ANNUAL MEETING.

Monday, January 12th, 1885.

The Annual Meeting of the Halifax Dispensary was held in the Dispensary building this afternoon, the President, W. C. Silver, Esq., in the chair. After the minutes of last annual meeting were read and approved, the Secretary read the Directors' Report for the year as follows:

DIRECTORS' ANNUAL REPORT.

The friends and supporters of the Dispensary are entitled from time to time to information respecting its work, progress and condition. The Directors have much pleasure in presenting this their Annual Report, though they have nothing of special importance to communicate which would command unusual interest. Most particularly do they offer sincere thanks to Almighty God, under whose divine blessing and fostering care this Charity has been rendered successful in its operations, has proved so great a benefit to that large class of suffering people for whose relief it was established, and is from year to year maintained.

The valuable reports of the Medical Staff, and the Treasurer's Financial Statement hereto appended, afford reliable statistics of the work performed during the past year, and its cost. They also show that the principal objects for which this institution exists are being faithfully

carried out, so far as its resources permit. How long and to what extent they will continue thus to be effectuated, depends entirely upon the spirit of charity and liberality of our citizens in general.

Outside of the yearly grant voted by the City and the Legislature, the Dispensary depends upon private subscriptions and "Dispensary Sunday" collections, for its sustentation. Were no personal and public appeals made by the Directors in its behalf, the doors would speedily have to be closed, and its benevolent undertakings would very soon terminate. In fact, should any one of these sources of income be withdrawn, or much reduced, the good work must at once be curtailed in the same ratio. Already the board have felt the cramping effect of the non-payment by the City, of the grants voted for 1883 and 1884. Only one-third of the sum voted for 1884 has been paid, but the Directors fully expect the balance will be duly provided for in good time. Through the exertions of His Worship the Mayor and the recommendation of the committee on Public accounts, the usual grant was passed for the current year, to be paid when the City Treasurer has funds To meet such exigencies it has been the desire of the Directors to increase, if possible, the membership, by soliciting subscriptions from friends and well-wishers. At present this corporation would seem to be limited to the governing body itself and the officials, although the Constitution provides that any person paying annually four dollars and upwards shall thereby become a member of the society. It is doubtful, however, whether one-tenth of the number who thus contribute are aware of their franchise or privileges. These are—to have a voice in the election of the directory; to have an opportunity of relieving systematically by this means, their poor sick brethren; and to exercise the right of an Englishman to find fault if matters are not satisfactory.

The work done by the Medical Staff in 1884 is summarized as under, viz:

No. of patients visited at their homes and attended	
to at Dispensary	
Prescriptions	761

The statement gives evidence of the faithful and unremitting discharge of their duties among the sick poor, on the part of the Medical Staff. As the population increases the doctors find the demands upon their time and labors and on the medicine chest, augmented in a corresponding degree, but they do not murmur at the growing claims, nor at the small remuneration alloted for their devoted efforts to relieve and restore the distressed subjects of their skill and care.

Those citizens are truly charitable and wise benefactors who, feeling sympathy and interest in this work, assist by their spare means the special objects of the Dispensary. Its history palpably shows the necessity for and value of such an institution in a city like Halifax—a seaport and centre of business and travel inadequately provided with Hospital accommodation for even the extraneous claims entailed at times upon it. Close the Dispensary, where a patient costs, on an average, sixty cents, and the City or the Government would require to expend a large sum on new buildings, and probably five times the annual subsidy they now grant, and still fail to accomplish the benevolent results attained by this institution.

Referring to their own body, the Directors number one less by the decease of their esteemed coadjutor and friend, Mr. Edward Smith, who for five years past was a member of the board. Whilst at all times manifesting an earnest

and in I doll the ann pass the specifoll clearing

favo thei propa a sp Hal furt

Mur pass T

una

by com

and steady regard for the Dispensary and its success, he has in his will bequeathed to it an endowment of five hundred dollars, the income from which is to be paid annually toward the support of this charity. His name will thus appear annually in the list of contributors, though he himself has passed away. Such an act of thoughtful liberality suggests the formation of an Endowment Fund for the general or special objects of the Dispensary. Who will be the first to follow the example above named? The premises are now clear of debt, and everything in good working order waiting for such investments as will ensure permanency.

The Directors close their report with thankful acknow-ledgements to all friends. To the city press for frequent favours, kindly notices and comments; to the clergy for their valuable services; to the executors of Mr. Smith for prompt payment of the legacy; to all contributors, including a special donation by Messrs. N. Sarre & Sons, and to the Halifax Association for Aiding the Poor, for their offer of

further assistance toward the institution.

W. C. SILVER, President. W. H. WISWELL, Secretary.

The adoption of this report was moved by Rev. F. R. Murray and Rev. Canon Partridge and unanimously passed.

The succeeding Reports were also read and passed

unanimously.

GENERAL SI	UMMARY.		
		1883	1884.
No. Patients Treated			3,693
Visits and Consultations		14,267	12,200
Prescriptions Dispensed		14,667	14,761
Teeth extracted		780	729
Deaths		62	65
To this total the different dep	artment	s have cont	ributed as
follows:			
THE INDOOR	R STAFF.		
Department. Doctor	. Patie	nts. Cons	sultations.
Medical,Somer			2,103
SurgicalRigby,	,	412	802
Women and Children McFat	ridge, 5	520	803
Total	2,0	001	3,708
THE OUTDOO	R STAFF	. itoda ibee.	
District. Doctor. Pa	tients.	Visits.	Deaths.
South Trenaman,		760	7
	438	1.868	16
	500	2,553	21
2nd North Lathern,	198	1,445	15
Total	1.337	6,626	59

From the above it will be seen that the work done during the past year has been beyond the average, although the figures are not quite so high as in the statistics of 1883. This is chiefly due to the fact that the past year has been on the whole a very healthy one. The epidemic wave of acute dysentery, which passed over the the city in 1882, scarcely reappeared in 1883, and during the last year the number of cases of this disease was reduced still further, to less than one-third of that of the year before, and only one death is attributable to this cause.

Even the ordinary summer diarrhœa among children

was less prevalent last year than in 1883. According to the Dispensary statistics, which include Dartmouth as well as the city, there were only 104 cases in 1884, while in 1883 the number reported was 151. The fact that diphtheria and typhoid still cling to the flats and hellows in the northern and southern districts, while the hilly central district is almost free of both, indicates that the drainage and general sanitary conditions of these portions of the city require more careful investigation than can be given even by paid police inspection.

THE DARTMOUTH BRANCH.

From the Dartmouth District Dr. Cunningham sends the following report:

Patients190	
Visits 757	
Consultations 511	
Teeth extracted 72	
Deaths 6	

THE PRESCRIPTION AND DENTAL DEPARTMENT.

The gentleman in charge of this department continues to perform his duties in his usual satisfactory manner. The total number of prescriptions dispensed by him has amounted to 14,751. As compared with the previous year there has been an increase of nearly 100, so that there has been no falling off allowed in his department, at any rate, 13,802 of these perscriptions were by order of the acting physicians in the city; 761 were for the Dartmouth branch and 198 were for the consulting and other physicians. The Medical Board would again call the attention of the Directors to the increasing demand which exists for some means being provided for the conveyance of sick and injured persons to the City Hospital. An ambulance has become an absolute necessity.

C. D. RIGBY, President. A. W. H. LINDSAY, Secretary.

EYE AND EAR DEPARTMENT.

The report herein submitted, and the classified list of diseases annexed, give a summary of the work in the Eve and Ear Department for the year 1884. Taking the whole year's work into account, it has been the most satisfactory in its results of any year since my connection with the Dispensary, as the proportion of recoveries has been larger. This fact is owing to a greater readiness on the part of the applicants to seek relief. There were 120 cases of eve disease and 45 of affections of the ear. The number of the latter was greater in proportion than in any previous year. Two cases were presented which could have been treated at the right time with every prospect of success, but they had been so shamefully neglected that the eyes were disorganized when they were brought to the Dispensary. The transparent part of the front of the eye was in a state of "slough," or actual death, when first seen. They were both infants of a few weeks old. Two other cases of the same disease were presented, and they fully recovered with good sight. I have, on a former occasion, referred to such cases, and as they illustrate two evils amongst us, I desire to direct special attention to them with a view to their removal.

One of the cases referred to belonged to the wife of a soldier who had been married without leave but a short time before. He was ordered away, and the mother had to get along as best she could. She was a comparative stranger in the city, having come from the country, was young and ignorant, and actually needed a mother's protection instead of having to provide for herself and a blind child. Patients of this class constitute no inconsiderable portion of the work in the Dispensary, as they are often met with in the other departments. How can it be otherwise when a woman is left with one or two and sometimes three children to maintain besides herself? I would most respectfully, but with all earnestness ask, is there a clergyman in Halifax who would be willing to perform the marriage ceremony under these

conditions when he becomes cognizant of the fact that he is thereby abetting a state of society which is, to speak mildly, a caricature of the marriage relation? Such facts cannot be gathered in the study; but those who have much to do with the poor know what I have said is true. The remedy is simple, and can be readily applied by those who are virtually responsible for this anomaly. Let the clerical duties of the army be performed by those who are duly authorized to attend to it.

The other case was the child of a poor girl, who was at service in order to earn money to clothe herself and pay for having the child kept by the woman who brought the infant to the Dispensary. It was ten weeks old, and was said to have had sore eyes ever since its birth. had to be brought from an adjoining street-a neighborhood rich in Dispensary material. This was by no means the only instance of "baby farming" met with in my department during the year. The consequences of neglect in another case were not of so revolting and painful a character, as the child had a different disease. These patients are generally unsatisfactory to treat; first, from the delay before applying for treatment, and secondly, from the irregular attendance afterward. The persons who undertake the care of these children are often unable to maintain themselves decently, and hope to make a living by pretending to care for these unfortunate ones. Seldom do these children live, as it becomes a question of the "survival of the fittest," since only the most robust can endure the ordeal of improper and often insufficient food. In the Infants' Home they could be properly cared for and have a fair chance of life. Such neglect as I have referred to is criminal, and if the S. P. C. Society were to prosecute such offenders, this abuse would soon cease.

Mrs. Webber's attention to those patients who were received into the Dispensary for operations was all I could desire.
