

Technical and Bibliographic Notes / Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

Coloured covers/
Couverture de couleur

Coloured pages/
Pages de couleur

Covers damaged/
Couverture endommagée

Pages damaged/
Pages endommagées

Covers restored and/or laminated/
Couverture restaurée et/ou pelliculée

Pages restored and/or laminated/
Pages restaurées et/ou pelliculées

Cover title missing/
Le titre de couverture manque

Pages discoloured, stained or foxed/
Pages décolorées, tachetées ou piquées

Coloured maps/
Cartes géographiques en couleur

Pages detached/
Pages détachées

Coloured ink (i.e. other than blue or black)/
Encre de couleur (i.e. autre que bleue ou noire)

Showthrough/
Transparence

Coloured plates and/or illustrations/
Planches et/ou illustrations en couleur

Quality of print varies/
Qualité inégale de l'impression

Bound with other material/
Relié avec d'autres documents

Continuous pagination/
Pagination continue

Tight binding may cause shadows or distortion
along interior margin/
La reliure serrée peut causer de l'ombre ou de la
distorsion le long de la marge intérieure

Includes index(es)/
Comprend un (des) index

Blank leaves added during restoration may appear
within the text. Whenever possible, these have
been omitted from filming/
Il se peut que certaines pages blanches ajoutées
lors d'une restauration apparaissent dans le texte,
mais, lorsque cela était possible, ces pages n'ont
pas été filmées.

Title on header taken from:/
Le titre de l'en-tête provient:

Title page of issue/
Page de titre de la livraison

Caption of issue/
Titre de départ de la livraison

Masthead/
Générique (périodiques) de la livraison

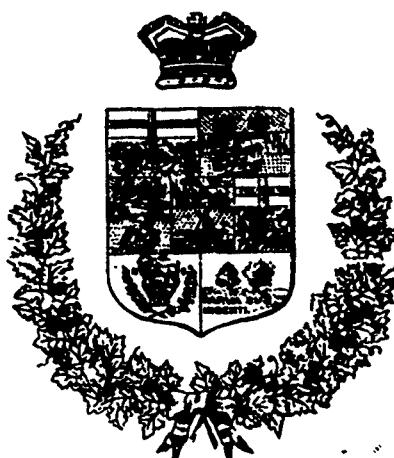

Additional comments:/
Commentaires supplémentaires: Various pagings.

This item is filmed at the reduction ratio checked below/
Ce document est filmé au taux de réduction indiqué ci-dessous.

The Canadian Patent Office Record

VOLUME XII, 1884.-INDEX.

INDEX OF INVENTIONS.

Abrading machine, G. H. P. Flagg.....	18,408
Acid, purification of sulphuric, G. Thomson et al.....	18,856
Acids and lactates, lactic, T. S. Nowell.....	18,441, 18,450
Advertising device, T. H. Bowles.....	18,461
Air compressing machinery, G. R. Cullingworth.....	18,804
" engine," carbureted, E. Eve et al.....	20,896
" purifying apparatus, L. P. Roderique et al.....	19,007
Alarm, draw bridge, E. F. Meyer.....	18,398
" electric low water, H. W. Page et al.....	18,586
" gauge, low water, A. Weiden.....	20,111
" high and low water, J. C. Palmer et al.....	20,418
" and indicator, electric water, J. C. Blake.....	18,458
Aluminum, extracting, F. J. Seymour.....	18,873
Amalgamating apparatus, gold, S. L. Trippé.....	18,825
Amalgamator, ore, H. Moore.....	19,656
" silver and gold, T. Walker.....	18,168
Ammonia, production of, R. Tervet.....	18,864
Anchor, T. S. Calpin	20,845
" W. Lewis.....	19,708
" mode of hoisting, etc, E. P. Tieffy.....	20,805
Animal trap, J. A. Williams.....	18,484
" H. Brubaker.....	19,816
Annealing pot for wire, H. Roberts.....	18,319
Apple parer, F. R. Williams.....	20,281
" paring machine, J. L. Wilcox.....	20,571
Ash pan for steam boiler, J. C. Anderson et al.....	25,482
" locomotive, W. H. D. Welsh.....	20,028
" sifter, B. H. Cook.....	19,877
" G. A. Blanchard.....	20,500
" and gravel sifter, A. McKenzie.....	18,880
Astragal glazing bar for roof lights, W. R. Lester.....	20,853
Auger and bit blanks, roller dies for making, C. O. Tinker.....	20,261
Axle blade, C. C. Brooks.....	19,785
" and axle box, R. C. Parvin.....	19,085
" bearing, car, O. S. Stearns et al.....	18,594
" box, car, J. Timms.....	19,228
" " W. A. Hardy.....	19,915
" " G. W. Stewart.....	19,470
" carriage, A. B. Poor et al.....	19,828
" dust guard for car, N. M. George.....	19,441
" carriage, scalp for, W. J. Parmelee	19,189
" coupling, J. W. Leete.....	19,184
" for two wheeled vehicles, A. Gilbert.....	18,560
" lubricator, A. D. Howe.....	19,7
" H. K. Vosburgh.....	20,63
" car, C. Page et al.....	19,981
" N. M. George.....	19,440
" S. A. Flower et al.....	19,229
" T. R. Gordon.....	19,499
" self-ciling, C. H. Carrier.....	19,068
" skein, The Illinois Iron & Bolt Co.....	19,498
" bus wagon, P. Ulrich.....	19,541
" vehicle, J. J. Devine.....	29,169
" M. J. Klopp et al.....	19,899
Baby jumper, C. T. Gardner.....	18,388
Bag and twine holder, J. H. Hunter.....	20,194
" killer, A. Hay.....	18,286
" for boxing exercise, A. R. Rumsey.....	20,875

Bag holder, W. J. Messervey.....	19,821
" and truck, W. James.....	20,134
" paper, C. M. Buland et al.....	20,018
" holding machine, P. E. Ward.....	20,878
Baking and roasting apparatus, W. Smith et al.....	19,406
" tin, C. Schmidt.....	18,961
Ball joint, universal, A. W. Von Schmidt.....	20,935
Balance spring, T. B. Salter et al.....	20,897
Bale tie, bag, bundle, D. E. Ladd.....	19,140
Balling press, A. Buckman.....	20,101
" " A. Fitts et al.....	19,508
" " J. McIver.....	19,087
Band cutter and feeder, F. Hawley.....	19,858
" wire for boxes, etc., H. Frank et al.....	20,255
Bandage, S. Perrin.....	20,210
Bark cutter, J. Daigneau.....	19,295
" grinding mill, J. T. Phillips et al.....	20,615
" utilization of birch, E. Guay et al	19,727
Barrel, J. H. Roy et al.....	20,268
" head, securing, T. L. Telamore et al.....	18,830
" bending machine, W. Rand, Jr.....	19,376
" jacketed, for transportation, L. Fritz.....	18,491
" pulp, W. Mears.....	20,390
" rack, W. Walter et al.....	19,686
Basket splint machine, S. Oakman.....	20,878
" wire, construction of, A. Greenwood.....	19,452
Battery, galvanic, G. W. O. Harra et al	18,228
" secondary, electric, D. G. Fitzgerald.....	18,266
" " W. Hochhauser.....	18,281
" storage, C. G. Perkins.....	18,591
Baths, G. Booth.....	20,805
Bathing apparatus and commode, combined, Q. S. Backus.....	19,078
Bearing, anti-friction, P. Brounley.....	20,621
Bed bottom, A. L. Jaynes.....	18,918
" frame-for, D. Knowlton.....	19,941
" " spring, H. Benedict.....	18,402
" " J. M. Keith.....	19,080
" " O. L. Fuller.....	19,996
" " C. M. Burk.....	20,216
" and spring frame for, B. Taylor.....	20,818
" spring, P. Fraser.....	19,738
" " B. Swayze et al.....	20,486
" " connection, B. Burnell.....	19,310
" " R. K. Butterfield.....	19,595
Bedstead and dressing table, J. W. Jones	18,909
Bee-hive, A. Fratey et al.....	18,700
" T. P. McCormick.....	18,868
" wintering apparatus, A. Marshall.....	20,388
Beer cooler, C. A. Bartholif.....	18,940
" " V. Whittlesey.....	18,982
" cooling apparatus, I. Schliather.....	20,385
Bell, M. M. Bowers.....	19,427
Belt carrier, C. P. Peterson.....	20,406
" conveyor, endless, E. H. Parker et al.....	19,847
" fastener, D. Lovejoy.....	19,608
" " E. C. Smith.....	20,186
" " J. A. Roberts.....	20,643
" " J. W. Pugh.....	20,426
" for money, etc, A. H. Kepley.....	19,888
Belting leather, F. E. Dixson.....	19,136
Berth, self levelling, A. P. Bickmore et al	18,858

Bevel, carpenter's, B. F. Van Auering et al.	19,548	Brick, building, J. Lee.....	19,177
Bicycle, D. Kennedy.....	18,688	" burning, C. F. Theodore.....	20,028
" T. H. Robinson.....	19,771	" elevator, J. Tomlin.....	20,398
Billiard cushion, H. Nightingale.....	18,808	" kiln for burning, D. Laemmle et al.....	20,408
Binder temporary paper, J. T. Shannon.....	19,008	" machine, A. Peet.....	20,594
Bird cage, E. Schultz.....	19,947	" " H. Martin.....	19,936
" " J. W. Gregory.....	20,376	" " J. B. Foster.....	19,888
Bit brace, J. Watson.....	18,690	" " H. Konefes.....	18,689
" boring, H. E. Fuller et al.....	18,416	" " W. L. Gregg.....	19,718
" for boring wood, S. P. Graham.....	19,428	Bridge, iron and wood, G. & B. Bear.....	19,194
Blast furnace, V. Collis.....	20,098	Bridles, cheek lines for, G. A. Macs.....	19,929
Bleaching process, J. B. Thompson.....	18,674	Broller, W. Hailes.....	20,881
Blood, composition for purifying, E. Racicot.....	18,829	Bronchitis, composition for, E. Racicot.....	18,880
Blower furnace, P. Richards et al.....	19,900	Brom, W. H. Palme.....	19,180
Blue, laundry, M. H. T. L. & J. E. Hargreaves.....	19,187	" holder, A. Frazer et al.....	19,150
Blue-line compound, G. A. Conant.....	20,502	" " J. M. Van Horn.....	19,614
Bow, H. F. Combe.....	18,389	" support, W. T. Shaffer.....	18,747
" de-tacher, A. D. Po t.....	19,972	Brush, C. W. Meakin.....	19,026
" hull, T. T. Hodson.....	18,518	" boring machine, J. C. Hall et al.....	19,875
" suit marine, M. Japling.....	18,998	" " R. C. Fellowe.....	18,842
" sea and foot-board for row, J. J. Turpid.....	19,720	" fountain, T. Huntbach.....	20,051
" foot-rest for row, J. E. McIntyre.....	18,956	" paint and whitewash, J. A. Read.....	19,980
Body, display, J. M. Simpson.....	18,285	Bucket, rubber, C. H. Miller.....	18,882
Boller, locomotive, C. B. Coventry.....	20,252	Buckle, H. Kimball.....	21,404
" " and steamboat, O. Rothrock.....	19,458	" J. J. Simons.....	20,597
" furnace, W. P. Hall.....	20,042	" J. D. Robinson.....	20,228
" low pressure, D. S. Robilliard.....	20,439	" W. W. Budding.....	20,080
" sectional, W. King.....	19,818	" W. H. Biles.....	20,114
" sediment collector for steam, D. Haines.....	20,611	" for harness branching, R. S. Boulter.....	19,610
" steam, J. B. Murray.....	18,535	" harness, J. A. Gavitt.....	19,730
" " and water, E. Gurney et al.....	20,029	Buggy, case, physician's, J. B. Vaughan.....	20,246
" removal of scale in, G. Dowde.....	19,289	" gear, H. Cameron.....	19,778
" tubes, W. H. Baldwin.....	18,820	" top, A. M. Cochrane.....	20,012
" wood pulp, D. O. Fruecke.....	20,060	" attachment for, C. Champion et al.....	19,926
Bolt-star plate, L. J. Brandon et al.....	25,512	" " shifting rail, J. Bell.....	18,878
" wagon, A. G. Wilbur.....	18,523	Burglar alarm, F. D. Hill.....	20,620
Bolt, strike for wash, E. W. Elliott et al.....	16,281	" " H. Farris.....	20,440
Book, black leaf check, E. L. Burwell.....	20,410	" " catch, R. G. Vaughan.....	19,500
" chequer, C. E. Sprague.....	18,225	" " escape, H. C. Roome.....	20,889
" stand, D. D. Bowman.....	19,083	Burial apparatus, A. B. Morrison.....	21,414
" leaf holder for, A. S. Flint et al.....	19,135	Bust roller, J. Nichols et al.....	20,178
Boot, G. B. Furniss.....	20,069	Buttle, C. W. Highly.....	18,722
" T. Kennedy et al.....	18,757	Butter dish, J. D. Lucas.....	18,803
" and shoe brusher, N. A. West.....	19,469	" " and package, A. Edwards.....	18,805
" fit, machine for, S. Rue.....	19,539	" " worker, W. F. & H. White.....	20,191
" Inclining, G. Bolvin.....	20,007	Button, G. W. Prentiss.....	19,912
" legs or other beams, machinery for finishing, L. Allen.....	20,922	" C. E. Bailey et al.....	18,808
" or glove fastener, G. Valiant.....	18,611	" J. Bid.....	18,282

INDEX OF INVENTIONS.....	I
INDEX OF PATENTEES.....	II

INVENTIONS PATENTED.

NOTE—Patents are granted for 15 years. The term of years for which the fees have been paid, is given after the date of the patent.

No. 18,225. Cheque Book. (*Livret de Mandats.*)

Charles E. Sprague, New York, N. Y., U. S., 1st December, 1883; 5 years.

Claim.—A book composed of leaves of detachable blank forms, alternating with permanent record leaves, each record leaf having one of its sides prepared for receiving the records of the cheques, or other documents, and having the other side prepared as a surface to which to fasten the cheques, or other documents, when they have been returned.

No. 18,226. Electric Cable Support.

(*Support de Câble électrique.*)

Albert S. Weevor and Oscar N. Beader, Providence, R. I., U. S., 1st December, 1883; 5 years.

Claim.—1st. The improved electric cable support, or hanger, made of a single piece of material, and having a slotted tongue C, and two shorter tongues D and E at one end of it, and at its opposite end a short tongue D, all arranged and being for use in manner, with an electric cable and its sustaining rod, substantially as set forth. 2nd. The combination of the joint sealing strip as described, with the cable-hanger, substantially as set forth, made of a single piece of material, having a slotted tongue and two shorter tongues at one end of it, and a short tongue at its opposite end, arranged and bent in manner essentially as represented.

No. 18,227. Process for the Manufacture of Fluid for rendering various Fabrics, Materials, or Things Water-Resisting, and Proof against Moths, Mildew, &c.

(*Procédé de fabrication d'un fluide propre à rendre divers tissus, matières ou choses imperméables et à l'épreuve des mites, de la moisissure, &c.*)

Clara B. Warner, London, England, 1st December, 1883; 15 years.

Claim.—1st. Dissolving caoutchouc, or other elastic gum, and paraffine, in a mixture of absolute alcohol, naphthaline and bi-sulphide of carbon with American naphtha, or benzoline. 2nd. The purification of the compound by distillation, substantially as described, whereby the acid is eliminated without the use of an alkali. 3rd. The use of the residual liquid from the still for treating the fresh materials, as above described.

No. 18,228. Galvanic Battery.

(*Batterie Galvanique.*)

George W. O'Harrar, John A. Hoedemaker, Daniel O. Roberts and Frank S. Hillhorn, Kalamazoo, Mich., U. S., 1st December, 1883; 5 years.

Claim.—1st. In a galvanic battery, a cell composed of a cup of zinc, or carbon, located within a rubber cup, said inner cup being provided with an axis-pole secured in its enclosed end, and extending out through the end of the rubber cup, the opposite end of the cell also

being provided with an axis-pole secured in the end of the stick of zinc, or carbon, and extending out through the cover, in combination with a cabinet provided with axial supports, all substantially as set forth for the objects specified. 2nd. The combination, with the rubber cup, having the concave recess in the inclosed end, the inner cup having the pole secured thereto and passing out through the end of the rubber cup into said concave recess, the opposite end of the cell also having a pole serving as an axis, of a cabinet provided with the S-shaped supports at each end of the cell, all substantially as described and shown for the objects stated. 3rd. The combination, with a cabinet provided with axial supports, of a cell having an axis at each end revolvably located in said axial supports, substantially as described. 4th. A cell having an axis at each end, in combination with a cabinet having axial supports, provided with open slots in the upper end, whereby the cell is both detachably and revolvably supported by said axial supports, substantially as set forth. 5th. A revolvable cell provided with axial bearings at each end, said cell having a concavity in one end, substantially as described and shown.

No. 18,229. System and Apparatus for Ventilating Railway Cars. (*Système et appareil de ventilation des voitures de railroads.*)

Mann's Boudoir Car Company (Assignee of William D. Mann), New York, N. Y., U. S., 1st December, 1883; 5 years.

Claim.—1st. The system described for ventilating railway cars in warm weather, consisting in, first, drawing in a copious supply of air through a funnel located outside the car; second, cleansing, filtering and cooling said air by passing it through a filter and refrigerator; third, distributing such filtered and cooled air throughout the interior of the car by conducting it into a flue extending through, or along same and allowing it to escape through apertures in said flue; and, fourth, exhausting the air as it becomes vitiated by a number of outlets having suction devices, substantially as set forth. 2nd. The system described for ventilating railway cars in cold weather, consisting in, first, drawing in a copious supply of air through a funnel located outside the car; second, cleansing and filtering said air by passing it through a filtering chest, and warming said air by bringing it into contact with the car-heater and its pipes; third, distributing such filtered and warmed air throughout the interior of the car by conducting it into a flue extending through, or along same, and allowing it to escape through apertures in said flue; and, fourth, exhausting the air as it becomes vitiated by a number of outlets having suction devices, substantially as set forth. 3rd. In a railway car ventilating system, the double-mouthed funnel A having swinging door, or damper δ , adapted to close the aperture at either end automatically, in combination with the pipe B, for conducting air to the interior of the car, substantially as and for the purpose specified. 4th. The combined filtering and cooling chest C having water at its bottom, a filtering medium above said water, and an ice chamber above said filtering medium, in combination with means for collecting and discharging the air which passes through said chest, substantially as and for the purpose set forth. 5th. The filtering chest C having water at its bottom, and the filtering medium, in combination with the closed D, heater D, and its pipes, and means for collecting and discharging the air which passes through said chest and closet, substantially as and for the purpose set forth. 6th. In a railway car, the combination, with the closet D, and means for forcing purified air thereinto, of the flue E running through the car, or along same, and provided with apertures ϵ ϵ , substantially as and for the purpose specified. 7th. In a railway car, the combination, with the closet D, containing heater D, and with means for forcing purified air into said closet, of the flue E containing heating pipes E₁, running throughout the car and provided with apertures ϵ ϵ , substantially as and for the purpose specified.

No. 18,230. Railroad Car-Coupler.

(*Attelage de Wagons de Railroads.*)

Edward Casper, Collingsville, Penn., U. S., 1st December, 1883; 5 years.

Claim.—1st. In a railroad car-coupler and in combination with the draw-head, the hinged or movable stop C, substantially as set forth. 2nd. In a railroad car-coupler and in combination with the draw-head A, the stop C, as described, and the automatically acting coupling pin

E, as and for the purposes described. 3rd. In a railroad car-coupler and in combination with the draw-head A, the hinged, or movable stop C and the lifting device D, substantially as described. 4th. The swinging coupling-pin E, having journal e¹ and handle e², combined with draw-head A, having socket a¹ and arched chamber a², substantially in the manner shown and described. 5th. The draw-head A, having arched top a², socket a¹ and chamber a², combined with the stop C, on the floor of said chamber, hinged or jointed at its rear end, and having the groove or chamber e at its front end, and movable by a lift and pin E, substantially as shown and described.

No. 18,231. Storage or Secondary Battery.

(Pile d'emmagasinage ou secondaire.)

William Hochhausen, New York, N. Y., U. S., 1st December, 1883; 15 years.

Claim.—1st. The combination, with an electric generator and line wires to distant working devices, of a switch to change the direction of current, a polarized switch at one, or more distant stations, and circuit connections and storage battery, substantially as set forth, to direct the current through such storage battery, or to disconnect the same from the electric circuit, substantially as set forth. 2nd. The combination, with a storage battery, of the magnets O and N, switches and circuit connections, substantially as set forth, for diverting the electric current from the storage battery, when the same is charged, substantially as set forth. 3rd. The combination, with the storage battery, of the magnet M, in a shunt of said battery, and a circuit changer, operated by such magnet, substantially as set forth. 4th. The combination, with the secondary battery and the main electric circuit, of the polarized switch, the magnet O, switches h i k l, operated by the same, the magnet M, of high resistance, the magnet N, of parts, substantially as and for the purposes specified. 5th. The combination, with a storage battery, of circuit connections, a switch and a floating device, similar to a hydrometer, to operate such switch according to the strength of the liquid in such storage battery, substantially as set forth. 6th. The plates for secondary, or storage batteries, made of oxide of lead mixed with lead, substantially as set forth. 7th. The lead foundation for the battery plates, having transverse channels for the reception of the oxide of lead, substantially as set forth.

No. 18,232. Cribbing Plate for Horses.

(Plaque pour empêcher les chevaux de ronger.)

August Quinque, Harleyville, Pa., U. S., 4th December, 1883; 5 years.

Claim.—1st. The cribbing-plate shown and described, consisting of the hooked plates a, a and the central fastening plate f, the plates a, a for the purposes set forth. 2nd. The combination, with the curved plates a, a of the staple plate f, held between the adjacent ends of the said plates by the clamping-screws d, d, and provided with the arms e, e, substantially as shown and described and for the purpose and the projections g, in combination with the books b, the lugs c and the plate f, substantially as shown and described.

No. 18,233. Dress Chart.

(Mesure de Vêtements.)

Lbbie A. Call, Oskosh, Wis., U. S., 4th December, 1883; 5 years.

Claim.—The described pattern chart having a square end and a rounded end, a graduated straight edge and the curved edge a¹, substantially as set forth. 2nd. The described pattern chart, or form, having a square end B¹ and a rounded end B², joined by the edge a¹, gradually curving from the rounded end to the other end, and a graduated straight edge, or rule, all formed in one piece, substantially as set forth. 3rd. The described pattern chart, or form, having a square end B¹, with the following words described thereon: "Top round end B², having marked thereon the following: "Neck point," a "Back arm-size," "Dart form," "Hip point," "Side body form," a "Back arm-size point," "Front arm-size turn-over" and edge a¹, gradually curving from the rounded end and joining with the square end, and a graduated straight edge, or rule, all substantially as set forth. 4th. In dress charts, the combination of the form, or pattern, A, having the ends B B¹, curved edge a¹ and straight edge a, with the scale comprising a series of gradually increasing scales connected together, as set forth. 5th. In dress charts, the combination of the form, or pattern, A, having the ends B B¹, curved edge a¹ and straight edge a, with the scale comprising a series of scales connected together, each of the scales gradually increasing in length and divided into spaces that increase in size proportionately with the increasing length, as set forth. 6th. A pattern chart, or form, having a square end, a rounded end and a curved edge, the curve of said edge gradually decreasing from the rounded end to the square end, as set forth. 7th. In a dress chart, the scale comprising a series of scales connected together, each of said scales gradually increasing in length, and divided into spaces that increase in size proportionately with the increasing length, as set forth.

No. 18,234. Self-Acting Elevator Gate.

(Châssis d'ascenseur au/omatiqe.)

Samuel J. Laughlin, Guelph, Ont., 4th December, 1883; 5 years.

Claim.—The combination of the arms B B¹ and the catches C C¹, operating on the gate E and slide D, in their double ascending and descending motion, by means of said arms and the slide piece D and grooved piece K, substantially as and for the purposes set forth.

No. 18,235. Scales.

(Balance.)

Moses G. Cook, Ashfield, Mass., U. S., 4th December, 1883; 5 years.

Claim.—1st. In a scale, or weighing apparatus, the combination, with the scale beam provided with notched weight-lifting bars, of corresponding notched weight-supporting plates, and series of flat weights provided with projections adapted to be received in the

notches of the said bars and plates, and to be transferred from one to another, in the movement of the scale beam, substantially as described. 2nd. The series of flat weights provided with guiding notches, combined with the weight-lifting bars and weight-supporting plates, and the guide co-operating with the said notches, whereby the said weights are properly transferred from the former to the latter, substantially as described. 3rd. The dial having figures to indicate the amount in half ounces, and the number of postage stamps required to take that number of half ounces of mail matter through the mails, a pointer co-operating with the said dial, and a shaft to carry the said pointer combined with a scale beam having connected lifting bars, a series of weights, weight supporting plates from which the said weights are taken and upon which they are placed in succession, as described, and with means between the said scale beam and the pointer carrying shaft to rotate the said pointer, substantially as and for the purpose described.

No. 18,236. Spark-Arrester and Conductor.

(Arrête-flamme et Conducteur.)

John A. Cotter, Saginaw, Mich., U. S., 4th December, 1883; 5 years.

Claim.—In a spark-arrester and conductor, the combination, with the smoke-stack having an elbow, a damper, and means for operating the latter, of the pipe B and the support F having swivelled adjustable hanger O N, as set forth.

No. 18,237. Car Brake.

(Frein de Wagon.)

James M. DeWitt, Greeley, Col., U. S., 4th December, 1883; 5 years.

Claim.—1st. The combination, with the shaft B, ratchet wheel C and pawl D, of the lever F and a suitable spring, the lever being adapted to be shifted for controlling the pawl, as and for the purposes set forth. 2nd. The pivoted lever F, adapted to be held in different positions by the plate H, in combination with the semi-elliptical spring G and the pawl D, the spring being adapted to impinge upon opposite ends of the pawl as the lever is shifted, as and for the purposes set forth.

No. 18,238. Improvement in Electric Cables.

(Perfectionnement des Câbles électriques.)

Richard S. Waring, Pittsburgh, Pa., U. S., 4th December, 1883; 15 years.

Claim.—1st. The method of forming hoops or branches in lead covered cables, at any point thereof, which consists in removing the lead armor from around one of the conductors of said cable, severing the said conductor, bending each of the several ends outward, removing the insulation from the severed ends and electrically uniting them with the ends of the loop or branch, substantially as set forth. 2nd. The method of forming hoops or branches in lead covered cables, at any point thereof, which consists in removing the lead armor from around one of the conductors of said cable, severing the conductor, bending each of the severed ends outward, removing the insulation from the severed ends, electrically uniting them to the ends of the loop or branch, covering the union with insulating material and then covering the union with lead, substantially as set forth.

No. 18,239. Improvement in Electric Cables.

(Perfectionnement des Câbles électriques.)

Richard S. Waring, Pittsburgh, Pa., U. S., 4th December, 1883; 15 years.

Claim.—An electric cable composed of a tubular body of lead, or other ductile material, having external longitudinal ribs, and two, or more series of concentrically-grouped insulated wires extending through said body, each wire of the outer series extending through one of the ribs of the cable, substantially as specified.

No. 18,240. Improvement in Electric Cables.

(Perfectionnement des Câbles électriques.)

Richard S. Waring, Pittsburgh, Pa., U. S., 4th December, 1883; 15 years.

Claim.—1st. A flexible electric cable having a lead body, or center of circular form, in cross section, with a series of separate ribs, or flutes, extending longitudinally on its surface, and having insulated conducting-wires inclosed within and covered by the ribs, substantially as and for the purposes set forth. 2nd. A flexible electric cable, having a central body of soft ductile metal, with a series of separate longitudinal flutes E, divided from each other by grooves e, and connected to the central body along one side as at e¹, and having insulated conducting-wires inclosed within such flutes, substantially as and for the purposes set forth. 3rd. A cable containing a group of insulated electric circuit-wires, arranged around a naked central conducting-wire, such central and surrounding wires being imbedded in, and covered by a body of flexible metal, substantially as and for the purposes set forth. 4th. An electric cable containing a group of insulated circuit wires, arranged around a naked central wire, such wires being imbedded in and covered by a body of flexible metal as described, in combination with electric conductors leading from such naked central wire to ground, substantially as set forth.

No. 18,241. Improvement in Electric Cables.

(Perfectionnement des Câbles électriques.)

Richard S. Waring, Pittsburgh, Pa., U. S., 4th December, 1883; 15 years.

Claim.—1st. The method, herein described, of uniting two or more sections of lead-covered cable which consists in removing the lead covering and insulating material for a suitable distance, thereby ex-

posing the ends of the conductors of the cables, electrically uniting such exposed ends, covering the union and exposed conductors with insulating material, wrapping the insulated union and conductors with fibrous material, and lead-covering the unions and conductors with a sleeve, uniting the sleeve to the cable sections and then filling said sleeve with insulating material, substantially as set forth. 2nd. The method, herein described, of uniting two or more sections of lead-covered cable which consists in electrically uniting the ends of the conductors of said cables, covering the union with insulating material and surrounding said union with a protecting sleeve, substantially as set forth.

No. 18,242. Soldering Iron. (*Fer à souder.*)

James C. Covert, West Troy, N.Y., U.S., 4th December, 1883; 15 years.

Claim.—1st. The forks C, C₁, recessed to form a circular rim I and provided with a suitable handle, in combination with threaded pivot D and nut E, or its equivalent, and the copper-point A, provided with tongue H, substantially as and for the purposes set forth. 2nd. A jointed soldering-iron, having the contact surfaces between the ears, or forks which form the joint, limited to a circular rim I of the said tongue and forks, substantially as described and for the purposes set forth.

No. 18,243. Oven Grate. (*Grille de fourneau.*)

William H. Keating, Boston, Mass., U.S., 4th December, 1883; 5 years.

Claim.—As an improved article of manufacture, the oven grate described, the same consisting of the base A and table B, constructed, combined and arranged to operate substantially as set forth.

No. 18,244. Hay Elevator. (*Monte-foin.*)

Charles A. Graham, Ernestown, Ont. 4th December 1883; 5 years.

Claim.—1st. In a hay lifting and carrying implement, the car body B, having splayed chamber a, and the sliding latch lock C, trip latch D and pulley b working in slots formed for their reception in said car body, substantially as set forth. 2nd. The combination of the car body B, having the splayed chamber a, latch block C, trip latch D and pulley b, with the tilting pulley block E, having the shank e, and knob f, substantially as set forth. 3rd. In a hay lifting and carrying implement, the combination of the car body B, having the splayed chamber a, latch block C, trip latch D and pulley b, arms c, and wheels d, with the pulley block E, having the shank e and knob f, and the rail A, substantially as shown and described.

No. 18,245. Hasp Lock. (*Serrure à moraillon.*)

Edgar Knight, Bridgewater, Ct. U.S., 4th December 1883; 15 years.

Claim.—1st. In a hasp-lock, the combination, with the shank or stem A, carrying the lock-case B, of the recess C and the plate E, with its opening e, adapted to receive and retain the head of the fastening screw, or bolt D, as described and for the purpose specified. 2nd. In a hasp-lock, the combination of the shank or stem A, the lock-case B, the recess C, the plate E, the screw or bolt D, together with the recess F, adapted to receive and enclose the staple G, as and for the purpose described. 3rd. In a hasp-lock, the combination, with the shank, or stem A, of the rearwardly opening recess B, constituting the lock case, the rearwardly opening recess C and its plate E, and the rearwardly opening recess F, together with the fastening bolt or screw D, and the staple G, substantially as and for the purpose specified. 4th. In a hasp-lock, the combination, with the shank A, carrying the lock-case B, of the recess C with its slot e, the plate E with its opening e, and the screw D, as and for the purpose set forth. 5th. The described hasp-lock frame, or bar, having the rearwardly opening recesses B, B₁ and C, the recess B being adapted to receive a lock, and the recesses B₁ and C adapted for the insertion therein, of the head of the screw D, as and for the purposes described.

No. 18,246. Egg Preserver. (*Boîte à œufs.*)

George Conant, Marshfield, Mass., U.S., 4th December 1883; 5 years.

Claim.—1st. In an egg preserver, substantially such as described, the rack E, provided with the rails J, for receiving and holding the eggs, said rack being centrally pivoted and adapted to be tilted to turn the eggs, substantially as set forth. 2nd. In an egg preserver, substantially such as described, the racks E, F, centrally pivoted in a framework, or support, and coupled, or connected by the wire K, whereby they may be tilted conjointly, or in unison, substantially as specified. 3rd. In an egg preserver, substantially such as described, the rack G, having the elevated end pieces H and rails J, and provided with the pins X, substantially as set forth. 4th. In an egg preserver, substantially such as described, the grooved standards B, B, provided with the pins d, in combination with the rack G, provided with the pins X, constructed, combined and arranged to operate substantially as specified. 5th. The improved egg preserver described, the same consisting of the base A, bar D, standards B, provided with the pins X, and pins d, rack E, provided with the pins V, racks F G, provided with the pins x, and wire K, constructed, combined and arranged to operate, substantially as set forth. 6th. In an egg preserver, substantially such as described, the standards L, substantially as and for the purpose set forth.

No. 18,247. Machine for the manufacture of Mineral Waters. (*Machine pour la fabrication des eaux minérales.*)

James S. Pearson, Hamilton, Ont., 4th December 1883; 5 years.

Claim.—1st. The combination or one or more double pumps with the mineral water machine, as and for the purpose hereinbefore set forth. 2nd. The partition E with hole F in the condenser A, as set forth. 3rd. The combination of equilibrium valve and condenser, substantially as and for the purpose herein set forth. 4th. The com-

bination of pressure piston regulator B, with condenser A, for engine, substantially as and for the purpose hereinbefore set forth. 5th. The combination of steam engine and mineral water machine, in the manner herein described and for the purpose specified and substantially set forth.

No. 18,248. Improvement in Electric Cables. (*Perfectionnement des câbles électriques.*)

Richard S. Waring, Pittsburg, Pa., U.S., 4th December 1883; 15 years.

Claim.—The method of forming branches in a cable having a series of insulated conductors inclosed in an armor of ductile material, the same consisting in cutting the ductile material longitudinally between the conductors and bending the separated parts laterally, forming a series of independent metal-armed and insulated conductors, substantially as specified.

No. 18,249. Electric Lamp. (*Lampe électrique.*)

Franz Krizik and Ludwig Piette, Pilsen, Austria, 5th December 1883; 15 years.

Claim.—1st. The herein described method of regulating the arc of an electric lamp by the attractive influence of a solenoid coil, on a tapering iron core attached at its large end to the holder of one of the carbons of the lamp, and partly balanced by the other carbon and its holder. 2nd. The construction of electric arc lamp with regulating solenoid and tapering iron core, substantially as herein described.

No. 18,250. Improvements in Boots and Shoes. (*Perfectionnements dans les chaussures.*)

Simon B. Keffer and Fred L. Brown, Des Moines, Iowa, 5th December 1883; 5 years.

Claim.—An improved metallic counter support, for boots and shoes, consisting of a metal plate, of the form shown* and described, and provided with perforations at one end, and with a longitudinal slot or slots in its central bent portion, substantially as and for the purposes set forth.

No. 18,251. Heating apparatus for Railway Cars. (*Calorifère des voitures de rail.*)

Mann's Boudoir Car Company, (assignee of William D. Mann,) New-York, N.Y., U.S., 5th December 1883; 5 years.

Claim.—1st. The combination, with a car heater, stove or fire box, of a water chamber or jacket wholly or partially surrounding the fire or heating chamber, and having one or more outlets or distributing pipes, and a supply tank connected with said water chamber or jacket, substantially as and for the purpose specified. 2nd. In a car heater, the combination, with the base B, grate C and fire-pot C₁, of the double casing E, outlet pipe L, connecting pipe H, supply pipe J and supply tank K, having over-flow pipe I, substantially as and for the purpose specified. 3rd. In a car heater, the combination, with the base B, grate C, fire-pot C₁ and steam coil D, of double casing E, outlet pipe L, connecting pipe H, supply pipe J and supply tank K, having over-flow pipe I, substantially as and for the purpose specified.

No. 18,252. Train Signal. (*Signal de convoi.*)

Marcus F. Parrish, Schuyler J. Munn and Lewis Beeson, Niles, Mich., U.S., 5th December 1883; 5 years.

Claim.—1st. The combination of a rail of the track, and a line of wire along said track, with two or more engines or vehicles provided with alarms, generators, connecting electrodes and conducting arms, all substantially as set forth. 2nd. The combination, with a vehicle located on a metal track and having a conducting arm, of a line of wire located along the line of said track, substantially as described and shown. 3rd. In a method of train signalling, substantially as described, a reversible conducting arm adapted to be thrown from one side of the vehicle to the other, substantially as set forth. 4th. The combination, with an engine cab or other vehicle, provided with means for receiving and communicating signals or messages, of a line of wire along the vehicle track, and a conducting arm pivotally connected to a support, and means for causing a yielding engagement of said arm and wire, substantially as described and shown. 5th. The cab provided with a tube-support and a rotative-shaft in said support, in combination with a conducting-arm connected with said shaft, and means for rotating said shaft in throwing the conducting arm from one position to another, substantially as set forth. 6th. The combination, with a tube-support, a rotative thimble at the top of said support, a rotative shaft in said tube-support, a pivoted conducting-arm and spring-braces connecting said thimble and arm, substantially as shown. 7th. An engine provided with an electrical generator, an alarm and telephone, in combination with a line of wire along the track of said engine, a conducting-arm, and electrode-wire connecting the conducting-arm generator and alarm with the metal parts of the engine, substantially as described. 8th. The combination, with the insulated tube-support, the rotative-shaft and a pivot conducting-arm, of a generator and an alarm or telephone, or equivalent device, substantially as set forth. 9th. The method of transmitting signals or messages between two approaching trains by means of a wire along the line of the track, a device for supplying the electrical current, an instrument for receiving and transmitting signals or messages, and conducting-arms adapted to engage the line of wire, and electrodes connecting the conducting-arms with a rail of the track, all substantially as set forth. 10th. The combination, with the short lines of wire along the lines of two roads which cross each other, said wires connecting with each other where they cross, of the conducting arms of the engines or trains, said arms adapted to engage said wires, for the purpose set forth, substantially as specified. 11th. The combination, with two or more engines or vehicles provided with generators, alarms or telephones and conducting-arms, of a line of wire along the line of two crossing-roads, said wires crossing and

connecting with each other at a point where the roads cross, all substantially as described and shown. 12th. In a train signalling apparatus, a rotative shaft having a lever connecting with the lower end, in combination with a conducting-arm pivotally connected with the upper end of said shaft, and electrodes, alarms and generators, all substantially as set forth. 13th. The combination, with the pivoted conducting-arm, of a double incline rest, all adapted substantially as described. 14th. The combination, with a line of wire, of the supporting-posts having the extended arms, and the wire-supports terminating at the upper end in grippers adapted to hold the wire and allow the conducting-arm to pass over, substantially as set forth. 15th. The combination, with the conducting-arm and its supporting shaft, of a rest beneath said arm adapted to cause an upward movement thereof, should the arm be thrown laterally, substantially as described.

No. 18,253. Stove Pipe. (*Tuyau de poêle*)

George B. Barclay, Petrolia, Ont., 5th December 1883; 5 years.

Claim.—The seam with double fold E and clear edge F, and also the draw screw C, substantially as and for the purposes hereinbefore set forth.

No. 18,254. Improvement in the Manufacture of Compressed Blocks of Gas-producing Materials. (*Perfectionnement dans la fabrication des blocs de matières agglomérées produisant le gaz.*)

George Walker and Edward W. Rathbun, Deseronto, Ont., 5th December, 1883; 5 years.

Claim.—The manufacture of blocks from the admixture of sawdust, charcoal and a hot tarry distillate by compounding, moulding and compressing the matter while the tar is hot.

No. 18,255. Car-Coupling.

(*Accouplage de wagons.*)

Andrew McWilliams and William Wallace, Galt, Ont., 5th December, 1883; 5 years.

Claim.—1st. The combination, with an ordinary pin and link draw-head, a detachable strap fastened to the draw-head and having pivoted to it, below the draw-head, a peculiarly-shaped bar or plate, one end of which extends beyond the mouth of the draw-head and forms an oblique link-guide, while the other end behind the pivot-point is weighted so as to balance the weight of the link, substantially as and for the purpose specified. 2nd. In combination with an ordinary pin and link draw-head, a detachable strap fastened to the draw-head and having pivoted on one of its sides a bar or plate, the upper end of which is bent so as to extend beyond the pin while, its end below the pivot point is weighted so as to keep the bent end against the pin, when the latter is raised, substantially as and for the purpose specified. 3rd. A bar or plate pivoted on the lower side of a strap fastened to the draw-head, the said plate having an end extending beyond the mouth of the draw-head, and slanting downwardly so as to form a guide for the link as it approaches the draw-head, in combination with a bar or plate pivoted on one side of the strap, and having its upper end bent so as to extend beyond the pin, while its lower end is weighted, substantially as and for the purpose specified. 4th. In a draw-head provided with an ordinary coupling-pin and link, and in which the pin when lifted is supported by a pivoted bar, as described, a rod connected at its upper end to a crank-rod journal ed o. the end of the car, and at its lower end to the front side of the coupling-pin so that the pin may be raised and the pivoted bar for supporting it kept from extending over the top of the pin when the latter is down, substantially as and for the purpose specified.

No. 18,256. Secondary Battery or Accumulator. (*Pile secondaire ou accumulateur.*)

Desmond G. Fitzgerald, Brixton, Eng., 5th December, 1883; 5 years.

Claim.—In secondary batteries or accumulators, the employment, in combination with the electrodes and more particularly the anode, of a partial covering of impervious and insulating material, applied in such a form and way as to protect portions of the electrolyte and leave a continuous network or framework of unaltered metal, substantially as specified.

No. 18,257. Improvement in Making Gas from Compositions of Matter. (*Perfectionnement dans la fabrication du gaz avec des compositions de matières.*)

George Walker and Edward W. Rathbun, Deseronto, O.t., 5th December, 1883; 5 years.

Claim.—The manufacture of illuminating gas by charging a retort with promiscuously-inserted compressed blocks of compounded gas-producing materials, and subjecting the charge to destruction by distillation by heating the retort.

No. 18,258. Automatic Railroad Signal.

(*Signal automatique de chemin de fer.*)

Stephen J. Swayze and John C. Lane, Sag Harbour, N. Y., U.S., 8th December, 1883; 5 years.

Claim.—1st. The combination, in automatic signals, of the signal board having the shield adapted to rise and descend simultaneously therewith, the clock, or retarding mechanism, the rack connected to the signal board and engaging with the retarding mechanism, the interchangeable fan and the bent lever connected by a rod to the said rack, substantially as and for the purpose set forth. 2nd. In a signal, the clock mechanism D having the interchangeable fan m, in combination with the signal board B having rack d, connecting-rod g and

the bent operating lever E, substantially as and for the purposes set forth. 3rd. The combination, with signal board B and lever E, bent to form arm h and crank h, of the arms b b, attached to plates q q and pivoted to crank h, substantially as and for the purpose set forth.

No. 18,259. Grain-Binding Harvester

(*Moissonneuse-lieuse.*)

John F. Seiberling, Akron, Ohio, U. S., 8th December, 1883; 5 years.

Claim.—1st. The combination of the spur-pinion C₂, the ratchet-wheel I, the pawl i, the spur-wheel Cr provided with the cam-projection C₅, the sliding hinged piece I₂, adapted to be interposed between the pawl and cam-projection, and the compressor-shaft h connected with piece I₂, for automatically stopping and starting the binder, substantially as described. 2nd. The compressor-arm h₁ and the cut-off h₂, both rigidly connected with a common shaft h, in combination with the cam C₄, and intermediate connecting devices for actuating said shaft, substantially as described. 3rd. The combination, with the adjustable binder-frame, of the slotted binder-table and packer-shield, the compressor-arm, the cut-off, the elevating packer-teeth working up through said table and shield, and the overhanging binder-arm shaft with its binder-arm arranged and operating, substantially as described. 4th. The binder-arm shaft provided with holes or grooves in its journal portions only, for adapting the cord to be passed to the needle on the outside of the shaft. 5th. The combination, with adjustable binder-frame, of the binder-arm shaft having grooved or perforated journal, for the passage of the band to the binder-arm, a binder-arm upon one end, and a driving-wheel on the opposite end of said shaft, and a band-carrier and guide, all secured to and adjustable with said binder-frame. 6th. The binder-arm curved at its outer swinging end, in combination with the needle secured to, said curved end, whereby the said arm is adapted to pass by the knotter hook or head, and at the same time to carry the needle under said head, substantially as described. 7th. The combination of the knot-stripper N₁, and the inoline or wedge on one side of the point of the needle, for moving said stripper, subsequently as described. 8th. The hollow knotter-shaft provided with the fixed jaw, in combination with the slotted sliding-rod passing through said shaft, a movable jaw pivoted to said fixed jaw and passing through the slot in and, operated by said rod, and mechanism for actuating the latter, substantially as described. 9th. The combination of the knotter-hook, the hollow shaft, the sliding rod passing through said shaft, the movable knotter jaw passing through a slot in said sliding rod, the spring for closing said jaw, and the cam and roller for depressing the jaw, all arranged and operating substantially as described. 10th. The combination, in a grain-binding harvester, of the grain-table, or receptacle, located between the platform-carrier and the driving wheel, the rotating packer located underneath said receptacle, and operating to lift the grain from the platform-carrier and into said receptacle, the overhanging binder-arm shaft and the grain-guard U, provided with the lower yielding compressor arm U₂ located over the packer-teeth, substantially as described. 11th. The packer shafts provided with crank arms, in combination with the fixed cam F₆, and the pivoted extension F₇ of the latter, for holding the packer teeth up to their work in forming the bundle, and allowing them to drop back without packing the grain, while the bundle is being bound, substantially as described. 12th. The rocking packer shafts provided with the inwardly-bent crank portions, allowing the point of the needle-arm to pass within the circle in which said shafts move, substantially as described. 13th. The hinged cam piece F₇, in combination with the rod p₅, the slotted standard F₅, the rod G₁ and the crank-shaft p₃, for operating the same, substantially as described. 14th. The crank-shaft p₃, provided with the crank-arms p₂, in combination with lever G₁, connecting it with the cam groove C₄, the cam extension F₇ and intermediate connecting devices for operating said extension, substantially as described. 15th. In combination with a carrying platform and packers, for moving the grain therefrom to the binder-table a cut-off independent of said packers, arranged to hold the grain on said platform and prevent its reaching the packer-teeth, while the binding mechanism is in operation, substantially as described. 16th. The combination of the packer, the carrying-platform, the cut-off between the packers and platform arranged to work automatically, simultaneously with the stopping of the platform, substantially as described. 17th. The combination of the cut-off shaft, the arm X₂ on the end thereof, the pawl V and the ratchet-wheel W for automatically stopping and starting the platform-rake, when the cut-off is operated, substantially as described. 18th. The combination, with the platform-apron or carrier and a packing mechanism located at the inner end thereof, for taking the grain from said carrier and delivering it to the binding mechanism, of a cut-off interposed between said carrier and packing mechanism connected with the binding mechanism, substantially as described, whereby its movements are timed to those of the binding mechanism for preventing the grain from reaching and being acted upon, by the packers, when the binding mechanism is operated to bind a bundle. 19th. The combination of the cut-off shaft, the crank X on the end thereof, the connecting-rod X₁ and the cam C₄ with connecting devices, substantially as described, for automatically rocking said cut-off shaft at proper intervals.

No. 18,260. Harvesting Machine. (*Moissonneuse.*)

John F. Seiberling, Akron, Ohio, U. S., 8th December, 1883; 5 years.

Claim.—1st. The combination of the frame provided with toothed brackets, the drive-wheel axle provided with gear-wheels and a chain pulley, the chain connecting said pulley with the grain end of the frame, and the grain-wheel secured to a bracket hinged to the frame over which said chain passes, substantially as and for the purpose described. 2nd. The combination of the frame of the machine, the grain-wheel bracket pivoted thereto, a stud-axe secured to the bracket in rear of its pivot, a chain-sheat secured to the bracket above the axe, and a chain secured to the grain-end of the frame, that passes over the sheaf of the bracket, to a driving or adjusting mechanism upon the stubble side of the machine, substantially as described. The combination of the frame, the grain-wheel, the stud-axe bracket, the sheaf on the bracket, the sheaf upon both the grain and stubble sides of the rear end of the platform and rear of the

wheels, and the drive-wheel axle adjustable upon the frame and provided with a pulley upon the end of the axle, and the chain passing over said sheaf and connecting the pulley of the drive-wheel axle with the grain side of the frame, substantially as described. 4th. The combination of the frame, the bracket secured thereto and formed with toothed segment racks, the drive-wheel axle and gear-pinnions supported and adjusted upon said brackets, the ratchet-wheel secured to the axle, the pawl for holding the ratchet-wheel in its adjusted position, and means for revolving the axle to adjust it, substantially as described. 5th. The combination of the frame, the adjustable drive-wheel axle, the ratchet-wheel secured thereto, the retaining pawl, the bearing-plate pivoted to the pawl and provided with an arm for operating the same, and the lever for operating the ratchet-wheel, substantially as and for the purpose set forth. 6th. The lifting, or ratchet-wheel lever, crooked at its end to embrace the shaft or hub of the ratchet-wheel, provided with spur upon said lever, to engage with the teeth of the ratchet, substantially as and for the purpose described. 7th. The combination of the frame of the drive-wheel, the axle upon which the drive-wheel revolves, the cogged gears secured to the axle, the toothed segment brackets secured to the frame upon which the axle and its gears are adjusted, the ratchet-wheel pawl and hand lever for adjusting said axle, and a pulley on the axle connected by a chain with the grain-wheel and grain end of the frame, substantially as and for the purpose described.

No. 18,261. Grain-Binding Harvester.

(Moissonneuse-lieuse.)

John Seiberling, Akron, Ohio, U. S., 8th December, 1883; 5 years.

Claim.—1st. In a grain-binding harvester, in which revolving packers are located below a table rising from the inner end of the travelling platform apron or carriers, to the grain receptacle where the sheaf is bound, the points of the said packers extending through the table for the purpose of carrying the grain from the inner end of the travelling platform apron to the grain receptacle, the combination of a cut-off located at the inner end of the travelling platform apron or carriers, and operated by mechanism timed to move simultaneously with the binding mechanism, so that the supply of grain shall be cut off from the grain receptacle during the period in which the sheaf is being bound. 2nd. In a grain-binding harvester, in which revolving packers are located at the inner end of the travelling platform apron and below the grain receptacle when the sheaf is bound, the combination of a cut-off located at the inner end of the travelling platform apron and provided with mechanism by which it is caused, at certain periods, to hold the grain clear of the revolving packers. 3rd. The cut-off shaft F located at the inner end of the apron A, and provided with fingers E and crank G, in combination with the pivoted lever I, one end of which is connected to the crank G and its other end to the cam-shaft K, made in the disc E, which is fastened to, and works with the needle-shaft M.

No. 18,262. Improvements in Circuits and Apparatus for Electric Temperature and Pressure Indicators.

(Perfectionnements aux circuits et appareils des indicateurs électriques de la température et de la pression.)

Robert Hewett, Jr., and Charles L. Clarke, New York, N. Y., 8th December, 1882; 5 years.

Claim.—1st. The combination, substantially as hereinbefore set forth, of a thermometer, an electric generator, a contact-arm movable to and fro by the expansion and contraction of said thermometer, a series of contacts corresponding in number to the arbitrary divisions of the thermometric scale, a common conductor to which all the said contacts are united, two movable contact-stops, upon one or the other of which the said contact-arm impinges according to the direction of its movement, two main conductors respectively extending from said movable stops to an observing station, an electro-magnet in each of said main conductors at said observing station, and an index, the movements of which, in one direction or the other, are controlled by the respective electro-magnets. 2nd. The combination, substantially as hereinbefore set forth, of a normally open main circuit, an automatically operated circuit-closing arm, a local circuit closed by the operation of said arm, an electro-magnet included in said local circuit, acting, while vitalized, to close said normally open main circuit, and a second electro-magnet acting to temporarily interrupt said local circuit, when said main circuit is closed. 3rd. The combination, substantially as hereinbefore set forth, of a normally open main electric circuit, an automatically operated circuit-closing arm, a local circuit closed by the operation of said arm, an electro-magnet included in said local circuit, acting, while vitalized, to close said main circuit, an electro-magnet included in the main circuit, an armature and armature-lever actuated by the last-named electro-magnet, and a pendent arm actuated through the movement of said armature-lever to temporarily interrupt said local circuit. 4th. The combination, substantially as hereinbefore set forth, of an automatically operated circuit-closing arm, a contact-arm extending in proximity to said circuit-closing arm, an electro-magnet, its armature and armature-lever, means, substantially such as described, for successively closing and interrupting an electric circuit through the coils of said electro-magnet, through the instrumentality of said circuit-closing and contact-arms, a pawl carried upon said armature-lever, a ratchet-wheel engaged by said pawl for moving said contact-arm out of contact with said circuit-closing arm, when the circuit through said electro-magnet is interrupted. 5th. The combination, substantially as hereinbefore set forth, of a circuit-closing arm automatically revolved in either direction, two contact-arms, one adjacent to each side of said circuit-closing arm, means, substantially such as described, for transmitting electric impulses to a distant station co-relatively with the movements of said circuit-closing arm, and means substantially such as described, for revolving both of said contact-arms in the direction of the motion of said circuit-closing arm, when said impulse has been transmitted. 6th. The combination, substantially as hereinbefore set forth, of a shaft or arbor capable of rotation in either direction, two pawls or pallets, one for imparting a

direct and the other a retrograde movement to said shaft or arbor two electro-magnets included in separate circuits for actuating said pawls or pallets respectively, and a device actuated by said shaft or arbor, whereby, when the same is moved in either direction by the action of one or the other of said electro-magnets, the electric circuit of the actuating electro-magnet will be immediately broken. 7th. The combination, substantially as hereinbefore set forth, of a shaft or arbor capable of rotation in either direction, two pawls or pallets, one for imparting a direct and the other a retrograde movement to said shaft or arbor, two electro-magnets in separate circuits for actuating said pawls or pallets respectively, a device actuated by said shaft or arbor, whereby, when the same is moved in either direction by the action of one or the other of said electro-magnets, the electric circuit of said actuated electro-magnet will be immediately broken, and a circuit-closing arm normally held in equilibrium between two forces, one or both of which may be variable, whereby said circuit is completed or restored through one or the other of said electro-magnets, according to the direction of the resultant force acting upon said circuit-closing arm. 8th. The combination, substantially as hereinbefore set forth, of an automatically actuated circuit-closing arm, two contact-arms, one upon each side of the same, a battery having one pole connected with said circuit-closing arm, and its remaining pole connected through independent conductors with said contact-arms respectively, an electro-magnet included in each of said conductors, acting when vitalized to complete the circuit of said battery independently of said circuit-closing arm, two additional electro-magnets likewise respectively included in said conductors, and acting, when successively magnetized and demagnetized, to effect the movement of said contact-arms in the direction of the movement of said circuit-closing arm. 9th. The combination, substantially as hereinbefore set forth, with one or more indicating arms or fingers, of an automatically actuated circuit-closing arm, a contact-arm extending in proximity thereto, a battery having its opposite poles respectively connected with said circuit-closing and contact-arms, three or more electro-magnets included in series in the circuit of said battery, one of said electro-magnets acting to complete the circuit of the same, when it is vitalized independently of said circuit-closing and said contact-arms, a second of which electro-magnets acts to effect the movement of said contact-arm away from said circuit-closing arm, while the remaining one or more electro-magnets effect the movement of said indicating arms or fingers co-relatively with the movement of said contact-arm. 10th. The combination, substantially as hereinbefore set forth, of a battery, an automatically actuated circuit-closing arm electrically connected with one pole of said battery, two contact-arms near said circuit-closing arm, which contact-arms are electrically connected with branch-conductors leading to the remaining pole of said battery, two electro-magnets respectively included in said branch-conductors, an armature and armature-lever applied to each of said electro-magnets, each acting to move both of said contact-arms in the direction of motion of said circuit-closing arm, whenever the movement of the latter has completed the circuit of said battery through the corresponding electro-magnet, two additional electro-magnets respectively included in said branch-conductors, an armature and armature-lever applied to each of the last named electro-magnets, an index arm or finger actuated by the movements of the last named levers co-relatively with the movements of said contact-arms, and two circuit-interrupters applied to one pair or the other of said electro-magnets and respectively included in said branch-circuits, each of which circuit-interrupter is caused by the movements of the corresponding armature-lever, to momentarily interrupt the connections of the branch-circuits in which it is included. 11th. The combination, substantially as hereinbefore set forth, of a revolving circuit-closing arm, one or more revolving contact-arms near said circuit-closing arm, a battery having one of its poles connected with said circuit-closing arm, and its other pole connected with the said contact-arm or arms, and an electro-magnet, acting, when vitalized, to complete a shunt-circuit around said circuit-closing and contact-arms, and to interrupt said shunt-circuit when demagnetized. 12th. The combination, substantially as hereinbefore set forth, of a battery, an automatically actuated circuit-closer, a series of electro-magnets included in the circuit of said battery, one of which electro-magnets is so constructed that its armature and armature-lever respond last in said series, and a circuit-interrupter included in said circuit, which is caused by the movements of said last actuated armature-lever to interrupt the circuit of said battery, after it has been completed by the action of said circuit-closer. 13th. The combination, substantially as hereinbefore set forth, of a toothed wheel, a battery, an electro-magnet, its armature and armature-lever, a resilient arm carried upon said lever, a pin projecting laterally from said arm, a stationary arm normally projecting above said pin, and a lateral opening formed in said stationary arm, whereby, at each vibration of said armature, said resilient arm is first caused to engage and advance said wheel and to be subsequently released therefrom.

No. 18,263. Lifting Jack. (Cric.)

Frank A. Lewis, Minneapolis, Minn., U. S., 8th December, 1883; 5 years.

Claim.—1st. The herein described lifting-jack consisting of the curved lever B, provided with the curved tooth face E, in combination with the wheel A and the bearings or side pieces C, all constructed to operate, substantially as and for the purpose described. 2nd. The lifting-jack herein described consisting of the curved tooth rack E on the curved lever B, in combination with the wheel A, bearings or side pieces C and foot D, constructed as herein described, for the purpose specified.

No. 18,264. Skate. (Patin.)

Robert C. Hindley, Racine, Wis., U. S., 8th December, 1883; 5 years.

Claim.—1st. The herein described blank for the manufacture of skates consisting of sole part a, runner part b, ears c, e and d and connecting-strips e, substantially as shown. 2nd. The herein described skate consisting of two-sheet metal blanks, each constituting one-half of the sole plate and one side of the runner, and a spacing strip of softer material interposed between the side plates of the runner, and the whole united substantially as explained. 3rd. In a skate, a

runner consisting of two thin steel side plates and an intermediate filling of softer material, adapted to wear away more rapidly than the steel, and thereby to render the skate self-sharpening. 4th. In combination with the skate-body, a clamping or fastening mechanism consisting of slide C, levers D, E and sliding clamps F, all constructed and arranged to operate, substantially as set forth. 5th. In combination with the skate having ears d, the clamping mechanism consisting of slide C, levers D, E and sliding clamps F, arranged and operating as explained. 6th. In combination with the skate having a metal sole-plate and with a clamping mechanism, such as described, a slide C, provided with a clamping-face j and depending lips l, to pass beneath the sole-plate. 7th. In combination with a skate, a clamping mechanism consisting of slide C, levers D, E and sliding clamps F, the pivot joining said levers being thrown out of line with those connecting the levers with the slide, and one of the levers being adjustably connected to its slide or slides, substantially as shown and described. 8th. In a skate, a runner consisting of thin steel side plates b, intermediate wooden strip B and rivets or fasteners i, passing through said parts and binding them together, as set forth. 9th. A skate blank, substantially such as described and shown, provided with a series of lips projecting from the runner portion, substantially as shown and described. 10th. A skate blank, substantially such as shown and described, having the runner portion provided with a series of conical or tapering holes, for the purpose explained. 11th. In a skate, a runner or blade consisting of two-sheet metal facing plates provided with inwardly-projecting ears, and a filling and binding material filling the space between the plates and enveloping the lips, substantially as shown and described. 12th. In a skate, a runner blade composed of sheet metal facing plates provided with conical perforations and a soft metal filling occupying the space between the facing plates and passing through the perforations therein. 13th. The herein described method of forming a runner or blade for skates consisting in placing, at suitable distances apart, two sheet-metal blanks provided with perforations a d projecting lips, or either, and pouring into the space between them molten soft metal or like substance, whereby the said substance is caused to unite the parts, as explained. 14th. The process herein described of forming a skate runner, which consists in first tinning two sheet-metal blanks of the desired form of the runner separating said blanks, to give the required thickness to the runner, and pouring molten white metal into the space between the blanks and permitting it to cool therein. 15th. In a skate, a sheet-metal sole plate provided with lips d, figure q, corrugated substantially as shown and described, for the purpose explained.

No. 18,265. Machine for Cleaning and Separating Grain. (*Machine à nettoyer et séparer les grains.*)

Ruby Z. B. Curtis, Minneapolis, Minn., U.S., 8th December, 1883; 10 years.

Claim.—1st. The combination of blast-fan B, screen b¹, inclined from the fan and provided, at its upper end, with sieve d and metallic bottomed-chamber e, its lower portion covered with perforated zinc d¹ and having the chamber h with closed bottom screen b², inclined toward the fan and provided with chamber h¹ having closed bottom and located over screen b³, substantially as and for the purpose hereinbefore set forth. 2nd. The combination, in a grain separator, of a reciprocating shoe or frame and a concave wire-gauze cleaning and discharging conduit rigidly secured to said shoe or frame transversely of the line of reciprocation thereof, substantially as and for the purpose hereinbefore set forth. 3rd. The combination of a blast-fan, a longitudinally reciprocating shoe provided with sieves and having a concave wire-gauze cleaning conduit rigidly secured beneath and to said shoe, transversely of the line of reciprocation thereof, and a section air-trunk which is provided, at its lower end, with curved wings to give the air a spiral motion receiving the grain, as it is discharged from said shoe, substantially as and for the purpose set forth.

No. 18,266. Sack Filler. (*Ensachoir.*)

Alexander Hay, Coshocton, Ohio, U.S., 8th December, 1883; 5 years.

Claim.—1st. In a bag-holder, the combination of a standard provided with a guide-pulley, a funnel sliding on the standard and having hooks secured thereto, a counterbalancing weight and a cord connecting the funnel and the weight, and passing over the guide-pulley, substantially as set forth. 2nd. The combination of a hollow base adapted to hold a ball of cord and having a suitable cord-exit, a hollow standard mounted on said base, a guide-pulley journaled in the upper end of said standard, a funnel, a counterbalancing-weight, and a suitable cord connecting the funnel and the weight, all substantially as and for the purpose set forth. 3rd. The bag-holder consisting of a twine-box base, a standard mounted thereon, a funnel sliding on the standard and having bag-holding hooks connected therewith, a counterbalancing-weight and a pointed bar extended laterally from the standard and adapted to hold the bags, all as and for the purpose set forth.

No. 18,267. Diamond Millstone Dressing Machine. (*Machine à diamant pour rhabiller les meules.*)

Thomas C. Barnes, Logansport, Ind., U.S., 8th December, 1883; 5 years.

Claim.—1st. In a machine for dressing millstones, the combination, with the pivoted tipping or adjustable bolster N having slats P P, and the radiating beam B connected therewith, of the shouldered gudgeon I having clamp-screw Z, for securing said beam in any adjustment around its own axis, and the centre pivot-bolt J fixed in frame A, all as shown and described. 2nd. In a machine for dressing millstones, the combination, with the pivoted beam B having lip R, and the bed-plate A, of the notched plate M, the spirally-grooved feeder C, trigger D connected with the latter, the diamond carrying slide U and its attached gage S, all as shown and described to operate as and for the purpose specified.

No. 18,268. Cut-out of Telephone.

(*Interrupteur de Téléphone.*)

Charles D. Wright and Charles A. Fisher, Petersburgh, Ill., U.S., 8th December, 1883; 5 years.

Claim.—1st. A telephone cut-out, made substantially as herein shown and described, and consisting of a clock-work mechanism adapted to be released automatically by the current passing through the instrument, combined with a lever connected with one wire of the cut-out circuit and adapted to be brought in contact, by the clock-work, with the contact piece connected with the other wire of the cut-out, whereby a circuit of less resistance than that which passes through the instrument will be formed and the instrument will be practically cut-out, as set forth. 2nd. In a telephone cut-out, the combination, with a telephone receiver, of a clock-work mechanism, an electromagnet provided with an armature in such a manner as to release the clock-work mechanism, a notched disk mounted on one of the shafts of the clock-work mechanism, a spring lever connected with one end of the line of the cut-out circuit and provided with a projection resting against the edge of the disk and of a contact piece connected with the other end of the line of the circuit, against which contact piece the said spring lever is adapted to be pressed, substantially as herein shown and described. 3rd. The combination, with a telephone instrument and a cut-out, of levers projecting between the call bells and adapted to close the circuit for operating the cut-out, substantially as herein shown and described. 4th. The combination, with a telephone instrument and a cut-out mechanism connected with the same, of levers projecting between the call bells, which levers can be pressed together by the call bell hammer, the said levers being in the circuit of the cut-out mechanism, substantially as herein shown and described. 5th. The combination, with a telephone instrument and a cut-out mechanism connected with the same, of levers projecting between the call bells and springs for holding the same parallel, which levers are in the circuit of the cut-out mechanism, substantially as herein shown and described. 6th. The combination, with a telephone instrument and a cut-out mechanism connected with the same, of the ebonite plate M, the levers O, O¹ pivoted to the same, the springs P, P¹, the studs Q, Q¹, the bells K and the hammer L, substantially as herein shown and described. 7th. The combination, with a telephone instrument and a cut-out mechanism connected with the same, of the ebonite plate M, the levers O, O¹ pivoted to the same, the platinum wires S, S¹ on the levers O, O¹, the bells K and the hammer L, substantially as herein shown and described. 8th. The combination, with a telephone instrument and a cut-out mechanism connected with the same, of the ebonite plate M, the levers O, O¹ pivoted to the same, the platinum wires S, S¹ on the levers O, O¹, the bells K and the hammer L, substantially as herein shown and described. 9th. The combination, with a vibrating lever, of two levers held separated at the side of the same and adapted to be brought in contact by the vibrating lever, which levers are connected with the opposite poles of an electric circuit, substantially as herein shown and described.

No. 18,269. Medicinal Compound.

(*Composition médicinale.*)

Charles L. Robinson, Oakland, Cal., U.S., 8th December, 1883; 5 years.

Claim.—The herein described medical compound for fever and ague consisting of olive-oil, milk, flowers of aronia, spirits of red lavender and essence of Jamaica ginger, substantially in the proportions specified.

No. 18,270. Wick Trimmer. (*Ciseaux à mèche*)

William C. Seaton, Quebec, Que., 8th December, 1883; 5 years.

Claim.—In a wick trimmer, the combination of the hollow cylinder A, having the fixed heads a and b and the longitudinal openings c, d and e, with the rotary brush B journalled in the heads a and b and having the crank C, substantially as described. 2nd. In a wick trimmer, the hollow cylinder A, having the longitudinal openings c, d and e with the inturned edges f, with the surrounding sheath E having the oblong opening g, substantially as shown and described.

No. 18,271. Automatic Stop Plug for Gas and Oil Pipes. (*Tampon automatique pour les tuyaux de gaz et d'huile.*)

William F. Cogrove, Jersey, N.J., U.S., 8th December, 1883; 15 years.

Claim.—1st. The combination, with the coupling A provided with the tapering socket C and the apertured removable cap F, of the plug D provided with the slotted stem E passing through the aperture of the said cap, and the fusible key G passing through the said stem on the outside of the cap, substantially as herein shown and described. 2nd. In an automatic stop plug, the combination, with the stem E, the cap F, the slotted stem E and the fusible key G, of the non-heat-conducting washers I, J, substantially as herein shown and described, whereby the said cap and stem are kept from conducting the heat away from the said key, as set forth. 3rd. In an automatic stop plug, the combination, with the stem E, the plug D and the key G, of the set screw K, substantially as herein shown and described, whereby the said plug can be drawn firmly into place, as set forth.

No. 18,272. Dress-Maker's Rule.

(*Règle à moisir.*)

William Wallace, Oakland, Cal., U.S., 11th December, 1883; 5 years.

Claim.—The herein described dress-makers' rule having the long arm or side A, short arm or side B and the curvatures No. 1 and No. 2, said arms and curvatures being marked with the various scales for showing the proportionate measures of the different parts of the form, substantially as specified.

No. 18,273. Composition of Matter for Painting and Graining Wood
(Composition de matières pour peindre et imiter le bois.)

Noah S. Briggs, Hamilton, Ont., 11th December, 1883; 5 years.

Claim.—1st. The herein described composition of matter to be used for painting and graining consisting of cider vinegar, gum arabic or quills, spirits of turpentine and coal oil, as specified. 2nd. In combination with the compound above described and used with it, a roll composed of Potter's clay or putty, whiting and oil, for graining after the former has been applied.

No. 18,274. Crane. (Grue.)

Samuel H. Edgerley, Jackson, Mich., U.S., 11th December, 1883; 15 years.

Claim.—1st. A jib for a crane consisting of a tapering central web and two or more pairs of curved flange plates of decreasing lengths, all bolted together, substantially as shown and described. 2nd. In a crane, the combination of a stationary mast having a movable ring around its lower end, and a movable cap on its upper end, a V-shaped frame secured to, and turning with said ring and cap, and a jib pivoted to one side of said frame removably attached to the other side thereof and having therein a hole adapted to loosely encircle the mast, substantially as shown and described. 3rd. In a crane, a jib pivoted in a supporting frame and having its rear end adjustable in said frame, substantially as and for the purposes specified.

No. 18,275. Horse Rake. (Râteau à cheval.)

William S. Wilson, Ayr, Ont., 11th December, 1883; 5 years.

Claim.—1st. In a horse-rake, in which the wheels revolve freely on spindles fixed to the axle, to which axle the teeth are attached, a pulley-shaped hub formed on the inside of the wheel, in combination with a friction clamp adjustably attached to the axle and having two flanges opposite to each other, one flange designed to fit the outer surface of the pulley hub, and the other flange the inner surface thereof, with mechanism arranged to actuate the bracket so as to press its flanges against the pulley-shaped hub, and thereby form a friction connection between the wheel and axle, as and for the purpose herein specified. 2nd. In a horse-rake, in which the wheels revolve freely on their axles, with which the rake-teeth are connected, a friction clamp adjustably attached to the axle and having two projecting flanges formed on it, to fit against the pulley-shaped hub of the wheel, as specified, in combination with a curved cap designed to fit the outer surface of the pulley-shaped hub and located immediately over the flange designed to fit against the inner surface of the hub, a crank-rod journaled on the bracket and having its crank-end attached to the cap, so that, by rolling the rod, the cap and flanges are caused to press against the hub, substantially as and for the purposes specified. 3rd. In a horse-rake, in which the friction dump is formed by the flanged clamp H J and cap K, fitting against the pulley-shaped hub F, a crank-rod L journaled on the bracket and connected to the cap, as specified, in combination with the set-screws d, arranged to act against the rod L, substantially as and for the purpose specified. 4th. In a horse-rake, in which the wheels revolve freely on spindles fixed to the wooden axle, and the rake-teeth are attached to the said axle, the combination of an iron bracket fixed to each end of the axle and having a hub formed on it, through which the wheel spindle passes and upon which the flanged clamp is supported, the said bracket having also extending from it an arm to support the end of the rider-bar, substantially as and for the purpose specified. 5th. In a horse-rake, in which the friction dump is formed by an adjustable flanged clamp and cap, arranged to clamp the inner and outer surfaces of the pulley-shaped hub of the wheel, the combination of a rod journaled on the axle and having on its inner end a crank connecting to the dumping lever, and a hook on its outer end and upon which the clamping cap is suspended, substantially as and for the purpose specified. 6th. In a horse-rake, in which the wheels revolve freely on spindles fixed to a wooden axle, a truss-rod extending from end to end of the axle on its bottom side, substantially as and for the purpose specified. 7th. In a horse-rake, in which the wheels revolve freely on spindles fixed to a wooden axle, to which axle the teeth are attached, the combination of a truss-rod extending from end to end of the axle immediately below its bottom edge, so as to form a support for the teeth, the end of the rod passing through elongated holes in the flanged clamp and being provided with nuts, hold the same in position, substantially as and for the purpose specified. 8th. In a horse-rake, a driver's seat arranged to extend behind or immediately above the axes of the carrying wheels, substantially as and for the purpose specified. 9th. In a horse-rake, in which the teeth are dumped by the rolling of the axle, the combination of a spring Q attached to the axle and arranged to come in contact with the thill-iron, substantially as and for the purpose specified. 10th. In a horse-rake, the thills R, braced together by the diagonally-crossed bars S, extending outwardly to a point near the carrying-wheels, in combination with thill-irons fixed to the outer ends of the cross-bars and pivoted to the axle, as specified. 11th. In a horse-rake, in which the thills are braced together by diagonally-crossed bars S, a metal bracket V, bolted to the cross-bars S and shaped to form a pivot point for the hand-dumping lever U, and a pivot point for the whiffle-tree T, substantially as and for the purpose specified.

No. 18,276. Method of Securing Buttons.
(Mode d'assujettir les boutons.)

William F. Spinney, Reading, Mass., U.S., 11th December, 1883; 5 years.

Claim.—1st. The improvement, in the art of attaching buttons or other articles to garments, &c., consisting in inserting a portion of the fabric into the tubular or open part of the button, then placing a suitable compressible substance therein, and flattening or expanding the same, as set forth. 2nd. The combination of the button or other article having an opening receiving part of the fabric and an expanded plug, substantially as specified.

No. 18,277. Submarine Electric Cable.

(Câble électrique sous-marin.)

Richard S. Waring, Pittsburgh, Penn., U.S., 11th December, 1883; 15 years.

Claim.—1st. An electric cable having insulated electric conducting wires embedded in, and covered by a body of lead, and a series of hard metal protecting-wires also embedded in the lead outside of the conducting wires, substantially as and for the purposes set forth. 2nd. An electric cable having a tubular lead body A, a compound conductor B, filling its central passage, such conductor being composed of wires of different size, a part being lead-covered and all being twisted together, as described, insulated conductors a embedded in the body of lead, and strengthening and protecting wires at embedded in the lead outside of the wires a, substantially as set forth. 3rd. An electric cable having a tubular body of lead, near the inner surface of the tubular body, and a series of hard-metal wires alternating in arrangement with the conducting wires and embedded within the lead, near the outer surface of the tubular body, substantially as set forth. 4th. An electric cable having a tubular lead body and a compound conductor filling the tubular passage, such conductor being composed of separately insulated wires, a part of which are also covered exteriorly with an electric conducting material, and all being twisted together, substantially as set forth.

No. 18,278. Cord Binding Harvester.

(Moissonneuse-lieuse à ficelle.)

George Fielden, Dundas, Ont., 11th December, 1883; 5 years.

Claim.—1st. The combination of the cord disk A, cord-holder a swinging frame B, pawl lock C and can gear shaft H, as and for the purposes hereinbefore set forth. 2nd. The combination of the cord disk A, connecting rod F, pawl G, ratchet wheel I and set screw I in connecting rod, as and for the purpose hereinbefore set forth.

No. 18,279. Motor Power. (Pouvoir moteur.)

Louis Seebach and Joseph Bettchen, Gowantstown, Ont., 11th December, 1883; 5 years.

Claim.—1st. As an improved motor, the weight or weights N, connected by a chain or rope L to a drum or drums K, which is or are connected by a chain of gear wheels to the shaft B, in combination with the crank B₁, connected by the pitman D to the lever C, which is pivoted to the frame A, and arranged to impart a reciprocating movement to a churn or other machine, substantially as and for the purpose specified. 2nd. In a motor deriving its power from the descent of a weight or weights, the combination of a governor connected to the main shaft, driven by the descending weights in such a manner that the motion of the governor imparts a resisting power to the shaft, in proportion to the power consumed by the machine driven by the motor, substantially as and for the purpose specified.

No. 18,280. Saw-Sharpening Machine.

(Machine à limer les scies.)

Milo Covell, Chicago, Ill., U.S., 11th December, 1883; 5 years.

Claim.—1st. The combination, with the irregular shaped cam-wheel B, of the lever B₁ pivoted at one end, the opposite end being adapted to rise and fall, the friction-roller a₂, the rod B₄, the graduated arm C provided with a number of apertures arranged at regular intervals, and the adjustable connecting-rod B₅, whereby motion is transmitted to the emery-wheel and the shape and depth of the teeth determined, substantially as described. 2nd. The combination, with the sleeve b, having a loose joint at the lower end, and the shoulder b₃ on the upper end of the rod C₁, and the hand-lever C₂, whereby the emery-wheel may be raised from contact with the saw without stopping the machine, substantially as described. 3rd. The combination, with the cam B, adapted to perform the functions of a crank-wheel, of the connecting-rod D, the graduated arm B₁, the adjustable companion rod D₂, the vertical lever D and the feed-finger d, whereby the required movement and adjustment are given to said feed-finger, substantially as described. 4th. The combination, with the feed-finger d, of the adjustable rest d₂ provided with the elongated slot d₃, whereby said feed-finger may be adapted to conform to teeth of various shapes and depths, as set forth. 5th. The combination, with the eccentric clamping-lever E, provided with the head F, and the handle F₁, substantially as and for the purpose set forth.

No. 18,281. Striker for Sash and Door Bolts.

(Gâche de verrou de fenêtre et de porte.)

Charles W. Elliott, Horatio N. Ruggles and Mathias Donnelly, Boston, Mass., U.S., 11th December, 1883; 5 years.

Claim.—A bolt striker formed from a metal tube having its outer surface forced inwards, to form a bevelled face at each end, and adapted to be inserted in a door or window frame, as set forth.

No. 18,282. Roofing Compound.

(Composition à toiture.)

Phebe A. Way, (Assignee of Daniel Brobst), Portland, Mich., U.S., 12th December, 1883; 5 years.

Claim.—The herein described roofing compound consisting of coal-tar, asphalt, gum-shellac, glue, salt, alum, gypsum, cement, sulphur, resin and benzine, in proportions specified.

No. 18,283. Flexible Last. (Forme élastique.)

Charles L. Higgins, Montreal, Que., 12th December, 1883; 5 years.

Claim.—1st. The described method of preparing boots and shoes for examination and show, which consists in placing therein an inflat-

able device capable of being forced into substantial conformity with the shape thereof, and then inflating the same until restrained by a mild tension of the leather, substantially as described. 2nd. A device for expanding the uppers of boots and shoes adapted to be placed within the boot or shoe, and then inflated outwardly against the inside walls of the same and into substantial conformation with the shape thereof, substantially as described. 3rd. A device for expanding the uppers of boots and shoes, the same being composed of rubber or a similar elastic material having an outline and size similar to, but slightly smaller than that of a boot or shoe, and adapted to be placed within the same, and then expanded by inflation, to completely fill the chamber of the upper and produce slight tension on the walls thereof, substantially as described.

No. 18,284. Improvements in Stoves or Furnaces. (*Perfectionnements dans les poêles ou calorifères.*)

Daniel M. Graham, Philadelphia, Penn., U. S., 13th December, 1883; 5 years.

Claim.—The combination of the stove and the drum arranged within it, and provided with flue pipes and air educts disposed as set forth, with the two hot air induction pipes having dampers and arranged with such stove and drum, substantially as represented.

No. 18,285. Display Body. (*Caléidoscope jouet.*)

Josiah M. Simpson, Chicago, Ill., U. S., 13th December, 1883; 5 years.

Claim.—1st. In devices for display bodies, the wheel A with downwardly turned buckets r, in combination with an inverted concave cone or cone F, to form a continuous curve from the cone to the outer ends of the bucket, as and for the purpose specified. 2nd. A gas-globe or other similar device hung suspended from the rotating wheel A n, which is supported by the standard G passing through the globe and fastened to a gas or lamp burner, as and for the purpose specified. 3rd. The plumbage pivot H, in combination with the stone X, as a bearing for rotating display bodies which are driven by heat, as specified.

No. 18,286. Adjustable Sash Frame.

(*Châssis mobile de croisée.*)

Richard Stockdale, Ottawa, Ont., 13th December, 1883; 5 years.

Claim.—1st. A box sash frame having the hanging stile A notched into the frame head and butt ended upon the sill, the lower end of said stile provided with a rack E meshing into a pinion F journaled below, and fitted with a cam f, engaging a lug e in said rack E, the lock plates g secured to the stile A, in combination with the sashes. 2nd. A movable hanging stile of a box sash frame moved and controlled by means of a rack and pinion with cam, and provided with a lock plate G. 3rd. A movable hanging stile of a box sash frame notched into the frame head and butt ended upon the sill. 4th. The controlling mechanism consisting of the rack E having the lug e, the pinion F and cam f mounted upon the spindle f, provided with a knob F and journaled below the rack and meshing therewith, in combination with the hanging stile and sill, all substantially as described and for the purpose set forth.

No. 18,287. Lubricator for Piston Rods.

(*Graisseur des tiges de pistons.*)

Solomon Hoffmaster, Harrisburg, and George W. Arthur, Altoona, Penn., U. S., 13th December, 1883; 5 years.

Claim.—The combination, with a piston rod or valve stem, of the gland having an annular chamber terminating in a wide mouth at the upper edge of the flange, for increasing the capacity of the chamber, and providing for filling the same, the mouth being provided with a cover, substantially as and for the purpose set forth.

No. 18,288. Process and Apparatus for Freezing Paraffine, &c. (*Procédé et appareil de congélation de la paraffine, &c.*)

Edward Kells and Henry L. Church, Cleveland, Ohio, U. S., 13th December, 1883; 5 years.

Claim.—1st. The process of freezing or chilling paraffine, paraffine-wax and other products of petroleum, consisting in passing the material upward, through a body of liquid refrigerants and in immediate contact therewith, substantially as described. 2nd. The process of chilling paraffine-wax or other products of petroleum, consisting in passing the material in a divided state upward through a liquid refrigerant and in immediate contact therewith, substantially as described. 3rd. The steps in the process of chilling and separating paraffine-wax and other products of petroleum, consisting in passing the material upward through a refrigerating liquid and in immediate contact therewith, and then carrying the product to a refrigerating chamber, substantially as described. 4th. The process of chilling paraffine and other products of petroleum, the same consisting in conducting the material to be operated under pressure or by gravity into a column of refrigerating liquid, at or near the bottom of said column, substantially as described. 6th. The apparatus for effecting the above described purpose consisting of refrigerating tank A, chamber B having perforated top c, conducting pipe K with inlet a and spout S, substantially as shown and specified. 6th. The receptacle D surrounded by outer jacket or refrigerating chamber E, and furnished with spout or orifice F to conduct the frozen material from the spout S into the said chamber D, which is provided with the sliding bottom I and drawer J, substantially as shown and specified. 7th. In combination with tank A, the receptacle D surrounded by jacket E and having spout

or orifice F, to conduct the frozen material from spout S into the receptacle D, which is provided with sliding bottom I and drawer J substantially as shown and specified.

No. 18,289. Rowlock. (*Toletière.*)

Charles W. Morris, Lowestoft, Eng., 13th December, 1883; 5 years.

Claim.—1st. The combination of the sliding headed tholes A with the gunwale B and cross-pins D, constructed to operate substantially as described. 2d. The combination of the sliding headed tholes A with the gunwale B, slotted plate F and catch G, constructed to operate substantially as described.

No. 18,290. Flour Dressing Machine.

(*Blotoir.*)

Middleton Crawford, Wiarton, Ont., 13th December, 1883; 5 years.

Claim.—1st. In a flour-dressing machine, an endless web-sieve carried on rollers in a horizontal frame, the said frame having imparted to it a vibratory movement, while the sieve travels around the rollers, so that the fine flour is sifted through the sieve, while the coarser flour is carried over the end of the frame by the travelling sieve, substantially as and for the purpose specified. 2nd. In a flour dressing machine, an endless web-sieve carried on revolving rollers and presenting a horizontal travelling surface, in combination with stationary brushes set so as to come in contact with the surface of the sieve, in order to clear the meshes of the sieve as it travels over the brushes, substantially as and for the purpose specified.

No. 18,291. Cockle Machine.

(*Machine à nôles des blés.*)

Middleton Crawford, Wiarton, Ont., 13th December, 1883; 5 years.

Claim.—1st. In a cockle machine, a sieve formed in an endless web carried on rollers and caused to travel in an upward direction, the angle at which the sieve is set being such as will cause the grain to roll down while the cockle and small grain, which stick in the meshes of the sieve, are carried over the top edge of the sieve, substantially as and for the purpose specified. 2nd. In a cockle machine, provided with ordinary fixed sieves carried in a vibrating frame, the combination of a sieve formed in one endless web carried on rollers journaled in a frame, so pivoted on the vibrating frame that the angle of the endless sieve may be adjusted, substantially as and for the purpose specified. 3rd. In a cockle machine, in which the sieves are carried in a frame flexibly connected to the main or stationary frame of the machine, a strap connected at one end to the vibrating frame and at the other to an eccentric, in combination with a spring arranged to operate the vibrating frame in the opposite direction to that in which it is moved by the eccentric, substantially as and for the purpose specified.

No. 18,292. Self-Closing Hatchway.

(*Ecaille à fermeture automatique.*)

Richard D. Thackston, St. Louis, Mo., U. S., 13th December, 1883; 5 years.

Claim.—1st. In a self-closing hatchway, the counterbalances consisting of removable disks secured to the ends of pivoted arms, substantially as and for the purpose set forth. 2nd. In a self-closing hatchway, the friction rollers consisting of two grooved disks riveted together and provided with a soft band and secured to the ends of pivoted arms, substantially as and for the purpose set forth. 3rd. In a self-closing hatchway, the combination of cage doors, independent pivoted arms connected to the doors, counterbalances and friction rollers secured to the ends of the pivoted arms and cams upon the cage, all constructed and operating substantially as shown and described for the purpose set forth. 4th. In a self-closing hatchway, a cam or cams secured to the top of the cage for opening the door or doors, in combination with a spring secured to the cam, the two being arranged in such a manner that the breakage of the spring will not prevent the cam from accomplishing its function, as set forth. 5th. In a self-closing hatchway, a spring cam hinged to the bottom of the cage, its free end being guided and supported by suitable mechanical means, as set forth. 6th. In a self-closing hatchway, the combination of the cam J secured to the cage, slotted hanger J₁ secured to the bottom of the cage, perforated projection J₂ in the hanger post, J₃, on the cams, and the spring J₄ surrounding the post, substantially as and for the purpose set forth. 7th. The combination of the cage B, doors D, ropes N, pivoted counterbalanced arms L, pulleys O and cams secured to the cage, all substantially as shown and described and for the purpose set forth.

No. 18,293. Machine for Arranging Match Splints for Dipping. (*Machine pour disposer les allumettes à soufrer.*)

Bernard T. Steber, Utica, N. Y., U. S., 13th December, 1883; 5 years.

Claim.—1st. In a machine for arranging match splints for dipping, the combination, with a pair of clamping slats constructed to contain a row of match splints, of vertically movable pushing bars arranged to bear against alternate splints, whereby a portion of a row of splints is moved longitudinally, and spaces formed between adjoining splints at the top and bottom of the row, substantially as and for the purpose described. 2nd. The combination, with travelling clamping slats, of pushing bars arranged to bear against alternate splints, as the clamping slats pass over them, whereby a portion of the rows of splints is moved longitudinally, and spaces formed between adjoining match splints at top and bottom of the row of splints, substantially as and for the purpose described. 3rd. The combination, with clamping slats constructed to contain a row of match-splints, and with vertically movable bars arranged to bear against alternate splints, of notched top plates secured to one of the clamping bars, substantially as and for the purpose described.

No. 18,294. Device for Protecting the Neck Bands, Collars and Cuffs of Shirts when packed together Transportation. (Appareil pour protéger les cols, faux-cols et manchettes des chemises empaquetées pour le transport.)

William A. Greene, Jr., Toronto, Ont., 14th December, 1883; 5 years.

Claim.—1st. A false collar A, set within the neck-band of a shirt and shaped so that its top edge shall project slightly above the neck-band B, substantially as and for the purpose specified. 2nd. A false collar A, in combination with projecting fingers B arranged to fit within the neck-band of a shirt, substantially as and for the purpose specified. 3rd. A bridge D, made of card board or other stiff material and so shaped that when placed upon the bosom of the shirt, it will project slightly above the cuff or neck-band, so as to form a protection for the same, substantially as and for the purposes specified.

No. 18,295. Underwaist. (Ceinture de dessous.)

Mary E. Higgins, Cadillac, Mich., U. S., 14th December, 1883; 5 years.

Claim.—1st. The combination, with an underwaist or corset, of pendant flap pieces for supporting the hose attached to the inside of the waist or corset at a point near or above the waist line and under the arm holes and having a broad connection at their upper edges with the underwaist or corset, as and for the purpose described. 2nd. The combination, with an underwaist or corset, of hip pads provided with points or hooks, or connections for sustaining the skirt, as set forth. 3rd. An underwaist or corset having hose supporting flap attached to the inside of the waist or corset, and hip pads with supporting the vices attached to the outside of the same, as described. 4th. The combination, with a waist or corset, of an imitation chemise or skirt S attached to the inner side of the lower edge thereof, as described.

No. 18,296. Car-Coupling. (Accouplage de wagons.)

Ezra N. Gifford, Cincinnati, Ohio, U. S., 14th December 1883; 5 years.

Claim.—1st. In a car-coupling, the combination, with a draw-head having a guideway extending above the draw-head, said guideway being provided near its upper end with a locking-recess, and with inwardly projecting flanges over the locking-recess, of a coupling-pin provided with laterally-projecting locking-lugs adapted to move vertically within said guideway, and rearwardly into said locking-recess, substantially as set forth. 2nd. In a car-coupling, the draw-head having a guideway cast integral therewith, said guideway having undercut recesses in its upper end, and a bar L secured at its ends within said recesses, substantially as set forth. 3rd. In a car-coupling, the combination, with a coupling-pin having locking-lugs cast integral therewith near its upper end, of a guideway provided with a locking-recess in its upper end, and provided with lugs j that extend above the bottom or floor of said recess substantially as set forth. 4th. In a car-coupling, the combination, with a coupling-pin having locking-lugs cast integral therewith near its upper end, of a guideway provided with a locking-recess s in its upper end, and constructed with side passages m located above the floor of the locking-recess, for the insertion of the locking-lugs on the coupling-pin, substantially as set forth. 5th. In a car-coupling, the combination, with a draw-head having a guideway extending above the draw-head, said guideway having a guideway cast integral therewith near its upper end, and with lugs j that project in front of said locking-recess, of a coupling-pin having locking-lugs formed with concave bearing on their under-sides, substantially as set forth. 6th. In a car-coupling, the combination, with a coupling-pin having locking-lugs cast integral therewith near its upper end, of a draw-head having a draw-head having a guideway cast integral therewith, substantially as set forth. 7th. In a car-coupler, the combination, with a coupling-pin provided with a locking-recess near its upper end, and with lugs j that may be raised, its head moved rearwardly and its locking-lugs lowered into a locking-recess located in the upper portion of said guideway, substantially as set forth. 8th. In a car-coupler, the combination, with a coupling-pin provided with locking-lugs, of a draw-head having a guideway constructed substantially as described, whereby the pin may be raised, its head moved rearwardly and supported so as to cause the pin to fall by concussion and automatically couple the cars, substantially as set forth. 8th. In a car-coupler, the combination, with a coupling-pin provided with locking-lugs, of a draw-head provided with a guideway constructed substantially as described, whereby the pin may be raised, its head moved rearwardly and its locking-lugs lowered into a locking-recess, substantially as set forth.

No. 18,297. Fire-Escape Ladder.

(Echelle de sauvetage)

Arthur W. Covell, Lombardy, Ont., 14th December 1883; 5 years..

Claim.—1st. An iron ladder composed of sections constructed of sides A, A₁ and step-bar B, and consecutively connected by bolts C, or hooked intersecting ends, whereby the ladder will fold, as set forth. 2nd. The ladder sections composed of two sides A, A₁ and having arms D, to keep the sections distanced from the wall, as set forth.

No. 18,298. Stove. (Poêle.)

Michael C. Armour, Chicago, Ill., U. S., 14th December 1883; 5 years.

Claim.—1st. Combined in a stove, two combustion apparatuses, an oven between them, a top, every part of which is in substantially the same plane, and an oven adapted to rest over either combustion apparatus or over the oven between them, substantially as set forth. 2nd. Combined in a stove, two combustion apparatuses, an oven be-

tween them having its lateral and top walls perforated, a top standing in a plane above said combustion apparatuses and top wall of the oven, and forming with said wall a combustion current flue, and a ventilated oven adapted to rest over either combustion apparatus or over the oven between them, whereby it may, under different conditions, be heated either by the passage through it of the products of combustion and by a current of hot air induced thereby, or by simple radiation of heat, substantially as set forth. 3rd. In a stove, two combustion apparatuses, an oven or induction flue placed between them and communicating therewith, a top placed above said combustion apparatuses and oven and having, in substantially a common plane, an imperforate section over each of said apparatuses, and a perforate section over said oven or induction flue, substantially as set forth. 4th. Combined in a stove, combustion apparatuses, combustion current and induction flues, a top having imperforate and perforate sections, and a ventilated oven adapted to rest and slide upon said top, whereby, under different conditions, it may be heated by the passage therethrough of the products of combustion, and a current of air heated thereby, or by simple radiation of heat, substantially as set forth. 5th. In a stove, a top having imperforate and perforate sections standing in substantially the same plane, the imperforate sections being heated by the action thereon of the combustion current, and the perforate section by said current, and a current of air induced and heated thereby, combined with an oven adapted to rest upon said top and to be moved to different points in its length, substantially as set forth. 6th. In a stove, a top having imperforate and perforated sections in substantially the same plane, combined with a ventilated oven having a grated bottom and adapted to be moved along the length of said top, so that said oven may be brought over either the perforate or imperforate sections, and thereby be heated under different conditions, substantially as set forth. 7th. In a stove, the combination of a heating apparatus, a top having imperforate and perforate sections, combustion current and induction flues, and an adjustable oven adapted to be placed over either the imperforate or perforate sections of the top and which, when removed from the perforate section, allows of the free escape of the products of combustion through the same, and of their utilization for other purposes of heating, substantially as set forth. 8th. In a stove, a combustion apparatus at each end thereof, an intermediate oven or induction flue, a top having imperforate and perforate sections, and a ventilated oven adapted to rest and slide upon said top, substantially as and for the purposes set forth. 9th. In a stove, a top having imperforate sections and a perforate section provided with ridges or protuberances b₃, said sections being in substantially the same plane, combined with the adjustable oven A, having the rack or grating a₃ and the ventilating perforations a₁, substantially as and for the purposes set forth. 10th. In a stove, a combustion apparatus at each end, an intermediate oven or induction-flue having perforations h, h₁, the stove-top having imperforate sections and a perforate section provided with ridges or protuberances b₃, the flue B being formed below said stove-top as shown, combined with the adjustable oven A, having the rack or grating a₃ and the ventilating apertures or perforations a₁, substantially as and for the purposes set forth. 11th. In a stove, a top having imperforate and perforate sections, combined with a sliding oven having guiding flanges adapting it to be retained upon, and moved along said top, substantially as set forth. 12th. A stove provided with flanges e and d₁, one on the combustion apparatus and the other on the stove proper, substantially as set forth. 13th. A stove having on its top a sliding oven open at the bottom, and provided with flanges for guiding it, substantially as set forth. 14th. In a stove, two combustion apparatuses, an oven or space between them, a top place above said combustion apparatuses and oven, and having an imperforate section over each of said apparatuses, and a perforate section over said oven or space, substantially as set forth. 15th. In a stove, a flue provided with an equilateral covering-plate having a₁ depending flange, substantially as set forth. 16th. A stove provided with a covering-plate, having ridges or protuberances projecting above the general level of the top of the stove, and also having perforations between said ridges, substantially as set forth. 17th. A stove provided with a chimney-frame chamber, a removable chimney-frame therein, and chimneys in said chimney-frame and removable therefrom, substantially as set forth. 18th. The combination of cones b having apertures a₁, with the studs or flanges f₂, substantially as set forth. 19th. In a stove, a cone-plate with cone entirely below it, in combination with chimneys, substantially as set forth.

No. 18,299. Harvesting Machine.

(Moissonneuse.)

Henry J. Case and David M. Osborne, Auburn, N. Y., U. S., 14th December 1883; 15 years.

Claim.—1st. A butt-board supported on a horizontal arm hinged to, and adjustable around a vertical axis, in combination with a crank shaft for operating the said butt-board, arranged centrally within said axis, substantially as described. 2nd. The butt-board upheld by, and adapted to slide longitudinally on a hinged supporting arm, in combination with a connecting rod and crank, the shaft of which is coincident with the axis of the supporting arm, for imparting a longitudinally reciprocating and a laterally oscillating motion to said board, substantially as described. 3rd. A butt-board supported by, and sliding longitudinally on an arm, free to swing or be adjusted in a horizontal plane on its axial support, in combination with an adjusting bar connected with said supporting bar and extending within reach of the driver in his seat, and means for holding said bar supporting arm and butt-board at any desired adjustment, substantially as described. 4th. The longitudinally reciprocating and laterally oscillating butt-board, in combination with its hinged supporting and adjusting arm, and the shaft for actuating said butt-board, arranged within the axial centers of said supporting bar and geared to, and operated from the upper roller of the lower elevating canvas, substantially as described. 5th. The combination of the butt-board B₁, hinged supporting arm B₂ arranged to vibrate around the crank-shaft actuating the butt-board as a centre, the crank-shaft actuating said butt board geared to, and operated from the upper roller of the lower elevating canvas, and means for adjusting said supporting arm and butt-board, substantially as described.

No. 18,300. Process for Converting Manganite, Braunite and Manganese into blue Peroxide of Manganese. (Procédé pour convertir la manganite, la braunite et le manganèse en péroxyde bleue de manganèse.)

Alfred Markham, Markamville, N. B., 14th December 1883; 5 years.

Claim.—1st. The process for converting protoxide of iron and manganese combined to peroxide of manganese, substantially as described. 2nd. As a new article of manufacture, peroxide of manganese produced from protoxide of iron and manganese combined.

No. 18,301. Button. (Bouton.)

Richard Roseman, Waterloo, Ont. 14th December 1883; 5 years.

Claim.—1st. A button having a circular recess cut in its face, and a groove cut around the inner edge of the recess, to receive and retain in position a piece of cloth or other similar material. 2nd. In a button having a circular recess cut in its face, and a groove cut around the inner edge of the recess, in combination with a piece of cloth inserted within this said recess, and held there by glue or other adhesive. 3rd. In combination with a button having a circular recess cut in its face, and a groove cut around the inner edge of the recess, to receive and retain in position a piece of cloth, a plunger working within a hollow cylinder having a flange *b* to project into the recess of the button, substantially as and for the purpose specified.

No. 18,302. Track Laying Machine.

(Machine à poser les voies de fer.)

Ferdinand F. Voigt, Walla Walla, Washington, U.S., 14th December 1883; 5 years.

Claim.—1st. In a track laying device, a construction train, the cars of which are each provided with a track *a*, in combination with trucks adapted to travel upon said tracks, to transport material from one portion of the train to the other, substantially as herein described. 2nd. In a track laying device, a construction train, the cars of which are each provided with track *a*, in combination with trucks adapted to travel on said tracks, and intermediate coupling track sections substantially as herein described. 3rd. In a track laying device, a construction train, the cars of which are each provided with a track *a*, and the coupling sections of the track *C* having a gauge narrower than the gauge of the track *a* in combination with the trucks *b*, having wheels *d* with a central flange, and rolling surfaces on each side of the flange, to fit respectively the wide and narrow gauge of tracks *a* and *C*, substantially as herein described. 4th. In a track laying device, a train of cars having each a track *a*, and the coupling track sections *C* joined to the cars by coupling pins *c*, passing through slots *e* in said section, to enable them to conform to changes of direction in the cars, in combination with trucks *b* adapted to travel on tracks *a* and pass from one car to another over coupling tracks *C*, substantially as herein described. 5th. In a track laying machine, the end car *B* and extension frame *D* in front, in combination with the carrier *E* and a means for advancing and withdrawing said carrier on the frame *D*, substantially as and for the purpose herein described. 6th. In a track laying machine, the end car *B* having a track *a* for a truck, and a central recess with a track *c*, and the extension *D* in front, in combination with the T-shaped carrier *E* having wheels *e* on the rear of its shank, adapted to travel on track *c*, and rollers *e* on its cross-head, for travelling on the side of the front extension *D*, and said carrier, substantially as and for the purpose herein described. 7th. In a track laying machine, the end car *B* and extension *D*, in combination with the carrier *E* and means for advancing it out on gear *I*, shaft *J*, ratchet *K* and the lever *L* having a link pawl *l* engaging with the ratchet *K*, substantially as and for the purpose herein described. 8th. In a track laying machine, the end car *B* and extension *D*, in combination with the machine, the end car *B* and extension *D*, in combination with the extensible carrier *E* and the means for withdrawing said carrier rapidly, consisting of the chain *H*, sheave *G*, shaft *F*, pinion *i*, gear *I*, crank *M* and pinion *m*, all arranged and operating substantially as and for the purpose herein described. 9th. In a track laying machine, the end car *B* having a frame work *N*, in combination with the forwardly extending derrick frame *O*, the derrick ropes *P* having rail clamps *Q* and the winding drum *R*, all arranged and operating substantially as and for the purpose herein described. 10th. In a track laying machine, the end car *B* having a track *a* upon it, and a frame work *N*, in combination with the swinging track sections *R* mounted above in said frame work and adapted to incline to either end, to receive a truck from track to carry it over the car, substantially as and for the purpose herein described. 11th. In a track laying machine, the end car *B* having a track *a* and a frame work *N*, in combination with a swinging track section *R* centrally pivoted in said frame and adapted to incline to either end, and a pivoted catch *S* to hold said swinging section horizontal, and rope *t* to trip the catch, substantially as and for the purpose herein described. 12th. In a track laying machine, the end car *B* having track *a* and frame work *N*, and the extension frame *D*, in combination with the extensible carrier *E* having track *a*, and the swinging track sections *R*, all arranged and operating substantially as and for the purpose herein described. 13th. In a track laying machine, the swinging track section *R* having a pivoted catch *T*, as shown, in combination with a truck *b* adapted to be moved upon said track section and to be held by the catch, substantially as and for the purpose herein described.

No. 18,303. Dumping Platform.

(Plateforme à bascule.)

John T. Savage and John Love, Rockford, Ill., U. S., 15th December, 1883; 5 years.

Claim.—1st. In combination with the track-beams or dumping portion of the contrivance, and the ordinary scale-platform, means so

operating or turning said track-beams from a horizontal to an inclined position and vice versa, at the pleasure of the operator of said mechanism, all substantially as set forth. 2nd. The combination, with the gear-toothed segments fixed to the pivoted track-beams or dumping portion of the platform, of spur-toothed gear-pinions to engage the gear-teeth of the segments, substantially as and for the purpose set forth. 3rd. The combination, with the spur-toothed gear-pinions having a gear-toothed connection with the gear-toothed segments, of a sprocket-wheel and chain-belt connection therewith, substantially as and for the purpose set forth. 4th. The combination, with the sprocket-wheel and chain-belt connecting with the spur-toothed gear-pinions, of a hand-wheel or winch to impart motion to the parts, substantially as and for the purpose set forth. 5th. The combination, with the sprocket-wheel and chain-belt connecting with the spur-toothed gear-pinions, of a ratchet wheel and pawl mechanism, substantially as and for the purpose set forth. 6th. The combination, with the pivoted track-beams, or dumping portion of the platform, of detents operating to limit the descent of the dump, substantially as set forth.

No. 18,304. Method of Raising Cream.

(Mode de production de la crème.)

Henry W. Kellogg, Ripon, Wis., U. S., 15th December, 1883; 5 years.

Claim.—The improved method of raising cream from milk, which consists in applying ice directly to the lower stratum of milk contained in a receiver, substantially as described.

No. 18,305. Stop Valve. (Soupape d'arrêt.)

Daniel Kearney, Montreal, Que., 15th December, 1883; 5 years.

Claim.—1st. In combination with the basement or chambers in a building, the parts *Q*, *R*, through which hydraulic pressure is transmitted, as described, the cylinder *K*, piston *L*, piston rod *M*, stop valve *P*, cylinder *A*, having valve-seat *I* and connections *B* for supply pipe *G*, and *C* for service pipe *H*, substantially as described. 2nd. The combination of the cylinder *K*, piston and piston rod *L*, *M*, stop valve *P*, cylinder *A* having valve seat *I* and connections *B* and *C* for supply and service pipes, substantially as described. 3rd. The combination of the tubes *Q*, *R*, through which hydraulic pressure is applied to operate a piston or surface upon which the pressure acts, to move the same and operate a stop-valve, substantially as described.

No. 18,306. Plough. (Charrue.)

Adam C. West, Blanchard, Mich., U. S., 15th December, 1883; 5 years.

Claim.—The combination, with the cast iron plough joint *A*, of a steel plate covering thereto, constructed both to form both the share *B* and coulter *C*, and the separate and detachable cap point *D*, applied to the point and assisting to hold the share and coulter in position, essentially as described.

No. 18,307. Oscillating Guides for Gang Saws. (Guides oscillants pour les scies verticales.)

Clinton H. Weston, Mount Clemens, Mich., U. S., 15th December 1883; 5 years.

Claim.—1st. In a gang saw mill, in which the saw sash is arranged to work up and down, within oscillating guides comprised in a single frame, the combination of the supporting frame with the saw sash working in oscillating guides, said guides being pivoted to the frame at a point near to, but below the centre and in rear of the upper guides, as and for the purposes set forth. 2nd. The combination of the vibrating side pieces *E*, *E*, having upper guides *c*, arranged to incline forwardly in a downward direction, and lower guides *d*, with the swinging pivots *f* for said side pieces, arranged back of the upper guides and nearer the lower than the upper ends thereof, the pins *f*, the rods *g*, the rock shaft *h*, the cranks *i*, *k*, the rod *l*, the eccentric *m*, the shaft *A*, crank pin *a*, the rod *b* and the saw sash *B*, for operation in relation with each other, essentially as shown and described.

No. 18,308. Magneto-Electric Call Signal Apparatus. (Appareil avertisseur électro-magnétique.)

The Bell Telephone Company, (Assignee of Charles Brown,) Montreal, Que., 15th December, 1883; 5 years.

Claim.—The combination of the armature *A*, electro-magnets *C*, *C*, with armature *D* and rod *E*, bells *G*, *G* and switch lever *H*, with projection *H* on same, put in circuit by spring *K* with springs *L*, all constructed, arranged and operating with their several connections, as herein set forth and for the purposes described.

No. 18,309. Rowlock. (Toilettière.)

Charles W. Morris, Lowestoft, Eng., 15th December, 1883; 5 years.

Claim.—The combination of the rowlock *A* with the gunwale *B*, circular recess *C*, grooves *D* and flanges *E*, to work substantially as set forth.

No. 18,310. Miners' Safety Fuses.

(Fusées de sûreté pour les mineurs.)

William Eltringham, Minersville, and John Eltringham, Sr., Branchdale, Penn., U. S., 15th December, 1883; 5 years.

Claim.—1st. The herein described safety-fuse or squib for blasting, the same consisting of the powder-containing tube *A* and match *B*, touch paper *D*, fixed upon the upper end of the tube, said tube *A* having a transverse diaphragm *C* of tissue-paper or equivalent material, separating the charge, in the powder-containing tube, from its match or touch paper. 2nd. A safety-fuse or squib for blasting

consisting of a powder-containing tube, a match or touch paper saturated with sulphur and fixed upon the top of the powder-containing tube, said tube having a transverse diaphragm of tissue-paper or equivalent material, separating the charge in the powder-containing tube from its match or touch paper.

No. 18,311. Oiler for Machinery.

(Graisseur de machine.)

Frederick A. Gardner, Robert Dunbar and George H. Dunbar, Buffalo, N. Y., U. S., 15th December, 1883; 5 years.

Claim.—1st. The combination, in an oil cup, of a piston or pump arranged below the valves, outside of the oil cup, and provided with a spring for keeping it downward, a lever a^3 secured to the frame by a pin a^4 , an eccentric for operating it and a thumb-screw, the lever or handle a^3 , being arranged between the pump eccentric and resting against the thumb-screw, substantially as and for the purposes described. 2nd. In an oil cup, a pivoted lever or handle arranged between the bottom of the pump and the eccentric a^2 , and its end resting against an adjustable screw, thereby adapting it to be operated automatically or by hand, substantially as specified.

No. 18,312. Plough. (Charrue.)

The South Bend Iron Works, (assignees of Charles Anderson and James Oliver,) South Bend, Ind., U. S., 15th December, 1883; 5 years.

Claim.—1st. The combination, with a standard and a reversible plow point, of a spring actuated locking lever for securing the point against displacement, substantially as set forth. 2nd. The combination, with a standard and a reversible plow-point having notched prongs or jaws, adapted to be inserted through openings formed in the standard, of a locking lever adapted to engage in the notches of said prongs or jaws, substantially as set forth. 3rd. The combination, with a standard and a reversible plow-point having notched prongs or jaws, extending rearwardly from the point and adapted to be inserted through openings formed in the standard, of a locking lever having its head constructed with bevelled surfaces adapted to fit the corresponding bevelled surfaces of the notches in the prongs or jaws, substantially as set forth. 4th. The combination, with a plow standard having its foot provided with grooves on its upper and lower sides, of a reversible plow point constructed with T-shaped flanges and a standard, substantially as set forth. 5th. The combination, with a standard having grooves on the upper and lower sides of its foot portion, and a web on the lower portion of the standard and in rear of the grooved foot, of a reversible plow point adapted to fit within the grooves in the standard foot, and provided with prongs that extend through openings in the standard, substantially as set forth. 6th. The combination, with a standard having a grooved foot and a web constituting a sole and forming a protected recess in rear of the foot, of a reversible plow point having prongs that extend back into said recess, substantially as set forth. 7th. The combination, with a standard having a grooved foot, of a reversible plow point having prongs extending rearward from the ends of the flanges of the plow point, the upper prong extending beneath the mould-board, and the lower one between the foot and a web, substantially as set forth. 8th. The combination, with a standard provided with grooves extending back to the mould-board, of a reversible plow point having correspondingly-inclined flanges provided, on their inner and adjacent faces, with ribs that extend their entire length, substantially as set forth. 9th. The combination, with a standard constructed with grooves on the upper and lower side of its foot portion, and an open slot in the front edge thereof, of a reversible plow point provided with T-shaped flanges that fit into the said grooves and open slot, substantially as set forth. 10th. The combination, with the standard and mould board, of a reversible plow point provided with prongs that extend beneath the mould board and in contact therewith, substantially as set forth. 11th. The combination, with the standard and reversible plow point, of a reversible plow having bevelled faces on opposite surfaces and opposite ends, substantially as set forth.

No. 18,313. Harvester Binder.

(Lieuse de moissonneuse.)

William P. Plant and Moses Trotman, London, Ont., 15th December, 1883; 5 years.

Claim.—1st. The combination of the tumbling rod G^1 , shaft B^1 , bevelled gears N^1 , sprocket wheels M^1 and chain belt O^1 provided with pin link O^1 , for moving the pocket P^1 as well as the swinging arm P in a curvilinear motion, substantially as shown and described for the purpose specified. 2nd. The combination of the circular dog R^1 , knotted cam S^1 , shaft B^2 and pocket P^1 for operating the knotter cam S^1 , to tie the knot on its backward movement, substantially as shown and described. 3rd. The combination of the tumbling rod G^1 , shaft B^1 , bevelled gears N^1 , sprocket wheels M^1 , chain belt O^1 , connecting rod V^1 , wiper U^1 , lugs C^1 , K^1 , shaft B^2 , crank arms T^1 , T^2 , connecting rod V^2 , arm P , needle W , compressor X , connecting rod A^1 and coil spring A^2 , substantially as shown and described and for the purpose specified. 4th. The combination of the curved spring wiper U^1 provided with a notch C^1 , latch C^2 and pin C^3 , substantially as shown and described and for the purpose hereinbefore set forth. 5th. The combination of the movable carriage L , flanges Z^1 , Z^2 , connecting rods J^1 , J^2 , bell crank J^3 , lever J^4 and cog segment J^5 , substantially as shown and described and for the purpose specified. 6th. The combination of the tumbling rod G^1 , shaft B^1 , bevelled gears H^1 , H^2 , lever J^4 , cog segment J^5 , substantially as shown and described and for the purpose specified. 7th. The combination of the stationary portion N^2 of the binder-table, pocket N^3 , screw R^3 and spring N^3 , movable portion N^4 of the binder-table, pivotal fork N^5 , clutches N^6 , tumbling rod G^1 , flanged lug N^6 , wiper N^9 secured on the outer end of the pocket P^1 , substantially as shown and described and for the purpose specified. 8th. The combination of the folding grain table X^3 , hinges X^1 , X^2 , frame C , axle slide X^5 , axle X^6 and wheel X^4 , substantially as shown and described and for the purpose specified.

No. 18,314. Attachment of Horses to Vehicles. (Système d'attelage.)

Louis P. Bruneau, (Co-inventor with Charles G. C. Simpson,) Montreal, Que., 15th December, 1883; 5 years.

Claim.—1st. The combination of the whiffle-trees G having loops H arranged as described, with shackles D having ring E and bar F , substantially as set forth. 2nd. The combination of the whiffle-trees G , loops H , tug strap K and breeching O , substantially as described. 3rd. The combination of the buckle S having eye T , trace M , M^1 , tug strap K and breeching O , substantially as shown and set forth. 4th. The combination of the buckle S having eye T , trace M , M^1 , tug-strap K , breeching O and saddle strap P , substantially as described.

No. 18,315. Car-Coupling. (Accouplage de Wagons.)

Elijah M. Hobbs and Charles Solomon, Santa Rosa, Cal., U. S., 15th December, 1883; 10 years.

Claim.—1st. In a car-coupling, the open top draw-head A and the swinging latches D , in combination with the coupling pin C secured in the draw-heads and having shoulders e^1 , with which the swinging latches engage, substantially as herein described. 2nd. An automatic coupling consisting of the open top draw-head A provided with the passage p , hole b in its floor, and side walls m , in combination with the coupling-pin C , having in its forward end shoulder e^1 , its rear end bevelled to correspond with passage b , and having a rear under shoulder d and middle shoulder c , and the externally pivoted link latch D , all constructed, arranged and operated as set forth. 3rd. The open top draw-head A having chambers a , and the latches D having elongated slots h through which they are pivoted to the shank of the draw-heads by pins or bolts h , whereby a play is given to the latches to bear against the front wall of chamber a and relieve the pins h , in combination with the coupling pins C secured in the draw-heads and having shoulders e^1 , with which the latches engage to couple the draw-heads, substantially as herein described. 4th. In a car-coupling, the open top draw-head A having passage p and hole c , in combination with the coupling pin C adapted to fit and be secured in said draw-head and having a rear top shoulder o , and the link latch D for securing said pin C , substantially as herein described. 5th. In a car-coupling, the open top draw-head A in combination with the externally pivoted link latch D , provided with a cover or cap P , substantially as and for the purpose herein described. 6th. In a car-coupling, the draw-head A , coupling pin C and pivoted link latch D , in combination with the rod q having a hand-loop g^1 at its top, and secured to the link latch by a chain r , substantially as herein described. 7th. In a car-coupling, the draw-head A provided with passage b and hole c and side walls m , and the pivoted link latch D , in combination with the link pin C having a rear bevelled end, with shoulder d , for engaging in the hole c of the draw-head, and a link portion n on its forward end, substantially as herein described. 8th. In a car-coupling, in combination with opposite draw-heads and suitable latching devices, a coupling link or pin having a hinged or pointed body adapting it to conform to any direction, to engage with the draw-heads, substantially as herein described. 9th. In a car-coupling, in combination with the draw-heads A and link latches D , the link pin C adapted to fit in said draw-heads and to engage with said latches, said link pin having a jointed or hinged body at w , substantially as and for the purpose herein described.

No. 18,316. Corset.

Isaac M. Van Stone and Frederick Crompton, Toronto, Ont., 15th December, 1883; 5 years.

Claim.—1st. The improvement in corsets consisting in stiffening the sections thereof by a collection of hairs bound together, in a continuous length, by a thread externally wound thereon and inserted between the inner and outer materials of the corset, and secured by parallel rows of stitching, as set forth. 2nd. The improved stiffening for corsets consisting of a collection of hairs bound together, in a continuous length, by thread externally wound thereon, the lengths laid side by side and collectively re-enforced at both ends by a metallic tip D , bent up on the outside and inserted in a pocket formed by stitching the inner and outer materials of the corset in parallel rows, as set forth.

No. 18,317. Rolling Window Screen.

(Rideau de fenêtre à rouleau.)

Thomas Tribe, Colorado Springs, Col., Loftus N. Keating and Albert Dickerman, Muskegon, Mich., U. S., 15th December, 1883; 15 years.

Claim.—1st. A rolling screen or shade having cords threaded, through the fabric of which it is composed, near the edges, substantially as set forth. 2nd. The combination, with a rolling screen or shade, of elastic strips arranged near its edges and attached to the rollers and bottom slot, substantially as set forth. 3rd. The combination with a rolling screen or shade having cords threaded, through the fabric of which it is composed, near the edges, of elastic strips arranged near said cords and having their upper and lower ends attached to the roller and bottom slot, respectively, as set forth. 4th. The combination of the window frame, the spring roller E , the screen D having cords O threaded through its fabric near the edges, and the guide strips L having pockets M and slits N , as set forth. 5th. The combination of the spring roller, the roller screen, the transverse guide strips P , Q and the wire netting box R , as and for the purpose set forth. 6th. The combination, with the window-frame, of the blocks G having grooves H , the bearings or brackets F and the screen roller, substantially as set forth. 7th. The combination of the rolling screen, the cords threaded longitudinally through the same, and the bottom slot having laterally projecting plates to which the lower ends of said cords are secured, as set forth. 8th. The combination of a spring roller, a screen or shade cords threaded longitudinally through the same near the edges, a bottom slot having laterally projecting guide plates, and the vertical guide strips L having slits N and pockets M , as set forth. 9th. The combination of the window frame, the rolling screen having bottom slot S provided with spring bolts Y , the con-

necting cord B having central pendent loop D, and the guide strips L having notches A', as and for the purpose set forth.

No. 18,318. Wire Wiping Apparatus.

(Appareil pour essuyer le fil de fer.)

Henry Roberts, Pittsburgh, Penn., U. S., 18th December, 1883; 15 years.

Claim.—The combination of a series of reciprocating packers T with the box K containing wiping material k, and with the revolving roll L, as and for the purposes specified.

No. 18,319. Annealing Pot for Wire.

(Chaudière pour recuire le fil de fer.)

Henry Roberts, Pittsburgh, Penn., U. S., 18th December, 1883; 5 years.

Claim.—1st. The annealing pot described, composed of the annular vessel D having the external flange D₁ and internal lugs D₂, and adapted to serve as and for the purposes herein specified. 2nd. The chain M, tongs J, H, pivot I, headed rod K, K₁ and plate L, in combination with the annealing-pot D, D₁, D₂ and adapted to serve there-with, as and for the purposes herein specified.

No. 18,320. Apparatus for Feeding Wire.

(Appareil pour servir le fil de fer.)

Henry Roberts, Pittsburgh, Penn., U. S., 18th December, 1883; 5 years.

Claim.—1st. In combination with a metal bath M and take-up mechanism O, a series of wire-delivering reels B, B, and corresponding guide pulleys C, and movable pulleys D, one set for each wire, each with its slotted guide J arranged to serve, as and for the purpose herein specified. 2nd. In a wire-feeding apparatus, the delivering drums B, pulleys C, P, guides J and guide-bars F, in combination with each other and with the traversing pulley D, rope H, pulley G and weight I, all substantially as herein specified. 3rd. In a wire-feeding apparatus, the movable pulleys D and ropes H, with means for inducing tension on the latter, in combination with the pulleys C, P, reels B and metal bath M, and with a check-rope K for each movable pulley, as herein specified.

No. 18,321. Apparatus for Pickling Wire.

(Appareil pour décapier le fil de fer.)

Henry Roberts, Pittsburgh, Penn., U. S., 18th December, 1883; 5 years.

Claim.—1st. The reel A with its removable pin D and lifting-bail A, in combination with the stand G G₁ adapted to serve relatively to each other and to the series of bundles of wire m, as herein specified. 2nd. The pins D and bushings A z, in the reel A, arranged to serve relatively to the bundles of wire and to the stand G G₁, as herein set forth.

No. 18,322. Shooting and Army Gun.

(Fusil de Chasse et de Muniti n.)

Francois X. Lefebvre (Assignee of Joseph Duval), Laprairie, Que., 18th December, 1883; 5 years.

Reclamé.—10. Dans un fusil de chasse et de guerre combiné, l'extracteur U en combinaison avec la cavité U₁, la clef double U₂, le ressort U₃, le pivot U₄ et le levier U₅, le tout tel que ci-dessous décrit et pour les fins sus-mentionnées. 20. Dans un fusil de chasse et de guerre combiné, la clef de sûreté S₁, en combinaison avec la détente P P₁ P₂ et la sous-garde T, le tout tel que plus haut décrit et pour les fins sus-mentionnées. 30. Dans un fusil de chasse et de guerre combiné, le ressort N, en combinaison avec le frappeur I I₁ et le bâti W, le tout tel que ci-dessous décrit et pour les fins sus-mentionnées. 40. Dans un fusil de chasse et de guerre combiné, la détente P avec les projections P₁, P₂, en combinaison avec le pivot R et le frappeur I I₁ P₂, le tout tel que ci-dessous décrit et pour les fins sus-mentionnées. 50. Dans un fusil de chasse et de guerre combiné, la coulisse Q, avec la cavité L, en combinaison avec le levier J et le frappeur I I₁ I₂, le tout tel que ci-dessous décrit et pour les fins sus-mentionnées. 60. Dans un fusil de chasse et de guerre combiné, le ressort à détente Q, en combinaison avec la vis Q₁, la détente P P₁ P₂ et le frappeur I I₁ I₂, le tout tel que ci-dessous décrit et pour les fins sus-mentionnées. 70. Dans un fusil de chasse et de guerre combiné, la combinaison de l'exctracteur U, de la clef de sûreté S₁, du ressort N, la détente P, de la coulisse Q et du ressort Q, avec le bâti W, le levier J, le frappeur I I₁ I₂, le tire-cartouche T₁ T₂, la boîte B et le canon D, le tout tel que plus haut décrit et pour les fins sus-mentionnées.

No. 18,323. Machine for Cutting Off and Bending Wire to form Staples.

(Machine à couper et plier le fil de fer pour former les Crampes.)

Thomas S. Baylis, Toronto, Ont., 18th December, 1883; 5 years.

Claim.—1st. A revolving drum having, fixed on its periphery, one or more pairs of projecting fingers or formers K, in combination with a finger G situated as described, so that the formers K, in revolving will pass on either side of the finger G, thereby bending the wire over the said finger, substantially as and for the purpose specified. 2nd. In a staple machine, a revolving drum C having forming fingers K and cutting-off knives K arranged on its periphery, as specified and operating in connection with the finger G and knife K₁, for the purpose of cutting off and forming the staples from the wire F fed in by the rollers D, substantially as and for the purpose specified. 3rd. In a staple machine having feed rollers, timed to feed the wire into the cutting-off and bending mechanism at a regular speed, a groove f for guiding the wire, and a shouldered-fixed knife K₁, in combination with the revolving drum C having fingers K and knives K, substantially as and for the purpose specified.

No. 18,324. Car Truck. (Train de Char.)

Joseph Huson and William Willis, Jr., Rochester, N. Y., U. S., 18th December, 1883; 5 years.

Claim.—1st. In a car truck, the frame composed of the bars A, B, having the parallel longitudinal bars E, E₁, in combination with the downwardly projecting brackets, or hangers G, G vertically slotted and the inner hangers N, having at the lower ends the circular apertures N₁, substantially as and for the purpose shown. 2nd. In car-trucks, the hangers N, having the circular apertures N₁ at the lower ends, in combination with the sleeve or tubular arm O, connecting said lower ends at the hangers, provided centrally with the bearing-brasses P and with the axle T, substantially as shown. 3rd. In car-trucks, the frame and hangers, as described, having the slots or guide-ways J and the tubular arm or sleeve O, provided with bearing-brasses P, in combination with the anti-friction wheel L, the axle T carrying the flange-wheel V and the axle-bearing W, substantially as and for the purpose shown.

No. 18,325. Grain-Binding Harvester.

(Moissonneuse-lieuse.)

John F. Seiberling, Akron, Ohio, U. S., 18th December, 1883; 5 years.

Claim.—1st. The combination, in a grain-binding harvester, of the main supporting and driving-wheel, the driver's seat located on the axle, on the outer side of said wheel, a dumping bundle-carrier supported upon said axle, in rear of the driver's seat, a cutting apparatus located centrally of the driving-wheel, on the opposite side from the driver's seat, and a binding mechanism located on the platform side of said wheel, substantially as and for the purpose described. 2nd. The combination of the driver's seat with the thimble-support on the outer end of the main axle, the supporting brace having a sliding connection, with the tongue of the machine and the foot-rest on said brace, substantially as described. 3rd. The gear support A provided with the main drive-wheel axle, projecting from its side near one end, and a sleeve-bearing for the secondary shaft, projecting on the opposite side near the other end, in combination with the harvester frame bar D provided with the sleeve D₁ and hook-bracket D₂, arranged and operating substantially as described. 4th. The combination of the gear support A provided with the drive-wheel axle A and pinion-shaft D₁ and sleeve A, the harvester frame-bar D provided with the sleeve D₁ and hook-bracket D₂, and the lifting lever mounted on the gear support, and connected by chain with the hook-bracket D₂, substantially as described. 5th. The rib or flange d on the harvester-frame thimble D₁, in combination with the hook d on the gear support A, for keeping said thimble in place, substantially as described. 6th. The combination of the crank-shaft I, the spur-pinion C₃, the shaft J and the spur-wheel J₁, and sliding pinion J₂ thereon, for transmitting motion from the harvester to the binding mechanism, substantially as described.

No. 18,326. Car-Coupling. (Accouplage de Chars.)

Jay L. Williams, Lone Tree, Iowa, U. S., 19th December, 1883; 5 years.

Claim.—1st. The draw-head A, having a flaring mouth of a width somewhat in excess of the breadth of the link and of a greater height, and terminating in a long throat having the width of the link and provided with a spiral spring E, the lug B, to abut against the end of the ear, a supplemental pin G passing through a suitable perforation in the throat, and holding the full sectioned end / of the link F therein, the coupling pin H, having a shoulder h and passing through perforations in the mouth of the draw-head, one of the said perforations having a facing I above, and notches i, i within, to engage the shoulder h and retain the pin in an elevated position, the link F having a full sectioned end, and the forward or projecting end having a flaring mouth C, terminating in a long throat //, of a sufficient width to receive the link, and perforated to receive the pin G, the upper external part of the mouth provided with a facing I, perforated to receive the coupling pin H, and having the notches i, i. 3rd. A coupling-pin of angular or other section, which will prevent the same turning in its seat, having its lower end formed with a shoulder h. 4th. The link F, having one end bevelled outward to an edge and running out to a point, the other end of square, circular or other full cross section, all substantially as described and for the purpose set forth.

No. 18,327. Machine for Manufacturing and Sawing Laths. (Machine à fabriquer et scier la latte.)

Arthur Carrier, Bay City, Mich., U. S., 19th December, 1883; 5 years.

Claim.—1st. In a circular sawing machine having the solid press roller frame E located over the saws, and provided with the press roller P suitably attached to the front end thereof, the back end being rigidly attached to the shaft F, which is located back of the saws, the combination of the press roller frame E and press roller P, and shaft F, with the clips p, substantially as shown and for the purpose specified. 2nd. In a lath sawing machine, a shield or guard consisting of the press roller frame E, constructed of one solid piece placed over the saws and at an angle inclined forward, and having suitably attached at its front end and under side, and in front of the saws, the presser roller P, the rear end of the frame being rigidly attached by the clips p to the shaft F, which is located back of, and above the saws, all combined to operate substantially as and for the purpose specified. 3rd. The combination of a circular sawing machine with a pressure foot, placed in the rear of the saw and consisting of the foot I, the front portion of which is slightly turned up, and the back portion being turned up at right angles with the foot, and provided with the slot c, and secured to the cross piece H by the bolt W, the cross piece H being provided with the slots c and secured to the standard g by the bolts f, all constructed substantially as and for the purpose specified. 4th. The combination of a lath sawing machine with a spreader, consisting of a plate R provided with the slots S and T, the spreader consisting between which are placed the dividing pieces o, all outside pieces o, and held together by the bolt d, and held to the plate R by the bolts c.

which are attached to the outside pieces *oi*, substantially as described and shown. 5th. In a circular sawing machine, a table *m* located above and covering the entire machinery, and supported by the legs *n*, which are secured to the under side of the table *m*, as described, the lower end of the legs *n* resting on the bed *B*, and the back legs *n* being screwed to the bed *B* by the hinges *r*, all in combination and operating substantially as shown and for the purpose specified.

No. 18,328. Composition of Matters for Rheumatism. (*Composition de Matières pour le Rhumatisme.*)

Elie Racicot, Quebec, Que., 19th December, 1883; 5 years.

Reclame.—Un remède composé de poivre rouge, poivre blanc émoussé, clous moulus, muscade, canelle, huile de kagipit et de frêne piquant, le tout mélangé avec l'alcool dans les proportions et pour les fins décrites.

No. 18,329. Composition of Matters for Purifying and Strengthening the Blood. (*Composition de matières pour purifier et renforcer le sang.*)

Elie Racicot, Quebec Que., 19th December, 1883; 5 years.

Reclame.—Un remède composé de carbonate de fer, réglisse en poudre, jalape également en poudre, le tout mélangé dans du vin dans les proportions et pour les fins décrites.

No. 18,330. Composition of Matters for Cough, Cold, Bronchitis and Dyspepsia. (*Composition de matières pour la Toux, le Rhume, les Bronchites et la Dyspepsie.*)

Elie Racicot, Quebec, Que., 19th December, 1883; 5 years.

Reclame.—Un remède composé de melasse, d'eau, de gomme de sapin, de gomme de pin et d'huile de canelle, dans les proportions et pour les fins décrites.

No. 18,331. Button. (*Bouton.*)

Nelson C. Newell, Springfield, Mass., U. S., 19th December, 1883; 5 years.

Claim.—1st. The within-described improved button, consisting of the shell *a* made from elastic material, substantially as described, and having a cup-shaped face, the face piece *b* made from pearl or other similar material, substantially as described, and the metallic eyelets *c* inserted through the face-piece into the shell, substantially as set forth. 2nd. A button consisting of a back *a* having a face-piece *b* of pearl or analogous material, substantially as described, secured to its back by the two eyelets *c*, inserted through the face-piece into the back, which also serve to form passages through which thread is carried, which secures the button to a fabric, substantially as set forth.

No. 18,332. Rail Stringer. (*Ceinture de Rails.*)

Henry Holgate, Toronto, and Robert Bagnall, Hamilton, Ont., 19th December, 1883; 5 years.

Claim.—1st. As an improved rail stringer, two l-rails *A* laid on their bases side by side, the inner edges of their bases touching each other, or nearly so, a similarly-shaped centre rail *B* inverted and slipped between the two rails *A*, the flanges of its base resting on the heads of the side rails, and the bottom of its base presenting a level support for the running rail *C*, in combination with clips arranged to combine the rails together, substantially as and for the purpose specified. 2nd. The rails *A* and *B* arranged, as described so as to form a support for the running rail *C*, the clip plates *D* and bolts *E* arranged to combine the rails together, in combination with packing pieces *F* inserted between the rails *A* and *B*, and between the rails *A* and clip-plates *D*, substantially as and for the purpose specified. 3rd. In combination with a rail-stringer composed of the rails *A* and *B*, arranged and combined together, as described, a plate *H* placed on the timber *G* and held there by spikes driven into the timbers, through holes in the plate and notches cut in the outer edges of the flanges of the rails *A*, substantially as and for the purpose specified.

No. 18,333. Sewing Machine. (*Machine à coudre.*)

Charles A. Dearborn, Walter W. Winton and Hiram J. Snyder, New York, N. Y., U. S., 19th December, 1883; 5 years.

Claim.—1st. In a sewing machine, the combination, with a rotary driving shaft *d*, a needle operating lever *d* and shuttle operating lever *e*, and an eccentric, or its equivalent, on the driving shaft connected with the needle lever, of the elbow lever *n* having one arm linked with the eccentric lever, and the opposite arm coupled with the shuttle lever, substantially as and for the purpose set forth. 2nd. In a sewing machine, the combination, with the needle lever *d*, shuttle lever *e*, driving shaft *f* and eccentric *k*, of the strap *j* and pitman *l*, connecting the eccentric with the needle lever, and the elbow lever *n*, and link *p* connecting the eccentric strap with the shuttle lever, arranged and operating substantially as and for the purpose set forth. 3rd. In a sewing machine, the combination, with a driving shaft having a fast and loose pulley, of a pivoted or swinging bobbin winder from one pulley to the other, and operatively connected with the bobbin winder, whereby the depression of the bobbin winder will bring its winding roller into contact with the loose pulley and simultaneously shift the belt thereon, whereas the opposite movement of the bobbin winder will withdraw its roller from the loose pulley and shift the driving belt therefrom onto the fast pulley, substantially as and for the purpose set forth. 4th. In a sewing machine, the combination, with a fast and loose pulley, a shifting belt and a shifting bobbin winder, of the belt shifting lever *m* engaging the belt at one end and operatively connected with the bobbin winder at the other end,

and arranged to automatically shift the belt by the movement of the bobbin winder, substantially as and for the purpose shown and described. 5th. The combination, in a sewing machine, with fast and loose pulleys, a shifting belt and a pivoted bobbin winder, of the belt shifting lever *n* and a spring *p* arranged to constantly press one arm of the shifting lever against one arm of the bobbin winder, the said contacting arms being so disposed that, when the bobbin winder is raised out of action, said arms are placed at right angles, or nearly so, whereas, when the winder is depressed into position for action, said arms are parallelled or nearly so, whereby the spring impelled lever *n* tends to hold the winder in either position in which it may be placed, and tends to hold the winding roller against the loose pulley when so placed, substantially as shown and described. 6th. The combination, with the pivoted bobbin winder *r*, the fast and loose pulleys *s*, *t*, belt shifter *m* and its spring *p*, arranged and operating, substantially as and for the purpose set forth. 7th. A sewing machine presser foot formed with the semi-tubular shank *f*, convex on the outer side of the foot and perforated with the key hole slot *k*, substantially as and for the purpose set forth.

No. 18,334. Gauge Cock. (*Indicateur d'eau.*)

Louis B. Fulton, Pittsburgh, Penn., U. S., 19th December, 1883; 5 years.

Claim.—1st. In a gage-cock having a valve seating against the pressure and capable of rotation, the combination, with said valve, of a rotative device located at a point forward of the valve and seat, substantially as described. 2nd. In a gage-cock having a valve seating against the pressure, the combination, with said valve and its seat, of an enlarged cylindrical chamber in front of said valve and seat and a device, on the valve or its stem, located in front of said valve and seat and in said chamber, and adapted to rotate said valve by the projectile force of escaping steam or water, substantially as described. 3rd. In a gage-cock having a valve seating against the pressure and means of rotation therefor, under the projectile force of steam or water, the combination therewith of guiding and centering devices located in front, or forward of said valve and inside the cock, substantially as described. 4th. A gage-cock provided with two valves and a corresponding number of valve seats, both said valves being on a single stem, one valve arranged to close positively and the other to close by the boiler pressure, substantially as described. 5th. In a gage-cock, the combination of the sections *A*, *B* having the respective valve seats *b*, *c*, chamber *a* and outlet *d*, *e*, with loose reciprocating or sliding stem *g* having the valves *i* and *k*, the former arranged to close positively and open by the boiler-pressure, and the latter arranged to open positively and close by the boiler-pressure, substantially as described. 6th. In a gage-cock, the combination of the rotating valve stem *g*, nipple *p* having recess *s*, and hard metal plate *r*, substantially as described. 6th. In a gage-cock, the combination, with a valve seating against the pressure, of a chamber in front of said valve, larger in diameter than the valve seat, and guiding device on the valve fitting said chamber and serving to guide the said valve to its seat, substantially as described.

No. 18,335. Galley Type Lock.

(*Serre-forme d'imprimerie.*)

Samuel D. Webb, Washington, D. C., U. S., 19th December, 1883; 5 years.

Claim.—1st. A galley type lock consisting of the combination of two strings of preferred dimensions, curved to the arc of a circle, riveted together at their central convex surfaces working in the same plane, and two sliding clasps, all arranged substantially in the manner and for the purposes set forth. 2nd. A galley type lock consisting of the combination of two springs of preferred dimensions, curved to the arc of a circle, riveted together at the central convex surfaces working in the same plane, and having the edges suitably notched, plane convex tip on the ends of said springs and two sliding clasps, all arranged substantially in the manner and for the purposes set forth. 3rd. In a galley type lock, the combination of the curved springs firmly connected and working in the same plane, having longitudinal slots and indentations on the outer sides of the springs, at right angles to, and along the sides of said slots, and two sliding bolts working in said slots, substantially as set forth.

No. 18,336. Lock Winch. (*Gru de porte d'écluse.*)

James A. Gordon, Sherbrooke, Que., 19th December, 1883; 5 years.

Claim.—1st. In a lock gate winch, the counter-weights *X* on each side of the valve rod *Y*, as described and for the purpose set forth. 2nd. In a lock gate winch, the gear wheels *C* and *D*, spur-wheels *E*, *F* and *J*, ratchet *D*, pawl *L*, rods *M*, rack *G* having lugs *V* and eye *H* pivoted to foot board *B* by lugs *N*, in combination with sheaves *I*, wire-rope *U* and counter-weights *X*, as shown and described, and for the purposes set forth.

No. 18,337. Window Shade. (*rideau de fenêtre.*)

Andrew Barrickle, Jersey, N. J., U. S., 19th December, 1883; 5 years.

Claim.—A window shade composed wholly or in part of translucent material, said translucent material having similar designs on both sides, lithographed or otherwise, formed directly upon the surface of the translucent material itself, such design, *w* en so lithographed or otherwise formed directly upon both sides of the shade, corresponding or registering, substantially as shown and described.

No. 18,338. Telegraph and Telephone Cable. (*Câble de télégraphe et de téléphone.*)

Josephus C. Chambers, Cincinnati, Ohio, Nelson C. Girdley, Chicago, Ill., and Preston Brady, Detroit, Mich., U. S., 19th December, 1883; 5 years.

Claim.—1st. In a telegraph or telephone cable, one or more induction wires, rods, bands or strips insulated from the electrical conductors, and from the earth, and having the terminal ends thereof extended beyond the ends of the cable proper, and upturned and provided with one or more points, substantially as and for the purpose

specified. 2nd. The combination, with a series or groups of telegraph or telephone electrical conductors severally, having coverings of insulating material, of one or more induction wires, rods, bands or strips arranged in electrical proximity to the telegraph or telephone electrical conductors, and insulated therefrom and from the earth and having disconnected terminal ends so as not to form a closed circuit, substantially as and for the purpose specified. 3rd. The combination, with a series or groups of telegraph or telephone electrical conductors severally, having coverings of insulating material, of one or more induction wires, rods, bands or strips arranged in electrical proximity to the telegraph or telephone electrical conductors and insulated therefrom, and a surrounding covering of insulating and water-proof fabric or material, substantially as and for the purpose specified. 4th. The combination, with a series or groups of telegraph or telephone electrical conductors severally, having coverings of insulating material, of one or more induction wires, rods, bands or strips, arranged in electrical proximity to the telegraph or telephone electrical conductors, and insulated therefrom and from the earth, and having its terminal ends upturned and provided with one or more points, substantially as and for the purpose specified. 5th. The combination, with a series or groups of telegraph or telephone electrical conductors severally, having coverings of insulating material, of one or more induction wires, rods, bands or strips arranged in electrical proximity to the telegraph or telephone electrical conductors, and insulated therefrom and from the earth, and having attached thereto between its terminal ends, and so as to project therefrom, one or more similar wires, rods, bands or strips D, provided with one or more points e, substantially as and for the purpose specified.

No. 18,339. Ballast Car. (*Char à gravier.*)

Thomas P. Cordrey, Massillon, Ohio, U.S., 20th December, 1883; 5 years.

Claim.—1st. In a ballast-car, the combination of the bottom frame thereof and a series of transverse rods D secured thereto, with a horizontally movable plate B having bearing wheels resting upon said rods, and mechanism for moving said plate sidewise from either end of the car, substantially as and for the purpose described. 2nd. The combination of the frame of a car carrying a hopper-receiver, and a series of transverse rods D dependent therefrom, a horizontally movable plate B, and its bearing wheels P, with rod E extending longitudinally of the car, guide pulleys K, chains F and F₁, wound upon said rod E, in opposite directions, and mechanism for rotating said rod E from the end of the car, substantially as described. 3rd. The combination of the frame of a ballast car, a series of transverse rods D dependent therefrom, the plate P and its bearing wheels with rod E extending longitudinally of a car, chains F and F₁, wound upon said rod E, in opposite directions, and secured in opposite sides of the plate B, pulleys K, sprocket-wheel L, chain I and rod M, substantially as and for the purpose described. 4th. The combination of the frame of a ballast-car having its sides inclined towards the central opening, with the scraper or leveller W having its sides converging and united to form an acute edge over the centre of the track, and its suspension hooks w, whereby said scraper is adapted to swing over the track, substantially as shown and described.

No. 18,340. Gimlet Pointed Screw.

(*Vis à pointe en vrille.*)

Hayward A. Harvey, Orange, N.J., U.S., 20th December, 1883; 15 years.

Claim.—A pointed screw, having the spiral rib, which forms the thread raised from the body of the blank, in contradistinction to cutting a spiral groove in the blank, said raised spiral rib continued around the pointed part of the body, and forming a gimlet point, substantially as described.

No. 18,341. Device for Indicating Railway Stations. (*Appareil pour indiquer les stations de railroads.*)

Andrew McWilliams and William Wallace, Galt, Ont., 20th December, 1883; 5 years.

Claim.—1st. As a station indicator, a band having the names of the stations printed on its surface and connected to two drums, so that it can be wound from one drum to the other, only one name at a time being exposed between the two drums, a spur wheel journaled on the spur-wheel shall impart a similar movement to the two drums, causing the band to unwind off one as it is wound on the other, in combination with a ratchet-wheel connected to the spur-wheel, and operated by a pivoted arm provided with a ratchet pawl, substantially as and for the purpose specified. 2nd. In a station indicator, in which the drums holding the printed band are operated by ratchet gearing, as described, an arm having the ratchet pawl pivoted to it and extending between two stops, which permit it to move only a given distance, in combination with an elastic cord arranged to actuate the arm, substantially as and for the purpose specified. 3rd. In a station indicator, in which the drums holding the printed band are operated by ratchet gearing, as described, an arm journaled on the spindle of the ratchet-wheel and having a reversible ratchet pawl pivoted on it, and an extension piece fixed to it and having a quadrant shaped slot, in combination with a spring rigidly held at one end of the frame of the machine, and adjustably connected at its other end to the quadrant slot, so that the action of the spring may be altered to suit the reversed position of the pawl. 4th. In a station indicator, in which the drums holding the printed band are caused to revolve by intermittently revolving mechanism, a bell in combination with a pivoted hammer operated by corrugations on a collar fastened to the spindle of the ratchet driving mechanism, substantially as and for the purpose specified. 5th. In a railway train provided with an ordinary bell rope and station indicator in one or more of the cars, a short rope or link connected at one end to the driving gear of the station indicator, and to the bell rope at its other end, the latter connection being such that the bell rope may be pulled from within the car without affecting the station indicator, but when pulled by the engine driver will communicate motion to the station indicator, substantially as and for the purpose specified.

No. 18,342. Brush Boring Machine.

(*Machine à percer les brosses.*)

Richard C. Fellows, (assignee of Martin J. Imbach,) New York, N.Y., U.S., 20th December, 1883; 5 years.

Claim.—1st. The combination, substantially as before set forth, of the swivelling back-holder, the back pattern and the index. 2nd. The combination, substantially as before set forth, of the mandrel, the swivelling back-holder, the back pattern and the index.

No. 18,343. Corset Clap. (*Agrafe de corset.*)

Max W. Henius, New Haven, and Ferdinand S. M. Blin, Waterbury, Ct., U.S., 20th December, 1883; 5 years.

Claim.—1st. The integral corset clasp plate having a main stud eye, for the reception of a corset-stud, and divided at its outer end into two springs, substantially as described, whereby a stud is embraced at its shank between said springs, and is capable of being released at the outer end by slightly twisting said plate, as set forth. 2nd. The integral clasp-plate provided with the main eye and the retaining eye, and divided into two springs at its outer end for grasping or closing upon a stud, when in position for use, at or near the outer end of the plate, substantially as described, thereby preventing said stud from freely re-entering the main eye and becoming disengaged, as set forth. 3rd. The integral clasp-plate divided or slotted at its outer end to form two springs, and provided with the main eye, the retaining eye, and the straight-sided slot connecting said eyes, for adapting a stud to be released from the outer end by slightly twisting said plate, substantially as described. 4th. The combination, with a pair of corset steel or busks, of headed stud and an integral clasp-plate divided into two springs at its outer end, for grasping or closing upon the stud, when in position for use, and provided with a main eye and a retaining eye. 5th. The combination, in a corset-clasp, of the integral clasp-plate divided into two springs at its outer end, with the covering plate B, substantially as described.

No. 18,344. Pitman Coupling for Harvesting Machine. (*Joint de bielle de moissonneuse.*)

Thomas Urié and Richard Goyn, Boulder, Col., U.S., 24th December, 1883; 5 years.

Claim.—The pitman-coupling for harvesting machines consisting of the arms A, A₁, having elbows B and B₁, top plate C and cone-shaped projections F and F₁, in combination with the adjusting-bolt D having a nut E, substantially as and for the purposes shown and specified.

No. 18,345. Car. (*Char.*)

Thomas L. Wilson, Port Hope, and Eugene H. Davis, Toronto, Ont., 24th December, 1883; 5 years.

Claim.—1st. In a car having hoppers constructed in its bottom, with a series of transverse joists permanently secured over the top of the hoppers, a plank placed longitudinally in the centre of the car and resting on top of the transverse joists, in combination with doors hinged on either side of the car and arranged, when closed, to form a bottom to the car over the said hoppers, substantially as and for the purpose specified. 2nd. In a car having hoppers constructed over the bottom with a series of transverse joists, permanently secured over the top of the hoppers, and a plank in the centre of the car resting on top of transverse joists, the doors hinged on either side of the car and arranged, when closed, to be flushed with the centre plank, in combination with the shelf pieces, arranged to support the outer edges of the doors and form a joist around the hoppers, as specified.

No. 18,346. Mechanism for Operating Semaphore Signals. (*Mécanisme pour faire fonctionner les signaux télégraphiques.*)

Andrew McWilliams and William Wallace, Galt, Ont., 24th December, 1883; 5 years.

Claim.—1st. A semaphore arm fixed to a spindle suitably journaled and having a spur-wheel keyed or otherwise fastened to it, a rod provided with a rack to mesh with the spur-wheel and connected to an arm of a pivoted bell-crank, in combination with a cable fixed to the other arm of the bell-crank and extending on either side of the points on the railroad track, where mechanism is provided by which the wheels of a passing train actuate the cable, so as to impart a vertical adjustment to the rack-rod and, through it, operate the semaphore, substantially as and for the purpose specified. 2nd. A revolving semaphore lamp having its lenses of one colour, above or below the plane of its lens of a contrasting colour, in combination with a fixed blind so situated that, when the lamp is revolved, the blind will hide from view the lenses of one colour, while exposing the lenses of the other, substantially as and for the purpose specified. 3rd. A semaphore arm fixed to a spindle suitably journaled and having a bevelled pinion keyed to it, to mesh with a bevelled pinion on the spindle of a revolving lamp, a spur-wheel fastened to the semaphore and meshing with a rack on a vertically adjustable rod connected to one arm of a pivoted bell-crank, in combination with a cable fixed to the other arm of the bell-crank and extending on either side of it to points on the railroad track, where mechanism is provided by which the wheels of a passing train actuate the cable, so as to impart a vertical adjustment to the rack-rod and, through it, operate the semaphore and lamp, substantially as and for the purpose specified. 4th. A vertically adjustable rod connected to one arm of a pivoted bell-crank, a cable attached to the other arm of the bell-crank and extending on either side of it to points on the railroad track, where mechanism is provided by which the wheels of a passing train actuate the cable, so as to impart a vertical adjustment to the rack-rod and, through it, operate the semaphore and lamp, substantially as and for the purpose specified. 5th. A vertically adjustable rod connected to one arm of a pivoted bell-crank, a cable attached to the other arm of the bell-crank and extending on either side of it to points on the railroad track, where mechanism is provided by which the wheels of a passing train actuate the cable, so as to impart a vertical adjustment to the rack-rod and, through it, operate the semaphore and lamp, substantially as and for the purpose specified. 6th. A vertically adjustable rod connected to one arm of a pivoted bell-crank, a cable attached to the other arm of the bell-crank and extending on either side of it to points on the railroad track, where mechanism is provided by which the wheels of a passing train actuate the cable, so as to impart a vertical adjustment to the rack-rod and, through it, operate the semaphore and lamp, substantially as and for the purpose specified.

pulleys J, located below the track K and fixed to a spindle N, having attached to it the segment O having ratchet teeth cut on it, an arm P journalled on the spindle and having pivoted on it, the dogs Q, in combination with the pivoted bar R, one end of which fits into the slot i in arm P, while its upper end extends up in proximity to the rail K and, when in a vertical position, will be slightly above the rail, substantially as and for the purpose specified. 6th. The pivoted arm R carrying the dogs Q, in combination with the dogs S, pivoted on either side of the arm R and arranged, as specified, to tilt the arm, substantially as and for the purpose specified.

No. 18,347. Nail Extractor. (*Arrache-clou.*)

George W. Lewis and A. F. Grice, Portsmouth, Va., U. S., 24th December, 1883; 5 years.

Claim.—1st. A nail and spike extractor made, substantially as herein shown and described, and consisting of a lever having its lower end forked and provided with angular arms at the ends of the fork shanks, to the ends of which arms a bit or jaw is pivoted, having a transverse pindle passing into longitudinal slots in the shanks of the forks, as set forth. 2nd. In a nail and spike extractor, the combination, with the lever A having its lower end forked, and provided with angular arms B, at the ends of the fork shanks, of the jaw C, pivoted to the ends of the arms B, and having a bearing block G at its lower end, and of the jaw D, having its upper end pivoted to the upper end of the jaw C, and of the pindle E passing through the jaw D and into longitudinal slots F, in the shanks of the forks, substantially as herein shown and described and for the purpose set forth.

No. 18,348. Saw Filing Machine.

(*Machine à limer les scies.*)

David Chambers and Sturgis S. Cushman, Hull, Que., 24th December 1883; 5 years.

Claim.—1st. The combination, with the bed-plate A, of the frame D, yoked boxes G, G, screw post I, shaft K, dial plate O, file-holder carrier S and file-holder T, as and for the purpose set forth. 2nd. The combination, with the bed-plate A and a reciprocating file-holder carrier S, of the frame D, journals boxes G, G, yoke H and screw post I, as set forth. 3rd. The combination of the bed-plate A, horizontally adjustable frame D and vertically adjustable shaft K, as set forth. 4th. The combination, with the bed-plate A, of the frame D carrying shaft K, file-holder carrier S and file-holder T, as set forth.

No. 18,349. Railway Car. (*Char de railroute.*)

Thomas L. Wilson, Port Hope, and Samuel Davis, Montreal, Que., 24th December, 1883; 5 years.

Claim.—1st. In a railroad car provided with trucks, the combination of two or more brackets rigidly fastened to the bottom of the car, and extending below the bottom of the transom, or other truck timber, in such a position as will prevent the truck slewling or the car from jumping off the track. 2nd. In a railroad car provided with trucks, a boiler-plate sheet having brackets rigidly bolted to its surface, the upper arms of the said brackets being set at right angles to the sheet, and bolted to the longitudinal timbers of the car, in combination with two or more bars rigidly fastened to the same boiler-plate sheet, at or near either end thereof, and having their lower ends which project below the sheet, bent at right angles and arranged to fit below the truck transom or timbers, substantially as and for the purpose specified. 3rd. In a railroad car provided with trucks, the combination of brackets rigidly fastened to the truck side timbers in such a position that they will come in contact with the body bolster of the car, should the truck slew more than is necessary to allow it to follow the curves in the track. 4th. In a railroad car provided with trucks, two or more brackets rigidly fastened to the bottom of the truck car, and formed so as to fit below the transom or other truck timber, in combination with brackets rigidly fastened to the top of the truck side timbers, the whole being arranged substantially as and for the purpose specified.

No. 18,350. Creamer. (*Boîte à lait.*)

George J. Ainsworth, Madrid, N. Y., U. S., 24th December, 1883; 5 years.

Claim.—The combination of the cooling tank A and a set of milk pans C, one pan having an observing glass E to be viewed through a watertight opening in the tank, and all the pans provided with an outlet pipe furnished with a stop-cock G, and having connection with a goose-neck I, adjustable to draw off the milk to a level corresponding to the depth of cream in the pans, and depressible to consequently draw off the cream, as set forth.

No. 18,351. Improvements in Hammocks and Cots. (*Perfectionnements aux hamacs et lits de camp.*)

John C. Dodge, Boston, Mass., U. S., 24th December, 1883; 5 years.

Claim.—1st. The combination of ropes e, notched slats A, A₁, A₂, A₃, spreaders C and suspension cords or bridles F, substantially as described. 2nd. The combination of ropes e, notched slats A, A₁, A₂, A₃, spreaders C, bridles F₂ and side lines f, substantially as described. 3rd. The combination of ropes e, notched slats A, A₁, A₂, A₃, spreaders C, C₁, bridles F, F₂ and side lines f, substantially as described.

No. 18,352. Churn Working Mechanism.

(*Mécanisme faisant fonctionner les barattes.*)

Elie Bertrand, Kingsville, Ont., 24th December, 1883; 5 years.

Claim.—In a churning machine, the combination of the churn B and dasher-rod a, with a machine frame having the guide bar b and guides c and H, bridge pieces C and G, spur pinion D, balance wheel rod E, crank pin f, the set collar g, spur wheel F, connecting rod h, crank shaft j, bridge piece G and hand crank I, all substantially as described and for the purpose set forth.

No. 18,353. Process and Apparatus for Evaporating Liquids. (*Procédé et appareil d'évaporation des liquides.*)

Jean A. Mathieu, Port Leyden, N. Y., U. S., 24th December 1883; 5 years.

Claim.—1st. The kettle A, pipe B having a rose thereon, steam pipe S and exhaust pipe C, substantially as shown and described. 2nd. The combination of a tank E having steam pipe G, pipe F, metallic vessel M and door N, and exhaust pipe W, all constructed and arranged and operating substantially as herein shown and described. 3rd. The herein described process of separating solid matters from any fluid holding the same in solution, consisting in subjecting the same in a heated and finely divided state to the action of a partial or entire vacuum.

No. 18,354. Steam Injector. (*Injecteur de vapeur.*)

Louis Schutte, Philadelphia, Pa., U. S., 24th December 1883; 5 years.

Claim.—1st. In a jet apparatus for the forcing of liquids or fluids, an overflow valve, substantially as described, arranged to be acted upon on one side by the pressure of the discharge, and on the other side by the pressure of the steam or fluid by which the apparatus is operated, whereby an excessive counter pressure or resistance causes the automatic opening of the overflow valve. 2nd. In a steam jet apparatus, substantially such as shown, an overflow-valve communicating with the discharge end and subject to the pressure of the out-going fluid, combined with a closing piston having an area greater than that of the valve, and a conductor or passage, whereby the pressure of the steam or actuating fluid is applied to hold the overflow normally in a closed position. 3rd. In a steam jet apparatus for moving fluids, a main-valve for admitting the actuating steam to the apparatus an overflow and starting valve at the delivery end, a piston to close the overflow valve, and a valve connected and arranged to admit steam behind the piston after the opening of the main-valve, substantially as described, whereby the overflow valve is relieved from the closing pressure and permitted to remain open until after the apparatus has been set in motion. 4th. In a jet apparatus for moving fluids, the combination of the overflow-valve, the piston to close the same, the passages P, Q and the valve O acting in connection with said passages and with the steam supply. 5th. In a steam apparatus, an overflow relief valve constructed and arranged, substantially as described, to receive upon its outer side a fluid pressure, in excess of the normal pressure of the fluid discharge by the apparatus. 6th. In a jet apparatus of the character herein represented, the combination of the valve G, piston H, spring K, passages M, P, Q and valve O.

No. 18,355. Sulky Plough. (*Charrue à siège.*)

Orville A. Stoneman and Lawrence Garrity, Minneapolis, Minn., U. S., 24 December 1883; 5 years.

Claim.—1st. A sulky plough, an axle and axle frame formed of sections of tubes, and with means for supporting the beam of the plough laterally within said axle frame, substantially as set forth. 2nd. In a sulky plough, an axle and axle frame formed of sections tubing, in combination with clamps H, H₂, adapted to be adjusted and to support the beam of the plough laterally, substantially as specified. 3rd. In a sulky plough, an axle and an axle frame, and means for supporting the beam of the plough laterally within said axle frame, in combination with brace rods M₁, M₂, connecting the forward end of said beam with said axle, and means for lengthening and shortening said rods, substantially as and for the purpose specified. 4th. In a sulky plough, an axle, an axle frame and means for supporting the beam of the plough laterally within said axle frame, in combination with clamps N₁, N₂, brace rods M₁, M₂, provided with screw swivels M₃, M₄, clamps K₁, K₂, plough and beam F₁, substantially as and for the purpose set forth. 5th. In a sulky plough, an axle, an axle frame and means for supporting the plough beam laterally within said axle frame, in combination with adjustable brace rods M₁, M₂, connecting the forward end of said plough beam with said axle, and means for elevating and depressing the forward end of said plough beam, substantially as and for the purpose specified. 6th. In a sulky plough, the combination, with an axle frame of a tongue supporting sleeve R₁, of a greater width on its interior than said tongue, as and for the purpose set forth.

No. 18,356. Car-Coupling. (*Accouplage des chars.*)

John G. Peace, Eben B. Sankey, Salem, Carter Tracy, A. de Witt Rose & Henry S. Bennett, Springfield, Mo. U. S., 24th December 1883; 5 years.

Claim.—1st. In a car-coupling, the combination of sliding block E with projection E₂, draw-bar B with groove F, and projection B₁, pin G, secured out of its centre of gravity, lever H to which the pin is secured, pivoted to the draw-head and having counter-balance H₁, and lifting crank J₁ or rod J, all substantially as shown and described. 2nd. In a car-coupling, the lock-bar or yoke K, for holding the lever H down, adapted to be raised by the crank J₁, as set forth.

No. 18,357. Metallic Plastering Surface. (*Surface métallique pour crépir.*)

James Stanley, New York, N. Y., U. S., 23th December 1883; 5 years.

Claim.—1st. A metallic plastering surface consisting of the wire cloth B corrugated or ribbed, substantially as and for the purposes described. 2nd. The wire cloth B ribbed or corrugated, as shown at a, and attached to the joists or studding A by staples b, or other fastenings, the ribs a being arranged transverse to the joists or studding, substantially as described.

No. 18,358. Thill Cultivator.

(*Cultivateur à l'armenture.*)

David L. Barnum, Wilson, N. Y., U. S., 24th December 1883; 5 years.

Claim.—1st. In a thill-cultivator, the combination of the side

pieces A, cross-pieces A¹, A², A⁴, adjustable thill B, rearward projecting piece A³, adjustable plough standards F, F, stationary plough standard F¹ and bolts d, d¹, all constructed and combined as and for the purpose described.

No. 18,359. Railway Frog. (*Rail de croisement.*)

William J. Morden, Chicago, Ill., U.S., 24th December 1883; 15 years.

Claim.—1st. A railway frog point or piece C, provided with wings or flanges a, a, all in one piece, substantially as shown and described. 2nd. In a railway frog, a centre piece or point C, provided with wings or flanges a, a and connecting pieces h and h¹, all in one piece, substantially as described and shown. 3rd. In a railway frog, a centre piece or point C, provided with wings a, a, having connecting pieces h, h¹, all cast or made in one piece, in combination with, and secured to, the wing-rails, substantially as shown and described. 4th. In a railway frog, the combination, with the wing rails A, A and point rails B, B, of the centre piece or point C, having shank C¹ and trough-shaped wings or flanges a, a, substantially as shown and described.

No. 18,360. Wrench. (*Clé à écrou*)

George G. Hadley and George P. Merrill, Toledo, Ohio, U. S., 24th December 1883; 5 years.

Claim.—1st. The combination, in a monkey wrench, of a ferrule cylindrical sliding shank carrying the lower movable jaw, spring pawls and stationary shaft, carrying the fixed jaw and having serrations at each side, substantially as set forth. 2nd. In a wrench, a cylindrical shank carrying the movable jaw, combined with the ferrule adapted to guide the cylindrical shank, substantially as set forth.

No. 18,361. Breakwater. (*Brise-lame*)

Edward C. G. Thomas, London, Eng., 26th December, 1883; 5 years.

Claim.—1st. The combination and use of a sloping body or air chamber x y with the buoy A¹, substantially as hereinbefore described and shown by figures 2 and 3, sheet 2, on the accompanying drawings. 2nd. The combination of the buoys A¹, A¹ with each other and with an air chamber E, substantially as hereinbefore described. 3rd. The combination and use, with my improved buoys, of anchors F, substantially as hereinbefore described and shown by figure 2, sheet 2, on the accompanying drawings.

No. 18,362. Machine for Sawing Hoops. (*Machine à scier les cercles.*)

William Bowker, Somerville, Mass., U. S., 26th December, 1883; 5 years.

Claim.—1st. In a hoop-sawing machine, one or more knot cutters or more saws, the whole being arranged as set forth. 2nd. The two cutters and their enclosing vibratory mouth pieces adapted to the arms in opposite ways, as set forth.

No. 18,363. Car Brake. (*Frein de char*)

Charles V. Rote, John W. Holman, Robert M. Agnew, Lancaster, Ohio, U. S., 26th December, 1883; 15 years.

Claim.—1st. The combination, with the sliding draw-bar, of an adjustable block or dog connected to, and moving with said draw-bar, and adapted at its inner end to act on a brake-lever, one end of which is projected within the path of said block or dog, whereby said block or dog can be adjusted to actuate said lever, or moved aside to permit its inner end to pass the brake-lever without actuating it. 2nd. The combination, with the brake-lever, of a dog or block pivoted at its outer end to the sliding draw-bar, and adapted at its inner swinging end, when properly adjusted, to vibrate said brake-lever for actuating the brakes, substantially as described. 3rd. The combination, with the sliding draw-bar, of the pivoted block or dog, the brake-lever projected within the path of dog or block, and the cam-lever, by the adjustment of which the said dog can be set to act on the brake-lever, or be allowed to swing aside without actuating it, substantially as described. 4th. The brake-lever, in combination with the sliding draw-bar, and the dog or block pivoted thereto for actuating said brake-lever, and a fixed stop for preventing displacement of the said pivoted block or dog, substantially as described. 5th. The combination of the sliding draw-bar, an adjustable block or dog secured to, and moving with said draw-bar, a brake-lever, one arm of which is projected within the path of said block or dog, a cam-lever, for adjusting said block or dog, whereby it can be set for causing the block or dog to act on the brake lever, or to allow the block or dog to move aside without actuating said brake-lever, substantially as described. 6th. The brake-lever E, actuated by the adjustable block or dog on the sliding-bar, in combination with the spring e², interposed between said brake-lever and the brakes, substantially as and for the purposes described.

No. 18,364. Automatic Car Brake.

(*Frein de char automatique.*)

Charles V. Rote, John W. Holman, Robert M. Agnew, Lancaster, and Henry Hice, Beaver, Penn., U. S., 26th December, 1883; 15 years.

Claim.—1st. The combination, with the sliding draw-bar, of the brake-lever, the dog or block adjustable on said draw-bar for actuating the brake-lever, a cam-lever for adjusting said dog or block and a gravity-stop for automatically locking said cam-lever, substantially as described. 2nd. The combination, with the sliding draw-bar, of the brake-lever, the dog or block adjustable on the draw-bar, for

actuating or relieving said brake-lever, a cam-lever for adjusting or relieving said dog or block, a gravity-stop for locking said cam-lever and mechanism, substantially as described, for automatically lifting said gravity-stop and releasing the cam-lever. 3rd. The combination of the movable draw-bar, the adjustable dog or block connected therewith, the brake-lever projecting within the path of said dog or block, a cam-lever for adjusting said dog or block, and mechanism, substantially as described, for automatically locking and releasing said cam-lever controlled by the speed of movement of the car, substantially as described. 4th. A cam-lever for setting and relieving the brake-actuating mechanism, in combination with an automatically-actuated latch for locking and releasing said cam-lever, substantially as described. 5th. The cam-lever, for adjusting the dog on the draw-bar and setting it to act upon, or to relieve the brake-lever, in combination with a gravity-stop for locking said cam-lever, a jointed and weighted lever on the axle, and mechanism interposed between said stop and jointed lever, for adapting the latter to act upon said stop and release the cam-lever, substantially as described. 6th. The combination, with the brake-actuating mechanism, of a gravity-stop for setting said mechanism, levers connected with said stop for raising it, and releasing the brake mechanism, levers having pendent semi-annual arms surrounding the axle, and jointed and weighted levers on the axle for actuating said semi-annularly armed levers, arranged and operating substantially as described. 7th. The combination, with the gravity-stop I², of the levers I and I¹, semi-annularly armed levers K and K¹, and jointed levers on the axle, for actuating said semi-annularly armed levers, and raising and releasing the gravity-stop, substantially as described. 8th. The levers K and K¹ having curved pendent arms, in combination with jointed levers on the axle disconnected from said levers K and K¹, for actuating the latter and automatically setting and releasing the brake-actuating mechanism, substantially as described. 9th. The combination, with the semi-annularly armed levers K and K¹ and intermediate lever or levers, connecting said levers with the gravity-stop I², of jointed levers on the axle for actuating said levers K and K¹, substantially as described. 10th. Jointed levers on the axle, in combination with levers having curved or semi-annual arms pivoted with relieving points or depressions on the adjacent concave sides for setting and releasing said jointed levers, substantially as described. 11th. In a mechanism for setting and releasing the brake-actuating mechanism, jointed levers on the axle, consisting of a lever arm, a weighted arm and a pivoted latch or dog actuated by the weighted arm, for setting and releasing the lever arm, substantially as and for the purpose described. 12th. The jointed levers on the axle, provided with lever arms having friction rollers for actuating the levers, and a latch or stop for releasing the brake-actuating mechanism, and with sliding dogs for locking and releasing said lever arm, substantially as described. 13th. The combination, with the car-axle, of the jointed levers P composed of the lever-arm p, weight p¹ and dog p², and the spring u, applied and operating substantially as and for the purpose described. 14th. The combination, with the cam-lever for setting and relieving the brake mechanism, of the gravity pin or stop I² for locking the cam-lever, and the levers I and I¹ for lifting said stop, arranged and operating substantially as described. 15th. The combination, with the pivoted dog on the draw-bar, for actuating the brake-lever, of the cam-lever F for adjusting or relieving said dog made in angular or bell-crank form, with its long arm F¹ extending inward longitudinally of the car, substantially as described. 16th. The cam-lever F, made in the bell-crank or angular form described, in combination with the transversely-arranged guiding quadrant h, substantially as and for the purpose specified. 17th. The cam-lever F for adjusting or relieving the dog, actuating the brake mechanism, made in angular or bell-crank form, in combination with the cam-lever f¹ for adjusting said lever, substantially as described. 18th. The combination, with the levers I and I¹ and the angular levers K and K¹, for raising the gravity-stop I², of the links J and J¹ provided with adjustable loops or eyes, substantially as described.

No. 18,365. Machine for Driving Fence Posts. (*Machine à chasser les pieux de clôture.*)

Henry Dixon and Breckon Dixon, Nottawasaga, Ont., 27th December 1883; 5 years.

Claim.—1st. In a machine for driving fence posts, a horizontal frame carried on wheels and supporting a triangularly braced vertical frame, in combination with a vertical guiding frame on which the weight slides, the said guiding frame being adjustably connected to the apex of the triangular frame, so that it may be maintained in a perpendicular position, notwithstanding any unevenness of the ground upon which the wheels of the horizontal frame may at the time be resting. 2nd. In a machine for driving fence posts, a guiding frame upon which the weight for driving the posts is fitted, in combination with a frame or carriage resting on the ground, and connected to the guiding frame in such a manner that the latter may be adjusted so as to maintain a perpendicular position, irrespective of the angle of the frame supporting it. 3rd. In a machine for driving fence posts, in which the weight for driving the posts is fitted on to a guiding frame, as specified, the combination of the lever R, pivoted to the guiding frame and having a notched end, into which the bottom edge of the weight fits, when it is desired to adjust the posts below it. 4th. In a machine for driving fence posts, a weight or block N provided with guides to fit over the frame J, and a V-shaped head n, in combination with a cross-head O similarly attached to the frame J, and carrying the spring tongs P arranged to grip the V-shaped head formed on the block N, substantially as and for the purpose specified.

No. 18,366. Machine for Manufacturing Grindstones. (*Machine à fabriquer les meules.*)

Frank Trier, Westminster, Eng., 27th December, 1883; 5 years.

Claim.—1st. In machines for making grindstones, one or more circular rolling cutters secured to moving arms by means of adjustable slides, such as described, said arms being adapted to be moved in a plane or planes parallel to the surface of the stone to be dressed.

the movement of such cutter carrying arms being in a straight line or said arms are hinged, then through an arc of a circle toward the eye or centre of the stone, as set forth. 2nd. In machines for making grindstones, the sliding or swinging frames E provided with the cutter carrying arms E₁, E₂ and devices, substantially as described, for automatically moving the cutters into their proper position with relation to their point of contact with the stone, as set forth. 3rd. In machines for making grindstones, the sliding or swinging frames E provided with the cutter carrying arms E₁, E₂, said arms being provided with cutter holding devices, which are adjustable toward and from the stone, as and for the purpose set forth. 4th. In machines for dressing or making grindstones, the sliding frame E provided with the cutter carrying arms E₁, E₂, in combination with the screw T, but a, bevel wheels c and d, and the driving shaft G, whereby the cutter carrying frame is automatically fed forward to the work, as set forth. 5th. The combination of the cutters g and L, the bars carrying which are provided with the arms L and M and connected together, by the bar or link K, with the rods l, bell crank levers N, guides P and guide slots m, as set forth. 6th. The cutter carrying arm E₂ provided with the stationary cutter-holder, in combination with the cutter carrying arm E₁ provided with an adjustable cutter-holder, as and for the purpose set forth. 7th. The sliding frame carrying the slide and cutter-holders, in combination with the rack pinion and shaft, whereby the cutters are adjusted to dress or finish the edge of the stone. 8th. The combination of a cutter carrying arm or arms for dressing the sides of grindstones, with apparatus, substantially such as described, for dressing the grinding edge or periphery of the stone, as and for the purpose set forth. 9th. The cutter mounted on a spindle located within a sleeve or bushing, said sleeve being secured in an inclined hole in the cutter carrying bars, whereby the cutter may be adjusted in any desired position with relation to the face of the stone.

No. 18,367. Machine for Truing Grindstones. (Machine pour dégauchir les meules.)

Frank Trier, Westminster, Eng., 26th December, 1883; 5 years.

Claim.—1st. In a machine for dressing or truing grindstones, the cutter-bar or carrier mounted in a suitable guide and provided with a cylindrical sleeve adjustable thereon, said sleeve, together with the cutter and cutter-carrier, being themselves adjustable to and from the work, as set forth. 2nd. In a stone-dressing machine, the cylindrical sleeve adapted to be detachably secured to the cutter carrying bar, provided with a lug p and slot o₂, whereby the angle of inclination of the cutter can be changed by the partial rotation of the sleeve. 3rd. The combination of the cutter carrying slide B and cutter-carrier O, with the sleeve E provided with the projections p and shoulders q, as set forth. 4th. A means for truing or dressing crowning peripheries, a curved track or guide, a slide adapted to move in a curved path on said track and provided with a suitable dressing tool, and a journalled screw engaged with said carriage, so as to move the slide along the curved track, as set forth. 5th. The combination of the cutter carrying bar e provided with the sleeve E, with the set screws / and H. 6th. In a machine for dressing stone, the frame A provided with a right and left-handed screw r, in combination with the cutter-carriers M and N set at the same time on different levels, as and for the purpose set forth. 7th. A tool for dressing stone or other material consisting of a thin metallic cone-shaped disk, strengthened or supported in its inner side by a cone-shaped filling piece, as described, or a series of smaller metallic cones fitting within the outer and within each other, as set forth. 8th. As a new article of manufacture, a cone-shaped metallic cutter for dressing stone, struck up, or out of sheet steel, or other suitable material.

No. 18,368. Draft Equalizer. (Régulateur du tirage.)

James W. Lawler and Albert B. Lawler, Rushville, Ill., U. S., 27th December 1883; 5 years.

Claim.—1st. The combination, with the double tree and the lever f, of the double lever c having its longer arm c² arranged in rear of the lever f, the anti-friction rubber d journaled on the end of the shorter arm of the lever c, the chain g coupled to the longer arm of lever c and to the lever f, and the equalizing-chain e having one of its ends made fast to one end of the double-tree, and its other end carried around the anti-friction roller d, and made fast to the opposite end of said double-tree, substantially as set forth.

No. 18,369. Staple. (Crampe.)

Seth Frost, Boston, Mass., U. S., 27th December 1883; 5 years.

Claim.—As a new article of manufacture, a staple A having the inside c of the bottom of one or both legs b bevelled downward and outward from c to a point d, and the portion of each leg, which is to enter the wood, provided with one more notches or shoulders k on its outside d and inside c, or on either its inside or outside only, in order to enable the legs of the staple to separate from each other in the plane passing through their centres, and to afford an increased amount of fiber resisting surface to oppose the force applied to withdraw it, substantially as described.

No. 18,370. Fire-Escape. (Sauveteur d'incendie.)

Ole Hansen, Walnut Grove, Cal., U. S., 27th December 1883; 5 years.

Claim.—1st. In fire-escapes, the ladder described having the outer rail A and folding rounds Z attached or pivoted at C and D, in combination with the platform L constructed and operated in connection with a building, substantially as and for the purposes set forth. 2nd. In fire-escapes, the projection B in combination with the ladder described, constructed and operated substantially as and for the purposes set forth. 3rd. In fire-escapes, the cord or cable K and balance weight H, to balance the weight of the folding ladder described, constructed and operated as and for the purposes set forth. 4th. In fire-escapes, the lever J in combination with the weight H and weight

cord, and folding ladder described, for the purpose of ringing the bell or sounding the alarm, substantially as and for the purposes set forth. 5th. In fire-escapes, the bevel gear composed of the bevel wheels O and pinions P, and line shaft Q or their mechanical equivalents, constructed and operated substantially as and for the purposes set forth.

No. 18,371. Rail Joint. (Joint de rail.)

Thomas H. Gibbon and Dudley Farlin, Albany, N. Y., U. S., 27th December 1883; 5 years.

Claim.—1st. In a rail-joint, the rails A having the heads of their conjoining ends cut away as at a₁, and a connecting piece B consisting of a head b that conforms to the heads a of the conjoining rails, side plates b₁ having a uniform length with the head b, and vertical flanges b₃ of greater length than the side plates b₁ and pointed with openings b₄ as herein described, in combination with a fastening plate C adapted to engage in the openings b₄, for the purpose of securing the rails A to the connecting piece B, substantially as herein specified. 2nd. In a rail-joint, the combination, with the rails A having the heads of their conjoining ends cut away as at a₁, and a connecting piece B consisting of a head b that conforms to the heads a of the conjoining rails, side plate b having a uniform length with the heads b, vertical flanges b₃ of greater length than the side plates b₁ and provided with openings b₄, as herein described, of the fastening plate C adapted to engage in the openings b₄, and the cross-tie D provided with transverse grooves, for receiving the vertical flanges b₃ of the connecting piece B, as and for the purpose herein specified.

No. 18,372. Aerial Telegraph and Telephone Conductor. (Conducteur de télégraphe et de téléphone aériens.)

Joseph C. Chambers, Cincinnati, Ohio, Nelson C. Girdley, Chicago, Ill., and Preston Brady, Detroit, Mich., U. S., 27th December 1883; 5 years.

Claim.—1st. The combination, with an aerial telegraph or telephone line consisting of one or more electrical conductors, insulated from the supports and connected with the earth, of one or more induction wires, rods, bands or strips arranged in electrical proximity to the telegraph or telephone electrical conductors, and insulated from the supports, from the telegraph or telephone electrical conductors and from the earth, and having disconnected terminal ends so as not to form a closed circuit, substantially as and for the purpose specified. 2nd. The combination, with an aerial telegraph or telephone line consisting of one or more electrical conductors insulated from the supports and connected with the earth, of one or more induction wires, rods, bands or strips arranged in electrical proximity to the telegraph or telephone electrical conductors, and insulated from the supports, from the telegraph or telephone electrical conductors and from the earth, and having disconnected terminal ends so as not to form a closed circuit, substantially as and for the purpose specified. 3rd. The combination, with an aerial telegraph or telephone line consisting of one or more electrical conductors, insulated from the supports and connected with the earth, of one or more induction wires, rods, bands or strips arranged in electrical proximity to the telegraph or telephone electrical conductors, and insulated from the supports, from the telegraph or telephone electrical conductors and from the earth, and having its terminal ends turned upward and pointed, substantially as shown and described and for the purpose specified. 4th. The combination, with an aerial telegraph or telephone line consisting of one or more electrical conductors, insulated from the supports and connected with the earth, of one or more induction wires, rods, bands or strips arranged in electrical proximity to the telegraph or telephone electrical conductors, and insulated from the supports, from the telegraph or telephone electrical conductors and from the earth, and having its terminal ends turned upward and pointed, and provided at intervals, between its terminal ends, with electrical conducting-bars or points pointing in opposite directions, substantially as shown and described and for the purpose specified.

No. 18,373. Preparation of Agents used in the Treatment of Sewage Matter. (Préparation des agents employés dans le traitement des produits des égouts.)

William C. Sillar, Blackheath, and John W. Slater, London, Eng., 27th December 1883; 5 years.

Claim.—1st. The preparation of crude muriate of alumina, or muriate of alumina and iron, for use in the treatment of sewage, by mixing a solution of sulphate of alumina, or the lixivium of shales, or other minerals containing sulphate of alumina alone, or sulphate of alumina and sulphate of iron, with a solution of chloride of calcium, substantially as hereinbefore described. 2nd. The preparation of an agent for use in the purification of sewage by adding sulphuric acid, or muriatic acid, or both, to the deposit or sediment obtained by treating sewage by any process in which salts of alumina or clay, or salts of alumina and clay, have been used, substantially as hereinbefore described. 3rd. The use, in the treatment of sewage, of the product resulting from the treatment with sulphuric acid or muriatic acid, or both, of the mud or precipitate produced by treating sewage by any process in which salts of alumina, or clay, or salts of alumina and clay, are used.

No. 18,374. Fireman's Extension Ladder. (Échelle à rallonge de sauvetage.)

Benjamin F. Bower and Francis M. Stephenson, Ripley, Ohio, U. S., 28th December 1883; 5 years.

Claim.—1st. The combination, substantially herein described, of a turn-table provided with the socket-abutments N, N and sockets k, with a fireman's extensible ladder, the lower ends of the lower section A whereof are adapted for detachable support and connection, with said socket-abutments, and a derrick P adapted for detachable support and connection within the said turn-table sockets k, for the purpose specified. 2nd. The turn-table of a fireman's ladder, provided with the socket-abutments N, N, each having a curved back and closed at their sides, in combination with the main ladder section A, the lower ends of the side bars of which are rounded and adapted to fit within said sockets, between their closed sides, substantially as described. 3rd. The turn-table of a fireman's extensible ladder provided with the socket-abutments N, N, each having a curved back and closed at their sides, in combination with

the main ladder section A, the lower ends of the side bars of which are rounded and provided with pins j, and the hooks i pivoted to said socket abutments, substantially as described, for the purpose specified. 4th. In a fireman's extension ladder, the combination of a turn-table provided with socket-abutments N, N and sockets k, k, and a ladder adapted to be supported within said socket-abutments, substantially as described, with a derrick P for raising the ladder, having picket-points supported upon said turn-table independent of said ladder, means whereby said derrick is connected with the truck, the windlass and the ladder elevating rope T, substantially as described. 5th. In combination, in a fireman's ladder, the turn-table having the socket-abutments, the ladder having extensible sections and an elevating windlass therefore, the derrick having picket points, its supporting guy ropes or ropes and hoisting-rope connecting said derrick with the ladder, substantially as described for the purpose specified. 6th. The ladder sections A, B, C, arranged one within the other, the middle section between the flat guides a¹, a¹, and the upper section C between the flat guides b, b, sections A and B having the grooves g, g, as described, in combination with the sheaves h, h in the section B, the ropes f, f, attached to the lower ends of the upper section passing over said sheaves and attached to the side bars of the main section A, the sheaves e, e, in the main section, the ropes d, d and the double windlass D carried by said main section, substantially as described for the purpose specified. 7th. The combination, in a fireman's ladder, of the turn-table and the derrick, with the supporting guy-ropes therefor, and one or more slide-bars for said guy-ropes fixed to the platform or truck frame, substantially as described for the purpose specified. 8th. The turn-table of a fireman's extensible ladder, provided with socket-abutments, in combination with the main ladder section having rounded ends, and means for securing said ladder ends within said socket-abutments, substantially as described, for the purpose specified. 9th. In combination, the truck platform M, the turn-table R, the extensible ladder and the derrick and its stay R, the said ladder having a double extension windlass D connected by suitable ropes with the ladder sections, and the said derrick having the windlass and rope T for elevating said ladder, the latter and its hoisting derrick being carried by, and detachably supported upon the turn-table, and the derrick connected with said platform, substantially as described. 10th. The combination of the truck platform with the ladder and the derrick, and with means, substantially as described, whereby they are detachably connected with the turn-table, and means substantially as described, whereby the derrick is detachably connected with the truck.

No. 18,375. Valve Gear. (Distribution par tiroir.)
Frederick B. Nichols and Cathcart Thomson, Halifax, N. S., 28th December 1883; 5 years.

Claim.—1st. The adjustable cams E, W and rack G oscillating on pivot T, in combination with reciprocating rack H, valve stem B attached to valves X, Y, stops r, r and counterbalance weight U, all in combination in the manner and for the purpose specified. 2nd. The arm D and roller A, on piston rod C, in combination with the adjustable cams E, W, racks G and H, valve stem B and valves X, Y, all in the manner set forth.

No. 18,376. Braiding Machine.

(Machine à appliquer la passementerie.)

Florenz L. Veerkamp, Charles F. Leopold, William Darker, and Cunningham S. Patterson, Philadelphia, Pa., U. S., 28th December, 1883; 5 years.

Claim.—1st. The combination, in a rotary braiding machine, of a set of upper bobbin carriers and bobbins, a revolving carrier bearer, a set of lower bobbins and devices for supporting the same, with mechanism for revolving the upper and lower bobbin holders in contrary directions from each other, in concentric annular paths but in different planes, and stationary guides and push prongs, whereby the threads from each of the lower bobbins are made to alternately cross the threads from each of the upper bobbins, and be plaited for the purpose of forming cord braid, as set forth. 2nd. The carrier bearers E, constructed as described. 3rd. The grooved ring L and mechanism for revolving the same in an opposite direction to the carrier bearers, in combination with said carrier bearers E, and the push prongs d to guide the course of the lower threads, substantially as described. 4th. The horizontal guide arms M, arranged as described, for alternately changing the position and course of the lower threads. 5th. The bobbin carrier c, constructed and operating substantially as described. 6th. The combination of the upright rod K having projections o, s and cam Y, the rod X and bolt-shifting mechanism, with the droppers p, bolt r, a frame carrying said droppers and bolt, and adapted to supply one set of braiding thread, a carrier adapted to supply a second set of braiding threads, means for rotating said frame and carrier in opposite directions and crossing the threads, and means for elevating said bolt on the breakage of one of the upper braiding threads carried by said carrier, substantially as described. 7th. The tension springs N, constructed and arranged as described, in combination with the stationary horizontal guide arms M, and means for supporting the same, mechanism for impelling the thread along the guide arms, and a revolving frame adapted to hold a set of lower bobbins and supply a set of braiding threads, substantially as and for the purpose set forth.

**CERTIFICATES OF THE PAYMENT OF FEES FOR FURTHER TERMS HAVE BEEN ATTACHED TO
THE FOLLOWING PATENTS.**

129. W. C. SILLAR, R. G. SILLAR and C. RAWSON, 3rd 5 years of No. 2899, from the 5th day of December 1883. Improvement on Deodorizing, Purifying and Utilizing Sewage, Urin, Night Soil, Excreta and Excrementitious and Refuse Matters, 5th December 1883.
130. M. J. EGERY and THE HINCKLEY and EGERY IRON CO., 2nd and 3rd 5 years of No. 9607, from the 23rd day of January 1884. Improvement on Machines for Sawing Lumber, 5th December 1883.
131. W. McCLAVE and J. A. PRICE, 2nd 5 years of No. 9499, from the 18th day of December 1883. Improvements on Stove Grates, 5th December 1883.
132. THE REV. REND B. FOLTZ, 2nd 5 years of No. 9466, from the 10th day of December 1883. Neck Yoke Attachment for Ironing Draft Polls, 6th December 1883.
133. THE REVEREND R. DICK, 2nd 5 years of No. 9457, from the 10th day of December 1883. Improvements on Folding Chairs, 7th December 1883.
134. M. T. BUCHANAN, 2nd 5 years of No. 9470, from the 10th day of December 1883. Improvements on Hay Pitching Machines, 7th December 1883.
135. E. O'CUMPAUGH, 2nd 5 years of No. 9469, from the 10th day of December 1883. Improvement on Heating Apparatus, 10th December 1883.
136. D. CAMPBELL, 2nd 5 years of No. 9538, from the 31st day of December 1883. Improvements on Adjustable Chairs, 10th December 1883.
137. J. C. WARD, 2nd 5 years of No. 9465, from the 17th day of December 1883. Improvements on Hernia Trusses, 10th December 1883.
138. N. DUTTON, 2nd and 3rd 5 years of No. 9494, from the 17th day of December 1883. Improvements in coverings for spring bed bottoms. 14th December 1883.
139. T. G. RICE, 2nd 5 years of No. 9486, from the 17th day of December 1883. Improvements on Animal Traps, 14th December 1883.
140. M. T. BOULT, 2nd 5 years of No. 2941, from the 15th day of December 1883. Improvements on Wood Working Machines, 14th December 1883.
141. R. THOMSON, jr., 2nd 5 years of No. 9514, from the 24th day of December 1883. Improvements on Skate Fastener, 18th December 1883.
142. G. F. SMITH, H. C. SMITH, C. W. WOODS and A. REGINALD, 2nd 5 years of No. 9500, from the 18th day of December 1883. Improvements on Refrigerators, 18th December 1883.
143. R. W. GRAY and T. S. FOSTER, 2nd 5 years of No. 9527, from the 28th day of December 1883. Improvement of Abdominal Supporters, 24th December 1883.
144. THE HAMILTON POWDER CO., 2nd 5 years of No. 9509, from the 24th day of December 1883. Improvements on Apparatus for the Manufacture of Nitric Acid, 24th December 1883.
145. W. J. INGALLS, 2nd 5 years of No. 9530, from the 28th day of December 1883. Improvements in Tools for Cylindrically Cutting Iron Bars, Pipes, Shoulders and Axles, &c., 27th December 1883.
146. A. W. WATKEYS, 2nd 5 years of No. 9535, from the 21st day of December 1883. Improvements on Valves for Steam Engines, 29th December 1883.

Van Stone's Corset.

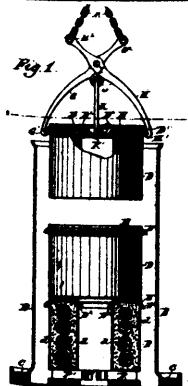

18317

Tribe's Rolling Window Screen.

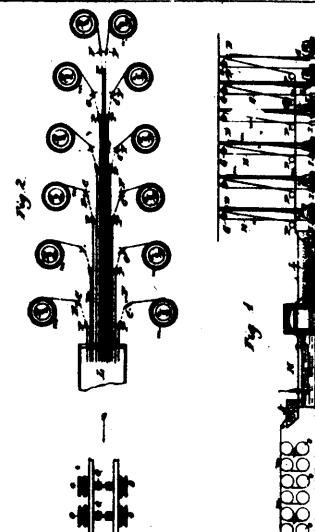

18318

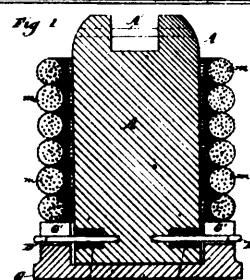

Roberts' Wire Wiping Apparatus.

18318 Roberts' Annealing Pot for Wire.

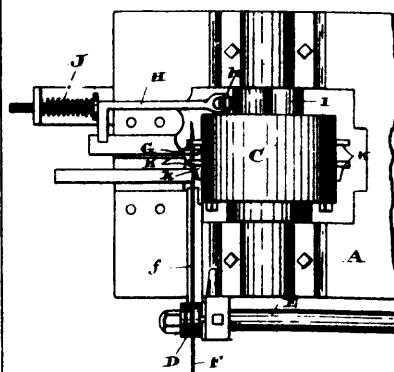

18320 Roberts' Apparatus for Feeding Wire.

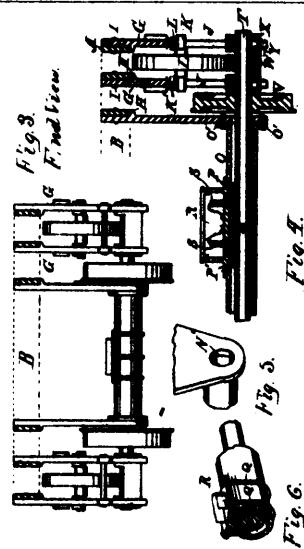

18321 Roberts' Apparatus for Pickling Wire.

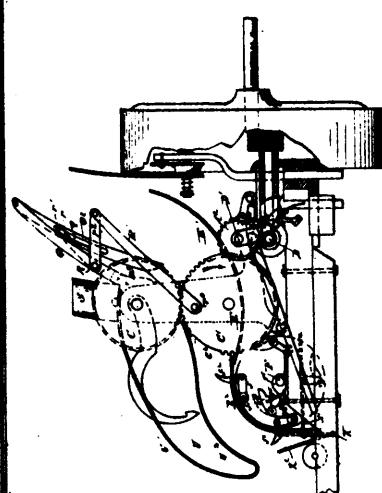

18322 Duval's Gun.

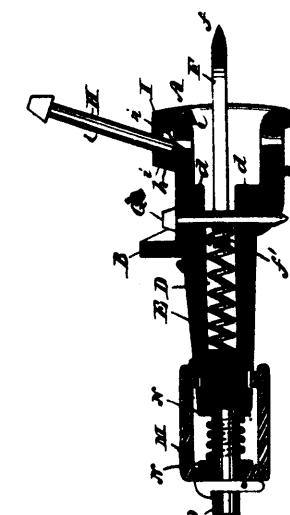

18323 Baylis Machine for Cutting Off and Bending Wire to Form Staples.

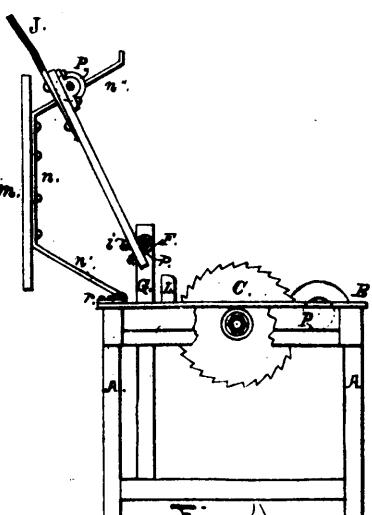

18324 Huson's Car Truck.

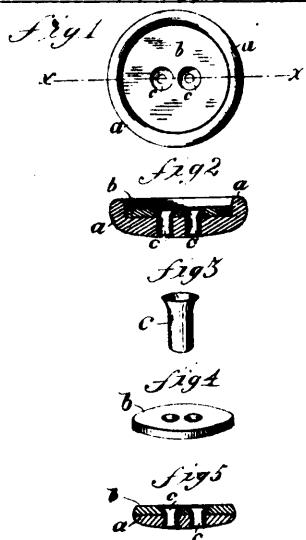

18325 Seiberling's Grain Binding Harvester.

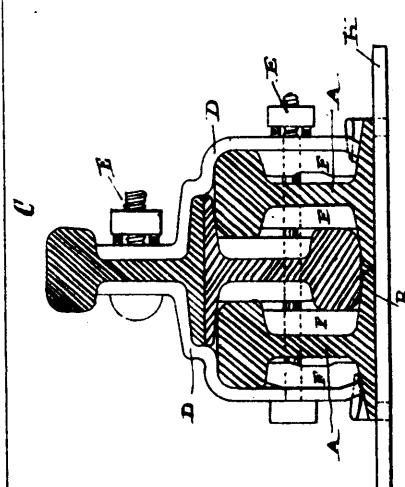

18326 Williams' Car-Coupling.

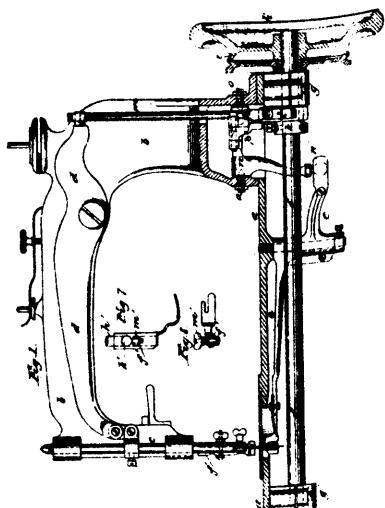

18327 Carrier's Machine for Manufacturing and Sawing Laths.

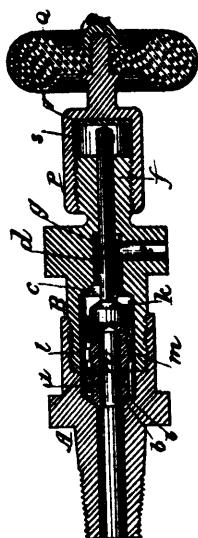

18331 Newell's Button.

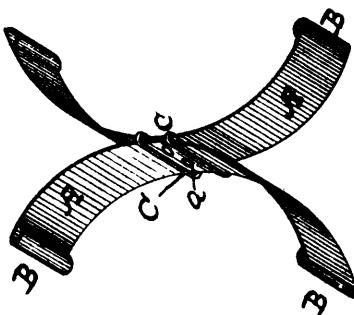

18332 Holgate & Bagnall's Rail Stringer.

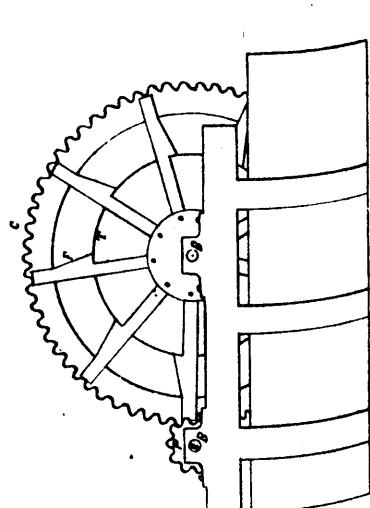

18333 Dearborn's Sewing Machine.

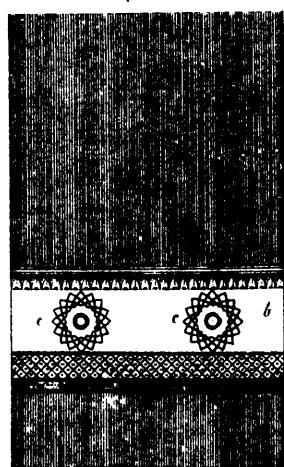

18334 Fulton's Gauge Cocks.

18335 Webb's Galley Type Lock.

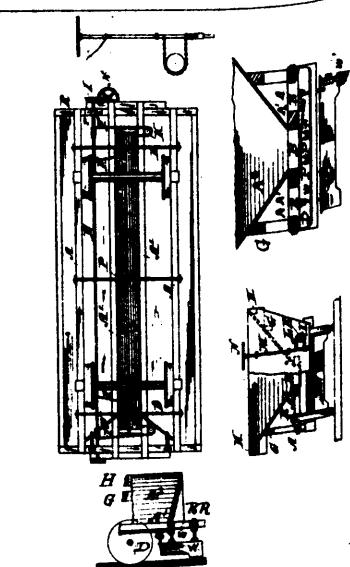

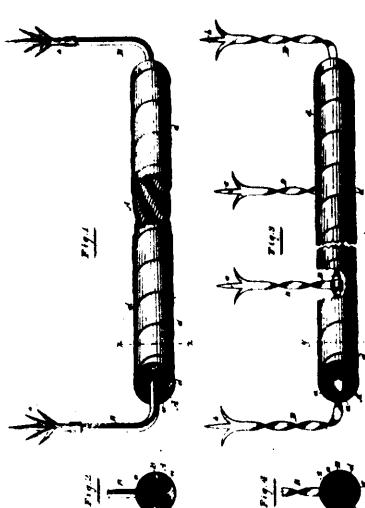

18336 Gordon's Lock Winch.

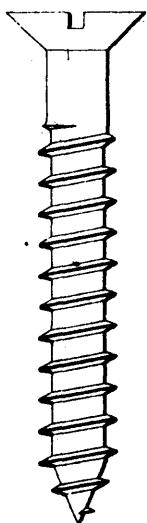

18337 Barrickle's Window Shade.

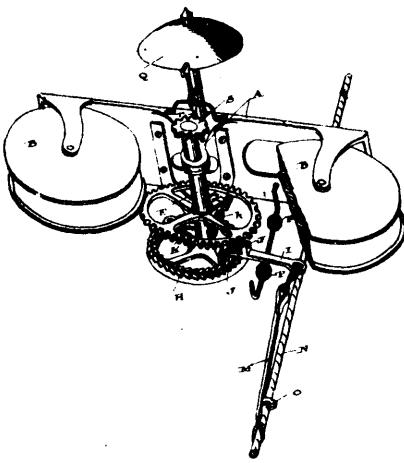

18338 Chambers' Telegraph and Telephone Cable.

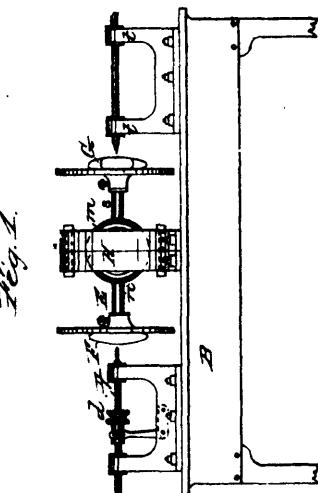

18339 Cordrey's Ballast Car.

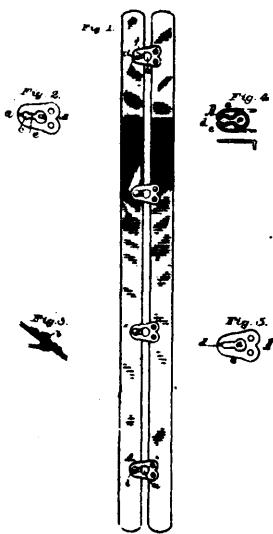

18340 Harvey's Gimlet Pointed Screw.

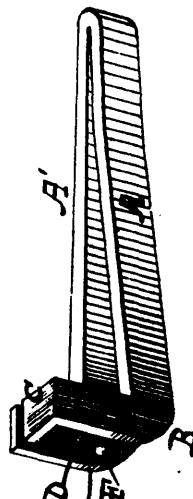

18341 McWilliams' Device for Indicating Railway Stations.

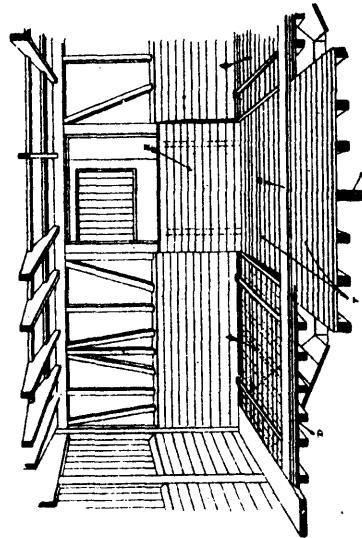

18342 Imback's Brush Boring Machine.

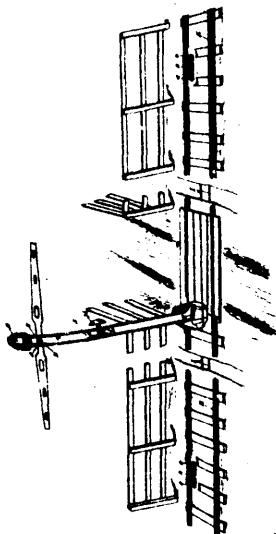

18343 Henias' Corset Clamp.

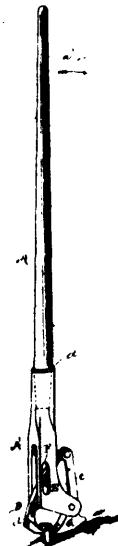

18344 Urie's Pitman Coupling for Harvesting Machine.

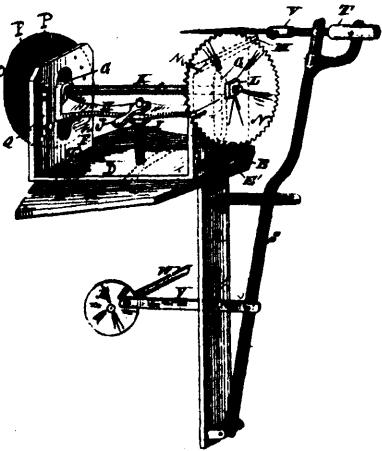

18345 Wilson's Car.

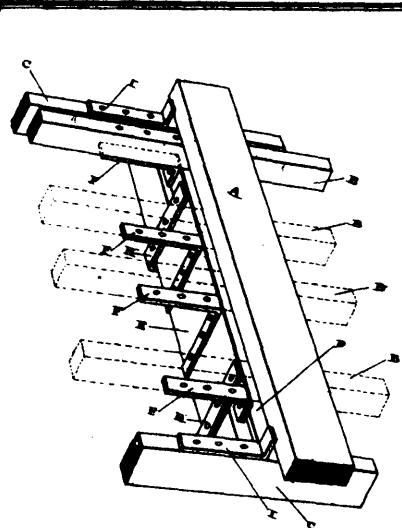

18346 McWilliam's Mechanism for Operating Semaphore Signals.

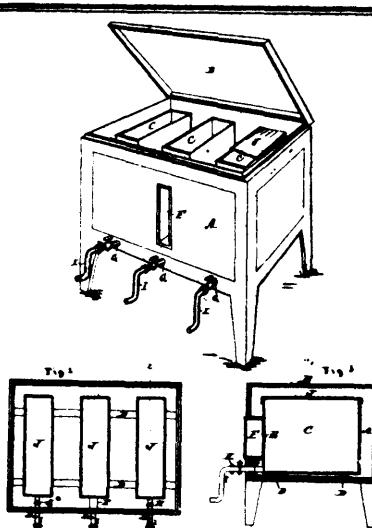

18347 Lewis' Nail Extractor.

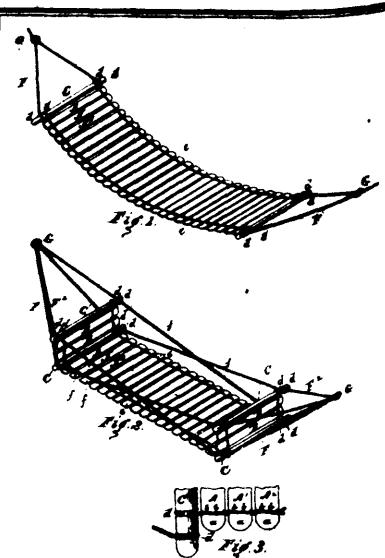

18348 Chambers' Saw Filing Machine.

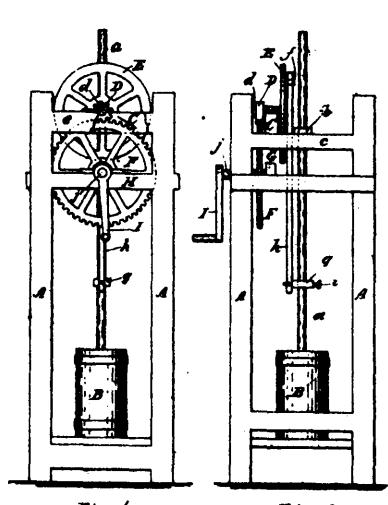

18349 Wilson's Railway Car.

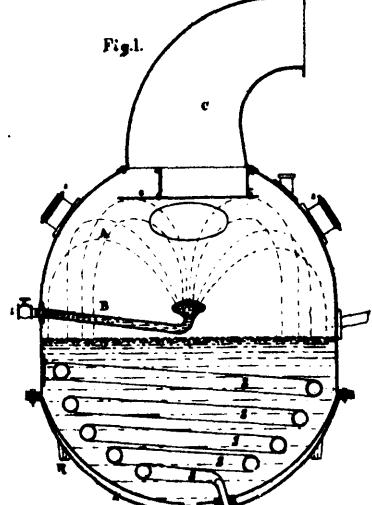

18450 Alinsworth's Creamer.

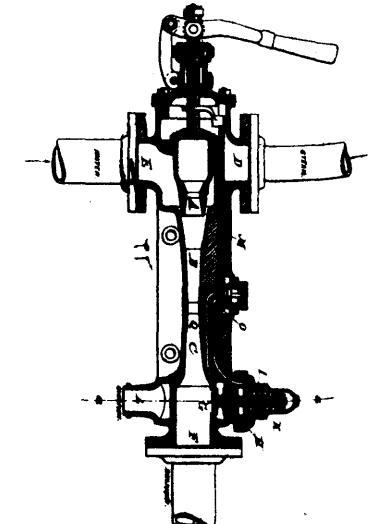

18351 Dodge's Hammocks and Cots.

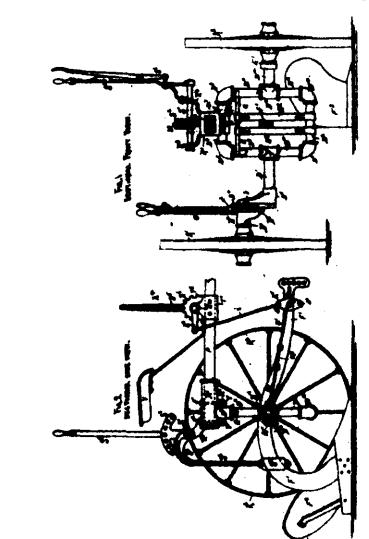

18352 Bartrand's Churn Washing Mechanism.

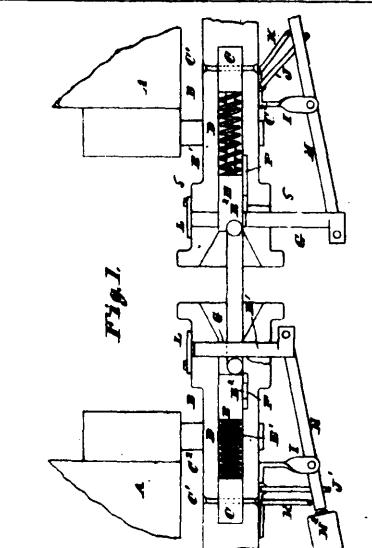

18353 Mathieu's Process and Apparatus for Evaporating Liquids.

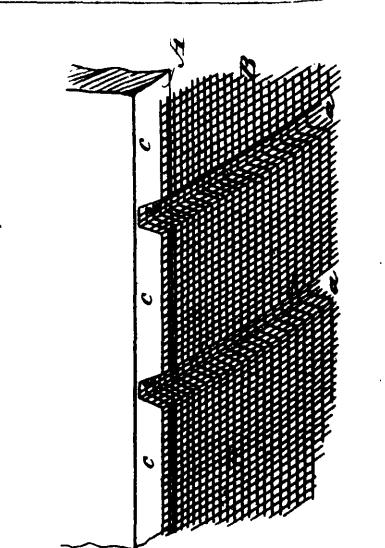

18354 Schatte's Steam Injector.

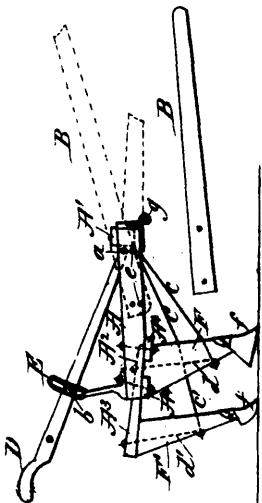

18355 Stoneman's Sulky Plough.

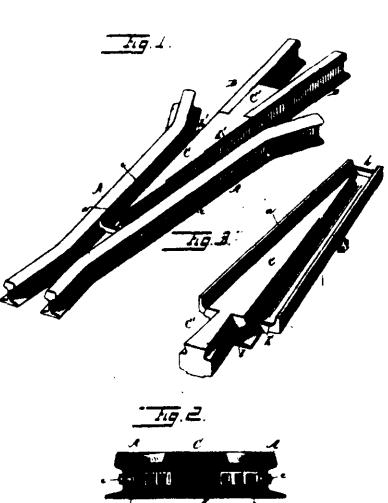

18356 Peace & Sankey's Car Coupling.

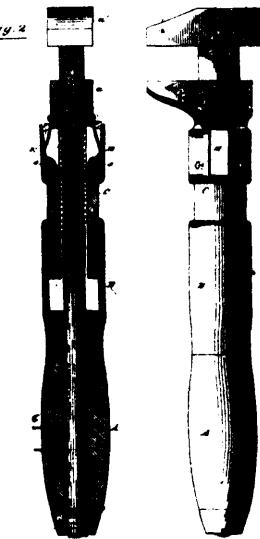

18357 Stanley's Metallic Plastering Surface.

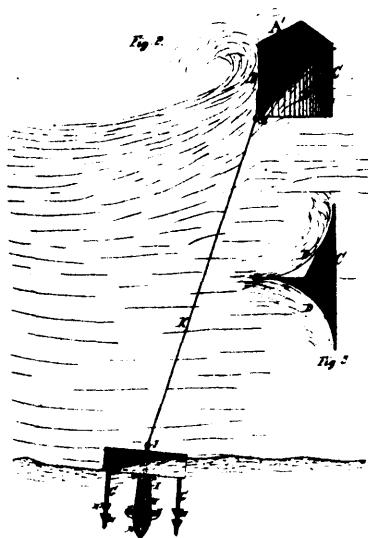

18358 Barnum's Thill Cultivator.

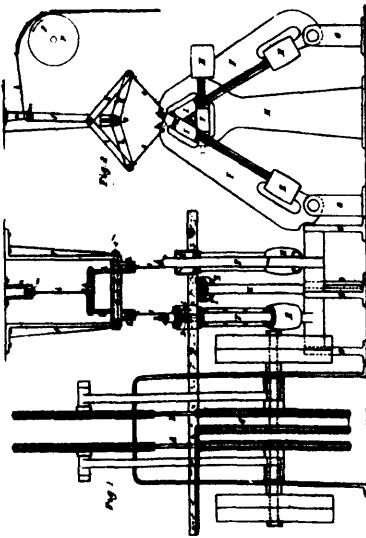

18359 Morden's Railway Frog.

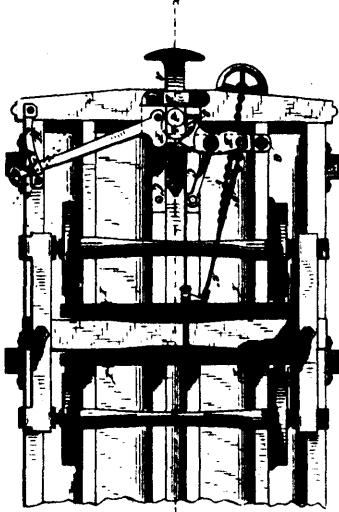

18360 Houlehan's Wrench.

18361 Thomas' Breakwater.

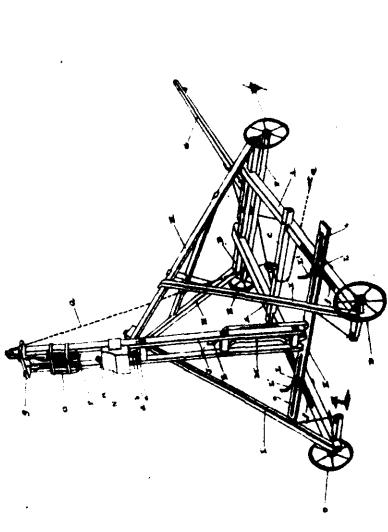

18362 Bowker's Machinery for Sawing Hoops.

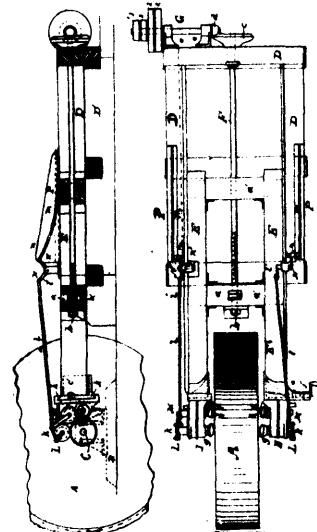

18363 Rote's Car Brake.

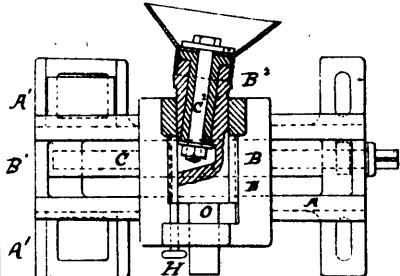

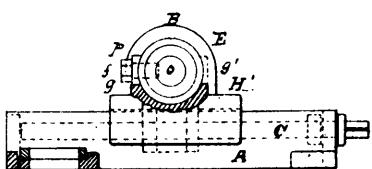

18364 Rote's Automatic Car Brake.

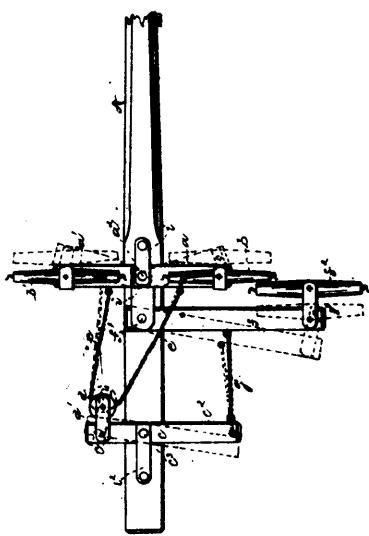

18365 Dixon's Machine for Driving Fence Posts.

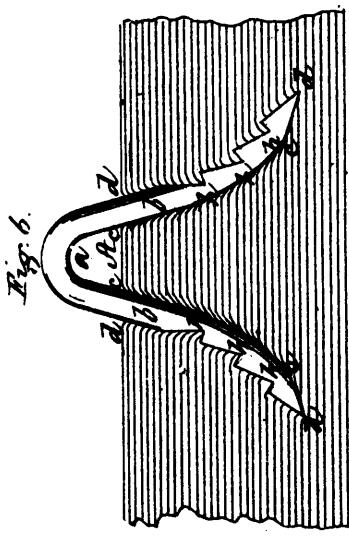

18366 Trier's Machine for Manufacturing Grindstones.

18367 Trier's Machine for Truing Grindstones.

18368 Lawler's Draft Equalizer.

18369 Frost's Staple.
