Technical and Bibliographic Notes/Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.

- Coloured covers/
Couverture de couleur
- Covers damaged/
Couverture endommagée
- Covers restored and/or laminated/
Couverture restaurée et/ou pelliculée
- Cover title missing/
Le titre de couverture manque
- Coloured maps/
Cartes géographiques en couleur
- Coloured ink (i.e. other than blue or black)/
Encre de couleur (i.e. autre que bleue ou noire)
- Coloured plates and/or illustrations/
Planches et/ou illustrations en couleur
- Bound with other material/
Relié avec d'autres documents
- Tight binding may cause shadows or distortion
along interior margin/
La reliure serrée peut causer de l'ombre ou de la
distortion le long de la marge intérieure
- Blank leaves added during restoration may
appear within the text. Whenever possible, these
have been omitted from filming/
Il se peut que certaines pages blanches ajoutées
lors d'une restauration apparaissent dans le texte,
mais, lorsque cela était possible, ces pages n'ont
pas été filmées.

Additional comments:/
Commentaires supplémentaires:

Pagination is as follows : [131]-133 p.

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

- Coloured pages/
Pages de couleur
- Pages damaged/
Pages endommagées
- Pages restored and/or laminated/
Pages restaurées et/ou pelliculées
- Pages discoloured, stained or foxed/
Pages décolorées, tachetées ou piquées
- Pages detached/
Pages détachées
- Showthrough/
Transparence
- Quality of print varies/
Qualité inégale de l'impression
- Includes supplementary material/
Comprend du matériel supplémentaire
- Only edition available/
Seule édition disponible
- Pages wholly or partially obscured by errata
slips, tissues, etc., have been refilmed to
ensure the best possible image/
Les pages totalement ou partiellement
obscures par un feuillet d'errata, une pelure,
etc., ont été filmées à nouveau de façon à
obtenir la meilleure image possible.

This item is filmed at the reduction ratio checked below/

The copy filmed here has been reproduced thanks to the generosity of:

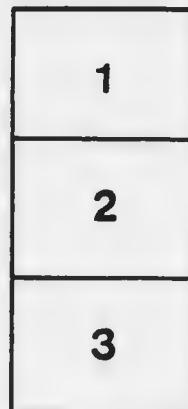

Harold Campbell Vaughan Memorial Library
Acadia University.

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shell contain the symbol → (meaning "CONTINUED"), or the symbol ▽ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

1	2	3
4	5	6

L'exemplaire filmé fut reproduit grâce à la générosité de:

Harold Campbell Vaughan Memorial Library
Acadia University.

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par la première plie et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par la seconde plie, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▽ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant la nombre d'images nécessaires. Les diagrammes suivants illustrent la méthode.

Recent Auroral Displays.

By Prof. C. H. McLEOD, of McGill College.

The auroral display of the night of February 13th was observed throughout the northern portion of North America, in Britain, and probably throughout northern Europe. It was without doubt the most brilliant of the auroras observed here since 1870. In Montreal, it became visible shortly after sunset, and increasing in splendor attained its greatest brilliancy at between 7 and 7.30 p.m. Thereafter, gradually fading, it appeared as a uniform haze at 8.30, and the sky became completely overcast shortly after 9 o'clock. The most marked feature of this aurora was the bright red cone of light having its base between N. and N. 60° W., and extending to the zenith. The cone maintained an approximately constant position, and was of a uniform bright red colour, changing in tint only as it increased to a maximum and faded away. In front of this bright red screen there were slowly moving streamers of brilliant reds and greenish tints, and these also extended at times throughout the whole northern quarter of the sky. Low down in the north there was an arch of white light, and at one or two points in the N. E. there were columnar patches of coloured aurora which also maintained a fairly

constant position. The movements were of the slow and stately order rather than those of the "merry dancers."

Since this aurora there have been several minor ones, and on March 6th there was a display, which, though only faintly coloured, was quite as beautiful as that of the 13th. It was marked by a beautifully folded curtain like aurora standing above a very dark cloud. The changes in the curtain were very rapid, and at times showed light tints of pink and green. The streamers were numerous, but were not coloured, so far as observed.

It is perhaps worthy of remark in connection with these two auroras that the days on which they occur are included in a list of six days on which bright auroras are supposed to return periodically. The days are Feb. 3, Feb. 4, Feb. 13, March 6, Sept. 9, and Sept. 29. The aurora of March 12th, though not equal to those described, is also worthy of record. Like that of Feb. 13th it faded into a uniformly hazy sky.

The aurora of Feb. 13th marked one of the most violent magnetic storms on record. At the Kew observatory the "magnetometers were not able to record the complete extent of the vibrations to which free needles were subjected, nor could the entire change of force be secured in the field of the instrument. The limits, however, clearly recorded, were 2° of declination, from .1760 to .1830 of horizontal force, and from .4350 to .4420 units of vertical force expressed in C. G. S. measure in absolute force."† At Toronto, "during the early morning hours the declination magnet was considerably west of its mean position, and east of it during the afternoon. The vibrations were exceedingly rapid, notably so in the morning when the range of declination was over $2^{\circ} 37'$ The horizontal component was very much affected. Some of the vibrations were so rapid that they were barely recorded. The disturbance started with a sharp increase of the force. In the morning the force was considerably

† Letter to *Nature* by Mr. G. M. Whipple, Feb. 18th, 1892.

"below its mean value, and during the afternoon a rapid recovery commenced between 0h. 38' p.m. and 4 p.m. (Eastern time), an increase of .0096 C. G. S. took place; the total change of horizontal force during the disturbance was over .0148 C. G. S. Between 6 and 9 p.m. the vibrations were very swift. The changes in the vertical component were also considerable."*

This magnetic storm was preceded by a most unusual outbreak of sun spots. The group of spots which became visible by rotation on Feb. 5th was, on the morning of the 8th, and for some days thereafter, easily visible to the naked eye. The area of the group, as measured here on the 8th, amounted in area to about $\frac{1}{20}$ th of the sun's visible hemisphere, the length of the disturbed area being about 149,000 and the breadth about 100,000 miles. On Feb. 13th there was also another very large group of spots, then about making good its position on the eastern limit, which added very materially to the total spotted area on this day. This latter is probably the same group of spots which, after making one rotation, is now (March 14th) nearly central on the sun.

* From a statement kindly furnished by Mr. C. Carpmael.
