Fair anchorage in West Quoddy Bay 1 mile $N W$ by N from the entrance. The Narrows have lately been dredged to a depth of 12 feet at low water, the Channel being 200 feet wide; but strangers should not attempt to pass through without a pilot. There is a Steam Fog Whistle at West Quoddy Head, giving a blast of 8 seconds duration at intervals of 52 seconds. Sail Rock, a dry ledge, lies $\frac{1}{4}$ of a mile from this Light, and when the tide is running should be carefully avoided.

Bell Boat, off the north side of the Harding's Ledge (about $4\frac{1}{2}$ miles from Minot's Ledge Light). A good mark to clear the Harding's Bell Boat, after passing Minot's light, is to keep Long Island Head light (fixed white) just open to the north of the Narrows Light, which is a red light.

Also, an air trumpet, giving blasts of 7 seconds, followed by interval of 43 seconds. From Cape Cod highlands the course for Boston Light is N W by W $\frac{1}{4}$ W, which well clears Minot's Ledge and the Hardings; then, when well past Minot's, bring Boston light to bear W by N $\frac{1}{4}$ N and run for it until within $\frac{1}{2}$ of a mile of it or until the Beacon light bears about W by N, then run W $\frac{1}{4}$ S until the Beacon light bears W N W, then run W by N leaving the Beacon light 100 yards on your starboard hand, then steer N W $\frac{1}{4}$ W (keeping the middle of the channel) for the Narrows between Galloups and Lovell's Islands, then about N W $\frac{3}{4}$ N for the bell buoy off Nix's Mate, which leave on port hand, then run W by N $\frac{1}{4}$ N for Fort Independence, leaving the lower middle buoy, red can, No. 6, a good berth on your starboard, and State Ledge buoy, red Nun No. 8 close aboard on your starboard; then run about N W $\frac{1}{4}$ N for the upper middle buoy, black Nun No. 9, which, leave on your port, then the course to Long Wharf or to good anchorage is about N W $\frac{1}{4}$ W. If making Boston ship channel from Cape Ann, get Thatcher's Island light to bear N N W from 2 to 3 miles, then steer S W $\frac{1}{4}$ W until Boston light bears W by N $\frac{1}{4}$ N. Then proceed as before given.

Narrows Light; brown house; fixed red light, on the right hand side of Narrows, in ship channel entrance to Boston Harbor.

In coming up ship channel, and after leaving Nix's Mate buoy on the port hand, and Long Island Light bears W by S $\frac{1}{2}$ S, run W by N $\frac{1}{4}$ N for the south end of the Castle until the Castle North Wharf bears N W by W $\frac{3}{4}$ W, or abreast of the State Ledge Buoy (red, No. 8), then N W $\frac{1}{4}$ N to the Upper Middle Buoy (black, No. 9), which leave on port hand, then the course to Long Wharf is N W $\frac{1}{4}$ W. But if approaching Boston from Cape Ann, via Broad Sound, bring Long Island Light to bear S W by W, and run for it until Deer Island Point Beacon bears N W by N $\frac{1}{2}$ N, three-eighths of a mile distant, then W by N $\frac{1}{4}$ N up the harbor. Strangers should bear in mind that in the middle of Broad Sound there is but 8 feet of water at low tide; but by keeping on the southern side of the Sound, leaving the Graves Whistling Buoy $\frac{1}{2}$ a mile on your port hand and the Devil's Limb Buoy (black can No. 1) $\frac{1}{2}$ mile on port hand, and running straight to Ram's Head buoy (black can buoy No. 5) about W S W, passing Aldrich's Ledge buoy (black can No. 3) $\frac{1}{2}$ mile on port, then leaving Ram's head 50 yards distant on port, and run about W $\frac{1}{4}$ S to clear Deer Island Point Beacon, you can carry 12 feet safely. From the Beacon you will steer W $\frac{3}{4}$ N for lower middle buoy, then W by N $\frac{3}{4}$ N for State Ledge Buoy, when proceed as before given.

Explanatory.

- Aphelion**—The point of a Planet's orbit farthest from the Sun.
- Apogee**—That part of the Moon's orbit farthest from the Earth.
- Astronomical Day** is reckoned from noon to noon through the 24 hours. Thus, July 21, 9h, is 9h A of July 21, and July 21, 15h, is 3h M of July 22.
- Conjunction**—A Planet directly between the Earth and the Sun is said to be in Inferior Conjunction with the Sun. A Planet with the Sun directly between it and the Earth is said to be in Superior Conjunction with the Sun. Planets are said to be in conjunction with each other, or with the Moon, when they are in the same sign and degree.
- Declination**—The distance of a heavenly body from the Equinoctial, measured north or south, in degrees or minutes, on a Meridian.
- Ecliptic**—The plane of the Earth's orbit, so called because Eclipses can take place only when the Moon is on or near it.
- Elongation**—The distance of a Planet from the Sun as seen from the Earth.
- Equinoctial**—The circle in the heavens traced by the Earth's Equator.
- Node**—That part of the orbit of a heavenly body which intersects the Ecliptic. If the body is passing from south to north, it is called the Ascending Node; if from north to south, Descending.
- Opposition**—A Planet with the Earth directly between it and the Sun is said to be in opposition to the Sun.
- Penumbra**—That portion of space around the shadow of the Earth, in passing through which the Moon diminishes in brightness, in consequence of a part only of the Sun's rays reaching her surface.
- Perigee**—That part of the Moon's Orbit nearest to the Earth.
- Perihelion**—That part of the Planet's Orbit nearest to the Sun.
- Quadrature**—Two heavenly bodies are said to be in Quadrature when they are distant from each other by one-fourth of the Zodiac, or three signs apart.
- The Sun's Declination and fast or slow of clock are given for apparent noon, or time of passing the Meridian of St. John.
- The Moon's Southing is given in Astronomical time for the Meridian passage at St. John; and her Declination, when on the Meridian.
- The Rising of the Moon is given from Full Moon to New Moon; and the Setting from New Moon to Full Moon.

TIDES.

The Tides in the Calendar are the Morning and Afternoon Tides at St. John and Charlottetown. In the Tide Table (page 37) will be found Constants for finding the time of High Water at each of the places given in the Table.

In editions of this Almanac prior to 1885 the Tides were only given approximately, but ever since they have been corrected for the varying distance of the Moon from the Earth, and also her angular distance from the Sun. They can now be depended on as accurate to at least the same degree as the Admiralty Tide Tables.

It will sometimes be found that when a Constant is added to the time of High Water at the Port of reference the sum exceeds 12 hours; in this case subtract 12 hours from the sum and the remainder will be the time of High Water at the required Port on the succeeding afternoon or morning, according as the Tide at Port of reference was a Morning or Afternoon Tide.

It will sometimes be found that a Constant to be subtracted is greater than the time of High Water at the Port of reference: in this case add 12 hours to the Time at the Port, subtract the Constant, and the remainder will be time of High Water at the required place for the previous Morning or Afternoon, according as the Tide at the Port of reference was an Afternoon or Morning Tide.

FORECASTING THE WEATHER.

Men have, from a very early period, studied the weather, on account of its great influence on their pursuits, in order if possible to predict its nature, and prevent those losses to the Farmer and the Sailor which result from violent storms.

The earlier students based their predictions on the phases of the moon, but an examination of the Greenwich observations for more than half a century has shown that this theory is entirely unfounded. Weather prophets like Moore, Zadkiel and Vennor claim in their Almanacs to be able to forecast the weather day by day for a whole year; but meteorological science in the British Isles, and the Signal Service of the United States, with the Weather Bureau of the Dominion, does not claim to forecast, with any certainty, the weather for more than three or four days at the most.

If an observer could obtain, at regular and repeated intervals, readings of the Barometer at stations distributed over a large area, he would be enabled to trace the march of the storm, for it has been found that the wind always blows towards the place of the lowest barometer reading; and so, by means of the telegraph, he may warn those places the storm is approaching. Still, mistakes are often made, and the forecasts are not always infallible, so that much remains to be done before meteorology can be ranked among the exact sciences.

TIDE TABLE.

The time of High Water in the following places will be found approximately by adding to or subtracting from the time of High Water at the given Port of reference, as follows:

Sign + add; Sign - subtract.

In this month the day decreases in length 1 hour and 13 minutes — 40 minutes in the morning and 33 in the evening.

WE keep our Travellers almost constantly on the road, yet they are unable to call upon our Customers as often as we would like. This we hope to remedy in the near future.

Preserve, and request correspondents to preserve, envelopes of mis-sent or delayed letters.

Business men should be careful to authorize but a limited number of persons to receive their letters, and only those in whom they have full confidence.

Have a letter box on your office door.

Letters addressed to mere initials, or fictitious names, will not be delivered, unless addressed in care of a resident, or to some box in the Post Office.

Mutilated Stamps.

Letters having mutilated stamps, or stamps so soiled and defaced as to make it impossible for the sorting clerks to decide whether they have been used before or not, will be sent to the Postmaster General for his adjudication.

Post Bands and Stamped Envelopes.

One cent post bands for newspaper or book packet wrappers, and one and three cent stamped envelopes are issued by the Department, and may be had at the stamp vendors at a trifle above their face value.

Time Ball on Northern Tower of Custom House.

The Ball will be hoisted half its elevation each day (Sunday excepted) at fifteen minutes before one o'clock. At one minute before one o'clock it will be hoisted its full height; and at one o'clock, mean time, the Ball will be dropped. A Chronometer keeping correct Greenwich time should then show 5h 24m 15s, and the difference between this and the time shown by a Chronometer, is its true error on Greenwich time at the moment. As the above hour of one o'clock when the Ball drops, represents 5h 24m 15s at Greenwich, the error of a Chronometer may be ascertained, no matter where the ship is lying. Masters of vessels arriving at Saint John should compare their Chronometers by the time Ball, as it will enable them to get the sea rate, which frequently varies from harbour rates. Latitude 45° 16' 42'' North. Longitude in time 4h 24m 15s. West of Greenwich. *GEORGE HUTCHINSON, Director.*

P. S. Any shipmasters entering this Port, keeping a Meteorological Register, who may be desirous of having the accuracy of their Barometers verified, can do so by comparison with the standard at the Observatory at the Custom House. *G. H.*

YOUR attention is respectfully solicited to the above Sewer Trap, which offers many advantages over the hand-made traps, and all others hitherto used. THE McAFEE PATENT TRAP, being composed of a single homogenous casting of lead or other suitable material is not only heavier, more durable, and having no solder joints less liable to be eaten away or injured by acids and sewer gas than other traps; but is also much less expensive. It is also so constructed that it always remains filled with water, and prevents any possibility of sewer gas escaping.
