Technical and Bibliographic Notes / Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming are checked below.

- Coloured covers / Couverture de couleur
- Covers damaged / Couverture endommagée
- Covers restored and/or laminated / Couverture restaurée et/ou pelliculée
- Cover title missing / Le titre de couverture manque
- Coloured maps / Cartes géographiques en couleur
- Coloured ink (i.e. other than blue or black) / Encre de couleur (i.e. autre que bleue ou noire)
- Coloured plates and/or illustrations / Planches et/ou illustrations en couleur
- Bound with other material / Relié avec d'autres documents
- Only edition available / Seule édition disponible
- Tight binding may cause shadows or distortion along interior margin / La reliure serrée peut causer de l'ombre ou de la distorsion le long de la marge intérieure.
- Blank leaves added during restorations may appear within the text. Whenever possible, these have been omitted from filming / Il se peut que certaines pages blanches ajoutées lors d'une restauration apparaissent dans le texte, mais, lorsque cela était possible, ces pages n'ont pas été filmées.
- Additional comments / Commentaires supplémentaires:

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

- Coloured pages / Pages de couleur
- Pages damaged / Pages endommagées
- Pages restored and/or laminated / Pages restaurées et/ou pelliculées
- Pages discoloured, stained or foxed / Pages décolorées, tachetées ou piquées
- Pages detached / Pages détachées
- Showthrough / Transparence
- Quality of print varies / Qualité inégale de l'impression
- Includes supplementary material / Comprend du matériel supplémentaire
- Pages wholly or partially obscured by errata, slips, tissues, etc., have been refilmed to ensure the best possible image / Les pages totalement ou partiellement obscurcies par un feuillet d'errata, une pelure, etc., ont été filmées à nouveau de façon à obtenir la meilleure image possible.
- Opposing pages with varying colouration or discolourations are filmed twice to ensure the best possible image / Les pages s'opposant ayant des colorations variables ou des décolorations sont filmées deux fois afin d'obtenir la meilleure image possible.

This item is filmed at the reduction ratio checked below / Ce document est filmé au taux de réduction indiqué ci-dessous.

10x	14x	18x	22x	26x	30x
12x	16x	20x	24x	28x	32x

The copy filmed here has been reproduced thanks
to the generosity of:

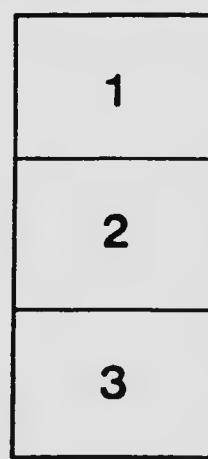

National Library of Canada

The images appearing here are the best quality
possible considering the condition and legibility
of the original copy and in keeping with the
filming contract specifications.

Original copies in printed paper covers are filmed
beginning with the front cover and ending on
the last page with a printed or illustrated impres-
sion, or the back cover when appropriate. All
other original copies are filmed beginning on the
first page with a printed or illustrated impres-
sion, and ending on the last page with a printed
or illustrated impression.

The last recorded frame on each microfiche
shell contain the symbol → (meaning "CON-
TINUED"), or the symbol ▽ (meaning "END"),
whichever applies.

Maps, plates, charts, etc., may be filmed at
different reduction ratios. Those too large to be
entirely included in one exposure are filmed
beginning in the upper left hand corner, left to
right and top to bottom, as many frames as
required. The following diagrams illustrate the
method:

1	2	3
4	5	6

L'exemplaire filmé fut reproduit grâce à la
générosité de:

Bibliothèque nationale du Canada

Les images suivantes ont été reproduites avec le
plus grand soin, compte tenu de la condition et
de la netteté de l'exemplaire filmé, et en
conformité avec les conditions du contrat de
filmage.

Tous les exemplaires originaux dont la couverture en
papier est imprimée sont filmés en commençant par le
premier plat et en terminant soit par le
dernière page qui comporte une empreinte
d'impression ou d'illustration, soit par le second
plat, selon le cas. Tous les autres exemplaires
originaux sont filmés en commençant par le
première page qui comporte une empreinte
d'impression ou d'illustration et en terminant par
la dernière page qui comporte une telle
empreinte.

Un des symboles suivants apparaîtra sur la
dernière image de chaque microfiche, selon le
cas: le symbole → signifie "A SUIVRE", le
symbole ▽ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être
filmés à des taux de réduction différents.
Lorsque le document est trop grand pour être
reproduit en un seul cliché, il est filmé à partir
de l'angle supérieur gauche, de gauche à droite,
et de haut en bas, en prenant le nombre
d'images nécessaire. Les diagrammes suivants
illustrent la méthode.

BULLETIN, No. 119

FRUIT PRESERVES

LABORATORY

OF THE

INLAND REVENUE DEPARTMENT

OTTAWA, CANADA

BULLETIN No. 119

FRUIT PRESERVES

OTTAWA, June 7, 1906.

W. J. GERALD, Esq.,
Deputy Minister of Inland Revenue.

SIR,—I have the honour to enclose herewith a report by Mr. A. McGill, Assistant Analyst to the Chief Analyst, concerning the last collection of fruit preserves, and also a statement giving the results of examining 190 samples of these and Mr. McGill's each. In this statement I have found myself obliged to insert a column the conclusions I have reached regarding the various samples and especially marked by Mr. McGill as 'not analysed.' There was of course nothing to be gained by examining these, their adulteration having been declared by the use of the word 'compound' or 'mixture' on the labels. In many cases, however, this declaration was not made in the manner required by the Adulteration Act, which states that food shall be deemed to be adulterated within the meaning of the Act 'if any inferior or cheaper substance has been substituted, wholly or in part for the article,' provided that this definition shall not apply 'if any articles of food not injurious to the health of the person consuming them are mixed together and sold, or offered for sale, as a compound, and if each package, roll, parcel or vessel containing such articles is distinctly labelled as a mixture in *conspicuous characters* forming an inseparable part of the general label, which shall also bear the name and address of the manufacturer.'

In applying this clause for the purpose of ascertaining whether any sample of these fruit preserves was adulterated 'according to the Act,' I have not used that term in reference to any sample upon which the word 'compound' or 'mixture' was to be found in close proximity to the name of the article, in distinct, although smaller characters, and forming part of the original label. On the other hand where the words referred to have been, subsequently to the printing, stencilled on the label inconspicuously in small and indistinct letters, or disconnected entirely from the name of the article, I have judged it

reasonable to characterise the sample as 'adulterated according to the Act.' With reference to the genuine samples in which Mr. McGill found none or only traces of glucose, I have adhered to his findings. As regards the samples which he has classified as 'probably adulterated under the Act with recommendation to leniency in some cases,' I have been obliged to discriminate between those which showed some or a little glucose, which I have marked 'doubtful,' and to look upon those samples, regarding which there is no declaration, and which contain much glucose or dextrine as 'adulterated.'

This plan leads to the following classification :—

	No. of Samples.
Unadulterated	53
Doubtful	17
Adulterated according to Act.	67
Adulteration declared	30
Adulterated	15
Collected by mistake	8
Total	190

I have the honour to be, sir,

Your obedient servant,

THOMAS MACFARLANE.

Chief Analyst.

LABORATORY OF THE INLAND REVENUE DEPARTMENT,
317 QUEEN STREET, OTTAWA, June 4, 1906.

THOMAS MACFARLANE Esq., F.R.S.C., &c.,
Chief Analyst.

SIR,—I beg to submit herewith the results of examining 190 samples collected as preserves (jams, jellies and marmalades) in November and December of last year and in January and February of the present year.

Eight (8) of the samples above referred to do not answer to the description of preserves : seven (7) of them being gelatine jelly blocks or powders and one being a so called 'canned' fruit.

According to inspectorial districts, the collection is as below :—

Districts.	Samples Collected.	Preserves.
Nova Scotia	14	14
New Brunswick	14	14
Prince Edward Island	12	12
Quebec	29	19
St. Hyacinthe	14	8
Montreal	24	24
Ottawa	29	20
Kingston	20	20
London	21	20
Manitoba	9	9
Calgary	6	6
British Columbia	16	16
	190	182

Of 182 samples answering to the description of a preserve, ninety-seven (97) samples are marked 'compound' with more or less distinctness. Only 17 of this number have been analysed. The remaining samples (eighty-five in number) claim to be genuine or are sold without any statement to the contrary. Fifty-three of these have been found to be genuine ; leaving a balance of thirty-two (32) samples regarding which the question of adulteration may be raised.

My examination of these samples has had regard to the following points :—

1. Quantity and quality of fruit used.
2. Quantity and kind of sugar (including a determination of the presence or absence of glucose).
3. Preservatives.
4. Artificial dyes.

As regards preservatives and dyes I have contented myself with ascertaining the presence or absence of these without comment. We have no regulations which forbid their use, and it is quite probable that, so far as dyes are concerned, the minute quantities present are not more harmful to health than they would be in candy-colouring. The chief objection that I find to the use of dyes in jams and jellies, is the fact that they serve to cover up defects in fruit, and thus permit the employment of inferior fruit in manufacture. It is also evident that the making of a so-called strawberry or raspberry jam from apple pulp, is only possible when the colour is given by a dye.

With regard to the quantity of fruit present in a jam, we have no standards which enable interpretation to be made from the amount of insoluble residue, nor is any ratio between fruit and sugar established by law. Until this is done, it is evident that exact determination of insoluble matters (cellulose, &c.) affords no useful datum in analysis, and I have not carried out this research in many of the samples reported.

I would respectfully recommend that this very important subject be made matter of investigation during the coming fruit season. Since raspberry and strawberry jams are those most largely sold, I would suggest that methods of research be carried out in these; having regard to the degree of accuracy attainable in determining the amount of fruit used, from the amount of insoluble tissue found in the jam.

The Department of Agriculture at Washington, D.C., has recently (March, 1906) adopted a ratio of not less than forty-five (45) pounds of fruit for fifty-five (55) pounds of sugar. Whether or not this standard would suit Canada is matter for investigation, and it remains to be seen what degree of accuracy can be attained in determining the ratio. Messrs. Tolman and Munson (Bull. 66, Bureau of Chemistry, Washington) have done some valuable research work in this regard, but there is need of a great deal more research work before a reliable method of procedure can be outlined.

I may merely add that when no remark is made concerning the fruit found in jams of the present collection, it is to be understood that, so far as regards quantity and quality, nothing calling for special notice has been found. In a few cases the fruit has been so abnormally small in amount, that I have thought it right to call attention to the fact. It is usually in glucose jams that this paucity of fruit tissue is found; the consistency of the finished product is in this case due chiefly to the viscous character of the glucose, while in a genuine jam, the fruit pulp plays an important part in giving normal consistency to the jam.

It will be evident from what I have said, that for the present, the decision of the genuineness in a jam rests mainly upon the absence of glucose. In a few cases (eight samples) I have found traces only of dextrine, and a polarimeter number indicating certainly less than ten (10) per cent of glucose, and probably less than five per cent. It is claimed by some manufacturers that the addition of a small quantity of glucose is desirable in order to prevent the crystallizing of the cane sugar on prolonged keeping. Without committing myself to an opinion on the matter, I have thought it justifiable to include these cases among the samples classified as genuine, but this is done without prejudice to future findings, and is, of course, subject to your own revision.

In the remaining thirty-two (32) samples, glucose is present in so large quantity as to make it necessary to pronounce them adulterated within the meaning of the Act, since the presence of glucose is not acknowledged on the label.

It is, however, only fair to say that many of these samples bear evidence of having been taken from very old stock, the labels being fly-specked, discoloured or otherwise marked as *shop-worn*. Later samples, by the same makers, are stencilled with the word 'compound,' and it is fair to conclude that, at least in some instances, the samples in question are to be looked upon as *old sales*, which had escaped proper marking rather than as uttered with any fraudulent intent. To what extent this consideration may affect the decision of the Department regarding the vendors is another matter, but I think it only right that I should point out the facts.

I have the honour to be, sir,

Your obedient servant,

A. MCGILL.

(Addendum.)

I think it may be well at some future time to make a special collection of gelatine jelly powders and things of that sort. These are very largely sold and quite a number of manufacturers are represented in the Canadian market. Investigatory work will be needed to define a method of work and to discover how far we can hope to get any valuable information concerning their composition.

A. MCGILL.
