Technical and Bibliographic Notes/Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

The copy filmed here has been reproduced thanks to the generosity of:

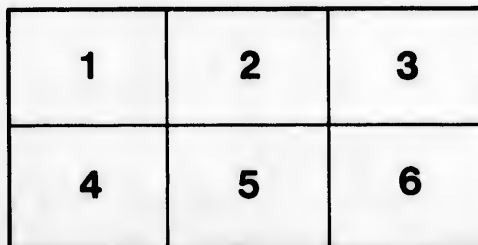

University of Saskatchewan
Saskatoon

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▼ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

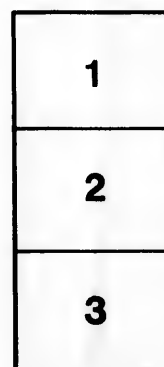

University of Saskatchewan
Saskatoon.

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▼ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

HALIFAX PROVISIONAL BATTALION Cough Mixture

Is universally well spoken of, and is assuredly a good article for people afflicted with Coughs, Colds, &c., &c. PRICE, 25 CENTS.

We also wish to draw attention to the following, which speaks for itself:

HALIFAX, N. S., OCT. 7TH, 1886.
MR. L. J. MYLIUS:—Dear Sir,—I can testify to the virtue of your IRON AND QUININE TONIC. For weeks I suffered from weakness and loss of appetite, caused by a run-down system. Three of your bottles restored me to my usual health. Yours truly,

SHORT RULES FOR CASTING INTEREST.

For finding the interest on any principal for any number of days, the answer in each case being in cents. Separate the two right hand figures to express it in dollars and cents:

FOUR PER CENT.—Multiply the principal by the number of days to run; separate the right hand figure from the product, and divide by 9.

FIVE PER CENT.—Multiply by number of days, and divide by 72.

EIGHT PER CENT.—Multiply by number of days, and divide by 45.

NINE PER CENT.—Multiply by number of days; separate right hand figure and divide by 4.

SIX PER CENT. INTEREST.

WEATHER GUIDE.

The following Table (the result of many years' actual observation) is ascribed to Dr. Herschel. It is constructed upon a due consideration of the attraction of the Sun and Moon in their several positions respecting the Earth, and serves to show what kind of weather will most probably follow the entrance of the Moon into any of her quarters:—

Moon.	Time of Change.	In Summer.	In Winter.
	Between midnight & 2 A. M. }	Fair.	Hard Frost unless wind be S. or W.
	" 2 and 4 A. M. }	Cold with showers.	Snow and stormy.
	" 4 " 6 " }	Rain.	Stormy and rainy.
	" 6 " 8 " }	Wind and rain.	Stormy.
	" 8 " 10 " }	Variable.	Rain if wind W.
	" 10 " 12 " }	Showery.	Snow if E.
	At 12 Noon, and to 2 P. M. }	Very rainy.	Cold and high wind.
	Between 2 and 4 P. M. }	Variable.	Snow or rain.
	" 4 " 6 " }	Fair.	Fair and mild.
	" 6 " 8 " }	Fair if wind be N. W. }	Fair.
	" 8 " 10 " }	Rainy if S. or S. W. }	Frosty if wind N or N
	" 10 " midnight.	Ditto. Ditto.	E. Snow if S or S W.
		Fair.	Ditto. Ditto.
			Fair and frosty.

The nearer midnight any of the Moon's changes occur, the finer will be the weather during the succeeding week; the nearer noon any of the changes happen, the more foul and wet will be the weather that will follow.

It will sometimes be found that when a constant is added to the time of High Water at Halifax, the sum exceeds 12 hours; in this case subtract 12 hours from the sum, and the remainder will be the time of High Water at the required port on the following afternoon or morning, according as the Tide at Halifax was a morning or afternoon Tide.

JANUARY.—During this month the day lengthens 55 minutes—18 in the morning and 37 in the afternoon. Venus at the beginning of the month is still immersed in the Sun's rays, after the middle of the month she may be seen as an evening star. Mars is an evening star. Jupiter shines through the last half of the night.

FEBRUARY.—During this month the day lengthens 1 hour 18 minutes—39 minutes in the morning, and 36 in the afternoon. Venus and Mars are evening stars. Jupiter is a morning star.

MARCH.—The day lengthens in this month 1 hour 39 minutes—41 minutes in the morning, and 41 minutes in the afternoon. Venus is an evening star. Mars disappears by the end of the month. Jupiter shines nearly the whole night.

APRIL.—The day lengthens in this month 1 hour 14 minutes—30 minutes in the morning, and 30 in the afternoon. Venus is an evening star. Mars is still invisible. Jupiter may be seen during the whole night.

MAY.—The day lengthens in this month 1 hour 7 minutes—34 minutes in the morning, and 34 in the afternoon. Venus is an evening star. Mars is still hidden in the Sun's rays. Jupiter shines for the greater part of the night.

JUNE.—To find the length of the day, subtract the time of sunset from 12 hours, and to the difference add the time of sunset.

PUTTNER'S EMULSION is used in all Wasting Diseases.

Venus and Jupiter are evening stars. Mars is a morning star.

AUGUST.—The difference of 12 minutes in the decrease of morning and afternoon during this month is caused by the sun being 6 minutes slower than the clock on the 1st, and agreeing with it at the end of the month. Venus and Jupiter are evening stars. Mars is a morning star.

SEPTEMBER.—The time of sunrise added to the time of sunset is equal to 12 hours, only when the time by Sun and the clock is the same, as on the first of this month. Venus is too near the Sun to be seen. Mars is a morning star. Jupiter an evening star.

OCTOBER.—In this month the day decreases 1 hour 29 minutes—38 minutes in the morning and 51 in the afternoon. Venus and Mars are morning stars. Jupiter is an evening star, but towards the end of the month is too near the Sun to be seen.

NOVEMBER.—During this month the day decreases 1 hour 9 minutes—40 minutes in the morning, and 29 in the afternoon. Mars and Venus are evening stars. By the middle of the month Jupiter is again visible for a short time before sunrise.

DECEMBER.—The length of the shortest day, December 21st, is 8 hours 39 minutes. By the end of the month the day has lengthened 14 minutes. Venus, Mars and Jupiter are all morning stars.

The new Standard Time is 15 minutes earlier than Halifax Mean Time, and the Railway Time one hour earlier than Halifax Standard Time.

PARKS' COTTON MANUFACTURES.

Awarded the ONLY MEDAL given at the Centennial Exhibition for Canadian Yarns. And the GOLD MEDAL for Cotton Goods at the Dominion Exhibition at Montreal; and First Prizes at Toronto, Hamilton and London Exhibitions of 1880 and 1881; and First Prize Medals at Toronto, Montreal and Kingston Exhibitions of 1882, and St. John, 1882.

COTTON YARNS,

Nos. 5's to 10's.

WHITE, BLUE, ORANGE, GREEN AND RED.

Made of good American Cotton, with great care, correctly numbered, and warranted full length and weight.

We find it necessary to call the attention of those who USE COTTON YARN or WARP to the fact that the yarn made by us is the ONLY

WATER-TWIST YARN

made in the Dominion—no other mill having the machinery on which to make it. Our Yarn is, consequently, very much superior for weaving purposes to any other in the market—a fact which is well known to those who have used it for the past TWENTY YEARS.

The only GOLD MEDAL awarded Toronto Exhibition, 1885.

All our Yarns have our name upon the label, and none other is genuine.

COTTON CARPET WARP,

Made of No. 9's Yarn Twisted.

WHITE, RED, GREEN, BLUE, BROWN & ORANGE.

Each 5 lb. Bundle contains 9,000 yards in length, and makes length of carpet in proportion to the number of ends in width.

BALL KNITTING COTTON,

In all Numbers and Colours, put up in 2 oz. Balls.

2 lbs. in each box, made from the finest long staple cotton, especially selected for the purpose. This cotton is very carefully spun, and will be found to be evenly made and correctly numbered. Particular care is taken to have the dyeing and bleaching perfectly done. FULL WEIGHT IN EVERY BALL.

COTTON HOSIERY YARN,

SUITABLE FOR MANUFACTURERS OF HOSIERY.

Better than any other made, and so acknowledged by all who have used them. These goods are supplied to all the first-class Manufacturers in the Dominion.

Begin this year by patronising SMITH'S DRUG STORE.

JANUARY.—In former editions of the Almanack, the special purpose of these Farmer's Foot Notes has been explained. They are intended as a monthly guide or reminder of the field work and farm matters that require attention during the several seasons of the year. They are not written for the purpose of furnishing new or original or theoretical information, but rather as practical hints to intelligent Agriculturists already familiar with the science and practice of their profession. The notes, in fact, are to be used on the farm to assist during the progress of the season, in arranging the farm work and business. A fact known to every farmer is that no two seasons are the exact counterparts of each other, and the farmer or gardener or fruit-grower will be most successful whose crops are selected and

operations carried on in view of the season proving either good, bad or indifferent. Crops that ripen well one season may not do as well on the same farm the next, and hence a judicious choice should be made. The same applies to modes of culture, and to times of preparing the ground and sowing. These two last operations should always, however, be performed as soon as the soil and weather are fit, with regard to the temperature of the soil. It is at this comparatively idle season that a plan of the year's work may be carefully prepared, and we commend this as an exercise well adapted for occupying the leisure evenings of January.

FEBRUARY is the trying month for cattle. We cannot too strongly impress the necessity of care in their feeding, watering and general treatment, at this season of the year. If once allowed to begin to fall off, it will be uphill work to attempt

to stop it. Barns may be faulty, and the cold is severely felt, and yet this is one of the least evils in Nova Scotia, for horned cattle require plenty of fresh air, and the winter and spring rates of mortality in cows in the country barns is very low compared to that of the apparently comfortable, substantial, wind-tight stables of the City of Halifax. The root cellar may be troublesome to get at, and the animal may thus miss an occasional meal; the wells may be frozen and the way to watering places may be so slippery that the cattle cannot reach them without discomfort or positive accident. In order to overcome these and many other difficulties that appear in February, it is a good rule to give extra time and attention to the stock in feeding grain and meal always mix them into cut hay, moistened. In districts where an Agricultural Society does not already exist this is a good time to organize, where Farmers have time to attend a meeting, and take steps for organization, notification of which has to be made to the Office of Agriculture before the end of June in order to qualify for the grant for the year.

MARCH.—The nature of our climate necessitates the use of a hot-bed for raising seedling plants of those crops that require a long season to mature. A hot-bed is made by piling on successive layers of well chopped horse dung obtained from a stable where oats are freely fed. The manure may be raised to a height of two or three feet above the surface of the soil. On top, spread four or five inches of very fine and rich soil mixed with sand; this should have been prepared in the fall, and kept dry under cover all winter;—otherwise it is likely now to be in a hard frozen mass. The glass sashes are then to be put on and kept close till the hot-bed heats; the steam and heat will start the seeds of weeds, which may be allowed to grow. Air is then given, and when the heat modifies, weed and rake the surface; sow your spring seeds,—cauliflowers, cabbages, celery, tomatoes, &c., in the kitchen garden; and stocks, verbenas, petunias, asters, balsams, and such annuals for flower garden ornament. The seeds will bear a good deal of heat before they emerge from the soil, but, as soon as the first leaves begin to appear, the frame must be aired daily, taking care to avoid cold draughts and exposure to

bright sunshine; a newspaper laid over the seed bed forms a convenient shade. The character of our spring season, as regards earliness, is best indicated by certain periodical phenomena which it is of interest, as well as useful, to notice. In 1886, frogs were first heard on 17th April, showing that the ponds had completely thawed out and the water was getting warm; on 18th, the golden crocus was in bloom, and the thermometer stood in the shade at 72° Fah. (22° Cent.) half an hour after noon, and at 68° at 6 p. m. This was followed by cool weather. The sweet violet was in bloom in the woods on 2nd May; dandelions on the railway embankment 4th May. In the gardens, on 13th, daffodils, scilla, cowslips and pansies were in bloom, and in the woods and fields at same date poverty flower, wild strawberry, white trillium, blue violet and gold th. had.

comparing the above with dates of flowering of these plants in any other country, the degree of forwardness of our spring-time may be ascertained.

April.—Spring ploughing, seeding and planting all commence in April, and should be pushed on with as much expedition and vigour as the weather will allow. In 1886, ploughing commenced early in April,—in dry soils in favourable situations as early as the first of the month. Wheat was sown in some places before the middle of April, and potato planting for early crop commenced about the 20th. It is not every year that we have such an early season, but the farmer should be ready to anticipate the advantages arising from early work. Early in the month, if the fields are not fit for ploughing or sowing, preliminary operations may be performed. Manure under cover may be carted out on the frozen soil to

where it is to be used. In fields seeded down with timothy last fall, it will now be time to sow clover,—a mixture of red and alsyke is the best for hay, as the white clover does not grow tall enough for cutting. When early potatoes are required, the seed should be kept in a warm place so as to start the eyes, and whenever the ground is dry enough, they may be planted. This advice we gave last year in the Almanack, but it could not have been generally heeded, for reports were received from nearly all Counties in the Province that seed potatoes came up very scantily, many rotting in the ground. If farmers, instead of planting inert seed potatoes, taken out of a cold cellar, would first allow the eyes to start, there would be no more complaints of the seed perishing in the soil. Peas and Broadbeans may be sown at the very beginning of the month; onions, parsnips, and carrots

soon as the ground is fit to give them the more delicate seed-bed they require. Beets and mangel wurzel are usually sown at the end of the month or early in May. All gooseberry and currant bushes should be dressed, apple and pear trees gone over, and generally the whole kitchen garden and orchard thoroughly weeded. Remove the boughs from the strawberry plants gradually, and make the flower garden neat and trim.

MAY.—The work of crop raising commenced in April has now to be carried on with increased vigour. The success of the farmer's year depends so much upon the month of May and the work that can be then accomplished, that every hour should be highly valued. If any ploughing has still to be done, let it be done at once; manure has to be taken out for crops, don't wait for a more convenient season; if the weather is not all that can be desired, proceed nevertheless with your work,

vary it to suit the state of the soil and the atmosphere. Men cannot fight against the operations of nature, but they can very often turn them to advantage by the consideration and forethought. What has to be sown and planted this month is *Everything*, except what has either already been committed to the soil, or is too tender to withstand the coldness, or the probable frosts. Such exceptional crops are bush-beans, pole-beans, corn, tomatoes, cucumbers, squash; it is only warm sandy soils that such things can be safely put out before the end of the month. Turnips also should not be sown in May. Finish all top dressing grass land, if this has been neglected in autumn, when it should have been done. keep down weeds in gardens, give more air to frames, so that the plants will grow strong and hardy, see that all fences are secure before you let out.

attle into the pastures, clear out cellars and yards, whitewash buildings, and put the whole homestead into summer order.

JUNE.—Some field crops are grown for the purpose of furnishing summer feed and winter fodder for the animals of the farm; these are used on the farm. Some crops are sent directly to the market, and are thus called "paying crops." One of the most important of these to the Nova Scotian farmer is the potato. As, potatoes have, during the last year or two, been planted earlier than was formerly the custom. There is a great advantage in this, as the potato has time to mature before the August blight; but, when planted early, or during dry weather, care should be taken to see that the seed is first sprouted. If potatoes are still to be planted, do it at once. Different methods are adopted in different

localities; in light land the manure is ploughed in, on heavy land it is laid in the drills. Superphosphate and kainit greatly increase the yield, which varies with different varieties. Where the Colorado bug appears, pick off by hand or dust with Paris green before the dew has gone off the vines. As soon as the currant and gooseberry bushes have pushed out their first leaves and blossoms, it will be found advantageous to give them a sprinkling of white hellebore powder in the early morning before the dew is off. This will destroy the first crop of currant worms, and thus preserve the bushes and the fruit crop the season. Summer bedding plants are set out in the flower garden as early as the month as the weather will allow; verbenas may be put out very early, and are rather better in the moist cool weather of early June, than later, when the soil apt to be baked by the sun. Stocks are also very early. Balsams, phloxes,

JULY.—Ploughing, sowing and planting have been completed in the months of May and June,—this month is especially devoted to the cultivation of the various field crops. Cultivation, in this restricted sense, means the hoeing of crops, stirring by cultivators and harrows, and such like implements, between or over the drills, hilling up and moulding. The object of these operations is to destroy weeds, to keep the soil open, and thus to promote the decomposition of the manure, enable the soil to retain moisture, allow free access of air, and by these means to ensure the growth of the crops. We are apt to have a good many rainy days in July, and, as most of the hoeing work has to be compressed between planting time and haying time, haying has occasionally to be begun before potato

hoing is completed; this occurs on many of the best regulated farms. In ordinary seasons it is sure to occur on a farm where foresight is not shown, hence the miserable root crops we so often see. Let our farming readers then be careful to forecast the weather probabilities in light of the July work to be done on the growing crops, and thus avoid the disastrous loss that comes from neglect. The sowing of turnips is usually recommended for the month of June, but, as the ground has to be remarkably fine for this crop, and as turnips are often put in to fill up land that was originally intended for the earlier sown roots, it frequently happens that turnips have to be sown in July. Some even prefer to sow their Swedes this month, and the soft turnips for immediate feeding need not necessarily be sown till the end of July, although, if they get warm genial weather to

start with, they do much better earlier. The ground should have undergone a thorough pulverization. Light sandy soil is the best for turnips. They start best after the ground is warm, but the bulbs swell most rapidly during the cool dewy nights in Autumn. The soil cannot be worked too deep or made too fine for turnips. Town manures are valuable for this crop; and crushed bones have been applied with the best effects, either when covered in the drills in the manner of ordinary dung, or, preferably, when sown by machine along with the seeds, so as to be in immediate contact with the latter. Guano has been largely used, but not so much of late years. Superphosphate is very efficacious.

carried over into the month of August. Where suitable implements and appliances are used, there is now no difficulty in securing the crop. Of late years a pest has appeared in our potato fields, which requires looking after this month; we refer to the Colorado beetle or bug. There are two remedies: either pick the Coloradoes off the plants, or poison them by sprinkling. The most convenient method of picking is to walk along the rows, with a tin milk pail, striking the insects off the potato tops with a shingle. The substances used for poisoning are Paris green and London purple; the powder may be thrown upon the plants before the dew is off in the morning. We have in former years recommended our readers to note at this season how convenient it is to have

thoroughbred calves should be at once registered in the Stock Register. For grade stock the farmer should keep himself a record for after reference.

SEPTEMBER.—This month should be specially devoted to the gathering in Crops. Haying has been finished in August, and probably all the grain has been harvested. Orchard fruit requires special attention. Early in the month Indian Corn will have to be cut and put into the Silos; fortunately these grow on the increase in this Province. The ensilage forms an excellent supplement to the hay and roots upon which our cattle were fed too exclusively in former years. Later in the month Potatoes of the earlier kinds and early planted will be ready to be taken up; but, whilst the weather remains warm, they should be

SKETCH OF THE HOUSE.

THE FIRM has been in existence about seventeen years. Like most successful enterprises, it was commenced in a comparatively small way, and has had a natural and steady growth. Confining its united energies to one line of business only, the firm has had success perhaps without precedent in the Maritime Provinces in any manufacturing industry. There is scarcely a retail house selling Clothing in the Lower Provinces which can do without some of its Specialties. The house has always been noted for its promptness,—promptness in every department,—promptness in its payments,—promptness in executing orders, and in being fully up to the times. Constantly improving its equipments and appointments, and quickly appropriating the newest methods and styles, whether of New York or London origin.

That the goods are right, is perhaps best attested by the fact of the increasing demand for them, and the growth of the business of those confining their purchases of Clothing chiefly or entirely to our lines.

To our friends who may favor us with a visit, we tender a cordial invitation, and hope to show a stock worthy their most careful consideration.

OCTOBER.—Now that the season's work is well nigh over, the young man on whom may repair to the School of Agriculture, at the Normal School, Truro, where instruction is given in the Art of Agriculture and the sciences bearing on it. The Fruit Crop is yearly acquiring increased importance in Nova Scotia, and that the markets of the world are open to our fruit growers. The fruit harvest is now being gathered. Fruit growing forms one of our great industries; and therefore, in view of the importance of promoting and extending it, no better advice can be given to our orchardists at this season

than that which appeared in the London Garden, from a prominent London firm of fruit dealers:--New York State Apples a few years ago occupied the leading position in the trade, but have been steadily losing prestige, and goods packed in the Western and New England States and Canada have steadily gained in popularity and prices. These results have been caused by the style of packing; the New York barrel contains about 24 bushels, has flat hoops, whilst the others have fully three bushels and have round hoops. Baldwins in the former sell in London at 18s. per barrel, whilst in the latter they bring only 15s., 17 p. c. less, whilst the difference in quantity is only 84 p. c. NOVEMBER.—The improvement of cattle has at length taken a secure hold upon people of Nova Scotia, and is carried out to some extent through the agency of Agricultural Societies. Every Society keeps, or ought to keep, a sufficient number of male animals for the use of members. animals are not always obtainable. For beef cattle the Short Horn Durham breed is the best, their growth is more rapid than that of any other kind. For milk alone, Ayrshires are to be preferred, Devons make the best working ones. For domestic cows in the city the creamy Guernseys or Jerseys are the most suitable. The Jerseys are at present the greatest favorites, and their increase whilst it will promote the manufacture of butter, threatens to lessen our capacity for beef production. Holsteins are also, however, becoming great favorites in a few localities, and the same may be said of Polled Angus. A few Herefords have been introduced. As soon as the root crops are all cleared off the fields, the weeds and potato vines are put in heaps to rot, the farmer should employ

the strength of man and beast in fall ploughing. Whether on old or new land, ploughing is a most important operation. Without it, the farm cannot be worked to advantage. After ploughing, do not forget to go carefully over the water furrows to make way for the exit of the rain and melting snows that are sure to flood your land before seed time. A well ploughed, well drained, field may be sown in spring even as the frost is gone, whilst one that is irregularly ploughed, or has no water course, may long remain a puddle, defying every attempt to improve its condition. The best part of what is too often left to be "Spring work," can be done in the month of November. All land intended for the spring sowing of oats, peas and beans, should be effectively worked this month.

DECEMBER.—Under each month are indicated the matters that most urgently require notice. Last, but not least, we call the farmer's attention to his position as the Member of an Agricultural Society, in which, by example and precept, he may make his personal influence widely felt, and thereby conduce to the prosperity and advancement of by far the most important industrial interest of the Province. There are now nearly a hundred Agricultural Societies in this Province, with membership of about six thousand farmers; each Society is entitled to draw from the Provincial Treasury an annual grant in aid to promote its operations. The special purpose of a Society is to improve the live stock of its district, which

accomplished by obtaining and keeping for the use of members, superior male animals, such as bulis, rams and boars. Societies may also introduce seeds of new varieties of grain, roots, and also improved implements, and sell them to members at cost and charges. Each Society is required to circulate among its members a certain amount of Agricultural literature. Exhibitions are held by the Societies in a District, embracing two or more Counties, combining. The whole of the Societies of the Province meet annually, each in its own District, when the members receive the Director's Report, and select officers for the ensuing year. Information as to the method of organizing Societies may be obtained on application at the Office of Agriculture, Province Building, Halifax. (See remarks in Almanack under February.)

Aphelion—that part of a planet's orbit *farthest* from the Sun.
Perihelion—that part of a planet's orbit *nearest* the Sun.

Elongation—angular distance of a planet from the Sun, as seen from the Earth.

Penumbra—a partial shadow resulting from the diminished light of the sun to the earth or moon, during a solar or lunar eclipse, appearing as partial.

Declination—the distance of a heavenly body from the equinoctial line.

Ecliptic—the plane of the earth's orbit nearest the sun.

The Astronomical day is reckoned from Noon to Noon through the 24 hours. Thus July 21, 9h. is 9h. A. of July 21st, and July 21st, 15h. is 3h. M. of July 22.

The Sun's Declination and Equation of Time are given for Noon at Halifax, Apparent Time, i.e. when the True Sun is on the meridian.

The Moon's Southing is given in Astronomical Time for the Meridian Passage at Halifax; and her declination when on that meridian.

The rising of the Moon is given from Full Moon to New Moon; and the setting from New Moon to Full Moon.

THE TIDES.

The Tides in the Calendar given for the Ports mentioned, are the tides that occur during the day. In the Tide Table (page 51) will be found constants for finding the time of High Water at each of the places mentioned in the Table.

The Times of High Water given in the Calendar have been corrected for the varying distance of the Moon from the Earth, also for her angular distance from the Sun. They can now be depended on as accurate to at least the same degree as the Admiralty Tide Tables.

The new Standard Time is 15 minutes earlier than Halifax Mean Time, and the Railway Time one hour later than Halifax Standard Time.

subscribers or news agents in Newfoundland or the United States, free; to the United Kingdom, 1c. per lb.

On transient newspapers addressed to the United Kingdom the rate is one cent per two oz or fraction of 2 oz., to be prepaid by postage stamps.

Newspapers if sent singly, must be prepaid at the newspaper rate, but they may be sent in packets paid collectively at book post rate, or by newspaper rate, but if at newspaper rate, each paper must be paid the same rate as if sent singly.

Full information in regard to the rates of postage to British Colonies and foreign countries, via England, or the United States, inland and foreign mail connections, the rules governing letters, newspapers, books, periodicals, samples and parcel post, and the transmission of post cards, ships letters, free matter, &c., may be obtained at any Post Office.

Parcel Post between Canada and the United Kingdom.

Closed Parcels may be posted in the United Kingdom, when addressed for delivery at certain Post Offices in Canada, and may in like manner be posted at those Canadian Post Offices for destinations in the United Kingdom.

As Parcels from the United Kingdom will be liable to Canadian Customs duties, and under existing regulations must be examined for the purpose by an Officer of the Customs in the presence of the persons addressed, the operation of this Parcel Post with the United Kingdom has been limited for the present in Canada to Parcels addressed to or posted at places where Officers of the Customs are stationed.

Parcels for the United Kingdom may be posted at the following Post Offices in Nova Scotia, and Parcels in like manner may be mailed in the United Kingdom addressed to any of these offices, viz.:

Amherst.	Halifax.	Port Hawkesbury.
Annapolis.	Kentville.	Pugwash.
Antigonish.	Liverpool.	Shelburne.
Bridport.	Londonderry Station.	Sydney.
Bedford.	Lunenburg.	Truro.
Barrington.	New Glasgow.	Weymouth.
Bridgetown.	North Sydney.	Windsor.
Bygonia.	Parishborough.	Wolfville.
Chatham.	Pictou.	Yarmouth.
Chatham.	Port Hood.	

The Parcels exchanged with the United Kingdom will pass exclusively by the Weekly Mails conveyed by the Canadian steamers to and from the St. Lawrence in summer and Halifax in winter, and such parcels cannot be sent via New York.

The Parcel Post with the United Kingdom is governed by the following regulations:

A parcel must not exceed 3 lbs. in weight.
The dimensions of a parcel must not exceed 2 feet in length by 1 foot in width or depth.

A parcel must not contain any explosive, combustible or dangerous articles, nor any article of a perishable or fragile character, nor liquors or articles likely to injure other parcels or mail transmissions.

All parcels must be securely and substantially packed and closed.

Each parcel must be plainly directed, and such direction must include the name and full address of the person for whom the parcel is intended.

Open westward of St. John's Island, bearing N. E. by N., clears the ledge; in making harbor from any other direction, the light must be brought to the northward of E. N. E. before it can be steered for to avoid shoal spot off St. Ann's Point. Spar buoys mark the channel. Black left on port hand, red on starboard in approaching the harbor. A bell buoy has been placed near John's Ledge.

PEASE'S ISLAND, on the south point of Pease's Island, one of the Tusket Islands, Yarmouth County, Nova Scotia, lat $43^{\circ} 37' 35''$ N., lon $66^{\circ} 1' 40''$ W. The main or sea light will be revolving catoptric, showing alternately red and white, each color visible for 15 seconds, with intervals of 45 seconds between the flashes. It is elevated 56 feet above high water mark, and in clear weather should be seen 12 miles from all points of approach from the southward, and also through the Schooner and Ellenwood Passages. A fixed red catoptric light will also be shown from a window in the tower, 16 feet below the main light. It is intended to mark the channel between the two dangers known as the Old Man and Old Woman Rocks, and is, therefore, visible between the bearings W. by N. $\frac{1}{2}$ N., and N. W. by N. W. by W., and in no other directions. It should be visible 4 miles. The tower is a wooden building, painted white, and consists of a square tower 42 feet high from base to vane on lantern, with a keeper's dwelling attached.

ARGYLE, on south point of Whitehead Island, Yarmouth County, lat $43^{\circ} 39' 30''$ N., lon $65^{\circ} 52' 4''$ W., fixed red catoptric light, visible 12 miles, 115 feet high, building white, square, wood, with dwelling attached, height 28 feet. For guiding vessels into Argyle Harbor.

TUSKET RIVER, Big Fish Island, south-west point, lat $43^{\circ} 42' 10''$ N., lon $65^{\circ} 57' 15''$ W., two fixed white catoptric lights, horizontal, 8 yards apart, visible 12 miles, 50 feet high, white square wooden building, height 23 feet. Visible seaward; in windows each end of a dwelling house.

SEAL ISLAND, south point, $\frac{1}{2}$ mile inland, lat $43^{\circ} 23' 34''$ N., lon $66^{\circ} 0' 52''$ W., fixed white light, dioptric, 2nd order, visible 18 miles, 98 feet high, white octagonal building, height 60 feet. The Blonde Rock lies S. by W. $3\frac{1}{2}$ miles from light house. Between this Rock and the Island there are some dangers, the ground is rocky throughout, and large vessels ought not to attempt passing between them. A fog whistle near light house, during fogs and snow storms, sounds in each minute a blast of 5 seconds duration, and after an interval of 5 seconds gives another blast of 5 seconds, with an interval of 45 seconds.

YARMOUTH OR CAPE FORCHU, east cape, south point, lat $43^{\circ} 47' 28''$ N., lon $66^{\circ} 9' 20''$ W., white catoptric light, intermittent—light 1 minute, dark $\frac{1}{2}$ minute, visible 18 miles, 117 feet high, octagonal tower, vertical stripes, red and white, height 59 feet. Fog whistle on west side, sounds in fogs and snow storms, 10 seconds in every minute.

An Automatic Buoy, painted red with letter L, has been placed 18 fathoms of water, about $\frac{1}{2}$ mile W. by N. from the Lurcher shoal which lies 15 miles W. N. W. from this light.

BUNKER'S ISLAND, on end of reef, off S. W. point of Island, east side of entrance to Yarmouth Harbor, lat $43^{\circ} 48' 30''$ N., lon $66^{\circ} 8' 45''$ W., fixed red catoptric light, visible 10 miles, 27 feet high, the lantern on a dwelling house, built on a wooden pier. A red beacon light for the purpose of guiding vessels into the harbor. Visible from the southward between the bearings of N. E. by N. and N. $\frac{1}{2}$ E. It can also be seen

For 10 Do, a flag of any colour close up on the outer halliard, with a ball close up on the inner halliard.

The above balls, &c., are hoisted on the east or west yard arm, according to the quarter the vessel first appears in.

A Ship, a large ball at the end of the yard, with a small one at inner halliard.

A Barque, a large do at the end, with a small one dropped at inner halliard.

A Brig, a small one at the end of the yard, and a large one at the inner halliard.

A Brigantine, a cross close up at the outer halliard. Two or more do, a cross half hoisted.

A Topsail Schooner, or Schooner wearing a Merchant's Private Signal, a cross close up at the inner halliard.

Two or more schooners, a cross luner, half hoisted.

The upper yard of the Ship Staff is used solely to designate Steam Vessels thus:

Two large balls close up, one at the outer and the other at the inner halliard, E or W, a steamer reported in that quarter.

A small ball at the outer, and a large one at the inner halliard, a very small or regular coasting Steamer.

A large ball at the outer, and a small one at the inner halliard, a large or ocean going Steamer.

Steamers or Sailing Vessels showing owners' or agents' private signal flags, are denoted on the private Signal Staff with a small descriptive pennant underneath the private signal.

When the description of vessel is ascertained, the following descriptive colors will be hoisted at the masthead, and the inner ball taken down:

A Union Jack—a Flag Ship.

Man-of-War Screw Steamer, steamer pennant, over the Union Jack.

Man-of-War Paddle Steamer, steamer pennant under the Union Jack.

Troop Ship, white pennant two blue crosses between steamer pennant and Union Jack.

DIRECTIONS TO MARINERS WITH REFERENCE TO CANADIAN STORM WARNINGS, ISSUED FOR QUEBEC AND THE MARITIME PROVINCES.

Explanation of Signals made on the Storm Signal Staff at the Citadel.

- I.—Cone, hoisted with the apex downwards, indicates "moderate gale is expected," probably at first from an easterly direction.
- II.—Cone, with apex pointing upwards, indicates "moderate gale expected," probably at first from a westerly direction.
- III.—Drum, with Cone underneath, the apex pointing downwards, indicates fresh to heavy gale is expected, probably at first from easterly direction.

IV.—Drum, with Cone above, the apex pointing upwards, indicates fresh to heavy gale is expected, probably at first from a westerly direction.

The Cone, when hoisted by itself, indicates that it is expected that the wind will obtain a velocity of 30 miles an hour, but will not exceed 40 miles; and it is not intended that an ordinary well found vessel should stay in port, but simply as a warning to mariners that strong winds are expected from the quarter indicated.

The Drum will always be hoisted when the velocity of the wind is expected to exceed 40 miles an hour.

The night signal, corresponding to Nos. 1 and 3, is two white lanterns hanging perpendicular.

The night signal, corresponding to Nos. 2 and 4, is two white lanterns hanging horizontally.

NOTES.—Mariners will be able to obtain further information from Drum Agents, or by consulting the daily probabilities. Mariners must always bear in mind that the storm signals are merely cautionary, and do not necessarily mean that a storm will occur at the place where the signal is displayed, but that one is expected either there or within such a distance that vessels leaving port would be liable to be caught in it.

The storm warnings issued for Nova Scotia, are received from the Central Office, Toronto, Ont.

Mackinlay, Halifax, *Secretary of Juvenile Organizations*. Quarterly sessions of G. D. are held in different parts of the Province, in January, April and July. The annual session is held each Autumn in Halifax.

I. O. OF GOOD TEMPLARS OF THE WORLD.—The first Lodge organized at Economy, Colchester County, July 4, 1864. Grand Lodge of Nova Scotia formed February 5th, 1867; there are now 102 Subordinate Lodges with 4556 members; 15 Juvenile Temples with 700 members; *G. W. C. T.*, R. R. Duncan, Grand Pre, Kings Co.; *G. W. S.*, Joseph Burford, 158 Upper Water St., Halifax. *Supt. of Juvenile Temples*, J. L. Barnhill, Truro. The next Annual Meeting will be held at Amherst the fourth Tuesday of June, 1887.

I. O. OF GOOD TEMPLARS, LOYAL.—Grand Lodge of Nova Scotia re-organized Nov. 21, 1876, 98 Subordinate Lodges, and about 4500 members; 10 Juvenile Temples with 500 members; *G. W. C. T.*, I. J. Hingley, Oxford; *G. W. S.*, P. J. Chisholm, Truro; *Genl. Sup. of Juvenile Temples*, S. Archibald, Watervale, Pictou County. Next Annual Session will be held the first Tuesday of July, 1887.

THE BLUE RIBBON CLUBS, under various names, have footing in many towns, and keep up courses of local public meetings which, with the **WOMEN'S TEMPERANCE UNIONS**, are largely instrumental in advancing Temperance sentiment.

THE N. S. BRANCH OF DOMINION TEMPERANCE ALLIANCE consists of delegates from all other Societies combining for united action to secure advanced legislation and to enforce existing laws. The officers are:—*President*, Rev R. Alder Temple, Halifax. *Vice-Presidents*, R. L. Black, Pugwash; R. T. D. Hart, Kings Co.; P. A. McGregor, New Glasgow; Rev J. Murray, Sydney; Austen Locke, Lockeport; W. C. Bill, Biltown; Rev Dr Burns, Halifax. *Secretary*, P. Monaghan, Halifax. *Treasurer*, W. C. Silver, Halifax.

At this date (Autumn of 1886) the enrolled membership of the various Temperance organizations in Nova Scotia is as follows:—

MEASURES AND WEIGHTS.

To Measure Grain in Bulk.

RULE.—Multiply the length, breadth and height together in feet and tenths of feet; divide by 56 and multiply by 45, and the result will be struck measure in bushels.

To Find the Number of Tons of Hay in a Mow.

Multiply the length in yards by the height in yards, and that by the width in yards, and divide the product by 15. The quotient will be the number of tons. This is only a rough approximation, for hay varies greatly in weight, according to the way in which it was put in, its dryness at that time, and the length of time it has been lying, etc.

To Find the Number of Sq. Yards of Plastering or Painting in a Wall, or the number of yards of yard-wide Carpeting to cover a Floor.

RULE.—Multiply the length by the width or height (in feet), and divide the product by 9, the result will be square yards.

To Measure Boards.

RULE.—Multiply the length in feet by the width in inches and divide the product by 12. The result will be the contents in square feet.

To Measure Scantling, Joists, Plank, Sills, etc.

RULE.—Multiply the width, the thickness and the length together, the width and thickness in inches, and the length in feet, and divide the product by 12. The result will be square feet.

To Find the Number of Shingles Required in a Roof.

RULE.—Multiply the number of square feet in the roof by 8, if the shingles are exposed $4\frac{1}{2}$ inches; or by 7 1-5, exposed 5 inches.

NOTE.—To find the number of square feet, multiply the length of the roof by twice the length of the rafters.

To Find the Number of Acres in a Body of Land.

RULE.—Multiply the length by the width in rods, and divide the product by 160, carrying the division to two decimal places if there is a remainder. The result will be the answer in acres and hundredths.

NOTE.—When the opposite sides of a piece of land are of unequal length, add them together and take one-half for the mean length or width.

Value of Food for Domestic Animals.

The figures below give the comparative number of pounds of each substance, to equal that of any standard food—as for instance, that of bay. Good hay, to give a certain nourishment, for instance, requires 100 lbs. It will require, to give the same, of good clover hay, 95 lbs.; of rye straw, 355 lbs.; of oat straw, 220 lbs.; potatoes, 195 lbs.; of carrots, 280 lbs.; of beets, 346 lbs.; of rutabagas, 262 lbs.; of wheat, 43 lbs.; of peas, 41 lbs.; of beans, 46 lbs.; of rye, 49 lbs.; of barley, 51 lbs.; of corn, 56 lbs.; of oats, 59 lbs.; of buckwheat, 64 lbs.; oil cake, 64 lbs.

RULES FOR FARMERS.

1. Do not over-crop yourself; or, in other words, do not undertake more than you can accomplish with ease.
2. Have a regular system in all you do, and do everything with clear understanding as to result and effect.
3. Keep your lands well up to a good standard by a proper fertilizing and a judicious rotation of profitable crops.
4. Keep none but a good stock, and see to it that said stock kept in good condition.

THE HORSE.

A FARMER'S HORSE.—One of the most important wants of the farmer is a horse that will answer all the diversified purposes of farm life. It is easy enough for the drayman to procure a horse that will suit him—a heavy, slow-moving, docile horse is all that he requires, and such horses are bred all over the country. The professional man, wanting a light, active horse, weighing about 1000 lbs., able to go a mile in three minutes, and with considerable style, is able to procure from almost any establishment for breeding roadsters. Any one wanting a first class carriage horse can also be served; for carriage horses are bred upon many farms. A farmer does not want simply a roadster, a carriage horse, or a draught horse; he wants the qualities of all these different horses combined in one animal.

BOREHAM'S, 145 ARGYLE STREET.

D. H. SMITH & CO., Blank Books, TRURO, N. S.

The farmer wants a horse that is able to haul the heaviest loads on the farm or in going to market, and the same animal must be fast enough to answer the demands of business or pleasure. The small farmers in this country do not keep more than three or four horses. A farmer with from 100 to 200 acres will keep from three to six horses. A farmer does not keep a horse to work on the farm, another to drive upon the road; not at all—his horses are for work or pleasure indifferently. The horses of this country answer this description of the general-purpose horse to a certain extent, but are deficient in weight. Horses that weigh under 1200 lbs. are not the best draught horses in the world. Our agricultural machinery is usually too much for a team of two horses weighing under 2400 lbs. Sulky ploughs, pulverizers, and harvesters very often require more than two horses to operate them successfully. Our farmers are already awake to the defects of our horse stock, and efforts are made in all directions to improve our horses. The means adopted is the introduction of a class of heavier horses.

EXAMINATION OF HORSES.—Stand in front of a horse, to see how his limbs are formed, the width of his chest, the depth and fulness of his bonom, all anomalies of position in his fore legs being carefully registered. Examine the mouth for age. At 4 years old tusches appear; at 5 he has a full mouth, tusches top and bottom, corner teeth shelly; at 6, marks disappear in the two centrals; inside or posterior wall of the corner teeth is lower than the anterior wall or front of the teeth; at 7, two more marks disappear in the two laterals, corner teeth level; at 8, marks disappear in the corner teeth; he is level-mouthed at 9 years old.

The eye is next observed. For ophthalmia, cataract, &c., quite a vet's question. Feel the crest for condition—firm and muscular. Examine the poll for poll-evil, the withers for fistula and as to character, fine withers (high or low, as the case may be, and in keeping with the class) or undue coarseness. Shoulders for muscularity, length and obliquity, also proportion of parts. Scapula and humerus (the humerus in a valuable horse is never by any chance horizontal, neither is the scapula short and upright. The forearm or radius (the humerus is the true arm) long, massive, muscular—powerful forearms. Knees the indices of stability. Good knees always have a well-defined, centrally situate trapezium bone, deep and long. Short cannons, flat tendons—broad, firm and flat. No splints, no gum. Pasterns free from ringbone, no windgalls at the joint. Sesamoid bones at the upper posterior portion of the fetlock fully developed. Feet moderate in size, frogs clean, sole gently concave. No side bones or flat feet.

Back muscular, moderate in length, loins nicely sprung, and muscular. Top of the quarter long, muscular, horizontal in the blood horse, oblique in all other classes, more or less; but positive drop and short at the top is both unsightly and indicating lack of quality. Body deep, fore and back ribs long and low, well coupled. To get a good view of the contour of the horse, stand three or four paces back, observe the muscularity of his haunches, the position of the stifle, and proceed down his thighs and second thighs, which should be let down well into the hock. Hocks clean, prominent on calcis point of the hock, and broad both above and below. The metatarsal or hind cannons short, flat, and straight. Hind pasterns moderate long. Feet sound, soles concave, medium frogs. Now stand behind the horse and view his quarters, that they and his gaskins, or second

thighs, are nicely let down and muscular. Then satisfy yourself about the "set on" of his head and tail, the fullest development of sheath and dock, also the graceful curve and development of his throat. Groom now runs the horse on—gently—leaving his head free. Good action is truth in action; brilliant it may be, but it is never excessive, nor exaggerated in the forehand at the expense of the hind quarters. Brilliance owes its origin to "courage," as opposed to "heat." A hot horse "fights;" a high-couraged horse "goes." Freedom in action can alone be found in sound horses. The walk must be perfect at the lift, well executed in the stay, grounding flat and firm; the trot true, level, and straight, with liberty and equal force. The gallop; the hind legs brought well under, his fore legs got neatly away. He should gallop low or near the ground. This briefly and imperfectly touches the judgment of the horse in health and for sale, which practice alone can make the buyer.

STABLE HINTS.—1. Let your stable be well drained, and sufficiently lighted. The vapours from a damp, putrid floor, and the sudden change from darkness to light will almost to a certainty cause blindness. 2. Let the floor of the stalls be quite flat and level. Standing on a sloping place is very painful, and causes lameness by straining the ligaments and membranes. It also produces grease and sore heels. 3. Every stall should be at least six feet wide and nine feet long. This will enable the horse to turn around without bruising himself, and to lie down and stretch himself with comfort. 4. Let the stalls be separated by partitions, not by bars. They prevent the horses from fighting and kicking each other. 5. Let proper openings be made just under the ceiling, to permit the hot foul air to escape, and proper openings at the bottom of the wall to admit fresh air. Impure and confined air will cause broken wind. 6. The fresh air should enter through a number of small holes, rather than a large hole, such as an open window. That prevents draughts, which cause chills and coughs. 7. The temperature of a stable should be that of a sitting-room or parlor; not over seventy degrees in summer, nor under forty-five degrees in winter. Hot, close, or foul stables will bring on glanders or inflammation, while a very cold or damp one may cause an incurable cough, or disease of the lungs. 8. Do not keep the hay over the manger. The steam and breath of the animal make it both unpleasant and unwholesome. If the hay must be kept over the horse, the ceiling between should be of plaster.* This will in some measure prevent vapours from passing up to the food. 9. Have no opening into the manger from the hay-loft. Dust is very often thrown into the horse's eyes when fed in this way, and thus blindness is begun. The breath ascends directly to the food through the opening, which at the same time pours a continual draught down on the horse's head, thus causing chills as well as bad food.

SIMPLE REMEDIES.

Half a teaspoonful of common salt dissolved in a little cold water, and drunk, will immediately relieve "heart burn" or dyspepsia. If taken every morning before breakfast, increasing the quantity gradu-

ally to a teaspoonful of salt and a tumbler of water, it will in a few days cure any ordinary case of dyspepsia, if, at the same time due attention is paid to the diet. There is no better remedy than the above, for constipation. As a gargle for sore throat it is equal to chlorate of potash, and is entirely safe. It may be used as often as desired, and if a little is swallowed each time it will have a beneficial effect on the throat by cleansing it and by allaying the irritation. In doses of one to four teaspoonfuls in half-pint to a pint of tepid water, it acts promptly as an emetic; and in cases of poisoning is always at hand. It is an excellent remedy for bites and stings of insects. It is a valuable astringent in hemorrhages, particularly for bleeding after the extraction of teeth. It has both cleansing and healing properties, and is therefore a most excellent application for superficial ulcerations.

SIMSON'S LINIMENT Cures Rheumatism.

MUSTARD is another valuable remedy. No family should be without it. Two or three teaspoonfuls of ground mustard stirred into half pint of water acts as an emetic very promptly, and is milder and easier to take than salt and water. Equal parts of ground mustard and flour or meal, made into a paste with warm water, and spread on a thin piece of muslin, with another piece of muslin laid over it, forms the often indispensable "mustard plaster." It is almost a specific for colic, when applied for a few minutes over the "pit of the stomach." For all internal pains and congestions, there is no remedy of such general utility. It acts as a counter-irritant, by drawing the blood to the surface; hence in severe cases of croup a small mustard plaster should be applied to the back of the child's neck. The same treatment will relieve almost any case of headache. A mustard plaster should be moved about over the spot to be acted upon, for if left too long in one place it is liable to blister. A mustard plaster acts as well when at considerable distance from the affected part. An excellent substitute for mustard plasters, is what is known as "Mustard Leaves." They come a dozen in a box and are about four or five inches in size; they are perfectly dry, and will keep for a long time. For use, it is only necessary to dip one in a dish of water for a minute and then apply it.

COMMON BAKING SODA is the best of all remedies in cases of scalds and burns. It may be used on the surface of the burned place, either dry or wet. When applied promptly, the sense of relief is magical. It seems to withdraw the heat and with it the pain, and the healing process soon commences. It is the best application for eruptions caused by poisonous ivy and other poisonous plants, as also for bites and stings of insects. Owing to colds, over fatigue, anxiety and various other causes, the urine is often scanty, highly colored, and more or less loaded with phosphates, which settle to the bottom of the vessel on cooling. As much soda as can be dipped up with a ten cent piece, dissolved in half a glass of cold water and drank every three hours, will soon remedy the trouble and cause relief to the oppression that always exists from interruption of the natural flow of urine. This treatment should not be continued more than twenty-four hours. Most of the diseases and accidents that are constantly occurring, can be remedied or avoided by resorting to such remedies and appliances as are to be found in every home.

COAL.

GENERAL MINING ASSOCIATION, (L'td.)

The Coal from the Mines of this Association, situated at North Sydney, Cape Breton, has become generally known under the name of **SYDNEY COAL**.

The words **SYDNEY COAL** are registered as a trade mark, and the appropriation of the word Sydney, in describing other Cape Breton Coals, is unwarranted, and looks like an attempt to trade on the reputation of above coal. **SYDNEY & VICTORIA COALS** are the only coals mined on Sydney Harbour.

SYDNEY COAL has long stood alone in its reputation for **HOUSE USE**. It is also an excellent **STEAM COAL**.

CUNARD & MORROW,

HALIFAX, N. S., General Agents.

Low Point, Barrasois and Lingan Mining Co.

The coals of this company are mined at Victoria Mines, on Sydney Harbour, and at Lingan, C. B., and are known respectively as "**VICTORIA**" and "**LINGAN**" Coals.

These coals are very good for Steam purposes, and are Favorite House Coals.
