the toictte, and were, therefore, thought a frivolous people; hut now they have fomething of more importance than drefs to eccepy them; and the light airy character that was ufinally given them, will have no foundation in truth. Every thing in this world depends on government.

The $13^{\text {th }}$. A great commotion among the populace !ate laft night, which is faid to have arifen on two accounts-one to get at the Baron de Befneval, who is in prifon, in order to hang him'; the other to demand bread at $2 f$. the pound. They eat it at prefent at the rate of twenty-two millions a-year cheaper than the reft of the kinglom, and yet they demand a farther reduction. However, the current difeourte is, that Favras, an adventurer alfo in prifon, muft be hanged to fatisfy the people; for as to Befneval, the Swifs cantons have remontrated fo firmly, that they will not dare to execute him. Farly in the morning, the guards were doubled, and eight thoufand horfe and trot are now patrolling the Itrects. The report of plots, to carry off the King, is in the emonth of cvery one; and it is faid, thefe movements of the people, as well as thofe at Verfailles, are not what they appear to be, mere mobs, but intligated by the ariftocrats; and if permitted to iffe to fuch a height as to entangle the Paris militia, will prove the part only of a confpiracy againt the new govermment. That they have reaton to be alert is undoubted; for though there flould actually be no plots in exillence, yet there is fo great a temptation to them, and fuch a probability of their being formicd, that fupinenefs would probably create them. I have met with the lieutenaut-colond of a regiment of horfe, who is come from his quarters, and who afferts, that his whole regiment, officers and men, are now at the King's devotion, and would march wherever he called, and would execute whatever he ordered, not contrary to their ancient feelings; but that they would not have been inclined to be fo obedient before he was brought to Paris; and from the converfation he has had with the officers of other regiments, he believes that the fame firit pervendes their corps alfo. If any ferious plans have been laid for a counter-revolution, or for carrying of the King, and their exccution has been, or hall be prevented, pofterity will be much more likely to have information of it than this age. Certainly the eyes of all the fovereigns, and of all the great nobility in Furope, are on the French revolution; they look with amazement, and even with terror, upon a fituation which may poffibly be hereafter their ovel cafe; and they mult ex. peet, with anxiety, that fome attempts will be made to reverfe an example, that will not want copies, whenever the period is favourable to make them. Dine at the P ilais Royal, wih a felect party; poliicians they muft be, if they are lirenchmen. The queftion was difcuffed, Are the plots and confpiracics of which we hear fo much at prefent, real, or are they invented by the leaders of the revolution, to keep up the
fpirits of the militia, in order to enable themfelves to fecure the government on its new foundation irreverfibly?

The 14th. Plots! plots!-the Marquis La Fayette, laft night, took two hundred prifoners in the Cbamps Elyëess, out of eleven hundred that were co:lected. They had powder and ball but no mufquets. Who? and what are they? is the queftion; but an anfiwer is not fo cafily to be had. Brigands, according to fome accounts, that have collected in Paris for no good purpofe; poople from Verfailles by others; Germans by a third: but every one would make you believe, they are an appendix to a plot laid for a counter-revolution. Reports are fo various and contradictory, that no dependence is to be placed on them; nor credit given to one-tenth of what is afferted. It is fingular, and has been much commented on, that La Fayette would not truft his ftandiug troops, as they may be called, that is the cight thoufand regularly paid, and of whom tid •rench guards form a confiderable portion, but he took, for the expedition, the bourgcoije only; which has elated the latter as much as it has difgufled the former. The moment feems big with events; there is an anxiety, an expectation, an uncertainty, and fufpence that is wfible in every cye one meets; andeven the beft informed people, and the leaft liable to be led away by popular reports, are not a little alarmed at the apprehenfion of Come unknown attempt that may be made to refcue the King, and overturn the National Affembly. Many perfons are of opinion, that it would not be difficult to take the King, Queen, and Dauphin away, without endangering them, for which attempt the Thuilleries is putticularly well fituated, provided a body of troops, of fufficient furee, were in readinefs to receive them. In fuch a cafe, there would be a civil war, which, perhap., would end in delpotifm, whatever party came of victorious; confoquently fuch an attenipt, or plan, could not originate in any bofom from true patriotifu. If I have a fair clpportunity to pais much of my time in good company at Paris, 1 have allio no fimall trouvle in turning over books, MSS. and papers, which I cannot fee in England: this employs many hours a day, with what I borrow from the night, in making an,tes. I have procured alfo fome public records, the copying of which demands tince. He who withes to give a good account of fuch a kingdom as France, mult be indefatigable in the learch of materials; for let him collect with all the care poflible, yet whea he comes to fit down coolly to the examination and arrangement, will find, that much has been sut into his hands, of no real confequence, and more, poffbly, that is abolotely uletcls.

The 1 th. To the Plais Royal, to view the pictures of the Duke of Orleans, which I had tried once or twice before to do in vain. The collection is known to be very rich in pieces of the Dutih and Fleminh mafters; fome finifhed with all the exquifte attention which that fchool gave to minute expreflion. But it is a genre little interefting, when the works of the great Italian artifts are at hand: of thefe the collection is one of the firlt in the world: Raphacl, Hanibal Carracci, Titian, Dominichino, Correggio, and Paul Veronefe. The firft picture in the collection, and one of the fineft that ever came from the cafel, is that of the three Marics, and the dead Chrift, by H. Carracci ; the powers of expreflion camnot go further. 'Ihere is the St. John of Raphael, the fame piture as thofe of Florence and Bologna; and an inimitable Virgin and Child; by the fame great malter. A Venus bathing, and a Magdalen, by Titian. Lucretia, by Andrea del Sarto. Leda, by Paul Veronefe, and alfo by Tintoretto. Mars and Venus, and feveral others, by Paul Veronefe. The naked figure of a woman, by Bonieu, a French painter, now living, a pleafing piece. Some noble pitures, by Poulfin and Le Seur. The apartments mult dilappoint every one :-I did not fee one good room, and all inferior to the ratk and immenfe fortune of the poffeffor, certainly the firt
firt fubject in Europe. Dine at the Duke of Liancourt's: among the company was Monf. de Bouganville, the celebrated circumnavigator, agrecable as well as lenfible; the Count de Caftellane, and the Count de Montinorenci, two young legifators, as cnragés as if their n:mes were only Bernave or Rabeau. In fome allufions to the conttitution of England, I found they hold it very cheap, in regard to political liberty. The ideas of the moment, relative to plots and confpiracies, were difcuffied, but they feemed very generally to agree, that, however the coniltitution might, by fuch means, be delayed, it was now abfolutely impoffible to prevent its taking place. At night to the national circus, as it is called, at the Palais Royal, a building in the gardens, or area of that palace, the moft whimfical and expenfive folly that is eafily to be imagined: it is a large ball room, funk half its height under ground; and, as if this circumftance were not fufficiently adapted to make it damp enough, a garden is planted on the roof, and a river is made to flow around it, which, with the aldition of fome fpirting jets d'cau, have undoubtedly made it a delicious place, for a winter's entertainment. The expence of this gew-gaw building, the project of fome of the Duke of ©rleans' friends, Ifuppofe, and executed at his expence, would have eftabliflied an Englifh farm, with all its principles, buildings, live Ilock, toals, and crops, on a fcale that would have done honour to the firtt fovereign of Europe; for it would have converted five thoufand arpents of defert into a garden. As to the refult of the mode that has been purfued, of invelting fuch a capital, I know no rpilhet equal to its merits. It is meant to be a concert, ball, coffee, and billiard room, with thops, \&c. defigned to be fomething in the ftyle of the amulements of our Panthenn. There were mufic and finging to night, but the room being almoft empty, it was, on the whole, squally cold and jombre.

The 16 th . The ided of plots and confpiracies has come to fuch a height as greatly to alarm the leaders of the revolutin!. The difgult that tpreads every day at their tranfactions, arifes more from the King's fituation than from duy other circumflance. They cannot, after the feenes that have palfed, venture to fet him at liberty before the conftitution is finifhed: and they dread, at the fane time, a change working in his favour in the minds of the people : in this dilemma, a plan is laid for perfuading his Majefty to go fuddenly to the National Aflembly, and, in a fpeerh. to declare himfelf perfectly fatisfied with their proceedings, and to confider himfelf as at the head of the revolution, in terms fo couched as to take away all idea or pretence of his being in a fate of confinement or coercion. .This is at prefent a favourite plan ; the only difficulty will be, to perfuade the King to take a Itep that will apparently preclude him from whatever turn or advantage the general feeling of the provinces may work in his favour; for, after fuch a meafure, he will have reafon to expect that his friends will fecond the views of the democratical party, from an abfolute defpair of any other principles becoming eficient. It is thought probable, that this fcheme will b. brought about; and fhould it be accomplihed, it will do more to eafe their apprehenfions of any attempts than any other plan. 1 have been among the bookfellers, with a catalogue in hand to collect publications, which, unfortunately for my purfe, I find I mult have on various topics, that concern the prefent ftate of France. --Thefe are now every day fo numerous, efpecially on the fubjects of commerce, colonics, finances, taxation, deficit, \&c. not to fpeak of the fubject immediately of the revolution itfelf, that it demands many hours every day to leffen the number to be bought, by reading pen in hand. The coilection the Duke of Liancourt has made from the very commencement of the revolution, at the firf meeting of the notables, is prodigious, and has coft many hundred louis d'or. It is uncommonly complete, and will hereatter be of the greated value to coufult on abundance of curious queftions.

The 17 th. The plan I mentioned yefterday, that was propofed to the King, was urged in vain: his Majefty received the propofition in fuch a manner as does not leave any great hope of the fcheme being executed; but the Marquis la Fayette is fo ftrenuous for its being brought about, that it will not yet be abandoned; but propofed again at a more favourable moment. The royalifts, who know of this plan, (for the public have it not) are delighted at the chance of its failing. The refufal is attributed to the Queen. Another circumftance, which gives great difquiet at prefent to the leaders of the revolution, is the account daily received from all parts of the kingdom, of the diftrefs, and even ftarving condition of manufacturers, artifts, and failors, which grows more and more ferious, and mull make the idea of an attempt to overturn the revolution fo much the more alarming and dangerous. The only branch of induftry in the kingdom, that remains flourifhing, is the trade to the fugar-colonies; and the fcheme of emancipating the negroes, or at leaft of putting an end to importing them, which they borrowed from England, has thrown Nantes, Havre, Marfeilles, Bourdeaux, and all other places conneeted fecondarily with that commerce, into the utmoft agitation. The Count de Mirabeau fays publicly, that he is fure of carrying the vote to put an end to negro flavery-it is very much the converfation at prefent, and principally amongft the leaders, who fay, that as the revolution was founded on philofophy, and fupported by metaphyfics, fuch a plan cannot but be congenial. But furely trade depends on practice much more than on theory ; and the planters and merchants, who come to Paris to oppofe the fcheme, are better prepared to thew the importance of their commerce, than to reafon philofophically on the demerits of flavery. Many publications have appeared on the fubject-fome deferving attention;

The 1 \&th. At the Duke of Liancourt's dinner, to-day, meet the Marquis de Cafaux, the author of the mechanifin of focicties; notwithfanding all the warmth, and even fire of argument, and vivacity of manner and compofition for which his writings arc remarkable, he is perfectly mild and placid in converfation, with little of that effervefcence one would look for from his books. There was a remarkable affertion made today, at table, by the Count de Marguerite, before near thirty deputies; fpeaking of the determination on the Toulon bufinefs, he faid, it was openly fupported by deputies, under the avowal that more infurrections were neceflary. I looked round the table, expecting fome decifive anfiver to be given to this, and was amazed to find that no one replied a word. Monf. Volncy, the traveller, after a paufe of fome minutes, declared that he thought the people of Toulon had atted right, and were jullifiable in what they had done. The hiftory of this Toulon bufinefs is known to all the world. This Count de Marguerite has a tetc dure and a fleady conduct -it may be believed that he is not an enrage. At dinner, M. Blin, deputy from Nantes, mentioning the conduet of the revolution club at the Jachins, faid, we have given you a good prefident; and then afked the count why he wid not come among them? He anfwered, de me truve bon-

 He got no reply here. At might, Monf. 1)ecretot, and Mouf. Biin, carricd me th the revolution club at the Jorobin; the room where they afiemble, is that in which the famous league was figned as it has been olferved above 'thote were above one hundred deputies prefont, wih a prefident in the chair; I was handed to him, and announced as the author of the Arithyctiquc Politique; the pretdent thanding up, repated my name to the corpany, and demanded if there were any objections-None; and this is all the ceremony, not merely of an introduction, but an elcction: for $I$ was told, that now I was calpowered to be prefent when I pleafed, being a fureiguer. Ten
vol. Iv.
or a dozen other elections were made. In this club, the befinefs that is to be brought into the National Affembly is regularly debated; the motions are read, that are intended to be made there, and rejected or consected an! approved. When thefe have been fully agreed to, the whole party are engaged to lupport them. I'lans of conduct are there determined; proper perfons nominated for beine of committees, and prefidents of the Aflembly mamed. And I may ad!, that fuch is the mij rity of numbers, that whatever paffes in this club, is alnoft fure to pals in the Affembly. In the evening at the Duchefs d'Anville's, in whofe houfe 1 never failed of fanding my time agreeably.

One of the moft amufing circumfances of travelling into other countries, is the opportunity of remarking the difference of cuftoms amongt different nations in the conmon occurrences of life. In the art of living, the French lave generally been efleened by the relt of Europe to have made the greateft proficiency, and their manners have been accordingly more imitated, and their cuftoms more adoped than thofe of any other nation. Of their cookery, there is but one opinion; for every man in Furope, that can afford a great table, cither keeps a liench cook, or one inftucted in the fame mannes. 'That it is far beyond our own, 1 have no doubt in afforting. We have about half a dozen real Einglifh difhes, that exceed any thing, in my cpinion, to be met with in France; by linglifh difhes I mean, a turbot and lobiler fauce - ham and chicken -turtle-a haunch of venifon-a turkey and oyfters-and atier thefe there is an end of an Englifh table. It is an ille prejadice to clafs roatt beef among them; for there is not better beef in the world than at Paris. Large handfome pieces were almott con. ftanty on the confiderable tables thave chined at. The variety given by their cooks, to the fame thing, is aftonifhing; they drefs an hundred difhes in an hundred different ways, and molt of them excellent; and all forts of vegetables have a davourinefs and flavour, from rich fauces, that are abfolutely wanted to our greens boiled in water. This varicty is not flriking, in the comparifon of a great table in France with another in England; but it is manifefl, in an inflant, between the tables of a French and Englifh family of fmall fortune. The Englifh dinner, of a joint of meat and a pudding, as it is called, or pot luck, with a neighbour, is bad luck in Fangland; the fame fortune in France, gives, by means of cookery only, at leaft four difhes to one among us, and fpreads a fmall table incomparably better. A regular defert with us is cxprited at a confiderable table only, or at a moderate one, when a formal entertaimment is given; in France it is as effential to the fmalleff diancr as to the laryeft; if it confit of a bunch of dried grapes only, or an apple, it will be as regularly ferved as the foup. i have met with perfons in England, who inagiue the fobriety of a Prench table carried to fuch a length, that one or two glafes of wine are all that a man can get at dimer ; this is an crror: your fervant mixes the wine and water in what propertion you pleafe; and larce bowls of clean glatics are fit before the matter of the houfe, and fome trionds of the family, at different parts of the table, for ferving the richer and rater fiers of wince, which are drunk in this manner fiedy enough, The whote mation are ferupulonhy neat ia refufing to drink out of ghates ufid ly other people. At the houfe of a carpenter or blachtmain, a tumber is fot 10 every cover. 'This refults from the on.n. mon beverage being, wine and water ; but if at a lage tabl', as in liggland, there wie
 lets to fland by cery phate; and equally fo for the fervants to keep fach a number feparate and ditimat. In table linen, they are, 1 think, cleanerod wifer than be forslifh; that the change may be incelfon, it is every where coart. The idea of dining without a napin feems rificulons to a liruchman, lut in fingland we che at the whes
of people of tolerable fortune, without then. A journeyman carpenter in France has his napkin as regulatly as his fork; and at an inn, the fille always lays a clean one to every cover that is fpreal in the kitchen, for the lowilf order of pedeftrian travellers. The expence of linen in Fingland is erormous, from its fincnefs; furely a great change of that which is coarfe, would be much more rational. In point of cleanlinefs, I think the merit of the two nations is divided; the French are cleaner in theic perfons, and the Englifh in their houfes; I feak of the mafs of the people, and not of individuals of confiderable fortunc. A bides in France is as univerfally in every apartment, as a ha. fon to wath your hands, which is a trait of perfonal cleanlinefs I will inore cermmon in England; on the other hand their necefliry houfes are temples of abomination; and the prasice of fpitting about a room, which is anongt the bigheft as well the lowelt ranks, is deteftable; I have feen a gentleman fit fo near the clothes of a duchefs, that I have flared at his unconecrn. In every thing that concerns the fables, the Englinh far exceed the French; horfcs, grooms, diarnefs, and change of equipare; in the provinces you fee cabriolets of the lalt century ; an Englifhman, however fmall his fortune may be, will not be feen in a carriage of the fahion of forty years paft; if he caunot have another, he will walk on foot. It is not true that there are no complete equipares at Paris, I have feen many; the carriage, horfes, harnefs, and attendance, without fault or blemifh;-but the number is certainly very much inferior to what are feen at London. Englifh horfes, grooms, and carriages, have been of late years largely imported. In all the articles of fitting up and furnihing houfes, including thofe of all ranks in the eftimate, the Englifh have made advances far beyond their neighbours. Mahogany is fcarce in France, but the ufe of it is profufe in England. Some of the hotels in Paris are immenfe in fize, from a circumflance which would give me a good opinion of the people, if nothing elfe did, which is the great mixture of families. When the eldeft fon marries, he brings his wife home to the houfe of his father, where there is an apartment provided for them; and if a daughter do not wed an eldeft fon, her hufband is alfo received into the family, in the fame way, which makes a joyous number at every table. This cannot aliogether be attributed to economical motives, though they certainly inGuence in many cafes, becaufe it is found in familics poffeling the firt properties in the kingdom. It does with French manners and cuftoms, but in England it is fure to fail, and equally fo amonglt all ranks of people : may we not conjecture, with a great p:obability of truth, that the nation in which it fucceeds is therefore better tempered? Nothing but good humour can render fuch a junble of familics agreeable, or event tolernble. In drefs they have given the ton to all Europe for more than a century; but this is not among any but the higheft rank an object of fuch expence as in England, where the mafs of mankind wear much better things (to ufe the language of common converfation) than in France : this ftruck ine more amongft ladies who, on an average of all ranks, do not drefs at one half of the expence of Englifh women. Volatility and changeablenels are attributed to the French as national characteriftics,-but in the cafe of dre's with the grofleft exaggeration. Fidhions change with ten times more rapidity in F.ngland, in form, colour, and affemblage; the vicifitudes of every part of drefs are fantaftc with us: I fee little of this in France; and to inftance the mode of dreffing the gentemen's hair, while it has been varied five times at London, it has remained the fame at I'aris. Nothing contributes more to make them a happy people, than the chearful pliancy of difpofition with which they adapt themfelves to the circumftances of life: this they polfers much more than the high and volatile fpirits which have been attributed to them ; one excellent confequence is, a greater exemption from the extravagance of living beyond their fortuncs, than is met with in England. In the highef ranks of life, there
are inftances in all countries; but where one gentleman of finall property, in the provinces of France runs out his fortune, there are ten fuch in England that do it. In the blended idea I had formed of the French character from reading, 1 am difapp sinted as to three circumftances, which I expected to find predominant. On comparilon with the Euglif, I looked for great talkativenefs, volatile fpirits, and univerfal politenels. I think, on the contrary, that they are not fo talkative as the Englifh; have not equally good firits, and are not a jot more polite: nor do I fpeak of certain claffes of people, but of the general mafs. I think them, however, incomparably better tempered; and I propofe it as a queftion, whether good temper be not more reafonably expected under an arbitrary, than under a free government.

The 19 th. My laft day in Paris, and, therefore, employed in waiting on my friends, to take leave; anongt whom, the Duke de liancourt holds the firtt place; a nobleman, to whofe uninterrupted, polite, and friendly offices I owe the agrecable and happy hours which I have paffed at laris, and whofe kindnefs continued fo much, to the latt, as to require a promife, that if 1 fhould return to lirance, his houfe, either in town or country, fhould be my home. I fhall not omit obferving, that his conduct in the revolution has been direct and manly from the very beginning; his rank, family, fortune, and fituation at court, all united to make him one of the firt fubjects in the kingdom ; and upon public affairs being fufficiently embroiled, to make alfemblies of the nobility necelfary, his determined refolution to render himfelf mafter of the great queftions which were then in debate, was feconded by that attention and application which were requifite in a period, when none but men of bufinefs could be of importance in the ftate. From the firft affembling of the States General, he refolved to take the party of freedom ; and would have joined the ti.rs at firf, if the orders of his conftituents had not prevented it; he defired them, however, either to confent to that ftep or to elect another reprefentative; and, at the fame time, with equal liberality, he deciared, that if ever the duty he owed his country became incompatible with his office at court, he would refign it; an act that was not only unneceffary, but would have been abfurd, after the King himfelf had become a party in the revolution. By efpoufing the popular caufe, he acted conformably to the principles of all his anceftors, who in the civil wars and confufions of the preceding centuries, uniformly oppofed the arbitrary proceedings of the court. The decifive fteps which this nobleman took at Verfiilles, in advifing the King, \&c. \&c. are known to all the world. He is, undoubtedly to be efteemed one of thofe who have had a principal fhare in the revolution, but he has been invariably guided by conftitutional motives; for it is certain, that he has been as much averfe from unneceffary violence and lamgunary mealures, as thofe who were the moft attached to the ancient government. With my excellent triend Lazowfki, 1 fpent my latt evening; he endeavoured to perfuade me to refide upon a farm in France, and I enticing him to quit French bufte for Englih tranquillity.

The zoth -25 th. By the diligence to London, where I arrived the 25 th ; though in the moft commodious feat, yet languithing for a horfe, which, after all, affords the beft means of travelling. Pafling from the firt company of Paris to the rabble which one fometimes meets in diligences, is contralt fufficient,-but the idea of returning to England, to my faraily and fricnds, made all things appear finooth, - -272 miles.

The 30 th. To Bradfield; and here terminate, thope, my travels. Alter having furveyed the agriculture and political refources of Fagland and Ireland, to do the fame with lrance, was certainly a great object, the importance of which animated me to the attempt: and bowever pleafing it may be to hope for the ability of giving a better account of the agriculture of France than has ever been laid before the public, yet the
greateft fatisfaction I feel, at prefent, is the profpect of remaining, for the future, on a farm, in thit calm and undifturbed retirement, which is fuitable to my fortune, and which, I trult, will be agreable to my difpofition.—— 72 miles.

## PART THE SECOND.

## Cuar. I. - Of the Exicnt of France.

THE circumfances which are mof apt to command the attention of mankind, for giving importance to a country, are really valuable no farther than as they contribute to the eafe and profperity of the inhabitants. Thus the extent of a kingdom is of no other confequence than affording nourilhment for a people too numerous to be reafouably appreheufive of foreign conqueft. When a territory is much more confierable than for this purpofe, it tends to infpire ambitious projects in the minds of the men that govern, which have proved, perhips, more difaltrous than the deficiency of power that endangers the national defence. France, minder Lewis XIV. was a remarkabie inflance of this fact. 'The fituation to which the ambition of that prince had reduced her immenfe territory, was hardly preferable to that of Holland, in 1672, whofe misfortunes, flowed from the fame origin. Of the two extremes, France has undoubtedly more to apprehend from the ambition of her own rulers, than from that of any neighbour. Audiorities vary confiderably in defcribing the extent of this fine kingdom. The Maréchal de Vauban makes it 30,000 leagues, or $140,940,000$ arpents; Voltaire 130,000,000 arpents. - The accuracy of round numbers is always to be doulted. Templeman gives it an extent of $1,38,837$ fquare geographical miles, of fixty to a degree; a meafurement, which renders his tables abfolutely ufelefs for any purpofe, but that of comparing one country with another, a degree being fixty-nine miles
 French arpents, and makes the number 107,:90,000. The Encyclopedia, article France, affigns $100,000,000$ of arpents as the contents; and obferves, that, by Callini's maps, the amount is $125,000,000$. A late author * calculates it at $105,000,000$ : and another $\dagger$ at $135,600,000$. None of thefe accounts feem fufficiently accurate for the purpofe of giving a correct idea. The authority on which I ann inclined moft to rely is that of M. Necker $\downarrow$, who calculates it (without Corfica) at 26,951 leagues fquare, of
 Englifh acres. Paucton, by covering his map with fhot to every indenture of outline, with the greateft carc, found the kingdom to contain $10,3,021,840$ arpents, each of 100 perch, at 22 feet the perch, or 1344 toifes fquare to the arpent ; inflead of which the arpent of Paris contains but goo toifes:-this meafurement makes $81,687,016$ Englifh acres §. - Notwitiflanding the credit ufually given to this writer for i:is accuracy, I muft here reject his anthority in favour of that of M. Necker. Paucton's calculaton, which gives $81,687,016$ Finglith acres to lrance, alligns by the fame rule to England $2+476,315 \|$; yct Templeman's furvey, at 60 miles to a degrec, and therefore confefledly below the truth, makes it $31,048,000$, which, at $69 \frac{1}{2}$ to a degree, are

[^42]
## young's travels in prance.

$42,463,26_{4} ;$; a greater difierence than is found between them in eflimating the furface of France, which, by Paucton, is made 81,587,016 Englihh acres, with a general admillion of about a nillion more; and by 'lempleman, 88,855,68) or at 69 , is $119,220,87+i^{\circ}{ }^{2}$.
It is vain to attempt reconciling thefe contrary accounts. I thall therefore adope. with the author of the Credit Nationale ${ }^{\bullet}$, the eflimation of M. Necker, which fuppon ${ }^{(1)}$ $156,024,113$ arpents of Paris, or $131,72,205$ linglifh acres.

For a comparifon of the French and Finglifh dominions, I muft for the latter whlope Templeman's meafurenent, who gives to

Calculated at 60 to a degree; but at 69 ! thete numbers become,

Hence it appears, that France, according to thefe proportions, containe $29,312,96.4$ acres more than the three Britifh kingdoms; and it is to be noted, that as the extent of France is taken trom the more modern and correct authorities, whence M. Neckir deduced his meafurement at 131,722,295 Englihh acres, which is confiquently much more exaít than that of Templeman; fo it is equally fair to fuppofe, that the latter is as much below the fact in the contents of our iflands, as he was in thofe of France. Corrected by this rule, the areas will be

Thefe numbers, I am uion the whole inclined to belicve, are as near to the truth as may reafonably be expected from calculations, when the data are not abfolutely correct.

## Curap. II. - Of the Soil, and Face of the Country.

THE modern French geographers, in a branch of that fcience, to which they have properly given the epithet plyyfical, have disided the kingdom in whe whry call bafinn; that is to fay, into feveral great plains, though which flow th. , "wit rivers, ${ }^{\text {nit }}$ which are formed of feveral ridges of mountains, either origir granite, or fecondary of calcareous and other matcrials. Us thete bafins the chicf

[^43]are, 1. Of the Loire and all the rivers that fall into it. 2. Of the Seine and its branches. 3. Of the Garonne. 4. Of the Rhone and Soane. There are likewife fome fnaller ones, but of much lefs account. The reader who wifhes to confult the detail of thefe, may turn to the Journal Pbyfipuc, mon. 30. for a memoir ly M. la Metherie.

In refpect to the geoponite divifion of the foils of the kingdom, the rich calcareous plain of the northecaltern quarter firft calls for our attention. I crolled thes in feveral directions, and from the oblervations I made, the following are the limits I would affign to it. On the coall it may he laid to extend from Dunkirk to Carentan in Normandy, for the uncthern promontory of that province, which projects into the feat Cherbourg, \&ec. is of a difierent doil. In M. la Metherie's map is markeal a ridge of granite mountains in this promontory; 1 flould remark, that I haw nothing in that country which tho ferves the vame of a mountain, any more than at Alençon; merely hills, and thofe mone confiderable onss. 1 may terminate the rich track at Carentan, as thence to Coutances the land is chictly poor and tlony, and holds, with many variations, quite to Breft. In the line a litte to the S. of the coall, before Caen, is feen the firt confuderable change of fuil from Calais; it there hecomes a red fone brath; this rich tradt is here, therefore, narrow. On re-entering Normandy on the fide of Alençon, from Anjou and Maine, I firlt met with the rich loams on a calcareous bottom at Beaumont; at Alençon there is a noble foil, which I then loft no more in adrancing northwards. In another line I entered this rich diltrict about ten miles to the fouth of Tours. The hills on the Loire, though all calcareous that I noticed, are not all rich, though on fome the foil is deep and good. Directly to the fouth of Orleans begins the miferable Sologne, which, though on a calcareous bottom of mall, is too po ir to be in luded in the prelent diftrict. From Orleans to Paris, and alfo Fontainbleau, no exceptions are to be made, but in the fruall fpace of poor fand fone in the royal foreft of the later town. In a fourth direction this difitiet is entered, but no fo decifively as in the preceding cafes, a few miles to the fouth of Nemours. At Croifiere the firft chalk is vifible to the traveller. Advancing to the N. I.. very good land is found near Nangis, and then bearing N. I entered the fertile plain of Brie. Some of the vales through which the Marne flows are rich and what I faw calcareous; but the hills are pror. The plain of Rheims may be chafed in the prefent diftrict, but at Soifions and thence due N. all is exceHent. "Thefe limits inclofe one of the finet territories that I fuppofe is to be found in Europe. From Dumbirk to Nemours is not lefs than one huadred and eighty miles in a right line. From Soifions to Carentan is another right line of about two hundred miles. From Eu, on the Norman coalt, to Chatres is one hundred nites; and though the breadth of this rich diftriat at Caen, Baycux, \&c. is not confiderable, yet the whole will be found to rontain not a trilling proportion of the whole kingdom. This noble territory includes the deep, level, and fertile phain of Flanders, and part of Arens, than which a richer foil can harily be defired to repay the indultry of mankind; two, three, and even four feet dee pof moint and putrid, but friable and mellow loam, more inclining to clay than fand, on a cilcarous bothm, and from its marine origin , for there can be little doubt but that the whole plain of Flanders and Holland has been covered by the fea, long fince sur globe has taken ils prefent appearance) abounding with particles that add to the common fertility, refulting trom fuch compounds found in other finations. The purridity ot the bunnes in Flanders and its pofition, being a dead level, are the principal circuinfances that diflinguilh it from the better foils of the rett of this fertile part of Eurepe. Fvery flep of the way from the very gate of Paris to near Soiffons, and thence :o Combray, wib but lide variation of fome inferior hills of fmall extent, is a fandy lown af adnarable texture, and commonly of confiderable depth. About Meaux it
is to be ranked among the fineft in the world; they call it bleaunemenu-it tends much towards an impalpable powder, which betrays few figns of fand, even when, to the eye, it has the appearance of a fandy loam. It is of an admirable texture and friability. Monf. Gibert informed me, that it is of the depth of eighteen feet where his well is dirged, and under it a ftratum of white marl, found under the whole country, at different depths. This marl has the appearance of a confolidated palte. The line through Picardy is inferior, yet, for the moft part, excellent. But all the arable part of Normandy, which is within thefe limits, is of the fame rich friable fandy loam, to a great depth; that from Bernay to Elbocuf can fcarcely be exceeded; four to five feet deep of a reddifh brown loam on a chalk bottom, and without a fone. As to the paltures of the fame province, we have, I believe, nothing either in Eugland or Ireland equal to them ; I hold the vale of Limerick to be inferior. The famous Pays de Beance, which I croffed between Arpajon and Orleans, refembles the vales of Meaux and Senlis; it is not, how. ever, in gencral, fo deep as the former. The limits I have traced are thofe of great fertility; but the calcareous diftrict, and even of chalk, is much more extenfive. To the E. it raches acrofs Champagne; a ftrong change, not having occurred to me till about St. Menehould. From Mctz to Nancy all is calcarcous, but not chalk. Lime-ftone land I found plentifully in the fouthern parts of Alface; and from Befori acrofs Franche Compté to Dole, all the ftones I tried, and many from quarries were calcareous. Immenle diftricts in Dauphiné and Provence, \&cc. \&c. are the fame; I thall therefors only obferve, that I remarked the chalk country to extend E. to about St. Menehould, and S. to Nemours and Montargis* in one line. In another, that all of the Angoumois which I faw is the fame; much in Poitou, and through Tourain to the Loirc. Had I penetrated more to the IW. I fhould probably have found the chalk of Angnumnis, and that of the Loire to be connected uninterruptedly. Moft of the courle of the Loire is, I believe, chalk, and the whole of it calcareous. Hence it appears, that the chalk cnuntry of France is of very confiderable extent; not lefs than two hundred miles E. and W. and about as much, but more irregularly, N. and S. and comprifes, by far, the richeft and moft fertile provinces of the kingdon.

The next confiderable diftrict, for fertility, is that which I may call, without impropriety, the plain of the Garonne. Pafling to the S. from limofin, it is entered about Creif. fenfac, with the province of Quercy, and improves all the way to Montauban and Tonloufe, where $i t$ is one of the fineft levels of tertile foil that can any where be feen. It continues, but not equally fruitful, to the foot of the Pyrenees, by St. Gaudents, \&c. very even to the eye, when viewed from the promenade at Momauban, which commands one of the richell, as well as maguificent profjects, inter met with in France. This plain I found, however, to be much indented and irregular; ior to the W. of Auch, and all beyond it to Bayonne, is too inferior to te admitted ; and to the F. Mitrepois, lat miers, and Carcaflome are among the hilis, and all the "ay from Agen to bourdans, though the river flows through one of the richaft vallies that is to be fien in the worh, yet the breadth appeared to be every where inconfiderat te. 'Hhrongh all this thin, wherever the deil is fomed excrilem, it confits ufually of a bep metion friable tandy loam, with moifture fufficient for the produdion of any thing; much of it is cateareons. White lime-fone and white clalky lomes are found about Cathors \&c. and white loams more tenacious near Nontaban. At Tonnatce, on the Garonne, they are red, and apparently as good at ten feet deep as on the furface.

[^44]In travelling from Narbome to Beziers, Pezenas, Montpellicr, and Nifmes, cvery one 1 converied with reprefented that vale as the moft fruitful in France. Olives and mul. berries, as well as vines, render it very productive; but in point of foil (the only circumftance I confider at prefent,) much the greater part of it is inferior to all I have named. The Bas Poitou, as I was informed by a perlon who relides in it, is of a fertility that deferves to be clafied with the richeyt foils of France, extending eighteen leagues by 12 , or 216 fquare leagues, which, at 5,736 arpents per league, are 249,7\%6 arpents. 100,000 arpents of rich marlhes have been drained there *. Being alfo informeld at Nantes, that there was a very rich track to the $S$. of the Loire, in the quarter of Bourgneuf and Macheoul, I have extended the region of good land to that river, as feen in the amexed map.
The narrow plain of Alface, the whole fertile part of which hardly exceeds the furface of one thoufand fquare miles, muft be claffed anong the richeft foils of France. It refembles Planders a good deal, though inferior to that province. It confits of a deep rich tandy loam, both moit and friable, equal to the large production of all forts of crops. A more celebrated dillrict is the Limagne of Auvergne, a flat and chiefly a calcareous vale, furrounded by great ranges of volcanic mountains. It is certainly one of the finet foils in the world. It commences at Riom ; the plain there is of a beatiful dead level of white calcareous loam, the whole furface of which is a real marl, but fo mixed with bumus as to be of prime fercility. The lirench naturalits, that have examined it, alfert the depth to be twenty fect of beds of earth, formed of the ruins of what they fyle tie primitive (granite) and volcanized mountains. At Iffoire, Dr. Brés thewing me his farm, in an inferior part of the Limagne (for the beft of it reaches no farther than from Riom to Vaires, which is farcely more than twenty miles), made me obferve, that the river had, in all probability, formed the whole plain, as it was adding rapidly to his land, and had given him a depth very perceptible in a few years, having buried the gravelly fhingle of its bed, by depoliting a rich furface of fandy mud. The vale here, on the banks, is feven or eight feet deepp of rich brown fandy loam. On the contrary', there are philofophers who contend for the whole having been a lake., The mountains that furround this valc are various. The white argillaceous ftone, in the hills between Riom and Clermont, is calcareous. The velcanic mountains are found to be better than the others, except in the cafe of tigha or cinders, which are fo burnt as to be good for nothing. The calcareous and cliyey ones gool, and the bafaltes decompofed and become clyy excellent. Their bafe is commonly granite. The calcareous fandy flones, and the argillacenus calcarous earths are heaped on them by the attion of volcanoes, according to the theory of the French philutophers. The fertility that refults from the volanic origin of mountains, has been often remarked, and efpecially in the cafe of Nitna; the fame fact appeared in many tracts of country as I paffed from Le Puy to Montelimart, where many confiderable mountains are covered with beautiful chefnuts, and various articles of cultivation, which in diflricts not volcanic are wafte, or in a great meafure uticlefs.
Lhave now noticed all the diftricts of France, which, to my knowledge, are of any remarkable fertility: they amount, as it will be fhown more particularly in another place, th atove twe ity eight millions of Enchlifh acres.

Ot the wher provinces, Bretarne is gencrally gravel, or gravelly fand, commonly deep, and on a gravelly botton, of an inferior and barren mature, but in many places on fand ttone rock. I tricd various fpecimens, but found none calcareous; and having

- Des Canaux de Narig par Mf. de la Lande, p. 391.
feen a Thip at Morlaix unloading lime-fone from Normandy, I may conclude, that the fact does not contradict the conclufion which I drew from the eye. All that I faw in the two provinces of Anjou and Maine are gravel, fand, or fone-generally a loamy fand or gravel; fome imperfect fchiftus on a bottom of rock; and much that would in the weft of England be called a tone brafh, and that would do excellently well for turnips : they have the friability, but want the putrid moifture and fertile particles of the better loams. lmmenfe tracks, in both thefe provinces, are walte, under ling, fern, furze, \&c. but the foil of thefe does not vary from the cultivated parts, and, with cultivation, would be equally good. Touraine is better ; it contains tome confiderable diftricts, efpecially to the fouth of the Loire, where you find good mixed fandy and gravelly loams on a calcarcous bottom ; confiderable tracks in the northern part of the province are no better than Anjou and Maine; and, like them, it is not without its heaths and wattes. Sologne is one of the pooreft and moft unimproved provinces of the kingdom, and one of the moft fingular countries I have feen. It is flat, confilting of a poor fand or gravel, every where on a clay or marl bottom, retentive of water to fuch a degree, that every ditch and hold was full of it : the improvement of fuch a country is fo obviounly effected on the eafielt principles, that it is a latire on the French government, and on the individuals who are owners or occupiers of eftates in this province, to fee it remain in fuch a miferable condition. Berry is much better, though both fandy and gravelly; but good loams, and fome deep, are not wanted in fome diftricts, as that of Chateauroux, on quarries, and near Vatan on calcareous oncs. La Marcle and Limofin confift of friable fandy loams; fome on granite, and others on a calcarcous bottom. There are trads in thefe provinces that are very fertile; and I law none that fhould be efteemed fteril. Of the granite they diftinguifh two forts; one hard, and full of micaceous particles; the grain rather coarfe, with but little quartz, hardening in the air in mafles, but becoming a powder when reduced to limall pieces; -this is ufed for building. The other fort is in hurizontal Arata, mixed with great quantitics of fpar, ufed chiefly for mending reads, which it does in the moft incomparable manuer. I was affured at limoger, that, on the hard granite, there grow neither wheat, vines, nor chefnuts; but upon the other kind, thofe plants thrive well : I remarked, that this granite and chefnuts appeared together on entering Limofin; and that, in the road to Couloule, there is about a league of hard granite without that tree. The rule, however, is not general ; for fo near as to the S. of Souilac, chefnuts are on a calcarcous foil. Puitou confifts of two divifions, the upper and the lower; the latt of which has the reputation of being a much richer country, efpecially the grafs lands on the coaft. The foil of the upper divifion is generally a thin loam, on in imperfect quarry bottom - a fort of ttone-brafh; in fome tracts calcareous: it mutt be efteemed a poor foil, though admiably adapted to various articies of cultivation. I have already oblerved, that all I faw of Angoumois is chalk, and much of it thin and poor. Thole parts of Guienne and Gafcoign, not in. cluded in the rich vale of the Garonne, of which I have already fpoken, mult be confsdered in refpect it foll as poot. The landes (heaths of Bourdeaux, though neither un. productive, nor unimproveat le, are in their prefent ftate to be clafled amongtt the worit foils of France. I have been affured, that they contain two hundred leagues fquare; and the roots of the Pyrcnecs are covered with immenfe waftes, which demand much induftry to render profitable. Rouffillon is in general calcareous; much of it flat and very ftoney, as well as dry and barren: but the irrigated vales are of a moft exuberant fertility. The vaft province of Languedoc, in productions one of the richelt of the kingdom, does not rank high in the fcale of foil: it is by far too foney:-r take feven. eighths of it to be mountainous. I travelled near four hundred mikes in it, without fec-
ing any thing that deferved the name of an extenfive plain, that of the Garonne, already mentioned (part of which extends within the limits of Languedoc), alone excepted. The productive vale, from Narbonne to Nifmes, is generally but a few miles in breadth; and confiderable waftes are feen in mooft parts of it. Many of the mountains are productive, from irrigation, as I have obferved too in the volcanic territory of the Vivarais. Some parts of the vale are however very rich ; and indeed there are few finer foils in France than what I faw near the canal, in going from Beziers to Carcaffonne. A rich mellow loam, tenacious, and yet friable ; in fome ftates the particles adhere into clods; in others they recede and melt with friability. Provence and Dauphiné are mountainous countries, with the variation of fome lovely plains and vallies, which bear a very inconfiderable proportion to the whole. Of thefe two provinces, the former is certainly the drieft, in point of foil, in the kingdom. Rock and quarry-land, with fandy gravels, abound there; and the courfe of the Durance, which in fome countries would be a fine vale, is fo ruined by fand and fhingle, that, in a moderate calculation, above 130,000 acres have been deftroyed, which would have been the fineft foil in the country, if it had not been for that river. All 1 faw in both the provinces is calcareous; and 1 was informed, that the greater part of the mountains of Provence are fo. Thefe, towards Barcelonette, and in all the higher parts of the province, are covered with good grafs, that feeds a million of emigrating fheep, befides vaft herds of cattle. With fuch a foil, and in fuch a climate, a country mult not be thought unproductive becaufe mountainous. The vales which I faw are in general fine: that of the Rhone at Loriol, in Dauphiné, is rich,-an admirable fandy clay, five or fix feet deep, on a bed of blue marl with many ftones in it. But more to the S. from Montelimart to Orange, this great river paffes through foils much inferior. The north plain of this province, as we go from Savoy to Lyons, confiffs much of a good deep red loam, on a gravel bottom. The county of Venaifin, or diftrict of Avignon, is one of the richeft in the kingdom. Its admirable irrigation, is, of itfelf, fufficient to make it appear fo; but I found the foil to confift of rich deep loam, with white and calcareous clays. The whole coaft of Provence is a poor ftony foil, with exceptions of very finall fpaces under happier circumflances. About Aix, the land is all calcareous, even the clays that are red and ferruginous. This province, however, contains one of the moft fingular diftricts in the king. dom, namely, that of the Crau, which is a fony plain to the S. E. of Arles, not containing lefs than 350 fquare miles, or 224,000 acres. It is abfolutely covered with round fones of all fizes, fome of which are as large as a man's head. The foil under them is not a fand, but appears to be a kind of cemented rubble of fragments of fone, with a fmall mixture of loam. The naturalift who has defcribed this province, fays, they are of a calcareous nature, with neither the grain nor texture of flint; in fome quartzofe molecules predominate-and others are metallic *. Vegetation is extremely thin, as I fhall mention more particulally when I treat of the pafturage of fheep in France.

The I.yonois is mountainous, and what I faw of it is poor, ftony, and rough, with much wafte land. In paffing from Lyons to Moulins, it is, near Roanne, on the limits of the province, before the gravelly plain of the Loire commences, the fame which M. 1.a Metheric calls the calcareous plain of Montbriffon.

Auvergne, though chiefly mountainous, is not a poor province; the foil, for a hilly country, is in general above inediocrity, and the higheft mountains feed valt herds of cattle, which are exported to a confiderable amount. Befide a variety of volcanic foils, Auvergne is covered with granite and gravelly and fandy loams.

> - Ilift. Nat. de la Povence, 8vo. 3 tom. 1792. tom. 1. p 290.
> R R 2

The Boarbonnois and Nivirnois, form one vaft plain, throush which the Loire and Allier pafs; the predominant foil, in much the greater part, is gravel; I believe commonly on a calcareous botoom, but at confiderable depths. Some tracks are fands, which are better than the gravels; and others are very good fria le fandy loams. The whole, in its prefent cultisation, mult be reckoned amongit the moft unproductive provinces of the kingdon, but capable of as great improvement, by a different managensent as any diftrict in France.

Burqundy is exceedingly diverfified, as I found in croning it from Franche Compté to the Dourbounois by lijon, I faw the beft of it ; that line is through fandy and gravelly loams ; fome good vales, fome mountans, and fome poor granite foils. The fubdivifion of the province called Brefle, is a miferable country, where the ponds alone, moflly on a white clay or a marl, amount, as it is afterted by an inhabitant *, to fixty-fix fquare leagues of two thoufand toifes, not much lefs than wo hundred and fifty thouland acres. This is credible from the appearance of them in the map of Caflini.

Franche Compté abounds with red ferruginous loams, fchiltus, gravel, with limefone in the mountains very common; and I thould remark, that all the fones I tried, fome of which were from quarries between Befort to Dole, effervefced with acids. From Befançon to Orechamps the country is rocky, quite to the furface nuch limeflone; a reddifl brown loam on rock; with iron forges all over the country. The whole province is vary improveable.

Loraine is poor in foil; from St. Menehould to the borders of Alface I faw fearcely any other than ftony foils, of various denominations; mott of then would in Engliand be called fone-brafh, or the broken and triturated furface of imperfect quarries, mised by tine, foreft, and cultivation, with fome loam and vegetable mould-much is calcareous. 'Ihere are indeed dittrits of rich, and even deep friable fandy loams; but the quantity is not confiderable enough to deferve attention in a general view. I have al. ready remarked, that the predominant feature of Champagne is chalk; in great tracks it is thin and poor; the fouthern part, as from Chalons to Troyes, Ac, has from its poverty, acquired the name of pouillcus, or lonfy. The appropriating of fuch land to fainfoin is little known there.

I have now made the tour of all the French provinces, and hall in general obferve, that I think the kinglom is fuperior to England in the circunftance of toil. The proportion of poor land in England, to the total of the kingdom, is greater than the finnihar proportion in France; nor have they any where fuch tracts of wretched blowing fand, as are to be met with in Norfolk and Suffolk. Their heatins, moors, and waftes, not mountainous; what they term lande, and which are fo frequent in Bretagne, Anjou, Maine, and Guienne, are infinitely better than our northern moors; and the mountains of Scotland and Wales cannot be compared, in point of foil, wih thole of the Pyrenees, Auvergne, Dauphiné, Provence, and Languedoc. Another advantage almoft ineftimable is, that their tenacious loans do not take the character of clays, which in fone parts of England are fo fubborn and harfh, that the expence of culture is almoft equal to a moderate produce. Such clays as I have feen in Suffex, I never met with in France. The fimallnefs of the quantity of rank clay in that kingdom, is indeed furprifing.

[^45]
## Face of the Country.

The chief diftinction that marks the faces of different countrics, is that of being mountainous or level. In the language, as well as the ideas common in France, mountains are fpoken of, to which we thould give no other appellation than that of hills: the tracks really mountainous in that kingdom are to be for nd in the S. only. It is four hundred miles S. of Calais before you meet with the mountains of Auvergne, which are united with thofe of Languedoc, Dauphinée, and Provence, but not with the Pyrences, for I croffed the whole S. of France, from the Rhone to the ocean, either by plains or ranges of inconfiderable hills. The mountains of Voge, in Loraine, deferve, perhaps, that name, but yet are not to be ranked with the fuperior elevations 1 have noticed. The inequalities of all the reft of the kingdom are fufficient to render the profpects interefting, and to give variety to the face of the country, but they deferve not to be called mountains. Some of the hilly and mountainous tracks of France receive a very confiderable beauty froin the rich and luxuriant verdure of chefinuts. To thofe who have not viewed them, it is not eafy to believe how much they add to the beauty of the Linofin, the Vivarais, Auvergne, and other diltrits where they are common.

There is no doubt that the Pyrenees are more ffriking than all the other mountains of France; I have defcribed them fo particularly in the Journal, that I would only obs ferve in general here, that their verdure, their woods, their rocks, and their torrents have all the characters of the fublime and beautiful. I faw nothing among the Alps that of ired fuel pleafing feenes as thofe of the northern parts of Dauphine; which, howcuer, are lefs varied than thofe in the neighbourhood of Chambery fo abounding in landfapes. According to every account, the courfe of the Ifer is a fiene of perpitual beaucy: The Vivarais, and part of Velay, are molt romantic.

Of the great rivers of France I prefer the Seine, which is every where an agreeable object. I fhould fuppofe the reputation of the Loire mut have originated from perfons who either had never feen it at all, or only below Angers; where in truth it merits every cloge. From that city to Nantes it is, probably, one of the fineft rivers in the worid, the breadth of the ftream, the iflands of woods, the boldnefs, culture, and richnefs of the coaft, all confpire, with the animation derived from the fwelling canvafs of ative commeree, to render that he eminently beautiful; but for the reft of its immenfe courfe, it exhibits a ftrean of fand; it rolls fhingle through vales inftead of water, and is an uglier object than I could poflibly have conceived, unlefs I had actually feen it. The Garonne reccives more beauty from the country through which it flows than it confers upon it; the flat banks, fringed with willows, are deftructive of beanty. I am not equally acquainted with the Rhone; where I faw it, from Montelimart to Avignon, and again at Lyons, it does not intereft me like the Seine. The courfe of the Soane is marked by a noble track of ineadows.
In regard to the general beauty of a country, I prefer Limofin to every ather province in France. The banks of the Loire below Angers, and thole of the Seine, for two hundred miles from is mouth, fuperior, undoubtedly, in point of rivers, the capital feature of the country; but the bcauty of the Limofin does not depend on any particular feature, but the refult of many. Hill, dale, wood, inclofures, Itreans, lakes, and fcattered farms, are mingled into a thoufand delicious landfcapes, which fet off every where this province, lnclofures, which add fo much ornament to the face of a
country, would furuifh obfervations, but I muft treat of them exprefsly in a more inhportant view.

Of the provinces of the kingdom, not already named, none are of fuch fingular features as to demand particular attention. The benuties of Normandy are to he found on the Seine, and thofe of Guienne on the Garome. Bretagne, Maine, and Anjou have the appearance of deferts; and though fome parts of 'Touraine are rich and plearing, yet moft of the province is deficient in beauty The fertile territories of Flanders, Artois, and Alface are diftinguifhed by their utility. Picardy is uninterefting. Chanpagne in general, where I faw it, ugly, almott as much fo as Poitou. Loraine, and Franche Compté, and Bourgogne are fomber in the wooded dill ricts, and want clearfulnefs in the open ones. Berry and La Marche may be ranked in the fame clafs. Sologne merits its epithet, triftc. There are parts of the Angoumois that are gay, and confequently pleafing.
It may be ufeful to thofe who fee no more of France than by once pafing to Italy, to remark, that if they would view the fineft parts of the kingdom, they fhould land at Dieppe and follow the Seine to l'aris, then take the great road to Moulins, and thence quit it for Auvergne, and pals to Viviers, on the Rhone, and fo by Aix to ltaly. By fuch a variation from the frequented road, the traveller might fuffer for want of good inns, but would be repaid by the fight of a much finer and more fingular country than the common road by Dijon offers, which paffes, in a great meafure, through the worft part of France.

## Chap. III.-Of the Climati of France.

OF all the countries of Europe there is not, perhaps one that proves the importance of climate, fo much as France. In the natural advantages of countries, it is as effential as foil itfelf; and we can never attain to an idea tolerably correct, of the profperity and refources of a country, if we do not know how clearly to afcertain the natural advantages or difadvantages of different territories, and to difcriminate them from the adventitious efficts of induftry and wealth. It hould be a principal object with thofe who travel for the acquifition of knowledge, to remove the vulgar prejudices which are found in all countries among thofe who, not laving travelled themfelves, have built their information on infufficient authorities.
France admits a divifion into three capital parts; 1 , of vines; 2, of maize; 3, of dives-which plants will give the three diftricts of, 2. the northern, where vines are not planted; 2, the central, in which maize is not planted; 3 , the fouth, in which olives, mulberies, vines, and maize are all found. The line of feparation between vines and no vines, as I obferved myfelf, is at Coucy, ten miles to the N. of Soiffons; at Clermont, in the Beauvoifois; at Beaumont, in Maine; and Herbignac, near Guerande, in Bretagne. Now there is fomething very remarkable in this, that if you draw a itrait line on the map from Guerande to Coucy, it pafies very near both Clermont and Beaunont; the former of which is a little to the north of it, and the later, a little to the fouth. There are vines at Gaillon and La Roche Guyon, which is a little to the N. of this line; there are alfo fome near Beauvais, the moft remote from it which I have feen; tue even this difance is inconfiderable; and the melancholy fpectacle of the vintage of 1787 , which I faw there in the midft of inceffant rains, is a proof that they ought to have nothing to do with this branch of culture: and at Angers I was informed, that there are no vines, or next to none, between that place and Laval and Mayenne. Haviag made this remark on the vine clinate of France, I wihed to know
how far the fact held true in Germany ; becaufe if the circumftance arofe from a difference of climate, it ought, by parity of reafon, to be confirmed ly vines in that country being found much farther north than in France. This lappens precifely to be the cale; for I find, by a late author, that vines in Gernany are found no farther north than lat. $5^{\circ}$. The mecting with thefe in that latitude is a fullicient proof of the fact in queflion, fince in France their limit is at 49 ? The line, therefore, which I have drawn as the boundary of vines in France, may be continued into Germany, and will probably be found to afcertain the vine climate in that coun'ry, as well as in France. The line of feparation between maize and no maize is not lefs fingular; it is firtt feen on the weltern fide of the kingdom, in going from the $\Lambda$ ngoumois and entering Poitou, at Verac, near Ruffec. In crolling Loraine, I firt met with it between Nancy and Luncville. It is deferving of attention, that if a line is drawn from between Nancy and Luneville to Ruffec, that it will run nearly parallel with the other line that forms the feparation of vines: but that line acrofs the kingdom, is not formed by maize in fo unbroken a manner, as the other ly vines; for in the central journcy, we found it no farther north than Douzenach, in the S . of the Limofin; a variation, however, that does not affect the general fact. In croffing from Alface to Auvergne, I was neareft to this line at Dijon, where is maize. In crofling the Bourbonnois to Paris, there is an evident reafon why this plant flould not be found, which is the poverty of the foil, and the unimproved hufbandry of all that country, being univerfally under fallow, and rye, which yields only three or four times the feed. Maize demands richer land or better management. I faw a few pieces fo far north as near La Fleche, but they were fo miferably bad, as evidently to prove that the plant was foreign to that climate. In order to give the reader a clearer idea of this, I have annexed a map, explaining, at one coup d'ail, thefe zones or climates, which may be drawn from the productions of France. - Ihe line of olives is pretty nearly in the fame direction. In travelling fouth from Lyons, we fee them firt at Montelinart; and in going from Beziers to the Pyrenees, I loft them at Carcaffonne: now, the line on the nap drawn from Montelimart to Carcaffonne, appears at once to be nearly parallel with thofe of maize and vines. Hence we may apparently determine, with fafety, that there is a confiderable difference between the climate of France in the eaftern and weftern parts: that the eaftern fide of the kingdom is two and a half degrees of latitude hotter than the weftern, or if not hotter, more favourable to vegetation. That thefe divifions are not accidental, but have been the refult of a great number of experiments, we may conclude from thefe articles of culture in gencral gradually declining before you quite lofe them. On quitting the Angoumois, and enterin': Poitou, we find maize dwindling to poor crops, before it ceafes to be cultivated; and in going from Nancy to Luneville, I noticed it in gardens, and then bui in fuall pieces in the fields, before it became a confirmed culture. I made the fans remark with refpect to vines. It is very difficult to account for this fact; it feems probable that the climate is better when remote from the fea, than near it, which is contrary to numercus other facts; and I have remarked, that vines thrive even in the fea air, and almof dully expoled to it, at the mouth of the river Bayonne, and in Bretagne. A great many repcated obfervations muft be made, and with more atte " rion than is in the pow cr of a traveller before fuch a fubject, apparently very curious, can be thoroughly afccrtained. In making iuch inquiries as thefe, a general culture is alenc to be re garded: vines will grow in England; I have maize now on my own fam-and I have feen it at Paris; but this is not the queftion; for it turns folely on

- De la Mona chie Prughare, enar M. Ie Comple de Mirabeau. tome it. p. iss.
the climate being fo well adapted to fuch a ticles as to enable the farmer to make them a common culture.

Ot the northern climate of France I may remark, that though wines will yield little profit in it for wine, yet there is a ftrong diftinction, in refpect of heat, between it and England, at the fame time, that much of it is, I believe, to the full as humid as the s . and E. of Singland. The two circumbances to be attended to in this inquiry are, the quantity of fruit and the verdure and richnets of pallurcs. In regard to heat, we mult attend neither to the thermometer nor to the latitude, but to the vegetable productions. I travelled in the fruit leafon through Artois, l'icardy, Normandy, Bretagne, Anjou, and Maine, and I found at every town, I might properly fay at every village, fuch a plenty of fruit, particularly plumbs, peaches, late cherries, grapes, and melons, as never can be feen in Enghand in the very hotelt lummers. The markets of all the towns, ceven in that poor and unimproved province of Bretagne are fupplied with thete in a profufion of which we have no ided. It was with pleafure I walked through the market at Rennes. If a man were to fee no other in France, lighting there from an Englifh balloon, he would in a moment pronounce the climate to be to aly different from that of Cornwall, our moff foutherly county, where myreles will fand the winter abroad; and from that of Kerry, where the ariutus is fo ac-climated, that it feems indigenous, though probably brought from Spain ty the origimal inhabitants of the country. Yet in this province of Bretagne I faw romaize nor mulberries, and, except in the corner I have mentioned, it has no vineyards. Paris is not fupplied with melons from provinces to the S., but from Hatleur, at the mouth of the Sel. e.

For the humidity of the climate, I may quote the be iutiful verdure of the rich paf. tures in Normandy, which are never irrigated. And I was a witnefis to three weeks of fuch rain at Liancourt, four miles only from Clermont, as I have not known, by many degrees, in Englane!. To the great rairs in the N. of France, which render it difagreeable, may be added the heavy fnows and the fevere frofts, which are experienced there to a greater degree than in the $\mathbf{S}$. of England. I am affured that the $\mathbf{N}$. of Europe has not known a long and tharp frolt, whicl: has not been much feverer at Paris than at London.

The central divifion that admits vines without being hot enough for maize, I confider as one of the finelt climates in the world. Here are contained the provirice of Touraine, which, above all others, is molt admired by the French ; the picturefque province of Limolin; and the mild, healihy, and pleafant plains of the Bourboniois; perhaps the molt eligible countries of all France, of all Europe, as far is foil and climate are concerned. Here you are exempt from the extreme humidity which rives verdure to Normandy and England; and yet equally free from the burning heats which turn verdure itfelf into a ruflet brown in the $S$.; no ardent rays that opprefs you with their fervor in fummer; nor pinching tedious frofts that chill with their Eeverity in winter; a light, pure, elaftic air, admirable for every conftitution except confimptive ones. But at the fame time that I mult commend thefe central provinces of France, for every circumftance of atmofphere that can render a country agrecable to inhabit, I mutt guard the reader againt the idea of their being free from gieat inconveniences; they are certainly fubje to thofe in relation to agriculture, which are heavily felt by the farmer. They are fubject, in common with the olive diftrict, to viotent itorms of raing and what is worfe, of hail. Two years ago, a ftom of hul liwept a track of defolation in a belt acrofs the whole kingdom, to the damage of leveral millions of our money. Such extended ruin is not common, for, if it weri, the finett kinedoms woul. be laid wafte; but no year ever paffes without whole parihes futfering to a degree of which
we have no conception, and on the whole to the amount of no inconfiderable proportion of the whole produce of the kingdom. It appears, from my friend Dr. Symond's paper on the climate of Italy ", that the mifchicf of hail is adful in that country. I have heard it calculated in the S. of France, that the dannge in fome provinces amounted to one-tenth of the whole produce of them upon an average. A few days before my arrival at Barbefieux, there had fallen, at the Duke de la Rocl:efoucauld's feat in the Angommois, and fome neighbouring parifhes, a flower of hail that did not leave a fingle grape on the vines, and cut them lo feverely, as to preclude all hope of a crop tite year tollowing, and allowed no well-founded expectation of any beneficial produce even the third year. In another place, the geefe were all killed by the fame itorm; and young colts were fo wounded that they died alterwards. It is even afferted, that men have been known to be killed by hail, when unable to obtain any thelter. This florm deftroyed a cople of the duke's, that was of two years growth. With fuch effects, it muft be obvious to every one, that all forts of corn and pulfe muft be utterly deftroyed. At Pompinian, between Montauban and Touloufe, I was witnefs to fuch a flower of rain as never fell in Britain; in that rich vale, the corn, before the ftorm, made a noble appearance; but imagination can hardly picture a more entire deftruction than it poured over the whole; the fineft wheat was not only beaten flat to the ground, but ftreams of liquid mud covered it in many places, in a manner that made all expectation of recovery hopelefs. Thefe hafty and violent fhowers, which are of little confequence to a traveller, or to the refidence of a gentleman, are dreadful fcourges to the farmer, and immenfe drawbacks from the mals of national products.

A circumftance of lefs confequence, but not undeferving attention, is the frofts which happen in the fpring. We know in England how injurious thefe are to all the fruits of the earth, and how much they are fuppofed to damage even its moft important product. Towards the end of May 1787, I found all the walnut trecs with leaves turned quite black by them, S. of the Loire; and farther to the S., at Brive, we no fooner faw fig-trees, for the firlt time feattered about the vineyards, than we remarked them bound about with fraw to defend them from the frofts of June. Still more to the S., about Cahors, the walnut trees were black on the 1 oth of June by frofts, within a fortnight; and we were informed of rye being in fome years thus killed; and that rarely there is any fpring month fecure from thefe unfeafonable attacks. In the N. E. quarter i found, in 1789, the froft of the preceding winter had made a fad havock aunongt the walnut trees, moft of which were killed in Alface, and the dead trees made a ftrange figure in fummer; they were left in expectation of their flooting again, and fome few did. From Autun in Burgundy, to Bourbon Lancey, the broom was all killed. Spring frofts were alfo complained of as much as on the other fide of the kingdom. About Dijon, they faid that they have them often late, and they damage or deftroy every thing. And all the countries within reach of the mountains of Vore are affected by the foow that falls upon them, which was in 1789 , on the $29^{\text {th }}$ of June. This renders the vineyard an uncertain culture. Perbaps it may arile from the late frots in the fpring, that we mect with fo few mulberries in France N. of the olive diftrict. The profit of that tree is very great, as I fhall explain fully in another place; yet the diftricts, where they are found in France, are very inconfiderable, when compared with the extent of the whole kingdom. It has been conceived in England, that the mildew is owing to late frofts; when I found myfelf in a region where rye was fometimes thus killed in June, and where every walnut hung with black, I naturally en-

[^46]vol. IV.
quired
quired for that diftemper, and fomd in fome places, near Cahors for infance, that their wheat was perfectly eximpt from that malidy in many fprings, when other plants fuffered the molt fevercly; and we met even with farmers whole lands were fo little fubject to the diftemper that they hardly know it. This thould feem to fet afide the theory of frofts being the canfe of that malady. As fpring frolts are as michievous in France as they can be with us, fo alfo are they troubhd with autumal ones earlier than is common with us. On the 2oth of September 1-37, in going on the S. of the Lecire, from Cuambord to Orleans, we had fo finart : one, that the vines were hurt by it ; and there had been, for feveral days, fo cold a N. E. wind, yet with a bright fun, that none of us flirred abroad without great coats.

The olive-climate contains but a very inconfiderable portion of the kingdom, and of that portion, not in one acre out of lify is this tree cultivated. Several other plants, befide the olive, mark this climate. 'Thus at Montelimarr, in Damhine, befides that tree, you meet with, for the lirft time, the pomegranate, the arbor judx, the paliurus, figs, and the evergreen otk; and with thele plants, 1 may add alfo that deteltable animal the mofquito. In crofling the mountains of Auvergne, Velay, and Vivarais, I met, between Pradelles and Thuytz, mulberries and flics at the fane time; by the term flies, I mean thofe myriads of them, which form the moft difagreable circumfance of the fouthern climates. They are the firft of torments in Spain, Italy, and the olivediftrict of Prance: it is not that they bite, fling, or hurt, but they buz, taze, and worry: your mouth, eyes, ears, and nofe, are full of them: they fwarm on every eatable, fruit, fugar, milk, every thing is aracked by them in tueh myriads, that if they are not driven away inceflantly by a perfon who has nothing elle to do, to eat a meal is impoffible. They are, however, caught on prepared paper, and other contrivances, with fo much cafe, and in fuch quantities, that were it not from negligence they could not abound in fuch incredible quantitis. If 1 firmed in thote coumtries, 1 think 1 fhould manure four or live acres every year with dead thes. Two other articles of culture in this climate, which deferve to be inentioned, though too incomfiderable to be a national object, are capers in l'rovence, and oranges at Hicres. The latter plant is fo tender, that this is fuppofed to be the only part of Prance in which it will thrive in the open air. The whole of Rouffillon is to the fouth of this, yet none are to be found there. I went to Hicres to vicw them, and it was with pain I found them almoft, without exception, fo damaged by the froft, in the wimter of 1733 , as to be cut down, fome to the ground, and others to the main then. Vaif numbers of olives were in the fame fituation throughout the whole olive-diftrict, and abundance of them abfoluicly killed. 'Thus we find, that in the moft foutherly part of framee, and even in the mofl fheltered and fecure fituations, fuch fevere frofts are known as to ceilloy he arteles of common cultivation.

In the defeription I took of the climate of Provence, from Monf. le Prefident, Baron de ha 'Tour d'Aigues, he informed me, that hail, in fome years, dos suot break glafs; but it was mention das an extramdinary thing. 'The only feafons in which is to be expected rain with any degree of certainy, are the equinoses, when it comes viol noly for a time. No dependence for a fimble derp in June, July, or Auguft, and the quanity alwass very fimall; which the momhs, and not the winter ones, are the pinching fiaton for all great canl: Sumetimes not a drop falls for fix mombs together ". They have whie frotls in March, and fomesims in April. The great heats

[^47]are never till the $15^{\text {th }}$ of July, nor after the $15^{\text {th }}$ of September. Harven begin ne $24^{1 / 1}$, and ends July 1 th-and Michaelmas is the middle of the vintage. In my years no fuow is to be feen, and the frofts not fevere. The fpring is the worlt 1 . m in the year, becaufe the cont de bize, the majprale of the Italians, is terrible, and fafs. cient, in the mountains, to blow a man off his horfe; it is alfo dangerous to the healh, from the fun, at the fame time, being both high and powerful. But in December, January, and February, the weather is truly charming, with the bize very rarely, but not always free from it; for on the 3 do January 1786, there was fo furious a maj/tralc, with fnow, that flocks were driven four or five leagues from their paltures; numbers of travellers, thepherds, flecp and affes in the Cran perifhed. Five flepherds were conducting eight hundred fheep to the butcheries at Marfeilles, three of whom, and almoft all the fleep, perifled ". 'To make a refidence in thefe provinces agreable, a man thould alfo avoid the great fummer heats. lor during the laft week in July, and fome days in Auguft, I experienced fuch a heat at Carcaflonne, Mirepoix, Pamiers, \&ce as rendered the leaft exertion, in the middle of the day, oppreflive; it exceeded any thing I felt in Spain. It was impofible to fupport a room that was light. No comfort but in darknefs; and even there reft was impoffible from myriads of fies $\dagger$. It is true, fuch heats are not of long duration; if they were fo, nobody, able to quit the country, would refide in it. Thele climates are difagreeable in fpring aad fummer, and delicious in winter only. In the Bourbonnois, Limofin, and Touraine, there is no vent de bize. On the mountains above 'Tour d'Aigues, are chiefly found lavendula-thymus-ciftus rofea-ciftus albidus-foralia bitumina-buxus femper virens-quercus ilex—pinus montana-rofmarinus officinalis-rhamnus cathartica-geniftis montis ven-tofa-genifta Hifpanica-juniperus Phonicia-fatureja montana-bromus fylvatica, \&c. In the Itubbles of all the olive-diftrict, and in every wafte fpot are found centaurea ca-lycitropa-centaurea folltitialis,-alfo the eryngium campeftrum, and the eryngium amethyftinum : - they have fown in Provence the datura ftrimonium, which is now habituated to the country. In the mountains, from Cavalero to Frejus, and alfo in that of Eftrelles, the lentifcus-myrtus-arbutus-lavendula-ciftus-and lauruftinus.

Upon a general view of the climate of France, and upon comparing it with that of countries, not fo much favoured apparently by nature, I may remark, that the principal fuperiority of it arifes from adapting fo large a portion of the kingdom to the culture of the vine ; yet this noble plant is moft unaccountably decried by abundance of writers, and efpecially by French ones, though the farmer is enabled to draw as extenfive a profit from poor and otherwife barren, and even almoft perpendicular rocks, as from the richeft vales. Hence immenfe tracks of land may be ranked in France among the moft valuable, which in our clinate would be ablolutely wafte, or at leaft applied to no better ufe than warrens or theep walks. This is the great fuperiority which climate gives to that kingdom over England:-of its nature and extent, I fhall treat fully under another head.

The object of the next inportance is peculiar to the olive and maize diftricts, and' confifts in the power of having, from the nature of the climate, two crops a-year on

[^48]valt tracks of their arable land : an early harveft, and the command of plants, which will not thrive equally well in more northern climates, give them this invaluable advantage. We fee wheat flubbles left in England, from the middle of Augult, to yield a few fhillings by theep, which, in a hotter climate, would afford a fecond crop, yielding food foreman, fuch as millet, the fifty day maize (the cinquantina of the Italians ' \&c.; or prove a better feafon for turnips, cabbages, \&c. than the common feafon for them here. In Dauphinc, I faw buek wheat in full bloffom the a3d of Auguft, that had been fown after wheat. I do no more than name it here, fince, in another phace, it muft be examined more particularly. Mulberries anight in France be an obj" c of far greater innportance than they are at prefent, and yet the fpring frofts are fatal impediments to the culture : that this plant muft be confidered for all important purpofes, as adapted only to fouthern climates, appears from this, that 'Tours is the only place I know in France, nurth of the maize climate, where they are culivated for filk with any ficcefs; confiderable experiments have been made (as I fhall hew in the proper place) for introducing them into Normandy and ilfewhere, but with no fuccefs; and the force ol this obfervation is doubled, by the following fact - that they fucceed much better in the olive climate than in any part of the kingdom. But that they might be greatly extended, cannot for a moment be doubted. In going fouth, we did no: meet with them till we came to Caufade, near Montauban. In returning north, we faw them at Auch only - - few at Aguillon, planted by the Duke-the promenade at loitiers planted by the intendant-and another at Verteul, by the Duke d'Anville; all which are experiments that have not been copied, except at Aush. But at Tours there is a fmall diftrict of them. In another diredion, they are not net with after Moulins, and there very few. Maize is an object of much greater confequence than mulberriss; when 1 give the courle's of the Freuch crops, it will be found that the only good hutbandry in the kingdom (fome finall and very rich diltricts excepted) arifes from the poffeclion and managenent of this plant. Where there is no maize, there are fallows; and where there are fallows, the people flarve for want. For the inhabitants of a country to live upon that plant, which is the preparation for wheat, and at the fame time to keep their cattle fat upon the leaves of it, is to pofferfs a treafure, for which they are indebted to their climate. The quantity of all the common forts of fruits, which, through the greater part of France, is fuch as to form a confiderable object in the fubfiftence of the great mafs of people, is a point of more confequence than appears at firft fight. 'T'o balance thefe favourable circumflances, other countries, not fo happily fituated (efpecially Fingland) have advantages of an oppofite nature, which are very material in the practice of their agriculture : that humidity of atmofphere, which the French provinces north of vines enjoy - which Fngland has in a greater legree, and Ireland filll more, and which is better marked by the hygrometer than by the rain gage, is of fingular importance in the maintenance of cattle by pafturage, and in adapting the courles of crops to their fupport. Arificial grafles, turnips, cabbages, potatoes, \&ic. thrive beft in a humid clinate. It would take up too much room bere fully to explain this; to mention it will be fufficient for thofe who have reflected on fimilar fubjects. From a due attention to all the various ircumftances that affect this queftion, which, relatively to agriculture, is the beft climate, that of France, or that of England? - I have no hefitasion in giving the preference to lrance. I have often heard, in converfation, the contrary afferted, and with fome appearance of reafon-but I believe the opinion has arifen more from confidering the actual fitate of hufbandry in the two countrics, than the dif-
ine properties of the two climates．We make a very good ufe of our＇s；but the French are，in this refpect，in their infancy，through more than half the kingdom＊．

## Chap．V．－Of the Populution of France．

AS the fubject of population is beft treated by an inquiry into the induftry，agricul－ ture，divition of landed property，\＆c．I thall at prefent merely lay betore the reader fome fatts collected with care in France，that aflord ufeful data for political arithmeti－ cians．Monl．l＇Abbé Expilly，in his Dictionnairc de la France，makes the number $21,000,000$ ．And the Marqu＇s de Mirabeau $\dagger$ mentions an enumeration of the king－ domin 1755；total 18，107，000．In Normandy 1，665，200，and in Bretagne 847，500． Monf．de Buffon，in his Ili／loire Naturelle，affigns for the population of the kingdon 22，672，077．Monf．Mellance，in his Recherches fur la Population，4to．1766，gives the detaily from which he draws the conclufion，that in many towns in Auvergne the births are to the number of inhabitants as 1 to $24 \frac{1}{2}$ 直而 $\frac{1}{6}$ ；the marriages per annum 1 to 114 iuhabitants；and fumilies，one wish another，compofed of $5 \mathrm{r}^{\prime}$＇s，or 24 fa － milies contain 124 inhabitants．In various towns in the Lyonnois，births are to the inha－ bitants as ；to 23！；the n：arriages per annum 1 to 111 perfons；and families com－ pofed 4 t＇$\ddagger$ ； 80 families contain 381 inhabitants．In various towns in Normandy the births to the inhabitants as 1 to $27 \frac{1}{2} 2^{\prime}$ ；marriages per annum 1 to 114 perfons； families are compofed of $31 \frac{1}{1} \frac{1}{6}$ ；zo reprefent $; 6$ inhabitants．In the city of Lyons fanilics are compofed of $5 \frac{1}{6}$ ； 60 reprefent 316 inhabitants；and there are a few above 24 perfons per houfe in that city．In the city of Rouen families are compofed of $6{ }_{16}^{\prime}$ perfons；and there are $6 \frac{1}{5} \cdot \frac{1}{1}$ perfons per houfe．At Lyons 1 in $35 \frac{1}{}$ dies an－ nually；at Rouen 1 in 27 \％．Mean lite in fome parifhes in the generality of Lyons 25 years；ditto in the gencrality of Rouen 25 years 10 months．At Paris 1 in 30 dies annually ：a family confifts of 8 ，and each houfe contains 241 perfons．By conparing the number of births in every month at Paris，for forty years，he found that thofe in which conception flourihed molt were May，June，July，and Auguft，and that the mor－ tality for forty years was as follows：

| Munths． | Dea | Mo | Dca | Mo | Deaths． |
| :---: | :---: | :---: | :---: | :---: | :---: |
| March， | 77，803 | Fcbruary， | 66，789 | October， |  |
| April， | 76，815 | December， | 60，9．6 | September， | 54，339 |
| May， | 72，198 | June， | 58，272 | November， | 54，029 |
| January， | 69，166 | July， | 57，339 | Auguft， | 52, |

It thould appear from this table，that the influence of the fun is as important to human health as it is to vegetation．What pity that we have not fimilar tables of ciices in all the different latitudes and circumflances of the globe．

[^49] 1 in $24 \frac{1}{1}$ - At Vitry le Françosis in $23 \frac{1}{2}$. - At Elbouf 1 in $29 \frac{1}{2}$.-At Loviers 1 in $3 \frac{1}{2}$. -At Honfleur s in 24.-At Vernon 1 in 25.-At Gifors 1 in 29.-At Pont-au-deMer 1 in 33.-At Neufchatel 1 in 24 !. - At Pont l'Exeque 1 in 26. - At le Havre a in 35. Upon a comparifon in feven principal provinces of the kingdom, population in fixty years has augmonted in the proportion of 231 to 196 , or a thirteenth. General deduction; - that the number of people in France in 176; was 23,909,400. Moni. Moheau* gives to the beft peopled provinces 1700 inhabitants per fquare league; and to the worlt 500 ; the medium 872, at which rate he makes the total $23,500,000$, and an increate of a ninth fince 1688. The ine of Oleron is peopled at the rate of 2886 per league, and that of Ré 4205 . He alfo calculates that 1 in 36 dies, and 1 in 26 is born every year. Monf. Necker, in his work de l'Admimiftration dis Finamecs de la Fronce, has the following particulars, which it is alfo neceffary to have in our at-tention:-Births in the whole kingdom per anmum, on an average, of $1776,77,7^{8}$, 79, and 8 c , were 963,207 : - which, multiplied by $25 \frac{3}{4}$, the proportion he fixes on, gives $24,802,580$ inlabitants in France. He notices the grofs error of the aconomifles, in eftimating the population of the kingdom at 15 or 16 millions.-A later authority, but given in whole numbers, and therefore not accurate, ftates the population of the kinglom at $25,500,000$, of which the clergy are fuppofed to be 80,000 , the nobility 110,000 , the proteftants $3,000,000$, and Jews $30,000+$ : the committee of impolts aflert, that to multiply the births in the cities of France by 30 , will give their population with fufficient truth; but for the country not fo ligh $\ddagger$. The rule of 30 would make the population $28,896,2$ io. But much later than all thefe authorities, the National Affembly has ordered fuch enquiries to be made into the population of the kingdom, as have produced a much greater degree of accuracy than was ever approached before: this has been done by the returns of taxes, in which all perfons, not liable to be charged are entered in what we fhould call the duplicates; and as the directions for making thele lifts are pofitive and explicit, and no advantage whatever refults to the people by concealing their numbers, but on the contrary, in many inllances, they are favoured in taxation, by reafon of the number of their children, we may furcly conclude, that thele returns are the fafeft guides to direct our calculations. Here follows the detail :

[^50]Etat gínérale de la Populution du Royaume de la France.

Fittinating the acres at $131,722,295$, and the people as here detaited, we find that it makes, whina timall taction, five acres a head. That proportion would be $31,815,270$ acres. If foneland were equally well poopled, there fhould be upon $46,915,933$ acres, rabler more than $9,000,000$ fouls. And for our two iflands, to cqual france in this refoct, there thonh be in them $10,867,117$ fouls; inttead of which there are not more than 15, ce 0,000 .

An ohforamon, rather curious, may be made on this detail ; it appars, that lefs than one-fourth of the pople inhatit towns a very remarkable circumbance, becank it is commonly obfored, and doublels tounded on cortain fads, that in foumhing coumnics the hati of a mation istomed in towns. Many writers, I believe, bave looked upon this as the proportion in Ingland: in Holland, and in lombarly, the riched commeris in Furepe, the fame probably exifts. 1 am much inclined to comect this fingatar tact, rehating to brance, wh that want of chect and fucceds in its agricumare, whoch I haveremarked in aboot every part, "the kingdom; refulting alfo from the owreme divifion of the loil into litte propertic. It appears likewife, from this detat, that then tom
are not confiderable enough to give that animation and vigour to the induftry of the country, which is beft encouraged by the attivity of the demand which cities afford for the produes of argriculture. A more certain and unequivocal proof of the jultice of my remarks, on the too great and mifchievous divifion of landel property and farms in that kingdom could hardly have arien : and it yields the cleareft convistion, that the progrefs of national improvement has been upon the whole but fimall in lrance. The manufactures and commerce of the kingdom mult have made a lefs advance than one would have conceived poffible, not to have effected a proportion far different from this of a fifth. A really active induftry, proportioned to the real refources of the kingdom, fhould long aro have parged the country (to ufe an expreffion of Sir James Stuart's) of thofe fuperfluous mouths,-I do not fity hands; for they eat more than they work; and it is their want of employment that ought to drive them into towns. Another obfervation is fuggrefted by this curious table of population: I have repeatedly, in the diary of my journey, remarked, that the near approach to Paris is a defert compared to that of London; that the difficrence is infinitely greater than the difference of their population; and that the want of traffic, on the high roads, is found every where in the kingdom as well as at Paris. Now it deferves notice, that the great refort, which is every where obfervable on the highways of England, flows from the number, fize, and wealth of our towns, much more than from any other circumftance. It is not the country, but towns that give the rapid circulation from one part of a kingdom to the other; and though, at firt fight, France may be thought to have the advantage in this refpect, yet a nearer view of the fubject will allow of no fuch conclufion. In the following lift, the Englifi column has furely the advantage:

| Englim. | French. |
| :--- | :--- |
| London, | Paris, |
| Dublin, | Lyons, |
| Edinburgh, | Bourdeaux, |
| Liverpool, | Marfeilles, |
| Briftol, | Nantes, |
| Newcalte, | Havre, |
| Hull, | Rochelle, |

Englifi. Nanchelter, Birmingham, Norwich, Cork, Glafgow, Bath,

French.
Rouen, Lille, Nifmes, St. Malo, Bayonne, Verfailles.

The vaft fuperiority of London and Dublin, to Paris and Lyons, renders the whole comparion ridiculous. I believe, London, without exaggeration, to be alone equal to Paris, Lyons, Bourdeaux, and Marcilles, as appears by the lifts of population, and by the wealth and trade of all. But if we reflect, that the towns of England, \&c. are portions of a population of fifteen millions only, and thofe of France parts of twenty-fix millions, the comparifon fhews at once the valtly greater activity there muft be in one country than in the other *.

Of all the fubjects of political ceconomy, I know not onc that has given rife to fuch a cloud of errors as this of population. It feems, for fiome centuries, to have been confidered as the only fure teft of national profperity. The politicians of thole times, and

[^51]the majority of them in the prefent, have been of opinion, that, to enumerate the people, was the only ftep neceffary to be taken, in order to afcertain the degree in which a country was flourifhing. Two-and-twenty years ago, in my "Tour through the North of England 1769 ," I entered my caveat againft fuch a doctrine, and prefumed to affert, "that no nation is rich or powerful by means of mere numbers of people; it is the indu'trious alone that conflitute a kingdon's ftrength; that affertion I repeated in my "Political Arithmetic, 1774 ;" and in the fecond part, 1779 , under other combinations. About the fame time a genius of a fuperior caft (Sir James Stuart,) very much exceeded my weak efforts, and, with a mafterly hand, explained the principles of population. Iong fince that period, other writers have arifen who have viewed the fubject in its right light; and of thefe none have equalled Monf. Herenfchwandt, who, in his "Economie Politique Moderne, 1736;" and his "Difours jur la Divificn des Terres *, 1788," has almolt exhaufted the fubject. I fhall not, however, omit to name the report of the committee of Mendicite in the National Affembly. The following paffage does the higheft honour to their political difeermment:-"C"eft aingi que malgré les afertions, fans ceffo répetćes depuis vingt ans, de tous les écrivains politiques qui placent la profperité d'un empire dans fa plus grande population, une porulation e:aceflive fans un grand travail $छ$ fans des productions abondantes, feroit au contruire une dévorante furcharge pour un etat; car, il faudroit alors que ct the exceffive population partageat les benefices de celle qui, fans elle, eût trouvé une fulbfiftonce fulifijante; il faudr it que la même fomme de travail fut aban. donnće à une plus grande quantité de bras; il faudroit enfin noce: Jaircment que le prix de ce travail buiflat par la plus grande concurrence des travailleurs, d'on refulteroit une indigence complette pour cenx qui ue trouvcroient pis de travail, छo une fubfifance incomplette pour ceux-mèmes aux quels il ne feroit pas refufe $\dagger$ ' $\dagger$-France itfelf affords an irrcfragable proof of the truth of thele fentiments; for I am clearly of opinion, from the obfervations I made in every province of the kingdom, that her population is fo much beyond the proportion of her induflty and labour, that the would be much more powerful, and infinitely more flourifling, if fle had five or fix millions lefs of inhabitants. From her too great population, fhe prefents, in every quarter, fuch fpectacles of wretchednefs, as are abfolutely inconiftent with that degree of national felicity, which fhe was capable of attaining even under her old government. A traveller much lefs attentive than I was to oljects of this kind, mult fee at every turn moft unequivocal ligns of diftrefs. That thefe hould exift, uo one can wonder who confiders the price of labour, and of provifions, and the mifery into which a fmall rife in the price of wheat throws the lower claffes; a mifery, that is fure to increafe iffelf by the alarm it excites, left fubfiftence fhould be wanted. The caufes of this great population were certainly not to be found in the benignity of the old govermment yielding a due protection to the lower claffes, for, on the contrary, it abandoned them to the mercy of the privileged orders. It is fair, however, to oblerve, that there was nothing in the principles of the old government, fo directly iminical to population, as to prevent its increafe. Many croaking writers in France have repeatedly announced the depopulation of that kingdom, with prety much the fame truth and ingenuity that have been exercifed on the lame fubject in England. Monf. Nocker, in a very fenfible paftage, gives a decifive anfiwer to them, wh:ch is at the fame time thoroughly applicable to the ftate of England, as well as to that of France $\ddagger$. Nor can the great population of France be attributed to the chmate, for the tables of births

[^52]and burials offer nething more favourable in that kingdon, than in our own. And a much worfe climate in Holland and Flanders, and in fome parts of Germany and Italy, is attended with a ftill greater populoufnefs *. Nor is it to be imputed to an extraordinary profperity of manufactures, for our own are much more confiderable, in proportion to the number of penple in the two countries.

This great populoufnefs of France I attribute very much to the divifion of the lands into fmall properties, which takes place in that country to a degree of which we have in England but litile conception. Whatever promifes the appearance even of fubfiftence, mduces men to marry. The inheritance of ten or twelve acres to be divided amongtt the children of the proprietor, will be looked to with the views of a permanent fetlement, and either occafions a marriage, the infants of which die young for want of fufficient nourifhment $\dagger$; or keeps children at home, diftrefling their relations, long after the time that they fhould have emigrated to towns. In diftricts that contain immenfe quantities of wafte land of a certain degree of fertility, as in the roots of the Pyrenees, belonging to communities retaly to fell them, aconomy and indultry, animated with the vicws of fetting and marrying, flourifh greatly: in fuch neighbourhoods fomething like an American increafe takes place; and, if the land be cheap, little diftrefs is found. But as procreation goes on rapidly, under fuch circumftances, the leaft check to fubfiftence is attended with great inifery; as waftes becoming dearer, or the beft portions being fold, or difficulties ariing in the acquifition; all which cafes I met with in thofe mountains. The moment any impediment happens, the diftrefs of fuch people will be proportioned to the activity and vigour which had animated population. It is obvious, that in the cafes here referred to, no diftrefs occurs, if the manufactures and commerce of the diftrict are fo flourifhing as to demand all this fuperfluity of rural population as faft as it arifes; for that is precifely the balance of employments which prevails in a well regulated fociety; the country breeding people to fupply the demand and confumption of towns and manufactures. Population will, in cvery ftate, increafe perhaps too faft for this demand. England is in this refpeet, from the unrivalled profperity of her manufactures, in a better fituation than any other country in Europe; but even in England population is fometimes too active, as we fee clearly by the dangerous increale of poor's rates in country villages; and her manufactures being employed very much for lupplying for eign confumption, they are often expofed to bad times; to a flack demand, which turns thoufands out of employment, and fends them to their parifhes for fupport. Since the conclufion of the American war, however, nothing of this kind has happened; and the feven years which have elapfed fince that period, may be named as the mof decifively profperous which England ever knew; It has been faid to me in France, would you leave uncultivated lands wafte, rather than let them be cultivated in fmall portions, through a fear of population?-I certainly would not: I would on the contrary, encourage their culture; but I would prohibit the divifion of finall farms, which is as mifchievous to cultivation, as it is fure to be diftreffing to the people. The indifcriminate praife of a great fub-divifion, which has found its way unhappily into the National Affembly, muft have arifen from a want of examination into facts: go to diftricts where the properties are minutely divided, and you will find (at leaft I have done it univerfally) great diftrefs, and even mifery, and probably very bad agriculture. Go to others, where fuch fub-divifion

[^53]has not taken place, and you will find a better cultivation, and infuitely lefs mifery; and if you would fee a diftrict, with as little diftrefs in it as is confiftent with the political fyitem of the old government of France, you mult affiuredly go where there are no little properties at all. You muft vifit the great farms in leauce, Picardy, part of Normandy, and Artois, and there you will find no more population than what is regularly employed and regularly paid; and if in fuch diftricts you fhould, contrary to this rule, meet with much diftrefs, it is twenty to one but that it is in a parifh which has fome conmmons that tempt the poor to have cattle-to have property-and, in confequence, mifery. When you are engaged in this political tour, finifh it by feeing England, and I will hew you a fet of peafants well cloathed, well nourifhed, tolerably drunken from fuperfluity, well lodged, and a their eafe ; and yet amongtt them, not one in a thoufand has either land or cattle. When you have viewed all this, go back to your tribune, and preach, if you pleafe, in favour of a minute divifion of landed property. There are two other grofs errors, in relation to this fubject, that fhould be mentioned; thefe are, the encouragements that are fometimes given to marriage, and the idea of the importance of attracting foreigners. Neither of thele is at all admifible on juft principles, in fuch a country as lirance. The predominant evil of the kingdom, is the having fo great a population, that fhe can neither employ nor feed it : why then encourage marriage? would you breed more people, becaufe you have more already than you know what to do with? You have fo great a competition for food, that your people are farving or in mifery; and you would encourage the production of more to encourage that competition. It may almoft be queftioned, whether the contrary policy ought not to be embraced? whether difficulcies hould not be laid on the marriage of thofe who cannot make it appear that they have a profpect of maintaining the children that flall be the fruit of it? But why encourage marriages which are fure to take place in all fituations in which they ought to take place ?-There is no inftance to be found of plenty of regular employment being firft eftablifhed, where marriages have not followed in a proportionate degree. The policy, therefore, at beft is ufelefs, and may be pernicious. Nor is the attraction of foreigners defirable in fuch a kingdon as France. It does not feem reafonable to have a pealifntry half farved for want of employment, arifing from a too great populoufnefs; and yet, at the fame time, to import fereigners, to increafe the competition for employment and bread, which are infufficient for the prefent population of the kingdom. This muft be the effect, if the new comers be induftrious; if they belong to the higher claffes, their enigration from home mult be very infinificant and by no means an object of true policy; they mult leave their own country, rot in confequence of encouragement given in another, but from fome ftrokes of ill policy at home. Such inflances are indeed out of the common courfe of events, like the perfecutions of a Duke d'Alva, or the revocation of the edict of Nantes. It is the duty of every country, to open its arms, through mere humanity, to receive fuch fugitives; and the advantages derived from receiving them may be very confiderable, as was the cafe with England. But this is not the kind of emigrations to which 1 would allude, but rather to the eftablifhment of fuch colonies as the King of Spain's, in the Sierre Morena. German beggars were imported, at an immenfe expence, and fupplied with every thing neceflary to eftablifh little farms in thofe deferts; whillt at the fame time, every town in Spain fwarmed with multitudes of idle and poor vagrants, who owed their fupport to bifhops and convents. Supprefs gradually chis blind and indifcriminate charity, the parent of infinite abufe and mifery, and at the fame time give fimilar employments to your own poor; by means of this policy, you uill want no foreigncrs; and you may fettle ten Spanifh families for the expence of one German. It is very common to hear of the want of population in Spain, and fome
other countrics；but fuch ideas are ufually the refutt of ignordee，fince all ill go． verned countriss are conan mly too popalons．Spain，from the happinets of its clinate， is greatly fo，notwithitanding the apparsut fcarcity of inhabituts；for，as it has been hewn above，that country whish has more people than it cm maintain by induitry， who mutt either ftarve，or remain a daad weight on the charity of others，is manifetliy too populous＊；and Spuin is perhaps the bett peopled country in Europe，in proportion to its indultry．When the great evil is having more people than there is wifdom，in the political inftitutes of a country to govern，the remedy is not by attrating foreigners －it lies math nearer home．

Thefe are the quantities for which duties are paid ；but it is calculated by the officers of the cuftoms，that what enters contraband，and for which nothing is paid，amounts to one－fixth of the whole $t$ ．
The confumption of flour is 1500 farks per diem，each weighing 320 lb ．requiring nine feptiers of corn to yield four of thofe facks，or 3375 feptiers per diem．This is， per annum， $1,231,875$ feptiers；the French political arithmecticians agree in calculating the confumption of their people per head，at thrce feptiers for the whole kingdom on an average；but this will not lead us to the population of the capital，as the immenfe confumption of meat in it muft evidently reduce confiderably that proportion．It may probably be eftimated at two feptiers，which will make the population $615,9,37$ fouls． Monf．Necker＇s account of the population was 660，000．The enumeration in 1790 made the numbers no more than 550.800 ；and there are abundant reafons for believ－ ing the affertion，that this capital was diminithed by the revolution in that proportion at leaft．This point is，however，alcertained by the confumption，which is now 1350 facks a day，or reduced one－tenth，which，at two feptiers of corn，implies a population of

[^54]554,244 ; and as this comes within 2000 of the actual enumeration, it proves that two feptiers a head is an accurate eftimate; and though it does not perfectly agree with Mionf. Necker's account of the former population of Paris, yet it is much nearer to it than the calculations made to correet that account, by Dr. Price, and by the very able and ingenions political arithmetician, Mr. Howlet. As the late cnumeration fhews the population of Paris to have been (proportionably to the confumption of corn) 615,937 fouls, when its births amounted to 20,550 , this fact confirms the general calculation in France, that the births in a great city are to be multiplied by thirty; for the above mentioned number fo multiplied, gives 616,500 , which comes fo near the truth, that the difference is not worth correcting. M. Necker's multiplier is confirmed clearly; and the event, which gives to France a population of $26,000,000$, has proved, that Dr. Price, who calculated them at above $30,000,000$, was as grolly miftaken in his exaggeration of French populousnefs, as Mr. Howlet has hewn him to be in his diminution of that of England. It feems indeed to have been the fate of that calculator to have been equally refute! upon almolt every political queftion he handled; the mifchief of inclofures-the dep , pulation of England - the populoufnefs of France-and the denun. ciation of ruin be pronounced fo authoritatively againft a varietv of mamitant focieties, that have flourifhed alnoft in proportion to the diftreffes he affigned them. The confumption of wine at Paris, on an average of the iall twenty years, has been from $2,30,000$ to 260,000 muids per annum; average, $2+5.000$. In i 789 ir funk rather more than 50,000 muids, by finuggling, during the confufions of that period. In 245,000 muids there are $70,560,00 \mathrm{~J}$ Paris pints, or Englifh quarts, which makes the daily confumption ' 93.315 quarts; and if to this, accorling to the computation of the commis of the barriers, one-fixht is to be added for fmuggling, it makes 225,534 , which is onc-third of a quart, and one-tenth of that third per had per diem. 'The confumption of meat is very difficult to be calculated, becaufe the weight of the bealts is not noted; I can guefs at it only, and therefore the reader will pay no other attention to what follows than to a mere conjecture. I viewed many hundreds of the oxen, at different times, and eftimate the average at fixty fone; but as there are doubtlefs many others fmaller, let us calculate at 50 , or 700 b . and let us drop fmuggling in thefe cafes, fince though it may on the whole, be one-fixth yet it cannot be any thing like that in thefe commodities; the calves at 12 clb . the fheep at 60 lb . and the hogs at $10=\mathrm{lb}$.

This quantity divided amonght a population of 615,937 , gives to each perfon ${ }_{1} 36 \mathrm{lb}$. of meat for his anmal confumption, or above one-third of a pound per diem. During the fame twenty years, the contumption of London was on an average, per annum, 92,539 oxen, and $6.49,369$ fherp $\dagger$. Thefe oxen probably weighed $8+c l b$. each, and the fleep 1oolb.; which two artichs only, without calves or hogs, make 142,669,660;

[^55]yet thefe quantities do not nearly contain the whole number brought to London, which for want of fuch taxes as at Paris, can be difcovered with no certainty. The confumption of Brelt is regiftered for the year 1778 , when 22,000 people, in 1900 honles, confiumed 82,000 boifean, each $1501 b$. of corn of all forts; 16,000 baniques of wine and brandy, and 1000 of cyder and heer ${ }^{\circ}$. This confumption amounted to per headcorn $2 ;$ feptiers, of 24 olb . per annum; - wine, brandy, beer, and cyder, one third of a quart per head per diem. Nancy, in 1733, when it contained $29,6+5$ fouls, confumed,

Oxen, 2402.-Calves, 9073.-Sheep, $1_{1,863 .-T o t a l, ~}^{23,3,38 .}$
It onfumed, therefore, more than one of thefe pieces per head of its population. In 1733, when it contained 19,831 fouls, it confumed,

Oxen, 2309.-Calves, 5098.-Sheep, 9549.——Total, $16,896 \dagger$; above thrce-fourths each. The conflumption of Paris is three fourths of one of thefe beafts per head of population. As the finefl catte in the kingdom are fent to the capital, the proportions in number ought to be lefs; but the wealth of that capital would have juffified the fuppofition of a flill greater comparative confumption.

## Char. XVII.-Of the Police of Corn in France.

OF all fubjects, there is none comparable to the police of corn, for difplaying the folly to which men can arrive, who do not betray a want of common fenfe in reafoning on other topics. Onc tells us (I confine myfelf chiedly to French authorities, engaged as I am at prefent in relearches in that kingdom) that the price is in exact proportion to the quantity of corn, and to the quantity of moncy at the fame time in the kingdom $\ddagger$; and that when whear fells at 36 livres the feptier, it is a proof there is not half enough to laft till harveft g . He propofes to have magazines in every market, and to prohibit, under fevere penalties, a higher price than 24 livres. This would be the infallible method to have it very foon at 50 , and perhaps ico livres. That the price of corn does not depend on the quantity of money, is proved by the fudden rife proceeding from alarms, of which this author might have known an inftance in the year he printed; for Monf. Necker's memoir to the National Afiembly was mo foomer difiperfed, than the price rofe in one week 30 per cent.; yet the quantity in the kinglom, both of moncy and corn, remained jut as before that memoir was publifhed. But it has alrealy been fuficiently proved, that a very fmatl afficiency of the crop will make an enormous difference in the price. I may add, that the mere apprehention of a deficiency, whether ill or well founded, will have the fame effect. From this circumftance, I draw a conclufion of no trifling import to all governments; and that is, never to exprefs publicly any apprehenfion of a want of corn; and the only method by which government can exprefs their fears, is by proclamations againft export: prohibitions; ordonances of repulation of fale; arrets, or laws againtt monopolizers; or vain and frivolous boalts, like thofe of Monf. Necker, of making great imports from abroad-all thefe meafures have the fame tendency; they contirm amongit the people the apprehenfion of want ; for when it is found anongit the lowell orders, that government is alarmed as well as they themfelves, their own frars augment; they rife in a rage againft monopolizers, or fpeculators, as they ought rather to be called, and then every itep they take has the never-

1789.8 vo. p. 5.
failing effect of increafing the evil ; the price rifes flill higher, as it muft do inevitably, when luch furions obflructions are thrown on the interior trade in corn, as to make it a matter of great and lerious danger to have any thing to do with it. In fuch a fituation of madnefs and folly in the people, the plenty of one diflrict camot fupply the want of another, without liuch a monftrons promiun, as fhall not only pay the expence of tranfport, but infure the corn, ...n lodged in granarics, againft the blind and violent fulfpicions of the people. 'To raife this fpirit, nothing more is necellary than for government to iflue any decree whatever, that difcovers an alarm; the people immediately are apprehonfive of famine ; and this apprehenfion can never take place without creating the reality in a great mealure. It is therefore the duty of a wife and enlightened government, if at any time they flould fear a fhort provifion of corn, to take the molt private and cantious meafures pollible, either to prevent export, by buying up the corn that is collected for exportation, and keeping it within the kingdom, a meafure caly to be done through individuals, or to encourage import, and to avoid making any public decree or declaration. The hiltory of corn, in France, during the year 1789, was a moft extraordinary proof of the juiltnefs of thefe principles. Wherever I paffed, and it was through many provinces, I made inquinies into the caufes of the fcarcity; and was every where alfurcd, that the dearnefs was the molt extraordinary circumftance in the worli : for, though the crop had not been great, yet it was about an average one; and confequently that the deficiency mult certainly have been occafioned by exportation. I demanded, if they were fure that an exportation had taken place? - They replied, no; but that it might have been done privately : this anfwer fufficiently flewed, that thefe exports were purely ideal. The dearnefs, however, prevailed to fuch a degree, in May and June particularly, (not without being fornented by men who fought to blow the difcontents of the people into abfolute outrage,) that Monl. Necker thought it right not only to order inmenfe cargoes of wheat, and every other fort of corn, to be bought up all over Europe, but likewife in Sune, to announce to the public, with great parade, the fteps that he had taken, in a paper called Mcmoirc inftructif, in which he ftated, that he had bought, and ordered to be bought, $1,404,463$ quintaux of different forts of grain, of which more than $800,0 c 0$ were arrived. I was a perfonal witnefs, in many markets, of the effect of this publication; inftead of linking the price, it raifed it directly, and enormoully. Upon one market day, at Nangis, from 38 liveres to 43 livres the feptier of 240 lb . ; and upon the following one to 49 lirres, which was July 1 it ; and on the next day, at Columiers, it was taxed by the police at 4 livres $f f$. and 4 livres $6 f$. the $2 ; \mathrm{lb}$. ; but as the farmers would not bring it to market at that price, they fold it at their farms at $5^{\frac{1}{2}}$ livres, and even 6 livres, or 57 livres the feptier. At Nangis it advanced, in fourteen days, 11 livres a feptier ; and at Columiers a great deal more. Now, it is to be oblerved, that thefe markets are in the vicinity of the capital, for which Nonf. Necker's great foreign provifion was chiefly defigned; and confequently if his meafures would have had any where a good effect, it might have been expected here; but fince the contrary happened, and the price, in two markets, was raifed 25 per cent. we may reafonably conclude, that it did good no where; but to what was this apparent faarcity imputable? Abfolutely to Monf. Necker's having faid in his memoir, à mon arivée dans la niniftere je me batai de prendre des informations fur le produit de la récolte छ̂ fur les befoins des pays étrangers*. It was from thefe unfealonable inquiries in September

1788, that all the mifehief was derived. They pervaded the whole kingdom, and fread an univerfal alarm ; the price in coufequence arofe; and when once it rifes in France, mifehief immediately follows, becaufe the populace, by ther violence, render the internal trade infecure dind dangerous. The bufinefs of the minifter was done in a moment; his confummate vamity, which, from having been confined ti) his character as an author, now became the foourge of the kingdom, prohibited the export for no other reafon, than becaufe the Archbifhop of Sens hat she year before allowed it, in contradiction to that mafs of errors and prejulices which M. Nockers.s book upon the corn trade had dilfeminated. It is curious to fee him, in his Memoir mill ruflif, afferting, that Vrance, in 1787, ctoit liverée au commerce des grains dans tout li roy. nume, avec phes
 Now, to fee the invidious mamer in which this is pat, let us surn to the regiter of the Burcan General de ha butance du Commerei, where we thall find the following Itatement of the corn-trade for 1787 :

n'en avnir aicun d'immuahle mais à defendre "u premettre cette expmetation felon le tempsa folon len cir. eonflances." When a man flate upona rotten fomindation, he is fure to thounder in thic manner ; the fime plicity of a fyetem to tie new-moulded every moment, 'felon ke temps \& felon les circoultances!" And who is to judge of thefe feafons and circumbancen? A minither? A goverument? Thefe, i ferms, ate to promulgate laws, in confugunce of their having male inguiries into the ta c of crops and abe son hand. What prefumption; what an excefs of vaniev mult i: lee, which impels a man to fuppole, that the truth is within the verge of fuch inquiries; ar, that he is one line, or one puint neder to it, atter he has mask them before he lickan. Go to the Intendant in France, or to the Lond l.ientenint in England, and
 low him to his table for ennerf fation on crops, or in his ride amone the farmers (au idea that may obtain in Fngland, but never was fuch a ride taken byan Insendnet in Fawe) in onter to make inquiries ; matk

 fources of his information. He cught to have known that miniters can never peowne it ; and that they
 his own parifh ; yet what genteman would prefume to prosenner upon a crop to the 3 foth pati of its amonnt, or even to the ceih? But it nuft be ubfeved, that all Mon. Necker's fimple oprati,ns, which caufed an unlimited import, at an unlimited experiec, aflictat not nue twemieth pant of a year's conformp-

 Monf. Necker's peformane deferves an atemene permin, eqpeciaily when he paians puthetcaty the anx.

 famine; to aconty which, ha afines fo much merit, as to matate a cominon reader.

This account fhews pretty clearly how well founded the minifter was, when he attempted to throw on the wife meafure of his predeceflor the mifchiefs which arofe from his own pernicious prejudices alone; and how the liberty of commerce, which had taken place moft advantageoully in confequence of the free trade in 1787, had been more an import trade than an export one; and of courfe, it hews, that when he advifed his fovereign to prohibit that trade, he acted directly contrary even to his own principles; and he did this at the hazard of raifing a general alarm in the kingdom, which is always of worfe confequence than any poffible export. His whole conduct, therefore, was one continued feries of fuch errors, as can, in a fentible man, be attributed only to the predoninant vanity that infligated him to hazard the welfare of a great nation to defend a treatife of his own compofition. But as this minifter thought proper to change the fyftem of a natural export and import; and to fpread, iy his meafures, an alarm amongt the people, that feemed to confirm their own apprehenfions, let us next examine what he did to cure the evils he had thus created. He imported, at the enormous expence of $45,543,097$ livres (about $2,000,050$ fterling) the quantity of $1,404,455$ quintaux of corn of all forts, which, at 240 lb . make $58 \mathrm{j}, 192$ feptiers, fufficient to feed no more than 195,064 people a year. At three feptiers per head, for the population of 96 millions of mouths, this fupply, thus egregiouly boafted of, would not, by 55,908 feptiers, feed France even for three days; for her daily confumption is 213,700 feptiers, nor have I the lealt doubt of more perfons dying of famine, in confequence of his meafures, than all the corn he procured would feed for a year*${ }^{*}$. So abfolutely contemptible is all importation as a remedy for famine! and fo utterly ridiculous is the idea of preventing your own people from being llarved, by all owing an import which, in its greateft and moft forced quantities, bears fo trilling a proportion to the confumption of a whole people, even when bribed, rather than bought from every ce intry in Europe! But a conclufion of much greater inportance is to be deduced from thefe curious facts, in the moft explicit confirmation of the preceding principles, that all great variations in the price of corn are engendered by apprehenfion, and do not depend on the quantity in the markets. The report of Monf. Necker's meafures we have found, did not fink, but raifed the price : providing France with lefs than three days bread, when blazed forth with all the apparatus of government, actually raifed the price in the markets, where I was a witnefs, 25 per cent. Of what pofible confequence was three days provifion added to the national fock, when compared with the mifery and famine implied-and which actually took place in confequence of puthing the price up fo enormounly, by Monf. Necker's meafures? Would it not have been infinitely wifer never to have ftopped the trade, which I have proved to have been a trade of import?-Never to have expreffed any folicitude?-Never to have taken any public fteps, but to have let the demand and fupply quietly meet, without noife and without parade? The confiequence would have been, faving forty-five millions of the public money, and the lives of fome hundred thoufands, farved by the high price that was created, even without a fcarcity; for I am firmly perfuaded, that if no public ftep whatever had been taken, and the archbihop of Sens' edict never repealed, the price of wheat in no part of France would have feen, in 1789, fo high a rate as 30 livres, inftead of rifing to 50 and 57 livres. If there is any truth in thefe principles, what are we to think of the firft minitter hunting after a little popularity, and boalting

- At a moment when there was a great flagnation in every fort of employment, a high price of bread. 1 ifead of a moderate one, mull have deltroyed many; there was no doubt of $g$ eat numhers dying for want in every part of the kingdom. The people were reduced in fome places to ea- brar and boiled gafs. Yourna' de l'Alp Nat, tom. i.
vol. $1 v$.
$\mathbf{U} \mathbf{U}$
in his Momoirc, that the King alloned only bread of wheat and rye mixed to be ferved at his own table? What were the conclutions to be looked fir in the people, but that if fuch were the extremities to which France was reluced, all were in danger of drath for wamt of bread. The conlequence is palpable; a blind rage againft monopolizers, hanging bakers, feizing barges, and fenting fire to magazines; and the inevitable effect of a fudden and chormons sife in the price, wherever fuch meafures are precipitated hy the populace, who never are truly active but in their own deltruction. It was the fame firit that dictated the following palfige, in that Memoire in/ructif, "Les accaparenacens fons la promiere calife ì laquelle la multitude attribue la cherte des grains, छven ofit cen foutent cu licu de je plaindice de la cupidité des fpeculuteurs "." I cannot read thefe lines, which are as nutrue in tact as erroneoos in argumen, without indignation. The multituele never have to complain of fpeculators; they are always greaty indebted to them. There is no fuch thing as monopolizing corn but to the benefit of the people $\uparrow$. And all the evils of the year 1789 would have been prevented, if monopolizers, by raifing the price in the preceding autum, and by lefiening the confumption,
- 'Ihis is pretty muel like his fending a memoir to the National Affenhly, which was read uctober

 fisme the people, and confequently to raife the pir ce.
$\ddagger$ nam onech inclined to believe, that no fort of inomopoly ever was, or ceer can be injurious withous the affitance of government ; and hat government never tonds in the leall to favour a momoporly withous dugg intinite mifchicf. Wi have heard in Lugland of attempts to monopolize hemp, allum, cotom, and nany other artiche: ill conctibed fpeculations, that atways colled in the win of the ichemers, and eventazly dis, onel, ar I could thew, if this ware the proper place. Bue to monopulize any article of ermmon and dalv huply and confingriou to a mifchiceoun degree, is abfolutely imponible : to buy lange quantites, at the cheapell featon of the yoaro in order to livard and bring them ont at the very deare it moneat,
 equal fupply. The wheat which fuch a man buys is wheyp, or he would nut buy it with a diew to protit : What dore he do then ? He takes from the nanket a portion, when the fupply is targe; and he brings that portion to the makket when the fupply is fuall; and for doing this you hang him ne an eneny. Why? BCtanfe he las made a private prolit, pultinps a very grent une, by coming in between the farmer and the contwiner. What thould indace hin tocany on his batinefo, except the detire of profit? Bur the benelit of the peonphis exactly in proportion to the greatnefsof that proft, fance it anifes diredty fum thelow price of corn at one feafon, ant the deanefo ot it at mather. Moll clearly any trade which tends to level this inequality is advantageous in proportion asin etfectsit. By huy ing great y antites whencheap, the price is raifed, and thecomfumption forced tobe more fraring: thiscitcumitancecan alune fave the people from famine; if, when the cropis feanty, the people condume plentifully in autumn, they mult ine viably thave in fumner; and they certainly will cuntfume plentifully if ecm is cheap. Gesermenen canuet Aop in and fay, you hatl now cat half a pound of bread unly, that you mav met by and hy be put to half an nance. Government camot do this withont ereating graturics, which we know, by the experience of all Europe, is a moll pernicious fyftem, and done at an oxpence which, if laid out in prewiams, encoutaging cultivation, would convert deferts into fruifful corn-lichds. But pivate monopulizers can and doetfot it; for by their purehafes in cheap monshs they raife the price, and exactly in that puphortion felfen the confumption; this in the great objef. for nuthing elle can make a thurt enop hald out thromph the year: when onte this is clitected, the people are fafe, they may pay very dear aterwards, but the corn will be forth-coming, and they will have it thenghat an high price. but reveffe the medal. and huppofe no monopolizers; inf fuch a cafe, the chicapoefs in antunn cominuing. the fire confunption wouk continue with it: and an undue portion being eaten in winter, the fumncr sombleome withnit is finply: this waa manifelly the hillony of 1789 ; the people emagedat the idea of nompolizets, nus at their ieal exittence, (fon the nation was flarving fore Want of then,) huag the miferable dealers, ot che idea of sheir having tone what they were miterly mable to do. Thus, with tiah a fyltem of fmall fatmanempty the whole crop into the markets in antum, and gake nos referve fur fum ner, there is no poltible remedy, but many and great monepulizers, who are be-

 turns, and keep a die referve in llacks to be theflhed in fumatuer ; the belt of all nethode of keeping corn and the only vie in which it rectives no damage.
had divided the fupply more equally through the year. In a country like France, fub)divided mifchisvoufly into little farms, the quantity of corn in the onarkets in autum is mays beyond the propertion referved fur fupplyiner the reft of the gear ; of this evil, the heft remedy ix, enlarging the fize of farms; but when this does not take place, the dealings of monopolizers are the only refource. Thry t wy when corn is cheap, in order to hoard it till it is dear; this is thair fpeculation, and it is precifcly the conduct that keeps the penple from flarving; all imaginable ensourserencut flould be given to fich merchants, whofe bufnefla anfersevery purpofe of public granarics, withut any of the evils that are fure to llow from them". It may eafily be conceived, that in a country where the people live almoft entirely on bread, and the blind proceedings of mobs are encouraged by arrets of parlianems, feemad by fuch blunders of government as I have defcribed, and maided by the beneficial exituence of real monopolizers; it may eafily be conceived, lay, that the fupply mult be irregular, and in many inftances infulticient; it muft be infufficient, exartly in proportion to the violence of the populace; and a very high price will be the umavoidable confequence, whatever may be the quantity in the kingdom. In June and July 1789 , the markets were not opened before troops arrived to proteft the farmers from having their corn feized; and the magiftrates, to avoid infurrections among the people, fet the affize too low upon corn, tread, and butcher's meat; that is, they fixed the prices at which they were to be fold, which is a molt pernicious regulation. The farmers, in confequence, refrained from goirg to market, in order to fell their wheat at home at the beft price they could get, which was of courle much higher than the affize of the markets. How well thefe principles, which fuch ample experience proves to be jull, are underfood in France, may be collected from the cabiers, many of whom demand meafures which, if really purfued, would lipread abfolute famine through every province in the kingdonl. It is demanded at one place, " that as lirance is expofed to the rigours of famine, every farmer thould be obliged to regifter his crop of every kind, gerbs, bottes, muids, \&c. ; and alfo every month the quantity fold t." Another requires, "that export be feverely prohibited. as well as the circulation from province to province; and that importation be always allowed $\ddagger$." A third §, "that the feveref laws be paffed againft monopolizers; a circumftance which at prefent defolates the kingdom." A tyltem of prohibition of export is demandeld by no lefs than twelve cabicrs $\|$. And tifteen demand the ercetion of public magazines I. Of all folecifins, none cver equalled l'aris demanding that the tranfiport of corn from province to province thould be prohibited. Such a requeft is

[^56]really edyfying, by offering to the attention of the philofophical obferver, mankind under a new feature, worthy of the knowledge and intelligence that ought to reign in the capital of a great empire; and Monficur Necker was exactly fuited to be miniftor in the corn department of fuch a city!-The conclufions to be drawn from the whole bufinefs, are evidenrenough. There is but one policy which can fecure a fupply with entire fafety to a kingdom fo populous and fo ill * cultivated as France, with fo large a portion of its territory under wood and vines; the policy I mean is an entire and ablolute liberty of export and import at all times, and at all prices, to be perfifted in with the fame unremitted firmnefs, that has not only refcued Tufcany from the jaws of periodical famines, but has given her eighteen years of plenty, without the intervention of a moment's want. A great and important experiment! and if it has autwered in fuch a mountainous, and, in comparion with France, a barrent territory, though full of people, affuredly it would fulfil every hope, in to noble and fertite a kingdom as France. But to fecure a regular and certain fupply, it is neceffary that the farmer be equally fecurc of a fleady and good price. The average price in France vibrates between 18 and 22 livres a feptier of 240lbt. I made elquiries through many provinces in 1789, into the common price, as well as that of the moment, and found (reducing their meafures to the feptier of 24 olb .) that the mean price in Champagne is 18 livres; in Loraine $17 \frac{1}{\frac{1}{2}}$; in Alface 22 livres; in Franche Comté 20 livres: in Bourgogne 18 livres; at Avignon, \&c. 24 livres; at Paris, I believe, it may be calculated at 19 livres. - Perhaps the price, through the whole kingdom, would be found to be about 20 livres. Now, without entering into any analyfis of the fubjec., or forming any comparifon with other countries, France ought to know, at leaft the has dearly learned from experience, that this is not a price fufficient to give fuch encouragement to the farmers as to fecure her a certainty of fupply: no nation can have enough without a furplus; and no furplus will ever be raifed, where there is not a free corn trade. - The object, therefore, of an abfolutely free export, is to lecure the home fupply. The mere profit of felling corn is no object; it is lefs than none; for the right ufe thereof is to feed your own people. But they cannot be fed, if the farmers have not encourabement to improve their agriculture ; and this encouragement mult be the certainty of a good.

\footnotetext{

- The affertion of the Marquis de Caffaux, "that the free corn trade eftablifhed by Monf. Turgot, increafed the productions of the agriculture of France as 15010100 ," (Seconde Suite de Confid. fur les Mechb. d, Soe: p. 119.) muft be received with great caution. That of Mon( Millot, "that the lands of the rame kingdon produced five times as much in Henry IV 's reign as the y do at prefent," is a very grofs error, irricuncilcable with the lealt probability. Elem. de PHi/t. Gen. l. ii. p. 488.

price. Experience has proved fufficiently, that 20 livres will not do. An ablolute freedoin of interior circulation is fo obvioufly neceffiary, that to name it is fufficient *.
A great and decided encouragement to monopolizers $\dagger$ is as neceflary to the regular fupply, as that feed fhould be fown to procure a crop; but re.ping, in order to load the markets in winter, and to farve the people in fummer, can be remedied by no other perfon but an accupareur. While fuch men are therefore objeds of public hatred; while even laws are in force againf them, (the moft prepofterous that can difyrace a people, fince they are made by the mouth, againft the hand for lifting food to it,) no regular fupply tan be looked for. - We may expect to fee famine periodical, in a kingdom governed I $y$ the pri:cinles which mult take place, where the populace rule not by enlightened reprefentaicis, but by the violence of their ignorant and unmanageable wills. Paris governs the National Affembly; and the mafis of the people, in great cities, are all alike abfolutely ignorant how they are fed; and whether the bread they eat be gathered like acorus from a tree, or rained from the clouds, they are well convincel, that God Almirhty fends the bread, and that they have the beft poffible right to eat it. The courts of London, aldermen and common councilmen, have, inevery period, reafoned juft like the populace of Paris $\ddagger$. The prefent fyftem of France, relagive to agriculture, is curius :

## To encourage inveftments in land, 1. Tax it Tbree Hundred Millions.

#### Abstract

- The internal' hackles on the corn trade of France, are fuch as will greatly impede the eftablifhment of that perfect freedom which alone forms the proper regulation for fuch a country. M. Turgot, in his Letlres fur les Grains, P 126, notices a mult abfurd duty at Bourdeaux, of 20f. per feptier on all wheat confumed there, or even deyofi ed for fureign commerce, a duty which ought to have prevented the remark of the author of Credit National, w. 222, who inentions, a3 an extraordinary fact, "llat at Touloufe there is a duty of $12 f$ per feptier on grinding, yet bread is chearer there than at Bourdeanx." Surely it would be fo; it ought to be 8 ., the feptier cheaper. $\dagger$ The word fpeculator, in various paflages of this chapter, wonld be as proper as monopolizer, they mean the fame thing as accapareur; a man who huys corn with a view to filling it at a higher price; whatever terin is ufid, the thing meant is every where underltood. $\ddagger$ Aldermen, cummon cumncilmen, and mobs, are confitent when they talk nonfenfe; but philofophers are net fo eafly to he pardoncd; when M. P'Ahbé Rozier declares, que la France recelté anneé ordinaire prìs du double plus de blel qu'rlle n'en confomare, (Recueil de Mémoires fur la C'ulture E'le Rouifuge du Ebauvre, 8vo. 1787. P. 5. , he winte what has a direca tendency to inflame the people; for the conclufion they muit draw is, that an inmenfe and incredible export is always going on. If France produces in a common year donble her confumption, what hecomes of the furplus? Where are tie oither 25 millions of people that ate fed with French corn? Where do the $7800 \mathrm{o}, \mathrm{000}$ of feptiers go that France has to fpare; a quantity that would load all the hips poffelfed by that kingdon above thity tines to carry it. Intrad of the common crop equalling two years conímprion, it certainly does not cyual thirieen months comnou confump. tion; that is fuch a confump,tion as taken phace at an average price. And all the difference of cropep is, that confunption is moderate with a bad prowluct. and plentitul with a good one. The failure of a crup in one province in a very finall degree, which, under a good government, and emire liberty of trade, would not even be felt, will, under a fyllem of relltiations and prohibitions, raife the price through the whole kingdom enormeunly; and if mealures are taken to correct it by government, they will couvert the high price into a famine. The allihor it Iraite d'Economic Politigue. 8vo. 1783, P. 59;, doee not talk quite fo greatly, when he fays a good crop will feed France a year and a half; but pretty near it. The abfurdities that daily appear on thio furject are altomith"ng. In a work now publifhing: it it faid, that a mode'ate crop furuifhes Eogland tor three yrars, and a good one for five. Encys upadie Mctbodique Eiconomic tol. pt. i tum. i. p 73. 'This affertion is copicd from an Itahan, viz Zunoni delp Agricolitur, ${ }^{1763}$,  8 8v. $76 \quad$ P. 210 It is thus hat fuch nonfenfe becumes propagated, when authors are coutens ta copy one another, without knowledge or confideration.

To enable the land to pay it, II. Probibit the Export of Corn. That cultivation may be rich and fipirted, III. Encourage finall Firms. That cattle may be plentiful, IV. Forbil the Inclofire of Commons.

And that the fupply of the markets may be equal in fummer as in winter. V. Hang all Monopolizers.

Such may be called the agricultural code of the new government of France!

## Chap. IV. Of the Commerce of France.

AGRICUITURE, manufactures, and commerce, uniting to form what may be properly termed the mafs of national induftry, are fo intimately connected in point of interef, under the difpenfations of a wifc political fyttem, that it is impofible to treat amply of one of them, without perpetually recurring to the others. I feel, in the progrefs of my undertaking, the impoffibility of giving the reader a clear idea of all the interefts of French agriculture, without inferting, at the fame time, fome details of manufactures and commerce. The opportunities I poffeffed of gaining fome valuable intelligence, enable me to infert feveral accounts hitherto unpublifhed, which I believe my commercial readers (hould I have any fuch) will not be difpleafed to examinc.

Exilanation-The contrahand trade of export and impor: has been calculatod, and the true balatice fuund to be about $25,000,0=0$ liv. ( $1,093,75 \mathrm{cl}$,) the proviuces of Luraine, Alface, the three bifhoprics, and the Wefl-Indies, not included.

## Obfrevations.

The preceding accounts of the trade of France, for thefe two years, are correct in all probability in the articies noted; but that they are imperfect there is great reafon to believe. In 1787 there is an import of raw intals to the amount of above twenty milhons: but in the ascount of $178+$ there is ne fuch article in the litt, which is plainly an onifion. And though coats are among the exports in 1784 , there are none in the imports, which is another omifion. In the manufactured articles alfo are various omiffions, not eafily to be accounted for, though the treaty of commerce explains fone articles, as that of cotton manufactures, $\& \mathrm{cc}$. : the idea to be formed of the exports and imports of France fhould be gathered from an union of the two, rather than from cither of them feparate. No idea, thus to be gained or acquired by any other combinations, willallow for one moment the poffibility of a balance of commerce of $70,000,000$ livres, $(3,062,5001$.) in favour of France, which Monf. Necker has calculated it to be, in his book, De iddminillration des Finances, and which calculation the Marquis de Caffaux, in his Mecbanisin dis Societćs, has refuted in an unanfiverable manner. It will be curious to examine what is the amount of the imports of the produce of land, minerals excluded.
Ia $178+$ the inports of the produce of land amounted to,

She may be faid, therefore, to import in a common year about $14,500,000$ livres $(6,3+3,7501$.) of agricultural products: and thefe imports are a ftriking proof, that I was not wide of the truth when I condenmed fo feverely the rural occonomy of France in almolt every particular, the culture of vines alone excepted. For the coustry, of all Furope, the beft adapted by nature to the production of wool, to import fo immenfely, Shews how wretchedly they are uaderftocked with fheep; and how much their agriculture fuffers for want of the foll of thefe five or fix millions, in which they are defici nt even for their own demand. The import of tuch great quantitics of other lorts of live flock alfo facaks the fane language. 'Their hulbandry is weak and languifting in every
part of the kingdom, for want of larger flocks of cattle, and the national demands cannot be fupplied. In this trade of live flock there is, however, one circumftance which does the higheft honour to the good fenfe and policy of the ald Freach government ; for though wool was fo much wanted for their fabrics, and many meafures were taken for increafing fheep and improving the breed, yet was there no prohibition on the export either of live fheep or veol, nor any duty farther than for afcertaining the amount. It appears that they exported above 100,c00 fheep annually; and this policy they embraced, not for want of experience of any other (for the export was prohibited for many years, ) but finding it a difcouragement to the breed, they laid the trade open, and the iame plan has been continued ever fince ; by this fyftem they are fure that the price is as high in France as amongf her neighbours, and contequently that there is all the encouragement to breed which fuch equality of price can give. The export of woollen manufacture in 1784 , amounts to $24,795,800$ livres, or not equal to the import of raw wool. On the general account, therefore, France does not fupply herfelf; and the treat y of commerce having intioduced many Englifh woollen ftuffs, fhe is at prefent further renoved from that fupply. Confidering the climate, foil, and population of the kingdom, this fate of her woollen trade certainly indicates a moft grofs neglect For want of having improved the breed of her fheep, her wools are very bad, and the is obliged to import, at a heavy expence, other wools, fome of which are by no means good; and thus her manufachures are under a heavy difadvantage, on account of the low fate of agriculture. The fteps fhe has taken to improve her wools, by giving penfions to acadenicians, and ordering experiments of enquiry upon obvious points, are not the means of improvement. An Englif, cultivator, at the head of a fheep farm of three or four thoufand acres, as I obferved above, would, in a few years, do more for their wools than all the acadensicians and philofophers will effect in ten centuries.
Bayonne. - Trade here is various, the chief articles are the Spanifh conmmerce, the Newfoundland fifhery, and the coafting trade to Breft, Nantes, Havre, Dunkirk, \&c.: they have an export of wine and flour, and they manufacture a good deal of table linen. They build merchant hips, and the king has two frigates on the focks here under Ilated roofs. Of a merchantman, the workmanhip alone amounts to about 15 livres a ton. They reckon two thoufand failors and fihermen, including the bafque men, about fixty fhips of different fizes, belong to the place, eight of which are in the American trade, feventeen in the Newfoundl: . fifhery, of from eighty to one hundred tons averare. but fome much larger; the reft in the Spanifh, Mediterrancan, and coafting trades.
amen here are paid in the Newfoundland fifhery 36 liv. a month wages, and one quintal in five of all the fifh caught. To Dunkirk 27 liv. to Nantes 45 liv. per voyage; to the coaft of Guinea 50 liv per month; to Bofton and Philadelphia 50 liv. to St . Scbaftian 24 liv. the voyage; to Bilboa 36 liv. to St. Andero 40 liv. to Colonia and Ferrol 46 liv. to lifbon and Cadiz 30 liv. a-month, and for three months certain.
Bourdeaux. - All the world knows that an immenfe commerce is carried on at this city ; every part of it exhibits to the traveller's eye unequivocal proofs that it is great; the fhips that lye in the river are always too numerous to count eafi'y; I guefs there are at prefeit between three and four hundred, befides fmall craft and barges; at fome feafons they amount to one thoufand or fifteen hundred, as I was affured, but know not the truth of it ; I rather queftion it, as it docs not feem ablolutely to agree with auther account, which makes the number of thips that enter the harbourten on an average every day; or, as afferted by others, three thoufand in a year. It mav be fufficient to fay, at prefent, that here are every fign of a great and flourifhing trade; croutis of men all em-
ployed, bufy, and active ; and the river much wider than the Thames at London, antmated with fo much commercial motion, will leave no one in doubt.

Ship-building is a confiderable article of their trade; they have built fixty fhips here in one year; a fingle builder has had eight of his own on the focks at a time; at prefent they reckon the number on an average from twenty to thirty; the greater number was towards the termination of the war, a fpeculation on the effect of peace; there are fixty builders who are regiftered after undergoing an examination by an officer of the royal navy; they reckon from two to three thoufand fhip-carpenters, but including the river Garonne for many leagues; alfo fifteen hundred failors, including thofe carpenters; the expence of building rifes to $\mathrm{gl} . \mathrm{a}$ a ton, for the hulk, mafks, and boats; the rigging and all other articles about 41. more; thirty-three men, officers and boys included, are eftimated the crew for a veffel of 400 tons, eight men for one of 100 tons, and fo on in proportion ; they are paid all by the month from 30 to 36 liv. fome few 40 liv. carpenters 40 to $50 \%$ a day, and fome 3 liv. There are private fhip-owners, whofe whole trade confifts in the poffefion of their veffels, which they navigate on freight for the merchants; they have a calculation, that fhips laft one with another twelve years, which would make the number poffefed by the town three hundred, built by themfelves; a number I fhould apprehend under the truth; the Bretons and Dutch build alfo for them.

Ships of a larger burthen than feven hundred tons cannot conc up to the town but in fpring tides.

The export of wine alone is reckoned to amount to eighty thoufand tons, befides which brandy muft be an immenfe article.

Havre de Grace.-There is not only an immenfe commerce carried on here, bue it is on a rapid increafe; there is no doubt of its being the fourth town in France for trade. The harbour is a foref of mafts; they fay, a 50 gun fhip can enter, I fuppofe without her guns. They have fome very large merchanturen in the Guinea trade of 5 or 600 tons, but by far their greatelt commerce is to the Welt-India fugar inlands; they were once confiderable in the fifheries, but not at prefent. Situation muft of neceflity give them a great coafting trade, for as fhips of burthen cannot go up to Rouen, this place is the emporium for that town, for Paris, and all the navigation of the Seine, which is very great.

Sailors are paid 40 liv. a month.
There are thirty Guincamen belonging to the town, from 350 to 700 tons; one hundred and twenty Weft-Indiamen; one hundred coalting trade; moft of them are built at Havre. The nere building a thip of 300 tons is 30,000 livres, but fitted out 60,000 livres.

The increafe of the commerce of Havre has been very great in twenty-five years, the exprefion ufed was, that every crown has become a louis, and not gained by rivalling other places, but an increafe nationally, and yet they confider theinfelves as having fuffered very confiderably by the regulations of the Maréchal de Caffries, in relation to the colonies; his permitting foreigners to ferve them with falt provifions, lumber, \&c. opened an immenfe door to fmuggling manufactures in, and fugar out, which France feels feverely.

Honfleur.-The bafon full of hips, and as large as thofe at Havre, I faw fome of at leaft 600 tons.

Cherbourg.-Sailors 36 liv. to 40 liv. a month.
St. Brieux.-The fhips belonging to this little port are gencrally of 200 tons, employed in the Newfoundland fifheries, carrying fixty men of all forts, tho are paid
not by fhares, but wages by the voyage : feamen two hundred livres, to two hundred. and fifty livres, and fome to five hundred livres.
Nantes. - The accounts I received here of the trade of this place, made the number of hips in the fugar trade one hundred and twenty, which import to the amount of about thirty two millions, twenty are in the flave trade; thefe are by far the greateft articles of their commerce; they have an export of corn, which is confiderable from the provinces wathed by the Loire, and are not without minoteries, but valtly inferior to thofe of the Garonne. Wines and brandy are great articles, and manufattures even from Switzerland, particularly printed linens and cottons, in imitation of Indian, which the Swifs make cheaper than the French fabrics of the fame kind, yet they are brought quite acrofs France ; they export fome of the linens of Bretagne, but not at all compared with St. Maloes, which has been much longer eftablihed in that bufinefs. To the American States thcy have no trade, or next to none. I alked if Bourdeaux had it? No. Marfeilles? No. Havre? No. Where then is it? Tout en Angleterre.
The accounts they give here of the trade to the Sugar llands is, that Bourdeaux his stwice as much of it as Nantes, and Havre to the amount of twenty-five millions, this w'll make it ${ }_{3}$

The whole commerce of thefe ines they calculate at 500 millions liv. by which I fuppofe they mean exports, imports, navigation, profit, \&cc. icc.
The trade of Nantes is not at prefent fog great as it was before the American war; thirty fhips have been building here at once, but never half that number now; the decline they think has been much owing to the Marilhal de Caftries' regulations, admitting the North Americans into the Sugar Iflands, by which means the navigation of much Cugar was lof to France, and foreign fabrics introduced by the fame channel. The 40 livres a ton given by government to all hips that carry flaves from Africa to the Sugar llands, and return home with fugars, and which I urged as a great favour and attention in government, they contended was juit the contrary to a favour; it is not near equal to what was at the fame time taken away; that of favouring all cargoes of fugar in flips under that defcription, with paying only half the duties, $2 \frac{1}{2}$ inftead of 5 per cent. and. which equalled 60 liv. per ton inftead of 40 .
A fhip of 300 tons in the fugar trade thirty hands, but not more than fixteen or eighteen good ones, becaufe of the law which forces a certain proportion of new hands every voyage.

Weft-India eftates in general render to their owners at Nantes io per cent. on the capital fo invefted.
They affert, that if the Eaft-India trade was laid open, numbers here would engagein it. There is a Chip of 1250 tons now at Yambon, idle for want of employ.

A circumftance in thip building deferves attention. It was remarked in converfation, that many Spanifh hips laft incomparably longer than any other; that this is owing to maftic being laid on under the copper bottom. Monf. l:pivent, a confiderable merchant here, has tried it and with the greateft fuccels; copper bottoms all with copper bolts in. ftead of iron ones.

13uilding a fhip of 300 tons, 30 to 35,000 livres; ten now building.
L'Orifint.-Every thing l faw in this port fooke the declenfion of the Indian com. merce, the magazines and warchoufes of the company are immenfe, and form a fpectacle of which I had feen nothing of the kind equal, but the trade is evidently dead, yet they talk of the company poflefing ten Thips from 600 to 900 tons, and they even fay, that five have gone this year to India and China, In 177,5,6, it was great, amounting to fixty millions a year. What activity there is at this port at prefent, is owing to its royal dock for building fome men of war. It is the port at which the farmers general import their American tobacco, the contract of which was for 25,000 hogitheads, but dwindled to 17,000.

Marsethies. - I found here as at the other great ports of France, that the commerce with North America is nothing, not to a greater amount than a million of livres a year. The great trade is that of the Levant.

I was informed here, that the great plantation of Monf. Galifet, in St. Dom igo, has 1800 negroes on it, and that each negrue in general in the ifland produces grolis 660 liv. feeding himfelf befides.

Wages of feamen 33 to 40 liv. a month; in the Mediterranean 33, America 40 liv. A hip of 200 tons building here cofts for timber only 25,000 liv. of 300 tons 40,000 liv. of 400 tons 75,000 liv., the wood is from 50 to $70 \%$ per cubical foot; fitting out af. terwards for fea, cofts nearly the fame.

Weft India Trade.
The following is the flate of the trade in 1775. as given by Monficur l'Abbe Raynal.
Products exported is France of St. Doningo, Martinique, Guadaloupe, and Cayenne.

The returns to France in fix hips of 118 o tous, brought $3 ; 5,000 \mathrm{lb}$. of gum Senega, 37,000ib. of elephant's teeth, both worth $1,173,000$ livres.

But the flave trade on French bottorns did not increafe with the increafe of the African trade in general.

But as the produce increafed, there feems reafon to think, that foreigners partoo'c of this trade.

Thefe in French bottoms, the total numbers mult be much more confiderable, as ap. pears from the following table of St . Domingo only:

| Years. | No Negroen fold. | Price. | Ycari. | Cuffer fuld. | Price. |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | liv. |  | it. | 16 |
| $17^{8} 3$ | 9,370 | 15,6:0,000 | 1:83 | 44,57.3,000 | 33,429,750 |
| 178. | 2,025 | 43,602,000 | 178 + | 62,885, 00 | 44,051,250 |
| 178 : | 21,762 | 4,3,64,000 | 178 ; | 67,368,000 | 57,368,000 |
| 1785 | 27,648 | 5,4,4 20,000 | 1786 | 52,18,200 | 57,398,000 |
| 1737 | 30,839 | $6 \mathrm{C}, \mathrm{j}_{6,3,20}$ | 1787 | 70, 03,000 | 91,00,3,900 |
| 1758 | 2\%,500 | 61,936,.00 | 1783 | 68,151,000 | 92,00,3,850" |

It deferves oblervation, that while the quantity almoft trebled in five gears, the price rofe continually.

Price per lb. in $1783,-15 \% . \mid$ Price per lb. in 1786, - $22 \%$.

Exports from France to thife I/les in 1756 .

[^57]

Of which Bourdeaux exports to the anoount of $33,761,000$ livres. Foreign articles exported purfuant to the arret of Auguft 3 orh, were 4,967,000 livres.

Inports from the ines, $174,8_{3} 1,000$ livres. - Lexports to them, $64,341,000$ livres.
Balance againft France, 210,490,000.
The exports in $\mathbf{1 7 8 6}$ to the illes were lefs than thofe of, 85 by $1 \cdots 761,000$ livres.
But the exports to Senegal were greater by 12,j14,000 livres.
The decreafe was in manufactures.
I inens in $1784,17,79^{6}, 000$ livres. -1786, 13,363,000 livres.
Auguft 30, 1784, in the Minifry of the Marechal de (in ries, forcigners were permitted, under certain regulations, to trade to the French rugac iflands, after a fpirited controverly in print for and againft the meafure. The trade of 1786 , in confequence of this arret, was as follows:

As the cultivation and exports from the ines in 1786 , were greater than in 1784 , the demand for French inanufactures ought to have been greater allo; but this was not the cale;

| Export of French linens to the ifles in | 178,4, | $17,596,000$ liv. |
| :--- | :--- | :--- |
|  | 1786, | $13,363,000$ |
| Aulns of French linen | 1784, | $7,700,000$ |
|  | 1785, | $5,200,000$ |
|  | 1786, | $6,100,000$ |

It would have been found fo, if the arret of Auguit 30 had not opened the colonies to foreigne:s, who introduced manufactures as well as lumber and provifions. It is a great quetlion, whether this was right policy; the argument evidently turns on one great hinge; the peculiar benefit to the mothe country, from poffefing colonies, is their fupply; to fell them owhatever they demand, and to fecure the navigation dependent. It is not, :o be fure, of fugar and coffee that nations plant colonies; they are fure of thofe, and of any other commodities if they be rich enough to pay for them; a Ruffian or a Pole, is as certain of commanding fugar as a Frenchman or an Englifh. man; and the governments of thofe countries may raife as great a revenue on the import, as the governments that poffefs the iflands. The peculiar benefit, therefore, of colonies, is the monopoly of their fupply. It is in vain to fay, that permitting the colonifts to buy what they want at the cheapeft and the beft hand, will enable them to raife fo much more fugar, and tend ultimately to the benefit of the mother count:y ; fince, let them grow as rich as poffible, and increafe their culture to any degree whatever, tlill the advantage of the mother country arifes from fupply; and if the lofes that to gain more fugar, fhe lofes all for which the pofiefion is decirable. It would be right for every country to open her colonies to all the world on principles of liberality and freedom; and ftill it would be better to go one ftep farther, and have no colonies at all. The fugar illands of all nations, in the We? ludies, including the great ifland of Cuba, are confiderable enough to form an independent free nation; and it wants not many arguments to fhew, that the csiffence of fuch an one would be far more beneficial to the F.nglifh, lirench, and $\mathrm{S}_{\text {pan }}$ ands, than the poffeffion of thofe iflands as colonies. To return, however, the the arres of Nus in $3 \%$, there is reafon to believe, that the policy which induced the Mar: chal de Caltrics to ater the exilling laws relaing to foreigners was quetionable, and anended with crils, in proportion to the extent of the trade that took place in confequence.

The refult of the French fugar trade rcfenbles ncarly that which England carries on with ner fugar colonies, namely, am immenfe balance againtt her. We have writers who tell us, that this trade ought to be judged by a method the reverfe of every other, the merit of it depending not on the exports, but on the imports: I have met with the fame idea in France; and as it is an object of very great confequence in the national occonomy, it may be worth remarking, - 1 , That the advantages refulting from commerce, are the encouragement of the national induftry, whether in agriculture or manufactures; and it is unqueftionably the exports which give this encouragement, and not the imports of a trade, unlefs they are the raw materials of future labour. 2. The real wealth of all trade confifts in the confumption of the commodities that are the object of fuch trade; and if a nation be rich enough to confume great quantities of fugar ard coffee, the has undoubtedly the power of giving activity to a certain quantum of her own induftry, in confequence of the conmerce which fuch confumption occafions, ithether the fugar be the product of her own colonies, or thofe of any other power. 3, 'I.e

3, The taxes levied on Wef-Indian commodities are no motive whatever fow efteming the poffeflion of fuch colonies beneficial, fince it is the confumption that pays the tax, and not the poffeffion of the land that produces the commodity. 4, The monopoly of navigation is valuable no farther than as it implies the nanufacture of flip-building and fitting out ; the pofieffion of many failors, as inftruments of future wars, ought to be efteemed in the fame light as great Ruffian or Pruflian armies; that is to fay, as the means of ambition; and as the inftruments of wide-extended mifery *. 5 , The poffer. fion of fugar iflands is the inveftment of immenfe capitals in the agriculture of America, inftead of the agriculture of France: the people of that kingdom fidarve periodically for want of bread, becaufe the capitals which fhould raife wheat in France are employed on furar in St . Domingo. Whatever advantage the advocates for colonies may be fuppofed to fee in fuch poffeffions, they are bound to fhew, that the inveftment of equal capitals in the agriculture of France would not be productive of equal and even of infinitely fuperior benefits. $6, \mathrm{lt}$ is fhewn, ia another place, that the agriculture of France is, in the capital employed, $450,000,0001$. inferior to that of England; can any madnefs, therefore, be greater than the inveftment of capitals in American agriculture for the fake of a trade, the balance of which is above 100,000,000 livres againlt the mother country, while nothing but poverty is found in the fields that ought to feed French. men? 7, If it be faid, that the re-exportation of Weft-Indian commodities is immenfe, and greater even than the balance, I reply, in the firft place, that Monf. Necker gives us reafon to believe, that this re-exportation is greatly exaggerated; but granting it to rife to any amount, France bought thofe commodities before fhe fold them, and bought them with hard cafh to the fum of the balance againft her; firt lofing by her tranfactions w th America the fums the atrerwards gains by exporting to the north. The benefit of fuch a trade is nothing more than the profit on the exchange and tranfport. But in the employment of capital, the lofs is great. In all common trades, fuch as thofe the carries on with the Levant, or with Spain, fhe has the common profit of the commerce, without invefting any capitals in producing the commodities the buys; but in the Weft-Indian commerce the invefts double capitals, to produce the goods the fells, and equally to produce the goods the buys. 8, If it fhould be faid that St. Domingo is not to be confidered as a foreign country, with which France trades, nor a colony, but as a part of itfelf; and that the balance between them is like the balance between them and the provinces, then I reply, that it is fo ill fituated a province, that to encourage a deviation of capitals from all other provinces to be invelled in this, is little thort or madnefs; $\mathrm{fr} f$ f, from diftance and cultivation by flaves, it is infecure. If it efcapes the attacks of European foes, the natural progrefs of events will throw it into the hands of the United States. Secondly, it demands a great navy to defend it; and confequently taxes on all the other provinces, to the amount of two millions fterling per annum. Of what expence to languedoc, is the poffeffion of Bretagne? Its proportion of the common defence. Is this fo with St. Domingo? France pays a marine of two millions, but St. Domingo does not pay one fhilling to defend France, or even to defend it filf. In common fenfe, the poffeflion of fuch a province ought to be deemed a principle of poverty and weaknefs, rather than of riches and of Arength. 9, I have

[^58]converfed on this fubject at Havre, Nantes, Bourdeaux, and Marfeilles; and I have not yet met with a man able to give me one other fold reafon for fuch a fyftem than the fact that agriculture in the Weft Indies is profitable, and not fo in France. The fame argument is ufed, and with equal truth, in England. I admit the fact ; and it recurs at once to the pernicious doctrine of laying foch taxes, reftrictions, prohibitions, and monopolies on land at home, that men inclined to purfue agriculture as a trade mut go with their capitals into another hemifphere, in order to reap an adequate profit. But change this wretched and abominable policy; remove every tax, even to the fhadow of one on land; throw all on confumption; proclaim a free corn trade; give every man a power of inclofure.-In other words give in the Bourbonnois what you have given in Domingo, and then fee if French corn and wool will not return greater profits than American fugar and coffee. The polleffion of fugar inlands, fo rich and profperous as thole of France and England, dazzles the underfandings of mankind, who are apt to look only on one fide, where they fee navigation, reexport, comercal profit, and a great circulation: they do not reverfe the medal, and fee, in the milchievous deviation of capitals from home, agriculture languifhing, canals ftanding fill, and roads impaffable. They do not balance the culture of Martinique by the landes of Bordeaux ; the tillage of St. Domingo by the deferts of Bretagne; or the wealth of Guadalupe by the nifery of Sologne. If you purchafe the riches that flow from Anefica by the poverty and wretchednefs of whole provinces, are you blind enough to think the account a beneficial one? I have ufed no arguments against the French fugar iflands that are not applicable likewife to the Englifh: I hold them to be equal obstacles to the profperity of both kingdoms; and, as far as experiment of the loft of North America goes, 1 am juftified by that vat and important fact-that a country may life the monopoly of a diftant empire, and rife from the imaginary lois more rich, more powerful, and more profperous!

If there principles be juft, and that they are fo is confirmed by an immenfe range of facts, what are we to think of a politician who declares, that the lofs of Bengal, or the Dutch withdrawing their money from our funds, would ruin England "?

## Trade avith the Uuitud Statcs.

'The conmerce which France carries on with the North Americans, is all the reward fie reaps from having expended probably fifty millions ferling to lecure their freedom. Vifions of the depreflion of the Britilh power, played indeed in the imaginations of the cabinet of Verfailles; but peace was fcarcely returncd hefore thofe airy hopes entirely vanihed; cvary hour proved, that Eugland, by acemancipation of her colonies, was fo far from lotimg any thing, that the had gained immenfely: the detail of this trade will prove, that France was as much deceived in one expectation as in the other.
On an average of threc years proceding the Vrench revolution, the im.
ports from Anerica were - - - - - 9,600,000
Ditto into thr French fugar illands, - - - - - $\underset{20,700,000}{11,100,000}$
Exports of France to North America, - - - 1,800,0co
Ditto from the illes, - - - - $\quad$ - $6,400,000$
$8,200,000$
Balance, - - - - $\quad$ - 12,500,000
Ces républicains, fays Monf. Arnould*, fe procurent maintenant fur nous, une balance en argent de 7 a 8 millions, avec laquelle ils foudyent l'induftrie Angloife. Voila donc pour la France le nee plus ultra d'un commarce, dont l'efpoir au pui contribuer à faire facrifer quilques containes de millions et plufiews générations d'bommes!

## Trade to Ruffia.

It is commonly fuppofed in England, that the trade which France carries on with Rufia is very beneficial, in the amount of the balance; and there are French writers alfo who give the fame reprefentation; the part in French navigation will appear in the following ftatement:

| Imports from Ruffia to France in 1788, |  |  | lines. |
| :---: | :---: | :---: | :---: |
|  |  | - | 6,871,900 |
| From France to Ruffia, | -- | - | 6,108,500 |
| Baiance againt France, |  | - | 763,400 |

This, it is to be noted, concerns French bottoms only; the greatelt fart of the commerce being carried on in Englifh and Dutch botowis $\dagger$.

- De lis Balance du Commerce, 179 tom. i. p. 234.

The navigation of the Ballic will appear from the following lift of hips which pafied the Suund:

|  | 1781 | 1-35 |  |  | 1704 | 1;45 |

Trade to India.

At the period of the Revolution the fate of the trade to India was as follows: Imports from India on a medium of 1785,1786 , and $1787,34,700,000$
In 1788, - - - $\quad 33,300,000$

By the regulation of May 1787, confirmed by the National Affembly, Port Louis, in the Ine of France is made free to foreign fhips, by which means it is expected that that port will become an entrepôt for the Indian trade.

## Navigation.

There is not much reafon for modern readers to be folicitous concerning the consmerce or navigation of any country; we may reft affured, that the trading fpirit which has feized all nations, will make the governments auxious to promote, as much as poffible, whatever interefts their commerce, though their agriculture is, at the fane moment, in the loweft fate of poverty and neglect. All the Englifh authoritics I have met with, refpecting the navigation of France, are of a verv old date ; perfons who are surious in thefe fpeculations, will probably be pleafed with the following account:

Ships in France cleared outwards in 1788.

N. B. The total navigation in Europe and America, cither by French or forcign Mips, amounts to 9,445 fhips and $556,5^{2}$ tons.

Mouf. Amould in his treatife $D_{c}$ ia Balance du Coinmerce, has given an account of . the French navigation for the ycar : $7^{87}$, which does not weil accord with this. I infert an extract from it here that the realer may have the opportunity of comparing them.

The immenfe increafe of the navigation of England, appears by comparing this acconnt with that firit of commercial writers Lord Shefficld, for the average of three years preceding :773.

| Foreq 1 trade, | - | - | Ships. 279 | Tons. <br> 335,583 | Men. 30,771 |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 27 <br> 3 | 335.58 | 30,771 |
| FiRina veffels |  |  | $3+58$ 14 | 219,56 25,339 | 15,244 |
| - |  | - |  | 25,339 | 6,774 |
| Totals, |  |  | 7613 | $5^{8} 9,978$ | 52,789 |

This is exclufive of Scotland *.
Monf. Arnould, however, afiures us, that at the period of the Revolution, Trance poftefted rono hips ( 1 do not live fuch round numvers, which always betray inaccuracy,; of 250 tons, employ ad in lnng voyages, and in the cod and whale fiftioriest. The whole maritime cominerce of exportation employing at the fame time 58 c . ovo los.s of all nations; of which 152,000 tons were Frencil.

[^59]Cabotage (coafling Trade) the fame 1 car.

| French fhips, Forcign ditto, | - | - | Ships. $22,360$ $60$ | - | $\begin{aligned} & \text { Tons } \\ & 997,666 \\ & 2,742 \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | 22,420 | - | 1,000,408 |

N. B. There is no diftinction between fhip and voyage ; if a fhip clears out five times a-year, the is regiftered every vojage. The article Sardinia, which appears fo large in hips, and fo finall in tomnage, mult, I hould fuppole, be for a fifhery on the coalls of that ifland.

From the tonnage of the hips, as they are called, in the fifheries, it appears, that they are little nore than boats: thofe in the herring fifhery, are about 30 tons eachand in the mackarel, little more than 10 tons.

The navigation of England for a year, ending the 3oth September, 1787, was,

Without including the Weft-India trade, or that of the North American colonies, or the African or Afian, the Indiamen excepted.

Progrefs of the French Comnerce *.

|  |  | Imports, liv. |  | Exparts. liv. |
| :---: | :---: | :---: | :---: | :---: |
| 1716 to 1720 , peace, | average per annum, | 65,079,000 | - | 106,215,000 |
| 1721 to 1732, peace, | - | 80,198,000 | - | 116,5,65,000 |
| 1733 to 1735, war, | - | 76,600,000 | - | 124,465, 00 |
| 17.36 to 1739, peace, | - | 102,035,000 | - | 143,441,0:0 |
| 1740 to 1748, war, | - - | 112,805,000 | - | 192,334,000 |
| 1749 to 1755 , peace, | - | 155,555,000 | - | 257,205,000 |
| 1756 to 1763, war, | - - | $13.3,778,000$ | - | 210,899,000 |
| 1764 to 1'776, peace, | - | 165,161,000 | - | 309,245,000 |
| 1777 to 1783, war, | - | 207,5.36,000 | - | 259,782,000 |
| :784 to '738, peace, | - | 301,727,000 |  | 354,423,000 |

It will not le ufelefs to contraft this with the trade of England:

[^60]|  | Imports. $/$. |  | Exports. L. |  | Imports. L. |  | Exports. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1717, | 6,346,768 |  | 9,147,700 | 1771, | 12,821,995 | - | 17,161,1:6 |
| 1725, | 7,09+,708 | - | 11,352,4io | 1783, | 13,122,235 | - | 15,450,778 |
| 17.35, | 3,1to, 18.t | - | 13,54, 14.4 | 175 5, | 16,279,419 | - | 11,7,70,228 |
| 173', | 7,4;8,950 | - | 12,289,495 | 1787, | 17,80+000 | - | 10.869,000 |
| 174.3, | 7, $\mathrm{SO2}, 3 \mathrm{S3}$ |  | 14,62, ${ }^{1}, 653$ | 1788, | 18,027,000 | - | 7,471,000 |
| 1753, | 8,62-,029 | - | 14,26.1,614 | 179 , | 17,821,000 | - | 19,j40,0.0 |
| 1763, | 11,65:036 | - | 16,!60,181 | 1790, | 19,130,000 |  | 2c, 120 |

As the balance, or ideas of a balance, are a good deal vifionary, we fhall find, by adding the two columns together, that the trade of Fingland has fuffered no decline, but on the contrary, is greater than ever; it deferves attention, however, that the progrefs of it has not been nearly fo rapid as that of France, whofe commerce, in the lalt period, is 3 ! times as wreat as it was in the firtt ; whereas ours has in the fame period not much more than doubled. The Franch trade has almoft doubled fince the peace of 17 高, but ours has increafed not near fo much. Now it is obfervable, that the improvements, which in their aggregate mark mational profperity, have, in this period of twenty-nine years, been abundantly more active in Eingland than in $1 \cdot$ rance, which afiords a pretty frong proof that thole improvements, and that prolperity, depend on fomething elfe than foreign commerce; and as the force of this argument is drawn directly from facts, and not at all from theory or opinion, it ought to check that blind rage for commerce, which has done more mifchicf to Europe, perhaps, than all other evils taken together. We fimd, that trade has made an immenfe progrefs in France ; and it is elfewhere flewn, that agricul-ure has made little or none; on the contrary, agriculture bas experienced a great incrate in England, though very feldom favoured by government, but commerce an inferior one; unite this with tite vall fuperiority of the latter in mational profperity, and furcly the leflon afforded by fuch facts necds no comment.

## Of the Premiums for the Encouragement of Commeree in France.

The French adminiftration has ling been infected with that commercial fpirit which is at prefent the difyrace of all the cabinets of Europe $A$ totaly falce eilimate that has been made of Fingland, has been the origin of it, and the effect hus been an almoit univerfal neglect of agriculture.

The premiuns paid in France for encouraging their commerce are the following, and the amount for a year, ending the it of May 17₹9, is adjed:

Fxpence of tranforting dry cod to the American ifles, and to various forcign countries, at the rate of 5,10 , and 12 lives prr quintal, by the arret of 18 th Sept. 1715, and inth Feb. 1787.

Bounty payable on the departure of flips for the coalt of Guinea, and for Mozambique, at the rate of 40 liv. per ton, by the arrets of 26 th , ct. $17^{8}+$, \& c .

Bouniy on the negroes tranfported into the Colonies at the rate of 60 to
o live a-h al, by he arrot of $20 t h$ OQ. 1791 , and of 163 liv. and 202 1 co liv. a.hall, by the arrot of 20 th OA. 178 , and of 160 liv. and 202 liv. by that of the 10th Sept. 1706,

Dounty for encouraging the navigation in the North $S c a$, at the rate of $3,4,6$, and 10 liv. per ton, by the arrct of $25^{\text {th }}$ Sept.
Bounty on the export of refined fugar 4 liv. the quintal, by the arret of 26th May 1786,

Bounty of 4 liv. per 10001b, of caft iren, granted to the foundries of Mont Cenis in llourgogne, --

Bounty granted to the people of Nantuket eftablifhed at Dunkerque for the whale filhery, at so liv. per ton of oil,

18,000 170,000
To the coal mines of the kingdom,

I hope it does not at this time of day want much explanation, or many obfervations on this contemptibic catalogue of the commercial merit of the old government of France. The fifheries and fugar inands, if we are to believe the French writers, are the moft valuable and the mott inportant articles of the French commerce.-How can this be, if they want thefe paltry bountics to alfift them? St. Domingo is faid in France to be the richelt and moft valuable colony there is in the world; 1 believe the fact; but if we were to confider only a premium on fupplying it with flaves, we fhould be apt to imagine it a poor fickly fettlement, fearcely able to fupport iffelf. If cultivation is vigorous there, it demands flaves without any bounty; if it is not vigorous, no bounty will make it fo; but the object, real or pretended, of bountics, is to induce people to invelt capitals in certain employments, which they would not fo inveft without fuch bounties. This is to profefs giving bounties to the inveftment of capitais in American agriculture, rather than in that of France; the tendency : clear; but in this age it furely beconcs a queftion, whether wine landes of Bretagne aril A njou would not be as deferving of fuch a bounty as the forefts of Ilifpaniola?

To remark on all thefe premiums is unnecefliny ; it is fufficion. or obferve, that all, except that for coal, is ablurd, and that that is fo given as to be uiclets.

## Of the Treaty or Comincres betucch Gruat Britain and Frame.

This celebrated meafure was fo thoroughly debated in England, that I hall not go again over ground trodden atnont bare ; but, with attention chiefly to brevity, give fome French atthorities upon if, which are but little knowa in England.

There are in moft of the great commercial towns in France, focieties of merchants and manufacturers, known under the wite of Chamber du Comarce; thefe gentemen aflociat for the purpofe of giving intormation to the minifty $\cdots$. commercial quetion upon which their opinion is demanded, and for other purpoas mat concern the trading interefls of their refpective towns. The Chantre du Comberce de Nornamdio, on occafien of this treaty, printod and difpered (it was not fold) a pramphet entited, $O$ O-

In this work thry inform that reaters, that in order to draw a fur comparifon between the advantages and difmantags of the two kingtoms in manufatures, they

$$
\text { * Cumir Giniml izso p. } 186 .
$$

Z Z
 mandy, and whofpoe linslifh, to take a journcy to the manufacturing parts of lingland, in order to acquire anthentic intelligence, and upon their retum they were defired to make a fimila: tour through the mambactures of Normandy, that they might pollefs themfelves of the knowledge requifte for a fair compariton; and trom their reports, as well as from other materials, the Cbambre du Commerce fpeak in their oboblervations:
"But white we are embiking in "No undertaking, the aham of our commerce increafose every day, and beroness at real evil by a mof active fale of every article of EngLith manufacture, which an enter into competition with our fabrics. There is not an article of habitual confumption with which finglatad has not filled all the magazines of France, and particulaly thote of this province, and in the grated number of thefe artickes the Enelith have a victorions preponderance. It is aflicting to fee the manufacturers who fulfer by this rivalthip, already di is fucceflively the number of their workmen, and important fabrics yieding in another manner to the fame fourge, by Eangh goods being fubllituted in the fale for French ones; receiving a preparation agrecable to the contimption, named, marted, and fold as French, to the infinite prejudice of the matenal indultry.
"The Chamber is apprehenfive of the immediate effect of the introduction of Englifh cottons, watreof the perfection of the preparation, the merit of the finning, united with their cheapnefs, has already procured an immenfe fale. A coup d'xil upon the folio 5 of the table of patterns of Manchefter, and the Fauxbourg St. Sever, at Rouen, will demonltrate the difadvantages of the latter.
" Our potteries cannot cicape a notable prejudice; the low price of coals in England enables.the Englifh to underfell us in thefe articles 25 per cent.; confiderable cargoes have already arrived at Rowen.
"the 36,000 dozen pairs of fockings and caps of cotton, made in the generality, are the produce of 1200 looms. Within three momhs it is calculated, that at Rouen alone, more than one hundred have flopped. The merchants have made provifion of Englifh goods, for more than 35.000 dozan pairs of flockings and caps have already been imported.
" Manchefler is the Rouen of England, the immonfe fabrication of cotton ftufts, the induftry of the manuladurers, their activity, the refource of the mechanical inventions, emable then to undofill us from 101.15 fer cent. livery circumilance of the fabrie proves the riches of the mafter manufacturers, and the folicitude of government for fupporting and favouring their indoterg.
" In general their ftuffs and their linens are finer, of a more equal fpinning, and more beautiful than ours; neverthelefs any are at a lower price, which proves the im. fortance of their machines for carding and lpinning the cotton in a pertect and expeditious manner. By the aid, fthefe united means, they flat or themfelves at Manchefrer with equalling the muflins of India, yo the highefl price of thofe nthero wrought does and cyoced 3 s . a yard, but the fabric is fo conidorable, that whey are not afraid to value it at 500,00 liv. a week; however one "ay he permitted to dotiot of this, one muft be amased (effroye) at the inmenfe? which the Finglifh have procured for this article, and the more fo, as we have 1 affur d, that the magamines of the company contained, within a few months, to the a lue of $80,006,000$ livres, in India mugins.
"We do not know that the Englifh have in their fabrics of linen any other inven. tions for fimplifying the labour than the fying foutle and the flax-mill, becaule the
fibres of fax are not adapted the application of machires for fomming and carding ; we arr, however, affured that they have found means, by water-mills, to weave mathy pieces of linen at the fame time and in the fane loom.

6' The price of coals in the preparation of coton is of fome importance. The intare bitants of Manchetter pay for coal only 9 s . a ton, of 200 clb . (French) but at Rouen it is 47 to 50 liv. the ton.
"The linglifh are forced to render julaice to the cloths of Louviers, as well as to thofe of Abbeville and Sedan. They cannot diflemble that they think them more foft than their own, and that the colours are more lively and more feducing, but we cannot hope to fell them in Eneland. The Enelim, whether through a firit of patrotilm, or by tite real agreement of then kind of fatrice to the mature of their elimate, profer their cloths extremely fulled, and of colours very fombre, becaufe the foome of their coal fires, combined with the humidity of the atmolphere, depointimg a greafy duft, might eafily affect our colours to lively, but of little folidity; however it may be, the competition at prefent of the Englifh in France cannot be vory hurful to the manu actures of Louviers, Sedan, and Abbeville; but as the Englih import as well as we the wools of Spain, they may certainly attain the beauty of the cloths of Louvicrs.
" The fabrics of Filbouf, however profperous, have not the fame refources as the Englifh ones of the fame kind, excellent national wools proper for their fabric at a low price. We calculate that the ordinary cloths of five-lourths breadth, and 15 or 16 livres price per auln, can fcarcely withftand the competition of the cloths of Leeds, called Britols, which coft only $1:$ liv. the auln.
"'The cloths, ratines, efpagnolettes, flannels, and blankets of Darnetal, have moft of them a fuperiority over many famiar Englith fabries; but the low price of thefe laft will reader their competition fatal. We cannot too ofen recur to the advantages which the Englifh poffefs over all the woollens of l'rance, which are wrought like thofe of Darnetal, with the wools of Fiance. The high price of our wool, and its inferiority in quality* to that of lingland is luch, that this inequality alone ought to have induced the rejection of the treaty of commerce on the terms upon which it has paffed. The manufaturers of Darnetal, Rouen, Beawais, Amiens, Lille, and Rhems, may find it their interelt to import binglifh fabrics betore they have received the lath hand, which they can give cheaper than in England, and thus appropriate to themflves a profit in - echeapnefs and beauty of the Ligglih wools, by underfelling the fimilar fabrics enbirely French.
"The Englifh ratines cannot fupport the parallel with thofe of Andely, where allo good kerleymeres are made in imitation of the Englifh, but quite unable to ftand againlt them. Before the treaty the Englilh' kerfeymeres came contraband to Frame, and were therefore dear, but now all the magazines of the kingdom regorge with them, for at the fame time that they are cheaper, they are in fuality more perfect, of a more equal grain, and lefis fabject to greafo.
" The manufacture of cloths at Vire has fallen from 26,000 pieces per anmun to Soo: During the war they had an export to North America, but on the peace, the cloths of Leeds prefented themfelves with a viforious fuperiority, and will hold it till we have perfected the breed of our theep, and obtained fleeces of a greater length and weight.

- The manufacturers of France poftefs no fuch iniquitous monopoly againat the farmer, as makes the digrace and mitchici of Engiifh agriculture
 buat, camblots, baracans, calmandes, ćtanines, kerlymeres, fagathi: \&e, which were furnithed both to France and forcigners by Darnetal, Aumale, Beanrar, Amiens. Lille, Rhwins, and le Mans, they mult fink under the competition of the fimitr mame Gatur of of lighan. Duriug thi late war he Spaniards gave emmiderable emphoyment in the fe artiches to the mambathures of Amiens, Lalle, and Aumale. Oa the firfl report of apsee, they not ouly falpended their comminions, but even gave cunuter or-
 cent. chaparer than we could afford them.
"We may olferve in fine, upen the conditions of the treaty, that the Fuglifh have contrived to leave excelfive duties upon al the articles, the trate of which wombl have offered advantages for France, and to prohithit the moft interefling, to admit thofe whereof the reciprocity would be wholly to their own advautage; and to facour in a mamer almoft exclufively, in their importations, fuch as are made in linglith botoms; circmantaness which, unital with the fanous act of mavigaion, explain, in a great meafure the diproportion which exills beeween the number of binglith and Prench vetfels in the commere of the two nations fince the treaty, which is at leall twenty to one.
"the opinion we develope upon this treaty is general, and foundel on a fimple reflecion, that Prance furnifhes twenty-four millions of confumers againft cight millions which E.ngland ulfers in return ".
"The fituation of France camnot have been confidered in the prefent circumfan. ess; at the fame time that the confumption of its inhabitants, firft, that natural and neceflary aliment of national indullery becomes a tribute to li, gland, whe has carried her fabrics to the highett degree of pertection; the livach a d ufacturers and workmen, difcouraged wothout labour, and without bread, may wher an eafy conqueft to Spain, who, mure colightened at predent upon the real mems of incrating her profperity and her giony, delopes with energy the defire of augmenting her population, of extonding and pertaing her agriculture, and of acquiring the indultry that fhall fintice for her wants, and exclude as much as thall be pandibe from her markets objocts of fereign fabrication. We are allured that the workmen in the fouthern provinces pats fuce lively into the difierem mandactures which are ethathifhed; an emigration, which cannot but increafe by the elfets of the treaty of commerce with Fughnd."
'the Clamber of Commerce in the fame memon decher, that the Frolifh had not augnented their contumption of Frach wins in confequane of the traty. And they dwell repatally on the fuperior wealh of the faghin mand turers to that of the Firn homs, the inhuence of which, in the comptition of cory tatric, they feel decifively.

The French miniftry, the Archliflop of Seas at thir heal, to remove the imprefiom which they feared would follow the precentrs memorial of the werchants and manufaturers of Nurmands, emptoged the cehtrat d xcoramize Monf. wlont, editur of the Fphemorides duc Cioroch, a prindical wik, primed 1767-177e, and
 detail, and with at ility: the followiag extuats, will lacw the arguments in favour of the treaty.

- "Relative to the wine trats, your inf rmann has not been exak. I an ecreain that it has been confiderably ammentad. The diflerence between the dutics

[^61]in Ingland upon the wines of Portugal and lirance was $34 /$ of our money the bottle ; it is at prefent but $5 / .8$ den. in fipite of the proportional diminution made ujon the wines of Portugal, an approximation of which muft be very favourable to use suthentic accounts of the cuflom-houle at Lomden have been fent to the department of forcign allairs, fating the ginatity of Preneh wines imported into that fingle city, and it rifes frem the month of May to that of December of the latt year ( $1 \%$ ) to 6000 tons of four bariques each. In presedi'g years, in the lame fpace of time, the legal importation has anomited only to 400 tons, anl the contratand import was eltimatod at about an equality. 'Jhe atcmomaton, thersfore, for the city of London, is at leatt 5000 tons, or 20,002 bathutes, which, at 1200 liveres amount to $6,000,000$ lives. The aceomts of the balance of commerce for nine years preceding the lat war mak 1 eco tons as the mean expert of our wines to linglind, Scothand, and Ireland. In 15ソ4, that export did not exced 2.00 tons. The city of tonden has theretore ime ported in the ci $\mathrm{i}_{2}$ ht laft monis of $7^{3} 7$ bo times more than the three kingdoms formerly imponted in the courfer of a who year.
"* 'The fale of vinegars, brandy, wil, loap. dried fruits, preferves, cambric, linens, and millur $y$, has much aupmented. In paticular, cambric and linens have doubled.
"But this is mo reafon why the minillry fhould not, on one hand, exert themfelses with all adivity to oblige the I nglith to athere to the terms of the treaty (which they have deranged by their tarills and regulations of the ir cuftoms); and, on the other, to favor the matomal iadully, partuably that of the provinces of Picardy, Normandy, and Champagne, for whou, fince the treaty, the competition of the Englith has certainly been very milchievous (trés fichory $f$ ).
"There are live bratuehes of indultry in which the Englifh have over us at prefent in fome refpets an advantege more or leds folid; in coton tlufts, in finall woollens, in pottery, in leel, and in I whher.
"In remad tu c.ntu, Mmi. Buneville is in poff lion of a machine, invented by his uncle, which fius threat of a degree of fimels till now unkoown even to

 confiduration, has at hatt det mined on hie report of M. D) fhereft to purc.are this machine, and to diftribute many of them ammer our mantachese.
"It is inconcedvable that we have not a fuperionty over the Eerglifh in We has the raw waterial, and even fell to our riads the greater part o ufe. We have procifons and labour deop $r$ than they nave". It is ous which we want, or rallere we dond wath them, for we !ave the w $i$, we have artills capathe of pertecti.g them; we have alrady the fur ; 0 e can give prizes, and we have aca lemi-s to judret.
 ratines, djagnollettes, mollotons, and reps made of epanih wool; of in whith it enters for the groater part. Our tabricaion of hais forn is fup.rior to that of the Englifh ; our fluffs are lioter anl more durabin, and our dyeing moeb batu: wh. We can inmate at will, all the fombre colours of the lingiala fatric; but they cantot copy any of our lively colvurs, and specially one icarlus.

* Not fu; a man is fed chraper in France, living bady, but provilions ate not cheaper, ald d.bour is really deater, lhough nominally deaper.
† Im.fl fmile at acadmies bing named amoner the manabeturing advantages of itance: I wouder what acaitanise have done cor the manafactures of Enghat.
"In the midding clafs of woollens, which comprizes the tricots and fmall ftaffis, we have a marked inferiority. The wools of which thele are made are with us lefs fine, 1.fs brilliant, and higher priced. But this evil is not without a remedy.
"Of the next manuficture it may be obferved, that the Englifh potteries have been imported at all times into Loraine, without paying any duties, and yet that province is full of manufactures of pottery which profper."

Relative to the fleel manufactures, Monf. du Pont cites the following cafe: " Monf. Doffer, after having been a long time at Clignancourt occupied for our Englifh magazines to make bijoux of Iteel, which have been fold for Englifh, has been taken under the protection of goverument, who have furnifhed him with the means of carrying on bufinels. At prefent eftablifhed in the inclofure of the Quinze Vingts, he there fabricates, with at lealt as great perfection as in England, and at a lower price by 30 per cent. * all the beautiful works in fteel, watch chains, fwords, \&c. \&c. \&c."

Monf. du Pont then infilts at length on the great import of linglifh manufactures, which took place clandeftinely, not only from England directly, but by lilanders, Helland, Germany, and Liege, which it was found impoffible to prevent, and contends, that converting fuch import to a legal one, to the profits of the ftate, was an object of no flight importance.
" It is fome years fince the manufacturers of Sedan, and after its example thofe of Louviers, Abbeville, and of Elbouf, have railed the prices of their cloths 25 per cent. and not without fome reafon, imagining, under the influence of a fpirit of monopoly, to benefit the undertakers of thofe fabrics. But to whatever reafon it might be afligncd, certain it is, that German cloths, which never came into the kingdom before, have, fince this rife of price, found a confiderable fale in France, to the prejudice of the national manufactures; the treaty of commerce having been made at the time of the evil being felt, the whole effect has been laid, without much reafon, to the operations of that treaty."
M. Du Pont in like manner examines the tate of the filk manufacture, which he fhews to be a Lyons in the loweft ftate of mifery atd diftrefs, owing to the war in the north of Europe abforbing thofe expences which in peace were otherwife employed; to the fuccefsful exertions in Spain for increafing the fabrics of that country; and to the failure of the crop of filk; yet while the declenfion of that manufacture had thus no Ihadow of connection with the treaty of commerci, yct happening at the fame time, the evil, like all the others, has been attributed to its inlluence.
" At all events, the treaty of commeree, fuch as it is, is perhaps the only guarantee of pace between the two empires. I have the ftrongelt realon to believe, that its perfpective has haftenct the conculion a year or two, and we have thus fpared $+00,002,000$ livres of expence; the impolts which would have been needlazy to pay the intereit, the lofs of bloo, and the frightful chances which every war entrains in its fuite. It is more than probable, that without it, we fhould for fix months palt have been enga-

[^62]ging in hoftilities, the term of which would have been impolible to forefee. When France and lingland remain neuter and united, no war can be durable in Europe; for though other powers have cannons, foldiers, and bayonets, yet none of them have refources to fupport a war of any length; not even thofe who reckon upon a trealure, which would be diflipated in two campaigns at moft. The only folid traifure is a good agiculture and an induftrious people. The repofe of the world, and above all our own, holds therefore almoft folely by this treaty; which citizens, zealous without doubt, but certainly too little enlightened, would wifh to fee annihilated.

The argument which has been drawn from the population of the two kingdoms, founded on France containing twenty four millions, and England cight millions, is not
ft. France contains nearly twenty eight millions, and the three Brith kingdoms eleven; but the whole rafoning is a fophifm, founded upon ignorance of the riches of the two nations. It is not on population that we are to calculate the means of buying and felling, of paying and being paid. Unhappily the greateft difference found between the iwo empires is not in their manufactures; that of their agriculture and crops is much more confuderable. The annual crops of England have been calculated with care at $2,235,000,500$ liv. ( $97,781,25 \mathrm{cl}$.) adding thofe of Scotland and Ireland, they cannot amount to lefs than $3,000,000,000$ liv. (131,250,00cl.) Thofe of France, calculated with great fagacity, after certain cafes in fome points, and on conjectures combined from all forts of views in others, have been valued at the loweft at 3,200,000,000 liv. and at the higheft at $4,000,000,000$ liv. ( $175,000,0001$.) We have therefore, at the molt, but a fourth more crop than England ; but we have to fubfift a population two and an half times greater. Before we trade abroad we muft live. Retrench from three milliards the eafy fubfiftence of eleven millions of people; retrench from four milliards the fubfiltence, a little more difficalt, of twenty-eight millions of people, and you will foon lee that it is not the nation of twenty-eight millions that furnifhes the beft market for foreign commeree, and confequently for luxury, which can only be paid for with a fuperfluity.

The experience of all times has proved, that nations fucceffively rival each other in manufactures. Spain debauches and carries off our workmen in filk; but the cannot take from us our cultivators, the nature of our foil, our happy expofition, nor the privileged products which we polfefs exclufively. It is therefore upon the products of cultivation that mult be founded, in the mof folid manner, the profperity and commerce of agreat empire.

And even as to fabrics, you fee by the example of the paft, that excluding competition has left ours in on inferiority of which vou complain. It cannot be neceffary to prove to you, that the beft method of raifing the induftry of a nation to a par with its neirhbours, is by eftablifhing fuch a communication as fhall place unceafingly models and objects of emulation under the cyes of fuch as are inferior.

It is clear that by referving to the manufacturers of a nation the exclufive privilege of fupplying it, we deftroy among them a great part of the principle of that attivity which sught to perfect their induftry. Believing themfelves fure of purchafers, and fure allo of fixing their own price, they neglect, with all proprietors of exclulive privileges, to feek the means of fabrication tie moft economical, and thofe whici? would render their labour the molt perfect.

Monf. du Pont enters into a detail of the courfe of exchange through fifty feven page, from which be deduces the fact, that the balance upon the trade, in conlequence of the treaty. was in favour of France: from May 1787 to March 1788, he gives a table of exc janges, divided into three epechs; 1. From the ift of January 1735 , to the re-coin.
age at the French mint in October; 2. From the recoinage to the treaty of commerce, from if November 1785 to laft of April 1787 ; 3. From the treaty to the time of his writing, i. e. from 1 ft May 1787 to laft of March 1788.

## Firft Epocls.

| January, | - | 29T⿺𠃊 | May, | - | 28 | Auguft, | - | 2839 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| February, | * | 28 +3 | June, | - | $28{ }^{2} \frac{2}{16}$ | September, | - | 29\% |
| March, | - | 28 \% $\frac{2}{3}$ | July, | - | 2838 | October, |  | $29 \mathrm{r}^{3}$ |
| April, |  | $28{ }^{2}{ }^{2} 5$ |  |  |  |  |  |  |

From January to September 1784, exchange was at 30 and 3 r , and fell to 29, at which rate it was about 3 per cent. againft France; but it fell in June to $28 \frac{2}{5} ?$, which was a lofs of 4 per cent. ; and in Augult the lofs was at the height, or $4+1$ per cent. which funk in October to $2 r^{\prime}:$ per cent.

## Sccond Epoch.

Par of exchange by the alteration in the French money counted on gold $28 \frac{1}{5} \frac{1}{5} \frac{9}{\frac{9}{6}} \frac{5}{8} \frac{8}{9} \frac{1}{6} \frac{1}{6}$

| Nov. | - | 29'\% | May, | - | 2917 | Nov. | $29 \mathrm{~T}^{17}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Dec. | - | 29, ${ }^{\text {\% }}$ | June, | - | $29{ }^{3}{ }^{\text {a }}$ | Dec. | - $29{ }^{3} \mathrm{r}$ |
| Jan. |  | 2919 $\frac{1}{6}$ | July, | - | 29 t | 1787 Jan. | 29 ¢5 |
| Feb. |  | 29? | Aug. | - | $29 \frac{1}{9} \frac{1}{6}$ | Feb. | $29 \frac{r^{2}}{}$ |
| March, |  | $29^{2}{ }^{2}$ | Sepr. | - | 29 sic | March, | - 29 \% ${ }^{1}$ |
| April, | - | 29\% | Oct. | - | $27{ }^{\frac{3}{6}}$ | April, | - 29 'ry |

Upon this epoch, Monf. du Pont has a long obfervation concerning a fuppofed tranfo port of old louis d'or from England to the French mint, which the chamber of commerce, in their reply, jully rejects.

Third Epcch.
Par as before.

| 1787 May |  | $30 \cdot 5$ | Sepr. | - | 2919 | 1788 | Jan. | 2915 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| June | - | 29 ${ }^{\text {\% }}$ | Oct. | - | 2995 |  | Feb. | 29 |
| July | - | 29 ! | Nov. |  | 29 ${ }^{\frac{3}{9} \text { ? }}$ |  | March | $29 \%$ |
| Aug. |  | 2197 | Dec. | - | 29? ${ }^{\text {a }}$ |  |  |  |

During thefe elcven months, the mean rate has been $29 \frac{4 \frac{1}{8} \frac{7}{6}}{6}$, or about $2 \frac{1}{7}$ per cents in favour of France.

By the accounts of the Bureau General de la Bulance du Commerce, the imports of Englifh goods in France for the eight laft months of 1987 , amounted to 35,294,000 liv., and the export of French goods to England during the fame time to 26,276,000 liv., a difference which Moni. du Pont attempts to convert into the favour of Irance, upon grounds not at all fatisfactor:-

The Chamber of Commerce, in their reply, affert, refpecting the navigation employed, that from May to December 1787, there entered the ports of France 1030 Englifh Inips of 68,686 tons, whereas, in the fame trade, there were only 170 French fhips of 5570 tons.

In the fame reply, the Chamber reject the reafonings of M. du Pont upon the courfe of exchange, and infift that it was affected by collateral changes, and by tranfactions not commercial.

I fhall lay before the reader the refult of the treaty, both according to the Englifh cuftom-houfe, and alfo by the regifters of the Bureau de la Balance du Commerce at Paris; which, I fhould however remark, is beyond all comparifon more accurate in its eftimations; and whenever it is a queftion between the authority of the twoin oppofition to each other, I hould not hefitate a moment in preferring the liench authority; indeed it is certain, that in many articles the valuation attached to fome denominations is as old as the reign of Charles II, though the real value is known to have quintupled.

## Englifh Account.

Export of Britils Manufactures to France.

| 1769, | - | 83,213 | ${ }_{18}^{88}$ | d. | 1784, | - | $\stackrel{\text { L. }}{\text { 23,763 }}$ | 7 | d. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1710, | - | 93,231 | 7 | 5 | 1785, |  | 244,807 | 19 | 5 |
| 1771, | - | 85,951 | 2 | 6 | 1786, |  | 343,707 | 11 | 10 |
| 1772, | - | 79,534 | 13 | 7 | 1787 |  | 713,446 | 14 | 11 |
| 1773, |  | 95,370 | 13 | 1 | 1788, |  | 884,100 | 7 | 1 |
| 1774, | - | 85,635 | 13 | 2 | 1789, |  | 830,377 | 17 | 0 |

The rife in the years 1785 and 1786 , may be attributed to the rage for every thing Englifh, which, I believe, was tilen pretty much at its height; the moment the honour of the nation was fecured by wiping off the difgraces of the war of 1756 , by the fuccefs of the American one, the predilection for every thing linglifh fpread rapidly. In order to thew the proportion which our export of manufactures to lirance bears to our exports to all the world, I thall infert the total account by the fame authority.

|  |  | 2. |  | $d$ |  |  | $\ldots$. | 8 | $d$. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1786, | - | 11,830,194 | 19 | 7 | 1780, | - | 13,779,740 | 18 | 9 |
| 1787 |  | 12,053,980 | 3 | 5 | 1790 |  | 14,922,000 | 0 | $\bigcirc$ |
| 17\$8, |  | 12,72.4,719 | 16 | 9 |  |  |  |  |  |

We know that ail thefe fums are incorrect ; but we nay fuppofe the incorrectnefs as gieat one year is another, and that therefore the compariton of one year with another may be tolerably exact. 'The following l'rench accounts lave been taken with fingular attention; and as duties have been levicd on erceryanticle, th.. amount may be more, but cannot be lefs.

## Frcnch Account.

Imports from Eigland into France, in 1758.

Exports from France to England, in 1-SS.

Explanation.-All manufactured gonds, both Englifh and foreign, imported by the Finglifh merchants have been under rated about one-twelfth, which will add 3,2,38,800 liv. The French exports mutt aldo be increafed for finuggling, \&c. \&c.; fo that the re is great reafon to think the real account between the two nations may be thus Aated:

| Total Exports of England to France in 1789, |  |  | $\underset{58,000,000}{\text { liv. }_{0}}$ |
| :---: | :---: | :---: | :---: |
| Ditto of Englifh manufactures in | 1787, | - | 33,000,000 |
|  | 1788, | - | 27,000,000 |
|  | 1789 | - | 23,200,000 |

Hence it appears, that the two cuftom-houfes do not differ effentially in their accounts.

Before I offer any obfervations on thefe accounts, I hall infert a few notes I made at fome confiderable towns of the intelligence I received perfonally.
1787.-Abbeville.-In difcourfe upon the effect of the new treaty of commerce with Fingland, they ex: effed great apprehenfions that it would prove extremely detrimental to their manufactures. I urged their cheap labour and provifions, and the encouragement their government was always ready to give to manufactures: they faid, that for their government nothing was to be depended upon; if their councils had underftood the manufactures of the kingdom, they certainly would not have made the treaty upon fuch terms; that there were intelligent perfons in their town who had been in England, and who were clearly of opinion, that the fimilar Englifh fabrics were fome cheaper and others better, which, aided by fallion in France, would give them a great advantage; that provifions were by no means cheap at Abbeville, and the workmen in feveral branches of their fabrics were paid nearly as much as in England, without doing the work equally well, at leaft this was the opinion of come very good judges; and laftly, that all Abbeville are of this opinion.

Ameens.-I had here fome converfation to the fame purport as at Abbeville; the whole town I was affured had been alarmed from the firft rumour of the terms on which the treaty of commerce had been concluded ; they are well convinced that they cannot in any one inftance, as they affert, fland the competition of Englifh goods. On my afking what reafon they had for fuch an idea, the perfon I converfed with went intoa warehoufe, and bringing a piece of fuff and another of flannel, they were, he faid Englifh, and from the price at which they were gotten before the treaty, he drew the conclufion; he was alfo, he faid, well informed of the prices in England. In the cotton fabric, he faid, the fuperiority was yet greater; in a word, that Amiens would be ruined, and that on this point there was but one opinion.

The manufacturers of all comntries are full of thefe apprehenfions, which ufually prove extremely groundlefs. In all probability the effeet would be as expected, if a counter ftream of emulation and induffry did not work againft it. The introduction of Englifh fabrics may be hurtful for a time, but in the long run may be beneficial, by fpurring up the French manufacturers to greater excrtions and to a keener induftry.

Bourdeaux. - The intercourle between this port and England has been increafed a great deal fince the treaty. Warehoufes of Englilh grods are opened. The article which has hitherto fold the beft, and quickeft, is that of the Staffordfhire potteries; the quanities of thefe which have been fold is very great: but the hardware fent hither has been found fo dear, that it could not be fold in competition with French and German, except in a very few articies. fadlery there are feveral fhops opened that have fold largely. Beer has been tried, but would not do; the Dutch is ftill preferred for the Weft Indies as cheaper; tha: of Fingland has been fold at go livres the barique, of 250 lirench bottles, and fome of it arrived fo bad as not to be merchantable. Wine
las increafed in its export to England, but not fo much as was expected; Hefore the treaty it was cight thoufand tonneaux a year, and it has not rifen to twelve thoufand; however the courfe of exchange is againft England the, and wine, owing to the prefent failure of the crop, has increafed in price 50 per cent. Brandy has alfo increafed.
The Englifa take only the ewo firlt qualities of wines-or, rather they are fuppoled to do fo ; for their merchants eftablihed here mix and work the wine fent in fuch a manner, that the real quality of it is unknown : this is the account given us. Thofe two frif forts are now at 201 . to 22l. a barique, which is two hundred and fifty French bottles, and two hundred and feveniy Englifh ones. The other qualities are fold from 151. to 18 l . port charges, cafk and hipping included; freight to London is jcs a ton, befides 15 per cent. primage, average, \&c. The French duty is 28 livres the tonneau, which has been lowered to 5 livres 5. from laft October to the firft of January next, a regulation which it is faid will not take place longer.

Beauvais. - The opinion univerfal among the manufacturers here is, that the Eng. :inz fabrics are fo fuperior in cheapnefs, from the wife policy of the encouragements given by government, that thofe of Beauvais, flould they come in compctition, muft fink; fo much of the fabrics here as are for the confumption of the lower people might perhaps fland by it, but not any others; and they think that the molt milchievous war would not have been fo injurious to France, as this mort pernicious treaty.
Lilis.-I no where met with more violence of fentiment, relative to this treaty, than here; the manufacturers will not fpee's of it with any patience; they wifl for nothing but 2 war; they may be faid to pray for one, as the only means of efcaping that ideal suit, thich they are all fure muft flow trom the influx of Englifh fabrics to rival theirown. This opinion ftruck me as a moft extraordinary infatuation; for in the examination which took place at the bars of our Houfes of Lords and Commons, this is precifely the town whofe fabrics were reprefented as dangeroufly rivalling our own, particularly the camblets of Norwich; and here we find exactly the counter part of thofe apprehenfions. Norwich confiders Lille as the moft dreadful rival, and Lille regards Norwich as fo formidable to her induftry, that war and bloodfhed would be preferable to fuch a competition. Such facts ought to be uleful to a politician; he will regard thefe jealoufie, wherever found, either as impertinence or knavery, and pay no attention whatever to the hopes, fears, jealoufies, or alarms, which the love of monopoly always infpires, which are ufually falfe, and always mifchievous to the national interefts, equally of every country.
Naotis.-In converfation here on this traty with fome very refpectable commercial gentemen, they were loud againft it ; infifted that France fent no fabrics whatever to England in confequence of it, not to the amount of a fingle fol; fome goes, and the fane went before the treaty ; and that England has not imported more wine or brandy than ufual, or at leaft to a very fmall amount; we know at prefent that this was not correct.

Rouen.-The quantity of merchandize of all forts that has been inuported here from England fince the treaty, is wery confiderable, elpecially Stafirulthire hardvare, and cotton fabrics, and feveral Englifh houfes have been eftablifhed. Thoy entider the treaty here as highly detrimental to all the manufactures of Normandie.

I am better fatisfied with the real fact than if it were, as the Chanber of Commerec of Normandic imagined, much more in favour of Kingland; for as the benflit is more likely to laft, fo the treaty is more likely to be renewed; and confequenty peace between the two kingdoms to be more durable. The balance of the manufaturing account does not exceed 14 millions, which is very far thort of the French ideas, and mult,
in the nature of things, leffen. The 18 millions of raw materials and coals, inftead of being an import hurfful to the interens of French induftry, is bencficial to it; and they themfelves wifely confider it as fuch, and lamented the old duties on the import of Englifh coal, afferting, that there ought to be none at all. Here are 10 millions of imports, and a balance of eight in direct objects of agriculture, as corn and meat. If a people will manage their agriculture in fuch a prepofterous manner, as not to be able to feed themfelves, they fhould efteem themfelves highly obliged to any neighbour that will do it for them. Raw materials, including drugs, with cattle, corn, and horfes, very nearly account for the whole balance, great as it is, that is paid on the total to England; and as fuch objects are as much for the advantage of France to import, as for the benefit of England to export, the whole trade mult, both in extent and balance, be deemed equally reciprocal, and of courfe equally tending to advance the profperity of each kingdom. There is, however, a circumftance in which matters are very far from being reciprocal, and that is, in payments. The French are paid for their goods, whatever thefe inay be, accord-ing to agreement; but that is very far from being the cafe with the complaints againft the mode of dealing in France, not only in refpeet of payment, but allo of want of confidence, fince their goods, fairly executed, according to patterns agreed on, are feldom received without difpute or deduction: and while they chearfully do jultice to the punctuality of the Americans, Germans, \&c. they put very little value on the French trade, fpeaking in general. It is the fame with Birmingham, whofe merchants and manufacturers affert ftrenuoufly, that the commercial treaty has been of no fervice to their onwn ; the French having taken as largely their goods by contraband, before the treaty, as at prefent, through a different channel ; with this change, that the Dutch, Germans, and Flemmings, with whom they dealt before, paid better than the French. Thefe circumflances are great deductions from the apparent merit of the treaty, which cannot be fairly eltimated, unlefs we could know the anount of our exports fent out clandeftinely before it was concluded. The manufacturers are certainly the beft judges; and they unite, with one voice, throughout the kingdom, either to condemn it, or at leaft to alfert its lraving been a mere transfer from one channel to another, and not an increafe. The benefit of it, however, as a political meafure, which tends to eftablifh a friendfhip and connection between the two countries, cannot be called in que!lion with any propriety ; for the mere chance of its being productive of peace, is of more confequence than ten fuch balances, as appears on the foot of the above mentioned account.

## Char. XIX.-Of the Manufactures of France.

Picardie-Abbeville:-ThE famous manufucture of Vanrobais has been defcribed in all dictionaries of commerce and fimilar works; I thall therefore only obferve, that the buildings are very large, and all the conveniencies feem to be as complete as expence could make them: the fabric of broad cloths is here carried on upon the account of the malter of the eftablifhment, from the back of the fheep to the laft hand that is given. They affert, that all the wool ufed is Spanifh, but this muft be received with fome degree of qualification. They fay that one thouland five hundred hands are employed, of which two hundred and fifty are weavers; but they have experienced a great ceclenfion fince the eftablifhment of the fabric at Louviers, in Normandie. They have feveral fpinning jennies, by which one girl does the bufinefs of forty-fix fpinners.

An eftablifhment of this kind, with all the circumftances which every one knows at. tended it, is certainly a yery noble monument of the true fplendour of that celebrated
rcign to which Monf, de Voltaire juflly enough gave the title of $A_{f c}$; but I have great doubts whether it is poffible to carry on a manufacture to the beft advantage, by thus concentrating, in one eftablifhment, all the various branches that are effential to the completion of the fabric. The divifion of labour is thus in fome meafure loft, and entirely fo in refipect to the malter of each branch. The man whole fortune depends entirely on the labour of the fpinner, is more likely to underftand finining in perfection, than he who is equally concerned in fpinning and weaving; and it is perhaps the fame with refipect to drelling, milling, dying, \&ec, when cach is a feparate butinefs each muft be cheaper and better done. 'The appointment of commis and overfeers leffens, but by no means gets rid of the dificulty. In viewing a manufacture therefore I am not fo much frrack with that great fcale which fpeaks a royal foundation, as with the more diffufive and by much the more uffful figns of induftry and employment, which fipread into every quarter of a city, raife entire ftreets of little comfortable houfes, convert poor villages into little towns, and dirty cottages into neat habitations. How far it may be neceffary when manufattures are firtt introduced into a country to proceed on the plan followed by Louis XIV. I hall not enquire, but when they are as well eftablifhed as they are at prefent, and have long been in France, the more rivals in fualler undertakings, which thefe great eftablifhments have to contend with, the better it will generally be found for the kingdom, always avoiding the contrary extreme, which is yet worfe, that of fpreading into the country and turging what ought to be farmers into manufacturers.
Befides fine cloths, they make at Abbeville carpets, tapefty, worfed fockings, barracans, a light Ituff much worn by the clergy, minorques, and other fimilar goods. Thcy have alfo a fmall fabric of cotton handkerchiefs.

Amens-Abounds with fabrics as much as Abbeville; they make cottons, camblets, calimancoes, minorques, coarfe cloths; there is fearcely any wool worked here but that of Picardy and a little of LIolland, none of England, or next to none; they would get it they fay if they could, but they cannot. I examined their cotton flockings carefully, and found that 4 or 5 livres was the price of fuch as were equal to thofe I had brought from England, and which coft at London 2s. 6I.; this difference is furprizing, and proves, if any thing can, the valt fuperiority of our cotton fabrics.

Bretevil.-They have a manufacture here on a fimall fcale of feythes and wood hooks, the former at 4.5 . the latter at $3 \rho /$. the iron comes from St. Diziers, and the coals from Valenciennes. Nails are alfo made here for horfe-floes at 8 f. the lb. but not by nailors who do nothing elfe.

Orleans. - The manufactures are not inconfiderable, they make flockings of all kinds, and print linens; a fabric of woollen caps has been eftablifhed here fince Louis XIV.'s time, in which two noufes are employed; the chief we viewed. It employs at home about three hundred working hands, and twelve to fifteen hundred others. The caps are entirely made of Spanifh wool, three ounces of yarn make a cap; they are all for exportation, from Marfeilles to Turkey and the coait of Africa, being worn under turbans; in dreffing they extract the greafe with urine, full and finifh in the manner of cloth.

The fugar refinery is a confiderable bufinefs, there are ten large and feventeen fmaller houfes engaged in it; the firt employ each forty to forty-five workmen, the later ten to twelve; one of the principal, which I viewed, makes $600,000 \mathrm{lb}$. of fugar, and the reft in proportion. The beft fugar is from Martinico, but they mix them together. Rum is never made from molaffes, which is fold to the Dutch at $3 f$. the lb . the fcum is fqueezed, and the refufe is fpread thick on meadows to kill mofs, which it
does very effectually. The price ofenw fugar is $3^{3}$ to 45 livres per ioolb. The coal they burn is from the vicinity of Moulins, in the Bourbonnois. Trade in general is now brik here.

Romorintin.-A fabric of common cloths for liveries and foldicrs, carried on by private weavers, who procure the wool and work it up; they are at lealt one hundred in number, and make on an average twenty pieces each in a year; it is fent to Paris. At Vatan there about twenty of the fame weavers and three hundred finners.

Chateaurols. - A fabric of cloth, which two years ago, before the failure of the math", fave employment to five hundred hands, boys included, and to one thoufand five hundred to one thoufand eight hundred fpinners in this and the neighbouring piovinces; it is a Manufacturc Rovale, like that at Abbeville, of Vanrobais, by which is to be underfteod an exemption for all the workmen employed within the walls from ecrtain taxce, I believe tailles. Sume gentlemen of the town keep at prefent one hundred hands at work in the houfe, and he amers dependiag on that number, in order that the fabric might not be loft, nor the poor left entirsly without employment; there is true and uleful patriotifm in this. The cloths that were made here were it to $1!$ aulns broad, which fold at 8 livees in 23 livres the auln; they make alfo ratteens. In the tow are about eighty private weavers, who make nearly the fame cloths as at Romorentin, but better; fell from 8 lises to 8 livres the auln, $1+$ brod; thefe private thrics, which do not depend on any great citabilhment, are vaftly proferable to concontrating the branches in one great inclofure; the right method of remedying fuch a failure as has happened here, is to endearour by every means to increafe the number of private undertakers. The cloths are all made of the wool of the country now 20 to 3 .f. the lb. it has been dearer for two years, and tein years ago was to be had for 15 io $20 f$. from the 2.th of Junc it is fuld at every market, and in large quantities; manufacturers come from Normandy and Picardy for twelve days together to buy wool, wafh, and fend it off.

At two leagues from Chateauroux are iron forges, which let at 140,000 livres a year, (61251.) belonging to the Count d'Artois.

Limocis. - 'The moft confiderable fabric here is that of druggets, the warp of which is of hemp thread, and the woof of wool, one hundred looms are employed by them. Siamoife ftufts are made of hemp an cotton, fold at 30 to 48 f , an auln; there are about one thouland or one thoufand one handred cotton fpimers in the Limofin, alfo various mixed ftutfs of filk and cotton, and !: and thread, under many denominations, for gowns, coats, wailcoats, breches, cic. from + to 6 livers the auln. Some ftuff, which they call China, are rather dearer; a gown felling for \& lowis, but of filk gauze only 2 louis; this fabric employs about twenty looms, worked cach by three or four people, boys included. I took many feecimens of thefe fabrics, but in general there is a great mixture of thew and finery with coa fenels of materials and cheapuefs of price, not at all fuitable to an Englifh talle.

They have aho a porclare manafacture, purchatad by the King two years ago, whin works for Seve; it gives emphoment to about fixty hands; I bought a fecina, an, but nothing they make is cheap, and no wonder, it the King is the manufaturer.

Thy have in the gamality of Limoges, which includes the Angoumois, feventy panr mills wat mandacture all kinds; they are fuppofed to make every day to the guantity of 19 catcs, the contents on which vary according to the fort of paper. A (we $, 1,3 \mathrm{ch}$. will make 6 : rams of large and tine paper, but double that quantity of chere firts; they calculate that a mill can work about two hundred days in a year, feftivals and repirs excludut; this makes at a cure a day $+5+, 2 \mathrm{colb}$. for a year's work
vor.
of a mill, and 31794 ,noolb. for the whole gencrality, and they value it at $20 f$. the lb . which makns as many liveres, or $1,390,987$. They confuder the manufacture as greatly overbueded with an excif, whith amounts to about th part of the valle, but they bion an altorance for all then, rove to be defigned for exportation, in the bature of our dawhacks; the manficture has inereatid notwithtandin " duty. Thiy reck here, and in all the promills of France, the cylimur tor bing the rass, which they call Dithih (and whicla we have had fo long in langlady, as a mew and grat improvement. lach mill cmithes from twele to twent hando induling cariere; they reckon that hatf the para is exaruted, much to toe B dies, and fome they fin to Finghad.
They have aifo in this sencratity fory iron forges, fome of which employ one hundrad poople, onc is a fimadry fire : Ring and bining camon.

Brove.-A filk faric has been ellablithed here ahout five and twenty years, filk alone is wrought in it, and alfo mixed with cotton, and gatus of dll hidis are made; they fay they have dificovered a manner of ding raw filk, with which they make phan ganzes ; the of an auln broad and it hong; the price varics aecortins as they are chinics (waved), or not; a picee white, friped or not, is $5+$ lives, (2l. 7s. 3d.) coloured ones 60 hivere, (2l. 12s. 6.1.) and the whets 30 hiris, (3l. 1oc..0.d.); they make alfo a thick fhining lluff in imitaton of Mancucfer, at $\sigma$ livers the auth, alfo filk and neck handkerchicts of a German tafte, whld chisly in Gemany and Auvergne. A merchant alfo at B ne, in Switzerland, is fo good a cultonce as to have taken one thoufand dozen of them. They have fix:y or eighty looms contanty at work in the town; the weaver having his hom in his houle and luppliad with the materai from the mannfactory, and puid by the piece: ach toon employs five people, women and childen included. They we only Prench fik, which though not for fhaning as the 1tulan, is they fay, fronger, bears the prepratin, and wars beiter.

They have allo here a coston mill and fabric which is but in its infancy, has on'y nuc combing machine, and :iree double ones for finning ; they fay that this macline, with the affilance of amople, does the work of cighty; this undertaking has been eftablithed and is c: mel on by Mcllis. Mills and Clarte, he former an Englifhan from Canterbury, the wots from Irdand, both iadued by ancouragenents to fethe in France.

Sombac- Parm:-No manufacures whaterer in the country.
Cutnes. - Sonse finall manufatorics among them, one of woollen cloth; fome years ago it had near one thouland workmen, but the company difagreeing, a law-fuit enlued, to that it decreafed to one hundred and lifty; the fpimacrs are chiefly in the town; work up both lrench and Spanifh wool, but the later not of the firt quality. They fhewed us however fome cloth, made as they fay, entirely of Spaiifh wool, at 3 liveres $\mathrm{c} / \mathrm{f}$. the lb . which is not fo grod as their ratteens made with $\frac{?}{3}$ wool of Navarre and Rouflillon, and : Spanifh; they make fome cloths for the home confumption of the province, entirely with the wool of Navarre, an auln broad, at 11 hirres the auln; ratteens : of an auln broad, at 22 livres the auln ; a fecond fort of ratteens, made with Frenh wool, an anlm broal, 14 lisres the antn.

Cacssami.-This comury is full of palant proprietors of land, who all abound very much with domeflic manufatures; they work their wool into common cloths and cambth, and all the women and girls fin wool and hemp, of which they make linen; there are weders that buy abost two quintals of wool, pay for the fpinning, weave it, and cary the cloth tw market, and there are merchants that buy the fuperiluity for export.

Nontaunan. - The woollen manufature here is of tome ensiname, comfiting of conmon cloths, croifers, hatf an aula broad, and feveral forts of Hum; that give the
 in the town and the comary, mon only on alcomit of the matar mamfacturera, but alfo by private wavers, who make and carry their ftuff to market un.'rufed; the paphe
 Prance a common affertina by way of secomencming tha ir tabrics, and has been heard in thofe, known on much better andority to whe none at all; another circunatance to benoted is, that the wool of Rouffilton goes in common manufacturing language wader the dolomination of Spanifh; I fow their raw wool, and an clear, that if it is spanifh, it is of a very inferior fort; the quali whe price of the coths fpak the fame language; they dye the cloth and in which are the of an auln wide, a 5 lives arf. Twotve ..andred;

The filk mandiacture is alfo co virons, hut of the upper coumtry an, orevioufy; they fell their broad clothis, a auln, ( 1 .s. 10!d.) and the croifics ar and by private looms; a flocking chine cofts from ig to $2=$ louis, and a workman can earn with it to 3 livers a day.
 has abont eighty looms, which are in the town; in the other flockinge, fluals, damalks, and ether fabrics, worked in thowers; about cighty looms alto.

St. Martis. - There are here ten mandactures' homfe, one of which made lat venf feven hundred pieces of wonlen ftulis, each fix alns long; on an average cach houfe live hundred piecos, chiefly bays, fays, and other thufs, the chain of thread; feme for home comfamplion, but chiclly for exportation to Spain. Their beft is 4 lisres 1s. the canes of eight palms, and ten palms to the auhn, hala an auh broat. Other dains 3 heres 5 dive in all kinds of colours. There are plemy of fpianers of both
 and carders are at homs they ute fome Spanilh wool from the Navare hills at 3 : the \%. this year 3 .i. lat very dear.
st. G.mmeste Mandatures feveral forts of fuffe, buth wool alone, and wool and ther ad mixel ; the principal fabnic is a light Ituff called Cadis, the grater part of which is expored to $S_{\mathrm{i}} \mathrm{min}$.
 it is faid, the ouly one in the whole king dom, which was all lupplied, before the eftabilhment of this fabric, by a Saxon genteman, from the works in Saxoay; and what is now made here is ufod at home and exported as Sixon cobat. The ore is brought from Spuin at a very hish paice, from a mine in the Pyrences, nut thore diftant in a flrait line than lix leagues, but the rowa is fo rocky that the ore is brought by the ralley of Latoufte, which tak up a day and a half. The ore is not found in veins, but in lumps (ramen:), fo that it is often low and frmad again.

A comarnite ciremutance, and hardy eredible, is their employing ore alto from Stria, which is flipped at Trime for Bourdenx, and brough be the Garone to TouIrufe, and hither by had, at the experee of 4 . the quintal. They ufealo fome from Pecheont ; of here diff rent ore, that rom Styra is the wort, and the Spanifh the beft;
 the Spaifh ore is the fint demeribed by Monf. Wurcroy, the grey or ath coloured; thay do not meit thefe ores ferate but mixea to sther.

Photographic Sciences
Corporation

Tranfplantation. - In April following, thofe that were fown in May are tranfplanted ${ }_{*}$ three feet every way, into the nurfery; only half the plants (the beft) being drawn, the reft are left till ithe year after. They are never tranfplanted a fecond time.

Sort.-The feuille rofe, with white or grey fruit, is the beft ; black fruit not known here, but faid to be good for leafing late, and efcapin; frolts in the fpring.

Grafting. - It is belt to graft in the nurfery, in May, when they are three years old, at the head, with grafts cut in February preceding, and preferved in fand in a cellar: thefe grafts are branches three feet long, which are buried in fand, except four inches at the end, for three or four knots to fhoot; if all are buried in the fand, all the knots will fhoot. At grafting cut off thofe knots that have fhot out, and ufe the reft. The time is after gathering the leaves of the flandard to be grafted, when the plants are five feet, or $5 \frac{1}{2}$ feet high. One year after grafting tranfplant, that is, about April. Graft three or four branches.

Soil. .-Good and humid fands, and fandy loams arc the beft: warm, forward, rich, and friable: rocky and foney foils do welt; but all clays are bad. On the ligheft ftoney lands, the trees come into beaimg much fooner than in the rich vale, but thefe laft valtly longer; on the rich vale land, two hundred years are a common age for them.

Planting.-In bad land plant at eighteen feet fquare, in moderate at twenty-four, and in very good at thirty fix; and, after feven or eight years, there can be no crops under them, if at thefe diftances. There are two forts of trees, the one large ftandards; and the others dwarf ones, which they call murier nain; an arpent contains, of courfe, many more in number of thefe than of the others; and they yield, for the firft ten or fitteen years, a larger produce, but afterwards the greater trees are inore productive. The dwarfs are beft for being fet in rows, for ploughing between; they are grafted at $1 \frac{1}{2}$ feet high; are never watered. The price of trees $2 \%$ the hundred, at the age of one or two years; the great trees, at four or five years, for grating, of. each, at prefent $15 \int$ each, and grafted. The operation of planting is performed by digging a hole fix feet fquare, and 2if or three feet deep; and they commonly liay dung upon the ronts.

Cultivation.-The attention with which they manage the trees after planting, merits the higheft commendation : - after they have been planted two years, a trench is dug around each tree, about two feet deep, which is left open all winter, and filled up again in the fpring; the year following another is dug, more removed from the tree, which is managed in the fame manner ; and fo on every year a trench, till the whole land is ftirred as far as the roots extend. This appears to be a molt excellent fyitem, and preferable to trenching the ground at fuft; as in that way much of it is confolidated again, before the roots of the young trees reach it.

No crops whatever to be fown on the land after the trees are of a fize to have theirleaves gathered; as much is loft in leaves as is gained by fuch crops.

The trees thould never be pruned at any other featon than March, and but once in two years; the wood pays the expence: they receive one digging per annum, at 0 liveres, and a hoeing at 3 livres per arpent.

There is another admirable practice known here, and ufed by all 爪hilful cultivators, which is that of walhing the flems of the trees every year, in May, for four or five years after planting. Monl. L'Abbé Berenger always practiles this with great fuccefs.

Producc. - Nor the denefit of the young trees, they ought not to be ftripped for fev in or eight years after planting into the field; they will pay well afterwards for this for-
bearance; but the practice is not common. I viewed a young plantation of Mon饣. Blanchard, at prefent in the National Affembly, who is famous for his attention to his mulberries; the trces were fix, feven, and eight years old, and none of them had ever been ftripped, and their appearance was very flourifhing. Monf. L'Abbé Berenger approves the practice, but has not adhered to it; his trees, however, are very fine, and do not complain ; one plantation, of eight or ten years growth, that have confantly been fripped, are, notwithftanding, very fine. There are forty on four hundred toifes of land, that this year produced, each tree, eight pound of leaves. The beginning of February he planted the land under them with potatoes, which were dug in Auguft, and produced forty quintals; among thefe potatoes maize was planted in April, in fquares of five or fix feet, and the produce of that will be five or fix quintals, at 8 livres the quintal. He fhewed me another plantation, of an arpent, of very fine and flourifhing dwarf trecs, which yielded this year cight pound of leaves cach tree, and three hundred pound on the arpent. They are ten years old; no crops have ever been fown under them.
The produce of leaves may be eftimated at fifty pound from a tree of a toife fquare. The greateft produce known is ten quintals, from a tree of fifty years old. At twenty years the medium is two quintals. They increafe till fixty years old; but are in good perfection at twenty.

The eggs. - A paper of nine inches by fifteen inches, covered with fmall leaves, ftuck full of worms, gives one quintal of cocoons; and this is what they call one ounce of grains. But proportions will not hold, for the produce is not increafed proportionably to an increafe of quantily.

Hatcling.-Retarding the hatching of the worms with particular views, is, in many circumftances, impoffible. When once the heat of the atmofphere is come to a certain pitch, the batching cannot be retarded by cellars. Monf. Faujas remarked, that in June they would hatch in an ice houfe; which flews that at a certain age they will hatch in fpite of cold. They never, however, truft to the natural heat for hatching them, which always does it too fowly; it is done with the affiftance of fire, and in the month of May. They begin to hatch at twenty to twenty-two degrees (Reaumur); but artificially it is done at twenty-four degrees. When the eggs happen to have been put in a cellar, at ten degrees, their common temperature, they afterwards hatch with difficulty, and never well; always beft when they have to undergo but a moderate change.

Fccding.-In this bufinefs all forts of food, except the mulberry leaf, is rejected, at the firlt mention, as the moft ridiculous, impracticable, and impofible idea, that ever entered the head of a vifionary; and never could be conceived but by thofe only who amufe themfelves with a few worms, without taking the trouble of calculating quantity, expence, and quality of filk.

For one ounce of grain, a room of ten feet by fourteen feet, and twelve feet high, is neceflary; but the larger the better, and with windows only to the north. There fhould be ten tables, or fhelves, fix fect long, and $4 \frac{1}{2}$ feet broad, one cighteen inches above another; the firft expence of which is 60 livres.

Till the 1 th of April there is here no fecurity againft frofts. Two years ago there were many leaves before that day, and mott people began their operations; the leaves were all cut off, and they loft the year entircly; for it is three weeks before the leaves come again. Monf. I'Abbé Berchger would not trult appearances; did not begin till after that day, and had as good a year as at any other time.

The expences are ufually borne between the parties, and amount to half the produce, not including the keeping the utenfils in repair. But if they are paid by the owner of the mulberries, fome of them amount to as follow:- gathering the leaves, 10.5 to 15 f . the quintal; for gathering the dwarfs, only half the price of the others; wood, 15 livres for one, two, or three ounces of eggs in one room : thirty livres for fix ounces, becaufe in two rooms; 22 livres $10 \%$. for lahour in the houfe; fpinning, $40 /$. p 2 r lb . of filk. The watte is worth $20 f$. therefore the expence is $2 \mathrm{C} /$.

For the laft four or five days, eight men are neceffary to gather leaves for twenty ounces of grain, their voracity being incredible the latter part of the time.

The price of the leaves, if bought, is 4 livres to 5 livres the quintal, never at 3 livres, but has been at to livres. From fifteen to eighteen quintals of leaves give one quintal of cocoons, and one of cocrons gives nine pound of filk. Cocoons are fold at 265 . the pound; filk, on an average, at 19 livres. The leaves, diffected by the worms, are dried, and kept for hogs, heep, \&c. being worth 4 livres the quintal; and an ounce of grain yields two quintals of fuch: and the dung of the worns, from an ounce, is worth 4 livres more, being excellent; the beft indeed of all others.

Two brothers here, Mefirs. Cartiers have had as far as eighty quintals of cocoons. Monf. Berenger's three hundred trees on an arpent, at cight pound of leaves each, are twenty-four quintals; and, at 4 livres the quintal, amount to 96 livres : and as fixteen quintals of leaves give nine pound of filk, at 19 livees, it is 171 livres, and for twentyfour quintals, 256 livres, the half of which is 128 livre:; ; hence, therefore, to fell the leaves at 4 livres the quintal, does not anfwer equally with half the produce $\{128$ livres per arpent de Paris, is 61.4 s. 3 d. per Englifh acre).

Provence. - Avignon. - At ten ycars growth the mulberries yicld a confiderable produce; at that age they give one hundred pound to one hundred and fifty pound of leaves, but not common. For one ounce of grain, five or fix very large trees are ncceffary ; or, if the leaves are bought, to the amounst of 24 livres to 30 livres. The ounce will give from forty pound to fifty pound of cocoons, or five pound of filk ; but more commonly twelve pound of cocoons for 1 pound of filk. Gathering the leaves, 16 . or $12 f$. the quintal, one with another, dwarfs and ftandards. The wafte pays the fpinning.

Aix.-Mulberries, beyond all comparifon, more profitable thar oliven will give 3 livres or 4 livres per tree, more regularly than olives will 10, ; but th at plantations of olives are on barren rocks that will not do for mulberries.

Tour d'Aigues.-One ounce of grains requires fifteen quintals of leaves, and gives fifty pound of cocoons; that is fifty pound in a fmall undertaking, like the houfe of a poor family; but not more than thirty pound in a large building. Monf. the Prefident has, however, had feventy-five ounces of grain that gave forly pound one with another: fourteen pound of cocoons give one pound of organzine fiik.

On good land, twenty trees, of ten years old, will give fifteen quintals of leaves. The wafte, with the addition of $1<f$. per pound, will pay the fpinning. Wood is $12 /$. the quintal, and $1!$ qumtal will wind and fpin one pound of filk: and ose quintal of charcoal will make three pound of filk. The common calculation is ten quintals of charcoal for one ounce of grain.

Labour and fuel, $4\ulcorner$. per pound of filk, exclufive of gathering the leaves; but the common method is to find the trees and the grain, and give half the produce for all the reft. The whole bufincfs, exclufive of winding and fpinning, employs exactly a month.

Hyeres nor do th years pay
Frejus. or fix of which it 1 mentionc

[^63]Hyeres.-This article is here but little regarded; the number is not confiderable, nor do they pay nearly the fame attention to them as in Dauphiné. A tree of twenty ycars pays about $30 \%$; and fome, of a very great fize and age, 6 livres.

Frejus.-Clofe without the town, on the banks of a fmall canal of irrigation, are five or fix of the largeft mulberriss I have feen, growing clofe to the water's edge; from which it fhould appear, that they have here none of that objection to water which was mentioned to me at Montelimart.

Eftrclies.-At the inn here there is a mulberry tree which yields black fruit, and leaves of a remarkable fize. I alked the matter, if he ufed them for filk-worms? Never, he replied, they are no bettcr for them than cim, oak, or pine leaves: it is the whitemulberries that are for worms. So inaccurately underftood is this point, even in the filk countries; for in Languedoc they told me, all forts were given indifcriminately. This tree would be worth 2 or 3 louis a year.

To thefe notes, taken by myfelf, I fhall add a few others, for the more general elucidation of the fubject.

Languedoc yields, in a common year, from five hundred to one thoufand two hundred quintals of filk *. I have fearched books in vain for information of the quantity of filk produced in all France ; but I find the number of looms which work it, by one account, twenty-nine thoufand $\dagger$, of which eighteen thoufand at Lyons; but by a later and more authentic account, there were at Lyons only nine thoufand three hundred and thirty-five looms, which worked about two million pounds $\ddagger$, and in all France feventeen thoufand five hundred looms; which, in the fame proportion, would work about three million, feven hundred and fixty three thoufand pounds. In 1784, fhe imported raw filk to the value of $29,500,000$ livres, and in 1787 , to $28,220,000$ livres; call it twenty nine millions, and 20 livres the mean price per lb. it is one million, four hundred and fifty thoufand pounds $\S$; which will leave about two million, three hundred and ten thoufand pounds for the home produce, or $46,200,000$ livres, which is fo grofs an impoffibility, as to afcertain to a certainty the exaggeration of the number of looms, and confirms, in a frefh inftance, the many errors in the New Encyclopedia. If Languedoc produces onl, one hundred thouland pounds, all the reit of the kingdom cannot produce twenty times as much; for the culture is confined to three or four provinces, except fimall quantities, that enter for little in a general account. I wasinformed, at Lyons, that the home growth was about a millions of pounds weight, of twothirds of the value of the imported per lb . or about 20 livres. This makes the growth to the value of $20,000,000$ livres or $875,000 \mathrm{l}$. If fo, Languedoc mult produce more than one hundred thoufand pounds, for that province unult be at leaft one-fourth, if not one third of the whole. I muft confefs I have my doubts upon this point, and think that even one million of pounds much exargerated, for I croffed the filk country in more than one direction, and the quantity of trees appeared inconfiderable for any fuch produce. But admitting the authority, and flating that the kingdom does produce to the amount of 8 or 900,000 . fterling, I mult remark, that the quantity is frangely in confiderable, and feems to mark, that the climate has fomething in it vafly inferior to that of Italy, for the production of this commodity; in which country there are little principalities that give more than the whole kingdom of France ; - yet, to human feel-

[^64]ings, there is no comparifon between the climate of France and that of Italy; the former is better, beyond all queftion. But the fpring frofts, (found in Italy alfo) are what bring the greatelt deftruction on this culture, and will for ever retard its progrels greatly in countries expofed to them. In 1788 , there was a general failure in the fouth of France, jet acrofs the Pyrences in Catalonia, the crop was abundant, marely becaufe the fyring frofts did not pafs thofe mountains.

In the diftricts and foots of the fouthern provinces, where the climate has, from experience, been found favourable to filk, there is no want of exertion in following it; and about Loriol and Montélimart, it is cultivated with more energy than in any part of Lombardy, yet at fuall diftances there are no mulberries, though the proprietors are as rich and as indultrious as where they are found. The fame obfervation is to be made every where, and feems to mark a great dependence eyen on the locality of climate, if 1 may hazard fuch an exprellion. Where the culture fucceeds well, it appears, from the preceding minutes, to be highly profitable, and to form one of the molt beneficial objects that can attract the attention of the induftrious.

The Society of Arts at London, have, for many years, offered premiums for mulberries and filk in England; and much has been written and argued in favour of the fcheme, which I take to be a great but harmlefs folly; it may miflead and deceive a few ingenious fpecularive people, who may, for what I know, in the courfe of a century, arrive at luch fuccefs as the late King of Pruffia boafted, that of making a few thoufand pounds of milerably bad filk, after forty years' exertion. Such fuccefs is a real lofs; for the fame attention, time, capital, and encouragenent, given to productions natural to the climate, would have made twenty times, perhaps an hundred times, the return. That filk may be made in England I have no doubt; but it will be made on the fame principles, and attended by the fame dead lofs. The duke of Belleifle made filk in Normandy, and if he had been a great fovercign, his hundreds would have been thoufands of pounds; but all was lofs, and therefore the fooner it dropped the better. Another duke failed, not quite fo much, in the Anguomois; and a third planted mulberries to lofs on the Garomme; his neighbours did the fame, but grubbed them up again becaufe they did not anfwer. At Tours, the fineft climate of France for fruits, and by confequence well adapted for mulberries, they ficceed tolerably, but the culture does not increafe, which carries with it a prefumption, that more fleady heat in fpring is wanted than the northern provinces of France enjoy. Such circumftances bear with great force againt any ideas of filk in England, where the heat is never fteady; and leaft of all in fpring, where late frolts cut off vegetables much hardier than the mulberry, even fo late as the end of May and'beginning of June; and where I have feen potatoes turned black by them, even on Midfummer day.

The minutes are invariably decifive, on the queltion of feeding worms with any thing but mulberry leaves; the utter impracticability of that fcheme is fhewn in a manner too fatisfactory for any doubts to remain; and the difliculty of retarding the latching of the worms beyond a certain a period, though not proved wihh equal decifion, is yet placed in a light not a little queftionable. It is upon thefe two modifications of the conmon practice, that filk in England confefiedly depends; one of them is a vague groundlets theory; and the other too uncertain to be relied ons. But I mult further remark, that f:oits, in fuch a climate as England, as well as abroad, are to be looked for after the leating of tie mulberry; and conlequently, that the power of retarding the hatching of the eggs weuld b : ufelefs; the worms in that cale mult be put upon other ford, which, with fmall parcels, would make bad filk, and with large ones would demand an expence imponible to fubmit to every year, for a mere contingency that might
be demanded only once in three or four. To urge the example of Brandenbourg is idle : in the firlt place, all continental climates are more regular than infular ones, and therefore the climate of the King of Prulfia's dominions may be better for the bufinefs; yet with this advantage Normandy failed. In 1788, that is after forty years' exertion, they made, in all the Pruffian territories, eleven thoufand pounds *, of pounds lighter than French ones. And the author I quote on this fubject, who commendsthe pro. ject, informs us, that in Brandenbourg, to make a pound of filk demands one-fourth more cocoons than in the fouth ot France $\dagger$; and that the filk thus made is fo bad, that it will do only for certain objects $\ddagger$; of the climate he fays, that it is not favourable enough $\$$ for the bufinefs. What encouragement is to be collected from this deail, when it is confidered that forty years effort of the firt talents in the world, feconded by boundlefs power, forcing plantations and lavithing premiums, have been able to drive this nail, that will not go but againt nature, to no greater extent than eleventhoufand posads of bad filk in all the ! 'ruffian dominions? In my opininn, the refult of fuch an experimeft yields a more complete condemnation, than if it had never been tried at all in tuch a climate, and ought to be a leffon to us in England, not obltinately to perfift in weh forilih attempts, calculated only to bring ridicule on focieties, and difappoisment to individuals. In all probability, the filk made in Pruffia coft every year ten times more than it is worth; that is to fay, the fame royal attention, the fame premiuns, the fame favours, as giving trees and filk eggs, the fame powerful intigations to rectors and cure's of the crown livings, \&c.-bad they been exerted to people the heaths of Brandenbourg with fleep, would have yiclded, in wool alone, ten times the value of eleven thoufand pounds of filk; which, if we value it at 12 S . a pound, being fo inferior, amouits only to 6,6001 . ;-a pretty article of produce for forty years' effort of the molt energetic government in Europe! fifty thoufand Cheep, at $3^{\text {s. a a head in }}$ wool, go much beyond it, throwing mutton out of the queftion.

- An idle error in England, is the idea that this culture demands the labour only of women and children, and old and infirm perfons; the contrary appears the fact ; eight men are neceffary for gathering the leaves for twenty ounces of grain, during four or five days, when the worms are molt ravenous; and the work of gathering is that of men at all times; for the leaves are not picked, but fripped along a branch, by force and hardnefs of hand. And even the feeding and cleaning worms is fo far from being light work, that it is, on the contrary, very levere, fo as even to kill fome of the poor prople that follow it up; as the induftrious will follow up all work feverely. The culture is therefore very far from what it has been reprcfented in England, as being all net profit, demanding only women, children, and the infirm; on the contrary, it would demand many able men, at a bufy feafon of the year, when they could be ill fpared; and if a propofal was to be made at fuch a feafon to a farmer, that he mult fare men enough to gather all the leaves of many hundred pollard trees of any fort, he would probibly fay, the price of mulberry leaves in the filk countries would not pay him; and that double that price would not be an inducement to him, at fuch a feafon, to derange his bufinets, and take his men from neceflary work, for employing them on fuch a bufinefs. If it is afked how the fime thing can be done in filk countries? I anfwer, that labour is but half the price of Englifh labour, owing to caufes explained in other chapters; that the multiplied lubdivifion of landed property fills many of thofe countries with hands, -many idle, and many not half employed. To them the culture is highly valuable; but to introduce it in a country, even if the climate would permit, conftituted and politically a ranged, in a manner and upon principles abfolutely contrary, would be

[^65]attended with dificulties and expences, not in the contemplation of people very ingenious, pcrhaps, who liave amufed themfelves with filk-worms, and paid an attention to them, being a pleafure, which, if commercially valued, would poffibly anount to fifty times the value of all the filk they make.

## Chap. XXIV.-Of Cattle in Franci.

EVERY part of agriculture depends fo immediately on the quantity of live flock, that a farming traveller cannot give too much attention to to material a part of his purfuit. The cand 4 reader will not, however, look to any traveller, that does not refide long in a place, for fuch information as is alone to be acquired by fuch refidence. He who ftays a week will gain knowledge beyond the attainment of a day; and the attention of a month will produce fruits beyond the reach of him whofe obfervations are limited to a week, and yet remain very fuperficial, when compared with the refearches of others who live on the fpot. A mere traveller fhould gain what his opportunities allow, and what he is thus able to gain is not the lefs valuable, becaufe larger powers would have commanded a greater harvef.
Pavs de Beauce.-Toury, E'c.-Their bett cows fell at 150 livres; they give twelve or thirteen bottles a day.

Orleans.-They have a remarkable cuftom of letting chick-weed get a head in their vineyards, which they pluck in May and dry. This they boil in water with bran for their cows, giving it thrice a day, and find that it makes them give double the quantity of milk they would do on any other food. This application of a common plant, that might eafily be cultivated, and got off time enough for a crop of turnips, probably improving the land, deferves a trial. The fact is curious.

Sologne.-To La Ferté.-Make hay of the weeds of their vineyards, and are the chief fupport of their cows; do not boil, but give them in bran and water. In fummer feed with grafs and vine cuttings.-A cow, that gives one to three bottles a day, fells at 90 livres.

La Fuzclicr. - The cows fmall, and very like Alderneys. Plough bullocks of the fame breed.

Berry.-Verfon.-A pair of oxen, ready to work, fell at 400 livres (ifl. ics.); and when old and palt labour, but lean, 300 to $3 \div 0$ livres.

Argentan.-A good pair of oxen fell at 400 livres; common ones 300 livres; very fine to 600 livres ( 261.5 s .). All the cattle here are cream coloured, as well as the droves we have met going to Paris.-A cow, not the largeft, fells at $15^{\circ}$ livres ( 6 l . 1 t . . jd.).
L. Marche.-To Boifmandé-Very fine bullocks, well made, and in great order, $6=0$ lives ( 261.5 s .) the pair. Thefe oxen are of a beautiful form; their backs ftrait and flat, with a fine fpringing rib; clean throat and leg; felt well; and are in every refpect fuperior to many breeds we have in England.

La Ville Aubrun.-Work their cows, but they do not give as much milk as if not worked. A good one fells, with its calf, at 150 livres ( 61.115 .3 d.). They fatten oxen here with raves, a fort of turnip; begin to ufe them in October or Novenber, and latt generally about three months. To fatten a pair of good oxen, would take forty-five cart loads, cut in pieces, and twenty quintals of hay; when the raves are done, they give the flour of rye or other corn, with water enough added to forma pafte; this they leave four or five days to become four, and then they dilute it with water, thicken it with cut chaff, and give it to the oxen thrice a day; when fed with raves the oxen do not wat to drink. Such a detail would imply a turnip culture of
forne im conjectu crop by i frolt forn after the is loft.

Bafle . of land, cart load are of oat the oxen They eat chopped 1 many dro that they difficult of fpring.
well fatte
Limou begin to $f$ but with t make it qu take it the Saw a pair work, fell loads; and large and They gene dung may fortnight a are apt to eaten, and from three Limoges. towns, as cream colo dency to a their carca fraight an very fat; of real imp weight I g few may b like our old St. Gcor always kep fuch labou cows.
fome importance, but though hoeing is not abfolutely unknown, yet the turnips may be conjectured, from the common management, bcing never to hoe, fearing to cut up the crop by it. The young plant is fometimes eaten by the fly, in which cafe they fow again; froft fometimes damages the roots, but never deftroys them entirely. Often fow wheat after them, and do not cultivate clover: thus three-fourths of the merit of the culture is loft.

Balfie. -Their raves yield, according to the year, two or three cart loads per boiferée of land, about eight of which make an Englifh acre. A pair of good oxen will eat a cart load in two days, but have hay with them : they are as fond of this root as horfes are of oats: they finifh with flour of rye, mixed as before-mentioned : they affert that the oxen like it the better for being four, and that it anfivers better in fatting them. They eat about a boifeau a day (weighs 22 lb .) and never give this acid liquor without chopped hay. It is proper here to remark, that, in coming to Paris, we have met a great many droves of thefe oxen, to the amount I guefs of from twelve to fifteen hundred, and that they were with few exceptions very fat ; and confidering the feafon, May, the moft difficult of the year, they were fatter than oxen are commonly feen in England, in the fpring. I handled many fcores of them, and found them an excellent breed, and very well fattened.

Limousin.-To Limoges.-A pair of good oxen will eat a cart load of raves a day; begin to feed the end of October: after the raves, give rye-pafte as defcribed above, but with the addition of a leven (lcvain) to the pafte, to quicken the fermentation, and make it quite four: at firft the oxen will not drink it, but they are ftarved to it; ufually take it the fecond day, and after they have begun like it much, and never leave a drop. Saw a pair bought latt winter for 1100 livres (481. 2s. 6d. ); but fuch as are ready for work, fell as dear as fat ones, which is remarkable. An arpent of raves yields forty cart loads; and a pair of good oxen will eat a load a day. They have two kinds; one very large and flat, the other more round, and with a root that enters the ground deeply. They generally manure thoroughly for them in March, and plough in fo early that the dung may be quite rotten and mixed with the foil by the end of June. Begin to fow a fortnight after Midfummer : they are not hurt by the frof when it thaws with rain, but are apt to rot when it thaws with the fun. About Chriftnas they plough up the part eaten, and fow rye, the reft for oats. They plough their cows, milking them once a day, from three to five bottles.

Limoges.-The great ftaple of the whole province is fat cattle, fent to Paris and other towns, as well as hogs, that go for falting to the fea ports. The catele are all of a yellow cream colour, with no other diftinction than having, one in an huw perhaps, a tendency to a blood red: all have horns of a medium length; legs tho t in proportion to their carcaffes, which are deep and heavy; the thape in general very good; the back ftraight and broad; the rib fpringing, and confequently well arched; the hips and rumps very fat; the tail rifing high from the rump; which I note, not becaufe fuch points are of real importance, but becaufe it is elteemed by fome as a proof of a bad breed: the weight I guefs to be from 60 to feventy fone ( 14 lb. ; ) fome rife to eighty, and a very few may be fo low as fitty. Their hogs are many of then large : fome with lop ears like our old Shrophire's.

St. Gcorge. - The fame breed of oxen continues here, but hardly fo large; they are always kept in high order: a pair draws the weight commonly of 2000 lb . and fupports fuch labour well. They rear calves by keeping them eight or ten months with the cows.
vol. Iv.
$3^{\mathrm{P}}$
UJarch.

Ujarib.-Fatten their oxen with raves, as above, and then with rye.flour, made into a pafte with leaven, and given four, as before deferibed. They alfo fatten fome with potatoes, mixed with chefnuts, and alfo alone ; but in either cafe boiled thoroughly, and given frefh as boiled every day. They have a great opinion of their fattening quality : they feed their cows alfo with this root, and find that it gives a great increate of milk. Calves reared, either for oxen or cows, fuck ten or twelve months, which is the univerfal practice.

Qubrcy.-Brive to Creffenfac.-A practical farmer, that has the largeft oxen I had met with, gave me the following account :-they fatten with maize, but, in order to render it tender, pour boiling water on it, cover it up clofe, and give it to the cattle the fame day ; and in this method it is a moft excellent fattener, both of oxen and poultry. But in order to make them fatten fooner and better, this farmer gives them, every night, and fometimes of a morning, a ball of pork-greafe, as large as an apple; he fays this is both phyfic and food, and makes them thrive the better.

To Souillac.-Fat their oxen here alfo with raves, and give them alfo to lean beafts; the mafter of the poft town where we ftopped fays, that he fent laft year to Paris, four raves that weighed roolb. They foil their oxen with crops of the vicia latharoides, and of the latbyrus fetifolius; of thefe plants he fpoke fo highly, when given in the foiling way, in the fable, that he faid the oxen became fo fat that they could not get out of the ftable if they were not worked. He fhewed me fome oxen that did not allow a doubt of the truth of what he faid, for they were as fat as bears. The fact of hog's greafe being given, was here confirmed; it is given to increafe the appetite, and anfwers fo well, that the beafts perfectly devour their food after it, and their coats become fmooth and thining. The moft fattening food they know for a bullock, is walnut oil-cake. All here give falt plentifully, to both cattle and fheep, being but $1 / . a$ pound. But this practice is, more or lefs, univerfal through the whole kingdom.

Cabors.-Nearly all the draft cattle are mules, and yoked as oxen in England, only collars to the yoke inftead of bows. Cows and oxen all cream coloured; very good, and in fine order.

Languzdoc.-Touloufe.-Very fine cream-coloured horned oxen; a pair good working ones fell at 25 louis.

St. Gaudents.-Price 120 livres, ( 51.55. ); in the winter kept in ftables, and fed upon hay.

Bagnere de Luchon.-Every parih in thefe mountains has common paftures for their cattle and fheep, and each inhabitant has a right to fend as many as they can feed in winter. They are on the mountain three or four months, under the care of people who milk the cows, goats, and ewes, and give the proprietor, at the end of the period, two cheefes of eighteen pounds for each cow; or four goats; or ten ewes; the price of the cheefe is $5 /$. the pound ; but $10 \int_{\text {. at a y y }}$ a old, and the overplus, if any, is their reward. A cow is reckoned to pay above 2 louis a year, valuing the calf, as they do, at a louis. A pair of cows, fout enough to be worked, fell al 10 to 12 louis; and a pair of oxen 12 to 15 louis.

Basque.-Informed by a gentleman, at Bagnere de Luchon, that the mountains in this province afford a very great fupply of food, in fummer, for cattle, which are fent to winter on the landes of Bourdeaux, where they juit get a living on weeds, rough grafs, branches of trees, \&c.; and that they pay only 5 . a head for wintering thefe cattle, which is perfectly incredible; but I note it as reported. He alfo informs me, that thofe

Pctiwie
Isle o
the comm
mountains of Bafque, and alfo of Navarre, breed moft of the oxen that I faw in Limoufin; they are fold thither calves; and are all cream-coloured, or yellowifh.

Lanourdoc.-Pinjean to Montpelier.--Ploughing with fine large oxen, in good order; fome cream-coloured, others deep red; middling horns. The fame breed has been found all the way, almoft from the Loire to Barcelona; and from Calais to the Loire, variations of the fhort-horned Alderney, or Norman cow.

Bearn.-Navarens.-Cream-coloured cows, 100 livres to 120 livres.
Gascoion.-St. Palais to An/pan.-In 1786, on thefe mountains, the fcarcity of forage being very great, they cut'much fern and made hay of it, and it anfwered well; horfes, mules, and young cattle, eat it freely ; but it was cut early. Through this country, and nearly to Bayonne, they fatten oxen with raves, which they cultivate carefully for an after-crop. They anfwer perfectly well, without other food being given; when the raves are done, they fometimes give maize-flour, but dry, knowing nothing of the Li moufin method.

Port St. Marie. - Very fine cream-coloured oxen.
Aguillon.-Ditto, very fine and beautiful.
Tonnium to La Morte Landron.-As we advance on the Garonne, the oxen are yet finer; meet common ones at 600 livres and 700 livres the pair; but fome very fine that rife to 1000 livres, and 1200 livres, (521. 10s.) as they are in the plough; all are however, in fine order, and many fat. Breed their own cattle; a pretty good cow fells at 250 livres; harnefs and work them as oxen, but gently while they give milk.

La Réole.-Work their cows: put oxen to work at three years old, and keep them to it four, eight, and even ten years, according as they are found fit for it. Rife in price to 1200 livres the pair. The leaft weight they are put to draw, is 20 quintals (a ton Englifh) a pair; but good oxen draw 30 quintals with eafe: all harneffed by the horns; they are fed now upon maize leaves, which are fo excellent a food for them, that it is fown in fucceffion thickly for mowing for foiling. Give alfo at prefent vine leaves, which are very good food. See them thoe an ox; they are faftened by the horns in a fhoeing ftall, and lifted from the ground, if wanted, by two broad bands of hemp, that pals under the belly. The fhoe turns over the toe, or hoof, as in England; fhoe for ${ }^{\prime \prime}$ ploughing as well as for the road.

Barfoc.-Oxen, through all this country, where they are found fine, are dreffed as regularly every day as horfes.

Angoumois.-Barbefeux to Petignac.-Cream-coloured oxen; 20 louis'to 25 louis the pair. -

Portou.-Poitiers.-Red-coloured oxen, with a black tinge in the head; the fign of the Poitou breed.

Chateaurault.-Good cream-coloured and red oxen, but they have declined fince Bourdeaux. The good ones here fell at 25 louis the pair. They plough with a pair, without driver or reins.

Amboife.-Cream-coloured, and fome blackifh ; and, which thews we are got to the Loire, fome Norman ones, with mixtures. This great river is the feparation of breeds in a remarkable manner. All the way from Tours, to Blois, they raife raves for cows and oxen, but never hoe them; and the fcale not at all refpectable.

Pctiviers.-Cows quite the Norman breed, and the earth tilled by horfes.
Isle of France.-Liancourt.-Exceedingly deficient. Some poor ill fed cows upon the commons were all that 1 faw, except the Dutchefs of Liancourt's dairy of Swifs cows.

Of oxen and fatting beafts they have none. Very fine fat beef appeared a't table which came from Paris, I think.

Braféffe.-Madame la Vifcounteffe du Pont's dairy of cows fed entirely with lucerne, and the butter excellent; I admired it much, and found the manufacture quite different from the common method. The milk is churned inftead of the cream. Her aiarymaid is from Bretagne, a province famous for good dairy-maiels. The evening's milk and the morning's are put together, and churned as foon as the latter is milked; the proper quantity of falt is added in the churn, and no wafhing or making in water, which thefe dairy-maids hold to be a very bad method. Finer butter, of a more delicate flavour, was never tafted, than procured by this method from lucerne.

Ccmerle en Vexin.- ' his part of the province is famous for fatting calves for the Paris market. I had gathered fome circumitances at Marcnne, and they were confirmed here. All is known at l'aris under the name of Pontoife veal, but it comes chicfly from this country. The farmers here are mofly, if not all, in the fyftem of fuckling. The cows are of the Norman fhort-horncd breed, nearly refembling our Alderney; thofe of three confiderable farmers, whofe herds I viewed, wcre fo unceptionably. The management of their cows is to keep them tied up conflantly, as far as food is concerned, but turned out every day for air and exercife, during which time they pick up what the bare paftures yield. Their food is given in the houfes, being foiled on lucerne, fainfoin, or clover, mown frefh every day, while they give milk, but hay and fraw in winter. The calves alfo are, in general, tied up in the fame houfe; thofe I faw, both cows and calves, were all littered; but they feemed to have fo little attention to kecp them clean, that I enquir. ed the reafon; and was told, that they are fometimes fuffered to reft on their dung till it rifes high, by the addition of freth ftraw, but that no inconvenience is found from it. Having been affured that they fed their calves with eggs, for giving reputation to the veal of Pontoife, I enquired into the truth of it, and was affured that no fuch practice was known; and that the reafon of the fuperiority of the veal of Pontoife, to that of Normandy, from which province moft of the cther calves come, was fimply that of making them fatter by longer fucking; whereas the Norman cuftom was to feed them with fkim nilk. In this country of the Vexin, they are in the cuftem of kecping them till they are
' of a large fize: I faw fome of four months old, valued at 4 louis each, and that would be worth 5 louis in another month; fome have been fold at 6 louis; and more even than that has been known. I felt one calf that fucked the milk of five cous. It was remarkable to find, that the value of many fatting calves 1 cxamined was nearly what it would be in England; I do not think there was 5 per cent. difference. They never bleed them to whiten the flefh, as is done with us. Some of the farmers here keep many cows; Monf. Coffin, of Commerle, has forty, but his farm is the largett in all the country ; the country people fay it is 20,000 livres a year.
Picardie.-St. Quintin.-All the way from Soiffons hither, the cattle are fome black, and black and white, which is very uncommon in France.

Cambray to Boachaine.-Feed their cows, and fatten oxen and cows, on carrots. They reckon that no food is fo good, for giving much and excellent milk. For fattening an ox they flice them into bran: but they remarkcd, that in fattening, the great object was to change their food; that a middling one, with change, would go further than a good one without; but in fuch change, carrots rank very high.

Flanders.-Valenciemes to Orchics.-Finding that they fed cattle with linfeed-cakes, I inquired if they ufed any of their immenfe quantity of colefeed cakes for the fame ufe? And was affured that they did; and that a bealt, with proper care, would fatten on then, though
though no fattening b not eats it there is no beaft. 'Th than the fhort and kept clean the world nine days. nips, whic

though not fo well as on linfeed-cake; alfo that they feed their hacep with both. For fattening beafts and for cows, they diffolve the cake in hot water, and the animal drinks, not eats it, having various other food given at the fame time, as hay, bran, \&c.; for there is no point they adhere to more than always to give variety of foods to a fattening beaft. Their cows, of which they are very proud, are Dutch; not large, though bigger than the Norman breed; they are red, or red and white, with a few black; the horns fhort and curled inwards, forward. They are fed in the houfe the whole year round, but kept clean with the greateft attention. They boaft of their butter being equal to any in the world; and i was affured of a cow that gave 19 livres ( 16 s . $7 \frac{1}{2} \mathrm{~d}$.) in butter every nine days. They feed them with potatoes, which give excellent butter; and with turnips, which give as bad. Cows fell at 150 livres.

To Lille.-All the cattle tied up in houfes, as they affured me, the year round; I inquired into their motives for this, and they afferted, that no practice is, they think, fo wafteful as letting cattle pafture abroad, as much food, or perhaps more, being fpoiled than eaten; the raifing dung allo is a great object with them, which flands fill, to their great lofs, when catte are abroad.

- Their cows were now (November 4,) feeding on turnips and cabbages. In every cow houfe I faw a tub of bran and water, which is their principal drink; boiled with bran in it is greatly preferred, but fome give it without boiling. Such minutia of practice feems only poflible on a little farm, where the hands are very numerous compared with the quantity of land; but it merits experiment to inquire, how far boiling all the water drank in winter can anfwer. Without experiment, fuch queftions are never underfood. All the cows I faw were littered, but the floors being flat, and without any fleep at the heel, they were dirty.

Normandie.-Neufchatel. - There are dairies here that rife to fifty cows, the produce of which in money, on an average, rejecting a few of the worft, is so to 100 livres, including calves, pigs, butter, and cheefe. In winter they feed them with fraw ; later with hay; and even with oats and bran; but not the leaft idea of any green winter food. The vale from hence to Gournay is all full of dairies, and fome alfo to Dieppe. One acre of good grafs feeds a cow through the fummer.

To Rouen.-Good cows give three gallons of milk a day; they are of the Alderney or Norman breed, but larger than fuch as come commonly to England.

Pont au Demer.-Many very fine grafs inclofures, of a better countenance than any I have feen in France, without watering ; grazed by good Norman cows, larger than our Alderneys, but of the fame breed; I faw thirty-two in one field. In the height of the feafon they are always milked three times a day; good ones give three Englifh gallons of milk a day. A man near the town that has got cows, but wants pafture, pays $10 /$. a day.for the pafturage of one, which is a very high rate for cattle of this fize.

Pont l' Ereque. - This town is fituated in the fanous Pay d'Auge, which is the diftrict of the richeit pafturage in Normandy, and indeed of all France, and for what I know of all Europe. It is a vale of about thirty five miles long, and from half a mile to two miles. over, being a flat tract of exceedingly rich land, at the bottom of two flopes of hills, which are either woods, arable, or poor land; but in fome places the pafture rifes partly up the hills. I viewed fome of thefe rich paftures, with a gentleman of Pont l'Eveque, Monficur Beval, who was fo good as to explain fome of the circumftances that relate to them. About this place they are all grazed by fatting oxen : the fyttem is nearly that of many of our Englifh countics. In March or April, the graziers go to to the fairs of Poitou and buy the oxen lean at about 240 livres (iol. 10s.): they are generally creamcoloured; horns of a middling length, with the tips black; the ends of their tails black;
and $\tan$ coloured about the eyes, which are the diftinctions of the Poitou breed. At Michaelmas they are fat; and fent to the fair at Poifly, that is Paris: fuch as are bought in at 240 livres lean, are fold fat at 350 to 400 livres. ( 15 l .6 ss .3 d. to 17 l . 10 s .) An acre of good palturage carries more than one of thefe beafts in fummer, befides winter fattening sheep. This acre is four verges, each forty perches, and the perch twenty-two feet, or a very little better than two Englifh acres. The rent of the belt of thefe paftures (called berbages here) amounts to 100 livres (4l. 7 s .6 d .) per Norman acre, or neariy 21. 3s. 9d. the Englifh; the tenant's taxes add 14 livres (12s. 3d.) or 6s. $1 \frac{1}{2} \mathrm{~d}$. per Englifh acre. The expences may be ftated thus :

Which is about 1l. 6s. 6d. per Englifh acre profit; and will pay a man well, the interelt of his capital being already paid. As thefe Norman graziers are generally rich, I do not apprehend the annual benefit is lefs. In pieces that are tolerably large, a ftock proportioned to the fize is turned in, and not changed till they are taken out fat. Thefe Poitou oxen are for the richeft paftures; for land of an inferior quality, they buy beafts from Anjou, Maine, and Bretagne. The theep fed in the wiltter do not belong to the graziers, but are joifted; there is none with longer wool than five inches, but the pafture is equal to the fineft of Lincoln. In walking over one of thefe noble herbages, my conductor made me obferve the quantity of clover in it, as a proof of its richnefs; it was the white Dutch and the common red: it is often thus-the value of a pafture depends more on the diadelphia than on the triandria family.

To Lificux. - This rich vale of the Pay d'Auge, fome years ago, was fed almoft entirely with cows, but now it is very generally under oxen, which are found to pay better. Whatever cows there are, are milked three times a day in fummer.

To Caen.-The valley of Corbon is a part of the Pay d'Auge, and faid to be the richeft of the whole. In this part, one acre, of one hundred and fixty perches of twenty-four feet, or about (not exactly) $2 f$ acres Englifh, fattens two oxen. Such rents are known as 200 livres ( 3 l. $1 \%$. per Englifh acre) but they are extraordinary: the proportions here are rather greater, and more profitable than in the former minute. They buy fome beafts before Chrittmas, which they keep on the palturage atone, except in deep fnows; thefe are forwarder in fipring than fuch as are bought then, and fatten quicker; they have alfo a few theep. There are graziers here that are landlords of 10,000 livres, and even 20,000 livres a jear, yet 100 acres are a large farm.

Isle of 8 louis to 1

Baycux. - The rich herbages about this place are employed in fattening oxen, of the Poitou breed, as before; bought lean, on an average, at 200 livres, and fold fat at 350 livres. Their cows are always milked thrice a day in fummer; the beft give twelve pots a day, or above four gallons, and fell at 7 or 8 louis each.

Ifigny to Carentan.- Much falt marh, and very rich; they fat oxen; but I was fur: prifed to find many dairy cows alfo on thefe very rich lands. A cow they fay fometimes pays 10 louis in a year; giving eight pound of butter in a week, at $20 \%$. to $30 \%$ a pound at fome feafons, but now (Auguft 25) only 10 . which they fay is ruinoully cheap. All are milked thrice a day. Others informed me that a cow gives ten pound a week, at the average price of 1.5 . Thefe cows refemble the Suffolk breed, in fize and brindle colour, round carcale, and fhort leg; and would not be known from them but by the horns, which are of the fhort Alderney fort. The profit on fattening a cow here they reckon at $\mathbf{7 2}^{2}$ livres, and an ox of the largeft fize 300 livres. They have alfo a common calculation, that dairy cows feed at the expence of $8 \%$ a day, and yield $20 f$. Ieaving $12 \%$ profit. It is remarkable, and cannot be too much condemned, that there are no dairics in this country: the milk is fet and the butter made in any common roon of a houfe or rottage.

Carentan.-Many oxen are bought at Michaelmas, and kept a year. They eat each in the winter three hundred bottes of hay, or 50 livres, but leave 150 livres profit, that is, they rife from 300 livres to 450 livres. Cows pay, on an average, 100 livres, and are kipt each on a verge of grafs, the rent of which is from 30 to 40 livres. Ais the vergé is 40 perches, of 24 feet, or 23,040 feet, it is equal to 96 Englifh fquare perches, which fpace pays 100 livres, or per Englifh acre 71. 5s. 3d. ; but all expences are to be deducted, including what the wintering cofts. Here they have milk.rooms. They work oxen all the way from Bayeux, in yokes and bows, like the old Englih ones, only fingle inftead of double.

Advancing ; cows fell fo high as 10 and 12 louis. Many are milked only twice a day : good ones give $1 \frac{1}{}$ or $1 \frac{1}{2}$ pound of butter a day. They remark that cows that give the largeft quantity of milk do not yield the largelt quantity of butter. Fat cows give much richer milk than others.

Again; a good cow gives fix pots of milk a day, which pays in butter 24\%. Three thouland livres profit has been made by fatting thirty cows. A great number of young cattle all over the country, efpecially year olds.

Bretagne.-Rennes.-Good oxen of Poitou, 400 livres to 600 livres the pair; they are harnaffed by the horns. A good cow, 100 livres. Milk but twice a day.
Landervifier.-I was at the fair here, at which were many cews; in general of the Norman breed, but fmall: one of the fize of a middling Alderney, 4 louis, but faid to be dear at prefent. Colour, black and white, and red and white.

Quimper. - Many black and white fmall, but well made, cows on the waftes here; a breed fomewhat diltinet from the Nornian; different horns, \&c.

Nantes.-Many Poitou oxen ; cream coloured; black eyes, tips of horns, and end of tail ; about fifty or fixty fone fat; all yoked by the horns.

Nonant.-Much rich hirbage; an acre of which feeds two oxen to the improvement of 160 livers. Many cows are fattened alfo ; and fome milked always three times a day in fummer.

To Gacé.-Some very fine cream coloured oxen, of fixty ftone or more; but in general, red and white, not Poitou.

Isle of Francr.-Nangis.-Cows fell at 4 louis or five louis; oxen, half fat, from 8 louis to 1 I louis. They come from Franche Compté.

Champagne.-Mareuil.-Monf. Le Blanc's Swifs cows give cighteen pints, of Paris (the Paris pint is an Engl:? quart) of milk per diem, and hola their milk remarkably long. He gave 40 louis for a bull and a cow.

Loraine.-Braball.-A fmall cow, 75 livres.
At.sace.-Strafbourg.-A cow, 6 louis; an ox the fame.
Ifenheim. - Cows improve as you approach Franche Compté.
Befort.-Good oxen, red and cream coloured, to 25 touis a pair.
i/le:-Here much finaller; and they fay the fine ones I have feen are from the moun. tains on the frontiers of Swifferland.

Bourgognr. - Dijon to Nuys.-Small oxen in this country, and yoked by the horns.
Autun to La Maifon de Botirgogne.-Good oxen drawing by the horns.
Auvergne.-Clermont. - Salt given twice a day to cows that give milk. In the mountains the price of cows, 150 livres to 200 livres; a few, 300 livres: an ox, from 200 livres to 450 livres.

Izsir.-A pair of good oxen, 16 louis to 18 louis, which will draw two thoufand pounds. The Poitevius will buy only red cattle in Auvergne, having remarked that chev fatten cafier *.

Vivarais. - Coffcrons.-A fmall cow, 4 louis.
Provence. - The cities of Aix, Marfeilles, and Toulon, are fed by oxen, cows, and fheep, from Auvergne, which come every week; a few from Picdmont.

Tour d'Aigues.-A pair of good oxen, 18 louis or 20 louis. When they have done working, they are fattened with the flour of the luthyrus fatirus, \&ic. made into pafte, and balls given frefh every night and morning; each ox, two or three balls, as large as a man's fift, with hay.

## Obfervations.

From the preceding notes it appears, that in Normandy, the Bas Poitou, Limoufin, Quercy, and Guienne, the importance of cattle is pretty well underitood; in fome diftricts very well ; and that in the palturage part of Normandy, the quantity is well pro. portioned to the richnefs of the country. In all the relt of the kingdom, which forms much the greater part of it, there is nothing that attracts notice. There would, in eighteen-twentieths of it, be fcarcely any cattle at all, were it not for the practice of ploughing with them. There are fome practices noted, which merit the attention even of Englifh farmers - 1. The Limotin and Quercy methods of fattening, by means of acid food.-It is remarkable, that I have found hogs to fatten much better with their food become acid, than when ufed frefh $\dagger$. But in England no experiments, to my knowledge, have been made, on applying the fame principle to oxen; it is, however, done in the Limoufin with great fuccels. The fubject is very curious, but the brevity neceffary to a traveller will not allow my purfuing it at prefent.-2. The practice in Flanders, and, in fome degree, in Quercy, \&cc. of keeping cows, oxen, and all forts of cattle, confined in thables the whole year through.-This I take to be one of the mofl correct, and probably one of the moft profitable methods that can be purfued; fince, by means of it, there is a conflant accumulation of dung throughout the year, and the food is made to go much farther.-3. Milking well-fed cows thrice a day, as in Normandy. - Fsperiments thould be made on the advantages of this practice, which will probably be found nut inconfiderable; it is never done, either in Lingland nor in Lombardy.

[^66]This is tention ; 1 of the worl if oxen tro tainly appli any countr confidered 1 hall infer
Limous kingdom; they are no is Pampado of horfes, were impo and, owing been much for the gro whom the have the $p$ ? the owner and never eyes. The fo in this 0
vol., 1 v.

Except in the provines I have named, the managenent of cattle in France is a blank. On an average of the gdom, there is not, perhaps, a tenth of what there ought to be: and of this any . muft be convinced, who retlects that the courfes of crops throughout the king dow are calculated for corn only; generally bread corn; and that no attention whatever is paid to the equally important object of fupporting great herds of cattle, for raifing manure, by introducing the culture of plants that make cattle the preparative for corn, inftead of thofe barren fallows which are a difgrace to the kingdom. This fyftem of intervenving the crops which fupport the cattle, among thofe of corn, is the pillar of Englifh hufbandry; without which our agriculture would be as miferable and as unproductive as that of France. The importance of grafs in fuch views, is little underfood in France; but in proportion as corn is the ultimate object, thould be the attention that is paid to grafs. England, by the immenfe extent of her paftures, has a prodigious preparation always ready for corn, if it was demahded. He who has grafs can, at any time, have corn; but he who has corn, cannot at any time have gralf, which demands one or two years' accurate preparation. In proportion to your grafs, is the quantity and mafs of your improvements; for few foils, not laid to grafs, are at their laft ftage of improvement. The contrary of all this takes place in France; and there is little appearance, from the complexion of thofe ideas which are at prefent falhionable there, that the kingdom will be materially improved in this refpect : the prejudices in favour of fmall farms, and a minute divifion of property, and the attention paid to the pernicious rights of commonage, are mortal to fuch an improvement; which never can be effected but by means of large farms, and an unlimited power of enclofiure.

## Horfes.

This is an animal about which I have never been folicitous, nor ever paid nuch at tention; I was very early and practically convinced of the fuperiority of oxen for moft of the works of hufbandry; I may, indeed, fay for all, except quick harrowing: and if oxen trot fix miles an hour with coaches, in Bengal, which is the fact, they are eertainly applicable to the harrow, with proper training. 'To introduce the ufe of oxen in any country, is fo important an agricultural and political object, that the horfe would be confidered merely as adminittering to luxury and war. 'The very few minutes I took, I fhall infert in the order they occurred.

Limousin. -This province is reckoned to breed the beft light horfes that are in the kingdom; and fome capital regiments of light horfe are always mounted from hence; they are noted for their motion and hardinefs. Some miles to the right of St. George, is Pampadour, a royal demefne, where the King has a baras (ftud) : there are all kinds of horfes, but chiefly Arabian, Turkilh, and Englifh. Three years ago four Arabians were imported, which had been procured at the expence of $7^{2,000}$ livres ( 31491 .); and, owing to thefe exertions, the breed of this province, which was almoll fpoiled, has been much recovered. For covering a mare, no more is paid than 3 livres, which is for the groom, and a feed of oats for the horle. They are free to fell their colts to whom they pleafe; but if they come up to the King's ftandard of eight, his officers have the preference, on paying the fame price offered by others; which, however, the owner may refufe, if he pleafes. Thefe horfes are never faduled till lix years old, and never eat corn till they are five; the realon given is, that they may not hurt their eyes. They pafture all day, but not at night, on account of the wolves, which abound fo in this country as to be a nuifance. Prices are very high; a horfe of fix years old,

[^67]a lit-
a little more than four feet fix inches high, fells for 70 louis; and 15 louis have been offered for a colt at one year old. The paftures are good, and proper for breeding horfes.

Cabors.-Bean-fraw they reckon excellent for horfes, but not that of peafe, which is too heating.
figen.-Meet women going to this market, loaded with couch roots to fell for feeding horfes. The fame practice obtains at Naples.

Saintonge.-Monlich--Never give chaff to their horfes, as they think it very bad for them.

Isle of France.-Dugh.-Monf. Cretté de lalleul has found cuit chaff one of the moft ceconomical foods that can be given to horfes; and his machine for cutting it is by far the molt powerful one that I have any where feen. It is a mill turned by a horle ; the cutting inftruments are two fmall cylinders, that revolse againft each other, circular cuting hoops being on their furface, that lock into each other; thofe of one, plain, but of the other, toothed; juft above them is a large trough or tray, to hold a trufs of ftraw, which weighs twelve pounds, and the machine cuts it into chaff in three minutes, without putting the horle out of his pace; and in two minutes, by driving him quicker ; a man attends to fpread the ftraw equally in the cray, as it is fucked in by the revolving cylinders; a boy driving the horie. One of the machines common in Fingland, for drefling corn, is at the fame time turned: the whole is in a building of eight yards fquare.

Normandy.-I/igny.-The rich herbages here are fed, not only with bullocks and cows, but alfo with mares and foals.

Carentan.-Colts, bred here, fell for very high prices, even to 100 louis at three years old ; but in general good ones from 25 to 30 louis.

Bretagne.-Remucs.-Good horfes fell at 150 livres. The author of the Confiderations fur le Commerce de Britagne, fays, p. 87. that he has feen many markets in the bifhopricks of Rennes and Nantes, where the beft horfe was not worth 60 livres.

Morlaix.-See in this vicinity, for feveral miles, fome fine bay mares with foals.
Auvergnac.- Informed that Bretagne exports twenty four thoufand horfes, from 12 to 25 louis each; and the country that chiefly produces them, is from Lamballe to the fea beyond Breft.

Alsace.-Strafbourg.-A good farm houfe, 12 louis.
To Schelefadt.-Clover mown for foiling all the way.
The Norman horfes for draught, and the Limoufin for the faddle, are efteemed the beft in the kingdom. Great imports have been made of Englifh horfes for the coach and faddle. It is no object to leffen that import, for their own lands can be applied to much more profitable ufes than breeding of horfes. The rconomiffs were great enemies to the ufe of oxen, and warm advocates for that of horfes becoming general; one of the many grofs errors which that fanciful fect were guilty of.

## Hogs.

Gascoign.-St. Palais to An/pan.-See many fine white, and black and white hogs; they are fed much on acorns, but are fattened throughout this country on maize ground to flour, and boiled with water to a pafte. and given frefh, milk warm, every day. Some on beans. They are turned a year old when put up to fatten; rife to the weight of two or three quintals. Thefe are the hogs that furnifh Bayonne with the hams and bacon, which are fo famous all over Europe. The hams fell at $20 \%$, the pound.

Bretad for faggots

I have referved this minute, from fome others of little confequence, for the opportunity of remarking, that, in England, the old cuftom of feeding hogs with warm food, is totally difcontinued; but it well deferves experiment, whether it would not anfwer in fattening, and alfo in the nourihment of fows and pigs. Such experiments are difficult to make fatisfactorily, but yet they ought to be made by fome perfons that are able. Warm food in winter, regularly given, I Thould fuppofe, muft be more fattening than that which is cold, and, in bad weather, half frozen.

## Chap. XXV.-Of the Cullure of various Plants in France.

IN the courfe of my inquiries into the French agriculture, I made fome minutes on vaious articles, that do not merit a feparate chapter affigned to each ; I fhall therefore introduce them to the reader alphabetically. It may be of ufe to future travellers to know what articles are cultivated in that kingdom, that they may give to each fuch an attention as may fuit their purpofe.

## Almonds.

Provence.-Aix.-More fubject to accidents than olives; fometimes three, four, and five bad crops to one good. Olives flour in June, but almonds in February, and confequently fubject to frolts. The produce of a good tree is commonly 3 livres.

Tour d'Aigues. - Do not yield a good crop oftener than once in ten years. Price, $3_{6}$ to 40 livres the quintal: four and a half quintals in the fhell yield one clean: the price has been 70 livres. Price of the piftachio aluond, 6 livres the fifteen pound in the fhell. Some few fine almound trees will give a quintal in the fhell. ` They are a moft hazardous culture, by reafon of the fog that makes them drop; the worm that eats; and the froft that nips.

## Bcans.

Sorssonors.-Coucy.-In the rich lands cultivated, in the courfe of, 1, beans; 2, wheat, remark now (October 31) fome beautiful curled and luxuriant pieces of wheat, which, from the beans among it, appear to have been fown after this crop.

Artois.-Lillers to Bethunc.-Many beans through all Artois, in drills at twelve or fourteen inches, very fine and very clean; the culture is as commion and as good as in Kent, and they have a much richer foil. Wheat is fown after muftard, flax, and beans; and is better after beans than after either of the other two crops.

Alsace.-Wiltchbcim to Strafourg.-Many pieces; good and very clean. Produce, fix facks (of one hundred and eighty pound of wheat) per arpent of 24,000 feet (twentyeight bufhels per Englifh acre).

Schelefadt. - Produce, fix to cight facks, at 7 to 12 livres, (feven at 9 livres is 4 l. 7 s. per Englifh acre!.

The culture of beans is by no means fo common in France as it ought to be; they are a very neceflary afliftance on decp rich foils in the great work of banifhing fallows; they prepare on fuch foils better than any other crop for wheat, and are of capital ufe in fupporting and fattening cattle and hogs.

## Broom.

Bretagne.-Renncs.-The land left to it in the common courfe of crops. It is cut for faggots; fold to the bakers, \&c.

Morlaix.-Cultivated through all ihis country, in a very extraordinary fyftem; it is introduced in a regular courfe of crops, and left three or four years on the land; at which growth cut for taggots, and fornis the principal fuel of the country. It is a valt growth, much fuperior to any thing I ever faw; fix or feven feet high, and very fout; on regular lands, with intervals of two or three fect. Price fometimes of a cord of wood, 30 livres. Does this apologize for fuch a fyltem?

Brejt.-The broom feed is fown anong oats, as clover is in ather places, and left four years, during all which time it is fed. The faggots of a good journal will fell for 400 livres ( $1+1$. per Englifh acre). The faggots weigh fifteen pound, and fell fifty for 9 livres to 12 livres, being a threc-horfe lond. It is only within the reach of Breft market that it is worth 400 livres, elfewhere only 300 livres the beft. Four years broom improves land fo much, that they can take three crops of corn after it.

Bourgogne.-Luzy. - When I left Bretagne, I never expected again to find broom an article of culture; but the ryc-lands of all this country, and there is nothing but rye in it, are left, when exhaufted by corn, to cover themfelves with broom, during five years; and they confider it as the principal fupport of their cattle.

To Bourbon'ancy amil lourbonnons.-Moulins.-Much broom through all this diftrict of rye-land.

## Carrots and Parjinips.

Flanders, - Cambray--See fome fine carrots taken up, which, on inquiry, I find are for cows. They fow four pound of feed per arpent; hoe them thrice : I gueffed the crop about four bufhels per fquare rod. An arpent fells, for cattle, at 180 livres. the purchafer taking up ( 51.55 . per Englifh acre). After them they dung lightly, and fow wheat.

Orchies to Lilli:-The culture here is fingular ; they fow the feed at the fame time, and on the fame land, as flax, about Eafter; that crop is pulled in July, the carrots then grow well, and the produce more profitable than any other application of the flax ftubble. They yicld, I guefs, from fixty to cighty bufhels, and fome more, per Englifh acre; but what I faw were much too thick.

Argentan to Bailleill. - Carrots taken up, and guarded, by building in the neateft and moft effectual way, againft the froft ; they are topped, laid in round heaps, and packed. clofe, with their heads outwards; and being covered with fraw, in the form of a pyramid, a trench is digged around, and the carth piled neatly over the ftraw, to keep out the froft. In this manner they are found perfectly fecure.

Artois.-Afs to Aras.-A fprinkling of carrots, but none good.
Bretagne.- Ponton to Morlaix-Many parfnips cultivated about a league to the left; they are fown alone and hoed. They are given to horfes, and are reckoned fo. valuable, that a journal is worth more than one of wheat. Nearer to Morlaix, the road. paffes a few fmall picces. They are on beds, five or fix yards broad, with trenches. digged between, and on the edges of thofe trenches a row of cabbages.

Morlaix.-About this place, and in general through the bifhoprick of St. Pol de Leon, the culture of parfnips is of very great confequence to the people. Almof half. the country fubfifts on then in winter, boiled in foup, \&c. and their horfes are generally fed with them. A horfe load of about three hundred pounds fells commonly at 3 livres ; in fcarce years, at 4 livres; and fuch a load is good food for a horfe fitteen. days. At fixty pounds to the bufhel, this is five buthels, and $2 \mathrm{~s} .7 \frac{1}{2} \mathrm{~d}$. for that is $6 \frac{1 \mathrm{~d} \text {. }}{}$ per bufhel of that weight. I made many inquiries how many loads on a journal, but
no fuch th prefent cr bufhels, o fore, that ground is very accur They are Incks fatte all forts of friable fanc

Landern pieces; on by feeding flour, and other diftri more, bef mion cultur great fucce I have, in rots fuccee fhould be : this genera

Norma bage trees

Bretad felling plan than to tho had they p firt clean, threc. feet , high, and - Morlaix but planted Anjou. not to be f of kale, an gave me n? parable to Absact
no fuch thing as information tolerably to be depended on; I muft therefore guefs the prefent crop, by the examination I made of many, to amount to about three hundred bufhels, or three hundred and fifty per Englifh acre. The common affertion, therefore, that a journal of parfinips is worth two of wheat, feems to be well founded. The ground is all digged a full fpit deep for them; they are kept clean by hand-weeding very accurately, but are left, fur want of hoeing, beyond all comparifon, too thick. They are reckoned the beft of all foods for a horfe, and much exceeding oats; bullocks fatten quicker and better on them than on any other food; in fhort, they are, for aلll forts of ftock, the moft valuable produce found on a farm. The foil is a rich deep friable fandy luam.

Landernue to $\operatorname{Brcf} f$. - The culture of parfnips here declines much, but I faw a few pieces; one was weeding by five men, crawling on their knees. Fatten many horfes, by feeding them with cabbages ant parfnips boiled together, and mixed with buck wheatflour, and given warm. They have a great pride here in having fat horfes. Many other diftricts in France, befides Bretagne, pofiefs the right foil for parfnips; and many more, befides Ilanders, that for carrots; but they are no where elfe articles of common culture. Parfnips are not cultivated in England; but carrots are in Suffolk, with great fuccefs, and all the horfes in the maritime corner of that county fed with them. I have, in the Amals of Agriculturc, given many details of their culture and ufes. Carrots fucceed weil on all dry foils that are fix inches deep; but for large crops, the land thould be a foot deep, rich and dry. The extent of fuch in France is very great, but this general profitable ufe not made of them.

## Cabbages.

Flanders.-Orchics to Lille-The kale, called here chour de Vache, is common through this country; it never cabbages, but yields a large produce of loofe reddif leaves, which the farmers give to their cows. The feed is fown in April, and they are tranfplanted in June or July, on to well dunged land, in. rows, generally two feet by one foot: I faw fome fields of them, in which they were planted at greater diftances. They are kept clean by hoeing. They are reckoned excellent food for cows; and the butter made from them is good, but not equal to that from carrots.
Normandie.-Granvillc to Aivranebes.-In the gardens of the cotages, many cabbage trees five and fix feet high.
Bretagne. - St. Bricur.- Many fown here on good land, on wheat ftubbles, for felling plants to all the gardens of the country, and to a diftance. I do not fee more than to the amount of a journal in one piece; which, in September, I nuft have done, had they poffelled any cabbage culture, as reprefented to me, worth attention. They firft clean, and then plough the wheat flubbles, and chop and break the furface of the three feet ridges fine, and then fow. The plants are now (September 7) about an inch high, and fone only coming up.

- Morlaix.- -They have fome crops that are much more productive than their turnips, but planted greatly too thick: they are given to cows and oxen.

Anjou. - Migniame.-The choud'Anjou, of which the Marquis de Turbilly fpeake, is not to be found at prefent in this country; they prefer the chou de Poitou. which is a fort: of kale, and produces larger crops of leaves than the chou d'Anjou. Monf. Livonniere gave me me fome feeds, but by miltake, they proved a bad fort of ruec, and not com-parable to our turnips, as J found by fowing them at Bradfield.

Absace.-Saverne to Wiltchbcim.-Many cabbages, but full of weeds.

Strafbourg.-Crops to a great weight, but only for four crout.
Schelffat.-The quantity increafes between Benfeldt and Scheleftat.' Their culture is, to fow the feed on a bed in March, covered with mats, like tobacco, and tranfplant in June, two thoufand to three thoufand plants on an arpent; they make a hole with a fpade, which they fill with water, and then plant; they never horle-hoe, yet the diftance would admit it well. They are in fize ten pounds or twelve pounds, and fome twenty pounds; the hearts are for four-crout, but the leaves for cows. An arpent is worth 303 lives ( 201.15 s . 10d. per Englifh acre); but carriage to a town is to be deducted.

The culture of cabbages for cattle, is one of the molt important objects in Einglifh agriculture; without which, large ftocks of cattle or fheep are not to be kept on foils improper for turnips. They are, in every refpect but one, preferable to that root; the only inferiority is, that of cabbages demanding dung on all foils, whereas good land will yield turnips without manuring. Great attention ought to be paid to the full introduction of thele two crops, without which we may venture to prediet, that the agriculture of France will continue poor and unproductive, for want of its due ftock of cattic and Greep.

## Cloicr.

Isle of France.-Liancotrt. - Never cultivate it for its place in rotation, but merely for forage like luceme; have a barbarous cuftom of fowing it without tillage on wheat ftubbles, and it lafts fo fometimes two years.

Artors.-Recouff.-Monf. Drinkbierre, a very intelligent farmer here, affured me, that clover exhaufted and fpoiled the land, and that wheat after it was never fo good as after a fallow; but as the clover is fown with a fecond, and even a third corn crop, no wonder therefore that it fouls land.

I could add many other notes on this fubject, but will be content to mention, in general, that the introduction of clover, wherever I have met with it, has been commonly effected in fuch a manner that very little benefit is to be expected from it. All good farmers in England know, from long experience, that the common red clover is no friend to clean farming, if fown with a fecond or third crop of corn. In the courfe, 1, turnips or cabbages; 2, barley or oats; 3, clover; 4, wheat: the land is kept in garden order. But if after that fourth crop, the farmer goes on and fows, 5 , barley or oats; 6, clover; 7, wheat, the land will be both foul and exhaufted. In a word, clover is beneficial to the really good and clean farmer only to the extent of his turnips, cabbages, and fallow; and never ought to be fown but on land previoufly cleaned by thofe lioeing crops, or by fallow. As to fallow, no Frenchman ever makes it but for wheat, confequently the culture of clover is excluded. I have often feen it fown in this courfe; 1, fallow; 2, wheat ; 3, barley ; 4, oats; 5, clover; 6, clover; 7, wheat; 8, oats; and the land inevitably full of weeds. I may venture to affert, that clover thus introduced, or even in courfes lefs reprehenfible, but not corredt, will do more mifchief than good, and that a country is better cultivated without than with it. Henee, therefore, let the men, emulous of the character of good farmers, confider it as effential to good hufbandry to have no more clover than they have turnips and cabbages, or fome other crop that anfuers the fame end; and never to fow it but with the firt crop of corn; by thefe means their land will be clean, and they will reap the benefits of the culture without the cominon evils.

I have read in forne authors, an account of great German farmers having fuch inmenfe quantities of clover, as are fufficient to prove the utter impofibility of a due pre-
paration land, in $w$

## Cbefnuts.

Berry.-La Marche. - Firft mect with them on entering La Marche.
Boifmandè.-They are fpread over all the country; the fruit are fold, according to the year, from $5 /$ to $10 \%$ and $15 \%$. the boifeau, which meafure will feed a man three days: they rub off the fkin; boil them in water with fome falt; fqueeze them into a kind of pafte, which they dry by the fire ; they commend this food as pleafant and wholefome. 'The fmall ones are given to pigs, but will not fatten them fo well as acorns, the bacon being foft ; when fattened with acorns, they are finifhed with'a little corn. A chefnut tree gives two boileau each of fruit on an average; a good one, five or fix. The timber is excellent for building; I meafured the area fpread by many of them, and found it twenty five feet every way. Each tree, therefore, occupies fix hundred and twenty five feet, and an acre fully planted would contain feventy; at two boifeau each it is one hundred and forty, which, at $10 \%$. is 21.18 s .4 d . and as one of thefe meafures will feed a man three days, an acre would fupport a man four hundred and twenty days, or fourteen months. It muft, however, be obvious, that land cannot be fo exacly filled, and that an acre of land would not probably, in common, do for half that number.

La Villeaubrun.-They eat many chefnuts, but do not live upon them, eating fome bread alfo; in which mode of confuming a boifeau, it will laft a man five or fix days. Price as above.

Limousin.-Limoges.-Price 7 . to 1.5 . the boifeau. This food, though general in the country, would not be fufficient alone; the poor therefore eat fome rye bread. The comfort of them to families is very great, for there is no limit in the confumption, as of every thing elfe : the children eat them all day long, and in feafons when there are no chefnuts there is often great diftrefs among the poor-The exact tranfcript of potatoes in Ireland. The method of cooking chefnuts here, is to take off the ontward fkin, and to put a large quantity into a boiler, with a handful of falt, and very little water to yield ftcam; they cover it as clofely as poffible to keep in the fteam : if much water is added they lofe their flavour and nourifhing quality. An arpent under chefnuts does not yield a product equal to a good arpent of corn, but more than a bad one.

To Magnac.- They are fpread over all the arable fields.
Quercy.-Brive to Noailles.-Ditto; but after Noailles there are no more. -
Payrac. $\rightarrow$ Boil them for their food, as above defcribed.
Languenoc. - Gange.-Many in the mountains, and exceedingly fine cheinut underwood.

Portou. - Ruffi,-Yields a good crop, to the amount even of 10 livres for a good tree's produce. The poor people live on them. A meafure of forty-five pounds has been fold this year at $48 \%$.

Bretagne.- Pont Orfon.- On entering this province, thefe trees immediately occur, for there are none on the Normandy lide of the river, that parts the two provinces.

Maine.-La Fleche to Le Mans. - Many chefinuts, the produce chi fly fold to towns; the poor people here not living on them with any regularity: three bufhels (each holding thirty pounds of wheat) are a good crop for one tree, and fell at $40 /$. the bufhel; this is more than a mean produce, but not an extriordinary one. The number here is very great; and trees, but of a few years' growth, are well loaded.

Vivarais.-Pradelles to 'Thuytz.-Immenfe quantities of thefe trecs on the mountains; it is the greatelt chefnut region I have feen in France. The poor people live on them boild; and they fell by meafure, at the price of rye.

The hufbandry of fpreading chefnuts over arable lands muft unqueftionably be very bad; the corn mult fuffer greatly, and the plough be much impeded. It is as ealy to have thefe trees upon grafs land, where they would be comparatively harmlefs: but the fact is here; as is fo general in France, that they have no paltures which the plough does not occupy by turns; all, except rich meadows, being arable. The fruit is fo great a refource for the poor, that plantitig thefe trees upon lands not capable of tillage by the plough, is a very confiderable improvenent; the mountains of the Vivarais thus are made productive in the belt method perhaps that they admit.

## Clicory.

Isle of France. - Dugny.-Monf. Cretté de Paleuel, 1787 , had this plant recommended to him by the Royal Society of Paris; in confequence of which, he has made feveral very fucceffful experiments on it. He has had it two years under cultivation. The feed is fown in March, twelve pounds per arpent (one hundred perches at eighteen feet) on one ploughing, and is harrowed in. It rifes fo thick, as to cover the whole ground, and is mown the fame year once ; Monf. Cretté has cut one piece-twice the firft year. The following winter he dunged it, at the rate of eight loads of three horfes per arpent. The year after, fome was cut three times, and fome four; and Monf. Cretté remarks, that the oftener the better, becaufe more herbaccous and the falks not fo hard. He weighed the crop upon one piece, and found the weight, green,

\end{aligned}
$$

By making fome of it into hay, he found that it loft three-fourths of its weight in drying, confequently the arpent gave nincteen thoufand pounds of hay, or ten tons per Englifh acre. It is fo fucculent and herbaceous a plant, as to dry with difficulty, if the weather be not very fine; but the hay, he thinks, is equal to that of clover, though inferior to meadow hay. He has ufed nuch in foiling, and with great fuccefs, for horfes, cows, young cattle, and calves; finds it to be caten greedily by all, and to give very good crean and butter. Monf Crette's fine dairy of cows being in their ftalls, he ordered them to be fed with it in my prefence; and they ate all that was given with great avidity. When in hay, it is molt preferred by fheep: cows do not in that flate eat the falks fo well as fheep. A circumflance which he confiders as valuable, is its not being hurt by drought fo much as moit other plants; and he informs me, but not on his own experience, that it will laft good ten years.

I viewed one of his crops, of feven or eight arpents, fown laft fpring, and which has been mown once; I found it truly beautiful. He fowed common clover and fainfoin among it, and altogether it afforded a very fine fleece of herbage, about eight or nine inches high (October 28) which he intends feeding this autumn with his fheep. He is of rpinion that the fainfoin will be quite fuffocated, and that the chicory will get the better of the clover.

Provence.- Tatulufc to Orgon.-In a very fine watered meadow, one third of the herbage is this p!ant.

I liked the appearance of this plant fo well in France, and was fo perfectly fatisfied with what I faw of it, cultivated by Monf. Cretté de Paleuel, and growing fpontaneoully in the meadows, that I brought feed of it to England, and have cultivated it largely at Bradield with fuch fuccefs, that I think it one of the beft prefents France ever made to this kingdom. I fow it with corn like clover; but it pays well for occupying the land entirely. It will prove, without doubt, a very valuable plant for laying land per manently to grafs; and alfo for introducing, in courfes of crops, when the land wants reft for three, four, or five years. I am much miftaken if we do not in a few years make a much greater progrefs in the culture of this plant than the French themfelves, from whon we borrowed it, will do.

Sheep are faid to be very fond of it *, a fact I have fufficiently proved in Suffolk. From a paffage in an Italian author, who fpeaks of fowing the wild chicory, I am in doubt whether the French lave the honour of being really the firt introducers of this plant $\dagger$.

## Colefeed.

Flanders.-Cambray.-Near this town, I met firft with the culture of colefeed: they cal! it gowí. Sow the feed thick on a feed-bed, for tranfplanting; fetting it out on an oat flubble, after one ploughing. This is fo great and ftriking an improvement of our culture of the fame plant, that it merits the utmoft attention; for faving a whole year is an object of the firft confequence. The tranfplanting is not performed till October, and latts all November, if no froft; and at fuch a feafon there is no danger of the plants not fucceeding: earlier would however furely be better, to enable them to be ftronger rooted, to withfand the fpring frofts, which often deftroy them ; but tise object is not to give their attention to this bufinefs till every thing that concerns wheat fowing is over. The plants are large, and two feet long, a man makes the holes with a large dibble, like the potatoe one ufed on the Effex fide of London, and men and women fix the plants, at eighteen inches by ten inches; fome at a foot fquare, for which they are paid 9 livres per manco of land. The culture is fo common all the way to Valenciennes, that there are pieces of two, three, and four acres of feed bed, now cleared, or clearing for planting. The crop is reckoned very uncertain; fometimes it pays nothing, but in a gooll yaar up to 300 livres the arpent (one hundred perches of twenty-four fect) or 81. 15s. the Englifh acre. They make the crop in July, and by manuring the land, get good wheat.

Valencicnnes to Orcbics.-This is a more valuable crop than wheat, if it fucceeds, but it is very uncertain. All tranfplanted.

Lille. - The number of mills, near Lille, for beating colefeed, is furprifing, and proves the immenfe quantity of this plant that is cultivated in the neighbourhood. I counted fixty at no great diffance from each other.

Baillcul. - The quantity cultivated through this country immenfe; all tranfplanted; it occurs once in a courfe of fix or feven years. Price of the cakes, $3 \frac{5}{5}$. each; they are the fane fize as ours in England.
Artois.--St. Omers. - Great tacks of colefeed fraw all over the country (Augult 7 th) bound in bundles, and therefore applied to ufe.

[^69]I hould remark, in general, that I never met with colefeed cultivated in any part of the kingdom merely for theep.feed ; yet it is an object, fo applied, of great confequence, and would be particularly ufeful in France, where the operofe cultures of curnips and cabbages will be long eftablifhing themfelves. With this view colefeed fhould be thus introduced:

1. Winter tares, fown the beginning of September on a wheat ftubble; mown for foiling : then the land ploughed and colefeed harrowed in.
2. Barley, or oats.
3. Clover.
4. Wheat.

## Fuller's Thifte.

Isle of France.-Liancourt.-Very profitable: has been known to amount to 300 livres or 400 livres the arpent (about $1 \frac{1}{4}$ acre).

## Furz.

Gascoigne.-St. Palais to Anfpan.-A practice in thefe mountainous waftes, which deferves attention, is their cutting furz when in bloffom, and chopping them mixed with fraw for horfes, \&cc.; and they find that no food is more hearty or nourifling.

Normandie.-Vologne to Cherbourg.-Throughout this country a feattering of furz fown as a crop, with wheat or barley, as clover is ufually fown : the third year they cut it to bruife for horfes; and every year afterwards: and it yields thus a produce of 40 livres the vergé, of ninety-fix Englifh perch.

Bretagne.-St. Pol Leon.-Through all this bifhopric the horfes are fed with it bruifed, and it is well known to be a moft nourifhing food.

The practice here minuted is not abfolutely unknown in England; there are many traces of it in Wales, and fome other parts of the kinguom. I have been affured that an acre, well and evenly feeded, and mown for horfes cvery year, has yielded an annual produce, worth, on a moderate eftimate, 101. , but I never tried it, which was a great neglect, in Hertfordhire, for I had there land that was proper for it.

## Cuture of Hemp and Flax.

Picardie.-Montreuil to Picquigny.-Small patches of flax all the way. At Picquigny, a good deal of land ploughing for hemp, to be fown in a weck. (Nlay 22.)

Quercr. -Thes hemp, in much of this province, is fown every year on the fame fpots; and very oten highly manured. 'This appears to be an erroneous fyitem, whereever the lands in general are good enough to yield it.

Caufade.-Valt quantities near this place, now (Jone 12.), two or three fe.,
Languedoc.- Monrcjcau.-Flax now (Auguft 10.) graffing.
Bagnere de Bigore to Lourd. - Never water their flax, only grafs it. I law much with the grafs grown through it; if the land or weather be tolerable wet, three weeks are fufficient.

Guinne - Port a. ryrac.-This noble vale of the Garonne, which is one of the richen ciftricts of Franis ealfo one of the molt productive in bemp that is to be found in the kingdom.'

Agen.-
(171. 108 thod.

Going ed a great letting at their cult poles, or being beat caution it

Orchics and cven thread, as works, fo prefer for proceding

Lillc.( 15 s .6 s .

Agen.-Hemp yields ten quintals per carterée, at 40 livres the quintal, poid de table (171. 10s.), which carteree is fown with two hundred and feventeen pounds of wheat. This is probably about ${ }^{\frac{3}{4}}$ Englifh acre.

Aguillon.-The hemp is every where watering in the Garonne; they do not leave it in more than three or four days.

Tonneins.-The whole country, from Aguillon to this place, is all under either hemp or wheat, with exception of fome maiz; and its numerous population feems now employed on hemp.

La Morte Landron.-It yields ten to twelve quintals, at 36 livres to 45 livres the quintal.

Sorssonors.-Coucy.-Hemp cultivated in the rich vales, in the courfe,-1. hemp; 2. wheat. It yields five huadred bottes, at 25 livres the hundred, reckoned on the foot before watering.
5. Amch - The carterce of land, of one hundred verge of nineteen fect (thirty-fix th: und and hundred feet), under flax, has this year a very good crop, on account of the rainy weather; it has been fold at 1200 livres, or very near the fee-fiumple of the land (55l. 11 s. 3 d . per Englifh acre). This amazing value of fax made me defirous of knowing if it dcpended on foil, or on management. Sir Richard Wefton, in the laft contury, who has been copied by many fcores of writers fince, fpeaks of poor fandy lard as being the beft for that flax of which the fine Bruffels lace is made; confequently this is made from land abundantly different from what produces the Valenciennes lace, if that affertion were ever true. The foil at St . Amand is a decp moilt friable loamy clay, of vaft fertility, and fituated in a diftrict where the greateft poffible ufe is made of manures; it therefore abounds very much with vegetable mould. Flax is fown on the fame land once in twelve to fifteen years; but in Auftrian Flanders, once in feven or eight years. . Advancing and repeating my enquiries, I was affured that flax had been raifed to the amount of 2000 livres the carterée ( $921.15 \% 6 \mathrm{~d}$. per Englifh acre). The land is nearly the fame as above defcribed, and lets, when rented, at 36 livres the carterée ( $11.13^{\text {s. }}$ 3d. per Englifh acre). They fow two razicre of feed, each holding fifty pounds of wheat per carteré ; and a middling crop of good flax is from $3 \frac{1}{2}$ to four teet high, and extremely thick. They water it in ditches, ten, twelve, and fourteen days, according to the feafon; the hotter the weather, the fooner it is in a proper flate of putrefaction. After watering, they always grafs it in the common method.

Going on, and gleaning frefh information, I learned that 1200 livres may be efteemed a great produce per carterée; the land all round, good and bad, of a whle farm, letting at 30 livres and felling at 1200 livres. Nothing can thew more atteation than their cultivation: befides weeding it with the greateft care while young, they place poles, or forked ftakes, amongft it, when at a proper height, in order to $p$ erent its being beaten to the ground by rain, from its own length and woight; without this precoution it would be flat down, even to rotting.
Orcbics.-A carterće of flax, of forty thoufand feet, rifes to the value of 1500 livres, and even more ( 63 l . 18s. gd. per Englifh acre). They fow fuch as is intended fer tine thread, as foon as the frofts are over, which is in March; but uch as is for coarfer works, fo late as May. Never feed their own flax, always ufing that of Riga. They prefer for it an oat-Itubble that followed clover; and they manure for it in the winter preceding the fouing. Wheat is, in general, better after ilax than a ter hemp.

Lille.-Flax in common, is worth go livres the centier, or 360 livres the carterie ( $15 \mathrm{l} .6 \mathrm{~s} .3^{\mathrm{d}}$. per Englifh acre): this is excluding uncommon crops.

Artols.

Artors.-Lillers.-Flax all through the country, and exceedingly fine. Sow wheat after it.

Betbunc.-An arpent of good flax worth more than one of wheat; yet good wheat is worth 200 livres.

Beauval.-Flax fometimes worth 500 livres the journal (251. 17s. 11d. per Englifh acre). Hemp does not equal it. They do not water flax here, only fread it on grals or ftubbles.

Normandy.-Bolbec to Harfleur. Flax not watered, but fpread on ftubble.
Bretagne.-Throughout this province, they every where cultivate flax in patches, by every family, for domeftic employment.

Ancenis.-The culture of flax is generally, throughout the kingdom, as well as in the greateft part of Europe, that of a fpring crop; but here it is fown in autumn. They are now working the wheat-ftubbles on one ploughing, very fine, with a fout bident-hoe, and fowing them; fome is up. It is pulled in Auguft, and wheat fown after it.

Anjou.-Migniame.-They have winter-fown flax all over the country. The value of the crop exceeds that of wheat. They do not water, only grafs it ; yet admit that watering makes it whiter and finer.

Turbilly.-Hemp is fown in patches every where through the country; fells at 88 . the pound raw; fpun, at 266 . and $27 \%$; bleached, at 30 . to $36 \%$ The crop is thirty to forty weights, each fifteen pounds or fixteen pounds per journal, or about 210 livres.

Míaine.-Guefeland.-Through all this country there is much hemp fown every year, on the fame fpot; fpun, and made by domeflic fabrics, into cloth for home ufes. Spinning is 10 . the pound; and it is an uncommon fpimer that can do a pound in a day; in common but half a pound.
Loraing.-Lancailli.-Hemp is cultivated every where in the province, on rich fpots; hence there is much of it; and fome villages have been known to make a thoufand crowns in a year of their thread and linen. If it is wifhed that the hemp be very Gne, they do not water, but only fpread it on the grafs; but in general water it. Elfe their own feed, and furnihn much to their neighbours; but have that of flax from Flanders. Sow beans among flax for fupporting it; others do this with fimall boughs of trecs. Some alfo fow carrots among their flax; which practice, I fuppofe, they borrowed from Flanders. Hemp is always dunged; and always fown on the lame fpots, which foll at the fame price is gardens; a common and execrable practice in France. A journal gives on good land, nincty-five poumds, and one hundred and three pounds of toup ; price laft ycar, ready for fpinning, $16 f$. the pound ; the tout $11 \%$ now higher: alfo two razeau of fead (each one hundred and cighty pounds of wheat). The journal equals fixty-five Englifh perches.

Alsace.-Strafourg.--Product three quintals, at 27 livres the quintal, the arpent (5l. 12s. per Englifh acre).

Schelffat.-Produce two quintals, ready for fpinning, at 36 lives to 48 livres the quintal ( 51.16 s. jd. per Englifh acre). Water it for cordage, but not for linen; grals it only, as whiter.

Auverone.-Clermont.-In the mountains; price of hemp, ready to fpin, 15 f. to 18 f the pound; fpun, 24 f ; fine, $3 \%$
laoir. - Produce of hemp, per cartona, one hundred and fifty pounds rough, at $5 \%$ the pound, which is one hundred and thirteen pounds ready for fpinning; but bad hemp lofes more. 'The fétercée is eight cartoni, of one hundred and fifty toifis, or forty-three thoufind
thoufand two hundred feet. Hemp grounds fell equally with gardens (ill. irs. 6d. per Englifh acre).

Briude.-Hemp yields a quintal raw, per cartona: female is worth 40 livres the quintal, male 30 livres; alfo eight coups of feed, at $6 \%$ Average produce, 35 livres or 36 livres in all.

Dauphine':-Loriol.-Chinefe hemp fucceeds well with Monfieur Faujas de St. Fond, and perfects its feed, which it rarely does in the King's garden at Paris. He thinks it an error to fow it, like other hemp, in the fpring; for he is of opinion, that it would feed even in England, if fown in Autumn. He has found by experiment, that it is excellent for length and flrength, if fown thick enough to prevent its fpreading laterally, and to make it rife without branching.
Provence.-Marfilles.-Price of hemp; Riga, firl quality, 36 livres the quintal ; ditto, fecond quality, 33 livres. Ancona, firlt quality, 33 livres; ditto, fecond quality, 30 livres to 31 iivres. Piedmont, three group, 26 livres; four group, $28^{\circ}$ livres.

From thefe notes it appears, that hemp or flax is cultivated in fmall quantities, through every part of France; generally for the ufes of domentic manufactures among the lower claffes. A very interefling political queftion arifes on thofe diffufed fabrics, and on which I fhall offer a few obfervations under the chapter of manufacturcs.

## Madder.

Alsact.-Strafoourg Fertcinldim.-Much of this plant is cultivated in various parts of Alface, where the foil is very deep and rich, efpecially on that which they call limomenfe, from its having been depofited by the river. They dig the land for it three fiet deep, and manure highly: the rows are fix to nine inches afunder, and they hoe it cean thrice a fummer. The produce of an arpent, of twenty-four thouland feet, is forty quintals green, before drying, and the mean price 6 livres the quintal (161. 12 s. 6d. per Englith acre). Such is the account I received at Strablourg; but I know enough of this plant by experience, to conclude, that fuch a produce is abfolutely inadequate to the expences of the culture, and therefore the crop is probably larger than here flated; not that the low rate of labour fhould be forgotten.

D,suphine'.- Pierc Latti-- Planted here in beds; but it is very poor, and apparent. ly in a foil not rich enough.
'To Orange. - Much ditto; all on flat beds, with trenches between, but weedy and ill cultivated. The price is 27 livres the quint. 1 dry. Some jult planted, and the trenches very fladlow: dig at three years old. I'rice $2 \&$ livres the quintal, dried in the fun. The roots are fmall and poor.

- Avignon.-Price 24 livres to 30 livres; but there is no profit if it be under 50 livres. It is three years in the land. Sow wheat after it; but if it were not well dunged the crop is poor. A good deal on llat beds, eight feet wide, with trenches between, two broad and two decp, which are digged gradually for fpreading on it.

Lille.-An cymena in three years gives five quintals, at 20 livres to $2+$ livers the quintal, but a few years ago was 50 livres to 70 lives. The expences are very ligh, 120 livres. At fl. a cwt. which equals a French quintal, madder paid a proper pro. fit for inducing many linglifh cultivators to enter largely it ; but falling to fos. and 50 . per cwt. fome were ruined, and the reft immediately withdrew from it. But in France we find they carry on the culture; it is however wakly and poorly
done; with fo little vigour, that common crops, well managed, would pay much' better.

## Maiz.

The notes I took on the fubject of this noble plant were very numerous; but as there is reafon to believe that its culture cannot be introduced, with any profpect of advantagi, in this ifland, I hhall make but a few general obfervations on it.

In the paper on the climate of France, I have remarked, that this plant will not fucceed in common cultivation, north of Luneville and Ruffec, in a linc drawn diagonally acrofs the kingdom; from which interefting fact we may conclude, that a confiderable degree of heat is neceffiary to its profitable cultivation, and that all ideas of introducing it in England, except as a matter of curiofity, would be vain. It demands a rich foil or plenty of manure, and thrives beft on a friable fandy loam; but it is planted on all forts of foils, except poor gravels. I have feen it on finds in Guienne, that were not rich, but none is found on the granite gravels of the Bourbomois, though that province is fituated within the maiz climate. The ufual culture is to give two or three ploughings to the land; fometimes one ploughing, and one working with the heary bidert-hoe; and the feed is fown in rows at two feet or two and a half, by one and a half or two; fometimes in fquares. Some I have feen near Bagnere de Bigore, in rows, at three fect, and cighteen inches from plant to plant. The quantity of feed in Bearn, is the eighth part, by meafure, of the quantity of wheat fown. It is univerfally kept clean by hocing, in moft diflicts, with fuch attemion, as to form a feature in their hufbandry of eapital merit. In Augult, they cut off ail that part of the ftalk and herbage which is above the ear, for feeding oxen, cows, \&c. and it is perhaps the richeft and moft faccharine * provender that the climate of France aftords: for wherever maiz is cultivated, no lean oxen are to be feen; all are in hish order. The crop of grain is, on an average, double the quantity commonly reaped of wheat; about Nivareen in Bearn, more than that ; and there the price ( 1787 ) is $54 \int$. to $55 \%$. the neafure, holding 36 pounds to 40 pounds of wheat; but in common years $1 \%$ to 20 . Whether or not it exhaufls the land is a queftion; 1 have been aflured in Languedoc, that it does not, but near Lourde in Guienne, they think it exhaufts much. Sivery where the conmon managemem is to manure as highly as pollible for it. In North America it is faid to exhauft confiderably $\dagger$; Montieur Parmentier contonds for the contrary opinion $\ddagger$; wha rever I found it, wheat fucceeds $i$, which ought to imply that it is not an exhautling crop. The people in all the maiz provinces live upon it, and find it ty far more nomifhing than any bread, that of wheat alone excepted. Near Brive, in Quercy, I was informed that they mix one-third rye, and two thitsis maiz to make bread, and though yellow and heavy, they lay it is very gowd food. A lirench writer fays, that in Brefle, maiz cakes colt nine and two thirds deniers the pound, but that a man eats double the quantity of what he does of bread made of what g . A late author contends, that it is to be claffed among the moft wholefome articles of human food II.

[^70]Every New York fhoots arya better tha, and not w per acre $\dagger$. fifty pounc Accordins mit || ; thi parts in tw to mow fo harvett of This is the be fown in to catch a

[^71]Every one knows that it is much cultivated in Norilı A merica; about Albany, in New York, it is faid to yield a hundred bufhels from swo pecks of feed *; and that it fhoots araiu after being killed by the froft, even twice; that it withftands the drought better than wheat (ibis is gucfionable); does much better on loofe than on ftiff foils, and not well at all on clav. In South Carolina it produces from ten to thirty-five bufhels per acret. On the Miffifippi two negroes made fifty barrels, each one hundred and fifty pounds $\ddagger$. In Kongo on the coaft of Alrica, it is fail to yield threc crops a year $\$$. Aceording to another account, great care is taken to water it where the fituation will admit \|; this I have feen in the Pyrennecs; but moft of the maiz in France, even nineteen parts in twenty are never watered. About Dowzenac, in the limoufin, they fow it thick to mow for foiling, and at Port St. Maric on the Garonne they do the fame, after the harveft of other grain, which is the moft profitable, and indeed admirable hufbandry. This is the only purpofe for which it can be cultivated in northern climates. It might be fown in England the firf week in June, and mown the end of Auguft, time enough to catch a late crop of turnips, or as a preparation for wheat.

## Muftard.

Isle of France.-Petiviers.-At Denainville, near this place, I faw them mowing muttard, in full bloffom, to feed cows with.
Artols.-Lilliers.-Much all the way to Bethune; fow fpring corn after it.

## Orchards.

Normandie.-Falaife.- Many apple and pear trees are fattered over the country. They never plant them on the belt lands, as they are convinced that the damage to the corn, \&c. is at leaft equal to the value of the cyder; but on the poorer foils they confider it as an improvement, forming a fourth, or third, and in fome cafies even a half of the value of the land.

Brefagne.- Doll.-A cyder country; but reckon the trees at no real value beyond that of the land, for they fpoil as much as they produce.

Renncs.-A common proportion is to plant thirty trees upon a journal (about five roods Englifh, which, if well preferved will yieh on an average five to ten barriques of cyter every year; and the mean p:ice 12 livres the barrique, which is one hundred and twenty pots; this year good orchards give ferty or fifty per journal, but they have produced none, or next to none, for four years paft. The damage the trees do to the corn is fo great, that, in common expreflion, they fay they get none. The cyder is made by the prefs, which is of the fame kind as Jerfey, I fuppole, brought from this country. The ground apples, and wheat or rye traw in layers under the prefs, and reiuced to fuch a deficcated thate that they will burn freely immediately out of the prets.
Lor ambi..- Blamon to Satern.- The whole country lpreal with fruit trees, apples, pears, \&e. from ten to forty rol alunder.

Aupirgne.- Vaires.- The valley of this place, fituated in the Limagne, fo famous in the volemic hiltory of France, is much noted for its fine apples, varticularly the rennet blanche, the renut gris, calvills, and apy, all gratted on crab tocks.

[^72]Olives

#### Abstract

Olives. 'Roussillon.-Bellcgard to Perpignan.-Reckoned to pay onc livre each tree. Pia.-The land under them fallowed every other year, and fown with corn: they are pruned in the fallow year, yiclaing no fruit; a crop being only in the corn

Languedoc.-Narbonne.-Olives pay, in general, 3 livres each tree per annum; ycar. fome 5 livres. Many fields of them are planted in rows, at twelve yards by ten. Bcaicrs. - The trees on the farm that was Monf. L'Abbe Rozier's, are feventeen yards by two.

Pinjcm. - Some trees fo large and fine are known to give eighty four pound of oil in a year, at icf. the pound, or 42 livres; but they reckon in common that good trees give 6 livres one with another ; this epithet good, flews that the common average of all trees is much lower. In plauting, if they mean to crop the land with corn in the common manner, that is one yar in two, the other fallow, they put one hundral trees on eight leterces of land; but if they intend to have no corn at all, the fame number on four fetorćs; under corn, the eight fetcrées yield forty feptiers of corn, each one hundred pound at 9 livres ( $75.10 \frac{1}{2} \mathrm{~d}$.) The feterée is about half an acre, as 1 conclude, from the beft intelligence I could procure. This proportion is one hundred trees on four Englifh acres, or twenty-five per acre: if they were all good, th: produce in oil would be 150 divers, and of wheat 90 livres-in all 240 lives or 10 l .105 ; ; the half only of which is annual produce, or 5 l. 5 s. which feems not to be any thing very great, even fuppofing

 the trees to be all grod, which mult be far from the fact.Montpcllier to Ni/acs.-The trees are thrce rods afunder, by one and a half; alfo two by one and a half; both among vines; alfo two fquare; alfo one by one and a half.

Font dc Gard.--Planted at one rod and one and a half; their heads almoft join. They are all pruned to flat round heads, the centre of the tree cut out, cup-fafhion; and thefe formal figures add to the uglinefs of the tree.

Vinarais.-Aubchas.-In paffing louth from Auvergne, here the firtt olives are met with.

Daupitine'.-Picre Latte to Avignon.-Many ; but feven-eighths dead from the froft, and many grubbing up.

Province.- Aix.-I Iand planted with olives fells at 1 coo livers the carterce, whilf arable anly 600 livres, but meadows watered 1200 livres. Slear profit of a carterée of dives, 40 livres, ( 21,600 feet, at 40 livres, it is 23. 2s. 1t. per Einglifl acre.) Gathering the olives 40 livres Icf. the quintal: prefling 2 liveres: culivation is lives the carterée: the wood pays the pruning.

Tour d'Aizues.-The olive, pomegranate, and other hard dress as they are called here, bear fruit only at the end of the branches; whence, they conceive, refults the necelfity of their being pruned every other year. Thirty years ago the common calculation of the produce, per olive, was $5 . ;$ but now, the price being double, it may be fuppord icf.

Toulon.-They have great trees in this neighbourhood that are known to yiehd 20 lives to 30 liveres a tree, when they give a crop, which is onee in two years, and fometimes once in three. Small trees yield 3 livere, 5 livess, and 6 liveres each, and are much more proftable than mulberriss, for which tree the fiel is too dry and foney. Olives

demand as great an expence in buildings, preffes, coppers, backs, \&c. as vines. Preffing comes to 3 livres a barrel. Crop of a large tree, eight to ten pannaux. Olives, in Provence, never pruned into the hollow cup-form, which is fo general in Languedoc: they appear here in their matural form.

Hycres.-They produce confiderably in twenty or thirty years, and fome have been known to be a hundred years old. I faw, going to Notre Dame, fome that refifted the froft of 1709. A good tree of thirty years gives, when it bears, three pannaux of olives; the pannaux holds thirty pounds to thirty-two pounds of wheat, and the common price is 24f. the pannaux. They have great trees that give a mot or twenty pannaux, or 24 livres each tree. When fields planted with olives are bought, they are meafured by the fquare canne or toife ; a canne of good land, well planted, $30 \int$. ; middling, $20 \int$.; bad, $1 \circ \rho$; but there are fome that fell to $60 \int$; confequently a middling arpent is 900 livies.

Antibes.-The largef trees I have feen in France are between this place and the Vir, as if the near approach to Italy marked a vegetation unknown in the reft of the kingdom.

The culture of this tree is found in fo fmall a part of France, that the object is not of very great confequence to the kingdom; one fhould, however, remark, that in Provence, where the beft oil in Europe is made, there might be twenty trees to one that is found there; whence we may conclude, that if it were fo profitable a hufbandry, as fome authors have reprefented, they would be multiplied more. The moft important point is, their thriving upon rocky foils and declivities, impenetrable to the plough ; in which foots too much encouragement cannot be given to their culture.

## Oranges.

Provence.-Hyeres.-This is, I believe, the only fpot in France where oranges are met with in the open air: a proof that the climate is more temperate than Rouffillon, which is more to the fouth; the Pyrennees are between that province and the fun; but Hyeres lies open to the fea; fo indeed does the coaft of Languedoc; and fo does Antibes; but there is a peculiarity of helter at Hycres, from the pofition of the mountains, that gives this place the advintage. I always, however, doubt whether experiments have been made with fufficient attention, when thefe nice difcriminations are pretended, that are fo often taken on truft without fufficient trial. The dreadful froft of laft winter, which deftroged fo many olives, attacked the oranges allo, which were cut down in great numbers, or reduced to the mere trunk; moft of them, however, have made confiderable fhoots, and will therefore recover.

The Kipg's garden bere, in the occupation of Monf. Fine, preduced laft year 21,000 lives in oranges only, and the people that bought them made as much by the bargain; the other fruits yielded 700 livres or 800 lives; the extent of this garden is twelve arpents; this 1808 livres per arpent, befides the profit (941. 7s. 7d. per Englifh acre.) A fine tree will produce one thoufind oranges, and the price is 20 lives to 25 livers the one thoufand for the bell ; 15 liveres the middling ; so liveses the fmall. There are trees here that have produced to the value of two louis each; and what is a more convincing proof of great profit, a fimall one, of no more than feven or eight years, will yield to the value of 3 lives in a common year. 'They are planted from the nurfery at two or three years old, and at that age are fold at $30 f$. each; and it is thought that the flowers, fold for diftilling, pay all the expences of cultivation; they muft, however, be
planted on land capable of irrigation, for if water be not at command, the produce is fmall.

## Pinegranates.

Provence.-Hyeris. - The hedges are full of them, and they are planted fingly, and of funall growth: the largelt fruit fell at 3 . or $4 \int$. each ; mideling, 1. ; little outs, one liard A good tree, of ten or fifteen years, will give to the value of 2 livres or 3 livers a ycar.

## rines.

Gasceign-Bayonne - The great product of the immenfe range of wafle, as it is commonly called londes, is refin: the pinus maritimes is regularly tapped, and yiekls a produce, with as much regularity as any other crop, in much better foils. I counted from filty to eighty trees per acre, in fome parts; but in whers from ten to forty; thofe with inciitons for the refin are from nine to fixteen inches diameter. Some good com-- mon oak on this fand, twelve to fourteen inches diameter, but with bodies not longer than from cight to ten or twelve feet.

St. Vincent's.-Here pines are cut for refin, at the age of fiftecn to twenty yoars; the firft year at about two feet from the ground, the fecond to four feet, the third to dix feet, and the fourth to eight or nine feet: and then they begin again at bottom, on another fide of the trec, and continue thus for one hundred years: the annual value per annuin in refin, $4 f$. or $5 \int$. When they yield no longer, they cut into good plank, not being foiled by tapping. Much tar alio is made, cliefly of the roots. Cork trics are barked once in. feven years, and yield then about $15 \int$. or about $2 f$. per annum. Men are appointed, each to a certain number of trees, to collect the refin, with fooms, out of the notches, cut at the butt-end of the tree to receive it.

Dax.-Pines pay $4 f$. a year in refin. Pine woods, with a good fucceffion of young ones; from one rod and a half to three afunder.

Tartajs.-Several perfons united in afferting that the pines give one with another $+f$. to 5 . eacb, from fifteen to one hundred years old, and are then fold on an average at 3 livres each; that taking the refin was fo far from fuoiling the tree, that it was the better and cut into better planks. This furprifing me, 1 fought a cappenter and he confrimed it *. They added that an arpent of pines was worth more than an arpent of any other land in the country; more even than of vines: that it would fell accorling to the tres from 500 livres to 1000 livres, while the inclofed and cultivated tands would not yield more than 300 livres, or at mof than 400 livres. The arpent 1 found by mealiring a piece of two arpents, to be 3366 Englifh yards ( 500 livres is 3 sl. Ics. per Englifh acre).

St. Severt.--Pafs feveral inclofures of fandy land, refembling the adjoining waftes, fown with pines as a crop; they are now of various heights, and very thick. Sce fome very gool chefnut underwood on a white fand.

Guienne:- - Ianyon.- Many of the props ufed for their vines here, are young pines, the thinnings of the new fown ones; are fold for 36 livers to 40 livere the thouland, or $t^{\text {wenty }}$ bundles, each fifty pincs.

Cubfac to Cavignac.- On the pooreft lands fow pines, which are not an unprofitable article of culture. At five years old they begin to thin them for vine props; and the fmall branches are fold in faggots. At fifteen years the produce is more confiderable; and at twenty-five the beft trees make boards for heading cafks. I faw a journal and half, the boards of which yielded 1200 livres. They fow one hundred and thirty-five pound of wheat-feed on a journal. Several crops of fown pines very thick.

Bretagne. - Quintperley to L'Oricnt. - Pines abound in this country, and feem to have fown themfelves all around; but none are cut for refin.

To Vanncs.-Such a fcattering of them, that I apprehend all this country was once pine land.

Auvergne.-St. Gcorge.-In the mountains, fee immenfe pine planks laid by way of fences, not lefs than fixty feet long, and two and two and a half broad.

Fizx.-Dr. Coiffier has them in the mountains eighty feat high, and ten feet round.
Provence.-Cuges to Toulon.-In the rocky mountains of this coaft, there are pines; and fuch as are of any fize are cut for refin; but they ftand too thin to yield an acreable produce of any account.

Cavalcro to Frcjus.-The mountains here are covered chiefly with pines, and have a moft neglected defert appearance.

To Effrelles.-The fame; and hacked and deftroyed almoft as badly as in the Pyrennees.

Pines are juflly efteemed a profitable crop for the landlord, for they yield a regular and certain revenue, at a very little charge; no repairs, and no loffes by failure of tenants. But, in regard to the nation, pines, like moit of the poor woods of France, fhould be reckoned detrimental to the public intereft, fince a kingdom flourifhes by grofs produce and not by rent.

## Poppics.

Artors.-Lillers.-Much cultivated for oil; they are called here zullicte. Get as good wheat after them as after colefeed.

Aras. - Nany here; they are reekoned to yield more money per arpent than wheat; equal to colefeed; which, however, is a very uncertain crop.
Loraine. - Nazcy to Lunevillc.-Some fine pieces on a poor gravel.
Alsace.-Savern to Willenlocim.-Many poppies; fome fine crops, and very clean.
Strifbourg.- Product chree facks, at 24 livres per arpent, of twenty-four thoufand fquare feet (41. 19s. 9d. per Euglifh acre). Manure for them, and fow wheat after.

Our ideas of the exhaulling quality of certain plants, are at prefent founded, I believe, but upon that half-information which is farcely a degree above real ignorance. It is a common obfervation, that all plants whofe feeds yield oil, are exhauiters of foil; an obfervation that has arifen from the theory of oil being the food of plants. Experiments upon both lave been fo few and unfatisfactory, as to be utterly infufficient for the foundation of any theory. Colefed, feeded in England, is almoft gencrally made a preparation tor what; fo it is in France, and we here find the fame effect with poppies. It can hardly be lelieved, that wheat, which demands land in beart as much as almoft any other crop, fhould be made to follow fuch exhaulting plants as the theory of oil would make one believe thefe to be; it is the organization of the plant alone that converts the nourithment into nil ; which, in one plant, turns it to a facclarine fubflance, and, in another, to an acid one; but the idea that plants are fed by oil, and that they exhault in proportion to their oil, is abfolutely condemned by the olive, which
yields more oil than any other plant, and yet thrives beft on dry arid rocky foils, of abfulute poverty, as far as oil is concerned. We fhall be wholly in the dark in this part of agriculiure, treated as a fcience, till experiments have been greatly multiplied.

## Potatoes.

Anjou.-Ansers to La Fleclee.-More than is common in France.
Loraine. - Pont a Molfin - Throughout all this part of Loraine there are more potatoes than l have feen any where in France; twelve acres were at once under the eye.

To Nancy.-Many cultivated through all this country, but degenerated, by being fown ton oiten on the fame lanil; and for want of new forts. A journal yields twenty toulins, or about twenty-four bufhels Englifh; and $2 \frac{1}{2}$ journals are equal to an arpent de Franc, which makes the acreable produce miferable. Price now 3 livres the toulin ; was only 2.5 .

Luncrilic.--More !till; they plant them, after one ploughing, in April : for feed, cut the large ous only; but fil the faller ones uncut. Always dung much. Every man that has a cow ke ps the dung carefully for this crop; and fuch as have no land plant on other people's, without paying rent, that being the preparation for wheat: the crop of that griin is, however, very moderate, for the potatoe pumps much, to ufe the French expreffion,-i. c. txhaults greatly. Poor light foils anfwer beft for them, as they are found not to do on frong land. Product per journal, thirty to fifty rajaux, which meafure contains one hundred and eighty pounds of wheat. I found an exact journal, by ftepping, to be one thoufind nine hundred and feventy-four Englifh yards, or about fixty-five rods. At forty rafuux, each three Englifh bufhels, it is nearly about three hundred buhels Englifh per acre. The price is now 7 livres the razal, heaped; when low, 3 livres; and in conmon, 4 livres iof. The culture increafes much.

Alsace.-Savern to Wiltenbeim. Many, and good potatoes.
Strafourg. - Produce of an arpent, of twenty-four thoufand feet, feventy-five facks to one hundred, at $36 \%$ to $60 \%$. (at $2 \frac{1}{2}$ livres, and ninety facks, it is 15 l . 10 s .7 d . per Englifh acre.) Sow wheat atter them, if manured, otherwile barley. In the mountains they pare and burn for them.

Schelefadt.-Produce fifity or fixty facks, at 3 livres, but 4 livres or 5 livres fometimes (fifty-five facks, at 3 livres, are 13l. 5s. lod. per Englifhacre.) In planting, they think the difference is nothing, whether they be fet cut or whole. The people eat them much.

Befort. - The culture continues to this place.
Franche Compri:-Be angon. - And a fcattering hither.
Orechamps. - Now lofe the culture entirely.
Auvergne.-lillencuve.-In thefe mountains they are cultivated in fmall quan. tities.

Vili.ay.-Le Puy to Pradelles.-Ditto.
To Tbugtz. - Thes are met with every where here.
Daupmine'.-St. Fond. - Many are cultivated throughout the whole country; all planted whole; if fliced, in the common mamer, they do not bear the drought fo well. They are plagued win the cur!.

Thefe minutes hiew, that it is in very few of the French provinces where this ufeful root is commonly found ; in all the other parts of the kingdom, on inquiring for them, I was told, that the people would not touch them: experiments have been made, in
many pla forts could country in
reftriction would be confumpti œconomy, many othe with cattl would inal come not veloped in nothing ca

Isle of Cretté del directed by remains ; thinks is th he thinks which is f where labo would equ: has found, or feeding

Dauphi and half al under rice, to health.

Angous neither ftro and two ind faftron amo and on gou per lb. but removed. labour for ;
many places, by gentlemen with a view to introduce them for the poor, but no efforts could do it. The importance, however, would be infinite, for their ufe in a country in which famine makes its appearance almoft periodically, arifirm from abfurd reftrictions on the corn trade. If potatoes were regularly cultivated ft attle, they would be ready for the poor, in cafe of very high prices of wheat; and fuch forced confumption would accuftom them gradually to this root; a practice in their domeftic œconomy, which would prevent much milery for want of bread. This object, like io many others, can only be effected by the exhibition of a large farm, highly ftocked with cattle, by means of potatoes; and the benefit, in various ways, to the nation would make fuch an exhibition exceedingly advantageous. But fuch eftablifhments come not within the purview of princes or governments in this age: they muft be enveloped in the mift of fcience, and well garnifhed with the academicians of capitals, or nothing can be effected.

## Räcine de Dijette.

Isle of Francr. - Dugny.-This plant, the beta cycla altifizma of Linnæus, Monfo. Cretté de Paleuel has cultivated with attention: he has tried it by tranfplantation, as directed by Monf. l'abié de Commerell; alfo by fowing the feed broadcaft where it remains; and likewife feed by feed, in fquares of fifteen inches; and this laft way he thinks is the beft and moft profitable. The common red beet, which he has in culture, he thinks yields a larger produce; but it does not yield fo many leaves as the other, which is ftripped thrice in the fummer by the hand, an operation which may anfwer where labour is exceffively cheap; but I have my doubts whether the value in England would equal the expence of gathering and carriage. Cows and hogs, Monf. Cretté has found, will eat the roots readily, but he has made no trial on it in fattening oxen or feeding theep.

Alsace.-Scbelefadt. - The culture is common in this country: I viewed three arpents belonging to the mafter of the poft, which were good and clean. They gather the leaves by hand for cows, and then return and gather again,' and the roots are the beft food for them in winter; they come to eight pounds and ten pounds, and arefown and planted like tobacco.

## Rice.

Dauphine:-Loriol.-Sixty years ago the plain of Livron, one mile from Loriol, and half a league from St. Fo. d, more than a league long and a league broad, was all under rice, and fucceeded well, but prohibited by the parliament, becaufe prejudicial to health.

## Saffron:

Angoumois.-Angouleme.-The beft land for this crop is reckoned that which is neither ftrong nor itoney, but rich and well worked ; plant the rows fix inches afunder, and two inches from plant to plant; fow wheat over the planted land, and gather the faffion among the wheat; bloflom at All-Saints, whon they gather it. In a good year, and on good land, a journal yields three pounds, which fells, when dear, at 30 livres per lb . but it is fometimes at 16 liveres: lafts two years in the ground, atter which it is removed. Th $y$ affert, that the culture would not anfwer at all if a farmer had to hire labour for it : all that is planted is by proprietors.

## Tobacco.

Flanders.-Mof farmers, between Lille and Montcaffel, cultivate enough for their own ufe, which is now (Novenber) drying under the caves of their houfes.

Artois.-St. Oners.-Sone pieces of tobacco, in double rows, at eighteen inches and two fect intervals, well hoed.

Airc.-A crop is worth three times that of wheat on the fane land, and at the fame time prepares better for that grain than any thing.

Alsace.-Strafbourg. - Much planted in all this rich vale, and kept very clean. Product eight to ten quintals per arpent of twenty-four thoufand feet, at 15 livres to 30 livres per quintal (nine, at 23 livres, is $\mathbf{1 4 l}$. 6 s . 2d. per Englifh acre). Sow wheat after it ; and the beft wheat is after tobacco and poppies.

Benfeldt.-G reat quantities here, an! all as clean as a garden.
Scheleftadt.-Produce fix quintals to eight per arpent, at 16 livres the quintal (81. 15 s .7 d . per Englifh acre). This they reckon the bett erop they have for producing ready money, without waiting or trouble. There are pealants that have to fix hundred quintals. They always mamure for it. 'Tney fow it in March on a hot bed covered wih mats; begin to plant in May, and continue it all June and the beginning of July, at eighteen inches or two feet fquare, watering the plants in a dry feafors. When two feet high, they cut off the tops to make the leaves fpread. Their bett wheat crops fullow it.

Tobacco, as an object of cultivation, appears in thefe notes to very great advantage; and a refpitable author, in lrance, declares, from information, that, inftead of exhaufting the land, it improves it like artificial graflies *; which feems to agree with my intelligence; yet the culture has been highly condemmed by others. Mr. Jefferfon obferves thus upon it: "it requires an extraordinary degree of heat, and ftill more indifpenfably an uncommon fertility of foil: it is a culiure productive of infinite wretchednefs: thofe employed in it are in a continued flate of exection, beyond the powers of nature to fupport: little food of any kind is raifed by them, fo that the men and animals, on thele farms, are badly fed, and the earth is rapidly impoverifhed. The cultivation of wheat is the reverfe in every circumftance: belides cloathing the earth winh harbage and preferving its fertility, it feeds the labourers plentifully; requires from them only a moderate toil, except in the featon of harveft; ruifes great numbers of animals for food and fervice, and diffifes plenty and happinefs among the whole. We find it eafier to make an hundred buthels of wheat than a thouland weigh: of tobacco, and they are worth more when made t." 'This authority is reipectable; but there are circumttances in the paffige which almoft remove the dependence we are inclined to have on the author's judgment. The culture of wheat preferving the firility of the earth, and sailing great numbers of amimals! What can be mean ly this? As to the exhaufing quality of wheat, whien is fullicient to reduce a foil almoit to a caput mortum, it is too well known, and too completely decided to allow any queftion at this time of day; and how wheat is made to raife animals we mult go to America to learn, for jult the contrary is found here; the farms that raife moft wheat have fewefl animals; and in France, hulbandry is at almolt its loweft pitch for want of animals, and becaufe wheat and rge are cultivated, as it were, to the exclu-

Brl:TAO wheat; for inconfideral

Morlaix: want of tu
fion of other crops. Tobacco cannot demand an uncommon degree or heat, becaufe it has been cultivated on a thoufand acres of land, fuccefffully in Scotland: and as to the demanding of too great exertions, the free hands of Europe voluntarily addict themfelves to the culture; which has nothing in it fo laborious as reaping wheat. I take the American cafe to be this; ill hulbandry, not tobacco, exhaulted the land; they are now adopting wheat; and, if we may judge from the notions of the preceding quotation, that culture will, in a few years, give the finifhing froke to their lands; for thofe who think that wheat does not exhauft, will be free in often fowing it, and they will not be long in finding out what the refult will prove.

Monl. Bolz, in Swifferland, fays, that they are dilgufted with the culture of tobacco, becaule it exhaufts their lands; half an arpent gave five to fix quintals of * leaves. Eftimated grofsly, this may be called a thoulund weight per acre, which Mr. Jefferfon compares with one hundred bufhels of wheat ; a quantity that would demand in England, four acres of lamt to yieh; and, as American crops do not yield in that proportion, it is one acre of tobacco being as expenfive as five or fix of wheat, which furpafles comprehention.
The Strabbourg produce of nine quintals, in the notes above, equal 5 cwt . per Englifl acre The Scheleftat protuce of feven quintals is about 12 cwt. per acre.
1)r. Nitchel, many years before Mr. Jefferfon, gave the fame account of the exhaufting quality of tobacco $\dagger$.

The cultivation is at prefent fpreading rapidly into countries that promife to be able to fupply the world. In 1765 , it was begun to be cultivated in Mexico, and produced, in 1778 , to the value of 800,000 l. and in $1784,1,200,0001 . ~ \ddagger$

## Turnips.

Guienne. - Anjpan to Bayome - Razcs are, in thefe wafte tracts at the roots of the Pyrennecs, much cultivated; they manure for thera by burning ftraw, as defcribed under the article manure; weed, and, as they told me, hoe them; and have fome as large as a man's head. They are applied entirely to tattening oxen. Maize is fown after them. The poople here knew of the orders given by the King, for cultivating this plant, but I could not find they had had any effect. The practice obtained here before the two laft fevere years, which were the occalion of their increafing it, much more than any orders could do.

Flanders. - I'alemciennes to Oribics.-Many fields of this root, but quite thick, though it was fais they have been hoed; thefe are all after-crops, fown after corn.

Normanule.-Cach.-In going to Bayeaux, many, botn flourifhing and clean, though tou thick; but on inquiry, found them all for the market, and none for catle or fleep. I thonght the colour of the leaf differed from our own, and got off my horfe more than once to examine them. They are the raves of the fouth of France; the roots, which ought to have been of a good fize, were carrot-fhaped and fmall.

Brditicne.--Belle-Ifle to Morlaix:. - Here is an odd culture of raves amongt buckwheat; fown at the fame time, and given to cows and oxen, but the quantity is very incontiderable.

Morlaix - Get their beft turnips after flax, fometimes to a very good fize; but, for want of lufficient thinning the crops, in general, very fmall roots mult be produced;

[^75]yet the leaves larce, hea!thy, and vigorous. They fow them alfo among buckwheat ; but he product is triffing, and the ufe but momentary, as they plough the land for wheat.

A vjou.- Migniame. - If one were to attend only to converfation, without going into the ficl.Is, a franger would be perfuaded that the culture of turnips flourilhed herc: they a elually give fome, and cabbages too, to their cows, for every man has a ferap: but fown quite thick, and the largeft I faw not bigger than a goofe egg; in general, not a fourth of that fize; and the largett piece I faw was half an Englifh acre. They have, in like manner, patches of a fort of kale, which is the chou de Poitou; this is inftead of the chon d'Anjou, of which the Marquis de Turbilly fpeaks fo much: and which is quite neglecled in this country now, in favour of this Poitou cabbage, that is found to produce many more leaves. To me it however appears inferior to the cloou de Vaclse of Flanders

To La Fleche.-A fcattering of miferable raves all the way.
Alsnce.-Scheleftat to Colmar.-Some fcattered pieces, but in very bad order; and none hoed, which they ought to have been three weeks before I faw them.

Auvergne.-Ifoire.-Raves are cultivated for cattle, but on fo fmall a fcale, that they fearcely deferve mention. They fow them alfo among buckwheat, which is drawn by band, woben in blofom, for forage, and the raves left. No hoeing, but fome are weeded.
Brioude.-Many raves, and cultivated for cattle: common to two pounds weight.
St. George's to Villencuve.-Many raves, but miferably poor things, and all weeds.
Perhaps the culture of turnips, as practifed in England, is, of all others, the greateft defideratum in the tillage of France. To introduce it, is effential to their hufbandry; which will never flourith to any refpectable extent, and upon a footing of improvement, till this material object be effected. The fteps hitherto taken by government, the chief of which is diftributing the feed, 1 have reafon to believe failed entirely. I fent to France, at the requeft of the Count de Vergennes, above an hundred pounds worth of the feed; enough for a finall province. When I was at Paris, and in the right feafon, I begged to be fhewn fome effects of that import, but it was all in vain. I was carried to various fields, fown thick, and abfolutely neglected; too contemptible to demand a moment's attention. Not one acre of good turnips was produced by all that feed. It is with turnips, as in many other articles; a great and well cultivated Englifh farm, of feven hondred or eight hundred acres, flould be eftablifhed on an indifferent foil ; and two hundred acres of turnips cultivated upon it, and eaten on the land by fheep, fhould every year be exhibited: and a fucceflion of perfons educated on fuch a farm, difperfed over the kingdom, would do more to introduce the culture than all the meafures yet attempted by government.

## Walnuts.

Berry.- Verfon to Vatan.-Many of thefe trees fpread over the country which yicld a regular revenue by oil.

Quercy. - Souilitc. - Walnut-oil cake the fineft food of all for fattening oxen. They export pretty largely of this oil, the trees being every where.

Ancoumors. - Rignac. - Walnuts fipread over almoft every field.
Ruffce.-A common tree yields a boilfean of nuts; fold at 3 livres or 4 livres; but a good tree three boifeau. All for oil, which the people eat in foups, \&ec.

Potrou. - Many throngh all parts of the province, which I patfed in croffag it. Oil univerfally made from them. 'This ycar (1787) all were fo frozen, that the crop will
be very $f$ feau fells gives five of oil, wh Anjou Bretagne.
be very fmall; fometimes get fixteen boiffeau a tree, even to twenty boiffeau; the boiffeau fells generally at $20 \%$. There is, on an average, one tree to an acre. One tree gives five or fix meafures of nuts, and each meafure makes fomething more than a pint of oil, which fells at $18 \%$ or $20 \%$.

Anjou.-Acrofs this whole province they are found every where, but none through Bretagne.

Alsace.-Ifenbeim.-Great numbers fpread all over the country; for oil.
Bourbonnots.-Moulins.-Some eftates have a good many fcattered trees; the oil fells at $12 /$ : the pound.

Auverone.-Clermont.-Many in every part of the country; a prime tree will, in a good year, give twenty pounds and even thirty pounds of oil, one of ten years fix pounds; common price 6\%. per pound.
Lempde.-Here they finifh; as we advance from this village, no more are met with.

## Various Plants.

Quercy. - Brives. - Figs we met with here for the firft time; they are fcattered over the vineyards, and wrapped up in mats, to preferve them from the frofts.

Crcifcufac.-Gieyfe much cultivated here; it is the lathyrus fetifolius. Alfo jarafh, the vicia latharoides. They fow them both in September and the fpring, which are generally ufed, mown green, for foiling.

Souillac.-They have no meadows in many diftricts of this country, but fupply the want by the above-mentioned plants, which are always ufed green. They do not anfiwer equally in hay, as it is faid that the leaf falls off in drying.

Caloors.-Near this place meet with four new articles of cultivation ; one a vicia fativa varietas; another the ciccr arietinum; the third the crvum lens; and the fourth the lupinus albus.

Caufade.-Here the trifolium rubens is cultivated, and continues through all the $\mathbf{P y}$ rennees. On all thefe articles I mult however obferve, that they do not feem to equal, for foiling, the common winter-vetch, which we cultivate fo much in England; nor lue cern, fo fuccefsfully fown in France.

Guienne.-Triticunt Repens. Upon the banks of the Garonne I met women loaded with the roots of this plant, going to fell it at market; and they informed me it was bought to feed horfes with. It is applied to the fame ufe at Naples. It grows with great luxuriance at Caygan Solo, in latitude 7*; and being the great plague of Englifh hufbandry, may be called a univerfal grower. It feems, from a late account $t$, as if they cultivated it in the ifland of Nantucket, in Anerica.

Isle of France.-Dugny.-Monf. Dretté de Palcuel gave me fome notes of experiments he had made on various plants, in'drying them for hay:

The cpilobium angufifolium makes hay that is readily eaten by fheep, and lofes half in drying. They are very fond of the hay of the fpirca ulmaria, the litbum falicaria, thaliftrum vulgaris, pucedanum flaus, and centaurea jacea; all thefe lofe half, when made into hay; the althea officinalis two-thirds. Monf. Crette is of opinion, from his trials, that thefe plants may be very ufeful in cultivation, for hay. He found, at the fame time, that an arpent of wet meadow gave thirteen thoufand two hundred pounds of green herbage, which loft two-thirds in drying. An arpent of winter-vetches feventeen thoufand cight hundred pounds green.

[^76]The common fun-flower he has alfo cultivated; he plants it in rows, at two feet afunder, and one foot from plant to plant; an arpent containing tixteen thouldel two hun. dred plants; the leaves he gives to cows, the llowers may be ufed for dying; of the ftems he makes vine props, or for French beans, and aftewards burns then; and of the feed he makes oil, which leaves a cake good for fattening cattle. Six perch of land, each of eighteen feet fquare, has given him twenty-two hoillean of feed, the boill aut $\therefore$ : of the feptier, that contains two hundred and forty pounds of wheat; but the crop exhaufts the land exceedingly and finall birds devour the feed gredily.

The fane gentleman compared cabbages and porateses, in alternate rows: an arpent gave (half the ground) fixty-wo feptiers of phatoes, which weighed fourteen thoufand eight hundred and eighty pounds; the cabbages on the fame land, in number five thoufand four hundred, weighed tweaty-five thoufand tive lumdred pounds.

Dammartin.-bummer-vetches cultivated here, they are mown for hay, and yield eight hundred to one thoufand bottes per arpent; one thoufand one hundred have been known.

Artots.-La Recouff:-Winter-vetches are found on every farm, on the good land from Calais to St. Omer : oats are mixed, to keep them up; and every one foils his horfes in the itable.

Afs.-Some hops here.
Anjou. - In the way from Angers to La Fleche, the number of citroules is yery great, even to acres, and the crop extremely abundant; the metayers feed their hogs with them.

Auvergne.-Brioude.-Jarouffe every where fown, the end of Auguft or beginning or September, for hay.

Dauphine. - Loriol. - The melilotus fibyrica, from Monf. Thouin, at the King's garden at Paris, makes, in the garden of Monl. Pauj is de St. Fond, a moft fuperb figure; nobody can view its prodigious luxuriance without commending the thought of cultivating it for cattle. The coromilla zaria, a common plant here, and of fuch lixuriance, that it is hardly to be deftroyed. The bodyfarum coronarium does well here.

Provence. - Cuges.- Capers are here met with for the firt time, in going from Marfeilles to Italy. It is a low bulh, plated in fquares oi don five or fix feet. This year they yield nothing, becaufe damaged by the froft; but, in common, more profitable than vines; they mentioned one pound per tree, at $30 f$.
'Toulon.-Capers are not fo profitable as vines. The buthes here are planted at 6 or feven fect fquare; and a good one will give 1! or two pobnds of capers; but the price varies prodigioufly, from 30 lirres or 40 lives, to 120 liveres the quintal; average 30 lives, or from $6 f$ to 20 f , the pound.

Hicres *- - Capers are here planted in fyuares, at fix, feven, and eight feet; each good buthel yieds two pounds from (of. 10 24f. the pourni ; but in a grols oftimate of a whole crop, are not fuppofed to pay more than $6 f$ to tef. per bulhel.

Girafe.-Here is one of the molt fingular cultures to be met with, that of plants for making perfumes; whole acres of rofes, tuberofes, \&c. Cir their It wers, and a frect full of thops fur felling them: they make the famous oter of roles, as good and as clear as from Bengal; and it is fidd now to fupply all Europe.
L.vonnots. - The fromental of the French (ovena elatior) is cultivated in this part of France, and in fnme diltriets of Pranche Compte. The feed is commonly lold by the

- The matural hiflorian of Provence mentions a fingular profit by thin phant, at Hieres, of two bumdred
 four forvir al'ilif. Nut, do la I'rswence, par M. Beraard. 8vo. tom. i. p. 329.
feedfinen, at Lyons, of whom I bought fome to cultivate in England. The firft perfon who mentioned it publickly was, I believe, Monf. Miroudot, who wrote an effay upon it, in which he fell into an error, copied by many of his countrymen ", namely, that of calling it the ray grafs of the Englifh. The great botanift, Haller, was miftaken in fuppofing it the avena flavefecns $\dagger$. King Staniflaus made fome experiments on it in Loraine In Bretagne $\ddagger$ it has been found to yield ten times the produce of common meadows. That it is very productive cannot be doubted, but it is a very coarfe grafs : however, it merits experiments, and ought to be tried upon a large fcale, as the qualities of plants cannot be afcertained upon a fmall one.

Citroules, in this province and the neighbouring ones, are cultivated largely, and rarely fail. They may be preferved until the beginning of January : oxen, cows, and hogs eat them freely; for lean cattle they are given raw, but commonly boiled for fattening: from ten pounds to twenty pounds a day, given to cows, foon thews the effect in the quality of milk For fattening an ox, in Breffe §, with them, they mix the citroule with bran or pollard, or flower of buckwheat, and boil them together, and give thirty five pounds to forty pounds to each beaft per diem. In fome places they apply them to feeding carp. The poor people eat them in foup, in moft parts of the kingdom, but not in great quantities.

## Chap. XXVI.—Of ibe Wa/de Lamds of Lrance

Soroone--THERE is, in this province, fuch a large mixture of wafte, even in the moft cultivated parts, and cultivation itfelf is carricd on upon fuch barbarous principles, that there will not be much impropriety in conlidering the whole as walte; to every fpot of culture called a farm, a much greater proportion of rough heep-walk and wood (caten down and deftroyed) is annexed ; fo that any good farmer, who got poffeflion of one thoufiand or one thoufind five hundred acres, would conclude the whole as wafte, and treat it accordingly: by much the moft unproductive and pooreft part of fuch a tract would, in every cafe, be the lands at prefent under the plough. I may, in confirmation of this general idea, add, that there are many abfolute waftes in lrance, that yield as good, and even a better produce than all Sologne, acre for acre. I know no region better adapted for a man's making a fortune by arriculture, than this ; nothing is wanted but capital, for moft of the province is already inclofed.

Brrry.-Chatcurour.- Leaving this place for the fouth, enter vaft heaths of ling and furz, but much mixed with trefoils and grafles. Some limall parts of thele heaths are brokeil up, and fo ill ploughed, that the broom and furz are in full growth. After this ancther heath, of feveral miles extent, where the landlords will not give leave either to build or break up, referving the whole for fheep, and yet not focked; for the people affert, that they could keep twice the number, if they had them.

Limousin.-To Limoges. - The mountainous heaths and uncultivated lands are commons, and therefore every metayer fends his theep in the common flock of the village.

Bioone - Bagmeres de Luclion - The wate tracts of the Pyrennees, by which are to be underthool, lands fubject to common pitturage, are fo much fubject to the will of the communities, that thefe fell them at pleafure. Formerly the inhabitants appropri-

```
+ M/m. dela Nor. de Rerme. 17%0. p. 16.
```

```
$0flera, al ling par l'miur, p. 8%.
```

ated to their own ufe, by inclofure and cultivation, what portions they pleafed; but this obtains no longer; at prefent the communities fell thefe waftes, and fixing 2 price on them, ncarly to their value, new improvements are not fo common as heretofore.

Languedoc.-Narbonne to Nifines.--This vale, which is by far the richeft of Languedoc in productions, is of no confiderable breadth, yet the quantity of wafte neglected land in it is very great.

Monrejaut 10 Lann Maifon.-Vaft waftes, covered with fern; the foil good; and land projecting into it cultivated to advantage.

Bagneres de Bigorre. - Thefe immenfe fern-waftes continue for many miles, with many new improvements in them. They belong to the communitios of the villages, which fell portions of them to any perfons willing to buy. The price moft comunon has been 20 livres the journal, of one hundred and twenty-eight cannes fquare, the canue eight pans, the pan eight inches and four lines, four journals making an arpent. The metiod of improving has been, firf to burn all the fern and rubbifh, then to mattock it and fow rye, which is pretty good; then oats for fix, feven, or eight years, according to circumftances; after that they fummer.fallow and take wheat Some they leave to grals and weeds, after thofe eight crops of oats; a detail of the hulbandry of barbarians! They have all a right of commonage on the waftes, as long as thefe continue uninclufed; confequently can keep cattle, and efpecially fheep, to any amount in fummer; yet, in their inclofed improvements, they give not a thought to raife winter food! Such fupidity is deteftable. The parifh of Cavare has $10+, 000$ arpents of thefe waftes, without one metayer ; all are peafant proprietors, who buy morfels as it fuits then. The improvements are exempted from tithes for ten years, but not at all from King's taxes, which is Thameful.

Bearn. - Pau to Moneins.-Vaft waftes of rich foil, covered with an immenfe product of fern, to the amount of five or fix waggon loads an acre.

St. Palais to Anjpan. - Vaft waftes, belonging to the communities of the parilhes, that fell them to whoever will buy: a common price 120 livres per arpent; but after they are brought into culture, they fell for at leaft 300 livres. 'Ihe advantages of this fyltem, which extends through the whole region of the Pyrennees, is prodigious: it excludes the rights of commonage, becaufe all is enclofed as faft as bought; and enables every indultrious man, that has faved a little money, to become a land proprietor, which is the greateft encouragement to an active induftry the world can produce; it has, however, one evil, that of too great a population.

Bayonne to St. Vincents.-In this line I came firf to the landes of Bourdeaux, becaufe they extend from the gates of Bayonne to thofe of Bourdeaux, and of which I had read fo much, that I was curious to view and examine them; they are faid to contain $1,100,0 c 0$ arpents *. They are covered with pines, cork-trees (only half the value of pines), broom, whins, ling, and furz; the foil fand, but the growth of trees thews a moift bottom. There is a good deal of cultivation mixed with the wafte this tirf ftage. There is much land alfo under water, a fort of fandy fen. Pafs a great fpace, without trees, covered with dwarf furz, ling, and fern. Others before Dax; one of them of five or fix miles long, by two or three broad: much rough grafs and ling on it: but none of thefe tracts appear half flocked.

Dax to 'Tartus.-This difrict is a deep white fand, the whole of which has evidently been lande, but part of it inclofed and improved; much is, however, yet rough.-Singular feene of a tlewing fand, white as fnow, yet oaks growing in it two feet diameter; but a broken ground difcovers a bed of white adhelive earth, like marl, which explains the woader.

Learn : be purcha communi from tith that all th of marl o of Monf. very ill. 1 what Ifur corn-col ing fuch $p$ and grafs, one end ol

La Gr fome bett it coufifts

Norme Monfieur the fame provemen the Frenc which for built, as , alone cof to cripple proveluen burnt wit as foon as hardly cr acres of wheat; in Englar portance arpent, o pints; fo

Learn at Tartas, that thefe immenfe waftes, the landes, without pines or wood, are to be purchafed, at all times very cheap indeed, of the King, the great lords, and of the communities of many parifhes, even fo low as 3 livres per arpent, with an exemption from tithes, and from taxes for twenty years'. But every one here reckons them fo bad, that all the money fpent would be fure to be loft; yet it is admitted that there is a bed of marl or clay under all the country. This opinion is chiefly founded on the attempts. of Monf. Rollier, of Bourdeaux, having made a trial of cultivating them, and fucceeded very ill. ! gueffed how fuch improvements had been atteunpted, and told my informants what I fuppoled had been done; and iny guefs proved exactly right: corn-corn-corn-corn; and then the land pronounced good for nothing. It does not fignify telling fuch pcople, that the great objects in all improvements of waftes, are cattle, and heep, and grafs, after which corn will be fure. Nothing of this kind is comprehended from one end of France to the other.

As I fhall here take my leave of thefe landes, I may obferve, that fo far as they are covered with pines, they are not to be efteemed waftes; but, on the contrary, occupied with a very profitable culture, that docs not yield lefs than from 1 gs. to 25 s. an acre annual revenue. Of the very extenfive tracts not fo employed, and which are to be purchafed at fo cheap a rate, they are among the moft improveable diftricts in the kingdom, and might be made, at a very fmall expence, capabl: of fupporting immenfe flocks of ficep.

Cavignac to 'Pierre Brane.-Many fandy waftes, with white marle under the whole.

To Cherfac. - Great waftes, of many miles extent, covered with fern, ling, and fhrubby oak; all greatly improveable.

To Montlieit -Ditto. Many of thefe waftes belonged to the Prince of Soubife, who would not fell but only let them; the confequence has been, that no improvements have been wrought.

La Graule. - The waftes in this country are fold at 10 livres the journal, and lefs; fome better at 30 livres. The journal here is to the Englilh acre as ten to thirty-eight; it confifts of ten carraux, each eighteen feet fquarc.

Normandie.-Valogne to Cherbourg.-Mont. Doumerc, of Paris, having bought of Monfieur, the King's brother, three thoufand arpents, part of fourteen thoufand fold at the fame time, being parcel of an ancient but much neglected foreft, has made an improvement here, which fo far deferves attention, is it thews the principles on which the French improvers proceed. He has brought into culture feven hundred verges, which form his prefent firm, around a houle for himfelf, and another for his bailif, all built, as well as many other edifices, in much too expenfive a manner; for thefe erections alone coft 2500 louis d'or. Such unneceflary expenditures in building is generally fure to cripple the progrefs in much more neceflary matters. Th : firft bufinefs in the improvement, was to grub up the wood; then to pare and burn; and manure sith lime, burnt with the furz, fern, and heath of the land; the fone was brought from Valogne: as foon as it was cleared, it was fallowed the firf year for wheat. Such infatuation is hardly credible! A man, in commencing his opeations in the midit of three thoufand acres of rough ground, and an immenfe pafturage for cattle and theep, begins with wheat; the fame follies prevail every where: we have lien juft the lame courle purfucd in England, and preferibed by writers. Such people think cattle and fleep of no importance at the beginuing of thefe improvements. This wheat, limed at the rate per arpent, of feven or cight tonncaux, of twenty-five beifieau, each eighteen pots of two pints; four boiffeau of feed fown, and the crop forty beilfeau. Afier this wheat fown,
five boiffeau of oats, the crop forty. Then barley, feed four boiffeau, produce twenty to twenty-five boiffeau. With this barley clover fown; mown the firft year twice, and paftured the fecond; being then ploughed for wheat, which is inferior to the original crops; then oats and fallow again. From all thefe crops it is fufficiently evident, that Fret ci farmers efteem corn, and not cattle, the proper fupport of a new improvement. The $f$ il which has been thus reclaimed is on a fone quarry in general; a friable fandy loam, covered with a ftrong fpontancous growth (where not foreft) of furg, fern, and in fome places, heath; mixed with much grafs, and even clover and millcfolium; which, if properly focked by cattle, well fed in winter, would be of confiderable value in its prefent rough fate.
Though the methods purfued have not been calculated on the beft principles, yet there is certainly a confiderable degree of merit in the undertaking. Laft year's crop of wheat produced forty thoufand gerbs; and this year (1787) there is one piece of oats, of eighty verges, which gives twelve thoufand gerbs, at fifteen boilleau per hun. dred; each boiffeau forty pounds, and the price at prefent 45/. The prefent ftock, two hundred and feven wethers, ten horfes, twenty-one working oxen, ten cows, one bull, fix young cattle, are certainly fine, for a fpot where, ten years ago, Monficur Baillio, the bailiff, who has exectied the whole, and who feems to be a truty excellent man, was in a hovel, with no other ftock than a dog. The whole improved would now let at 15 livres the verge, $2!$ to the arpent.

Bretagne. - Combonrg to Hedé--Pafs an immenfe wafte for a league, but to the Ieft a dead tevel, boundefs as the fea; high lands at one part, feemingly eight or ten leagues off. Every part which the road paffes has been under the plough, for the ridges are as diflinet as if made but laft year; and many ruined banks of hedges crofs it in various ways. The fipontancous growth, furz, ling, and fern; the foil good, and equal to valuable crops, in a proper management. The king has part, Monfieur Chateaubriant part, and other feigneurs alfo; but every lody I talked with fays, it is good for nothing. Would to heaven I had one thoufand acres of it at Bradfield! I would foon put that affertion to the teft.

Rennes.-The wafte lands, which, in almoft every part of the province, extend for many leagues, are almoft every where to be bought, in any quantity, of the feigncurs, at 10 . the journal, which is to the Englifh acre as 47 to $3^{8}$, with a fimall quit-rent per annum.

St. Bricus.- Inquiring here into the period of the cultivation which I every where remarked on the landis of Bretagne, I was told, that it was no ancient culture, but common for peafants, who took them of the feigncurs, to pare and burn, with the croubo:1; exhauf, and then leave them to nature; and this for forty, lifty, and fixty years back. Rentad for ever at $20 \mathcal{S}$. to 30 . the journal.

St. Nazaire to Savamal.-Immenfe bog marked on all the maps of Bretagne, and filling the fpace of many leagucs, covered with vaft growth of bog myrtle, and coarfe grafies, three or fiour feet high; what a fich for improvement, in a climate that gives fuch a fowtanenus growth!

To Names. - In the landes, which, Arange to fay, extend to within three miles of Nantes, there was an improvement ancmpted fome yeare aro ; four good houles of tlone and fate are buits, and a few acres run to wreched grafs, which have been tilled but all favage, and become ollowit as rough as the refl; a few of the banks have been planted. 'This may be the improvement I heard of afterwards at Namtes, made by fome Englifhmen at the expence of a genteman, and all the parties ruined. I inquired how the improvement had been eflected : pare and burn; wheat ; ryc ; oats!!!

Thus it is for ever: the fme methods, the fame failures, the fame folly, and the fame madnefs. When will men be wife enough to know that good grafs muill be had, if corn is the ebject.

Nuntes. - I have now tavelled round the vaft province of Bretagne, and may obferve, that io laree a proportion of it is walle, as to be difficult to calculate; I have paffed tracts of land, of three, four, live, and even cight miles in extent, without any cultivatio: and I have had of much more confiderable, even to fourteen leagues in lewigth. I have marked one ditioct in the map, which contains fome hmadred thoufand acres. Three-fourths of the province are either walle, or fo rough as to be nearly the fame thing. This is the , more furprifing, as here are fome of the firt markets in France; that is to fay, fome of the molt confiderable commercial towns; and ev ry where the vicinity of the fea. Theie enormous waltes, which are faid to exceed two millions of arpents *, are found, as I have remarked, in my nots on the great road, within four miles of fuch a city as Nantes: vaft dittricts are to be had on leafes, or tanher preperty for ever, on the payment of very flight fines.. The fuil is generally very inpruveable, Imean convertible to cultivation, at a very fuall expence, and with great tactity; contrary to the affertion of every body in the province, who have been fo ufed wiet it defolate, that they cannot readily believe it capable of a $b$ ter hufbandry than being turne, exhaufted, and left to nature. 'The means of improving thefe waltes are abfolutely unknown in France, and not much better underfood in England. The profit of the un-dertaking, however, when properly purfued, upon the never-failing principle of grais-fleep-cattle-corn; inftead of the common blunder, which puts the cart before the horfe (if I may ufe a vulgar proverb), will be found great and rapid.

Anjou. - Turbilly. $\boldsymbol{m}$ In the journal part of this wo: $k$, I have explained the motives which carried me out of my road, to view the waftes of this vicinity, and particularly the improvements of the late Marquis of Turbilly, defcribed at large in his Memoire fur les $D_{\text {i fichemens, which has been to often cited in almolt every language. }}^{\text {fin }}$
'The immenfe heaths, or landes, are in general a fandy or gravelly loam; fome on a gravel, others on a clayey, and others on a marley bottom, and others again, on imperfect quarry ones : the fpontaneous growth would predominantly be every where foreft, particularly of cak, if it were inclofed, and preferved from depredation. At prefent, it is wood browled and ruined, fern, furz, broom, ling, \&c. \&ic. In the defert ftate in which the whole country is left at prefent, the value is nothing elfe but what it jiel!s to a few cattle and theep; not the hundredth part of what might be kept, if any well regulated provifion were made for their winter fupport 1 paffed ten miles over thefe heaths; they were, in fome directions; bonndlefs to theview, and my guide affured me , I might continue travelling upon them for many days. When at 'fours, I was told of their extending much in that direction alfo. The climate is good. 'I bere are many ftreans that pafs through thele waftes, which might be employed in irrigation, but no ufe whatever made of them; there are marl and clay under them for mamure, and there is every where to be found plenty of pallurage, for the immediate fummer fiod of large flocks. - In a word, there are all the materials for making a confiderable fortuncexcept fkill and knowledsc.

Such was the country in which the late Marquis of Turb:lly fat down, at an carly period of life, determining to improve his eftate of three thoufand arpents in thefe deferts; with all the neceflary activity of difpofition; every energy of mind; and that animated luve of laudable attempts, to give life and eflicacy to the undertaking. Some meadows
and plantations, which he made, fucceeded well, and remain; but, of all his improvements of the heaths, to the inconfiderable amount of about one hundred arpents, hardly any other traces are now to be feen, excepr from the more miferable and worn-out appearance of the land; which, after cropping, was of courfe left in a much worfe condition than if it had never been touched. The fences are quite deftroyed, and the whole as much lande as before improvement. This flowed from the unfortunate crror, fo common, indeed fo univerfal, among the improvers of wafte lands, and unexceptionably fo in France-that of improving merely for the purpofe of getting corn. Pyron, the labourer who worked in all the Marquis's improvements, informed me, that he pared and burnt, which is the common practice of :tll the country, and then took three crops of corn in fucceffion; that the firt was very good, the fecond not good, and the third good for nothing, that is, not above three times the feed: from that moment there was an end of improvement, it only crawled, during many years, to the amount of one hundred acres, whereas, if he had begun on right principles, he would in all probability have improved the three thoufand; and others copying his modes, the whole country night by this time have been under cultivation. It was reckoned a valt effort in him to fold two huncred and fifty heep, and this was the beft engine he had in his hands, but giving the fold for corn, it was loft as foon as exerted. Inftead of two hundred and fifty fheep, the Marquis fhould have had tive humdred the firft year, one thoufand the fecond, one thoufand five hundred the third, and two thoufand the fourth; and all his paring, burning, manuring, folding, exerted to raife turnips (not their contemptible raves) to winter-feed then ; with fo much burning, folding, and eating off the turnips, the land would have been prepared for grafs, and when once you have good grafs, good corn is at your command. Thus corn was the lat idea that fhould have entered his head: inftead of which, like other French improvers, lie rufhed upon it at once-and from that inftant all was ruined.

The particular advantages of the fpot are confiderable, if ever an improver fhould arife, with knowledge enough to purlue the methods that are adapted to the foil and fituation. The hills of all the country are fo gentle, that they are to be tilled with great cafe, offering the advantage of perennial freams, that run at prefent to wafte in the vales. There are rich veins of white marl, with an under-Atratum, in many places, of clay. There is a hill of fhell-fand, for improving the fiffer foils and the moory botoms. There is lime. llone at the diftance of half a league, and plenty of peat to burn it. The Marquis of Galway's father fpread fome of the fhell-fand on a fmall poor field, and had an immediate luxuriance of crop in confequence. The prefent curé of the parifh has tried the marl with equal fuccefs. But both thefe manures, and indeed any other, would, be abfolutely loft, if a fucceffion of corn crops were immediately to follow. It is this valuable under-ftratum of clay and marl which gives fuch a growth to wood. In paff. ing from La Fleche to Turbilly, I was amazed, in fome fpots, at the contraft between the apparent poverty of the furface foil, and the oaks fcattered about it ; they are in general caten up by cattle, yet the bark is clean and bright, and this year's shoots four and even five feet long. A common mode, and indeed the only one of attempting improvements here, is to permit the peafants to pare and burn pieces of the heath, to take five crops in fucceflion, but to leave the flraw of the laft, to fence the piece around, and to fow whatever leeds of wood the landlord provides, ufually oak, for a copfe, which in this villainous way fucceeds well; but as fuch copfes are fenced with a ditch and bank only, and never any hedge planted, they are prefently open and eaten.
Mainis.-Guefflard.-The landes of Anjou extend over a great part of Mine alio. -Here they told me, that the extent in that neighbourhood is hardly lefs than fixty leagues

Vivara burnt, exha
To Thuyt is all by hat beds that yi could poffib fint cultivat vol. iv.
leagues in circumference with no great interruption of cultivation. The account they give of the foil is, that it is abfolutely good for nothing but to produce wood, which it will do very well. The feigneurs fief it out for ever, in any quantity, at the rent of half a buhhel of oats an arpent (the buthel thirty pound of wheat), and fome at $10 \int$. $020 \%$. 'The peafants pare and burn, and get a very fine crop of rye, then another poor crop of rye, and after that a miferable one of oats; reckoning in common that a burning will give juft three crops; after which the land is trictly good for nothing, but is left to nature to recover itfelf. The price of paring and burning 30 livres per arpent. I can hardly record thefe inftances of barbarifm with tolerable patience without dealing execrations, not againt a poor unenlightened peafantry, but againft a government poffeffing in demefne immenfe tracts of thefe lands, without ever ordering any experiments to be made and publifhed, of the belt methods of improving them. But had it come into any fuch project, and had thofe experiments had French conductors, they would have been merely with a view of getting corn! corn! corn!

To Le Mans. - Much of thefe watles here refemble the fands of Sologne; upon a dead level, and water ftanding in יwany places; yet the foil a fand; and in fipots even a running one: it arifes from the ame circumftance which makes them productive of oak timber, wherever preferved, viz, the botom of clay and marl.

Bourbonnois.-Moulins.-'ihree-fourths of the whole province wafte, or heath, or broom, or wood.

St. Pourgain.-As I quitted the Bourbonnois in this vicinity, entering Auvergne, it swill not be improper to remark, that the whole province, as well as that of Nevernois, ought, refpecting all the purpofes of improvement, to be deemed wafte. The culture that is carried on, without any exception, on the arable lands, is only fallowing for rye; and, after two or three rouads, the land is fo exhaufted by this bleffed fyitem, that it is left to weeds: broom is the prevalent fpontancous growth in fuch a cafe; and if the broom be left for a number of years itbecomes a foreft. This rye-courfe produces the landlord for his half (as all is in the hands of metayers) about 2s. 6d. or 3s. an acre through the whole farm, by corn, cattle, \&ic. ; and at fuch rates a valt proportion of the province is chiefly to be bought. Confidering that the lands are all inclofed; that wood enough is every where found ; that the country is.furnifhed with a fufficient quantity of buildings; that the roads are excellent ; that it enjoys a navigation to the capital; that markets are good and prices high; that there is marl or clay under the fands and fandy gravels; that the climate is one of the fineft in Europe; and the country highly pleafant and beautiful: when all thefe circumftances are well weighed, it will be admitted that no part of France is fo eligible to eftablifh a great and profitable improvement; but, as I muft agaia repeat it, the whole province appears walte to the eyes of an Englifh farmer.

Auvirgere-Brichile.-The mountains in this neighbourhood too much cultivated; the earth is, by fuch means, walhed away by ftorms, and torrents drive away every thing.

Vivarats.-Pradelles. - Pare and burn old turf in thefe mountains. Great tracts burnt, exhauted, and left to nature to recruit.

To Thuytz-Cultivation is carried on in thefe mountains to an incredible height; and is all by hand. In fome cafes earth is carried by hand in bakets, to form the terraced beds that yield a difficult and fcanty crop, that is brought away on the back. Nothing could pofibly fupport fuch exertions but the whole being fimall properties; every peadant cultivates his own land.
vol. IV.
34
Pro.

Provence.-Tour d'Aigues.-The mountains here are all calcareous, yet they are, from a vicious culture and management, deftroyed and abandoned, and yield fubfiftence to a few miferable goats and fheep only'; fuch mountains in the Vivarais, the Prefident remarks, are covered with fuperb chefnuts, that yield a good revenue; - this country would do equally well for them, as appears from the very fine ones found in the park of Tour d'Aigues. The cutting of every bufh for burning the earth is the caufe; this fpecies of culture loofens the furface, and renders it a prey to torrents; fo that all is walhed into the rivers, and becomes the deftruction of the plains. The Durance, in its whole courfe of near 200 miles, has deftroyed on an average to the breadth of half a league.

## General Obfervations.

In the preceding notes mention is made of great tracts of country fo miferably cultivated, that the whole would by a good Englifh farmer be confidered as wafte. This is particularly the cafe in Bretagne, Maine, Anjou, Sologne, Bourbounois, \&c.; and it is this circumftance which reduces the general average product of France to fo low a pitch, as appears in the chapter which treats of it, notwithfanding the immenfe tract of twentyeight millions of rich land, the products of which are of courfe very high. Here then ought to be the great effort of a new fyftem of government in France. The revolution has coft immenfe fums; and has occafioned a happy defalcation of the revenue, provided it be replaced wifely and equally on fome object of general confumption, and not on land: but the public burthens of the kingdom are fo heavy (proportioned to its confumption and circulation) that every attention thould be exerted to increafe and improve the contributing income; and this can in no way and by no methods be effected fo well and fo e fily as by freading improvements over thefe immenfe waftes, which are fuch a difgrace to the old government. The waftes alone are calculated in thefe fleets at 18,000,000 of Englifh acres; if to thefe we add the tracts in the above-mentioned provinces, which, though cultivated, are no more productive than waltes, and much of them not of equal profit, we cannot reckon for the whole lefs than $40,000,000$ of acres that are in a wafte flate; not abfolutely unproductive, but which would admit of being rendered four, five, tix, and even ten times more fo than they are at preient. This extent is nearly equal to that of the kingdom of England; whence we may judge of the immenfe refources to be found in the improvement of the agriculture of France; and the wifdom of the meafures of the National Affembly ought to be eftimated in proportion to their exertions in this refpect rather than in any other. If they give a ready, immediate, and abfolute right of inclofure; an exemption from all taxation whatever, for twenty.one years; and by a wife lyftem of impoits, the future propect of not being too much burthened; if fuch be their encouragements in addition to the great ones already effected, particularly in the abolition of tythes, they may expect to fee in a few years great undertakings on thefe defolate traćts. But the policy of a good gove:nment will not, in this point, do the whole; it may encourage buildings, inclofures, manuring, and the invellment of large captals; but if thefe foils be attempted to be cultivated, as they have hitherto always been in France, failure, baukruptcy, and ruin will be the confequence, and the lands after a few years left in a worfe fate than they are in at prefent. The government thould therefore not omit taking the neceflary fteps to have inflructions well diffufed for the cultivation of thefe immenie tracts of country; not in the fpirit of the
old * $f$ chief th right $m$ practice of perfe to imita a third If thefe ing corn ter, by in cility of : the foil a fix for o I fay, the exhibited improven would pr which at fumption whole foc -in a wo that can a attention

[^77]old * fyftem, by printing memoirs, which, if followed, probably would fpread more mifchief than benefit, but by the exhibition of a farm in each confiderable diftrict, under a right management, and in that degree of perfection of culture which is applicable to the practice of all mankind, of the poor farmers as well as of rich ones; every other fpecies of perfection does well enough for gentlemen to commend, but is not adapted for furmers to imitate. One large farm taken er irely from walle in Bretagne, another in Aujou, a third in Sologne, a fourth in Bourbonnois, and a fifth in Guienne, would be fufficient. If thefe farms were cultivated on right practical principles, on thofe of utterly difregarding corn till the ample fupport of theep and cattle (but particularly the former) in winter, by means of green crops, and in fummer by graffes, gave fuch a command and facility of action, that whatever corn was then fown, would in its produce be worthy of the foil and climate of France, yielding ten for one on thefe waftes, initead of five or fix for one, the prefent average of cultivated lands in that kingdoin. If this were done, I fay, the profit of fuch improvements would be equally great and durable; the practice exhibited would take deep root in the refpective provinces; and extenfive and fpeedy improvements would be the confequerce. By fuch a policy, the National Affembly would prove themfelves genuine patriots; the kingdom would flourilh; population, which at prefent is a burthen, would be rendered uleful, becaufe happy; and the confumption and circulation of thefe provinces increafing, would give a fpur to thofe of the whole fociety; the weight of taxes would leffen as the bafis enlarged that fupported it: -in a word, every good effect would flow from fuch undertakings, if properly executed, that can add to the mafs of national profperity, and confequently the moft worthy the attention of an enlightened legiflature $\dagger$.

Attempts have been made to improve thefe waftes, but always with ill fuccefs; I faw a neglected farm gone back nearly to its priftine ftate, not far from Nantes; the Marquis of Turbilly's in Anjou had no better fuccefs; and equal failures attended thofe that were tried on the heaths of Bourdeaux ; and I heard of fome others, fimilar undertakings in different parts of the kingdon; but in general they were all equally unfuccefsful; and no wonder, for all were conducted on the fame plan, with no other object in view than corn; but this is the lealt important of the products, as it hath been obferved, that fhould be found on new improvements. A French writer $\ddagger$, who fpeaks from

[^78]from experience, as well as the Marquis of Turbilly, prefcribes this courfe; 1 , dig, at the expence of 20 livres per arpent of 46,000 feet, in winter, and fummer-fallow, with many ploughings and harrowings, for -2, wheat - .3, oats - 4, fallow -5 , wheat 6, oats, \&c. \&ec. This gentleman, who tells us he broke up and improwed four hundred and fitty arpents, has not explained how realimprovement is to be made without fheeps or cattle. Where is his uinter food in this prepofterous courfe? If thefe four hundred and fifty arpents be really improved, they have coft him five times more than they are worth; but I fufpect they are-improved a la Tirrbiliy. It is mere romance to think of improving waftes profitatly without a great flock of thecp. 'The ideas of French improvers feem rooted in a contrary firitit to the prefent moment, there is no other plan than the old one of corn. A publication of the year 1791, Mcmoire fur l'Utilitć da D':frichement des Terres de Caftenau de Medor, fpeaks of the fame methods- díracincr-labourer-berfer-cinfemencer-froment-faigle, p. 5. The fame views in every part of the kingdom; but when you inquire for cattle, you have, on fome hundreds of acrer, feven cows, three inares, four oxen, and no fheep! (p.4.)

As the fubject is one of the molt effential in French agriculture, I will very briefly fketch the right principles on which alone wafte countries can be improved to profit. The rapid view which is practicable for a traveller to take, will allow no more than an outine; fully to explain the procefs would demand a diftinct treatile.-_ $\mathbf{1}$. The build ings, upon which fo much money is generally fo ufelefsly employed, fhould, in a private undertaking, be adapted to that fized farm, which lets in the country moft advantagcounly; but in a public undertaking, they fhould be adapted to that fized farm which is moft favourable to a beneficial cultivation of the foil; in the latter cafe from four hundred to fix hundred acres. This attention to the fcale of the buildings flows from the plan of the improvement, which is that of letting the land in farms, as faft as it is well improved and brought into the cultivation, in which it ought after wards to remain. But whatever the fize of the future farms may be, the flricteft attention ought to be had to keeping this part of the expenditure as low as poflible, it contributes litele to the productivenefs of the land, except what arifes from convenient oftices for cattle and fheep. -2. The next object is to buy a large flock of fheep, to feed on the lands in their walte flate, that are to be improved; five hundred would he a proper number to begin with. Thefe fheep fhould be, as nearly as pollible, fuch as the South Downs of England; of the French breeds, the moft profitable, and the beft to procure, would be thofe of Roufillon. It is of more confequence to have a breed not too large, and well clothed with a fhort firm fleece, than larger or more expenfive breeds.-3. The firt fummer fhould be entircly employed in paring and hurning, and cultivating at leaft one hundred acres of turnips and rape, for the winter fupport of the fleep and plough oxen. After the turnip feafon is paft, the paring and burning to continue for rye, artificial graffis to be fown with rye.-4. Begin, as carly in the fpring as poffible to pare and burn fref wafte, firft for a crop of potatoes, on fifteen or twenty acres, and then for two hundred acres of turnips. The turnip land of laft year to be fown with oats, on three ploughings; and

with the oats, over fifty acres, clover-feed to be fown. After the turnip feafon is paft, continue paring and burning for rye, as before. The labourers employed in the fummer on paring and burning, to work in the winter on ditching, for forming inclofures; thebanks to be planted with white thorn, and willows for making hurdles. This is fufficient to ftate the leading principles of the undertaking. Wconomy in the execution demande that the labourers employed flowuld have work contantly; in fummer paring and burning, and managing the hay and corn harvelt; and in winter ditching, quarrying, if there be lime-ltone on the premiles, for burning lime for manure, and if not, digging andfilling marl, or chalk, or other manures which may be found under the furface. Inlike manner the number of mafons and carpenters fhould be fo regulated, in proportionto the works, fo as to find conftant employment through the building leafon.

The courfes of crops will explain the whole bufinefs of tillage. On the land pared and burnt, and planted with potatoes in the fpring, the following rotation: 1, potatoes 2, oats - 3 , turmips-4, oats, and grafs feeds for laying down.

On the land pared and burnt, and fown wihh turnips at midfumner: i, turnips 2, oats-3, turnips-4, oats or barley, and grafs feeds for laying down.

On the land pared and burnt, and fown with rye in autumn: 1, rye-2, turnips3 , oats-4, turnips-5, oats, and grafs feeds for laying down.

All the turnips to be fed on the land with fheep, by hurdling, except the fimall quanti:y that would be wanted for the plough oxen.

All the graffes to be mown the firit year for hay, and then paftured by fheep, for two, three, four, or more years, according to circumftances. When they wear out, or betray indications of a want of renewal, they may be broken up with a certainty of yielding grain in plenty, but no two crops of white corn ever to be fown in fuccelfion: by. white corn is underftood wheat, ryc, barley, and oats.

A very eav, and, in fome cales, effectual method of improving heaths, is by grubbing. up the plants that grow fpontaneoufly, and freading lime upon the walte without any tillage, fowing grafs feeds and covering them by the fheep-fold: it is furprifing what a change is thus effected at the fmalleft poffible expence; foils apparently miferable, have been made at once worth the rent of 20 s . per acre.

It is not poffible to give more than an outline in fuch a fketch as this; variations, arifing from a difference of foil, will occur, which, though not confiderable, mult be markedwith care, or ufelefs expences will often be incurred. The method juft hinted at is particularly applicable upon thofe wafles, which are in culture fterile, from abounding with the vitriolic acid; the cafe of many in Bretagne; where pudding fone is found in fome diftricts at fix to eight inches under the furtace: cultivation on fuch by the plough: may be fo tedious and expenfive, that the mere paring and burning, and application of calcareous manure, lime or marl, with grafs feeds and fold, as above-mentioned, would be much the belt improvement, as I have myfelf experienced in a country nore vitriolic and fterile than any wates I faw in Bretagne.

The progrefs of the flock of theep will, by its procreation, fhew what may be the given progrefs of fuch an improvement, providing turnips in the proportion of one acre to five fheep, which will allow enough for oxen and other cattle, and fuppofing the loffes upon a flock to be five per cent.

If the breed of fheep be good, all the ewes fhould be faved for increafing ftock, and the weathers fhould be kept until two years old and paft, fuld tat at from two to three years. On fuch a plan a lluck increafes rapidly, perhaps more fo than the capital employed. But the conductor of fuch an undertaking would of courfe proportion his Hock to his money, to that all the works might be conftantly going on, without fop or
break ; to effect which, would demand no inconfiderable forefight and knowledge of the butiners.

Fy the plan of letting the lands, as foon as brought into comp'ete cultivation, the capital employed in the undertaking would be exerted to the utmolt force and advantage in fpreading the improvement over the greateft poffible breadth of walte. If the lands were all to be kept accumulating into one farm, it would grow too valt to be managed with profit; but, by letting, the principal attention, exertion, and force of capital would be always cmployed where moft wanted and noft ufeful; and it is hardly to be believed by thofe not accuftomed to fuch obfervations and inquiries, how great a tract of country might, in twenty years, be improved.
Ilanting colonies of foreigners upon waftes, has been a favourite method purfued in feveral countries, particularly in Spain and in Ruffia; fuch ipeculations have rarely anfwered the immenfe expences beftowed upon them. The lands are ufually but half in. proved ; the hufbandry introduced is almolt fure to be bad; and the jealouly with which the new fettlers are viewed by the natives, prevents their practice from ever being imitated. Such a mode of improvement as is here iketched would be infinitely more beneficial; what was done would be well done, all would be executed by natives, for the only foreigner employed in the bufinefs fhould be the director. There would be no probability of the improvement not being durable and fpreading widely, for the lands not being let until the cultivation was completely in train, the profit as well as the method would be feen loy every one.
By executing the improvement of a wafte on thefe principles, ten thoufand pounds would have an infinitely greater effect than an hundred thoufand expended in any other method: in the German colonies, effablifhed in the Siera Morena in Spain, and in various others in different parts of Europe, much attention has been paid to the eftablifhing of little farms only. I do not want to view fuch, to know that the improvement is beggarly, and the hufbandry contemptible: no wafte can be really improved, and to the beft advantage, but by means of the fheep, powerfully applied; all other methods are coftly, how, and of weak effect; but no little farmer can have a ftock fufficient. This paltry idea, of eftablifhing nothing but little farms, is the refult of moft impolitical ideas refpecting population, which ought never to be the object of a moment's attention. If it exilt idle, or beyond the proportion of employment, it is the fource of poverty and wretchednefs; it is valuable only in proportion to regular and active employment; find that employment, and you wilt have an induftrious active population in fpite of every obitacle. But frall farms and little divifible properties, increafing the people without increafing employment, has no other tendency than to propagate idle beggars, and to diffeminate modes of tuibandry calculated to txhauft the land, and keep its cultivators in nifery. Tthis is not theory but fact, of which almoft every province in France abounds with glaring inflances. But of this more in another chapter.

There is another fort of wafte land, that abounds alfo very much in France, I mean marthes: it is afferted, that there are from $1,200,0=0$ to $1,500,000$ * arpents of them in France. The improvement of thefe is vally' move expentive and more difficult than that of landes, heaths, monrs, Ne. The drails demanded for them require a confiderable capital. Thefe ought to be converted to meadow and rich palture, by means of draining. Where they admit it, the cheapell improvement of fuch is by irrigation; the general drainage of great marhes, if not trulted by the allemblies of the departments to

the conduct of fome one able director, fhould be done by commiffion ; by conftituting a company as in England, and paying the expence by a tax on the lands drained. If the rage for fmall farms continue, thefe marhes, in proportion as the foil is boggy, will admit of being divided into fmall portions, that is of thirty to fixty arpents, but it fhould be under an abfolute prohibition of the plough. The bog, which 1 faw in paffing from Auvergnac to Nantes, and which feems from its appearance on the map of Bretagne, to be of a vaft extent, is highly fufceptible of improvement, and every acre of it might be converted into rich meadow.

## Chap. XXVII.-Of Coals in France.

Limousin.-Limoges.-I was here affured that a vein of coal has been found at the depth only of twelve yards, which is feventeen feet thick, but it is no where ufed, either in houfes or in manufactures; the iron forges are all worked with charcoal. If this is fact, what a want of capital it proves!

Flanders.-Valenciennes.-There are mines worked here. The manco of two hundred and forty pounds fells for $23 / .9$ den. and the worft of all at $12 \frac{1}{2} \int$; the largeft of all at 35 f . and 36 f . ; they are more abundant at Mons. Wood is burnt here at the inns, and all the better private houfes, but the poor burn coal : the mines they fay, are feven hundred feet deep; the coal is drawn up by four horfes; they have four Iteam engines.

Lille. - Coals, the raziere, 3 livres.
Dunkirk.-Englifh, the raziere of three hundred pound, 8 livres. Thefe are burnt in every houfe in the town, and are one-third cheaper than wood: there is a canal to to the coal pits at Valenciennes, but the diftance too great, and locks too numervus and expenfive to rival the import from England.

Bethune.-Pits within a few leagues. Price here $44 \int$. to $46 f$. the raziere, which, I have been told, holds about nine Jinglifh pecks, but the raziere of St. Omers holds one hundred and ninety-five pounds of wheat.

Rouch. - The boiffeau of twenty two pots, each two bottles, 3 livres 10 .
Ifigny.-A mine newly opened, at which the coals fell at $14 j^{\prime}$. 1 liard the boiffau of ninety pounds to one hundred pounds.

Carentan.-Coals of the comatry only for blackfmiths, 14\%. the boilienu of eighty pounds dry at the mine, but wet are ninety pounds or one hundred pounds: thy are not half io good as what is brought from Jingland.

Cberbourg.-In the manulacture of blown phate glafs, a great quantity of Newcafle coal is burnt; thirteen keel, or one hundred and three chaldrons colt, all Englifh charges included, about 750 livres; the French duty 3600 livres; and port charges, \&c. make it in all about 11,000 livres, which being near 5 l. a chadron feems an enormous price, at which to buy luel for a manufacture. The soals of the Cutatin, they fay here, are good for nothing.

Granville.-The blackfmiths burn Gucrnfey coals.
Auray.-Finglifh coals; lares the builieau of about three Englifh pecks, which the black funths ufe for particular purpolies.

Nantes - French coal 300 livres the twenty-one barriques, cach double winemealure, or four hundred and eighty pints, but one barrique of Englifh is worth two of it.

A coal mine worked by a Munl. Jarry, at Langein, five leagues from Nantes. Another at Montrelais, near Ingrande; and at St. George, near S:umer. The French coals uled in the toundry, near this city, come to $3+$ livres the two thoufand pounds.

La Flcclee.-Price 16 f . the boiffeau, of thirty pounds, wheat; they are from Angers.

Roucn.-Monf. Scannegatty works the common borer with a windlafs in boring deep for coals, for which purpofe he has been employed by government: he fhewed ine the model of one made at Paris, three hundred feet long, with this he has bored one hundred and fixty feet, much of it in hard rock, without accident; his objection to fhafts is the water rifing, he would ufe fhafts until he comes to water, but after that mult bore. He fays the badncfs of the coal in the mine near Cherbourg, arifes mercly from being ill worked; they have got at prefent only to the furface coal, inftead of piercing through the bed. M. Scannegatty afferts the confumption of Fnglifh coals in the generality of Rouen to be two millions a year. The price is 40 livres for fix and a alf barriques, each barrique one handred and fifty pounds, or nine hundred and feventy-five pounds, or about 80 liveres a ton.

Elbouf.-Confumes 200,000 livres a year in Englifh coals.
Nangis.-Brought from Berri. Price 4 livres the Englifh bufhel.
Lorraine.-Pont-à-Moufon-From Sarbruck 18 livres the thoufand pounds. At the mine 5 livres.

Alsace.-Befort.-Price at the mine, four leagues from this place, $12 \%$. the hundred pounds; here $16 f$. They are ufed only by blackfniths.

Buurgogne.-Chagny.-Coals from Mont Cenis; at the mine 6 livres the wine $q^{\prime \prime} u$-here 10 livres. Nobody burns coals in their houfes.

Mont Cenis. - At the mine a ban 10 f . It is remarkable, that at the inn here and at every houfe, except thofe of the common workman, wood is burnt: which thews the abfurd prejudices of the French in favour of that fuel, in [pite of price.

Bourhonnols.-Moulins.-Price $30 \%$. the bachole, of which four makes a poinçon.
Auvergne.-Clermont.-Price 10 livres the raze of two feet two inches, by one foot fix inches, and nine inches deep. Ufed only in foves or by blackfimiths, they are from Brioude.

Brioudc:-The raze, of one hundred and fifty pounds, $16 \rho$. but the beft is $20 \%$.
Fix.-The carton of fifty pound 14\%:
Vivarais.- Coforos. - The quintal $50 \%$.
Thuytz--'The blackfmiths here burn charcoal, yet are near the coal mine which I pafled in the vale; it is a fone coal; the price $7 /$. the hundred pounds.
1)abphana:- - Nontilimart. - Large coal t livere 15 f. the one hundred and fifty-five pounds; fnall, for blackfmiths and manufacturcrs, 22f. the one hundred and fifty-five pounds. The mine is at Givors near Vieme, at five leagues from Lyon; there is a canal to Vienne, but with a toll. Coak, made of coal, for melting, $5 \%$, the quintal.

Picre Lattc.- Coals 3 livres the meafure of about fix pecks; none ufed by black. fmiths.

Provence.-Tour d'Aigucs.-Price $+\mathrm{o} /$. the quintal. 16 f . or 18 f . at Aix. At the mines three leagues from Aix, $5 \%$.

Marfaillc.-Coals from Givors in Dauphiné near L.yon, 33 f. for two hundred and ten pounds, of Faveau in Provence, $40 /$. to 24 f . tor three hundred pounds. Of Valdonne 41 f. ditto; ufed in the foap fabric and fugar refineries. Of lingland $42 f$. to $45 \%$. on board the thip, for two hundred and ten pounds; on thore $60 \rho$. fur one hundred and siacty-five pounds.

Lyonnois. - Lyon.- Coals $30 \rho$. the one hundred and thirty pounds. The mines are fix leazues off, price there 24 . for one hundred and fixty pounds: there is a canal from the pits to the Rhone.
The want of vigour in working the coal-mines in France, is to be attributed to two caufes; 1. the price of wood has not rifen fufficiently to force this branch of induftry; and, 2. the want of capital whish affects every thing in that kingdom, prevents exertions being nuade with the neceffary animation. But thefe cvils will correct themfelves; the gradual rife in the price of wood, which fo far from being an evil, as it is univerfally thought in France, is only a proof of natimal improvencent, will by degrees force the confumption of coals; and when thefe are in the neceffary demand, they will be produced in greater quantities.

## Chap. XXVIII. - Woods, Forefts, Timber, and Planting, in France.

Pyrcméces. - A confiderable proportion of thele mountains is under wood, and a much larger has been; for the deftruction of them making every day is not credible to thofe who have not viewed them. Paffed frequently through fevcral woods near Barnere de Luchon, in which the woodmen were at work, riving and cutting beech ftaves for calks; I was fhocked to fee the deftruction they made, which could not have been more wafteful or lavilh if they had been in the midtt of an American foreft. Large and beautiful beeches are cut off, three, four, and five feet high, and thofe noble fumps left to rot; whole trecs, which on trial would not rive well, left for years, and now rotting untouched: and in working thofe we faw, nothing but clean cuts taken, three or four fect perhaps in fifty, and the reft left on the ground in the fame confufion in which it fell. The deftruction fo general in this noble foreft of Lartigues, that it is almoft deAtroyed; there is no young growth for fucceffion; and in ten or twelve ycars it will be a bare mountain with a few miferable fhrubs browzed by goats and other cattle. In fome tracts which I paffed, at a few leagues difance towards the walks of the Spanifh flacks, there are fome forefts deftroyed in fuch a fhameful manner, that to a perfon, from a country where wood is of any value, mult appear incredible; feveral fcores of acres fo utterly deftroyed that not a tree remains ftanding; yet the whole a foreft of ftumps, threc, four, and fix feet high, melancholy and fhocking to behold. The torrents every where roll down as much wood as flone, and prefent a fpectacle of fimilar ruin; the roads are formed of fragments of trees, and are guarded againit the precipices by whole oncs laid and left to rot; you no where pals many yards without thrufting your cane into bodies, rotten, or rotting; all is ruin, walte, and defolation; and the very appearance one woukd fuppofe a wood to carry, in which a forcign enemy had, with the moft wanton malice, deftroyed every thing.

Thefe woods are commons belonging to the communities of the parifhes, upon which every inhabitant affumes the right, and practifes the rage of depredation. So carelefs of the interelts of pofterity, or rather fo inflamed againit every idea but that of the prefent moment, that, in the general opinion, there will be an undoubted fcarcity in thirty years, amidft what have been, and yet are, in fome diftricts very noble forefts. The communities fometimes fell woods; an inftance occurred lately, that of Bagnere de Luchon fold a fall for 14,000 livres, but worth, it is laid, 35,000 livres, in which fome pilfering might take place; this was to pay their fhare of the new bathing-houfe. Is it pollible that fuch a recital can be given of a country that imports pot-alh from the diftance of two thoufand miles?

Vol. 1 V .

The number of faw mills in thefe mountains, turned by torrents, is confiderable; the $\boldsymbol{y}$ are of a very cheap and fimple conftruction, but exceedingly incomplete, having no mechanical contrivance for bringing the tree to the faw, a man conftantly doing it by prefing with his foot on the cogged whed.

Langurdoc. - Lunel.-At the Palais Royal inn there is one among many ftables which is covered by twelve large beams, fixteen or eighteen inches fquare, and fortyfive feet long. The whoie country is at prefent quafi fuch trees as thefe, denuded.

Gascogne.-St. Palais to Anjpan.-An oak here fells for 30 livres, which would in England fell for 45 s . to 50 s .

Isle of France, -L Lieurfaint.-In the royal foreft of Senars, the oak copfes are cut every twenty years, and fell at 600 livres the arpent (the cord of wood felling at Paris, at 50 livres; which makes 30 livres a year, but from this carriage is to be deducted, and there will remain about a louis d'or.

Liancourt. - Woods here form a confiderable pertion of the whole country. They are in general cut at twelve years growth, but in fone parts at fifteen and twenty; they fellat twelve years from roolivres to 200 livresthe arpent (about one acre and a quarter): at 150 livres, it may be called 12 livres per ann.; as they are on the pooreft land this is much more confiderable than the fame land would let for, but it is much inferior to what the product of the fane lands would be under a tolerable fyttem of culivation. The quantity of foreft fpread over the country, in almuft every direction, makes timber cheap: oak, afh, and elm fell at $30 \%$. the cubical foot, a larger foot than that of England. The pooreft family 60 livres a year in wood.

Clermont.- Near this place, in the foreft of la Neuville eu Haye, belonging to the king, there is an undertaking now ( 1787 ) going forward, which does honour to government: it is a plantation of oak for timber. The land is inclofed with pales, wired to the rails in the French manner, inftead of nailing : the land is all trenched two feet deep, for which the workmen are paid according to the foil, $20 \%$. to $40 \%$. the fquare perch of twenty-two feet, and they earn about 22 f . a day : as it was an old foref where they work, there are many roots, for extracting which they are allowed fomething more. The foil in general is a good light loam, except in fome parts on a pure white fand. The whole expence by contract (fencing excepted), digging, planting, filling vacancies, and hoeing twice a year, for five years, is 300 livres the arpent, of about one acre and a quarter. The fence is 3 livres the toile, or about 1 s .2 d . a yard, running meafure: fixty arpents are done, and they are fill at work. I viewed the oaks with pleafure; they are moft of them remarkably finc ; they thrive well and are very healthy; fome are five years old from the feed, and others five years old from tranfplanting ; the plants then three years old : thefe are the largeft, but not more fo than three years' difference in age ought to make them; they are in rows at about four feet. There is alfo a tmall inclofure of chefnuts and Bourdeaux pines (pinus naaritimus,) fown four years paft, which are now five feet high, which is a valt growth. The only enemy which the oaks have hitherto met with is the cock-chaffer grub, which has killed fume.

Dugny.-Monf. Cretté de Paluel has planted many thoufands of the poplar with fuccefs, and has cut them when only twelve years old, large enough for building. Severai of his farming offices, very well and fubftantially built, are of this wood, erected twelve years ago: and the timbers are now as found as at the time of ufing; but he has found that when expofed to the weather it cioes not lant.

Normandie.-Bon.- The feat of the Marquis de Turgot, elder brother of the celebrated controleur-gencral. A large plantation of foreign trees, in which nothing is fo remarkable as the fuperiority of the larch to every other plant.

- Falaije. year.

Harcou beyond an at five fee cut Norm acre).

Isle o arpent (91

Сham
(id. : ther, 4

- Falaije:-Woods at twelve years growth, pay 8 to 10 louis an acre, or 22 livres a year.

Harcourt. - The larch and Weymouth pine of eighteen years growth, have thriven beyond any thing. I meafured a larch of that age, three feet fix inches in circumference, at five feet from the ground; and a Weymouth two inches larger. Woods throughcout Normandy, on an average, pay 20 livres the Norman acre (10s. 6d. per Englifh acre).

La Roche-Guyon.-There is nothing in this country that pays better than plantations of willows for yielding vine props. The Duchefs D'Enville has a piece of three and a half arpents, which yields 400 livres a year, by being cut every third year. New ones are fet as the old wear out; the heads are cropped at three years old, and the great product is from nine to eighteen years of age. Lombardy poplars planted by the prefent Duchefs, of twenty-four years growth, are worth is livres each, ftanding only fix feet afunder: it would be ufelefs to apply calculation to this fact, to fee what the acreable produce would be; for if a man had a few acres to fell every year, he would be able to get no more than the price of a very bad fire wood, not faleable till after every better fort in a country was confumed. Could a demand be found the profit would be enormous. They grow on the level of the Seine. They are cut into boards ten inches wide, which fell at 28 . the foot.

Isle of France.-Columiers.-Woods at nine years growth, worth 180 livres the arpent ( 9 l. the Englifh acre).

Champaone.-Mareuil.-At twenty years growth, worth 300 livres the arpent (icl. :s.er Englifh acre), at one and a half or two leagues from the Marne, but if further, $4 \quad \therefore$ per arpent per annum deduction.

Ep .-It is poffible to go from hence to Alface, with no great interruption, through forelt all the way.

Loraine.-Braban.-Woods are cut at twenty years growth, and the produce 12 livres per a:pent per annum (i8s. 4d. per Englifh acre).

Metz.-Woods cut at twenty to twenty-five years growth, 120 livres the journal.
Luneville.-Woads cut at twenty-five or thirty years growth, from 40 livres to soo livres net the journal, one thoufand nine hundred and feventy-four Englifh yards.

Franche Comté.-Befangon.-Cut at twenty-five years growth, and yields $15^{\circ}$ livres to 200 livres the cutting, or 8 livres per annum per arpent; near the forges of the city, to 300 livres ( 101. 10s. per Englifh acre).

Orchamps.-A little auberge confumes from twenty to thirty waggon loads, each 8 livres in a year at one fire.

Bourgoone.-Auxonne. $\rightarrow$ Pals a wood felled and corded, twelve cords per Englifh acre; the cord eight feet by four feet, and two high; and the price 8 livres. A little aubergifte confumes to the amount of 200 livres a year one fire. It would coft a poor family 80 livres a year, if they hought fairly all they burn. Calculate

Dijon.-Confumption of one fire, five or fix maul for the poor, the maul four feet cubical. Of the whole town of twenty-four thouland people, forty thoufand maul. Beft rak timber, 3 livres ihe cubical foot. Inferior to $20 \%$. Elm dearer than oak; ufed ior wheel carriages only. Pine one-third cheaper.

Bourbonnois-Moulins-Copfes cut at fifteen years growth, and fell at 50 livres the arpent, of forty-eight thoufand three hundred and eighty-four feet; no expence except cutting. Oak timber, 18 f . to 20 f . the cubical foot. Flanks of nine, ten, and eleven inches wide, 45 livres to 60 livres the hundred toife (fix feet), $\frac{1}{4}$ inch thick. Laths $14 \int$. the faggot, of fifty-two, and five feet long.

Auvergne.-Riom--One fire, and a very poor one, solivres, if bought.
Clermont.-A poor family, to fteal none, muft have ten cord, or 60 livres, and charcoal to the amount of 15 livres; but in general they Ateal, or collect as well as they can.

Vivarais.-Pradelles to Thuytz.-Great woods of pines in thefe mountains, with faw nills for cutting them.

Dauphine'.--Loriol.-Oak $12 f$. the hundred pound.
Provence.-Tour d'Aigucs. - Wood thrives greatly in this country. The Prefident has a great many oaks, and iome of a vaft fize; alfo black pepiar and beech. One by the farm-houfe, thirteen feet eleven inches, French, in circumference, at five feet from the ground, and eighty feet high. Here alfo are ever-green oaks, five hundred years old. He has platanus of a vaft growth, in twenty-five years, and the morus papyrifera, of a great fize. The pooreft family in this country confumes fixty quintals of wood a year, folen or bought; generally the fornser. A bourgeoife, that has foup every day at one fire, one hundred and fifty quintals.

Fréjus to Eflrelles.-The pines, \&c. in thefe mountains, hacked, plundered, and deftroyed, almoft as wantonly as in the Pyrennees: and fpots every where burnt by the Ghepherds, though prohibited, in order to procure herbage for their flocks.

## Price of Wood and Charcoal, \&oc.

${ }^{\text {Price per }}$ Paris load of 140 ft.
1787.-Limousin.-Limeges.-Charcoal 30\%. the quintal.

Anooumois. - Verteuil. - Cord of wood 10 livres near a navigation; 3 liveres at 2 diftance.

Isle of France.-Me.itgeron.-Cord 44 livres.
Flanders.-Lillc.-Ditto 60 livres.
Dunkirk.-Ditto 60 livres the load of one hundred meafures.
1788.-Normandy.-Caen-Charcoal 20f. the raziere, of forty pound of wheat.

Cord of beech wood, fix feet long, four broad, and four high, 24 livres, - 35
Other woods 18 livres to 20 livres, " ${ }^{-}$- ${ }^{-}$
Faggots of three and a half feet round, and five feet long, with large wood in them, 60 tivres to 80 livres per hundred.

Bretacne, - Remess. - Cord eight feet long, four high, and two and a half broad, 15 livres to 17 livres,

Landernau. ...Cord eight feet by four feet, and two and a half high, 24 livrcs, 42.
L'Orient.-Cord eight feet hy four feet, and two and a half high, 20 livres, 35
Auray.-Charcoal 3 livres the barrique. Iron $5 \delta$. the pound. A horfe fhoe 12):

Auvergnac.-Cord of wood, 28 livres,
Nantes.-Ditto 30 lirres to 36 livres,
Swedih iron 880 livres the thowhand pound. Hemp 50 livres the hundred dite.

Ancenis. - Cord $2+$ livres.
1.

Anjou. - Angers. - Cord cight feet long, four feet high, and four broad: a dou. ble cord, 40 livres.
Faggots 18 livres to 24 livres the hundred.
La Flache. - Cord 16 livres to 21 livres,
Charcoal 70 livres to 80 livres the forty-two barriques.
Maine.-Gucfolard.-The cord, fix feet by $3^{\frac{1}{2}}$ feet, and $3^{\frac{1}{2}}$ high, of pine, 6
livres, - - - - - - $\quad$ - 12
Ditto of oak, 14 livres, - - $\quad$ - 26
Normandy. - Gacé.-Charcoal 52 f. the barrique. Iron 23 livres the hundred pound, or 1 liard lefs that 55 the pound. They charge 88 , the pound for heavy work, and 32 . for hoeing a horfe.

Elbauf. - The cord eight feet by four feet, and $2 \frac{1}{2}$ high, 24 livres, - - 42
La Roche Guyon.-Cord eight feet by four feet, and four high, is 30 livres, 32
Isle of France.-Nangis.- Cord twelve feet by four feet, and four high: price 24 livres to 28 livres,18

Champagne. - Mareuil. - Cord eight feet long, five feet high, and three feet feven inches broad, fells, oak ${ }_{3} 6$ livres,31

White woods 24 livres, - - - $\quad 21$
Charcoal $50 \%$ : the tonneaux, of two hundred pints of Paris (quarts).
Epernay.-The cord 40 livres,
St. Maneboud.-Cord eight feet by four feet, and $3 \frac{\pi}{2}$ inches: 18 livres 19. S. : in $^{\circ}$ the town 19 livres; but iwenty-five years ago it was 7 livres to ten feet,24

Lorraine. - Bravan. - Cord eight feet by four feet, and four high, is 1.9
livres, - - - - 20
A 'ar-le-Tour.-Cord eight feet by four feet, and four high, is 16 livres; the beft
1 livres, 20

Of oak, 22 livres, - - . . . 24
Pont $\dot{a} \cdot \mathrm{M} \cdot \mathrm{u}$ ffon.-Cord eight feet by four feet, and 4 high : in town 16 livres 109
In the foreft 12 livres.
Nancy.-Cord floated oak 20 livres; other forts 23 livres, - - 28
Not floated oak 26 livres; beech and hornbeam 34 livres, - 37
I uncrillc. - Cord eight feet by four feet, and four high : now 24 livres to 28 livres.

Al.Sace.-Strafbourg.-Cord fix feet by fix feet, and three high : price 27
livres, - - $\square^{-} \quad-\quad 3^{8}$
Schelefith.-Cord fix feet by fix feet, and three high ; price 24 livres *, - 3 !
I/e.-Cord eight feet by four fcet, and four high; price 12 livres, yet many.
iron forges,

[^81]Franche Comte'.-Befangon--Cord eight feet by four feet, and four high, liv. floated, 16 livres $10 \%$. Not floated, 25 livres,

Orcloamps.-Iron; all ufed by blackfmiths; is of the country ; 55 . the pound. Charcoal only ufed in making it, at 40 livres the load of four horfes, about fifty or fixty buthels; there are forges fpread over the whole country: one within three leagues, which, with its furnace, ufes fifty loads of wood per diem. Shoeing a horle 49 .

Dijon.-Cord $7 \frac{1}{2}$ feet by four feet, and $4 \frac{1}{2}$ higi, at 26 livres the mocul, a cube of four feet, and the price 13 livres, Price of carriage $20 f$. per thoufand pound for each league.

Clagny.-Mceul, cube of four feet, ${ }_{13}$ livres to 16 livres,
Iron : tier of wheels $7 f$. the pound and $8 f$. for the nails. Price of iron $5 \%$. l liard.
Moulins.--Cord, two to a coche, 30 livres. Charcoal $3 \$$. to 3 . the Englifh peck. Iron I liard under $5 /$. per pound. Caft dito $\frac{2}{5}$.

Clermont. - Cord three feet eleven inches, by feven feet four inches circumference; price 6 livres, about one-fourth of a Paris cord, Charcoal $2 f$. the pound.
Fix.-Iron $5 \frac{1}{1}$. the pound.
Montćlimart.-Charcoal 5 . the hundred pound.
Pierre Latte. - Wood 20f. the hundred pound.
Avignon.-Wood $18 f$. to $20 \%$. the hundred pound. Charcoal 3 livres the hundred pound.

Tour d"Aigues. - Charcoal 45f. the hundred pound.
Marfeille.-Wood 3 livres $17 f$. for three hundred pound, and $8 f$. carriage from the thip.
In winter the fame, 5 livres. Charcoal, by fhipping, 50 . the quintal, one hundred and twenty pound; by land $70 \%$.

Lyon. - Oak, the mocul, three feet eight inches fquare, 23 livres.
General average,

- 30

To thefe data may be here added, that the woods and forefts of the kingdom amount to $19,850,515$ acres, and that the average annual produce may be reckoned 14 s . an acre. It here appears, that the average price per cord, of one hundred and forty cubical feet, is 30 livres.

The price of wood has rifen confiderably in France. Price of the lignier, equal to two Paris voies, at Bourg, in Breffe.

| In 1688, | - |  | 3 |  |
| ---: | :---: | :---: | :---: | :---: |
| 1718, | - | - | 3 | liv. of. |
| 1748, | - | - | 7 | 12 |
| 1778, | - | - | 9 | 10 |
| 1789, | - | - | 21 | 0 |

The fcarcity of wood in France, as marked in this rife of price, has occupied at leaft an hundred pens during the laft ten years: almoft all the cahiers complain heavily of it, and in that of the clergy of Meaux, they call it a real caamity. There is hardly a fociety of

[^82]agriculture in the kingdom, that has not offered premiums for memoirs that fhould explain the caufes of fuch an alarming want, and point out the beft means of remedying it. The opinion is univerfal; I have met but one mind upon the topic, which, confidering the talents for political œconomy, furprifed me a good deal : for I mult declare myfelf of a direstly contrary opinion, and venture to affert, that the price of wood is too low in France; that it has not rifen fo rapidly as it ought to have done; and that all ideas of encouraging plantations, to prevent a further rife, are ignorant and mifchievous, and founded in a total mifconception of the fubject, for want of combining thofe circumftances which bear upon the queltion. The rent of arable land, in France, calculated feparately, and rejecting the parts left wafte, and in neglect, is 15 s .7 d. an acre; but the rent of woods is oniy 12 s . How then in common fenfe can any one complain of a price of wood, which, inflead of being at its prefent rate an injury to the confumer, is actually a material one to the landed intereft, who do not make by their woods nearly what they would do by the land if it was grubbed, cleared, and converted to cultivation; and I am fo well perfuaded of this, that if I was the poffeffor of woods in France, I would inoft affur dly grub up every acre that did not grow upon land impracticable to the plough; and I fhould do this under the firmeft conviction that my feculation would be profitable. If tillage improves, and freed from thes and inequality of taxation, no one can doubt but it will improve, the price of wood ought to rife very confiderably to prevent landlords, who are well informed, from grubbing up; and let it be confidered how valt a premium there is to induce them to fuch a conduct, in all woods where the growth is ancient, as forty, fifty, fixty, and a hundred years, at which age mas yare found in France: the money which the fale of fuch would produce, placed at interef, and the land converted to tillage, would in moft inftances treble, and even quadruple, the revenue to be gained from the fame land while cropped with wood. Nor is it to be forgotten, that frefh wood-land is generally fertile, poffeffing ftores that, with good management in refpect to crupping, may be made to laft at leaft twenty years, and in fome meafure for ever. We may fafely determine that the price of wood is not rifen to a fair par with other land products, until it can no longer be the intereft of the land owner to grub up, and till woods yield as good a revenue as the lands around them, well cultivoted. It is an undoubted fact, that the price is not yet rifen near to fuch a par.

There is yer another, and equally unquef nable proof, that the price of wood is much too low in France, and that is the coal mines, found in almoft every part of the kingdom, emain for the greater part unworked; and that the people burn wood even in the immediate vicinity of fuch mines; I was myfelf ferved with wood at all the inns, at and near the cual mines wrought, of Valenciennes, Munt-Cenis, Lyon, Auvergne, Languedoc, Normandie, Bretagne, Anjou, \&cc. \&cc. Is it poffible to fuppofe that this would be the cafe if wood was rilen to its fair par with other commodities?

The conclufion to be Jrawn, from this ftate of facts, is fufficiently clear, that the leginature ought not to take any fteps whatever to encourage the production of wood, but leave it abfolutely free to rife gradually to that fair price to which demand will carry it; and that the focieties and acadenies of agriculture, compofed of citizens, that is to fay, commonly of mere confumers, uninterefted in the production, ought to ceafe their unjull and impertinent clanour againfl the price of a commodity which is much too cheap. Whenever the price of wood rifes too high, coal mines will every where be effectually worked, and the people in fight of them noft afluredly will not burn wood.

We have of late had, in Fngland, the fame vulgar apprehenfion of a want of wood, efpecially for fhip building, which has difgraced France. No wonder timber has been deftroyed
deftroyed in both kingdons, while the price was inadequate to the expence of raifing it. Thimber for flip building, as well as cord-woo', fhould at leaft bear a proportion with corn, meat, butter, wool, \&c. which the ground might yield if not occupied in a different ma:ner. The comparifons made are by landlords, who look only at rent, but the national interells require that produse fhould be confulted. The argument conmonly ufed, by the propristors of the landes of Bourdeaux, againf cultivating them, is, that they yield at prefent, in pincs, a better rent in refin than they would do for cultivation, which is certainly trus, if the culture introduced was not good; but what a lofs to the mation to have lands cmployed to yield, like all the woods of the kingdom, a grofs produce of 16 lives per acre, inftead of 40 livres, the produce of arable land? Thofe who contend for encouragement to planting, becaufe wood is dear, call for the inarvillous improvement of converting land, which now yields 40 livres, to the ftate of yielding 16 lives ! It is juft the fame in England; our focieties offer premiums for planting, and, as far as thofe premiums are clained, or induce men to think planting an improvement, they are attended with the mifchief and abfurdity of preferring a fmall to a great produce. There are tracts of impracticable land, 1 will not fay rwafe, becaufe nine-tentis of our wafte lands, like thofe of France, are fufceptible of cultivation, and therefore it is a public nuifance to plant them: it may be profitable to the landlord to plant quick growing trees, becaufe he confiders only rent, but focieties and the nation thould look at produce, and confequently difcourage :al planting.

The common argument, that is founded on the fuppofed neceflity of a Royal Navy, 1 hould be forry to beftow three words upon; for thold every idea of a great naval force to be founded on very queflionable theories. Injurious to other nations in its object, which is that of extending to the moft dittant parts of the glowe, the mifchievous effects of ambition, and all the horrors that attend the firit of conqueft, when flowing from tue wortt firit of foreign commerce. A great navy afiords the means of fpread. ing what may to Europe be called a domeftic quarrel to the mof diftant regions of the globe, and involving millions in the ruin of wars, who are in juftice as unconcerned in the difpute as they are removed by diftance from the natural theatre of it. And whatever commercial neceflity, founded upon the worft principles, may be urged in the fupport of it, yet the expence is fo enormous, that no nation, it is now well underfood, can be formidable both at land and fea at the fame time, without making efforts, that throw our own burthens, by means of debts, on our innocent pofterity. Mr. Hume remarks, that the Britifh tleet, in the height of the war of : 740, coft the nation a greater expence than that of the whole milital; eftablifment of the Roman Empire, under Auguftus, while all that deferved to be called the world was in obedience to his fceptre ; but in the late war, the expence of our flect amounted to more than the double of what attracted the notice of that agreeable and profound politician, for the naval expence of 1781 arofe to $8,603,8841$.

The ambition of flatelimen is ready at all times to found upon a great commerce the necefity of a great navy to protect it ; and the next Itep is, the luppofed neceflity of a great commerce to fupport the great navy; and very fine arrangements, in political weonomy, have been the confequence of this nifchievous combination. 'The delufive dream of colonies was one branch of this curious policy, which coft the nation, as Sir John Sinclair has calculated, two hundred and eighty millions! Rather than have incurred fuch an enormous expence, which our powerful navy abfolutely induced, would it not have been better had the nation been without commerce, without colonies, without a navy? The fame madnefs has infefted the cabinet of France; a great navy is there alfo confidered as effeutial, becaufe they have in St. Domingo a great colony; this one
nuifance $b$ will ceafe mercial ra

[^83]nuifance begets another. The prefent century has been the period of naval power. It will ceafe in the next, and then be confidered as a fyltem founded on the fpirit of commercial rapine.

But whatever neceffity there may be for navies, there :s none for raifing oak to build them, which ir is infinitely better to buy than to cultivate. There is no profpect of exhaufting the oak of the north, of Bohemia, Silefia, Poland, Hungary, and the territories on the Adriatic, for centuries to come; the price will rife as carriage becomes expenfive, but the fupply will remain for ages. So long ago as the beginning of the laft century, we ufed fir for building, from the fcarcity of oak *; and notwithftanding the immenfe confumption fince, the countries that fupply it promife to continue that fupply for five centuries to come.

A veffel of the firlt rank is faid, in France, to demand fixty thoufand cubical feet of timber $\dagger$; but a later account makes it much more confiderable.

I cannot quit the fubject of woods without remarking, that many of the nobility, in France, have given that attention to the introduction of exotic trees, which would have been a thouland times better applied to improving the agriculture of their diftricts: I faw many places, the owners of which affected to make a reputation by their evergreens, and other plantations, while living in the midft of lands, under a cultivation difgraceful to the kingdom, and the fame even on their own farms. For one fol that France will ever be improved by their exotics, it was in their power to have improved her many louis, by very different exertions.

## Chap. XXVIII.-On fome ©Economical Practices in France.

SOME fcattered minutes, not abfolutely ufelefs may perhaps better be thrown together than burnt; for ingenious men fometimes catch hints from a dight mention of practices, and apply them to ufes not at firft thought of.

## Building.

Languedoc.-Montauban to Touloufe.-At a brick-kiln, obferve that they burn only faggots of vine-cuttings.

[^84]Baguere de Lucbon.-For building the new bathing.houfe erciting here, by the flates of Languedoc, they work the lime (burnt from a fine blue hard fone) with gravel inftead of fand, of which they have none in the country; and, on examination, I found this gravel to be a true lime-fone one, the fame fo often met with in Ireland. I could not find that the mortar was the harder or better for this; but, on breaking, rather fofter than that of fand. They have here a very effectuai method of cementing ftone; when fquared blocks break, they join them very eafily, by applying this cement;refin, three-fourths; fulphur and wax, one-fourth; powdered ftone, of the fort to be joined, enough to give it the right confiftence when melted. This holds the fone fo firmly together, that the folid part will break rather than at the junction.

Normandy.-Carchtan to Cultances.-They build here the beft mud houfes I have any where feen; very good ones, of three flories, are thus raifed: and confiderable offices, with large barns. The earth and flraw well kneaded cogether, are freaci, about four inches thick, on the ground, cut in fquares of nine inches, and thele toffed from a fhovel to the man on the wall, who builds it; it is fuifhed, layer by layer, and left for drying, as in Ireland; the layers three feet high, and the thicknefs of the walls about two feet; they make them projecting about an inch, which they cut off, layer by layer, perfectly fmooth; if they had the Englifl way of uhite-wafling, they would look as well as our lath and plafter houfes, and be vaitly better and warms. In good houfes, the doors and windows are in fone work.

Bernay.-Mud walls to inclofe gardens, and for fruit, well built and thatched at top.

Champagne.-Epernay. - Monf. Paretclaine's new oak floor, which is the common fahion of France, of fhort fantlings, in a fort of Mofaic, cofts 4 livres, the fquare toife of fix French feet, including joifts and all. They are dove-railed along the fides, but nailed at the ends, the nails knocked in, and a plug of wood driven in and plained off.

## Jime.

Languedoc.-Bagnire de Luchon.--The lime-kilns here, while burning, have a remarkable fmell of burning fulphur, from the quantity ot that mineral with which the lime-fone is mixed. Thes build their kilns oval, foelling in the middle, with amouth, not quite at the bottom, where they put in the wood: the upper part is covered with fomes, in orler to keep the tieat in. They are twent four hours bursime the lime. When burnt, flop the mouth clofe, and leave it to con!, which takes thas days; after which, they take the bine our. A him holis four humdred fiptien, which may be fuppofed the feptier of laris. They carry, with a pirotosum, mar cho feptiers. Sell it at $4 \%$ to +5 \% the feprier. Such a gataty of heme tahes fix humdred laggets to burn, and a litile other wond.

Flanders.--Armatiarss to Monteafel- - Heaps are bing in fome ol he fivids, ran dy for ipreading. It is burnt in the courtry.
 two barriques.

Barament-Limestone plentiful, yet line solivere the pipe.
 two pipes.
 ty.two dameter.

Vamaras.-Pradllis.-Lime 9fo the meafure of tinitytyo poumds.

## Fences.

Normandy.-Pays de Caus. - The fences here refemble more the double banks and ditches of Ireland than any I have feen: parapet banks are thrown up out of a double ditch, floperl; and upon them are planted a hedge, and one or two rows of trees; and the foil is fo rich, that all thrive to fuch a pitch, as to form hedges forty or fifty feet high, and perfectly thick. By means of foume linall inclofures of this fort around every houfe, every habitation is a redoubt, and would make the country very duenfible, for a fmall army againft a great one.
Iont L'Eveque.-Many of the rich paltures here are fo well fenced, that one can no nore fee through a fingle hedge, than through a wool; yet there are many willows in them, with only a mixture of thorns and bramble; but they are fo well trained, and of luch a luxuriant growth, as to be impenetrable to man or beaft.

In fencing lutte is to be learned in France, yet a confiderable portion of the kingdom is inci fod. In England we have carried that art to a pertection of which the lirench know little. It is only in a fiw dill ricts, where gates and ltiles are regular; in others, a few buthes put in a gap fupply tre place. Whenever the French have invefted in their agriculture, the lime it nugh to atiract, at leatt thice or four thoufand millions of livers more than in at prefeat, thefe objects will receive an atteation which they have not yet commanded. They are by no moans umimportunt; and as far as connead with inclofing, in general, are effential tu prufperity.

## Fifs Ponds.

Sologne.-This province abounds very much with ponds of all fizes, which let, at from 5 livres to 12 lives the arpent.

Bourbonnois. - Moulins.- -'Ihrough every part of this province, which I faw in crofling it, in two directions, the number of fifh ponds is very contiderable. The country, though in extenfive views flat to the eye, is, on a nearer examination, found to fwell into a variety of gentle inequalities, with form vallies, with fmall brooks, fprings, or ftreams, in them, as eligible for a refidence, and agreeat le to the eye, as it would be beneficial to cultivation, if they knew how to apply then. Mounds are made acrofs thefe little valcs, to form ponds; and there are mills at th ir heads, when the freams are confiderable enough. Thefe ponds are from two or three to ten, twenty, and thirty acres, and fome a great deal more. They are all fifhed regularly every fecond or third year, and the fifh fold, at fo much a thoufand, to the merchants, who lend them, by the Allier, Loire, canal of Briare, and Seine, to Paris. Oin one e'late, I faw eight ponds, that paid 800 livres; on another, tour paid 800 livres; and on a farm of about four hundred acres, four ponds paid icoo livres. Water deccives one fo much in guelling the fuperficies, that I may be erroneous (for nothing is meafured in this province); but I flould guefs, that land under water paid 20 livres an acre at leat, inftead of 3 livres, which is the more common net produce of the country; and at the fame time that the proprictor receives this fuperior benefit, his table is, by terms of the contract uith the merciant, who focks the ponds himfelf, allowed to be amply fupplicd.

Bresse. -The ponds of this little province and Dombes, cover fixty-fix leagues equare of country, and are found terrible to population, from the effect they have
on the climate *. In 1764, ponds in France generally let at 5 livres to 7 livres per arpent $\dagger$.

The management of ponds is vaftly better underfood in France than it is in Eng. land, both as to focking, adapting the fort of fifh to the foil, clearing the ponds, emptying, filhing, \&c. \&c. In all Catholic countries, fifh is of more importance than in Protellant ones, and this occafions more attention being paid to them.

## Leaves.

Languedoc.-Gathering, the end of July, leaves of mulberries; for feeding cattle.

Poitou.-See them gathering elm leaves for cattle, particularly for mules, the firft week in September.

Touraine.-Clipping elm trees to feed cows, in September.
Near Clarcy, they gather the vise leaves in September; we faw them fpread, in large quantities, by the fides of the roads, with many women, girls, and boys, gathering and drying; they are for winter provender for their cows; this cuftom is general through the country. They make an infufion of thefe leaves in hot water, by boiling them with fome bran; which mixture they give to their cows, in fnowy or frofty weather, with fraw. Was a cow fed with leaves alone, it would require eight or ten arpents to fupport a cow the whole winter; they reckon them very beneficial for this ufeful animal. Leaves are fometimes fold, in which cafe, fuch a heap dry as would equal thirty pounds of hay, fells for $20 /$. but all this varies according to the year. An arpent produces feven or eight times that quantity.

Isle of France.-Among the winter provifion which Monf. Cretté de Paluel, of Dugny, makes for his hheep, is that of faggots, cut in fummer while in full leaf, and houfed as foon as dry : thefe he has found to be of confiderable ufe, and to anfwer the purpofe perfectly well. When given to the fheep they pick off every leat carefully. Such a practice well deferves attention in England.
Dauphine'.-About Montélimart the leaves of all mulberries are gathered in November for feeding theep. A gentleman, near the fame place, feeds a flock of Spanifh and half bred fheep, with faggots cut in fummer from full leaved trees.
Provence.-The prefident de la Tour d'Aigues making elm faggots, in September, for his fhecp; a common practice: poplar alfo and oak; indeed all forts are thus applied. Olives are alfo excellent ; one of twelve years growth will thus yield to the value of $12 \%$; every fecond year, on good land, more than the expence.

For the better undertanding this fubject I beg to refer the reader to an excellent and ufeful memoir on the fubjcet, by Mr. Profeffor Symonds, inferted in the Annals of Agriculture, vol. i. p. 207. $\ddagger$

This is one of the cecononical practices of France, which well deferves imitation in England : not gathering leaves, for I queftion whether it would anfwer the expence of labour, but cutting faggots in fummer inftead of winter; drying them like hay before binding, and then ltacking and thatching for feeding fheep. I made a flack of them in 1789 , but the two following winters were fo open and mild, that 1 could not expericnce the benefit. I hall, however, make other trials on the practice, for I

[^85]have not nourifhin at eafily dering th an object

have not the leaf doubt of its anfwering as well here as in France. Leaves are very nourihhing, but aftringent, and wholefome for fheep, and fuch ftores might be got at eafily when the ground is covered with fnow, to the great faving of hay. Confo dering the immenfity of leaves that fall to wafte, in a woodland country, it is certainly an object that well deferves attention.

## Threfling.

Roussillon.-Languedoc.-Through all the fouthern parts of this province; they tread out the corn with horfes and mules; a man in the centre of the threfhing floor, in the open air, drives them round, and other men fupply the floor, and clear away the ftraw. In fome converfation I had on this method, between Narbonne and Niffau, I was affured that it was far preferable to the ufe of flails. That twenty-four mules or horfes, and twelve men, would depiqué, as they term it, one hundred and fifty feptlers of wheat in a day. That fome farms produce two thoufand feptiert of corn; what would flails do for fuch a quantity? I examined the wheat, and did not find it more damaged than with flails; but the climate is to be remembered, which makes the grain much harder than any with us. Seeing fome flails going alfo, I demanded the reafon, and was told that the mafter woull fometimes have particular parcels of ftraw threfhed fo, to get the corn that was left in it, if he fulpe§led too much; at others the labourers defire to do it for themfelves, which is fometimes granted.

Dauphine'. - Loriol. - But Monf. Faujas de St. Fond has tried threflaing the corn all at once with flails, and finds it much better than with horfes, sce.

Monrejeau to Lann-Maifon.-The oats are all mown to the fanding corn; sace woman follows each fcythe, gathers and lays them in gavels, ready to be bowd afterwards in fheaves.

Orange to Avignon. -The fame method of threhing with horfes, $x<$ prevails here; and they ftack their ftraw very neatly, plaftering at top with whitc claj; mixed with ftraw and water.

Provence.-La Tour d'Aigues. - Secing a large quantity of the Prefident's wheat fpread on cloths, for drying in the fun, and inquiring what it meant, 1 found it was wafhed, as all is, of which the beft bread is made; owing, beyond all doubt, to the mode of thre!hing, which renders it fo foul that this operation is neceflary.

## Chap. XXIX.-Of Tillage, and the Implements of Hu/bandry in France.

NOT an object of the firft confequence, but of too much importance to be neglected by a farming traveller. In a climate in which the fun has power to burn up weeds, with only a fcratching of the foil, and in a territory where harfh, obftinate, churlifh clays are almoft unknown, perfection of intrments, and great powers of tillage, are not fo neceflary as in the lefs favourable climitce and foil of England.

## Of the Tillage, and Laying of Lands.

Picardie.-Calais.-Lands well and fraight ploughed; three horfes.
Montreuil.-All turn-wreft ploughs; which, from having two brealls, go alone almoft as well as with holding; I faw a man leave his plough to chat with the driver of a load of bark, and the five horfes went on and performed their work as well without as with him : the double breaft occafions the cutting double work. The man, while
while I held it for a bout, told me that his mafter expected him to plough 30 meafures thrice in the fummer.

Bernay.-A pair of horfes.
Ajbeville. - Very badly, wich four affes or two horfes. Feed their affes with hay and oats.

Piquigry.-Women ploughing witín a pair of horfes.
Pays de Beauce.-Tonry.-Do not give their firt Atrring to their faliows until May. Plough well, Itraight, and clean.

Sologne. - La Fritc. - Piough their poor fands all on three fect risges; and affert that withont them they fhould get no corn, as they preferve the fand from plaftering in rains: this is an odd idea, as plaftering fuch fharp fand is ufually a means of inio provement; but fhowers here certainly fall with nuch greater violence than with us; their crops, however, are fo beggarly as to give no weight to their opinions. Their teams of horles are kepe out all the year, as they have the paflurage of the landlerd's woods for them. What a barbarous fyltem! Plough an arpent a day with three. Plough alfo with fix oxch, and this in land.

To La diette Biuveron. - Plough with eight bullocks, and on fand! Buck wheat is given belore witer, mixed with oats; if aione, before it has had a fwear, it gives the cholic ; but afterwards, alone fafely.

Nonon te Fuflicr.-For two years paft, chaff cut at the poft, of rye Araw, mixed with buckwheas, for horfes, and fuund excellent : the fearcity of forage alone drove them to this ufeful experiwent.

La Lago. -Through all Solngne the land is ploughed on to the two-bout ridge of three feet, and they never ftir it in any oher way.

Salbris.- Diough their fandy gravels with fix to eight oxen, that are pretty good, felling for fix or feven louis tach.

Berry.-l'erion-Tillage all done with nven, harneffid by the horns; a pair draw a plough; fome are not bigger than nur Alderney cows ; the furrow about four in. ches deep, but hardly to be called a furrow, fo uregularly and ill cut. The y are now ploughing up oat itubbles for wheat; an Inylillman can hardly conceive what work thev make; they give four of thefe wretched licratchings for every crop.

Normandie. - Argentan. - Wretched ploughs drawn by four uxell.
Limousin.-Limoges. - Plough throughout the pruvince with oxen or cows, harneffed by the horns.

Quercy.-Pelleroy. - Walked from the road to a pealant at plough with tro cows, about as big as Alderneys; it is not poflible for an Englifh farmer to conceive how badly; treaches three and a half or four inches broad, and two deep, were leratched paralle to each other, and the earth driveti afide by two mould boards, fome one way, come another; no coulter to the plough: they do atout an Eng'if rood a day. A Thin, wh re there are no ftones, and a Kentifh nilget, where there are, would do the wook much more effectually, and ten times as quickly. But their burning lion deftroys weeds beter than fuch tillage. Their hoeing is excellent and eflective, and to this their crops are more owing than to their ploughing.

Cauffuti. - The latds ploughed as fraight as in Suffilk; all by oxen or cows.
lanouedoc. - Wiontaball. - Plough with osen, without cither reins or driver.
Toulouji to St. I.yce. - The ploughs beter, the monld bourts being larger. 'The fielde' are thrown into fteches or flat hands. Ploughs are ox-bocing the vines, cach ox walking in an interval with a row between them, and yoked with a fiding yoke, to vary the difliance

from ox to ox, and bafkets at their mouths to prevent their biting the vines. The rows at five feet, and the plants at two.

Bangersis de Luchon.-They ox-hoe the rows of their maize. All oxen yoked by the horns.

Roussillon.-Bellegard to Perpigan.-Plough with mules yoked; allo with affes in the fame way. Earth-boards of the ploughs are to the left.

Pia.-Day's work of a man, his plough and team, 3 livres.
Languedoc. - Narbome.-Of many ploughs now going (Ju'y) moft are drawn by mules in yokes; the plough beam faftened to the centre of the yoke; earth-board to the left. They plough well.

Pezenas to Montpcllier.-The oxen all yoked by the horns. Ploughing olive grounds with one horfe; the plough of an odd conftruction, the bean dividing and forming. fhafts for the horfc.

Bearn. - Pau to Moncins and Navarcins.-All this country is ploughed with oxen that are good, and in good order.

Gurenne.-Agen to Aiguillon.-Plough with very fae cream-coloured oxen, a pair to a plough. All draw by their horns.

Tonneins -A pair of very fine oxem plough a journal a day; that meafure contains 33,750 fquare feet, and is to the Englifh acre as 33 to 38 . 'the plough beams all faften to the yokes.

To La Motte Landron.-Thev are now (Auguft) ploughing for jaroucle and forage, (by the lalt is meant oats for foiling), and are very attentive in the orcering and finifhing their lands, and covering the feed; breaking the clods with a wooden beetle and rake, fo that the high ridges are brought down in fuch a manner as to admit the fcythe, and at the fame time the furrows are kept open.

Barface.-They are now ox-hocing their vines quite clean; and fee one piece of ofiers ox-hoed.

Poitou.-A.pan of oxen without either driver or reins.
Tuuraine.-Montazon.--Horfe ploughs; faddles on the horfes with a bar like a curricle, one from faddle to faddle, to which the beam of the plough ataches. A bad plan, as by this means the horfe does not draw from his fhoulders, where his ftrengti2 and weight lie.

Soloove:. Chambord.-The poorfands of thiscountry are laid on the three feet ridge of two-houts, and rye and buck what fown on them; the lurrows are as wile as the ridges, and yiehl notning but weeds.

La Chupclle La Reins.--1 lomeh with wo horfes, and no driver, yet the price perarpent is 5 herw, one handral perch twangetwo feet.

Ister or Fraver.-Wi/har.-Hiough into broad fiat lands, and very fraight. Many ploughs with three horles, con before a pair: no driver.
Liancourt.--In the gencon armgement of their fams, they reckon three herfes to a ploueh, though they anver ufe more than two at a time; and a plough to feventerfive arpettes one and a yarter atrej, twenty-five of wheh are fallow; and a common cabenlation here is 1500 lives echt fer plough, which makes 20 lives per appent. They never ufed esem until the Duke of Liazeonet introduced them from Lnytame.

Paris to lidiors Cotcots.- The whole way the lands are ploughed quite flat, with a turn-wreft wheel-phough, and much of the wheat is overthowed, for want of furrows to carry off the water from the late mans.

Picarder-La Ferc--kour horles in the ploughs, and no driver.

St. Quentin to Cambray.-Thirty-five horfes to a farm of eight hundred feptiers; and twenty horfes on one of four hundred. The latter proportion is feventeen on four hundred Englifh acres.

Flanders.-St. Amand.-Tinis feafon (November 1, 1787) the wheat here, owing to the exceflive rains, is put in as badly as poflible. The loweft and wetteft fields are perfectly flai, and half of them, in parts, overflowed. Furrows are diawn, as marks for digging, which is doing, through all the country, with a narrow fpade of five inches wide, and eight long; thefe furrows are from fix to eight yards afunder, but done poorly, miferably crooked, and the whole unfightly.

Lille. -There is a minutia of labour and attention given to land in this country, which mult, in the nature of things, refult from that over-population, which is found every where in France on fmall properties. I faw many men and women hoeing up the land with great mattock-hoes, almoft a foot fquare, with long handles; by which they are lifted high, that in the fall they nay cut four or five inches deep. They work by lines that mark out beds, five or fix feet broad, along which other men dig out trenches, a full fpit deep, fpreading the earth over the beds. Wheat feed is then fown, and covered by a man's drawing a wooden harrow over it : another follows with a hoe to cut clods, and level inequalities. I calculated in my mind what this would coft me in Suffolk, and I made it amount to 3l. 1os. per Englifh acre. Such operofe methods are not in practice here, becaule the labour which comes to market is cheap, fince fuch labour, like every thing elfe in Flanders, is what is conmonly called dear: it fprings alone from the population that is attached to the poffeffion of land in property ; and is, relative to any other country, a fyftem of trifling; a wafte of labour not greatly better than picking ftraws. Perhaps it is owing to this over-population of the fields, that Flanders, with the richeft foil' in Europe, cannot feed her own towns, but is forced to import large quantities of wheat from Artois and Picardie, where large farms enable thofe provinces to fpare to the warits of their more fubdivided neighbour.

About four or five niles from Lille begins another method of laying their lands; it is that of ploughing them up in very broad high arched beds, of all breadtins from four rods to ten or twelve. When inclofures are finall, a whole one is formed into but one land; and in larger fields, there is a drain left at every parting furrow, which is either planted with a row of alders or willows, or dug into a trench and laid to grafs. In a land ten or twelve rod wide, the centres may rile four or five feet higher than the bottoms of the furrows; the flopes on each fide very gentle and regular; and fo equal, that all water is effectually drained off. I difcourfed with fome farmers on this method, ftating objections and hearing their anfwers. They infilt that no other method of laying land dry is fo effective, cheap, durable, or commodious. That all the methods I mentioned are known and practifed in fome part or other of Flanders, but that ail the beft hufbandmen have one opinion, are united in thinking this roode fuperior to all others. That planting alders or willows (which are always kept low by conftant cuttings), or having grafs in the furrows, are not neceflary parts of the fyftem, and that the furrows, in a few years after throwing up the lands, are as good as the reft of the field. The neatnefs and regularity with which the fyftem is executed, is extraordinary; the borders, headlands, and fides of the fields, are fo dug away, that a fimall one has the form of a teather-bed, the feathers of which are driven towards the middle. I never faw this fyllem fo well executed as here, though I have known it copied in England; not in the highlands of many of our counties, which are on coniparifon a barbarous method, but in the practice of a few individuals who had feen the effed in Flanders.

Armentieres.-Paffing this town, meet with another exertion of induftry, that deferves attention. Many flubbies were ploughed into beds cight or ten feet wide, and the furrows digging out, and the earth fpreading on the beds. I fuppofed this was for wheat, but on inquiry found that thefe fields were intended for beans. They leave the land, thus prepared, till March, and then plant without further tillage. As fpring tillage is thus avoided on wet land, the fyftem muft be admitted to be excellent.

Mont Cafil to Bers. - The lands not raifed fo high as thofe above defcribed, nor with equal fkill or attention, and this wet feafon (November) fhews the confequence of it; they camot get on to their lands to fow wheat, but moft of the high lands are fown, and fome of them green.

Artors.-Lillers to Betoune.-The lands broad and arched; but gently. From Ardres to Bethune, all the waty, the greatelt attention to plough the land the moment the corn is carried, yet much is now uncut and ripe.

To Arras.-They are now (Auguft 8,) ploughing the fubbles of fuch corn as is carried, with one horfe, that walks, not in the furrow, but on the unploughed land, by the fide of it: the plough bean very fhe t, with a foot; no coulter; a well.curved breaft and throat; but too wide in the heel: ftir fhallow, and do not make good work ; do about a meafure a day.

Normandy.-Rouen.-All the harrowing is done in this country by men leading many horfes. I faw one man leading feven horfes, each drawing a harrow: the horfes are tied one behind another, jbliquely, fo as to be out of danger of the harrows,

Bretagne.-Rcnnes.-Plough with four horfes and a driver; or two horfes and two oxen.

Vannes.-The common plough team, two oxen; always harneffed by the horns, and a little horfe, a mere poney, before them; if no horfe, the oxen are led by a woman. They ufe aukward, ill made, but light, wheel-ploughs.

Auvergnac.- The farmers (metayers) have here the Effex cuftom of digging away the borders and margins of all arable fields, and carrying them on to the land, which they practife very exactly, as it is done in that county.

Anjou.-Migniame.-They plough deeper, in common, than ever I faw in any part of either Lingland or France; eight or nine, and even ten inches deep; ufing fix or eight good oxen of the Poiton breed; but it is done, in one refpect, badly,-their depth obliges them to carry a furrow a foot wide, yet their thare is not fix inches; and they do every thing on four-feet ridge-work. The great ftrength of the team is moft wanted for the roots of the fern, which are now lying about the land in heaps.

La Filcise to Le Mans. - They are now ploughing fand land, very flowly, with four bullocks and two horles. Prepoflerous!

Normandy.-Bcaumomt. - 'Ywo bullocks and two horfes, to draw thirty bufhels of dung.

To Alengon. - Plough with fous or fix bullocks, or horfes, and a driver.
Bernay.-Wheel-ploughs; with two horles, and no driver. The rich loams here are on broad lands, very well arcl ad.

Toftes.-Wheel-ploughs; three horfes, and no driver.
To Dieppe.-Ditto; well ploughed, flat and deep.
Bris.-Neuf Moutier.-Monf. Gibert, a confiderable farmer and proprictor, keeps fifteen horfes for three hundred iupents of rich loamy clay (three hundred and feventy five acres linglifh).

Champagine.-Chalons, to Ove-Plough with one horfe,
vol., iv.

To St. Nienebouid.-Plough with four horfes, without a driv.r; turn-wreft ploughs.
Lorraine.-Mars/a Tour to Mctz.-Fallows dunged, after ploughing with fix horfes (July).

Luneville to Blamont.-Broad lands, and fome arched, but no water-cuts, confequently the crops much damaged, whenever rain falls. l'lough with four, fix, and eight horfes, cows, and oxen; all mixed fometimes. I iave feen women holding the plough, and a boy driving : wheels, but not turn-wreft.

Alsace,-Saverne to Wilteim.-Here is a remarkable 10 llom , of both waggons and ploughs being driven by poftillions.

To Stra/bourg. - The lands broad and arched, as in Flanders.
To Scheleffat.- The fame lands on the flat rich vale.
Colmar to (finbleim - Oxen here improve much on the preceding country: they are harneficd by the horns, drawing fingly in lines, and alfo mixed with horfes.

To Befort.-Plough. with a pair of oxen, without line or driver. Arched broad lands.

Bourgogne.-Dijon.-Plough with fix horfes.
Bourbou Lancy.-Plough with fix oxen, that draw by the horns. A level country; a fandy gravel.

Bourbonnois.-Cbavannes.-All the arable thrown into one bout-ridges, about fixteen inches broad.

Auvergne. - Riom to Clermont. - Plough with a pair of oxen.
Citr, estat to I/foire.-Ploughing with oxen only; fome of them good; all draw by the horns.

Fix to Le $P_{b y y}$.-Miferable ploughing; the plough has one long handle; and the man holds a long light pole in the other hand for a goad: a pair of titte oxen.

Daupuné, -- Montélimart. - Plough with two mules.
There is no part of England where lands are laid fo neatly as in Flanders ; but the French have no other province that partakes of this perfection; Alface is in a fimilar fyfiem, but not to well executed. In general the tillage of the kin, dom is molt miferably performed ; and many of the provinces are, in this refpect, fo backward, that to Englifh eyes they appear to be pitiably conducted.

The principal que?tion that aries upon tillage is the comparative advantage of $\mathrm{u}^{\mathrm{r}} \mathrm{ing}$ horles or oxen. Both have had their adrocates. The principal epponems to oxen were the aconomifes, that facifulf feet, of very worthy and ingenimus men, whe, from their chanters at laris and Verfaithes, offered opinions uponevery part of the farmer's bufinels. They divided the arable land of France into thofe managed in the great and little culture: in the former the tilluge dowe with horl's, and in the latter, with oxen; and as Flanders, Mcar'y, Nurmandy, \&ec. wherehorles were in ufe, being alio let at money rent, thofe prowinces were necellarily more at their eafe than boogne, Berry, limoufin, and others in the hands of metayers. This comparilon is oft : a made in the writings of the acononi/les, and abondantly more ftrefs laid on the nature of the team than it deierves; they gave naby calculations to thow, that horfes were

Picarmin Turn-wrelt

[^86]Marquis de Mirabcau, Monf. Du Pont, Du Quefnay, and other aconmiffes. The comparifon has been made in England with great accuracy; and the opinion now is, that oxen are the moft beneficial and the moft profitable, and that a pair of good oxen will plough as much in a day as a pair of goed horfes. The other ceconomical points of the comparifon are all in favour of oxen.

But though the fuperiority, both in faving to the farmer, and in national benefit, is clearly in favour of oxen, yet there want improvements to be made in training and working them. Some ftep well, and move with as much freedom and activity on a walk as horfes, but this is not the cafe with the generality; they are trained to go too flowly, and demand, fur light work, more hours than horfes. This is certainly owing to negligence and idleness of workmen and farming fervants, for I am weil perfuaded, from circumftances I have remarked in them, that they are capable of great activity and quick motion. I have had them of a large fize, which have taken leaps shat no horfe in the world would attempt, a proof not of activity only, but of great mulcular itrength.

Accufoming then to more fpecd, even to a trot of five or fix miles an hour, is certainly as practicable, in the cool climates of Furope, as it can be in the burning ones of Afia. The fact that they draw coaches at that rate, in the Ealt Indies, feems to have been long afcertained. The Targuzinian Tartars ride on their oxen * : the Nogayan Tartars, of Koundour, do the fame $\dagger$ : Mandelloe $\ddagger$ rode on an ox part of the way from Agra to 1) thi, that carried him feven leagues in four hours: in Kachemire they faidle, bridle, fhoe, and ride them as faft as horfes $\oint$; they alfo draw their coaches: at Surat, in riding them, they take care their horns are not more than orie foot long, to avoid being ftruck when flies bite; they never fhoe them but in rough places; in the caravan trom that city, they carry three hundred to three hundred and fifty pounds ||: a camei carries nine hundred to one thoufand pounds 9 : but in a late account, of great authenticity, five hundred and fix hundred pounds is mentioned as the common load of a camel in croffing the Arabian defarts**: the hackrees, a fort of coach, is drawn in Hindoftan by oxen; which, when well trained and managed, will maintain their rate againft horles at full trot ; thofe of Guzerat and Cambray are as large as Lincoln beafts, and white $\dagger t$ : the oxen that are rode in Formola, go as well and as expeditioufly as the beft horfes, by being trained young $\ddagger \ddagger$ : the Hottentots train oxen to gallop and even run down an elk $\$ \$$.

If fuch quicknels of movement could be given to the oxen of France and England, it would be a vèry confiderable object, for it would get over the principal objection to them, and would at the fame time render them applicable to a great variety of ufes, to which at prefent they are never put.

## Of the Implements of Hufbandry.

Picarniv. - The harrow teeth of wood, all the way from Calais to Clermont. Turn-wreft ploughis, and bad.

[^87]Sol.ogns.--The ploughs have all a broad siouble finned fhare, and double mould. boards, with wheels; the whole ill conftructerl.

Berry. - The plough very ill made; it has two fcraps of fomething like mouldboards, and a long ground-rett, at the end of which is an iron fhare, four inches wide, fomething like the fhim which they ufe in Kent for earthing up beans: a hole for a coulter, but I faw none ufed. Nothing can be woife than its work. They have alfo turn-wreft ploughs, fomething liite thofe of Kent, but bad. Beyond Argenton, the beane of the plough faftens to the yoke of the oxen : the plough has a chiffl-ref and peint, and no other mould-board than two fmall fticis, ftuck in it, with a circularly b . $\mathrm{n}^{*}$ one behind; thefe fticks anfivered the purpofe of two mould-boards, but very badly; the handles fo low, that the body of the plougiman is in a bent pofition to boid them.

Limousin.--The ploughs which I faw near St. George, \&er. have one mould-board on the left fide; the fhare long, and one and a balf inch broad; the beam reuchen to the yoke, and confequently faves traices. They plough better than in La Marche.

Quercy.-The fame long beams to ploughs that reach to the yoke; have two very bad mould-boards; the fhare long and narrow, with no coulter; bet the land exceffively fon $\mathrm{F}^{\circ}$.

Languedcc.--Montauban to Toulouf - -. The plough much better thav meny I lave feen in France; it las a brod conter, and a fhort noled fhare; one mouid-board, and that to the left; the ploughtom, like many others, fixes to the ox-yoke.

To Noe.-Meet waggons fu the for time; the wheels fhod with wood, that is, wood upon wond. The oxen all cloathes wath linen againt the flies, one tape under the tail and another rownd the neck. Thy ine w thefe waggons new is 60 livres ( 21.12 s .6 d .); they carry, with a pai: of own, two aiks of wine, containing four barrigues, which is twenty quintait, or abous a ton Englifh. Some pairs of oxen will draw forty quintals.

Guienne..-Tomeins. - The ploughs have very long hollow or fluted mould-boards for lifing the furrow, in order to make fharp high two-bout ridges.

Ancoumors.-Barbficux.-Wheel-ploughs.
Isue de Prance.-Nelun.-Large heavy wheel-ploughs, with breafts as wide and thick in the throat, as the heel is broad; mult go very heavy for the borfes.

Comneryid. ...Wheel-ploughs drawn by a pair of horfes.
Dugny.--One of the beft implements I law in France, was the chaff-cutter of Monf. Crette de Pateatel; it conlifted of two cylinders, with edges that worked into the vacancies of each oll er, and, fucking in the ftraw delivered very rapisily, cut it into coarfe chaff; one mas: fed the machine, by freadiug the itraw on an inclined plane; and a boy drove a fingle horle, which turned the machine. A tolerable mechanic, improving ou the infea, would produce a much more powerful cuter than any yet invented.

Fianiners. - Lille.- Many waggons loaded with chalk flones, \&e, with the principal part of the load laid on the hind wheck, and a very fimall porion on the fore ones ; a goo: fane that reproaches our barbarians in England.

Arcoss.-- The flort fey the which they ufe through this province, and all ower Flandere, is one of the moll mifulimplemens that can be feen : they eall it the pique: it is much like the repretentai in given by Mr. Wralker in the Anmals of Agriculture, only the handl. are is much florter; a mas cuts an arpent a day in general with it, and fometimes more . he cuts and rol!'sinte bottes an arpent of vetches; (called here, mixed with
 with ilraw bands made athome. This is a moll cecononical ifilem. The ". et hande of the pique is made to retagum the clow, he holds it with the right! : mly, or rither

turnise thy
rather hand and arni ; and in his left he has a fick with a hook at the end of it, with which he draws or holds the corn in the right pofition to receive the ftroke. They ufe fcythes and cradles alfo for fome works.

St. Omcr. - That the pique is much eafier to work than a feythe, appears from women and even girls cutting ftout creps of tares with it. They give $45 \%$. per meafure of oats for cutting with the pique, and a man does three.fourths per day.

Normandie.-Harfleur. - I noticed here, what I may have often paffed, perhaps, without feeing it, a pierced roller behind and before a cart, which turns in the frame, or in the ladders, by which means a load is corded with a fimall handfike, almoft in a moment; I have known fomething like it in the ladders of carts in England, but forget where; here they lct down a cart behind by raifing the flafts in the air, fet it againft a cafk, and wind the cafk on to the cart, by means of the fore-roller, cafily and com. modioully.

Avranches.-Sea fand is drawn in this country in carts, by a horfe in the fhafts, and another to lead, with two or three oxen between, and all in a line. About Carentan they attach the rope by which they draw, to the yokes of the oxen, confequently the horfe draws them down to ilie line of his own draught; and their rope to the top of the pole between the two thillers, (when they are two,) confequently all draw the thill horfes down. A team of five, thus harneffed, does not draw more than from twenty to twentyfour bufhels of fea fand: the horles are, however, poor fmall things; and no wonder, from the number of miferable garran (poney) Italions that infeft every ftable you enter. The oxen are better, but not large.

Bretagne. - Varades. - They are now working their ridges, of three and four feet acrofs, with a great timber triangular machine, drawn by oxen, to anfwer the treble purpofes of harrowing, rolling, and levelling.
 the breadth, which is fisteen or eighteen inches, and in narrow lands lofes a fourth; it only wants to be taken in narrower, and left with the fhare projecting more from the throat.

Champagne.-Marcuil.-Bad turn-wreft ploughs; but have the Bric one, which they prefer when there are root weeds to cut.

Khcims.-Very light ploughs, with a broad fhare, and one carth-broad, but ill fet on; it has whecls on the beam which is little more than a flick. Women are ploughing.

To Cbalons.-Many rollers every where; an implement very uncommon in France.
St. Misochould to I'crdun. - Wheel ploughs that are not turn-wrefts, with well turned mould-toards. This is among the beft ploughs 1 have feen in France.

Iorraine,--Mais-ii-Tour to Mctz.-Bread fhare and good, but too wide at the heel; wheels.

Pont-à Moufon to Nancy.-Here, for the firft lime, I met with waggons of a peculiar Atructure, the fore whecls are within four inches as high as the hind ones, and are high enough to enable one horfe, for none are drawn by more, to convey cight hundred pounds, to one thoufand poouds. Ploughs fo wide at the heel that they are drawn by cighthorfes.

Absacio.. Al dibough the part of Alface which I have feen, they ufe ploughs with low $w^{1 \cdots}$...; the thare roli:id and broad, an 1 as wide on the land lide as on that of the furre, which is very erronculus, ior they are not turn-wrefts, but with fixed brealls, turning the furron to the left.

Bourbonsors. - Moialins. - The common plough a turn-wreft one; but they have another for ftirring, called arrou, without an earth-board.

Auverene.-I Ifoirc. - The plough only opens a flight furrow, into which the carth falls again, and buries nothing, and without a hot fun would kill nothing: the flare a chiffel point, one inch wide at one end, and three inches at the other end for foney land, or for that which is free, turning it occafionally end tor end. An earth-board on each fide, but not more than four inches high.

Upon the implements in general, I may obferve that they will in all countries be proportioned to the wealth of the farmers. There is nothing in the kingdom comparable to thofe which we fee in every part of England, where the implements of hurbandry are carried to a perfection of which one fees nothing in any other country that I have view. ed. The right form and powers of all inftruments ufed in agriculture, depending very much on the application of mechanical principles, were proper oljects for the attention of thofe fientific men that compofe academies; I do not know, however, that they lave done any thing in this relpect in agricalture, though fich great exertions have been made in manulactures and hip building. At one petiod the ingenuity of mechanical genius in France was employed on agricultural fools; and then, as an ill far would govern, nothing was thought of but drill-ploughs and herfe-hoes. Fortunatcly all invented were abfointely good for nothing, which threw fuch a difcouragement on the practice, that the tolly was but of thort duration; had they been better it would have talted longer. and would have done fo much the more mifehicf; for the drill hulbandry, at its beft efforts, is fitter to amufe very ingenious gentemen, who aim at great products uithout attending to expences, than to becone the fteady flaple prasice of a kingdom, in the hands of men who cannot eafily underftand refinements; and if they could underfand, could much lefs afford them. Adopting beneficial courfes of crops, that will allow a great increafe, of catle and fheep; draining, irrigating, manuring; fuch objcts are applicable to common farmers, little and great; but the refiuement of drillin., applicable but to certain crops ant certain foils, is not adapted to the mafs of hufbandmen, by whofe snore plain exertions mankind muft be content to be fed.

## Chap. X XIX.-Of Manurcs and Manuring in France.

Picardie.-THROIGHOUT this province, moft of the way from Calais to Cler. mont, the dung is now (May) carried out and ploughed in upon the fallows; it is in a long frawy flate, and not one-filith part rotten; nor half of it ploughed in.
Pays de Beauce.-Toury.--Many pits of white mar! in this rich plain of Beauce, quite to Orleam; the fine loam four or five lect decp on it. They fread it on ther lai.ds, but the quantity very fmall, nor did I fee any figns of old pits.

Solobne. - La Motte Beuvron.- The rye.ftubbles are (May) collected in heaps on the land, having been left fo all winter, to prepare it for rotting for manure. Surely they might fiuda better way of doing it; houfing their fleep, as they do, at noon as well as night.

Limousin.-Ufarch,-Colleat leaves to make manure with.
Languedoc. - Nijmes to Quifice. In cultivating waftes, or old neglected pieces, they pare and burn; alfo collect turts and clods in heaps, on faggots of box-wood, which they turn.
Lann. Maifon to Bagnere de Bigorre.- Cut from their wattes much fern, which thcy Sprad on their cultivated lands, ind, feting fire to it, find the athes equal to a dunging. 'Ality alfo cart much to their flat les and tam-yards, to make dung with.

lsie del tion from! der; for tha larly, do the

Sorssono peat for man per mealure, pent. The deen, refemb for l fove fov ot Fupland. country. nuw

Gascoigne.-St. Palais to Anfpan.-Pafs three or four lime.kilns, which my guide affures me are employed in burning for manure, to improve the waftes that abound to much in this country; and 1 faw feveral heaps near houfes, without any figns of building going forward.

A general practice through thefe mountains, and almoft to Bayonne, is that of manuring for raves, with the afhes of buru: ftraw. I obferved feveral fields quite black; and, demanding what it was, ny guide told me of this common practice here; afterwaris 1 faw them ftrewing ftraw thickly over land, part of which had been already burnt on. Thty do this on a wheat ftubble : but not thinking that fubble enough is left, they add much wheat fraw, and fetting fire to it, burn the weeds as well as the ftraw, and clean as well as manure the land. Wih fuch quantities of fern on all their extenfive waftes, I afked why they did not burn that, and keep their ftraw? The reply was, that fern makes much better dung than ftraw, fo they burn the flraw in preference. As foon as the eperation is over, they plough the land, and harrow it in rave feed. One large field, thus treated, 1 faw ploughing tor that crop. They both hoe and hand-weed the raves, and have them fometimes very large; many as big as a man's head. Ufe them for oxen.

Fleurange to Lcitoure.-Chop their flubbles cxactly as in Suffolk, driving it on with their fiot: they gather it for making manure.

Touraine.-St. Maure.--Here we found a greater exertion in hufbandry than is commonly found in France, that of marling. We faw feveral large heaps of white marl, and at one of them four or five carts at work, each with three horfes. It is found almoft every where under the country, at the depth of three to five feet; the foil on which they lay it, is a good loam; adhefive, but not clay. They draw it up by buckets, which is a fingular practice for fuch flight depths. The marl is in fome pits white, in others yellowin, which is reckoned the beft; it is very foft and fat to the touch. They fread twelve cart loads per arpent, of one hundred chaine, each twenty-five feet iquare, fixty two thoufand, five hundred feet, or more than an acre and half; and it lails good about twenty-four years. The landlords, on leafes of nine years, pay the dirging, and the tenants the carting. Of the yellowifh fort they do not pread quite fo much as the white. The fame account was given at Montbazon; they fprent it on the fallows, after two ploughings; and having ploughed in the marl, manure it what nug, and fow wheat. Make conpofts alfo of marl and dung mixed.

Orleans to Petiviers.- Uuder the greater part of this country there is a bed of inperfest marl, which is over the calcareous ftone of which the roads are made. The farmers fpread this marl on their lands, at the rate of ten tomberaux per arpent, which balts twelve ycars; fome, better than the rell, has been known to latt thirly years.

Ishe de france.- Liancourt.- Within two leagues of liamcourt, there is a navigation from ! aris, bu' no idea, in any part of the countiy, of bringing manures; no wondur; for they carry flour thither by land carriage; aven the millers, who fend it regularls, do the fame.

Sorssonors.-La Fere.-A vaft excavation made in a hill, by digging and burning peat for manure: greal heaps of the afhes now here. The price the farme.". . . is 22 f . per meafire, that hulds fixty pounds of wheat, fifteen of which they fipredu upon an arpent. The efiect is very great on all kinds of plants. This peat is malike any 1 have feen, refembling an imperfect coal; and the being found, not on a p'ain, but on hills, for I fav feveral, ann all cqually on elevations, diftinguifh it remarkably from the peats ot Fugland. The mine of this hill is nearly exhaulted, as the common red lom of the country nuw anosars neatly all around it.

Flanders.

Flanders.-Li/ke-See many loads of urine and night-foil carrying into the courtry, by the farmers, for manuring their lands with. It is loaded in calks: each waggon carries ten tomeaux of about half an hoghead Englifh. They lay from fixteen to twenty upon a quarticr of land, at the expence of 7 livres: ufe it for cole-feed, wheat, fiax, \&ic. and find it equally excellent for all forts of crops.

Armontieres to Monteafcl.-Holes are dug in the fides and corners of many fields, for receiving the urine and night-foil, which is brought from every town, in caiks, and kept againft the feafon when it is way have frall roofs built over, to exclude the fun, wind, and rain; an:l others cowed with hraw. The moft correct and never-ceafing attention with which they procure and ufe this manure, deferves the greateft commendation.

To Berg.-A good deal of land chalked as well as dunged, and ready for wheat. The chalk is in large hard lumps, but breken and fpread moft curioully; more evenly than ever I beheld any thing fimilar in England; where the rough and unequal manner in which marl is rather tumbled than fread over the is, is a reproach even to our beft farmers, who permit thofe labourers, whoie fanilies are fupported by poorrates, to exccute their work in that manner, to earn ten fhillings a week inftead of eight.

Normandie.-Threighout the part of this province which I have feen, they gather their wheat ftubbles, and even bundle it in fheaves: they chop it with an inftrument fomething like a c:ooised fcythe, fixed at the end of a handle of fix or feven feet long; but do it much flower than in England, with a common feythe.

Ifigny.-Here, for the firft time in France, I faw componts of dung and earth made.

Carentan.- Ufe fea-fand for manuring tiseir paftures, fpreading twenty loads per vergé, each load twelve to fixteen Englifh bufhels. The vergé equals ninety-fix Englifh perches. Mix it alfo with dung.

To Coutancs.-Manuring with fea-fand continues hither.
Avranches.-And hither they have banked out half the river, which is a fmall arm of the fea, in order' to build a bridge; and the countrymen are digging out the blue feamud, and carrying it away to confiderable diftances.

Bretagne.-Dol to Cembourg.-Wheat-ftubbles gathered carefully; and a great deal of fern cut now (September 1.) and in heaps.

Hedé.-From entering Bretagne, paring and burning every where practifed, but the heaps too large and too much burnt.

Rennes.-The farmers and gardeners buy the town dung, at 4 livres the load.
Bellc-Ife to Morlaix. - The rough Jand of this comntry is reckoned to find fuel and nanure: one of the reafons lor almoft the whole of it being in fuch a rough favage fate. They have an exccrable cuftom, we! adapted to perpetuate their deferts, that of hurting parts for afhes, to carry to their grod land.

Morlaix. - Heaps of hell fand on isys, ready to fpreal for fowin: wheat: the fame hufbandry is practifed on our oppofite coaft, in Cornwall.

To Brefl. - A moll excellent cuitom of going round all the inclofures with an inftrument between a fcythe and a wood houk, for cutiag $u_{1}$ all grafs, weeds, and rubbiih, on the banks and in the ditches, leaving them in' aps, and then carting then away for making litter and dung; a practice that cannot ' oo much commended.

Chatcaulin.-Paring and burning, the origin of all the culture there is in Bretagne; and the ruin of the province at the fame time. They pare two and a lailf and three inches
inches deep for twenty

inches deep; and laving exhaufted the ahes by three or four crops, teave it to weeds for twenty ycars before it is fit to burn a in.
Quimperlay.-There is here a moft fingulur hufbandry, of which I never faw any traces before. It is to pare the rough land, and not to burn, put to pile it up in heaps regu• larly fquare, of about tw enty-five or thirty cubical yards in each, and about four of them to an acre; they are fquared up very neatly, and then the field is left for fome time, to cover itfelf with a new herbage, which is free from furze and broom, but not quite fo from fern; after a time, the heaps being rotten, they are carted and fpread, and the land cultivates. Somictinics they cultivate the land before they are fpread, as 1 faw fome in picces of buckwhent. Paring and burning is alfo practifed. This method is inferior to burning; it docs not equally deftroy grubs, verain, and weeds; and the double carting is a confidermbe expence.
Fanves.--Thefe heaps lurmed in the fpring, and many will be fpread this year for ryc. IIere they confint of three-funthe or feven-cighths of turf, pared off from every hole and corner from commons and bad fields, and carried to the good ones; and if this execrable practice is of any antiquity, it will account for the barren and wretched fate of the country. Every poor ficld is made good for nothing, and the good one cropped, in confequence, till it is almoft as bad. Thefe heaps continue about Vannes in anazing quantitics.

Anjour-Mignianc. - The common manuring, ten loads of dung, each three thoufand pounds; but not more than four of Angers dung, night-foil, afhes, \&c.

Maine. - Le Mgims.- Marl is here ufed; one bundred pipes are laid on a journal.
Normandie.-Alchçon.- Fallows all dunged, with fquare lumps of dung, quite Hack, as if calt in a mould; and very thinly, not more than fix or feven loads an acre.

Leflimislc:-Marl employed here; or rather a hardifh imperfect chalk-ftone; drawn up in buckets; it lafts twenty years. Stubbles cut clofe and botted.

Bornay to Elbouf.-Marl.
Roteli-Monf. Scannegatty, Profeffor of Phyfics in the Royal Society of Agriculture here, having oblerved, that, in calcining gypfum, it was apt, for various -fes, to be uncqually burnt, part being partially reduced to lime, and the reft not fuffiently calcined, invented a furnace for the more equal diftribution of the heat; a vault picreed for the fuel, with a long channel beneath, for conveying air, and a door to the mos:' of the furnace; at top, various holes by way of chimnies, for the fmoke to iffue, and which he clofes alternately. Ite knows when the gypfum is fufficiently calcined, by applying a cold bright iton to thefe holes; it is iafulficiently done while any humidity ariles.

La Rocbi Guyor:-Elm leaves are found to make good dung, but not oak ones; tha latter take three yars to rot fufficiently.

Isle de Frince.-Nangis. - There are afemen, who take marling to do for the farmers, at 18 lives per arpent (to Englifh acre as $3^{2}$ to $3^{3}$ ). Monf. de Guerchy, after water in a pond, nine crops of oats, and ail good.

To Wimk.-Long dung foread and fpreading now (July 2), for wheat next year.
Nerf Moaticr.-Mamure their rich clays with the white mad foand under then: which has the appearance of confolidated pafte. They fallow for wheat, and manure the fallows in Jene, with long dung almof in the flate of flaw ; a method they conte ? warmly for ; thinking that a greater degree of putrelaction would be lofs of quatity and wirtue. Bhat there is a circumitance which feems in fat much to condemn this method; it is, that while the what crops are to be rauked among the finef in France, and would inded make a capital figure in England, the oats and barley are wretched, in-
deed (foil confidered) below contempt. Does not this feem to prove, that the expoithe: of the manure, through the year of fallow, to the fun, exhaufts it to the amount of se benefit which one crop would receive from it, and that the wheat has it at fecond hand, and the fpring corn at the third ?

Ar.sace.-Strafourg.-Gypfum ufed as a manure for clover with fuccefs; does beft on clayey lands; there are mills for pounding it. It is faid to laft good for fome time; two or three boiffeau, of thirty pounds of wheat per arpent of 24,000 feet between two and three bufhels per Englifh acre. If a quantity is ufed it fpoils the land. What myfteries are thefe about this manure!

Befort.-Manure with blue marl.
To I/e. The dunghills here are the neateft fpectacles I have any where feen; the walls of them are twitted bands of fraw, clofe and regular as a bee-hive, and fome are covered at top with leaves and branches of trees to exclude the fun. Admirable! Deferving univerfal imitation.

Dauphine'.-Loriol.-Box, in this country, is cut on the mountains, for manuring vines, by burying it frefh at their roots. For mulberries alfo it is excellent. Three trees were planted at the fame time, and in the fame foil, one with box, and the other without, and there is now no comparifon between them.
M. Foujas de St. Fond has tried gypfum, on a large fcale, on fandy land, for fainfoin, with great fuccefs.

Provence.-Salon to St. Canat.-Dead olive branches and cuttings, are piled up with clods and rubbinh for burning, as in Catalonia.

Tour d'Aigues.-Paring and burning is practifed every where; and, as in Ireland, in corners, holes, waftes, and even ditches, to make heaps of manure for their cultivated lands. They are now (September) burning every where. The common opinion is very much againft it; but the Prefident remarks that it has been practifed here uninterruptédly, probably for two thoufand years, yet the land is no worfe than it has. always been.

The importance of manuring is well underfood in many of the French provinces: where faults are to be found, it is more for exhaulling the benefit as falt as poffible, than for want of knowing the operation and effect. The beft farmers in England fpread manures for ameliorating crops, in order that the boe or the fcythe may cut off the weeds that are apt to arife in confequence; and as fuch crops fupport cattle, the more manure is fpread the more manure is made; it is in arithmetical progreffion; on the contrary, when it is given for exhiaufling crops, as wheat or rye, the benefit is foon exhautted, and the increafe, fo valuable in the ceonomy of a farm, does not take place. By means of fpreading the dung for thofe crops that fupport cattle and Sheep, the live fock of a farm may be always gradually increafing; and it is impoffible they fhould increafe, without the farm improving, and corn itfelf augmenting by the ratio of the produtt arifing.

## Снap. XXX,-An Englifh Farmeffablifted in France.

AMONG the moft interefling obfervations which the Duke of Liancourt had made, in the various vifits he paid to England, was that of the fuperiority to which the induftry of that kingdom was carried beyond the practice of Brance; and above all, to what a degree of perfection agriculture had attained, founded on experiment, and manifeft in an infinitely greater production of corn and of live ftock than is to be found in almont any other country, extent and quality of foil confidered. Impreffed with this fact, he
had long cherih ing wealth, flowi ple employed to could be introdu being practifed b prejudices, and $u$ determined to att but as he was def fhould be fo cond

His friend, Mc confented to acco zowiki, whom I agriculture, whic the beft farmers, vation : he was li inftance, as on ev views.

In 1789, Moni at thirteen league projected : he acc his family, and a farming implemer Suffex, to perpetu admit of it; to th

To the cows fr zerland; the wh head, and hopes fupplying them c
had long cherifhed the hope of introducing into his own country this fource of increating wealth, flowing as well from the augmentation of produce, as from that of the people employed to raife it ; but fenfible at the fanse time, that the moft ufeful innovations could be introduced by example only - a truth the more applicable to agriculture, from being practifed by men of fmall fortune, little or no education, and confequently full of prejudices, and unequal to the purfuit of any practice, but that of the beaten track-bu: determined to attempt, as foon as it was in his power, an effay of Englifh agriculture; but as he was defirous of having his example followed, it was neceffary that thefe effars fhould be fo conducted as to enfure fuccefs.

His friend, Mon. de Lazowiki's refidence during three years in England, whither he confented to accompany the fons of the Duke, facilitated thefe means. Mon. de Lalzowiki, whom 1 had the pleafure of knowing intimately, acquired that kuowledge in agriculture, which much inquiry, affiduous application, and frequent converfation with the beft farmers, could give to a mind very capable of, and much accuftomed to obfervation : he was likewife no franger to the projects of Monf. de Liancourt; and in this inflance, as on every occafion, his unexampled friendhip made him eager to fecond his views.

In 1789, Monf. de Liancourt, on beconing the proprietor of a large eftate, fituated at thirtecn leagues from Paris, refolved immediately to execute the plan he had fo lons projected : he accordingly engaged an Englifh farmer to come over from Suffolk, with his family, and a common labourer; this Englifh colony carried with it every kind of farming implement; they had with them likewife five oxen, a bull, and five cows, from Suffex, to perpetuate that breed, if the country into which they were tranfported would admit of it; to thefe were added a Suffolk polled bull and five cows.

The farmer was placed in a farm that had hitherto yielded about two hundred pounds a year; the land was in fome parts good, in others, bad; it was fo divided in quality and fituation, as to render one part fit for the reception of theep, and the other part for the feeding of cattle; thefe two objects were thofe which Moni. de Liancourt was moft anxious to attain, in the agricultural fyftem he was about to introduce; becaufe they were moft advantageous, in a country furrounded by great markets, and very near to that of Paris; he added a large extent of land to the farm, taken from his park, and from other farms, confifting of about eight hundred arpents; two hundred and fifty which were appropriated to fheep, and the ref to the feeding of cattle; he defigised to have made fuch additions to each part, as would have enlarged the whole to fifteen : dred arpents; to which, in procefs of time, he would have nearly dedicated the wh of his park. Whiltt the Englifhmen were beginning their operations, and forn: labourers of the country to the ufe of the new fort of plough imported from :n, inftructing the common workmen as to the conftruction of the new implements, a: teaching the women fervants of the farm the managenent of the dairy, the making of checfe, $8 \cdot c$. Monf. de Liancourt had fent two young labourers, out of the environs of Liancourt, to England, who, being placed by me with good farmers in my neighbourhood, qualified themfelves to replace, at a future day, the Englifh family, in cale thele fhould grow tired of living in France, or to affift them if, as Monf. de Liancourt hoped, they were difpofed to remain. The artizans of Liancourt learnt to imitate the implements, the plough and the cart brought from England, and made them very well.

To the cows from England, were added twenty four more from Normandy and Switzerland; the whole herd, a very fine one, amounted, in 1792, to a hundred and five head, and hopes were entertained of increafing the number to three hundred, and of fupplying them completely with a fufficiency of food. The young beafts were not then
of an age to allow of any decifion being made, whether the produce of the Suffolk or Suffex breed would beft fucceed, but the whole afforded the molt flattering hopes.

With regard to the flock of theep-the Spanith ram croffed with the ewes of Berry and the Spanith ewes, and the Berry ram with the Flemifh ewes, were the two breeds defigned to be efablithed and improved; an Englifh ram from Romney Marfliwas alfo crofied with the Berry ewes, all of which anlwered perfectly well: the lambs were fine, bat as this branch of bufinefs had been began later than the other, the profpect of its fuccefs, although well founded, could not be entirely atcertained.

The lands had been put into excellent condition, in a country where inclofures were unknown; cvery field of the farm was inclofed by deep and broad ditches, with well planted hedges; gates were ercated in all; the dry lands were irrigated, and the marthy meadows drained, by cuts underground; old lands, for ag:s pait judged incapable of yielding any produce, were burnt and rendered fruitful; the buildings on the farm were modelled to the new fyftem, and to the magrement of the culture that was introduced. The two young Feench labourers were returned from England, and the Englifh farmor (Mr. Reeve), an excellent one, and a very honett man, fatisfied with his fituation, with his fuccels, and with the treatment he met in the eountry, thought only of continuing his employment, of increafing his fuccefs, and of feconding the intentions of his mafter. He was ordered to keep an exact and daily regilter of all the bufnets tranfacted on the farm, to thow it to whoever chofe to fee it, and to anfwer all their queltions with truth, mildnefs, and patience, but not to entice any perfon to undertake an imitation of the Englifh method of farming ; Monl. de Liancourt thinking, that in every innovation, nothing lefs than telf cenviction ought to actuate thofe who attempt it; and that by raifing their expectations too highly they ritk the fuceefs, which fooner or later would not fail to attend their efforts. The cows of the dittritt were covered by the bulls of the farm whenever they were brought, and the produce from them was already found, by the people of the country, to be much mer; the calture of turnips and of cabbages, for the feal of cathe, abtolutely unknown beltre in the diltrict, begat to be introduced ; fome proprietors inclofed their tields; fever.ll others had made, for their own ufe, larming implenents alter the Englifh modei, and found them anfwer bert the purpoie; many more liands were cmployed, of all ages and of both fexes, in the farms ; the Englifi were received with pleature in the country, and treated in the moot cordial maner; every thing fiececded to the umott with, and thefe fuccefles were, in great meafure, due to the indefatigable and enlightened vigilance of Monf. de Lazowfiki, whofe hart is equal to his capacity.

The evemts of the $\mathbf{x}$ ch of Aught abded the cruel necelity of forcing Monf. de Liancourt w renome the hope of being weful to his comery, as he had every reafon to expect irons thefe effays, to the other misformes he has experienced from the finme culle.

Agriculture was not the naly objeot of improvement he fonght to tranfport out of Enghand into his country; be tad likewife begm to cflablifh the fpiming of coton, a matufatory of linen, a tooking mandactory, and the fabrication of cands; he had engaged the diderent arizans in cach branch from lingland, controted buidenge, and werificed hes garders to thefe various eltablifhment"; which, in 1892, alrealy employed inore than a thouland people in the ditrict of Liancourt; and, athough yet är fi m maving atained to pertection, they were productive of the mot latuary atle to the lewer ramk of moph: As thete manntachares have remained in the polletlin of an
 tine ilen, that the coalia rable fums of money it coft him to form thefe eldablamens,
were not dultry. in his bod father of orangeric in Angoi the cult:man had fuccefs; the gooil very' pee hurt hii deflroyin was uniq

were not wholly lof to the country he was fo anxious to enliven and to enrich by induftry. Thefe eftablifhments naturally recall to mind what the Marquis de Mirabeau, in his book De l'Ami des Hommes, relates of the Duke de la Rechefoucauld, the grandfither of Monf. de Liancourt, having, in 1754, made a facrifice of one of the fineft orangerics iil France, and part of his park, to the inhabitants of his eftate at Verteuil, in Argotimbis, for the purpofe of planting mulberry-trees, and raifing of filk-worms, the cultivation of which was at that time fcarcely known at Verteuil. This benevolent man had, before his death, theconfolation of feeing many good intentions crowned with fuccefs;' Mont: de Liancourt, on the contrary, has the fenfible mortification of feeng the good he intended to do, and which he had fo happily begun, deftroyed by thofe very people for whom it was undertaken; and who, by a fatal error, in thinking to hurt hir :. whofe fole endeavours tended to their advantage, have hure themfelves, by deftroying an eftablifhment that would have been a gerin of national profperity, and was unique in France.
: The deftruction brought upon fuch eftablifhments, by revolutionary anarchy, is one, among a thoufand leffons thar teach the danger, to the deareft interefts of the people,

- flowing from popular commorions. Litule more remains of thefe agricultural eftablithments, than the merit of having made them, a fource of heart-felt fatisfaction to a worthy and patriotic individual. That he may be fpeedily reinftated in a property, which he lived only to improve and to adom, is the fincere wifh of that gratitude and friendhip which peris this'faint acknowledgmeut of merit.

## ITALY.

## Notes on the Agriculture of Lembardy.

ONE of the mof interelting countries in Europe, for the practice of various branches of rumal aconomy, merits a mach clofer and more minute detail than is poffible for a traveller to pive', who from the nature of his purtiut can do no more than retain a few of the principal features, to point out thofe circumftances which demand the moft fludiones attontion: fome of thefe are fo valuable, that jears would not be mi'pent in acquiring a complete knowledge of them. On every fubject, except what refpeets diretly pratical hutbandry, the finall number of my inquitis is of lets confequence, while the pen is in the hand of my ellecmed friond, Mr. Profeflor Symonds, whofe elegant memoirs upon Italian ayriculture are fraught with information of unguefionable utility. I thall arrange the minutes 1 made in Lombardy under four leaded, which will include all that 1 think worthy of the reader's contideration.

1. General circumftances of the huibandry.
2. The management of grats lands.
III. 'The management of arable lands.
IV. The entouragement or depeffion which agriculture receives from various caufes.
[^88]Chap.

## Cuap. XXXI.-Gcneral Circumfances of the Huflandry of Lombardy.

LOMBARDY is one of the richeft plains in the world; for fertility of foil, united with the ufe that is made of it by watering, it much exceeds every other in Europe; but for mere natural fertility, I take the plain which extends from Holland to Orleans to confift of a richer foil, and it is alfo of a greater extent. From the foot of the Alps, near Suza, to the mouths of the Po, are about two hundred and fifty miles, and the breadth of this noble plain varies from fifty to one hundred, containing, probably, about fifteen theufand fquare miles. The Po bends its ftately courfe through the whole extent, its branches ramifying, in innumerable ftreams, from the Alps on one fide, and from the Appenines on the other; the prodigious extent of the former range, covered with eternal fiows, afford a valt fupply of water, preferved moft conveniently in thofe immenfe refervoirs the I:igo Moggiore, Lugano, Como', Ifeo, Guarda, whofe waters are the origin of the greater part of the irrigations of Lombardy. But in the Appenines there are no fuch refermoirs, nor any extent of fnow fimilar to that of the Alps. Thus the fpace watered to the north of the lo, is probably ten tines more confiderable than that to the fouth of the fame river.

The foil of Lombardy is, wherever I viewed it, either fand, gravel, or loam. I met with none, or at leaft, with very little clay (fyeaking always as a farmer, and not as a uaturalift, and no chalk.

Under this head I fhall infert the notes I took concerning-1, foil; 2, climate; 3, indofures; 4, farms and tenantry ; 5, rent and price of land.

> Sect. I.-Of Soil.

Piedmont. - After pafling the Alps from Nice, and defending towards Coni, in the level and fertile vale of Piedonont, the foil is every where a rich fandy loam, with fonath appearance of clay. Wherever rivers, or rather torrents are found, we fee great tracts of fone and fhingle, which were brought by the water fron the mountains. The Dora Baltia offers this fpectacle; from that river to Ciylione, are plains and waftes of gravel. The rice country of Verceil is a fandy loam. The diftrict of the Scfia is gravel. The Tefin is the fame. The gravels of Piedmont are all full of round fones, from the fize of an egg to that of twice a man's filt.

Milanese.-In the way from Milan to Pavia, great tracks ef gravel, which would not be very valuable without water. 'To the north of the city', about Mozzatta, \&c. they have two foils chiefly,-a frong loam, a little clayey, blackifh, and free from fones: and a gravel mixed with loam, fome blackifh, dries quickly, and always loofe. The Lodizan is a loamy fan!, or loamy gravel ${ }^{*}$.

Srate o: Ventee-The whole way from Vaprio to Verona, there are very great trads of gravelly loams ; there are alfo fome fandy ones; the foil naturatly is aot deep or rich, though there are tracts that merit both thofe epithets. The territory of Verona is, in general, indifferent, and would not be of great value, were it non for water, and much induftry. The beft meadows and rice-grounds not more than aime inches deep on flone and gravel. For fome miles from Verona, the ftony

[^89]gravel continues; but towards Vicenza, much fine red and brown, deep, friable, fandy loam, with few or no fones.

Ecclesiastical State.-Ferrarese.-In the Ferrarefe, between Paffo Sieng and Bologna, the foil is two feet deep; of a brown fandy loam, with a yellowifh hue under which is one foot of fand, and then blue clay, apparently ferruginous. In cutting, not long ago, through a field, for raifing a bank, they met with a heap of ancient bricks, five feet deep. From Ferrara to Bologna, the foil is, to all appearance, the richeft I ever beheld ; deep, friable, and with that degree of tenacity which marks great fertility ; it feems to be entirely a depofition of waters, that have brought thofe fine particles which are held fufpended, and which render that fluid turbid : thofe almoft impalpable particles which are long in fubfiding.

Tuscany,-All 1 faw of this territory is a rockey ftone brafh, or gravel. The loams are compounds of it, with more or lefs vegetable mould; I faw fcarcely any tracts, large enough to be worth mentioning, that are exceptions. It is, upon the whole, though improveable, not a fertile foil; and, if olives were not well adapted to it, would be productive of little befide fheep-walk; to which animal, all I faw of this country, is admirably adapted, and would, I doubt not, produce as fine wool as Spain itfelf.

Modena and Parma.-A rich fandy or gravelly loam is predominant through thefe dutchies; in many tracts it is deep, moift, and friable, as I faw in the lands which were receiving, their autumnal preparation for beans in the fpring. In fome diftricts it is of a firm texture, but not clay. Much the fame foil, but not equally deep, is found in the ceded provinces of Vogara, Tortona, and Alexandria; but parts of the laft more tenacious, and to be ranked among the ftiffeft I met with in Lombardy.

## Sect. II.-Climate.

ON the climate of Lombardy, Mr. Profeflor Symonds is fo full and fatisfactory. that the reader can be no where fo well inftructed.

Piedmont.-The great complaint in Piedmont, is the exceffive heat in fummer: equal, I was affured, to almoft any that is felt on the globe, and of a fuffocatiug quality; while the frofts in winter are as fevere, in the contrary extreme. The peftifcrous climate of Sardinia is known to every body; though between 39 and 41 degrees latitude ; in the fouthern part of the ifland, they are not forwarder than in the Milanefe: they cut their corn in the north part in July: in the Milanefe before the end of June *.

Misanese.-The moft remarkable circumftance in the climate of the Milanefe, is the mildnefs and warmth of northern and mou.tninous tracts, and the leverity felt in the phain. This fact is found particularly around the lake of Como ; upon all the weftern coaft of that lake, which is about forty miles long, the agrumi, as the Italians call oranges, lemons, \&c. are found, expoled to the open air, in good perfection; yet the whole of the lake is bounded by the high Alp., which, immediately to the north, are covered with eternal fnows. On the rich plain of Milan, and thence to the Appenines, no fuch plant can be left expofed ; olives are not ieen, and oranges, lemons, and bergamots, muft be covered in winter. Thele agrumi are found chicfly on the weft coaft of the lake, but fome are feattered on the callern, It is the fhelter alforded by the

[^90]mountains, in peculiar pofitions, that has this effect. The fame circumftance is found in the Lago Maggiore, where the famous Borromean Illands are covered with agrumi. In all the Milanefe, dry funmers for corn (I believe it is the fame every where in Eurnpe) are moft productive *.

In an experiment made at Vicenza, in the Venetian State, by the Academia Agraria ot this city, they fowed wheat October $18,178 \%$; came up the 28 th ; the ears appeared Mav 2, 1788 ; the flowers May 13 ; reaped June 19.

Tuscany.-I was at Florence the beginning of November, and the ice was four inches thick; a feverity nenr yet known in England. The Englifh were, at the fame time, fkating at Rome.

One-fifth of all the productions of the earth are calculated to be deftroyed by hail and other accidents.

Parma.-In the management of the vines in the larmazan, there is a practice which fhews the contant dread of fevere frofts. All the vines are now, in November) turned down, and the end fhoots buried $\dagger$ in the earth to preferve them; yet in a wet feafon they fufier by this treatment, as well as in all feafons, by being Itript from the trees, in order to undergo this operation.
Mr. Profefis Symonds, in the excellent paper quoted above, removed the common erroneous dea of the fine climate of Italy; I made many inquirics concerning the leading facts, and have cevery reafon to belicve, that it is in point of health and agrecablenefs, one of the worft climates in the world: with the views of a farmer, however, it mult be confefied, that the productions which the whole peninfula owes to its climate are very valuable; to omit fpeaking of Sicily or Naples, I may remark, that planting the poor brafhy hills of Tufcany with. olives is an advantage unequailed by any thing to be met with in the north of Europe ; that the produce of fiik throughouc lombardy is an object of the firt importance-That rice is found to be an article of atmolt unrivalled profit-'lhat the productive fate of the meadows is indebted almont as much to the heat of the fummers, as to the plenty of water; and, for any thing I know to the contary, the admirable quality of the cheefe alfo. Thefe are all objeats of great magnitude, and entirely derived from climate.

## Sect. III.-Inclofures.

Piedmont.-It is not very eafy, in many parts of Piedmont, to pronounce, on a fuperficial view, whether the country be open or inclofed; but, on a nearer infpection, the

- I' e fance remark was made long ago, in rifin;

greater part by far found to be inclofed; generally by ditches, and, in many difftricts, with hedges alfo; which, in fome places, nre as complete as in the beft Englif counties.

Milanese- - Much the greater part of this territory is inclofed, either with hedges or by ditches, which ferve as conductors of the water ufed in irrigation. Thele, in the Lodizan, and other diftricts to the fouth of Milan, are planted fo thickly with willow and poplar pollards, that the country looks every where like a wood.

Venetian State.-Much of the country from Bergamo to Brefcia, is very thickly inclofed with hedges. From Brefcia to the Lago di Guarda it is the fame; but from thence to Verona not equally fo.

Ecclasiastical State. -Bologna.-The whole Bolognefe is inclofed. They make and plafh their hedges with the niceft attention: made with dead ftakes, about four feet high, and tied in crofs lines, with great neatnefs and ftrength. This care is, however, exerted for the boundary of the farm only; fubdivifions of this kind are mare.

Tuscany.-There are no rights of commonage in ali Tufcany; thanks to the wifdom of Leopold; every man has a right to inclofe his property as he pleafes. The Appenines, crolfed from Bologna to Florence, are however moftly uninclofed, ani almoft wafte.

Moden 4. - From the city of Modena to Reggio, the inclofures are very neatly formed of well made hedges without any ugly fprawling ones; but all either trimmed or made fo often, that they are not fuffered to fpread.

Parma.-To Firenzuola all the country is inclofed.
Piedmont. - Tortoncfe. - The fences from the Duchy of Modena hither are greatly declined: there are fome hedges every where; but many large fields all the way, with only bad ditches or banks.

Lombardy, upon the whole, mult be confidered as an inclofed country, and much of it clofely fo. It would indeed be a glating abfurdity to keep land fo extremely valuable in an open ftate. The importance of inclofing is well underfood, and where not practiled in perfection, it arifes from caufes that form exceptions rather than effect the general rule.

## Sect. IV.—Of Farms and Tenantry.

THE predominant feature in the farms of Piedmont is metayers, nearly upon the fame fyltem which I have defcribed and condemned, in treating of the hubandry of lrance. The landlord commonly pays the taxes and repairs the buildings, and the temant provides cattle, implements, and feed; they divide the produce. Wherever this fyltem prevails, it may be taken for granted that a ufelefs and miferable population is found. The poverty of the farmers is the origin' of it ; they cannot llock the farms, pay taxes, and rent in money, and therefore mult divide the produce in order to divide the burghen. There is reafon to betieve that this was entirely the fyltem in every part of Europe; it is gradually going out every where; and in Piedmont is giving way to great tarns, whofe occupiers pay a money rent. 1 was for fome time deccived in goint from Nice to Turin, and believed that more of the farms were larger then is really the cafe, which refulted from many finall ones being collected into oae home fead. That belonging to the Prince of Corignan, at 1י", Brum, has the appearance of being very confiderable; but, on inquiry, ifound it in the hands of foven families of metogers.
vol. iv.

## Youno＇s travels in prance．

In the mountains from Nice to Racconis，however，they are fmall；but many properties， as in the mountains of France and Spain．

The Caval．de Capra，member of the Agrarian Society，affured me，that the union of farms was the ruin of Piedmont，and the effet of luxury；that the metayers were dil－ miffed and driven away，and the fields every where depopulated．I demanded how the country came to have the appearance of immenfe cultivation，and looked rather like a garden than a farm all the way from Coni？He replied，that 1 fhould fee things otherwife in paffing to Milan ：that the rice culture was fupported by great farms，and that large tracts of country were reduced to a defert．Are they ：hen uncultivated？No， they are very well cultivated，but the people all gone，or become miferable．We hear the fame flory in every country that is improving：while the produce is eaten up by a fuperfuity of idle hands，there is population on the fpot；but it is ufelefs population： the improvement banifhes thefe drones to towns，where they become ufeful in trade and manufaqures，and yield a market to that land，to which they were before only a bur－ then．No country can be really flourifhing unlefs this take place；nor can there be any where a fortining and wealthy race of farmers，able to give money rents，but by the deftruction of metaying．Does any one imagine that England would be more rich and more populous if her farmers were turned into metayers？Ridiculous．The intendant of Rifatii added another argument againft great farms；namely，that of their being laid to gyats more than fmall ones；furely this is a leading circumftance in their favour，for gra．sthe laft and greateft improvement of Piedmont；and that arrangement oif the foi！：ach occafions moft to be in grafs，is the moft beneficial．Their meadows are amongt ith：neft and moft productive in th world．What is their amable？It yields crops of hevor fix times the feed only．To change fuch arable to fuch grafs，is doubt－ lefs the higheft degree of improvement．View France and her metayers－View England and her farmers；and then draw your conclufions．

The Milanese．－Wherever the country that（Ifaw）is poor and unwatered，in the Milanefe，it is in the hands of metayers．At Mozata the Count de Caftiglioni thewed me the rent book his intendant（lleward）keeps，and it is a curious explanation of the fyftem which prevaiis．In fome hundred pages I fiw very few names without a large balance of debt due to him，and brought from the book of the preceding year： they pay by fo many moggii of all the different grains，at the price of the year：fo many heads of poultry，fo much labour，fo much hay，and fo much fraw，isc．But there is， in molt of their accounts，on the debtor＇s fide，a variety of articles befide thofe of re． gular rent：fo mucls corn of all forts，borrowed of the landlord for feed or food when the poor man has none ：the fame thing is common in France，wherever metaying takes place．All this proves the extreme poverty and even mifery of thefe little farmers；and fhews that their condition is more wretched than that of a day labourer．They are murls too numerous，three beingcalculated to live in one hundred pertichi，and all fully employed by labouring，and cropping the land inceflantly with the fpade，for a produce unequal to the paynent of any thing to the landlord，after feeding themfelves and their cattle as they ought to be fed；hence the univerfal diftrefs of the country．Thole who are ad－ vocates tor fimall farms，fhould come hither，and fee how they iafallibly generate poverty in every cottage．＇the furplus of population is not demanded by manufactures，or by sowns；the increafe therefore is only the divifion of a pittance of food amongt many mouths infted of a few．1．is impoffible to probibit procreation，or to force emigra－ tion ；but it is in a landord＇s power to introduce bradually and prudently，a different fytem－to occupy a large farm himfelf，cultivated accurately by day labourers of all
ages and fe grofs and teration in is at prefer example of in countries in others wl im plefervin a country fi of the peop count－book other：but much being terelt in ke paying their tempration ： tion of num posperty，is country，by remembered not in the I and the farn hands of po which fhoul nicious fy fter ing them to that their la

ages and fexes, well paid, and if this be not fufficient, to eftablifh a manufacture of fome grofs and fimple kind, to employ the population already exitting; and by a gradual alteration in his farms, to proportion the food to the mouths that are to eat it ". There is at prefent an inducement to fuch a change, that ought to weigh very ferioufly: the example of the French revolution will fpread, and will be much more apt to take effect in countries where there is nothilg but the great land owner and the poor cottager, than in others where there are intermediate ranks of men of fubftance, who have an interef in preferving public order. What a temptation to confufion and rebellion is it, to have a country full of miferable metayers, all deeply indebted to the feigneur? Nine-tenths of the people in fuch a cafe, have an immediate intereft in burning his cafle and his ac-count-books, for he ftands fingle, on one hand, againt all the pcople, fwarming on the other: but in the watered plain, where the farms are large and nut populous, from fo much being in grafs, there is every where a race of wealthy farmers, who have in in: tereft in keeping the people quiet, - who are united with the landlord, - and who, paying their men in money, without thefe long and dangerous accounts, have not the temptation to revolt; or even if they were tempted, they would not have the difproportion of numbers to render it equally dangerous. The great object of men who have p. operty, is at prefent to fecure it - and they can have no fecurity, while they fill the country, by metaying, with fwaims of a flarving and indebted peafantry. It fhould be remembered that the mifchievous confufions, plundering, and burnings, in France, were not in the Pays de Beauce, nor in Picardie, nor in Artois, where metayers are unknown, and the farms large; but in the Maçonnois, in Breffe, in Sologne, where all are in the hands of poor milerable metayers; an inftance, furely, exprefs to the purpofe, and which fhould have its weight with Italian landlords. But to work a change in this pernicious fy ftem, demands a refidence on their eftates in the country, inftead of abandoning them to the rapacity of fewards; it is not by living in the frippery of great cities, that their landed property is to be arranged on fafe principles $\dagger$.

In the watered parts of the Milanefe, great and rich farmers are found. Here are the particulars of a farm I viewed, between Milan and Pavia; viz. three thoufand one hundred pertichi; one thoufand fix hundred of rice; two hundred flax; four hundred and fitiy perennial grafs; four hundred and fifty clover; four hundred arable crops, wheat, rye, maiz, millet, oats, \&c.; twelve horfes; eight oxen; fifty-five cows, two bulls; forty labourers; rent 20 livres the pertica; the whole capable of being watered. And at Cologno the following are the particulars of one, where one intndred cows are kept: two thoufand ferticisi; onc hundred cows; one cazaro; one fotte cazaro; fix others; nine for corn ; one agent; one guard againft thieves, and thofe who fleal water; one waterman. To flock fuch a farm 50,000 livres neseffiary. By means of fuch farms they have rich farmers; fome worth 100,000 livres. The general idea of profit, in thefe dainy difricts, is ten to fifteen per cent. ; fome dairy farms are occupied by proprictors, but the number is inconfiderable.

Venetlan Srate.-All the lands in the Brefeian and Veronefe territory are let at half produce, is la micta; even vines: but fome meadows are ufually referved, and alfo woods. The proprietor pays the land.tax, and the farmer provides live ftock, and pays the taxes on it.

[^91]Sig. Locatelli has a farm of one hundred campi, within two miles of the city, which yields him two hundred and fifty zecchini nett; this is fomething more than 308 . an acre. He has alio another farm more diftant, of 'fix hundred campi, which yields fix hundred and fifty zecchini nett; on which there are eight cows, twenty-two oxen, and one hundred and fifty fleep.

In the Vicenine $\dagger$, rent when calculated in money two and a half zecchini per campo. They have farms fo large as two thoufand campi.

In the Paduan, one hundred campi are a large farm; common 60; fmall 40; and they reckon fmall ones the belt cultivated; if this be fact, and not a matter of opiuion in the gentleman, my informant, it Thews that their hurbandry muft certainly be efteemed bad; it is, however, queftionable, for the reafon added was, that there were more people on fmall farms; a fure proof that the progrefs of improvement has not been carried far. To ftock a farm of a hundred campi, one thwufand ducars are necelfary, reckoning the ducat at $3^{5}$. which is not exact ; this is a poor flock, for it does not exceed $33^{5}$. the Englifh acre. The arrangement of the farms in the Paduan, may be gueffed at, in fome neafure, from the following particulars; there are fount, in the whole diftrict, two hundred and eighty-eight thouland three hundred fouls; forty-nine thoufand, nine hundred and forty-three cows and fatting cattle; forty-one thoufand plough oxen; one hundred and two thoufand fireep; fixteen thoufand five huudred and ninety eight hogs; feven hundred and thirty-one mules; two thoufand three hundred and eightyone affes. One Profeffor informed me, that in his opinion, the great mifchief of the country is, that of great land proprietors letting their eftates to undertakers or middlemen, who will hire to the amount of ic,000 ducats a year; and in re-letting to farmers will fqueeze them fo that they cannot live, to the great degradation of the country. Another profeflor faid, that the diflrict of Padua is not fo well cultivated as the Vicentin, by reafon of the greater poverty of the farmers and peafants, who are miferable, and have no power to make the land yield well. Jndeed I learned, from very good authority, that the Paduan is not equal to the Vicentin, except in the mountains, where the peafants are much more at their cafe than in the plain.

Ecclemiastical State.--Bologna.-Eitates here are very gencrally let to middle men, who re-let them to the farmers at half produce, by which means the proprietor receives little more than one-half what he might do on a better fyftem, with a peationuy in a better fituation. The uhole country is at half produce; the farmer fupplies inplements, cattle, and theep, and half the feed : the proprietor repairs. Silk, and cren wine on the fame tenure.

Particulars of a farm (Sig. Bignami's) of fix hundred tornature; three hundred and fixty on the hills; the reft on the plain: fix metayers; thirty-fix working exen; twelve cows; twenty young cattle; one hundred fheep. Produce, two thoufand corbi of wine; three to four hundred corbi wheat.

Tuscany.- Letting lands at money rent, is but new in Tufcany; and it is frange to fay, that Sig. Paoletti, a very pratical writer, declares againtt it $\dagger$. A farm in Tulcany is called a podere: and fuch a number of them as are placed under the management of a factor, is called fattoria. His tuffuels is to fee that the lands are managed according to the leafe, and that the landlord has his fair half. Thefe farms are not often larger than fur a pair ot oxen, and cight to twelve people in one houfe; fome one hun-

[^92]dred perti pair of oxe Florence) without ob and legum trary. It of oxen, e who provi him to pro ftory of Fr ants upon poor, that mixture wi aquarolle ; lars they in the Val the cattle a of 3 livres at Caftello $28 \frac{1}{2}$, at 7 ), pair of oxe penple, of now 15 ; whole for : and a half receipt for acre, and

Villamag agriculture detail of $t$ this part of

The fajo can), fows times the the reft $m$ more in th on the wo
dred pertichi (this meafure is to the acre, as about twenty-five to thirty-eight), and two pair of oxen, with twenty people. I was affur that thefe metayers are (efpecialiy near Florence) much at their eafe; that on holydays they are dreffed remarkably well, and not without objects of luxury, as filver, gold, and filk; and live well, on plenty of bread, wine, and legumes. In fome inftances this may poffibly be the cafe, but the general fact is contrary. It is abfurd to think that metaycrs, upon fuch a farm as is cultivated by a pair of oxen, can be at their eafe; and a clear proof of their poverty is this, that the landlord who provides half the live mack, is often obliged to lend the peafant money to enable him to procure his half; but they hire farms with very little money, which is the old flory of France, \&.c.; and indeed poverty and miferable agriculture are the fure attendants upon this way of letting land. The mutayers, not in the vicinity of the city, are fo poor, that landlords even lend them corn to eat: their food is black bread, made of a mixture with vetches: and their drink is very little wine, mixed with water, and called aquarolle; meat on Sundays only; their drefs very ordinary. Yet in all thefe particulars they were in a worfe fituation before the free ron-trade. The richeft peafants are in the Valdichianu. The moft common agreement is, for the landlord to furnifh all the cattle and theep, and to pay the taxes, except the capitation on the peafants' family of 3 livres for all above three years old. In a confiderable fattoria of eighteen poderi, at Caftello Villa Tali Martelli, the largeft is two hundred ftiori (thirty.fix acres, at $5 \frac{\frac{\pi}{2}}{}$; $28 \frac{1}{2}$, at 7 ), end 70 the imallef. Particuiars of one of one hundred and ninety ftiori; one pair of oxt: , two calves; one horfe; one mule; no cows, fheep, or hogs; fourteen people, of all ages and fexes; taxes before the grand Duke's redemption, 80 pauls, now 15 ; tithes 15 pauls, half paid by landlord, half by peafant; this is 6 s .8 d . in the whole for about thirty acres. Produce corn, one hundred and eighty fcudi ; filk, fix and a half; wine, fifty-eight; oil, fixty; in all 851. ; the half, or 44 l. is the landlord's receipt for thefe articles, or above 11. 5s. per acre, at five ftiori and a half to the Englifh acre, and il. 11 s. if at feven. No fmall proprietor.

Villamagna.-Sig. Paoletti, rector of this pa:it', and author of fome valuable works on agriculture, which I have had occafion to quote, was fo obliging as to give the following detail of the three poderi belonging to his living, from which the arable aconomy of this part of I ufcany will be well undertood.

> Threc Poderi; thes: Fiunilies.
> Secd fown. -48 ftaji of wheat -168 ?iori of land.
> 3 ditto vetches - $7 \frac{\pi}{3}$
> 24 ditto beans - 23
> 6 dito oats - 10
> Artificial grafles; viz. clover,
> great millet, vetch, and
> oats, all for forage - $\quad$ - $\begin{array}{r}24 \\ 083\end{array}$

The ftajo of wheat, of forty pounds Englifh (fifty-two pounds to fifty-five pounds Tuf. can), fows three ftiori and a half, and yields eight or niae times as much; vetches four times the feed; beans three times; oats feven tirses; the wheat is a tolerable crop; all the reft miferable. If the farms, immediately uner the eye of this able writer, yield no more in this metà fyftem, we may fuppofe the poverty of the common products; we have on the worlt lands in England no idea of fuch crops as thefe of vetches, beans, and
oats.
oats. There are further on the three poderi, thirty-fix theep; one mule; fix oxen; and four cows; allo fifty barrels of oil, at five fcudi; and three hundred and eighty barrels of wine, at 10 livres the barrel, vintage price, but at a year old 15 livres or 16 livres; in filk 25 fcudi; and in wood 10 frudi, for three-fourths of the woods are in a ftate of dent ction. Thefe poderi a ele a la metà; repairs are done by the propicetor; live flock belong to the incumbent, and neither to the church nor to the parants; implements belong to the tcaants; feed-wheat, three fourths to them, and ons vurth to the owner; of fpring-curn, all to the latter; allo all forts that are put in with the vanga (fpade), as the lond is fo much the better laboured. Let it be romembered, that the fpade being preferred to the plough, is the moft decifive proof that tillage is in a ftate of mediocrity, if not barbarifri.

Modena.- In the mountains there are many peafant proprietors, but not in the plain. A great evil here, as in other parts of Lombardy, is the practice of the great lords, and the poffeffors of lands in mortmain letting to nuddle-men, who re-let to metayers; under which tenure are all the lands of the duchy. The temnt furnilhes one-half of the catte, and the landlord one-half. To Reggio the number of fcattered hovfes very great; good; and with neatly hedged home-ftalls: apparently there is not a labourcr's h wufe in all the country; all metaying farmers.

Parma. - Appearances from Reggio to this place are much inferior to thofe from Modena to Reggio; the fences not fo neat; nor the houfes to well built, white, or clean. All here metayers; the proprietor fupplies the cattle, half the feed, and pays the taxes; the pealant provides the utenfils. In the whole dutchies of Parnia and Placenza, and indeed almoft every where elfe, the farms mult be very finall; the pracice I have elfewhere noted, of the digging the land for beans, and working it us with a fuperfluity of labour, evidently thew it: the fwarms of people in all the markets announce the fame fact; at Placenza, I faw men whofe only bufinefs was to bring a fmall bag of apples, about a peck; one man brought a turkey, and not a fine one. What a wafte of time and labour, for a fout felliow to be thus employed.

Savor.-All the peafants are preprietors. So long ago as the year 897, lands were let on leaie for twenty-two yours, and not only for a payment of fruits or lervice, as in all the northern parts of Eurupe, Ent partly at a money-rent. This hews how valtly more forward Italy was in thofe carily periods, than the reft of Europe *.

It is faid, that in 1464 began the cuftom of letting lands on a three years leafe $t$.

## Sect. V._-Rcnt and Price of Land.

This, as I have endeavocred to explain already, in the cafe of France, is one of the mof important inquiries in rural cconomy. The vultar notion is, that nothing railes the value of land, but trade or manufacture. If the retult of my travels were ouly to produce facts fuficient to overturn fo falfe a theory, my time would not be altogether loft.

Piedmont.-Chentale.-Land in general is fold at 800 livres, or 900 livres the giornata, which is to the Englifh acre: as 7440 is to 7 g29. (Pancion) At a diflance from

[^94]towns, 600 livres to 850 livres. Some at 1000 livres (53l. 6s. per Englih acre). Good watered meads, 1000 livres to 1200 livres.

Turin. - The price of land in the environs of Turin, as may be fuppofed, is very high. Four miles from the town fome is fold without water, at 1200 livres the giornata: with water, it depends on quantity, and the value is immenfe. Land that has one hour a week of fuch a fream as will water five giornata in that hour, fells at 1500 livre3 (791. 19s. per Englifh acre); if it waters two giornata, 1000 livres; and if three, 1200 livers. And fuch watering adds at leaft one third to the value of the land. At Cambiano, five miles from Turin, arable land fells at 3000 livers, but this is uncommon. Near the town fuch prices as 3000 livres and 4000 livres are known. But in general, arable watered, near Turin, fells at 1000 livres; at 2 diflance and not watered, 200 lives to 55 a livres. If a general average were to be made of all forts of land, except the very fineft, it would be ahout 500 tivres. ${ }^{T / 1}$ regard to rent, but little is let for money, chiefly at one half produce; but fuch . as would fell at 1000 livres would let at 70 livres to 75 livres. If two-thirds a a will be about the rent in goud lands. In t'
Vercelli.-Rice grounds, 500 livres; good
$d$ one third meadow, 40 livres of Turin, arable lets at 30 livres. 600 livres and 700 livres per giornata.
Milanesi.- The price varies from 15 livres nd, 800 livres; watered meadow,
pooreft waftes, to 1000 livres the pertica *; but from 600 livres to 1000 livres more common. As the livre is 7 id . Englifh, 1000 livres is 981 . 19s. 2d. per acre. It is ufually bought in fuch a manner as to pay $2 \frac{1}{2}$ to 3 per cent. for the purchafe money.

Between Milan and Pavia, land rendered good by water, fome fells at 300 livres to soo livers: at 300 livres it lets at 12 livres.
From Milan to Mozzata, when you have paffed the watered plain, wlich is in a few miles, the rent in general is not more than 4 livres or 5 lives the pertica. In every new leafe for a long period, fuch as eighteen or twenty-one years, there is always an

[^95]augmentation

## IMAGE EVALUATION TEST TARGET (MT-3)

Photographic
Sciences Corporation
kugmentation of rent in every part of the Milanefe, and generally to a pretty confiderable amount. There is alfo an undoubted augmentation in the fpecie current in the country, and the prices of every thing have rifen at the fame time that money has increaled. It highly deferves noting by the politician, that as the Milanefe fubfifts entirely by land produce, without trade (other than the fale of that produce) and without manufacture, it is remarkable that it has experienced an advance in its profperity, as well as countries that feem to engrofs both trade and manufacture; even at a period loag after it had attained a height of cultivation and improvement, to which thofe trading countries have little to oppofe.

Lodi.-The beft land near this place, 600 livres the pertica (591. 8s. per Englifh acre); but farther off, 300 livres to 350 livres. The Spina, a farm I viewed, belonging to the Caval. Don Baffiamo Bona Noma, lets at 30 livres, others at 25 livres; but the common price 12 livres to 15 livres. The beft land and highelt rent is all for cows.

Codogno.-Watered lands feil at 300 livres the pertica; and let at 10 livres (1gl. gs, per Engliß acre) nett rent, tenant paying cenfimento, \&c.

Vinetian State,-Bergamo.-Price of land near Bergamo, 80 ducats the pertica. The ducat is 8 livres, and 50 livres the pound fterling; and if the editors of Agontino Gallo be not miftaken, there are 6,194 French feet in a pertica; on thefe proportions, land fells at 781 . 8s. per Inglifh acre.

Brefcia.-The beft fells at 800 fcudi ; commonly from 300 to 500 fcudi the jugero. This meafure containing four pertichi, and the Englifh acre $4!$, makes 400 fcudi to equal 59l. per Englih acre, at 7 livres the fcudo. The belt land of oo fcudi, announts confequently to 1181 . Rents, per jugero, 5 to 10 fcudi; the mean, $7 \frac{1}{2}$ licudi, equals 225. Englifh acre.

Verona.-Land here commonly fells at 70 zecchini the campo (441. 6s. per Englifh acre), and yields to the proprietor 3 to 4 per cent. I viewed an arable field clofe to the city, yet fowing uith wheat, that would fell for 100 zecchini per campo: and fome other lands juft out of the Porta Nouva, that are exceffively gravelly, would fell for $: 5$ zecchini; fuch poor land, at a diftance, would not fell for more than 8 or 9 zecchini ( 5 l. per Englifh acre): it is however not fo bad, but that good mulberry-trees are on it.

Vicenza.-The beft watered mendows fell at 2400 livres to 3000 livres the campo, which is about $\sigma_{g l}$. per Englifh acre, the beft arable is nearly as valuable.: The worft arable 300 livres; in the beft there are neither mulberrics nor vines. Conimon price 900 liver $1010 c 0$ livres, and the produce 310 livres per campo, about 55 s. the acre. The higheft rent in money is 3 zecchini the campo, common 1 , $1 \frac{1}{2}$, or 2 zecelini. But in general land is let at half produce.

To Padua.-'The beft lands fells at 45 zecchini the campo : rice-grounds are at that price.

Padut.-The bett arable land fells at 200 ducats; of 6 liveres $4 f$. The campo is 840 pertiche quadrate, each of fix feet, confrquintily 30,240 feet ; tut the foot is one inch
longer th $\frac{1}{T}$ the und and confe ducats ; Efates pa

The mol is fold at p

[^96]longer than the Paris foot: it is therefore equal to about 35,280 Paris feet *, or about ${ }^{\text {r }}$ th th under an Englifh acre. Middling land 95 ducats ; bad 50 ducats; rice grounds, and confequently irrigated, 200 ducats; the fame land before rice being planted, 100 ducats; watered meadows, 200 ducats; woods, 100 ducats; gardens, 400 ducats. Eftates pay 5 per cent.

Ecclesiastical State.-Bologna.-Landlords are paid by half produce, which affords them about 11. 6s. 5d. per tornatura, of half an Englifh acre, and as much is left for the farmer: this is about 5l. 5s. an acre, grofs produce, on an average; but it is in the rich plain only. I'hrough all the country, and including good, bad, and indifferent, it varies from 8s. 9d, to 26s. 5 d . the tornatura, for the landlord's fhare. The price for fuch land as yields the latter fum, is 211.17 s . 6d. Englifh, the tornatura: in general from 81 . iss. to 131.2 s . 6 d . The return for the value of land is 4 to 5 per cent. on the capital, but in farms on the mountains, 7 per cent.

Tuscany.-Florence. -The landlord's half of the produce, for all farms are let a la meta, is about 3 livres nett ( 2 s .11 d .) per ftiora on the plain (11s. 81 d . per Englifh acre $\dagger$ ): it is 2 livres on the hills ( 7 s . $8 \frac{1}{2} \mathrm{~d}$. per acre), and ilivre on the mountains. No other proof is wanted of the poor ftate of agriculture in this country, arifing, doubtlefs, from fo wretched a mode of letting land. What muft it have been before the time of Leopold, who has done fo much towards the annihilation of its old fhackles?

Villamagna. - Three poderi, containing 200 ftiori cultivated, and 283 of mountain wood, would fell at 12,000 fcudi ( 3400 i .) ; and per ftiora for the whole, 7 l . each : it alfo yields a rent by metaying of 500 fcudi ; and land is commonly fold to pay $3 \frac{1}{2}$ per, cent. intereft ; but more commonly in other parts only 3 .

Dutchy of Modena.-Modena. - The biolca, which is here the meafure of land, is twenty-nine French toifes by twenty-fix, or feven hundred and fifty four; or to the Englifh acre as 27,144 is to 38,300 ; or as 15 to 21. This meafure of arable fells from 500 livres to 1200 livres-the livre half that of Milan, or about 4 d .; 800 would be 181. an acre. Watered meadow fells at 1200 livres to 3000 livres; the latter equals 70l. an acre. Such are mown thrice; the firl cutting-yields one carro of 100 poid, or 2500lb. (the pound about 4 ths of an Englifh pound); and the price of hay 3 to 4 zecchini per carro.

Parma.-The beft land fells commonly at 50 zecchini the biolca (31l. 7 s . per acre). To Firenzuola, the beft fells at 25 to 40 zecchini.

Pibdmont.-Vogara.-From St. Giovanni to Vogara, the price of the beft is 500 livres the journal. After that town, 24 feudi di Milano per tavola (about 20l. to 251. per acre). From Vogara, to within is few miles of Turin, the average value of land is 500 livres (261. 13s. per Englifh acre).

Savoy.-At Montmelian, vineyards fet at icoo livres to 1200 livres the journal,' which about equals a French arpent. On the mountain fides to Chamberry, on a foil, to appearance abfolutely fones, that yield good wine, and fell as high as meadow. Cultivated land at Modena, in the Haut-Savoy, at 1000 livres. Improved mountain fpots, 300 livres to 500 livres.

The moft carelefs examination of the preceding prices will be fufficient to thew, that land is lold at prefent in Lombardy, fome ages after it has loft both its commerce and its ma-

[^97]nufactures *, at prices that ought to mark the direct influence of immenfe induftry; for it riles from 301 . to rool. an acre, through a territory not comparable for foil naturally to many others. I will venture to affert, that the fame land in England, would not fell for half, perhaps not for one third of the money. And it is worthy of remark; that the cities which poffefs moft trade at prefent, as Leghorn, Genoa, and Venice, have little influence on the lands which fell at the prices here noted It is not the competition of Venetian merchants that raifes the prices on the terra firma; and what have thofe of Leghorn and Genoa to do with the Milanefe and Piedmont? If Leghorn has not cultivated the Maremina, how was it to water the Lodizan? Bologna is perhaps the moft manufacturing town in Lombardy; but hàs it drained the Commachio? If you recur not to prefent, but to aneient weaith, you muft turn to Florence t, Pifa, Genoa, and Venice; the two firf are in one of the wort cultivated countries in Italy : of Genoa I know nothing but by reading ; but I have read no author that fpeaks of great cultivation in the Ligurian nerritory, free from fmall prefent proprictors: and let it be remembered, becaufe it is a circumftance that merits it, that great commerce and fabrics, efpecially when depending on a city that governs a territory, have a direct tendency not to eftablifh, but to annihilate fuch properties.

The efiect of great wealth flowing from induftry, is to extirpate little properties by the profits from trade being invefted in their purchale; one country gentleman, with half a fcore farmers, and a hundred labourers, takes the place in countries, where the progrefs of wealth is in its natural courfe, of a number of little proprietors, who eat up all their produce, and yet are half ftarving for want. Is this the cate in the Genoefe territory ? I amfure it is not at Venice.

The fureft proof of the want of diffeminating wealth in the country, is the almoft univerfal practice of cultivating the land by metayers; if trade and commerce did much for Italy, which cannot be doubted, you mult look for their effects, not in the country, but in towns. Thole cities that poffeffed much induftry (which I have named), carry fure proots of former profperity: go out of their gates, and you meet with none-from what did this arife ? Probably from thofe cities being fovereign ones, and fhackling the country with every fecies of monopoly, in favour of themfelves. What is it therefore that will diffufe wealth through all the claffes, and give verdure to the fields, as well as luftre to the towns? An equitable governm.

Whatever we poffers in England, we owe to this origin ; and it highly deterves w , that it is not a cultivation fuperior to that of other countries, which diftinguifles our ifland fo much, as the eftablifhment of a race of men generally found no where elfe; a fubftantial and wealthy race of tenantry; a race found in every corner of England : in Lombardy, you muft go for fuch, not to Florence and Genoa, but to the Lodizan.

Chap. XXXII.—Of the Management of Grafs Lands.
CATTLE and grafs lands are fo connected, that; $\mp$ truft, it will not be deemed an impropricty to treat of them in the fame chapter, and as parts of the fame fubject. The obfervations I have made in Italy will be divided eafily into 1 , irrigation-2, live flock.

## Sect. I.-Of Irrigation:

IF there be one circumftance which gives a fuperiority to Lombardy, over all the other countries I have feen, it is this, and therefore merits the moft particular detail.

Piedmont.-Nice.-Such is the confequence of water here, that a garden of four feftaradi (a fquare of twelve trebucchi, i. e. 144 is a feftarada, and 400 trebucchi a giornata, which is to the Englifh acre as 0.7440 is to 0.7929 ) with a fmall houfe, lets at 20 louis d'or per annum, or about 151. an acre.

Coni.-For the laft ten miles from Nice to Coni, the country improves continually. The foil near the mountains is foney, but is a good fandy loam lower in the vale. It is perfectly level, and watered with the utmoft attention, in a manner I had not noticed before; not as in Spain, in beds, but the field is ploughed flat, fown with wheat, the clods broken with hoes and bufh-harrowed, and then great deep trenches ftruck with the plough, for letting in the water; thefe are eight to twelve yards afunder. They are now (September) watering clover eight inches high, by letting the water into thefe trenches, and conducting it in a fingular manner. A man walking backwards, draws by a line a bunch of ftraw and weeds, juft large enough to fop the water in the trench, and force it to overflow on each fide. This is an expenfive and operofe method, and inferior to the Spanifh. The crops now on the ground are maiz, good, but not extraordinary; nillet; and a little hemp, the male plants picked. A great deal of clover, but not much that is clean. But meadow abounds, which is the glory of Piedmont; and the conducting of the water in multiplying conduits, feems well undertood, and practifed in great perfection.
Coni to Chentalc.-In the watered meadows, much chicorium intybus and plantago lanceolata. Watered meadows are cut thrice commonly; but in fome feafons four times.
Racconis.-The watered meadows are now mowing for a third time; the predominant plants - the clicorium intybus, plantago lanceolata, accbillea millefolium, and trifolium pratenfe.

To Turin.-From Coni to Turin, fomething more than half the country appears to be watered, poffibly two-thirds, and wherever the water is carried, it is apparently with great fkill. It is however rather fingular, that more trenches are not cut for taking the water off the land; the attention is chiefly paid to bringing it on; from which we may conclude, either that the heat of the climate renders fuch drains lefs neceffary than in England-or that water is too valuable from every one underfanding its ufe, to be brought on in the leaft fuperfluous quantity. The contrivance towards Turin, for carrying the aqueducts of irrigation acrofs the roads, are beautifully executed: for convenience of diftribution, the water-courfe is raifed three or four feet, or more, above the gencral level : thefe aqueducts are brought to the fide of the road, and fcemingly finifh in a wall, but really fink in a fyphon of mafonry under the road, and rife on the other fide behind another fimilar wall. Seeing thele buttrefles of mafonry, without perceiving
firft any water, I wondered for a moment to what ufe they could be affigned; but when I mounted the foot-way, this beautiful contrivance was at once apparent. Thefe are noble exertions.

Turin.-The irrigation in all this vicinity is extenfive, and carried to great perfection. Water is meafured with as much accuracy as wine. An hour per week is fold, and the fee fimple of the water is attended to with the fame folicitude, as that of the land. Rich meadows without water fell for 1000 livres and 1100 livres a giornata; and arable worth 500 livres without water, is in many inftances worth 2000 livres with it. Such a meadow as will fell for 1100 livres or 1200 livres per giornata, will yield the firf mowing 115 rubbii of hay, worth $9 f$. to 10 . the rubbio, the fecond 90 rubbii, at $7 f$. to $8 f$. and the third, 80 rubbii, at $6 f$. to $7 f$. the fourth growth is fold to be eaten by fheep, at 5 livres. This produce amounts to 120 livres, or 6l. Englifh per giornata, which is under an acre. The intereft of 1100 livres being at 40 livres or 50 livres, there remains a fufficient profit, after all expences are paid. During the winter, as the meadows are commonly fed with fheep; they do not water at all. Some experienced cultivators avoid water in the fpring, till the frofs are over, which happen here as late as the 10 th, and even the 15 th of May, as a ftrong frefh vegitation is in fuch cafes entirely cut off; but in general no attention is paid to this circumftance, and watering goes on at all times except when theep are on the ground. Thofe who have water enough, let it on to their land once a week during the whole fummer; but if the weather is wet, once a fortnight; and a day or two before cutting, if the water is perfectly clear. In regard to the quality of water, they make no other diftinction than that from mountains being cold, and that of the Dora, near Turin, being charged with fo much fand as to be bad. They attend to the cutting of weeds in the canals that they may rot; and fome good managers harrow the bottoms in the fpring to foul the water, which then acts more powerfully as a manure. Another practice, which tends alfo to prove what excellent farmers they are in all that refpects meadow grounds, is that of paring and burning, which they perform on pieces that have a bad herbage, or want of improvement; but do not fow them with corn or any other plant, except hay-feeds, in order to renew the grafs, with no other interruption. It is impoffible to praife fuch practices too much. They call this hufbandry motara.

The power of effecting the great works in irrigation, which are vifible over this whole country, depends very much on the law, which fuppofes the right and property of all rivers to be vefted in the king; confequently all canals taken from them, are bought of hin, and this enfures another regulation, which is the power of carrying the water, when bought, at the pleafure of thofe who buy it, where they think fit; they cannot however cut acrofs any man's ground without paying him for the land and the damage; but the law does this by regulations known to every one, and no individual is allowed a negative upon a ineafure which is for the general good. The purchafers of water from the king, are ufually confiderable land owners, or communities that have lands wanting water, and it is of no confequence at what diftance thefe lands may be from the river whence the water is taken, as they have a right to conduct it where they choofe, provided they to not cut through a garden or pleafure ground. Nor can they carry the 'water under that of others, whofe canals are already made, as they might in that cafe dieprive them of part of their water ; they are obliged to throw aqueducts over fuch canals. The benefit of water is fo great and well underftood, that nobody ever thinks of naking objections; and in cafe their lands are not already watered, it is no fmall ad. vantage to have a new canal brought through them, as they have the opportunity of buying water of the proprietors. It is fold per hour per week, and even half an hour,
and down to a quarter. The common price of an hour per week for ever, is 1500 livres. At Gruliafcho, four miles from Turin, there are many Perfian wheels that lift up the water by buckets; the wheels are double, with wafhers between for the fream turning them ; the buckets or boxes on one outfide only; they raife the water eight or ten feet, and about two and a half fhort of the full diameter of the wheel, and I could not perceive that they lofe a drop; none falls except what adheres to the wheel itfelf. To fave the expence of multiplying fluices, for the occafional ftoppage of water, in carrier trenches, to force it over the land they have a moveable board that fits the trench, which is placed occafionally where wanted, and anfwers the purpofe well. They have none of the ramifications of carrier trenches common among us; and not fo many drains for taking the water off as with us; and, on the whole, do not fhew any thing like our attention in the ufe of the water, though twenty, or rather a hundred times more in bringing it from rivers, and diftributing it about the country; and 1 could not but obferve that their meadows have much bad herbage, and many places damaged by the water refting too long; this is more the cafe here than it feemed to befrom Coni to Racconis, where the meadows carried a better countenance.

Turin to Chivafco.-Not one-third of this country is watered. At Chivafco but little alfo. After crofling the Dora Belta, therè are foon two confiderable canals of irrigation; one made two years ago only, which is as great a work as a navigation in England.

Ciglione.-Little land watered in this country ; but lobferved here fome meadows, with off-channels from the principal ones, for conducting the water, which I did not notice before ; but very few drains. The new canal crofles a gravelly walte, but none of it watered.

Trouchan.-A very rich country much watered ; and many mulberries.
St. Germano.-Mowing the third crop of grals, and very poor; not more than fiften cwt . an acre, and yet watered. The glory of Piedmont is from Coni to Turin. Thole who pafs Mont Cenis to Turin, and Turin to Milan, fee, on comparifon, nothing.

Vercelli.-The new canal now making, for taking water from the Dora Belta, and conducting it to the rice grounds of Vercelli, is done by the king, and will coft three millions; the water is fold to communitics. The other I croffed near the Dora, at the fame time, was made long ago, and belongs to the Marquis de Bourg.

Milanese. - Buffalora.-After crofling the Tefino, in feveral branches, and entering the Milanefe, we find a great fytem of watering meadows to Buffalora, where that magnificent canal, the Navillio Grande is twenty yards broad, and though navigable, was originally made for irrigation alone.

St. Pictro Olmo.-Hence, for fome diftance, there is no watering; but then there is fomething in our Berkfhire method; the lands are arched up, and juft in the centre, on their crown, are the carrier trenches for conducting the water, and on each fide a row of low fallows; fome of thefe lands are two rods broad, and two feet higher in the ridge than in the furrow; the land firm and the herbage good: wherever the meadows feem good, there is abundance of chicorium intybus, plantagco lancolata, and trifolium pratenfe.

Milun,-As the invigation of the Milanefe is perhaps the greateft exertion of the kind that ever was in the world, and certainly the firlt that was undertaken in Europe, after the decline of the Roman empire; it merits every attention that a farming traveller can give; for it will be found, by very briefly recurring to records, which have been fearched, that great exertions (perhaps as great as ever known) were made in this country, at a period when all the north of Europe was in a flate of barbarifm. In the year 1037, mention
mention is made of the canal Vecchiabbia. In 1067, watered meadows were common, called prato roco, by Landolfo *. In 1077, there are notes of many flreams ufed. In ${ }_{11}{ }^{38}$, the monks of Chiarevalle bought of Giovanni Villano fome comınons, woods, and meadows for 81 livres under the contract (a parchment yet remaining) " ut monaferium. polfit ex Vcctabia trabcre lectum ubi ipfum monafierium voluerit et fifuerit opus liceat facerecidem nonafterio foflata fuper terram ipfus Johannis ab una parte via et ab alia-Esc. pofft. firmare ct babere clufam in prato ipfus Jobannis, E®c.". There is a fimilar contract of the following year, and various others, until the beginning of the thirteenth century; from which, and others, it appears that the Vecchiabbia was the entire property of the monaftery, and confirmed in 1276 by the diploma of the Emperor Frederick II. The merit of thefe monks appears to have been great, for they gained fuch a reputation for their fill and induftry, that they had many applications for afliftance in directing works fimilar to their own upon uncultivated lands; and the Imperial Cbancellor Rinaldo, in the time of the Emperor Frederick I. being appointed arclibihop of Cologne, found the poffeflions of his fee in fuch a deplorable itate, that he applied for, and found the fame affiftance as reported by Cefarior Eifterbacenfe. Their greateft exertions were in irrigation, which was fo well known, that they fold their fuperfluous water, transferring the ufe and property of fome by the hour, day, and week. In two centuries they came to be poffefled of fixty thoufand pertiche, mofly watered: there is reafon to believe that the practice in the thirteenth century did not materially differ from the prefent modes; becaufe, in the papers of the archives of the abbey of that period, mention is made of cbinfe, incaftri, bocbilli, foratoi $\dagger$, and cther works, to diftribute the water, and regulate the irrigation $\ddagger$. In 1164, the Emperor Frederic gave various rights, in certain rivers, to the people of Pavia, for the purpofes of irrigation §. In 1177, the people of Milan enlarged and continued the Navillio Grande, from Abbiate Graffo to Milan, being fourteen miles; it was brought from the Tefino, near the Lago Maggiore, to Abbiate Graffo, twenty miles, by the people of Pavia, long before the date of any records now known to remain \|. In 1271, it was made navigable. It is thirty-two Italian miles long, and twenty-five bracchi wide, or forty nine Englifh feet T.

The fecond great work, was the canal called Muzza, which takes the waters of the Adda, at Caffano, and carries them to Marignano, there dividing and watering much of the Lodizan. It was executed in $1220^{* *}$, and done in fo admirable a ftyle, that Padre Frifi, in the preface to Modo di regolare ifumi, E'c. fays, ""il meccanifmo d'irrigar le campagne è fato ridotto all'ultino grado di macfiria e di pcrfizione nel canale di Muzza $\dagger$." And Padre Antonio Lecchi, another great engineer and mathematician, remarks, " De'noftri trè celebri canali di Muzza, e de'due navigli qual altra memoria ci rimane ora, fe mun fe quella del tempo dclla loro confruzionc, e d'alire poclse notizie, niente concernenti al maravigliofo artifzio della loro condotta $\ddagger$."'

In I 305 , the canal of Treviglio was made, which takes the water from the Brembo, and carries it for feveral miles, about twenty-five feet wide, and about three deep; it ir-

[^99]rigates the territory of Triviglio and the Ghiara d'Adda: And, within four or five miles, there are five canals, taken from the Adda and the Brembo, all of great antiquity. In 1460; the canal de Martefano was begun, under Duke Francis Sforza I.; it was twenty-four miles long, and eighteen braccia (thirty-five Englifh feet) wide; fince lengthened feven or eight iniles more. It takes the waters of the Adda, a little before Trezzo, by means of a powerful wear (chiufe) founded upon the living rock; it is then fupported for five miles by a folid wall of fone, forty braccia (eighty feet) above the bottom of the Adda, and parallel with it. At Gorgonzola, it paffes over the torrent Molgora, by a bridge of three ftone arches. At Carfenzago, it is croffed by the river Lambro, which enters and quits the canal with all its floods. And in order to prevent the furplus of water, which this circumftance occafions, from breaking the banks of the canal, or overflowing them, there are nineteen fcaricatori in the canal, above, below, and facing the junction, which are fo calculated that they have not only powers fufficient to take off the waters of that river, but alfo half of thofe of the canal itfelf. Thefe fcaricatori are canals which take the water, when nuice-gates are opened for that purpofe, and convey it at various diftances to the Lambro again; the fall in its courfe being confiderable enough to free the canal from all fuperfluity of water. Near Milan, this Navillio receives the torrent Sevefo; and, after furrounding the city, unites with the Navillio Grande and the Olona. The fluices which Bellidor fuppofed to be invented by theDutch were ufed for the firt time near Padua, in 1481, by two engineers of Viterbo, Dionifius and Peter Domenico, brothers *. Leonardo da Vinci profited immediately of this great invention, for the union of the two canals of Milan; and finding bet tween them the difference of the levels to be eighteen braccia $\dagger$, he with fix fluices, in the year 1497, under Ludovico il Moro, opened and facilitated the navigation from one to the other. The greateft fcaricatori $\ddagger$ of the waters united at Milan, is the canal of Vecchiabbia, which, after having ferved fome mills and irrigation, falls into the Lambro near Marignano; and if this canal were made ftraight, and fupported by fome fuices, the navigation might be continued to the Lambro, and thence to the Po and the fea. Both thele canals, the Grande and the Martefano, are fo contrived as to be completely emptied once a year, for cleaning and repairing whatever accidents may have happened to any of the works.

I have entered into this digreffion upon a very curious fubject, little known in Eng. lifh literature $\mathbb{S}$, in order to fhew how well irrigation was underfood, and how adnirably it was practifed, when the countries on this frde of the Alps were barbarous. At the fame time, however, that juftice is thrs ione to thefe great exertions, we muft bear in mind that few diftricts in Europe arc bester, or fo well fituated for irrigation. The : lakes of Maggiore and Como, nearly upun the fame level, are three hundred feet (one

* Moto dell sicque, vol. v. Parma, 1766, p. 349. Mentioned by Zendrini in the tenth chapter, Sofra $P$ Acqua Corrente. This is the common fuppofition in Lombardy, and is thus recorded ; but it appears to be an error, bya paffage in Guilini, tom. xii. p. 332, where, anno $\mathbf{1 2 0}$, mention is exprefsly made of them, machinarum quas concloas appellant, $\mathfrak{F}$ c.
+ P. 98. Frifi.
$\ddagger$ The fcaricetori are what I believe we call wears in England; they are difcharges of fuperfluous waters. Mr. Brindley made them in the Duke of Bridgewater's canal, circular, and in the centre of the river, to convey the water as into a will; but in Italy they are cuts or openings in the banks of the canal, at places that allow a quick conveyance of the water; for inftance, where a canal croffes the bed of a river; their powers are calculated with fuch a mathematieal exactnefs, proportioned to the quantity of water brought into the canals by the rivers joining them, that no Hoods ever effect the furface, which is of an equal height.
§ One would naturally look for lome knowledge of thefe facts in "Auderfon's Deduction of Commerce;" but we fhall look in vain.
hundred and fifty braccia) higher than Milan, - and that of Lugano two hundred feet higher than thofe, with a nearly regular declivity to the Po *.

There are authors who have afferted, that agriculture is improved in confequence of great trade or manfactures only ; but the inftance of the immenfe irrigation in the Milanefe, effected by thefe and many other canals, too numerous to mention, will not allow of fuch a conclufion being general ; and to thew that my opinion is not without foundation, a very brief review of the ftate of Milan, fo far as it refpects thefe periods, will not be difpleafing to a reflecting reader.

In 1177, when the canal de Navillio Grande was made, the republic of Milan had been gradually forming for about two hundred years $\dagger$; but thefe dominions were exceedingly contined;-Lodi, Pavia, Mantua, Verona, Crema, Tortona, Como, Bergamo, Brefcia, Piacenza, Parma, Genova, Afti, Vercelli, Novara, Cremona, Ivrea, Padua, Alba; Trevifo, Aquileia, Ferrara, Reggio, Modena, Bologna, Imola, Cefena, Forli, Rimini, Fano, and Ancona, - were at that time independent republics $\ddagger ;$ which united againit Milan, in 1162, with the Emperor Frederick I. and befieged and deftroyed it. This fingular fact that in fifteen years after one of the moft fignal deftructions that could be brought upon a city, there fhould be found energy enough in a petty republic, to undertake a work which is in the prefent age regarded as an honour to Lombardy muft be admitted as a proof, that the trade and manufactures of that period could have been but very inconfiderable.

Milan, however, unqueftionably arofe to great power and profperity ; and our bufinefs is to inquire into that period, whence we may judge how much its commerce might influence the perfection to which the has carried agriculture.

1497, Leonardo da Vinci joins the canals at Milan.
It fhould feem from this detail that the exertions in irrigation were almoft purely agricultural ; the benefit enjoyed by the people of Pavia, from the Navillio Grande, was a conftant proof of the advantages to be derived from fimilar canals; and they were executed at moments which will not allow us to attribute them to the influence of manufacturing or commercial wealth.

To this may be added, that during the 13 th and 14 th centuries $\ddagger$, Italy was the perpetual fcene of bloody wars; the Venetians and Genocfe, the Venetians and the Milanefe, and, in their turns, the other republics feem to have had no other bufinefs than that of cutting each other's throats. A perpetual flate of warfare, and fo many revolutions as were taking

- In 1378, Giovanni Galeazzo Vifconti Conte di Virtu was declaged Duke of Milan, his dominions then comprifing Arezzo, Reggio, Parma, Piacenza, Cremona, Lodi, Crema, Bergamo, Brefcia, Verona, Vicenza, Feltro, Belluno, Baffino, Bormic, Coma, Nuvara, Aleflandria, Tortona, Vercelli, Pontremoli, Bobbio, Sarzana, Pavia, Valenzi, Cafali, Padua, Alba, Afti, Bologaa, Pifa, Siena, Perugia, Nocera, Spoleto, and Affifi. Verii. p. 417.
$\dagger$ Asthis woollen manufacture is faid to have been in the hands of an order of friars, the frati umiliati, we have no reafon in fuppofe it an ohject of great confequence; the expreffonsfeeming to imply its magnitude teing appsienble to a comparifon with pourer neighbours. Count Guilini lays, on occation of its being carried from Milan to Sicity, "she tanto fioriva fra noi," (tom viii p. 585;) but records do not explain the extent; though we are told thas they worked up wool from France, Flanders, and England, in 1288 (tom. viii. p. 399 ;) which Irade had exitted to fome degree of confideration in 1216 . Count Verri ufes the expreffico- "lavoro de pannilami la quale formò la ricelezea cofpicua di Milano." (Storia di Milano, tom. i. p. 357.) But it was Venice, Genoa, Pifa, Amalf, and Ancona that had the empire of the fea, which gave that author reafon to fay, "che tutto il commercio dell' Eurofa era preffo gl' Itoliani." (tom. i. p. 465. )
$\ddagger$ In the preceding periods it was probably worfe. Count Verriobferves, "Dello fato della populazione nel decinio fecolo-mi pare verffimile che doveffe efferc mediocremente popolato Mi'ano. Le terre erano collivate parte da fervi e parte da liberti. Molte parti del ducato era bofco. In qualche luogo, clie ora.fi coltiva forfe, ancora v'erano delle acque fagnanti." Sioria di Milano, tom. i. p. 76.
vol. 1 V .
4 D
place in the governments of the Italian cities, were little adapted to give a fecurity of poffefion effentially neceffary to the eftablifnment of fuch manufactures and commerce, as fhall by the overflowing of their furplus, ameliorate the agriculture of a country.

It was but fíteen years after the deltruction of Milan, that the Navillio Grande was made; and within three years after the lofs of all her conquefts, that the canal de Martefano was digged : thefe great undertakings were, therefore, executed at periods when conmercial profperity could leaft of all effect them. There was no ftability in that prof. perity. It is alfo to be remembered, that throughout this period of Milanefe hiftory, that people, even at the height of their power, were never mafters of a commercial feaport. It is true that they twice took Genoa ; firlt in 1353, but kept it for a very fhort time; and again in 1421, when they were in poffeffion of it but fourteen years; and amongf all the dominions of Galeazzo Vifconti, Sarzano was the only port, and that never a commercial one; thus the fabrics of Milan were obliged to be exported through the Venctian or the Genoefe, who laid duties on the tranfport of their commodities.

The conclufion of the whole feens fairly to be, that we are not to atribute the irrigation of the country to wealth derived from foreign commerce; the fertility and excellent management of the lands fupported a great population, which proved as induftrious as public calamities and confufions would allow; but it does not appear that this induftry was ever continued through a long feries of peace and happinefs.

Another idea has been ftarted, that Lombardy owed her irrigations to the effect of the crufades : that the mad enthufiafts who went upon thofe expeditions, brought home with them the art of cutting canals, for this moft beneficial purpofe; but hiftory does not give fufficient lights to allow of this conclufion. I have already remarked that the Navillio Grande was made by the people of Pavia, long before thofe of Milan made the cut to that city; and fo long before, that no records in the archives were found of it by that moft induftrious fearcher into antiquity, Count Guilini. This fact feems nearly decifive, for the firft crufade did not commence till 1096, nor terminate till it 00 , before which period there is every reafon to fuppofe the canal in queftion was cut, as the refearches of Guilini go fo far back as 773. The crufades ended in 1291; and had the effects been as great as poffible, yet they cannot be imagined to have taken place immediately; it muft be, after much confultation and long reafoning, that whole towns could be brought to co-operate in the exccution of fuch plans for the common good, from. mere reports of the effect in diftant countries and different climates. Another circumftance, tending to prove that irrigation in Lombardy was much more antient than the crufades, is that Theodoric, who began to reign in Italy, anno 493, publicly rewarded an African who had come thither in order to inftruct the Italians in the art of irrigating lands, as Mr. Profeffor Symonds has explained, with his ufual elegance, in his mof agreeable paper on the effect of water in the agriculture of Italy ${ }^{*}$. Now if this art had been thus introduced, or more properly fpeaking, revived in Italy above fix hundred years before the crufades were thought of, there cannot be much reafon for attributing that improvement to the obfervations of thofe frantic enthufialts. It is remarkable that Count Verri, in his Hiftory of Milan, fays, he had long conceived that their irrigations were to be afcribed to the Crufades; but from paying more attention to the authorities quoted by Count Guilini, he gave up that opinion, and concurred in the idea

[^100]of a 5 that $t$
of a greater antiquity *: for which alfo P. Frifi feens to contend, when he fays exprefsly that the canal made by the people of Pavia was more antient than $1177 \dagger$.

And here it may be worth remarking, that Pavia was the capital and refidense of Theodoric, whence there refults, at leaft, a prefumption, if he fent to Africa for a perfon to inftruct the Italians in irrigation, that here was the field of his excrtions, and that this very canal was the work of that fovereign, not the lefs celebrated for thus laudably applying himfelf in a barbarous age to works that would do honour to the politef. But to return from this long digreffion.

The fame law that has been fo effectual in watering Piedmont, operates here alfo, and has done even greater things. He who difcovers a fpring, conduets it where he: pleafes, paying a fixed compenfation $\ddagger$ for cutting through the properties of others. All rivers belong, as in Piedmont, to the fovereign, who fells the waters to fpeculators for this noft beneficial purpofe of irrigation. In the diflribution of it by fale, they do not meafure by the hour, as in Piedmont, but by the ounce; twelve ounces are a braccio, or twenty-two inches: an ounce of water is a fream that runs one braccio long and one ounce deep; and the farther the water has run, the higher is the price as being more charged with manure.

As an example of the beneficial influence of this law, I was fhewn between Milan and Pavia, a fpring that was difcovered two miles from the lands of the difcoverer, the properties of many perfons lying between him and the fpring. He firft bought the property of the perfon in whofe land it was fituated, which was eafily done, as it was too low to be there of any ufe; then he conducted it by a trench at pleafure the two miles, paying the fixed price for cutting through his neighbours lands; and, having gained it upon his own, prefently changed poor hungry arable gravel into a very fine watered meadow.
Near Milan a watered meadow fells at 800 livres the pertica ( $\mathrm{j}_{2} 1.15 \mathrm{~s}$. the Englif acre; ) and the rent of fuch is about 30 livres (11. 5s. the Englif acre.) This muft not, however, be claffed high; for there are lands that rife to 4000 livres, ( 163 l. the Englifh acre.) In land at 800 livres or 1009 livres, water often makes half of the value; that is, the rent to the owner of the land will be 15 livres to 20 livres, and as much to fome other perfon for the water.

In viewing a great farın fix or feven miles from Milan, in the road to Pavia, I found that all the watered meadow was mown four times; and that what was watered in winter, prati di mercita, five times. Such is the value of water here, that this farm, which watered is rented at 20 livres the pertica, would not let at more than 6 livres without water, the foil being gravel. The irrigation of the mercita begins in October, and lafts till Tharch, when it is regulated like all other meadows. All in general begin in April, and laft till September; and if there be no rain once in feven to fifteen days. An

[^101]ounce of water runring continually from the 24 th of March to the 8 th of September, is worth, and will fell for 1000 livres. When arable crops want water, it is always given.

Milan to Mizzato. - Every confiderable fpring that is found becomes the origin of a new canal. They clear out the head for a baton, and fink calks by way of tumels for the water to rife freely, and without impediment from mud or weeds. There are ufually three, four, or five of thefe tunnels at the bottom of a balon of twenty or thirty yards.

Milan to Ledi.-- Of all the exestions that I have any where feen in irrigation, they are here by far the greatef. The canals are not only more numerous, more inceffant, and without interruption, but are conducted with the molt attention, fill, and expence. There is, for moft of the way, one canal on each fide of the road, and fometimes : wo. Crofs oncs are thrown over thefe on arches, and pafs in trunks of brick or ftone under the road. A very confiderable one, after paling for feveral miles by the fide of the highway, fonks under it, and allo under two other canals, carri. din fone troughs eight feet wide; and at the fame place under a fmaller that is conducted in wood. The varicty of directions in atich the water is carried, the cale wilh which it flows in contrary diretions, the obftacles which are overcome are objects of admiration. The exp nce thus employed, in the twenty miles from Milan to Lodi, is immenfe. There is but little rice, and fome arable, which does not feem under the befl management; but the grafs and clover rich and luxuriant; and there are fome great herds of cows to which all this country ought to be applid. I cannot but eftetm the tweny miles as affording one of the mott curious and valuable profpects in the power of a farmet to view; we have fome undertakings in England that are meritorious, but they fink to tothing in comparition with thefe great and truly noble works. It is une of the rides which I wifh thofe to take, who thisk that every thing is to be feen in England.

Lodi--Examining fome watered meadows in high eftimation, I found the following plants moft prodominant, and in the order in which I note them: --1 , Rununcuitus ic. pens; 2, Trifolium pratenfe; 3, Cbicorium intybus; 4, Plantago lanceclata; 5, Acbillea millefoliun *; and about one-filth of the whole herbage at bottom feems what are properly called graffes. Thefe rich meadous about Lodi are all interfected by ditches, without hedges, but a double row of pollard poplars; all on a dead level, and no drains to be feen. They are now (Octoher) cutting the grals and weeds in the ditches, to cart home for making dung. The meadows are commonly cut thrice; but the belt four times. The produce of hay per pe:ica, fix faffi of onc hundred pounds, of twentyeight ounces at the three cuts. Price of the firf, 8 livers per fals; of the fecond, 5 livers; of the third, $4 \frac{1}{2}$ livres. They water immediatily after claring if there be nu rain. Without irrigation, the rent of the country in general would be only one rhird of of what it is at prefont. In forming thefe watered meadows they have very fingular cuftoms :-all are broken up in rotation ; flax fown for the firt crop, and their way of laying down is to leave a wheat Itubble to clothe itfelf; clover is prohibited by leafe, from an abfurd notion that it exlaufts the land; and that it is not fo good as what the nature of the ground gives; but on worie land, the other fide of the Adda, they fow clover.

forbear :l

- As wi I.ambro enl Alberomi hii but fatial in the mifchie tmen.vi. p. 5 May $115 \%$ wiht his arr Ficrara,

Lodi to Codogno.-All this country the fame as about Lodi, a dead level, cut into bits of from three to ten acres, by ditches, without hedges, and planted with double sows of poplars and willows, all young, for they are cut as foon as the fize is that of a thin man: here and there one is left to run up to timber. I remarked, in the meadows fed, that the ranumculus is avoided by the cows as much as poilible. I expected in one meadow to find it the acris, but much of it was the repens. All this country is alternately in rillage; ridge and furrow every where: no permanent meadow. After feven miles, the road being natural, hews the foil to be a loamy fand, binding with rains *.

Codogno. -Thirteen pertiche of watered land neceffary for a cow, the hay of which is cut thrice and it is fed once; fuch land fells at 300 livres, and lets at to livres, free from tax. The whole country is ploughed by turns, being down to clover for the cows four years.-1. Flax, and then millet; 2. maize; 3. wheat and clover; and refts then for feeding cows; white clover comes, but it is bad for cheefe. The reader will note, that this opinion differs from that near Milan.

Codlenno to Crema.-Crolfing the Adda, from the Lodizan, there is more arable, and much fewer cows.

Milan to Vaprio. - In this line there are fome dairies, but not many. Near the city there is much grafs, all cut into patch-work of divifions, and planted fo as to feem a wood of willows; after that much tillage, though all is flat, and there are no great exerions in wetering. But the road paffes by that fine navigable canal ile Martefano from Milan, whis? it Vapprio is fulpended as it were againft the hill, twenty feet above the Adda-a noble fpectacle.

Before we quit the Nilanefe, it will be proper to make a general remark on the conduct of their irrigation, that fome evils ate oblerved to attend the practice for want of a bette; forefight and more attention; particularly from the gradual enlargement of the carrier canals and ditches; they clean them with to much care, for the fake of obtaining the mul, as a manure, that the'e are every where become too wide for the quantity of water they convey. Sig. Bignanii has written upon this point very rationally, in his difiertation Suli' abuyo difitavare i canali delle roszic cel ifofil nol Lodigiano; where he afferts that one tonth part of their lands is occupied by canals and ditches. The evils are numercts, it is not only a confiderable lofs of land, but it is an equal lois of water, for when an oncio of a givei run of water is purchafed, there is a great difference between its firt fitting a great or a fmall channel, as in proportion to the fize will be the quantity of ufelefs tluid. The atmoliphere is alin proportionably contaminated, for this great breadh ciber of ftagnant water, when irrigation is not atually going on, or, what is worfe, of mul, in to hot a climate, mult be peftiferoas; and to this have been attributed the diftempers which have frequently made fuch havoe among their cattle. Another inconvenience is, the great expence of all erestions, bridges, fluices, Ec. \&e. which are in proportion to the breadth of the channels. The remedy is obvious, it is to forbear :ill cleanfing for the fake of mal; to let all aquatic weeds, and other plants,

[^103]grow freely on the banks, edges, and fides of the canals, and to clear them in the middle only. Such a conduct would in time quite choak them up, and enable, the farmer to keep his camals exactly to their right width. All thefe plants covering the foaces, which in canals often cleaned, are bare earth or mud, would be very beneficial towards preventing and decompofing that noxious, and mephitic, and inflammable gas, always iffuing from fuch mud, which is fo peftilential to animals, yet fo falutiferous to plants; for mud covered with plants that are ready to feed on its exhalations, is much lefs mifchievous than that which is expofed to the rays of a burning fun. Count Carlo Bettoni, of Brefcia*, has practifed a method which acts on fimilar principles; namely, that of Lurying or fixing willows or poplars to the fides of the rivers whofe banks he wanted to preferve, with the precaution only of keeping the ends of the branches out of water; he finds that they grow vigouroufly in this fituation, and by ftopping the mud of the current, form a folid bank; this, ou a fmall feale, might certainly be executed: alfo in the canals of irrigation, as it has been remarked, by the author already quoted, in the Atti di Milano.

Venetian State.- Vuprioto Bergamo.-There is a mixture of watered meadow in this line, but the quantity is not confiderable. In fome which are old, I found a good fprinkling of trifolium repens, chicorium intybus, and plantago lanceolata; but alfo much ranunculus and rubbih. In the plain clofe to Bergamo, they clean the irrigationditches at the end of November, and harrowing them wich a faggot, to thicken the water, let it immediately on to their meadows, which is faid to enrich them much.

To Bre/cia. - The Venetian State, thus far, is a confiderable falling off from the Milanefe, in refpect to irrigation; the country is not without canals, but neither the number nor the importance of them is to be compared to thofe of Milan. I'rom Coquillio to Brefcia there are many channels, yet the lands are not half watered.

Brefoia to Veroma.-The road paffes for Some diftance by a very fine canal, yet the quantity of watered land in this route is but inconfiderable. Before we arrive at Lago di Guarda, there are a few meadows never ploughed, that have a good appearance, but none from the lake to Verona. On the whole, thefe forty miles, for want of more irrigation, are not comparable to the Milanefe or to Piedmont. This route fo much to the north, gives the traveller an opportunity of feeing a chain of confiderable cities, and of obferving the effects of one of the molt celebrated governments that has exilted; but a better direction by me would have been by Cremona and Mantua.

Verona.-The meadows here are cut thrice, and fed once; are never ploughed, if food and well watered. Water for irrigation herc, as in all Lombardy, is meafured with great care and attention, by what is called the quadrata, which is a fquare foot (the Veronefe foot is to the Englifh about as twenty are to twelve). Tiwelve quadrate are fufficient to water five hundred campi of rice grounds (about three hundred and eighty Englif? acres), and the price of fuch a quantity of water is commonly about Sco0 zecchini ( 14251 . flerling). The wheels in this city for raifing water for irrigating the gardens are very complete; they receive the water as in Spain, into hollow fellies. "Fhere is one irr the garden of the Daniele monaftry for watering about four campi, which are foid to yiuld a revenue of 300 zecelinin; which is 100 zecchini, of 9s. 6d. per Englifh acre. 'The wheel raifes the water about twenty-five feet, receiving its motion by the flream; a low wall, croffing the garden, conveys the water in a trench of mafonry on its tops; and a walk paffing along the centre of the garden, the wall there is open to admit the path, the water finking in a fyphon, and rifing on the other fide to the fame

[^104]leight, roads in
to troug re place zecchini.

The wheel has double fellies, for giving water on both fides to troughs, which unite in the fane receiver, and the wallers for giving the motion re placed between the fellies. The whole apparatus complete, coft three hundred secchini.

To Vicenza.-There are in this tract of country fome perenuial meadows watered, quite upon a level, which have a very good afpect : the exiftence of fuch flould make us queftion the propriety of the Lodizan fyftem of ploughing, where water is fo regularly at command.

Padua.-The country from Vicenaa to this city, is not watered like many other diftricts of Lombardy. The practice is very well known; and there are rice-grounds about Padua, but not nearly the ufe made of water which is found in the Milanefe; yet the rivers in the Venetian fate belong to the prince, as well as in other parts of Italy, and water is confequently to be bought: but there is not the fame right to conduct it at will, and confequently the water itfelf might almoft as well not exift.

To Venice. - In this tract I faw no irrigation, though the whole is very low, and quite level.

Venice. - The fame admirable law that takes place in the Milanefe, for enabling every man to conduct wator where he pleafes, is found in the Venetian ftate alfo, contrary to my information at Padua; but to many forms are ncceflary, and the perfon who attempts it muft fight his way through fo much expenfive litigation, that it is a dead letter, and nothing done in confequence. I was farther told, that it is a principle of the Venetian code, that not only all rivers, but even fprings, and rain itfelf, belongs to the Prince: an idea worthy of this ftern and tyrannical government.

Eccleshatical State.- Bologna. - law no watered lands.
Tuscany.-I faw no irrigation in Tufany; and from the intelligence I received, have reafon to believe, that the quantity is not confiderable; fome meadows, however, are watered after mowing. The beft methods I heard of, are about Poggio, Calana, Villa Sovrana, ten miles from Florence.

Dutchy of Monena. - The quantity of irrigated land in the Modenefe, is but finall; it does not amount to more than fix biolche in eighty, nor have they more than fifteen perpctual water-mills in the whole territory. From Modena to Regnio, there is a fprinkling of thele meadows, the canals for which, taken from the Lecehia, are not large; all, whether watered or not, are manuring with black well rotted compolt, and have a very neat countenance.

Dutchy of Parma.- The country from Reggio to Parma is not without watering, but the quantity is inconfiderable; there is, in this line of country, a great inferiority to that from Modena to Reggio, not the fame ncamefs nor attention in any refpect; there are mole-cafts in the meadows, a thing unfeen before; and though there are much cattle and fheep, yet the features of the hufbandry are worfe. From l'arma to Firenzuolt, not an hundredth part of the country irrigated, yet there is a good deal of grafs, and in fome places in large pieces.

Pledmontr-Pavefe, Esc.-For fome miles in the Sardinian territories, there are agood many meacins, but very few watered. I.paffed two fmall channels of irrigation; but the quantity was incouiderable. If a map of thele countries be examined, there is the appearance of many rivers defcending from the Appenines, and falling into the Po, but the ufe made of them is fmall. It is remarkable that all the way by Tortona, Alixandria, \&cc. to Turin, the quantity of irrigation, till almoft clofe to the lait mentioned city, is quite inconliderable, not one acre perhaps in a thoufand. What an idea can be
framed of liedmont, by thofe who pafs through it from Mont Cenis, and quit it for Milan or Tortona, without feeing it from Turin to Coni?

Savoy.-In the mountains of the Alps, by Laneiburgh, \&cc. they mow their watered meadows once only, but in the plain twice.

From this detail of the irrigation of Lombardy, it muft be apparent, that for want of laws finilar to thofe which take place fully in Piedmont, and the Milanefe, and partially in the republic of Venice, no fuch exertions are ever likely to be made in a free countuy. We can in England form no navigation, or road, or make any trelipafs on private property, without the horrible expenfive form of an ate of paliament; we cannot even inclofe our own property, without the fame ceremony. Nor is it only the expence of fuch applications, but the neceflity of them gencrates oppofition at every Itep, and a man mun fight his way through country meetings, through attorncys, agents, counfel, witneffes, and litigation,- in a manner odious to every liberal feeling, and at a ruinous expence, before be is at liberty to improve his own eftate, without any detriment to others; every idea of fuch works, therefore in England, as we have feen common in Lombardy, is vifionary and impraticable; and we muft continue to view, with eyes of envy and admiration, the noble excrtions which have been made and perfected in that country, and which, in truth, very much exceed any thing we have to exhibit in any walk of agriculture in this ifland :-an example to hold up for imitation, and an ample field of practical itudy.

## Sect. Il.-Of Cattle.

Piedmont.-Nicc to Coni.-In this part of the Alps, the breed of cows refembles the Alderney, in horn, colour, and fize. They are ulually cream-coloured, or pale yellow, but with black around their eyes, black tail, and fome of them Jegs alfo, like the Poitou breed in France.

Turin.-Price of a plough ox, 150 livres to 300 livres. A good cow, 110 livres.
The method of fattening in the plain, the cattle called moggic, trom the mountains of Suza and Bufiolino, as given by the Agrarian Sucicty, delerves attention. They begin by puting them in airy ftables, healthy, and well lighted, bleed once or twice, anoint the bodies of the cattle, drels them well at leaft twice a day, give water mixed with ryeflour, in the evening feed with a certain mixture called condut, compofed of elm leaves, with fome hay of the fecond or third cut, or clover-hay, to which they join a mefs of well-pulverized walnut-oil-cake, on this misture they pour fome boiling water, well falted, and ftir up the whole together, and mixing at the fame time an cymena of bran, according to the number of moggie; the pap, thas prepared, is turned into a tub, and fome $h$ urs after it is given to the cattle, who cat it with an avidity that marks a delicious food; continuing this method fome time, they caf their hair, grow fmooth, round, fat, and fo improved, as to fell frequently at double the price *.
Mis.anese. - Milan.-Examining the ox-ftalls of a farmer near the city, I found his ftandings $6 \frac{1}{3}$ feet wide, and made almoft like my own at Bradfield, except that inltead of a ftep and gutter, he has a trench at their heels, in the Dutch method. I thought the houle too clofe and hot, yet there were air-holes, but all flopped, the farmer faying that a cow gives more milk for being kept hot, but in fummer the theds are open and quite cool. They begin to work their oxen at four years old, and continue till ten, tometimes till twelve, but after ten they do not fatten fo kindly. They all draw, as in

[^105][^106]Piedmont, by the withers; fine ones fell at 30 louis the pair. A pair will draw four thoufand pounds of hay, each pound twenty-eight ounces, on a waggon that weighs one thoufand pounds more, with wheels not three feet high, and wooden axles. Four thonfand pounds at twenty-eight ounces Milanefe, are fix thoufand feven hundred and feventyfeven pounds, at fixteen ounces Englifh; and three tons being only fix thoufand feven hundred and twenty pounds, this is a confiderable load in fuch a vehicle, and fhould imply no bad method of drawing, yet I cannot like it fo well as by the floulders. They are never hod, except on foney hills.

This farmer fattens his oxen in winter with lintleed cake, giving five pounds or fix pounds a day to each beaft, and as much hay as they will eat; the beft for them, that of meadows not watcred. When it is fcarce, they fubftitute forage of maiz, fown thick for mowing, and this hay they cut in a chaff-box, to the length of one or two inches.

But the great object in the vicinity of Milan, as well as in the Lodizan, \&cc. is a dairy; 1 viewed feveral confiderable ones, from four to feven miles from the city, and had my inquiries very fatisfactorily anfwered. Some of the particulars deferve noting, for I fhould remark, that all the dairies of the Milanefe are very famous, and few produce cheefe that is not fold under the general name of Parmefan. They buy in about the end of October, Swifs heifers, with calf, generally at two years and a half old, under contract, that if they do not calve, or do not give milk from four teats, the bargain is void: the price on an average, $13^{\frac{1}{2}}$ louis. They keep fo long as till fifteen years old, or fo long as they breed. Till the age of fix years, the milk augments annually, but afterwards diminithes. They are fold lean at 15 to 36 crowns each, 6 livres (at 8 d. ) The beft two or three cows in a dairy of forty or fifty, will give thirty-two bocali of milk per diem; but in common, twenty-four, or eighteen Englifh quarts. The cows are moflly of a dark brindled red colour, with fmall horns *; and it deferves noting, that the beft made cow in fifty-five, quafi, fattening, was the beft milker.

In refpect to cheefe, a dairy of tifty-five, which I viewed, make three hundred and twenty in a year, :it forty pounds on an average, or twelve thoufand eight hundred pounds, or two hundred and thirty-two pounds per cow (three hundred and eighty pounds Englifh), at 90 livres per one hundred pound ; in all per cow in cheefe, 7 l . ios. Englifh. The butter amounts to twelve pounds to every checfe of forty pounds, at $26 /$. per pound: three thoufand eight hundred and forty pounds, which at $26 /$ are 4992 livres (1661. 8s. Englifh, or per cow, $3^{1}$.) Thecalf, at eight or fifteen days, fells at $7 .{ }^{2}$ livres per one hundred pounds nett, and being weighed alive, twenty-eight poinds per one hundred pounds is the deduction. I do not clearly underfand this note, on revifion, but as veal at Milan is about the fame price as in England, I fhall call the calf 10s. To fifty-five cows, feven fows and a boar are kept, which breed forty hogs that are reared; twenty fold in furing, and twenty in autumn, average $1 \frac{1}{2}$ louis each; in all for hogs, 60 . Englifh.

[^107]The account of a dairy taken next door to me, in Suffulk, is complex, and fuch as not one man in twenty keeps accounts particular elough to afcertain; it may therefore be eafily fuppofed, that greater difficulties occur in a foreign country, through the medium, not only of a different language, but of different manners and cuftoms. This account was given partly as an actual one of fifiy-five cows, and partly by calculation; but in fuch a number of cows, there will be fome dry; there will not be fifty-five calves fold from fify-five cows; hogs muft, for fuch a pioduce, have fome corn given them, though not much; and I thould confider this eflimate rather as what a good cow ought to do, barring accidents and exceptions, than as a fair average of a large number.

The expences, however, are high, as well as the produce; among others, there are the following to this dairy of fifty-five :

Here are above 441 . Englifh, without knowing at what to calculate the three other articles; probably they would raife it to above 20s. a cow. There is likewife the wear and tear of the dairy implements, falt, oil, and many fmall articles; befides hazard, and the lofs by difference between the fale of old cows and the purchafe of young. In regard to the management of the cows, they eat in winter, that is, from the middle of December to the end of March, nothing but hay, and the allowance is twenty one pounds of twenty-eight ounces, cach cow per diem; this is 2184 pounds of Milan, or 3559 pounds Englifh, or about $1 \frac{1}{2}$ ton. This fingle article of expence, without any other confideration, would make a very great produce necefliary, or the farmer could not live. I hey milk at break of day, and fometimes before it ; in the evening, two hours before funfet : the quantity moft in the morning. The belt cheefe is made when the cows feed on white clover, which comes of itfelf the fecond year, where red clover was fown, which occafions a vulgar notion here, that red clover changes into white. This fecond year's white clover is better than perennial meadows for cheefe. Far one fortnight in a year, they foil their cows,-the laft half of March,-and the grals gocs thrice as far
as when cumftan night; th the reft for this v as withot ycar, anc liay, but rule, wh gular a of milkin

*This cetra wery
as when eaten in the field; yet they never do it at anyother feafon. Themof fingular circumftance is that of their ftalling their cows to empty racks moft of the day, and all the night; they are turned out at eight or nine in the morning for three or four hours, and all the reft of the twenty four they have nothing. I inquired particularly into the motives for this very extraordinary practice, and was affured it was necefliary to make good cheefe, as without it the milk would not have the requifite richnefs. During fome feafons of the year, and in very wet or bad times, they give them during this faft, a fmall quantity of hay, but the practice is confined to fuch times, and is an exception from the general rule, which is decidedly that the cows muft not eat grafs at pleafure. It is fo very fingular a practice, as certainly to deferve experiment in England. The French practice of milking thrice a day, is quite unknown.

The method of making the checfe known in England by the name of Parmefan, becaufe the city of Parma was once the entrepot * for it, was an object I wifhed to underftand as well as poffible. The idea is, that all depends on foil, climate, and irrigation; and the boafted account that the Kings of Spain and Naples, in order to make fimilar cheefe in their territories, at lealt for their own tables, had procured men of fkill from the Milanefe for this purpofe,-contribute to give a readinefs every where in anfwering queftions, as they are all very well perfuaded, that fuch cheefe can be made no where elfe.

In order that I might view the procefs to the beft advantage, the Abbate Amoretti conducted me to the dairy in queftion, belonging to the houfe of Leti. It is, in the firft place, neceflary to oblerve, that the cheefes are made entirely of fkimmed milk; that of the preceding evening mixed with the morning's milk; the former had food fixteen or feventeen hours, the latter about fix hours. The rennet is foimed into balls, and diffolved in the hand in the milk; the preparation is made a fecret of, but it is generally known that the ftomach of the calf is dreffed with fpices and falt. The rennet was put to the milk at twelve o'clock, not in a tub, but in the cauldron or boiler, turned from off the fire-place at ten o'clock; the heat 22 degrees of Reaumur's thermonster, and common to 24 degrees ( $81_{4}^{3}$ Fahrenheit's), the atmofphere being at the fame time $16_{5}^{2}$ ( 70 Fahrenhecit's. In fummer, the whole operation is finifhed by eight in the morning, as the heat fours the milk if in the middle of the day. At one o'clock the cazaro examined the coagulation, and finding it complete, he ordered his fotto cazaro to work it, which he did, with a fick armed with crofs wires, as defcribed in Annals of Agriculture; this operation is, inftead of cutting and breaking the curd, in the manner it is done in England, free from the whey. When he has reduced it to fuch a firmnefs of grain as fatisfies the cazaro, it is left to fubfide, till the curd being quite funk, the whey is nearly clear on the furface; then the cauldron which contains it, is turned back again over the fire-hearth, and a quick fire made, to give it the fcald rapidly; a fmall quantity of finely powdered faffron added, the fotto cazaro ftirring it all the time with a wired machine, to keep it from burning ; the cazaro examined it from time to time, between his fingers and thumb, to mark the moment when the right degree of folidity and frmnefs of grain is atained. The heat was 41 degrees ( $12+$ Fahrenheit), but it is ofter $4+$ ( 131 Fahrenheit). When the cazaro finds it well gramated by the fealding, he orders his deputy to turn it off the fire, and as foon as a certain degrec of fubfidence has taken place, empties about three-fourths of the whey, in order the better to command the eurd. He then pours three or four gallons of cold water around the bottom

[^108]of the cauldron, to cool it enough for handling the curd; then he bends himfelf into the veffel in a formidable manner to view it, refting his feet againft the tub of whey, and with his hands loofens the curd at bottom, and works it into one mafs, fhould it not be fo already, that it may lie conveniently for him to llide the cloth under it, which he does with much apparent dexterity, fo as to inclofe the whole in one mafs; to enable himfelf to hoilt it out the eafier, he returns in the whey, and taking out the curd, refts it for ten minutes or a quarter of an hour in a tub to drain. The vat, in the mean time, is prepared in a broad hoop of willow, with a cord round to tighten it, and widens or contracts at pleafure, according to the fize of the checfe. Into this vat the curd is fixed, and the cloth folded over it at top, and tucked in around. This is placed on a table, flightly inclining, to carry off the whey that drains from the cheefe; a round plank, three inches thick, fhod with iron like the block-wheel of a barrow, is laid on the cheefe, and a flone about thrice the fize of a man's head on that, which is all the prefs wfed, and there ends the operation. The cheefe of the preceding day was in a hoop without any cloth, and many others falting in different hoops, for thirty or forty days, according to the feafon,-thirty in fummer, and forty in winter. When done, they are feraped clean, and after that rubbed and turned in the magazine every day, and rubbed with a little lintfeed oil on the coats, to be preferved from infects of all forts. 'They are never fold till fix months old, and the price golivres the one hundred pounds of twentyeight ounces.

The morning's butter-milk is then added to the whcy, and heated, and a ftronger acid ufed, for a frefh coagulation to make whey-cheefe, called here mafco-pinto. Little ones are kept in wooden cafes, in the fmoke of the chimney.

Upon this detail, I am to remark, that the rules that govern the operation of making cheefe in the Milanefe feem to be very different from thofe which are attended to in England. Thefe are marked diftinctions.
I. Starving the cows during fo large a portion of the day.
II. Breaking and fcalding the curd.

1II. I.ight preffing.
The mode of feeding which thefe farmers purfuc, they think effential to good cheefe; and that if the cows were allowed to paflure all day long, it would be difficult, perhaps impoflible, to make cheefe of equal goodrefs. It would be idle to realon upon a propofition, which demands in other countries experiment alone.

The breaking of the curd and fcalding is abfolutely different from ours, and apparently a method infinitely fuperior; our breakiag by the hand, and cutting into cubes and other ways, are grofs, and render it diflicult for the fcalding whey to operate equally; but in the Italian method it is broken minutely, and by keeping the heating whey conftantly firring, the fcald is equal throughour, and operating on the minutely divided curd, muft take a more regular and a greater effect. 1 defcribed to the cazaro the method ufed in England, and afked his opinion, on which he replied-Il anfro formag. sio in qual modo non potilefiere troppo buonat: come ì la grana? By referring to the sran of the checfe, it is flain be thought that the texture of it demanded this way of operating.

In regard to prefing, all with whom I converfed were much againf any very heavy wecights, and feemed of opinion, that a good cheefe might be prefied imo a bad one. firmaefs, weight, and folidity, they contended, flould arife from the right fabric of the checfe, and from adapting the fabric to the land and to the feafon, but never from much preflis, which would be a bad way of remedying either evils or miftakes. Hoved theelis are very rare with them, which may pollibly proceed not only from the grani-

Iation given by their method of fcalding, but alfo from their moderate prelfing. However it muft not be imagined that the excellency and peculiarity of Parmefan cheefe depend altogether upon the fabrication; their own idea is probably very juft, that foil, climate, and irrigation come in for their flare; and that the abundance of certain plants has an influence; but this laft caufe will not have much ftrefs laid on it, fince clovers are found to be the chief plants.

I fhall not quit this moft interefting diftrict, without recommending it frenuoufly to thofe who would wifh to give themlelves a completely good farming cducation. For fuch a purpofe Codogno would be a proper ftation; for it is furrounded by great dairies, and contains the largelt magazines of cheefe of any town in Lombardy; the confequence of which is a regular intervourfe with all the dairy mafters of the Lodizan. Much ufeful knowledge might here be gained in irrigation, and in making cheefe.

The oxen of this dairy farm begin to work at four years old; and are fold at eleven or twelve years old, from 9 to 12 louis each. A pair will plow eight pertiche a day; and draw, waggen included, three thoufand pounds, of twenty-eight ounces, twenty miles.

Mozafa. -They practife a fingular method of fattening oxen liere. They put chopped Araw, a little hay, the leaves of maiz, and alfo fome flour of it, into a tub, and pour in hot (not boiling) water; and as they give this foup to the beaft, they add for each a handful of oil-cake in powder, or for want of that, of eln leaves in powder; oak leaves they give green. Another food in ufe is powdered acorns, which is given iuftead of oil-cake, and with good fuccefs.

Lodi.-The cows here are generally of a blood red colour, long, lank, and ill made. In a dairy of ninety, they make for one hundred and fixty days, one cheefe a day, of fixty pounds; but in April and May it is of feventy pounds. After St. Martin, the begiming of November, greater, but not every day; in feven months, one hundred and ninety cheefes; and in the reft of the year one hundred and feventy; in all, three hundred and fixty ; this is two hundred and forty pounds per cow. In feeding, they give the cows nothing from four in the afternoon till nine the next morning, unlefs the weather be very bad, and then a little hay. In making the cheefe I found very littic variation in the practice from that already defcribed. For the coagulation, or what our dairy wives call fetting, they heat the milk gradually, and take care not to do it too much at once. In the great heats of fummer they fet it without heating and even put ice or fnow (with which every dairy is provided) to cool it; but they do not confider the heat at letting to be a point of much confequence, as a little more or lefs heat makes no difference. The curd is broken exactly as defcribed before, with two machines, one of wood only, the other armed with fine wires, and the faffron akled during that operation. Scald it
 or lefs fealdin $r$ they can remedy certain deficiencies in foils and plants. The reft of the operation is jutt as already defcribed, and all the utenfils the fame; the weight fomething lefs than at Milan; and here as great enemies to much prefing. The checfe made yefterday is all honey-combed in the coat, and as yellow as wan, a pale yellow : whereas at Milan the new cheefes are quite white. Thefe inoncy-combs wear cut by feraping after fatting, which is for thirty-fix or forty days; they are then coloured, and there is given to them an appearance of a whitifl crut, or eftlorelcence artificially. They are preferved by oiling, as at Milan. Good cows give about five gallons of milk per diem; the beft of all, fix. Sixty cows require one huidred pertiche for fix months in fummer.

Codogno. - The produce per cow is here reckoned at one hundred pounds of cheefe*, at twenty-eight ounces, at $22 \frac{1}{2} \int$. per pound, and eighty pounds of butter at $24 \%$. The calf fells at 20 livres, at fifteen days old; and the produce of hogs, twelve fows to one hundred cows, which pay about to livres percow.

Thirteen pertiche of land are neceflary to carry a cow through the year, which they cut for hay thrice, and feed once. Such land bought, fells at 300 livres, and lets at 10 livres. The greateft dairy in the country, one hundred and ten cows, and the price 10 louis cach. In fummer they milk at four o'clock in the morning, and at fun-fet. Make the cheefe at eleven in the forenoon; in winter at any time. Skim all the milk, and never fet it for coagulation without heating it by fire. In other refpects, the manufacture is conducted as already defcribed. They colour the coats with earth, and the whitilh efflorefcence is given with rye-meal. When the grafs is oldeft, it always gives the beft cheefe, but the produce, after being down four years, declines fo much, that the almoft general practice is to plough it.

View the magazine of checfe at Codogno, of Sig. Bignami, and of Sig. Stabilini ; the latter are immenfe. Moft of it is fold in Italy, much in Spain, and lealt of all in France; there is not a folid cheefe in that kingdom that is eatable, and yet they confume little Parmefan!

Codogno to Crema. - Meffrs. Bignami had the goodnefs to conduet me to a great farm, two miles from Codogno, in the way to Crema;-here I found that coagulation takes, according to the feafon, from one to four hours; in fome parts of the Milanefe the cazaro informed me that they fet the milk without warming: here never; always heat it by fire. The caggio (rennet) is in balls about twice as large as a pigeon's egg, put in a linen coarfe cloth, and rubbed, holding it in the milk, till it is diffolved. In this dairy after three hours coagulation, the milk was as hot as if frefh from the cow. Quantity of faffron, a quarter of an ounce to a cheefe of fixty pounds- 945 pounds of milk, of twenty-eight ounces, make a cheefe of fixty pounds weighed fix months after. The fame quantity of milk in fpring and in autumn, makes more cheefe than in fummer. Beft-and molt from old grafs, but a cazaro who really underftands his bufutefs, will make all alike; and the idea here is that fabrication is all in all. A cheefe of thirty pounds will be as good as one of a hundred pounds. The fcalding in their manner is

[^109]to gran of the Parmef: mult, h thefe ca a threas at prefe fooner, ploughi from o never ti (1750 cheefe, lanccolat lus repen but lolitu They for cover it! There w ter. Jo ounces, to remar into the lancfe, b abroad $f$

In rep fince thi ferve, th Atti delld mefan ch Milan $u$ of this c there arc have tak

[^110]to granulate the curd, and, united with fo fmall a preffure, leaves cavities in the texture of the cheefc, that fill with an oleaginous liquid, and form the peculiar excellence of Parmefan chcefe. With the methods ufed in England, fuch cavities fpoil a cheefe. I muft, however, remark that fuch Parmefan as was common many years ago, in which thefe cavities, and their contents were of a texture that would allow of drawing out like a thread of glue, is not fo common now. The folid cheefe, without cavities, common at prefent, is not much better than our North Wilthire, and is apt to dry mach fooner, if equally kept. Quare, if this declenfion of quality is not to be imputed to their ploughing all the country ? When their cheefe gaimed its great reputation, it was made from old meadows; now all is from arable land. Here it is kept five or fix yearsnever till ten. Walking with the farmer, the malter of cighty cows, into his fields ( 1750 pertiche), I begged him to pick the plants in the order of his eftimation for cheefe, which he did;-firt, irifolium repens; fecond, trifolium pratenfe and plantago lancolata equal; third, chicorium intybus. Thefe he efteemed capital. The ranunculus repcns bad; all the graifes, properly fo called, bad, on comparifon with thofe above; but lolium percune the beft, if it come naturally; bad, if fown. Gallega officinalis bad. They fometimes do not fow any thing to make a meadow, leaving the wheat-Itubble to cover itfelf; a barbarous practice, fince they confefs that in the firft year it yields little. There were dung-hills in moft of the fields, well mixed and rotten, to be fpread in winter. Feed the cows, in winter, oilly wih hay, and twenty pounds, of twenty-eight ounces, the daily allowance; the price now $7 \frac{1}{2}$ livres per one hundred pounds. I forgot to remark, that all the milk trays are of copper; and that ice is in every dairy, to put into the churns with the cream. The cows are here fed, as every where elfe in the M:lancfe, but a few hours in twenty-four; yet longer than in fome diftricts, for they are abroad feven hours; they eat nothing while tied up in the fheds.

In 1733, there were in the Lodizan one hundred and ninety-feven dairies: in 1767 there were two hundred and thirty.fix, each of which had one hundred and twenty cows, on an average, making two hundred and ninety cheefes each dairy per ann.; in thirty four years increafe - thirty nine dairies, four thoufand fix hundred andeighty cows, eleven thoufand three hundred and ten checfes, and value $8,48,210$ livres *. This is Count Carli's account, but I fufpect an error $t$, as I heard no hints of any decline;-and at Codogno, the dairies were calculated, apparently with attention, at two hundred and thirteen each, making three hundred and ten cheefes in a year, or fixty-fix thoufand and thirty checeses, of fifty pounds each, or $3,301,500$ pounds, of twenty-eight ounces, at one livre a pound ; this makes $110,047 \mathrm{l}$. and the account I received was, that, of this quantity, two-thirds were exported.

In regard to the origin of this checfe, it deferves notice, that it is not three centuries fince this great advantage of irrigated meadows has been here known; and I may obferve, that the Cilterfan monk who has written fo well - Sull'Irrigazioni de Prati, in the Atti della Societa Pat. di Milano, feems to admit, that the original manufactures of Parmefan cheefe was in the territory of Parma ; and refers to original papers for hewing that Milan was fupplied three centuries ago with this cheefe from Parma. A clearer proof of this cannot be produced, than that in the ledgers of the monaftery of Chiaravalle, there are entries of the purchafe of cheefe from Parma, which, moft afluredly, could not have taken place, if fuch cheefes had been made at home. And this feems to be con-

[^111]firmed by the account of the entry of Louis XII. into I'avia, in $\mathbf{t} 499$, given by Franceico Muralto, juris confulto of Como, who fays, - "Multa fucre per Papicuicis dono regi tralita ct inter catera forme centum cufci Pluccutince cianifatis." It is alfo werih oblervinge, that though they did not make good cheefe at this period, (as we may judge, from their buying it elfewhere,) yet fome cheefe was made at Tecchione, a tarm belonging to then, of the weight of fourteen pounds per checfe, as it appears by theirledgers tor the year $14944^{*}$

Venice.-This city is fupplied with beef from Bofnia, Carinthia, Styria, and Hungarr: at prefent the export from thofe countries is prohibited, on account of fupplying the Emperor's armies in Hungary. Mutton from Dalmatia, and Bofmia.

Ifcclegiastical State.-Dolggn.-In their cow-houfes they have the fame fap at the heels of the beafts as I have in my own, and which I copied from Mr. Bakewell many years ago; but they have applied it to their horfe-ftables alfo, which I never met with before; yet it is an obvious improvenent, which well delerves imitation. The. floors of their ftalls are level.

Tuscany. - Though the quantity of cattle of every kind in this courtry is narh m. ferior to what it ought to be, yet is the art of fattening an ox well underfood. In furnmer they feed on mown clover and faggina (the great millet, bolcus forg ${ }^{m n}$ ); aifo on maiz, and a mixture of all forts of corn and pulle, called farrana. Price of an ox, 45 fcudi (at 5s. 8d.); a cow, 30 : a fheep, 1 ; a horfe, 20; a hog, 7.

Account of a Dairy of Eight Cous, at Vilamagna, in Tufcanj, belonging to Contc Orlando del Benino.

Parma. - Many and great dairies in the Parmefa; fome to fixty cows, and numbers from twenty to thirty; and thofe who have a few cows, carry their milk tc Pome neighbouring dairy, and receive cheefes in proportion to the quantity; but this eefe has not the reputation at prefent of being fo good as that of the Lodizan. As this country gave its name to the beft cheefe in Europe, and once certainly inade the beft, I was defirous of knowing how far the mode purfued in the manufacture diifered here from that of the Lodizan: in the dairy of a farmer of the Count de Schaffianatti, I had bis opportunity. The apparatus is nearly the fame, except that the ftick with which tue curd is broken, and which in the Lodizan is armed with crofs wires, is here only a bulh; the branches of which are drawn a little together by a fring ; this is not fo effective fine wire, and is a variation in a point of importance in giving a fine grain. I have remarked already, that the board which in preffing is laid on the vat, is in the Lodizan one and a half or two inches thick; here it is five or fix inches, and heavy; and the ftone ufed to prefs it four or five times larger, yet the cheefes here are not often more than half the fize of the others; this variation in a circumfance that cannot be uneffential certainly deferves notice; if to very light a preflure in the Lodizan is given, the "cheefe of which is fuperior to all others, ir undoubtedly fhould lead the farniers of Parma to examine whether the inferiority of their cheefe does not arife wholly or in part from thefe variations; the country, it is true, is nor watered to one-tenth of what the Lodizan is, and the cows feed in perennial meadows, inftead of the pafturage of arable land," The. trays here are of wood, intead of copper for the milk; and it is fkimined, as at Lodi, before making the cheefe. The coagulation is made ufually in three quarters of an

hour, if the milk be what they call wholefome, that is, if it have no particular quality that demands a variation, in which cafe it is coagulated in half an hour: they vary the fcalding alfo; for bad milk they fcald with a fierce quick fire, but good is done more gently. In managing the lump of curd, when fettled to the bottom of the boiler, they vary alfo; they prefs it with a circular board, fixed at the end of a llick or handle, and then get a milk tray under it, and when they have hoifted it out, they leave it to drain in that tray about half an hour; at I.odi, ten minutes, or at moft a quarter of an hour. The common price of the cheefe 30 livres, ( $2 \frac{1}{2} \mathrm{~d}_{\mathrm{o}}$ ) the pefo (twenty-two pounds Englith : I tafted it at the table of the Count de Schaffanati, and alfo at Parma, and the inferiority to the Lodizan is great.

The attention of giving falt to cattle and Theep here, as in every other parte of Italy, is regular; they even confider a plenty of falt as fomewhat effential to having proper focks of thole animals, and gave me an inftance which is remarkable. In the Courfi di Monchio, a valley in which the bilhop is the fovereign, there is no gabelle on falt, and therefore given much more plentifully to cattle and heep, the confequence is, that the numbers of both are much greater, proportionably to all other circumftances thau in any other diftrict.

Savoy.-They reckon at lanefburgh, that three goats are equal to one cow; the price here is 11 livres to 12 livres. At IAe, in Allace, a goot goat fells from 12 livres to 30 livres French, in common 20 livres. Some there are fo good that two equal a cow, but at Tour d'Aigues, in Provence, it takes, four to equal a cow, the price. 10 livres or 12 livres French.

## Sect. III.-Ofi Sheep.

Nice-I here obferved what appeared very Ingular, a flock of fieep brought downe. from the mountains to drink the fea-water, which is I fuppofe to fave falt. The gardeners near the town generally keep a few Gheep, confined in fties, juft as hogs in England, and fed with the offal of the garden. I'took a fpecimen of the wool of one of. thefe ftie-fed theep, more like goat's hair than wool, it fells at $6 \%$. the pound.

Turin.-The price of freep from 10 livres to 15 livres. The fleece is eight pounds, at 5 . unwalhed.

Milanbse:-Throughout this country I fcarcely faw any fheep, and thofe few bad.
Venetian State.-Bergamo.-Here I met a flock, an ugly breed, large, long, and ill made, without horns, the wool coarfe and hairy, large lianging ears, and their throats fwollen almoft like wens. They have a fabric of woollen cloth here, but the wool comes from Apuliz.

Brefcid. - The fleeces here are four and a half pounds, (about two and three quarters pounds Englifh), and fell at 25 livres to 30 livres per peze, not wafhed, which is about 1s. Engliih the pound.

Vorona.-Price 30\%. the pound of twelve ounces (is. the pound Englifh).
To Vicenza.-Meet feveral flocks; all are clipped twice a year, the breed polled, and. much like thofe, but not fo large, as on the other fide of Verona.
Vicenza.-The forts of aleep known here, are Gentili, which live only in the plain, not being hardy enough to refift the mountain cold ; their wool is longer than of the other forts. Tofetti, thefe refift the cold well; have fhort wool, clipped twice. Monte Padouana, are of a much greater fize; the flefh excellent; are clipped twice. Jrice of wool, $2 \ddagger$ livres per pound unwafhed (the ounce of Vicenza, twelve to the pound is to the Englifh ounce as 690 is to 480 , as I found, by buying an ounce weight there); this price is equal to about isd. the Englifh pound. It is remarkable, that they here feed
their fheep in winter, with a mixture, made in a hole in the ground, trodden well in, of zucca (gourds) cut in flices; the mark of grapes, vine-leaves, and green grafs. Price of wool here:-Gentili preparata, 6 livres ; Gentili non preparata, 5 livres $5 /$.; Toferta, 5 livres to 6 livres; Tefino, 2 livres 10 .; Padouana, 4 livres; all by the pound of twelve ounces. The ounce is to that of England, as 690 to 480 ; the pound therefore equals feventeen ounces Englifh; st livres is above 28. 6d! Englifh.

Padua.-Price of theep about 2 ducats. In common they clip but once a year; fleece three pounds.
Ecclesiastical State.-Bologna.-Price of a good Theep, 14 pauls (7s.) Produce, per Theep, of a flock; -lamb, 4 pauls; wool, $3 \frac{1}{2}$; cheefe, 4 ; in all $11 \frac{1}{2}$ ( $5 s .9 \mathrm{gd}$.) per annum.; half to the proprietor, half to the peafant. The wool three pounds at twice fhearing, and at 13 baiocchi the pound ( 10 baiocchi to the paul, of 6 d . lefs a fraction). It is wafhed on the back before flearing. There are 25,000 to 30,000 Sheep in the Ferrarefe.

Tuscany.-Bologna to Florence.-Some flocks of fheep are fcattered on the Appenines, of a fmall and rather pretty hornlefs breed. Near Florence, they cut the lambs in June, and fell them in September, to thofe who kecp thens till March. Price, in September, 10 livres, ( 7 s .1 d. ) and in March, for 18 livres ( 12 s .9 d. ); there are few, or none, of two or three years old. They clip but once; weight of the fleece four pounds, at 14 paul per pound; wathed before clipping (Englifh weight and money, the fleece is three pounds, at is. id. per pound). Wethers are in fome places fattened on oats, barley, and hay, and fometimes with a few raves.
Villamogna.-Thirty-fix fheep kept on four hundred and eighty-three fiori of land, each giving three pounds of wool (equal to two and a quarter pounds Englifh), at this year, $1 \frac{1}{2}$ paul, and laft, $1 \frac{1}{2}$ (the paul $5 \frac{1}{\left.\frac{1}{2} d .\right) ; ~ c l i p p e d ~ b u t ~ o n c e ~ a ~ y e a r, ~ i n ~ M a y, ~ a n d ~ w a h e d ~}$ before. Each heep ${ }^{3}$ of a paul in cheefe. Thirty-fix bring, on an average, twenty lambs, which fell, at five or fix weeks, at $4 \frac{1}{2}$ pauls; at fix months, 7 or 8 pauls.
Two hundred fheep from the mountains, that pafs the winter in the Maremma, the expence 157 fcudi, compofed of twenty rams, fifty ewe hoggits, one hundred and thirty brecding ewes; fifty lambs kept for flock.

Winter food in the Maremma,
Two hundred fheep to a fhepherd; 24 ftari of corn for the winter,
Paffes, chargex, duties regulated at 6 fcudi the roo fheep,
Expences of travelling, utenfils, fees, \&\&
Pafturing in fummer in the mountains,
Half to the proprietor,
Nett profit to proprietor,

Nett profit to proprietor, Which profit, being on a capital of 157 fcudi, is 18 pdr cent. *

[^113]It is an obfervation of Sig. Paoletti ${ }^{*}$, that draining the Maremuna, and cultivating ir, have leffened the number of heep in Tufcany confiderably: great flocks, before that perind, were kept in fome mountainous diftricts in fummer, and paftured in the Maremma in winter; but cultivation has changed this. He does not fay that the people of the Marema have fleep of their own, but oblerves, that it is a diminution in number. This is fufficient to prove, that the improvements in the Maremma have been on falfe and vicious principles; for if they had been on juft ones, fleep would have been increafed inftead of icffened.

Sig. Paoletti recommends, that all heep flould have one pound of falt in March, and one in Ottober, which makes them healthy, and to yield more wool $\dagger$.

Modena.-Wool here fells from 2 livres to 3 livres per pound, wafhed; equal to 121 $\frac{1}{2}$ d. per pound Englifly. There are many fheep in the mountains, but milerable things; clipped twice a year.

Parma.-In going to Firenzuola, I examined the wool of a flock, and found it more like the hair of a dog than wool; and all I fee, which are tut few, are alike hairy; moft of them polled, but fome with horns; not badly made, but feel worfe. Thefe are the flocks whofe wool, Monf. de la Lande fays, is ineftimable!

Piedmont.-Pavefe.-On entering the King of Sardinia's country, and for many miles, fee little parcels, of from ten to twenty-five, of poor dirty houfed theep, feeding on the young wheat. Afti was formerly famous for wool ;-nclli antichi tempi famofo per la fua lane $\ddagger$; but the country contains none at prefent to fupport that character.

Savoy.-Unwafied wool, 10 . the pound of twelve ounces; fleece three pounds to fix pounds; it goes to France or Piedmont. Sheep, 9 livres to 12 livres each. Though cattle and fheep are the great riches of all Savoy, yet no care taken of the breed, and the wool all bad g .

The price of wool, regard being had to that only which is long, coarle, and bad, (but not the worft, may be flated in Lombardy at is. Englifh, the Englifh pound ; fuch. would fell in England, I calculate, at about 7 d . or 8 d . per pound.

## Chap. XXXIII.-Of the Management of Arablc Land.

THE minutes I took, concerning the conduct of arable land, may, for the fake of clearnefs, be thus divided :-i. Of the courfes of crops. 2. Of feed and product. 3. Of the culture of certain plants. 4. Of implements. 5. Of manures.

## Sect. I.-Of the Courfes of Crops.

Piepmont.-Chentale.-A year of fallow common in five or fix years, during which year the land is never watered, only expofed to the fun. Wheat is fown on fallow; on clover land; always after hemp, becaufe the land is in high order; the fame after maize, if well manured; in which cale alfo after, millet fown in June, otherwife meflin or rye. The fallow for wheat, conmmonly follows buck-wheat, called here fromentin, or millet. Clover is fown among rye in March, never among wheat. Millet de cottura is fown in June; millet de reftuba the end of July, after wheat; and then dung well for hemp.

Turin.-In fome arable land I viewed, a few miles from this capital, the following moft extraordinary courfe was purfued, and was mentioned to me as being not uncommen; 1. maize; 2. wheat; 3. wheat; 4. wheat; 5. maiz; 6 . wheat ; 7. wheat ; 8. wheat.

The year of maize being confidered as fuch a preparation, as to allow of three fucceffive crops of wheat. The practice however is barbarous. Upon the farm of Sig. Briolo, the following is the courfe;-r. maize; 2. wheat; 3. rye, and when the land wants repofe, elover is fown upon a fmall part.

Vercelli.-Upon good wheat land ;-1.maize ; 2. wheat ; 3. wheat ; 4. rye. And in the rice grounds ;-1. fallow; 2. rice; 3. rice; 4. rice. They have here an excellent practice, and it extends, more or lefs, over all Piedmont, which is to mow clover by the soth of May, and to plow the land and plant maize, which fucceeds greatly after clover.

Milanese.-Milan.-The arable lands never repofe; but a quick fucceffion is reaped. Two crops of bread corn are gained in one year, by fowing maize in July: after wheat.

Milan to Pavia.-The courfe common in the rice grounds is,-I. rice; 2. rice; 3. rice; 4. fallow, and dung; 5. wheat, clover fown, either with it in autumn, or upon it in fpring; the former beft ; 6. clover; 7. clover; 8. clover; 9. flax, and then millet the fame year: and then rice again as above.

Alfo,-I. wheat ; 2. clover; 3. clover; 4. clover; 5. clover; 6. flax, and then maize; 7. wheat, and clover again. Sometimes after flax, colefeed for oil. Another courfe,-1, 2, 3. clover; 4. maize; 5 . rice; 6. rice; 7. rice; 8. fallow; 9. corn and clover.

In the Pavefe-I. Rye, and then fallowed for, 2. wheat, fown with clover in Febru. ary, mown with the flubble, and then fed ; 3. clover ; 4. clover; 5 . clover; 6. flax, and then millet; or inftead of both maize ; 7. wheat; 8. wheat, and left then fometimes to palturage under clover.

Mozatata. - A courfe common here, - 1. clover; 2. winter flax; 3. lupines; 4. maize, for forage ; 5. colefeed; 6. cabbages; 7. panic ; 8. hemp; 9. beans. This courfe will be found to occupy about twelve pertiche in one hundred, and to pafs in fucceffion over the whole, for the bencfit of variation. Another,-1. wheat, and millet after; 2. common maize; 3. wheat and millet ; 4, common maize; 5. ryc and quarantino; 6. common maize; 7. rye and quarantino; 8. common maizc. The affiduity with which they avoid a fallow, deferves attention, and it is here effected, as in the fouth of France, by means of a plant that is afferted by many to exhauft.

Lodizan.-I. Wheat, fown in October and reaped in June, and the land ploughed thrice and manured for 2. wheat again, and clover, called fpianata agoftano, which is fed till the tollowing fpring, but fometimes ploughed the end of autumn; 3. flax; 4. millet. Another courfe, called coltura maggenga,-I. break up the layer for flax; 2. millct; 3. maize; 4. wheat, the ftubble of which remains in jpianato agofano.

Cremonefe.-1. Wheat, fown in October, and reaped in June, the ftubble ploughed thrice for 2. wheat, upon wnich fow clover the end of February; 3. clover, ploughed in November for, 4. flax, and then millet; 5 . maize; 6. wheat.

Carpianefe-1. Maize; 2. wheat fown in the fpring with clover, which is mown with the ftubble, and remains fpianata agoflana; 3. clover; 4. flax, and then millet; 5 . rice; 6. rice; 7. rice.

Venetian State.-Bergamo.-The land here is conftantly cropped,-1. wheat; 2. clover, mown in the fpring once, in time for maize; 3. wheat ; 4. clover. Alfo, 一
t. clover, or millet; 2. maize; 3. wheat. By which courfes they have half or a third of their land in wheat every year.

Brefia.-I. Wheat, and twenty pounds of clover-feed in March, per jugero,-the clover cut in Auguft with the wheat-ftubble, and then paftured, in winter dunged :2. ©lover, called this year prato grafo, cut thrice; firf in May, called il maggiatico; fecond in Auguft, called l'oftano; third in September, il navarolo:-3. in March fow lax, which is gathered in June, then plough and fow quarantino, amongt which, at the fecond hoeing, fow lupines for manure:-4.' plough in the lupines, and fow wheat in November, which is reaped in June; cut the ftubble iftimediately, and fow lupines or colefeed for manure : $\rightarrow 5$. plough in Ottober, athd fow wheat mixed with rye, reaped in June, and then fow part with quarantino and part with panic :-6. if a crop of colefeed is taken, it is fown amongf the maize whilf growing, which cole is ripe in fpring, in time to clear the ground for manuring and fowing the common maize; if cole not fown, remains fallow in winter, and fow melica in fpring, -the great millet.
Vcrona.-Here, as in all other parts of Lombardy, the land is never fallowed, 1. maize, called grano tarco:-2. wheat, and when reaped, millet or cinquantino; this is the quarintino of the Milanefe:-3. barley or oats, and when reaped, lome other fecond crop. Wheat is always fown after maize, and that after barley of oats. No clover ufed here, except in rice-lands. In the rice-grounds,-1. wheat, reaped time enough for a crop of cinquantino; 2. maize; 3. clover; 4. rice, \&cc. \&cc. Beans are alfo fown inftead of maize, and wheat after them, and prepare for wheat much better. On the dry lands, fuch as about the Lago di Guarda, \&c. no clover, as the land is not good enough.

To Vicenza.-No fallow any where. There is a little clover, and very fine, but the quantity is fmall : all wheat and maize, and fcarcely any thing elfe.

Vicenza.-Wheat is always fown after clover, and cinquantino after wheat; but nothing prepares fo well for that crop as beans, fo that they are called the mother of wheat, madre della formento. This idea, in Lombardy, is as old as Gallo, who remarks, that wheat lucceeds after nothing better than beans, which in grafano maggiornente la terra, che non fa ogni altro legunc*; and this he refers to as a cuftom of the Cremonefe and the Mantuans. It is equally true in England; and Yuch a combination of authority ought to convince fuch as yet want conviction, of the utility of beans as a preparation for wheat; more, perhaps, to be depended on than any other preparation whatever. A common courfe uear this city introduced as a variety is,-1. maize; 2. wheat and cinquantino. A farmer cultivated a field during fone years in this courfe, I. maize; 2. wheat; 3. clover: and to preclude the neceffity of dung, he ufed only the vanga (fpade): for five years his c"nps were good, but afterwards declined greatly till he could not get even clover. They fow wheat in October, and the clover-feed over it in March, if there is rain; the end of June the wheat is cut, the end of Augult the clover is mown for hay, and another fmall crop again in October ; here is, therefore, within a year, one crop of wheat and two of clover. The grafs is cut again in May, or beginning of the following June; a fecond time in Auguft, and a third growth plowed in for wheat, which is ufually a very great crop in this hufbandry.

Padua.-On all forts of land the moft ufual hufbandry is, -1. dung for maize; 2. wheat ; 3. wheat, and then cinquantino or millet, \&c. Clover is fown both in autumn and in fpring; if the froft is not very fevere, autumn is beft, but fpring the molt ice cure. It is cut once after the wheat is reaped.
Venice.-Sig. Arduino aflures me, there is no fallow to be found in any part of the Venetian territory; they have not even a word to exprefs the idea-l'anno di ripofo, is

[^115]a different thing, and always means clover, or a ftate of reft, without any tillage. That gentleman's expreflion pleafed me much,-La jachere '̀ una fciocca pratica in agricolture: The two great points on which the beft agriculture of the Venetian ftate turns, ate maize on clover, and wheat on beans. All thefe plants are equaliy neceffary upon a farm; and there is a peculiarity in clover as a preparation for maize, and equally in beans as preparatory for wheat.

Bologna.-In a very rich field near this city, which I viewed, the courfe has been, in 1787 , wheat, which produced one hundred corbi, or twenty times the feed. In 1788 , hemp, five thoufand pounds. In 1789, it is now wheat, and perfectly clean. This courie of-1. hemp; 2. wheat, is perhaps the mof profitable in the world, and brings to mind the noble.vaie of the Garonne, under the fame management. If land will dofor hemp they uever fallow, but have fome fields in the courfe,-1. fallow; 2. wheat, which ought to be confidered as a difgrace to Lombardy. 1. Maize; 2. wheat, is a courfe not uncommon. On the fallowed lands they fow beans, provided they have dung. Very little clover, preferring fenugreek, which is fucceeded by wheat. Vetches they fow in autuinn, and beans allo, both for a crop, and alfo to plough in, in the fpring, as a manure for hemp. Withequal quantities of manure, beans give better wheat than hemp. Beans on Sig. Bignami's farm are now (November) fix inches high on the tops of narrow ridges, but none in the furrows; thefe are for a crop, and infinitely too thick, I fhould apprehend. Lupines alfo for ploughing in.

Tuscany. - In the Valdarno di Sura, Coliai, Sienifi, Pifani, Volterrana, they fallow, and their courfe is,-1. fallow; 2. wheat. After travelling fo long in Lombardy without a fallow, it hurt me to find them comnon here. Clover is ufually made a preparation for maize in tnoft parts of this country; and beans, where fown, are reckoned the beft for wheat. At Martolli, \&c. the courfe is, -1. beans, French beans, or maize; 2. wheat ; 3. wheat ; 4. wheat and rye, and no after.crop. In the Valdichiana, the following courfe, I am informed, is purfued,-1. maize and French beans; 2. wheat, and nothing after it ; 3. wheat and then raves, and, in fome praces, clover added. At Villamagna, the courfe is,-1. biade, vetches, beans, \&rc. ; 2. wheat ; 3. wheat; 4. wheat. The firtt wheat produces nine or ten times the feed, if after beans; the fecond fix or feven; the third three or four: a degradation that ought to explain fully the abfurdity of fuch a fyftem. In fomediftricts the foltowing is the courfe; -firt year, biadi, viz. beans, peafe, chick-peafe, French Deans, tares, lentils, oats, maize, the great millet, fmall millet, panic in part clover, and oats, and; after cutting for forage, plough for fome of the above. Second year, upon the land thus prepared, wheat is fown, called grofo and ariftata mucked; or with half groffo and half gentili (white wheat). Third year gentili wheat.

Modena.-The bad farmers in the Modenefe are fallowifts, and their courfe is, 1. fallow, ploughed firf in May or June, in Augult the fecond time, and the third in October, for fowing, 2. wheat. But the better farms fubtitute beans, French beans, vetches, fpelt, maize, particularly the laft inftead of a fallow. Upon foils that are very good, and manured, they have an exccrable cultom of taking three crops of whent in fucceflion; fometimes throwing in clover with the wheat, which is plowed up in June for wheat again. When beans are fown in autumn and fland the frolt, they yield much more than fpring fown.

The huibandry practifed by Sig. Bertolini, which is the beft of the country is, 1. beans, fown in October, and harvefted in May: then French beans, or formentoni, for fornge, or thick-peafe, or lentils; 2. whent, the ftubble ploughed thrice for,
3. Wheat; 4. maize, fown in March. To Reggio they fallow fome of their land every third year ; but more commonly fubftitute maize, beans or fomething elfe in lieu.
-Parma.-In the country about Vicomero, the common courfe is, 1. beans; 2. wheat; 3. maize; 4. wheat.

- Piedmont.-Tortonefe.-A common courfe here is,-1. beans; 2. wheat. Alfo, -1. melga (great millet); 2. wheat. But they have fome lands in fallow courfes.
Savoy.-At Lanefborough, the common, hurbandry is that of a crop and a fallow : they-plough in May or June, and again for the feedindauguft, when they fow the rye; and they have no wheat.

From thefe notes it appears, that there is fomething both to commend and to condemn in thefe Italian courfes. The rejection of fallows is pretty general ; this is a good feature, and the great ftrefs they lay on beans as a preparation for wheat, cannot be praifed too much. On the other hand, there feems to be no idea of fo proportioning the crops of a farm, as to make cattle and fheep (kept on arable land) the preparation for corn : the culture of clover is not unknown, but fcarcely extends further than to produce fome hay i no where met with artificial graffes introduced on fo large a feale as to fupport a good flock of fheep. In fome diftricts, the great plenty of watered meadow explains this deficiency ; but there are more where it will not afford an apology. This objection, however, does not hold good in the Lodizan, where their immenfe dairies are fupported on arable land, and certainly form one of the moft curious fyltems of hufbandry that are to be met with in Europe.

## Sect. II.-Of Seed and Product.

That reader who thinks nightly of the ufe of collecting a great mafs of facts in thefe inquiries has not, it is to be prefumed, reflected fufficiently on the great importance, in every fcience, of combining circumftances apparently unconnected, in order for mutual illuftration. He who collects fuch facts, Infulated for a time only, may not live to fee the effect of fuch comparifons; but the gradation of knowledge is preferved without interruption, and the ufes will undoubtedly be difcovered.

Savigliano.-They reckon here that a farm of onee hundred giornati, one third wa. tered meadow fhould yield 2300 livres clear of taxes, landlord's half.

Pienmont.-Turin.-Products of Sig. Briolo's farm:-wood, eight giornata; meadow, four ; wheat, five ; rye, five ; maize, five. Yields to the proprietor for his half,
Ninety mines of wheat, at 3 liv, 10 f .
One hundred and five do. of rye, at 2 liv. 155.

Milanese. - Milan to Pavia. - The crops are - Wheat, feven or eight feeds.-Rye, eleven feeds.-Maize, forty feeds.-Ditto quarantino, twenty feeds.-Millet, fifty feeds.

## Wheat.

Piedmont.-Chentale.-A country proverb in this country is, that a good peafant fhould finifh his wheat fowing by the 1 gth of October. After hemp, clover, or fallow, wheat yields forty to forty-five inina per giornata, each mina forty-five pounds to fiftytwo pounds, average forty-feven pounds, and the common price 3 livres to 3 livres $10 \rho$. but at prefent 3 livres ${ }_{15} \mathrm{f}$. But, including good and bad farmers, and all foils, the produce is not more than twenty-four mina: that is, twelve for the landlord and twelve for the tenant. They fow four to four and a half; the common produce is, therefore, fix times the feed, which is miferable; the better crops between ten and eleven feeds. Allowing for the Piedmont pound, being about one-tenth heavier than the Englif2 (though only of twelve ounces), and that the giornata is not equal to an acre, their beft crops, at forty two or forty-three mina, will be near five quarters per Englifh acre; and their average near three; which are not greater than might be expected. Their quantity of feed appears, however, to be immenfe, for it amounts to one hundred and nineiy-nine pounds per giornata, which is extravagant : and makes it fufpicious, that the giornata here is larger that the legal giornata of the principality.

Savigliano. -They fow here, of wheat, three and a half eymena, and reap eight times as much, in a good crop.

Turin.-They fow five mina, or nine rabbii, and ten pounds to the giornata; of rye and oats, the fame quantity; of hemp, three mina; maize, one-half; millet, onehalf. Wheat produces twenty-five mina; or five times the feed; rye, thirty; maizc, fifty to feventy; millet, twenty. The mina at forty-five pounds the crop of wheat is about five and a half coombs per Englifh acre. For their land and climate, a miferable crop; but as good, or better, than they deferve, when their courfe of crops is confidered.

Milanese. - Mozzata.-Produce of wheat, eight ftajo per pertica on the beft land; five on middling; and three on the wort.

There is a fingular neglect in keeping wheat in this country : being thewed the granaries at two houfes, in which the quantity was confiderable, I was furprized to find that, where fome of the windows were open, the room ftunk very much; the feent particular; and examining the wheat, I found the furface all either covered, even to fhining, with the webs of the wevils, or elfe in ropss, hanging together by it, and the flies buiy; the wheat was two or three feet thick, and had not been ftirred. In a third granary, to which I went for fatisfying my curiofity, in the hands of the owner, (for the other two belonged to noblemen, and were managed by intendants,) I found in the fame condition; and all agreed, that to ftir the wheat is bad, as it makes the whole heap alike; whereas, by not moving it, the furface only fuffers. On this, I thrult my arm into the heap, to examine the interior, which all ftunk dreadfully. Perhaps neither the wevil, nor any other infect, may live deep in the heap; but, for want of airing, the wheat Itinks; not to mention the furface, which is a lofs of five or fix per cent. A molt barbarous fyftem of management. It is worth remarking, that the only good way of keeping wheat is in the ftraw: ftacks fhould be built on capt ftones, to keep voruin out, and the corn thrafhed as wanted.

Clover hay, three hundred and fifty pounds of twenty-eight ounces per pertica, at 3 mowings; one three-fourths ton per acre. In money by corn, without mulberries or vines,

24 liv- $15 \frac{1}{2}$ - $9^{\frac{3}{4}}$
For the landlord's fhare, I fuppofe. And, in refpect to the country in general, if four fquare miles be taken around Mozzata, of fix parts, three are good, two middling, and one bad. Average corn produce, $18 \frac{1}{2}$ livres. The common notion is, that two-thirds of the grofs produce go towards maintaining the farmer, fupporting the cattle, wear and tear, taxes, \&c. and that one-third is nett to the proprietor.
 Such land would fell for $1+5$ liv. per pertica (281. 16s. per Englifh acre).

Codogno.-The feed and produce of the crops here, are,-wheat, fow one ftara and reap fix times as much; maize, fow one fourth of a fara, and get twenty for one; millet, fow one-eighth flara, and reap fix ftara; rye, fow one-half fara, the produce eight flara; rice fow one flajo, gain fixteen rough, or quite white.

braccio, and li oblorg fquare. $=46_{1}^{6}$; and Euglifh acre; their jugero of

A Bergamafque writer obferves, that wheat cultivated with the plough commonly yields four, five, and fix times the feed; but cultivated with the fpade, twelve, fourteen ${ }_{2}$ and fixteen times that quantity ${ }^{*}$, and this of great veight; a fure proof of their miferable tillage.

Breficia.-Arable products in this vicinity, are,-wheat, three facchi, of fourteen pezè each pezè twenty-five pounds being about fix feeds. The pezè of twenty-five pounds Brefcian, being equal to $14 \frac{3}{4}$ French, makes two hundred and fix pounds French per fack, or two hundred and twenty-four pounds Englifh: the three facks, therefore, are fix hundred and feventy-two pounds Englifh, on a jugero of four pe:tiche; this is fcarcely twelve bufhels the Englifh acre, reckoning four one-fourth pertiche in that acre $\dagger$. Maize fown in March, produces fix, eight, ten facchi, each twelve pezè of twenty-five pounds. This is about twenty-eight bufhels to the Englifh acre, fuppofing a buihel of maize to be fifty pounds; but quarantino does not yield more than five fuch facks. Melico (the great millet,) fifteen facchi, of ten or eleven fuch pezè. Flax, fix to nine pezè, at 20 livres to 25 livres the pezè; this is about one hundred and twenty-five pounds the Englifh acre, and 170 livres at 6d. Englifh, 41. 5s. and per Englifh acre 4l. Millet gives three facchi, of eleven pezè. Clover, three hundred peze of hay, at three cuts; meadows yield the fame as clover, but are paf. tured in autumn. Price of hay 70 livres the carro, of one hundred peze. Three hundred pezc̀ equal four thoufand eight hundred and twenty-feven pounds Englifh, and per Englifh acre, four thoufand five hundred and twenty-two pounds, which we may call grofsly two tons; a very poor crop for three mowings.

To Verona.-In this line of country, the Lombardy fyftem, of planting all the arable lands with rows of pollards, for training vines, is at its height. There is a good deal of it from Bergamo to Brefcia; and fome are feen in paffing from Vaprio to Bergamo, but not fo univerfally as here. It is a moft fingular fyftem; rows of maple, afh, or poplar, are planted from four to feven yards afunder, and rows of vines at their feet, which are trained up thofe trees, and in feftoons from tree to tree; the fpace is cultivated for corn. They do not feem to approve of a fingle ftem for thefe pollards fo much as feveral, for they have three or four, about fix feet high; cropped every fecond year, to prevent too great a thade. In fome places, mulberries are nixed with thefe common foreft trees: one nulberry, and then two afh or maple. In fome rows, beyond all doubt, the vines are trained equally on the mulberries as on the other trees; but not generally, being faftened only to the ftems of the mulberries. The better the land, the farther afunder are thefe rows, even to fixty or feventy feet; but, in worfe land, much nearer. All the way, the foil is a floney gravel, of a different appearance in quality, but where holes are dug for trees, it looks better.

Verona.-Wheat here yields five or fix times the feed. They fow one hundred Veronefe pounds upon a campo of land, and reap five hundred and fifty, which is about two bufhels of feed per Englifh acre, and the produce eleven bufhels. We have not, upon the pooreft lands in England, fo wretched a crop : to what are we to attri-

[^116]bute it, if not to general bad management, united with the execrable fyftom of incum. bering their fields with pollards and vines. They fteep their wheat feed in lime-water twelve hours, to prevent the fmut.

Vicenza.-Th thrty-two miles from Verona hither are all, except a fmall quantity of irrigated land, lined into the fame rows as already deferibed, from twenty-five to thirty yards afunder. Wheat is fown clofe under them; but with maize fix yards are left on each fide not cropped; and, in fome pieces, thofe twelve yards are fown thick for forage, as not equally wanting fur: ; a fure proof that they admit the damage of the trees, and provide againft it as well ds they can. In fome grounds preparing for wheat, manure is fpread as far as the roots of the trees extend, but no further. What a fyftem, to give dung to elms and maples, and to force wheat to grow under their fhade!

Wheat has now (October 23.) been fown a month or fix weeks; it is' high, and thick enough to hide a hare. 'The borders of thefe fown lands are dug clean away, as deeply as in Effex.

Maize produces about nine one-half facchi the campo. Inquiring here into the eftimated damage refulting to corn from the plantations of trees in arable land, I was told, that the lufs in onc-tenth of wheat, and one-half of maize, but to clover none. The trees here are all walnuts, for training vines to, the damage clone by them, agreed to be very confiderable. Of wheat they fow three ftari, and the produce cighteen to twenty; of maize one, and the crop thirty to thirty-five; of cinquatitino, half a ftara, produce fixteen; of buck-wheat one-fourth, the return fix. In the farms around the celebrated Rotunda, maize produces five facks, cach one hundred and fifty pounds: a fack is four ftari, and the ftara about three pecks; this is fifteen bufhels, and not fixteen, the acre. They are fometimes troubled with the fmut ; Sig. de Boning, Prefident of the Academy of Agriculture, has tried liming and lime watcr, as a prevention, but without any fuccefs. Of maize they have a new fort, that carries a male flower on the top of the cone, and this fort always fills with grain to the very point, which is not the cafe with other kinds.

In refpect to the exhaufting quality of crops, they reckon that the maize which carries the flower at top takes molt from the land: 2. millet: 3. common maize: 4. wheat. It feems remarkable, that they flould confider the crops which are preparatory to wheat as exhaufting, more than the wheat itfelf.

Padua.-Of wheat they fow three ftaji in middling land, two in fertile foils, and four in bad ones, .per campo: as the flajo is equal to forty-one French pounds, and the campo about one-tenth lefs than an Englifh acre, it makes three ftaji equal to two and a half bufhels per acre, which is pretty exactly the quantity we ufe in England. The crop is two mozzi on the beft land, and one and a half on a medium: each moz\%o twelve flaji: this is about fifteen and a half buhels the acre or under feven times the feed. Thus thefe wretched products purfue me through all Lombardy. Of maize they fow three quarti, or three-fourths of a flajo, but it planted two: the produce, good five mozzi, middling three, bad one. Of lucern (he quantity very inconfiderable) and of clover they fow twelve pounds grofo. This pound is to the French one as 9150 is to 9219 ; this is between fourteen pounds and fifteen pounds per acre. Clover gives three carri, each one thoufand pounds at three cuts. Lucern four carri, at four or five cuts. Almolt he whole country is lined into rows of pollards, as already defcribed; yet they adinit that every fort of tree does very great danxage to all arable crops; but to grals the mifchicf is not great.

To Veniec.-The fame level at this city that reigns about Pad equally enclofed and planted; nuch of it arable, and aluoft the whole cut into uete fcraps af fields, with many gardens. Near the Adriatic, a dead level marfh, coven with mal graffes.
Ecclesiastical State.-Bologna.-In a famous field near the cily, rumarkable for yielding great crops of hemp, wheat yields one hundred corbes for five of feed. In general, they fow two and a half tornature of land, or one acre and a quarter, with a corba of feed, or one hundred and fifty pounds to one hundred and fixty pounds (fomething under the Enalifh pound); and in all the Bolognefe, on an average, the produce is abnut five feeds, fome only three; but on the beft hemp lands twelve to fixteen, on a medium; but twenty for one are fometimes known.

Tuscany.-Florence--In the plains, the general produce is eight times the feed; the whole dutchy through, not more than five or fix : in the depofits of rivers, or fpots remarkably rich, twelve, fifteen, and even twenty. All thefe are wheat. Beans four and a half and five. On one ftioro of land they fow three-fourths of a fajo of wheat, which weighs fifty-tivo pounds to fifty-five pounds of twelve ounces (this pound is equal to three quarters of a pound Englifh . On the hills they fow one-fourth more. Suppofing the ftiora * to be, according to De la Lande, feven thoufand and fifty-fix French feet, about five and a half nake an Englifh acre; three-fourths of a fajo therefore per fiora cquals one hundred and fixty.five pounds per acre, or very near three bufhels.

But I found at Martelli, near Florence, that they fowed but one third of a flajo per ftiora, which would not be more than two bufhels per acre. Beans would be muchmore cultivated, but for the pernicious plant the cufcuta-a parafite that feeds on and deftroys the crop, fo that even the feed again is not reaped; in the old botany called orobanchis ramofa, and in Tufcany fucca mala, and famini. Of faggini they fow one and

[^117]a half fajo of feed, and the produce fifty to fixty. Of formentone (ma'se) they fow half a llajo, and reap twenty five.

On the plains in lufcany, the chief product is wheat, the fecond wine, and the third oil ; but on the fouthern fide of the hills, olives on fpots bad for them, and wine. Silk no where enough to be a chief object.

Modena.-The country from Modena to Reggio conflantly improves in its features, and mult be reckoned among the beft cultivated in Lombardy ; the fields are thrown into arched lands, like Flanders about twenty-five yards broad, and fmall ridges on thofe : a row of trees is planted on the crowns of fome, and along the furrows of others: in fome there are neat great trenches; and as the fences are equally well made, and the meadows with a good afpect, the country carries the general features of being well cu!tivated. The appearance of thefe broad ridges, in two of the beft cultivated countrics in Europe, Lombardy and Flanders, juftly gives a high idea of the practice.

Parma.-lirom Reggio to Parma, there are many lands, three or four yards broad, now (November) deep ploughed, and the furrows cleaned out by fpades, laid up in this manner, for planting beans in the fpring; excellent management. There are alfo a good many autumn fown ones, three or four inches high : produce in general, about Vicomero, wheat four or five times the feed, and beans five or fix. To Firenzula this practice takes place yet more, and is better done. The merit of their hulbandry af. pears to be greater about Parma than at Piacenza; there is a vifible decline as you advance.

Savoy.-At Lanefbourg, they fow only rye, which they harveft in July, the produce about fix for one.

If the intelligence concerning the produce of wheat be reviewed, it will be found, on an average, varying from five to feven and a half times the feed; generally between five and fix. Suppofe the latter number, and we fhall, with reafon, be amazed at the miferable products of this rich plain, in every thing except grafs and filk. The average foil of England cannot be compared with the average foil of Lombardy, yet our mean produce is eleven times the feed, perhaps twelve. Every one mull be curious to know the caufe of fuch wretched crops: I attribute them to various circumftances - but the predominant caufe mult be fought for in the finall farms occupied either by little pealant proprietors, or, what is more general, by metayers. This atominable fytem of letting tand is the origin of moft of the evils found in agriculture, whercver the method prevails. Such poor farmers, who, in every part of Italy where I have been, are fo miferable, that they are forced to borrow of the landlord even the bread they eat before the harveft comes round, are utterly unable to perform any operation of their culture with the vigour of a fubfantial tenantry; this evil pervades every thing in a farm; it diffufes itfelf, imperceptibly to a common eye, into circumftances where none would feek it. There are but few diftricts where lands are let to the occupying tonant at a money rent; but wherever it is found, there crops are greater; a clear proof of the imbecillity of the metaying fytem. Yet there are politicians, if they deferve the name, every where to be found who are violent againft changing thefe metayers for farmers; an apparent depopulation is faid to take place; and the fame ftupid arguments are heard, that we have been peftered with in England, againft the union of farms. Men reafon againtt that'improvement of their lands, which is the natural progrefs of wealth and profperity; and are fo grofsly abfurd as to think, that doubling the produce of a country will de. prive it of its people.

Gallo and wh

## Sect. III.—Of the Culture of Plants.

Gallega Officinalis.-Commonly fpontaneous in the fields, between Milan and Pavia, and wherever cattle have admiffion all clofely eaten.

Paliurus.-I know no plant that makes a better hedge than this in the north of Lombardy. Sig. Pilati, near Brefcia, has one of fix years growth, as good as an excellent white thorn one in England would be in ten.

Trigonella Fanum Gracum.-Cultivated in the Bolognefe in preference to clover; foil with it; and fow wheat on the land.

Sainfuin.-In Tufcany, the coline de Pifani are much under this plant, which is called lupinello; particularly about Caftel Fiorentino, where it was introduced about twenty years ago by Sig. Neri ; one of the good deeds which deferve a nation's thanks, better than a victory, or the taking of half a dozen towns. A thoufand facks of the feed were fent thence to Naples and Sicily. Will thofe kingdoms awzen at laft ? Sig. Paoletti, at Villamagna, has a piece of good fainfoin on a fteep flope; but I found one-third of it burnet.

Larch.-In the Milanefe, at Mozzata, the Count de Caftiglioni having two hundred. pertiche of wafte heath, and a community two hundred more adjoining, he took a leafe of it for ever; and ploughing the whole, fowed acorns, planting alder, larch, and other trees, which do well; but the fown oak, in eight years, exceeded every thing, and are beautiful trees: the foil a poor gravel. We have in England fo many prejudices, that a man who does not travel is apt to think that every thing Englifh is better than the fame thingsin other countries; and, among other follies, that for oak England is fuperior to all the world: but timber wants fun as much as wheat ; and I have no where in England feen fuch a growth of timber, as in many places abroad. Larch abounds greatly in the mountains, and is reckoned an admirable wood for water-works; all pofts are of larch. 1 have read in fome writer, that there is a law in many parts of Lombardy which allows a land-proprietor, whofe effate is entailed, to plant, on the birth of a daughter, a certain number of Lombardy poplars, which are her portion on coming of age, or being married, in fpite of any entail. I enquired, both in Piedmont and here, into the truth of this, and was affured there is no fuch law; nor did they ever hear of the cuftom, even when eftates have not been entailed.

In the arfenal of Venice is fome quantity of larch, kept under cover, and valued. greatly for all works expofed to water. They are nct very large, but coft twenty-twoducats each. The mafts are very fine pine-trees, from the upper Trevifano; I meafured one thirty-eight yards long, and two feet diameter at the butt, and one foot at the other end.

Lucerne. - I mention this plant, for an opportunity of obferving how very rarely it is. cultivated in Italy : I faw a little near Padua; and there is an inconfiderable quantity in the Parmefan, where it is cut five or fix times; they find that cows give more milk. on it than on any other grafs.

Raves.-I was furprifed to find turnips, or rather the French raves (for I fear they are not the genuine turnip) cultivated in Tufcany. I was aflured that in the Valdichiana there are many, fown immediately after wheat, but never hoed, yet come generally from two pounds to five pounds; fome to thirty pounds (twenty pourds Englifh), and that they are applied to the feeding and fattening of oxen, which fell at 140 frudi the pair (39l. 13s. 4d. Engliih) ; nothing befide is given, except a little hay.

Cyprus'Tree.-At Soma, near the Lago Maggiore, there is a famous cyprus tree, which Corio, in his Storia di Milano, fays, was the place where the people afiembled in
congrefs in the thirteenth century; it was then the moft celebrated tree for fize and age in the Milancle, and muft therefore be immenfely oid at prefent. It is now in good health, except a few branches that have fuffered a little towards the top; it is nine braccia in circumference.

## Culture of Silk.

Nice.-Eight roups of cocoons, or eighty-four pounds, make twenty-fou: pounds of filk (eleven ounces and a half), which fells at 10 livres 5 /: the pound; a roup of leaves fells at $\approx 0 \int$. and two hundred and fifty roup are neceflary for eight ounces of grain (egms).

Coni--The whole country, aftor afcending the Alps, is planted with mulberries around every field, and if large, in lines acrols. I remarked great numbers from ten to fifteen years old.

To Chentale, one ounce of grain requires three hundred and fixty roup of leaves; each roup twenty-five pounds, and yields four or five roups of bozzoli or cacata (cocoons), and one roup of cockoons makes three pounds of filk. The price of organzine 20 livres to $2+$ livres per pound; the offal pays the fpinning. Gathering the leaves cofts $2 \int$. to 3 f: the roup.
Cbentalc.- The feed of the mulberry is fown in nurferies, and the trees commonly planted out at four years oicl. The furt, fecond, and third year, they are pruned, for giving the branches the right form ; the fourth, they begin to gather leaves. Some which were flewn me by the Count de Bonaventa, of eighteen years old, give fix, feven, and to eight rubbii of laves each. One old tree, a very extraordinary one, has given filty-three roups. A large tree, of fifty or fixty years, commonly yields twenty-five rubbii. They never dig around them, nor wath the ftems, as in Dauphine ; but they have a practice, not of equal merit, which is to twift fraw-bands around the ftems, to defend them againt the fun. For one ounce of grain fixty-five to eighty rubbii of leaves are necellary, which give two and a half rubbii of cocoons, and fometimes fo far as four. One rublio of cocoons yields twenty to twenty-one ounces of filk organzine, of the price of 18 livres per pound. For gathering the leaves, from $1 f .8$ den. to $2 f$. the rubbio is given. The offal (morefra and chocata) pays the winding and fpinning. They never hatch the worms by artificial heat, ufing that of the fun, or of the human body. The common method of carrying on the bufinefs is to provide, as in France, grain and mulberries, and to receive half the cocoons. The cultivation is fo profitable, that there are many lands to which mulberries add 2 value of 200 livres, or 300 lives, more than they would fell for if they contained none; and it is farther thought, that they are little injurious to corn, the fhade not being fo prejudicial as that of the walnut, ind of fome other trees. The common eltimation of profit is, that trees of all ages yield from the time of beginning to bear, from $30 \int$. to 4 livres each, nett to the landlord for his half produce.

Turin.- One ounce of grain gives two to four rubbii of cocoons, and demands one hundred and twenty rubbii of leaves; one rubbia of cocoons will give twenty-two ounces of commonly well fpun filk. The price of grain 12 lives the ounce when very farce, but
 1 afked the price of the filk, the anfwer was, Oh! fre that, it is the price the Englifh choole to pay for it. The common price of organzine, 16 to $=0$ liveres, firlt quality; raw, 12 liveses. Fir gathering the leaves, $2 j$. per rubbio is given. Ot the different lorts of mulberry, the andd is the beft, in point of quality of fuk. A tree of twenty years will give twenty-four
or' twen nurfery, out of $n$ Jows, tl planted as they never by of lcave but alw fants ge feet by long anc

Noza
f.veral

Mila
ragged; all plant thein, fo them. only fro the gro with dur as if for
or twonty-five ribbii of leaves; fome to thirty-five rubbii. The trees are grafted in the nurfery, and planted out at four years, at the beginning of April; price, 20/. to choofe out of many; and in four years after begin to gather. When planted in watered meadows, the gathering damages the hay almoft to the value of the leaves, yet many are fo planted; and many peafants think they lofe in corn by the flade of the trees, as much as they get by them. From the 22d to the 26th of April is the feafon for hatching; never by fire; nor have they any method of retarding the hatching, in cafe of a want of Icaves. Endive, lettuce, and chm leaves, have been often tried as a fuccedaneum, but always killed the worms; fuch things muft never be depended on. The peafants gencrally fell the cocoons, not one in a hundred fpinning. A chamber of twenty feet by twelve feet is necelfary for three ounces of grain; and fix tables, one trebucco long and two-thirds wide.

Norara. - Paffed this place towards Milan, which is a great tract of mulberries for f veral miles.

Milanese.-Buffalora to Manicnta.-Many mulberry hedges, but they are bad and ragged; fome new planted in the quincunx pofition. For feveral miles the country is all planted in rows of vines, at twelve, fixteen, and twenty feet, and fruit trees among thein, for their fupport; among which are many mulberries, and the vines running up them. This mult be a moft profitable hufbandry indeed, to have filk and wine not only from the fame ground, but in a manner from the fame tree. Between the rows the ground is cultivated; millet, maiz (cut), bolcus forgum, the great millet, lupines, with dung amongft them, to be ploughed in for wheat, with young maiz, fown thick, as if for fodder.

Citricho.-A beautiful mulberry hedge, and in good order; fix to eight inches from plant to plant, and cropt at fixteen or eighteen from the ground. It is clear thercfore that the plant will do, with care, for a good hedge. 'Towards Milan, mulberries decline, oak and other pollards being found in their fead.

Mozata.-T he culture of mulberries and making filk, being here much attended to, were principal objects in my inquiries. The fruit is well wafhed, the end of June, to make the feed fink; it is then lown in rows, in a bed of earth well manured, and finely laboured, in the rich nurferies near Milan; covered very lightly, and the furface lightly Hattened ; fraw is fpread to defend it from the fun, and much water given. When the young plans appear, they are weeded by hand. The fecond year, they grow to two or three feet high, and hoed and thinned. The third year, they are cut to the ground above the buds that are to puth, and tranfplanted from thofe nurferics, in the vicinity of the city, to others that are feattered all over the country, in ground well dug and manured, and at two feet fquare; here they are kept clean by hocing. The fifth. year, in the fering, they are cut again to the ground; they then fhoot very powerfully, and attention muft be given, to keep but one good floot, and the ground is dug or hoed deeper than common, and atfo dunged. The fixth year, thole that are high enough are grafted, and the reft the year following. Thofe that took the fixth year, ought (1) relt in the nurfery three years, including the year of grafting, that is, the feventh and cighth year. They do not like to plant large trees, and have a proverb,

> Se vioi far torto al tuo vicino,
> Pianca il moro groflo e il lico picenlino.

As to phant fomall fig trees is as bad as large mulbervies.
The holes are made in winter for recciving them where they are to remain; thefe are nine leet fquare and two feet deep, and have at the bottom a bed of broom, bark
vol., iv.
of trees, or other rubbifh ; then the beft earth that can be had, and on that dung, one load of fixteen feet to four trees; this is covered with more good earth, and this levels the hole with the reft of the field; then prunc the roots and plant, fetting a pole by the young tree to the north, and a fpur poft on the other fide, to guard it from the plough. Twine no ftraw the firt year, becaufe of the infect forficula auricularia, L.; but in November bind flraw around them againt the cold, or, as ftraw is dear, the poa rubra, which abounds. Never, or very rarely, water. Much attention to remove all buds not tending in the right dircction.

The fourth fpring after planting, their heads are pollarded in March, leaving the fhoots nine inches long of new wood, and feeking to give them the hollow form of a cup, and that the new buds may afterwards divide into two or three branches, but not more. The next year they begin to pluck the leaves. They are attentive in pruning, which is done every fecond year, to preferve as much as they can the cup form, as the laves are gathered the more eafily. Thus it is about fourtcen years from the feed before the return begins.

After gathring the leaves, a man cxamines and cuts away all wounded hoots; and if hail damere them, they are cut, let it be at what time of the year it may. Old trees are pruncd alter gathering, but young ones in March. In autumn, the leaves are never taken for cattle befure the ath of November, as the trees after that time do not fuffer. The thind ycar after planting young trees, they fow about a hat-full of lupines around the flent, and when about ten inches high, dig them in for manure. The opinion here is, that the mulberry does very little harm to rye or wheat, except that when cut the falling of branches and trampling are fomewhat injurious. Maiz, millet, and panic are much more hurt. A tree, five years after tran/planting, gives ten pounds of leaves, each twenty-cight ounces. At ten years, cighteen pounds. At fifteen ycars, twenty-five pounds. At twemy years, thirty pounds. At thirty years, fifty pounds. At fifty to feventy ycars, feventy pounds. There are trees that give eighty pounds, and even one hundred pounds. The price of leaves is commonly 4 liveres per one hundred pounds (twenty-eight ounces). lor one ounce of grain live humdred pounds of leaves are neceflary, and yidd fercnteen pounds of cocons; but among the rifings in the mountain of Brianza, twenty five pounds. To make a pound of filk, of twalve ounces, five pounds or fix pounds of cocoons, of twenty eight ounces, are required. Price of cocoons, in the low watered country, 2 lives per pound twenty-cight ounces). At Mozzata, $2 \frac{1}{2}$ livres. At Brianza, 3 liveses. The grain is hathed in a chamber, heated by a chimmey, and not a ftree, to teventeen degrees of Reaumur (ieven:y and a half Far.); but before hcing placed in this chamber, they are kept eight days under a bed, wih a coverlt upon them, in boxes covered with paper pierced; and when hatched lay the young leallets of the mulberrics on the peper, to entice them out. The method of conducting the bufinefs here is the fame as in France, the landord furnithes of the grain, and the peafants hall, and they divide the cocoosts. Price of grain, 2 liveres the ounce. Nuherrics, of all ages, are poll ordel cyery fecond year; a mifchievous cuftom, which makes lee tre es decay, and beflens their produce; it is never done in Dauphine, where the culture is fo w il underthod.
Mihn.--Sig. Felice Soave made fruse interefling trials on filk worms.
At Lambrate, mar Milan, two ounces of feal in rooms kept th the heat of twenty three and twenty-four decrece of keamur, hatched wedn, and kept healthy: the 28 ho of April the feed was flaced in the ronne, ard hathed in the third, fourth, and fifth day: the 2 at of May the fint coroon feen, an! at the cond ot the monthall were at work. The produst gathered the: 3n of June; thi, produt ninety-two and a half pounds of cococns

coons (twenty-cight ounces); eighty-four of them having becn fpun from four and five cocoons, gave twenty pounds and one-thirl (twelve ounces) of fill, flronger and more fhining than common : the confumption of leaves, fourteen hundred and twenty pounds, of t.venty-eight ounces. Wood ufed for fire, two thoufand eight hundred pounds; but the two roons would have ferved for four ounces of feed. In the common method, without ftoves, the confumption of leaves is five hundred pounds for an ounce of feed, and the medium product is not above fifteen pounds of cocoons; and by this new method, the confumption of leaves has been feven hundred and ten pounds each ounce, and the produce forty-fix and a quarter pounds of cocoons. Sixteen or feventeen cocoons weigh an ounce in the common method, but in this only thirteen or fourteen. The filk cannot commonly be fipun from five or fin cocoons; thefe were fpun cafily froms four or five, and might have been done from three or four. To gain a pound of filk, in common, the pounds of cocoons are neceflary; but here the fame quantity has been gained from four pounds.

Ledi to Codlogno. - In this dead level and watered diftrict there are very few mulberries; none except near the villages; many of them, not all, appear unhealthy, perhaps by reafon of their not exerting the fame attention as in Dauphine, where there are, in irrigated meadows, mounds made to keep the water from thefe trees.

Codogno to Crema.-Mulberry trees here have large heads, as in Dauphiné, inftead of being pollarded inceffantly, as to the north of Milan.
There is an idea in the Milanefe, that filk was introduced by Ludovico il Moro. Francefco Muralto reports, "Pradia inculta infinita duobus fluninibuts ad novalia (Ludo. vicus), reduxit infinitas plantas Moronum ad conficicndas foias, feu fericas plantari foccrat et illius artis in ducatu, primus fuit auctor *." It is faid to have been introduced into Europe by fome Bafilian monks from Sirinda, a city of Indoftan, to Conftantinople, under the Emperor Juftinian, in the year 550, by one account $\dagger$; and by another, in $525 \ddagger$. In $1^{15}$, the manufactory of filk was brought in liorence to great perfection, by the refugees of Lucca §; but during the fifteenth century no filk was made in Tul'cany; for all ufed in that period was foreign, filk worms being: then unknown $\|$. In 1474, they had eighty-four fhops that wrought gold and filver brocaded filks, which were exported to Lyons, Geneva, Spain, England, Germany, Turkey, Barbary, Afia, \&c. $\mathbb{T I}_{\text {R }}$ Roger I., King of Sicily, about the year $114^{6 * *}$, having conquered fome Grecian cities, brought the filk-weavers from thence into lalermo; and the manufacture was foon imitated by the people of Lucca, who took a bale of filk for their arms, with the infcription-Dci mumus diligenter curandum pro vita multorum $\dagger$ t. In 1525 , the filk manufacture at Milan employed twenty $\cdot$ five thoufand people ; and it fcems to have augmented till $1558 \ddagger \ddagger$. In 1423 , the republic of Florence took off the duty of cutréc upon mulberry leaves, and prolibited the exportation; and fome communitics of Tufcany have records concerning filk anterior to that period $\$ \$$.

In almoft all the diftricts of the Milanefe mulberry trees are met with, very old, with towering branches; among which are thofe of Sforzefca, planted under Ludovico il Moro ||II, who lived at the end of the fifteenth century.

 tam. ii. p. 513 .

Venetian State.-Vaprio to Bergamo. -There are many mulberries, mised with the cultivation of corn and vines, in this tract of country.

Bergrano.-Four ounces of feed are here given to cach poor fanily, which yield four $p e / i$ of cocoons.

Brefia.-One hundred $p f f$ of leaves are neceffary to one ounce of feed; and four FCfi of bozaoli, or cocoons, are the produce of one ounce; and the pefo of cocoons gives twenty-cight to thirty ounces of tilk. Cocoons fell at 45 livers per pefo. Leaves at 1 livre; and filk at 22 livres to 24 lives per pomel. The trees are lopped every three years; yet fome are known that give twenty pefi of leaves. Small ones half a $p$ fof and one pefo.
l'crona.-One ounce of feed demands feventeen or eighteen fucchio of leaves, cach one hundred Veronefe pounds (or feventy-four pounds Englifh). Twelve ounces of feed are given to each family; and each ounce returus fixty pounds of cocoons, at tweive ounces the pound; the price 24 . the pound. To each ounce of feed fisteen to cirh. teen facchi of leaves, each one hundred pounds of twelve ounces are neseflary. The fixty pounds cocoons, at $24 \%$ are 72 livres, or 365 ; which is the produce of cight trees, or 48.6d. a tree, the half of which is $2 s .3 \mathrm{~d}$. It mult howeverbe remarked, that thefe prices of cocoons vary fo much, that no rule can be drawn from them: this price of $24 \int$. the pound is very low, and muft arife from fome local circumftance. One ounce of filk to one pound of cocoons. They are here, as in the preceding diftricts, in the cuftom of finding the trees and half the feed, and the peafants the reft; and they divide the cocoons. A tree of forty years old will give four facchi; and if a plantation confift of one thoufand trees, they will, one with another, give two fucchi. They make filk in the Verorcfe to the amount of a million of pounds of twelve ounces. There are, near the city, foine trees in a rich arable ficld feventy years old, that yicld from four to fix facks of leaves each; this is about 10 s . a tree at the lowelt price of cocoons.

To Vicenza. - There are many rows of mulberries in the meadows, that are never dug around, and yet quite healthy, which proves that they might be feattered fuccefsfully about grafs lands, if any proof were wanting of fo undoubted a fact. In the arable lands, the foil all gravel, they are planted twolve ridges apart. Some of the trees are old, that fpread feven or eight yards acrols.

Vicenza.-The produce of filk amounts here to about 6 livres the campe, over a whole farm; this is about $3^{s}$. an acre. The facco of leaves weighs feventy-fte pounds, and forty facchi are neceffary for one ounce of feed; which gives one hundred pounds of cocoons, and ten pounds of filk. One hundred trees, of twenty years old, yield forty facchi; price 3 livrcs to 1 a livres; commonly 3 livres. Price of cocoons $3 \circ \%$ to 50\%. the pound.

I was glad here to meet with fome intelligence concerning the new filk worm, faid to have come from Perfia, which they have had here eight ycars, but is in the hands of fo few perfons, that I could get none of the feed; and I fufpect that it is lo't, for, on repeated inquiries, I was referred to other parts of Italy. While they had this worm, they had four crops of cocoons a year:-1. In the beginning of Junc. 2. The end of the fame month. 3. The middle of Auguft. 4. In October. This worm is effentially different from the common ones in the circumilance of hatching: no art will hatch the eggs of the common fort the firft year, that is the year of the flies dropping them; they can be hatched the year following only; but of this new fort, the eggs will hatch in fifteen days the fanc year, if they be in the proper heat. But it is to be obfervel, that they ufe this fort of worm not really to command feveral crops in the faune year, for mulberry trees will not bear it without deftruction, but merely as a fuccedaneum to the common
fort of worms, if by frofts in the fpring they be loft for want of food; this new fort is in referve to apply the leaves to profit once in the year. Theoretically the plan is good; but there muft have been fomething in practice againft it, or we may conjecture that after many years the ufe of them would have been generally int: duced.

This will not be an improper place to introduce fome remarks on this fubject, by an author much efteemed, but quite unknown in England. It appears from the work of Count Carlo Bettoni, of Brefcia, that the difcovery of the new filk worm arofe from experiments made with a view of finding out a cure for the ficknefs of mulberry-trees, called moria; this was fuppofed to arife from flripping the lenves in the fpring annually; it was thought that if fone means could be difcovered of poftponing the gathering much later in the year, it woul. 1 greatly favour the vegetation and health of the trees; an effect that could only take place by means of a worm that would hatch much later than the common one. In 1765, a fecond hatching of the eggs of the common worm is faid, by the fame author, to have been made; part of which were fed with the fecond growth of leaves, and part with the leaves of trees that had not been gathered in the fpring. Thofe fed with the old leaves gave a greater number of coconns, and of a better quality than the others. Thefe experiments were repeated by many perfons; and it was found, that in the heats of July and Auguft the worms would not do well; but in September much better, and that the trees did not fuffer from having their leaves gathered in September. The fame author fays that the new worms (which he calls foreftieri) will hatch three times a year, and that no art will prevent it; no cellars, no cold will keep them from it, though it may retard them fome time, as he tried in an ice-houfe, by which means he kept them inert till Auguft. But, on the contrary, the common fort cannot in general be hatched a fecond time the fame year, ceven with any heat that can be given; yet he admits, that they were hatched by certain perfons in $\mathbf{1 7 6 5}$. The new ones fleep four times, like the common ones, but begin to fpin their cocoons five or fix days fooner: they eat lefs in quantity, but give lefs filk; and as this defect is balanced by the advantage in food, they ought not, lays the Count, to be profcribed. Their cocoons are fmall, but the confiltency is good and fine; and their filk is fine and fofter than the common: he fold it for 4 livres or 5 livres a pound more than common filk. There is, however, an evil attends them, which is the uncertainty of their hatching the fecond and third time; fometimes all the feed will hateh, but at others only a p irt; even only the feventh and tenth of the quantity: but the firt hatching is regular, like that of the common worms. A circumitance in the courfe of his trials deferves noting, that he found the worms of both the old and 1 iv forts would drink water when offered to them, and that the cocoons were the lauger their having had the water.

They have had a fort in Tufcany that batches twice a year; and the Count writing thither for information concerning them, found that their filk was coarfer than the conmon, and of lefs value; and he judges them to be a different kind from his own, which hatches three times. The Count concludes nothing determinate concerning them; but refolves to continue his numerous experiments and obfcrvations. As there may be perfous who think, as I did at firt, when I heard of this fort of worm, that if any fuceced in England it would probably be this; it is proper to obferve that Count Bettoni had nothing in view but the difeafes of the mulberry trees, and does not feem to have had at all in contemplation the evils attending late frofts, depriving the worms of their ulual food; and if the common fort may be retarded in hatching (which he fhews) till Auguft, equally with the new fort, there does not leem to be any extraordinary advantage in this fort, for a northerly climate, more than in the others. The Count's book * was printed at Venice in 1778.

- Progetto per prefervars i Gelfi, \&c. Co. Carlo Bettoni. 8vo. Various pallages.

Sig. Pieropan has made an obfervation, which deferves noting ; mulberries, and likewife other trees, are generally found to fucceed much better when grafted a little before fun-fet than at any other time: the reafon he attributes to the heat of the earth after fun-fet; he kept a journal fome years of the comparative heat of the atmofphere and the earth, at the depths of four, twelve, and twenty-four inches; and has found, that immediately after the fetting of the fun the mercury in thofe thermometers under ground had always rifen fome degrees gradually till the rifing of the fun, when it as regularly falls.

The following is the Account of the Profit and Lofs of Six Ounces of Sccd, for Three Tars, at Vicenza, by Sig. Carlo Modcna.

Seed, Leaves Gather Spinnir Reduc
1780.-Upon his own account.

Expences.

This year the profit would have been much greater; but through the negligence of the women in the night, not attending to the degrees of heat (from 25 to 27 degrees Reaumur), many were fuffocated *.

To Padua.-One ounce of feed gives fixty pounds of galetta (cocoons), and eight pounds to ten pounds of gal tta one pound of filk: the ounce of feed requires fixteen facks of leaves, of four $p c /$, each twenty-five pounds; and twelve fmall trees yield one fack, but one great tree has been known to yield fix facks. Price of gathering, 20/. the fack. Expence of making fixty pounds of filk, 250 livres. Spinning, 30\%, the pound. Cocoons fell at 30 f. to $36 \%$. Silk this year, 25 livres the pound. Jotile.

Padua. - One ounce of leed gives in common thirty pounds of coconss, and eight pounds of cocoons one pound of filk : twenty facks, of eighty pounds of leaves, are neceffiry to feed the worms of an ounce of feed. Price of gathering, $25 /$, the fack. The greatelt trecs give ten facks of leaves each; a tree of twenty years four or five facks. It is not the gencral cuftom to divide this bufinefs with the peafants. The common fort of filk worm is hatehed about the 25 th of April ; the others the middle of June; but filk demands a more expenfive operation in the latter feafon.

Venice.-There are three forts of filk worms:-1. The common one, which cafts its epiderm, or fleep as it is called, four times. 2. A fort known at Verona, that cafts only three times; the cocoons fmaller than thofe of the other fort. 3. The new fort mentioned by Count Carlo Bettoni, the feed of which hatch two or three times a year ; but the others only once. 'The feed of the two firlt forts cannot be hatched the fame year

[^118]it is dropped; but that of the third will hatch of itfelf, if it be not carefully kept in a cool place.

Bologna.-One hundred pounds of cocoons are made from one ounce of feed, and yield feven pounds and a half to eight pounds and a half of filk, of twelve ounces. Price of cocoons, twenty to twenty-five baiocca. Silk, thirty-four pauls, at 6d. the pound.

Tuscany.-Fiorence.-Making inquiries here concerning the new fort of filk worm, I found that they were not, as I had been before told, a new dilcovery in Italy, but known long ago; and, what is remarkable, is prohibited by law, in order to preferve the mulberry trees from being ftripped more than once. The filk made from them is not more than half as good as the common, and very inferior in quantity alfo. They affert here, that by means of heat they can hatch the eggs of the common fort when they pleafe, but not for any ufe, as they die directly; which is not the cafe with the new fpecies, or that asit is called di trè volte.

Their contrivance for winding filk is very convenient, and well adapted to fave labour; one man turns for a whole row of coppers, the fires for which are without tine wall; and the clofets with fimall boilers of water, for killing the animal in its cocoon by fteam, are equally well adapted.

At Martelli, near Florence, on a farm of one hundred and ninety ficri (thirty-four acres) there are forty or fifty mulberrics, enough for one ounce of grain, which gives fifty pounds or fixty pounds of cocoons, and fix pounds or feven pounds of filk. Price of cocoons this year, 2 pauls the pound; lait ycar $2 \frac{1}{1}$; and in 1787 it was 3 pauls. In the culture of the trees they do not practice fuch attentions as the French in Dauphiné; they never dig about them, except when young; never walh the flerss; they prune the trees when neceflary, but not by any rule of years. The belt fort is the wild mulberry, but it yields the lealt quantity ; next, the white fruit.

In 1782, Sig. Don. Gio. Agemi di Giun, prelate of the Greek Catholic church, on Mount Libanus, exhibited to the academicians Georgofili of Florence, the $4^{\text {th }}$ of December, fome filk worms, in number thirty eight, part of which had already made their cocoons, and part ready to make them, as accuftomed to do in his own country, with the leaves of the wild miulberry. , The feed was hatcied in Otober: the worms fed with leaves, procured from warm gardens; cocoons were made in November; mallow leaves were ulied allo *.
Modena. - The export of filk from the city forty-fix thoufand pounds, at 38 livres (4d. each); from the whole territory, fixty thoufand zccisinini.

Piedmont.-Pave/e--lmmediately on entering the dominions of the King of Sardinia, within two miles of St. Giovanne, mulberries are found regularly every where, and continue to Turin. Seven-eighths of them are about twenty or twenty five years old; fome however are anongt the largeft I have feen.

## I.cmbardy Poplars.

They are very fearee throughout Lombardy ; there is a fcattering between Modena and Reggio; and Count Tincoli, five or fix miles from Parma, planted feveral thoufands along a canal, on the birth of his daughter, for her portion, but there is not in any part of Lombardy, any law which in fuch cafes lecures the groperty of the trees thus planted, to the child they are intended for; it is merely private confidence.

$$
\text { - Corja, vol iii p. } 123
$$

l'ifd

## Clover.

PIfDMONT.-Chentale.-Such is the power of climate united with the advantages of irrigation, that clover is here mown for hay once after harvefting the corn it grew with; the hay is net of the beft quality, but ufeful.

Milane.e.-Milan to Pavia.-On the rich dairy farms, the cows are fed much on clover. The red fort is fown, which wearing out, white clover comes fo regularly, that the country people think the one fort degenerates into the other.

Vicenza. - They fow twelve pounds of leed per campo with wheat; it is cut twice the firt year, yielding one carro each cut; the fecond year it is mown thrice : per 44 livres the carro, which is one hundred $p e f$, of twenty-five pounds.

Padua.-Sow twelve pounds groffo per campo (fourteen pounds or fifteen pounds per Englifh acre) it gives three carri, each one thoufand pounds, at three cuts (one ton and a half the acre Englifh;) but they have crops that go much beyond this.

## Figs.

Piedmont.-Nice to Coni.-On this range of the Alps, there are, in favourable fituations, a great quantity of fig trees; and the extreme cheapnefs of the fruit mult be of no trivial importance in fupporting the people, not only while ripe but dried.

## Hemp and Flax.

Piedmont.-Cbentale.-A siornata (to an acre as 7440 to 7929) produces two hundred pounds for the proprietor, and as much for the farmer; and fome crops rife to fix hundred and fifty pounds. They gather the female hemp from the 25 th of July to the 4 th of Auguft: the male the beginning of September. Of fome pieces I was informed that a produce not uncommon was thirty rubbii of female, and feventeen of male, worth $4 \frac{1}{2}$ livres to 5 livres the rubbio, both of the fame price; and alfo twenty-five to thirty mine of feed, if well cultivated; but if not, twelve to fifteen. The mine thirty-five pounds, and the price $4 \frac{1}{2}$ livres to 5 livres the minc. The common calculation is, that a giornata is worth 150 livres to 200 livres, which may be called iol. per Englifh acre. Their contrivance for fteeping is very fimple and effectual: there are many fquare and oblong pits with pofts in them, with open mortifes for fixing poles to keep down the hemp, which is valtly preferable to our fods and ftones.

Turin- - They fow three mine (forty-five pounds of wheat) and get thirty rubbii, at 4 livres 10 f . to 4 livres the rubbio grofs; but ready for fpinning 12 livres $10 \rho$. the finelt ; the fecond quality is 7 liveres $10 \rho$.; and the third 5 livres; befides three mine of feed, at 2 livres each. This product is above 81. the Englifh acre.

Milanase.-Mozaata. - Winter flax is here eftemed the properer for land that is not watered; they fow it in the middle of September; they have had it in this country two years only, and call it lino ravagno. It gives a coarfer thread than fpring flax, but a greater quantity, and much more feed. The price of the oil 22 . the pound, of twenty eight ounces; of the flax ready for fpinning, $25 \%$ or $26 \%$; of the thread, 4 livres and $4 \frac{1}{2}$ livres. A quartaro of feed is neceffary for a pertica, for which it returns eight times the quantity of feed, and twenty pounds of flax ready for finining, at 25 f . the pound.

> vol. IV.

$$
41
$$

Coilogne.

Codogno. - When they break up their clover lands they fow flax on one ploughing, which is worth rent 20 livres and crop 40 livres per pertica, being twenty-four pounds of twenty-eight ounces and feed three times more than fown. Much winter flax now green.

Venetian Statr. - Bergamo. Winter flax green in October.
Eccleslastical State. - Bologna. - The territory of Bologna produces from twelve to fourteen milion pounds of hemp. They manure for it highly with dung, feathers, the horns of animals, and filk-worms' refufe. The beft hemp-land is always dug; the difference bween digging and ploughing is found to be very great. If ploughed, three earths are given; when the fpade is ufed, the land is firtt ploughed and then dug. For this crop five or fix yards are left unfown under the rows of trees. The foil agrees fo weli with this plant that the crop rifes ten feet high; they gather it all at once, leaving only a few flands for feed. It is watered in ftagnant pools. A good product is from one hundred pounds to two hundred pounds of twelve ounces per tornaturt, or half an acre. The prise of the beft is from 20 livres to 27 livres the hundred pounds. At prefent 25 livres (ihe Englifh pound onefifth larger than the Bolognefe, and the livre of the Pope's dominions is ten to the zeccibin, of 9 s. 6 d .) ready for combing. When ready for fininning, the price of the belt is $12 \rho$. the pound ; and they pay for fpinning fuch $6 f$. to 15 f . the pound. Near the city I viewed a field famous for yielding hemp: no trees are planted acrofs it, which is fo common in the country in general ; a fure proof of the pernicious tendency of that fyltem; fince in very valuable fields thefe people themfelves reject the method. Little or no hemp on the hills near Bologna, but fome autumnal flax for family ufe.

## Maize.

Piedmont.-Cbentale.- Maize produces here twenty-five to thirty mine, which holds forty-feven pounds of wheat, and the price 2 livres each. It is fown on three feet ridges.

Savigliand.-Maize, in a good year, will yield three hundred fold, but in a dry one fometimes fcarcely any thing.

Turin.-Made every where the fallow, which prepares for wheat.
Cbivafco to Verceil.-A great deal of maize through all this country, and all foul with grals and weeds, even to the height of two or three feet.

Milanese.-Milan.-They fow much maize, of the fort called quarantino, from its ripening in forty days (which however it does not). They fow it the middle of July, after wheat, which they cut the firlt week of that month. If the common maize were fown at this time, they affert that it would yield no ripe feed: this is a very curious circumftance. The culture has been often recommended to England; if ever any thing were done, it muft affuredly be with this fort; but even with this I fhould put no faith in the power of an Englifh climate.
Mozzata.-They cultivate three forts:-1. Formentone maggengo, fown the beginning of May, and reaped in October. 2. Formentone agofano o formentone de ravettone, becaufe fown after taking off the rave or colefeed fur oil, the end of May, and harvefted the end of September. 3. Formentone quarantino, fown after wheat or rye, and cut the end of October.

Venice.-This plant was cultivated in the Polefine de Rovigo, towards 1560; and fpread through Lombardy the beginning of the feventeenth century *.

## Olives.

State of Venice.-On the banks of the Lago di Guarda are the only olives I have feen fince I left the country of Nice; but the number is not confiderable, and moft of them are dead or nearly fo, by the froft of laft winter, which made fuch deftruction likewife in Fance.

Tufcany.-Near Florence, at Martelli, the product of a farm of 190 fiori was as follows: in 1786, thirty barrils. In 1737, it was no more than three. in 1788, it yielded cight. In 1799, it was twenty-five but on an average ten; for which produce there are two hundred trees. They are dunged every two or three years, and dug about once in three years. They are reckoned to leffen the product of corn one fifth; this is a notion of the country, but I believe very far from accurate. The average price of oil is 5 fcudi per barril, of one hundred and lifty pounds (11.8s. 4 d .); ten barrils amount to 14 l .3 s .4 d .; and as there are about thirty-four acres in one hundred and ninety fiori, the product of oil is 8 s . to gs . per acre : a fum that yiclds no very favourable impreffion of the culture : -and, divided amonglt two hundred trees, it does not amount to is. 6 d . a tree.

The plain of Florence is all lined inte rows of thefe trees, wita vines between and upon them; in fome places, an efpalier of vines between the rows of olives; and when all are well cultivated, the olives yield the greateft produce, next the wine, and then the corn. I viewed, near Florence, fome fields, in which I found twenty olives on a ftiora of land, but this is not common : and on a very bad fony foil, though in the plain, I found that it took twenty trees of twenty-five years growth to yield a barril of oil, But in a fine foil, and with very old trees, a barril a tree has been known. Vines are fuffered here alfo to run up the trees, but they reckon it a bad cuftom. The price of oil is more than doubled in forty years. Very few olives were loft by the latt hard frof, but great numbers by that of 1709 . Landlord's half produce of fome fields $I$ viewed-oil, 10 paüls; grain, 7 ; wine, 1 ; in all 18 pauls per ftiora (2l. 5s. per Englifh acre.)

This year, 1789 , the Grand Duke, for the firt time, has given a gold, medal, of the value of 25 zecclini, for the greateft number of olives planted; no claimant to be admitted for lefs than five thoufand : in confequence of this premium above forty thoufand trees have been planted. It will be continued annually.

There is, in the Maremma fome remarkable inftances of the vaft age to which olives will attain: Sig. Zucchino, profeffor of agriculture at Florence, informed me thar, upon examining the hills in the middle of that tract, he found in the midtt of woods, and almoft over-run with rubbifh, olives of fo immenfe an age and magnitude that he conjectures them to have been planted by tile ancient Hetrufcans, before the Romans were in poffeffion of the country; there muft, of courfe, be much uncertainty in any conjectures of this kind, but a great antiquity of thefe trees is undoubted.

## Rice.

Piedmont.-Ciglione to Ferecil -.They are now threfling rice with hortes, as wheat in Languedoc ; - threfl as much in the night as in the day :-meet alfo gleaners going home loaded with it. About five miles before Verceil the rice-grounds are in great quantities: the: culture, however, of this crop feems to want explanations. Here is, for inftance, a. wit field. which was under rice laft year, now left to weeds, with hogs feeding. - Why set fown with clover among or afte: the rice? They never plougin
but once for rice. The peafants are unhealthy from the culture, yet their pay not more than 24 f . to $30 \%$ a day. The foil of the rice-grounds here is that of a fine loamy turn'p fand; there is a mound raifed around them, for the convenience of flooding at will.

Vercelli.-Rice is here reckoned the mof profitable of all the cultivation of Piedmont; for it yields a greater value than wheat, and at a lefs expence. It demands only one ploughing, inftead of feveral. Seed only four mine, at 1 livre. Watering at 2 livres 5 . Cutting, the end of July, $10 \%$. The product is fixty mine rough, or twenty one white; the latter at 4 livres, or 84 lives ; and four mine of a fort of bran, at 15 . or 3 livres, in all 87 livres (fomething under 5 l. an acre). It is fown three years in fucceffion, and the fourth a fallow, during which the land is dunged. The price of thefe lands 500 livres or 600 livres the giornata. As rice can be fown only on land that admits watering at pleafure, I do not fully comprehend this account. Why, for inflance, is not the land laid down for meadow, which cvidently pays much better, and fells at a higher price? I fuppofe rice is ready money on demand, and meadows muft be converted to cafh circuitounly. Good wheat land fells at 800 livres.

To Novara.- Paffing the Sefia, which exhibits a bed of five times as much gravel as water, in three or four miles the quantity of rice is confiderable: the ftubble is green, and in wet mud; the fheaves thin. It extends on both fides the road for fome diftance; the whole inclofed by ditches, and rows of willow poplar pollards, as bad to the eye as it can be to the health. One or two fields are not yet cut ; it looks like a good crop of barley, being bearded. After Novara, fee no more of it.

Milanese.-Milan to Pavia.-The rice grounds receive but one ploughing, which is given in the middle of March, and the feeds fown at the end of the fane month, in water to the feedfman's knees, which is left on the ground till the beginning of June, when the crop is weeded by hand, by women half naked, with their petticoats tucked to their wailts wading in the water ; and they make fo droli a figure, that parties in pleafantry, at that feafon, view the rice grounds. When the weeding is finifhed, the water is drawn off for eight days; and it is again drawn off when the ear begins to form, till formed; after which it is let in again till the rice is nearly ripe, which is about the end of Auguft, when it is reaped, or in the beginning of September; and by the end of that month, all is finifhed. Quantity of fee.l, the eighth of a moggio per pertica, produce twenty-five to thirty moggio rough, or eleven and a half or twelve white. Price $37 \frac{1}{\frac{1}{2}}$ livres the mogrio, ( 17 l .8 s . per Englifh acre, ) which produce is fo large, that this minute I fufpect the higheft crop gained, and not an average one. The moggio of rice weighs one hundred and fixty pounds of twenty-eight ounces. The flraw is of ufe only for littering cows; and the chaff, like that of all other grain, from a notion of its being unwholefome, is thrown on to the dunghill. They fow rice three years in fuccefion, and then a courfe of fomething elfe. See Courfes of Crops. The rice is rendered merchantable by being pounded in a mill by flampers, turned by a water-wheel.

In the great road there is a flone, at five miles from Milan, nearer than which it is prohibited to fow rice.
State of Venicf.-Figora.-Of the produce of the rice-grounds in the Veronefe, they reckon one-third for expences, one-third for water, and one-third profit.

Parma.- Count Schaffienati lias fown rice, at Vicomero, cighteen years in fucceffion on, the fame land, wilhour any refl or manure. Sow on fifty four biolcchi ninety ftaji ; and the produce eighteen for one. He digs the ground, as it is too marthy to plough it well; this cofts 3000 livres (each $2 \frac{1}{d}$.) The fraw fells at 80 livers the load, of eighty $p e f t$, of twenty-five pounds (threc-fourths of a pound Englifh). Oxen alfo cat it. Rice is reckoncd

## Vines.

Pienmont.-Antibes to Nice.-A fingular cultivation of this plant furrounting very fmall pieces from fix to twenty perches, trained up willow trees; and the fcraps of land within them cultivated. What a fun muft fhine in a country where thick inclofures are counted by perches and not by acres.

Cbentale to Racconis. - In rows at twelve to twenty feet, and appear like thofe of hops in Kent, fupported on willow poles, twelve feet high, fome of which take root, but are afterwards pulled up.

Chivafco.-Vines faftened from mulberry to mulberiry, but not running up thefe trees, only up willows, \&c. that are between them.

Milanese.-Mozzata.-Half this country is lined with vines, and it is reckoned that they will damage to the amount of one tenth of the produce: each pertica of vines, in a common year, will give fifty pounds of grapes, worth 6 livres the one hundred pounds of twenty eight ounces, hail allowed for; and of this half is the peafant's Thare for the expence of culture. At Leinate I viewed fome wine-preffes, which are enormous machines; the beam of one is forty-five feet long and four feet fquare, and at the end where the fcrew is, a ftone of vaft weight, for which there is a paved hole in the pavement, that it may keep fufpended; the cuves, calks, and all the apparatus great: the quantity of vines one thouland pertica. The feeds of the prefled grapes are kept till dry, and then prefled for oil ; the feed of the grapes that yielded feventy brenta of wine will give ten pounds of oil : it is ufed for lamps. The poor people who bring their grapes to be prefled pay one-twelfth of the wine. Price at prefent 6 livres the brenta, but only 3 livres for what is laft preffed. The firft flow is trod out by men's feet. Common price so livres or 12 livres the brenta.

Venetian State.-Bergamu.-From entering the Venetian territory, near Vaprio, the country is almoft all planted in lines of vines, and the fpaces between tilled for corn.
To Brefcia.-This country, inclofed with hedges, befides which it is lined in ftripes of vines that are trained to low afh and maple trees, with mulberries at the end of every row; but the vines are not trained up thefe trees, though faftened to their trunks.
Visonza.-The country, for thirty-two miles from Verona to Vicenza, except the watered parts, which are not a tenth of the whole, is lined into rows of pollards, each with three or four fpreading branches, and at the foot of each two vines, many of them very old, with ftems as thick as the calf of a man's leg ; and many of the elms, uraples, \&c. are alfo old. They ftand about a rod afunder, and the rows from twenty five to thirty yards, and around the whole mulberries. Where the vintage is not finifhed, the vines hang in fefioons from tree to tree, garnifhed with an aftonifhing quantity of bunches of grapes.
Vines, near Vicenza, produce two mafati, each of two hundred and forty bottles, per campo; the price 16 livres the maftato ; the campo here is larger than at Verona, amounting to near an Englifh acre; this is about 17s. an acre, a produce very eafily loft in the damage done to the corn.

Padua.-The fame hulbandry of pollards and vines continues hither. . They reckon that vines pay better than mulberries; but in the diftricts of Verona and Vicenza mulberries are more advantageous than vines. 'This does not correfpond with foil, for that of Padua is deeper and richer, for the moft part, than the other, and thereforc lefs adapted to vines. In converfation with Abbate Fortis, on the wine of the Paduan, \&c.
being fo bad, he fays, it is owing merely to bad management in making. They tread the grapes with their feet; and will keep it fermenting there even fo long as fifteen days, adding every day more and more, till the ftrength is exhaufted, and the wine fpoiled; no cleanlinefs in any part of the operation, nor the leaft attention in the gathering, or in the chuice of the grapes. He further added, thai Śig. Modena, a Vicentino cultivator at Vancimuglio acjoining the rice-grounds, and confequently as little adapted as poffible to vineyards, provided the foii and trees were the caufe of bad wines, makes that which is excellent, and which fell for fo high as $30 \%$. French per bottle: that Sig. Marzari, and Sig. il Conte di Porto, in the high Vicentino, with many others, as well as he himfelf, Abbate Fortis, has done the fame with raifins from vines that run up the higheft trees, fuch wine as fells from $20 \mathcal{K}, 35 \int$. French the bottle: and that forne of thefe wines are fo good, that the Venetian ambafladors, at different courts, ufe them intead of Madeira, \&c. ; and the wines of Friuli as thofe of liungary, which they refemble ; yet thefe vines are all on trees. He alfo obferved, that it has been found, by experiment, that vines in thefe rich lands, trained near the ground, as in France, have yielded raifins and wine good for nothing; that the grapes cven rot; that the land is too rich for the vines to have all the nourifhment, unrivalied by the root of the trees. It is very much to be queltioned, if the experiments here alluded to have been made with due attention: if the land is too rich for vines, plant them upon foils that are proper; and keep thefe low diftricts for grafs and corn; but that vines, bidden from the fun amongt the branches of trees, can ripen properly to give a well-concocted juice, appears very dubious; and the fact of all the wine, commonly met with in this country, being bad, feems to confirm the reafonirs.

Ecclesiastical State.-Bologna.-All this country, where I have viewed it, is lined into rows of trees for vines, tell ur twelve yards afunder on the mountain, but more in the plain. But Sig. Bignami has his vincyard planted with colalats (poles), in the French way, about four or five feet fquare, and he fiuds that thele always give better wine than the vines trained to trees, and the land by tornatura gives a great deal more wine, though each vine feparately on trees gives more than each in this method. The object in this inflance was the goodnefs of wine ; Sig. Bignami thinks the common method moft profitable. The vines are now (November) trained and pruned, and turned down five or fix feet and tied; if allowed to mount, they yiedd much fewer grapes. Vines on the mountaiss yield thrice the value of the wheat, and the double of all other productions, wheat included.
Tuscany.-Bologna to Florence.-Vines in this route are planted differently fromany I have jet feen. Some are in efpaliers, drawn thinly acrofs the fields; others are traned to fmad polls, through which at top are two or three fieks fixed to hold them up; others are in fquares of five or fix feet, and fix or feven high, without fuch pofs; but all in the arable fields are, gcnerally fpeaking, in lines.

Florence-I bere met with a cafe ablilutely in point to prove how mifchievous trees are to corn, even in this hot climate. A fich under olives, whicl: piedded in corn fix and a hall for one fown, was grubbed, after which the common produce was fourteen for one. Now, as the olive is by no means one of the worlt trees for corn, this thews the great lots that accrues from the practiecs I have noted throughour Lombardy. Yer in common converfation here as elf where, they tell you the injury is finall, except from walnuts, which do more mifchief than any other.
Monena. - It appears to be a fingular circumilance, that in the parts of this territory, near the hills, corn pays better than wine, but in the phin, wine better than corn: I fulpect that dome milmanagement occalions this apparent contradiction. lirom Modena

The ox fight, by
to Reggio the country is planted in rows, as in the Venetian State, \&c. and the trees that fupport the vines being large, the whole has the appearance of a toreft.
Parma.-From Reggio to Parma, the fame fyitem holds, but executed in an inferior manner. And from Parma to Vicomero, the trees that fupport the vines are pollards, with old heads, like many we have in England, contrary to the practice of the Venetian State, where they are kept young. To Firenzuolo, the vines are all buried in like manner; fome here are planted for props, and the poles which ferve as fuch are let in rows: in both methods the fhoots are equally buried. A fcattering of golden willow in the rows, I fuppofe for attaching the vines to the props. From Borgo St. Domino to Firenzuola, there is a decline both of vines and wood; the country is not as hitherto, regularly lined, and many large fields are without any ; this is the more to be remarket?, as here begin fo ip inequalities of the country, the gentle ramifications of the Appenines. To Caftel Gioruane, moft of the fields have no vines, only a feattering; fhoots buried as before, but the inclofures have many pollards in the hedges, like the woodlands of Suffolk. From Piacenza, after paffing the Trebbia, the rows of vines are thirty to forty yards afunder, with heaps of props ten feet long, fet like hop-poles; very few or no vines trained to trees.

Piedmont.-Pavefe*.-The country is all the way hill and dale, the flat of Lombardy finifhing with the Dutchy of Piacenza. It is about half iaclofed, and half with rows of vines. There are alfo vineyards planted in a new method; fingle row of vines, with a double row of poles, with others flat, fo as to occupy four ridges and then four to ten of corn. Some vine fhoots buried for a few miles, but afterwards none. Near ${ }^{-}$ Stradella the props appear like a wood of poles.

Savoy.-The vineyards of Montmelian yicld one and a half tonneau per journal, which fell at $4 \frac{1}{2}$ louis the tonneau: all, not in the hands of peafant proprictors, is at half produce.

## Sect. IV.-Of Implements and Tillagc.

Coni.-The ploughs have a fingle handle, twelve or thirteen feet long, which throws the ploughman to fuch a diftance behind, that his goad is fixed in a long light pole. The oxen are yoked in the fame manner as ours, but the bow is of iron under the neck, and the preffure is reccived by two bits of wood. Some ploughs drawn by a yoke, others by two yokes of oxen.

Chentalc. - The names which are given to the parts of a plough here are,--long handle of fourteen feet, fiva; beau, bura; head, cannonlia; coulter rivetted to the fhare, cultor ; flare, maffa; ground-reft, on which the fhare fleathes, feven feet long, dentale ; carth-board, five feet long, oralia.

The Count te llonaventa, in explaining to me their tillage, fhewed the criterion, as old as Columella, of good ploughing, by ithrufting his cane acrofs the ridges, to fee if relt-baulked. They plough monly on the three feet ridge, forming and reverfing at one bout, i. c. two furrows, the work ftrait. Ufe no reins, and have no driver, though the ploughman is above twenty feet from the oxen. Two fmall beafts cut a good furrow on the top of the old ridge, feven inches deep, and thefe ploughs, long as they are in the ground, certainly do not draw heavily.

The oxen, whether at plough or in the waggons, do not draw, as I conceived at firft fight, by the fhoulder, but in a method I never faw before, nor read of; they draw by

[^119]prefing the point of the withers againft the yoke, and not at all by the bows; and in examining them, the mafter and man contended that the frength of an ox lies there, and not in his fhoulders, nor in his head, or roots of the horns. It appears a ftrange practice, but it is yet ftranger, that yoke a beaft how you will, he does his work, and apparently without diftrefs.

Chentalc to Racconis.-They have here a moft fingular cuftom, which is that of hoovelling all the moveable foil of a field into heaps of a large load, earth, flubble, and weeds; they fay, per ingraflare la torra.

To Turin.- The lands fown with wheat, on three fect ridges, is worked fine with a machine of wood, at the end of a handle, formed nearly like a hoe. Wherever one fees thefe operofe niceties, we may conclude the farms are very finall.

Turin.- Plough with a pair of oxen, no reins, no driver; go to work at five in the morning, and hold it till night, except one hour and a half at dinner, that is twelve hours work, and do a giornata a day, fomething under an acre, one bout to a threc feet ridge, reverfing.
Vercelli.-Price of a ploughing, $3 \frac{1}{2}$ livres per giornata, this is about 3 s. 4 d . per Englifh acre.

Milanese. - Milan to Pavia.-Hire of a ploughman and pair of oxen, 4 livres a day, but if no food for the oxen, 6 livres. The ploughs here vary from thofe of Piedmont. The handles are not above half as long, and are called fiva; the beam, buretto; the coulter, coltura; the thare; mafis ; the earth-board, orechio ; the land-board, orcchini. There is a molt grofs and abfurd error in all the ploughs I faw, which is the pofition of the coulter, eighteen or twenty degrees too much to the land; every one who is acquainted with the right fructure of a plough, knows that it fhould juft clear the fhare; this great variation from the right line, muft add greatly to the draft; and in difficuit land fatigue the cattle.

Mozatta.-- A light poor plough, the fhare with a double fin, but fo narrow as to cut only four inches of the furrow, the heei of the plough is nine or ten inches wide, the work it performs is mere fcratching, and the land they were fowing with wheat, a bed of triticum repens and agro/tis folonifcra. They have here a great opinion of digging; and a proverb which fays, La vanga ba la punta d'oro. -The fpade has the point of gold.

Codogno.-Here as near Milan, the coulters are many degrecs out of the line of the flare, and the fhares not roore than four inches wide. Shocking!

Codegro to Crema. - The harrows in this country have handles to them of wood; I an amazed that this practice is not univerfal; yet I never faw it before, except on my own farm.

Venetian State.-Birgamo.-In pafing from Vaprio to this place, they are ploughing with a pair of oxen a breaft, and two horfes before them in a line; wheelploughs, thare five iuches wide, and wi.h a double fin. Near the town of Bergamo, I law them ploughing a maize flubble for wheat, as full of grafs almoft as a meadow: a lad drives, and another ftout one aitends to clear the coulter from grafs, \&c. the plough low on the carriage, with wheels, the breaft all iron, and not ill formed, the fin of the flare double, and about cight inches wide, the coulter nearly in the fame direction as the fhare, but clearing four inches to the land fide, two thort handles. The furrow full nine inches deep, but crooked, irregular, and bad work. Notwithftanding this depti, they are great friends to the fipade. From four to fix for one, are common crops with the plough, bat twelve to fourten for one are gained by the fpade. 'There mult be an inaccuracy in this, the difference camot be owing merely to digging. We may be certain that the hulbandry in other refpects mult be much better.

Vicen

Nice.in Flande of revenu gardens in away regu gularly to trees, the, Atrongly, invigoratin

Milan fpread on

State frall and remarks th dows; fow with fand, plants are 1 fand two hi and on mid is fuch, tha rol. IV

Vicenia.-They here plough with four oxen in hernefs, many of them are of an iren. grey colour, with upright thick ugly horns. Some however are fine large beafts. Their plough is a frange tool; it is two feet four inches of Vicciza wide (their foot is above one and a half Englifi) : the flare has a double fin of a foot wide, confequently cuts half a foot in the furrow of more than two; has wheels, but no coulter. The landboard is called fondelo; the fhare, vomero; the earth-board, or breaft, arjedeman; two fhort handles, the left finiftrale; the right brancole'; the beam, pertica.
Ecclesiastical State.-Bologna.-The coulters of the ploughs here ftand fixteen degrees from the right line, an incredible blunder, had I not before met with it in the Milanefe. The beam, pertica; the handles, fiva; the mould-board, affa; the flare, gomicra; the ground-reft, nervo del focco; the coulter, coutre.

Tuscany.-Florcnce.-Here the beam is called fanga, and bura; the fingle handle, ftagola; the body of the plough, chicapo di aratro; the flare, riaugbeggiola. The body is hewn out of one large piece of wood, the fin double, and feven or eight inches wide. I fee no ploughing but on three feet ridge-work, reverfing. They are now fowing wheat among tares, about fix inches high, and plough both in together at one furrow, fplitting the ridges with a double-breaft plough. Oxen are ufed that draw by the nape of the neck; then women with a kind of half pick, called marona, work the ridge fine. No dreffing of the feed againft fmut, \&c.

Parma.-The plough here has wheels, a fingle-breaft that turns to the right, and pretty well, a double finned fhare, and the coulterffanding three inches to the left of the right line; drawn by two oxen, and two cows, with a driver.

Savoy.-The oxen in the vale of Chamberry, draw not only by the horns, the yokes bound to them in the common way by leathers, but they have a double bar, one againft the fhoulders, as if the beaft might be able to draw by both at pleafure.

## Manures.

Nice.-There is here a greater attention paid to faving and ufing night foil, than even in Flanders itfelf. There is not a neceffary in the town which is not made an object of revenue, and referved or granted by leafe. In all the paffages between the walls of gardens in the environs, are neceffarics made for paffengers. The contents are carried away regularly in barrels, on affes and mules, and being mixed with water, is given regularly to the vegetables of the gardens. The laft winter having danaged miny orange trees, they pruned off the damaged branches, and to encourage them to fhoot again Arougly, the roots are dug around, and at the foot of each tree a good mefs of this invigorating manure is buricd.

Minanese.-Milan. - Night foil is greatly valued, it is bought at a good price, and fpread on fowing wheat.
State or Venicr.-Vicenza.-Sig. Giacomello has tried gypfum with fuccefs, broken fmall and calcined in an oven, alfo in a lime kiln, pulverifes it finely and fifts it. He remarks that th:s is the chief ule of calcination. Ufes it for clover, lucern, and meadows; fows it as a top drefling on thofe plants, juft as they rife; never burics it; mixes with fand, in order to fpread equally; beft to fow it when the land is dry, never when the plants are high and wet; quantity, one hundred and forty pounds groffo, upon one thoufand two hundred and fifty tavoli of Trevifo. If the land is bad, three hundred pounds, and on middting, two hundred founds. The effect on perennial clover, upon good land, is fuch, that any greater crops would rot on the ground. The fame quantity of meadow
vol. 1 V .
4 K
that gives without gypfum, a carro of hay, will, with that manure, fpread about the inth of November, produce two carri the year following; three carri the year after that; and on fome meadows even to four carri. On old poor meadows, full of hard and bad graffes, this mamure coes not take effect fo foon, and requires a larger quantity of gypfum. (Modi di aumentarc i Bcfiami, 1777, p. 9.)

Sig. Pieropan informed me that this manure has been ufed here for eight years with much fuccefs, efpecially on all dry lands, but is good for nothing on wet ones; it is fuppofed to afi by attracting moifture; four hundred pounds of twelve ounces are fpread or. campo ; belt for clover, wheat, or natural grafs. It is faid to force land fo much, thest it demands more dung than if no gypfum had been fpread.

Pa:ma to Piaccnza.-The dunghills in this country are neatly fquared heaps.

## Cuar. XXXIV.-Of the Encouragement and Depreffion of Agriculture.

IN every country through which an inquifitive man may travel, there can be no object of his inquiries more important than thefe-How far is government, and all the circumfances any way dependent on government, fapourable or unfavourable to the culture of the earth? In truth, this queltion involves the whole circle of the political fcience. In fo immenfe a range, it is in the power of an individual to give but a few fketches, which may afterwards, by fome mafterly hands, be melted into one harmonious piece. All the writings on political œeconony which I have hitherto read, are filled too much with reafonings, yet experiment ought to be the only foundation. The facts which 1 have collected under this head, may be thus arranged : - 1. Government. - 2. Tax: ation. - 3. Tythe. - 4. Commerce. - 5 Population. - 6. Prohibitions. - 7. Prices of commodities.

## Sect. I.-Of Government.

It is a vulgar error of no inconfiderable magnitude, to imagine, as many writers have done, that all arbitrary governments are the fame. Whoever travels into countries unjer various forms of dominion, will find from innumerable circumftances, that ftrong ciatinctions are to be made. The mildnefs of that of France can never be miftaken, which was $f_{2}$ tempered by what was the manners of the people as to be free in comparifon wih fome others. Among the Italian ftates the difference will be found to be confidcrable.

The dominion of the houfe of Auftria has been by fome confidered as bard, harh, and unfceling, till the admirable Leopold retrieved, by the wifdom and humanity of his government in Tufcany, the character of his Houfe. By the conftitution of Milan, no new tax could be affefled or levied without the confent of the States, but Mary Therefin, about the year 1755 , abolifhed the States themfelves, which never were reftored till Leopold came to the throne. It may eafily be conceived, that iuch a fyltem of defpotifin was followed by meafures that partook ${ }^{\circ}$ its fpirit; the general farms, by which I mean the farming of the taxes, which had from the beginaing of the prefent century been grievous to the people, became doubly fo about the year 1753, when new ones were celablifhet. The adminiftration of thefe farms was cruel, or rather infamous; and the ruin brought on numbers for the fmalleft infraction of the regulations, fpread a horror againtt the goverument through every corner of the Milanefe, and'tended ftrongly to occalion a declenfion in every fource of mationsl profperity. 'The abolition of thefe faims
west th the fat prefen years that cc Senate
west the work of the Emperor Joleph, who heard fuch a reiteration of complaints againt the farmers, whofe great wealth * rendered them doubly odious, that he made fuch reprefentations to his mother as were effectual, and they were abolifhed about eighteen years ago. The prefent Emperor no fooner came to the throne, than he reeftablified that conilitution of which his mother had deprived the Milanefe; the States and the Senate were reftored, and alfo the right of the States to appoint what is called an orator to Vienna, in fact, an ambaflador paid by themfelves, to lay their reprefentations before the court without the intervention of a governor, a right which carnot be deemed unimportant. So that at prefent the government of Milan, though by no means fuch as can meet our ideas of freedom, is yet a kind of limited monarchy ; for affuredly that government which does not poffefs the power of taxation, muft be efteemed fuch.

Count Firmian, while prime minifter for the Milanefe, was the author of a law, which, if it could be adopted in England, would be worth an hundred millions to us. It obliges all communities, \&c, that poffefs wafte or uncultivated lands, to fell them to any one that offers a price, in order to cultivate them, but they have the neceffary liberty of publifh. ing the price offered, and receiving propofals of a better; a fair auction takes place, and the lands become cultivated. Suct, poffeffors of waftes are even obliged to let them at an annual rent for ever by the fame procefs, if any offer of rent is made to them, be it as low as poffible. And the effect of this excellent law has been the cultivation of many waftes, but not all; for on returning from Mozzata to Milan, I paffed a very extenfive one, highly capable of profitable cultivation.

Venice. - The celebrated government of this republic, is certainly the moft refpectable that exifts in the world, in pcint of duration, fince it has lafted without any material change, and without its capital being attacked for 1300 years, while all the reft of Europe and of Afia has been fubject to innumerable revolutions, and the bloodieft wars and maffacres, even in the very feat of empire. That duration is one of the firt objects of a government, can never admit a doubt, fince all other nerit, however it may approach human perfection, is nothing without this. A well organized ariftocracy, in which the greateft mafs of the wifdom of the communiy fhall be found in a fenate, feems from the vaft and important experinent of this celebrated republic, to be effentially neceffary to fecure the duration of any government. But the duration of an evil becomes a mifchief inftead of an advantage; and that tyranny which is fo politicaliy organized as to promife an immenfe duration, is but the more juftly to be aiominated. The knowledge which will refult from long experience, may probably tcach manisind the right compofition of is mingled form, in which the arifocratic portion will give duration and firmnefs; the democracy, freedom; and the conformation of executive power, energy and execution. Perhaps the Britih government approaches the neareft to fuch a defcription.

The reputation of the Venetian government is now its only fupport, a reputation which it does not at prefent merit in the fimalleft degree: but as this idea is directly contrary to the accounts given by many travellers, I feel it neceflary to premife, that I thould think it merely trifling with the reader to travel to Venice in order to write differtations in my own name, on the government of that republic; I do no more than hold the pen tn report the opinions of jealians, on whofe judgment I have every reafon to rely, and as exaggerated panegyrics have been publifhed of the government of this State, it is fair to hear what may be urged on the other fide of the queftion.

[^120]For twenty years paft, there has been in the republic little more than a multiplication of abufes, fo that almoft every circumftance which has been condemned in the arbitrary governments of Europe, is now to be found in that of Venice. And as an inftance of the principles on which they govern their provinces, that of Iftria was quoted. 1. To preferve the woods (which belong to the Prince), they prevent the people from tu:ning any cattle into them; and if any man cut a tree, he is infaliibly fent to the gallics, which has driven numbers out of that part of the country where the woods are fituated.-2.'There are great opportunities of making falt, and the pans might be numerous, but it is a monopoly held by the State; they purchafe a certain quantity, at $10 \%$. French, per quintal, and if more than the fpecified quantity be made, it is lodged in their magazines. on credit, and it may be two, three, or four years before the maker of it be paid.3. Oil is a monopoly of the city of Venice; none can be fold but through that city, by which tranfit, an opportunity is taken to levy two ducats (each 4 livres of France) per barrel of one hundred pounds, and five nore entrée into Venice. - 4. The coaft abounds. remarkably with fifh, which are taken in almott any quantity ; falt is on the fpot, yet noufe can be made of it but by contraband, except for Venice fingly. Thus a great trade in barrelled fifh is foregone, in order to make a whole province beafts of burthen to a fingle-city.-5. The heavy tax of a fajo of wheat, one hundred and thirty pounds, is laid on: each head of a family, payable to the Venetian bailiff.

The practical refult of fuch principles of government, confirms whatever condemnation theory could pronounce. Every part of the province, except a diftrict that is more favoured than the reft in foil and climate, is depopulated; and to much are the woods preferred to the people, that parts which once abounded with men, are become deferts;and the imall population remaining in other parts, is every day diminilhing. Dalmatia is in a yet worfe flate; for the greater part is a real defert: in 1781 and 1782 , no lefs. than twelve thoufand familics emigrated from the province. As I have not travelled in thefe provinces, I do no more than report the account given by well-informed Italians, though not refiding in the territories of the republic. Before the government of this ftern: ariftocracy is made the fubject of exaggerated praife, let facts counter to thefe be made, the foundation. - But farther,

In the iminediate operations of their government at home, the fame weaknefs is found. Their poverty has increafed with their revenue; they have raifed the leafes of the tarmers. general (for that odious collection is the mode they purfue) confiderably; and near iwenty years ago they feizod many of the poffieffions of the monks-that act for which the National Affembly of France has been condemned; but which, in the hands of nu*. merous other governments, has cither paffed without animadverfion, or has been commended. They did the fame with the eftates of fome of the hofpitals, but though fuch exertions have raifed their revenue to $6,100,000$ ducats, ( $1,054,0001$.) yet they have found their aftairs in fuch a fituation, from bad management, that they have been obliged. to fell the offices, which were in better times granted to merit; and committer a fort of. bankruptcy, by reducing the intereft of their olic debts from 5 to 3 per cent. Their credit is at fo low an ebb, that no longer ago than! It June, they opened a fubfeription to fund 700,500 ducats, and notwithitanding every art, could procure no more than about 300,000 . Intead of their famous chain, which marked the wildom of their ceconons, their treafury is without a fol: and to thew the auprehenfions they have of provinces under their dominion throwing off their yoke, if they are at a fmall diltance from the fert of governan nt, the State makes a diftinction in the political treatment of the Bergamafice and Brefc an territories, from thofe nearer to Venice, in relpect to privileges, punif m nts, taxes, \&c. No tivourable feature of their government; and which thews that they think the people made for their city.

Perhaps, in the fyttem of their finances, there is no circumflance that fhews a decline of the real principles of their government, more thas that of putting contraventions of the tobacce farm under the controul of the State inquifitors; which mutt have been done fince M. de la Lande's fecond edition, as he mentions exprefly their having nothing to do with the finances*. A conduct utterly ridiculous, in a flate that once conducted itfelf with fo much dignity.
Evers in the delicate article of imparting the privileges of the ariftocracy, to the nobility of Terra Firma, by whon they are in general detefted, they have exhibited no douktful fymptoms of weaknefs and want of policy. Reputation has been for many. years the great fupport of their govern.nent; to manifeft therefore fuch a want of policy, as trikes the moft careleifs eye, is to fuffer in the tendereft point. In 1774, they offered gratis, a feat in the configlio maggiort, to forty families, their fubjects, who poffeffed 1200 l . a year in land; provided there were four degrees of nobility, on the fide of hoth hufband and wife. Great numbers of families were eligible, but not ten in the whole would agree to the propofal. To offer a hare in the legifature of fo celebrated a republic, which in paft periods would have been fought for with fingular avidity, and to fuffer the mortification of a refufal, was exhibiting a fign of internal weaknefs, and of want of judgment, adapted to reduce the reputation of their policy to nothing. The motives for the refufal are obvious: thefe families muft of courfe remove to Venice; that is, to go from a city where they were old and refpected, to another where they would be new and defpifed. Their eflates alfo would not only fuffer from their ablence, but would be fubject to new entails, and held by other tenures; no mortgage of them is allowable; and they are fubject to peculiar laws of inheritance. In addition to thefe difadvantages, they are cut off from ferving foreign princes; whereas the nobility of Terra Firma engage in fuch fervices. The Emperor's ambaffador at Turin, is a fubject of Venice ; and one of the Pellegrini family, a field marfhal in his army. Nor did the noblemen of Terra Firiria refufe the favour for thefe reafons alone; they dreaded the power which the State exerts over the noble Venetians, in liending them upon expenfive embaflies, in which they mult fpend the whole of their income, and, if that be not fufficient, contract debts to fupport themfelves; for thefereafons, and many others mentioned to me, which I did not equally underltand, the government might have known before they made the offer, that it would fubject them to the difgrace of a refufal. Long before the period in queftion, conf able additions had been made to nobles of Venice, from the Terra Firma, but thele honours were paid for ; the price 17,000l. fterling ; 70001. in cafh, and 10,000 . lent to the State in perpetuity.

It is a curious circumftance, which marks undeceivingly the general features of the Venetian government, that about forty years ago, as well as at other periods, there were negociations between the Court of Vienna and the Venetians, relative to an exchange of territory; the diftrict of Crema was to have been given by Venice, for a part of the Ghiara d'Adda; the rumour of which filled the people of the latter with the greateft apprehenfions; they felt even a terror, at the idea of being transferred to the government of Venice; knowing, certainly, from their vicinity, that the change would be for the worfe. This afcertains the comparative merit of two governments, that one is lefs bad than the otner.

Upon the whole it may be remarked, that the wifdom of the Venetian government. flows entirely from its interior organization, which is admirably framed; but abufes, in fpite of this, have multiplied fo much, that the firlt real fhock that happens will overturn

[^121]it. The fall of a government, however, which has fubfifted with great reputation fo much longer than any other exifting at prefent, ought to be efteemed a great political lofs, fince the eftablifhment of new fyftems is not at prefent wanted for the benefit of mankind, fo much as the improvement of old ones; and if by any amelioration of the Venetian arifocracy, the benefit of the common people could be better fecured, it might yet laft in enlightened ages, as well as through thofe of darknefs and ignorance.

Bologna.-The government of the church, though in fo many refpects confidered as one of the wort in Europe, ought not to be condemned too generally, for fome difcrimination fhould be ufed. Thus in point of taxation, there are few countries that have lefs to complain of than this, as I have fhewn in the proper place; and another circumftance was mentioned to me here, which proves that it is not the Pope's fault that it is not better-His Holinefs was ready to abolifh all fètes, confining them to Sunday; and made the offer to the Senate of Bologna, if they would apply to him for the purpofe; great debates enfued in that body, and it was determined not to make the application.
Tuscany.-The government of the Grand Duke is, as every one knows, abfolute; it admits therefore of no other difcrimination, than what refults from the perfonal character of the Prince. The circuinftances I noted, during my refidence at Florence, will hew that few fovereigns have deferved better of their fubjectsthan Leopold : the details, however, which I hall enter into, will be very light, not that the fubject wants importance, but becaufe many other books contain large accounts of this period; and efpecially the collection of his * laws, of which I wifh to fee a complete Englifh tranlation, for the ufe of our legiflators. The encouragements which this wife and benevolent fovereign has given to his fubjects, are of various defcriptions; to clafs them with any degree of regularity, would be to abridge that collection; a few, that bear more or lefs upon agriculture, I hall mention.

1. He has abolifhed tythes, which will be explained more at large, under the proper head.
II. He has eftablithed an abfolute freedom in the trade of corn.
III. He has for many years contributed one-fourth part of the expence of buildings, in the Val de Nievole, and the lower province of Siena.
IV. He has this year made the culture of tobacco free, and engaged to buy all that is raifed at $16 \%$ the pound.
V. He has extinguithed the national debt of Tufcany, which had exifted from the time of the repu' iic; for it deferves noting (in order for fome future hiftorian $\dagger$ of the modern ages, to mark the fact that the richelt people run in debt the moft) that the republic of Florence was one of the moft commercial and rich in Europe. Two evils attended this debt, which the Grand Duke bent his operations to remove; firf, three or four millions of it were due to foreigners, particularly to the Geonefe, which carried much money out of Tufcany; and, fecondly, there were diftinct bureaus of collection and payment, for tranfacting the bufinefs of thefe debts. To remedy this double mif. chief, he firf bought up all that part of the debt due to ftrangers, which he effected by

[^122]the operation of a feady and wife ceconomy; he then called on the Tufcan creditors to liquidate their debts, in the ratio of 3 per cent.; thofe who had money did it; and to thofe who had none, he lent the neceflary fums : by this method, the diftinct receipt and payment were abolifhed; the accounts were melted into the land-tax; and a number of revenue officers, \&c. were reformed: nine or ten millions of crowns were thus extinguifhed.
VI. He has abolifhed all rights of commonage throughout his domirions, and given the powers of an univerfal inclofure.
VII. He has fold a confiderable portion of the eftates belonging to the fovereign, which has occafioned a great increafe of cultivation, and the fettlement in his dominions of many rich foreigners *.
VIII. In levying taxes, he has abolifhed all the diftinctions of noble, ignoble, and ecclefiaftical tenures; and all exemptions are fet afide.
IX. He has built a magnificent lazaretto at Leghorn, and fpent three millions on roads ; but it would be entering too much into detail to fpecify his works of this fort; they are numerous.

The effects of fuch an enlightened fytem of government have been great; general sfertions will not defcribe them fo fatisfactorily to a reader as particularinftances. Sig. Paoletti, who has been curé of the parifh of Villamagna forty-three years, affured me, that the forty farms, of which it confifts, have rifen in their value full 2000 /cudi each in that time, which is ahout cent per cent. of their former value; this great improvement has been chiefly wrought of late years, and efpecially in the laft ten. It highly merits notice, that the countries in Europe, whofe whole attention has been given exclufively to their commerce and manufactures, and particularly England, where the commercial fyftem has been more relied on than in any other country, have experienced nothing equal to this cafe of Tufcany, the government of which has proceeded on a principle directly contrary, and given its encouragement immediately to agriculture, and circuitouly to manufactures. In the tours I made through England, twenty years ago, I found land felling on an average at thirty-two and a half years purchafe; it fells at prefent at no more than twenty-eight. While Tufcany therefore has been adding immenfely to the money value of her foil, without trade and without manufactures;' (comparatively fpcaking to thofe of England,) we have in the fame period, with an immenfe increafe of trade, been lofing in our land. This fact, which is unqueftionably true, is a curious circumftance for political analyfis: it proves fomething wrong in our fyftem. Popula. tion in Villamagna has augmented abouf a feventh, in the fame period.

I fhall not quit this article, without giving the preference decidedly to Leopold, Grand Duke of Tufcany, as the wifeft of the princes, whofe power admits a comparifon in tho age in which he lives: thofe are inean fpirits, or fomething worfe, that will hefitate a moment between him and Frederic of Pruffia : a fovercign no more to be compared to him, than the deftroyers and tyrants of mankind are to be placed in competition withtheir greateft bencfactors $\dagger$.

[^123]Modena.-In an age in which the fovereigns of Europe are incumbered, and forne of them ruined by debts, a contrary conduct deferves confiderable attention. The Duke of Modena; for ten years paft, has practifed a very wife oconomy : he is fuppofed, on good authority, to have faved about a million of zeccbins, $(475,000 \mathrm{l}$.) and he continues to fave in the fame proportion. This is a very fingular circumftance, and the effect of it is obfervable; for I was affured at Modena, that this treafure was much greater than the whole circulating currency of the Dutchy; and they fpoke of it as a very mifchievous thing, to withdraw from circulation and $u f f_{c}$, fo confiderable a fum, occafioning prices generally to rife, and every thing to be dear. By repeated inquirics, I found this dearnefs was nothing more than what is found in the States around, which have all experienced, more or lefs, a confiderable rife of prices in ten years. But how could withdrawing money from circulation raife prices? It rught on the contrary, in a country that has no paper-money, to lower them. That this effect did not follow, we may eafily conclude from thefe complaints. But the very perfons who complained of this treafure could not affert that money was more wanted in the Dutchy than before it was begun to be faved. They even gave a proof to the contrary, by affirming the rate of intereft to be at prefent 41 per cent. only. Upon the whole, the effect is evidently harmefs; and it is a molt curious fact in politics, that a government can gradually dravi from circulation a fum that in ten years exceeded the current coin of the State, without caufing an apparent deficiency in the currency, or any iconveniency whatever. Conclufions of infinite importance are to be drawn from fuch a fact; it feems to prove, that the general modern policy of contracting public debts, is abfurd and ruinous in the extreme; as faving in the time of peace is clearly without any of thole incoveniences which were once fuppofed to attend it ; and by means of forming a treafure, a nation doubles her nominal wealth, that fort of wealth which is real or imaginary, according to the ufe that is made of it. The reputation, preventing attacks, is perbaps the greateft of all. How contrary to the funding fyftem, which carries in its nature, fuch a probability of prefent weaknefs, and fuch a certainty of future ruin!

Parma. - The river from Parma to the Po has been furveyed, and might be made navigable for about 25,000 . fterling ; but to the honour of the government which has been diffufed through fo many countries by the Houfe of Bourbon, no fuch undertaking can here be thought of. D.nn Philip's hiftory, it is to be hoped, will be written by fome pen that can teach mankind, from fuch an inftance, of what fuff men are fonctimes made, whom birth elevates to power. The prefent Duke fends too much money upon monks, to have any to fpare for navigations.

Piedmont.-The Houfe of Savoy has, for fome centurics, poffeffed the reputation of governing their dominions with fingular ability; and of making fo dexterous a ufe of events as to have been continually aggrandizing their territory. The late King "ds among the wifeft princes of his family, and thewed his talents for government in the practice of an enlightened and feady oconomy: it deferves no flight atiention among the princes of Europe, in the prefent ferment of men's minds, whether there be any other criterion of a wife government. The late King of Sardinia faved $12,000,000$ livres; paid off a great debt; repaired all his fortrefles; adorned his palaces; and built one of the moft fplendid theatres in Europe; all by the force of cconomy. The contraft of the prefent reign is ftriking; His prefent Majefly found himfelf in poffefion of the treafure of his predectfor. He fold the property of the jefuits, to the amount of $20,000,000$ liveres; he has raifed 7 or $8,000,000$ livres by the creation of paper.money; thus, without noticing the portions of the Queen and the Princefs of Piedmont, he has received $40,000,000$ livres extraordinary ( $2,000,0021$. Aterling) : all of which has been
lavilhed and rep arc not princes, him to but ince

in this c Fimpref the Ger fchemes cifive in tation be mor
${ }^{-}$It tem of go rous and found $\mathrm{fo}_{0}$ the hands pacious lives: th of two da hovels, w woods, fo amuleme cheap ; Wheat is for one, a as good a and the $f$
Sardini thing cor wood, fro crops are The tunn
lavihhed, and a debt contracted and increafing ; the fortifications not in good repair ; and report fays, that his army is neither well paid, nor well difciplined. Thefe features are not to be niiftaken; the King, though free from the vices which degrade fo many princes, and pofiefling many amiable virtues, is of too eafy a difpofition, which expofes hin to fituations, in which ceconomy is facrificed to feelings-amiable for private life, but inconfifteat with the feverity of a monarch's duty-

It is a moft curious circumftance in the King of Sardinia's government, that there is in this court a great defire to fell the ifland of Sardinia. A treaty was opened with the Fimprefs of Ruffia for that purpofe, after the was difappointed in her negotiation with the Gcnoefe; in the projected acquifition of Spazzie, and of Malta: but in all thefe fchemes of a Mediterranean eftablifhment, fhe was difappointed by the vigorous and decifive interference of the courts of Verfailles and Madrid. One cannot have any hefitation in the opinion, that to improve this ifland, by means of a good government, would be more political than fo frange a meafure as its fale *.

- It may not here be unuffful to the reader, if I note fome minutes taken at Turin concerning that ifland, one of the moft neglected fpots in Europe, and which, of courfe, betrays the effects of a vicious fyftem of government fufficiently, for conclufions of fome importance to be drawn. The marfhes ire fo numerous end extenfive, that the intemferia is every where found; the mountains numerous and high; and wailes found fo generally, that the whole ifle may be confidered as fuch, with fpors only cultivated. Eftates in the hauds of abfentees are large, the rents confequently fent away, and the people left to the mercy of rapacious managers. The Duke of Affinaria has $3 c 0,000$ livres a year: the Duke of St. Piera 160,000 livres: the Marquis of Pafcha as much ; and mapy live in Spain. M. de Girah, a grandec, lias an eftate of two days journey, frum Poula to Oleaftre. The peafants in a miferable fituation; their cabins wretched hovels, without either windows or chimnien ; their cattle have nothing to eat in winter, but browzing in woods, for thice sre no wolves. The number of wild ducks incredible. Shooting them was the chief amufement of an officer, who was nine years in the ifland, and who gave me this account. Provifiona cheap ; bread, if. the pound ; beef, $2 f . ;$ mutton, $2 \frac{1}{2} \int_{.} ;$a load of wood, of ten quintals, 43. gd. fterling. Wheat is the only export; in this grain the lands are naturally fertile, yelding commonly feven or eight for one, and fome even forty. No filk; and oil, worfe than cafy to conceive. They have fome wine almoft as good as Malaga, and not unlike it. The great want of the ifland is that of water: fprings are fcarce, and the fow rivers are in tow bottoms. To thefe particulara I thall add a few from Genelli.
Sardinia is a real defert, for the molt part; and where cultivated, it is in the moft wretched manner : every thing confumed in the inland (except the immediate food of the day) in imported, even their flax ** and wood, from Corfica and Tufcany? the mifcrable inhabitants know not even the art of making hay; their crops are deftroyed by wild animala, for the oery notion of an inclofure is unknown. Leafes are annual $\dagger$. The tunny fifhery produces from abroad 60,000 fcudi $\ddagger$.

They lave no mules; and the cities, as they are called, have been fupplied with corn from abroad; with glenty in the ifland, which conld not be brought for want of mules to convey it ; infomuch that a fourth part of the corn has been offered as a payment, for carryigg the other three parts to the towns, and not accepted $\S$.
lit 1750, there were about 360,000 fouls in Sardinia; in 1773. they were 421,597 ; fo that in twentythrce yeare the increafe was 61,597 ; occafioned by an inftitution called Monti Frumentarii, which furnifhes ieed olt credit to the poor farmers, who cannot afford to buy it $\|$. Cattle in the ifland, in 1771 ; cows, \& c . $1,710,259$; oxen for work, horfes, mares, and calves bred for work, $185,266 \%$.

I fhall not quit the fubject of Italian governments without renarking, that fuch deferts as Sardinia, under a defpotic monarch, and Iftria under a defpotic ariftocracy, are to be claffed among political leffons. The tendency and refult of fuch cafes are fufficient to fhew the principles of government : the leaders fhould fpeerily correct the neglect of fuch fyltems. When people are well governed, things carnot be thus. The wifdom applicable to the prefent moment is to watch the colour and firit of the age; to compound, and to yield, where yielding is rational.

Academies. - There is an agrarian fociety at Turin, which has publifhed four volumes of papers : a patriotic fociety at Milan, which has publifhed two volumes; neither of thefe locieties hath any land for trying experiments. At Bergamo, Brefcia, and Verona, there are alfo focieties without land. At Vicenza, the republic has given four campi for the purpofe of experiments. At Padua, I viewed the experimental garden, of about a dozen acres, under the direction of Sig. Pietro Arduino; the expence of which is alfo paid by the ftate. At Florence, a fimilar one, under the conduct of Sig. Zucchino; this was in good order.

Vcnice - l'erhaps no country ever had a wifer plan of conduct than the Venctians, in appointing a gentleman fuppofed, from his writings, to be well fkilled in agriculture (Sig. Arduino), to travel over all their dominions, to make inquiries into the flate of agriculture, its deficiencies, and practicable improvements; and the idea was, that the academies of agriculture, in all the great towns of the republic, would have orders to take fuch fteps to effect the improvements as would moft conduce to national profperity. The plan was admirable; all, however, depends on the execution; as far as the academies are concerned, I hould expect it to fail, for none of them are eftablifhed upon principles that will allow us to fuppofe their members fkilled in practical hulbandry; and without this, their ideas and their experiments would of courfe be vifionary.

The miferable flate of this iffand with beft appear from calculating the number of acres. Templeman tells us, that it contains 6,600 fquare miles. England he makes 49,450 ; the real contents of which, in acres, are $46,915.933$; Sardinia, in the fame 1 atio, contains $6,261,782$ : the number of goats and hreep in the ifland is $1,332,55$; there is, therefore, about one fheep or gsat to every five acers. Without viewing the ifland, I will venture to pronounce that it would, without cultivation, fupport a flicep per acre ; above fix millions ; and reckoning the fleeces at $3^{85} 4$ d. each, the wool ouly would produce one million iterling a-year. It is faid, the King of Sardina offered to fell the ifland to the Emprefs of Ruffia for a million ferling. The purchafer of it would have a noble eitate at twice that price, feeing the immenfe improvemelts of which it is capable. The fee-fimple of moft of the eflates are to be purcliafed at a very eafy rate, as well as the fovereignty. The climate would admit of wool, as five as the Spanif ; if it were made into an immenfe fheep-walk, with culture only proportioned to their wilter fupport, it would yield an exportable produce of full two millions fterling annually.
Gemelli mentions the ifland being capable of producing as fine wool as $S_{\text {pain }}$; they rear them only for fupplying their tables with lambs and cheefe; and to liave ikins for drefling the people; and no attention whatever is paid to the quality of the wool, which is good for nuthing but to make the Sardinian ferges.

[^124]It will not perhaps be improper to remark, under this head, that there is at Venice an inllitution appointed by the ftate, which, though not an academy, has much the fame object, but with more authority, called the Beni Inculti. Their origin was about 1556, and in 1768 they added the Deputati di Agricoltura. I was informed, that they had once great power, and did much good, but that now there lies an appeal from their tribunal to the council of forty, which is attended with a confiderable expence, and has done mifchicf.

## SEc̄T. II.——Of Taxation.

Piedmont.-Chentale.-The land-tax near the town is 6 livres, or 7 livres per giornata per annum, on fuch land as fells at 800 livres to 1000 livres; which may be called about one-fixth of the rent, fuppofing land to pay five per cent. The landlord, of courfe, pays his own capitation of 1 livre for himfelf, and every one in family; and the tenant pays as much for his family, being more than feven years old. But what is abundantly worfe, he pays $25 \int$ : a head for each cow, and $50 f$. for each ox. Salt is a monopoly: the ratio per head is eight pounds for every one in family, after five years old ; four pounds for each ox and cow; and one pound for each heep and goat; and one pound more per cow for thofe that give milk: the price, $4 \int$. the pound.

Turin. - No capitation in Turin. The entrées are 8f. the brenta, fifty bottles of wine; 4 den. per pound meat. Salt, $4 /$. the pound. Hay, $1 f$. the rubbio, to the Hotel de Ville, for lighting the city. No taxes except the entrées. The land-tax in common is 4 livres the giornata. Salt, eight pounds eaciı ox or cow, and four pounds each goat, fheep, or calf, at $4 \int$; and if they want more, the reft $a /$ the pound ; alfo eight pounds per head of the family. Capitation in the country, :l livre per head, for all above feven years.

The following is a correct Detail of the Reve:ue of the King of Sardinia, which in 1675 amounted only to $7,000,000$ liveres. $(306,2501$.)

Carne,

## Expenditure.

Inrereft of the public debt,
Arnry,

If, as calculated, there are two thoufand eight hundred and eighty-two fquare Frencls leagues in the King's continental dominions, the revenue amounts to 10,930 livres per: league; and as the population is three millions, it is 8 livres $2_{i j}^{2} f$. per head. Savoy produces 2,432,137 liveres; Piedmont, 11,$444 ; 578$ livres; and the provinces acquired by the treaties of Worms and Vienna, $1,972,735$ livres.

Milanese.-Milan.-One livre on the manufatture of each hat; duty of $7 \frac{1}{2} \int$. per pound on the export of filk. There are entrées at the gates of Milan upon moft conmodities. Wine pays 42 f . the brenta, of ninety.fix bocali, of twenty-eight ounces, or fomething under a common bottle. Salt in the city is $12 \int$. the pound, and $11 \frac{1}{2} \int$. in the country. No perfon is obliged to take more than they think proper.

- The debt amounts to $58,00 c, 000$ livies, originally at fuur, now at three and a half per cent., end the fund is above par. 'I here are si, 00,000 of bank notes, which at firlt bote four per cent., then two, and sow none.

Mozzata.-The land-tax throughout the Milanefe is laid by a cadaftre, called here the cenfimento ; there was a map and an actual farvey of every man's property taken parochially, and a copy of the map left with the community of every parift. It was. finifhed in 1760, after forty years labour, under the Emprefs Maria Therefa. The lands were all valued, and the tax laid at 26 deniers; $1 \int .6$ deniers per $e c u$, of the fee fimple. There is at Milan itfelf, as well as in the accounts of travellers, ftrange contradictions and errors about thistax; as foon as I arrived I was told, even by very fenfible men, that it amounted to full fifty per cent. of the produce. 'Monf. de la Lande, int his Voyage en Italie, tom. i. p. 291, fecond edition, fays, that it is one-third of the revenue, or half the produit net; this is the confufion of the economif/tes, with that jargon which feems to have enveloped the plaineft object in a mift ; for one-third of the revenue is not half the produit net. Monf. Roland de la Platerie afferts, that it exceeds the half of the revenu net ; but all thefe accounts are grofs errors. The inftruction of the commiffaries originally, who valued the country, was to eftimate it below the truth; of which thefe gentlemen feem to have known nothing. Nor do they take into their confideration the improvements which have been made in near thirty years; for the cenfimento remains as it was, no alteration having been made in the valuation; when they talk therefore of fifty per cent., or a third, or any other proportion, they muft of neceflity be incorrect, for no one knows the value of the whole dutchy at prefent; nor can tell whether the tax be the fifth or the tenth, or what real proportion it bears to the income. When I found the fubject involved in fuch confufion by preceding ravellers, I faw clearly that the way to come at truth was to enquire in the country, and not depend on the general affertions fo common in 'great cities. At this place (Mozzata), therefore, I analyzed the tax, and by gaining a clear comprehenfion of the value, rent, produce, and tax of one hundred perticbe, was enabled to acquire a fair notion of the fubject. Under the chapter of arable products, I have ftated that one hundred pertiche yield a grofs produce, in corn, wine, and filk, of 1836 livres; of which the proprietor receives for his thare 785 livres. This land would fell for 128 ; livres per pertica; or 12,833 livres for the hundred. Now this hundred pertiche, of fuch a rent and value, pays cenfimerto $15 \%$, per pertica, or 77 livres. This tax is paid by the farmer in the above-mentioned divifion; but if there were no tax, the lanellord would receive fo much more as his portion ; add therefore the tax, 77 livres, to his receipt,
 or 81.18 s . per cent., or 18. 9 d . in the pound. So utterly miftaken are the people of Milan, and the French travellers, when they talk of fifty per cent., and one-third; and one-half, the produit net and reverul net! And it is farther to be confidered, that only half this payment of 77 livres goes to the fovereign; for half is retained bv the communities for roads, bridges, and other parochial charges; and in fone cafes, the partial fupport of curces is included. When this happens, the payment of is. git. in the pound is in lieu of our land tax, tithe, and poor-rate; three articles, which in Enyland amount to 8 s . or Ics. in the pound. But diough the burthen is nothing, compared with thofe which crufh us in England, yet Is. gd. is too heavy a land-tax ; it is throwing too great a jurthen upon the landed property, a id leffening too much the profit which hould arife from invelting capitals in it ; for it mult be reluarked, that this proportion is that of the improvements included; this 1 s .9 d . might probubly, twenty-five years ago, be 3s. or $3^{3 .} 6 \mathrm{~d}$. : it is improvenents which have lowered it to 18. gd. at the prefent mo. ment; thofe filent and gradual improvements, which take place from what may be termed external ciufes, from the growing prolperity, and rife of prices in Europe in gencral. Were $8 \ddagger$ per cent. to be laid on new invelthents, not one livre would be invefted. Lands belonging to ceclefialtics and hofpitals are exempted.

It muft be fufficiently apparent, that this cenfimento muft vary in every parifh in the dukedom ; it varies proportionably, to the variation in the accuracy of the original valuation, and to the improvements that have been made, and to many other circumflances. As it is at prefent, the land-owners are well fatisfied, for the tax, though too heavy, is certainly not enormous; and it gives an accuracy and fecurity to property -that is of no llight value, as all mutations are made in reference to the parochial map of the cenfimento. They very properly, confider any alteration in it as a certain ftep to the ruin of the Milanefe. It has been reported that the Emperor has entertained thoughts of having a new valuation; but the confufion and mifchief that would flow from fuch a fcheme might go much farther than the court could imagine, and might be attended with unforefeen confequences. In thefe opinions they are certainly right; for of all the curfes that a country can experience, a variable land-tax is perhaps the heavieft.

Befide the direct land-tax of the cenfimento there is a capitation that is included in the roll, like the cuftom in England, of putting feveral taxes into one duplicate or aff: fiment. On fifteen thoufand one hundred and feventy-three pertiche of land, at Mozzata, there are three hundred and eighty-two heads payable, and one thoufand three hundred fouls. It may be calculated, that one hundred pertiche pay the capitation of three perfons, or $22 \ddagger$ livres.

Codogno. -The watered dairy lands, taken in generai, fell here at 300 livres the pertica; and lets, net rent, at 10 livres, the tenant paying all the taxes. The account is thus:

The $:$ livre we muft throw out, being local, and then 12 iivres $5 \int$. pays 2 livres $5 \int$., which is $18 \stackrel{9}{9} \frac{0}{75}$ per cent., or 3 s . 8 d . in the ponm' ; this is therefore doubly higher than in the poor country of Mozzata; one would luppuie beforehand that the cafe would be fo. The improvements in the Lodizan are not modern; probably there are no other but fuch as are common to the whole dutchy, and which arife from the general profperity of Europe, rather than from any local efforts in this diftrict; but in much poorer countries, the improvement of wafte fpots, and a huibandry gradually better, are more likely to have this effect ; the fact, however, is fo ; there was no fuch difference as this, when the cenfimento was laid, which fufficiently proves that the huiban.lry of the poor dillricts has advanced much more in thirty years, than that of the rich ones, which once well watered admited of little more. We may remark, that even here the accounts which Meffis. de la Lande and Roland de la Platerie have given, ane grofs exaggerations.

Treviglio.-Upon four humdred pertiche of land and fix houfes, the cenfinento anounts to 430 livres. Rent, 7,9 , and 12 livres the pertica, average 8 liveres, or 3440 livres, about 12 per cent. or 2 s . 4 d . in the pound.

Upon the land-tax in general in the Milanefe, I hould oblerve, before I quit that country, that in 2765 it was calculated * that the Dutchy of Milan contained dourteen

Bilancio dello Stato di Milano prefentato a S. E. Conte di Fïrmian, 12 mo.
millions three hu millions further 0

For the Suppnfe

Eleven pertica $\dagger$.

Verona. furnilhing campo, or nicipal ch: papable te $1!\int$. Th annum ;

Vicenza of flour,

[^125]millions of pertiche, and that lakes, roads, \&c. deducted, there remained eleven millions three hundred and fixty-feven thoufand, two hundred and eighty feven, of which, five millions ninety-eight thoufand feven hundred and fifty-eight were arable. It has beer. further flated *, that the cenfimento of the Dutchy, raifed,

Eleven millions of pertiche, paying ten millions of livres, is about 18 foldi per pertica $\dagger$.

In the Epilogo della Scrittura Cenfuaria dilla Lombardia Auftriaca, MS. fent by Count Wilizek, prime minitter of the Milanefe, to the Board of Agriculture at London, the general valuation of the territory, in the cenfimento, is thus ftated:

| Milano, - . . 40,139,042 fcudi |  |  |
| :---: | :---: | :---: |
| Mantova, |  | 14,487,423 |
| Pavia, | . - | 6,173,740 |
| Cremona, | - - | 15,112,042 |
| Lodi, | . - . | 11,014,562 <br> 2,153,626 |
|  | Value of the fee fimple, | 89,081,337 |

If therefore the tax produces but about ten millions of livres, it is not more than $z$ per cent, on the above capital.
State of Venice.-Brefia.-The land-tax amounts to $1 \frac{1}{4}$ livre per jugero, about 7 d. the Englifh acre ; but there is a tax on all products, viz. wheat and rye pays the foma or facco, equal to two fara of Venice, or eighty-eight pounds; 112 foldi equal to 18 foldi cu.renti; this tax ( $f$ chza portata in Villa) is about 5 d. Englifh the bufhel. Millet, maize, \&c. pays 12 foldi the facco; of or about $3 \frac{1}{2} \mathrm{~d}$. the Englifh bufhel. Hay, the carro of one hundred peze, pays $12 \int .3 \div d c n$. or about 6 d . a ton Ericlifh.

Verona.-Meadows, throughout the Veronefe State, pay a tax of hay to the cavalry; furnilhing it at a lower price thain the common one. The land tox here, 24/. for each campo, or about Iod. the Englifh acre; befides which, there are cntries dazio) for municipal charges on all products, anounting to about 2 per cent. of the value; alfo others papable to the State. Hay pays 24f. the carro: the fack of wheat, 10 f: of maize, $1 \frac{1}{1}$. There is a moft mifchievous tax on cattle; a pair of oxen pays half a zecchin per annum ; cows fomething lefs; and fheep alfo pay a certain tax per hend.

Vicenza.-Salt is $6 f$ the pound; fleih, $3 /$. entrée (dazio:) a fack of wheat, 41 . : of flour, of one hundred and eighty pounds, 3 livres $2 f$ : and every thing that comes

[^126]in pays. Lav '-tax, 2 livres the campu: and a poll-tax of two livres a head, on all above feven years old.

Padua.-The land-tax, 20 . the campo; and $10 f$. or 15 . for the expences on rivers; but this tax uncertain.

Fenice. - No tax on cattle in the Polefine. The land-tax on all the Terra Firma; arable, 2 livres the cumpo: meadow, 1 livre $10 \%$; woods, $10 \%$. The fale of meat in the city is a monopoly, no other perfons but thofe appointed being allowed to fell. Entrécs are paid on every thing that comes in; on wine it is heavy. Tubacco is a monopoly, at a heavy price, referved by the State throughout all the Venetian territory, producing 50,000 ducats a month, and guarded by the fame infamous feverities, that are found in other defpotic countries. Salt the fame. Inheritances, except from a father, pay 5 per cent. on the capital; a woman pays this cruel impofition, even upon her receipt from a father, or a hulband. Infamous tyranny! The city of Venice pays about one-fixth of the whole revenue.

Ecclesiastical State.-Bologna.-Taxation at Bologna is one of the moft remarkable circumftances I met in Italy. I had often read, and had been generally given to underftand, that the government of the church was the worft to be found in Italy; what it may be in the Roman State I know not, but in the Bolognefe it is amonght the Jighteft to be found in Europe. There are feur objects of taxation :-1. The Pope. 2. The municipal govermment of the city. 3. The fchools in the univerfity. 4. The banks, \&c. of the rivers, againt inundations. Of all thefe, there is fome reafon to believe that the Pope receives the leaft fhare. The common land tax is only 2 baiocchi the tornatura; this is about 2 d. the Englith acre. Lands fubject to inundotions, pay 5 baiocchi more. Among the impots levied in the city, wine on!y, and a few trifles, belong to his Holinefs. Salt, fifh, meat, cocoons (for there is a fmall duty upon them,) and rrinding corn, thefe are municipal; and among the heavieft articles of the cities expence, is the intereft of about a million Iterling of debt. In general, the revenue of the dogana, or cuftom-houfe, is applied towards fupporting the lectures in the public fchools, and the botanical garden. There is a light capitation, which is paid in the country, as well as in the city. Upon the whole the amount of the taxes of every kind is fo inconfiderable, that the weight is feit by nobody, and was etteemed to be exceedingly light by every perfon I converfed with.

Tuscany.-Florence.-Every circumftance concerning taxation, in the dominions of the moft enlightened Prince in Europe, mult neceflarily be interefting. If the reader is at all converlant with the works of tine aconomijics, with which France was fo deluged fone years ago, he will know, that when they were refuted in argument, upon the theory of a univerfal land-tax to abforb all others, they appealed to practice, and cited the example of Tufcany, in which dominion iheir plan was executed. I was eager to know the refuk; the detail I fhall give, in.perfect as it is, will fhew on what fort of foundations thofe gentlemen built, when they quitted the fields of fpeculation and idea. I was not idle in making inquiries; but the Grand Duke has made fo many changes, no year paffing without fome, and ail of them wife and berevolent, that to attain an accurate knowledge is not fo eafy a bufinefs as fome-perfons miy be inclined to think. The following particulars I offer, as little more than hints to inftigate other travellers, whofe longer refidence gives them better opportunities, to examine a fubject of fo much importance to the bottom.

The eftiriation on which the prefent land-tax is collefted is fo old as 1394 ; of courfa it can bear no proportion wilh the value or with the produce of the land; whatever improvemente are made, the tax rcmains the fame; much of it has been bought off in
payments made by proprietors, who have paid at different periods certain fums, to be exempted for ever from this tax; a fingular circumflance, and which marks no inconfiderable degree of confidence in the government. That part of this tax which is paid to the communities for roads, \&c. is not thus redeemable; and, without any breach of faith, the tax has received additions; it amounts to more than one-tenth of the net rent. A capitation from $1 \frac{1}{2}$ livre to 4 livres per head (the livre is $8 \frac{1}{2} \mathrm{~d}$. Englifh). Every body pays th is tax in the country, except children under three years of age; and all towns, except Florence, Piti, Siena, and Leghorn, which are exempted, becaufe they pay entrées. Nothing is paid on cattle. Butchers in the country pay a tax of $1 \rho$. per pound (fomething under $\frac{1}{2} \mathrm{~d}$. per pound Englifh); in a diftrict of feven miles long by four or five broad, the butcher pays 500 fordi per annum to the prince; as this tax implies a monopoly, it is fo far a nifchicrous one; and even a countryman cannot kill his own hog without paying 5 livres or 6 livres if fold. Bakers pay none. Cuftoms on imports, and fome on exports, are paid at all the ports and frontiers; and the entrées at the above-mentioned towns are on moft kinds of merchandize and objects of confumption. Houfes pay a dixme on their rents. Stamped paper is neceffary for many tranfactions. The transter of land and houfes, by fale or collateral fucceffion, pays 7 per cent. and legacies of money and marriage portions the fame-a very heavy and impolitic tax. There is a gabclle upon falt, which however the Grand Duke funk fix months ago from 4 to 2 grus; he at the fame time made Empoly the only emporium, but as that occafioned much expence of carriage, he augmented the land-tax enough to pay the lofs, by felling it to the poor only at 2 gras ; the rich pay the fame, but with the addition of carriage. T'obacco was alfo a revenue, and with falt, paid I livre per head on all the population of the Putchy, or one million. The entrées above-mentioned are not inccnfiderable; a calf pays 6 livres; a hog, 5 livres per one hundred pounds; grain nothing; flour; 10 foldi (there are 20 foldi in 1 livre); beans, $2 f$.; a load of hay, of three thoufand pounds, 4 livres; of fraw, under two thoufand pounds, 2 livres. Houfes are alfo fubjected to an annual tax; Florence pays 22,000 faudia-year to it: it may be fuppofed to be levied pretty flrictly, as the Grand Duke ordered all his palaces, the famous gallery, \&c. to be valued, and he pays for them to the communities. What a wife and refined policy ; and how contrary to the exemptions known in England! When the capitation was increafed in France, in a bad period, Louis XIV. ordered the Dauphin himfelf, and all the princes of the blood to be rated to it, that the nobility might not claim exemptions. Lotteries, to ny great furprife, I found eftablifhed here. The domains of the fovereign were confiderable. It was always a part of the policy of Leopold, to fell all the farms that could be difpofed of advantageoufly; he fold many; but there are yet many not difpofed of. I found it a queftion at Florence, whether this were good policy or not? A gentleman of confiderable ability contended againft thefe fales, judging the poffeffion of land to be a good mode of raifing a public re cuue. The opinion l think ill founded; if it be carried to any extent (and if capable weing fo, there is an end of the queftion), the lols by fuch poffeflions mult be great : every eftate is ill managed, and unprofitably, and ulually badly cultivated, in proportion to the extent. - And when this evil extends to fuch immenfe poffeffions, as are necelfary to conflitute a public revenue, the mquiry is decided in a moment ; and it muft on all hands be agreed, that there canmot be a more expenfive ricue of fupporting the fovereign.

From the preceding catal yue of taxes, which isvere far from being complete, it maje s. fily be concluded, that Monide laLande was not $p$, $\mathrm{g}_{\text {" lyaccurate in faying, "Le projet du }}$
 ceura fur h produit net des tcrecs." 'This is the old afferios of the aconcmifts: but if vol. 15.
it be the projed of covernment, it is executed in a marner not at all analogous to fuch a fyitem; for there is hardly a tax to be met with in Europe, which is not to be found in Tufcany. I was tuld, however, that the Grand Duke had formed an opinion, thaf fuch a fcheme would be beneficial if executed; but from his conduct; after a rei; no twenty years, it is evident that his good fenfe convinced him that fuch a plan, whether good or bad in theory, is abfolutely impracticable. He may have made it a fubject of converfation; but he was abundantly too prudent to vesturcon fo dangerous, and what would prove fo mifciit vous an experiment.

The Grand Duke gave to all the communities, the power ffaxation for roads, bridges, fublic fchools, reparations of public buildings, falarins of ch:ool-mafter:, $\mathfrak{c c}$. Among the long lif of taxes, however, there are ne excifer on manfactures, fucis is leather, paper, \&c.

The whole revenue of the Grand Duke may be eftmated at one million of foudi, ( 5 s .8 d . each,) paid by bout a million of fouls, fread over a thoufand fquare miles of territory, or $283,333 \mathrm{l}$.: this is the resived opinion at Florence; but there are reafons for believing it under the truth, and that, if every kind of revenue whateve:" were fairly brought to account, it would amount to 40, , ocl. a year. A.i this ium the Tufcans munt be confidered amongll the lightef axed peeple in Europe; for they pay but 8 s . a bead. The pople of lingiand pay fix times a much.

Mrnesta. - The commen calculation in the Mosenele is that wi taxes whatever equal one. it h of the grofs produce of the land; as the duties are various, fuch calculations muft nece fa: y ve liablo to a good deal of error. In the cenfimento or cadaftre of the Dotchy: eithes are valued at the half of their real worth, and the tax is laid at a per cent. anso.' payment of their fee fimple; this amounts to 6 s . in the pound land-tax; bur it may be fuppod that the real payment does not amount to any thing fo enormous as this. It appears by the cenfimento, that in the plain there are fixty-feven thoufand three hundred and feventy-eight pieces of laud, and feven hundred and thirty-eight thoufand eight hundred and nine biolca. The total revenue of Modena at prefent arnounts to 300,000 accrbini, (142,0col.) 200, 000 of which go to the Duke's treaFhre, and 100:000 for rivers, roade, bri'ges, commmities, \&ic. Among the taxes, many are heavy, and complained of; befide the land-tax above-mentioned, the general farms amount to 55,000 zccclimi : all corn muft be ground at the Duke's mills, and 3 pauls paid for each fach of three nundred pounds, of twelve ounces. There is a gabelle on falt; it fells white at 22 lol . the pound; black 8 bol . Snuff is a paul the pound. They have flamped paper for many tranfactions. Every horfe pays 20 bol.; each ox, robul. Sheep and hogs, 4 bol. : and if any perion be abfent from the itate for the term of a ycar, he pays an abfentee tax. Entrics are paid by every thing that comes into the city; a load of wood, so bol.; a lack of wheat, $3 \mathrm{bul}$. ; a load of hay, 20 bol ; of fag. gots, 20 bol . Ail meat, 4 hol . the pound. Wine, 14 livres the meature, of twelve poitin, each twenty-five pounds, of twelve ounces. Coffee, ${ }^{\circ}$ paul per pound. The fale, \&c. of land, pays 5 per cent.

Parma.-.The revenues of this dukedom are two-thirds of thole of Modena. The land-tax is 50 ) the biolca (about 9 d . an acre). The peafants pay a capitation; this varies if they are enrolled or tiot as foldicrs. A man pays 18 livres (each $2 \frac{1}{2}$ d.) per annum, if not a foldier, hut 3 livers or 4 livres if enrolled. A woman, not the wife of a foldier, 15 livres. Thele foldiers, or rather militia men, pay alfo 2 48 . a month, as, an excmption from fervice. He is enrolled tor 1 r.m $y$ five years, after which he has the fame advantage. He pays alfo but half for h:. Sf. only the pound; otars 12 A metayer, who is a foldier, pays all forts of tax. nut 60 livres.

Sect. III.-Of Tithe and Church Lands.
Piedmont.-Throughout this principality tithe is an object of no account. I made inquiries soncerning it every where: the greatelt part of the lands pay none; and upon the reft it is folight, as not to amount to more than from a twentieth to a fiftieth of the produce *.

Milanese.-In the country from Milan to Pavia, no tithe of any kind, but the curécs are fupported by toundations. In the village where I made inquiries into the dairy management,-the curee has 21 fara of rice, 12 fara of rya, 4 fara of wheat; three hundred pounds of the belt hay from one large farm; and he has fome other little ftipends in nature; the amount fmall, and never paid as a tithe.

At Mozzata, the tithes, as every where elfe, are fo low as to be no object ; grain pays, but not on all land; it is confined to the lands antiently in culture $t$, for even the anceftors of thefe people were much too wife, to allow the church to tax them in fuch a fpirit, as to take tithes of new improvements. Never did fuch a meafure enter their heads or hearts! The titheable lands are fmall diftricts; are near to the villages that have been in cultivation many centuries; and in fome of thefe, tithe is not taken on all forts of corn; only on thofe forts antiently cultivated. The variations in this refpect are many; but but on whatever it is taken, it never exceeds a fixteenth, ufually from one-feventeenth to one-twentieth; and of fuch as are levied, the whole does not belong to the curée, not more perhaps than one-fourth; one-half to the canons of fome diftant church, to which the whole probably once belonged; and one-fourth fold off to fome lay-lord, with a ftipulation to repair the church. The variations are fo great, that no general rule holds; but they are every where fo light, that no complaints are heard of them.

The church lands feized by the late Emperor in the Milanefe, were of immenfe value. From Pavia to Plaifance, all was in the hands of the monks; and the Count de Belgiofo has hired thirty-fix dairy farms of the Emperor, by which he makes a profit of 50,000 livres a year. The revenue that was feized, in the city of Milan only, amounted to above 5,000,000 livres; and they fay in that city, that in the whole Auftrian monarchy, it amounted to $20,000,000$ florins.

At Codogno, and through moft of the Lodizan, tithe is fo very inconfiderable, that it is not worth mentioning; the expreffion of the gentlemen who were my informants.

State of Venice. - In the diftrict of Verona, mulberries pay no tithe; wheat onetwelfth in fome places, in others lefs; maize, millet, \&c. from onc-fifteenth to onethirtieth; but if for forage only, they pay none, no more than vetches, chick-peafe, millet, \&cc. as it appears by a late memoir printed at Venice $\ddagger$. Meadows pay a light tithe, becaufe they are taxed to find hay for the cavalry at an under price. In the diftrict of Vicenza, tithe varies from the one-tenth to the forty-firlt. About ladua, wheat alone pays the tenth: vines a trifle, at the will of the farmer : mulberries, fleep, and cows, nothing.

Ecclesiastical State.-Bologna.-Tithes are fo low throughout all the Bolognefe, thit I could get no fatisfactory account of the very fmall payments that are yet

[^127]made to the church; every one affured me that they were next to nothing ; but that in the Ferrarefe they are high.

Tuscany.-In many of the countries of Europe, the feizure of eftates and effects of the jefuits was a rapacious act, to the profit of the Prince or State ; in Tufcany it was converted to a more ufeful purpofe. The Grand Duke fet afide thefe revenues for forming a fund called the "Ecclefiaftical Patrimony," under the management of a new tribunal, that hould enable him gradually to abolifh tithes. This great reform, equally beneficial to every clafs of the people, has been in execution for many years: as faft as the prefent incumbents of the livings die, tithes are abolifhed for ever; their fucceffors. enter into poffeflion of moderate falaries, payable out of thofe funds, or raifed by an: addition to the land-tax ; and thus an impoft, of all others the moft mifchievous, is: fpeedily extinguifhing, and the agriculture of Tufcany improving in confequence; proportionably to fuch extinction of its former burthens. Many monafteries have been alfofuppreffel, and their revenues applied, in fome cafes, to the fame ufe; but this has. not been attended with (ffects equally good: the lands are not equally well cultivated; nor do they yield the fame revenue as furmerly; for the farms of the monks were in the beft order, adminittered by themfelves, and every thing carefully attended to. This was not the cafe, however, with convents of women, who being obliged to employ deputies, their eftates were not equally well managed.

A propofition was lately made by the court to fell all the glebes belonging to the livings, and to add to the falaries of the curées in lieu of them; but at a public meeting of the Academia di Gcorgofili, Sig. Paoletti, a curé in the neighbourhood of Florence, a practical farmer, and author of fome excellent treatifes on the art, made a fpeech fo pointedly againtt the fcheme, fraught with fo inuch good fenfe, and delivered with fo much eloquence, that the plan was immediately dropped, and refumed no more; this was equally: to the honour of Paoletti and of Leopold. When good fenfe is on the throne, fubjects need not fear to fpeak it.

The lightnefs of the old tithes may be eftimated by the payment which forty farms at Villamagna yield to the fame Sig. Paoletti, the curé, which is 40 fcudi (each 5 s .8 d .), and this is only for his life, to his fucceffor nothing in this kind will be paid. Having mentioned Sig. Paoletti, and much to his honour, I mult give another anecdote of him, not lefs to his credit ; after his Sunday's fermon, it has long been his practice to offer to his audience fome inftructions in agriculture, which they are at liberty to liften to or abfent themfelves, as they pleafe. For this practice, which deferved every commendation, his archbihop reproved him. He replied, that he neglected no duty by offering fuch infruction, and his congregation could not fuffer, but mighr profit, and innocently too, by what they heard. A fovereign that receives fo much merited praife as the great Leopold, can well afford to hear of his faults; firf, why did he not reprove this prelate for his conduct, and by fo doing encourage an attention to agriculture in the clergy ? Secondly, why did he not reward a good farmer, and worthy prieft, and excellent writer, with fomething better than this little rectory? Talents and merit in an inferior fituation, which might be better exerted, are a reproach, not to the poffeffor, but to the prince.

The Grand Duke took the adminiftration of the lands belonging to hofpitals and the poor, into his own hands alfo; but the effect of this has not, in the opinion of fome perlons, been equally beneficial; the poor remain as they were, but the revenue gone; this, in the diocefe of Florence only, amounted, it is faid, to three or four millions of fcudi: if this be true, the mifchief attending fuch revenues muft be enormous; and taking them away, provided the rcally u/eful hofpitals be fupported, which is the cafe, mult be beneficial. Too many and great eitablifhments of this nature nurfe up idlenefs, and create,
by dependency and expectation, the evils they are defigned to cure. Poverty always abounds in proportion to fuch funds; fo that if the fund were doubled, the mifery it is. meant to prevent would he doubled alfo. No poor in the world are found at their eafe by means of hofpitals and gratuitous charities; it is an induftry fo fteady and regular as to preclude all other dependence, that can alone place them in fuch a fituation, as I haveendeavoured to thew in my remarks on France.

The patrimony of almoft all the parifhes in Tufcany, confifts in lands affigned them: the rector is adminifrator and guardian of them; and both by law and his oath on induction, he is ftrictly obliged to maintain and fupport them, and alfo to manure them, and to increafe the produce *.

Dutchy or Modena. - No tithe here; a voluntary gift only to the fub curé. The ecelefiaftical lands have been largely feized here, as well as every where elfe in Italy; butthe Duke gave them to the towns, to aflift them in the expence of the municipal ad. miniftration.

Dutchy of Parma.-No real tithe; the payments in lieu very fmall, and not proportioned to the'crop; a farm pay; a ftajo of wheat (about eighty-eight pounds Englifh), two parcels of raifins, and twenty faggots, between the two carécs.

Upon this detail of the tithe paid in Lombardy, \&cc. one obfervation ftrongly in. prefles itfelf, that the patrimony of the church is, under every government in Italy, confidered as the property of the State, and feized or affigned accordingly. It highly merits attention, that in the free countries of Holland and Switzerland, (exempt at leaft from the defpotifm of a fingle perfon, ) the fame principal has been adopted; with what reafon therefore can the firft National Affembly of France be reproached as guilty of a fingular outrage, for doing that which every neighbour they have (England and Spain only ex-cepted) had done before them; and which may poffibly, in a better mode, be followed in every country in Europe ! They have in Italy rid themfelves of tithes, though not half, perlaps not upon an average a third of the burthen they amount to in Eugland, where their levy has been carried to a much greater height. If the legillature of that kingdom would give a due encouragement, they will remove fuch burthens gradually, and with wifdom. All I converfed with in Italy on the Tabject of tithes, expreffed amazement at the tithes we are fubject to, and fcarcely belic ad that there was a people left in Europe who paid fo much, oblerving that nothing like i was to be found even in Spain. itfelf.

## Sect. IV.-Of. Manufactures and Commerce.

Piedmont.-Two-thirds of the rice raifed is exported: I met carts loaded with filk and rice on the great road to France; and demanding after vards concerning this trade, I was intormed that the coft ot carriage was $30 /$. per rubbio, to Lyons or Geneva, and. 3 livres to Paris. The following are the principal exports:

[^128]Oil and wine from Nice, walnut-oil, cobalt, lead, and copper ore, add fomething. France commonly takes $10,000,0$ 0 livres in filk, and England $5,000,000$ livres of the fineft fort. The balance of trade is generally fuppofed to be about 500,000 livres againf Piedmont; but all fuppofitions of this fort are very conjectural; fuch a country could not long continue to pay fuch a balance, and confequently there cannot be any fuch. By another account, wheat exported is 200,000 facks at 5 eymema; 5000 facks of rice, at 3 eymena; hemp, 5000 quintals; ard 10,000 head of oxen.

Turin.-The Fy woollen manufacturers having fworn at the bar of the Houfe of Lords, that the Preiac: "cmblets made of Englifh wool, rivalled the Englifh canblets in the Italian markcis, and even underfold then, I had previoufly determined to make inquiries into the truth of this affertion. 1 was at 'Turin introduc'd to Sig. Vinatier, a confiderable thopkeeper, who fold both. His account of the French and Euglifh camblets was this; that the Englifh are much better executed, better wrought, and more beautiful, but that the French are IIrongeft. I defired to know which were the cheapef. The Englih he faid, being much thrner, it was a matter of calculation, but he fuppofed the confumers thought the L!glth cheapit, as where he fold one French, he fold at leaft twenty five Englifh. He thewed me various pieces of both, and faid, that the above circumftances were applicable both to ftuffs mixed of wool and filk, and alfo thofe of wool only. I afked him then concerning cluths: he faid, the Englifh ordinary cloths were much better than the French, but that the French fine cloths were better than the Englifh. Thefe inquiries brought me acquainted with an Italian dealer, or merchant, as he is called, in hardware, who informed me, that he was at Birningham in 1786 and. 1789 , and that he found a fenfible diminution of price; and that the prices of Englifh hardware have fallen forfome years palt; and that, for chefe laft three or four years, the trade in them to Italy has increafed confiderably. He has not only bought, but examined with care, the fine works in Iteel at Paris, but they are not equal to the Englifh; that the French have not the art of hardening their fteel, or, if hardened, of not working it; for the Englifh goods are much harder and better polifhed, confequently are not equally fubject to ruft.

Milanese.-In the fifteenth contury, the trade of this country was confider ${ }^{\top}$ le. In 1423, the territory of Milan paid to the Venetians:

The leaft, a

Cour fifty, fe viz. fill chiri be for the 3c6,00
Berg confide d'Adda greater product ling ay none of

And they fent to Venice, at the fame time, cloths to the following amount:

And at the fame time the Milanefe took from Venice annually :

The produce of filk amounts to $9,000,000$ livres; nineteen-twentieths of which, at leait, a re exported.

Count Verri, in his Storia di Milano, mentions that the Milanefe, only fixty miles by fifty, feeds $1,130,000$ inhabitants; and exports to the amount of $1,35,000$ zecchini $\dagger_{\text {, }}$ viz. filk, $1,000,000$; cheefe and flax, more than 200,000; corn, 15,00 . (the zeccbiri being 9 s . 6 d . the fum of $1,350,200$ equals $\sigma_{41,200 \mathrm{l}}$.) But this is changed muc:1; for the export of cheefe alone is calculated now at $9,200,000$ livres, which is above 306,000l. fterling.

Bergamo. -The woollen manufacture at this place is of great antiquity, and it is yet confiderable. Its trade in filk is great; they buy from Crema, Monti, Brianza, Ghiara d'Adda, and in general the confines of the Milanefe; this has given their filk trade a greater reputation than it deferves, for their commerce is more extenfive than therr product. They have been known to export filk to the amount of near $3 \times, 0$, I. terling a year. Here alfo is a fabric of iron and fteel, of fome confideration in Italy; but none of thefe objects are in a ftile to be interefting to thofe who have been at all conver-

[^129]fant
fant with the fabrics of England. If however the manufatures of Bergamo are compared with thofe of the Milanefe, they will be found confiucrable.

Brcfia.-This is a very buly place; the city and the vity tor fome miles abound with many fabrics, particularly of fire-arms, cutlery, and other works of iron. 1 th:y have many filk and oil-mills, and fome paper fabrics that fucceed well. But their consmerce of all forts has declined fo much, as not to be compared at ;refent to what it has been in former times.

Verona.-Here is a woollen fabric that fill maintains fome liv' ground, though the declenfion it has fuffered is very great. I was affured, that twecty thoufand manulacturers were once found in a fingle ftrect ; this I fuppofe $m i j$ is an exaggeration, but it at leaft marks that it was once very great; now there are t.ut one thoufand in the whole city; in the time of its profperity they ufed chielly their own wool, at prefent it is imported.

In the Veronefe, they make one million of pounds of filk, of twelve ounces, and rice nearly to as great an amount.

State of Venice. - Vcrona. - Many years paft the only great import of camblets was from Saxony, but after the war of 1753 , the Englifh ones eftablifthed themfelves, and there is now no comparifon between the quantity of Englifl and l rench; of the latter very few, but the import of the former is confiderable.

Vicenza.-They lell nine picces of Englifh camblets to one of French. A woollen manufacture was eftablifhed here three years ago, under the direction of Thomas Montfort, an Englifhman. It works up their own wool, and alfo Spanifh. Spinning a pound of fine wool $50 \%$. and the women earn $15 \int$. a day; weavers 2 livers. Count Vicentino has eflablifhed a fabric of earthen ware with a capital of 9000 ducats; Mr. Wedgwood's forms (originally however from Italy) are imitated throughout. A good plate, plain, $12 f$.; ewer and bafon 12 livres; fmall tea cup and faucer, quite plain: $5 \int$.; teapot 4 livres; vafe, eighteen inches high, with a feftoon and openings for flowers, 60 livers. It meets with no great fuccefs, and no encouragement from the government.

Venice. - In the fifteenth century Vanice employed three thoufand three hundred and forty-five fhips, great and finall, and forty-three thoufand failors *. The chief export at prefent is filk; the fecond, corn of all forts; the third, raifins, currants, and wine. Glafs is yet a manufacture of fome confequence, though greatly fallen, even of late years. Tuyan for beads is, however, yet unrivalled. The glafs of Bohemia underfells from the great cheapnefs of wood, and poffibly from that of provifions, (my informant fpeaks,) not only the glafs of Venice, but that of Carniola alfo. The chief'export from Venice of fabrics, is to the Levant; velvets and filks go there to fome amount. The rrade of the whole Venetian territory does not employ above two hundred and fifty hips of national bottoms.

Ecclestastical State.-Bologna.-All the filk of the Bologncee is here made into crape and gauze; the crapes are, perhaps, the finelt in the world, price confidered. The gauzes alfo are very beautiful: they meafure by the braccio of furty inches; they fell at 26 to 36 baiocchi the braccio ( 10 baicecbi equal 6 d. Englif1). White handkerchiefs are alfo made for 7 livres cach. Crapes and gauzes employ feven or eight thoufand people.

Tuscany.-Fiorence.-The woollen manufacture was amonglt the greateft refources of the Florentines in the timt of their repudic.

In 1239 the friars umiliate came to Florence to improve the manufactory of woollen cloth. They made the fineft cloths of the age; the beft, of the wool of fpain and Portugal ; the feconds, of that of England, France, Majorca, Minorca, Sar iinia, Barbary, Apulia, Romana, and Tufcany *. In 13.36 there were at Florence $\because$ oie ian two hundred thops, in which woollens were manufactured, which made fion feventy to eighty thoufand pieces of cloth yearly, of the value of $1,200,000$ zectlini ; of which the third part remained in the country for labour; and employed more than thirty thoufand fouls; and thirty years before that the number was much greater, even to one hundred thoufand pieces, but coarfer, and of only half the value, becaufe they did not receive, nor know how to work the wools of England. In 1460 they were augmented to two hundred and feventy-three, but the quality and quantity unknown $\dagger$. From 1407 to 1485 was the period of its greateft profperity. In 1450 Cofmo of Medicis was the greateft merchant in Europe. From the year 1365 to 1406 the Republic of Florence, in wars only, expended $11,500,000$ zecchini $\ddagger$.
I was aflured at Florence, but I know not the authority, that if. a week, on the wages of the woollen manufactures only, built the cathedral ; and that at a fingle fair, in the time of the Republic, woollen goods to the amount of $12,000,000$ of crowns have been fold.

Giuliano and Lorenzo de Medici fent into England Florentine manufacturers of wool, to exercife their trade, for the account of thofe princes to take advantage of the cheapnefs of wool on the fpot ; from which circumfance the Florentine writer infers, that the Englifh thus gained the art of making cloth §.

Thefe particulars, it muft be confefled, are curious, but I muft draw one conclufion from then, which will militate confiderably with the ideas of thofe perfons, who infit that the only way of encouraging agriculture is to eftablifh great manufactures. Here were, for three centurics, fome of the greateft fabrics, perhaps the greateft in Europe ; and Pifa flourifhed equally; and yet the eftablifhenent and the fuccefs of a vaft commerce, which gave the city immenfe riches, the figns of which are to be met with at this day in every part of it, had fo little effect on the agriculture of Tufcany, that no perfon fkilled in hufbandry can admit it to be well cultivated, and yet the improvements in the laft twenty years are, I am affured, very great. Here then is a ftriking proof, that the prodigious trade of the Tufcan towns had little -. no effeet in fecuring a flourinhing agriculture to the country. Thefe great politica! . . . . s are not to be decided by eternal reafonings-it is by recurring to facts alora" "... waction can be gained. No wonder that the rich deep foils of Lombardy an • have been well applied ; but the more ungrateful and fteril hills of Tufcaw : it is I have feen of them) wild and unimproved.

There is yet a woollen manufacture of fome confiderat : a.e fine cloths of Vigonia wool; alfo hats, and various fabrics of filk.

The export of woollens from Tufcany in 1757, was one hundred and twenty thoufand pounds; and in 1762 , it was one hundred and eighty thoufand ponnds $\|$.

Among the filk manufactures, here are fome good, and pretty fatins, 18 pauls (the paul $5 \frac{1}{3}$ d.) the braccio (about two feet Englifh), the width one braccio four inches.

The filk fpun in Tufcany in ten years, from 1760 to 1769 inclufive, amounts to $1,676,745$ pounds; or per annum 167,674 ; and in the firf fum is comprized two hun-

[^131]vol. IV.
dred
dred and fixty-eight thoufind nine hundred and feventy-nine pounds of cocoons, bought of forcigners *. The filk manufacture amounts to a million of crowns ( 7 livres 10 \%. of Tufcany $\dagger$ ). Of oil the export is about 100,000 barrils. The year following the edict of the free conmerce of oil and grain, the export amounted to 000,000 fcudi $\ddagger$. Next to oil, hogs are the greatelt export, to the amount of from twenty to thirty thoufand in a year.

The average of the quantity of filk made in Tufcany, and regitered in the tribunal of Florence, from 1769 to 1778 , was one hundred and fixty-five thoufand one hundred and fixty-eight pounds; and the import of foreign filk, forty-eight thoufand four hundred and feventy pounds; together, two hundred and thirteen thoufand fix hundred and forty- nine pounds yearly 9 .

Modena.-In 1771, the following were the exports of the Modenefe:

All thefe are by the regifters of the farms ; the contraband is to be added.-Exportation is now greater than in 1771 .

Parma.-The firlt trade and export of the country is filk; the next cattle and hogs.

There is but one concluion to be drawn from this detail of the commerce of Lombardy, namely, that cighten-twentieths of it ernfifin the export of the produce of agriculture, and therefore ought rather to be ellemed a branch of that art, than of commerce, according to modern ideas; and it is equally worthy of notice, that thus

[^132]Mil
In 1 Milane vated ; Milanef in a fqu fquare and tha that to
fubfifting by agriculture, and importing manufachures, thefe countries muft be ranked among the molt flourifhing in the worl:l, abounding with large and magnificent towne, decorated in a manner that fets all comparion at defiance; the country every where cut by canals of navigation or irrigation; many of the roads fplendid; an immenfe population; and fuch public revenucs, that if Italy were united under one head, the would be claffed anong the firtt powers in Europe.

When it is confidered that all this has been effected generally under governments not the beft in Europe; when we farther reflect, that England has for a century enjoyed the beft govermment that exilts, we fhall be forced to confefs, perhaps witir aftonifliment, that Great Britain has not made confiderable advances in agriculture, and in the cultivation of her territory. The wafles of the three kingdoms are enormous, and far exceeding in proportional extent all that are to be found in Italy; while, of our cultivated diftricts, there are but a few provinces remarkable for their improvements. Whoever has viewed Italy with any degree of attention muft adnit, that if a proportion of her territory, containing as many people as the three Britifh kingdoms, had for a century enjoyed as free a government, giving attention to what has been a principa! object, viz. agriculture, infcad of trade and manufacture, they would at this time have made almolt every acre of their country a fertile garten; and would have been in every refpect a greater, richer, and more flourifing people than we can poffibly pretend to be. What they have done under their prefent governments juftifies this affertion : we, bleffed with liberty, have little to exhibit of fuperiority.

What a wafte of time to have fquandered a century of freedom, and lavihed a thoufand millions fterling of public money *, in queftions of commerce! He who confiders the rich inheritance of a hundred years of liberty, and the magnitude of thole national improvements, which fuch immenfe fums would have effected, will be inclined to do more than queftion the propriety of the political fyttem which has been adopted by the legiflature of this kingdom, that in the bofom of freedom, and commanding fuch fums, has not, in the agriculture of any part of her dominions, any thing to prefent which marks fuch expence, or fuch exertion, as the irrigation of Picdmont and the Milanefe.

## Sect. V.-Of Population.

Milanfse.-In all Auftrian Lombardy there are 1,300,000 fouls.
In 1748 the population was about 800,000; and in 1771 it was 1,130,000. The Milanefe contains 3000 fquare miles t. In 1732 there were 800,000 pertiche uncultivated; in 1767 only $2 \times 8,000$. In a fquare mile, of fixty to a degree, there are in the Milanefe, $35+$ fouls. There are in the Dutchy 11,385,121 pertiche, at 4868 pertiche in a fquare mile; and there are in the fate, exclufive of roads, lakes, rivers, \&c. $2333^{8}$ fquare miles $\dagger$, and 377 perfons per fquare mile, which is certainly very confderable; and that my readers may have a clearer idea of this degree ef population, 1 thall remark, that to equal it, England thould contan 27,036,302 fouls 5 .

Veneitian Statl.-P'adoum.- in the whele dillrict of Padoman there were, in $1760,240,33^{6}$ fouls: in 1781 , thare were $288,3 \circ 0$; increafe $47,914$. There is probably no corner of Europe, barbatous Turkey alone exeepted, in which the people do

* Sir Fohn Sinclair's Miflury of the rultic Reqinur, vol. ii. p. 98.

§ At $33, j$ co lywate miles cach of 0,0 actes.
not increafe confiderably; we ought not therefore in England to take too much credit for that rapid augmentation which we experience. It is found under the worft governments as well as under the beft, but not equally.

Venice.-The population of the whole territory 2,500,000: of the city, between 143 and 149,000, the Zuedecca included.
In Friuli, in 1581, there were 196,541; and in the city of Udine 14,579. In 1755 , in Friuli 342,158 , and in Udine $14,729^{*}$. The population of all the States of Venice, by another authority, is made $2,830,000$; that is 600,000 in Bergamo, Brefcia, \&c.: in the reft of the Terra Firma 1,860,000: in Dalmatia and Albania 25\%,000: in the Greek iflands $120,000+$. In the time of Gallo, who pied in 1570, there were faid to be in the Brefcian about 700,000 fouls; in 1764 , there were $310,388 \downarrow$.

Tescany. - The progreffive population of Florence is thus hewn, by Sig. Laftri:

| $1470 \varsigma$, | - | - | - | 40,323 |
| :--- | :--- | :--- | :--- | :--- |
| 1022, | - | - | - | 76,023 |
| 1660, | - | - | - | 56,671 |
| 1738, | - | - | - | 77,335 |
| 1767, | - | - | - | $78,635 \\|$ |

The total population of the Dukedom, is calculated at about 1,000,000**. Twa centuries ago, the population of the fields in the mountains, and on the fea-coaft, was little lefs than double what it is at prefent. And there is faid to have been the fame proportion in the cultivation and cattle $\dagger \dagger$.

Madena.-State of the Dutchy in 1781 :

Marriages, 2,901 ; births, 12,930; deaths, 10,933. Multiplving the births therefore by 27 , gives nearly the population; or the deaths by $41 .-$ Of this total, the following are in the mountain diftrits:

[^133]Pie

Piedmont.--Subjects in the King of Sardinia's territories, 3,000,000. In Savay, 400,000. In Sardinia, 450,000. In Turin, in 1765, 78,80\%. In 1785, it was 89, 185. In 1785, births 3394 ; deaths 3537 .

## Of the Poor.

Milanese.-Milan.-Charitable foundations, in the city only, amount to 3,000,000 livres ( $3,500 \mathrm{l}$. ferling). In the great hotipital there are commonly from twelve to fifteen hundred fick: the effect is found to be exceedingly mifchievous, for there are nany that will not work, depending on thefe eftablifhments.

Mozaata.--'The labourers here work in fummer thirten hours. Breakfaf one hour, dinner two hours, merenda one hour, fupper one hour, fleep fix hours. They are not in a good intuation. I was not contented to take the general defcription, but went early in a morning with the Marquis Vifeonti and Sig. Amoretti into feveral abins, to fee and converfe with them. In this village they are all little farmers; I alked if there were a fanily in the parifh without a cow, and was aniwered exprefsly there was not one, for all have land. The pooreft we faw had two cows and twenty perticbe; for which fpace he paid five moggio of grain, one-third whear, one-third rye, and one-third maize. Another for one hundred and forty perticlee paid 35 mogrgio, in thirds alfo. The poor never drink any thing but water, and are well contented if they can manage always to have bread or polenta; on Sunday they make a foup into which goes perhaps, but not always, a little lard; their children would not be reared if it were not for the cow. They are miferably clad, have in generat no fhoes or ftockings, even in this rainy feafon of the year, when their feet are never dry; the other parts of their drefs very bad. Their furniture but ordinary, and looks much worfe from the hideous darknefs from fonoke that reigns throughont, yet every cabin has a chimney. They have tolerable kettls, and a little pewter, but the general alpect miferable. Fuel, in a country that has neither forefs nor coul-pits, mult be a matter of difficulty, though not in the mountains. They were heating their kettes with the ears of maize, with fome heath and broom. In the cold weather, during winter, they always live in the fable with their cattle for warmth, till midnight or bed time. For day-labour they are paid 10 f . a day in winter, and 12 f . in fummer. for a houfe of two rooms, one over the other, the furmer of 20 pertiche pays 24 livres a year; that is to fay, he works fo much out with his landlord, keeping the account, as in Ireland, with a tally, a fplit tlick notched. They are not, upon the whole, in a fituation that would allow any to approve of the fyftem of the poor being occupiers of land; and are apparently is nouch more uncafy circumftances, than the day labourers in the rich watered plaing, where all the land is in the hands of the great dairy farmers. I drew the fame conchution from the state of the poor in France; thefe in the Milanefe Arongly confirm
the doctrine, and unite in forming a porfect contraft with the fituation of the poor in England, without land, but with great conforts.

State of Venice. - The people appear in the diftries of Bergamo, Brefcil, Verona, and Viconza, to be in better circumftances than in the Padoum. And from thence to Venice there are fill greater apparances of poverty : many very poor cottages, with the fmoke ifluing from holes in the walls.

Villamagna.-The peafantry, a term which in all countries where the landlorl is paid by a fhare of the produce, and not a money rent, inclutes the farmers, who are confquently poor, live here better than in diffricts more diftant from the capital; they eat fleh once a week; the common beverage is the fecond math, or wort of the wine; en: wheaten-bread, and are cloathed pretty well.

## Sect. Vl.-Of Prohioitions.

Piedmont. - The exportation of the cocoons of filk is prohibited; and the effect highly merits the attention of the politician who would be well informed, from practice, of the principles of political ceconomy. It is a perifhable commodity, and therefore it is not at all likely that if the trade were free, the quamity fent out would be any thing confiderable; ye, fuch is the pernicious effect of every ipecies of monopoly upon the falc of the earth's products, that this prohibition finks the price 30 per cent. While the cocoons fill in Piedmont at 24 lirres the rubbio, they are fanuggled to the Genoefe at 30 livres; which export takes place in confequence of the monopoly having fink the price. The object of the law is to preferve to the filk-mills the profit of converting the filk to organzi $\therefore$; and for this object, fo paltry on comparifon with the mifchief flowing from it, the land-owners are cheated in the price of their filk 3 o per cent. ; the State gains nothing; the country gains nothing; for not a fingle pound would be exportei if the trade were free, as the motive for the export would then ceafe, by the price rifing: the only poffible effect is that of taking .io per cent. os: all the filk produced out of the pockets of the grower, and puting it into thofe of the manufac. turur. A real and unequivocal infimy, which rellets a fandal on the government, for its ignorance in miftaking the means of effecting its defign, and for its injuftice in fleecing one clafs of men for the profit of another. I demanded why the Piedmontefe merchants could not give as good a price as the Genoefe. "They certainly could give as goot "t price, but as they know they have the monoptly, and the feller no rajurce in an cisport, they sell bate it at their outh price; and if sed do not give them this profit of 30 por cent. sec cunnet fell it at all." What an exact tranfeript of the wool haws in Lughand!

Another prohibinoa here not equally mifchievons, but equally contrary to jult principhes, is hat of keeping fleep in fummer any where in or near the plain of lidedmont; it is not cafy to undertand, whether the ohjoct of this law is that the flreep at that feafon /ball be $k$ pet in the mountains, or that they thall not be kept in the plain. In winter they are allowed every where. The fhepherds buy the lat growth of the meadows at 5 liveres or 6 livers per gionnata for them, and pay for fich hay, as may be wanted in froll or thew.

Corn from Sardina is not allowed to be exported, but when the quantity is large, and thin paying a heavy duty, yot this is the only commodity of the int and ; and the exerable policy that governs it has rendered it one of the mon? wretched deteres that is to be found i - Europe * On account of this duty they pey no landotas!. No wonder that the authors of luch a policy want to fell their inheritance!

[^134]Milankef.

Milanrse.-The export of cocoons are here alfo prohibited; and as it is rather more feverely fo than in Piedmont, the price is of courfe fomething lower. 'The duty on the export of filk is $7^{\prime} \mathcal{F}$. per pound.

Keeping theep in the vale of the Milancfe, every where prohibited by government, from the notion that their bite is venomous to rich meadows. 'Ihe fame in the Veronefe; and there is a defertation in the Verona Memoirs in favour of them.

State of Venice--Breficia.-The cultivation of the mountains is every where prohibited in this republic, lelt the turbid waters falling into the Lagunes, fhould fill up thofe channels, and unite Venice with the Terra Firna. Mr. Profeffor Symonds has remarked the ill effeets of cuting woods on the mountains, relative to the mifhief which rivers in that cafe do to the plains; it is fufpected in Italy, that there are other reafons alfo; and they have obferved in the territory of Aqui, in Pielmont, that hail has done more mifchief fince the woods have been cut down in certain diftricts of themountains, between the Genoefe territory and Monteferat *.
Verona.-The export of wheat is prohibited when the price exceeds 24 livres the fack, of eleven $p e f$, of twenty five pound; eleven pefi are two hundred and five pound Englifh; and thercfore 24 livres equals 26s. 6d. per quarter Englifh of four hundred and fifty-fix pounds; apparently a regulation that is meinat as an abfolute prohibition. The export of maize allo prohibited, when it reaches a certain price, proportioned to that of wheat. The export of cocoons and unfpun filk prohibited.

Vicenza and Padoua. - The export of cocoons prohibited.
$V^{\prime}$ cnicc.-The export of wool, from the Veactian territory, has been always prohibited. The export of wheat is prohibited, when the price arrives at 22 lives the faccion; but fo much depends on the magiftrate, that there is no certainty, and confequently the trade crippled. The fajo, or faro l'cucziano of whear, is one hundred and thistythree pounds groffo; four fari one mozzo. The fack of flour is two hundred and four pounds to two hundred and ten pounds $t$. The fack of wheat one hundred and thirty-two pounds grofo $\ddagger$. As the Venctian pound is about one twentiech heavier than the Englifh, 22 livres the fack about equals, not exactly, 36s. the Englifh quarter, but the ratio of the price is of little confequence, in laws, the execution of which diepends on the will of the magiftrate §. Another prohibition, which marks the fhort and fallacious views of this govermment, on every object but that of their own power, is in the duration of leafes; no perfon is allowed to give a longer one than for three years; which is in fact to declare by law that no renter fhall cultivate his farm well

Eccleshastical Siate- - Bolgrag. - The govemment of this country, in refpeet to taxes, is the mildeft perhaps in Europe; but it lofes much of its merit by many prohibitions and rellrictions, which have taken place more or lefs throughout laaly. Silk cannot be fold in the country; it muft all be brought to the city. All wood, within eight miles of the fame place, is a finilar monopoly; it can be carried no where elfi. The export of corn is always prohibited, and the regulation flrictly adhered to; and it may be remarked that the price is never low; the natural, and probably the miverfal effect of fuch a policy, mult be a high price inftead of that low one, which is the object of the State.

Tuseany.-In the flates I have initherto mentioned, to name prohibitions is to ex. emplify their mifchief in the conduct of all the governments, timeugh whofe territorice

[^135]I have yet pafied; but in Tufcany the tafk is more agreeable-to give an account of prohibitions there, is to fles the benefit of their reverfal, and of that fyftem of freedom, which the late beneficent fovereign introduced.

In 1775 an unlinited freedom in the export and import of corn was eftablifhed. The effect of this freedom in the commerce of corn has been very great; in the firt place, the price of corn has rifen confiderably, and has never fur a moment been low; the rife has been fteady; famines and any great fcarcity have been abfolutely avoided, but the auginentation of price on an average has been great. I was affured, on very refpectable authority, that landlords, upon a medium of the territory, have doubled their incones, which is a prodigious increafe. This vaft effect has not flowed immediately from the rife in the price of corn, but partly from an increated cultivation in conlequence of that price, and which would never have taken place without it. On the other hand, the confumers feel a very great rife in the price of every article of theirconfumption; and many of them have complained of this as a moft mifchievous effect. I was affured that thefe prices have been doubled. Such complaints can be juft only with refpect to idle confumers at fixed incomes; a penfion or an annuity is undoubtedly not fo valuable now as it was before the free corn trade ; this is clear ; but it is. equally certain that landlords, and all the mercantile and induttrious claffes profit greatly by the general rife : this fact is admitted, nor would the improvement of all the arts of induftry, the fituation of the poor moft highly ameliorated, and the increafe of population allow it to be queftioned. Before the free trade the average price was $5 \frac{1}{2}$ pauls (each $5^{1 \mathrm{~d}}$.) per ftaja, of fifty-four pounds; now the average is 9 pauls. Here is a rife in the price of 40 per cellt. Thofe whofe intc.efts, or whofe theories point that way, will contend that this mult be a moft pernicious evil, and that the confumers of corn muft fuffer greatly; it however happens, and well it deferves to be noted, that every hranch of induftry, commercial and manufacturing, has flourihed more decidedly fince that period, than in any preceding one, fince the extinction of the Medici. This is one of the greateft political experiments that has been made in Europe; it is an anfwer io a thoufand theories; and ought to meet with the moft ftudious attention, from every legiflator that would be thought enlightened.

No body can exprefs himfelf better againft the regulations in the corn trade, than Paoletti :-"Uno dei più gravi e dei piu folenni attentati, clbe in quefto genere fi fia fatto, è che ancora, da una gran parte dei poilitici governi fi fà all' ordine ncturale é certamente quello, delle refrizioni é dei divieti nel conmercio de'grani. Non ban conufiuto moftro il più orribile, il piax junefte quelles fortunate nazioni che ne feno fate infiflatc. Le pefti, le guerre, ie ftragi, le profirizioni dovunque aprirono il teatro alle loro tragcdie non arrecarono mai tanti danni al genere unano, quanto quefta arbitraria politica *."

It is remarked, by a very intelligent writer, that the carly declenfion of Tufcan agriculture, was caufed by the ill-digefted and injurious laws of reftriction and prohibition, in the beginning of the fixteenth century : the price of provifions was regulated, in order to feed manufacturers cheaply, not perceiving that the earth gave fcanty fruits to poor cultivators; that exalting the arts by the depreffion of agriculture, is preferring the thadow to the body. Wool was wanted for the fabrics, yet no encouragement given to breeding theep. Merchants and manufacturers compofing the legillative body, whofe interelts were concentrated in Florence; all the other towns, and generally the country, were facrificed at the fhrine of the capital: they made a monopoly of the L.evant trade, sud even of hip.building; wnich had fuch pernicious confequences, that in 1480, they

[^136]werc ob greateft the mear regulatio the powe in 1698 , effect of four tree the prohi

By the tions, on were abo time; as the plante redvenue vated on

Muden be expecte we find th tion to the

[^137]werc obliged to lay open the remnants of trades once flourifhing *. They fhewed the greatelt eagernefs to encourage the planting of mulberry-trees; yet knew fo little of the means of doing it, that they fubjected the fale of cocoons to a multitude of reftrictive regulations, and even fixed the price, and gave a monopoly of the purchafe $\dagger$; and even the power of fixing the price of filk was, by the government, given to four dealers; and in 1698 , the whole trade was fubjected to the price of one man; and fuch was the effect of thefe fine meafures, that a law was paffed forcing plantations of mulberries; four trees to every pair of oxen employed $\ddagger$. So utterly lubverfive of the intention will the prohibitory fyltem always prove!
By the edicts of 1775,1779 , and 1780 , of the Grand Duke, a mulitude of reftrictions, on the fale of cocoons and wool, and on the fabric of both filks and woollens, were abolifhed. A free trade in corn, oil, cattle, and wool, was given $\S$ about the fame time; as well as the rights of commonage deftroyed $\|$. By the edict of March 18, 1789, the plantation and manufacture of tobacco was made free; and, that the farmers of the revenue might not be injured, the benevolent fovereign declares he will buy all cultivated on the ufual terms, till the expiration of the farner's leafe 9 .

I am very forry to add to the recital of fuch an enlightened fyltem, a conduct in other refpects borrowed entirely from the old fcheol: the export of cocoons has been long prohibited; and even that of fpun filk is not allowed. But what is much worfe than this, the export of wool, about fix months ago, was forbidden, under the fhallow pretence of encouraging manufactures. Such a monopoly, againft the agriculture and improvement of the country, is directly contrary to the general firit of the Grand Duke's laws. The fame arguments which plead in its favour, would prove equally in favour of prohibitions, and fhackles on the corn trade; he has broken many monopolies: Why give anew one? The moft plaufible plea for this is the example of England; but does he know that of all the fabrics of that kingdom, this of wool is the leaft flourifhing; and precifely by reafon of the manufacturers having the monopoly of the raw material, and thereby being enabled to fink the price 60 , and even to 70 per cent. below the common rates of Europe? The total failure of this policy in England, which cheats the land of four millions a year, in order not to increafe, but to hurt the fabric, fhould plead powerfully againft fo pernicious an example. They fhould know that the raw materiais of our moft flourifhing fabrics are exportable; fome free, and others under low duties; and that wool is an exception to all the relt; and at the fame time, the manufacture that has made the leaft progrefs**.

Modena.-The export of wool is prohibited ; whercver this is the cafe, it is not io be expected that any exertions can be made in improving the quality; and accordingly we tind that all the Modenefe is milerably bad. The meafure is intended as a gratification to the manufactere; and when that poffeffes the monopoly, the wool is fure to be

[^138]worthlefis; which is the cafe here. They make in the mountains, fome coarfe things for the wear of the common people:

Parma.-There fis a fabric of earthen-ware at the city of Parma, to encourage which the import of all foreign ware is prohibited; the effect is, that the manufacture is contemptible, without an effort of improvement; it has the monopoly of the home confumption, which yields a great profit, and further nobody looks. It was juflly obferved to me, that with fuch a favour no flourihing manufacture could ever arife at Parma, as the advantage of the monopoly was greater. The policy of prohibitions has every where the fame refult.

## Sec't. VII.-Of the Priccs of Provifions, 1789.

Nife.-Bread, 3 . (the Piedmontefe fol is the twenticth part of a livre, or a flilling, and the pound is abcut one-tenth heavier than the Englifh.) Beef, 3 f. $8 \mathrm{dcn}$. . Murton, $4 f$. Veal, 5 . Butter, 122 . Cheefe, 11 . Bread, laft winter, 1 piccolin (onefixth of a (ol) cheaper. At thefe prices of meat, weighing-meat added.

Coni.-Bread $2 f .3$ dcn.; for the poor, $1 \frac{1}{2} f$. Beef, $3 f .2 \mathrm{dcn}$.
Turin.-Bread, 3 . Veal, $5 \%$. Butter, $9 f$. Cheefe, $9 /$. Brown bread, $21 /$; for the poor, $1 / .8 \mathrm{dcn}$. Nobody but the poor eats beef or mution.

Milan.- Beef, $13 /$. Cow ditto, $10 \%$. (the fol the twentieth of the livre, which is 7 Id.; the pound graffo is to that of England, by Paucton, as 1.559 is to 0.9264 ). Mutton, 10 !/. Veal, $15 /$. Pork, $18 \%$. Butter, $35 \%$. Cheefe, Lodizan, $42 \%$.

Codogno.-Bread, 4 oz .1 . Beef, $12 /$. per lb, Veal, $12 /$. Butter, $22 /$.
Verona.-Bread, $5 /$. per lb . of 12 oz . (equal to $\frac{3}{4} \mathrm{lb}$. Englifa). 20 Venetian fols equal to 6 d . Englifh.

Viccnza.-Beef, 14 . pcr lb. of 12 oz . groffo; this ounce is to the Englifh, as 690 is to 480 . Mutton, $13 f$. Veal, $16 f$. Pork, $17 \%$. Butter, 39 . Cheefe, $32 f$.; ditto of Lodi, 44. Hams, 44\%. Bread, by the ounce forile (which is to the groffo, as 1 is to 11), 6 .
Padua.-Beef, 14 . per lb. of 12 oz . groffo (which is to the Englifh pounci, as 9966 is to 9264 . Paucton). Mutton, 126 . Veal $16 \%$. Pork, $16 f$. Butter, $22 f$. Cheefe, $24 \%$.

Ficnicc.-Beef, ${ }^{1} 5$. per lb. groffo (to that of Englifh, as 0758 is to 9264 . Paucton.) Mutton, $1_{3}$ f. Veal and pork, 18 .
Ferrara. - Beef, 3 baioccliv ( 10 to a paul of 6 d .) per lb. of. 12 oz. Mutton, 3 baioc. Veal, 4 buioc. Butter, 9 baioc. Cheefe, 3 baioc.

Bologna.-Bread, 2 baiocchi per lb. (to the pound Englifh, as 7360 is to 9264, Paucton). Beef, 4 baioc. 2 quatrini. Mutton, 3 baicc. 4 quat. Veal, 5 baioc. 2 quat. Pork, 6 baioc. Butter, 10 baioc.; and in winter, from 15 baioc. to so batioc.

Fhorence.-The livre (of 8 ld .) is $\mathbf{1 2}$ grazie, or 20 foldi, the fol is 3 quatrini; and the pound is threequarters Englifh. Bread, 8 quatrini per.lb. Meat in general, 7 !/: Butter, 11 paul (the paul $5 \frac{1 \mathrm{~d} .}{}$ Enghilh.) Checte, $10 \%$.

Modena.-Bread, the beft white, $\frac{1}{4}$ paul per Ib. (the paml is 6d. Englifh; and the pound is to ours, as 6513 is to 9264 , or fonkething under twelve of our ounces). For the poor it is cheaper. Bread is thus dear, owing to the entrées and gabelle; a fack of four, of 70 livres fells at too livres. Beef, 12 bolognini per lb . Muton, $\frac{1}{g}$ of $n$ pau, or 10 bol. Veal, 13 bol. l'ork, 14 bol. Butter, 1 paul. Cheefe, 40 bol .

Laniflourg.-Bread, 4 . lor 18 oz. Meat of all forts, from 3 /. to $3 \frac{1}{3}$. for 120 oz. Checfe, from 4/. to $51 /$. Butter, $6 /$ for 12 oz .
from 201

Corn, 1789.
Piedmont. - Coni.-Rye, the eymena of 2 rubbio, or 50 lb . 3 liv.
Chentale. -Wheat, the eymena of 45 lb . aver. 47,3 livres $\mathbf{1}_{5}$ f. In common, 3 livres 15f. Maize, 2 livres.
Trein.-Maize, 2 livres. Wheat, 3 livres 10 . the cymena of 50 lb . Rye, 2 livres 1 c :
Mian.-Wheat, 34 lives the moggio of 140 lb .28 oz . Oats, 15 livres. Maize, 20 livres. Miglio, 18 livres. Rice, 44 livres.

Codogno.-Rice 5 livres the fara. Willow wood, 14 livres 6 braccio long and 3 braccio broad. Flax, $5^{3}$. for $50 \%$. ready for combing; $50 \%$ per lb.
Verona. - Wheat, the export prohibited when it exceeds 24 livres the fack ( 26 s .6 d. Englifh quarter). Maize, now 24 livres the fack, of 11 pef, of 25 lb .; common price; from 20 livers to 22 live ; has been fo low as 6 livres.
Venice.-Wheat flour, $8 \frac{1}{\int}$. per lb. Bergamafque maize, $24 \int$. the quarterole, of 6 lb . Common maize, 22 .
Bologna.- $\mathbb{T}$ he $r$, the corba, 24 pauls. Maize, 18 pauls. Oats, 12 pauls. Barley, 16 pauls. Beans, 18 pauls.

Florence.-Wheat, pauls the Aajo, which may in a rough way be called id. per lb. : this is 4 s .9 d . per Englith buthel, of 57 lb .; and 5 s . per bufhel, of good wheat. Before the free corn trade, it was on an average, at $5^{\frac{1}{2}}$ pauls. Beans, now $5^{\frac{1}{2}}$ pauls to 7 pauls. Saggina (great millet), 4 pauls the fajo. Maize, from 4 pauls to 5 pauls. Barley, 5 pauls. Oats, 4 pauls. French beans, 7 pauls.

## Wine, Fuel, Hay, Straw, Éc.

Nice.-Wine, 7 f. the bottle. Charcoal, $24 /$. per 100 lb . Wood, $15 /$. per 100 lb . Cbentale--Hay, from $5 \int$. to $8 \rho$. the rubbio, of 25 lb .
Turin.-Hay, 10 . the rubbio. Straw, the fame. Wine of Brenta, 7 livres IO . the 36 pints, each 4 lb . for the poor, 4 livres. Wood, 12 livres the load, of 200 pieces, 3 feet long. Charcoal, $12 \frac{1}{1}$, the rubbio. Candles, from $9 f$. to $10 \%$. Soap, $7 f$. Lime, $5^{1 / 5}$. the rubbio. isricks, 22 livres per thoufand.
Milan.-Iron, the pewd of 12 oz .5 . Charcoal, 100 lb . of 28 oz . 3 livres. Bricks, 30 livres per thoufand.

Mozzata.-Wine, ccamon price, 10 livres or 12 livres the brenta, now 6 livres.
Milan.-Hemp, ready for fpinning, tivre per lb . of 28 oz . Flax, ditto, 321 f . Oil, linfced, per lb. of $28 \mathrm{oz} .26 /$. Walnuts, 1 livre.
Verona.-Wood, 50. the pefo, of 25 lb . ( 18 lb . Englifh.)
Vicenza.-Candles, $20 \frac{1}{2} f$. Soap, 20/. Dutch herrings, $3 /$ each. Iron, $11 /$. groffo. Charcoal, from 5 livres in 8 livres the 100 lb . Coals, from Venice, $4 \frac{1}{2}$ livres the 100 lh . Wood, the carro. of 108 cubical feet, 22 livres; of oppio, walnut, \&c. the pieces the fize of a man's arn. Sugar, from 25f. to 35s. fotile. Coffee, 3 livres 6f. Chocolate, 31 lives or 4 livres; with vanilla, 6 livres or 7 lives. By the ounce groffo, which is to the ounce Englifh, as 6 go is to 480, is weighed fleh, butter, cheefe, candle, foap, \&c. By the ounce fotile, is weighed fugar, coffee, drugs, rice, bread, fill, \&ic.; it is as a is to 11 .

Ferara.-Wine, 1 baiocca the bocali.

Bologna. - Wood, the load, 30 pails. Faggots, 24 livres per two hundr d. No coal. Charcoal, $1 \frac{1}{2}$ paul the corba. Bottle of common wine, from 3 baioc. to a haioc.: common price of wine, from 20 pauls to 30 pauls the corba of fixty bocali. Sugar, 2 pauls 1 baioc. the whi. Coffee, 2 pauls 2 baioc. Of Moka, 3 pauls 5 baioc. Candles, 8 baioc. Wax ditto, 8 parlls. A footman with a livery, 50 pauls a month. A man conix, from 20 to 40 zecchins. An Englifh gentleman's table is ferved, nine in the parlour and five in the kitchen, by contract, for 20 fanis aday.

Florence.-'To plough a ftiora of land, 3 livres. Hay, 4 pauls the one hundred pounds (about 21.15 s a ton). Straw, 3 pauls per one hundred pounds. Wine, 8 grazie the bottle. Charcoal, ne hundred pounds, 4 pauls. Wood, the catafter of fix braccia long, one and a half broad, and two high, 28 livres. Rent of a poor man's houfe, 18 pauls.

Modena. - Wood, 45 livres the load, of three braccia long, three high, and three groad. Wine, 40 livres the twelve $p \subset f$. Candles, 20 bol. Soap, 15 bol.

Parma.-Hay, eighty $p f f, 150$ livres (the pefi twenty-five pounds, each three fourths of a pound Englifh, and the livre 21/2d. about 11. 9s. fer ton).

## Labour.

Nice.-Summer, 30 . (1s. 6 d .) Carpenter and mafon, $40 \%$. (2s.)
Coni--Summer, 14 . Winter, 10 . ( 6 d .) Mafon, 25 f.
Savigliano.-Summer, 12 . Winter, 10 . Farm fervants wages, about 100 livres, ( 51. ) a year, befide their food, which confilts of three pounds or four pounds of bread, according to the feafon, a foup maigre, a polenit. (a maize pudding), \&c. \&c. During the fummer, they add checfe and a little fimall wine, with a fallad; and in harveft time a foup of good wine, which they call mercendon, but they then work twelve hours a day.

Tiarin-Summer, $11 \int$. Mafon, 25f. Carpenter, $27 \%$.
Atiais to Pavia.-Summer, $22 \frac{1}{2}$. (8d.) Winter, $10 \mathcal{L}$. ( $3 \frac{1}{2} \mathrm{~d}$. ) Manufacturers, $4 \%$. Inkourrs pay 7 livres (at 7 d . Englifh) for a cottage, and a very little garden.

Mazoita.-Summer, 12 f. Winter, $10 f$.
Ledi- - Summer, $20 \%$. Winter, 12 . Harvelt, $30 \%$. Mowing, 20f. a day; a good hand mows five pertiche a day.

Codogno.-Weavers, $20 \%$.
Verona.-Summer, 30 . (9d.) Winter, 20f. (6d.)

- Vicenza.-Summer, $16 \%$ Winter, 14 . Mowing, 30 .

Padoua.-Summer, 25 f. and wine. Mowing, 2 livres ( 1 s. ) a day: wheat, 3 livres ditto. Winter, $16 \%$.
Venice.-Summer, from 3¢f. to $4 \circ \rho$. Mafon, 4 livres: the loweft in the arfenal, 3 livres a day.

Ferrara.-Summer, 25 baiocclbi (1s. 3d.) Winter, 12 baioc.
Bologna.-Summer, 12 baioc. and 2 bocali of wine, each three pounds four ounces. Winter, 10 baioc. (6d.) In harveft, to 20 baioc. Half a day, of four oxen and two men, 5 paoli (2s. 6d.) Manufacturers carn from 5 to 20 baioc. a day. The women that fpin hemp, 3 or 4 baioc.

Florence.-In the filk mills of Florence, they are now (November) working by hand, for want of water. The menearn 3 panis (1s. $4 \frac{1}{2} \mathrm{~d}$.) A girl of fifieen, 1 paul ( $5 \frac{1}{2} \mathrm{~d}$.) In the porcelaine fabrics of the Marchefe Cinori, common labour, 2 or 3 pauls. Painters, $4 \frac{1}{2}$ pauls. In furamer, $1 \frac{1}{2}$ paut and food. in winter, 1 pa:l and ditto. 'To plough a

## YOUNG'S TRAYELS IN PRANCE.

fiora of land, 3 livres. Threfhing corn by the day, I livee and food. Cutting corn, 18 grazie and food.

Modena. - Common labnir, i paul and wine. Carpenter and mafon, 2 pauls.
Pлѝма. - Printer's men, 3 papuls a day, ( $16 \frac{1}{2}$ d.)
Lanefourg.-Winter, ICf: and food. Summer, 20f, and food.
Poultry.
Nice.-Turkey, 7 livres. Fowl, 20f. Pigeon, 20f. Eggs, 12f. the dozen.
Turin.-Tarkey, $3 \mathcal{J}$. Fowl, $15 f$. Duck, ${ }^{2} 5$ f. Goofe, 25 . Pigeon, rof. Eggs, the dozen, $8 f$.

Milan:-Turkey, $11 /$. per pound. Fowl, $20 \%$. Duck, $32 f$. Eggs, the dozen, $26 \%$. Capon, $15 \int$ per ind.

Bologna.-T' 'hout four pounds 3雰 pauls. Pair of capons, ? 就chj. Eggs,

## Rife of Prices.

Milan.-In 794, a alecree of the Senate and Diet of Frankfort, canon four, that corn fhould fell at the following prices, no regard to fcarcity and abundance:-Moggio of oats 1 denaro; one of barlcy, 2 denari; one of rye, 3 denari; one of wheat, 4 denari; proportion 1080 to 1.

In 835, hogs, 20 dcnari.
In 857 , one pound of filver, lira, 20 foldi of 12 denari; one denaro, now at Milan, on comparifon of $=$ whtuent denaro of half a paolo, was as 1 to 90 ; for 90 denari make nalf a paol. The value of filver now to that of antient times, as' 1 to 12 ; therefore it is 1 to $1080{ }^{*}$.

In $97 e$,u, nuji al vino, 1 denajo; un moggio di frumento, 4 denaji; un carro di legna, - uenajo, equal to 18 livres, at 1 to 1080 †.

In 1152 , ryc and panic, 3 livres the morgio; 1 denaro equal to 130 ; confequently 3 livres is equal to 13 liveres icf. Io den. $\ddagger$

In 1165 , 5 co hogs, each 6 foldi; which now we muft call 65 livres each \|. Cart load of wood drawn by a pair of oxen, 12 denari; equal now to $6 \frac{1}{2}$ livres.

In 1272, I moggio of wheat, the common price 19 foldi. Millet, 12 joldi; and this to the money of the prefent time, is as a live for a fol; that is, wheat 19 livres and millet 12 livres 6 .

In 1315, 1 foldo for a mafs, equal to twenty now; ifiorino d'oro, 30 . now 60 livres, $2 s 1$ to 40 ; the fiorino d'oro ancient, and the prefent eecchino the fame thing. From this time to the prefent, the proportion of the muney of thofe times to the prefent, is as 1 to 4.9

In 1402, the fiorino o ducato d'oro, worth 42 foldi, equal to 6 livres 88 . at prefent **.
Buicgna. - The prices of every thing are now at Bologna from to to 15 per cent. dearcr than ten years ago; here attributed to the increafed plenty of moncy from a rife of

[^139]

Photographic Sciences

the price of the products of the country, hemp and filk felling much higher. Twenty years ago: hemp was at 30 pauls, new at 50 . And in Tufcany the prices of every thing doubled ince the free corn trade.

It is worthy of the reader's oblervation, that the general prices of provifions and of !living, as it may properly be called, have rifen perhaps as much in Italy as in any country in Europe; certainly more than in England, as I could fhew by many details if they were confiftent with the previty of a traveller. A. fact of fo much importance would admit of many reflections; but I hall obferve only, that this fign of national profperity (and-I believe it to be one), is not at all confined to the countries in the poffeffion of extenfive manufactures and a great trade, fince we find it in thofe that have none.

I hall not enlarge upon it, but barely hint that the poffeffor of a landed eftate in Lombardy hasjraifed his rents to the full as much in the laft ten, twenty, thirty, or forty years, as his brother landlord has in England, who has bleffed himfelf with the notion that manufactures and commerce have done more for him, than for any other fimilar clafs in Europe. It is very common in the Englifh parliament, to hear the deputies of our tradefmen expatiate on what the immenfe manufactures and commerce of England have done for the landed intereft. One fact is worth an hundred affertions: go to the countries that poffefs neither fabrics nor commerce, and you will find as great a rife perhaps in the fame period.

## SPAIN

## Cultivation, Esc.

THE vale of Aran ${ }^{*}$ is richly cultivated, and without any fallows. Follow the Gar. ronne, which is already a fine river, but very rapid: on it they float many trees to their faw-mills, to cut into boards; we faw feveral at work. I he vale is nuwne. but the hills to the left are cultivated high up. No fallows. They have little wheat, but a great deal of rye; and much better barley than in the French mountains. Infead of fallows, they have maize and millet; and many more potatoes than in the French mountains. Haricots (French beans) alfo, and a little hemp. Saw two fields of. vetches and fquare peafe. The fmall potatoes they give to their pigs, which do very well on them; and the leaves to their cows $;$ but affert that they refufe the roots. Buck-wheat alif takes the place of fallow, many crops of it were good, and fome as fine as poffible.

The whole valley of Aran is highly peopled ; it is eight hours long, or about forty miles Englith, and has in it thirty-two villages. Every one cultivates his own land. A journal of meadow fells in the valley for 800 livres irrigated, but by no means fo well as in the French mountains, nearly an arpent of Paris, which is fomething more than an Englifh acre. The lower arable lands are fold for 500 livres or 600 livres; the fides of the lhills proportionably; and the higher lands not more than 100 livres. Their crops of all forts vary from two and a half to three quarters Englifh the acre. Hay harveft no where begun.

[^140]The mountains belong as in the French Pyrennees, to the patifhes; each inhabitant Has a right to cut what wood he pleafes for fuel and repairs, in the woods afigned for that purpofe; others are let by leafe at public auction for the bencfit of the parifh, the trees to be cut being marked; and in general the police of their woods is better than on the French fide; when woods are cur they are preferved for the next growth.
Have fcarce any oxen; what few they kill they falt for winter. Taxes are light; -the whole which a confiderable town is affeffed at b:ing only 2700 livres, which they pay by the rent of their woods and paftures let : but if calculated by tailles, houfes, \&cc. and including every thing, the amount would be about 3 livres a-year, on a journal of 600 lives value. This is the proportion of an acre of land worth 3 ol. paying 3s. a year in lieu of land and all other taxes.
Coming out of Veille, fee to the right fome of the moft foney land I have ever beheld, yet good hemp and buck wheat were growing on it. In the hedges many of the plants common to them in England. The paftures on the mountains good quite to the fhow; but the low meadows not watered with the attention given them by the French in their Pyrennees. Pafs feveral of the thirty-two villages of the valley of Aran; population very great for they croud on each other; and this refuits here from the divifion of property, and not from manufactures, which have more than once been fuppofed the ouly origin of great population.

Much nillefolium here, and other plànts common with us. Plough with bullocks;all we faw pale reddifh or cream-coloured, and with horns:

No wood at the top, but pafturage and rocks of micaceous fchiftus; met a great herd of dry cows and oxen cream-coloured. It is semarkable that a pale reddih cream-colour holds from Calais quite acrofs France hither, with very little variation.

Flocks of heep and a penn for oxen and cows-the latter milked for cheefe. Plough with oxen in yokes and bows as inEngland, and not yoked by the horns as in the fouth. of France. Come to fallows (which is a point of worle hufbandry than we have feen for fome time), manuring by affes loaded with bafkets. The trees here (pines) are finer than on the necucu inde; they are all cut for the Touloufe market, being carried over the mountains and floated down the Garronne; from whence we may draw conclufions on the compaxative deniiand of the two kingdoms. Land fells here from 400 livres to $5 \approx=$ livres the journal.

Come to the valley d'Efteredano, where wheat and rye are cut. Every fcrap on the defcent is cultivated; an extenfive favage view of mountain, with patches of culture fcattered about the declivities: but fallows are found here.

Pafs Rudafe, on the top of a rocky mountain, come prefently to vines; figs, and 1 fruit trees; fnow in fight. As we defcend to the vale, every fpot is cultivated that is capable of being fo.

Crofs the river to Realp; about which plàce is much cultivation; as the mountains tlope more gently, than hitherto. Hedges of pomegranates in bloffom. The town is long and has many fhops. Hemp is the great object in it ; of this they make ropes, twine of all forts, bags, and have fome looms for converting it into cloth. Corn and hay all carried on panniers.

Pafs Sort, a vale fpoiled by the river, which exhibited the depredations of the Italian rivers, fo excellently defcribed by my learned friend Mr. Prof: Symonds.

Hitherto, in Catalonia, we have feen nothing to confirm the character that has been : given of it ; fearcely any thing has a tolerable appearance. It is much to be queftioned,:from the intelligence, whether they have any fuch a thing as a farmer who rents land: only patches of property; no maize, and French beans very poor; fallows every where
on the hiils, and yet the rye after them miferable. Old vineyards of late quite neg; lected, over run with weeds, yet the grapes of a fize that hew what the climate is; they are now as big as peafe. In the towns every thing as bad; all"poor and miferable.

Rifing up the mountain, which is all of pudding fone, we find $i t$ is all cut into terraces, fupported by many walls, with rows of vines on then for raifins, not wine, mulberries, and olives: but here are fallows, and I thought I perceived traces of thefe hills having been formerly more cultivated than at prefent.

Pafs Colagefe. Come to a regular vineyard; the rows twelve feet afunder; the intervals alternate fallow and corn. The features of the country now begin' to relax, the mountains are not fo high, and the vales are wider. The leaves of a good mulberrytree fell for 44 f . or 22 d . Englifh.

Many walnut-trees full of fruit. , Much is tithed by the church : fee much corn threfhing every where.

Crofs two pieces that had rye laft year, left now to weeds, and will be under rye again next year ; an extraordinary courfe. Mulberry leaves' never fold, but if fo, the price would be about $4 \frac{1}{2}$ livres a tree. Cows all red. Land in the vale fells from 201 . to 2gl. Englifh the journal. The road leads up Monte Schia, the whole of which confifts of a white ftone, and argilaceous mari. Snow on the diftant mountains.

Look back over a great prolpect, but totally to the cye without wood. Crofs a hill to another great vale, where is much, and fome rich cultivation, as the hills are not fteep, but lloping.

Pafs in fight of St. Roma, near it the road leads by a fmall round lake, but it is on very high grouud, no hills near it; it is faid to be very deep. Here they were hoeing a barley ftubble, juft ploughed, to form ridges, on which they fow French beans. This diftriet is called that of fhells: millet juft up; pafs a large wafte almolt entirely covered with lavender ; corn on a part of it ; but after a crop, they leave it to weeds to recover again. Here alfo they practife the alternate hufbandry of one bed, or broad-ridge, corn, and another fallow. Plow with cream-culouret oxen. In breaking up the waftes here, they cut the fontaneous growth to dry, then pile it into neaps with the earth pared and placed on it ; this is all burned; wi: fug heaps ready to be burned to the quantity of five hundred loads an acre: but the crops are wretched for many miles, fcarcely the feed again.
In our inquiries, meet with fome traces of what in Fr :re called metayers, that is, a fort of farmers who cultivate the land for half the pr: ; the landlord taking one half, and the tenant the other.

For two hours and a half, pafs a wafte mountain covered with Thrubs, and feattered with ever-green oaks, and lower down the evident remains of old terraces, which have once been cultivated, but now over-run with weeds. To Fulca; the ploughs here have all long beams, as in the fouth of France, which reach to the yokes of the oxen, and confequently they have no traices; two fmall fticks form the mould-board; they plough all tlat.

In this diftriet not one acre in an hundred cultivated, all rocks, fhrubs, and', weeds, with patches of wretched oats on the mountain fides. The road leads up one which is all of Atone, covered with rofemary, box, brambles, \&cc. At the top break at once on the view of a deep vale, or rather glen, at the bottom of which a muddy river has fpoiled the little land which might have been cultivated. The hills are feep, and all is cultivated there that could be fo, but the quantity very fmall.

Defcend into a very rich vale, and to the town of Paous. There we faw many perfons winding filk, the cocoons were in warm water, and wound off by a well-contrived reel, fomething different from thofe ufed in France.

Priccs.—Bread, 3 /. per pound, of twelve ounces. Mutton, $6 f$. per pound, of forty-eight ounces. Pork, $15 f$. per pound, of forty-eight ounces. Bottle of fweet white wine, $5 \int$. Bottle of fweet red wine, $2 f$.
Here they were threfhing, by driving mules around on a circular floor of earth, in tive open air; a girl drove three mules round, and four men attended for turning, moring away the ftraw, and fupplying the floor with corn. Their crops are all brought home by mules or affes with panniers ; met feveral ; they each carried fix fheaves, equal to twenty common Englifh ones; where roads are bad, this is the only way in which it can be done.

Pafs a great wafte of argillaceous marl, in which are ftrata of taic : much of it a foft white rock; the ftrata in fome places clear and tranfparent, fhining, break in thin flakes; the country for many miles wafte, fo that there are not more, I guefs, than one acre in two hundred cultivated.

More deferts for feveral miles. Some alternate fallow hulbandry between vines, and the crops fo contemptible, that they produce hot more than the feed. Pais fome vineyards furrounded on every fide by deferts; no water, and yet the vines and grapes are of the moft beautiful luxuriance; from which I conclude, that immenfe tracts of thefe .wafte lands might be applied with equal profit, if there were men and capitals enough in the country.

Meet a farmer, who pointed out to us a piece of land, containing exactly a Catalonia journal, from which it appeared to be pretty nearly the fame meafure as an Englifh acre. They fack their corn by the threfhing floor, drive mules, \&cc. around upon it, and draw the ftraw, when cleared, with ropes by a mule to the fack, in which it is depofited for winter ufe.

To Beofca, moftly defert hills, but fonse brond vales, which are cultivated; about that place many mulberries, vines, and corn, but all the laft gained by fallow. A farmer here pays a Ceigneur, who lives at Barcelona, 2000 livres a year for his farm, which is reckoned a large one. Through all this country, they collect from every wafte fpot amongit their cultivated lands fhrubby wood and weeds, with which they burn heaps of clods and earth, and fpread the athes on the fallow as a manure for corn.

There feems every where to be inclofures fufficient for afcertaining diftinct properties, but not for fecurity againt any fort of cattle. No where any wood to be feen, except fruit trees, olives, or ever-green oaks, which are almoft as fad as the olive; altogether nothing for beauty of landfcape. The hills all rocks, and the vales vines, fcattered with thofe trees. Some new plantations of vines. Towards Toorà, the country is much more cultivated; the fides of the hills covered with olives. The vale has many mulberries, and much tillage; and for fome miles paft there are many fcattered houles, which has not been any where the cafe before: remarked one great improvement, which was a vineyard, with vetches fown in the alternate hulbandry between the rows, inftead of a fallow, to be followed by corn.

Leave Calaff.-Crop and a fallow ; fome vetches; much cultivation; and better corn than we have in gencral met with; fome fown in fquares, as if in clufters, but could not learn the fact. In fome parts many vetches, inftead of being fallow; they are planted by hand, and wheat fown after. The foil, a good adhefive loam, brown with a reddifh hue, better than the white land, which travelled with us lo long yefterday: molt of the corn cut.

Great wafte, and mount a hill, from whence an extenfive view; all the country alike, no wood; and not one acre in ten cultivated. Pafs four or five cream-coloured bullocks, and one or two blood-coloured. I note them, having feen fo few in fo many miles.

French beans, eighteen inches by twelve; a good deal of cultivation; but valt waftes, and country of a rocky, favage afpect; many pines, but poor ones. Within four hours of Montferrat, vines at fix feet afunder, the firt we have feen planted in that manner, which fhews the proprietor content with having one product only on the ground.

Waftes continue; not one acre in a hundred cultivated. All broken country, and fcarcely any vales of breadth.

At the botton we came again to olives. Meet two very fine cream-coloured oxen, which the owner fays would fell for about eighteen guineas; feeds them with fraw, but gives dats or barley when they are worked; they are in fuch good order, that the ftraw muft either be much more nourifhing than ours, or their work very light indeed. From the marks in the pine-trees, conjecture that they draw refin from them.

Pafs Orevoteau, where s a hedge of aloes about four feet high. A gradual defcent for fome time on a wretched foney defert, of nothing but aromatic plants, thin, and fcattered with the difmal ever-green oaks, more dull and difagreeable, if poffible, than the olives.

Near Efparagara, vines at five or fix feet, which cover the ground; red loam, mixed with ftones. This town is the firf manufacturing one we have met with, or which feemed to be animated with any other induftry than that of cultivation. The fabric is woollen cloths and ftuffs. Spinners earn 6f. a day, and food. Carders, i1f. They have alfo many lace-makers, who earn $9 \int$. a day. Thefe are Spanih money; their fol is fomething higher than the French, which is our halfpenny.

Fallow every where, yet many of the ftubbles full of weeds. Corn yet in the field, and poor. Some vines promifcuous, at four feet; fome in rows, at fix feet. Country difagrecable; many beds of torrents, without a drop of water, and fhocking to the eye. Apricots, plumbs, melons, \&c. ripe, fold in the ftreets, from the open ground. A pair of very fine cream-coloured oxen, 24 l. Englifh: the amazement is, how they can be kept in fuch order, in a country fo arid and defert, and that has not a pound of hay in it.
The country now is far more populous and better built : many vines and great cultivation, but with fallows. The foil all a frong red loam; a way cut through a vineyard of this foil, which fhewed it to be feven feet deep; at the bottom was a crop of fine hemp; indeed the foil to the eye was as good at the bottom as on the furface.
They plough with mules abreaft, without a driver, having a line for reins, as in England; the bean of the plough is long enough to reach to the circular iron, about nine inches under the yoke, to which the mules are collared. The yokes are like thofe in which oxen are worked, only with collars inftead of bows. This method, which is very common in France alfo, has both its advantages and difadvantages; it will be a light draught, when the pitch of the beam is proportioned to the height of the mules, but if the fhare mult be raifed or lowered according to their height, it will be bad both for the land and the animals. 'To have the line of traction, from the draught to the body of the plough, is not quite correct, but it is much better than the common plough beams, made either too long or too fhort: in this cale the length of the beams is afcertained; but the chief origin and intention of it is chenpnefs. The mould-board of the plough here has no iron on it, and is fixed to the left fide; the fhare is double, as if to work with a mould-board on cither fide; this is a great fiult; only one handle. It
evil.

Hem of wing irrigate cultivat hills, al there is

The the pro in whic
did its work tolerably. The wheat in fheaves is yet in the field, but the fubbles all ploughed, a narrow flip only left, on which the wheat remained: this flews good atten.tion to the fucceffion of crops.

Prices of Provifions, Eoc. at Barceiona.
Bread, $4 \mathcal{S}$. and a fraction per pound, of twelve ounces. Mutton, $22 \frac{1}{2} \int$. per pound, of thirty $\cdot f$ ix ounces. Pork, $45 /$. per pound, of twelve ounces.
That of the poor people very little lefs; but they buy the foldiers' bread, which comes cheaper; they live very much on flock-fifh, \&c.

Hams fometimes 3 or 4 pefettos, or fhillings, per pound, of twelve ounces. Wine, $4 f$. or 5 f. the bottle.

Common day wages are $25 /$. French ; fometimes rife to $33 /$. ; the very loweft, $22 \frac{1}{2}$. Stocking weavers earn $33 /$. .

Cream-coloured oxen in carts, their horns fawn off to the length of fix inches, two yoked abreaft, and one mule before. A pair of good oxen fell at 251 . Englifh. Vale from a quarter to half a mile broad.

All the corn in the country is left in the field till it is threfhed, and they fay it never takes hurt. A hill cut through, thirty feet deep, for the road, and walled on each fide. The fea clofe to us on the right all the way; and the vale I fpeak of is between that and the hills: fome of them are fandy, and planted with vines, which yield per journal four charges, the charge felling at 13 or 14 pefattos, and a journal for 300 Spanifh livres; this is the journal, felling for 35 l .8 s . 9d., and producing about 21 . $14 \mathrm{~s} .$, very inadequate to the value of the land; there are grcat quantities of fruit trees of all forts.

At Gremata; after which a vale for a mile and a half, or two miles, the foil fandy, and much cultivation. On the hills many vines. Some corn without fallows; it is all cut, but not carried, and the land all ploughed.-Vines.

A wheat ftubble ploughed up, and the land fown with buck-wheat, which is now up.
Part of a vale highly cultivated, but a great part wafte, though on the fame level to the eye, but much fpoiled by a torrent, for a quarter of a mile broad; it is entirely ruined, yet there is no water now, nor any channel, all being level; in fuch cafes as thefe, and indeed in moft others, induftry, united with good capitals, would remedy the evil. Eight men working a fandy field, by way of digging with an inftrument very common here, a fort of hoe, fixteen inches long, and nine broad, with a handle fo fhort, that the body is bent very much in ufing it. Vale two or three miles broad, and unites with an opening in the mountains. French beans often under maiz, but that crop much thinner, and nothing gotten by it. Some very fine orange-trees, near twenty feet high, large ftems, and thick round umbrageous heads. All this vale before Maturò is under a very fine cultivation. They have much lucern; and an article of attention I had not before obferved, was, tubs made on purpofe for carrying the riddance of privies and urine to their fields.

Hemp yields ten quintals the journal. Vineyards give threc, four, and five charges of wine per journal, and fell for 200 or 300 Spanifh livres the journal: other lands, not irrigated, from 100 to 150 livres. For above a league vines on fand; very little other cultivation; the vale is two miles broad; fells at 150 livres Spanith the jourmal; on the hills, and near the fea, vines; mountains cultivated imperfectly aluoft to the top; but there is much wiste. Houfes feattered every where.

The cultivators are motaycres, that is, they pay a portion of the crop inftead of rent: the produce is divided into three parts; two for the farmer, and one for the landlord, in which cale the farmer is at every expence whatever. Some vineyards are let at from

15 to 40 pefettos ; I have not met any where in France with vineyards let, for they are all in the hands of the proprietors. Land in gencral lets from is livres to 35 lives.

Come to a great cultivated vale, but no water, or but little; maiz, fix inches to two feet high, in fquares, on land from which the corn has been cleared; the account we received. Ifufpect the higheft to be previcufly fown in a bed, and tranfplanted as foon as the land was ready to receive it; millet alfo after corn; the foil a rich black loam.

Pafs Malgra. Vale two or three miles broad; vines and cultivation. A great deal of fine maiz, called all over Catalonia Milic. I found the fame name for it afterwards : in Langueduc, where they fpeak the fame language as the Catalans. Lets for 15 livres, ons with another. Maiz is fown, grain by grain, after corn; the foil a granite fand. A thich woodland, all inclofed. Pomegranates make very fine thick hedges. Much wood and vines-no watering nor fallows-houfes fcattered every where-foil fandy, but geod. Very hat ploughire-cream-coloured oxen. Inclofures become ftill thicker. Poplars planted over fome fields, and vines trained to them, and from one to another: reading accounts of this-huibandry in books, I had formed:an idea that it mult be fin. gularly beautiful to fee feltoons of vines hanging from tree to tree, but there is nothing either pleafing or flriking in it, and the wine is never good for want of fun, and owing to its being dripped on by another, plant, which robs it alfo of its nourihment; corn is fown under them, which is damaged ftill more. Broad flat vale, formed of the ruins of granite.

Pals for feveral miles in a vale, where the country has different features: It is all inclofed-much oak -a few vines, trained up trees. Soil bad. Two poor bits of meadow I noted, for they were the firft I had feen bad in Spain.. Many fields over-run with fpontaneous rubbifh. Maiz and haricots cultivated here togetier, as in many other quarters. Some fcattered houles. Much wafte on gentle hills that have vineyards on them, and would all yield that production, if planted. . A floping hill of.granite fand, well cultivated. Vines, trained to oaks and poplars, with many fruit trees. The price of wheat here is 15 or $16 p \epsilon f a t t o s$, for the $3 \frac{1}{2}$ quarterons, weighing five and a half quarters, and each quarter twrnty-fix pounds; this is one hundred and forty-three pounds of wheat, cofting 15 pefttcs , which will be 50s. the Englifh quarter: Barley half the price.

Come to a great wafte, fpreading over many hills, for feveral miles; to northern eyes a moft extraordinary fene. It is a thicket of aromatic and beautiful flowering Girubs, with very little mixture of any that are common with us. Large fpreading myrtles, three or four feet high, and covered with their. fweet-fcented flowers, jeffimines, bays, and other flhrubs, with which we crowd our fhrubberies, are here worfe muifances than heath with us, for we faw neither fheep nor goats. View after this a large plain, bounded by mountains, and fcattered every where with houfes-a good deal of cultivated inclofure; but on entering find much wafte in this plain. Vines now form hedges, and furround the fields. Come now to cattle, of which we have li: therto feen very little; faw feveral fmall flocks of theep, moft of then entirely black, fone without horns, others with, and curling round the ears. All the oxen cream. coloured, except two, with the necks and end of their tails black; all well made, and in fine order. Large breadth of corn, and fome fields left apparently to grafs. I fufpect fallows.

The country fill thickly inclofed, fome pieces of grafs, and a few of meadow, which are not burned, hot as the climate is. More cattle here than we have yet feen. They keep their theep and hogs (all black) together, and the girls, \&cc. who attend them fpin hemp.

Pafs Goronota, and many waftes for fome miles on gentle flopes; the foil good, But covered with aromatic fhrubs; no cattle feen in any of them. Level vale with much culture, and much pafture: many large oaks on old double banks, alfo tall poplars; all inclofed, and like many parts of England, as maize and vines are not here; a thick woodland. In this part the foil is a deep, rich, brown, adhefive loam ; the corn not carried, but the land ploughed and fown with French beans. They have peafe, beans, maiz, hemp, \&c. without watering, and, that circumftance confidered, the crops are good. The ploughs are drawn by cream-coloured oxen, guided by a line, and without a driver. Sone meadows without water, with many quails. They are metayers, paying the landlord one-third of the produce, but not of plang, which is for oxen; ploang is their name for clover; and this the firf time we met with any information about it. It puzzled us much to difcover what phang could be; but I found by accident a plant of trifolium alpeftre, and, fhewing it to a farmer, found, by his defeription, that it was clover (trifolium pratenfe), beyond all doubt. They were now ploughing a wheat. ftubble, in order to fow it directly with phang. Their culture of it is fingular, and very good:- it is mown for hay once in the pring, yielding a fine crop; the land directly ploughed and planted with monget, which is their name for fallow:hoeing crops, fuch as French beans, millet, peale, \&c. This monget is kept very clean, and wheat fown after it, which is off foon enough for a fecond crop of French beans. A courfe with. them is,

> 1. Maiz:.
> 2. Wheat, and fown after with clòver.
> 3: Clover and French beans.
> 4. Hemp and French beans.
> 5. Wheat and millet.

Vines are here planted in efpaliers; finall poles are laid on pegs driven into pofts, which fland at fix or eight feet afunder, and the vines trained to them; corn is fown between the rows; good land; yet walte join it. Many hedges are planted with the yellow-bloffomed prickly acacias which anfivers' perfectly well for that purpofe.

Within four miles of Gerona humbandry continues good. Trees have vines trained to them. Much cattle, mules, horfes, fheep, and hogs; kept in the ftubbles; fine cream-coloured oxen in the ploughs: The foil fine deep reddifh loam. Now reaping a crop of fquare peafe, three feet high, flout as lnpines, with pods like that plant; all here an inclufed woodland. Hemp fix feet high; and not watered. To the left of Gerona mountain beyond mountain, brenthes of the Pyrenees; and very high, but feemingly a good deal of cultivation on thetia. Fine rich deep foit in the vale before Gerona; the fime hubbandry:-crops of coin very fine, not carried, thourh all the land quite green with young millet : this extreme confidence in the climate fhews clearly what it mult be.

A journal of the vale land fells for two hundred Spanifh livres, or 23l. 12s. 6d. and lets at 8 -lisres to 10 livres, that is, Il. is. Englifh; bur none of it is irrigated. They do not tithe either lambs or other live fock.

## Price of Proosifions at Gèrona:

Bread, 3 . per pound of twelve ounces; and excellent.Beef, 109 . Mutton, $6 \rho$.
Pork, 8 f . per pound of fixteen ounces. . Cheefe, 20 $\%$ per pound of twelve ounces.

They have no mutton or beef, except what comes from France.
The poor live chiefly on vegetables and a little pork; their labour 20f. a day.
Leave Gerona.-Fine maiz, planted thin, with grod cabbages under it: this is a fyftem which promifcs well, but cabbages here are only for people, and not for cattle. Three meafures and a half make a journal, and a pair of oxen plough three meafures a day; bay their oxen in the French mountains at a year old. Their hills are either wood or cultivation, but mixed with part rocky walte. Crofs fome hills which con. tain a great deal of walte, but fee a broad valley to the right ; all inclofed and well cultivated; to the eye rich; houfes feattered.

At Marenia, iron $4 f$. or $5 \int$ : per pound of fixteen ounces. The road up a hill; twenty or thirty women giving it a winding direction, by levelling earth; on inquiry, find it is done by the communities, and that they earn nothing; hence it is by corvces. Enter a wood of cork-trees, many of them barked half way up; the texture of this tree is remarkable, it feems formed of layers of bark, one under another.

The country now generally cultivated; the fields ploughed, but have had a crop. Some well-planted olives, ploughed under. All the corn we fee is wheat; as to barley, it was cut and threfhed the firft week in June, and the land ploughed and fown with fomething elfe.

From Gerona to Calderoles, three hours and a half, generally cultivated; but waftes fcattered, and mountains every where in fight. The courfe here is,

> 1. Barley, left to weeds, \&c. for cattle.
> 2. Wheat and millet, or French beans.
> 3. Oats or barley, and maiz for cattle.

No fallow, or phang; French beans are called phafols.
Leaving Calderoles, the country all cultivated; many olives, and under them vines; all well inclofed; no wafte.

Pafs Baferà: a torrent has here deftroyed a vale half a mile broad; pafs it by a ferry. Country now ncither fo rich nor fo well cultivated, as on the other fide of that town. Maiz planted at fix feet, and two rows; Freach beans in the intervals; olives fcattered, but the maiz very poor under them. Country more poor and foney, yet but few waftes. Olives and many tall pines. Wafles with pines; the fea two miles to the right, and the ridge of mountains in the front, feems to end abruptly at it. Many vineyards, and planted with olives; all under culture, and well inclofed with acacia hedges; feveral with ditches to them.

The vale of Figuera bounded finely by the mountains; many olives and vines, and a good deal of corn, but neither foil nor cultivation equal to what have paffed; the former is more of a flone brafh. Reach Figuera.

The 2 if left Figuera, and breakfalted at Jonquicras. Enter the bottom of the mountains very foon; pafs through many olive grounds; the trees are large, and ftand about liateen feet afunder ; foil good red loam, but foney ; no watering. i quart of oil, two and an half pounds of twele ounces, fells, retail, for a pefetto. Olives bear only every other year. Our guide tays, he knows a tree in Arragon, which yields from fifty prunds to eighty pounds tor a crop. In thefe twelve miles to Jonqui. ras, sines fcatered all the way on the hills; fome few olives; many cork trees, latterly: much cultivation, but a good deal of wafte alfo. French beans in rows, and ploughed between with oxen. Soil all the way a granite fand.

The firt leading feature of the minutes is the inmenfe quantity of mountains and other waftes, which are found in every part of Catalonia. We travclied about three
hundred and forty miles through the province, and may conclude, from what we faw, without any danger of being deceived, that not one acre in an hundred is under any fort of cultivation ; in fuch grofs calculation one would take care to be within the truth, and if 1 faid not one in one hundred and fifty, I believe 1 thould ftill be on the fafe fide of the afferticn. When the fuct is connected with the reputation which the province has of being, next to Valenia, the beft cultivated, and, without exception, the moit induftrious in Spain, conclufions very unfavourable to the ftate and policy of that monarchy, muft neceffarily be drawn by every reader. The advantage of poffeffing the fecond city of the kingdom, a place of great trade, and containing one hundred and twenty thoufand fouls, is very confiderable, and muft have done much to bring the province even to its prefent fituation. At the fame time that thefe boundlefs waftes were offending the eye in every quarter, we could, in no part of Catalonia, condemn the people for want of induftry; on the contrary, they feem very well to merit the character they have gained : the activity which is feen through all the towns upon the coaft, and they are very numerous, and very populous, can hardly be greater in a country fubmitted to numerous feftival days by its religion: the fifhery in all thofe places is confiderable, and attended to with an unabating fipiri. The women and children make lace; and wherever the foil is good, or water conducted, cultivation is in a high ftate of perfection. Even in the interior country, we faw every where figns of much induftry; and, amidft a poverty which hurt our feelings, we generally faw fomething to convince us, that it was not the fault of the poor people that greater exertions were not made. I hofe interior parts depend entirely on their agriculture; and the height to which they climb the mountains in order to find a fpot tolerably level for cultivation, fhews that their minds and bodies are ready for laborious exertions, whenever there is a profpect of enjoying the reward. With fo much induftry among the people to what are we to attribute the waite ftate of their country? The inquiries ncceflary for a complete inveftigation of fuch a queftion were not to be made by travellers: a longer refidence would have been neceffary, but a few circumflances thould be mentioned, which are probably connected intimately with it.

Firft, the poverty of the people in the interior country is flriking ; their towns old, ill built, dirty, and wretched; the people ill dreffed, and generally deficient in the wealth beft adapted to fuch a country, cattle: in the higher Pyrenees this is not fo much the cafe; they have cattle, and are in every refpect in a better condition, owing to the plenty which great commons give in a country of good pafturage, and where wood is in profufion. The number of fheep we faw in general was not the twentieth part of what the wafts, bad as they are for that animal, would maintain; aud that of goats fo fmall as to indicate the fame thing ftrongly. This poverty not being the effect of a want of induftry, mult refult from a government inattentive to their interefts, and, probably oppretlive; and from a total want of the higher claffes refiding amongft them. Till we came to the rich country near Barcelona, that is to lay, in about two hundred miles, we faw nothing that had the leaf refemblance to a genteman's country feat; thofe who have eftates let in it are abjent ; thofe we heard of live at Barcelona; and the whole country is thus abandoned to the very loweft clafles, and the wealth and intelligence which might contribute to its improvement, diverted into dittant and very different chanmels; this is a great misfortune to the people, and which will long contribute to keep things in their prefent ftate. To the fame caufe it is owing, that the roads, fo effential in the improvement of a country, are left in a ftate which precludes the ule of wheel-carriages ; which, with the unnavigable ftate of all the rivers, except for rafters of timber grofsly put together, cuts off that fyttem of reciprocal purchafe and
fale, that interior commerce, which is the beft a country can poffefs. Thefe are alfo evils which the refidence of men of fortune is the mof likely to correct, and much above the power of peafants and mountaincers. With all thefe difadvantages there are ftill circumftances which make it furprifing that more land is not cultivated. Vines and olives fucceed very well on the poorelt and moft arid foils; their growth and luxuriance in fpots furrounded on every fide with waftes, and in foils not better, yield a conviction, which leaves no doubt, that the adjoining hands would, if planted, give a fimilar produce. The profit of doing it will not be fufpected, if the revenue and value of cultivated lands on comparifon with the waftes be contidered. Two points here force themfelves on our notice ; firft, the want of capital for undertaking the work; and, fecondly, the wafte being in all probabiliy in poffeffion of abfent landlords, who wifl not give fufficient encouragement to others to do what they neglect doing themfelves.

Where cultivation climbs up the mountain fides, it is by fmall proprietors, who purchafe of the communities of the parifhes the property of the land; wherever the foil is in hands that will fell juft the portion which is in the power of a man to buy, great exertions are fure to be the confequence. There is no fpur to induftry fo great as the poffeffion of a piece of land, which, in a country where the means of fubfiftence are contraeted for want of more diffufive and more various employments, is the only comfortable dependence of a man, who wifhes to be the father of a family. The parih that will fell a wafte at a moderate price, will be almoft fure to fee it cultivated; but the great lord, who rarely, or never, fells any of his property, unlefs ruin forces him to fell the whole, is equally fure of perpetuating the deferts, which are the difgrace of his country. He would let them, and perhaps upon advantageous terms; but it demands confiderable capitals, and a very enlightened ftate of agriculture, for fpeculations of that fort to take place; the only capitals, which can be found in Catalonia, for fuch a purpofe, are the hands of men willing to work; aided, perhaps, by fome little favings, which have originated from the view of waftes that are to be purchafed. All that has been done, and it is much in fome diftricts, is to be traced clearly to its origin.

That thefe obfervations are juft, will be confirmed by the prices of all the neceffaries of life in that province; they have nothing very cheap; every article of confumption is fomewhat dearer than in France; and it is more than once noted, that all the meat they eat comes from that kingdom. Their mules are bred in France, and great imports of cattle and fleep are common. This is a direct premium upon every fpecies of rural induftry, and its not having operated greater improvements, mult be owing to the caules on which I have touched.

To cultivate their waftes, to fpread irrigation wherever it is poffible to carry it, are ahe two firft objects in Catalonian improvement; all others are inferior; they have, however, fome which ought not to be neglected. Their wine and oil are objects of the greateft importance; for it is by thefe, probably, that all the lower waftes fhould be improved, which are rot capable of irrigation; to improve the manufacture of thefe two articles, in fuch a manner as to increafe the demand for them, would be one great means of accelerating the cultivation wanted; they are both bad; the wine is thick, muddy, and poifoned by the borachio; and the oil is gencrally rancid; both would otherwife be excellent; to remedy thefe defects, and force thofe commodities, by their merit, into commerce, would tend powerfully to enrich the province; and to enrich it in the very beft method, by one, which would, at every ftep, accelerate its improvenent. Wool is another commodity, which is of confiderable value, and might be produced in in infinitely greater quantity than at prefent.

The
the m I atten rough of all travel affordi ideas f ignora how to in fimi

The reader will not expect from a traveller, who throws his ideas on paper amidt the movements of a journey, that correct attention which leaves nothing uitouched; I attempt no more than to glance at fome prominent features, and to delineate them roughly; to draw into one point of view, the conclufions which ought to be the object of all ufeful travels, it would be neceffary to fee much more, to refide longer, and to travel with greater advantages than I poffefs. 'This little journey has been very far from affording fuch materials, but it has not to me been barren; it has removed many falfe ideas from my mind, which the writings of men, who have either been inattentive to, or ignorant of agriculture, had placed there, reintive to this province; and I know better how to appreciate the praifes or condemnation which are given of this or other countrics, in fimilar climates.

There are many perfons who travel for enjoying the beauty of profpect; and there are others, who feek for $a$ refidence better adapted than their own, to their health or their fortune; to fuch I will add a few words:-To the talte of a man that is fond of a country in a northern climate, there are few objects more pleafing to the $\mathrm{r} \% \mathrm{e}$, or more refrefhing to the imagination, than the natural landfcape fcenes of a well-cultivated and well-peopled country. Thefe have, in England, features that charm and inftruet. Inequalities of country, not too abrupt; woods that prefent rich maffes of fhade; rivers that offer the contraft of their filver bofoms, gliding gently through vales of conftant verdure, which are neither hurt by their rapidity, nor rendered marihy by their fugginhnefs; inclofures which mark thevalue and the culture of the foil; and fcattered habitations of the poor clean and comfortable, mixed with the houfes of farmers, in a fate of eafe and profperity; and with the feats of gentlemen, who find fociety and liberal pleafures, without deferting the fields which give them their fupport, for the profufion and wafte of a capital. No philofophical eye can view fuch a fcene without pleafure, nor contemplate it without inftruction. Such a fcene is not to be met with in Catalonia; the latitude which fpreads over their heads a clear expanfe of blue, which lightens up in their heavens a blazing fun, with rays of which we have no feelings, which bids the perfumes of the eaft breathe over their waftes, and gives to their gardens a profufion of moft delicious fruits, forbids it. Infinitely the greater part of the province is rock or mountain, without verdure, and without other wood, than ever-green oaks, olives, or pines; and no where, except in the Pyrenees, with any maffes of fhade that give effect to the profpect. The only verdure in the country, tolerably durable, is that of the vineyards. Great waftes are covered with fhrubs, which, however beautiful when detached, have very little effect in a general profpect. To look for neat cottages, or good farm-houfes, is to look in vain ; and to find the landlords of the country you mult go to Barcelona and Madrid. The deficiency of verdure deftroys half the idea of rural beauty ; the eye, dazzled with the unvarying fplendor of the folar beams, and tired with wandering over arid heaths, aches for cooler and more quiet fcenes, and languiflies to repofe on the verdant mead. When watered, where alone there could be verdure, all is a crowded feene of trees, and corn, and hemp; of glorious fertility, but forming the good feature of a landfcape only when looked down upon from an eminence immediately above it. Hence, I own, that in refpect of beausy of profpect, I muft prefer many parts of France, and more in England, infinitely to any thing I faw in Catalonia, a country whofe moft friking features are its rocks.

I take the climate to be equal to any thing that is known in the world ; I was there in the hotteft feafon of the year, and travelling twelve and fourteen hours a day, yet bore it without any fuch oppreflion as could give an idea of its ever being infupportable; and both men and women ftood their field bufinefs through the day, except two hours,
vol. IV.
4 Q
which
which they take for repofe. Suppofing, however, that July and Auguft are efteemed much too hot, ftill the reft of the year mult, from every circumiltance we heard, be de-licious-they fpoke with rapture of the pleafantnefs of the month of May; and no doubt but the winter muft be a charming feafon, where fuch vegetables as green peafe are gathered through every month of it, from the open fields. In regard to wholefonenefs for invalids, one circumfance fhould be confidered, which may be applied equally to all watered arable lands: I fhould conceive, that they muft of neceffity, in fo hor a climate, be very muwholefome; and little better than rice-grounds, which are known every where to be peftiferous. The land is kept conftantly watered, it is therefore little better than an earth fponge, or mafs of mud; innumerable fibres of vegetables are mixed with it; the heat, the moifure, and the rich foil form a putrid fermentation, which gives health and luxuriance to vegetables, but mult fill the air with phlogittic effluvia, I hould apprehend far from wholefome to the human body. This is a confideration for phyficians, and for thofe whom they fend to fouthern climates.

## Irrigation.

THE profpects down the vale of Aran beautiful ; it is without fallows, fine hemp inftead of them. Look down on the town of Efteredano, around which culture rifes pretty high up the mountains. All the corn cut is reaped and bound in theaves.Walnuts. Defcend into the vale.-Figs. Waiered meadows. Ray-grafs predominates; much common clover, white clover, trefoil, vetches, \&c. A caufeway for irrigation acrofs the vale; the meadows are uncut, and have two and a half tons per acre on an average; the corn all through three quarters an acre. Pais a rich flat common; part of this vale fed by horfes, hogs, mules, affes, and a few oxen.

Advancing, what meadows there are are well watered; as are French beans, hemp, and a fmall quantity of lucern.

Leave Poeblar; they have lucern, but not good, the gardens are all watered; mulberries; price of filk this year 18 livres the pound. Culivation all around anong the olive-trees; but it is corn one year and fallow another. Crofs the river, which is here fixty yards wide. Wheels for railing the water of it into the gardens, ten or twelve feet high; they are of a very fimple conftruction, fomething like the common waterwheels of a mill, but made very light; the fellies of the wheel are hollow in divifions, taking the water in through holes at equal diftances, and as the ftrcam turns the wheel it delivers the water out of the fame holes at the top of its revolution into a trough, which conducts it where wanted; it is cheap, fimple, and effectual. Many peachtrees fcattered about the gardens, \&cc. Mount the hills; pafs two large tracts of above one hundred acres, deftroyed by the torrents. Great quantity of pudding-fones. The mountains around are of interefting and bold features. The country in general here has a great mixture of cultivation and wafte; it is for fome fipace pleafing enough to the eye, but the produce is, I believe, very low; we faw many oats, and fcarcely any that will produce more than a quarter an acre. They have no meadows; and I fhould obicrve, that our mules have not found fuch a thing as hay; flraw and barley are the food; in all thofe fpots which would give grafs, corn and legumes are fown, as more neceftiary and more valuable; and this, I an told, is the cafe over all Spain, lucern excepted.

Newr Monte Schia-they have here poor crops of flat barley: of water, they know well the value, a fpring of any account being carefully conducted into a relervoir, and let out at feven in the morning and at night to water.

Advancing,

Advancing-there is fome good hemp, watered; and I fee enough of the country to find that the water is all in all; where that is to be conducted, they get crops that pay well; but where no water, they have not the power or the knowledge to turn the foil, however good it may be, to a profitable account; fallow the only effort, and the fuccefs every where miferable.

Crofs a fine fream with many acres under it, yet no watering; the reafoa I cannot tell, unlefs the land is common; if fo, it is eafily explained.

The foil fony ; the large, of the pudding clafs; but in the midft of this arid wretched defert, come to a fpring, which rifes out of the earth into a fmall refervoir, and is inmediately ufed for irrigation ; maiz, hemp, cabbages, beans, and all fine; the contralt Hhews the aftonifhing effect of water, and that in this climate the foil is the leaft object. the fun and water do the whole.

Paffing Paous; every thing changes the features; the vale, on comparifon with thofe we have feen, is wide, and allo flat, and water plentifully conducted in canals, which pais every quarter, fo as to let into the field of every proprietor; having paffed above one hundred miles of dreary mountain, this vale, fo great was the contraft, had the appearance of enchantment; the care and attention given to irrigation cannot be exceeded. The land is prepared for it, by levelling with a nicety as curious as for making a bowlinggreen, and this (conducting the water excepted, which is common to cvery one), is the only expence : this general level is divided into oblong beds, from fix to eight feet wide, by little ridges of fine mould, drawn up nicely with a rake every time the ground is fown, in order that the water may not fpread over too much at once, in which cafe, the irrigation would be unequal ; there would be too much of a current at the part where the water enters, a circumftance of no great importance in watering grafs land, but which would be mifchievous in arable; fmall trenches take the water from the carrier canals, and paffing by the ends of thofe beds, the farmer opens them at pleafure to diftribute the water where wanted. As foon as the land is fown it is watered, and periodically till the plants are up; moderately while they are young; but every day, and fometimes twice a day, when full grown : the effect is furprifing, and infinitely exceeds that of the richeft manures that can be fpread upon any land. The rapidity of vegctation is fo great, that there are but few crops, which demand all the fummer for coming to perfection; I believe hemp is the only one; that plant is now five to feven feet in height, and of fo thick a luxuriance, that nothing can be imagined finer. The rye ftubbles are ploughed and fown with French Leans, which are up and watered. After hemp wheat is the crop.

Watcred maize here, feven to nine feet high. Every time we fee any irrigation, we are fruck more and more with the importance of water, even on foils which are apparently mere rock, and on the moft arid deferts, it gives at once the utmoft luxuriance of vegetation. Vines and olives, however, ftand in no need of it, but thrive adnirably on the dxieft foils without it : not one acre, however, in twenty, is planted with them that might be.

Come to more watered grounds; gardening and hufbandry mixed; peaches; apples; ripe pears; pomegramates in the hedges, as large now as walnuts in the thell; onions and lettuces in great plenty. Some watered lands have been fold at 1300 livres the journal.

Near Martorelle is a fine irrigated valley ; French beans, feven feet high. Good lucern, cut thrce or four times a year ; onions, cabbages, and lettuces; but the hemp, every where a principal crop, not great. The land all formed into the beds for watering; which 1 ilave already defcribed.

Exceeding fine hemp, watered. Maiz thick, and in ear. Many fine and tall poplars by the river.

They are now (July) ploughing their ftubbles for French beans. Their courfe is, 1. Hemp.
2. Wheat ; and after wheat, French beans.

Three crops are therefore gained in two years. The products good. Very fine mulberries. A journal, which is here alfo about an Englifh acre, of rich land in the vale, not watered, fells for 500 livres : watered, for 1000 livres.

Leaving Barcelona, enter immediately an extraordinary fcene of watered cultivation, and which mult have given the general reputation to the province. Nothing can well be finer. The crops in perpetual fucceffion-and the attention given to their culture great. Not the idea of a fallow ; but the moment one crop is off, fome other immediately fown. A great deal of lecern, which is cut four, five, fix, and even feven times in a year; all broadcaft, and exceedingly thick and fine, from two and a half to thre feet high, when cut. It is all watered every eight days. We meet many mule loads of it going into the town, each four hundred and fifty pounds, or four quintals and a half, which fells for 4 pefettos, or near 4 s . Englif2 ; fuppofe it 4 s . for five hundred pounds, it will not be difficult to calculate the produce of an acre. All I faw would yield ten tons, green, per acre, at each cutting, and much of it a great deal more; lot us fuppofe five cuttings, or fifty tons per acre, at 16 s . a ton, this is 40 l. fterling per acre. It is to be remembered that the growth we faw was the third, perhaps the fourth, and that the firlt and fecond are in all probability more confi.lerable, it will not, therefore, be thought any exaggeration to calculate on five fuch. I by no means affert that lucern yields always, or generally fo, as I fpeak only of what I fee. I have very little doubt, however, but this is the amonnt of that portion, which is thus cut and feld to Barcelona; poflibly one-third, certainly one-fourth is to be deducted for the expence of carrage; this is the moft difficult part of the calculation, for it depends on how many times the mule goes in a day, which muft alfo depend on the readinefs of fale, and other circumftances. The profit is, however, amazingly great. All the other lucern I have any where feen finks, in my idea to nothing, on comparifon with the vaft and luxuriant burthens given by thefe watered grounds. The fineft crops I have known in England are drilled, but there is a fallacy to the cye in the drilled crops, in proportion to the diflance of the rows; they appear thick while they are really thin, but in broadcalt ones, which fatisfy the eye, there is no deception; and thefe immenfe burthens, through which the feythe is with difficulty moved, produce more at one cutting than two feet drills would at three, with the advantage of the herbage being finer and fofter. But weeds in England and Catalonia are two very different things; it well deferves, however, with us, a better trial than it has yet generally received; I have viewed broadcalt crops, particularly Rocque's, on a very rich gard $n$ foil, and Dr. Tanner's, on a common turnip loam, which, though not to be named with the Spanith, were certainly encouraging.

Hemp, through all thefe watered lands, is the predominant crop, it is feven feet high, and perlectly fine; fome of it is already harvefted. I amforry to fee that the watered part of the vale is not more than a mile broad. Indian fig, called here figur de maure, grows fix or leven feet ligh, very branching, and crooked, the arms at botom as thick as the thigh of a common man; thofe and many aloes in the hedges. Every garden or farm has a finall honfe, with a refervoir for water, which is filled in moft by a water wheel, with jars around the circumference. The gardens between Barcelona and the fort, and alfo widhin the walls, are watered in the fame manner; the water is let into
"eyy little bed, in the fame way as I have already def:ribed. They are crowded with ops, and kept in moft beautiful order; thofe in and clofe to the town, fcattered with sulberry-trees. But in the diftrict of which I an fpeaking at prefent, among the hemp and lucern, neither vine, olive, nor mulberry. Thefe watered lands belong generally to proprietors who live in Barcelona, and are let at 30 to 40 Spanifh livres the journal.

The valley, in its wideft part is three miles broad. Here it lets at 34 Spanifh livres a year the journal, and fells from 600 livres to 1000 livres; each of thefe livres being about $54 \% .:$ ( 1000 Spanih livres makes 2700 French ones.) Taking the medium, or 800 livres, and the French livre at $10 \frac{1}{2} \mathrm{~d}$. this makes the price of a journal 901.2 s . 6 d .; and the rent of it 4 l . The grols rent of the land, therefore, pays nearly 4 per cent. ; but whether this is clear rent, the tenant paying all taxes, and doing the fmall repairs of his houfe, \&c. or whether there are deductions on thefe accounts, are queftions which were neither forgotten nor refolved. To hew the quick fucceffion of their crops, They have corn in flocks on the borders of fome of the fields, and the land ploughed and fown with millet, which is already nine inches high. Many bleaching grounds.

Advancing-the irrigated land lets from 24 to 40 Spanifh livres: that not irrigated, at 15 livres. Water, therefore, here more than doubles the rent of the land; and in other places we have found the diffërence yet greater. The foil all the way a red and brown deep friable loam, with a fufficient adhefion for any crops. They fow French beans after hemp, and then fow wheat.

At Ballalo, two hours from Barcelona, we meet with the firtt vineyards, but the hills here come down to the fea; and where they do not, the vale is not more than half a mile wide. Lycium in the hedges; fome few mulberry-trees. Oranges in the gardens, a few palm-trees, with vines around thenr.

A journal of watered hemp produces from 10 to 12 quintals; if not watered, the product much inferior; the price 14 to 17 Spanih livres the quintal, or 35s. Englifh, which makes 19 l. 5 s. an acre. This is, however, to be underitood of a very fine acre. The mountains are at half a mile diftant, and partly cultivated to the top. All the way inclofed, and the men mending gaps in their hedges.

Livery fcrap of flat land well watered, from wells and refervoirs; the hill covered with vines.

Land, near Canet, well watered, fells for 500 Spanifh livres the journal ; vincyards for 300 livres. They give, in good yeare, to twelve charges. Unwatered land, 100 to 150 livres.

Enter a flat vale, half a mile broad, not watered. Hemp, very poor; maiz, feven feet high. Vineyards, under regular plantations of olives; corn cut, in ftooks, and the land ploughed. A journal fells for 205 livres, and further 0a, when irrigated, for 1000 livres, which is an aftonifhing difference.

While the mountains and walte parts of the province prefent an unfavourable profpect, the watered diftricts are, on the contrary, feenes of moft exubcraut fertility. To a perfon, from the north of Europe, there can hardly be a more flriking fpectacle than the effect of watering in thefe fouthern climates; it converts an arid flony wafte, which would yield nothing but vines and olives, and on which every fort of grain would hardly return the feed, at once into fields, pregnant with the richeft harvefts; on fuch foils, it gives almoft the whole value of the land; and on the richeit it raifes it, at the leaft, double; and in fome inflances, five times. It enables the cuitivator to have a fucceffion of crops, more important than any thing we know in the north. The reaping one crop is but the fignal for immediately putting in another; in doing which, they exert them-
felves with the utmoft ativity; ploughing univerfally as foon as the corn is cut ; and are by this means enabled to have conftantly two crops a year. The extreme fertility of thefe lands has, however, led many travellers into great or ignorant exaggerations; they have afferted that the land yields many crops at the fame time, one under another, which A. both true and falfe. It is fact, that corn, wine, oil, and filk, are produced by the fame field, in fome few inflances; but it is not from hence to be concluded, that the goodnefs of the land, or the importance of irrigation is at all fhewn by that circumftance. The fate is, that it is impofible to raife one crop under another, without lofing in one nearly as much as you gain in the other; the olive, being a large tree, cultivation may be carricd on under it, but the crop gained is poor, and hews that exactly in proportion to the flade is the injury fuflaincd by the produce which is flhaded. If the trees are thick, the corn is hardly worth reaping ; it is the fame in other cafes, and I was well convinced, from viewing their grounds with this defign, that the foil can carry, profitably, but one crop at a time; feveral may be crowded on it, but nothing is gained; with grals under trees, this is not the cafe fo much in a hot climate; but even grafs is damaged, and it is not the queftion at prefent, as they have none. A country to be fupported, and in a hot climate, without meadows or paftures, founds very ftrange to Englifh ears, and it is ameng the curious circumflances of this part, and $I$ an told of the reft of Spain. If they applied to grals the land that is proper for it, they could not poffibly have bread to eat; ftraw here is given inftead of hay, and entirely fupplies its place, and the oxen and mules, which we faw, did not flew in the leaft, by their looks, any deficiency in nourifment. Lucern is not at all common through the interior part of the province, and where they cultivate it, it is ufed green. Maiz is fometimes fown merely for its herbage, as it might be, I believe, profitably in England, late in the fpring, to avoid our frofts; it is one of the moft nourifhing plants in the world.

The confequence of water being fo apparent in the province, I could not but attend particularly to their exertions in conducting it, and I concluded that not one acre in twenty, perhaps in forty, is watered, that might be. In the flat vales where canals of irrigation are made, at a fnall expence, a very good, though by no means a complete ufe is made of them; but on the declivities of the mountains, it is neceffary to erect a mound of folid mafonry acrofs the river, and to cut the canal partly out of rocks, and to fupport it by walls of fone, as I have feen in France; and having thus diverted a large portion of the water of a river, to carry it on its level, along the fide of the mountain as far as it will go; fuch exertions demand a much greater capital than is to be found upon the lands of Catalonia : it could be done only by a great lord, who knew the importance of fuch undertakings, who refided on his eftate, and whofe income was fpent in fomethtug elfe than the tafle and pleafures of a capital. But leaving fuch exertions to individuals, who either have not the money or not the will to employ it, is to perpetuate wantes. It is the King only who can make thofe efforts; a monarch who fhould be determined to improve his kingdom would prefently find the means of doing it. The importance of water is fo well known, that if a canal is made to conduct it, the proprietors or farmers of the lands below would readily and fpeedily make ufe of it, paying proportionably for the quantity.they took; this is the fyltem in Lombardy, and the effect is great. It would be the fame in Catalonia, but the capital for the great work of the canal, muft probably be fupplied by the king, if not the whole, at leaft a confiderable portion. Such money flould be lent to undertakers at a moderate intereft. Exertions of fuch a nature, with a proper general attention given to thefe objects, would make them fafhionable among the great lords of the kingdom, and fertile provinces would foon be created out of barren and defolate waftes. Arbitrary power has been exerted for ages in efforts of barbarity, ignorance,
ignorance, and tyranny; it is time to fee it employed in works that have the good of mankind for their aim. A beginning, and a very good one, is made in the conftruction of fome great roads, on-a fcale of truc magnificence, which is never exhibited with fuclz effect as in works of public utility; and whenever the importance of cultivation is well underflood in Spain, and the right means of advancing it clearly analyzed, irrigation will then receive an attention that has not hitherto been gican. Such is the neceflity of water, for various productions in this climate, that rivers ought to be no more than infinitely multiplied channels, and collected in one ftream only, as a refervoir for frefh and repeated deviations.

## Sbcep.

On the northern ridge of the Pyrenees, bearing to the weft of Bagnere de Lichon, are the pallures of the Spanifh flocks. The ridge is not, however, the whole; there are two other mountains in a different fituation, and the fheep travel from one to annther as the pafturage is fhort or plentiful. I examined the foil of thefe mountain paftures, and found it in general ftony; what in the weft of England would be called a ftone brafh, with tome mixture of loam, and in a few places a little peaty. The plants are many of them untouched by the fheep: many ferns, narcifus, violets, ic.; but burnet (potcrium fanguiforba) and the narrow-leaved plantain (plantago lanccolata) were eaten, as may be fuppofed, clofe. I looked for trefoils, but found fcarcely any: it was very apparent, that foil and peculiarity of herbage had litale to do in rendering thefe heights proper for theep. In the northern parts of Europe, the tops of mountains hall the height of thefe, for we were above fnow in July, are bogs; all are fo which 1 have feen in our iflands, or at leaft, the proportion of dry land is very trifling to that which is extremely wet; here they are in gencral very dry; now a great range of dry land, let the plants be what they may, will in every country fuit fheep. The flock is brought every night to one fpot, which is fituated at the end of a valley on'a river, and near the port or palfage of licada: it is a level foot fheltered from all winds. The foil is eight or nine inches deep of old dung; not at all inclofed, and, from the freedom from wood all around it, leems to be chofen partly for fafety againt wolves and bears. Near it is a very larye ftone, or rather rock, fallen from the mountain. This the fhepherds have taken for a fhelter, and have built a hut againft it; their beds are fhecp-fkins, and their doors fo fmall that they crawl in. I faw no place for fire, but they have it, fince they drefs here the flefh of their hecp; and in the night fomctimes keep off the bears by whirling firebrands: four of them belonging to the flock mentioned above, lie here. Viewed the fheep very carefully, and by means of our guide and interpreter, made fome inquiries of the fhepherds, which they anfwered readily, and very civilly.

A Spaniard, at Venafque, a city in the Pyrences, gives 600 livres, French, (the livre is $10 \frac{1}{2}$ d. Englifh,) a year, for the pafturage of this tlock of two thoufind theep: in the winter he fends them into the lower parts of Catalnua, a journey of twelve or thirten days; and when the fnow is melted enough in the fpring they are conducted back again. They are the whole year kept in motion, and moving from fpot to fpot, which is owing to the great range they every where have of paiture.- They are always in the open air, never houfed, or under cover, and never tafte of any food but what they can find on the hills.

Four flepherds, and from four to fix large Spanifh doers, have the cate of this flock; the latter are in France called of the Pyrenees breed; they are black and white, of the fize of a large wolf; a large head and neck; armed with collars ftuck with iren fyikes;
no wolf can ftand againt them; but bears are more potent adverfaries; if a bear can reach a tree he is fafe, he rifes on his hind legs, with his back to the tree, and fets the dogs at defiance. In the night the fhepherds rely entirely on their dogs; but on hearing them bark, are ready with fire.arms, as the dogs rarely bark if a bear is not at hand. I was furprifed to find that they are fed only with bread and milk. The head Thepherd is paid 120 livres a year wages, and bread; the others 80 livres and bread. But they are allowed to keep goats, of which they have many, which they milk every day; their food is milk and bread, except the fleh of fuch theep or lambs as accidents give them. The head thepherd keeps on the mountain top, or an elevated fpot, from whence he can the better fee around, while the flock traverfes the declivities. In doing this, the fheep are expofed to great danger in places that are ftony; for by walking among the rocks, and efpecially the goats, they move the itones, which, rolling down the hills, acquire an accelerated force enough to knock a man down, and fheep are often killed by them. Examine the fheep attentively. They are in general polled, but fome have horns; which in the rams turn backwards behind the ears, and project half a circle forward; the ewes horns turs alfo behind the ears, but do not project ; the legs white or reddilh; fpeckled faces, fome white, fome reddifh; they would weigh fat, I reckon, on an average, from fifteen pounds to eighteen pounds a quarter. Some tails left long. A few black fleep among them; fome with a very little tuft of wool on their foreheads. On the whole, they refemble thofe on the South Downs; their legs are as flort as thofe of that breed; a point which merits obfervation, as they travel fo much and fo well. Their fhape is very good; round ribs, and flat frait backs; and would with us be reckoned handfome theep; all in good order and flefh. In order to be fill better acquainted with them, I defired one of the thepherds to catch a ram for me to feel, and examine the wool, which I found very thick and good of the carding fort, as may be fuppofed.' I took a fpecimen of it, and alfo of a hoggit, or lamb of laft year. In regard to the mellow foftnefs under the fkin, which is a ftrong indication of a good breed, with a difpofition to fatten, he had it in a much fuperior degree to many of our Englifh breeds, to the full as much to as the South Downs, which are, for that point, the beft fhort-woolled breed which I know in England; the fleece was on his back, and weighed, as I gueffed, about eight pounds Englifh; but the average, they fay, of the flock, is from four pounds to five pounds, as 1 calculated by reducing the Catalonian pound of twelve ounces, to ours of fixteen ounces; and is all fold to the French at $30 \rho$. per pound French. This ram had the wool of the back part of the neck tied clofe, and the upper tuft tied a fecond knot, by way of ornament; nor do they ever fhear this part of the fleece for that reafon; we faw feveral in the flock with this fpecies of decoration. They faid that this ram would fell in Catalonia for 20 livres. A circumftance which cannot be too much commended and deferves univerfal imitation, is the extreme docility they accultom them to ; when I defired the mepherd to catch one of his rams, I fuppofed he would do it with his crook, or probably not be able to do it at all; but he walked into the flock, and fingling out a ram and a goat, bid them follow him, which they did immediately, and he talked to them while they were obeying him, holding out his hand as if to give them fomething. By this method he brought me the ram which I caught and held without difficulty.

The nountain pallures belonging to the Spaniards, not ufed by themfelves, they let to the owners of large flocks who bring them from the lower part of Catalonia, as with the French mountains; thefe flocks rile to four thoufand theep; the rent in general being from 5 f. to 7 . a head, for the fummer food. Every inliabitant poffeffes cattle, which he keeps in the common mountains in what quantity he pleafes; but others, who

- Thid that all it in fomed perly the
do not belong to the parifh, pay $5 \int$. to 75 . a head for the fleep, and $10 /$. for a cow; which difproportion they explain by faying, that fheep mut have a much greater range.
They have good fheep in various parts of Catalonia, but all are fent to Saragofa or Barcelona.

The mountains and wates in fome parts have no flieep; only goats.
Crofs great waftes, which in other countries would be fheep-walks; but none here; for five.fixths of the fpontaneous growth are aromatic plants.

See two fmall flocks of theep, exactly like thofe in the Pyrenees, defcribed the firft day of this journey.

A fmall flock of fheep, that give five pounds or fix pounds of wool each.
Several fmall fheep-folds.-Such notes as thefe thew how few they are, on comparifon of what they ought to be.

In travelling over the lower mountains, after quitting the higher Pyrenees *, the de ficiency of theep truck me very much; the climate is too dry to think of a luxuriant vegetation of grals; but if the rofemary, lavender, and other aromatic ufelefs plants were deftroyed, and the land, by cultivation, properly adapted, was to be laid down to fuch plants as would feed theep, fine paftures might not be gained, but much valuable fhecp-walk would be created, and the quantity of wool increafed an hundred fold. Such a fyftem would unite well with olives, which might be thinly fattered over fuch improvements. To import immenfe quantities of Theep from France, and to take no fteps to increafe them at home, is a blind conduct, efpecially when it is confidered, that in a proper fyftem, they cannot be increafed without being at the fame time, the means of improving frefh land.

the ilan
the inquiries of fome future traveller, who fhall have an opportunity of vifiting that ifland.

Climate.-The moft delicious that has been experienced by various perfons well acquainted with France, Italy, Spain and Portugal; and refulting in a good meafure from the variety of the face of the country, which rifes from fome beautiful plains to gentle flopes, which, after many undulations of furface, finith in the mountains. In the greateft heats of July and Auguft, the hills preferve the temperature almoft vernal : nor are the heats ever fuffocating in any part. The winters, except on the highelt parts of the mountains, are mild and pleafant, as may be gathered from the circumftances of vegetation, almonds blofom' in December, are in full bloom in January; and many wild flowers are in all their beauty quite through the year. Spinnage, green peafe, beans, lettuce, endive, cellery, \&cc. are in perfection the year round. In the depth of winter, ice is feen to the thicknefs of one-tenth of an inch, but melts before the day is much advanced. No fharp cutting winds are ever felt, either in winter or in fpring ; and a perfon who refided there fixteen years, never faw a fog. The houfes have no chimnies; but when artificial warmth is wanted, almond-fhells are burnt in brafieres. This extremely agrecable temperature of the climate was confirmed to me by General Murray and his Lady, who refided there many years; and the foriner mentioned a circumftance, which fhews how erroneous it would be to judge of any climate by the latitude; Leghorn is nearly in the fame parallel, but the fevereft cold he ever felt, in March, was at that place, where, in wafhing, the water became ice before a towel could be well dipped in it .

Culturc and Products.-The hills are formed in terraces, and planted and cultivated with great attention. Olives are planted, and under them wheat fown; in the flats, many almonds and mulberries. Oranges and lemons are in fuch quantities, that they export many to France. They are in great profufion, and the moft beautiful to be imagined. The mountains of Soleya are famous for peaches, and all forts of fruit. Hedges of pomegranates are attended with medlar and quince trees, alternately on one fide, and on the other mulberries; but the beft fence is the prickly pear, the fruit ${ }^{4}$ of which is ripe in July, which is eaten, both leaf and fruit, by cattle, and are fupported on it in fine order, when other things fail in the heat. Munk. and water melons are in great perfection.

Sugar-canes do well; but no fuch thing as rice, as neither fwamp, marfh, nor bog.
Irrigation is well underfood and much practifed.
A common courfe of crops,

1. Wheat.
2. Barley.
3. Beans.
4. Peafe.

Capers (which are a weed) come up in the wheat ftubbles, which give a crop; then the ftubble and caper-bufhes are burnt, and the barley and legumes fucceed, and after thofe artichokes.

They plough with a pair of oxen or mules.
The proprietors in general keep the land in their own hands.

## Living.

This inand, which by every account might be made a paradife, is one of the cheapeft fpots in Europe to live in; upon an income of 1501 a year fterling, men of the better
fort live comfortably and bring up a fam:lr. Every vesetable production for the table with all kinds of fruits, are not only in un ommon profufion but excellent of their forts. Poultry no where better; turkies are kept in great droves, and driven to feed on berrics as regularly as heep to pafture; they are fattened on myrtle-berries, and are not only of a delicious flavour but a great fize, even to thirty fix pounds weight. Mutton is excellent; fome fheep are fo fmall from the ifland of Yuvica, that three legs are fometimes ferved up in one difh.

All thefe circumftances united, feem to point out this inland as an excellent winter refidence for thofe who can no longer refort to Nice or Hyeres, and is probably a bette: climate than either of then.

Produce of the Ifand of Majorca in 17 S6:

## ( 677 )

## AN ACCOUNT

OF
THE ATTEMPTS THAT HAVE BEEN MADE to attain the summit of mont blanc:

Written in the Year 1786.

[From Saussure *.]

WHEN I was writing the preliminary difcourfe and the firt part of this work, I looked upon the fummit of Mont-blanc as abfolutely unattainable. In my firt excurfions to Chamouni in 1760 and 1761 , I had it publifhed in all the parifhes of the valley, that I would give a confiderable recompence to whoever fhould find a practicable route. I had even promifed to thofe who made unfuccefsful trials to pay them for their labour: thefe promifes were of no avail. Pierre Simon made one attempt at the Tacul fide, and another at the fide of the glacier of Buifions, but returned without any hope of fuccefs.

However fifteen years after, that is to fay in $\mathbf{1 7 7 5}$, four of the Chamouni guides attempted to gain it by the mountain de la Côte, this mountain which forms a ridge pretty near parallel to the glacier of Buiffons, approaches to the ices and fnows which continue without interruption to the top of Mont-blanc.

There is fome difficulty to overcome before entering on thefe ices, and to crofs the firft crevices; but thefe firft obflacles once furmounted, there remains no more than the length of the way, and the difficulty of accomplifhing in one day the afcent and defcent. I fay in one day, becaufe the people of the country think it not fafe to run the rifk of palling the night on thefe fnows.

Thefe four travellers got very well over the firt obftacles; they then endeavoured to follow a great valley of fnow, which appeared to conduct them immediately to the fummit of the mountain. All appeared to promife them the moft happy fuccefs; they had the fineft weather imaginable, they neither met with openings too large, nor precipices too rapid: but the reverberation of the fun on the fnow, and the flagnation of the air in this vallcy made them undergo as they faid a fuffocating heat, and gave them at the fame time fuch a diffalte for the provifions with which they were provided, that over. come by inanition and wearinefs, they had the grief to be forced to return the fame way they went, without having met any vifible infurmountable obftacle. It however appears that the efforts they had made were very great, for their frength was very much tried in this cxcurfion, and from it they becane more or lefs ial.

This difappointment however did not prevent three other of Chamouni guides from undertaking the fame tafk, and by the fame road in 1783 . They paffed the night at the top of the mountain de la Cote, croffed the glacier, and followed the fame valley of fnow. They had already got to a good height, and were proceeding courageoully; when one of the boldelt and moft vigurous of the three was fuddenly feized with an infurmountable propenfity to fleep: he defired the other two to leave him and go on without, but they coukt not think of abandoning him, and leaving him to fleep on the finow is perfuaded as they were that the heat of the fun would kill him : they therefore
renounced the undertaking and returned back together to Chamouni. For this propenfity to fleep, produced by the rarity of the air, left him as foon as they had defcended low enough to find themfelves in a thicker atmofphere.

It is very likely that even if this overpowering propenfity to lleep had not ftopped thefe brave fellows, they would not have been able to have gained the fummit of the mountain, for in effeet though they had attained a great height, they had fill a great way to go, the heat incommoded them exceffively, a thing furprifing at this height; they had no appetite; the wine and provifions that they took with them had no charms for them. One of them * told me ferioufly that it was ufelefs to carry any provifions in this excurfion; and that if he fhould make another trial by the fame way, he :rould only take a parafol and a fmelling bottic. When I figured to myfelf this tall and vigorous momitainecr grapling with the fnow, and holding in one hand a little parafol, and in the other a bottle of caufions parcille, this image had fomething in it fo ridiculous and ftrange, that nothing could be more convincing to my mind than the idea he had formed to himfelf of the difficulty of this undertaing, and of confequence of its abfolute impof. fibility for people who have neither the head or the joints of a good guide of Chamouni.

Yet M. Bourrit would again make another trial at the end of the feafon, he likewie flept at the mountain de la Côte, but an unexpected form coming on obliged him to turn back juft at the entrance of the glacier.

For my part, after the informations which I had received from thofe who had made the attempt at this fide, I looked on the fuccefs as abfolutely imponible, and dhis was the opinion of all the intelligent people of Chamouni.
M. Bourrit, who interefted himfelf more than I did in the conqueft of Mont Blanc, thought he ought to try it by fome other fide; he gained from all parts all the intelligence he could; at length he learned that two hunters in following fome chamois had got on fome ridges of rocks to fo very great a height, that from the place to which they were come, to the fummit of Mont Blanc, there remained no more than four or five hundred toifis to get up by the declivities of fnow which were not very rapid, and in fo open an air that there was nothing to fear from that fort of fuffocation, that had been found in the valley of it wo which ends at the mountain de la Côte.

Charmed with this difoover;; M. Bourrit ran to La Grue, the village where thefe hunters lived, and immediately engared them to make another trial with him. He left the village the fame evening, and arrived with them at break of day at the foot of fome fteep rocks which it was neceffary to pafs. The morning air was of an extraordinary keennefs; M. Beurrit feized by the cold and overpowered by fatigue could not follow his guides. Two of thofe, after having left him with the third at the foot of the rocks mounted alone, not only to the top of the fame rocks but very far on the fnow : they faid that they had reached to the foot of the highelt fummit of Mont Blane, from which :hey were feparated only by a ravine of ice, in which, if they had had more time and heip they could have made flairs by which they mizht eafly have got to the top.

As foon as this tial had permitted me to believe in the prfibility of fuccefs, I refolved to make the attempt as fon as the feafon woud zenit; I charged two men of the veighbourhood $\dagger$ to watch near the mountain. amb:, ne notic as foon as the melting of the fows would render it poffible. I hathy they accumulated during the rigorous winters of $17^{8} 4$ and 1785 , and thofe which have frequently fallen during the coll and rainy fummer, which has fucceeded this winter have retarded my depart.ife till the middle of S atember.

I always prefer making thefe excurfions with my guides only ; but M. Bourrit, who was the firft to make known this route, having defired that we fhould make this attempt together, I confented with pleafure. We took with us his fon, a young man of twentyone years of age, whofe talents promife a mott happy fuccefs, and whom the love of botany, and the grand objects of contemplation that our Alps prefent, has often conducted on the traces of his father.
I had reckoned on lleeping as high as poffible under coverings in form of tents: but M. Bourrit had conceived the happy idea of fending two days before three men of Chamouni to conltrutt for us under fhelter of a rock, near the bafe of the Aiguille du Gouté, a fort of hut or hovel of dry ftones ; an excellent precaution which would fecure us from the danger of a form, if we fhould have the misfortune to meet one.

Thefe difpofitions made, we agreed to meet on Monday the twelfth of September at the village of Bionaffay, fituated about a league to the north-eaft above that of Bionnay, M. Bourrit and his fon came there from the Priory of Chamouni, which is four leagues to the north-caft of this viilage. I left Geneva the eleventh of September, and came in a carriage to Sallenche; and the next morning I went on horfeback to Bionafly fing by St. Gervais and by Bionnay.
The village of Bionaffiy is fituated in a very uneven valley, open to the foutheaft, and Thut at all other fides. It is commanded by the glacier of the fame name, an. Ceparated, at the north-eaft, from the valley of Chamouni by a fmall chain of flate and alcarenus mountains.

I obferved between Bionnay and Bionaffay fome remarkable fones, but I mean tu give the lithological account of this little journey in another place; thofe details nuld too much damp the intereft of which it is fufceptuble.

I arrived the firft at Bionaflay with Pierre Balue, who had come as far as Salle te to meet me; we fhould have flept at this village, but as there was no inn there, had afked at Bionnay which of the peafants of the place was in the belt fituation to ent rtain us, they directed me to the Confeiller dela Commune named Batandier. This $h$ eeft peafant received me with great cordiality ; and M. Bourrit coming in the evening om Chamouni, our hoft gave each of us a good little room, with a bed filled with th dh ftraw on which I paffed a very good night.

The next morning I felt fome uneafinefs for the weather, the barometer not haver mounted during the night more than the fixteenth of a line; which is much un-r what it rifes to from evening to morning, when fine weather is perfectly fettled. My oofervation, compared with that which M. Pictet made at Geneva, gives to the fituation of Batandier's houfe four hundred and eighty-eight toifes above our lake, and of confequence fix hundred and eighty above the fea.

We had then ftill to mount one thoufand eight hundred toifes before we could get to the fummit of Mont Blanc, but we had two days to perform it in: as the firlt day we were only to go as far as our hut. As its fituation had been left to the choice of its conftructers, we were ignorant of its height, but wifhed to find it placed as high aspolfible.

At day-break one of the Chamouni guides, who had worked at the confruction of the hut, came to inform us it was almoft finifhed, but that it would be neceffary to take another piece of fir, to make the roof more folid. We ordered a man of Bionaffay to "earry one, and two others loaded themfelves with ftraw, and two more with wood for firing. Others carried provifions, furs, and my phyfical inftruments, and thus we formed a caravan of fixteen or feventeen people.

1 had hoped that we might have gone near two leagues on our mules, but it was with difficulty we could make ufe of then even for one. M. Bourrit the father even wilhed to go the whole way a foot.

We immediately mounted an eafy flope by the fide of a profound ravine, in which runs the torrent which ifluca from the glacier of Bionaflay. Then a rapid afent conducted us to a litte phain bolow the glacier: we traverfed this plain in its whole length: we then coatted the glacier for fome moments, and we finifiel by leaving it and taking a Itrait arrth-eaft direction by a very rough but not too fatiguing flope, and without any danger.

All the upper part of this fope is called Picrre-ronde, without the origin of this name being known; for there is neither rock nor ftone there remarkable for its roundnefs. ['his flope is free from wood, buhhes; and almoft all vegetation is covered only with fiarments, and prefents a moft farage afpect. At the left are feen bare rocks which conceal the valley of Chamouni, and to the right, the rocks and ices of the bafe of Mont Blanc; for as for its head and fhoulders, they are concealed by its low and projecting bafes.

Although this afcent was long enough, I was always afraid to fee the end of it and come to the hut, becaufe I wifhed to get as high as poffible the firf day, and to make the moft of the fecond, which would be the moft interelting, but at the fame time the moft painful: thus, always counting for nothing the prefent fatigue, we afcended, almoft without perceiving it, the feven hundred and forty-one toifes which our hut lay above the village: we got to it about half an hour after one, although we had not fet out till eight, and divers little accidents had made us lofe more than half an hour of the time.

The fituation of this hut was the happieft that could have been chofen in fo wild a fituation. It was joined to a rock in the bottom of an angle, fheltered from the north. eaft and north-weft at about fifteen or twenty paces, above a little glacier covered with fnow, from which iffued a clear and frefh fream which anfwered every purpofe wanting to our caravan.

Oppofite the hut was the Aiguille du Gouté, by which we were to attack Mont Blanc. Two of our guides *, who had fcaled the Aiguille, fhewed us the ridge which we fhould climb. They even offered to take advantage of what remained of the day to reconnoitre the mountain, chufe the eafieft route and mark fleps in the hard frow : we accepted the offer with thanks. To the right of thefe rocks we admired a fummit of fnow called $l a$ Rogne, which appeared to us of a prodigious height, we were however told we hould fee it under our feet, from the Dóne of l'Aiguille. All the lower part of this high fummit was covered with extremely rugged glaciers, which emptied themfelves into that of Bionaffay. At every moment valt inalles of ice detached themfelves from this glacier, which we could fee fall, and precipitate shemfelves with a horrid crafh and diffolve in clouds of duft, that the air raifed by the fall of ice rofe up $1: k$ eclouds to a furprifing height.

Behind our hut was a fmall chain of rocks about forty-feet above it. I made hafe to get up it, my travelling companions quickly followed me, and there we enjoyed one of the fineft views I ever met on the Alps.
Thefe rocks, whofe height is one thoufand two hundred and twenty-nine toifes above the lake, and one thoufand five hundred and twenty-two above the fea, are at the northweft fide quite precipitous. There is feen under the feet the fouthern extremity of the valley of Chamouni, above which we were about nine hundred toifes. The relt of this charming valley is thortencd in the view, and the high mountains which horder on it

[^142]appear to form a circus round it. The high points feen in profile fubdivide themfelves in a foreft of pyramids which clofes the bounds of this circus, and feem deflined to defend the entrance of this charming retreat, and prefurve its peace and imocence. From that fide, the view extends to the Gemmi, which is known by its double fummit which las given it that name. hat I fhall not undertake to give a detal of the immenfe heap of mountains which is difeovered from this fummit, Iet it fuffice to fay that it prefents the molt ravifinas profpect to thofe who delight in fuch beantics.
I chote this fummit for my obfervatory, I fufpended my hysrometer and my thermometor in the air to a tick which kept them in the fhade, whilit 1 fanding on the moit prejocting point of the rock mafured with my eloctrometer the degree of arial electricity. It is true that the cold north wind which then blew did not pernit me to remain long in that fituation, it was neecfiny to find out a milder temperature under cover of the rocks which furrounded our hut; but as foon as I had warmed my felf, I returned again to enjoy the prolpect and continue my obfervations. I will give an account of them in a chapter apart.

I had the chansin of not being able to make an experiment from which I had promifed myfelf much plafure : that of the necefiay heat to boil water at difterent heights. The phyficians know the profound refarches of M. De Luc on this fa'jeet, their precition and their exactitude leave no doubt of the refuls; neverthelels N. Le Cheratier Shuckburgh thinhs he has found out another rule.

It was interefling to repeat thefe experiments, particularly at fuch heights as no nathalift had ever attempted. For eighteen months I had been adking of M. Paul, a themometer armed with a micronster and adapted to a portative kette: but the want of propor tubes, and the mutiplied eccupa ions of this excellent artilt, had fo retarded the execution of this inti rument that it was not ready till the day before our departure. However it appeared to be in very good_order, I tried it the fame night and again with fuccefs at Bionaffay; and 1 hoped it will fucceed equally well every where elfe, but at the height of the hut the lamp deftined to make the water boil would not burn; it was a lamp conflructed on the principles of thofe that M. Argand had invented, but made in a hurry, and from a bad model: the tinder which ferved it as a wick burned at firft very well : but prelemly this tiader turned into coal and afterwards went out, an accident which did not happen in a thicker air. Unhappily our apparatus was difpofed in fuch a manner that it was impolible to make our water boil on a wood fire, the only one here in our power. After then having ufelefly tried this apparatus a thoutiond different ways, I was obliged to give up the experiment, or put it off till another opportunity.

But the beauty of the evening, and the magnificence of the fpectacle, which the fit-
 croning rapour which, heke a light gas, tempered the fun's brightuets, ant half concalad the inmenfe what we had mater our feet, formed the tinctt purpte belt, which incireled all the weftern part of the homizon, whilit to the cat the fiows at the bafe of
 In propotion as the rapour defended and becme more denic, this belt beame nar-
 finall clouds which reve above his cham, darted a light of fuch brightebe, hat they re-

vol. iv.
diftinguifh the mafles and the diftances. The repofe and profound filence which reigned in this valt extent, ftill heightened by the imagination, infpired me with a fort of terror; it appeared to me as if I had outlived the univerfe, and that I faw its corpfe fretched at my feet. Sorrowful as ideas of this nature are, they have a fort of charm which can hardly be refifted. I turned my looks oftener towards this obfcure folitude than towards Niont Blanc, whofe flining and phofphorical fuows fill gave the idea of movement and life; but the keennefs of the air on this ifolated point prefently forced me to retire to the hut.

The coldeft part of the evening was three quarters of an hour after fun-fet, the thermomiter could kecp no higher than two and a half degrees above the freezing point. An hour after it got a degree higher, and another in the night, fill the fire afforded us great fatisfaction; indeed we fcarcely fhould have been able to have done without it.

But this hut, this afylum of fuch confequence to us, deferves to be defcribed. It was about feven feet by eight, and four in height: it was inclofed by three walls, and the rock which it was attached to ferved for a fourth; flat fones placed without mortar formed thefe walls; and the fame fort of fones, fupported by three or four branches of fir, compofed the roof: an opening of three feet fquare, left in the wall, ferved for an entrance. Two paillaffes placed on the ground ferved us for beds; and an open parafol phaed againft the entrance ferved us at the fame time inftead of a door and curtains. M. Bourrit, and fill more fo his fon, were incommoded by the purity of the air;' they did not digeft their dinner, and could not eat any fupper. For my part, whom the pure air does not incommode, if I ufe no violent excrcife, I pafied an excellent night in a light and quiet fleep.

When the parafol was not before the door, I could fee from my bed the fnows, the iccs, and the rocks fituated below our hut; and the rifing of the moon gave to this view the moft fingular appearance. Our guides paffed the night, fome fquatted in the boles of rocks, others wrapped up in cloaks and blankets, and others fat up and watched by a little fire, which they kept up with a part of the wood we brought with us.

As M. Bourrit the year before, at the fame feafon, and in the fame place, fuffered feverely from infupportable cold at fun-rife, it was fettled that we fhould not fet out till after fix o'clock. lijut as foon as day began to appear, I mounted to my obfervatory and there waited the fun's rifing. I found the view ftill very fine, lefs fingular however than at the fun's fetting; the vapours, lefs condenfed, did not form in the horizon a cordon fo diflinet and highly coloured, but in return I obferved a fingular phenomenon. It was formed of rays of a fine purple, which parted from the horizon to the weft, precifely oppofite the fun; they were not clouds, but a fort of thin vapour homogenous fubflance: thefe rays, to the number of fix, had their centre a little below the horizon, and extended to ten or twelve degrees from this centre.

We had the precaution to take a warm mefs of foup as a preventative againf the cold; we then made an equal divifion amongt our guiles of provifions, precautionary cloathing, and of my inftruments, and in this manner fet out at a quarter paft fix with the greatef hope of fuccefs.

Elevated as we were to one thoufand four hundred and twenty-two toifes above the fea, we had ftill one thoufand toifes to get up before we could attain the fummit of Mlont Blane; in effect, the moft exact meafures allow this fummit to be two thoufand four hundred and twenty-fix toifes above the Mediterranean. Of thefe one thoufan 1 toifes, we had to go about fix hundred on the rocks of the Aiguille du Gout', and the remainder on the fnow.

This Aiguille, or high nountain, feen from the environs of Geneva, prefents itfelf nnder a round form, ftraight before, and under the higheft fummit of Mont Blanc. The ridge of rocks which defcend from it appear like blackilh furrows. From our hut we could diftinguilh this Aiguille under the fame afpect as from Geneva; but as we were very near it, it concealed from us the height of Mont Blanc; we only faw the fky above thefe rocks.

The rapidity of the couloirs, or hollows, is fo great, that it is impoffible either to get up or down, and even if one fhould happen to fall, it would be found very difficult to retain one's felf; one muft either roll or flide to the bottom of the mountain.

This flope, by which we were to get up, as feen from Geneva, and alfo from our hut, appeared fharp and inacceffible; yet our guides affured us that on a near approach all thefe feeming difficulties would vanifh: they even went fo far as to fay that the afcent from Bionaffay to the hut was more difficult and more dangerous than what remained for us to attain the fummit of Mont Blanc. It may then be eafly conceived with what courage and hopes we fet out.

We began by traverfing not a very floping glacier, which feparated us from the bafe of the Aiguille, and in twenty minutes came to the firt rocks of the ridge by which we were to get on this bafe. This ridge is rapid enough, and the broken or difunited rocks of which it is compofed do not offer a very commodious patch. However, we mounted them very gaily in an hour and fome minutes: the temperature was fuch as we could defire : the air, between three and four degrees above the freezing point, was no colder than neceflary not to heat us in afcending; we enjoyed the lively and encouraging pleafure to perceive our progrefs by the gradual decline of fummits which not long before had appeared above us. I felt a moft lively joy, and which perhaps may appear puerile, when after having afcended twenty-five minutes I came to difcover the lake of Geneva; it was the firft time I had found myfelf high enough on the bafes of Mont Blanc to be able to perceive it. I had alfo the pleafure to find here two handfome plants, aretia Alpina, and aricta Helvetica. This laft is extremely rare in the Alps of Savoy. When we had attained the higheft part of the ridge, it was neceffary to climb a fleep flope of fnow to get on the glacier which forms the plateau of the bafe of the Aiguille, and there, for the firt time, we were affited by the hands of our guides, who were always anxious to offer us their help. It was near three quarter after feven o'clock when we got on this plateau: we had flattered ourfelves with the hopes of getting there fooner; and as we knew that this was but a fmall part of the whole of our undertaking, I thought I ought not to ftop to obferve the barometer.

We then paffed right to the foot of the Aiguille, and were upon the point of getting to it, when we faw with much furprife a man, who did not belong to our caravan, afcending before us at the glacier of Bionalfay. But this furprife changed iuto a cry of joy of all the cavalcade, when we difcovered him to be Guidet, the brave fellow who the year before had accompanied M. Bourrit, and had gone with Maric Coutet almott to the fummit of Mont Blanc: he was not at hone when we fent for him ; he had not begun his journey till late in the preceding evening, had got up the mountain in the night, and came by the fhortent cut into the track that he knew we fhould take. The guides the moft loaded haftened to let him have his thare of the bageage, and he gaily took his place in our rank.

The glacier that we were traverfing touches on one of the rillas of the Airuille of Goute, which is by its rapidity impacticable. 'This ridge is femated from that which we were to follow by one of thote rapid combors of which I have atrady fpoken: it was necellary to traverfe this combor: the fuow which comered it was fill frozen, and execo-
fively hard; happily Goutet and Gervais, who had paffed there the day hefore in the afternoon, had found this fnow foftened by the fun, and had marked places in which we could put our feet. 'Thefe traverfings are what I moft fear: if your fect fail you have little hope of beiag able to keep up; but when you directly afcend or defeend, if ycu fall it is calier to dop yourlift, Guidet wanted to pafs below ns, in cafe our fouting thould fail, to which we would not confent, as the flope by which he had to pads in to doing was flill more rapil and dangerous than where we were; and we followed the method I had uled in deficonding the ghacier of the Aiguille du Midi. Wach of us placed himfelf between two guides, who firmly held the two extremities of one of their loug flicks; this fick formed at the fide of the precipice a fort of barrier on which we fupported ourfelves; this barricr moved with us, made our walking fecure, and preferved us from all danger.

Ater having traverfed this couloir, we attaned the ridee of the rock we hal to climis, and liere it was that our tank become diffoult. We fomd this ridge incomparably more fieep than that which had consucted us on the bafe of the Aiguille, the recks of which it is formed being more incoherent, quite difunited by the injuries of the air; fonctimes they rolled from under our feet; fometimes pieces came away in our hands when we laid hold of them; often not knowing where to lay hold, I was ouliged to catch at the leg of the guide next before me. The afcent in fome places was fo ltecp, that fometimes this leg was level with my head: in addinion to our troubles, the fnow which bad fallen two days before filled up the intervals of the rocks, and concealed the hard fnow or ice which we found here and there under our fect. Often the middle of the ridge became abfolutely impaffable, in which cafe we were obliged to go by the fides of dangerous coulairs by which it was boundel ; at other times we met interruptions in the rocks, and it was nectfary to crofs fnow which covered flopes extremely rapid. All thefe obltacles augmented gradually in our approach to the fummit of the diguille. At lensth, after five hours afcent, thrce of which paffed on this fatiguing ridge, Pierre Balmat, who preceded me, feeing that not ouly the flope continually became more fteep, but that we lill found, is we advanced, a greater quansity of freth fuow, propofed that 1 thould reft myfolf while he went before a little to examine what we fhould do. I confented with fo much the more willingnefs, as I had not fat down fince our departwe in the morning: I had fometines ftopped to take brath, but always ftanding, fupporting myfulf on the ftick. As he advanced he kept calling to us to wait for him, and not to procecd farther till his return. Aiter an hour's abfence he returned, and informed us that the quantity of frch fnow higher up was fo great, that we could not attain the fummit of thele rocks wihout extreme danger and fatigue, and t..at there we hould be obliged to fop, becaufe the top of the mountain, beyond the rocks, was covered with foft fnow to the depth of a foot and a half, through which it was impolfible to advance. I Iis guetres, cuvered as high as his knees, attefted the truth of this report, and the quantity of fnow all round us was allo a fulficient proof of it. In confequence we agreed, though with regret, to proced no farther.

The barometer, which I had tricd during this balt, only fipported itfelf at eighteen inches, one ligne, lomeern lixteenths, and the themometer in the thade at two and a half. At this time the batometer, offervet at Genera by M. Diste at one humdred and fourtenfer above the lake, fupponted itfelf at wenty dix inches, eleven lignes, thiryone thirty-fonds; and the thermoncter in the open air at fourtern degrees de Reaumur. This obleration, calculated by the lograthms whout regard to the temperature of the air, would give one thoulmd nine humdred and thirty-five toifes above the fian. If we regard this temperature, in fulloning the formata of M. De Luc, we fhoula take
off feventy-two toifes; but if we adopt the principles of naturalifts, who have laboured to perfect M. De Luc's, we fhould make a much lefs confiderable deduction. For, according to the Chevalier Shuckburgh, we flould retrench but thirty toiles; and according to Mi. Trembley, but twenty-eight; and fo the height of the place where we fopt would be one thoufand nine hundred and feven toifes above the fea. Althougia I could not make thefe calculations on the place itieif, as I did not know the heighth of the barometer in the plain, I well faw that we ought to be about one thoufand nine hundred toifes, and I told my fellow-traveller fo ; and in the chagrin we felt for not having been able to complete our enterprize, it was fome confolation to us to know that we had been higher than any other known oblurver in Europe had ever been before.

I obferved the hygrometer, the electrometer, the ftructure of the rocks which furromaded us; I collected feveral famples of thefe rocks; we admired the immenfe extent of the profpect which prefented itfelf to our view: to the fouth-wett we could fee the river liere mucin beyond Chambery, and our view to the north-enft extended to Gemmi, and in this demi-circle, whofe diancter is about fifty leagucs, we darted above the highe it mountains; we could fer our lake at the left of the mole, and on the right the mountains of Abondance. The Jura alone terminated our horizon to the northwelt, for we faw it even above the fummit of the Buet, which was more than two hundred and feventy toifes below us.

Meantime our guiles preffed us to return. Although the thermometer in the fhade fupported itfelf only at two, five, and that the immediate action of the fun's rays made it only mount to four, feven, yet this fame fun appeared to us extremely ardent, and when we flood ftill we could fcarcely bent it without the help of a parafol. This made our guides fearful that the late finow, half melted by its rays, would augment the difficulty of the defeent. It is known that dangerous ways are more difficult in defcending than mounting, and we had paffed fone very bad in getting up. However, by walking with care, and the help of our guides, whofe ftrength and courage were equally admirable we returned without any accident to the plateau of the bafe of the Aiguille of Gouté.

As I was no longer preffed for time, I obferved the barometer at the border of the flope towards the lake, and its height compared, according to M. De Luc's method, with that which he then had, gives to this plateau one thoufand four hundred and ten toifes above our lake, or one thoufand five hundred and ninety-feven above the fea, which makes about nineteen toifes more than the fummit of Buct. It was alfo a fatisfaction to me to have found there a more convenient fituation for divers experiments, more elevated than the Buet, and of an eafier accefs alfo. This fame elevation, calculated according to M. 'Trembley's formula, would be one thoufand four hundred and forty-four toifs above the lake, and one thothand fix hundred and thirty-feven above the fea.

From thence I redefended to the hut very flowly, and in obferving at leifure the rocks over which 1 paffich. On my arival hare I tound M. M. Bourrit, who hat gone before us, and who teit fol lithe faligued from the journey, that they were getting ready to defeend to the village of Bionallay. 'This was the more furprifing, as M. Bourrit the younger had been ill the day wefore, and indilpoled all the night; M. Bourrit the father, alwass pre occupied by the dread ot the cold, from which he fulfered fo much the precedin; year, had monnted and defended the monatan with firred thoes, in which his finot bad no thability, and which rendered this excurion to much the more tirefome for him.

For my part, from having found myfelf fo well the preceding night in the hut, I refolved to pals this night alfo in it ; either to continue my meteorological obfervations, or to obferve in my defcent the nature and fructure of the mountain, which I could not have done if I had left it the fame day; for night came on before M. M. Bourrit had got half way down.

Immediately after their departure I went and placed my inftruments on the rock which I called my obfervatory, I there fill enjoyed the magnificent fpectacle of the fun's fetting ; and after a very good night in the hut, I continued in the morning my metcorological obfervations: I compared with great exactnefs, by means of a level, the elevation of this rock with that of the mountains which appeared to equal it nearly in height. I then defeended flowly in picking up ftones, and flopped a good while to obferve thofe which are carricd down by the glacier of Bionaflay. Here are found all thole of which the Aiguille of Gouté is compofed. I went to dinner at Bionafliy, and from thence a horfeback to fleep at Sallenche.

If this attempt thould be made again, I think it would be neceflary to erect thehut, where one fhould fleep, at leaft two hundred toifes higher than oure, that is to fay, at the very foot of the rocks of the Aiguille du Gouté ; and thus attack thofe fharp and uneven rocks with all the vignur that a night's reft gives, and before the heat commences. I likewife think that if fome guides were fent two or three days beforehand to form a fort of fairs in the moft rapid flopes, or at leaft chufe the caineft paffages; for our guides, almoft as great ftrangers as we in thofe deferts, were often divided in their opinions in the rout we fhould take; yet nothing is lefs certain than that we had always taken the beft. But whatever means may be imagined to facilitate this enterprize, it thould not be hazarded in a year of great fnow, but at a time perfectly fafe, with mufcular joints, and a head well accuftomed to the fight of precipices.
fURTHER ATTEMPTS TO ASCEND MONT bLANC*.

1HAVE given in the fecond volume, Chap. 52 , the hiftory of the ufelefs attempts that were made, to the year 1785 , to attain the fummit of Mont Blanc.
To complete this hiftory, 1 ought to fay a word of an excurfion made for the fame purpofe in 1786. This excurfion was not fucceffful, though it certainly was that whiclr detcrmined Dr. Paccard and Jaques Balmat to undertake the one made at the end of the fummer of the fame year.

It may be remembered that the 13 th of September, 1785 , I had attempted with M. Bourrit, to fcale Mont Blanc by the Aiguille du Gouté, but that we met with new fallen finows which forced us to ftop at the height of 1935 toifes above the fea.

As the obftacle that thefe fnows had oppofed to our defign, appeared to us to be the effect of the latencfs of the feafon, I refolved to repeat the attempt the following year; at a time when the new fuows fhould be Iefs formidable. In conlequence, and to leffen as much as poffible the fatigue experienced in the laft journey, I ordered Pierre Balmat to erect a hut at the foot of one of the ridges of the Aiguille du Goute, and as foon as the feafon would permit to make fome excurfions on that fide, in order to chufe the moft convenicnt route for me to take.

To execute this project, Pierre Balmat, Mirrie Coutet, and another guide, went the 8th of Junc, 1786, to flecp at our old hut at Pierre Ronde, and fet out for it at break of day; they got up the fime ridge that I had followed the preceding year, and attained, although with great difficulty, the fummit of the Aiguille du Gouté, after having all fucceflively fallen ill from tatigue and the rarity of the air. From thence by proceeding an hour on the fnows in the lame direction, they came to the height of the Dome du Gonté; there they found François Paccard and three other guides, with whom they had concerted this rendezvous, and who had paffed by the mountain of La Cote to come to the fame place, always believiny that it couid be only by the Aiguille du Gonte that the fummit of Mont Blanc was to be attained; and they had divided themfelves in two parties to make a comparative trial of the two routes which led to the fummit of du Gouté. This comparifon was entirely to the advantage of the route by the mountain de in Côte. François Paccard and his companions had arrived an hour and a half fooner, with much lets fatigue and danger than Pierre Balmat, who had palled by the Pierre Ronde.

After having joined, they traverfed a great plain of fuow, and came to a ridge which unites the fummit of Mont Blane to the Dome of Goute ; but this ridge was found to be fo narrow between two precipices, and at the fame time fo dangerous, that it was impolible for them to follow it, and attain the fummit of Mont Blanc. They then examined at different parts the approaches to this fummit, and the refult of this fearch was, that it was abfolutely inaccefible at tafl by the Dome of Goute. They returned from thence to Chamomi by the meuntain de la Cóte, much difontented with their expedition, and haraffed by a forma accompanied with fnow and hail.

But they did not all return; one of thofe who had followed François Paccard by the mountain of la Côte, was Jaques lBahmat, fince become famous by his afcent to the fummit of Mont Blanc. He was not to be of the party in this excurfion; he had joined laccard and his party almoft in fite of them. In returning from the Dome of Goute, as he was neton good terms with the others he walked by himfcif, and kept apart from them to fearch for chryftals in a rock at fome diftance. When he wifhed to rejoin them or at leaft follow their traces on the frow, he could not find them; mean time the form came, and being fearful to venture himfelf alone in the middle of thefe deferts in the florm and at the approach of night, he preferreci fquatting limfelf down in the fow, and there patiently wait till the form fhould ceafe and the coming of day-light; he there fufiered nuch from the hail and cold; but towards morning the weather cleared up, and as he had the whole length of the day to retuen, he refolved to confecrate part of it to the trying if he could not, among thele vaft and unknown folitudes, find out a way by which the fummit of Mont Blanc might be attained. It was thus that he difcovered that which has been followed, and which is certainly the only one by which it can be attained.

He did not immediately on his return to Chamounie make his difcovery known, but as he fome that Dr. Paccard had thoughts of making a fimilar attempt, he communicated the fecret to him, and offered to ferve him as a guide. The fuccefs of this enterprize ha:s been made known to the public by the relations which have been given of it by Dr. Paccard and M. Bourrit.

What is rumarkable in the difcovery of this route is, that it is the fame which prefonts itfelf the moft naturally to thofe who view Mont Blanc from Chamounie, and is alfo that which thofe who made the firlt attempt tried, but of which they became difgufted by a fingular prejudice. As it proceeded by a fort of valley between great heights, it was imagined too warm, and that it excluded the air too much. This valley is neverthelefs very wide, and acceffible to the winds, and the ices which form the bounds are not of that nature to heat it. But fatigue and the rarity of the air gave to thofe, who made the firlt attempts, this opprefion of which I have fo often fpoken; they attributed this oppreflion to the heat and lagnation of the air, and they no longer endeatoured to attain the lummit otherwife than by the known and ifolated ridges, fuch as that of Goutci.

The people of Chamounic likewife had an idea that fleeping on the heights would be attended wih death, but the trial made by Jaques Balmat in paffint the nioth on them, banifled this fear; and the inpoffibility of coming to it by the ridges forced them to take the moft natural and apparent route.

## fOURNET OF SAUSSURE IN AUGUST, 1787.

DIVERS periodical works have informed the public, that lat year in the month of Auguft two inhabitants of Chomounic, Mr. Paccard a phyfician, and Jaques Balmat the guide, attained to the fummit of Mont Blanc, which till then had been deemed impofible.

It was made known to me the next c'ay, and I immediately fet out to endeavour to follew their traces; but chere fill fo much rain and fnow that 1 was forced to give up the project for this feafon. I commiffioned Jaques Bahnat to vifit the mountain in the ben ining of Jume, and to let me know as foon as the finking of the winter finow fhound ruatr it practicable. In the interal I went into Provence to make experiments by the ica fide, wih a defign to compare them with tho.e I propofed to make on Mont В.ан.
me $\mathbf{w}$ for C neva moun arriva mined
Th
by a paratu

Jaques Balmat in the month of Junc made two ufelefs attempts, mean time he wrote me word he had no doubt but it might be done in the month of July. I then fet out for Chanounie. At Salenche I met the courageous Balmat, who was coming to Geneva to inform me of his new fuccefs; the fifth of July he had attained the fummit of the mountain with two guides, John Michel Cachat and. :is Tournier. It rained on my arrival at Chamounie, and the bad weather continued three weeks; but I was determined to wait till the end of the feafon, rather than mifs a favourable opportunity.

This opportunity fo mucis defired came at laft, I took my departure accompanied by a fervant, and eighteen guides who carried my inftruments and other neceffary arparatus.

My eldeft fon was extremely defirous of accompanying me ; but I was afraid he was ncither ftrong enoush nor fufficiently accuftomed to excurfi as of this nature, therefore infifted that he thould give up the definn. He ftaid at the Priory, where he made, with much care, obfervations fimilar to thofe I made on the top.

Although it is hardly two leagues and a quarter in a direct line from the Priory of Chamounie to the fummit of Mont Blanc, it takes eighteen hours to walk it, on account of the bad road, the turnings, and about one thoufand nine hundred and twenty toifes to get up.
To be perfectly at liberty in the choice of the places where I hould fleep, I had a tent carried, and the firtt night 1 flept under it on the fummit of the mountain of Côte, which is fituated on the fouth of the Priory, and at feven hundred and feventy-nine toifes above this village.

This journey is free from pain and danger, the afcent is always on the grafs or on the rock, and the excurfion is eafily made in five or fix hours. But from thence to the top, there is nothing but ice and linow to walk on.

The fecond journey is not the eafieft. We had immediately to crofs the glacier of the Cote to get to the foot of a chain of rock inclofed by the fnows of Mont Dlanc. This glacier is difficult and dangerous. It is interfected by large, deep, irregular crevices; and it is often difficult to pafs them except over bridges of fnow, which are fonetimes extremely flight, and fufpended over abyfes. One of my guides had nearly perifhed here. He had gone the day before with two others to reconnoitre the paffage, happily they had had the precaution to faften themfelves together by cords; the fnow gave way under him in the middle of a wide and deep crevice, and he continued fufpended between his two companions. We paffed by the opening which had been formed under him, and I trembled at the fight of the danger he had run. The paflage of this glacier is fo difficult and winding, that it took us three hours to go from the top of the Cote to the firt rocks of this ifolated chain, though it is little more than a quarter of a league in a direet line.

After having attained thefe rocks, we foon quited them again to go up a winding valley full of finow, which ftretches from north to fouth to the foot of the highelt fumnit. This fnow is interlected at different diftances by enormous and fuperb crevices. Their lively and neat form fhews the finow difpofed of in horizontal beds, and each of thefe beds anfwer to a year; be the largenefs of its crevices what it may, the botom can no where be difcovered.
My guides wifhed we fhould pafs the night near fome of thofe rocks which are to be met with in this route, but as the higheft are fix or feven hundred toifes lower than the fummit, I was defirous to get higher up. To do this, it was neceffary to pitch our tent amid the finows, this 1 had mucn trouble to make my companions confent to. They imagined that during the night there reigned on thefe high fnows an infupportable cold,

[^143]4 T
and
and feriouny believed they fhould perifh there. At laft I told them, that for my part I was determined to do it with thofe amongt them on whom I could depend; that we would dig decp in the fnow and cover this hollow with the covering of the tent, and there fhut ourfelves in together, and in this manner we fhould nor fuffer from the rigour of the cold. Thefe arrangements having encouraged them, we purfued our courfe.

At four in the evcuing we got to the fecond of the three great platforms of fnow which we had to pafs, and there we pitched our tent, one thoufand four hundred and fifty-five toifes above the Priory, and one thoufand nine hundred and minety five above the fea, ninety toifes above the pike of Teneriffe. We did not attempt to get to the laft platforn, becaufe there we fhould be expofru to the fall of avalanches.

The firft platform by which we had lately paft is not exempt from them. We had paffed over two of thefe avalanches, which had fullen fince Balinat's laft journey, the broken remains of which covered the whole valley.

My guides immediately fet about excavating a place where we might pafs the night; but they very foon felt the effect of the rarity of the air ". Thefe rohuft men, to whom feven or eight hours walking is in reality nothing, had hardly thrown up five or fix fhovels of foow when they found it abfolutely impolfible to continue; they found it neceffary conftantly to relieve each other. One of them who had turned back a little to fetch fome water in a calk from a hollow, was taken ill in going, returned without water, and paffed the night in the moft agonifing pain. Myfelf who am fo accuftomed to the air of the mountains, and who feel better in this air than in the plair, I was overcome with wearinefs in obferving my meteorological inftruments. I his illnefs caufed in us an ardent thirf, and we could not procure water but by melting the fnow, for the water we had feen in coming up, was found frozen when they returaed to fetch fome, and the little chaffing difh we had with us afforded a flow fupply for twenty thirfty perfons.

From the middle of this plateau, euclofed between the laft fummit of Mont Blanc, to the fouth, its high fleps to the eaft, and the Dome du Goute to the weft, there is fcarce any thing to be feen but fnow; this fnow is quite pure, of a dazzling whitenefs, ans on the high fummits forms the moft fingular contralt with the almoft black fky of thefe high regions. No living creature to be feen, nol appearance of vegetation; it is the dwelling of filence and cold. When I reprefenteci io inyfelf Doctor Paccard and Jaques Balmat arriving the firft at the clofe of day in thefe deferts, without fhelter, without fuccour, without even knowing that mankind could exift in thofe places they were attempting to get to, but continuing neverthelefs boldly their career, I could not but admire their refolution and courage.

My guides always occupied with the fear of cold, fo clofely fhut all the openings of the tent, that I fuffered much from the heat and impurity of the air, occafioned by the refpiration of fo many people. I was obliged to get out in the night for the fake of taking breath. The moon fhone with the greateft luftre in the midule of the fky of a dark ebony colour, Jupiter feemed to throw out ftrong rays of light from behind the higheft fummit to the eaft of Mont Blane, and the reverberating light all over this extent of finow was fo dazzling, that only the ftars of the firft and fecond magnitule were diftinguifhable. At length however we began to fleep, when we were awaked by the noife of a great avalanche, which covered part of the declivity that we fhould have to climb the next day.

At break of day the thermometer was three degrees below the freczing point. It was late when we fet out, owing to the neceflity we were under of melting fnow for

[^144]breakfart,
breakfaft, and to have fome to carry with us; it was no foone melted tlank, on d thofe people who religioully guarded the wine I had brought with us, 10 uully th is the water I had in referve. We began by afcending the third and lalt latorm, i a took to the lefi to get on the highelt rock at the eaft of the fummit. I c declivity tremely flanted, thirty-nine degrees in fome places, and every where borders on pr cipices, and the furface of the fnow was fo hard, that thofe who went firft wure ubliged to break it with a hatchet before they could gain a fonting. It took us two hours to climb this declivity, which is about two hundred and fifty toifes high. Coming to the laft rock, we took to the right inclining wefterly to clinb the laft declivity, the perpendicular height of which is about one hundred and fifty toifes. This declivity inclines only to twenty-eight or twenty nine degrees and is not dangerous; but the ait is fo rarified that our ftrength vifibly failed, as near the fummit I could only go fifteen or fixteen fteps without taking breath, I even felt now and then a fort of fainting which obliged me to fit down, but in proportion as I recovered my refpiration, I felt my ftrength return; when recovered enough to proceed, I feemed as if I could get to the top at one ftretch. All my guides in proportion to their flrength were in the fame fituation. It took us two hours from the laft rock to the fummit, and it was eleven o'clock when we gained it.

My firt looks were fixt on Chamounie where I knew my wife and her two fifters were, their eyes fixed to a telefcope following all our fteps with an uneafinefs, too great without doubt, but not lefs diftreffing to them. I felt a very pleafing and confoling fentiment when I faw the flag which they had promifed to hoift the moment they obferved me at the fummit, when their apprehenfions would be at leaft fufpended.

I could now enjoy without regret the grand fpectacle I had under my eyes. A light vapour fufpended in the lower regions of the air, concealed from my fight the loweft and moft diftant objects, fuch as the plains of France and Lombardy; but I did not much regret this lofs. What I had juft feen and what I faw in the cleareft manner, is the whole of all the high fummits of which I had fo long defired to know the organization. I could hardly believe my eyes, it appeared to me like a dream, when I faw placed under my eyes thrife majeftic fummits, thefe redoubtable Aiguilles, the Midi, the Argentiere, the Geant, whofe bafes even had been for me of fuch difficult and dangerous accefs. I feized their relation to each other, their comection, their ftructure, and a fingle glance cleared up doubts that years of labour had not been able to diffolve.
During this time my guides pitched my tent, and fet out the little table on which I meant to make the experiment of the ebullition of the water. But when it was neceffary for me to difpofe of my inflruments and obferve them, I found myfelf every moment obliged to fufpend my work, and attend only to my refpiration.

If it is confidered that the barometer was then only at fixteen inches one line, and that thus the air had litile more than half of its ordinary denfity, it may be comprehended that it was neceflary to fupply it by the frequency of infpirations. When I was perfectly quet, I only telt a flight pain at my breaft; but when my attention was fixed for fome monents in continuation, and particularly when in fooping, I leaned on my fomach, I was obliged to reft during two or three minutes, to recover myfelf again. My guides felt the fame fenfations. They had no appetite; and to fay the truth, our provifions, which were all frozen, were not in that fate calculated to excite one; neither did they care for wine, or brandy, indeed they had found that Arong liquors increafed this indifpofition, without doubt by increafing the quicknefs of the circulation. It was frefh water only that did them good, and afforded them pleafure; but time and trouble were wanting to make a fire, without which we could not have any.

I neverthelefs remained at the top till half after three, and although I loft not a fingle moment, I was not able in thefe four hours and a half, to make all the experiments I have frequently made in lefs than three hours at the fea fide. I made however with care the molt effutial ones.

I got down cafier than I expected. As the motion in defcending does not prefs the diaphragm, it does not confine the refpiration, and one is not, therefore, obliged to ftop fo often to take breath. The delcent trom the rock to the firt platform was neverthelefs very difficult by its great fteepnefs, and the fun fhined with fuch brightnefs on the precipices beneath us, that it needed heads well accuftomed to fuch fights not to be terrified. I again flept on the fnow two hundred toifes lower than the preceding night. There it was I became convinced that it was the rarity of the air which incommoded us on the fummit; for if it had been from wearinefs we fhould have been much fi ker after this long and dangerous defcent; but, on the contrary, we fupped with a very good appetite, and I made my obfervations without any obftruction from indilpofition. I even be ieve that the height where this indifpofition begins is fixed, beyond which it is impoflible to proceed farther. For my own part I find myfelf very well at one thoufand nine hundred toifes above the fea, but as foon as I get higher I feel myfelf indifpoled.

The next day we found the glacier of the Côte changed by the heat of thefe two days, and ftill more difficult to pafs than it was getting up. We were obliged to defcend a declivity of fnow, inclined to fifty degrees, to avoid a crevice which had opened during our journey. At length at half after nine we found ourfelves approach the Côte mountain, very happy to find ourfelves again in a place where we were not afraid of it finking under our feet.

There I met Bourrit who wanted to engage fome of my guides to go op again with him; hut they found themfelves too fatigued, and wihhed to reft themfelves at Chamounie. We defcended very gaily to the Priory, where we got to dinner. It was a great pleafure to me to have them all return fafe, and well with their eyes and face in the belt pouijble ftate. The black crapes with which we had provided ourfelves, and with which we covered our faces, had perfectly preferved us from the temporary blindnefs, and chaped and burned faces often occationed by the reverberation of the fnow, which thofe who had gone there bcfore us had felt.

## Details of the Journey.

IN going from the Priory to Mont B'anc, by the Côte Moumtain, you muft begin by following the road to Geneva, as far as the village of Buifons, and then take the path which leads to the glacier of that name. But at the foot of the declivity which leads to this placier, you turn to the right which leads to the hamlet of the Mount.

This hamlet is fituated on a hill of gypfum; on the furface of this hill are feen hollous, fome in the form of funnels, others on the contrary have only a narrow orifice, and widening farther in. I was thewn one in a field fcattered over with buthes, the opening of which was but a foot wide, but farther in its diameter was ten or twelve feet of a fpherical form. Without doubt, thefe hollows are made by the waters which diffo've, and draw with them the gypfum which forms the hill, whilf the vegetable earth, withheld by the roots of grafs and buhhes, refts fufpended above thefe cavities. As to the Ipherical form of thefe cavities, it is difticult io explain; neither are thofe geoneters who give the account.

A little beyond the Mount we began to afcend, in purfuing the borders of the torrent which iffues from the glacier of Taconay; there iuftead of fixed rocks we only find wrecks, difplaced rocks, compofed of quartz, of mica, of hillæ horublende, or of ferruginous horin ftone, which diffolves in the air, and changes into oxide of iron of a rulty colour. Thefe fragments have frequently a rhomboidal form.

Soon after are feen to our leff yellowith rocks, which decompofe, and whofe nature is the fame as thofe fragments. As to their ftructure and fituation, they are, in general, conformable to the other works of Chamounie.
In proportion as we got higher we found the horn rock abound more in thefe fragments, neverthelefs one meets fome fine knots of granite of felfpar, of an almoft black grey, mixed with white quartz; of quartz croffed with threads of ainianth and others.

This afcent is extremely wild, at the bottom of a narrow valley, with the glacier of Taconay in front, briltled with tlakes of ice, not clear and white, like thofe of Buifons, but foiled by a black mud, and interfected with rocks of the fame colour: but in getting up higher we difcovered above this glacier, clear and fharp-edged fnows of the Dome of Goutć.

Till within half a league beyond the hamlet of the Mount, you may go on mules for about two fmall leagues from the Priory; but all the reft on foot.
Soon after we got above the glacier of Taconay, fome part of the way became difficult; we then met with a clear fountain of freh water, where the guides already fatigued with their loads took fome reft.
There we faced the glacier of Taconay, remarkable for the different colours of its ices, which at our fide on the right bank is muddy and black, whilft on the oppofite bank they are tranfparent and white.

The rocks on both fides are the fame as thofe I have above defcribed; they divide frequently into oblique angled parallepipeda; their fituation and fructure are alfo the fame.

In getting up higher we found harder grey rocks, refembling veined granites, with lengthened knots and veins of quartz, parallel to their beds and layers. Afterwards we got nearer the glacier, and climbed a lloping declivity to the Moraine, whofe ridge we followed for fome time; we foon after left it entirely by getting higher on the mountain to the left.

Half an hour after having quitted the ghacier, we came to the foot of a pretty high tharp rock, which guards a narrow and deep cavity, from which there is no way of getting but by fealing this rock; this paflave is called the Mapas or bad hep: they had placed a ladder there for me, on a fuppofition I houid want it, but as I was unwilling to give my guid:s a bad opinion of my intrepidity, I palfed on without touching it.

Beyond the Mapas we were obliged to pals by fome narrow corners on high flarp ridges.

We then followed an uneven ridge, with the peecipice to the right, and very uneven ficlds to the left; after that we climbed a flope to a cavern, where I flept the 20 th of Augult 1786, when, immediately after Doctor Paccard's journey, I endeavoured, by fol. lowing his fteps, to attain the fummit of Mont Blanc. But in the night there happened fuch a ftorm of rain and fnow, that I was obliged to return forrowfully, and put off the attempt till the following year.

Each of thefe journeys took me about four hours, without including reft, from the Priory of Chamounie to this cavern.

The fum nit of this rock, to the north-weft of this cavern, prefents a very fine profpcet : it forms one of the heights of the narrow ridge of the Côte mountain, which fe-
parates the glacier of Taconay, from that of the Bulions. The neck by which it is paffed is about fix hundred toifes above the Priory of Chamounie. From this ridge is feen the two glaciers juft mentioned, and which lay immediately under our feet, all the valley of Chamounie, to the defile de Balme, and the two chains which border this defile: farther on is feen the tower d'Ai, and the Aiguille of Midi, which over-tops St. Maurice, as well as other heights at a greater diftance. From the oppofite fide is feen the mountain beyond the glacier of Taconay, which bears the name of this glacier, and the trenches of the beds of this mountain. Thefe beds fhew with the greatelt regularity their pofition. Finally, in the fame direction the profile of the Aiguille of Gouté alfo offers the fame pofition of beds.

But the moft fingular point of view is that of the ridge itfelf, on which we ftood, feen at its full length from the north-weft fide. Great blocks of rocks with tharp angles, boldly and fingularly heaped on each other, crown the fummit of this ridge, and prefent the mon wild and fanciful afpect; the fmiling and beautiful parih of Ouches appears divided by thefe fterile rocks, and forms with them a ftriking contralt.

One of thefe blocks, which is tharp angled, projects very much over the precipice, and is called from its fhape, the bird's beck. It is faid, that a hhepherd, who laid a wager to go and feat himfelf on the point of this beck, actually got to it, and fat on it, but that in moving to come away, he lof his equilibrium, fell, and was killed upon the ${ }^{2}$ pot.

The rocks of this part of the ridge are for the moft part of fchiftus, compofed of black hornblende, and white felfpar *. There is frequently found in the crevices of thefe rocks, tranlucid little cryftals, of felfpar a little inclining to green.

It was twelve when we came to this ridge; I ftopped half an hour to give my guides time to dine. During this time I amufed myfelf with the fight of fome people a great way beneath me, who were crofling with great difficulty, fupported by their guides, the lower plateau of the glacier of Buifons, and who very probably were propofing to themfelves at their return to make a pompous recital of their undertaking, and the rifks they had run.

I looked, but looked in vain, on the fecond platform, for two of my guides, who had flattered themfelves with the expectation of getting before us to the ridge, where we were, in paffing by this platform of the glacier, which in effect prefents a more direct route to the Priory. But as fome of the way is very bad, we were very unealy at not feeing them. - They however rejoined us, but very late.

After having crolfed this ridge, we continued to afcend ubliquely, between the glacier of Buiffons and the top of this fane ridge, the rocks of which are always of veined granite, here and there mixed with beds of fiénite fchiefle, or of a foliated rock, compofed of biladed hornblende, and felipar. The beds of theie rocks are always in the fame fituation.

We paffed under a deep cavern, where Jaques Balmat, in his preceding journey, had concealed the ladder which was to affit us in croffing the crevices of the glacier, likewife a pole to make ufe of in very bad places. He found the ladder, but the pole was Nolen; it is fingular that thieves fhould find their way to fuch a plice; however, it cannot be faid they were highway robbers.

We alfo paffed by the foot of the Aiguille de la Tour, which is the higheft point of this ridge. We afterwards climbed fome granite veined rocks, always fituated in the fame

[^145]manner ; and we arrived, at three quarters after one, at the fummit of the Côte mountain, at the place where we were to pafs the night.

The firf journey took us but fix hours and a half from the Priory to our fleepingplace.

This fleeping-place confifted of a great heap of blocks of granite, among which my guides hoped to find fheltor, and where Dr. Paccard and Jaques Balmat had nept the firft night of their expedition. . Thefe blocks have been forced there by the glacier which is very near, and which is to be croffed to make a way to the funmit of Mont Blanc. And there it is we quitted the firm ground to embark on ice and fnow to the end of the journey.

The croffing of the glacier in the morning while the fnow is hard is to be preferred,' as it becomes much more difficult when the heat of the fun has foftened the fnow.

This is what Marie Coutet found under whom the fnow gave way, when he went to reconnoitre the way we thould go the next day. Happily, as I have faid in the abridged relation, he refted fufpended by the cords which faftened him to his two comrades, who had accompanied him. At their return we were all eager to have an account of the expedition; as foldiers are to alk the fpies of an arny news of the enemy's fituaation. Marie Coutet, with great feeming indifference and even gaiety, told his fory; notwithflanding which, his recital caft a fhade of forrow on the countenances of his hearers ; the moft heroic fmiled at it, but the reft viewed it in a more ferious ligbt. Mean time nobody talked of returning there, but, on the contrary, began to look out for a place of helter to pafs the night : fome went to my old lodging, where they hoped to be warmer; others fixed themfelves between the blocks of granite, for my part, I flept under my tent with my fervant and two or three of my ancient guides.-

The next day, 2d of Auguft, notwithfanding the intereft we all had in fetting off early, there arofe fuch difficulties among the guides in the arrangement and divifion of their loads, that it was half after fix o'clock before we fet out, each fearing to load himfelf, lefs from fear of the hardhip, than of finking in the fnow by the weight of himfelf and load, and by this means fall into a crevice.

We got on the glacier, oppofite the blocks of granite under which we flept; the entrance on it was eafy enough, but we foon found ourfelves entangled in a labyrinth of rocks of ice feparated by large crevices, in fome places opening very wide, in others covered either wholly or in part by the fnow, which fometimes forms a fort of arches underneath, and which are fometimes the only refources in one's power to get over thefe crevices; in other refpects it is an uneven ridye of ice which ferves as a bridge to crofs over. In fome places, where the crevices are quite empty, we had to go down to the bottom and get up at the other fide by ftairs cut with a hatchet in the very ice: but in no part is the rock found or feen *; and fometimes after haviag got to the bottom of thefe abyffes, furrounded with almoft perpendicular walls of ice, you can hardly conceive how you thall get out again, however as long as they walked on the ice, though ever fo narrow the ridges, and flanting the declivities of it are, thefe intrepid Chanouniards, whofe head and teet are equally firm, appear neither afraid or unealy; they talk, laugh, and defy each other in jeft ; but when they pafs over thefe fiight roofs fufpended over deep abyffes, they walk in a moft profound filence; the three firft tied together by cords, about five or fix feet diftance between them; the others two by two holding their ficks by the ends, their eyes fixed on their feet, each endeavouring to place exactly and lightly his foot in the traces of the one before him. Above all it was after we had feen the place where

[^146]
## 696

Marie Coutet had fallen, that this fort of fear increafed; the fnow had quite given way fuddenly undes his feet and formed round him an empty lpace of about fix or feven feet in diameter, and difcovered an abyfs to, which was feen neither bottom nor fides; and that in a place where no exterior danger appeared. Whea after having got clear of fome of thefe fufpicious fnows we found ourfelves on a rock of ice, the expreffions of joy and ferenity fhined on all our countenances, and our jokes and good humour rereturned. We then held a council on which way we fhould take, and grown bold by fuccefs, we expofed ourfelves i, th the greateft confidence to new dangers. It took us three hours to crofs this redoutable glacier, although hardly a quarter of a league in breadth. From this time we had only to walk on finow, often rendered extremely difficult by the very great flants of the declivities, and fometimes dangerous when thefe declivities bordered on precipices : but in this cafe at lealt we had no dangers to encounter but what we faw, and where we ran no rikk of being fwallowed up, without either ftrength or addrefs being of any avail to us.

In going from this glacier, we were obliged to climb one of thofe declivities of fnow extremely floped, after which we had to pafs to the foot of the loweft and moft northerly rock of a fmall chain of infulated rocks, in the middle : $f$ the ices of Mont Blanc.

This chain runs pretty near from north to fouth, and is entirely compofed of primitive foliated rocks, the elements of which are of blackifh or greenifh plates of hornblende, of felfpar, of p'ombagine, with a little quartz and mica.

There is found there alfo a greenifh fone, brilliant enough, tranflucid, fibrous and fcliftofe, pretty hard, fufible by the blow-pipe, in a globule of 0.3 , line of green glafs, tranflucid, of a greafy luftre. This fubftance agrees much with the featite afbctiforme of St. Gothard; but its parts are finer, it is more briliiant, harder, more fufible, and produces a clearer glafs. But except another fpecies is made, I cannot compare it to any other.

As to the reft, the felpar, whicir forms a part of tile compofition of thefe rocks, is of the fort which I call fat, becaufe it has a fat and oily luftre. All the rocks of this chain have their beds fituated like thofe of the Cotte mountain, according to the general law of the Chamounie rocks, but are inclined low.

This chain at the caftern fide is feparated from the Aiguille du Midi, and fome mountains, which join this Aiguillc with Mont Blanc by an extrenely wild glacier, almoft wholly compofed of foracs.

The name of firac, in our mountains, is given to a fort of white compact cheefe, taken from whey, and preffed in a fort of rectangular cales, where it takes a cubical form, or rather rectangular parallelipidus. The fnows at a great height frequently take this form when they freeze, after having in part imbibed water. They then become extremely compact; in this ftate, if a thick bed of this hardened ice comes on a declivity, and fhould, as it often happens, flide down in a body on this declivity; and, in fo fliding, if fome parts of the mafs thould not go equally with the reft, their weight forces them to brenk in pretty near rectangular fragments, lome of which may meafure fifty fect, and which, by reafon of their having no mixture, are as regularly formed as if they had been chiffeled.

On the faces of thofe great parallelipids is feen one of thefe beds of fnow accumulated from year to year, and palling gradualily from the fate of fnow to that of ice, by the infiltration and fuccenive freezing of rain and other waters which refult from the luperior beds after melting.

We had alfo at our right great heaps of fnow into this form of ferac, and we fhould have been obliged to palis between their intervals with much difficulty and danger, had
it been ever fo little later in the feafon, but a bridge of fnow which would have melted in a few days, ferved us to crols an enormous opening, and faved us the trouble of pafling amid the feracs.

We refted ourfelves fome moments in the fhade of fome rocks of the ifolated chain, of which I have fpoken higher up.

We then went to the weft, after which we again approached it at the place where the year before I had the hut erected with the intention of neeping there, but, as I have already mentioned, bad weather prevented me from getting there. In other refpects, this flation had been badly chofen, being too near the firft; as it is not more than one hundred and twenty toifes above the top of the Côte mountain; fo that we fhould have had nine hundred toifes to afcend the third day; whilit, on the contrary, it was neceffary for feveral reafons to leave the fmalleft portion for the laft.

The nature of the rocks which compofe this part of the infulated chain is fill the fame; and there is befides obfervable fome argillaceous fchiftus of the nature of fate, and fome fchiftofe granite rocks with fome knots of quartz; the fituation of their beds is always the fame, but approaches nearer to the vertical. There, and ligher up, this chain is frequently interrupted by fnows; the points of thefe rocks project like little iflands or flelves from the fea of fnow which covers this vaft region. My guides caufed ine to lofe a great deal of time here under the pretext of breakfafting and refting ; their intention was to delay our journcy, that we flould not be able before night to venture ourfelves on that part of our way where we fhould meet no more rocks, and where we fhould be obliged to fleep on the fnow. We did not fet out again till eleven o'clock, although we arrived about nine.
I again found the Difpenfia Helvetica in flower on thefe rocks.
We had from thence a glimple of the lake acrofs the valley of Abondance from the firf rocks; but in continuing to afcend faw it fill better, we could even very well diftinguifh the town of Nyon. The mountains of Faucigni appearing lower and lower before us, l'aiguille percíe of Repofoir was that which kept longeft in fight, owing to its nearnefs to us, and its projecting fummit in a diftant horizon, for we could only call the view of thofe completed over which we could fee the Jura. Every victory of this fort was a fubject of joy to the whole party : for nothing animated and encouraged us more than.a diflinct view of the progrefis we made.

After an hour's walk we came to an immenfe opening, along which we had to coaft. And although a hundred feet wide, we could perceive no bottom to it.

The moment we were flanding on its edge refting ourfelves, admiring its depth, and obferving its beds of fnow, my fervant, byIdo not know what heedlefinefs, let fall the ftand of my barometer, which he held in his hand; it flided with the rapidity of an arrow on the flanted wall of the opening, and fixed itfelf at an immenfe depth at the oppofite fide, where it continued vibrating, like the lance of Achilles on the banks of the Scamander. I felt a very livel/ movement of concern, becaufe it not only ferved as a prop to the barometer, but alfo to a compafs, a telefcope, and many other inftruments which faftened on it ; in a moment fome of my guides, fenfible of my concera, offered to go for it, but as my fear of expofing them to too much danger prevented my confenting to it, they protefted there was no danger, and immediately one of them paffed a cord under his arm, and the others let him down to where it was, he drew it away and brought it back in triumph. I had a double uneafinefs during this operation : firft, the danger of the fufpended guide; next, as we were within view of Chamouni, from whence with a relefcope all our movements were perceivable, I thought that if at this moment our friends had their eyes fixt on us, they would, without doubt, think one

NOL., IV.
of us had tumbled into the abyfs, and that the others were getting him up. I have been fince informed, that happily at this noment they were not looking at us.

We were obliged to crofs this fame opeuing on a dangerous bridge of fnow; after which, by a very floping declivity of fnow we came to one of the rocks of the infulated chain, where I flept the day of my return from the fummit, and for that realon I called it the rock of Happy return; its height is one thoufand feven hundred and eighty toifes.

We arrived there at half after one, and dined in the fun with a good appetite, but much regretted the want of water, when one of the guides thought of a very ingenious method to procure fome: they threw fome balls of finow againlt the rocks expofed to the fun, part of which fticking melted by the heat of the rock, and we faved it by little and little as it fell; to relieve themfelves they threw the fnow-balls by turns, and formed a fort of well, which fupplied us with as much water as we wanted.

This rock, as well as that which is more to the fouth, and the laft of this infulated chain, is like the others compofed of primitive fehiftofe rocks, mist with quartz, hornblend, and felfpar, with knots, fome of pure quartz, others of granite rocks. The higheft fhew fome veins, fome of Black hornblende pretty near pure; others of white felpar; but an oxide of iron which comes from the hornblende diflolved, gives to all thefe rocks a yellowifh caft. The beds of thefe fchiftufes are alfo fituated according to a former obfervation, but are almof vertical.

This infulated rock, in the midtt of fnow, appeared to my guides a delightful place, an ifland of Calypfo; they could not prevail on thenselves to quit it, and feemed deternined to pafs the night there. In the abridged relation has been feen what trouble I had to make them leave it.

From thence in an afcent of about thirty-five minutes we attained the firft great platform of fnow which prefents itfelf in this route. The declivity of this platform is from ten to twelve derrees, but it is a plain in comparifon of the declivities we had climbed.

At our left hay the Aiguille du Midi, which began vifibly to lower to our right; the Dome of Gout', where the diflolved hornblende predominates. The fummit of this dome cut almoft a harp point on our fide, covered with a roof of fnow, half circular, like the arch'of a bridge, and crowned by a continuation of thofe enormous blocks of fnow of a cubical form which I have named feracs, prefented the moft fingular and magnificent view. Before us the fummit of Mont Blanc, the object of our undertaking, fill appeared to us of a prodigious height; at its left; the rocks which we call its fairs, and fome very fuperb picces of finow, which by the dazzling of the fun appeared ftrikingly fingular and beautiful.

It took us twenty minutes to traverfe this platform; and this time appeared long to us, for fince the lait voyage of J ques Balmat, it had been covered by two enornous avalanches of feracs, which fell from the Dome of Goute; we were obliged to crols over thefe avalanches under the continual fear of being overtaken by others. I had however the pleafure of obferving thof firais which we feldon have an opportunity of viewing uear us. I mealured fome which were more than twelve feet every way; the bottom, or that part which had uaited with the rock was formed of white, tranfucid ice, and more compact than ordinary ice. The oppofite fide which had been origimally the top, was ftill of fuow, thourh a little hardened, and there is feen in the fame block all the fhades between thefe two extremes. Wewre furprifed to tind that feveral of thefe blocks had arrived there witiont being distigured, and even that they had ever come, there, for the Dome of Goute, from which they were detached is at a great diftance, and the declivity is not very flanting: without dupbt they had dided in the morning on
the fnow which had been frozen and hardened by the cold of the night, and their own velocity had been very great.

From this platform we were an hour afcending a declivity of thirty-four degrees, which brought us to the fecond platform where we were to fleep.

We had at firft long and ferious deliberations refpecting the choice of the place we flould fix the tent under which we were all to collect to encounter the cold of the night, of which the guides had formed to themfelves fo frightful an idea. Beffides the cold we had two other dangers to guard againlt, the one from above, the other from beneath : the bufinets was to choofe a fituation which fould fcreen us from the danger of the avalanches which might fall from above, likewife from that of crevices concealed by fuperficial fnow. The guides trembled at the thoughts of this fnow loaded with the weight of twenty men collected in a fmall fpaise, and foftened by the heat of their bodies melting and yiving way all of a fudden, and fwallowing us all up in the middle of the night. A frightful crevice whofe winding we had traced in coming to this plat. form, and which might have extended, for what we knew, to the place immediately under us, proved at lealt the pollibility of fuch a fuppofition. However, we found at about one hundred and fifty yards from the entrance tof the platform a place which appeared to us fecure from all thofe dangers. There they fet about thovelling the fnow away, and lixing the tent over the place they had made for it. In the abridged account I have related the indifpofition my guides felt here from the rarity of the air.

After fone moments of repofe Marie Goutet and two others went on the Dome of Goute to look for the ftones covered with glafs bubbles, that I have defcribed in the fecond volume, and brought back fome very fine ones, and one among others very remarkable in its having fprinkled on its furface the bubbles of a colour analogous to the part of the correfponding ftone, blackifh or greenifh upon the hornblende, and whitifh on the felfpar; which proves clearly that they have been formed by a fuperficial fufion of the rock, and of confequence that thunder has produced them; in fact, by what other means could this effect be produced on the firface of a rock furrounded by fnow? The fame guides afterwards went to examine the declivity we had to get up the next day. They returned fatisfied with having found covered with fnow a crevice, which in the preceding journey had given them a good deal of trouble to get over; but the declivity by which we were to afcend appeared to them extrenely abrupt, and formed of very hard and flippery fnow, and I faw clearly by this account that they were in doubt of my being able to get up it.

On mountains free from fnow, an 'whofe heights does not exceed one thouland or one thoufand two hundred toifes it is very pleafant to get in good time to a fleeping place; the coolnefs of the evening refrehes you after the fatigues of the day, and you fit down on the grafs or on a rock, are amuled in oblerving the gradations of the light, and the changes which almoft always accompany the feting of the fun, and twilight.

But in high mountains covered with fnow the clofe of the day is extrencly painful, one camot tell where to place one's felf; if you fit ftill you are frozen, and fatigue joined to the rarity of the air deprives you of treugth and courage, neceffary to warm your felf by exercile. This is what we felt in the fituation we were now, to which we came about four o'clock. We wereall frozen with cold; and waiting with the greatelt impatience till the tent was fixed; as foon as it was, we all got into it, and in a thort time the babbling of the guides and the nauleat of thofe who where fick, forced me to leave it.

I hattence fupper as much as pollible. Afterwards they had great difficulty in fixing themlelves in fuch a manner as they might be able to pais the night; I was allowed to ftretch myfelf in a corner; but as for the ref they could only lit down on the fraw
between each other's legs; and the air corrupted by the refpiration of twenty perfons crowded into fo fmall a fpace occafioned our paffing the bad night of which I have fpoken.

The next day we foon traverfed the fecond platform, at the entrance of which we had paffed the night; from thence we afcended to the third, which we likewife foon croffed, and in half an hour came to the great declivity, by which in drawing to the eaft, we got upon the rock which forms the left floulder of the top of Mont Blanc.

At the beginning of this afcent I was out of breath by the rarity of the air ; however by refting a moment every thirty or forty paces, but without fitting down fo far recovered my breath, as to be able in about forty minutes to get to the entrance of the avalanche which had fallen the preceding night, and which we had heard from our tent.

There we all ftopped for fome minutes in hopes that after having refted our lungs and legs, we fhould be able to get over the avalanche pretty quick and without refting to take breath, but in that we deceived ourfelves, the fort of wearinefs which proceeds from the rarity of the air is abfolutely infurmountable; when it is at its height, the inoft eminent peril will not make you move a ftep fafter. But I infufed frefl courage into my guides by repeatedly telling them that this place was really the leaft dangerous, becaufe all the loofe fnow of the heights above us had already come away.

Beyond this avalanche the declivity became continually more lloping, and on our left bordered on a frightful precipice; it was neceffary to get over a pretty large opening, the paffage of which was incommoded by a rock of ice, which forced us to the border of the declivity. The furemoft guides had cut fteps here and there on the hard fnow as they went on; but as they had left the fpaces too long it was neceffary to take fuch long fteps that one ran the rik of miffing ones footing, and niding without remedy to the bottom. At lafl, towards the top the thawed furface became thinner ; then it broke under our feet, and underneath it eight or nine inches of crumbled fnow, which refted on a fecond cruft of hard fnow, into which we funk to the calves of our legs, after which we flided down the fide of the precipice, to which we were only held by the upper cruft, which thus found itfelf loaded with a great part of the weight of our bodies; and if it had broken we fhould infallibly have flided to the bottom; but I did not think of the danger, my refolution was taken, I determined to go on as long as my ftrength would cnable me, and I had no other thought than that of advancing with a firm Alep.

It is faid when you walk on the border of a precipice you fhould not look at it, and is true to a certain point ; but the following advice is the refult of my long experience. Before you engage in a dangerous paflage you fhould begin by contemplating the precipice, until you get quite familiar to it, and it has loft its force on the inagination, and you can look at it with a fort of indifierence; meantime you fhould ftudy the way you fhould go, and mark as you may fay your fleps: after which the danger is no more thought of, and you only think of following the preferibed way. But if you cannot bear the fight of the precipice and accuftom yourfelf to it, give up the enterprize, for if the path be narrow, it is impofible to look where to place your feet without looking at the precipice at the fame time : and this fight if taken unawares dazzles you, and may prove your deftruction; this rule of conduct in danger appears to me applicable to moral as well as natural cafes.
I employed there, and in other dangereus fituations the manner of helping one's-felf by the guides, which appears to me the fureft, for him who employs them, and the leaft inconvenient for thofe who help him; it is to have a light but frong, ftick, eight or ten feet long; two guides placed the one before and the other behind, keeping the ftick by
the fide of a precipice, the one guide at one end, and the other at the other, and yourfelf in the middle, with this walking fence you fupport yourfelf as occafion requires; this neither incommodes nor tires the guides, and may ferve to fupport themfelves in cafe one of them fhould flip or fall into a crevice. It is in this attitude that the Chevalier Mechel has reprefented me in the large coloured plate that he had engraved from our caravan in the middle of the furrounding ices.

At length in two hours and a half, reckoning from the place where we flept, we attained the rock that I call the left houlder of the fecond ftairs of Mont Blanc. In this place there opened to my view an immenfe horizon and quite new, for the fummit being at our right, nothing conccaied from our view the whole of the Alps on the fide of Italy, which I had never before feen from fuch a great height; but I referve this detail for the following chapter. There I had the fatisfaction to fee myfelf certain of attaining the fummit, fince the remaining afcent was neither very floping nor dangerous. We here ftopped to eat a bit, feated on the borclers of this magnificent terrace; but the bread and meat we brought with us were frozen; yet the thermometer had never been l/wer than three degrees below the freezing point, and thefe aliments, fhut in and covered in a doffer carricd on a man's back, ought to have been a little preferved from the cold by the heat of his body. I am perfuaded that on the plain in the fame degree of cold thefe aliments would not have been frozen, and very likely that there even a thernometer hhut up in a doffer would not be lower than o; but in this rarified and conftantly renewed air, the bódies or fubftances impregnated with water undergo a very great evaporation, and on that account imbibe the cold more than the dry ball of a thermometer: at nine in the morning, the thermometer was at half a degree above $c$, and my hygrometer at fifty-nine. The naked rocks that we met there, and which form two forts of black and projecting ridges, which are very well feen from the borders of our lake, to the left of the higheft fummit of Mont Blanc, are of granite, here reduced to fcattered fragments; there, in folid rocks divided by pretty near vertical fiffures, the direction of which is conformable to that which generally reigns in thefe mountains, that is to fay, from N. E. to S. W., and which in confequence Ilooked upon as beds.

The felfpar which enters into the compofition of theie rocks is white bordering on grey, or on green, or on a reddifh colour; it gives by the blow-pipe a glafs, from which may be obtained globules of 0,6 , tandparent, without colour but full of bubbles.

This felfar is lometimes pure, covered or even mised with a grey fubflance verging on fea green ; without brightnefs, earthy, brittle, ftripped with a grey whitenefs. This fubftance appears to be of an earthy fteatite; it is difficult to get fragments of it free from felfpar; thofe which I have been able to feparate, have melted by the tube into green-glafs, tranflucid and of an extremely fat afpect. They difcolour on the fibres of fappare, and diffoive it with effervefcence.

The whitih half tranfparent quartz, which enters into the compofition of this granite, appears fattifh on breaking; a fragment of a fifteenth of a line in length, by a thirtieth in thicknels or of 0,067 , on 0,033 , fixt at the extremity of a loofe thread of fappare, bucame quite round at the flame of a blow-pipe, in loofing a little of its tranfparence which under this volume appeared perfect, and formed in itfelf fome bubbles in its interior. This quartz is then more fufible than rock cryftal, in the proportion of 0,035 to 0,014 .

Thefe granites are frequently mixed with hornblende, fometimes blackifh, fometimes bordering on green.

There is alfo ieen here chlorite often of a green colour, fometimes in nefts, and even in thick mafles. It is tender but not crumbly; of a very fine grain, and its finall parts
feen through a microfcope, appears like fmall blades very tranflucid, of a clear green, but they have not the regularity of thofe of St. Gothard which I have defcribed. This follite, as well as the hornblende, appears to fupply in thefe granites the place of mica, whichonly fhewsirfelf in very fimall and farce blades.

Some of thele granites appear rotted, there are obferved in them fmall cavities of an angular, irregular form full of a rulty brownifh duft. In breaking thefe granites there, is found in their interior parts finall brown pyrites tarnifhed on the outfide, but brilliant and of a very pale yellow infide, and whofe tragments are attractable by the loadtone. It is from the mixture of thefe pyrites that thefe cavities are formed. My guides found fome fragments of thefe fame granites, in which are leen cubical pyrites of three or four lines in thicknefs, which on breaking appear very brilliant, and of a brally high coloured yellow; they do not alt $r$ on being expofed to the air.

On thefe rocks are alfo found fome quartz with fome veins and netts of delphinite or green fehorl of Dauphiné; it is but confufedly cryftalized, but to be diflinguifhed by its fivelling under the blow-pipe, and the black and refractory fcorix into which it changes.

In fome places thele granites degenerate into irregular fchiftofe rocks, formed of quartz and felfpar, without any mixture of mica, and whofe beds are feparated and covered with clay of a nut-brown ferrnginous colour, and melts into a black glafs.

In thefe fame granite rocks are inclofed a layer of granitel, almoll entirely compofed of black and hining lamellar hornblende, and of grey felfpar tranilucid, of the colour of rulty iron at its furface.
To conclude, my guides found in thefe rocks a palaioperre or primitive petrofilex of a grey colour bordering on green, trandlucid at a line thick and even to 1,2 ; fcaly or Theliy on breaking, hard, interiorly mixed with fpots of a deep green, which are fcarcely vifible but by a glafs, and which appear to be of fteatile; and allo with fome fpots of pyrites, which in difolving ftain of a rufty colour the places near it. This tone in melting turns to a green glafs like that of felfpar.

After having refted and examined thefe rocks, I refimed my journcy about nine o'clock. As I had meafured from Chamounie the heights of the parts of the mountain, I knew that I had not more than about one hundred and fifty toiles to go, and that by a declivity of not more than twenty-cight or twenty-nine degrees, on a firm and not flippery fnow, free from crevices, and diftant trom precipices, I therefore hoped io sttain the fummit in lefs than three-quarters of an hour; but the rarity of the air prepared me difficulties greater than I could have forefien I have obferved in the abridged relation, that towards the lattar end, I was obliged to take breath every fifteen or fixteen fteps; moftly ftanding fupported on my fick, but obliged about every third time to it down; this neceffity of refling was ablolutely infurmountable; I endeavoured to overcome it, my legs falled me, I felt a fwooning, and I was feized with a dazzling quire in. dependent of the power of the light, as the double crape which covered my face perfectly forened my eyes. As it was with extreme concern, that 1 thus faw the time pafs that I had hoped to dedicate to the making of my experiments on the fummit, I made feveral attempts to fhorten my rells; I endeavoured for example not to exert my full ftrengit, and to flop at every four or five fleps, but I gained nothing by it; I was obliged at the end of filteen or fin'enn theps to reft as long as if 1 had duone it without intermifion, what is ramarkable is that I did not feel this great uneafinefs till cight or ten feconds after I gave over walking. The only thing which did me grod and increafed my ftrengh was the air of the north wind; when in afendng I had my face turned to that fide, and ftontly inhaled the air coming from thence; 1 could without ftopping go twenty five or twenty-fix yards.

The generality of thefe fenfations felt by the twenty people of which our party was formed, and the details which I have given in my abridged account, cannot leave any doubt refpecting the caufe of thefe phenomena. They befide perfectly agree with what is known as to the neceffity of the air, and even of an air of a certain degree of denfity, for the prefervation of animals of a warm nature.

Pretty near the middle of this afcent we paffed near two finall rocks, projecting over the fnow. ' 1 " higheft of them had been lately fhattered, and its fragments thrown over the frefh fnow to the diftance of feveral feet. And as affuredly no body had been there to blow up this rock with powder, or break it with aniron bar, there can be no doubt but it was produced by thunder. Yet I could not difcover any glafly bubble. In the abridged account I have faid that it proceeded from is conitituent parts being extremely refractory; but this is an error, for I have fince then feen fragments from the rocks of the Dome of G ute, which are exactly of the fame nature of the one now in queliion, and which are covered with glaffy bubbles. This difference proceeds rather from the greater or lefs violence of the flroke they have received, or of the lefs or greater moifture then contained in them. Among thefe feattered fragments were fcen leaves of granite in mailes more or lefs thick, whofe great faces were pretty near parallel to each other.

The lower rock prefents the form of an horizontal fmooth table, its length from north to fouth fix feet fix inches, and its breadth four fect from eaft to weft. This table finks into the fnow from above or from the weft; but from the lower fide or from the ealt its border rifes four feet eight inches fix lines above the fnow. It is a folid block without any vifible. feparation. I carefully took its dimenfions that it might be known hereafter it it Mould increafe or diminifl.

Thefe rocks, fituated near two thoufand four hundred toifes above the fea, are interefting on account of their being the higheft of our globe examined by naturalifts; Meffrs. Bouguer and Condamine had been on the Cordilleres to an equal and even fome toifes greater height than our rocks (two thoufand four hundred and feventy toifes): they did not underftand ftones, but as they fay they have fent a great many cafes full of fpecimens from the mountains on which their trigonometrical operations had conducted them, I fhould have been very defirous to have thefe feecimens examined by judges.
The deceafed Duke of Rochefoucault, a man as much diftinguifhed for his knowledge as lis virtues, and who has been the innocent victim to the troubles of a country for which he had made and would flill have made the grcatelt facrifices, was willing at my requeft to examine thefe rocks with the greateft care and attention, either at the Jardin du Rui or at the Academy of fciences, of which he was a member, but he could ncither find them nor gain any intelligence of what was become of them.

The fcarcity of fecimens of rocks fituated fo high, and the confequences that might be drawn from their nature in different fyftems of geology, engage me to give a particular defeription.

They are granite in mafs, where hornblende and fteatite take the place of mica, which is there rare, a bright fun and a magnifying glats are neceflary to be able to diflinguifh fome white and bright fcales; it is even doubtful if thefe brilliant paricles, which it is imponible to take off, are really mica.

Felfar is the prevailing part of thefe granites; it evidently forms about the three fourths of their mafs. Their cryftals, pretty near parallelopepid, vary in fize; fome are feen an inch in length and fix lines broad, They are of a dull white, feebly tranflucid, of little luftre, of the fort I call dry; they yick by the blow pipe a tranfparent glafs, but with bubbles, of which may be formed balls of 0,81 , and of confequence fulible at 70 degrees of Wedgwood. On the filet of fappare the bubbles diffipate, and there renains a
tranfparent milky glafs, which fubfides without penetrating or diffolving. Thefe cryftals of felfpar appear here and there of a tarnihed green, caufed by a llight mixture of fteatite which covers them.

The quartz whicis forms a little lefs than the fourth of the mafs, is grey bordering on violet; uneven in breaking, brilliant in places, not fcaly but conchoid. Its fufibility is pretty near the fame as that of other granitic quartz.

The hornblende, whicl. forms too fmall a portion to be of much account, is black bordering on green; it hews fome tendency to a fcaly and brilliant form, but is oftenef twinkling and almoft earthy. It fufes into a black bright glafs, cavernous in its interior, and which on the thicad of fappare paffes to a bottle brownifh green, changes colourafterwards, and dilolves with fome effervefence which proves a mixture of magnetical earth.

The earthy fteatite likewife forms a very fmall part of thofe granites.
All thefe granites hive their natural divifions covered with a green or black cruft. This is an earth refembling the chlorite, of a blackifh green, fhining a little at its exterior furface, but of a clearer and more earthy green in the fractures, brittle, the ftreak greyifh green, turning brown under the blow-pipe, then giving a button $=0,3$, or fufible at the 189 th degree of Wedgwood. This button has a metallic afpect, a little unequal, and of a little tarnifled or iron melted colour; and not only this button but all the parts that the power of the flame has made brown, are very ftrongly attractable by the loaditone. A fmall fragment tried on the filet of fappare, infiltrates immediately like ink into the pores, then turns to a tarnifhed brown, and at length entirely lofes its colour, but without appearance of diffolution.

The green cement which covers other parts of this granite in their fpontaneous divifions is lefs obfcure, fhining enough, tranflucid, foft and a little greafy to the touch, brittle and eafily ftreaked into grey, changing by the blow pipe into a tranflucid glafs, which becomes tranfparent on the filet of fappare, and diffolves it, but without ebullition. This cement appears to be of the nature of fteatite; I was not able to procure any pieces large enough to meafure its fufibility.

The latter part of the afcent between thefe little rocks and the fummit was, as might be fuppofed, the moft difficult for the refpiration; but at length I gained the long wifhed for point. As during the two hours this painful afcenfion coft me, I always had under my eyes almoft every thing to be feen from the fummit, my arrival on it was not attended with that furprife one might imagine. The greateft pleafure I felt was that of fecing my great uneafinefs at an end; for the length of this ftruggle, the recollection of the ftill poignant fenfations the difficulties this victory had coft me, cauled me a great deal of irritation. The moment I had got to the higheft top of the fnow with which this fummit is crowned, I trod upon it with a fort of anger rather than felt a fentiment of pleafure. Befides my object was not folely the getting to the top; I wanted there to make obfervations and experiments which would make this undertaking valuable; and I was very much afraid I could make but a very fmall part of what I had propofed; for I had already found even on the platform where we flept, that all experiments attended with care, caufed fatigue in this rarified air, and that becaufe without thought you hold your breath; and as it is neceflary to fupply the rarity of the air by the frequency of refpiration, this fufpenfion caufed a fenfible uneafinefs, and I have been under the neceflity of refling and taking breath after having obferved an inftrument of any fort, as one fhould do after having got up a fteep hill. Still the fight of the mountains gave me a fenfible fatisfaction, of which a more particular account will be feen in the following chapter.

But before the contemplation of thofe diftant objects I thould fay a word of the form of this fummit, and finifh the defcription of the rocks neareft to it.

The top of Mont Blanc is not a plain but a fort of lengthened ridge, directed from eaft to weft, pretty near horizontal in its higheft part, and lowering at the two extremities in angles of from twenty-eight to thirty degrees. This ridge is fo uneven towards its fummit, that two perfons cannot walk a brealt ; but it widens and rounds in defeending to the eaftern fide, and takes towards the weft the form of a projecting roof, disected to the north. All this fummit is entirely covered with fnow; not a portion of rock to be feen till you go feventy or eighty toifes lower down.

Of the two fronts of the ridge, that to the north is of the moft rapid defcent, and becomes afterwards fill more fo, and terminates by joining frightful precipices. To the fouth on the contrary this flant is gentic, and lower down forms a cradle, rifing itfelf in a contrary way to the fouth, where it forms above the Allee Blanche a pretty high point, under which is a projecting roof of fnow, and under this roof are the rocks which I faw from the heights of Cramont, and took for the fummit becaufe they concealed the real fummit covered with fnow. This projection to the fouth is the caule that when the fummit of Mont Blanc is viewed in profile from the eaftern or weftern fide, for example, from St. Bernard or Lyons, there is feen beneath it a fort of hook turned upwards towards the fouth which conceals it.

Whilf I was employed in making thefe obfervations, Jaques Balmat offered to look for fome bits of thofe rocks which I have jult mentioned, and of which the turned-up point above the Allée Blanche is formed I eagerly emuraced his propofal. As he had been well refted and felt himfelf hearty, he fet out very eagerly in a run, but he foon found his breath fail, and to recover it was obliged to extend himfelf at full length on the fnow, however he recovered, and with a fteady pace refumed his intention and brought me three ftones of the following fort.
I. Some granites perfectly like thofe defore defcribed.
2. Some fienites or granitelles, that is to fay, rocks compofed of layers of black hornblende and white felfpar, alfo laminar, but boch in fuch fmall quantities that 1 may as well give thefe rocks the name of trapp, after the definition that I have before given.
3. A primitive petrofilex or palaiopetre of a grey pearl hue, tranflucid at the thicknefs of two thirds of a line, of a fcaly fracture in great and linall fcales, hard enough to produce farks of fire, but yct yielding into grcy ferakes by a ftrong point of fteel. With the blow pipe may be formed globules of 0.45 ; which indicates the fufibility of the grofs matter at 126 or 130 of Wedgwood. I his is a grey half tranfparent glafs, with bubbles, which on the filet of fappare gains in tranfparency and fubfides, but without penetrating or diffolving, and even withont freeing iffelf entirely from its bubbles.

This palä̈opetre enclofes veins from one to three lines in breadth, which crofs each other under different angles, and fmall nefls of leek-green hornblende, confufedly criftallized, or in lamina feldom flrait, or in moderate fized fibres.

The higheft acceffible rocks to the north and under the fummit, are thofe which are ftrewed with glafs bubbles, and of which 1 have for the firf time made montion in the fecond volume of thefe travels, but which merit a more exact defcription.

1. Granitelle (/jcnit of Werner) comp. fed for the moft part of white felfpar, almont opaque, of a laminar fracture, but not very diftinct, and of hornblende of a greenifh black, laminar and brilliant in crittals, often by themfelves, although often of undetermined forms, of the lize of from one to two lines. The fufibility of this felfpar is the fame as that I have deferibed; and that of this hornblende is of 90 degrees of Wedg- : wood, anfivering to a ball of the diameter of c.6.
2. The fane granitelle, but in which hornblende predominates, having but vary little felfpar. This fone in fome places takes a fchiftofe texture.

It is inderllood that between thefe two numbers may be found intermediate varicties.
vol. $1 v$.
$4 x$
3. Schiltus
3. Schilus of a greenilh grey, tender, compofed of cornéenne, or according to Werner of lehittofe hormblende, in fome places trait, in others waving, fomething brilliant on their greateft faces; and of white felfpar in very fmall blades intermixed with the cornécne.

This fchifus is often found adhering to Nos. $\mathbf{x}$ and 2. It is fufible into globules of a clear bottle green glafs colour, mixed with white fpots of the diameter of 0.7 , which indicates the 8 . ft degree. It is principally on this fehiflus that the glafly bubbles are feen; fone are of a pretty elcar green, and cthers of a dark bottle green. But in it is alfo found pure black hornblende, and there the bubbles are black. They are alfo found though more rarely in the white felfpar, and there they are whiter and a litile more tranllucid than the flone from which they have been lifted up, by the caloric detached by the thunder.

## Geological Ohfirvations.

The firfthing that fruck me in the view of the whole of the high fummits urder my eyes, from the top of the higheit among them, is the fort of diforder whicin reigus in their difpofal.

When from our plains, or even from the tops of the fummits adjacent to Mont Danc, for example, from Brevent or Cramont, one confiders the chain of which Mont Blanc forms a part, it appears that all thefe colofies are ranged in a line; and from this appearance is.called a chain. But when you take a bird's eye view of them, the illulive appearance vanifhes entirely. In fact, the mountains, particularly thofe to the north of Mont Blanc, in Savoy and in Swiflerland, appear fufticiently joined to form a fort of chain. But the primitive ones do not fhew themfelves under that appearance; they feem diflributed in great mafles or in groupes of a varied and fanciful form detached from each other, or at leaft appear to be only joined by chance without any regularity.

Thus to the eaft the Aiguilles of Chamouni, of Courtes, of Tacul, the tops of which mixed with rocks and fnow, and feparated by glaciers, offer the mott magnificent fpectacle, form a triangular group almoft deiached from Mont Blanc, and only united by its bafe.

In like manner to the fouth-wef, the Mont Zuc, the Rogne, and the other primitive mountains on the North of the top of the Allee Blanche, form alfo a fort of triangular group, feparated from Mont Blanc by the valley of the glacier of Miage; and which is likewife united only to Mont Blanc by the bafe of the mountains which clofe this glacier to the north.

And lafly, Mont Blanc iffelf forms an almont infulated mafs, the different parts of whicis are not in the fame line, and do not feem to have any agreement in fituation with the two other groups.

In taking a itill further view, I was confirmed in the fame obfervation; the primitive mountains of Italy and Swiliertand which I was near enough to view, only prefented to ny fight groups or maffes feparated without order or regular form. I did not fee the appearance of chains except in thofe whofe diftance was too great for the fight to take in.

This obfervation excludes all idea of a regular formation, or at lcaft it muft be traced back to an epoch anterior to that which has given them their prefent form.

Yet notwithlanding this irregularity in the forms and diftributions of the great mafies, I obferved fome refemblances, as pofitive as important in the fructure of their parts. All that I could diftinctly fee, appeared to me to be compofed of great vertical
leaves, and the generanity of thefe in a like direction, pretty nearly from north-eaft to fouth-wef.
I had above all a great pleafure in obferving this fructure in the Aiguille du Midi. In Chapter XVIII. of the fecond volume is feen with what trouble and danger 1 attempted to make the tour of the bafe of this Aiguille, to fludy its form ; and with what regret I found my eager curiofity oppofed by inacceflible walls of granite which furround its bafe. Here I faw it under my feet, and defribed at my eafe all its parts,

The fecond day of the journey, on arriving at the border of the platform on which 1 paffed the night, I faw to the north-eaft a little below me fome broken pinnacles; I afked Pierre Balmat what they were; and when he informed me what I prefently difcovered myfelf, that it was the fummit of the Aiguille du Midi, I felt a fatisfaction difficult to defcribe.

In continuing to afcend I did not lofe fight of it, and I am certain that like the $f . \therefore$ guilles of Blaitiers it is entirely compofed of magnificent plates of granite, perpendicular to the horizon and in a direction from north-eaft to fouth-weft. Three of thefe plates feparated from each other form the fummit, and fimilar ones gradually leffening as they rife, form the fouth front at the fide of the Col du Geant.

I believe then it was an illufion when in obferving from bottom to top, it appeared to me to be compofed of plates applied round an axis like the leaves of an artichoke; or at leaft if there are fome leaves difpofed in this manner, they are only the loweft ones; for in diving as I may fay into its interior, I faw all its leaves perfectly parallel to each other.

I have given the details of this fummit as an example; all thofe which I could fee diftinctly appeared to me pretty near in the fame form and direction. If there were fome exceptions they were local and of little extent.

This great phenomenon explains iffelf, as I hope to flhew in the theory, by the refolt lement or eruption which has reifed thofe beds originally horizontal.

But another queftion which 1 ardently defired to refolve, is to know if thefe great plates preferve the fame nature from their bafes, which 1 had long known, to their fummits, which I had not yet feen fo near. I was fully fatisfied; I found that the fummit of thefe peeks, as well thofe which we laid hold of, and of which a defcription has been given in the foregoing chapter, as thofe which we found near enough to examine diftinatly the fubftances of which they are formed, are without doubt like their bafes, of granite, granitelle, of veined granite, and other fones of the fame clafs.

This circumftance is fo important for the theory, that although I might have obferved it on mountains lefs high, and that it appeared mon probable for the others, it gave me extreme fatisfaction to make it general by a direct obfervation.

In effect this proves the remarkable property of mountains in vertical beds, which is that their nature is the fame from their bafe to their fummit, be the height of their fummits what it may. On the contrary, in thofe whofe beds are horizontal, or at lealt nearly fo, the nature of the fame vertical part of the mountain is feen to change in proportion to its height. The Buet, for example, reft on a primitive bafe, whilf its funmit is fecondary. The Furela del Bufco has its bottom of hard veined granite with the grain large ; and in proportion as one gets higher thefe granites are feen to degenerate into foliated rocks, of a quite different nature. The fame obfervation is verified as we thall fee, on Mont Rofe and Mont Cervin.

This difference holds good with the difference of the caufe which has given to thefe difierent forts of mountains the fituation and form they now have.

In thofe which have vertical trenches, each trench is one and the fame bed, in the proper fenfe of this word, and not the production of any accidental fiffires, as fome naturalifts have pretended.

Thefe beds were originally horizontal, and have only been raifed by a revolution of our globe: it is then very natural that each of them may have preferved to its utmont height the fame nature it had from its firft formation.

On the contrary, the inountains divided into horizontal trenches have only been raifed by an accumulation of different beds or layers, compofed of cryftallizations, or depofits the nature of which varied according to the diverlity of matter contained in the waters where they have bcen formed.

From this theory it follows, that the central rocis of a mals all compofed of vertical beds, fuch as Mont Blanc, ought to have been originally buried in ground of a very great depth. In effect, if it is fuppofed either by a rifing up, as I think; or by the rupture of the cruft of the old earth, as M. De Luc belicies, that thefe beds, horizontal in the beginning, are become vertical ; more, if it is fuppofed that the bottom of a valley, that of Chamouni for inflance, be the ancient furface of the coat, it will follow from hence that the horizontal diftance of the valley of Chamouni to a part which anfwers to. the fummit of Mont Blane, fhould be pretty near the meafure of the thicknefs of the cruft which has been ruflled up or broken, and that in confequence the funmit of Mont Blanc, whofe actual height is about a league above the furface of our globe, had been originally buried two leagues below the furface.

It fhould not be then in the fubterraneous depths of the mines of Poland or Northum. berland, but on the fummits of mountains, in vertical beds, that it is neceffary to ftudy the nature of the primitive world, at lcaft as far as we could attain.

This idea has given, in my mind, a great intereft to the fpecimens that I have taken from the highelt rocks of Mont Blanc, and has engaged me to deferibe them with great care; I always regard them with new pleafure ; I ftudy the:n, I interrogate them; and methinks that if they could anfwer my queftions, they would unveil to me all the myfteries of the formation and revolutions of our globe.

I was ftill more confirmed in thofe ideas when, in confidering the rocks neareft to the fummit, I recollected that the greateft number of them contained no mica, and that the others contained only fcales of it, fo fcarce and fnall, that by none that I broke off could I determine their reality. For it is a fact, that the matter torn afunder by the fubterraneous fires at the bottom of the earth to a great depth, very rarely contains mica. M. de Dolomien met only one micaceous rock in the natter vomited by Mount Erna, and I have not feen any in the volcanos of Auvergne or Brifgaw; yet I have feen fome in thofe of Vefuvius, as has M. Nofe in the lavas of the Lower Rhine; but it is becaufe the fubterraneous fires do not always take at the fame depth the fubftances they throw out : it is fufficient for my obfervation, that the mica is much fearcer in the bowels of the earth than at the furface.

It would have been natural to think that the higheft fummits of the Alps fhould be found near their centre, or at leaft towards the middle of the breadth of the mafs of primitive mountains; yet it is not fo. From the fummit of Mont Blane is feen that to the fouth ; on the fide of Italy, there are many more high fummits than to the north, on the Savoy fide; fo that this high fummit is found near the northern border of the whole of the primitive mountains. So allo is the view finer and more interefting on the fide of Italy, for the fecondary mountains to the north, terninated by the blue and monotonous line of the Jura, prefent neither variety nor grandeur ; and our plains, even
our lake, feen obliquely through the vapours of the horizon, prefent only feeble tints. and few diftinct objects. On the contrary, on the fouthern fide, the horizon concealed by the high fummits, varied in their groups and forms, mixed with rocks and fnows, and interfected with green valleys, prefents a whole equally fingular and magnificent. But above all, as I have already faid, the aiguilles and the glaciers of all the environs of Mont Blanc, formed in my mind, all at once, the moft ravifhing and inftructive--fpectacle.

In fine, from this fine obfervatory I feized at one glance, or at leaft without changing fituation, the whole of the'grand phenomenon that I had before feen in detail, that of the raifed beds of the mountains at the fide of Mont Blanc, and the high fummits of its neighbocrhood. Such, towards the north, were the mountains of Repofoir, thofe of Paffy, of Servos, the Buet; thofe to the fouth, the Col-Ferret, Great St. Bernard, and then the chain of Cramont, the fummit of which is not feen, as I have already faid, from the furunit of Mont Blanc, but of which the after-part is feen to border the AlléeBlanche, and then to join itfelf to the Tarentaife mountains.

Farther on, at the other fide of thefe tharp-pointed chains againft Mont Blanc, are feen fome whofe edges are turned the other way, according to. the law I have made known in the firft volume, and all thefe phenomena perfectly agree with the fyftem of refoulement or eruption, of which in other places there are fo inany proofs.
I have thus happily finifhed thefe obfervations. I began with them under the apprehenfion that the fudden coming of a cloud, fo frequent in thofe high places, might have enveloped me, and deprived me of the power of accomplifhing what I had moft at heart
(711)
JOURNET
to the
SUMMIT OF MONT PERDU,
the highest mountain of the pyrenges.
Br L. RAMOND,
Member of the Nationa! Inllitute; and read in that Society the 19 Floreal, an it. .

IHAD convinced myfelf, by various attempts to reach the fummit of Mont Perdu, that it was only by its eaftern fide that it could be accomplifhed; and I was perfuaded that even its peak might be afcended by the way of the defile of Fanlo, unlefs any infurmountable obftacle lay concealed from mis, in the fpace which feparates the peak from the defile.

It was therefore towards this doubtful intervening fpace that all my attention and thoughts were directed, and I had more than once or twice urged my guides to explore it; two of whom at length, laft fummer, determined to gratify me, and I marked their route for them ; but having reached the foot of the mountain, they thought proper to go from my inftructions, and to trult to the guidance of a Spanifh Chepherd, lefs acquainted than themfelves with Mont Perdu; and they had nearly paid very dear for fo doing. This journey was indeed perilous, being obliged to pals a night (fo ill had they contrived for themfelv.s) beneath the glacier of the peak, without fhelter, without fire, and almolt without fuod. The fecond day, however, they conquered the laft difficulties, and reached the fummit, but fo worn out, that they had fcarcely ability to explore it ; and fo confuledly did the man who came to me with the tidings of their fuccefs defribe the places, that I was more that once, in the courfe of his narrative, apprehenfive they had totally failed in their object : one circumftance was evident enough, which was, that the path they took was not the proper one.

Be this as it may, I inftantly deternined upon my departure, refolving to follow fcrupuloully the way I had by my eye traced out to myfelf, by which I did not doubt I fhould iteer clear of thofe dangers to which my guides had been expofed; nor was I difappointed: I had conceived the true rout, and found myfelf upon the fummit of Mont Perdu, lefs exhaufted by the labour of the journey than I was by exploring its bafe. I took my departure from Barège the gth of Auguft 1802, and having gained the valley of Gidre and Eltaubé, I took my firlt fation on the height of Port Penide, the exact elevation of which it was very defirable to afcertain, and by the oblervation of the barometer I found it to be one thoufand two hundred and nimety.one toifes; but the Port du Penide is by no means the higheft or moft dillicult paflage of this portion of the Pyrenees.

This calcuiation afforded me the opportunity of afeertaining with precifion the extent of the lefler chain of permanent fnows, which terminated at the abfolute elevation of onc thoufand two hundred and fifty toifes.

I hat a good fpirit-level, which furnilhed me alfo with a very interefting refult: 1 proved by it that the defile of limeni, from which I was feparated by the valley of Eftaube, was precifely of the lame elevation with the Port de Penide, and likewife with the defile of Fanlo, divided from me by the valley of Béoufe. 'This contormity of e eva-
tion between three correfponding and alike difpofed points, is a difcovery by no means immaterial to 2. geological hiftory of Mont Penide.

But in vain was our afcent to the defile of Fenlo: it was indifpenfable we fhould retrograde; we ware to defcend conniderabiy ere we could re-afecnd. We directed ourfelves obliquely towards the enormous walls which bear up the lake of Mont Perilu and its terrace, which brought us to the point from whence the torrent precipitates iffelf, in a frightul cataract, to the bottom of the valley of Béoufe.

Here we found ourfelves upon a faill well turfed, but very inclining platform; and here too we met with a flock of fheep under the guidance of a thepherd, a feecies of favage, una' 't to underftand us even in his native language. Mont Perdu was lufpended over his i-ad, yet was he as litile acquainted with it as if it had conllituted a part of the Andes. He had, however: a knowlalge of the defile of Fanlo, here defigned under the name of Nifcle, and he engaged to conduct us to it the next day. We, in confequence, paffed the night with him in the open air, amidt the vapour of the cataracts, and the angry portents of a threatening tempeit on every fide. I took the height of this ftation, and found the mean between two obfervations to be one thoufand and three toifes.

Our firft labour in the morning was to crofs the torrent which difcharges itfelf from the lake; its depth, its rapiaity, and particularly the coldnels of the water, rendered this effort of fome difficulty. The water cauled a rife of two degrees only in the thermometer above the freczing point.

From this place until we reached the fummit of the defile of Nifcle, we experienced no other difficulty than what was occafioned by the extreme inclining of the flopes. I afcertained the height of the defile to be exactly upon a level with that of the Penide, as it is alfo with the border of the terrace near the lake of Mont Perdu; the lake itfolf is fomewhat higher. I found, on trial,-its abfolute elevation to be fomething more than thirteen hundred toifes. Here then we have four excavations of equal form and height, viz. the valley of the lake, the defile of Nifcle, and thofe of limene and Penide; which I confider as the remains of an ancient valley, hollowed by the currents, after the deflruction of the beds of Mont Perde, and pofibly before their cmerfion; a valley which afterwards may have been tranfverfely cut by the great rents which now actually form the vallies r〔Béoufe, d'Ehaule, and Gavarmi- Hitherto I had proceeded upon aflured grounds: I have already defcribed what is fingular upon this fecondary foil, compofed of irregular beds th:own up by the aceidents of nature, the receptacles alternately of marbles, breccia, limctlone : fome compact, and mingled with lint; others grois, and more or lefs mised with clay and fand, and all fprinkled with zuophytes and teftaceous fragments. I now found myfelf upon the cominuations which conflitute the fummits of Mont Perlu, the foil of which, it was evident to me, had never changed either is po. fition or nature. I had never before been in a fituation fo eomenient, corredy to notice its itructure. The ficle of the momanin which prefented iffelf to me, that commands the defic to the eaft, arofe to a perfect peak, fo that the view I ho dof it was completely tranferfal, and perfally characterinic of the pofition of the beds which formed the ridges of the mountain I was about to climb.

The whole of thefe beds, allowance being made for their wiadinge, incline gencrally fo much to the north, that the greateft pant of them hardly vary from a vertical fitmatien, and have a direction very vifibly parallel with the general diredion of the chain; a circomfance not ctherwife to be explained or accounted for than from fome violent convulfion of nature ; and it is not to be doubted that this irruption has taken place urder the very waters, which have removed thefe bede, for their upper trashes ate co-
vered with thick layers of fhelly free-ftone, inclining rather to the northern horizon, and which differs in nothing befides from the free-fone found in the beds.
-What I had the opportunity of feeing upon the mountain of Nifcle, I was about once more to explore on the fummit of Mont Perdu, but in portions, and in detail, furrounded by the fnows and ice, and embofomed midft the diforder and ruins of nature, where it is hardly poffible to difcern the order and fructure of thefe irregular interwoven fhelves.

The firft flages to the afcent of Mont Perdu prefent themfelves to us to the weft of the defile of Nifcle, and they prefent themfelves with an abruptncfs and grandeur which announce the avenues to its fummit. Four or five terraces piled one upon another form as many lights of fteps, covered in part either with fnow or fragnents, which tend not a little to facilitate the accefs to thefe otherwife inacceffible walls. The firft of thefe fragments are blocks of more than ordinary fize, and apparently belong to the chain of the parafite bed of free-ftone which copes the mountain of Nifcle. It muft be noticed, I apply the name of free-ftone to thofe gravelly calces, of which fand conft:tutes the moft apparent part. Teftaceous fragments are found in thofe free-ftones; and with them fragments of a calcareous fchifus, ftrongly polluted with clay, and fpread over with a fmall extended polypus, r:oderately compreffed, fometimes ramified, its furface pierced with fimple pores, but remarkaple for a fmall projecting belt which furrounds them.

I very fhortly paffed beyond thefe blocks, and continued my rout, afcending obliquely from the north-eaft to the fouth weft, that is to fay, in a direction which cut nearly in a right angle the general direction of the ridges, and foon reached the ruins which belong to the continuation of the beds of which even the mafs or body of the mountain of Nifcle is formed. Here I recognized the compact fone of Marboré, black or grey within, but foon whitening when expofed to the air, and fpreading itfelf in a fpontaneous manner in fmall irregularly angled fragments. It is moft generally fetid, but in no region did I experience it fo much fo as in this; the very treading it was fufficient to intect the air with an infurecrable fmell and a naufea, bearing no polible relation to that caufed by percufion in the common hepatic and bituminous fones.

It took us near an hour to crofs thefe fragments, or rather thefe wrecks, and we were much overpowered in this part of our journey by the efforts required as well to climb the exceflive flanting declivities, as to ftruggle inceffantly againft the loofe earth, tending iavariably to the precipice. At length we found ourtelves upon the upper terrace, and on a range of rocks, which at the firit forms a narrow ridge, but widens by degrees, and becoming fater, brings us to a fort of valley where the ices begin which encircle the peak.

In the bare and uncovered part of this extended ridge I noticed fome large pieces of a con:pact calcareous blackith thone, crouded with great lumps of filex of the lame com lour; they flightly inclined from the vertical to the foutin, and follow the fame direction with the ridge and chain. It is a repetition of bels of the fame nature l have noticed in the Porte de Pemide, I'mene, and clfewhere. Here, as there, they appear to be of the number of thofe whofe direction is moit evident. They were diflinguilhable by me on the mountain of Nifcle, yet in my view, where this intrenchment widens iffelf from the bafe to the lummit of its wefterly lide. The kidneys of filex are of larser volume there than at Ports de Penide, and are at the fame time exceedingly irregular; though 1 found one figured like an hexadrical oblique prifin, which fingular feecinen 1 have depofited in Mr. Haus's collection; had I met wids it in the very heart of the rock, I fhould have been tempted to examine the direct work of eryftalization, but it was of the number of thole fragrents fread over the furface of this ground; and as all the kidneys with
vol. Iv.
4 r
which
which thefe ftones abound, are fhattered in every fenfe by ftraight planes, the natural effect of retiring waters; 1 am warranted in the conjecture, that this prifm is a detached portion of a more confiderable kidney, in which the fiffures had accidentally met under the angles, which quartz particles have an inceffant tendency to form.

At Port Penide there are many fhells contained in this ftone; here I did not perceive any, but it is probablefome may be found; befides, I have met with layers of a calcareous fone in thefe beds, very argillareous, and much mixed with fand, which contained fo large a quantity of nummularia, as gave it an appearance of having been almoft entirely compofed of them. Thefe beds foon lip under the ices, and become no longer vifible. We now approached the borders of thele glaciers, which have here their origin, and confequently but of very gentle declivity. Neverthelefs, we found the crofling of them difagreeable enough; fometimes we found the furface hard and flippery, at others we funk up to the knees in the recent fnows, fallen upon the fummits in the month of June. Beneath this fnow too, in our treadings, we were fenfible of rents, in which we ran the rifk every inftant, of being loft. The expofed clefts alfo intercepted our palfage, and we had nearly been altogether fopped, at two hundred metres * below the fummit, by one of them, which extended tranfverlly from the origin of the glacier, to the fteep of the valley of Béouffe. It was but three days before, that my guides had commodioufly paffed this cleft, by a bridge of fnow, which was now diffolved; and which it was now our bufinefs to effectuate by leaping, which we fucceeded in, and thereby conquered the laft obftacle. I meafured the depth of the cleft, and found it forty feet; and as the place where we croffed, correfponded with the convexity of the mountain; it muft evidently have been the place where the ice was of the lealt thicknefs.
From thence I beheld the fummit which had hitherto been conftantly concealed from me, by the pofition of the declivities over which I had paffed. It prefented itfelf in the form of an obtufe cone, clothed in fpotlefs, refplendent fnow; the fun fhone with uncommon purenefs and brilliancy; but its difk was fhorn of its rays, and the fky appeared of a deep blue, and fo ftrongly fhaded with green, that even the guides were ftruck with the frangenefs of its afpect. The firt tint has been obferved on all the high mountains; but there is no example of the fecond, and I am myfelf totally ignorant, to what this fingular optical illufion may be attributed.

At a quarter paft eleven, I reached the fummit, and, at length, had the gratification of contenplating, at my feet, the whole of the Pyrenees, and inftantly fet to work with my inftruments. The wind blew very boifterous from the W.S.W.; which threw difficulty in the way of my operation. I marked the ftate of both the barometer and the thermometer at noon. M. Dangos made a correfipondent obfervation at 'Tarbes, with the inftruments he took with him to Mcunt Etna ; which have been carefully compared with mine. My barometer placed upon the creft of the cap of fnow, after due correction, food at 18 i . 11.141.-at Tarbes it was found at the fame time, to fand at 27 i .1 .47 l . The difference of logarithms then give one thoufand five hundred and fifty toifs, for the vertical height of the meafured column. On the other hand, the thermometer at Tarbes ftood at $20^{\circ} 5^{\prime}$-by Reamur's fcale, and at cie fummit of the Peak, at $5^{\circ} 5^{\prime}$ by the fame fcale; which leaves to be added, agreeably to Mr. Trembley's formula, 12.11 toifes, and determines the height of the column to be 1562.11 toifes-Now Vidal's trigonometrical operations fix the elevation of Mont Perdu at one thoufand five hundred and ninety-nine toifes beyond that of Tarbes; which makes a difference of at leaft 37 toifes, or a $^{2} \boldsymbol{J}^{2}$ of the meafured column. Mr. Laplace's formula augments this

[^147]difference, more than double; and fo does Mr. Deluc's, but Schuckburgh's corrcction of the latter lorings the refult very exact to the formule of the former.

It is my intention ro examine more carefully this obfervation, when I give an account of the whole of my barometrical obfervations; 'at prefent I fhall content myfelf with obferving that the wind was exceedingly tempeftuous, and blew from the fouthern region; and the fily around me very portentous of ftorm; and that all my obfervations, made under fimilar circuinitances, have ever been fhort of the heights of the places I would meafure. I hall further obferve that the correction of temperature, which has already been fo often hazarded, nuft not here be confided in. L'ocal circumftances, infinitely varied, moft certainly varioufly inluenced every part of the fame column of air it was permitted me to examine. His effect, if the thermometer, placed by the fide of the barometer, on the lap of fnow, and at four feet above the furface, announced $5^{\circ} 5^{\prime}$ of heat, the fame thermometer brought down to the furface of the finow fell $t \cdot 2^{\circ}$, by reafon of the abforbent nature of the heat, which occafioned a rapid evaporation of the furface. At the fame time another thermometer, placed likewife in the fhade, at four feet from the furface, but upon the fouthern face of the peak, which the fnows had left, indicated $+10^{\circ}$, and this fame thermometer, placed on a level with the furface, and expofed to the fun, rofe to $+\mathbf{1 8 . 2 5}$. Finally, I inuft remark, and that too as a very fingular and fortunate circumftance, that Mont Perdu, and the Defile of the Giant, (Col du Geant,) where Sauflure made fuch a feries of valuable obfervations, we found to be precifely of the fame height, fince the trigonometrical obfervations give to each one thoufand feven hundred and fixty-three toifes, of actual elevation; for the mercury retained its fituation at the fame point in both thefe elevated fpots; and befides the barometrical calculation of heights furnifhed refults to Mr. Sauffure fo far below his geometrical proofs, that this illuftrious naturalift has judged it proper to relinquifh them altogether, notwithftanding they were grounded upon eighty-five obfervations, made within the courfe of fifteen days.

The peak is covered with fnow from the great glacier to the fummit, but the thicknefs of the fnow gradually diminifhes, and becomes very inconfiderable towards the top, by reafon that its trenched form does not admit of an accumulation of them; here indeed they did not appear to me more than three metres in depth ; their confiftence is both thin and light, and it is but flightly they incorporate themfelves with the extremity of the ice; while at the fa e time the thaws here are of too fhort a duration to impregnate them with water, and the fmall quantity which gathers during the fine days of fummer runs quickly off by two outlets; but on the northern declivity thefe fnows take, by degrees, an extraordinary confiftence, and quickly transform themfelves into a vait glacier, which defcends to the border of the lake, from a vertical height of eight hundred metres.

Contrary to this, on the fouth of the peak the foil was diftinguifhable, a circumftance to be attributed lefs to the force or action of the heat, than to the extreme precipitancy of its fteep. The fnows cannot here fupport themfelves, but are continually falling from the fummit of the mountain, on a defcent fituated fix or feven hundred metres beneath, and thefe form an ice confiderable enough to refift the direct and reverberated heat to which this fituation expofes it.

The uncovered part of the funmit prefented to my view no entire rock, no regular bed; it appeared only a mafs of ruins, all of the fame fpecies of ftone viz. a compact, calcareous, black, and fetid fone, which infinuates, or inter-twines itfelf into the beds of fand-ftone and hell lime-ftone. I examined it here with an attention,
proportioned to the importance its fituation gave it. It is of a fine grain ; a fpecies of marble, compofed almoft entirely of carbonated lime, without any mixture of argil, yet you may dilcover, by the aid of a microfcope, in the refidue left by the nitrons acid, after the diffolution of the calcareous part, a quantity of very fine quartzofe fand. This ftone, particularly the interior of it, is decidedly black ; but its blacknefs quickly goes off, when expoled either to the tire or air, though it will refift acids. I had fancied I difcovered in it the fetid principle: it totally left it during its diffolving, without the carbonic gaz contracting the fmell in its evaporation. Mr. Vauquelin was eager to afford me his affifance, more clofely to examine the properties of this fone. He difcovered in it, as I did, not only a naufeous but a cadaverous fmell, unfolded by trituration; he found no argil in it, but fonre filiceous particles, evidently belonging to the fand; which, as I have already mentioned, is found in its compofition. The black refidue is a compofition of fand, carbon and iron ; the two latter fubftances have the appearance of being intimately combined with the carbonate ot lime. The carbon conifituted not more than a 35 th parr of the portion of the ftone he made his experiment upon: with refpect to the fetid principle, he concludes it to be produced by a fubftance of the nature of gaz, which evaporates in the pulverifation and diflolution of the ftone. Perhaps it exits in the carbonic acid, but it mark its properties. Further, the analogy of this fmell with that is diftinguilhable in certain black marbles, in which he has afterwards dilcovered a bitumen inconteftably of animal nature, inclines him to believe that it has here no other origin.

This laft conjecturc is affuredly well fupported by the marvellous deftruction of marine animals, which took place at the firft formation of thefe mountains. Neither is this cadaverous fetidity peculiar to the beds of marble there met with; it is every where attendant on the carbonate of lime, and is difcoverable by breaking the free.ftone itfelf, of which the carbonate principle is the meft inconfiderable part ; as fand is difcovered even in marbles, where we have the leaft reafon to expect its prefence. All the maffes are a mixed affemblage of materials, of a correfpondent nature; fand, fetid carbonated lime, clay, fhells, affociated in all polible proportions, the fport of particular accidents, modifying throughout the influence of general caufes; fuch are the elements of all thefe beds, and veins, which, with fo much feeming caprice, replace and fucceed each other with fo much irregularity. If, in the various fragments that I have collected on the fummit, I have not obferved organized fragments, their prefence is not lefs attefted by the fetidity refulting from the mixture of their fofter parts, than in the neighbouring beds by the confervation of thei, fkeletons. It is not improbable, but by a very diligent examination fome veftiges may be difcovered, as we obferve here and there in beds of the fame nature on Mont Pinede : but fone of this compact quality ordinarily contains very few organic fragments; and we find the quantity in all the beds, of which thefe mountains are compofed, is conftantly proportioned to the fand or clay contained in them; but the beds of fhells are not diftant; they encircle every where the vcins with a compact calx; I have met with them a little below the fummit; and they flew themfelves on every face of the peak. Thefe extendings are perceptible in all the mountains, ranged on the fame inineralogical parallet; and if among all thefe collateral beds, vertically arranged, the preeminence is given to beds of compact calx, which, neverthelefs, conftitute the fmaltelt portion of their compofition, it is becaule the beds of this order are fuperior in durability to brittle free-flone and decayed marls.

From the top of Mont Perdu the eye embraces at orce the whole fyftem of moantains, in afpect refembling each other, and recognifes the fame conltitution in all that rife above the ordinary heights. The fyftem is an extended feries of fummits, the beds
of which arrange themfelves upon one and the fame line, in a parallel direction with the chain, dividing the immenfe horizon in two parts, as different in their levels, as the mountains which command them are diftinct in form.

To the north, the primitive mountains, which conftitute the axis of the cbain, lift up their heads. Their tharp and rugged fummits clofely encircle and form a belt of more than four myriametres (leagues) of tranfverfal thicknefs, whofe elevation totally intercepts the view of the French plains: fo infenfibly progreffive is their finking on this fide, that this valt belt compofes itfelf of feven or eight gradations of heights, gradually leffening, fo that the fouth peak of Bagneres, whofe ftation is in the laft vifible range, is only five hundred metres below Mont Perdu.

To the fouth, the view is quite different; here they appear to fink on a fucden. A: precipice prefents itfelf of from one thoufand to one thoufand one hundred metres; the bottom of which conftitutes the fummit of the highelt mountains in Spain; none of which attain to two thoufand five hundred metres of abfolute elevation, and quickly degenerates into low round topped hills, beyond which opens the inmenfe perfpective of the plains of Arragon.

But what more particularly attracted my attention was this meridional belt of the Pyrenees, fo nicely divided into two diftinct parts. The neighbouring plains opened to my view, the long ridges, and epening valleys which ordinarily form the calcareous fides. on the extremities of orreat chains. The belt, on the contrary, attached to Mont Perdu, and which is evilently an appendant of it, preferves the grotefque appearance which characterizes evcry appendage of this fingular mountain. It is a vaft extended platform, or terrace, the furface of which, viewed from this elevation, feems nearly level. Some fmall protuberances picture fo many little and gently rifing hills, feparating fome large, but not deep valleys; but in the midft of thefe fuperficial inequalities, four or five enormous clefts open their ponderous jaws, the walls of which are extremely vertical. They diverge in their openings, from the bafe of the peak, and extend to the boundaries of the platform; the protuberances and valleys of which they indifferently divide, as they divide themfelves from their very foundations. They abforb alfo the waters, and thick forefts lye concealed at thir bottoms. Thefe clefts are, in appearance, fo recently formed, that one would imagine them the work of yefterday, and have fo exactly preferved their tharp and returning angles, their projections, and indentings, the windings of their divifions, and the undulations of their fummits, as to induce a belief they only waited a new effort of that power which feparated them to re unite them.

It was defireable more minutely to examine thefe chafms, but we could not refolve to defeend from the fummit; this precipice is one of thofe not to be braved with impunity: hence we decided upon a circuitous rout of. twelve or fifteen leagues, to endeavour to find an entrence to them, either in the Val de-Broto, or in that of Fanlo; and retook our way by the cataracts of Beofli, to be certain at leaft of paffing the night in a place where it might be poffible to make a tire.
It was at one o'clock I began to defcend from the fummit, after having made a fecond obfervation with the barometer, but this was not made at Tarbes. Befide, my inftruments had not very fenfibly varied. - I had continued near two hours upon this fummit, and during all this time, no being that had life came within reach of my fight, excepting an eagle flying with fuch an inconceival te rapidity againft the current of the wind, that the fpace of a minute veiled him from my eyes.

It is with the utmof difficulty, we ourfelves could fruggle with the impetuofity of this wind, which an eagle could lo trimphantly encounter; and the cold too we experienced from it was almoft infupportable. No wind diminifhes fo quickly the fenfible
heat, as a fouth wind, when we are expofed to its action in the higher regions of the atmofphere. It derives this property from its drynefs and velocity, which entices and forwards the evaporation of bodies fufceptible of its intluence. The thermometer was not low, yet we were almoft frozen, but this was all the inconvenience I felt; we breathed without difficulty in this rarified air, found by many fo infufficient for refpiration. I have been myfelf more than once or twice witnefs to perfons of hale vigorous conftitutions being obliged to forego proceeding to heights much beneath this-even Sauflure, upon the defile of the Giant, where the air was by no means fo rarified, experienced an oppreflion in breathing, by fomewhat more than common exertion, but here we felt nothing of the kind. The pulfe only indicated an alteration, which was independent of the agitation occafioned by the labour of the journey - reft did not quiet it -all the time we were upon the fummit, it was low, dry, and extended, and beat at a rate of five to four-the fever evidently proved the unatinefs we fhould have experienced at a greater height; but in the manner we were affected, it produced an effect very different to what another degree of elevation would have done. So far from occafioning any weaknefs, it feemed rather to add to my frength, and invigorate my fpirits. Vegetation prevailed almoft to the very fumunit of Mont l'erdu. I fhall content myfelf with pointing out the moft remarkable fations of it.

Upon its fouthern fide, the vegetation or growth of trees ceafed : t two thoufand one hundred and fifty metres, or one thoufand one hundred toifes-theie were a fpecies of Scotch pines-ftill higher fhrubs feemed to thrive with much vigour ; the juniper endures at the higheft, and leaves the rhododendron in the rear. Among thele fhrubs I noticed the cifus rofeus, of Jacquin, growing a little below the defile of Nifele; and to this point we meet with a very vigorous and herbaceous plant, known by the name of cnicus Jpinofifimus of Villars, which has an appearance different from that of Linnæus: I fent fome of the feeds of it to Mr. Cels.

At the defile of Nifcle, that is to fay, at the height of two thoufand five hundred and fixteen metres, or one thoufand two hundred and ninety-one toifes; the furface is covered with verdure; and the potentilla lupinoides, of Willdenow, and the ranunculus montanus, of the fame author, are both found in abundance here. Thefe two plants are conftantly Alpine in the Pyrenees; the firft particularly fo perhaps, if it is really different from the potentilla valderia.

At one hundred and fifty or two hundred metres higher, appeared the ranunculus parnafiafolius; this rare feecies is very common here. I remarked that I met with it but three times in the upper Pyrenees, and then always in fituations of precifely the fame elevation. Above this fation, and until you reach the upper terrace, all is permanent or moveable wrecks of fnows; but at the terrace vegetation re-appears : and there are even fome graffes, and common faxifrages to be met with.

A check however is once more given to vegetation by the great glacier; yet upon rocks under the fhelter of the peak, hard and naked as they are, you difcover a fpecies of turf of fuxifraga groënlandica ct androfacca, and fome tufts of the artemi/a rupcflis of La Marck: thefe plants are fmall but vigorous; after all, I have gathered round the peak a ceraftium, confidered by many botanifts as the alpinum of Linnæus, and the arctia alpina with rofe flowers, drawn by Jacquin; they were both in their highelt bloom, and never did I behold the latter in fo much vigour and beauty.

Thefe latter plants grew fo near the funmit, that one cannot doubt but they would eftablifh thenfelves there but for the moving fragments, which invincibly, as it were, repulfe them; the lichens even will fcarcely faften to thefe fragments, and I could but
diftinguifh a few of thofe of the nature of cruftaceous lithophages, which every where have a difpofition to faften on ftones of this fpecies.

However the moft perfect plants which take growth at the greateft height and under the fame latitude are thofe which I have juft particularized. The platform and its immenfe clefts were now what remained for me to explore. I reached Gavarnie on the 2cth Auguft, and on the following day paffed the port, the lefs elevated, the eafieft and moft frequented paffage over this part of the Pyrenees, notwithftanding it is found to be, by the meafurement of fome engineers, one thoufand one hundred and ninety-fix toifes high, and the mean of two barometrical obfervations, varying but little from each other, fixes it at two thoufand three hundred and twenty-three metres, which is not more than feven metres lefs-hence it is evident this defile as much exceeds St. Gothard in elevation, as the Port de Pinede does St. Bernard; and in fact the great mals of the Upper Pyrenees, exceed in height that of the higher Alps, although the elevations of the peaks which command them, are much lefs.

I now iefcended to the Spanifh Hofpital of Boucharo, in elevation correfponding with that of Gavarnie, viz. one thoufand four hundred and forty-four metres or feven hundred and forty-one toifes. Here I found the platform which rofe upon my left abfo lutely inacceffible, and confequently found it neceffary to range the valley of Broto, to difcover if poflible an entrance into fome of the clefts; in our learch we arrived at Torla, a confiderable village at about a league and a half diftance from Boucharo; here I perceived to the eaft an opening into a large valley, which penetrated into the platform, and which is known by the name of the Val d'Ordefa, and entirely uninhabited, I made my way to it by fording the Ara, and was prefently fatisfied I had entered one of the clefts I had contemplated from Mont Perdu. Its aperture is at the fummit of Torla, which by my barometrical obfervations I found to be one thoufand and eighty-one metres, or five hundred and fifty-fix toifes. I rambled in this cleft for four hours, always under the fhade of a thick ftately foreft, and inclofed between vertical walls of dreadful elevation. The day was drawing towards its clofe when we reached the extremity of the cleft ; the platform was ftill above our heads, furrounded with thofe walls fo impoffible to climb, which determined us to pals the night under the fhelter of a rock overfpread with tufts of the genifa lufitanica a very rare fhrub, which we cut to light and feed our fire. We found the height of this fation to be nine hundred and twentyfive toifes.

At the break of the following day we proceeded to reconnoitre the walls, which after two unfucceffful attempts and not without imminent danger, we fcaled with our hands and feet. Having attained the platform, the face of every thing feemed changed a-ound us, and in fuch a manner that we hardly knew where we were. Mont Perdu, the Cylinder, its walls and clefts, were before us, but we were enabled to fingle them out from amidtt the chaos of rocks fo piled upon each other; it was neceffary then I hoould traverfe the platform to adjuft iny oblervations with thofe I had made on the fummit.
$\Lambda \mathrm{fter}$ more than once confulting the barometer on different fituations of the platform, its mean elevation I found to be two thoufand four hundred and thirty metres, or fomething more than one thoufand two hundred toifes. This height, compared with thofe I had taken at the bottom of the valley, gives an advantage over its upper extremity of five hundred and thirty-fix metres, and is one thoufand two hundred and fify feven metres above its mouth, fo that the mean depth of the cleft will be eight hundred and ninety-fix metres, or four hundred and fifty-nine toifcs.

Having now ranged in two directions the meridional fide of this Ihell-compofed chain, I will in a few words give the refult of my obfervations. With refpect to the general difpofition
difpofition of the furface or ground, it is certain that the fteeps are much more precipitous on the fouth than north; the mountains too fink fafter, and the valleys are deeper, though at the fame time this fide of the chain has lefs tranfverfal breauth than the other, and the furface of this part of Spain is higher than the correfponding furface of France. As to the nature of thefe mountains, they are all fecondary; the laft primitive materials I noticed were in the Port of Gavarnie: here at its utmoft elevation we find granite, and we afterwards leave to the north limeftone, and afterwards large very inclining Thelves of graurwakke, alternating with flakes of gratwacken.fchieffer, the latter is very much intermixed with wrecks of aquatic monocotyledones plants, whofe forms are frequently fpread with a pyritous varnifh ; it is, we know, in this fpecies of rock that the moft ancient remains of organifed beings are to be met with, beyoud all is compofed in fome fort, of two elements; gravel more or lefs coarfe, and fetid limeftone, more or lefs polluted with clay, both mixed in all proportions, from the pudding and the freeftone, where the union is hardly difeernible, to the compact limeltone in which the fand is with difficulty recognifed; but with this difference, that the beds wherein flint and fand predominate conftitute the greateft portion of the mountains, and compact limeftone is feldom found there but in finall, irregular, and thelving beds; finally marine bodies are chiefly difcovered in beds compofed of fand of a moderate finenefs, and in mean proportion, few are met with in freeftone of grofs quality, and fewer yet in marbles, and among the number of foffils, the fpecies in which they moft prevail is that of the lonticularcs numifinales, and here they are fo abundant as to ftrike minds the moft accuftomed to the contemplation of the deflruction of nature. I have met with them of three dimenfions, and they appear to conftitute as many diflinct fpecies; the diameter of the fmalleft rarely exceeds two millimetres, and is frequently much lefs; the firf is found upon the fummit of Mont Perdu, and appears to have fuffered from tranfportation, and its exterior forms are greatly defaced; the fecond is found along the Val de Broto even to the deepeft part of the Val d'Ordefa, it takes its refidenec in the inferioror lower beds, and dificovers itfelf evidently enough by the tubercles on its furface, and internal fires: its diameter attains to about half an inch; the third is about an inch and a half in diameter, and is found in the loweft beds, below Torla, towards the plain.

Further refpecting the difpofition of all their materials, it is too wonderfil in the hiftory of fecondary mountains to be paffed over, particularly the range of Marbore and Mont Perdu, the beds of which are arranged in fuch a manner as very frequently to take a vertical fituation, and the mof elevated fummits of this mineralogical paraile, are formed of beds thus difpofed; but we fcarcely find ourfelves in the Val de Broto, when the beds become horizontal, without a pofibility of difcovering their relative pofitions, or where the change begins. The horizonal beds are very precipitous, like thole which are vertical, and like them are vertically divided by fillures croffing from one fide to the other. We might in more than one place be eafily deceived, and take thefe trenches for beds, if we were not particular in noticing the order of the upper polition of their materials. It is this difpofition to divide iffelf vertically, however conttructed its beds, which in a very eminent degree characterizes the clain of Mont Perdu and all its dependances; and it arifes from the fontanoous divifion of its beds iato fmall folids, the form of which tends more or lefs to a rectangular parallelopiped, and there is even in the fand which incorporates itfelf in thefe beds, an apparent tendency to a finilar divifion, which has been remarked frequently in the freeftones of other parts of Europe. But what in other piaces would be confidered a phenomenon of no magnitude, and comprehended by a very curfory view, takes here a characker for grandeur fo prodigious, that even the acknowledged proceedings of nature appear at firf incompetent to the explana-
tion of fuch uncommon forms. Further in no part were thefe forms fo impofing as in thofe great clefts I had jutt explored. Their furface is a fucceffion of fteps perfectly horizontal, and formed by beds of freelone, with which we obferved intermixed the red freeftone, confidered by geologitts as the moft ancient of the globe. Here the torrents are fo regular in their fall, that the whole paffage they make to themfelves feems to be the work of man. The pofitions too of thefe immenfe fiffures, difpofed into forics of prodigious elevation, and on every fide of us loft to our fight, their perpendicular materials, colour, and joinings, fo much recall to our minds Itructures raifed by the hand of man, that we inagine ourfelves contemplating the ruins of fome immenfe edifice.

The pudding ftone and freeftone conftitute the largeft portion of thefe walls; but the compact limeftone feparates them here and there in large ftrata; upon the higher landings thefe are particularly obferved in fmall beds, not difficult to be diftinguithed, and always horizontal in their pofition

The firlt beds I noticed upon the piatform were yet horizontal, and are compofed of a pudding fone, in which the flints and fand form in the calcareous fand very irregular undulating veins.

But at the approach of the peak the pofition of the beds are entirely changed. At the bafe of Mont Perdul found the thel compor.a beds varing themfelves to the fouth, and dipping to the north on an ansle of $45^{\circ}$ an inclinatic: the very oppofite to that of fimilar beds which conltitute the northern bafe of the fanc peak. It is therefore certain that the beds of this mountain are, as it were, an opea fan, the vertical rays of which conflitute its fumnit; a very fingular difpoitis $s$, and an inverfior of that which a rife or burf * could have produced. It is further cerein, that the beds arranged towards the peaks are precifely the fhorteft, the moft irregular, and intertwined; and that there is a coherency and regularity in thofe beds very proportional to their approach to a perfeet horizontal pofition.

We canuot doubt that the latter are in their natural and original pofition, and that they owe their regularity to the foil upon which they have been depofited.

Befides the waters by which they were collected being turbulent, have by turns thrown up calcareous flime, fands, and heavy flints, and mixed their various materials with an effort, the figns of which cinnot be miftaken.

I have already in another piace attempted to eftablifh the fact, that the courfe of thefe waters was rapidly impelied in a direction from the fouth-weft to the north-eaft, and this is ftrongly here evinced by the pofition of the different maffes and the fituation of the fteeps. The force then of thefe rurrents, upon the fouthern tace of the primitive chain, would naturally lodge the matter t"e, accumulated very irregularly upon its fides, not lefs on account of the inclination and rubsednefs of the furface which received it, as by reafon of the agitation, whirlpools, and fwelling of the waves, by which it was impelled along.

The irregular beds which thefe tumultuary impulfions occafioned, being at firlt unftably lodged upon very oblique planes, have removed from then, as foon as they had received a confiderabie addition to their bulk and weight; and it is natural to imagine that the moft inclined of thefe beds muft have fallen upon the regular depofits beneath, and that feveral of them have maintained an hold upon the lower trenches. A movement of this nature is more eafily imagined than an eruption, the caufes of which muft be looked for in fome vague hypothcis, and whofe natural effect would be rather to lift up the beds in fhitts, upon each other, than fpread them out like a fan.

* Soulevement.

In the mean time one of the greateft difficulties yet remains unaccounted for ; it is not eafy to comprehend how fuch maffes, evidently as it were, turned upfide down, have taken their fations feveral hundred metres above the fummits of the mountains, from whence we might believe them to have been thrown down. Has it then arifen from the finkings, that have lowered, as there are many circumftances to induce a belief, the northern mountains? or have their fummits been fubjected to a more rapid wafte, as other facts authorize us to imagine? Let us however confefs, there is nothing clearly to be depended upon, excepting that fome extraordinary convulfion of nature has fubjected the higher beds of Mont Perdu to a change of pofition.

Another circuinftance is alfo clear, and that is, that this convulfion has originated beneath the waters, as is ovident from thofe upper difpofed fhelves, on the fummit of the overturned beds; which upper depofites may have occupied many vacuities, enlarged many ridges, and frongly cemented the crumbling mafles with the compreffed ones.

The firt valleys, the veftiges of which are fufficiently diftinguifhable, have been formed upon thefe mountains by the retiring of the waters, and thefe waters, having once found ,their natural level, have left thefe maffes to dificcation, and their natural weight; the general or partial finkings ton of thefe maffes, have occafioned the great fouthern clefts; and probably the deep valleys to the north and weft, which divide by diverging, having always Mont Perdu for their centre.

Doubtlefs thefe.clefts have at firf been no other than narrow fiffures, and by degrees, fince enlarged by the fall of their walls; the varied pofition of the beds to the north of Mont Perdu, and the diverfity of the matter feated upon them, has determined irregularly this enlargement; and the valleys have expanded themfelves from their bottoms to their edges in a multitude of different angles: to the fouth on the contrary, the tendency of the beds in every way vertically to divide themfelves, never fails to leave behind their fallen furfaces perpendicular craggs ; and the deftruction acting always in the fame manner, upon fubftances always fimilar, has increafed the fiffures by fections parallel to their firt line, infomuch that their projecting and returning angles have every where retained their original correfpondence.

I will not extend thefe reflections farther; what I have already faid is fufficient for the fingularities of one mountain; but this mountain is not only the higheft of the Pyrenees, it is alfo the moft elevated point of our hemifphere whereon organic wrecks have been difcovered; it is, in a word, of all the known mountains, the laft labours of the fea, in its volume the moft cónfiderable, and the moft extraordinary from its ftructure. A ground like this is claffical for the ftudy of fecondary mountains, and the hiftory of the laft revolutions of the globe. It will afford a reiterated exercife to the fagacity of the interpretess of nature; and, from what I have myfelf advanced regarding it, it will be evident I am very far from having exhaufted its geology.

     fame the people, and confeque tly to raife the prece.
    $\ddagger$ I an much inclined to believe, that mo font of monopoly ceer was, or ever can be injurioua without the affitance of povenment ; and that governament never tends in the leaft to favour a monopoly withous doing intinite mifchief. Wi have heard in Jingland of attenpta to monopolize hemp, allunn, cotton, and nany other article : ill conceived focculations, that atways ented in the atin of the felemers, and even-
     and datv cupply and confurption to a mifchievous degree, is abfolutely impofible : to buy large quantiten, at the cheapell featon of the yearo in order to hoard and bring them out it the very dearell moment, is the dea of a monopolizer or "ccufersar: this is, of all other tranfations, the moft beneticial towards an iqualfupply. The wheat which fuch a man buys is cheap, or he would not buy it with a view to profit : What does he do then? He takes from the maket a portion, when the fupply is large g and he hrings that portion on the matket when the fupply is fuall ; and for doing this you hang him as an enemy. Why? Bt canfe he has made a private protit, purhaps a very great one, by coming in between the farmer and the contumer. What hould induce him to carry on his bufinets, except the defire of profit? But the bene lit of the perspleis exactly in proportion to the greaturfsof that profit, fince it arifes directly from thelow priceofeorn at one frafon, and the deatnefs of it at another. Moll clearly any trade which tends to level this inequality is advantageous in proportion asin ctiectait. By buying greaty antities when chcap, the price is raifed, and heconfumption forced to be more fparing: thiscireumttancecanalune fave the penple from famine; if, when the cropiafeanty, the peopie confume plentifully in autumn, they mull inevitably thare in funmer; and they certainly will confume plentifully if curn is cheap. Government canuot fep in and fay, you hall now eat half a pound of bread only, hat yon may not by and by be put to half an ounce. Government cannot do this without erecting granaries, which we know, by the experience of all lurope, is a mull pernicious fyitem, and doue at an oxpence which, if taid nut in premiams, cucouraging cultivation, would convert deferta into fuuiful corn-fitida. But pivate monopolizers can and do effet it; for by their purchafea in cleap menths they raife the price, and exactly in that propertion delfen the confumption; this is the great objeft. for nothing elle can make a hort erop bold out through the year: when once this is effected, the people are dafe, they may pay very dear atterwarda, but the corn will be forth-coming, and they will have is th ughat an high price. Diot reverfe the medal, and cuppofe nu monopolizers; in fuch a cafe, the cheapoefs in autunu continuing, the fice confunption wnould continue with it : and an undue portion being eaten in winter, the fumner vould come wilhous is fupply : this was manifelly the hillory of 1789 ; the prople enraged at the idea of mompolizers, nots at their real exittence, (for the nation was ilarving for want of then, ) hung the miferable dealera, os the ilea of their having done what they were utterly mable to do. Thua, with tuich a fyltem of fmall farms as cmpty the whole crop into the markets in autum, and suake ma refrev for funn ner. there is no polfible remedy, but many and great monopolizers, who are beneficial oo the pabhic exactly in propoution ta theie profits. But in a country like England divided into large farins, fuch carn dealers are not equally wamted; the farmera are rich enough to wait for their returns, and keep a due referve in flacks to be thethed in fumater ; the bett of all medhode of keeping corn and the only one in which it receives no damage.

[^33]:    - Well has it been oblerved by a modern writer, Lorfque les récoltes manquent en quelque lieu d'un gran, ${ }^{\text {d }}$ empire, les travaux du refec cie fos provinees éturt payes d'une heureufe fécundité fulfifent à la confommation de la totalite Sans follicitude de la purt siu gouvernement, fans magazins publics, iar le jeul effic d'une ecmmunication

    Monl. de la arpent is to the at five perticas, - In the notes French feel, w Count Carli, on the cenfiment det S. Conte to 32 , there ar thor lays , p. 3 lif1 mile; this

    Of thefe the to Englifh feet, and by this athi

[^95]:    * The difficulty I have met with, in afcertaining the contents of a Milanefe pertica, is Arange. Pauc* ton, in his Metrologie, makes it to the Englifh acre, as 0.14727 is to 0.7929 , by which proportion, it fhould contain 8000 feet, or about $5 \frac{1}{3}$ perticas in an acre. Count Alexander Cicogno, in the Mcmoins of the Patriotic society of Milan, vol $\mathrm{it} . \mathrm{P}$ 3c4, fays, that if feeds are plaited at fifteen oncie one from another, 1479 will plaut a pertica. As the oncia is two inches Englifh, this makes $9^{2}+3$ Englifh feet in a pertica.

    Moni. de la Lande fays, that it taikes more than five perticas to make an arpent de Paris; now as that arpent is to the Englifh acre, $0.65,4$ is to 0.79 .9 , there are confequently 36,775 Englifh feet in that arpent; at tive perticas, it would confit of 7355 Englifh feet or aloout fix to an acre.
    In the notes to the new edition of the finti Giornata of Gallo ( $\mathbf{1 7} 75$ ), this pertica is Caid to contain 6152 French feet, which will not differ materially from De la Lande.

    Count Carli, who was prefide nt of the fupreme council of Finanees at Milan, and has written intelligently on the cenfimento fisye, L'arfent di Francia fla allat "ertica Milanefe come ${ }^{3}+$ ad amo proffimamente. (Delle opere det S. Conte Carli. ovo. 17.4 , tom i. P. 223.). The arpent of France being to the arpent de Paris as 48 to $3^{2}$, there are 55.02 Euglith fet in it, and in the pertica (at 1 Io 1) 31,500 feet. But the fnme aur thor fays p. 320 .), thete are $48: 8$ pertichi in a fquare Italian milc; if fo, there are 3628 in a fquare Englifh mile; this maises $5 \frac{1}{t}$ and 1 -Gth pertichi to an linglith acre.

    Findng (o) nany cuntradistions, I judged it neceffary to recur to different authority. The oncia of. Milan is two Englifh inches, and the meafures thus arrange themfelves:

    One pertica 4 tavoli.
    Onc savoli 12 piedi.
    Cue piede 12 oncie.
    Of thefe the tavola and pertici are fquare meafures, the former containing $1=$ piedi fquare; this makes 576 Luglifh feet, phich muttiplicd ty $<4$, the refult is 1,824 feet for a pertica, or about $3 \frac{1}{6}$ to an acre; and iny thes :ftimate I fhall calculate.

Penfieri, p. 220. And it is obferved by another writer, that if they are not fuperior to the antient mableto of Brufelo, they are at leait equal to them. Ragionamente fopra 7ofanno, p. 167.

[^115]:    * Le Venti Giornateidell Agrioltura. Brefiia, 1775. 4to, p. 59.

[^116]:    * Cantuni, Infruzioni Pratiche intorno al Agricultura. 8vo. 1788, Bergamo. p. 16,
    + In the new edition of Agoftino Gallo, the editors give line for the length of a Brefcian inch (oncia) which is the lengih of tith inch Englifh. Twelve of thofe oncia make one braccio, and fix braccia make one cavezzo ; confequenily there are 9$]$ feet in a cavezzo. A pertica is an oblong fquare, twenty cavezai long and five wide; now multiply $9^{1}$ by $20=195$; and multiply $9^{3}$ by 5 ,
     Englifh aere; perhaps the editors of that new cdition have made an error, in fating $30,7<9$ French feet in their jugero of 4 pertiche.

[^117]:    - There are three accounts before me of the contents of a Tufcan Aiora. Monf. De la Iande, tom. ii. p. 314. fays, " le fliora $=196$ toifes quarrés en fupericie;" thefe are French toifes, each fix feet: this makes about $5 \frac{1}{2}$ fliori to an Englifh acee; that is to fay, 7056 French fquare feet, of which 38,300 are an acre. In La S'quadra molíc l'arithmetica el's griculturia, el S. Saniovanini, 4 to. Vicen\%a, 1759, p. It. and 13 . . is the meafure of the foldo of Florence, which equals $1 \frac{1}{8}$ inch Engiith; the braccio is 20 foldi, or $22 \frac{2}{2}$ inches Englifh, (by another account 2;12) ; 6 braccia make a canna: and 8 canne long, by 6 broad, make a ftiora. Hence there are fo75 Englifh feet in the fliora; confequently there are fomething above 7 thiori in an acre. Monf. Paucton, in his Metrokgie, p. 754, compares it to the atpont of France of 48,400 French feet, and makes it to that arpent as 0.11461 to t.0c00; by this account it will be abont 27,800 French feet, of which feet 38,300 are an acre, or above $1_{3}^{\frac{1}{3}}$ tiora. In the Giornale Fiorentino di Agricoltura, 1786 , p. 253, "I'acre al notto flioro fta come 18,992 a 10,592 ;" by this ratio, an acre is abont $1^{3}$ ftiora. All thefe accounts differ therefore greatly. To compare other c:rcumftances.-At Martelli, they fow onethird of a tajo of wheat feed on a fliora; and at Villamagna. they fow $3 \frac{1}{2}$ Atiori with 1 ftajo, which quantities nearly agree. By De la Lande's account, this will be per acre Englifh 73 lb. which appears to bea Imaller quantity than any where ufed. By Sangiovamin, it will be about 94 lb . Atill under the comman quantities. By Paucton, it will be about r 7 lb .; a portion not to be named as the feed of an acre. And by the Florentinc author, 23 lb . which is almott equally abfurd. Seed wheat will agree with none of the meafures; fuppofe they fow $2 \frac{1}{2}$ bufthels per acre, then there are 15 fliori in an acre. If 2 bufthels then, there are 12 fliori. All is confution.
    At Villamagna, they fow 24 Aaji of beans on 28 ftiori of land ; this is about 3 bufhels Englifh per $5^{\frac{1}{4} \text { Atinri, }}$ which agrecs very well with an acre being , $\frac{1}{2}$ : they fow alfo 6 flaji of oats on 10 ftiori, this would be 2 bufhels on 5 : they fow oats therefore rather thinner, proportionably to the Englift practice, than beans.

    Upon my getting a friend to write to Tufcany for information, I received fuch as proved of no ufe; fimply this table, -1 quadrato, 10 tavola; 1 tavola, 10 perticle; 1 pertica, 10 deche; 1 deca, 10 bractia fquacra. This makes the qualrato under 40,000 feet Einglinh. But what is the fliora? Such are the endlefs difficulties in every thing concerning meafures.

    Where authorities, agyarently gowd, differ fo greatly, the reader will of courfe receive all eftimations with many doubts.

    ** See this point particularly explained in: Annels of Agriculture, vol. x. p. 235, and in many other papers of that work sone of thefe memoirs were tranlated and publifhed in French, under the title of lilature, smmerce et prixe des Laimes en Angleterre, 8vo 1790; but fome of the bet papers, for inflance that aloove alluded to, and obhers, were left out of the collection.

[^139]:    
    Il Ibid. vol. vi. p. 332. § Ibid. vol. viii. p. 254.
    ** Ibid. vol. xii. p. 63.

[^140]:    - The route in which thefe obfesvations were made, is marked in theijournal inferted in the frit volumes alfo the dates.

[^141]:    - There is nu line of boundary to be fixed, with any precifion, to the Pyrenees ; I am inclined to think that all the mountains we faw, Montferrat perhaps exeepted, are branches of that ftupendons chain, uniting in fome direction. The whole mountainous part of the province, that is, eighteen-twentieths of it, is properly the Pyrences.

[^142]:    - Gervais and Coutet.

[^143]:    VOL 1 V .

[^144]:    * The barometer food but at 17 inches $1 c_{2}^{2}$ l lines.

[^145]:    *Sienil fobiffic of Wcruer.

[^146]:    - Their bottom is always of fnow or ice.

[^147]:    - A metre is rather more than a yard.

[^148]:    Rerahan and I'retiont,
    P. Mikers strset, 1 ondra.
