The date of each trip, both from Charlottetown and Georgetown to Pictou. The number of mail bags carried each trip. The number of passengers carried to and from Prince Edward Island. The receipts on account of passengers. The amount of freight carried both ways and the receipts therefor. The total expense and total receipts in connection with said steamer up to 15th April, 1895. And amount received for freight and passengers carried by the said steamer from Pictou to Charlottetown in the spring of 1894 and the spring of 1895, respectively. Presented 24th June, 1895.—*Mr. Perry and Mr. Macdonald (King's)*..... *Not printed.*
83. Return to an order of the House of Commons, dated 3rd June, 1895, for a statement showing the gross earnings of the Quebec and Lake St. John Railway since the 30th day of June, 1894. Also a statement showing the total expenditure of said railway from said period. Also a statement showing the total expenditure of said railway from the same period on the following accounts respectively: (a) Wages and salaries of employees. (b) Payments to the president as such. (c) Payments to directors as such. (d) Payments for other working expenses. (e) Payments on construction account not included in above. Presented 24th June, 1895.—*Mr. Lavergne*..... *Not printed.*
84. Return to an order of the House of Commons, dated 3rd June, 1895, for copies of all correspondence between H. Langevin, Félix Pilon, Alexandre Théoret, and others, concerning claims against the federal government on account of damages caused to their properties by the ss. "Ocean" breaking through lock no. 12 on the Beauharnois canal in the spring of 1894. Presented 24th June, 1895.—*Mr. Bergeron*..... *Not printed.*

VOLUME 11—*Continued.*

85. Return to an address of the House of Commons to his excellency the Governor General, dated 21st May, 1894, for copies of all correspondence that has passed between the post office department here, or any other department of the Canadian government and the government of the United States on the subject of certain packets of printed papers franked by a member of the United States Congress which were received in this country from the United States, and which, according to a statement made in the House by the postmaster general, 2nd April, were sent to the dead letter office as not being prepaid by stamps and not being legislative papers or documents. Also copies of all correspondence that has passed between the Canadian and United States governments on the subject of franked matter through the mails from one country to the other. Also copies of all correspondence that has passed between the post office department and the individuals to whom such rejected matter was addressed. Also copies of all correspondence between the post office department and any of the officers of the department on this subject, and copies of instructions sent to said officers in connection therewith. Presented 24th June, 1895.—*Mr. Somerville.*
Not printed.
86. General Rules and Orders, Exchequer Court of Canada. Presented 25th June, 1895, by Hon. W. H. Montague.....*Not printed.*
87. Return to an order of the House of Commons, dated 10th June, 1895, for copies of all tenders received by the government in response to an advertisement dated October, 1894, calling for tenders for the construction of section 1 of the Simcoe and Balsam Lake division and section 1 of the Peterborough and Lakefield division of the Trent canal. Also for the approximate quantities of the various classes of work as specified in the forms of tender for both the above sections, and on which the total amount of each tender was based. Presented 26th June, 1895.—*Mr. Somerville.*
Not printed.
88. Return to an order of the House of Commons, dated 3rd June, 1895, for a return of the manifests of the cargoes carried by the several steamships "Duart Castle," "Taymouth Castle," "Alpha" and "Beta" for the past twelve months ending 30th April last, subsidized to run between St. John and Halifax and Cuba and Jamaica and other ports in the West Indies. Also statement of the subsidies earned or paid to each of such steamships during such time. Also the names of all the shareholders in such steamships or in the company or companies entitled to receive such subsidies. Presented 27th June, 1895.—*Mr. Davies.*.....*Not printed.*
89. Return to an address of the House of Commons to his excellency the Governor General, dated 24th April, 1895, for copies of all correspondence not yet brought down between the Canadian government and the Imperial government and between the Imperial government and the French government concerning the French treaty. Presented 27th June, 1895.—*Mr. Laurier.*
Printed for sessional papers only.
90. Return to an order of the House of Commons, dated 3rd June, 1895, for a return of all correspondence and petitions from the council of the municipality of Morris, in the province of Manitoba, in reference to the taxation of unpatented lands held or occupied by settlers, within the limits of their municipality. Presented 28th June, 1895.—*Mr. LaRivière.*.....*Not printed.*
91. Return to an order of the House of Commons, dated 10th June, 1895, for copies of all correspondence with regard to the homestead entry of William Fleming for the north-east quarter of section 16 in township 9, range 14, west of the first principal meridian, and also of all correspondence with Nathaniel Boyd, M. P., as to said quarter-section, and of Mr. Boyd's lease of said land, and also of the regulations as to leasing land and as to homesteading leased lands. Presented 28th June, 1895.—*Mr. Martin.*.....*Not printed.*
92. Return to an address of the House of Commons to his excellency the Governor General, dated 14th May, 1894, for copies of all correspondence, reports or judgments, in relation to the dismissal of Mr. B. Loiselle (postmaster of Ste. Angèle de Monnoir). And a copy of the record, depositions, declaration and pleas in suit brought in Montreal of Loiselle vs. Guillet, and the inspector's report. Presented 2nd July, 1895.—*Mr. Brodeur* and *Mr. Langelier.*.....*Not printed.*
- 92a. Supplementary return to no. 92. Presented 12th July, 1895.—*Mr. Brodeur* and *Mr. Langelier.*
Not printed.

VOLUME 11—*Continued.*

93. Return to an order of the House of Commons, dated 10th June, 1895, for a return of all petitions, letters or other documents from the inhabitants of Duvar Road, Prince county, Prince Edward Island, or from any other person, asking for a flag station at Duvar Road railway crossing. Presented 2nd July, 1895.—*Mr. Perry*..... *Not printed.*
94. Return to an order of the House of Commons, dated 3rd June, 1895, for a return showing the names, if any, of persons appointed to the Civil Service of Canada under chapter 18, 57-58 Victoria, and the offices, if any, to which they were appointed. Presented 5th July, 1895.—*Mr. Maclean (York)*..... *Not printed.*
95. Return to an address of the House of Commons to his excellency the Governor General, dated 10th June, 1895, for copies of all orders in council respecting the purchase of a site for a post office building in the town of Portage la Prairie, in Manitoba; also for copies of all instructions to, and reports by, Mr. Daniel Smith respecting said site; also of all petitions presented to his excellency the governor general or the department of public works in connection with the selection of a site for said building. Presented 5th July, 1895.—*Mr. Martin*..... *Not printed.*
96. Return to an order of the House of Commons, dated 29th April, 1895, for a return showing the amounts paid in customs duties at Waneta, Nelson, Kaslo and the boundary, Kootenay river, from 1890 to 1894 inclusive, giving the amount paid yearly at each outpost. Also the names of the customs officers at those places and the salary paid to each. Presented 11th July, 1895.—*Mr. Mara and Mr. McMullen*..... *Not printed.*
97. Return to an order of the House of Commons, dated 10th June, 1895, for a return showing the names of vessels, etc., that paid wharfage dues at Tignish harbour, P.E.I., the amount paid by each vessel, the date of entry and clearance of each vessel, and the sum total collected and paid in for the last fiscal year. Presented 12th July, 1895.—*Mr. Perry*..... *Not printed.*
98. Return to an order of the House of Commons, dated 10th June, 1895, for copies of all correspondence and estimates of value for the 135 acres of lands on the banks of the Richelieu river sold to one Foster for \$650, the date of sale, and all correspondence as to value of timber as well as land. Presented 16th July, 1895.—*Mr. McMullen*..... *Not printed.*
99. Return to an order of the House of Commons, dated 24th June, 1895, for a return of all correspondence, petitions, memorials or other documents, relative to the claims of settlers in Manitoba and the Territories, having paid for their pre-emption lots, when others were allowed homesteading the same as a second homestead. Presented 16th July, 1895.—*Mr. LaRivière*..... *Not printed.*
100. Return to an order of the House of Commons, dated 3rd June, 1895, for copies of all correspondence and reports in reference to the condition of the breakwater across the Yarmouth Bar at Yarmouth, Nova Scotia, and a statement of the original cost and subsequent expenditure on the same. Presented 19th July, 1895.—*Mr. Flint*..... *Not printed.*
101. Return to an address of the Senate to his excellency the Governor General, dated 3rd June, 1895, for a copy of all memorials, petitions, representations and correspondence addressed to the government by the harbour commissioners of Montreal, or by any other corporation or individuals, concerning the finances of said corporation, the cost of works in progress or proposed for the enlargement of the harbour of Montreal, as well as of the modifications suggested in the said works. Also a copy of all memorials, plans, reports, petitions and correspondence relating to the construction of an inland basin and of a dry dock in the eastern part of the harbour of Montreal. Also a copy of all resolutions on this subject passed by the Montreal harbour commissioners. Also a copy of the order in council appointing a commission of engineers to inquire into the nature and cost of the works now being executed in the harbour of Montreal, together with a copy of the instructions given by the government to this commission. Also a copy of all evidence, or summary of evidence, given in the course of the inquiry held by the said commission. Also a copy of the report of the said commission, and of any special report by any of its members, and of all plans and statements of cost accompanying such reports. Presented 19th July, 1895.—*Hon. Mr. Desjardins*..... *Not printed.*
102. Return to an order of the House of Commons, dated 29th April, 1895, for copies of all petitions, correspondence and reports in regard to making Point Tupper the terminus of the Cape Breton Railway on the Strait of Canso, and with respect to the construction of a branch line of the government railway to Hawkesbury. Presented 22nd July, 1895.—*Mr. Cameron*..... *Not printed.*

 VOLUME 11—*Concluded.*

- 103.** Return to an order of the House of Commons, dated 17th June, 1895, for a return of all correspondence, petitions, memorials, reports or documents, relative to the extension of the railway system in the province of Prince Edward Island. Presented 22nd July, 1895.—*Mr. Macdonald (Huron)*
Not printed.
- 103a.** Return to an address of the Senate to his excellency the Governor General, dated 3rd July, 1895, for copies of all petitions praying for railway extension in Prince Edward Island. Also the chief engineer's report thereon, showing the estimated cost, working expenses and probable earnings of said proposed branch railway; and also the estimated increased earnings on the Prince Edward Island Railway which will be effected by the operations of the said proposed branches. Presented 22nd July, 1895.—*Hon. Mr. Prowse**Not printed.*
- 104.** Return to an order of the House of Commons, dated 10th June, 1895, for a return giving copies of all lumber and timber supplied, under contract or otherwise, upon the Welland canal, from 1st January, 1885, to 1st January, 1895; the names of the contractors, the quantities supplied and the prices paid, either under contract with the government or by purchase. Presented 22nd July, 1895.—*Mr. Lowell**Not printed.*
- 105.** Return to an address of the Senate to his excellency the Governor General, dated 17th June, 1895, calling for certain papers in connection with the Baie des Chaleurs scandal. Presented 12th July, 1895.—*Hon. Mr. Landry**Not printed.*

	Page
Conclusions of Rev. Dr. McLeod—Gothenburg system has nothing to teach Canada except that no-license system is successful.....	569
“ “ raises cupidity of municipalities and shareholders.....	569
“ High license and larger revenue have made authorities and citizens favourable to traffic.....	556
“ High license has had a bad and corrupting effect.....	556
“ “ has increased influence of liquor trade, which favours it.....	556
“ “ has made the saloon seem more important and more dangerous.....	556
“ “ has not made restriction easier.....	556
“ “ has not proved better than low license in diminishing evils.....	556
“ “ revenues do not offset financial burdens.....	556
“ License laws a stupendous failure.....	555
“ “ do not diminish volume of trade or its evils.....	555
“ “ habitually violated, and illicit sellers not interfered with.....	555
“ “ have not caused steady improvement.....	555
“ License system in North-west has increased consumption, drunkenness and crime.....	672
“ License system nowhere really regulates liquor traffic.....	555
“ Loss of revenue could be met without continuing the liquor traffic.....	691
“ Maine law a marked success in spite of defects.....	603
“ National prohibition in Canada should be more effective than prohibition for isolated states.....	636
“ Parliament without delay should enact prohibition of manufacture, importation and sale of liquor.....	691
“ Prohibition favoured by majority in North-west Territories.....	672
“ “ has reduced consumption of liquor, crime, taxes and poverty, and has benefited financially, morally and socially.....	635-6
“ “ in Canada, by N. W. law, by Scott Act or local option, though areas limited, has had good effect.....	672
“ “ worked well in N. W. till broken down by permit system.....	672
“ “ in Kansas is a success, except locally.....	635-6
“ “ would not permanently injure farmers.....	673
“ Scott Act imperfect but preferable to license system.....	665
“ The Commons were wise in declaring prohibition the only effective remedy for intemperance, and should be enacted as soon as public opinion would sustain it.....	691
“ The liquor traffic is detrimental, and efforts to regulate it have been effective in proportion as they approximated to prohibition.....	691
“ United States prohibitory laws are defective, and officials are not well chosen.....	636
“ wine and beer drinking not encouraged by experience of France and Germany.....	575
“ Congregational Union of Ontario and Quebec resolved in favour of prohibition.....	684
“ Connecticut has large areas under local prohibition.....	636
“ prisoners, paupers and ratio in.....	577-8
“ Connors, Mr. T., evidence as to liquor traffic.....	668
“ Consumption of liquor decreased in Iowa.....	608, 612
“ “ in Kansas.....	615
“ “ increased in North-west Territories, under permits.....	667
“ “ under high license law.....	544
“ of other dutiable articles would increase with prohibition.....	679-80
“ of spirits in Norway.....	558

	Page

Liquor Traffic—Commissioners' Report.

COMMISSION appointing SIR JOSEPH HICKSON *et al.*, Commissioners to investigate and report upon the question of Liquor Traffic in Canada. Dated, March 14, 1892. Recorded, March 23, 1892.

L. A. CATELLIER,
Deputy Registrar General of Canada.

STANLEY OF PRESTON,
CANADA.

[L.S.]

VICTORIA, *by the Grace of God, of the United Kingdom of Great Britain and Ireland, QUEEN, Defender of the Faith, &c., &c., &c.*

ROBERT SEDGEWICK }
Deputy Minister of }
Justice, Canada. }

To SIR JOSEPH HICKSON, of the City of Montreal, in the Province of Quebec, Knight; Herbert S. McDonald, Esquire, Judge of the County Court of the United Counties of Leeds and Grenville, in the Province of Ontario; Edward F. Clarke, Esquire, of the City of Toronto, in said Province of Ontario, and a member of the Legislative Assembly of the said Province; George Auguste Gigault, of St. Césaire, in the Province of Quebec; and the Reverend Joseph McLeod, of the City of Fredericton, in the Province of New Brunswick, Doctor of Divinity, and to all whom the same may in any wise concern,
—GREETING:

WHEREAS it is deemed expedient to obtain for the information and consideration of Parliament the fullest and most reliable data possible respecting:—
1. The effect of the Liquor Traffic upon all interests affected by it in Canada;
2. The measures which have been adopted in this and other countries with a view to lessen, regulate or prohibit the traffic;

3. The results of these measures in each case;

4. The effect that the enactment of a Prohibitory Liquor Law in Canada would have in respect of social conditions, agricultural business, industrial and commercial interests, of the revenue, requirements of municipalities, provinces and of the Dominion, and also as to its capability of efficient enforcement;

5. All other information bearing upon the question of Prohibition;

AND WHEREAS it is expedient that a Commission be issued to competent persons for the purpose of obtaining such data and information;

AND WHEREAS it is in and by "The Revised Statutes of Canada," chapter 114, intituled "An Act respecting Inquiries concerning Public Matters," amongst other things in effect enacted, that whenever the Governor in Council deems it expedient to cause inquiry to be made into and concerning any matter connected with the good government of Canada or the conduct of any part of the public business thereof, and such inquiry is not regulated by any special law, the Governor in Council may by the Commission in the case confer upon the Commissioners or persons by whom such inquiry is to be conducted the power of summoning before them any witnesses, and of requiring them to give evidence on oath, orally or in

writing, or on solemn affirmation, if they are persons entitled to affirm in civil matters, and to produce such documents and things as such Commissioners deem requisite to the full investigation of the matters into which they are appointed to examine;

AND WHEREAS it is expedient that inquiry under oath should be made into and concerning the matters and things hereinbefore mentioned and set out;

NOW KNOW YE that under and by virtue of all and every powers and power vested in Us in that behalf, and by and with the advice of OUR PRIVY COUNCIL for CANADA, WE, reposing trust and confidence in your loyalty, integrity and ability have nominated, constituted and appointed and do hereby nominate, constitute and appoint you the said SIR JOSEPH HICKSON, Knight, you the said Herbert S. McDonald, you the said Edward F. Clarke, you the said George Auguste Gigault, and you the said Joseph McLeod to be Our Commissioners for the purpose of obtaining the desired data respecting:—

1. The effects of the Liquor Traffic upon all interests affected by it in Canada;
2. The measures which have been adopted in this and other countries with a view to lessen, regulate or prohibit the traffic;
3. The results of these measures in each case;
4. The effect that the enactment of a Prohibitory Liquor Law in Canada would have in respect of social conditions, agricultural business, industrial and commercial interests, of the revenue requirements of Municipalities, Provinces and of the Dominion, and also as to its capability of efficient enforcement;
5. All other information bearing on the question of Prohibition.

AND under and by virtue of the powers vested in Us by the Statute lastly hereinbefore recited, We do hereby authorize and empower you, or any, or either of you, as such Commissioners or Commissioner to summon before you any witnesses, and to require them to give evidence on oath orally, or in writing, or on solemn affirmation, in case they are persons entitled to affirm in civil matters and to produce such documents and things as you OUR said Commssioners shall deem requisite to the full investigation and report of the matters into which you are hereby appointed to inquire and report.

To have, hold, exercise and enjoy the said office, place and trust unto you the said Sir JOSEPH HICKSON, Knight; you the said HERBERT S. McDONALD; you the said EDWARD F. CLARKE, you the said GEORGE AUGUSTE GIGAULT and you the said Reverend JOSEPH McLEOD, together with the rights, powers, privileges and emoluments unto the said office, place and trust of right and by law appertaining during pleasure.

AND WE do appoint you the said Sir JOSEPH HICKSON to be the Chairman of Our said Commissioners.

AND We do hereby require and direct you to report to Our President of Our Privy Council for Canada the result of your investigation together with the evidence taken before you and any opinion or remarks you may see fit to make thereon, and any recommendation in respect thereof.

IN TESTIMONY WHEREOF, We have caused these OUR LETTERS to be made Patent, and the Great Seal of Canada to be hereunto affixed. WITNESS, Our Right Trusty and Well-Beloved THE RIGHT HONOURABLE SIR FREDERICK ARTHUR STANLEY, Baron Stanley of Preston, in the County of Lancaster in the Peerage of the United Kingdom, Knight Grand Cross of Our Most Honourable Order of the Bath, Governor General of Canada.

At Our Government House, in Our City of Ottawa, this fourteenth day of March, in the year of Our Lord one thousand eight hundred and ninety-two, and in the Fifty-fifth year of Our Reign.

By Command,

L. A. CATELLIER,
Under Secretary of State.

Liquor Traffic—Commissioners' Report.

*To His Excellency the Right Honourable Sir John Campbell-Hamilton Gordon,
Earl of Aberdeen, &c., &c., &c., P.C., LL.D., B.A., &c., &c., &c., Governor
General of Canada, &c., &c., &c.*

MAY IT PLEASE YOUR EXCELLENCY:

The Commissioners appointed by the Royal Commission, dated the 14th March, 1892, to obtain evidence in regard to the liquor traffic, presented on the 4th June, 1894, an interim report, with the evidence taken in the Provinces of Nova Scotia, New Brunswick, Prince Edward Island and Quebec.

They have now to present their final report, with the evidence taken in the Provinces of Ontario, Manitoba, British Columbia, and the North-west Territories, and that collected in the States of California, Kansas, Iowa, Minnesota, Maine, Massachusetts, Nebraska and Illinois, which were visited by members of the Commission.

The inquiries of the Commissioners have extended over a much longer period than they anticipated would be necessary when they commenced their investigation, the result, in a very large measure, of the almost entire absence of general systematized data or information in regard to the traffic and the interests affected by it. They found themselves in the position of having to communicate by correspondence with the provincial and municipal authorities throughout the provinces of the Dominion, and with a very large number of persons outside the Dominion. Much of the information at first obtained was either fragmentary or was found to be inaccurate or unreliable.

In the Provinces of New Brunswick or Nova Scotia, no license fees are collected by the Provincial Governments, with the exception of some small amounts for licenses to vendors of liquor for medical purposes, and apparently no regular returns have been made of the licenses issued and the amounts collected by the municipalities for license fees, or for fines inflicted for breaches of the liquor laws.

The Scott Act was in force over the whole of Prince Edward Island for a period of ten years. In Charlottetown, after it was repealed in 1891, there was practically free sale up to 1894, when the Act was again voted upon and carried by a small majority.

In Quebec the licenses are issued by the Government, but the municipalities are allowed to collect certain sums in addition to the fees charged, and of these collections no returns have been made to the Provincial Government.

In Ontario a well understood and efficient administration system is in force, and there is collected in central offices in Toronto full information as to the number of licenses issued, the amounts received by the province and the municipalities respectively, therefor, and also the amounts collected for fines for breaches of the law.

In Manitoba where the system is much the same as in Ontario, it has not been found practicable to obtain a return of the number of licenses issued prior to 1888, nor of the amounts received by the municipalities as fees prior to 1889.

The North-west Territories have been under exceptional legislation, and much valuable information in regard to the traffic therein has been reported from year to year through the Department of the Interior.

In British Columbia certain licenses are issued by the Provincial Government, and the fees for them are collected and paid into the Provincial Treasury; but there are other licenses issued by the municipalities of which no returns are made to the Government.

After renewed attempts, both by direct communication and through the provincial authorities, it has only been possible to obtain partial returns of the number of licenses issued by the municipalities and of the amounts collected by them, and it

has proved altogether impracticable to obtain statements of the expenditure incurred by the Provincial Governments and Municipalities in connection with matters which may, and by some are claimed to, have direct relation to the liquor traffic.

The reply of the Hon. Mr. Blair, Prime Minister of New Brunswick, to the request of the Commission for information, was:—"The Government in New Brunswick does not receive anything by way of license from the liquor traffic. All licenses granted under the New Brunswick Liquor License Act issue from the municipalities, and license fees are payable to them. * * * We are not supplied with information as to the number of prisoners committed to jail, nor of the poor receiving relief, nor as to the number of homes and almshouses for the poor, nor cost of maintaining jails, nor cost of maintaining prisoners in jails, nor the number committed for drunkenness, nor the cost per head for maintaining them."

The Provincial Government of Nova Scotia does not get any returns, and in that respect is in exactly the same position as the Government of New Brunswick. The Government of British Columbia does not secure returns of the number of licenses issued or of the amounts collected by municipalities either as fees or fines.

Such information as has been obtained by communication with the municipal authorities will be referred to hereinafter.

The sittings of the Commissioners have been attended by representatives of the temperance organizations of the Dominion; very many of them by the Secretary of the Dominion Alliance, Mr. Spence; oft-times, simultaneously, by Mr. Spence and representatives of the Provincial organizations, who also attended in his absence. Mr. Louis P. Kribs, of Toronto, attended the great majority of the sittings of the Commission in the interests of those engaged in the liquor traffic. Both Mr. Spence and Mr. Kribs gave evidence before the Commission, which deserves the consideration of all interested in the subject under investigation. They present the question from directly opposite standpoints.

The first clause of the Commission under which the undersigned have been acting, instructs them to inquire and report upon

"THE EFFECTS OF THE LIQUOR TRAFFIC ON ALL INTERESTS AFFECTED BY IT IN CANADA."

A literal compliance with the terms of this clause of the instructions to the Commissioners, the undersigned have found to be impracticable. The interests are so varied, numerous and extensive, and the data available so limited and imperfect, that they find themselves unable to do more than refer to the most prominent of these interests, and to supply such information in regard to them as they have been able, after every reasonable effort on their part, to collect.

Inquiries into the effects of the liquor traffic upon the communities where it is carried on have been met everywhere by an almost entire absence of systematized statistics and information. The advocates of particular systems of dealing with the traffic have sought only, apparently, for facts which would tell in support of their particular views, and, although there is an abundance of literature, really reliable statistics from which safe general conclusions can be drawn, either do not exist, or, existing, are so scattered as to be unavailable. This matter formed a subject for discussion at the International Conference on Alcohol, held at the Hague in the summer of 1893. The following is an extract from the report of the proceedings, kindly procured by Sir Charles Tupper, Bart., for the use of this Commission:—

"Mr. Berner, of Christiania, said:—All those who have made a special study of the subject for which congress is called will have felt keenly the total want of reliable statistics as to the extent and result of intemperance in various respects. The statistics and information given ought to be derived from more reliable sources. Perhaps the temperance friends in the different countries ought to appoint a committee for each country to gather such information. I have no doubt but that the Norwegian authorized companies would contribute towards the expenses of such

Liquor Traffic—Commissioners' Report.

a measure. But I have thought that the authority to be applied to upon this subject should be the International Statistical Congress, which is to be held next month in Chicago. I therefore beg to move that we send a memorial from this congress to the Statistical Congress of Chicago about gathering information. I admit that it would be desirable if we could point out a detailed plan for the statistical work wanted by us and our temperance friends; but as the matter stands, I shall leave this to the Statistical Congress. I beg to move:—"The present congress asks its president to send a memorial to the International Statistical Congress, to be held next month in Chicago, to consider the question of obtaining international statistics as to the total production and consumption of intoxicating liquors (brandy, wine and beer), their taxation, prices of production and sale, number of drink shops, number of those arrested for drunkenness, extent of crime and sickness, etc., caused by alcoholic liquors, and the social causes and effects of intemperance."

There has just recently been laid before the British Parliament, printed, and circulated, a despatch from the British Minister at Washington to the Right Honourable the Earl of Rosebery, dated January 15, 1894, enclosing a report from Mr. Michael Herbert to Sir Julian Pauncefote on the liquor traffic legislation in the United States since 1889. Mr. Herbert's report is mainly founded on information supplied by Her Majesty's consuls. He remarks in the very first page:—"I have found it very difficult to obtain reliable or properly classified statistics in regard to the working of the liquor laws in the various States of the Union, and those with which I have been furnished are drawn up in an entirely different manner in each state, and are consequently useless for purposes of comparison or insertion in this report. I have, therefore, in the absence of any statistical proof of their effect, confined myself in a great measure to describing the provisions of the liquor laws enacted since 1889."

The report on the traffic in Pennsylvania contains the following paragraph:—"In view of the entire absence of statistics, and the contradictory experience of officials, evidencing apparently different effects in different cities, it would seem hardly possible to form a conclusive opinion of the working and effects of the Act (The Brooks High License Act) in the State of Pennsylvania." Again, after quoting the nationality of those who carry on the saloon business in the city of Philadelphia, the report states:—"Other cities in the State of Pennsylvania have no statistical or other records from which any information on this subject can be gathered, although the Mayor of Harrisburg states that his 'personal experience in dealing with criminals justifies the assertion that high license has a tendency to increase the number of drunkards.' While the Mayor of Reading, on the other hand, says, 'As the chief executive of this city, there appears to be a decided improvement under the operation of the present Act, known as the Brooks High License.'"

In the report from Michigan it is stated as the opinion of the Mayor of Kalamazoo that "the high license excludes from the liquor business many of the worst or semi-criminal class who would otherwise open low places, and who would be hard to control. My experience has been that the greater number of places at which intoxicating liquors are sold, the greater number who drink." The report then says: "It appears impossible to obtain statistics, either for that city or the state, which would prove the accuracy of the foregoing opinion."

Of Ohio it is stated "that there is no system for the collection of statistics in Ohio which would show the practical working and effect of the above law—(An Act providing against the evils resulting from the traffic in intoxicating liquors)."

Practically the same observation is made in regard to the State of Kentucky.

These reports corroborate the statements made in communications received from the governors of several of the States of the Union by this Commission, and what is said therein is to a very large extent true in regard to the traffic in the Dominion.

It is, perhaps, desirable, before attempting to examine into the effect of the liquor traffic in Canada, to endeavour to realize the extent of it, and, as far as practicable, the changes which have taken place in the character and volume thereof.

The following are the quantities of spirits and beer made in Canada between 1880 and 1893, both years included, and the quantity of spirits remaining on hand:—

Year.	SPIRITS.		BEER AND ALE.
	Gallons made.	Quantity remaining on hand.	Gallons made.
1880.....	2,996,986	1,719,737 43	9,201,213
1881.....	3,048,146	1,370,206 29	9,931,176
1882.....	4,028,847	1,642,577 22	12,036,979
1883.....	4,281,209	1,841,123 05	12,757,444
1884.....	4,207,576	2,201,034 27	13,098,700
1885.....	3,579,333	1,242,196 82	12,071,752
1886.....	4,355,736	2,832,474 25	13,282,261
1887.....	5,119,506	4,563,977 42	14,786,285
1888.....	5,514,590	7,423,207 70	15,944,002
1889.....	5,847,509	9,948,182 30	16,363,349
1890.....	5,091,476	11,099,179 17	17,196,115
1891.....	4,397,596	12,415,785 98	18,069,303
1892.....	3,498,231	12,836,079 48	16,946,245
1893.....	3,856,954	13,502,813 57	17,175,356

In 1886, an Act was passed (cap. 34), which provided that, on and after the 1st of July, 1887, no spirits, subject to excise, should be entered for consumption which had not been manufactured for at least twelve months, and after the 1st of July, 1890, no such spirits should be entered for consumption which had not been manufactured for at least two years. There were some exceptions made in regard to spirits required for manufacturing purposes, and power was given to the Department of Inland Revenue to permit the removal for consumption, under regulations of the Governor General in Council, of one-third part of the yearly product of any licensee whose license was granted after the 20th day of March, 1885, and who was still the holder thereof on the 20th March, 1888, at any time after being warehoused, during the two years next following the date of the issue of such license. (51 Vic., cap. 16, sections 4 & 5.)

Taking malt liquors at an average of 30 cents per gallon, and spirits at an average of 60 cents per gallon, and the average quantities manufactured in the five years 1889 to 1893, and estimating the value of animals fed and sold, and the refuse products sold, as being about \$800,000, the total output per annum would represent:—

	Gallons.	Value.
Whiskey.....	4,538,000 @ 60c	\$2,722,800
Beer and Ale.....	17,150,000 @ 30c	5,145,000
*Cattle fed and sold and grains and slop sold.....		800,000
		<u>\$6,667,800</u>

Figures obtained from the census returns for 1891 give the value of the product of distilleries as \$2,200,000, and of breweries as \$5,732,000.

The principal materials used in the manufacture of liquors are the product of the farm. They consist of Indian corn, barley, rye, wheat, oats, buckwheat, hops, apple and pear pomace, grape pomace, and ground grapes to a limited extent. A carefully prepared estimate of the value of these raw materials based in nearly every instance upon the average quantities used, as nearly as they could be ascer-

*The representative of the distilleries and brewers estimated that the cattle fed and sold, and the grains and slop sold, amounted to \$800,000, and \$720,000, \$1,520,000, but these figures include profits on cattle fed outside the distilleries and breweries, partly on the grains and slop sold, which profits do not belong to the output of these establishments.

Liquor Traffic—Commissioners' Report.

tained, in the five years ended 1893, shows that they yielded to the producers about \$1,888,765 per annum, to which has to be added the amount paid to farmers for cattle for feeding and for hay used in feeding them, probably \$434,000, and a further amount paid for provender for horses employed in doing cartage, etc., of say \$60,000, making a total of \$2,382,765.

The feeding of cattle in connection with brewing and distilling establishments has reached large dimensions. The returns obtained by the Statistical Bureau, and supplied to this Commission, from six establishments, show that, combined, they purchased 7,531 cattle, at a cost of \$264,170; 410 hogs, at a cost of \$2,050, making a total of \$266,220 paid in one year for animals for feeding purposes. The returns also show that these animals had consumed 9,896 tons of hay, which estimated at a cost of \$10 per ton, would be equal to \$98,960. The two sums make \$365,180. The returns obtained do not embrace all the establishments in the country, and it is probable that this branch of the business of brewers and distillers affords a market for farm products, equal to quite \$434,000 a year. It may be stated that the amount realized from the sale of the cattle and hogs already mentioned was returned at \$516,940; and if the product of all the establishments is included, the amount is probably over \$600,000 per annum, apart from the amount received for grains and slop sold.

The growing of hops is an important agricultural industry, as it, to a greater extent than any other pursuit affected by the liquor traffic, leads to the employment of labour. One gentleman who gave evidence before the Commission (page 946, vol. 4.), farming about 150 acres of land, producing barley, and in part, hops, stated that, in the picking season, he had at times as many as ninety pickers per day employed.

Deducting from the preceding total, \$2,382,765, the value of Indian corn, hops and malt imported, the remainder would represent the sum of \$1,596,343, which is a reasonable estimate of the interest of the agricultural classes of the Dominion in the materials made use of annually in, and in connection with, the manufacture of spirituous and malt liquors in Canada.

In addition to the materials just referred to, there is a large amount of fuel used in distilleries and breweries. An exact statement of the total quantity so used, and the proportion of Canadian and foreign coal, it has not been practicable to obtain. Looking at the consumption in some of the larger establishments which have made returns, the Commissioners think that it is probable that the domestic fuel consumed annually is of the value of about \$41,000, and imported, \$129,000 exclusive of duty.

There is a large business carried on in the making of barrels for use in breweries and distilleries, and there is also a large trade in bottles, corks, capsules, etc., which are incidental to the brewing and distilling business. Heavy expenditure is incurred for advertising, show cards, and printing, repairs, blacksmith's work, ice, water supply, gas, taxes, insurance and sundries. The following statements has been compiled from information supplied by the representative of distillers and brewers, when giving evidence before the Commission. The figures represent estimated annual expenditure for :

Casks, bottles, cases.....	\$206,455
Capsules, corks, etc.....	76,186
Printing, advertising, show cards, etc	79,897
Insurance.....	151,685
Gas, taxes, and water supply..	123,118
Repairs and blacksmith's work, etc.....	47,005
Ice.....	36,757
Sundries.....	121,992
	\$843,095

The Commissioners have had no means of checking these items of expenditure. They believe them to have been put forward in good faith, but, in some cases, it is not entirely clear that an accurate distinction has been made between what should be considered as stock in trade, and annual expenditure for supplies. Analyzing the items as well as the information obtained will permit, the amount may be classified as:—

For domestic or Canadian supplies and services.....	\$719,846
For imported supplies.....	123,249
	\$843,095

Then, a large sum is paid for transportation charges on raw material and the products of breweries and distilleries. The items are scattered through so many channels, and in such great detail, that an accurate estimate can hardly be made. The representatives of the brewers and distillers, in his evidence, put down the amount at \$571,178; but certain items were included for the transportation of cattle fed with the grains and slop of the distilleries and breweries after leaving these establishments, which the Commissioners think should not be included, whilst on the other hand no account has been taken apparently of the charges for transportation of the supplies of the retail dealers from the wholesale establishments. The total charges are probably not less than \$450,000 per annum, apart from the charges on imported spirits, wine and beer, and the amount paid for the retail supplies, distributed throughout the country.

The census returns of 1891 showed that there were employed in connection with distilleries 404 persons; in connection with breweries, 1865; in malt houses, 45. If to these is added an estimate for those employed in the making of barrels, etc., used in breweries and distilleries, of, say, 60, the total number employed will be found to be 2,374. These figures probably include the office staff and officials, but exclude those engaged in feeding and shipping cattle.

In the same census returns, the amount paid for wages in breweries, distilleries and malt houses, was stated to be \$1,164,046. If to this is added, say, \$30,000, for the wages of those employed in the making of barrels, etc., outside these establishments, the total is \$1,194,046.

The foregoing statistics do not take into account those employed in the making of cider. The census returns of 1891 gave the following figures in regard to this business,—

Capital invested.....	\$136,795
Wages paid.....	47,129
Value of products.....	186,835
Number of industries.....	175
Number of employees.....	321

The preceding statistics do not include the persons engaged in the making of native wines, the figures in regard to which, given in the census returns of 1891, were,—

Capital.....	\$396,475
Wages paid.....	37,955
Value of product... ..	249,489
Number of industries.....	41
Number of employees.....	150

Liquor Traffic—Commissioners' Report.

Accepting the preceding figures as approximately correct, we reach this result. There is paid by brewers and distillers annually:—

For raw material, the product of the farm.....	\$2,382,765
For wages.....	1,194,046
For fuel	170,000
For transportation.....	450,000
For casks, bottles, cases, etc.....	206,455
For capsules, corks, etc.....	76,186
For printing, advertising, show cards, etc.....	79,897
For repairs, blacksmith's work, etc.....	47,005
For insurance.....	151,685
For gas, taxes, water supply, etc.....	123,118
For ice.....	36,757
For sundries.....	121,992
	\$5,039,906

Of this sum of \$5,039,906, it is estimated that there is paid about \$1,038,671 for imported materials, leaving \$4,001,235 as the sum paid for Canadian products, wages, etc.

The undersigned desire to repeat that many of these figures are estimated. Every care has been taken in their preparation and they are believed to convey a reasonably accurate idea of the extent of the various interests to which they refer.

There are (in addition to the home manufacture,) imported wines, spirits and malt liquors, which, on an average of five years, amount to

1,089,663	gallons	spirits
391,397	“	malt liquors
520,258	“	wines,

and the entered value of which is \$1,736,897. This is exclusive of duty. The freight, insurance and charges will amount to an additional sum of \$165,000. The \$1,736,897, is sent out of Canada to pay for imported liquors. On the other hand, employment is given to a small number of persons who handle them after they are imported, and there are a certain number of wholesale houses a part of whose profits is derived therefrom.

The following figures showing the capital invested in brewing and distilling establishments have been obtained from the census returns of 1891.

Distilleries:—		
Nova Scotia.....	\$ 190,000	
Ontario.....	6,864,000	
	\$ 7,054,000	
Breweries:—		
British Columbia.....	\$ 236,380	
Manitoba	277,300	
New Brunswick.....	114,000	
New Scotia.....	569,557	
Ontario.....	5,305,805	
Prince Edward Island.....	12,000	
Quebec.....	1,796,411	
	8,311,453	
Malt-houses:—		
Ontario.....	\$ 220,000	
Quebec.....	3,500	
	223,500	
Total.....	\$ 15,588,953	

It is probable that, in addition to the foregoing, a considerable amount of money is required to carry the large stocks of liquor which have been kept on hand, in compliance with the law, and to cover credits given by the manufacturers to the vendors, which the evidence taken by the Commission shows is also a large amount. (Q. 12,173a—12,177a.)

Of the capital invested in buildings which are used for the purposes of hotels and retail liquor selling establishments, and in fixtures and appliances used in carrying on that business, it is only possible to form approximate estimates. An accurate statement of the value of estate occupied by those engaged in the liquor trade throughout the Dominion, and of the fittings and appliances, could only be obtained by census being taken under Government supervision. A reference to the statements put before the Commission shows the value put upon these by those representing the business.

In Appendix No 2, Vol. I of the evidence, will be found a statement put before the Commissioners by the Licensed Victuallers' Association of the city of Halifax. From this statement the following figures are extracted:—

Value of hotel property.....	\$ 698,100	
Value of shop property.....	366,760	
Value of wholesale property.....	375,000	
		\$ 1,439,860

This valuation includes the estimated total value of the buildings in which liquors are sold, (Q. 2348—2349) only a comparatively small portion of which in some instances is occupied for the sale of liquors.

The fixtures and plant used were valued at:—

In hotels.....	\$ 89,250	
In liquor shops.....	146,730	
		\$ 235,980

The statement of the value of stock on hand was:—

In wholesale houses.....	\$ 200,000	
--------------------------	------------	--

The number of persons employed was put down as being:—

In hotels.....	240	
In liquor shops.....	207	
In wholesale houses.....	75	
		522

The amount paid in wages put down as being:—

In hotels.....	\$ 83,610	
In liquor shops.....	113,364	
In wholesale houses.....	38,250	
		\$ 235,224

These statistics do not deal with either the manufacturing establishments or the soda water trade.

The hotel and liquor shop properties, it was estimated, would depreciate in value in event of a general prohibitory law being enacted:

The hotels to the extent of.....	\$295,680
The liquor shops to the extent of.....	175,540
	\$471,220

The loss of wages, it was stated, would be just the amount now paid. There are payments also for municipal taxes, put down at \$16,628 per annum, including what are paid on the manufacturing establishments, which were estimated to be of the value of \$408,500.

The valuations of property here given, including, as they do, the gross value of real estate in the hotels, liquor shops and wholesale houses, are hardly a guide to the actual value of properties which are used exclusively for the vending of liquors. Only a very small portion of an hotel is used as a bar or for the storage of liquor,

Liquor Traffic—Commissioners' Report.

whilst there are a couple of hotels put down as being of the aggregate value of \$375,000. Of course, it may be contended that it is the liquor trade which gives the value to these establishments.

The returns made by establishments engaged in the trade in Halifax give the following results as regards employees:—

Class.	Number.	Number of Employees.	Average.
Hotels.....	24	207	8 $\frac{3}{4}$
Shops.....	44	149	3 $\frac{1}{4}$
Wholesale shops.....	6	45	7 $\frac{1}{2}$
Total.....	74	401	

These returns indicate that there were in the city of Halifax 74 establishments engaged in the liquor traffic, employing 401 persons, most of whom, it is claimed, would be thrown out of employment if a prohibitory law were enacted. The number put down as being employed by hotels must include, the Commissioners believe, some who are not strictly employed in selling liquor or attending to the liquor business.

Many other statements were laid before the Commission setting forth the value of the property occupied by those engaged in the wholesale and retail liquor trade in certain places, the value of their equipment, the number of employees who would be thrown out of employment, if the traffic should be put an end to by legislative enactment, and the general depreciation of property and stock which would follow. They will be found either in the Evidence or as Appendices thereto. They are, of course, the statements of those who are deeply interested, but who are, perhaps, in a better position than any others to express opinions.

In the evidence of Mr. Kribs (pp. 1208-1211, vol. iv. pt. 2) will be found a summary of very many of these statements, which may conveniently be recapitulated here.

SUMMARY.

Name of City or Town.	Value of Property.	Estimated Depre- ciation.	Value of Plant, Stock and Fixtures.	No. of Persons employed.	Wages.
	\$	\$	\$		\$
Montreal.....	13,078,075	5,448,725	3,709,819	4,851	1,437,882

Walkerton (no shops).....	66,500	37,500	5,800	44	8,014
Waterloo (no shops).....	111,000	71,200	4,000	47	8,040
Total.....	24,771,843	10,464,815	7,686,907	9,607	2,997,368

In the preceding figures soda-water manufacturers, coopers and cork-making establishments are included, the Commissioners not having the necessary information to enable them to eliminate the capital and expenditure of these from the total of

the returns put in all cases. It is claimed that a stoppage of the liquor traffic would practically put an end to these establishments. The Commissioners do not adopt that view. At the same time, they believe the manufacture of soda-water would be materially reduced if the sale of liquor was put an end to.

Some idea may be formed of the extent of these trades from the following statistics taken from the evidence.

SODA-WATER MANUFACTURERS.

	Property.	Deprecia- tion.	Value of Plant.	Persons employed.	Wages
	\$	\$	\$		\$
Montreal.....	72,500	26,333	77,604	91	30,701
Toronto.....	23,100	7,050	40,000	37	14,650
Halifax.....	24,500	12,250	26,300	28	9,928

* COOPERS.

Montreal.....	13,500	10,000	19	9,880
---------------	--------	--------	-------	----	-------

CORK-MAKERS.

Montreal.....	12,000	12,000	18,000	14	6,500
Toronto.....	18,800	5,979	34	12,775

Accurate statements of the number of those engaged in and connected with the vending of liquors are not obtainable. The census returns of 1891 give the number of persons so employed:—

As bartenders.....	1,553
As hotel-keepers....	6,524
As restaurant-keepers.....	693
As saloon-keepers.....	294
As bottlers, etc.....	354
As wholesale merchants.....	204
	9,622

There are agents employed for the sale of liquors by wholesale houses and manufacturers who are, probably, not included under any of these classifications. Then, where there are a number of persons in an hotel or a saloon, taking turns in supplying customers, the classification under the head of "Bartenders" must almost necessarily be inaccurate. Restaurant-keepers may not all be liquor vendors. Billard saloons are included with other saloons; all under that head may not be liquor sellers. Under the head of "Wholesale Dealers in Wine and Liquors" may be included some who are also engaged in other branches of business.

In Montreal the license fees are, in the case of retail establishments, in some measure based upon the rental of the premises occupied. Adopting the amount received for licenses as a basis for getting at the annual rental of the properties occupied, and capitalizing the same at 6 per cent per annum, the result, on an average of two years, would be equal to a capital sum of about \$5,700,000.

Taking such houses as the Windsor and St. Lawrence Hall, which pay the highest license fee (\$800 per annum), it will be realized that the sum paid represents only a very small fraction of the value of such houses, and falls far short of representing even the value of the parts thereof occupied by the bars.

Liquor Traffic—Commissioners' Report.

It cannot be doubted that the stoppage of the traffic would seriously depreciate the value of all such properties, and would probably lead to many of them for a time being unoccupied, not only to the loss of the owners, but also to the loss of the municipalities in which they might be situated, and which now collect taxes from them.

It has been already mentioned that the Commissioners have found themselves unable to obtain accurate returns of the number of licenses issued within the boundaries of the Dominion; but, from the information collected, it is certain they are not fewer than 7,000.

Taking, merely for the purpose of illustration, that of the places where the vending is carried on 2,500 are in cities and 4,500 in towns, villages or country districts, and that the first mentioned are, on an average, of the value of \$8,000 each, and the latter, \$4,000 each, the total value on this basis would be \$38,000,000.

In some of the places where the vending is carried on, perhaps not more than one person is employed, whilst in others the number amounts to probably five or six. It will not be an exaggeration to put down the number of persons making their living, or the main portion of it, by vending liquors as being between 25,000 and 30,000.

The Commissioners do not put these figures forward as representing the value of the real estate so occupied, or the actual number of persons so employed; their object is simply to endeavour to convey some idea of the vast extent of the interests, which, in this connection, are affected by the traffic. The hotels, some of which have cost very large sums, are only taken at an estimated value of the portion made use of for the traffic, and it is certain that the tendency is to underrate the rentals in order to secure licenses at the lowest rates.

CONSUMPTION OF LIQUORS.

The following tables (A. 1, 2, 3, 4, 5, 6, 7, 8, 9), give the total consumption of liquors, exclusive of home-made wines, under the three heads of spirits, beer and wine, from 1871 to 1893 inclusive, and the consumption *per capita* in the Dominion and in the various provinces. The statistics of the consumption in the Dominion are believed to be as nearly accurate as it is possible to get them. They are compiled from the total entries made for consumption from year to year, and are the quantities on which duties are paid. The quantities consumed in different years vary considerably, and it may be observed that the largest variations have occurred about the periods when changes in the imposts have been made.

The statistics of the consumption in the separate provinces have been compiled from the entries for consumption in these provinces; but it is undoubtedly the case that there is a transmission of liquors from one province to another after the imposts have been paid upon them. The inquiries made, and the evidence taken, by the Commission tend to show, however, that the duties, amounting, as they do, to a large proportion of the total cost of the liquor, are usually, in the case of spirits, paid as near to the point of consumption as practicable and it is probable that as regards spirits, the figures are only slightly affected by this transmission. In the case of beer and ale they are less accurate; and in regard to imported wine, the Provinces of Quebec and British Columbia are doubtless charged with somewhat more than they consume, as there are paid on imports into these provinces duties on wines which are consumed elsewhere.

The proportions of the constituent classes of the population at different periods have to be taken into account in making deductions from statistics of the consumption of liquors. It is manifest that a preponderance, or the reverse, of women and children in any one period, or in any community dealt with, would affect the consumption.

In 1891, of the total population of 4,833,239 in Canada, 2,372,768, or 49·10 per cent were females. In 1881, out of the 4,324,810, 2,135,956, or 49·39 per cent were females.

The proportion of children under 15 years of age was:—In 1881, 1,642,001, equal to 37·96 per cent of the population, and in 1891, 1,738,750, equal to 35·97 per cent of the population. The difference in the numbers between the two periods is so slight as not to materially influence the comparisons.

STATEMENT showing the total Quantities entered for Consumption annually, and the quantity per head of the population, in the Dominion and Provinces, in imperial gallons, of Spirits, Beer and Wine, from 1871 to 1893, inclusive, with the average for each five yearly period from 1871 to 1890, and for the ten years ending 1880 and 1890; also the average for the three years ending 1893.—The Population in 1871, 1881 and 1891 taken from the Census returns; for all other years it is estimated. Native wines not included. (Prepared from official sources for the Royal Commission on the Liquor Traffic.)

Liquor Traffic—Commissioners' Report.

THE EXTENT OF TRAFFIC.

Taking an average of the total amount of liquor entered for consumption for the five years ended June, 1893, it will be found to be 21,676,749 gallons per annum.

It is only practicable to make an estimate of the value, or price, of the quantities when they leave the bonded warehouses and the manufacturing establishments, and such an estimate is, perhaps, all that is needful for the purposes of this report. Perfect accuracy it is hardly possible to obtain. Taking Canadian spirits at \$2.10 per gallon, and imported at the entered value, plus duty; Canadian malt liquors at 30 cents per gallon, and imported at the entered value, plus the duty, and wine at the entered value, plus duty, the following total is reached:—

Spirits, 3,809,596 gallons.....	\$ 8,728,563 00
Malt liquors, 17,355,487 gallons.....	8,368,145 00
Wine, 511,626 gallons.....	933,356 00
	\$15,030,064 00

There has to be added to the entered price of the imported liquors the freight across the Atlantic, insurance and charges. These would probably amount to \$165,000.

Of the additions made to the quantities manufactured and imported before the different descriptions of liquors are disposed of by retail, it is, of course, impracticable to obtain any account.

The Commissioners, in giving the above and the undermentioned figures, desire to guard against it being assumed that they quote them as those which are actually charged and paid. Their object is simply to convey a general idea of the extent of the traffic on the basis mentioned.

Separating the imported liquors from those manufactured in the country, they may be approximately estimated to represent:—

	Domestic.	Imported.	Totals.
Spirits.....	\$ 6,067,797	\$ 2,660,766	
Malt liquors.	5,090,886	277,259	
Wine	933,356	
	\$11,158,683	\$3,871,381—	\$15,030,064

There is, of course, to be added to the foregoing figures the charges for transportation to the points of distribution, charges for insurance on liquors warehoused, and interest on capital invested until they are sold, with the profits, in many cases, of the wholesale merchant.

Taking an average of the quantities of wine, spirits and malt liquors entered for consumption in the five years ending 1893, but excluding cider and native wines, and taking an average of the retail prices, the calculation shows the sum of \$39,879,854, to be paid for liquor by the consumers. As more than more than one-half of this amount is paid for spirits to which, it is well understood, a large addition of water is made before they are vended to the public, the total amount paid is probably considerably in excess of the sum just mentioned. (Q. 23668, vol. 1).

The revenue derived by the Dominion and Provincial Governments from the traffic can be stated with some degree of precision. As regards the municipalities, with the exception of those in Ontario, the returns are incomplete and fragmentary.

The revenue of the Dominion Government is :—

	Yearly Average for five years, 1889-1893.
1. From Customs duties on imported liquors.....	\$2,241,784 00
2. " " " " malt.....	6,224 00
3. " " " " hops.....	44,803 00
4. " " " " coal.....	23,880 00*
5. " " " " corn.....	72,168 30
6. " " " " miscellaneous articles...	10,000 00*
7. " excise on malt liquors.....	3,634 00
8. " " " malt.....	691,954 00
9. " " " spirits..	3,990,169 92
10. " brewers', distillers' and maltsters' licenses....	16,040 00
11. " compounders' licenses.....	900 00
Total	\$7,101,557 22

The revenue derived by the provincial governments and municipalities for the year 1890-91 was as under. This year is taken, as the returns for it are more complete than they are for any other. Many municipalities have not made any returns:—

	No. of Licenses 1891.	Provincial.	Municipal.	Total.
		\$ cts.	\$ cts.	\$ cts.
Nova Scotia.....	108		17,659 00	17,659 00
New Brunswick.....	172		21,980 00	21,980 00
Prince Edward Island.....			600 00	600 00
Quebec.....	2,453	552,318 00	21,964 00	574,282 00
Ontario.....	4,256	308,200 00	294,968 00	603,168 00
Manitoba.....	156	27,550 00	18,507 00	46,057 00
North-West Territories.....	109	20,790 00	7,675 00	28,465 00
British Columbia.....	400	15,500 00	45,754 00	61,254 00
Totals.....	7,654	924,358 00	429,107 00	1,353,465 00

In Quebec, nothing is included for the city of Quebec, and many other places have not made any returns.

Several municipalities in British Columbia have not made returns.

The figures for the North-west Territories are those for 1892. Licenses only began to be issued May 1st, 1892.

In the foregoing figures \$47,280 is included for fines. In Ontario \$77,130 is deducted from the gross receipts for salaries, expenses and commissions. The gross receipts were therefore \$680,298 instead of \$603,168.

In Ontario the licenses on the preceding return include transfers, removals and extensions. Excluding the two first mentioned classes the licenses represent one to about every 583 of the population. In Quebec the transfers are endorsed on the licenses. The total number of the licenses is equal to one license to every 607 of the population. In British Columbia the 400 licenses shewn on the return, are equal to one to every 245 of the population.

In the Province of Quebec in 1891 the amount which the municipalities might charge in addition to the Provincial Government fees was limited to a sum of \$50. This materially reduced the amounts collected by the municipalities, as, for instance, the city of Sherbrooke, which, in 1890, collected \$9,100; in 1891 only collected \$1,300. The law was again changed in the session of 1892. The municipal councils were authorized to add in cities any amount not exceeding \$200, and in

*Estimated.

Liquor Traffic—Commissioners' Report.

other places not exceeding \$50. It is probable that correct returns would show that the Provincial and Municipal Governments collect \$1,500,000 from the liquor traffic.

It may be as well to recapitulate the various items which have been referred to:—

	Capital invested in breweries, distilleries and malt-houses. \$	15,588,953
Q. 18334a. Vol. 4, pt. 2.	Value of real estate occupied by vendors of liquors, estimated by the trade to be \$70,000,000, but which is probably nearer.....	38,000,000
Q. 18336a. Vol. 4, pt. 2.	There are in addition, fixtures, etc., estimated by the trade at what seems an excessive valuation, viz.....	21,000,000
Q. 12907a. Vol. 4, pt. 2.	There is an extensive stock of liquor always on hand in distilleries and elsewhere, and credit to a large extent has to be given to the retail vendor. These conditions probably lead to the employment of a large amount additional, temporarily obtained from bankers, of which no estimate has been attempted.	
	The brewers and distillers disburse, in wages and for materials required, payment of municipal taxes, etc., etc., a sum estimated at.	5,039,906
	There is paid for imported liquors, including ocean freights, etc.....	1,901,897
	For Federal excise and customs duties, licenses, etc.....	7,101,557
	For licenses, etc., Provincial and Municipal.....	1,353,465
Q. 18336a. Vol. 4, pt. 2.	For wages of those engaged in the retail and wholesale trade, a sum estimated at.....	10,500,000

The last estimate is probably in excess of the actual expenditure.

There are in addition, the domestic cider and wine trade, the soda water, cooperage and cork industries, heretofore referred to, which are not taken into account in the foregoing figures.

OTHER INTERESTS AFFECTED BY THE TRAFFIC.

The liquor traffic is the means of putting into circulation a large amount of money. The Commissioners sought to obtain the views of the gentlemen engaged in banking and other financial operations as to the effect of the traffic as now carried on upon financial transactions and the results which would follow the entire prohibition of the traffic. The following questions were, after due notice to those intended to be interrogated, put to several witnesses:—

“What, in your opinion, is the effect of the liquor traffic as at present conducted, upon the agricultural, financial, industrial, commercial and business interests generally of the Dominion?”

“What, in your opinion, would be the effect on financial, agricultural, commercial, industrial and business interests generally, and upon the revenue requirements of the Dominion, the Provinces and Municipalities, of the enactment of a law prohibiting the importation, manufacture and sale, except for medical, sacramental and mechanical purposes, of all intoxicants?”

Certain statistical information which has been gathered, showing in a general way the extent of the revenue derived by the country from the traffic, the material used in Canada in the manufacture of spirits, ale, &c., and on some other features, was supplied with a view to enabling those who were examined to form a general idea of the extent of the interests involved.

The following is a short summary of some of the replies made to the first interrogation. The replies to the second will be referred to hereafter.

Alfred Brunet, Esq., of Montreal, manager of La Banque Nationale, said:—
“My opinion is, as a whole, that it is beneficial to the agricultural, financial, industrial and commercial interests of the country.” (Q. 29980.)

A. D. de Martigny, Esq., manager of the Jacques Cartier Bank, Montreal, stated:—"It is very difficult for me to answer this question, because if absolute prohibition took place it would do damage."

Henri Barbeau, Esq., of Montreal, manager of the City and District Savings Bank, stated that he did not think the agricultural, commercial, industrial, financial, and business interests of the country were prejudicially affected by the liquor traffic, as at present conducted. (Q. 29883.)

M. J. A. Prendergast, Esq., manager of the Hochelaga Bank, Montreal, believed that the liquor traffic as at present conducted was injurious to the general interests of the country. One of the evils of the present law was its tendency to create a monopoly. The granting of more licenses than were actually required had a demoralizing effect on the people, as it created more opportunities for the poor people to obtain liquor, and was consequently injurious. Any prohibitory law against the manufacture of spirits would certainly have the beneficial effect of breaking up the monopolies that exist to-day, and clearing them away altogether. The only suggestion he made in the way of regulation or enactment that would tend to prevent the monopoly evil, was prohibition, which, he thought, would have a beneficial effect. (Q. 29839.)

F. Wolferstan Thomas, Esq., manager of the Molsons Bank, Montreal, said that it would require a great deal of time and attention to answer the question properly. "The liquor traffic," he said, "as at present conducted, the issue of licenses being seemingly nearly indiscriminate, has more or less a deleterious effect upon those interests that you have mentioned." He thought the money required to carry on the trade would be better applied to other purposes. (Q. 30659.)

W. Weir, Esq., president of the Ville Marie Bank, stated his opinion was that the liquor traffic affected general business only in so far as it took the industrial people away from other business, and waste of time was a loss to the whole community. He did not see that the employment of capital in the manufacture of liquor differed much from the employment of capital in other walks of life. "There can be no question," he remarked, "that the evil inflicted by the immoderate use of intoxicating liquors is injurious as regards every branch of trade and commerce, in so far as the people are taken from active pursuits in those branches and become impoverished. They are less able to provide for their families, and to that extent create less demand for articles which would make business of all kinds more active." In his opinion it is only the immoderate use of liquor which is injurious to the general business of the country. (Q. 29757.)

Mr. J. S. Bousquet, manager of the Banque du Peuple, was of opinion that the sale of liquor was not injurious to trade at present.

J. Herbert Mason, Esq., president of the Canada Permanent Loan and Savings Company, Toronto, said that the liquor traffic gave a home market for certain kinds of grain, which otherwise there would not be, and that it did not affect agriculture in any other way. It had no more effect on financial interests than any other business of the same extent. "As to the commercial and business interests generally," he said, "I do not know that it affects them any more than to the extent of the capital that is employed in it." (Q. 14442a.)

David R. Wilkie, Esq., president of the Board of Trade, Toronto, and cashier of the Imperial Bank of Canada, thought that the liquor traffic, as at present conducted, was injurious, directly or indirectly, to the financial, agricultural, industrial and commercial interests of the country. The freedom with which spirits were dealt with by the community at large was injurious to the consumer, and therefore to the employer and others who were dependent upon him. If the traffic were regulated by reducing the number of licenses issued, largely increasing the license fees, and increasing both excise and import duties on whiskey and spirits, it would benefit the country at large immensely. (Q. 11452a.)

George Hague, Esq., general manager of the Merchants' Bank of Canada, Montreal, said that the liquor traffic, extensively carried on in Canada as it is, must, directly and indirectly, give employment to a large number of persons, and also of capital in various forms. The importation leads to employment of ships, steamers

Liquor Traffic—Commissioners' Report.

and railways, the renting of warehouses, and the employment of sailors, officers, clerks and workmen, all leading to the employment of capital and the diffusion of money. In the manufacture, much capital is invested in buildings and plant, which also leads to the large employment of labour, and consequent expenditure of money. In considering the monetary interest of the trade, the income of principals and their expenditure thereof has to be considered, as well as that of their employees. In the sale and distribution of liquors, the same agencies are made use of as in importation.

Mr. Hague said that although the trade furnished a market for corn, barley, etc., he did not attach much importance to that, as the same could readily be turned to other uses. "But that the trade gives rise to a large amount of business and employment of a large number of persons," he said, "and that those in turn give rise to an immensely ramified line of business and employment in other lines, goes without saying." (Q. 30303.)

In the foregoing statements the Commissioners have endeavoured to indicate the various agricultural, commercial, industrial, financial and other business interests, and the extent of them, necessarily somewhat indefinitely, which are affected by the manufacture, importation and sale of intoxicating liquors.

Sufficient information has been given to show that these interests are very extensive, and that any serious interference with the traffic must necessarily depreciate the value of a large amount of property—a property which, if the estimates made in regard to its value are to be accepted, is equal to, or, rather, in excess of the capital of the whole of the chartered banks of the Dominion, and would interfere, for a time at least, to no inconsiderable extent with the general business of the country.

There remains one interest to be considered, undoubtedly the most important, and that is the effect which the use of intoxicating liquor has upon the community at large.

The buying and selling, or bartering, of intoxicants for beverage purposes can hardly be said of itself to produce injurious effects. Such evils as do arise flow from the misuse of the article bought and sold.

That many and grievous evils and much wretchedness and misery are caused by over-indulgence in the use of intoxicants, does not admit of controversy. It is impracticable to reach the number of individuals in the community who are guilty of such over-indulgence, and who thereby inflict injury upon themselves and their families, and dissipate means which might and should be applied to worthier objects. Considering, however, the repeated offences committed by those who so offend, the proportion of them to the total population of the Dominion, the undersigned believe to be comparatively small, and probably smaller in Canada than in any other country in regard to which it has been practicable to obtain information.

How much of the crime, poverty, and insanity of the country is to be attributed to the use of intoxicating liquors, cannot be accurately determined from any information accessible to the Commissioners.

In regard to crime, the evidence taken is fairly unanimous that the more serious offences, such as forgery, perjury, arson, etc., are committed by those who do not over-indulge in the use of intoxicants.

The Judges and Magistrates who replied on this subject to the circulars sent to them, place the percentages of the criminal cases attributable directly or indirectly to the use of intoxicating beverages, as follows:—

8 at between,.....	Zero and 10 per cent.
11 do	10 per cent and 25 do
9 do	25 do and 50 do
65 do	50 do and 75 do
15 over.....	75 do
53 were indefinite in their replies.	
6 made no reply to the question.	

In a very elaborate Bulletin prepared by the Rev. Frederick H. Wines, in connection with the United States Census of 1890, on the statistics of "Homicide" he observes:—

"It is frequently said that lynching takes place where the law is not executed, and that it is designed as a protest against the inefficiency of the courts. But the sections in which there are the most executions are those in which there are also the most lynchings. The number of executions and lynchings reported by the Sheriffs in the southern states is identically the same. It is further to be noted that the largest number both of executions and of lynchings is in the South Central division, where the average sentence for homicide is the longest, and where the percentage of long sentences imposed by the courts is the highest.

"As to the causes of crime.

"A careful study of the figures given will serve to correct the exaggerated impressions current as to the causation of crime.

"Ignorance is a cause of crime. Nevertheless, 66·57 per cent of all prisoners charged with homicide have received the rudiments of an education, in English or in their own tongue, and 3·44 per cent have received a higher education.

"Ignorance of a trade is a cause of crime. But 19·35 per cent are returned as mechanics or apprentices, and a much larger number have the necessary skill to follow mechanical pursuits.

"Idleness is a cause of crime. But 82·21 per cent were employed at the time of their arrest.

"Intemperance is a cause of crime, though a less active and immediate cause than is popularly supposed. But 20·10 per cent were total abstainers, and only 19·87 per cent are returned as drunkards.

"All of these causes, and others which might be named, are in fact only contributory causes whose operation is secondary and indirect. External circumstances facilitate or hinder the commission of crime. They operate as a stimulant to the criminal impulse or as a check upon it. But the root of crime is not in circumstance, but in character. The saying of the great teacher will forever remain true: 'Out of the heart proceed evil thoughts, murders.' Science confirms the moral teaching of religion."

The total convictions for all offences in the Dominion have averaged 36,194 in the last three years (ending 1893) or less than 0·74 of one per cent of the entire population. The offences against the liquor laws and for drunkenness were 40% of the total convictions.

Of the number of insane in the public institutions of the country whose condition has been brought about by intemperance, it is equally impracticable to obtain accurate information. Estimates are as varied as the number of persons questioned. This subject will be referred to again in subsequent parts of this report.

Of the poor, who are largely taken care of in institutions supported by charitable contributions, there are no regular official returns prepared for the whole country.

Of the population in the jails of the country, the Commissioners have been unable to obtain full statistics from some of the provinces. Such as have been obtained will be included and referred to hereinafter.

The criminal statistics collected and published annually form a most valuable contribution to the information obtainable in regard to the effects of over-indulgence in the use of intoxicating liquors, and in regard to some of the provinces it is possible to supplement them by other important information bearing upon the extent and character of crime therein; but, on the other hand, even the commitments to the common jails, with the number of prisoners in them at the close of each year, cannot be obtained with accuracy for any considerable period of time, and statistics concerning the inmates of the various insane asylums are constantly disturbed by the altered arrangements existing between these institutions, or the government

Liquor Traffic—Commissioners' Report.

representing them, and the local municipal authorities. For instance, in one of the provinces it was found that the number in the insane asylums had in a certain period decreased, which was the very opposite to the facts in regard to asylums in other provinces. Investigation discovered that some of the county councils, objecting to the charge made for the maintenance of the insane, had removed the harmless patients to almshouses under their own control and kept them there.

Then, as regards the pauper population, the systems prevailing in the different provinces are so divergent that comparison is practically impossible. In some, almshouses are provided at the public expense, in others the care of the poor is largely the work of charitable institutions supported by voluntary contributions.

Anything like accurate information in regard to the insane and the assisted poor, if it is possible to obtain it all, which is by no means a certainty, the Commissioners believe could only be collected by some department of the Federal Government employing an efficient staff to undertake the work, and having also at its command the services of such government employees in each province as could be made available for collecting information. The proportions of the different classes of the pauper, insane and criminal population whose condition has been brought about by over indulgence in intoxicating liquor cannot, the Commissioners consider they are justified in saying, be accurately ascertained; and opinions on the subject are so varied, as to be really of doubtful value. The statements made by the individuals themselves cannot be relied upon; those of interested friends are not infrequently lacking in candor, whilst in the case of the insane, the medical opinions expressed, are, in most instances, those of individual members of the profession, and in probably not a few instances would not be concurred in by others, although expressed in a perfectly unbiassed spirit.

The following tables show the convictions for offences in the Dominion and in the separate provinces, from 1881 to 1893. The population in 1881 and 1891 is that given in the census returns; for the other years, it is estimated :—

STATEMENT of total convictions for all offences, for drunkenness, offences against liquor laws, breaches of municipal laws and minor offences, with the ratio of each 1,000 of the population from 1881 to 1893.

Average.....	105,306	1,473	13.98	329	3.12	660	6.26	161	1.52

These statistics have been divided into total convictions, convictions for drunkenness, convictions for offences against the liquor laws, and for breaches of municipal laws and minor offences: the ratios per thousand of the population of the total and of each class are given. In considering these returns, the fact must be borne in mind that they deal with the number of convictions, whether such convictions may have been punished by a fine or by commitment to jail. The commitments to jail, if taken alone, would represent a smaller number of cases than are given in the tables. The results show a considerable increase in the number of convictions for offences of all kinds, for drunkenness, and for breaches of the liquor laws. The averages for the five years ended 1885 and the five years ended 1890 were as follows:—

	All con- victions per 1,000.	Convictions for drun- kenness per 1,000.	Convictions for offences against liquor law per 1,000.	Two and three com- bined.
	1	2	3	4
5 years ending 1885.....	7.14	2.49	0.42	2.91
5 years ending 1890.....	7.87	2.72	0.69	3.41
Increase.....	.73	.23	.27	.50
Per cent.....	10.22	9.24	64.29	17.18

Liquor Traffic—Commissioners' Report.

The ratio of the increase of convictions for drunkenness was slightly below the ratio of the increase in total convictions, while the convictions for offences against the liquor laws increased in a much larger ratio than the other classes. In some measure this is doubtless owing to the larger number of prosecutions in Ontario under the Scott Act.

Including the returns for the three years, between 1890 and 1893, the comparison is as follows:—

	All convictions per 1,000.	Convictions for drunkenness per 1,000.	Convictions for offences against liquor laws, per 1,000.	Two and three combined.
	1	2	3	4
5 years ending 1885.....	7.14	2.49	0.42	2.91
5 years ending 1890.....	7.87	2.72	0.69	3.41
3 years ending 1893.....	7.40	2.46	0.48	2.94

The last period mentioned shows a large decrease over the middle period, and as regards convictions for drunkenness, a lower ratio than in either of the preceding periods, or of the two periods combined.

The average of convictions for all offences for the five years ended 1890 was 0.78 of 1%; for drunkenness alone, 0.27 of 1%; and for drunkenness and offences against the liquor laws combined, about 0.34 of 1% of the population.

THE AVERAGE of the convictions for the three years ended 1893 were:—

Population.	For all offences.	For drunkenness.	For drunkenness and offences against the liquors laws combined.
4,887,450.....	36,194	12,056	14,416
Per cent of the population.....	0.74	0.24	0.29

The number of indictable offences were, in 1881, 3,026; in 1891, 3,964; or in 1881, 0.70 per 1,000 of the population; in 1891, 0.82 per 1,000 of the population, an increase of 17.14%, taking into account the increased population.

A fact which has been brought to the notice of the Commission, and which they are satisfied has an important bearing upon these statistics, is that, in the later years, greater exertion has been made to obtain accurate returns, and the necessity for accuracy in compiling and rendering them has been more fully impressed on the clerks of the various courts charged with the duty of making them up.

In the report on criminal statistics in Canada for the year 1892 (page xiii) Mr. George Johnson says:—

“As regards the growth of crime in Canada, these two classes (indictable offences and summary offences), taken together, show that for the census years 1881 and 1891, the convictions were 1 to each 148 inhabitants in 1881, and 1 to each 129 inhabitants in 1891. This would appear to indicate an increase of about 15% in the crime of the country during ten years. But this conclusion is apparent rather than real, because, undoubtedly, in 1881—the first year in which the returns were transmitted—there were less care and less completeness in making the returns than there has been since.

“Besides the greater care taken in making up the returns, other factors which must necessarily enter into the consideration of the question whether crime has really increased are: 1st, the increased vigilance of the police; 2nd, the drift of population to the cities, which has a tendency to make it increasingly easier to detect crime;

and 3rd, the enlargement of crimes by legislative enactments; for instance, each year breaches of municipal laws are more extended than in the previous year.

	1880-82.	1883-85.	1886-88.	1889-91.	1892.
1. Murder.....	0·066	0·08	0·073	0·07	0·07
2. Rape and other offences against females.....	0·20	0·33	0·23	0·26	0·19
3. Other offences against the person.....	15·03	14·37	13·73	12·90	13·70
4. Robbery, with violence.....	0·53	0·63	0·67	0·73	0·71
5. Horse, cattle and sheep stealing.....	0·17	0·17	0·60	0·37	0·13
6. Other offences against property.....	0·33	0·57	8·13	0·70	9·04
7. Other felonies and misdemeanors.....	0·63	0·50	0·40	0·40	0·82
8. Breaches of municipal by-laws and other minor offences.....	35·01	33·48	32·55	34·43	36·90
9. Drunkenness.....	33·16	34·90	33·60	35·70	32·62
10. Breaches of the liquor laws.....	5·72	6·12	10·02	6·60	6·00

"It will be seen that the numbers 8, 9 and 10, which constitutes 73·90 % of the convictions in the 1880-82 period, were, in the 1889-91 period, 76·73 % of the whole convictions. Of the remaining class of offences, murder, and manslaughter show a tendency to decrease. Rape and other offences against females remain steadily at the same general average, though there has been a reduction in the last two periods compared with a period 1883-85. Robbery with violence, including house and shop breaking, shows a tendency to increase. Drunkenness shows a general increase in the three-year periods, but a decided decrease in 1892, compared with the previous years. The increase apparent down to 1891 does not indicate that drunkenness was on the increase, but rather that there was a sterner spirit abroad respecting punishment of drunkenness."

The convictions for drunkenness and offences against the liquor laws, taking the whole Dominion, reached the highest point in 1888, since which date there has been a gradual reduction in the total of the combined offences. The Scott Act ceased to be in force in 10 counties in 1888, and in 19 counties in 1889, in which it had previously been adopted, and the Dunkin Act was put in force in one county, viz., Richmond, Quebec, in 1888.

The convictions for drunkenness, taken separately, continued to increase from 1888 up to 1890, when they reached the highest figure shown in the returns. From this date there has been a steady reduction, the ratio per thousand of the population being smaller in 1892 than in any year subsequent to 1884. The percentage of convictions for drunkenness to the total convictions, was less in 1892 than in any year subsequent to 1880.

There are doubtless many cases of intemperance which are not accentuated by appearing in the records of the criminal courts, yet are the cause of much wretchedness and misery. At the same time, there are included in these records numerous duplicated convictions, which, in the aggregate, must amount to a large number. The evidence taken by the Commission shows that there are many faces that are familiar to the recorders and magistrates of the Police Courts, and are those of persons who are convicted many times during each year.

The following statement gives the number of prisoners per thousand of population in the common jails of the country at the end of each of the undermentioned years, also the number per thousand of those committed to the jails in the same period. In the case of British Columbia, New Brunswick and Nova Scotia the returns, the Commissioners are aware, are not correct. They have found themselves unable to get accurate returns. In some cases the records are missing, or have been destroyed; in others they have been unable to secure even replies to their communications. The detailed returns from which these figures are taken are referred to in the parts of this report relating to the separate provinces, and they will be found printed as Appendices, Nos. 1 to 8, with such notes attached to them by way of explanation as it has been deemed necessary to make in order to guard against mistakes. The returns from the other provinces, the Commissioners have every reason to believe, are correct.

Liquor Traffic—Commissioners' Report.

NUMBER of Prisoners per 1,000 of the Population Yearly committed to, and the Number remaining in, Common Jails at the end of each of the undermentioned years.

It will be observed that in Ontario there has been a large reduction in the ratio of commitments per thousand of the population, and also a reduction in the number remaining in the jails at the close of the year.

For the first three years it has not been practicable to obtain the full figures for the Province of Quebec, but it will be noticed that there has been a decrease in the commitments between 1880 and 1893, and of the population remaining in the jails of that province between 1883, the first year for which a full return was obtainable, and 1893.

In New Brunswick the figures show an increase in the commitments between 1880 and 1893, and a decrease in the ratio of those remaining in jail, but, as has been already observed, they are incomplete.

In Nova Scotia, taking the year 1881, 1880 being manifestly incomplete, the figures show an increase in commitments and a reduction in those remaining in jail as between that year and 1893, but the returns from this province, are, as has already been remarked, also incomplete.

The returns from Prince Edward Island for 1893 show a very considerable reduction in the number committed and of the population remaining in the jails at the close of the year as compared with 1880.

In Manitoba as might have been expected with an increase of population principally immigrants, there has been an increase in the ratio of the number of persons committed to, and remaining in the jails. The highest ratios were reached in 1882; the lowest, in commitments, in 1888, and of those remaining in jails at the close of the year, 1887. From these dates the commitments have increased from 1.07 in 1888 to 1.84 per thousand of the population in 1893, and the number remaining in jail from 0.16 in 1887 to 0.36 per thousand in 1893. It is probable that during the period when the Canadian Pacific Railway was in course of construction through the province, there were more offences, resulting in a larger number of commitments to the jails.

In the Province of British Columbia there has been an increase in the ratio of the number of prisoners remaining in the jails between the years 1880 and 1893, though there have been periods when the ratio was larger than it was at the close of 1893. This province has the largest ratio of prisoners in its jails of any of the provinces; and it is probable that the returns do not include the whole of the prisoners under confinement. A large number of these prisoners, it should be mentioned, are Indians and Chinese.

The statistics for the North-west Territories are given in order to complete the return; but they can hardly be said to have any significance in this connection.

Generally, it may be said that there has been a reduction in the commitments to jails, and in the number of prisoners remaining in these institutions at the close of each year. The ratio of commitments per 1,000 of the population was in 1883 3.64, in 1893 3.27; of those remaining in the jails, the ratio per 1,000 of the population was in 1883 0.36, and in 1893 0.34.

In making comparisons between the ratios in the different provinces, it may be mentioned that the years do not all close at the same date, and that this fact may slightly affect the number, as in the milder months the population would probably be rather less than in the colder ones.

The years close in the various provinces as follows:—

Ontario, 30th September.

Prince Edward Island, 31st December.

Quebec, 31st December.

Manitoba, 31st December.

New Brunswick, 31st December.

British Columbia, 31st December.

*Nova Scotia, 31st December.

North-west Territories, 30th November.

Statistics in regard to the insane in public asylums are given in Appendices Nos. 9 to 16. These Appendices give the figures for each province, which with, in some instances, the opinions of the medical officers in charge of the asylums, are referred to in parts of the report which relate more particularly to the several provinces. These statistics, when compared with those given in the census returns,

* Noted. Dates apparently vary.

Liquor Traffic—Commissioners' Report.

go to show that there is a large portion of the insane population which is not resident in the various asylums of the Dominion. The number in these asylums has, however, steadily increased. This increase probably arises, in some degree, from increased confidence on the part of the public in the administration of the asylums, and the more general realization of the fact that in these institutions the insane, in very many instances, receive more care and attention—that is, care and attention of a useful and beneficial character—than they receive elsewhere.

The following figures are given simply for the purpose of showing the changes which have taken place in the population of the provincial asylums:—

Provinces.	Per 1,000 of Population.											
	Year.		Year.		Year.		Year.		Year.		Year.	
	Admitted.	Remaining at end of year.	Admitted.	Remaining at end of year.	Admitted.	Remaining at end of year.	Admitted.	Remaining at end of year.	Admitted.	Remaining at end of year.	Admitted.	Remaining at end of year.
Ontario	1877..	0 24 1 03	1882..	0 25 1 23	1887..	0 20 1 43	1892..	0 37 1 68	1893..	0 34 1 73		
Quebec	1877..	0 33 1 18	1882..	0 18 1 25	1887..	0 30 1 40	1892..	0 33 1 68	1893..	0 26 1 67		
New Brunswick			1882..	0 45 1 11	1887..	0 38 1 41	1892..	0 32 1 40				
Nova Scotia	1877..	0 22 0 83	1882..	0 20 0 90	1887..	0 25 0 91	1892..	0 22 0 80

British Columbia.	1877..	0 32 0 84	1882..	0 13 0 92	1887..	0 52 1 03	1892..	0 60 1 28	1893..	0 43 1 18		
North-west Territories					1887..	0 11 0 09	1892..	0 20 0 46				

The following figures of the number of the insane in the four following provinces of the Dominion are taken from Census Bulletin No. 16, 1891:—

	1871.	1891.	Increase.
Ontario	4,081	5,855	1,774
Quebec	3,300	4,550	1,250
Nova Scotia.	1,254	1,373	119
New Brunswick	788	886	98

After adding and deducting for transfers from one province to another, as shown by the figures in the same return, the increase would be:—

	Increase.	Increase per cent.	Increase in Population.
Ontario	1,911	46 82	30 5
Quebec	1,134	34 36	25 0
Nova Scotia.	181	14 43	16 1
New Brunswick	83	10 53	12 4

The following is the classification of the insane made in the same census bulletin per thousand of the population:—

British Columbia	1·32
Manitoba.....	1·20
New Brunswick.....	2·70
Nova Scotia.....	3·00
Ontario.....	2·80
Prince Edward Island.....	3·00
Quebec	3·00
North-west Territories.....	0·50

Comparing the figures in the census returns with those shown in the returns of the population in the public asylums at the close of the year 1891, as per the Appendices, Nos. 9 to 16, it will be observed that the census returns are in excess of the asylum returns to the following extent:—

INSANE POPULATION OF CANADA.

Provinces.	As per Census Bulletin, 16, Page 4.	Population in the Public Asylums, as per Returns furnished the Commission.
1. British Columbia.....	130	123
2. Manitoba.....	196	135
3. New Brunswick.....	886	466
4. Nova Scotia.....	1,373	354
5. Ontario.....	5,855	3,468
6. P. E. Island.....	333	137
7. Quebec.....	4,550	2,532
8. N. W. Territories.....	* 32	41
Total.....	13,355	7,256

* This is the population said to have been in the asylum at the end of 1890.

It has to be borne in mind that the census and asylum returns do not close at exactly the same period of the year; but this should not materially affect the comparison.

In Nova Scotia a considerable number of the insane population are lodged in almshouses, and it is probable that the same remark applies to Prince Edward Island. Of course, the insane so placed are not returned in the population of the provincial asylums. The asylums for which returns have been obtained are those maintained at the public expense, and, in the case of Quebec, only the number of patients maintained at the public expense in these asylums is given.

The same census bulletin gives the following information in regard to the insane of different countries:—

	Per 1,000 of the Population.
Canada.....	2.80
England.....	3.20
Scotland.....	3.20
Ireland.....	3.70
France.....	2.50
Germany.....	2.40
Scandinavia.....	2.90
United States.....	3.30
Victoria (Australia).....	3.30

Liquor Traffic—Commissioners' Report.

The Commissioners have not been able to find any substantial evidence proving that the insane population has been to any considerable extent increased through the drinking habits of the people of the Dominion, and it may be observed that whilst the insane of the country have, as between 1871 and 1891, increased in a greater ratio than the population, the consumption in the Dominion of liquor *per capita* has in the same period materially decreased.

In the following statement is given such information as the Commissioners have been able to collect in regard to the population in reformatories. Both Ontario and Quebec have a juvenile population in industrial schools—Quebec, perhaps, to a larger extent than Ontario—but these have not been committed for offences, and are not, therefore, classed as a part of the criminal population. In some of the other provinces there are industrial or reform schools; but the population is not wholly, if at all in many cases, of the criminal class.

INMATES OF REFORMATORIES.

Year.	ONTARIO.		QUEBEC.	
	No.	Ratio per M.	No.	Ratio per M.
1881.....	377	0·195	415	0·305
1891.....	306	0·145	631	0·423
1892.....	278	0·130	569	0·378
1893.....	298	0·138	405	0·267

In 1881 the average of the two provinces was 0·241 per 1,000 of the population. In 1892 the average was 0·233 per 1,000, and in 1893, 0·191 per 1,000 of population.

In the report printed in 1874, entitled "Report of the Select Committee of the Senate, and third report of the Select Committee of the House of Commons, respecting a prohibitory liquor law," at pages 9 and 10, information was given in regard to arrests for offences in the cities of Montreal, Toronto, Ottawa, Quebec, Hamilton and London, for the years 1871, 1872 and 1873.

These figures given compare as follows with the arrests in the same cities for the years 1891, 1892 and 1893:—

STATEMENT of Arrests in the undermentioned Cities.

Liquor Traffic—Commissioners' Report.

If any reliance is to be placed upon these statistics as evidence of decreased crime and a decrease in the vice of intemperance, the general results are certainly very striking, and are matter for sincere congratulation.

The Commissioners have collected statistics of arrests for offences of all kinds—separating the arrests for drunkenness—in many of the cities and towns of the Dominion. These are to be found in Appendices 18 to 47. A perusal of them will show that the ratio of arrests to the population, has, in most cases, diminished.

The following statement—imperfect in that returns have not been obtainable for the whole period between 1881 and 1893 from all the places named—shows the changes which have taken place in the ratio of arrests, the percentage of these arrests to the total population in the cities and towns named, and the percentage of arrests for drunkenness to the total arrests. Very many of the arrests are of the same persons, especially in the case of arrests for drunkenness. It is no unusual thing for the same individual to be arrested ten or twelve times in the same year. It must, therefore, be borne in mind that, although these arrests show a percentage of 1·36 in 1893, they, in fact, represent a much smaller section of the community than that figure indicates. Then it is quite certain that the number of arrests in cities and towns for drunkenness, is larger than it is in the country districts. The arrests, it will be seen, were, for the periods given in the return, 2·02 per cent of the population in 1881, 2·00 per cent in 1888, and 1·36 per per cent in 1893.

The ratio of total arrests to the population was, in 1881, 45·59; in 1888, 45·05; in 1893, 33·24 per 1,000.

The proportion of arrests for drunkenness to the total arrests was 1881, 44·40; 1888, 44·39; 1893, 41·13.

ARRESTS IN CITIES AND TOWNS.

STATEMENT of arrests for all offences, and arrests for drunkenness, in the undermentioned cities and towns, per 1,000 of the population.

Liquor Traffic—Commissioners' Report.

The following statement shows the number of prisoners committed to the penitentiaries of the Dominion, and the number remaining therein at the end of each year, with the ratio per 1,000 of the population, for the years 1880 to 1893, inclusive:—

Year.	Population.	Number Admitted.	Ratio per 1,000.	Number remaining at end of year.	Ratio per 1,000.
1880	4,255,123	493	0·12	1,279	0·30
1881	4,324,810	602	0·14	1,218	0·28
1882	4,371,546	331	0·08	1,128	0·26
1883	4,419,992	417	0·09	1,142	0·26
1884	4,470,336	346	0·08	1,067	0·24
1885	4,522,733	482	0·10	1,112	0·25
1886	4,574,698	528	0·12	1,200	0·26
1887	4,623,584	351	0·08	1,159	0·25
1888	4,673,861	430	0·09	1,093	0·23
1889	4,725,425	432	0·09	1,195	0·25
1890	4,778,528	437	0·09	1,251	0·26
1891	4,833,239	414	0·09	1,249	0·26
1892	4,889,562	387	0·08	1,228	0·25
1893	4,947,627	352	0·07	1,194	0·24

These are not exact statistics, and it is to be regretted that exact statistics are not available. The figures given have been taken from such places as it has been practicable to obtain them, and without reference to the results which they might show when tabulated together.

The returns obtained, and hereinbefore referred to, show—

- (1). An increase in the number of insane.
- (2). A decrease in the number of commitments to the common jails, and of those remaining therein.
- (3). A decrease in the number of population in the reformatories of Ontario and Quebec.
- (4). A decrease in the number of those arrested for offences in the principal cities and towns, more particularly in those arrested for drunkenness.
- (5). An increase in the number of convictions for offences of all kinds, comparing the five years ended 1890 with the five years ended 1885, but a decrease in the convictions per 1,000 of the population in the three years ended 1893, as compared with those for the five years ended 1890, and a steady reduction in the yearly ratios from 1889 to 1893.

The returns for the earlier years for which the statistics are given are supposed to be less accurate than those for the later ones. That is the opinion of the Government Statistician, which will be found expressed in the paper Appendix No. 17.

(6). Taking the statistics of convictions for drunkenness for the whole Dominion, it will be found that the average for the five years ended 1885 was 2·49 per thousand of the population. In the five years ended 1890, during the greater portion of which the Scott Act was in force in a large number of counties in Ontario, the average was 2·72 per thousand of the population. In the three years ended 1893, the average per thousand fell to 2·46. The highest ratios were in the years 1889 and 1890. These were the years immediately following the abandonment of the Scott Act throughout the counties in Ontario. In them the ratio was 2·94, and from that point there was a gradual reduction, until, in 1893, the ratio reached 2·35 per thousand.

(7). The statistics of the committals to, and those remaining in, the penitentiaries of the Dominion show a large decrease in the period between 1880 and 1893.

The Commissioners issued to the clergy throughout the Dominion 6,495 circulars, putting the questions one to seven, which are given in the following statement A. The replies received have been classified accurately as the nature of them would admit and are given in the same statement.

Liquor Traffic—Commissioners' Report.

The circulars were forwarded to the clergy of the several denominations in the numbers set forth in the following table B, in which the replies received are also given.

It will be noticed that replies were received from only 37·95 per cent of those addressed. Eighty-five (85) circulars were returned through the dead letter department of the Post Office. The replies from the Methodist clergy were the largest in the aggregate, and the largest proportionately, being 39·19 per cent of the total replies, and 58·69 per cent of the circulars sent to that denomination.

DENOMINATIONS.	CIRCULARS SENT OUT.		REPLIES RECEIVED.		
	Number.	Per cent.	Number.	Per cent of circulars sent out.	Per cent of total replies.
Roman Catholics.....	2,026	31·19	314	15·50	12·74
Methodists.....	1,646	25·34	966	58·69	39·19
Presbyterians.....	961	14·80	416	43·29	16·88
Church of England.....	952	14·66	431	45·27	17·48
Baptists.....	616	9·49	258	41·89	10·47
Congregationalists.....	108	1·66	38	35·18	1·54
Other denominations.....	186	2·86	42	22·58	1·70
Total.....	6,495	100·00	2,465	37·95	100·00

The following figures taken from the last census returns (1891) show the population reported as belonging to each religious denomination, and that part of the total population not classified:—

Denominations.	Number.	Per cent.
Roman Catholics.....	1,992,017	41·21
Methodists.....	847,765	17·54
Presbyterians.....	755,326	15·63
Church of England.....	646,059	13·37
Baptists.....	303,839	6·29
Congregationalists.....	28,157	0·58
Sundry other denominations.....	170,721	3·53
Not specified (including pagans).....	89,355	1·85
	8,833,239	100·00

The names and addresses of the clergy were taken from such records as were available to the Commissioners. The lists of the Methodist clergy appear to be fuller and more complete than those of the clergy of some of the other churches, and they apparently include probationers. It is probably a fact that including all who are on the roll of that church, the ratio of their clergy to the population classified as belonging to the Methodist denomination, is larger than it is in the case of most of the other denominations.

Four thousand one hundred and ten (4,110) circulars were sent to the members of the medical profession in the Dominion. The number sent out to each Province, and the number of the replies received are given in the following table :—

PROVINCES.	Circulars sent out.	REPLIES RECEIVED.	
		Number.	Per cent.
Ontario.....	2,362	905	38·00
Quebec.....	839	188	22·00
Nova Scotia.....	315	144	46·00
New Brunswick.....	240	79	33·00
Prince Edward Island.....	74	27	36·00
Manitoba.....	134	57	43·00
British Columbia.....	80	33	41·00
North-west Territories.....	66	24	36·00
	4,110	1,457	35·45

The replies received are 35·45 per cent of the circulars sent out. 89 Circulars were returned through the Dead Letter office.

The replies received have been classified as accurately as the nature of them would admit, and with the questions, are given in the following table :—

Three hundred (300) circulars were sent out to Judges and Magistrates, in which the questions set out below were asked. The table contains a classification of the replies received from 167 of those addressed, or 55.66 per cent.

<i>Questions.</i>	<i>Canada Judges' and Magistrates' Answers.</i>
1.—In your opinion, what proportion of the criminal cases which have come before you is attributable, directly or indirectly, to the use of intoxicating beverages?	1.—Under 10 per cent. 8 10 per cent to 25 per cent. 11 25 " 50 " 9 50 " 75 " 65 Over 75 per cent. 15 Indefinite 53 No reply 6 — 167
2.—Does your experience in dealing with criminal cases lead you to believe that the enactment of a law prohibiting the manufacture, importation and sale of intoxicating beverages would produce a material reduction in the number of criminal cases?	2.—Affirmative (a). 101 Negative (b). 39 Indefinite 18 No reply 9 — 167
3.—In your opinion, could such prohibitory law, if enacted, be successfully carried out?	3.—Affirmative 65 Negative 79 Indefinite 19 No reply 6 — 167
4.—In your opinion, and as a result of your experience, have the licensing or local option laws hitherto enacted been successful in reducing drunkenness? If not, please state to what cause you attribute the failure.	4.—Affirmative 68 Negative 46 Indefinite 42 No reply 11 — 167
5.—Do you consider a local option law, with suitable provision for its enforcement in the districts where it might be adopted, calculated to produce more satisfactory results in the suppression of drunkenness and crime than a general prohibitory law?	5.—Affirmative (c). 44 Negative (d). 95 Indefinite 23 No reply 5 — 167
6.—In your opinion, would the more general dissemination of facts and information amongst all classes, through schools, educational establishments and otherwise, on the effects of intemperance, be better calculated than a prohibitory or local option law to secure results permanently beneficial?	6.—Affirmative 79 Negative 46 Indefinite 36 No reply 6 — 167
7.—In your opinion, would a reduction in the number of establishments licensed to sell intoxicating beverages tend to the lessening of drunkenness and crime?	7.—Affirmative 94 Negative 41 Indefinite 24 No reply 8 — 167

(a.) In answering in the affirmative 20 express the belief that a prohibitory law would reduce the number of criminal offences if it was properly enforced.

(b.) Of those replying in the negative 4 are of the opinion that such a law is impracticable or could not be enforced.

(c.) Of the 44 answering in the affirmative 6 favour local option if it could be enforced. One believes it would be difficult of enforcement.

(d.) Of those answering in the negative 8 prefer a prohibitory law if it could be enforced.

Liquor Traffic—Commissioners' Report.

Circulars requesting replies to the following questions were addressed to 51 Life Insurance Companies. Replies were received from 30 companies. These replies may be classified as follows :

<i>Questions.</i>	<i>Answers.</i>
<p>1—Do you make any difference in insurance on life, between total abstainers and the users of intoxicants? (a) If so, what difference? (b) And why?</p>	<p>1—Affirmative..... 3 Negative..... 27 —30</p> <p>A few of the replies in the negative are qualified by the statement that a difference is made occasionally between abstainers and users of intoxicants. One company insures abstainers at lower rates.</p>
<p>2—Do you make any difference between those who use intoxicants moderately and those who use them to excess? (a) If so, what difference? (b) And why?</p>	<p>2—Affirmative 29 Negative..... 1 —30</p> <p>Of those answering in the affirmative several give their reasons. One company will not insure persons who use intoxicants moderately or immoderately.</p>
<p>3—If you make such difference, are your rates for abstainers as low, or lower than the ordinary rates of companies which make no such difference?</p>	<p>3—Negative..... 21 No reply..... 9 —30</p> <p>The answers in the negative indicate that the companies make no difference in rates for abstainers. Two or three have an arrangement in regard to the distribution of their profits between abstainers and non-abstainers.</p>

How these statistics, of crime, etc., compare with those of some portions of the United States and other countries will be shown elsewhere in this report.

The second and third clauses of the instructions to the Commissioners the undersigned have concluded can be advantageously coupled and considered conjointly. They are:

Second,—“The measures which have been adopted in this and other countries with a view to lessen, regulate, or prohibit the traffic.”

Third,—“The results of these measures in each case.”

To summarize and explain the effects of all the legislation of the various countries and colonies which have legislated upon the question of the traffic in intoxicating beverages, the Commissioners have simply found to be impracticable. To do this would manifestly require the employment of a very large staff and many years of research, seeing the long period which would have to be covered, and the great number of countries or communities exercising control over the traffic, and legislating in regard to it.

The legislation of the Dominion and of the various provinces of Canada touching the traffic, and the results thereof are referred to separately.

Such information as the Commissioners have been able to collect in respect to the liquor legislation of other countries, and the results to be attributed thereto, where the latter have been obtainable with any reasonable degree of exactitude, are given under the heads of the various countries, states and colonies reported upon.

It has always to be remembered that there are other influences than legislation affecting the liquor traffic and the consumption of liquor in a community. How much of such results as may be achieved is to be attributed to these influences, and how much to the effect of legislation, can never be clearly defined.

The investigations of the undersigned, and the evidence taken, all lead to the conclusion that legislation aiming at restricting or lessening the trade in or consumption of liquor, if it is to be at all effective, must have the active and continued support of a very large majority of the community in which it is to be enforced. If it has not such support, experience shows that opposition will overbear the law, and it will either become, in effect, inoperative and demoralizing, or it will be repealed.

DOMINION LEGISLATION.

The British North America Act (1867) gives to the Dominion Parliament the power to legislate upon all matters relating to the importation into or manufacture of liquors in Canada.

The legislatures of the several provinces possess, under that act, the power to legislate in regard to the sale of liquors within their respective territories, the number of licenses which may be granted, the charges for such, and, generally, to regulate the business.

The Dominion Parliament fixes the customs duties to be charged upon importations, and the excise charges to be levied upon liquors manufactured.

The Dominion Government issues licenses to distillers, brewers, compounders and maltsters, and collects the revenue from these sources. It is, of course, charged with the prevention of smuggling and illicit manufacture.

The position under the British North America Act may be shortly summed up as follows:—

The Dominion Legislature can enact laws prohibiting the manufacture and importation of liquors of all kinds. Such laws being enacted, the liquor license laws of the various provinces must become non-effective. If the power rests with the several provincial legislatures to enact local option laws, it follows that the manufacture and importation of liquors might be legal under the Dominion law, whilst the sale thereof, under the provincial laws, might be prohibited and, therefore, be illegal. In Ontario the question of the legality of the local option laws passed by the Provincial Legislature has been before the courts, and a case has been prepared, and is now before the Supreme Court of the Dominion, to decide the point of whether or not the power rests with the Provincial Legislature to pass prohibitory laws. A memorandum setting forth the various Acts passed in regard to the liquor traffic by the legislatures of Upper and Lower Canada, and by the Dominion Parliament, between 1791 and 1891 is printed in Appendix No. 68.

The legislation of the Dominion Parliament in regard to the liquor traffic has been confined to,—

- I. The imposition of excise and customs duties.
- II. The licensing and regulating of brewing, distilling, malting and compounding.
- III. The Canada Temperance (Scott) Act and amendments thereto.
- IV. The Liquor License (McCarthy) Act, 1883, and amendments.
- V. The prohibition of the sale of intoxicants to Indians.
- VI. The regulation of the traffic in the North-West Territories.

The first mentioned legislation has, with one exception, been in the direction of imposing higher duties, as will be observed on reference to the tables of excise and customs duties, Appendix No. 48.

The second has imposed more onerous and severe regulations from time to time, such, for instance, as that binding distillers to retain the product of their distilleries for two years before disposing of it.

The third class of legislation, the Scott Act, being practically local option in counties and cities, is referred to at length hereafter.

The fourth class, being an attempt to centralize and control the sale and the regulation of the traffic by the Dominion Government, whilst, at the same time, securing the revenue from licenses to the provinces and municipalities, was practically abandoned in 1885. It will be referred to again.

The sale of intoxicants to Indians, the children of the State, has always been strictly forbidden by law.

The legislation in reference to the North-west Territories and the present system are more fully dealt with in that part of this report which refers to the Territories. By a Dominion Act passed on September 30th 1891, the legislature of the Territories was empowered to deal with the traffic and has since adopted a license law with local option.

Liquor Traffic—Commissioners' Report.

The legislation of the various provinces, together with the present state of the traffic, and the results as far as circumstances have permitted the Commissioners to ascertain them, are referred to under the name of each province.

The Act of 1883, 46 Vic. cap. 30, known as the McCarthy Act, aimed at placing the licensing and regulation of the sale of liquor under the control of the Dominion government.

It provided that a Board of Commissioners should be established by the Governor General in Council; that such board should define the conditions and qualifications requisite to obtain a license, limit the number of licenses that may be issued, regulate the hotels, saloons and shops to be licensed, and fix and define the duties, powers and privileges of the inspectors to be appointed by the Board of Commissioners.

The Act also provided that all hotel, saloon, and shop licenses were to be subjected to a payment of such duty as the legislature of the provinces within which such licenses were issued should impose, for the purpose of raising, or in order to raise, a revenue for provincial, local or municipal purposes, under the power conferred on the provinces by sec. 92 of the British North America Act, 1867.

A fee of \$10 was to be paid by every applicant for a license, to cover the expenses.

The act contained many admirable provisions. Amongst them were the following:—

No saloon license was to be granted in any incorporated village, township or parish.

Licenses were not to be granted for the sale of liquors within the limits of a town, incorporated village, township or other municipality, save and except counties and cities, if in the event of a poll being taken, a majority of three-fifths of the duly qualified electors therein voted in favour of the prohibition of the sale of intoxicating liquors in their locality.

It prescribed the number of licenses of all kinds which might be issued, limiting the number to certain ratios of the population. It provided that no licenses should be issued under the provisions of the Act which should be considered to affect or impair any of the provisions of the Canada Temperance Act, 1878, and that no hotel, saloon or shop license should be issued to take effect within any county, city, town, incorporated village, or township in Canada, within which the second part of the Canada Temperance Act had been brought into force as by that Act provided, or within which "any by-law for prohibiting the sale of liquor under the Canada Temperance Act of 1864 (the Dunkin Act), or any other Act, is in force."

In 1884, by 47 Vic., cap. 32, the Act of 1883 was amended, and the following clauses were enacted:—

"26. Whereas doubts have arisen as to the power of Parliament to pass 'The Liquor License Act, 1883,' and the amendments thereof contained in this Act, it is therefore enacted that, until the question of the competence of the Parliament of Canada to pass the said Act, and this Act, be determined as hereinafter provided, no prosecution for the infringement or violation of the said liquor license acts shall be instituted against any holder of a license, for selling liquor, granted to him under the authority of any statute passed in any of the provinces, so long as such license under such authority is in force.

"2. And for the purpose of having the said question determined as soon as possible, the Governor in Council may refer to the Supreme Court of Canada, for hearing and determination, the said question as to the competence of Parliament to pass the said acts, in whole or in part, and such court shall thereupon hear and determine the same and certify their opinion to the Governor in Council; and if, in their opinion, a part or parts of the said acts only were within the competence of Parliament, then they shall certify to the Governor in Council what part or parts thereof are within such competence.

"3. The Lieutenant-Governor of any of the provinces may, with the consent of the Governor in Council, on behalf of the province of which he is the Lieutenant-Governor, become a party to the said case; and in the event of any province thus being a party thereto, it shall be entitled to be heard by counsel on the argument thereof; and all or any of the said provinces may, with the like consent, become parties thereto.

"4. The judgment of the said Supreme Court shall be final, unless, at the request of the Governor General or of the Lieutenant-Governor of any province who may have been party to the case, Her Most Gracious Majesty may be pleased to refer the matter of the said case, and the decision of the Supreme Court thereon, to the Judicial Committee of Her Majesty's Privy Council.

"This Act shall be read and construed as one Act with the Act hereby amended."

In 1885, by 48-49 Vic., cap. 74, it was enacted as follows:—

"1. The operation of such portions of 'The Liquor License Act, 1883,' and of the 'Act to amend the Liquor License Act, 1883,' as the Supreme Court of Canada has decided by its decision, whereof a copy is in the schedule to this Act annexed, to be *ultra vires*, is and shall be suspended, unless and until the same shall be decided by the Judicial Committee of the Privy Council to be *intra vires* of the Parliament of Canada."

The decision of the Supreme Court referred to in the Act, was as follows:—

"And the said case having come before the court for hearing on the twenty-third day of September last past, whereupon, and upon application of Mr. Bethune, Q.C., one of the counsel representing the Dominion of Canada, the said case so referred was amended by stating that, in pursuance of section twenty-six, subsection three, of the said Act, forty-seventh Victoria, chapter thirty-two, 'An Act to amend the Liquor License Act, 1883,' the Provinces of Ontario, Quebec, New Brunswick and British Columbia had become parties to the said case, and the said case having been subsequently further amended by stating that the Province of Nova Scotia had also become a party thereto.

"And the said case so amended as aforesaid having come on for hearing before this court, in the presence of counsel for the said Dominion of Canada, and for the said provinces, on the twenty-third, twenty-fourth, twenty-fifth, twenty-sixth and twenty-seventh days of September last past, whereupon, and upon hearing what was alleged by the counsel aforesaid, this court was pleased to reserve the said case for consideration; And the court, having duly considered the same, do now certify to His Excellency the Governor General in Council, in answer to the questions submitted for the determination of the said court by the said case, that, in the opinion of the said court, the Acts referred to in the said case, namely, 'The Liquor License Act, 1883,' and 'An Act to amend the Liquor License Act, 1883,' are and each of them is *ultra vires* of the legislative authority of the Parliament of Canada, except in so far as the Acts respectively purport to legislate respecting those licenses mentioned in section seven of the said 'The Liquor License Act, 1883,' which are there denominated vessel licenses and wholesale licenses, and except also in so far as the Acts respectively relate to the carrying into effect of the provisions of 'The Canada Temperance Act, 1878.'

"The Honourable Mr. Justice Henry being of opinion that the said Acts are *ultra vires* in whole."

This decision of the Supreme Court was subsequently referred to the Honourable the Privy Council, and the following decision was rendered thereon:—

[L.S.]

AT THE COURT AT WINDSOR CASTLE.

The 12th day of December, 1885.

Present:

The Queen's Most Excellent Majesty,
Lord President,
Lord George Hamilton,
Mr. Plunket.

WHEREAS there was this day read at the Board a report from the Judicial Committee of the Privy Council, dated the 21st of November last past in the words following, viz:

"Your Majesty having been pleased by your Order in Council of the 19th May last past to refer unto this committee the humble petition of the Most Honourable

Liquor Traffic—Commissioners' Report.

Henry Keith Petty-Fitzmaurice, Marquis of Lansdowne, Governor General of the Dominion of Canada, humbly praying that a special case and the decision of the Supreme Court of Canada upon the same, with reference to the competence of the Canadian Parliament to pass the Acts 46 Victoria, chap. 30, and 47 Victoria, chap. 32, in whole or in part, may be referred by Your Majesty to this committee to report thereon, the Lords of the Committee, in obedience to Your Majesty's special order of reference have taken the said humble petition into consideration and having heard counsel thereupon for the Dominion of Canada and likewise for the Lieutenant-Governors of the respective Provinces of Ontario, Quebec, Nova Scotia and New Brunswick, and having been attended by the agents for British Columbia, their Lordships do this day agree humbly to report to Your Majesty as their opinion in reply to the two questions which have been referred to them by Your Majesty, that the Liquor License Act, 1883, and the Act of 1884 amending the same are not within the legislative authority of the Parliament of Canada. The provisions relating to the Adulteration if separated in their operation from the rest of the Acts would be within the authority of the Parliament, but as in their Lordships' opinion they cannot be so separated, their Lordships are not prepared to report to Your Majesty that any part of these Acts is within such authority."

Her Majesty, having taken the said report into consideration was pleased by and with the advice of Her Privy Council to approve thereof and to order accordingly. Whereof the Governor General of the Dominion of Canada, the Commander-in-Chief and the Lieutenant-Governors of the respective provinces of the Dominion for the time being and all other persons whom it may concern are to take notice and govern themselves accordingly.

C. L. PEEL.

CANADA TEMPERANCE ACT, 1878.

This Act, more commonly known as the "Scott" Act, is, perhaps, the most important legislation passed by the Dominion Parliament in regard to the liquor traffic. A synopsis of it is printed as Appendix, No. 49.

Under this Act, counties and cities in the Dominion can, by a majority of those entitled to vote for representatives in the Federal Parliament, prohibit the retail sale of intoxicating liquors within their boundaries. Twenty-five per cent of the electors of any county or city can, under this Act, by petition to His Excellency the Governor General in Council, require that a vote of the electors of the same county or city be taken on the question of the adoption of the prohibitory clauses of the Act. If a majority of the qualified electors of the said county or city vote in favour of the adoption of the Act, it is put in force by proclamation of the Governor General, all legal formalities having been previously complied with.

The Act being adopted, the retail sale of liquor, except by licensed persons for medicinal, mechanical and sacramental purposes, and then only on proper certificates, is prohibited. Quantities of not less than ten gallons can be sold under the following condition:—

"Any producer of cider in the county may, at his premises, and any licensed distiller or brewer, having his distillery or brewery within any county or city, may, at such distillery or brewery, expose and keep for sale such liquors as he manufactures thereat, and no other; and may sell the same thereat, but only in quantities not less than ten gallons, or in the case of ale or beer, not less than eight gallons at any one time, and only to druggists and vendors licensed, or to such persons as he has good reason to believe will forthwith carry the same beyond the limits of the county or city, and of any adjoining county or city in which this part of this Act is then in force, and to be wholly removed or taken away in quantities not less than ten gallons, or in the case of ale or beer, not less than eight gallons at a time." Subsec. 5, sec. 99, cap. 16, 41 Vic.)

It is further enacted that:—

"6. Provided also, that any incorporated company, authorized by law to carry on the business of cultivating and growing vines and of making and selling wine and

other liquors produced from grapes, having their manufactory within such county or city, may thereat expose and keep for sale such liquor as they manufacture thereat, and no other; and may sell the same thereat, but only in quantities not less than ten gallons at any one time, and only to druggists and vendors licensed as aforesaid, or to such persons as they have good reason to believe will forthwith carry the same beyond the limits of the county or city, and of any adjoining county or city in which the second part of this Act is then in force, and to be wholly removed and taken away in quantities not less than gallons at a time.

"7. Provided also, that manufacturers of pure native wines made from grapes grown and produced by them in Canada, may, when authorized to do so, by license from the municipal council, or other authority having jurisdiction where such manufacture is carried on, sell such wines at the place of manufacture in quantities of not less than ten gallons at one time, except when sold for sacramental or medicinal purposes, when any number of gallons, from one to ten, may be sold.

"8. Provided also, that any merchant or trader exclusively in wholesale trade and duly licensed to sell liquor by wholesale, having his store or place for sale of goods within such county or city, may thereat keep for sale and sell intoxicating liquor, but only in quantities not less than ten gallons at any one time, and only to druggists and vendors licensed as aforesaid, or to such persons as he has good reason to believe will forthwith carry the same beyond the limits of the county or city, and of any adjoining county or city, in which this part of this Act is then in force, to be wholly removed and taken away in quantities not less than ten gallons at a time."

The prohibitory clauses of the Act once adopted cannot be voted upon again within a period of three years. After the expiry of that time a vote may be taken upon the question of repealing the Act, the same steps for taking such vote being re-ported to as in the first instance.

The statements printed as Appendices Nos. 50 and 50a, show the whole of the counties and cities in which the Canada Temperance Act has been voted upon and the years when such votes were taken.

It may be observed that in the County of Richmond it is the Dunkin Act, and not the Scott Act, which is in force, but hitherto this county has been classed as one of those which adopted the Scott Act. Including Richmond along with the Scott Act counties, there have been in all 135 polls upon the Act. It remains in force in 28 counties and cities, it has been voted upon in 81 counties and cities and in 51 cases the Act was either rejected in the first instance or has been repealed since it was first adopted. In two cases, namely, in Lisgar and Marquette, in the Province of Manitoba, the Act was voted upon and declared to have been adopted, but as will be seen from the subjoined communications, its terms appear never to have been enforced*

The 28 counties and cities in which the Act is now in force, are, two counties in the Province of Quebec, nine counties and one city in New Brunswick, twelve counties in Nova Scotia and three counties and one city in Prince Edward Island. A list of the places in which the Act is still in force is given in Appendix No. 51.

* "WINNIPEG, 16th July, 1894.

"Sir JOSEPH HICKSON,

"Chairman of the Royal Commission on the Liquor Traffic, Montreal, Que.

"MY DEAR SIR JOSEPH,—Referring to your favour bearing date the 19th of last month, which has remained unanswered owing to my absence from the city, I beg to say that the Counties of Lisgar and Marquette, prior to the extension of the boundaries in 1881, constituted about three-quarters of this province. That I presume was what was meant by Mr. J. W. Sifton in his evidence before the Commission upon that point. The statement that there was some flaw in the Act in consequence of which it was declared to be invalid, is evidently an inaccuracy in the report of Mr. Sifton's evidence. The fact is, and no doubt he intended so to state, that the Act was declared by the courts not to have been legally carried by reason of the fact that there was some informality in the giving of the notices required to be given before the taking of the vote; in other words, the adoption of the Act was set aside on a technical ground. As a matter of fact the Scott Act was a dead letter for some time, and then the Temperance Alliance took hold of a case for the purpose of enforcing the Act. The case came before the Court of Queen's Bench here, and that Court declared the Act not to be in force for the reasons above given. An appeal was taken to the Supreme Court, and I think the case in the Supreme Court was not decided upon its merits, but was thrown out on some technical ground respecting the proceedings taken for lodging the appeal. I am not quite certain as to the ground upon which it was thrown out, but feel quite sure that the case was not decided upon its merits.

Liquor Traffic—Commissioners' Report.

I will secure a statement and have it sent to you containing the number of municipalities in which by-laws have been adopted forbidding the issue of licenses.* I do not remember at the moment, any case where such by-laws once adopted have been repealed, but owing to the absence of competent legal advice in the submission of the by-laws, informalities have occurred upon which the courts have declared the by-laws to be invalid, and they have accordingly been quashed.

"As to the effect of local option it is difficult to give a very positive opinion. Very reasonable and intelligent men residing in local option districts take very opposite views upon this question, but it does not appear that the adoption of local option in the rural districts has the effect of very largely decreasing drinking. In towns of considerable size the effect is more questionable.

"As soon as the statement referred to comes to hand I will see that it is forwarded without delay."

Yours faithfully,

THOMAS GREENWAY.

(Telegram.)

"WINNIPEG, MAN. Jan. 22, 1895.

"P. MONAGAN, Montreal.

"Do not know whether act formally repealed in these counties. It certainly is a dead letter. License Commissioners pay no attention to it."

"H. A. MacLEAN."

The Act was adopted in the three counties of Prince Edward Island—in one, in the year 1878, in another in 1879, and in the third in 1880. In the city of Charlottetown, it was adopted in 1879, repealed in 1891, and re-adopted by a small majority vote in 1894. The whole of the province may, therefore, be said to have been under a prohibitory law from the year 1880 to 1891. The statistics of crime and the consumption of liquor in the island will be referred to hereinafter.

In the Province of Ontario it was adopted at different times in 25 counties and two cities. It has been repealed in all of them, and the law is not in force in any place in the province at the present time.

In Manitoba, as has been mentioned, the Act was adopted in two counties, but it has not been acted upon and is of no effect.

In British Columbia the Act was not adopted in any city or county.

Appendix No. 50 shows the number of votes cast and the total number of those entitled to vote, as nearly as the latter could be ascertained, at the date when the various polls were taken.

The paper, Appendix No. 17, prepared by the Government Statistician, Mr. Johnson, was received in answer to a request made to the government by the Commission for information touching the effect the adoption of the Canada Temperance Act had had upon the consumption of liquor, and the total volume of offences in the districts in which the act had been in force. It is explained in the paper that the statistics of convictions for offences in the various districts in Ontario which adopted the Act cannot be given, as the returns are made in accordance with divisions of the country provided by the Provincial Government, and the population according to divisions provided by the Federal authorities, and these do not coincide. It may be mentioned that there are no statistics which give the consumption of liquor in cities or counties.

The following statement gives the number of places in which the Canada Temperance Act was in force in each year from 1878 to 1893:

Year.	No. of Places.	Year.	No. of Places.
1879	11	1887	62
1880	12	1888	53
1881	23	1889	34
1882	27	1890	32
1883	28	1891	32
1884	31	1892	30
1885	43	1893	30†
1886	62		

*Not received.

†NOTE.—Includes two counties in Manitoba in which the Act is not operative.

It will be noticed that the maximum was reached in the years 1886 and 1887, and that there was a reduction of nine in 1888. Taking the four years ended 1888, and dealing with the Dominion, the statistics of the consumption of liquor show that in those years the entries for consumption, reduced to an alcoholic basis, were 0·626 parts of a gallon per capita of the population. In the four years preceding, the entries for consumption were 0·699 parts of a gallon, and in the four years succeeding the year 1888, they were 0·640 parts of a gallon per capita of the population.

The license year in Ontario and Quebec begins on the first of May. The statistics of the liquor entered for consumption are for the year ended the 30th June. There was a large decrease in the consumption of spirits, and an increase in the consumption of beer, in the two latter periods. How far this can be attributed to the increased production of lager beer (made principally in Ontario) elsewhere referred to, it is not practicable to determine.

With reference to the criminal statistics, if they are taken for the periods referred to above, that is for the four years ended 1888, and for the four years preceding and succeeding that period, they show the following results:—

	All Offences.	Drunken- ness.	Offences against Liquor Laws.	
Four years ended, 1884.....	7·04	2·49	0·41	} per 1,000 of the population.
do do do 1888.....	7·65	2·55	0·70	
do do do 1892.....	7·81	2·72	0·50	
They were for 1892.....	7·22	2·35	0·42	
do do do 1893.....	7·21	2·35	0·54	

It will be noticed that the convictions for offences against the liquor laws largely increased in the four years ended 1888—the Scott Act period. They reached a higher figure in 1887 than was ever touched before, and the figures in 1888 were the highest covered by the period for which these statistics have been prepared, being 3,108, against 1,235 in 1885.

The places in which the Canada Temperance Act was abandoned in the years immediately preceding 1890 were almost wholly in the Province of Ontario. The statistics of the consumption of liquor in that province show the following results for the four years, 1885 to 1888, and the four years preceding and succeeding:—

Four years ended 30th June, 1894.....	0·768	} Gallons of alcohol per capita.
do do (Scott Act years) 1888.....	0·702	
do do 1892.....	0·705	
It was in the year... 1892.....	0·622	
do do do 1893.....	0·652	

The statistics of convictions for offences are:—

Four years ended	All Offences.	Drunkenness.	Offences against Liquor Laws.
Sept. 40th, 1894.....	8·76	2·75	0·47
do 1888 (Scott Act period).....	10·22	2·97	1·06
do 1892.....	9·53	2·67	0·64
For the year 1893.	8·06	1·75	0·62

In Ontario very elaborate statistics are kept of commitments to the jails for different offences.

Tables showing the total commitments for all offences, and the commitments for drunkenness in the province, from 1876, will be found among the Appendices to this report, Nos. 52 and 53. Another table, No. 54, divides the periods between 1881 and 1892 into three sections of four years each. Analyzing them, as has been

Liquor Traffic—Commissioners' Report.

done in the case of the convictions for the dominion reported to Ottawa, they show the following results:—

	Per 1000 of Population.	
	For all Offences.	For Drunkenness.
Four years ended 30th September, 1884.....	5·22	1·96
“ “ “ “ “ 1888.....	5·61	1·95
“ “ “ “ “ 1892.....	5·19	1·86
For year “ “ “ 1892.....	4·22	1·28
“ “ “ “ “ 1893.....	4·00	1·23

The period in which the Canada Temperance Act was in force in the largest number of places was the four years ended 1888. The returns show the number of commitments for drunkenness in that time to have been about the same as in the previous period, and the average in the succeeding four years to have been the lowest. The ratio in each of the years 1892 and 1893 continued to decrease. Commitments for all offences were largest in the Scott Act period. In the years 1892 and 1893 there was a large decrease in the commitments, and they were lower than in any previous period.

Witnesses before the Commission, who were in favour of a prohibitory law, claimed that the reduction in the commitments for drunkenness resulted from the operation of the Canada Temperance Act. On the other hand, it is certain that the number of prosecutions for breaches of the law, as has already been mentioned, largely increased in that period. That drunkenness was not put an end to by the operation of the Act in the places where it was adopted, is established by the criminal returns, and by evidence presented to this Commission. That the effect of the law, when first put into operation, was to reduce the number of committals for drunkenness is probably a fact; but the statistics indicate that commitments for that offence again increased in several places in the last year in which the law was in force.

Taking the whole province, the statistics show that the convictions for drunkenness reached the highest figure in 1889. They increased from 4,694 in 1884 to 6,633 in 1888 and 7,059 in 1889, but went down to 3,967 in 1892 and 3,787 in 1893. Of course, there was an increase of the population in those years. Taking the convictions per 1,000 of the population, it will be seen that there was a large increase between 1884 and 1889, but a great decrease in 1892 and 1893. Taking the whole of the convictions for offences in the province, they rose from 16,276 in 1884 to 23,017 in 1888, and have since gradually declined, being in 1892, 17,081, and in 1893, 17,362.

The committals to jail for all offences, and for drunkenness, for the districts in which the Scott Act was in force, have been taken out, and they are shown in Appendices Nos. 55, 56 and 57. It will be noticed that in some of the counties there are included cities in which the provisions of the Canada Temperance Act did not apply. An examination of the statements shows that in very many cases the commitments were in the last year greater than they were in the first year in which the act was in operation. The maximum number of places in which the Act was adopted in the province was reached in 1887. Summarizing these returns, the results are:—

AVERAGE commitments for all offences.

* Scott Act years.

Liquor Traffic—Commissioners' Report.

The Dominion Government issued to vendors of liquor for mechanical, medicinal and sacramental purposes in the Scott Act counties in Ontario, during the time the McCarthy Act was in force, licenses as under :—

District.	No. of Licenses.
Brant.....	1
Bruce.....	18
Carleton.....	1
Dufferin.....	13
Dundas.....	4
Glengarry.....	2
Lambton.....	1
Norfolk.....	10
Oxford.....	14
Renfrew.....	8
Simcoe.....	21
Stormont.....	4
Total.....	97

The Ontario Government issued the following licenses:—For the years 1885-6, 9; 1886-7, 210; 1887-88, 187; 1888-9, 113.

The evidence taken by the Commission in regard to the causes leading to the repeal of the Canada Temperance Act throughout all the counties and cities of Ontario which had adopted it, is conflicting. The advocates of prohibition, represented by the Dominion Alliance and the Ontario Provincial Alliance, claim and assert that the effect of the Act was highly beneficial; that it reduced the number of commitments to jail for drunkenness, and conferred other advantages. The Alliance appears to have urged upon the friends of temperance throughout the Province to vote for the continuance of the Act, to persevere in their attempts to effectively enforce it, and not to be discouraged by the difficulties which had been encountered in carrying it out. When called upon to explain why, in the face of these facts, the various communities voted to repeal the Act, the general reply was that it had not been efficiently enforced; that the people had become discouraged, and could not be induced to continue their efforts to give effect to the law; that this state of things had been brought about by apathy, or something worse, on the part of the officials whose duty it was to administer the law, and that the conflict of jurisdiction between the Dominion and Provincial Governments, arising out of the passage of the Act of 1883, (the McCarthy Act), paralyzed the efforts of those who sought to have the law efficiently administered. On the other hand, it was shown that prosecutions for breaches of the law were numerous; that between May, 1886, and May, 1889, the inspectors appointed by the Ontario Government had laid 9,457 informations, and obtained 5,663 convictions.

The following extract is from a letter dated December 21, 1893, written by the head of the License Branch of the Ontario Treasury, Mr. Henry Totten :—

“ I beg to say that in February or March of 1885 the Ontario Government undertook to enforce the provisions of the Scott Act. About that time inspectors were appointed for a great many counties for the express purpose of enforcing that law. They were appointed, in very many cases, upon the express recommendation of the temperance people, for the reason, as they represented, that an officer who was in sympathy with the law should be specially required to enforce it. Having been appointed, instructions were given to the Inspectors to enforce the law, and, from time to time, circulars were issued having that express object in view. The convictions were obtained by these officers in the ordinary discharge of their duties.”

At this time in Ontario twenty-five counties and two cities were under the Scott Act. This represented, according to the evidence of Mr. Totten, three-fourths of the whole province.

In February, 1886, a gentleman was placed in the head office who was thoroughly in sympathy with the views of the supporters of the Scott Act, and whose duty it was to see to the enforcement of the law. Concerning him, Mr. Totten, who has been chief officer of the License Branch for 17 years, in giving his evidence said:—

At the head office, a well-known, tried and much respected temperance man, who had some experience, was employed, whose duty it was to supervise the conduct of the inspectors, and see that they faithfully discharged their duties. This officer is now deceased, but he lived to see the Scott Act repealed in all the counties of Ontario. He faithfully, and to the best of his ability and he was a man of much ability, discharged his duty."

In 1886 the law was amended, so as to enable the Governor in Council to order the payment of fines collected to be made to the province, municipality, or local authority incurring the expense of prosecutions, and from November, 1886, according to the same witness, there was no difficulty arising out of the laws about funds to meet expenses; but, continued Mr. Totten,—“Many of the County Councils in the Scott Act counties, delayed, objected, or absolutely refused to contribute anything towards the expenses of enforcing the Act, although it had been carried by a liberal majority, and a Provincial Act had been passed requiring them so to do.”

Another difficulty met with in carrying out the law was the objections taken to the decisions of justices having years of experience in the administration of the laws. These decisions, when appealed from, were almost invariably quashed by the courts, and, pending such appeal cases, prosecutions were deferred. To meet this difficulty, suggestions came from various quarters that the remedy lay in the appointment of police magistrates. Down to May, 1887, the Provincial Government had no power to appoint police magistrates with salaries. Salaries could only be paid by resolution of the county councils; but the council, as a rule, refused to pass such resolution.

Mr. Totten, in his evidence, said :

“Although a majority of the electors voting on the question had been favourable to the introduction of the Scott Act, the representatives of the people in the Councils refused for a long time either to contribute funds or pay salaries of the police magistrates for the purpose of enforcing the law. To meet some of these difficulties, the Provincial Government was empowered by an Act passed in 1887, 50 Vic. chap. 2, to appoint police magistrates in Scott Act districts and to fix their salaries to be paid by the counties. Under this act a large number of police magistrates were appointed, having been recommended by representative temperance people in sympathy with the proper execution of the Scott Act. The organization was from that time complete: 1st, the board of commissioners; 2nd, the inspector; 3rd, the police magistrates; 4th, representative in the head office. All these were officers recommended by, or acceptable to, the temperance people. 5th, there was then plenty of money.”

It would appear, therefore, that not only was exceptional machinery created to enforce this particular law, but the magistrates and the officers were selected, at any rate in great measure, on account of their well understood sympathy with the objects of the enactment.

Mr. Totten went on to state that, notwithstanding all these measures, “The difficulties still increased. Defects were discovered in the law that could be remedied only by legislation; rulings in the lower court stayed proceedings in that class of cases until reversed on appeal. The complaints of inspectors were almost universal. ‘We stand alone, no one supports us in this community.’ They had frequent occasion to complain of the conduct of many of those who voted for the Act. The peace, good-will and neighbourly feeling existing in many localities prior to the introduction of the Act were destroyed. In such localities perjury was common, arson was suspected, and buildings were injured or destroyed by dynamite explosions, and life was endangered. Public sentiment was at first shocked by this state of affairs, but did not manifest itself in such a way as to prevent their recurrence, and, eventually, it became apathetic.”

Liquor Traffic—Commissioners' Report.

Mr. Totten most emphatically denied that there was any want of energy or any apathy on the part of the officers entrusted with the administration of the law. He stated that, notwithstanding all efforts, "illicit traders in intoxicating liquors sprang up everywhere" in the Scott Act counties.

It is a feature which is brought out very prominently in most instances where prohibitory legislation has been put in force, that it has been considered by those promoting such that the ordinary officials and tribunals cannot be trusted to give effect to it, but that men with well-known and openly-declared proclivities must be selected to administer the law.

In the State of Massachusetts a joint committee of the Senate and Legislative Assembly, appointed to investigate certain petitions praying for the enactment of a law for the regulation of the sale of spirituous and intoxicating liquors, and the petition of the Massachusetts College of Pharmacy, asking for alterations in the then existing laws, together with various remonstrances of legal voters, etc., etc., in their report made in 1867, said:

"These statutes (the statutes relating to the sale of spirituous and intoxicating liquors), have constituted a prominent feature in the criminal legislation of the state for many years. Enacted originally with the sincere belief on the part of many good men that they were right in principle, and would prove successful in operation, they were designed, undoubtedly, like other criminal statutes, to promote the good order, peace and security of the community.

"In our republican form of government we have always recognized the fact that no criminal laws can be faithfully executed, (and therefore should not be enacted), which are not sustained by the moral convictions of the people. When we make changes in them from time to time, we are content to leave the execution of the new laws with the ordinary instrumentalities. For the administration of our entire code, old laws and new laws, we have relied upon the vigilance of ordinary municipal officers to complain of violations; the fidelity of prosecuting officers, elected by the people, to take charge of the complaints or indictments, when made or found; the honour and good sense of juries, selected under long-established and well-known rules, to convict or acquit, according to the law and the evidence, and the discretion of the judges, in case of conviction, to impose reasonable sentences. All these regular and ordinary methods were open for the execution of the statutes upon the sale of liquor. If the moral judgment of the people approved the law, there was no sufficient reason in the nature of things why police officers, district attorneys, juries and judges should not be as prompt and decided in doing their respective duties by this as well as other laws. Yet the course of the supporters of the present statutes seem to indicate great distrust upon their part of all these parties, or, rather, there is something in the law so different from the principles of our ordinary criminal legislation, and so repugnant to the popular instincts, that new and arbitrary methods are necessary to enforce it."

And again:—

"It was believed that juries in various parts of the commonwealth, selected and empanelled in the ancient way, under a system entirely satisfactory until the enactment of the present law, would not sometimes convict in liquor cases upon proper evidence, through the opposition to the law on the part of some of their number. Accordingly, during many sessions of the Legislature, attempts have been made, in several instances well-nigh successful, for the avowed purpose of procuring more convictions in liquor cases, to change the system of trial by jury, either by excluding liquor dealers from the panel, or all whose opinions would prevent them from convicting, or by giving to the prosecuting officer the right to challenge too peremptorily."

And, again:—

"We have referred to them (various enactments) simply as indicating the judgment of the most prominent and earnest supporters of the present prohibitory law, that its execution cannot safely be entrusted to the ordinary officers and methods, sustained by the moral convictions of the people; and, again, as indicating that the reason why its execution cannot safely be entrusted to them is because

in principle it differed so widely from other criminal legislation. Surely if the people thoroughly approved the law, there would seem to be no occasion for these departures from our long established system in the administrations of criminal statutes."

It may be mentioned that since the year 1888 no attempt has been made to put the Canada Temperance (Scott) Act in force in any city or county in which it had not previously been, at some time or other, voted upon, so that the advocates of prohibition, in so far as that legislation supplied them with the machinery for carrying out their views, have not done more than attempt to keep the law in force in such communities as had previously adopted it. In short, the law, as an aggressive weapon, has been abandoned.

Of the expenditure incurred by the Dominion and Provincial Governments and the municipalities through the liquor traffic, it has been already remarked that it is impracticable to make even an approximate estimate.

The expenditure of the Dominion consists of that part of the expenses of collecting the revenue from the excise and customs duties on liquors, the cost of inspection, and the prevention of smuggling, etc.

The expenses of the penitentiaries are borne by the Dominion, but the population of these institutions consists of those who have been guilty of the more serious class of crimes, and it is probable that only a comparatively small proportion of the offences for which they are incarcerated are to be attributed to intemperance.* The evidence taken by the Commission goes to show that those who are convicted for the graver crimes are not generally persons of intemperate habits.

The Provincial Governments were appealed to to supply information in regard to the following:—

(a) The cost to the province of the criminal classes whose offences could be attributed to intemperance.

(b) The cost of maintaining the poor whose poverty could be attributed to the same cause.

(c) The cost of maintaining the insane whose insanity was attributable to over indulgence in intoxicants.

(d) Any information in regard to the expenditure of the municipalities (if any) within the province, for the same purposes, and which might be in the possession of the Provincial Governments.

In no instance has any one of the provinces been able to supply the information. Statements were, in some cases, sent in, giving the total expenditure on jails and asylums, and, in the case of Prince Edward Island, of the poorhouse; but no attempt at classification was made. In some of the provinces, as has been already mentioned, the Provincial Governments are without information of any kind on these subjects.

There are no general statistics of the expenditure by municipalities from which even an estimate could be made of the expenditure incurred in connection with the liquor traffic. If complete statements of all the disbursements of the municipalities did exist, it would be hardly practicable to extract, with any degree of accuracy, the portion of such due to that traffic.

If we take the expenditure of cities and towns, it is probably true that if drunkenness could be entirely put an end to, a reduction would be possible in the police expenditure. In the country districts a complete cessation of the traffic would probably have no appreciable effect on the charges for police services. The Recorder's and Police Courts throughout the country could not be wholly discon-

NOTE.—* In the reports of the Kingston and St. Vincent de Paul Penitentiaries, the prisoners committed were classified as follows:—

Kingston, 1891-92.....	35½	per cent intemperate.
1892-93.....	29½	“ “
St-Vincent de Paul, 1891-92.....	54	“ “
1882-93.....	44½	“ “

Liquor Traffic—Commissioners' Report.

tinued if there was no liquor traffic, and it is doubtful if the expenditure in connection with them could even be appreciably reduced. A very large number of the cases which come before these courts arise out of municipal laws, which have no connection whatever with the liquor traffic.

There are a considerable number of persons committed for drunkenness to the various jails in the provinces, and probably some portion of the vagrants, of whom there is always a large number in the jails, get there through intemperance. There are also other cases which may be classed as resulting from over-indulgence in intoxicants. To the extent by which the number of the population of the jails could be reduced, the expenditure for food and lodging would probably be reduced. There are cases where the prisoners who are made to work earn something towards their maintenance. It is certain that the jails could not be discontinued. The lower grades of the staff could, probably, if there was a considerable diminution in the number of the prisoners, be reduced.

As regards the expenditure in connection with the insane asylums of the country, it is probably only very slightly increased from cases arising out of the liquor traffic.

There is, of course, a large expenditure incurred on reformatories, but, again, it is next to impossible to form any idea of the proportion of that expenditure which is chargeable to intemperance.

A very large proportion of the indigent poor are taken care of in charitable institutions, the funds of which are supplied by voluntary contributions.

A statement has been prepared, Appendix No. 58, of the expenditure for one year of the Dominion, provinces and municipalities, as far as it has been obtained, in connection with all these institutions.

It is almost unnecessary to say that economies in the direction indicated could only be effected if drunkenness were either extinguished or materially reduced. Hitherto the prohibition system can hardly be credited with having accomplished either of these results.

A perusal of the statements in Appendix No. 48 will show that there has been a steady increase in the imposts charged upon liquors, and also generally in the fees imposed for licenses, where such are issued.

The figures indicate that there has been a reduction in the consumption of spirits and of imported wines, and a large increase in the consumption of beer. About the year 1860 lager beer began to be made on a moderate scale, but it was not until 1876 that it reached any considerable proportions. The quantity has since then continued to steadily increase, until in 1893 it reached 5,368,652 gallons, or about 32 per cent of all the malt liquor made. Reducing the whole quantities consumed to the basis of alcohol, as set forth in the following table, the figures show a considerable reduction in the average consumption of the ten years ended 1890 from the average consumption of the ten years ended 1880, and a reduction in the consumption in the five years ended 1890 from the average consumption in the five years ended 1885.

The ratio of alcohol adopted as the basis of calculation is not an absolutely exact quantity, but it is considered by those having long experience of the business to be a reasonable estimate. Inasmuch as the basis is the same in all the periods, it should not materially affect the comparison of one with another.

The average consumption in the years 1891, 1892 and 1893 was again lower than it was in the five years ended 1890.

The weight of the evidence taken by the Commission is to the effect that there is less drinking, and less drunkenness throughout the Dominion at the present time than there was formerly. The statistics presented show that there is a smaller consumption of liquor; at the same time they indicate an increase in the number of convictions for offences against the laws, if the returns for 1881 are taken as the starting point. As that was the first year in which the returns were collected, the apparent increase may be attributed in a great measure to:

1st. More accurate returns being made in the subsequent years covered by the statistics.

2nd. An increase in the number of offences against municipal ordinances, in part arising from the enactment of ordinances creating new offences, and the increase of population in cities.

3rd. The more efficient enforcement of the laws.

Municipal offences can hardly have more than a remote connection with intemperance in most cases.

Liquor Traffic—Commissioners' Report.

The following statements are given in order to show, in as succinct a manner as possible, the great result indicated by the statistics presented. The Commissioners desire to repeat that the proportions of alcohol in the liquors consumed are arbitrary quantities; that cider and domestic wines are not included in the calculation, and that, as regards the consumption of liquor in the various provinces, the gallons taken are those entered for consumption in each province. As regards the Dominion at large, the quantities are taken from the official returns, and are, the Commissioners believe, accurate.

STATEMENT showing the estimated, per capita, consumption of alcohol, the convictions for all offences, convictions for drunkenness, and convictions for offences against the liquor laws in the Dominion and in the several provinces thereof during the undermentioned periods.

NOTE.—Spirits are computed at 50 per cent; malt liquors, of which a large quantity is lager beer, 6 per cent; wines, 20 per cent.

The quantities are those entered for consumption. In the case of the Dominion, they are supposed to be correct. Between the provinces there are interchanges—more particularly in the east—of which no records are kept. The returns are, as regards the provinces, therefore only approximations.

The preceding tables present several interesting results. Taking the Dominion at large, and the average of the consumption of alcohol, convictions for offences of all kinds, convictions for drunkenness, and for offences against the liquor laws, it will be observed that the averages of the three years which ended in 1891 were smaller under every one of the heads mentioned, than the averages of the ten years preceding 1891.

British Columbia has the largest ratio of consumption and the largest ratio of convictions for offences in the years subsequent to 1890, and it is only exceeded by Manitoba in the ratio of convictions for all offences and for drunkenness, during the ten years preceding 1891. The return of convictions includes many for offences committed by Indians and Chinese. It will be observed on examination of the returns that the consumption and convictions have increased, and that they were higher in every year subsequent to 1890 than they were on the average of the ten years preceding 1891.

In Manitoba, the ratios of convictions for the ten years ending in 1890 were very high, but subsequently they steadily declined, and in the years after 1890 down to 1893 were each year lower than the averages of the ten years preceding. The highest ratios were reached in the first five years when the results were probably affected by the large influx of immigrants and the population temporarily employed on railway construction. The consumption in the three years ending 1893 slightly increased over that for the five years ending 1890.

In Quebec the average consumption was higher in the ten years preceding 1891 than in the three years subsequent to 1890. Convictions, however, increased, and they were lower on the average of the ten years prior to 1891 than in the three years subsequent to 1890, excepting in the case of offences against the liquor laws, which were lower in the later period.

In Ontario there was a reduction in the consumption of liquor and in convictions under each of the three heads of the return.

In Nova Scotia the consumption slightly decreased; but convictions under all the classifications of the return very materially increased.

The same remark applies to New Brunswick. It will be observed that the ratio of convictions for all offences in this province is larger than the ratio in any of the provinces east of Ontario. If the last period shown in the return is taken,—although the consumption is less per capita,—the convictions are higher than those in any of the provinces east of British Columbia, excepting only Ontario, where the

Liquor Traffic—Commissioners' Report.

total convictions are largely affected by the convictions for breaches of the municipal laws, as may be seen from the following figures:—

	All offences per 1,000 population.	
	New Brunswick.	Ontario.
For three years ending 1893... ..	7.50	8.40
Deduct municipal and minor offences.....	0.83	3.67
	6.66	4.73

The ratio of convictions for drunkenness in this province is larger than the ratio in any of the other provinces, with the single exception of British Columbia.

In Nova Scotia the ratios under all the heads of the return are low, being, for the ten years ended 1890, the lowest on the statement (the Territories being left out as incomplete), but it is a noticeable fact that they have all increased since that date.

In Prince Edward Island the average consumption of liquor, as shewn on the return, is lower than in any of the other provinces, and it decreased in the three years ending 1890, as compared with the average of the ten years up to and including 1890. Charlottetown had unregulated free trade in liquor from the date of the repeal of the Scott Act in 1891, and up to July 1st, 1892, from which date it was under police regulation. The ratio of convictions increased 1891 and 1892* above the ratio of the ten years; but in 1893 it fell below that of the ten years and of the two years immediately preceding and the average of the three years was the lowest on the return.

An interesting table of the consumption of liquor by the people of the different nations is published by Mr. Michael Mulhall, a recognized authority, in his "Dictionary of Statistics." The following is a copy of it:—

	Millions of Gallons.				Gallons per Inhabitant.

*The Scott Act was again brought into operation in the city of Charlottetown on the 28th July, 1894.

The dates to which these figures refer are not given, but the work was published in 1892.

The statistics which have been collected by the Commission, published with this report, and also those published by Mr. Mulhall just referred to, show that the people of Canada consume as, compared with those of other countries, a small amount of alcohol per capita; in short, they appear to consume a smaller quantity than any other community of whose consumption there are reliable statistics.

The arrests for offences of all kinds and for drunkenness, have been obtained from a number of places in the Eastern and Western States, and they will be found in appendices numbers 137 to 168.

The arrests in certain places in Maine are hereinafter referred to, but for the purpose of more easy comparison of arrests in Canada and the States a summary of the whole is given in appendix number 136.

Taking the Dominion as a whole, the statistics of convictions for offences show that in the years subsequent to 1890, the ratio of convictions to the population for all offences, for drunkenness, and for offences against the liquor laws, decreased, and this notwithstanding that there was an increase in the convictions for offences against municipal laws and minor offences.

There was a decrease in the number of commitments to jail for all offences, and, where it has been practicable to obtain the information with any degree of accuracy, as, for instance, in Ontario, the returns also show a large decrease in the commitments for drunkenness.

In the later years there has been a decrease in the consumption of liquor.

If the results, as shown in these returns, have not been as satisfactory in some of the other Provinces, as in Ontario, the Commissioners believe the fault does not rest so much with the laws as with the administration of them.

It is hardly practicable for your Commissioners to say to what cause or causes is to be attributed the more generally satisfactory state of affairs above indicated, but they are very clear that the control of the liquor traffic should always be removed from party political influence, Dominion, provincial or municipal, and should be committed to a Board of Commissioners entirely free from partizan influences either as to its mode of appointment or its composition.

PROVINCES.

Such information in regard to the laws of the various provinces, and the results which have flowed from their enactment, as far as the Commissioners have been able to gather these results together, are given in the following pages.

NOVA SCOTIA.

The Commission opened its sittings, for the purpose of taking evidence, at Halifax, on the 25th July, 1892. An analytical index of the evidence taken in that city, and other places in the Province of Nova Scotia, is included in volume one of the evidence.

A summary of the liquor laws of this province and the changes which have taken place in them since the year 1749 is given in appendix No. 59.

Such licenses as are granted in the province for the sale of liquors are issued by the municipal councils.

The law provides that the council in any municipality, city, or town where licenses are not issued, may appoint agents for the selling of liquors for medicinal purposes, etc. No such appointments are to be made in any polling district, or ward within which, or within reasonable distance from which, a drug store is situated. Properly qualified druggists may sell in quantities of not more than six ounces at one time to one person, and are not required to take out liquor licenses, (Act 1886, section 59; Act 1888, section 9).

The law prescribes the mode in which applications for licenses are to be made. The municipal council has, under the law, to appoint a license inspector, whose duty

Liquor Traffic—Commissioners' Report.

it is to examine all applications for licenses and to report upon them. He is authorized to take evidence on oath, and no license is to be granted without a report from the Inspector being first obtained. But the council may, in its discretion, refuse to grant any license, notwithstanding that it may be favourably reported upon by the Inspector, (Section 25, sub section 2, Act 1886). Every license inspector has to be a member, in good standing, of some recognized temperance organization within the municipality, or, if there is none within the municipality, then of a recognized organization within the province. He holds his office at the pleasure of the council; but his appointment, and also his removal, are subject to the approval of the Governor in Council.

The councils have to meet on specified days in each year and decide upon all applications for licenses. In the municipalities where all licenses are refused, there can be no legal selling for beverage purposes. A succeeding council may, of course, reverse the decision of the preceding one, except where the refusal to grant a license is for cause, in which case no license can be issued to the applicant for two years thereafter.

The law provides (section 39, Act of 1886):—

“No hotel-keeper shall sell liquors in any bar in any hotel licensed under this Act, or otherwise in section 5 provided, under a penalty of one hundred dollars, and for a second, or any subsequent offence, he shall pay a penalty of one hundred dollars, and be imprisoned two months in the county gaol.”

Section 5 provides that the council may direct the issue of licenses; describes them as hotel licenses, shop licenses, and wholesale licenses.

“A hotel license shall authorize the licensee to sell and dispose of liquor, in quantities not exceeding one quart, to bona-fide guests in his hotel, and during the regular meals, to be drunk or used by such guests, at their meals at the table, and not otherwise, and to bona-fide guests or lodgers in their rooms in such hotel, to be drunk in such rooms, and not otherwise.”

“A shop license shall authorize the licensee to sell and dispose of any liquors not to be drunk in or upon the premises for which the license is granted, provided that not less in quantity than one pint shall be sold or disposed of at any one time to any one person, nor more than two gallons.

“A wholesale license authorizes the licensee to sell and dispose of liquors in his warehouse, store, shop or place defined in the license, in quantities of not less than an octave in each cask or vessel, and in the case of bottled ale, porter, beer, wine or other fermented or spirituous liquors, in quantities of not less than one dozen reputed quart bottles, not to be consumed on the premises.”

It will thus be seen that outside of an hotel there is no legalized sale for beverage purposes in Nova Scotia of a less quantity than one pint, and bars are prohibited.

Every hotel authorized to be licensed must contain, and, during the continuance of the license, continue to contain, in addition to what may be needed for the use of the family of the hotel-keeper, in cities and towns not less than six bed rooms, and in other places not less than three bedrooms, together with in every case, a suitable complement of bedding and furniture, and, except in cities and incorporated towns, must have attached to the hotel proper stabling for at least six horses, besides the proprietor's, and must be a well-appointed and sufficient eating-house, with the appliances requisite for daily serving meals to travellers. No license shop is to communicate by any entrance with any shop or store where any goods or merchandise are kept for sale.

The Canada Temperance Act is in force in twelve out of a total of eighteen counties in the province. It has only been repealed in one instance since being adopted, viz., in the County of Colchester. In that county it was adopted in 1881 by a majority of 1,234 of those voting (1,602), the number on the register at that time being 3,914. In the year 1889, it was repealed by a majority of 1,064 out of the total number of those voting (1,150), the electors on the register at that time being 5,010. The statement, Appendix 60, shows the counties in which it is

still in force, and the dates when it was adopted, and the map on page 155 shows the territory covered by the Act.

In the neighbourhood of the coal mines in Cape Breton, where the population is largely under the control of those working the mines, the Act, which is in force, appears to have been fairly well observed.

The evidence taken at North Sydney tended to show that the Scott Act was fairly well enforced in Cow Bay, but in North Sydney it was not observed, although many of those who gave evidence, while stating that the act had done nothing to suppress liquor in North Sydney, were in favor of a general prohibitory law. It was stated that the expense incurred in carrying on prosecutions, having for their object the punishment of offenders against the law, had led to their being discontinued, although it appeared that a considerable balance available for the carrying on of such prosecutions, remained in the hands of the municipal authorities.

The Rev. Isaac Murray, D.D., Presbyterian Minister, resident eight years at North Sydney and previously for thirty years in Prince Edward Island, stated that he was heart and soul in accord with the deliverance of his church on the subject of the liquor traffic; nothing short of prohibition, rigidly enforced by the proper authorities, should ever be accepted as final or satisfactory. He stated that the Scott Act was not enforced; that inasmuch as it allowed liquor to be landed in North Sydney, it was illogical to attempt to stop the sale of it. He said: "Last winter I saw four or five casks of liquor at the door of one house, invading our rights as passengers on the street. A prohibitory law would not allow that, and people reason that there is a lack of logic when the law allows liquor to come in, and yet does not allow it to be sold. Whenever a law becomes illogical, logical men will resist it." (Q. 4014.) And he added: "Mere legislation in itself or legislation in advance of the sentiment of the people, I can have no faith in; but the very community which demands the law we are seeking for must be looked upon as intelligent, and, in order that the law should be operative and effective, we must educate, and the law not only in its first enactment but in its execution must rest upon a strong moral sentiment favourable to the law." (Q. 4032.) Speaking with reference to the non-enforcement of the law in North Sydney, (Q. 4046) and the action of the county councils in reference thereto, he stated that he could only conclude that the councils were not in sympathy with the Act; that they were not appointed for the specific purpose of giving enforcement to the Act, and that other subjects and other interests came in and led to the election to the Council of men who were not in sympathy with the Act. Further questioned on the subject, he said: "I think, undoubtedly, the cause is lack of interest in prohibition in this place, and that is why the act is not enforced." (Q. 4053). Asked if he considered the Scott Act as at present enforced a moral educator, or as tending to improve the morals of the community, he said: "No; I think a law passed and not enforced is educating in the wrong direction; it is teaching us to disrespect law." (Q. 4064).

Many witnesses were examined in Truro; population 5,102. The prohibitive provisions of the provincial law are in force here and no licenses are issued. The County of Colchester, in which Truro is, was under the Scott Act from 1881 to 1889. There is evidently quite a free sale of liquor in the town, and the law is not enforced. The Mayor stated that there was illicit sale to a large extent and by many persons. He spoke of the difficulty of enforcing the law, owing to legal questions being raised and appeals taken. Under the old law, that is the law in existence prior to the coming into force of the Scott Act, there were five or six hotels licensed, and, perhaps, some shops. He said he did not think there was more drunkenness in the town when it was under license than there was at the present time. (pp. 249, 251, vol. 1.)

It was given in evidence that there was a year or two before the coming into force of the Scott Act when no licenses were issued in the town. It was explained that the parties who had promoted the adoption of the Scott Act in Colchester County were those who petitioned for its repeal. The ground for their action was that when they proceeded under the Scott Act, they were met with doubts as to the

Liquor Traffic—Commissioners' Report.

validity of the proclamation, and if they attempted to enforce the Provincial License Law they were met by the declaration that the Scott Act was in force. This state of matters led to the abandonment of the Act in the county.

A statement of the convictions for offences in the town was handed in by the town clerk, and it forms appendix No. 7, vol. 1, of the evidence.

Licenses appear to have been granted in the years 1875-6-7, and for the first part of 1877-8, but from that date no licenses were issued. A statement will be found in Appendix No. 7, vol. 1, of the amount received by the town for fines imposed in the police court, and of the expense of the police force of the town.

Some evidence was taken at Truro having reference to other places in the province.

A gentleman, formerly inspector of fisheries for Nova Scotia, and who occupied the position for twenty years, said that his business led him to travel over all the province, and that he had noticed a marked improvement in the customs of the people in regard to drinking. (Q. 5101-2).

A witness from Stellarton, Pictou Co., where the Canada Temperance Act is in force, stated that he thought the effect of the act latterly had been beneficial; that it was not well enforced all the time; but that it could be enforced with proper officers, if the councils of the municipalities would appoint them. (Q. 5319).

Evidence was given that the Scott Act was well enforced in Ferona, near New Glasgow; that it was not quite so well enforced in New Glasgow; and that there was a good deal of liquor sold there. At Ferona there are large iron works employing between 400 and 500 men. It was stated that it was mainly through the personal efforts of the Rev. H. R. Grant that saloons for selling in Ferona had been closed, and the terms of the Scott Act enforced. (Q. 5412-5462.)

Prior to the Commissioners visiting Yarmouth, it was mentioned to them as a place in which prohibition was efficiently enforced. It was stated that in Yarmouth, even before the Scott Act went into operation, there was no opportunity of getting liquor, except in the most indirect manner, although it was not claimed that the law had absolutely prohibited the sale. On arriving at Yarmouth the Commissioners found that long before the Scott Act was adopted, no licenses had been issued in that town.

Rev. William McIntosh, Congregational minister, stated that he thought the inhabitants of Yarmouth county, compared very favorably with any part of Ontario or Quebec, which he had visited, and he had visited nearly all parts of these provinces. He was an advocate of general prohibition. (Q. 6825-6830).

Mr. Nathan Hilton, Stipendiary Magistrate at Yarmouth (pp. 309-314) stated that there had never been a license issued in Yarmouth as far as he could recollect. He had been told that there were two or three, but his recollection extended to nearly seventy years. He had been on the Bench of Sessions for forty years, and in other ruling bodies in the county, and he had never known a license to be issued in Yarmouth. He was personally quite sure that no license had been issued for forty years. He remembered, when a boy, that many people got drunk, very respectable people. Almost all the people were drunk at times; but the temperance sentiment had been so pushed into the people and the children that the people now did not either drink or favor drinking, much less the illicit buying or selling of liquor. Drunkenness had never been prevalent in Yarmouth for the last forty years, except that now and then there had been a "kind of wave." Mr. Hilton is at present the stipendiary magistrate for the town, and also the municipality of Yarmouth, and his writs run over the whole county of Yarmouth as stipendiary magistrate for the municipality. With regard to the floating population, he stated that he had not many sailors before him, except for running away, and he experienced no special difficulty in dealing with them on account of drunkenness. He stated that people were frequently charged with the sale of intoxicating liquors, and that there were as many as twenty or thirty cases a year. In 1891 he had 154 cases in his court, and he divided them as follows:—Thirty for violation of the Canada Temperance Act, 52 for other offences, and cases occasioned by liquor, 26; or, in other words, about one-half of the whole number of cases arose directly or indirectly from the use of

liquor. He thought that the convictions for drunkenness which he had mentioned did not include more, perhaps, than 20 separate persons, as there were several "repeaters," and that there were, perhaps, 30 more cases which originated out of over-indulgence in drink. He intimated that he had been informed that the liquor sold was bad stuff, and that it generally cost about 75c. per gallon. He did not think over 25 per cent. of the population were in favor of rum selling. He stated that there were some "bottle peddlers." There was some illicit sale in hotels, and in a certain kind of boarding-house, and some of the vendors kept what were known as "holes." He did not believe that the druggists who had a right to sell under the Canada Temperance Act had gone beyond the limits of the law.

Mr. Hilton, when asked if he had reason to believe that perjury was committed in any of the cases relating to selling liquor illicitly, said that he did not wish to be cross-examined upon that subject, but he had no doubt of it; there would be no difficulty in stamping out the liquor trade in Yarmouth in a month but for that. When asked if he thought that there were more cases of perjury in connection with the liquor traffic cases than there were in other summary cases which came before him, said that he thought perjury more frequently occurred in liquor cases.

The population of the town of Yarmouth in 1881 was 3,485, and in 1890, 6,089. Taking the number of cases mentioned as coming before his court by the Stipendiary Magistrate as 154 in 1891, the ratio would be 25.27 per thousand of the population.

Heman Gardner, of Yarmouth, was clerk of licenses from 1873 to 1882. His duty was to prosecute offenders against the law. He said that there had been no licenses issued for fifty years, but continued: "I had a good deal to do. I cannot tell you the number of convictions. I suppose the record of the court would show. Many were fined and many went to jail. I shall be eighty-four years of age on the 23rd September, 1892. I had great difficulty in enforcing the law. My property was burned, my windows were broken, and I was personally assaulted on the street. The guilty parties were punished." (Q. 6284-6303).

A large number of members of the medical profession and several druggists were examined. They largely concurred in pronouncing the liquor sold in Yarmouth as being very vile stuff.

One gentleman, who had been in practice in Yarmouth for fifteen years, stated that he thought there was an honest attempt to enforce the Scott Act; but he did not think it was efficiently enforced, and it was almost impossible to enforce it. He thought that the temperance societies had done more to promote temperance than had been accomplished by legislation. He considered there was less drinking in Yarmouth when he first came to the town than there was now. There were times in the past when no liquor was to be had, but of late years there had been plenty. (Q. 6389-6408).

Another member of the medical profession who had been twenty-seven years in the town, said that he did not consider that drinking had increased in Yarmouth more rapidly than the population, and that the prohibitory laws had some effect in restraining it. (Q. 6435-6445).

The evidence of these gentlemen tended to show that there is a somewhat large use of drugs as stimulants in the town.

In Halifax county licenses are issued, and three appear to have been three taken out in 1892. There were in the same year 31 prosecutions for infringements of the law and 24 convictions. The clerk of the municipality remarks in regard to these prosecutions:—

"The result can scarcely be considered satisfactory. Each year (and 1892 is no exception) a large portion of the fines are not or cannot be collected. The county has to bear the expense of parties incarcerated in jail and the deficit on inspector's expenses. Parties refused licenses go on selling all the same, as the sale of liquors is connived at by friends and patrons of the seller, and even those who do not sign the certificates refrain from giving information such as will warrant the inspector instituting prosecutions. Various means are taken to evade the law and its penalties. Councillors complain that the license fees and fines, which formerly

Liquor Traffic—Commissioners' Report.

went to improve the roads and bridges, go now to the Inspector and to pay costs of ineffective actions, &c."

In Richmond County in 1891 no licenses were issued, but in 1892 it would appear that the council reversed the policy of the previous year and issued three shop licenses,

In the Province there are five licensed brewries and one distillery.

In the city of Halifax the number of licenses issued in 1892 was 108, about equal to one license to every 361 of the population. The amount received by the city for license fees is between \$10,500 and \$11,500 per annum.

The evidence taken by the Commission tends to show that the law is not strictly observed by those licensed to sell in the city of Halifax, and, further, that there is a large illicit sale.

A table showing the arrests for offences of all kinds, and the arrest for drunkenness, etc., in the city of Halifax, will be found in appendix 18.

It will be found that the ratio of arrests compares favorably with such cities as Portland and Bangor, Me., and St. John, N. B. Many of the cities in the Dominion, however, show a lower ratio of arrests than Halifax.

The gentlemen occupying the position of License Inspector for the city when the Commissioners were in Halifax, was a total abstainer, and was then a member of two temperance organizations.

The Rev. John Lathern, D. D., of Halifax, editor of the *Wesleyan*, and an ex-president of the Methodist Conference, spoke strongly in favor of prohibition, and of the beneficial effects which had followed the adoption of the Scott Act in many districts in the Province. He put in, in his evidence, resolutions passed by the Methodist Conference, one of which was:—

"With respect to political action, we declare our unalterable resolve to accept no compromise with the drink evil. Unconditional surrender and complete extirpation is our demand. We regard with utter condemnation the acceptance of monetary consideration, whether as license fees or federal revenue, as any sufficient justification for the perpetuation of this trade in drink in any of its forms." (Q. 1-8.)

He stated, with reference to prohibition, that, possibly, if a general law were not enacted at once, there might be one made permissive to provinces at least, and such a law might pass the Dominion Parliament, allowing any province, upon a majority vote to adopt it. Asked if such a law could be efficiently enforced in the city of Halifax in the present state of public opinion, he stated that his opinion was that there would always be difficulty in the enforcement of any such law in the city but outside the city the permissive clauses of the law at present in operation had resulted in there being large sections of the province where there are no licenses, and where no licenses have been granted for years; and, further, that he had no doubt, in regard to the Province of Nova Scotia, that, outside the city of Halifax, a prohibitory law could be efficiently carried out. (Q. 16-30.)

Rt. Rev. Frederick Courtney, D. D., Lord Bishop of Nova Scotia, who also gave evidence before the Commission, stated that he considered the people of the province and of Prince Edward Island of temperate habits; that he did not consider legalized prohibition would be an efficient remedy for intemperance; that the conscience of the people was not in a condition to enforce the law—it would enforce it in individual cases, but it would not enforce it practically and as prohibitionists wished to see it enforced, and that he did not consider a Dominion law prohibiting the manufacture, importation and sale of intoxicants as a beverage, desirable. Speaking of the Scott Act, his Lordship said: "With respect to the liquor traffic itself, and the possibility of a prohibitory law, it is notorious from what I have been told, even much more than what I have observed, because I have had opportunities of observing the operation of the Scott Act in many places, that it is, I will not say a dead letter, I will not say a failure, but it is not observed, and that breaches of it are shown in all sorts of directions, and that places which are supposed to be under the Scott Act, are places where, as a previous witness stated, people can get liquor." (Q. 1842.)

His Lordship further proceeds to say:—"Perhaps I may be allowed to say in regard to prohibition, this, and to answer your question in the shortest way possible by merely a monosyllable. I do not conceive it to be in the interests of the people that any law (I am now talking of the liquor traffic) should be on the Statute book which the conscience of the community will not endorse. It weakens the majesty of the law in the estimation of the whole population, and it is most desirable, perhaps I may say especially so in the present case, that the majesty of the law should in no sense be weakened, and in no particular be weakened in the minds of the people." (Q. 1842.)

His Lordship further said that prohibition prohibited a great many people who otherwise would engage in the traffic, either by way of selling or buying, but that it had not succeeded in shutting liquor out from all the towns of Maine, and that people who went there and wanted drink could get it; that they could get it in all sorts of ways. Efforts had been made to solve the question in the United States, where he had resided twelve years. In all the three places in which he had resided when there, namely New York, Chicago and Boston; Chicago was the first to lead the way, and the people there tried high license, the idea being that by exacting such a high license as \$1,000, the sum mentioned, and for beer licenses alone, \$500, the sale would be restricted to the hands of proper people, and they of reputable character. But the law had not stopped illicit selling, and in that respect it resembled in its practical working the prohibitory law, but it had reduced selling tremendously. (Q. 1842.)

In Boston he had been a member of the Citizens' Law and Order League, organized for the purpose of securing the enforcement of the law. The programme of the league was not to get the law altered, but to get the provisions of it enforced. The League had done good service in securing a reduction in the number of licensed places.

His Lordship explained the basis of the Church Temperance Society in the States, which is similar to that of the Church of England Temperance Society. There are three pledges, the first for abstinence, the second a pledge for abstinence from certain kinds of liquor, and the third a pledge of moderation in the use, or in other words, restraint in the use. (Q. 1845.)

The Rev. D. Stiles Fraser, of Stewiacke, Colechester, Co., Convener of the Temperance Committee of the General Assembly of the Presbyterian Church in Canada, explained the attitude of the Presbyterian Church on the subject of prohibition as being in favor of the entire prohibition of the liquor traffic. He handed in certain deliverances of the Assembly of the Church, which will be found in Appendix No. 5, Vol. I. Mr. Fraser stated that there was a minority in the Assembly, who did not agree with the views expressed by the resolutions. He held that the selling of liquor was a sin and he put the selling of intoxicating liquor and theft on the same footing, although admitting that the community generally did not look upon the two things in the same light. (Q. 4971.)

Rev. E. M. Saunders, of the Baptist Church, of Halifax, also gave evidence before the Commission. He expressed himself in favour of prohibition. When questioned as to the possibility of efficiently enforcing a prohibitory law in the city of Halifax, he admitted that he had doubts as regarded that city. With reference to the enforcement of a general prohibitory law, he stated: "I think, after all my enquiries, from the way in which the Roman Catholic priests in different parts of the country, and the clergymen of other denominations are acting, and from the fact that the public sentiment is encouragingly favourable to prohibition, that if there were a good prohibitory law for the Dominion of Canada, and if there were carefulness and wisdom observed in regard to the provisions of the law and in regard to appointing officers to carry it out, as a rule in these provinces (meaning the Maritime provinces), and I cannot speak beyond them, the law would be enforced with a high degree of efficiency." (Q. 616.)

Pressed to say if he thought, in the present state of public opinion, a prohibitory law would be efficiently enforced, he stated that, "if a law were passed by the Dominion Parliament simply to get rid of an ugly question that was pressing upon

Liquor Traffic—Commissioners' Report.

them, that of prohibition, and there was not any special interest taken in the details of the law, and of the officers appointed to carry out the law, then I am ready to believe that the law could not be enforced very generally. However, if the very best safeguards and protective provisions were put around it, it would be generally enforced in these Lower Provinces. There might be times in Halifax, and perhaps in St. John, when it would be difficult to enforce it, and when there would be obstacles in the way, and indeed, it would be some years before the public sentiment would be strong enough to enforce it there, but I am speaking generally of the lower provinces." (Q. 617-618.)

The Provincial Government has not collected any fees for licenses since the year 1884, when \$1,900 was collected under the Dominion Liquor License Act of 1883. Such licenses as are now in force are issued by the municipal councils, who collect the fees, which are: for a hotel, \$150; for a shop, \$100; for a wholesale license, \$300; for a brewer, selling wholesale, \$150.

There appear to be very few licenses issued outside the city of Halifax.

The Commissioners have endeavoured to get an accurate statement of all the licenses issued within the province, and the amount collected for fees, but they have not found it practicable to do so. Such information as has been collected is given at page 171.

The law provides that:—

The municipal council shall report annually to the provincial secretary, and its report shall contain:—

"(a.) A statement of the number and description of licenses and of the names of applicants to whom licenses were granted during the year.

"(b.) The names of those to whom licenses were not granted.

"(c.) Any other statement required to be entered in the register of licenses.

"(d.) The prosecutions for infractions of this Act, and the results of the same.

"(e.) General remarks as to the working of the law within the district.

"(f.) It shall also report as to the moneys received and expended during the year.

Such returns have not been made, and apparently have not been asked for by the government. In a letter addressed to the prime minister of the province (April, 1892), the request was made on behalf of the Commission, to be supplied with statements of the amounts received annually by the government and the municipalities, separately, from the granting of licenses for the sale of liquor. The deputy provincial secretary, replying, wrote:—

"I am directed to say that no money has been received by the government of Nova Scotia for liquor licenses, excepting in the year 1884. In that year the following sums were received from the treasurers of the undermentioned places as provincial revenue from licenses issued under the Dominion Liquor Licenses Act:—

The County of Halifax.....	\$ 350 00
The City of Halifax.....	1,350 00
The Town of Dartmouth.....	200 00
Total.....	1,900 00

"The most of the counties in Nova Scotia are under the Scott Act. In the city of Halifax, and in several of the counties, licenses are issued under the Nova Scotia Liquor License Act. As the operation of this Act is a municipal matter, this department is not in a position to afford the information desired by your letter.

The Nova Scotia Liquor License Act was passed in 1886; but I regret that I am unable to send you a copy, as I find, upon enquiry of the Queen's Printer, that the Acts of that session are out of print."

On applying to the municipal councils for information in regard to the traffic, in many instances the Commissioners have not received any replies to their communications, and in others they have been informed that the accounts from which the information could be compiled are not available. The following statement,

made up from the returns received, contain all the information on this branch of their enquiry which the commissioners can give:—

NOVA SCOTIA.

Partial statement of amounts received by municipalities for licenses for the sale of liquor, the number of such licenses issued, and the amount received for fines for infractions of the liquor laws, in the undermentioned periods.

Year.	No. of all licenses.	Amount Fees.	Amount Fines.	Remarks.
		\$ cts.	\$ cts.	
1880.....	9	1,197.00	490.50	Halifax city not included.
1881.....	14	981.00	229.00	" "
1882.....	14	1,058.25	140.00	" "
1883.....	12	847.00	275.00	" "
1884.....	12	776.63	228.00	" "
1885.....	10	893.44	136.00	" "
1886.....	7	765.75	214.00	" "
1887.....	78	8,716.50	2,415.85	Including Halifax city.
1888.....	93	9,100.00	3,073.45	" "
1889.....	112	11,620.50	4,023.50	" "
1890.....	110	11,580.00	6,993.57	" "
1891.....	108	11,230.20	6,429.00	" "

The amounts collected for fines in the counties from which returns have been got would indicate that there are many breaches of the laws.

The Scott Act has never been submitted to a vote in the city of Halifax. Much conflicting evidence as to the prevailing sentiment in the city was given before the commission. It was claimed by the advocates of prohibition that the sentiment in the city was in favour of prohibiting the traffic, but there does not appear to have been at any time on the part of the City Council which is the licensing body, a disposition to avail itself of the powers to refuse licenses conferred by sub-section 2, of section 25, of the Act of 1886, which is as follows:—

"If the said pre-requisites have been complied with (but not otherwise) the Council may, in its discretion, entertain the application." (i. e., an application for a license).

And it is further difficult to understand, if such is the prevailing sentiment, how the applicants for licenses succeed in meeting the requirements of the law, the tenth section of which provides,—

"The petition (for a license) must be accompanied by a certificate signed by two-thirds of the rate-payers of the polling district in which the premises sought to be licensed are situated. Such polling district shall be established by law for the purposes of an election for the House of Assembly, or if none such be established, then the polling district used for the last election to the House of Assembly."

The statistics of the consumption of liquors in the province for the ten years ended 1880 and 1890, respectively, were, per capita, as follows:—

	Galls.
1880—Spirits.....	0.683
Wine.....	0.083
Beer, &c.....	0.940
1890—Spirits.....	0.528
Wine.....	0.054
Beer, &c.....	0.926

Liquor Traffic—Commissioners' Report.

These figures indicate a consumption much below the average of the whole Dominion, and below that of any of the other provinces with the exception of Prince Edward Island. Reduced to alcohol, on the basis of 50 per cent of alcohol in spirits, 6 per cent in beer, and 20 per cent in wine, the consumption in the two periods would be,—

Ten years ended 1880.....	0.414	gallons	per	capita.
“ “ 1890.....	0.330	“	“	“
It was in 1891.....	0.318	“	“	“
1892.....	0.311	“	“	“
1893.....	0.286	“	“	“

Turning to the criminal statistics, page , it will be found that the ratio of convictions per thousand was as follows:—

	All offences	Breaches of municipal laws.	Drunkenness.	Offences against liquor laws.
Five years ended 1885.....	3.36	0.79	1.47	0.10
Five years ended 1890.....	3.06	0.69	1.30	0.19
Three years ended 1893.....	3.73	0.86	1.66	0.29

It will be noticed that the ratio of convictions increased in this province in the period between 1890 and 1893, the highest figures in the whole period covered by the returns, being those for the year 1893. In that year the ratio for drunkenness was 2.07.

A strong temperance sentiment has prevailed in Nova Scotia for many years past, and the efforts of the temperance organizations have been continuous and vigorous, A statement of what these efforts have been will be found in Appendix No. 61. Practically the people of Nova Scotia have under the Provincial License Law, the control of the traffic in their own hands. The council of any municipal district may, by simply refusing to grant licenses, prevent any legal sale of liquors for beverage purposes within the boundaries of the municipality.

The Commissioners were desirous of obtaining full information in regard to the cost to the Province of maintaining the poor, their numbers, the number of prisoners in jails, insane in asylums, etc., and the cost of these classes to the province and municipalities. The numbers of the insane and the amount paid for transient poor were supplied, but the cost only in part. The Deputy Provincial Secretary writing to the Chairman of the Commission, July 6th, 1892, said:—

“I am directed to acknowledge receipt of your letter of the 1st. instant, and to inform you that no letter of the date 27th. April has been received at this Department from you. The blank form you enclosed in your last was handed to the Commissioner of Public Works and Mines, who has filled in as much of the information desired by you as he could obtain. This Department has no statistics from which can be supplied replies to any of the other questions.”

The following statement contains the information supplied :—

PARTIAL STATEMENT of the cost to the Province of Nova Scotia of maintaining the transient Poor and Asylums for Lunatics, for the years 1876 to 1892, (inclusive).

	Number of Lunatics.	Number of Poor receiving relief.	Cost of maintain- ing Lunatics.		Amount paid on account of trans- ient Poor.	
			§	cts.	§	cts.
1876.....	337	Number varies from 250 to 300 in different years.	53,766	00	*	
1877.....	351		54,182	00	*	
1878.....	362		55,163	00	2,234	09
1879.....	364		56,000	00	1,425	37
1880.....	361		57,900	00	1,629	89
1881.....	382		69,204	00	1,334	55
1882.....	399		63,554	00	1,357	73
1883.....	400		69,400	00	1,324	46
1884.....	384		71,641	00	1,491	53

1888.....	305		69,000	00	1,524	42
1889.....	372		66,800	00	7,666	11
1890.....	348		72,411	00	1,989	43
1891.....	354		66,812	00	4,275	02

* Record not kept previous to 1878.

Such information as has been obtained in reference to prisoners in the common jails of Nova Scotia, will be found in Appendix No. 1. The returns are not complete, as some counties have not made returns at all, whilst others have made them for only a portion of the period embraced in the statement.

A statement of the insane in the Provincial Asylum is given in Appendix No. 9. It may be mentioned that part of the harmless insane are maintained in the almshouses of the province. The number of inmates in the Provincial Asylum fluctuates considerably. The municipal authorities, when they consider that the charges for the maintenance of the insane in the Provincial Asylum are too high, resort to placing as many of them as they practically can, in the almshouses, where it is, in some cases at least, asserted they are maintained at a lower rate.

Mr. Alexander P. Reid, M.D., who has been in charge of the asylum for the insane in Nova Scotia for many years past, gave evidence in reference to the number of the insane whose condition could be traced to intemperance. He expressed the opinion that the statistics generally published on the subject were quite unreliable, and stated that he had personally attempted to classify the insane, but very ineffectively, and that he could not classify more than 10 per cent of the patients. He said: "We assume that the statements we receive are correct. I am morally certain they are incorrect. 'Drunkenness' is the most unreliable form of classification we have. Very often we find a man's drinking is the result of insanity, and not the cause, and that a very great number of those who come to us, and are presumed to be temperate, are men who drink all the time, but their names never appear in such a list; never appear even indirectly in our papers. The only way we know is from previous personal knowledge of the man's habits. For that reason our statistics are absolutely unreliable and I would not believe any conclusions drawn from them, from the fact that frequently, when the cause is given as drunkenness, that drunkenness is the result of insanity, and those who become insane as the result of drinking are never mentioned." (Q. 1883.) "As an exciting cause of insanity, I think religion is a long way ahead of any other." (Q. 1891).

Liquor Traffic—Commissioners' Report.

Dr. Reid stated that his experience in the General Hospital at Halifax was that a very large number of the cases which came there resulted from drink. He said :— “ When I figure up the results of sickness I come to the conclusion, I may be wrong, but I really think not, that if there were any means, by any possibility, of excluding the effects of alcohol on humanity, the hospitals would have to be closed, for no one would have to go there, because those who go there now would be able to pay there way, for accidents and a large proportion of the disease result from the use of liquor. As superintendent of the asylum I was very much astonished to find that liquor had a much smaller influence on insanity than on almost any other social question that I am acquainted with.” (Q. 1906).

“ Take the children of drunkards,—I will not say drunkards exactly,—but take the children of those who have destroyed themselves through the influence of liquor, and it interferes with the nervous condition of the children. I think we have quite an amount of predisposition to nervous affections as the result of strong drink.”

NEW BRUNSWICK.

A summary of the law relating to the liquor traffic in New Brunswick and the changes which have been made from time to time therein will be found in appendix No. 62.

The province collects no fees for licenses, excepting those for vendors for medicinal purposes. The municipalities determine the amount of the fees within the limits laid down by the legislature, collect whatever fees are imposed, and they have to provide for inspection and see that the provincial law is observed.

The fees in New Brunswick are :—

In incorporated cities and towns.—For taverns, not less than \$50, or more than \$200; for wholesale places, not less than \$100, or more than \$400.

In other districts.—For taverns, not less than \$25, or more than \$200; for wholesale places, not less than \$50, or more than \$200.

No shop licenses are issued. For a transfer of a license a fee of \$10 is exacted. An inspector is appointed by each municipal district who has to report on all applications for licenses, hear in open court objections made to the granting of any license and make a full report, accompanied by evidence, to the council.

The process by which licenses are obtained is by petition to the council of the district in which the license is to have effect. The petition must be endorsed by one-third of the ratepayers in the polling subdivision in which the premises sought to be licensed are situated, which polling subdivision shall be that established by law for the election of members of the House of Commons.

Tavern-keepers have to provide certain accommodation, but may be given exemption, under certain conditions, by the municipal council. They are prohibited from selling to minors or interdicted persons, and are liable to damages resulting from the sale to intoxicated persons, or to an extent to cause intoxication.

In cities and incorporated towns the number of licenses issued is not to exceed one for each two hundred and fifty of the first one thousand of population in any ward of such city or incorporated town, and one for each full five hundred over one thousand of population. The number of tavern licenses to be granted in the parishes shall not in any year be in excess of one for each four hundred, up to twelve hundred of population, and one for each full thousand above twelve hundred. One tavern license may be granted in any parish, notwithstanding the population of each parish shall not amount to four hundred.

The council of any municipality may, by by-law to be passed before the first day of February in any year, ordain that no tavern licenses shall be issued therein for the then ensuing year, or for any further license year until such by-law is altered or repealed. (50 Vic. cap. 4, sec. 39.)

Objections to granting any license may be made by a resident or residents in the district where the place proposed to be licensed is situated. Proceeding is by petition to the council, who instruct the Chief Inspector of Licenses to investigate

and report. Every such investigation is to be open to the public, and the evidence taken by the Chief Inspector, which may be under oath, is, with his report to be submitted to the council, "who shall, nevertheless, exercise their discretion on each application for a license."

No licenses shall be granted if the majority of the ratepayers in any city or incorporated town or parish, petition against it. (Sec. 31.)

Out of fifteen counties in this province, nine have adopted the Canada Temperance Act (Dominion). One city has also adopted the Act.

The ratio of convictions, and also the ratio of the consumption of liquors are both high. The convictions were as follows:—

	Per 1,000 of population.			
	All Offences.	Breaches of Municipal Laws.	Drunkenness.	Offences Against Liquor Laws.
5 years ended 1885.....	6.97	1.16	4.18	0.33
5 " " 1890.....	6.81	0.85	3.97	0.67
3 " " 1893.....	7.50	0.84	4.44	0.99

The highest ratio of convictions for all offences was reached in the year 1890; the lowest in 1887. From 1890 there has been a slight decrease, the ratio for 1893 being 7.54, a figure only exceeded by the ratio in Ontario and British Columbia. The highest ratio of convictions for drunkenness in this province was reached in the year 1891; the lowest was that of 1887, when the figure was 3.14 per thousand. In 1893 it was 4.24 per thousand, a figure which was only exceeded by the ratio in British Columbia. The ratio of offences against the liquor laws in the province are also very high; that for 1893 being 1.38 per thousand of the population, which was again only exceeded by the ratio of British Columbia.

The section of the province in which the Canada Temperance Act is in force is indicated on the map, page 155.

Turning to the returns of arrests by the police, it will be observed that the ratios in St. John and Fredericton are comparatively high. In Fredericton the Canada Temperance Act is in force. It was adopted in the year 1878 by a majority of 200 of those voting. It was re-submitted in 1882, and confirmed by a majority of 41; again submitted in 1885, and re-affirmed by a majority of 13; again submitted in 1889, and re-affirmed by a majority of 68.

The Canada Temperance Act was adopted in Portland in the year 1886, and repealed in 1890. Portland was incorporated with St. John in the year 1889, and it now forms a part of that city.

The Act was voted upon in St. John City in the years 1882 and 1886, and on both occasions it was defeated. The city is now under license.

The average ratio of the consumption of liquors in the province was as follows:—

	Gross galls.	Galls. Alcohol.	
5 years ended 1885.....	1.567	.475	per head of population.
5 " " 1890.....	1.712	.390	" "
3 " " 1893.....	1.694	.362	" "

Liquor Traffic—Commissioners' Report.

The following is a partial statement of the number of licenses issued and the amounts collected for fees and for fines respectively:—

Year.	Number of Licenses.	Amount from Fees.	Amount from Fines.	Total.
		\$ cts.	\$ cts.	\$ cts.
1880	219	10,960 00	17 75	10,977 75
1881	225	11,120 00	110 00	11,230 00
1882	205	9,820 00	15 00	9,835 00
1883	210	9,995 00	9,995 00
1884	149	10,308 00	35 00	10,343 00
1885	110	10,084 00	16 66	10,100 66
1886	138	11,733 00	300 00	12,033 00
1887	142	11,802 00	435 00	12,237 00
1888	117	13,305 00	360 40	13,665 40
1889	117	13,659 00	280 00	13,939 00
1890	164	21,210 00	400 00	21,610 00
1891	172	21,805 00	175 00	21,980 00

NOTE.—(1.) Returns have not been received from all the municipalities. Westmoreland County makes no return for fees, but received between 1888 and 1892 \$2,240 for fines for breaches of the Canada Temperance Act, not included above, as the amounts received annually are not given.

(2.) Two counties return amounts received for fees without giving the number of licenses issued, in which case the number has been estimated.

(3.) The city of Portland was annexed to St. John in 1889, and the Scott Act, which had been in force in Portland, was repealed.

(4.) The Provincial Government received for licenses under the Canada Temperance Act in 1887 \$45, 1888 \$40, \$1889 \$10 and 1890 \$75. The fee is \$10.

(5.) The number of licenses issued in St. John in 1883 was 173, in 1891 103 (including Portland). The total number of licenses issued in the province is probably from one hundred and seventy five (175) to one hundred and eighty (180) annually. In 1892 St. John City issued 104 licenses and collected \$20,495, and in 1893 103 licenses and collected \$21,310.

The law of 1887, (50 Vic., 1887, cap. 4). provides that:

“The council shall report on or about the first of January in each year, or such other time as the Governor in Council may prescribe, annually, to the Provincial Secretary, and its report shall contain:—

“(a) A statement of the number and description of licenses, and the number of applicants to whom licenses were granted during the year.

“(b) The names of those to whom licenses were not granted.

“(c) Any other statement required to be entered in the register.

“(d) Prosecutions for infractions of this Act, and the result of the same.

“(e) Any remarks as to the working of the law within the district.

“(f) They shall also report in detail as to the moneys received and expended during the year.

“(g) Also, any other matters asked for by the Provincial Secretary.”

In response to applications for information, letters were received from the Hon. Mr. Blair the Prime Minister, and from the Hon. Provincial Secretary.

Mr. Blair, writing on the 15th August, 1882, stated:—

“A communication dated the 2nd July, was received from you in connection with the Royal Commission on Liquor Traffic, and enquiring as respects the returns from municipalities. Being absent from home at the time, not returning until last week, your letter has just passed under my observation, and in reply I hasten to say that there have never been any returns made by municipalities in this province of their receipts and expenditures in connection with the liquor traffic, although I believe information on the subject will be readily available on application to the Secretary-Treasurers of the different councils.”

The Hon. Provincial Secretary, writing on the 22nd April, 1892, said:—

“I have to reply that the Government of New Brunswick has not received any revenue from the granting of licenses since 1867.

Licenses are granted by the municipalities, and they have the whole revenue therefrom. We have no data from which to give you information as to the amount. This would have to be obtained from the treasurers of municipalities, and I enclose a list of their names and P.O. addresses.

"I have directed that copies of the Liquor License Act of New Brunswick be sent to you under separate cover."

The Province of New Brunswick has had an experience in the matter of the prohibition of the liquor traffic which is exceptional. In the year 1855 an Act was passed by the Legislature of the Province to prevent the importation, manufacture, and traffic in intoxicating liquors (18 Vic., cap. 36). A short synopsis of the Act will be found in Appendix, No. 62. It went into operation on the 1st of January, 1856, and in July of the same year was repealed.

A statement by the Hon. Sir Leonard Tilley, who, at the time this prohibitory Act was passed was the Provincial Secretary of New Brunswick, and Clerk of the Crown, will be found at page 554 of vol. 1 of the evidence taken by the Commission. The matter is also referred to in the evidence given by the Hon. Mr. Anglin, which will be found at page 914 of vol. 4.

The putting into operation of the prohibition Act brought about a political crisis in the province, and led to a change in the administration. Only two of the members of the Assembly who had voted for the passage of the Act were returned after the general election which followed the resignation of the provincial ministry. The vote in the Assembly for its repeal was 38 yeas to 2 nays.

Sir Leonard Tilley stated that the prohibition bill was passed by three-fifths of the members in both branches of the Legislature, and that the majority of the Upper House, which was not expected, was a little larger than it was in the Lower House; that the question was discussed at the general election of 1854, but was not, perhaps, a leading question at that election; that there was a party question more prominent, but still prohibition was a prominent question in several constituencies, and many men were elected to the Assembly in that year to sustain prohibition; that the law was practically in force only four months, because, after the Lieutenant-Governor had accepted the resignation of the Ministry, and it was understood that an appeal was to be made to the people, everything was chaos, and no effort was made to enforce the law.

Sir Leonard added: "I have since then counselled our friends, in moving in the direction of prohibition of legislation for the suppression of the traffic, to be quite sure that the public sentiment was strong enough to enforce the law if enacted."

And, further, in reply to a question as to the effect of what had taken place on the temperance movement, Sir Leonard said, "it was not beneficial at that time, because a great number of people got discouraged and disheartened. It put back prohibition sentiment somewhat, but it did not, after a year or two discourage the temperance people in the advocacy of the cause of temperance. It was rather a shock, a disappointment at the time."

On the question of the advisability of enacting a general prohibitory measure for Canada, Sir Leonard expressed himself as follows:—

"My opinion as to the advantage of prohibition has never changed, except to become stronger, if it can be enforced. The strength of a chain is established by the weakest link, and we have two weak links in the Dominion of Canada. One of them is the Province of Quebec; the other is at the further extremity, British Columbia. In these the sentiment is not as strong as in the other provinces. In the Province of Quebec there is a growing temperance sentiment, which I think will come to be a prohibition sentiment. The prohibition sentiment requires to be cultivated in the Province of Quebec, and we want the generation now growing up educated as to the evils of alcohol on the human system. With these and other influences, the time will come—it may not be during my time—when the public sentiment will be such that prohibition may not only be enacted but enforced, and from my experience in the past I would say: "Don't be in a hurry—that is, have ammunition, your guns and everything ready for the engagement when it comes, and

Liquor Traffic—Commissioners' Report.

don't run the risk of a defeat by premature action; but when you have enacted the law, make it a success by its enforcement.' That is the advice I give our people. I do not think the whole Dominion is quite ripe at this time for prohibition legislation. I may be in error and may not have gauged public sentiment correctly. * * * * Of late years I have not been brought so closely in contact with the public sentiment on this question as formerly; but I think that if you were to take the Provinces of New Brunswick and Nova Scotia, the overwhelming majority in these two provinces are in favour of prohibition, and I think it might be enforced in them. I am not so sanguine in regard to the other provinces and the sentiment there, but to have it a success, it would not do to have any one province allowing the liquor to come in and the law to be violated. It would lead to reaction and repeal. But the temperance sentiment in the Province of Quebec has increased, and is growing in a manner that has astonished me. The way in which the clergy have taken hold of the matter is remarkable of late years. They have not espoused prohibition yet, but they are laboring to curtail and limit the sale in every way."

An index and summary of the evidence taken in the Province of New Brunswick will be found in vol. I of the evidence.

The great bulk of the evidence taken goes to show that the Scott Act, although in force over a large portion of the province, is in reality not enforced in most of the counties, and that in almost every part of the province a plentiful supply of liquor is to be had by those who desire to get it. Very many of the witnesses expressed the opinion that the act ought to be enforced by Dominion officials. Some thought it had not been enforced because of a want of sympathy with its conditions by the population; others, a more numerous class, expressed the opinion that it had not been enforced owing to the expense of carrying on prosecutions and unwillingness on the part of the authorities to incur that expense. The opinion was expressed very generally that if a prohibitory law should be enacted, the Dominion government ought to undertake the enforcement of its provisions.

The evidence generally went to show that the license law was well enforced in the city of St John.

A witness who had travelled over the province as an officer of the Good Templars organization, and who was at the time of giving his evidence, City Marshal of St. John, stated with reference to the action of the "temperance people," that "When the Scott act came into force, and when they had the law in their own hands they did not go to work as they might have done as temperance men. They did not show their colors as plainly as they ought to have done * * * * If the Scott Act had been left alone when the bar rooms were closed in Portland, and if the temperance people had gone to the front as they should have done, and enforced the law, I say it would be enforced to-day, and that part of the city (the north end) would not have a rum shop in it." This opinion may or may not be well founded, but it tends to confirm the opinions expressed elsewhere, that prohibitory enactments have a tendency to relax the efforts of the temperance organizations to secure voluntary total abstinence.

The sheriff for the county and city of St. John stated that of 1,000 persons committed to prison in 1891, he thought 90 per cent were so committed for drunkenness or cases arising out of drunkenness. (Q. 6908, vol. 1.)

The same gentleman said he did not think there was so much interest taken in the Scott Act elections as in political elections, and the reason he gave for so small a vote being cast, was that "very few people cared to say they would vote against a prohibitory law, but they would let it go. They would say, we are doubtful as to the benefit and as to the success of it, but we will not array ourselves as opponents to it." (Q. 6936, vol. 1.)

It was stated that in Moncton, population 9,138, where the Scott Act was in force, that there were as many as fifteen places where liquor was being sold, and it was notorious that there was no difficulty at all in purchasing liquor in the town. The opinion was expressed, however, that there was less drinking at the present time in Moncton, in proportion to the population, than there was when the traffic in the town was regulated under a license system.

A gentleman strongly in favor of prohibition, who had lived in Moncton when the license system prevailed, said: "I am satisfied that the liquor sold to-day cannot compare at all with the liquor sold forty years ago. The liquor then was comparatively pure, but now, and it is from my own knowledge I speak, coloring matter and various materials are put into liquor to raise a bead and give it colour. I have seen men paralyzed, not by an overdose, but by the extreme strength of the compound. If the government does not take action to grant prohibition, it is its duty to see that we have as pure liquors as can be obtained."

In Moncton the Collector of Customs stated that for the year ended 1st July, 1892, 2,624 gallons of spirituous liquors had been imported, and that it was principally Scotch whiskey. There was some brandy in casks.

It will be noticed that the City Marshal stated that in 1887, \$950, in 1888, \$1,050, in 1889, \$2,000, in 1890, \$1,800, in 1891, \$1,650, and up to August, 1892, \$1,900, had been imposed for fines for breaches of the Canada Temperance Act.

As evidence of how openly the liquor traffic is conducted in the city of Moncton, it may be mentioned that the city marshal stated that, acting under the instructions of the Mayor, in regard to the 12th of July, he had issued a notice requesting illicit sellers in the town to close their bars on that date.

The following is a copy of the notice, which appeared in the Moncton "Times" on July 11, 1892.

"CAUTION."

"All proprietors of bar rooms are notified to close their respective places of business on Tuesday, July 12.

"CHARLES FOSTER,"
"Police Marshal."

He stated that he knew there were bar rooms because fines were received from them. He could not say whether the suggestion had originated with the Mayor or himself, but it had been concurred in by the Mayor.

The same gentleman stated that the fines collected amounted to about \$1,012, per year. He gave the following statement of the number of arrests made in the city:—

1885	335	1889.....	309
1886.....	311	1890.....	278
1887.....	205	1891.....	263
1888.....	206	1892 to July.....	123

He said; "Taking the average of arrests from 1885 to 1891, I think that two thirds of them were for drunkenness. This year we have not had as many drunken men in the streets as in previous years. I do not think there is as much drunkenness this year." (Q. 13529-13532). The number of arrests in 1877 was 205. (Q. 13555).

Taking the population in 1891 as 8,765, the ratio of arrests per thousand for that year (total 263) would be 30.00, and if two thirds of them were for drunkenness, the ratio for that offence would be 19.85. These figures compare very unfavourably with many license places throughout the Dominion.

The Pastor of the Baptist Church stated that at one time a citizen's committee had been formed in Moncton; that it lasted two years; that it had a guarantee fund, but collected enough in fines to enforce the law; that they closed up the public sale of liquor, and then stopped. (Q. 753, vol. 1.)

The representatives of various churches were heard before the commission.

The Rt. Rev. Hollingworth Tolley Kingdon, Coadjutor Bishop of Fredericton, expressed his adherence to the plan pursued in temperance work by the Church of England, of which he had knowledge through his connection with the Church in England. He stated that he had never joined any particular temperance organization, because he thought the church was the chief organization that was required; that he had never advised any one to take the pledge, unless by way of protection to himself, and then only for a limited period. In his experience he had always

Liquor Traffic—Commissioners' Report.

found it better, if the man could not restrain himself, that he should be helped by taking the pledge for a limited time, and that it was much more likely to be kept than if he took it for life; that he had found the results morally good. He considered there had been a great increase in the temperance and sobriety of the people both in England and in this country, within late years, which he attributed to the influence, in a great measure, of religious teaching. He was not in favour of prohibitory legislation, and thought that no law could be placed on the Statute Book and not kept without doing harm.

A resolution of the Synod of the Church of England, of Diocese of Fredericton to the following effect, was submitted:—

"That this Synod deplores the evils caused by intemperance and excessive indulgence in intoxicating liquors, a frightful source of poverty, suffering, disorder and crime in the Dominion, and hindering the church. Therefore,"

"Resolved that it is the duty of the church, and of every member of the church, to use every effort to promote the principles of temperance and sobriety, and to use every legitimate method to check this great evil."

The clergymen of the Church of England in Fairville, St. John County, where he had been for about seven years, and who had also resided at Canterbury, in the County of York, for about a year, stated that the Scott Act was in force at Canterbury; that Fairville was not under the Act at first, but it was afterwards, but not now, for which he was thankful, because he thought the Scott Act had been a curse wherever he had seen it in force. "Drink," he added, "is blamed for a great deal, but I think the Scott Act has opened a way to, I was going to say, hatred, malice and all uncharitableness; it has bred deceit and has increased the sale to women and children, and the people take liquor now to satisfy their taste, and every man's hand is turned against his neighbour. That has been my experience in Canterbury and in Fairville; others may have had better experience in regard to the Act. People who were friendly now pass each other by, and no man dare call his soul his own. That is my experience of the Scott Act. It has been an utter failure in every place where I have seen it. While I would engage in practical work in the cause of temperance, I would be the first to rise against a prohibitory measure."

This gentleman describes the steps which had been taken to enforce the law, and stated that before the adoption of the Scott Act there were three liquor stores in Fairville; after its adoption liquor was sold in almost every house.

The attitude of the Methodist, Baptist and Presbyterian churches of the province was explained by clergymen of these denominations, and it was practically that of these churches generally throughout the Dominion.

The parish priest of St. Bernard's Roman Catholic Church, Moncton, gave evidence before the Commission. He said he had resided in Moncton about ten years. He stated that he would like to see the existing law, the Scott Act, thoroughly enforced; that, in his opinion, it was not enforced at all, but, on the other hand, was perfectly disregarded, as far as he could see. He thought it would be a blessing to the community if it was enforced. He frequently asked his people to take the total abstinence pledge. Many of them did so, and nearly all kept it. He advised his people to keep the law as "the law of man must be God's law." He had worked for the adoption of the Scott Act. He said if he were in a policeman's position he would enforce the law, being paid for the work. He did not see the necessity for any more officers to enforce the law. He thought the Scott Act was now a farce, though he had been in favour of it, and supported it. He would repeal it now. If the law could be enforced, he would prefer its enforcement to its repeal. (Page 720, vol. 1.)

The High Sheriff of the County of York, who has held his position for ten years, stated that in 1890 the number committed to the common jail for infringement of the Scott Act was 6, and for drunkenness 26, the total committals for that year being 50. In 1891 the committals were 61, and for drunkenness 20. He stated that the committals for five years before the Scott Act came into force, and for five years afterwards, could not be given, as he had not the books; the administration was quite different now, and he did not know what had become of the books. He said he had lived in Fredericton for twenty-five years, and he thought there was not anything

like the drunkenness now that there was previous to the passage of the Scott Act. He said that the conditions fifteen or twenty years ago as regarded the floating population were somewhat different. There was then a great deal of rum selling on Regent Street, largely to lumbermen, but there were not so many of that class now visiting the city. He expressed the opinion that the Scott Act was remarkably well enforced in the County of York.

The efforts to enforce the law in the City of Fredericton led on one occasion to the arrest and incarceration of several of the hotel-keepers, who apparently had either a very large number of friends or a very large number of sympathizers, as they are said to have been visited when in jail by hundreds of people. They are stated to have been allowed to supply their own meals and to have a telephone placed in the jail.

Much drunkenness is said to have prevailed in Fredericton during the period when the city was under license. (Page 665, Vol. I). It is evident that there is still a great deal of drunkenness, from the number of arrests made for that offence by the police; that, notwithstanding very vigorous measures taken at different times for the enforcement of the law, there must be a very considerable amount of illicit sale of liquor. One witness stated that there was not so large a floating population in Fredericton as formerly; that the opening of railways had diverted a certain portion of the travel from the city, and that this fact had in some degree contributed to the reduction in the number of offences for drunkenness.

The following information was given in evidence by Daniel Crilley, Police Magistrate and Commissioner of the Parish of St. Stephen's Circuit Court in regard to the arrests in that town, the population of which was, in 1891, 2,680.

From March, 1886, to end of year, 162 convictions, 125 for drunkenness.

1887	93	78
1888	112	104
1889	103	82
1890	128	112
1891	126	100

The number of convictions for infringements of the Scott Act from March, 1880, to the 1st. August, 1892, was 203.

A statement will be found amongst the appendices, number 10, showing the population of the provincial insane asylum. The ratio of those remaining in the asylum at the end of each year increased from 1.01 in 1881, to 1.40 per thousand of the population, in 1892.

According to the Census report for 1891, the insane increased in exactly the same ratio as the population in this Province, namely 12.04 per cent.

New Brunswick had, according to the same authority, 27 insane persons per thousand of the population, which ratio was higher than that in British Columbia, Manitoba and the North West Territories, but lower than Nova Scotia, which had 30, and Ontario which had 28, Prince Edward Island, which had 30, and Quebec which had 30.

According to the figures supplied to the commission, the number of the insane in the provincial asylum at the close of 1891 was 53 per cent of the insane population as shown by the census return for that year.

According to the census returns, in the year 1871 there were 788, and in 1891, 886 persons of unsound mind in this province.

The provincial government supplied a statement showing that the cost of maintaining lunatics in the province ranged from \$97.50 to \$125.91 per capita per annum.

Dr. James P. Steeves, superintendent of the asylum, stated that the statistics kept showed that about one eighth of the insanity of those admitted to the asylum was due directly to intemperance, and about one eighth indirectly; but statistics were very uncertain things, and when persons were engaged to establish a certain conclusion they were very apt to get the statistics warped considerably to suit pre-conceived notions. His statistics were prepared with no pre-conceived intention. He considered that intoxication or intemperance was the leading cause of insanity, and stood prominently above any other cause. He thought that habitual drinking,

Liquor Traffic—Commissioners' Report.

though it had not reached the point of actual drunkenness, had an effect on the children of those so indulging. He stated that statistics demonstrate that there is an increase in the occurring cases, and that the accumulation of the insane is very widely increasing. He said he thought that about one-sixteenth of those admitted were classified under the head of "predisposing cause unknown."

The returns of prisoners committed to the jail in this Province are imperfect. From some of the counties no returns have been received at all. Others have no records. The statement, Appendix No 2, contains all the information on the subject which the Commissioners have been able to collect. It will be observed that the ratio of those remaining in prison slightly increased in the later years covered by the returns.

In appendix number 63 will be found a short statement of the efforts of temperance societies and the churches to promote total abstinence in New Brunswick.

A letter was received from the late Justice A. L. Palmer of the Supreme Court of New Brunswick, dated 30th. July, 1892, which is printed as appendix No. 170.

PRINCE EDWARD ISLAND.

A brief summary of the laws which have been in force in regard to the liquor traffic in Prince Edward Island from the year 1770 down to the present time will be found in Appendix No. 64.

The abstract, although brief, is highly interesting, because it is seldom that such complete historical information in regard to the liquor laws of any self-governing community is to be obtained.

The Commissioners desire to express their obligations to the Hon. Frederick Peters, the Prime Minister, and Mr. Arthur Newbery, the assistant provincial secretary of the province, for the prompt manner with which they have complied with requests for information made by the Commissioners, and the very ample way in which such information has been supplied.

The Province of Prince Edward Island is really the only one in the Dominion which made what might be considered a full response to the first enquiries of the Commission for information. A form was sent to each province with a request that it be filled up and returned. That received from Prince Edward Island, which is printed as Appendix No. 66, supplied the fullest information which has been obtained.

In the year 1878 the Canada Temperance Act was adopted in Prince county; in 1879 in King's county and in the city of Charlottetown, and in Queen's county in 1880. The numbers voting for and against the adoption of the act in each will be found in Appendix No. 50.

In Prince county the act was re-submitted in 1884, and the vote was in favor of its continuance. In Charlottetown it was re-submitted in 1884, 1887 and in 1891. It was sustained on the two first-mentioned occasions, and defeated on the last. It was voted upon again in 1884, and, it is understood, re-adopted by a small majority.

After the repeal of the act in 1891, no licenses were issued, and there was practically unregulated free trade in liquor in the city. On 1st July, 1892, it was put under regulation by act of the Provincial Legislature, the terms of which are briefly: The only entrance to a place where liquor is sold is to be from the main street; no screen or curtain is to be placed on the windows, and there shall not be any partition or stalls inside; there shall be no sales on Sundays; all places where liquor is sold are to be closed at 10 p.m. on all working days, excepting Saturday, on which they are to be closed at 7 p.m. No licenses are issued.

From what has been stated it will be seen that practically the whole island was under the Canada Temperance Act from 1880 to 1891.

Looking at the fact that, owing to the isolated position of the province, one of the main difficulties experienced elsewhere in the enforcement of the act, that arising out of immediately contiguous territory being under a license system, does not exist. The experience of Prince Edward Island deserves to be very carefully studied. It is fortunate that the records of information bearing upon the subject have been kept, with greater care and accuracy than is generally the case.

Prior to the coming into force of the Canada Temperance Act licenses were issued, and the following statement supplies information in regard to the number thereof, the fees charged, and the revenue derived from 1874 down to 1881, as also the revenue derived from licenses for distilleries, stores, taverns, and hotels between 1867 and 1873.

“Statement prepared in compliance with a request contained in a communication from the Chairman of the Royal Commission on the Liquor Traffic, dated Montreal, 14th April, 1892, showing the amount annually received by the Government of Prince Edward Island within the Province, exclusive of Municipalities, for the granting of liquor licenses from 1867 to 1881, both inclusive, since which date no Provincial liquor license law having been in operation:—

1867—	From distillers, store, tavern and hotel licenses.....	\$	1,552	64

NOTE.—“Owing to the absence of details in the available public records, the amount received on each kind of license mentioned prior to 1874 and the number of such licenses issued, cannot be ascertained.”

It will be noticed that the fees charged had been gradually increased, and stores which, in 1874, were charged \$24.33 each, were in 1876 \$75 each, and the charge for taverns had been advanced from \$11 36 to \$30.

There appears to have been issued by Charlottetown and Summerside, in addition to the foregoing, the following licenses:

	CHARLOTTETOWN.		SUMMERSIDE.	
	Total	Total	Total	Total

Liquor Traffic—Commissioners' Report.

It may lead to a better understanding of the situation in Prince Edward Island, to briefly describe the terms of the Canada Temperance Act, and also briefly to compare it with the law in force in the State of Maine.

The Canada Temperance Act prohibits the retail sale of liquor for beverage purposes within the boundaries of the county or city to which the Act is made to apply, except that sales may take place of not less than ten gallons, or in the case of ale and beer, not less than eight gallons at one time, and only to vendors licensed to sell for medicinal, etc., purposes, or such persons as will forthwith carry the same beyond the limits of the county or city, and any adjoining county or city, in which the Act may be in force. The Provincial Government appoints such last mentioned vendors, and under the law they are required to make a report to the Federal Government at Ottawa, of all sales made by them. Sales for sacramental purposes are only to be made on the certificate of a clergyman, and for use in some art, trade or manufacture, on the certificate of two Justices of the Peace, and for medicinal purposes, on the certificate of a medical man.

The manufacture of liquors is not prohibited under the Act.

The Provincial Government can appoint Inspectors to enforce the law, whose salaries are paid by the city or county in which they are appointed. The law provides for fines for first and second offences, and for fine and imprisonment for third offences against the law. Authority to search and seize extends only to cases where conviction is first had. The fines inflicted for breaches of the law are to be applied to the carrying on of prosecutions and giving effect to the Act.

Under the law in the State of Maine every citizen can import liquor into the state for his own use, in such quantities as he may think proper. The manufacture and sale within the state is prohibited. The law confers extensive rights of search and seizure, and the sheriffs of the different districts are charged with the enforcement of the law. They can employ such assistants as they may consider necessary, and the state authorities can, under certain conditions, appoint officers to enforce the law.

It is manifest to every one who studies the Canada Temperance Act that the communities adopting it have to give effect to the law, unless they are by some special provincial legislation relieved in part or in whole from the obligation of doing so.

The people in a province situated as are those in Prince Edward Island can scarcely be justified in complaining of the non-enforcement of the law, because in their case non-enforcement must result either from the necessary measures not being taken by themselves to give effect to the law, or the impracticability of enforcing it.

The evidence taken by the Commission clearly shows that the law was not enforced either in the city of Charlottetown, or in Summerside, a place of about 3,000 inhabitants, and evidence was given that in some other places, with a population of about 1,000, the law was not observed. It was claimed to have been better observed in the outlying country districts.

Many of those who testified before the Commission, whilst admitting that the Canada Temperance Act was not enforced, expressed a preference for a general prohibitory law which they thought might be better enforced. They preferred the Canada Temperance Act to the system of free sale under police regulation in the City of Charlottetown, but preferred the latter to the license system, although it was affirmed that, under the old license law in force prior to 1881, there were only about 39 licensed places, and therewith the unlicensed places did not make the number as many as sold under police regulation. (Q. 16193). Whilst under the Canada Temperance Act it was stated that from 100 to 150 places were selling, and one witness put the number as high as 200 (Q. 15338, 16188), under the police regulation law the places selling did not exceed 76. (Q. 15326).

The Commissioners are led to conclude that this feeling of antagonism to the license system is prevalent amongst the people of the island, and that it is the outcome of the conviction, or sentiment, that to legalize in any way the sale of liquor is morally wrong.

Many of the witnesses, while desiring to see a prohibitory law enacted, did not speak with confidence of the prospect of enforcing it efficiently, and many others did not hesitate to say that they believed its enforcement impracticable.

The Mayor of the city of Charlottetown, (who has been continuously Mayor since 1886) the hon. Senator Haviland explained that up to the year 1880, licenses were issued in the city. The numbers it appears, were in 1877, 42; 1878, 39 1879, 39, and in 1880, 35. He also said that from 1880 up to 1891 the Scott Act was in force in the city; that for a year and a half afterwards there was practically free trade in liquor, and that from July 1892, it was conducted under police regulations, without license. He thought the Scott Act had contributed to sobriety in the city; that towards the end of the period the act was in operation it was not rigidly enforced, and he thought the reason was that the majority of the city council were not in favour of the act. He said he could not explain why the liquor interest was so strong in a province which, as a whole, might be considered prohibitionist, and added that there was a period when a special officer was appointed as prosecutor under the Scott Act, but the time came that a majority of the council was adverse to the act, and they dismissed the officer and transferred the duties, with a nominal salary, to the City Marshall. He was strongly in favour of the appointment of officers by the Dominion Government to enforce the law, and thought that the Dominion should bear the expense of their doing so. (Q. 14785-6.) He had known as many as four of the members of the council engaged in the liquor business, and, of course, they were selling illegally. They constituted two fifths of the members of the council. (Q. 14821). The fines collected for infringements of the act were paid into the City Treasury, and a large proportion of them was utilized in paying the expenses connected with the Scott Act: "but it was like a dentist drawing teeth to get the money." (Q. 14762). "I have always been opposed in my elections by the liquor interest. We have a woman franchise, and I was opposed by that." (Q. 14881.) He believed that the liquor traffic was immoral and productive of great evils, and, therefore, objected to licensing the trade. (Q. 14965-6).

Mr. R. R. Fitzgerald, barrister, was appointed Stipendiary Magistrate for Charlottetown in 1875. Previously some of the aldermen acted as magistrates, but that year he was given sole jurisdiction in the city, and that of the magistrates ceased. He handed in the following statistics of arrests, and convictions for drunkenness.

	Total arrests.	Convictions for drunkenness
1876.....	1,290	676
1877.....	1,297	737
1878.....	745	357
1879.....	544	321
1880.....	491	256
1881.....	472	197
1882*.....	404	218
1883.....	526	250
1884.....	481	229
1885.....	640	284
1886.....	592	299
1887.....	516	213
1888.....	598	262
1889.....	483	395
1890.....	510	239
1891.....	566	†304

Statistics since obtained show that the convictions for drunkenness in 1892, were 222, and in 1893, 206. (Letter dated Aug. 16, 1893).

Mr. Fitzgerald explained in reference to the decrease in the number of arrests, "previous to my appointment, at all events, it was generally considered that the criminal business of the city was not well managed, owing to the constitution of the

*First year of enforcement of Scott Act. †(Q. 14979).

Liquor Traffic—Commissioners' Report.

court. It was not managed properly, for the judges were not legal men, but were aldermen, who took in turn the trial of all criminal cases. The number dropped off after my appointment, and during two years had dropped from 1,200 to 745, and from that time it has still decreased, until it now averages about 400 or 500, and it remains at that number." (Q. 14980). He further explained that it was after his appointment that the issuing of licenses by commissioners was adopted, and he thought the number of licenses was diminished. He thought there was more shipping in the years 1876 and 1877 than subsequently. He considered that the decrease in the number of cases was largely owing to the more strict enforcement of the law. When he took office he had handed over to him notes of hand for \$4,000 as representing fines inflicted, but not collected, and they never were collected. (Q. 14993). He expressed the opinion that, as regarded drunkenness in the city, the license law and the Scott Act had very little effect on drunkards one way or another. He thought the volume of drunkenness was largely dependent upon a small number of people; 20 or 30 separate persons would make up, to a very large extent the volume of drunken cases. The whole amount collected in fines during the nine and one-half years that the Scott Act was in existence was \$12,643.00, (Q. 15012) and the total number of convictions for infringements of the act was 364—243 first offences, 65 second and 51 third; 123 of the whole number were actually imprisoned. (Q. 15013-6). When the Act was first brought into force, there was a Temperance Alliance League and prosecutions were carried on by them. The members laid quite a number of informations during the first couple of years. Afterwards they found that it interfered with their private business, and the work was gradually dropped, and at last was left entirely to the police force. There was unquestionably a large amount of perjury committed in connection with liquor cases. He thought the Scott Act was not educational in many respects. There were some senses in which the Act might be called an educator. It prepared people for total prohibition and in that sense, in the eyes of those who desired to see prohibition, it might be considered an educator.

"The Scott Act," he continued, "is neither one thing nor the other, because it permits liquor to be imported into the country, and it then attempts to prevent its sale. * * * It is a workable act, and one that could be enforced in my judgment, especially if all the fines were paid into the Treasury and used for the purpose of enforcing the Act. But * * * I would unhesitatingly express my preference, in the interest of temperance, for prohibition.

Members of the city council were brought before him for illicit selling. Some were convicted and fined, and others imprisoned, and this whilst members of the council. (Q. 15050-1-2.) He did not think an argument of any great value could be drawn from the records of drunkenness as regards the working of the Scott Act or any other measure. (Q. 15065.) The volume of drunkenness, as well as increase in crime was affected by want of proper punishment by the courts. (Q. 15061.) He thought there were fewer people selling liquor in Charlottetown in August, 1892, when the sale was practically free than were selling during the Scott Act period. (Q. 15077.)

There were violations of the law under the license system in regard to the sale to minors or keeping open in prohibited hours, but there was little illicit sale. The licensees objected to the illicit sale, and they assisted in an indirect way to prevent it. (Q. 15091-2-3-4.)

"I say," he added, "that religious training has a great deal to do with it (the promotion of temperance). I know constantly in my practice as police magistrate, that when a priest takes hold of an unfortunate, he has much greater influence with him than I have. My punishment does not reach him as well as personal admonition * * * That is a more practical way than all the legislation that ever was placed on the statute book." (Q. 15113.)

"While the Scott Act was in operation, although drunkenness appears to have been about the same, and although there may have been 100 or 150 people selling, I believe there were times in this city when it was almost impossible to get a glass of ginger ale. I know this, that many men during the Scott Act time, made money by

selling liquor; but I also know that when the law was rigidly enforced, it was most difficult for a man to get liquor, and a man had almost to lose his self respect, to descend to trickery, before he could get liquor." (Q. 16220.) He considered the amount of fines imposed was inadequate. He made a statement of the amount of fines imposed, and the number of times some of the offenders were in jail, (Q. 16221) and explained how they were treated whilst in jail. (Q. 16223.) He said: "Application was made to the council several times under the Order in Council for the fines, but the application was refused." (Q. 16239.)

The Hon. Edward J. Hodgson, of Charlottetown, Master of the Rolls, stated that his experience was that the Scott Act in Charlottetown was an unmixed evil; that drinking was increased, and that perjury increased to an inordinate extent; that it produced a class of blackmailers. He considered the Act had done much good in Queen's County. In Prince county liquor drinking had decreased. In Summerside the Act was not efficacious, because in towns it was not well supported. In Kings County it was the same. In Montague and the better parts, he thought there had been a marked decrease in drinking. The trade had fallen into the hands of very disreputable people. To the east where Souris is situated, drinking was unlimited. There was abundance of liquor there. There was a vast difference between the urban and rural population. When he was at the bar he was thoroughly convinced of the evils of the Canada Temperance Act, and spoke and voted against it. He was prepared to vote for it in the country districts, and to speak in favour of it, if occasion arose. He was simply expressing his independent opinion as a member of the community. The blackmailers he referred to, would go and say to a man: "I know you have been selling liquor, and if you do not give me money I will bring you before the court." He thought the best way would be to have prohibition, but, unfortunately, it would not be possible to enforce it, and there would be a vast amount of smuggling. (Q. 15148-54-65-67.) He had been told on what he believed to be good authority, that at one time, whilst the Canada Temperance Act was in force in the city, there were 146 places where liquor was sold; that bedroom and home drinking increased to an enormous extent (Q. 15208) He said that continuous and flagrant violations of the law led to a perversion of the moral sense of the people. "Of that I am quite sure," he continued, "and it is for that reason I know the evils of the Canada Temperance Act are very far-reaching, and we have not seen the end of them yet. I have seen, unfortunately, a weakened sense of respect for the law, and I have been very sorry indeed to see it."

The City Marshal stated he thought that the effect of the Scott Act was to decrease drunkenness amongst a certain class of people, but amongst another class it did not. He had no doubt that drinking in offices and bed-rooms had increased after the Scott Act came into force, and that liquor was sold in grocery stores, and that, during the period the Act was in force, there was a lower class of people selling. The present law (free sale under police regulation) was working well, and he thought drunkenness was steadily falling off.

The keeper of the almshouse in Charlottetown, who had held the office for twenty-three years, expressed the opinion that the population of the house was not greatly increased by the drinking habits of the people, but it was principally infirmity and old age that brought them to the institution; he did not think that drink had anything to do with the people who came there. He was himself a temperate man and a Scott Act supporter, and thought that drinking was going out of fashion in Charlottetown.

Rev. James Simpson, incumbent of St. Peter's Protestant Cathedral and head master of St. Peter's School, expressed the opinion that it required personal contact with offenders, and that it was no use to preach temperance in the pulpit and then go to the drunkard and simply tell him to do better. Temperance ought to be taught to children, and he thought the most successful way of dealing with those who over-indulged was to get them to take a short pledge. He thought the system then in force (police regulation), with a few amendments, would be just as effective as any system which could be resorted to. He would not support a prohibitory law, because it would lead to so much smuggling. He would not desire to see the Scott

Liquor Traffic—Commissioners' Report.

Act re-enacted, as it did not prevent drinking, and encouraged a great deal of sneaking hypocrisy and mean ways.

Rev. George W. Fisher, of Pownal, Queen's County, about seven miles from Charlottetown, a Methodist clergyman, said he had found the Scott Act successful. Inspectors were appointed by the government. The place was a small scattered village, with, perhaps, a population of five or six hundred. Before going to Pownal he had been at Alberton in the western part of the island (population about 1,000). He had found the Act successful there. He had not had any experience of the license system in the island. The Act had reduced the sale of drink in Alberton to a great extent, and prevented a great amount of drinking. (Q. 15482.) If a general prohibitory law would work as well as the Scott Act had done in Charlottetown, he would vote for it. (Q. 15523.)

Mr. Fisher was recalled and gave the following additional evidence—

"Is the book now shown to you the Journal of the proceedings of the Grand Division of the Sons of Temperance of Prince Edward Island, at the session held at Hamilton, October 28, 1891? It is.

"In the report of the Grand Scribe presented at such session of the Grand Division appears the following:—

"I think I am quite safe in saying that not, for many years, has there been so much drinking among the young. Hundreds, yes thousands, of our boys—boys yet in their teens, many of them belonging to christian homes and christian parents—are fast going the way that leadeth down to death, dragged down by the drink curse.

"The report was, on motion of Rev. G. W. Fisher, referred to the Committee on finance and state of the Order. (Pages 13 and 14.)

"In the report of the said committee appears the following:—

"We agree with your Grand Scribe that the present is a critical time in the history of our order and of the temperance cause in this province. The repeal of the Scott Act in Charlottetown has emboldened the liquor party. From Charlottetown liquor is being distributed throughout the country. Tippling and drunkenness are on the increase. There is great need for a long pull, a strong pull, and a pull altogether on the part of temperance workers." (Page 20, 16836.)

Mr. James H. Reddin, of Charlottetown, a practicing barrister, did not consider that the Scott Act had been advantageous to the people of Charlottetown. He preferred a license law; did not think there was much drunkenness in Charlottetown, but that it compared favourably with other cities in the Dominion; that the Scott Act had been generally disregarded, and that it was more easily made efficient if the country districts than in the cities and towns. He thought that the system on regulation by the police in force in Charlottetown promoted temperance more than the Scott Act, though the latter did good where it was enforced.

The manager of the Telephone Company, Charlottetown, thought that the Scott Act had done much good in the rural districts. He said that it had sometimes been observed for a short time in Charlottetown, when the council was in favour of it. At other times the council and authorities would not favour it, and the liquor business would expand. He would prefer Charlottetown as it was under the Scott Act to Charlottetown under the license system. He thought it wrong that a revenue should be derived from the traffic, and was of opinion that the Scott Act was an educator, and educated the people to take a step further for prohibition.

Mr. Benjamin Davis, who had been merchant for fifty years, but is now retired, and who had known Charlottetown when the license law prevailed, said he did not think there had been any great change in the drinking habits of the people. He thought there was not quite as much drinking now in proportion to the population as there was twenty-five years ago. He did not think the Scott Act had suppressed drunkenness, nor that it had any marked effect within the city. It did better in the rural districts. He did not think that the liquor traffic affected business much one way or another, and he did not think that it would affect merchants much one way or another if the liquor trade was shut up in the city of Charlottetown. He thought that the Scott Act caused a great deal of false swearing, and when people

were prohibited from taking what they desired, they took too much when they got a chance, and hence many of the country people who came into the city got intoxicated. He thought that a license system would be better than the free sale. Liquor was freely sold during the Scott Act period. "When you saw a cabbage at the door and a bottle in the window? he said you could get a glass of whiskey there when you wanted it."

The Collector of Inland Revenue at Charlottetown handed in particulars of domestic spirits. (See Appendix No. 18, vol. 1 of evidence). He explained that there was one brewery which continued its operations during the Scott Act period, and it had been regularly at work ever since it was established, many years ago. He handed in a statement of the quantities manufactured from the year 1885—(see Appendix No. 19, vol 1 of evidence)—explaining that they could not be given prior to that date, as the records between 1873 and 1884 had been destroyed by fire.

It will be observed on reference to the statistics of domestic spirits, that the average entered for consumption was less in the Scott Act years than it was in the two years 1891-2, when Charlottetown was selling under police regulation; but the figures are incomplete, and do not include domestic spirits, the duty upon which is paid elsewhere. The statistics of beer made are given from 1885. The production increased from that year, until it reached in 1889, the highest point, and more than double what it was in 1885. The average of the six Scott Act years was slightly lower than the average of the years 1891 and 1892, when there was free trade in Charlottetown. The lowest figures were those of the first two years covered by the return, viz., 1885-1886.

From the Collector of Customs was obtained the importations and the quantity entered for consumption at the port of Charlottetown (King's and Queen's counties),

	For one year and a half before repeal of Scott Act in Charlottetown.	For one year and a half after repeal of Scott Act 1891-92.
Ale.....	7,978	5,655
Spirits.....	34,292	35,572
Wine.....	1,742	2,143

The Collector of Inland Revenue said:—"From observation I have to state that during the Scott Act years in Charlottetown, I lived out of the city on a very quiet road, and, of course, I saw nothing of drunkenness. There are no liquor shops in the country in that direction. During the last two years I have lived in the town on one of the most public thoroughfares, and I fail to see any difference in regard to the travelling public. They are a steady, sober people. The only drunken people are some strangers and the roughs about town." He did not think that those who wanted a drink had any difficulty in procuring liquor during the Scott Act period. He said that the authorities found themselves unsupported by public opinion; that the people would be better pleased if they did not carry out the law too strictly, and that the main reason why they did not carry it out was that they got nothing for it. He did not believe that a prohibitory law could be enforced; publicly it might be, but privately it would be violated, and there would be illicit distilling, as there was then. He had arrested five or six illicit distillers at different times. When he found a man he had him put in jail, which checked the business for a time. He thought that drinking could not be stopped unless distilling were stopped.

Mr. M. H. Wright, of Charlottetown, a manufacturer who had resided there twenty-five years, stated that he would prefer the system then prevailing (free sale under police regulation. He was, on principle, opposed to a license system. He did not think that the people of Charlottetown, when they repealed the Scott Act, declared against prohibition. As regarded his workmen, he saw no difference in

Liquor Traffic—Commissioners' Report.

them during the Scott Act and other periods, except that in the last few years they had been gradually improving in the matter of drinking; they were as temperate under free liquor as they were under the Scott Act. He did not approve of either license or free sale, and thought the State ought to prohibit the traffic. His men were not all total abstainers, but they were largely temperate. Perhaps 10 per cent were moderate users of liquor.

The Hon. Joseph Hensley, Judge of the Supreme Court, said that there were some delays caused by legal proceedings after the Scott Act was adopted. A question was raised as to the constitutionality of the Act, and the Courts suspended giving decisions on cases until that was decided. He thought that took about a year and a half, and then there were some questions raised as to whether a place was a city or town, and whether an election had been properly carried on. Those difficulties impeded the working of the Act for about twelve months; but for the last six or seven years that it had been the law in the province there were practically no legal difficulties impeding its enforcement. A large number of cases, he said, came before his Court and were disposed of one after another. Cases recently had been disposed of much more quickly, owing to the decision being vested in the judges, whilst formerly in some cases there were jury trials. He thought that after the Act first passed there was less drunkenness in some parts of the country, notably in Queen's County and Charlottetown, but he did not see much difference in that respect since the Act was repealed. Public sentiment, he added, was so strongly in favor of temperance, and such societies as the Women's Christian Temperance Union and some other societies had done as much good as the operation of the statute, that, if the Scott Act had been properly supported, it would have been much more efficient than it was, for, though it was carried at elections, there was a lack of public sentiment at the back of it. He had frequently had occasion to tell grand juries in the county "that it seemed to be very strange that they got their Legislature to pass the law, and they adopted it, and then failed to enforce it." He did not think that the delays which took place through the legal proceedings already referred to disheartened those interested in the Act. He did not think that these proceedings had any effect. He thought that prohibition of the manufacture, importation and sale for beverage purposes, well enforced, would be a benefit to the country; but he had very much doubt if it could be enforced. In the Legislature, many years ago, he had brought in license bills, one in particular about local option in school districts, providing for the adoption of prohibition when it was carried by two-thirds of the people within a small radius. He thought that it operated well while it was in force. "When," he said, "you have two-thirds of the people pledged, who live in sight of each other, you must have sympathetic support." He did not think the law helped public sentiment, but that the law was the result of public sentiment. A law on the Statute Book openly and flagrantly violated, he considered a very scandalous state of things. He considered it unwise to maintain a law which was openly violated, observing, "I think it brings about a very immoral state of public feeling. Under the Scott Act there were constant prosecutions and appeals, yet, notwithstanding that, it was said the number of places where liquor was sold was unlimited. That is not a satisfactory state of law. It showed either the law was not efficient or that it was not being efficiently enforced. The principal lawlessness is the fearful amount of perjury in these cases, notorious and evident perjury, and that is most demoralizing and causes the most painful feeling. It does a great deal of harm to moral feeling when evidence is so constantly given in such a way as it has been in my experience in Scott Act cases." (Q. 16056-59).

Mr. Arthur Newbury, Assistant Provincial Secretary, stated that there were only two licensed vendors under the Scott Act in August, 1892, but there were licensed druggists who were vendors under the Canada Temperance Act; these paid \$50 in towns, and \$40 in rural districts. Asked as to the operation of the Canada Temperance Act in Charlottetown he said: "I do not think it has worked very satisfactorily, not from a lack of temperance feeling, but a feeling against the Act." He would favour license law, properly carried out, to the present free sale

under police regulation. He thought that prohibition, if properly carried out, would have a better effect than license. He said that complaints had been made against the licensed vendors for not complying with the terms of the law, and in the past some licenses had been cancelled. There had been times when there were more vendors than there are now. He thought there had been as many as eight or nine throughout the Island, and of that number probably five were in the city of Charlottetown. Of course, since the repeal of the Canada Temperance Act there was no necessity for licensed vendors in the city.

Mr. W. E. Dawson, a merchant in Charlottetown, for forty years, who had known the city under the license system, under the Scott Act, and under the free sale and police regulation system, thought the Scott Act was not enforced; but he did not think there was much difference in the drunkenness prevailing during the Scott Act period and subsequently. He said he would prefer the Scott Act to a license law. He meant the Scott Act properly enforced, not otherwise. (Q. 16107.) If it was not properly enforced, it was a farce, and he would prefer a license law to the Scott Act enforced as it was in Charlottetown. He had been chairman of the commission on licenses, and would prefer total prohibition, properly enforced, to any other system; but to enforce it would require an intense public sentiment at the back of it. Under the old license law they had liberty to grant as many licenses as they thought proper. There was an option law, and the Commissioners were authorized to carry that law out. He thought that public opinion endorsed rigid enforcement of the license law. He stated that he was Mayor in the years 1877-78-79-80, and that the convictions for drunkenness were, in 1877, 729; in 1878, 357; in 1879, 231; and in 1881, 193. He had not the figures for 1880, but they were obtained from another source, and showed the number to be 256. Asked if he thought there was a lack of public sympathy with the Scott Act, he replied, "I am afraid public opinion was not with the Act, that is to say, not as it ought to have been." He thought that the officers to enforce the Act should be appointed by the Dominion Government. The city council had not provided the necessary machinery to carry out the Act. (Q. 16151.) He stated, "I would give them (the people), an education through the Scott Act, and if they did not afterwards want it, all right. But I would blot out free rum. If I had the power to do so I would add some amendments to the Act we have to-day." He thought there were four times as many places selling under the Scott Act as under the license system. In the year 1879 there were only 39 licenses issued. There were some unlicensed places in 1879, but very few. They were sharply looked after. (Q. 16192.)

The Hon. Angus B. Mackenzie, of Charlottetown, member of the Legislative Council of Prince Edward Island, would infinitely prefer the Scott Act, even in its worst stage, to a license law. He would prefer to have the system now in force rather than a license system, if even only half a dozen places were licensed. Licensing made the trade respectable, and he was entirely opposed to the license system on principle. He was in favor of the total prohibition of the manufacture, importation and sale of liquor for beverage purposes; in short, under all circumstances, except for medicinal purposes. He supposed that there would be some difficulty in carrying out the law, but he did not see any insuperable one. He thought it would be no more difficult to effectively carry out a prohibitory law than to carry out the revenue laws. He thought the temperance sentiment was strongly in the Island, outside of Charlottetown. He represented eleven townships, the most populous district of the county, and he heard no complaints against the Scott Act. So far as he knew, there was not an illicit house in the whole of that county. He could not give any reason why the Act was not effectively enforced in Charlottetown. He thought the law was good enough, if the parties who had had the carrying of it out had the moral courage or the will to do it. He expressed the opinion that if the people of Charlottetown had the opportunity presented to them of voting for the Scott Act, they would carry it by a decided majority. A general prohibitory law would have to be enforced by the Dominion Government. He was one of the eight Legislative Councillors who had declared they would not give a license law to

Liquor Traffic—Commissioners' Report.

Charlottetown. (Q. 16411). The council consisted of thirteen members. He thought that the effect of fifty places selling liquor, instead of twenty, would be just the same if they were under proper restrictions. He thought there was a marked improvement in business while the Scott Act was in force. Even when there were exhibitions in Charlottetown it was a rare thing to see a drunken man on the streets. Previous to the Scott Act there could be seen scores of carts, trucks and wagons around the licensed taverns at all hours. People became drunk and after they got home would be useless for next day. There was nothing of the kind under the Scott Act. He thought it an admirable Act, because it put rum sellers in a very awkward position. No one who had any regard for his character would be seen going into their places. (Q. 16332). He supposed that those who were found drunk on the streets got the liquor in the lower stores, where it was being sold illicitly. When requested to look at the list of convictions for drunkenness which had been handed in by the Stipendiary Magistrate, and were in 1881 197, and had gone up to 395 in 1889, and to explain, he said he could not account for it, but he thought that all the whiskey and rum brought into the Island was not, perhaps, drunk there, but some of it was shipped off to the northern boundary of Nova Scotia or New Brunswick. He could only say that he supposed those who were found drunk on the streets and were apprehended, got the liquor in the dens where it was sold illicitly. "When they went into those places the men would look around and see that no one was watching them, and if they got drunk they would stay there until they got sober." When it was pointed out that if they remained indoors they would not be arrested on the streets, and that would tend to reduce the number who were over-indulging, he said he could not account for it. He added, "I have heard people say when they got into one of these places, that a man might get his dram and go out, and when he got dry again, come back; but if they run the risk of detection, they would take three at a time, and would get drunk."

"Then the present is a better plan?—I think it is. Of course, you should have no such places under the Scott Act." (Q. 16342).

The Honorable Thomas W. Dodds, of Charlottetown, a member of the Legislative Council for eighteen or twenty years, did not think the Scott Act diminished drinking in Charlottetown, but he thought that there had been a decrease in the drinking habits of the people in the country districts. He did not think that a law prohibiting the manufacture, importation and sale of liquor in the Dominion could be effectively enforced, unless there were so many officers along the coast that the expense would exceed the whole revenue. He was of opinion that smuggling would increase, and did not think that the sentiment in favour of prohibition was sufficiently strong to make a prohibitory law a success. (Q. 16440). He believed the Scott Act was a benefit to the country people. When they came into Charlottetown and found that they were liable to be brought up before the Stipendiary Magistrate if they over-indulged, and to be called upon to give evidence in regard to the selling of the liquor, it deterred some of them from over-indulging. They bought liquor, however, and took it home if they wanted it. He thought that a general prohibitory law, if it could be carried out, might do good, but he was only speaking of it as if it were well enforced. (Q. 16426). He did not think that a general prohibitory law, which would prohibit the importation as well as the manufacture, could be carried out. (Q. 16464). He expressed the opinion that if the Scott Act was to be carried out properly, the Dominion Government should appoint a sufficient number of officers and pay them to look after it. He would not prefer a license law to a prohibitory law well enforced; but he was of opinion that it could not be enforced. He could not therefore say that he would prefer a prohibitory law, because he was satisfied that it could not be carried out.

Mr. Charles C. Gardner, of Charlottetown, was in the Island as far back as 1854. He remained there several years, went away, and came back again twenty years ago. He had lived in the Royalty five years, and in the city fifteen years. He had not held any official position. He said that formerly the conditions under the license law were altogether different to what they were now. He never was a

temperance man or belonged to any temperance organization. In the days of the license there was much drinking, and sometimes it was dangerous to drive on the country roads after dark. Farmers and others would be found driving out at a fast rate, and there was great danger of being run into. He had lived in Summerside and had personal experience of what he was describing. The Scott Act, he considered, worked a great change for the better, and people who formerly went home drunk, during the Scott Act period now went home sober. He thought there were ten men who went home drunk under the license law to one who went home drunk during the Scott Act period. He was speaking of the country people, and so far as they were concerned he believed the Act had done a great deal of good. He thought that in one way it had also done good to the town people, and in another way it had not. The lower classes got liquor more easily under the Scott Act than they did under the police regulation arrangement, and in this way: "A man could go in and get a drink and pay for it. The next day he went to the same place for liquor without having any money. He told the seller, if you do not want me to inform against you, you must give me some liquor. By using threats in this way, they usually obtained it." (Q. 16492). He stated that he preferred any system, to the license system, and a municipality by granting a license virtually became a partner in the trade. (Q. 16509-10). He thought the present system of regulation was better for the man who sold liquor, because he was free from paying a license, in addition to which he was not responsible for the evils that might result from his selling. (Q. 16512).

Mr. John Kelly, commission merchant, had resided in Charlottetown for seventeen years, had been a representative in the city council for two terms, and was now a water commissioner. The commissioners are elected by the city as a whole. He thought that the Scott Act had been about as well enforced in Charlottetown as in other places. The sale of liquor was not stopped. He had heard the evidence of other witnesses about the number of places selling. He did not personally know the number, but it was very large, and he had no reason to think the witnesses stated anything but was true. He would prefer a good license system, with the number of licenses limited. He did not consider the fee charged was of much consequence. A license having proper restrictions was what was desirable, and he thought that to make a license law a success, it should deal with the persons who drink, as well as the persons who sell, and have the places closed not later than nine o'clock at night, opened not earlier than seven o'clock in the morning, and closed on Sundays. He thought there was really a stronger temperance sentiment in Charlottetown when the Scott Act came into force than there was at the present time, (August, 1892). There was a strong temperance wave all over the Island, the movement being supported by all the churches and temperance societies in all parts of the Island. That was before the introduction of the Scott Act, (Q. 16567). The way the Scott Act was enforced he thought had a bad effect on the community, and brought law generally into disrepute. He thought the Act was responsible for much perjury, and said that he would prefer a prohibitory law if it could be enforced. He thought, however, that it would be some time before that period arrived. (Q. 16593). He was of the opinion that there were not so many temperance societies in the town as there were before the inception of the Scott Act. Asked if he thought if money had been expended for the appointment of efficient officers to enforce the law a better result would have been obtained, he answered, "No; I think it would have been very difficult to enforce the law, because there was no sentiment behind it. I think it was a law in defiance of public opinion."

Mr. Frederick H. Beer, of Charlottetown, grocer, said that there were times when the Scott Act was fairly well enforced, and his opinion was that when it was fairly well enforced there was not as much liquor sold as at other times. Had it been well enforced, it would have produced a good effect. There was a strong feeling raised against the Act, not only by the liquor dealers themselves, but by some of the newspapers. A man could not be arrested for drunkenness, but the Act was held up to disrepute, and a good many of the com-

Liquor Traffic—Commissioners' Report.

munity got disgusted. The city council could not enforce it, and would not appoint a prosecutor. The last city council dismissed the one appointed by a previous council, and the prosecutor was then nominally the City Marshal. He believed that the Marshal did good work, but the arrangement did not work well. He had heard numbers of people say that it was not fair to allow liquor to come in when it was not allowed to be sold. He thought the sentiment was stronger in favour of general prohibition than for the Scott Act. There were certain districts in the city which had elected opponents to the Act. He did not know any city in the world where a council was elected by the whole body of citizens, but it was being agitated for. He mentioned, however, that in Summerside, with a population of four to five thousand, the council was elected by the entire population entitled to vote.

The Collector of Customs at Charlottetown, a gentleman who has held the office thirteen years, explained that there are in the Island twelve outports under Charlottetown and four or five under Summerside. The Scott Act had been very badly enforced. He thought it would have proved a good law, and that it would have been better enforced but for the insincerity of a great many of its friends. (Q. 16744.) He gave particulars of liquors imported, and stated that it must not be supposed that they were all consumed in Charlottetown. He could not tell what quantity was consumed in the rural districts. He stated that the quantity entered for consumption from 1st July, 1889, to 31st December, 1890, was 43,012 proof gallons. That was at Charlottetown. The figures were for the year and a half prior to the Scott Act being repealed. The quantity entered for consumption since the repeal of the Act and up to the 30th June, 1892, was 43,370 gallons. The sale was practically free during the last mentioned period. He could not account for increase under free sale being so slight, "except that the people are beginning to see, or at all events a great many who are in the habit of drinking are beginning to see, that excessive drinking is to their injury." He thought that there were not four out of every ten supporters of the Scott Act who had not drank while the Scott Act was in operation under some excuse or other. (Q. 16782.) He had no idea what quantity of liquor, the duty upon which had been paid elsewhere, was brought in, but he believed that there was a very large quantity brought in duty-paid, from Halifax, St. John, and also from Montreal. The quantity so brought in, if it could be ascertained, should be added to the quantity shown in his statement in order to get at the total consumption. He thought that they had a very good Act now, if it was made a little stricter, and was enforced with all the strictness with which it was possible to enforce it. Under the present circumstances it would be better than the Scott Act. Those who thirsted after liquor could go and get it, while those who thirsted for liquor when the Scott Act was enforced had to "act as sneaks" in order to get it. Now they did not divest themselves of their manhood if they wanted a drink, for they could go and get it, but previously they would sneak in through a back door. The closing of the houses at six o'clock on Saturday night was an excellent arrangement. "Anyone," he remarked, "who has been residing in Charlottetown for a length of time, as I have, and who has seen the conduct of the men who drank under the Scott Act and under the License Act, must say that this is a most excellent Act. I have noticed, since this Act came into operation, that a den in Charlottetown, which I believe is one of the worst places in the province, or even in the Dominion, and which during the time the Scott Act was in force was a complete pandemonium, has been very much improved. That den, I believe, is owned by a reverend gentleman, who has allowed his sub-tenants to go to the devil while he himself has gone somewhere else to make converts to the gospel. I have been taking notice of the behaviour of these unfortunate people during the last month, and their conduct is admirable. (Q. 16793.) I cannot tell you about those who frequent the place. There is peace and quietness and apparent sobriety, and the people appear to be more decent, and seem to be more inclined to be industrious. (Q. 16796.) Prohibition is the law we want and require, but we are not prepared for complete prohibition. If the temperance lecturers are active, and if the indus

trious and temperate people work hard, perhaps in the course of ten years the people may be more ripe for prohibition than they are to-day. Prohibition in this province, from its unusual position, would be very hard to carry out. There would be smuggling, there would be illicit stills, and to carry out prohibition it would be almost necessary to have the co-operation of other places; that is to say, if prohibition existed in other places this province could not get its supplies from any other country, but so long as it can get its supplies from any other country a prohibitory law would be evaded and broken, just as the Scott Act was." He did not think the Scott Act was effective in country places. The habit was to go into some place and purchase a bottle, and then the persons would drink all of the bottle and get into a state of intoxication before they started homeward. He thought the fines for drunkenness were too small—they should be increased 100 per cent. The character of the liquor sold in the "dives and places" was "villainous," and in proof of this he cited the case of a man whom he personally knew, a man who did not drink to excess, who was deprived of his mental powers and temporarily paralyzed by some of the stuff he had taken in one of these places.

Mr. Michael P. Hogan, of Charlottetown, lumber dealer, thought the Scott Act was enforced as far as it was possible to enforce it, but it was not well enforced, because one-half of the community did not back it up. He thought the majorities in favour of the Act were reduced on each occasion; that some of those who voted for its introduction the first, and its re-introduction the second time, voted against it the third time. He regarded the last vote as an honest expression of the people of Charlottetown against the Scott Act. He stated that men had been induced to vote for the Act by giving them liquor. (Q. 16841-42). He would not favour re-enactment of the Scott Act, because he believed it had a great tendency to perjury. He believed that some of those who voted for the Act were in the habit of taking liquor. He was in favour of a stringent license law, and did not approve of the present system of free sale under regulation. He supported the Scott Act when it was first submitted, but did not support it now, because he found it made enemies of neighbours socially, and he had known of considerable perjury. (Q. 16879). He saw as much drinking in the town during the time of the Scott Act as there was previous to it. There was no doubt the conditions had changed. Seventeen years ago there was a large amount of shipping in the port, and trade was pretty good. The young men of the town had plenty of money. This was just after the building of the railway, and there was a large amount of employment offered. "Money," he said, was plentiful and liquor cheap. Liquor was manufactured on the Island at that time, and there was a great deal more drinking then from those causes." He did not think that the people had the money with which to get liquor to the same extent now as previously. From what he had seen at one or two places in the United States, he thought the high license system worked satisfactorily; but he had not had much experience. He had been a witness to liquor being used by Scott Act supporters to secure votes in favour of the Act. (Q. 16892-5).

Rev. W. W. Brewer, Methodist clergyman, of Charlottetown, considered that the operation of the Scott Act in Charlottetown was beneficial. During a residence in the city of twelve months, during the period the Scott Act was in force, he had observed that when the Act was not enforced, it was owing to local causes, and, perhaps, to some extent to the apathy of some temperance people. He did not know of more than one place in which liquor was reported as being sold in the district in which he laboured, namely, the upper end of the city. He and others had been especially engaged in a work amongst working men, the object of which was to promote social purity and temperance, and they had a membership at one time of 480. "About 150 during the winter and early spring months took the pledge and kept it; that is to say, 75 per cent of those who took the pledge kept it." These were men who were not in the habit of attending church regularly. He thought 75 per cent of them did not attend any place of worship. The work was carried on on undenominational lines. The Methodist church had no official connection whatever with the movement. He found that drink was altogether responsible for the reckless and uncared-for condition of these people. This was not during the Scott

Liquor Traffic—Commissioners' Report.

Act period. He referred to the place which had been mentioned by the Collector of Customs, which he said had been a menace to all Christian work and morals in the City, and said that there had been quite an improvement during the last few months (prior to August, 1892), which he attributed to the action of the police, backed up by active christian effort. He had observed the working of the Scott Act in Fredericton and the operation of the license law there. He considered there was an improvement all around the city in the Scott Act period. He was also familiar with Marysville, and it was greatly improved under the Scott Act. He preferred the present system of regulating the liquor traffic in Charlottetown to a license system. He said his church had pronounced against license in any form, and as a minister of that church he took that position. If he had his choice, he would prefer prohibition to the Scott Act, the Scott Act to license and free sale, but free sale over license. Though in favour of prohibition, and his church did not use fermented wines, he would allow the importation of them for other religious bodies. He desired liberty for himself, and would accord it to others. His idea of prohibition was a law which would prohibit the importation of intoxicants for beverage purposes. He would not go any further under any consideration.

The Rev. Alexander Macaulay, a Roman Catholic priest, who had been a priest about 2½ years, and a resident of Charlottetown for about ten years, said the Scott Act had not had the effect of stopping the use of liquor. He thought it was not enforced in Charlottetown at all, and that it was not enforced because at least a majority of the people considered it an irrational law, that restricted their natural rights, and consequently they could not be educated up to the point of supporting a law which they considered restricted those rights. The law fostered perjury to a great extent, and also deceit and some other abuses of the worst kind, such as immorality. The trade went into the hands of low people, who had no moral responsibility. The sale of liquor was removed from the public part of the house into the back part, and in those places many other abuses crept in besides drunkenness. "I think the habitual violation of one law will lead people to violate others as well. Their conscience becomes more lax when they habitually violate a law, so that they will not observe other laws, at least so well." Temperance societies did a great deal of good before the adoption of the Scott Act. A great temperance wave had just passed over the island, and was one of the principal causes of the adoption of the Act at the time. "I know myself" said the rev. gentleman, "that in the parish where I was born, there were perhaps six or seven liquor stores in it, and the pastor who had charge of the parish interested himself in the temperance societies, with the result of doing away with all the liquor stores that were in the place. For a couple of years between that time and the adoption of the Scott Act there was no rum, but some years after the adoption of the Scott Act two parties went there and sold on the sly. Where the sentiment of the people is not in touch with the law, the law cannot be enforced * * * * The Divine law looks upon drunkenness as the sin of the drunkard, not of the drink, as the abuse of one of God's gifts. If the people can be educated up to the point, if moral suasion can educate them to such a degree as to voluntarily adopt such a law as that or to impose it on themselves, that is all right; the more temperance we have the better." He did not believe that prohibition could be efficiently enforced. He thought the effect of the Scott Act, so far as the character of those engaged in the liquor trade in the city of Charlottetown was concerned, was mainly to drive the trade into the hands of many disreputable persons. There were many persons who would not pay a license. When there was free rum, which it practically was under the Scott Act, such persons got into the trade.

S. W. Crabbe, of Charlottetown, was a member of the council and a License Commissioner under the old law. He had no personal knowledge of cases of violation of the license law, but believes that there was selling on Sunday and after hours. "I think," he said, "the Scott Act did good. It was poorly enforced at times, and well enforced at others. The enforcement depended on whether the city council was for or against the Act * * * * The Act was repealed on account of votes being left off the list at the time of revision. The Liberal party

had a number of votes left off which were for the Act. This I believe was the cause of the Act being defeated. The vote does not show there was a great revolution in public opinion." He preferred the present system of free sale under police regulations to a license law.

When recalled he said that, on looking over the records, he found that the first prosecution made by Mr. Hudson, who was appointed prosecutor by the city council, was on the 16th April, 1887. During that year and all of the year 1888 he held office, but was dismissed in February, 1889. He said the arrests ran up in 1889 to 395, as compared with 262 for the year previous. Then in 1890 the ladies took the matter in hand, and brought the number down to 239.

Thomas Morris, of Charlottetown Royalty, had been in business as a partner in a brewery for about 40 years. He was also engaged in the liquor business. He sold wholesale during the Scott Act times. "The Scott Act did not affect the business much," he observed, "but we had to be more careful to whom we sold. We sold as much beer during Scott Act times as we do now. A quantity of beer comes here from other provinces." He did not think that the sales of other liquors increased after the Scott Act was defeated. He was a member of the city council for eighteen years. He sold to any one he thought proper; would violate any tyrannical law, and did not think a prohibitory law could be enforced. "We changed," he remarked, "the character of our beer to avoid the law; perhaps it is a little stronger now; we called it hop beer."

The Hon. James Ross, of Mount Stewart, said the Scott Act had been in force at Mount Stewart ten or twelve years. When the prosecutor was spurred on he did his duty. It had worked well for the past six months. License law, prior to the Scott Act, did not work well. There was ship-building there at that time, and quite a lot of drinking. He thought that the Scott Act had had a beneficial effect on business all round, also morally. He believed total prohibition would be a benefit, and could be enforced as well as the Scott Act. He preferred the present free sale under police regulation to a license system.

Mr. Ewan McDougall, of Charlottetown, liquor dealer, had been engaged in business for about twenty years, all the time in Charlottetown, with the exception of a few months. The Scott Act did not put a stop to the drinking of intoxicating liquors. "I stopped the sale of liquors," he said, "when the Scott Act came into force; but I found my customers wanted the class of liquor I sold, and I opened up again." He sold liquor in connection with groceries. He closed his store altogether, and stopped the sale of groceries, as well as the sale of liquor; was importuned to open again, and did so. He had sold more liquor since the repeal of the Scott Act, but made more money when the Scott Act was in force, as the profits were greater. Under the license law there was sharp competition, and the profits were small. Under the license law, in the eastern half of Charlottetown, there were only three places under license where liquor was sold in the street in which he lived, which was a great church street. That was when licenses were granted by the license commissioners. Things were not so well done when the licenses were granted by the mayor and council. The license commissioners placed the trade on a better system. After the license law was abandoned and the Scott Act came into force there were ten places in one block in the eastern half of the city where liquor could be bought. There was as much drinking during the period of the Scott Act as there had been since its repeal. The reason why his business had increased was that his premises opened on the street, while during the Scott Act time his place was not open to the street and business was done in a round-about way. The liquors did not come in his own name, duty was paid on them principally in Halifax. They came to the shipper's order, with an endorsed bill of lading, and so no person knew to whom they came. He thought that the only proper way to regulate the sale of liquor was to place it in the hands of good people, who would respect themselves at least. He thought that high license would have that effect, if it limited the number of licenses and placed the trade in the hands of respectable people. He thought that by the pulpit, the temperance lecturer, and the school, the education of the people would proceed, and the drink traffic would regulate itself. He acknowledged that

Liquor Traffic—Commissioners' Report.

he had violated the law, and said: "When you know that the law is not upheld by public sentiment, when the very best classes of the community ask you to violate it, and will offer you money as inducement to break a law, you must come to the conclusion that the law is an iniquitous one." (17612). He was convicted once for selling under the Scott Act, that is, once during the nine or ten years the Act was in force. He believed total prohibition impracticable.

The Rev. James Simpson gave evidence in regard to the Gothenburg system. He had visited Sweden in 1885, and found the system worked exceedingly well, and that it reduced the amount of drunkenness. He said it had been pointed out in evidence that, during the year there was "free rum" in Charlottetown there were 304 convictions, compared with 239 for the previous year, but it had not been brought out that in that year (1891) there had been six elections.

Mr. Alexander McKinnon had carried on business as an iron founder for twenty years in Charlottetown. The Scott Act was sometimes vigorously and sometimes indifferently enforced. When it was enforced vigorously, he thought there was very little drunkenness. He never made a record of the time which workmen lost through over-indulging in drink. He kept clear of workmen who were in the habit of getting drunk on Saturday night and Sunday, as they were not fit for work on Monday. The habits of the men had changed; but he did not know whether to attribute it to the Scott Act or not. (Q. 17,244). The Scott Act might have helped, also religious influences; at any rate, the views of many had changed with respect to drinking. (Q. 17,246.) He believed a general prohibitory law would have a good effect, if it were well enforced. He preferred the free sale under police regulation to license. He would prefer to have 78 or 80 places selling liquor, and no control over them by legislation, rather than half the number licensed. He thought that a prohibitory law could be as easily enforced as the Scott Act.

Mr. John Quirk, baker, of Charlottetown, had been on the City License Board from 1870 to 1873. He preferred total abstainers as workmen. He had not noticed that the drinking of liquor had affected the bread trade; never took much notice of that. When the Scott Act first went into operation the people were afraid to buy liquor, or at all events to do so openly. They were bound to have it, but they did not seek it as much as they did when the license law was in force. He thought the Scott Act had done good. He thought that there was not as much public drunkenness, though he was of opinion that there was as much drinking. He thought the present system of free sale under police regulation better than the Scott Act; the Scott Act better than license; and the present system better than both. (Q. 17294-5). The present law seemed to work very well. There were some things about the Scott Act that he did not like. "Among other things, it was educating the people to be perjurers right straight through." He thought that local officers would enforce the Scott Act better than Provincial or Dominion officers. (Q. 17305). He thought the present system favored temperance more than the Scott Act did.

The Mayor of the place stated that they had a Stipendiary Magistrate appointed by the Local Government, whose salary was paid by the people of the town. He might say that liquor was sold openly in violation of the law (Q. 17352-3-4); but that there was less liquor sold now than formerly, and that a drunken man was rarely seen on the streets. He thought the Scott Act was entitled to some credit for this, but the conditions had greatly changed during the last twenty or twenty-five years. He thought there were, perhaps, half a dozen places known to the police where liquor was sold. The people were arrested and fined occasionally. He did not know the number of times they had been fined, but he should think five or six times in a year; \$50 was generally the fine for a first offence, and \$100 for a second. He thought no attempt had been made to bring them up during the past year. The previous year there was an inspector appointed by the town council. This year, 1892, there was no inspector; the police had to look after the business. There were two policemen and one of them was considered to be the inspector to look after the enforcement of the Scott Act. Judging from the good order of the town, he supposed the people were satisfied with the manner in which the law was enforced; though offenders, when arrested, were treated in the matter of fines

as having only committed a first offence. (Q. 17385). The fines received were, for the year ended 31st January, 1892, \$600. He produced some figures of arrests for drunkenness. A statement of these will be found in Appendix 27, vol. 1. He thought the Scott Act had restricted the consumption of liquor. As an elector he would vote for a general prohibitory law; but he doubted if it could be more successfully carried out than the Scott Act. He thought the Scott Act was fairly enforced, except in a few small towns. People travelled now more by railway, and there was less business for wayside inns. The convictions for violations of the Scott Act, he said, were:—

1880	5	1887.....	14
1881.....	6	1888.....	12
1882.....	20	1889.....	17
1883.....	7	1890.....	25
1884.....	17	1891.....	17
1885.....	19	1892.....	9 to August.
1886	12		

He was sure there was less drunkenness in Summerside now than formerly, but whether it should be attributed to the Scott Act or not, he could not say. (Q. 17483.) He said that, comparing the condition of the town under the old license law with its conditions under the Scott Act during the last ten years, he thought there was very little difference in the social condition of the community. He thought the Scott Act might be so enforced as to make it next to impossible for a man to continue in the business of selling liquor; but he thought the community would be indifferent about it. (Q. 17501-5.) He thought that prohibition, if it could be enforced, was desirable, but that there would be difficulty in getting the people to fall in with the law. He would leave it for two years, but he believed that the majority of the people were in favour of the Scott Act. He thought a general prohibitory law would be more difficult to enforce than the Scott Act. (Q. 17531.)

The licensed vendor for the sale of liquors under the Scott Act for the County of Prince was examined before the Commission. He said he paid duty in Summerside on the greater part of the liquors he sold. There was some which came from St. John and Halifax, and a little from Montreal, the duty on which was paid. He got some liquor from Glasgow, on which the customs duties were paid in Summerside. His sales for 1891 he supposed would amount to \$8,000. He stated that he had not made any return to the Dominion Government, as provided by law, of his sales. He had no registry of his sales. The orders were strung on fyles, and he thought they were probably 5,000 in two years. Some orders were written on scraps of paper, and were evidently parts of a larger order covered by some former certificate of a medical practitioner. Some of these orders were for "eight bottles of brandy," "eight bottles of spirits for medical use," "gallon of whiskey for medical use," "ten gallons ale for medical use," "three quarts of spirits." The sales were for the whole County of Prince (population 36,470). There were some consumed in the town, but the greater quantity went to the country. There were places selling in town, selling illicitly, which interfered with his business, and the authorities knew it as well as he did. If it was not for their selling, he would do a much larger business. The vendor stated that it occurred to him sometimes that the liquor orders were for beverage purposes, but it did not occur to him that he was violating the law in selling for beverage purposes. (Q. 17763.) The appointment was in the gift of the Provincial Government. He belonged, at the time of his appointment to the office of licensed vendor, to the Order of Good Templars, and a division of the Sons of Temperance. He did not belong to them now. He was partly recommended by them and partly by others for the position.

The stipendiary magistrate, who was appointed to his office in 1885, handed in a statement of the convictions, which corresponded with the figures given by the mayor. He stated that in 1885 all the convictions were for first offences; in 1886 all first offences; in 1887 one second offence; in 1888 all first offences; in 1889 all first offences; in 1890 sixteen first offences, five second offence and four third

Liquor Traffic—Commissioners' Report.

offences ; in 1891 fifteen cases. He thought that the figures for 1890 and 1891 were not quite correct. For the current year, 1892, there were eight first offences and one second. When the Scott Act first came into force in the county there were a good many small places selling. He thought at the present time most of them had gone out of business. The sellers in the county were, he thought, pretty nearly limited to the villages of Tignish and Alberton. He did not think the Scott Act was an honest and straightforward law, because, morally speaking, the buyer must be equally guilty with the seller ; but the law said such is not the case, and he did not think that was in harmony with the moral sentiment of the people. "If the people," he said, "are not ready for the law adjusted in this way, and made fair and square, they are not ready for anything. In so far as regards legislation respecting temperance or any other subject, the law should do right, because it has often been said that those who sell are engaged in a not strictly moral business. If there is anything in that contention, they should not be surrounded with temptation. I did not consider the Act carefully until it became my duty to pronounce judgment in cases brought before me under it. I have found that sometimes witnesses have induced parties to sell liquor for the purpose of securing conviction against them. That, however, occurs very seldom now. Speaking from recollection of the cases coming before me, those for petty larceny, for example, are not due to liquor ; and I cannot say outside of the convictions for drunkenness, that liquor is an element in the criminal calendar. The only cases flowing from drunkenness that I can recollect just now are a case or two of assault. One case of grievous assault was the result of being drunk. The party is now in jail, and serving his term. It was an assault on a police officer. (Q. 17896.) The general view is that the Act has given rise to perjury ; but I do not think that that is invariably the case. Of course there may be some men who are rather defective in regard to morals, but beyond that I do not think I am prepared to go." He thought that there was far less drinking done than formerly ; that the temperance sentiment was growing, and that the temperance organizations were promoting temperance. He said that in the practical working of the Act he found the imposition of fines for the first offence was, perhaps, more effective than imprisonment for a third offence. Charges for a first or second offence could be proven more readily, and convictions were more easily obtained. He thought the Scott Act was class legislation, and that the state had no right to pass class legislation. He did not think there was any law so openly violated in Summerside as the Scott Act.

The Collector of Customs for Summerside supplied information as to the importations of liquor. He thought the condition of the town had much improved since the old license system was in force, and he attributed some of the improvement to the prohibition provided for in the Scott Act, which he thought had, in spite of violations, a beneficial effect. He did not know about places selling illicitly in the town, but it was common report that there were several.

The following is a statement of the importations of liquor :—

Year.	Gallons Imported.	Gallons entered for Consumption.
1878	*1857	—
1879	228	384
1880	76	232
1881	276	246
1882	574	348
1883	411	553
1888	934	932
1890	589	296
1891	1795	1351½

There had been a steady increase in the quantity imported. There were some still in bond. He had not had time to take out the quantities imported between 1883 and 1888 separately. At one time the importers might buy more liquor, duty paid in Halifax, for instance, than at other periods. He did not think it would be

*This year June to 31st December.

more difficult to prevent smuggling under a prohibitory law than it was now. He thought the feeling of Prince Edward Island was in favour of a general prohibitory measure.

The Sheriff of Prince County, who had held the office for twelve years, stated that he thought there were about six persons in the county jail at the present time. Sometimes there were as many as twelve. Sometimes the rooms were entirely empty. The principal offences for which prisoners were committed were breaches of the Temperance Act and drunkenness. He thought, perhaps, that all amendments to the Scott Act which would be of any service had already been made. He thought that the punishment of purchasers, as well as sellers, of liquor would be just and have a wholesome effect. He thought the Scott Act had been beneficial to the community, both in Summerside and throughout the county, but more so in the country parts. He thought there were half a dozen places selling liquor illicitly in Summerside. He believed a prohibitory law was desirable, and that it could be more easily enforced than the Scott Act, and that the liquor trade as it flourished under the license law had an injurious effect upon the business community. He also thought that a prohibitory law could be enforced, and that the country was ripe for it.

The Hon. Benjamin Rogers, of Alberton, merchant, and a member of the Legislative Council of the Province, thought the Scott Act was well observed in the rural districts. He thought that in Alberton, since the adoption of the Scott Act, there had been a very great change in the condition of the town for the better, and he attributed it largely to the Scott Act. He thought that the moral and religious influences without the Scott Act would not have brought about an improvement to the same extent. He preferred the Scott Act to a license law, and considered that a general prohibitory law would be preferable to the Scott Act, in that it would be better enforced, or, at any rate, it could be more easily enforced than the Scott Act, for the Scott Act was a very difficult law to carry out. He thought, that from business principles, and outside of moral considerations, prohibition of the liquor traffic would be beneficial to the community. He did not think that high license would have the effect of restraining the trade, as there would be illicit selling, even if there were high license. He said: "I do not like free trade in liquors, nor do I like a license. I think that if liquor has to be sold, it is better being sold illegally than legally, for this reason, that the responsibility for wrong doing would rest on one party's shoulders, while under the license, it would rest on the whole community. Besides, the business would be more disreputable when it was not protected by the sanction of the law, and a great many people who would go to a tavern to drink, if the tavern were legally established, would not go into places that were selling contrary to the law." (Q. 18334). He thought that the feeling in the country outside of the town was almost entirely in favor of prohibition, but that the feeling in the town was, perhaps, rather different, and he did not know that he could give a reason for it. Asked, "Supposing the case of Charlottetown were the case of Alberton, where you reside, would you rather that there should be a limited number of places selling under license, to free liquor with police regulations." "I would rather," he replied, have free liquor. I think the principle of license applied to the sale of liquor is altogether out of place. (Q. 18380). I do not think the guilt of the purchaser at all equals the guilt of the vendor. The bulk of the people who buy do so to satisfy their depraved appetites, and they do it almost as a matter of necessity at the time; and, therefore, we should be willing to adopt almost any expedient to get rid of the liquor. The sellers deliberately carry on the traffic." (Q. 18387).

Mr. David Rogers, M. P. P., of Summerside, stated that he was altogether opposed to the principle of license. He thought that free sale under regulation, as in Charlottetown, was the next best thing to prohibition, and that the Scott Act was fairly well enforced, but that it was a difficult thing to enforce it. He did not think there was any difficulty in purchasing liquor in Summerside, and remarked: "It appears to me it would not make much difference how strictly the law was enforced, for there would still be no difficulty in getting liquor." (Q. 18446). He was in

Liquor Traffic—Commissioners' Report.

favour of a general prohibitory law, and did not think a Provincial prohibitory law "would be worth a cent."

The Rev. John A. McDonald, Roman Catholic Priest in charge of the church at Miscouche and Wellington, who has resided in the district three years, considered the Scott Act well observed. There was no sale of liquor in his parish. When the Scott Act was brought into force in the district there were temperance societies in operation, and the people were temperate. He considered moral suasion to be the chief element in promoting temperance, and that legislation was desirable to back up moral suasion and restrict the sale. He did not consider that Divine law forbade the moderate use of wine. He thought that the reason why the Scott Act was not well enforced in Summerside was that public sentiment was to a large extent opposed to it. He had had very little knowledge of the working of the License Law, but thought that a local option act could be enforced as easily as the Scott Act, and, of course, the authorities would refuse to grant licenses where there was a strong public sentiment opposed to their issue. (Q. 18470). He thought the people were better educated and saw the evils of intemperance, and that they would now enforce more strictly a license law than it was enforced when in existence in the past. He thought that drunkenness had decreased a good deal in the country places, and he attributed this, to a great extent, to moral teaching and moral suasion. He thought that the having of a law on the statute-book which was flagrantly and regularly violated, had a bad effect on the morals of the people. A great many persons were in favour of having a law on the statute-book to prevent the sale of liquor; but he did not know whether they favoured the Scott Act or some other restrictive law. Personally he did not favour the passage of a general prohibitory law. He said: "I should not consider that it was just towards those persons who differ from me in opinion, moderate drinkers, to advocate such a measure. (Q. 18489-93). I think it would not be just to those persons who use it in moderation. I think it would be an unjust interference with them. I would have the trade so restricted that no abuse would flow from it, and then if the minority wished to have liquor in moderation they could do so." (Q. 18499).

Mr. John F. Gillis, Doctor of Medicine at Summerside, who had been in practice there for fourteen years, said he thought the Scott Act was as fairly and well enforced in Summerside as it could be. He considered it would be better if the traffic was controlled by the Dominion Government, instead of by local authorities. He did not think the Scott Act had curtailed the sale of liquor in Summerside at all. There were other factors influencing the matter. Formerly there were vessels built in Summerside, and a large floating population would be paid off at times, who would spend money in drink. That element had all been removed; but he did not think there was any difficulty in obtaining liquor in Summerside. He was not in favour of a general prohibitory law, as he did not think the people would observe it. He thought they would be very apt, if such a law were put in force, to resort to drinks probably more injurious than alcohol. (Q. 18530). He thought the sale of patent medicines had increased, and that the large consumption resulted from the alcohol which they contained. Perhaps those who bought patent medicines did not know what they contained, but they sowed the seed and gave the appetite for drink. He said he would not think it extraordinary if a doctor gave an order for eight pints of liquor. If the person desiring liquor lived in Summerside, he, the doctor, would order a bottle. He did not consider that the moderate drinker, who took his liquor well diluted, had any less chance of recovery from illness than a total abstainer, nor were the children of moderate drinkers more liable to brain and nervous diseases than others. He did not think that the majority of the people of the whole Dominion were in favour of total prohibition of the liquor traffic. He said that some of the country people manufactured a kind of liquor from blueberries and spirits, and called it "shrub," and that they occasionally used it as a medicine.

Mr. Edwin S. Blanchard, M.D., Superintendent for the Hospital for the Insane, Charlottetown, stated that they had about 140 patients in the asylum, of which he had been the superintendent for eighteen years. The number was divided about equally between males and females. He had kept statistics of the causes producing

lunacy, but would not declare them to be in any way exact. He thought a very small percentage of the cases were due to drunkenness, not more than 5 per cent, if so much. He had no doubt that there were quite a number of cases caused indirectly by drink, more, perhaps, than were caused directly. The number of patients in the hospital had increased, owing to the increased hospital accommodation. A change in drinking habits would have no perceptible effect upon the number; he did not think it would have any effect one way or the other. He thought that children of drinkers were very subject to nervous diseases in different forms. He thought the drinking habits of parents had a predisposing effect to nervous diseases in their children, and to insanity to a very great extent (Q. 15918). He thought that liquors sold by druggists on the orders of medical men were much superior to those sold at other places. He had not observed any decrease in the cases of drunkenness on the streets during the period the Scott Act was in force in Charlottetown. He thought he had noticed a slight increase since the Act was abolished. He thought that during the summer of 1892 especially, there had been a good deal more drunkenness than previously. Asked if he attributed that to free sale, he answered yes, but that it was virtually free sale during the Scott Act. He said he would prefer a rigid license law to either the Scott Act or the present plan of restriction by police surveillance. He thought a prohibitory law would be very difficult to enforce, and probably more difficult in the Island of Prince Edward than in any other province, as it would be next to impossible to prevent smuggling all along the coast. True prohibition would be of immense value. He considered wine useful in certain diseases, and alcohol more so. He was of opinion that the moderate use of wine after a man reached a certain age was beneficial, and he did not think that two or three glasses of beer or wine would injure any ordinarily strong man at all.

A statement of the quantity of liquor entered for consumption in the province will be found at page 31 of this Report. There is no export of liquor from the Island.

The entries for consumption undoubtedly represent a smaller quantity than the actual consumption. It is certain that there would be a disposition to send liquor into the Province duty paid during the period when the Scott Act was in force, inasmuch as importations would be more difficult to trace, and they might be sent in under other designations, if they had not to pass through the Custom House. Under free sale, the tendency would be to send the shipments in bond and pay duties and remove the consignments as they were sold to customers for retail.

Upon this subject the following evidence was given:—

Mr. James Currie, of Charlottetown, Collector of Customs, in answer to the question (Q. 16789, vol. 1). "Do you know whether, after the Scott Act became the law, there were larger quantities of liquor brought in by express or in small packages for private domestic consumption and office consumption and so on? That is, liquor purchased at Halifax and St. John on which duty had been collected there, purchased from the wholesale dealer? Have you any means of knowing that?" says:—"I have no idea of what quantity was brought in in that way. I have no idea, I say, of the quantity; but I believe there was a very large quantity brought in duty paid from Halifax and St. John, and I think also from Montreal."

Mr. Ewan McDougall, of Charlottetown, liquor dealer, stated (p. 888, vol. 1), "My importations were done in a curious fashion. The liquors did not come in in my own name, but duty was paid on them principally in Halifax, and they came to me to the shipper's order, with an endorsed bill of lading, and so no person knew to whom they came. * * * Very little duty was paid on it here. It was the same with the Inland Revenue goods; they came in duty paid. * * * The returns at Halifax would show the entries and they would be credited there."

The Scott Act was put in force in Prince and King's Counties and in the city of Charlottetown in 1879. In Queen's County it was adopted by vote on the 22nd September, 1880. In 1879, therefore, it was in force over the greater portion of the Province, and in 1881, in force over the whole Island. It continued in force down to 1891, when it was repealed in the city of Charlottetown. Last year (1894) it was again voted upon in the city, and was carried by a small majority. From 1881,

Liquor Traffic—Commissioners' Report.

therefore, to 1891, there was in force over the whole of the Province such prohibition as the Scott Act provided. From 1891 to 1894, there was free sale in the city of Charlottetown, the largest city on the Island.

The Provincial Legislature declined to give power to the city to issue licenses after the repeal of the Scott Act, but passed a law which was put in force in 1892 placing the traffic under very stringent police regulations.

It is doubtless the case that there have been very considerable changes in the population of such places as Charlottetown and Summerside, where in former years a considerable business was done in ship-building, which has now been wholly abandoned.

The following figures show the quantity of liquor entered for consumption :—

				Average Consumption per Head of Population.		
				Spirits.	Beer.	Wine.
				gali.	gall.	gall.
For the 5 years ended 1889.....				598	688	042
“ 5 “ 1885.....				435	273	017
“ 5 “ 1890.....				319	415	012
“ 3 “ 1893.....				257	361	013

These figures indicate that there has been a reduction in the consumption from the average of the first period of five years. They also indicate that, except in the matter of wine, the average consumption of the last three years, with Charlottetown under practically free sale, was smaller than the average consumption for the five years immediately preceding. Wine was very slightly higher.

The statistics of the convictions for offences will be found at page 65 of this report.

The average number of convictions for all offences, for drunkenness, and for offences against the liquor laws was :—

				Ratio per 1,000 of population.		
				All offences.	Drunk- eness.	Offences against the liquor laws.
For the 5 years ended 1885.....				5.13	2.43	0.62
“ 5 “ 1890.....				4.86	2.81	0.70
“ 5 “ 1893.....				4.55	2.57	0.61

Appendix No. 21 gives the arrests in the city of Charlottetown for all offences and the arrests for drunkenness from 1880 to 1893, inclusive. The arrests for drunkenness in 1893, when the city had free trade in liquor, were much below the average and, in fact, the lowest on the return, with the exception of those for 1881. The following are the figures for each five yearly period :—

				Ratio per 1,000 of population.	
				All offences.	Drunk- eness.
For the 5 years ended 1884.....				34.78	20.08
“ 5 “ 1889.....				33.07	24.16
“ 3 “ 1893.....				26.68	22.06

Appendix No. 11 gives the number of the insane remaining in the Provincial Asylum at the end of each year from 1877. The average for the four years ended 1880 was 0.80 per 1,000 of the population. This ratio steadily increased until, in 1892 it was 1.25 per 1,000 of the population.

The census returns give the following statistics of the insane of the province: In 1881, 351, which was equal to 3.22 per thousand of the population; in 1891, 333, which was equal to 3.00 per thousand of the population.

Appendix No. 3 gives the population of the common jails of the province from 1880. It will be found that the number of committals was in 1880, 3.18; in 1881, 2.25; in 1890, 1.79; in 1891, 2.46; in 1892, 1.73; and in 1893, 1.47 per thousand of the population. For the four years ended 1870, the ratio of committals to the common jails was 3.22, and for the ten years ended 1880, 4.51 per 1,000 of the population. The number remaining at the close of 1881 was 0.25; 1891, 0.22; 1892, 0.22; and 1893, 0.16 per thousand of the population.

The average number of the poor remaining in the Poor's Asylum for 1869-70 was 0.31 per 1,000 of the population. For the ten years ended 1880 it was 0.39 per 1,000 and for the ten years ended 1890, it was 0.42 per 1,000, and for the two years 1891 and 1892 the average was 0.42 per 1,000.

The following figures were supplied to the commission by Mr. Fitzgerald, the stipendiary magistrate of Charlottetown. They were prepared in order to show if any change in the convictions for offences had followed the adoption of free trade in liquor, but the period covered is probably too short to admit of any general deduction being made with safety.

CONVICTIONS in the City of Charlottetown, P. E. I.

	1	2	3	4	5
	July '87 to July '88	July '88 to July '89	July '89 to July '90	July '91 to July '92	July '92 to July '93
All offences.....	32	44	66	*159	50
Drunkenness.....	208	257	284	319	186

* Includes breaches of liquor law.
1, 2, 3, Scott Act periods.
4, Free sale.
5, Sale under police regulation.

The stipendiary magistrate in transmitting the foregoing opinions, remarks:

"I am of opinion that under the present system as regards drunkenness in the city, it is much less than it was during the free rum period—that is the year we had no law; but as compared with the years we were under the Canada Temperance Act, it is of about the same volume, slightly smaller, if anything. There is this, however, to be said, that under the present Regulation Act, the law is being observed, not grossly violated and brought into disrepute as it was under the Scott Act. Our drunkenness to-day is I think largely confined to the town rough and chronic inebriate. There is, I regret to say however, a larger amount of drunkenness noticeable among country people on their way home from town than in Scott Act times. They unfortunately too often fill up and then drive on home."

The following figures of the convictions for drunkenness in the city of Charlottetown for six months following the re-adoption of the Scott Act have been supplied since the foregoing was written. Alongside of them are placed the figures for the corresponding months of 1893. These statistics go to show that the reduction in the

Liquor Traffic—Commissioners' Report.

number of convictions for the year ending July, 1893, continued in an increasing ratio during the six months following:

	1893.	1894.
August.....	20	6
September.....	43	16
October.....	18	11
November.....	22	10
December.....	11	8
January.....	5	4
Total.....	119	55

Appendix No. 65 contains a brief statement of temperance organizations, and efforts made, to promote abstinence.

Appendix No. 66 contains information which has been supplied to the Commission by the Assistant Provincial Secretary of Prince Edward Island in respect to expenditure incurred for gaols, lunatic asylums, and the support of the poor. A portion of this expenditure is recouped in the province.

The preceding statements show a reduction in the quantity of liquor entered for consumption, but it is highly probably that the returns do not correctly represent the total consumption of the province.

The criminal statistics do not show any marked change in the number of convictions for drunkenness and for offences against the liquor laws.

There has been an increase in the number of insane on the Island, as there has been in every other province in the Dominion.

The population remaining in the jails of the province at the close of the year has not materially changed since the adoption of the Scott Act. The Commissioners have not been able to obtain a full return of those remaining in jail for the years prior to 1881.

The number of the poor remaining in the poor asylum has not decreased during the period that the Scott Act was in force in the province.

Taking the average convictions for drunkenness for the ten years ended 1890, Prince Edward Island has a higher ratio than either Nova Scotia or Quebec. For the year 1891, the ratio in the province is above that for the entire Dominion, and is higher than in Ontario and Nova Scotia, and is practically the same as that of Quebec. In 1892, the ratio was higher than that of the whole of the Dominion, and higher than the ratios of Nova Scotia, Ontario and Quebec. In 1893 when Charlottetown had free sale under police regulation, the ratio of convictions for drunkenness in the Island was lower than it had been for any period from 1881, and was lower than the ratio of any of the other provinces, with the exception of Ontario and Nova Scotia.

Taking the convictions for all offences for the same periods, the ratio per 1,000 of the population in Prince Edward Island was lower than the ratio of any of the other provinces, with the exception of Nova Scotia up to the year 1893, when the convictions in Nova Scotia largely increased, and the ratio was higher than that of Prince Edward Island.

After what has been stated, it is almost unnecessary to point out that drunkenness has not been extinguished in Prince Edward Island; that, taking the lowest estimate of the consumption of liquor, it far exceeds what could properly be required for medicinal, mechanical and sacramental purposes; that brewing has been carried on, and a large quantity of liquor made and sold during the time that the Scott Act was in force, and that there has been no pretence that liquor was being shipped to places where the Act was not in force, either within the boundaries of the Island or elsewhere; that the licensed vendors, at any rate in one case, have flagrantly and openly violated the law, and have not made the returns of their sales, as prescribed by the law; and that the effect of the law has not been calculated to elevate the public mind and increase respect for law and authority generally.

PROVINCE OF QUEBEC.

In Appendix No. 67, will be found a memorandum of the existing liquor laws of the province, and in appendix No. 48 a statement of the license fees which are now and have been imposed from time to time since 1876. From the latter it will be seen that the fees have been largely increased at various times. There are some few cases where cities have been authorized in their charters to charge exceptional fees.

An inn, comprising those establishments also called hotels and taverns, is a house of public entertainment, where intoxicating liquors are sold; and houses of entertainment are described as being houses or places of public resort, established for the reception of travellers and of the public, where, in consideration of payment food and lodging are habitually furnished.

A restaurant is an establishment where, in consideration of payment, food (without lodging) is habitually provided, and where intoxicating liquors are sold.

A liquor shop is any store or shop where intoxicating liquors are sold, without food and lodging being provided. They are divided into wholesale and retail shops. A wholesale liquor shop is that wherein are sold at any one time intoxicating liquors in quantities not less than two gallons, imperial measure, or one dozen bottles of not less than one pint. A retail liquor shop is a place wherein are sold, at any one time, intoxicating liquors in quantities not less than one pint, imperial measure.

A special license for the sale of intoxicating liquors at large gatherings, such as picnics, etc., may be granted by the Provincial Treasurer, upon an Order in Council for that purpose, to societies, clubs and corporations, having control of the same, or to the person recommended by them, at such rates and on such conditions, and for such time, as may be determined by the said Order in Council. "No intoxicating liquors shall, however, be sold or given away by any person whomsoever in village or rural municipalities, at any auction sale, ploughing match, exhibition or political meeting, nor during municipal or school elections, excepting beer and wines to be used at the table for meals, under a penalty not exceeding \$50 and an imprisonment not exceeding one month in default of payment." (Art. 857a.)

The cities of Montreal and Quebec are authorized to make a charge for the issuing of certificates, on which the provincial officers grant licenses to sell, of \$8 for each certificate. In other districts the councils are authorized to make a charge for the granting of certificates, etc., to an extent not exceeding \$20 for each license. The restriction does not limit any powers given to such municipalities by their charter or Act of incorporation. (Art. 845.)

A charge of one dollar is payable to the Collector of Provincial Revenue for the granting of each license, in addition to the established license fees (Art. 878), and the law provides that, "it shall not be lawful for any municipal council of a city, town, village or other local municipal authority to levy, by by-law, resolution or otherwise, any license, tax, impost, or duty, exceeding in any one year \$200 in cities and towns, and \$50 in other municipalities, upon holders of licenses under this law, either for the confirmation of a certificate to obtain a license, or otherwise, for the occupations for which they hold such licenses. (Quebec License Law, Art. 927b.)

Security has to be given for good behaviour and for the payment of any fines imposed upon, or damages awarded against the holder of any license. (Art. 846.)

A small force of provincial police is kept in the Montreal district, and it is charged with the duty of preventing breaches of the Liquor License Law, that is, selling without a license, selling in prohibited hours, to minors, etc. It is aided by the city police force.

The law prescribes the accommodation to be provided by tavern keepers; prohibits the sale to minors or interdicted persons; imposes liability for damages resulting from the sale to intoxicated persons, or from the selling in quantities to cause intoxication.

Liquor Traffic—Commissioners' Report.

It also contains a clause under which municipalities can determine not to issue licenses for the sale of liquors within their boundaries. It is as follows:—

"Whenever a municipal by-law shall have been passed, and confirmed, as by law required, prohibiting the sale of intoxicating liquors within the limits of its jurisdiction, and a copy of such by-law has been transmitted to the Collector of the Provincial Revenue entitled to the same, the Collector of Provincial Revenue is forbidden to issue any of the licenses hereinbefore mentioned for the sale of such liquors, excepting steamboat bar licenses, and licenses of railway buffets, such license not being affected by the present restriction." (860.) Notwithstanding the quashing, by judgment of a Court of Justice, of such a by-law, the Collector of the Provincial Revenue shall not grant any such licenses within two months from the rendering of such judgment, unless such judgment is final." (860.)

In each municipal district adopting the foregoing clause, one person may be licensed to sell liquors for medicinal, etc., purposes on the certificate of a physician, for a patient under his immediate charge, or by a clergyman, only for a person whose spiritual adviser he is, in quantities of not more than three half-pints, imperial measure; the vendor has to keep accounts and make reports of the persons to whom, and of the persons on whose certificates, he sells, which certificates have to accompany his report to the Collector of Provincial Revenue for his district.

In the city of Montreal a board, composed of the Recorder and two Judges of the Sessions of the Peace or any two of them, decide what licenses shall be issued. In Quebec the Judge of the Sessions of the Peace or the Recorder, and in the cities of Hull and Three Rivers, the Registrar of the county, the Recorder of the city, and the Clerk of the Circuit Court, or one of them, if there are more than one, are the Commissioners for granting licenses. In other municipal districts the application for a license has to be approved by the council and certified by the mayor and secretary before the license is issued.

The law originally provided that applications for licenses should be signed by one-quarter of the resident municipal electors, or a majority of the resident municipal electors, if they are less than fifty, of the parish, township, village, town or ward of the city within which is situated the house for which such license is applied for, to the effect that the applicant is known to the signers, is honest, and of good repute, qualified to keep a house, and that the house is needed.

The Legislature (52 Vic. cap. 14, sec. 15), declared that the clause requiring a larger number of signatures should remain suspended until put in force by proclamation of the Lieutenant-Governor, and that the number of signatures required in the meantime for the granting of a certificate for an inn license should be 25 municipal electors, and for a license of retail spirituous liquors in shops, three municipal electors.

No license can be issued in the cities of Montreal and Quebec if an absolute majority of the municipal voters residing, or having their places of business within the municipal polling district of the ward shall signify their opposition in writing to the granting of such license.

The statistics of liquors entered for consumption on which duties were paid in the Province of Quebec, given at page 38, show the following ratios *per capita* of the population:—

Year.	Spirits.	Malt Liquors.	Wines.
	Galls.	Galls.	Galls.
Average 1871-1875.....	1·439	2·252	·387
" 1876-1880.....	1·045	1·818	·233
" 1881-1885.....	1·262	1·960	·270
" 1886-1890.....	1·048	2·605	·241
" 1891.....	·945	2·895	·252
" 1892.....	·869	2·690	·229
" 1893.....	·960	2·534	·222

As there are large importations of liquor through the port of Montreal, it is highly probable that the consumption of liquor in the province is less than these statistics show. In the matter of foreign spirits, and more especially wines, there is, no doubt, a considerable shipment from the province after duty has been paid. To the extent that such shipments are made in excess of importations into the province from other provinces, the figures quoted would be increased beyond the actual quantities consumed by the population. The population of the province possibly consume a larger quantity of imported light wines *per capita* than the population of the other provinces. The conditions, however, have probably not been materially altered during the period covered by the returns, and therefore the comparison of the entries in one period with another should fairly represent the changes which have taken place.

The Assistant Treasurer, writing by direction of the Honourable Treasurer of the Province, who has on all occasions evinced the most earnest desire to supply the Commission with information and to assist them in carrying on their investigation, on the 14th April, 1892, said:—"The Treasurer spoke to me yesterday about returns that you want. Mr. Brosnan is at work in connection with the receipts of the municipalities from licenses. *I may say, however, that we have no returns from municipalities of what they may receive from licenses, nor have we any returns from them of what they may expend on jails or the poor.*"

A return prepared in the Department of the Provincial Treasurer shows the revenue derived from fees for licenses issued and fines imposed, and the number of such licenses, to have been as follows:—

Liquor Traffic—Commissioners' Report.

STATEMENT of Amounts Received in the Province of Quebec from the Granting of Licenses for the Sale of Liquors, and for Fines Imposed.

Fiscal Year.	No. of Licenses of all Kinds.	Provincial Government Receipts for Licenses.	Amount of Fines Collected by Provincial Government.	Total.	Salaries, Expenses and Commission.	Net Receipts.	Remarks.
		\$ cts.	\$ cts.	\$ cts.	\$ cts.	\$ cts.

1890-91.....	2,453	536,892 08	15,435 57	552,327 65	45,133 62	507,184 23	
1891-92.....	2,462	582,237 08	15,687 31	597,924 39	48,690 67	549,233 72	
1892-93.....	2,567	596,060 78	17,114,52	613,124 30	41,979 04	571,145 26	

In the fiscal year 1867-8, the number of licenses issued was 1,886; in 1892-3, the number was 2,567, showing an increase of 36 per cent. The receipts from licenses and fines in the meantime increased from \$69,000 to \$613,000, or 88·7 per cent.

The population of the province, was, in 1871, 1,191,516; in 1893, it was estimated to be 1,515,870, and the increase was therefore 324,354, or 27·22 per cent.

The number of licenses issued reached the highest point in 1887-8, when the receipts were \$333,000. In 1892-3, the number of licenses had fallen from what they were in 1887-8, 321, or 11 per cent, and the receipts had risen to \$613,000, or an increase of 85 per cent.

In the year 1887 an increase of \$10 per license was made to the tariff of fees. In 1888 a further increase of 25 per cent of the fees chargeable in 1887 was made. In 1890 an increase on the fees of 1888 was made, varying from 50 to 100 per cent. In 1892 additions were again made to the fees for sale under municipal prohibitory by-laws, for vendors under the Canada Temperance Act, both wholesale and retail, and some new licenses, were added to the previous lists, for dining cars, sample and commission licenses, etc. (See Appendix No. 48.)

Following the large increase made in the fees in 1890 there was a falling off in 1890-1 of 308 in the number of licenses issued, compared with those granted in 1889-90.

The fees for vendors under the Canada Temperance Act have been as under :

RETAIL.

Year.	Cities.	Towns.	Villages.	Other Organized Territory.	Unorganized Territory.
	\$ cts.	\$ cts.	\$ cts.	\$ cts.	\$ cts.
1886.....	70 00	50 00	25 00		
1888.....	87 50	62 50	31 25		
1890.....	130 00	90 00	50 00		
1892.....	200 00	160 00	125 00		50 00

WHOLESALE.

1886.....	80 00	70 00	60 00		
1888.....	100 00	87 50	75 00		
1890.....	150 00	130 00	115 00		
1892.....	225 00	200 00	160 00		

The fees imposed on vendors for medicinal and religious purposes in municipalities where prohibitory by-laws are in force have been as follows :

Year.	Cities.	Towns.	Villages.	Other Organized Territory.	Unorganized Territory.
	\$ cts.	\$ cts.	\$ cts.	\$ cts.	\$ cts.
1880.....	20 00	10 00	2 00	1 00

1892.....	200 00	160 00	125 00	125 00	70 00

Liquor Traffic—Commissioners' Report.

Mr. Brosnan, Comptroller of Provincial Revenue, in his evidence, quoted from a report made by himself to the Honorable Treasurer on the subject of the local option by-laws.

The following are portions of that report, made on the 17th June, 1892:—

"I have the honour to report that the working of articles 861 to 865 of the Revised Statutes respecting the sale of liquor under certificate in municipalities where a prohibitory by-law is in force, is very unsatisfactory. A much larger quantity of liquor is sold than can be needed for medicinal purposes; the certificates, which are granted in profusion, are, for the most part, disgraceful scraps of paper, indicative of the carelessness and indifference of those who deliver them, and I am assured that forgeries are not infrequent. But the point to which I desire more particularly to call attention for the moment is that of the number of certificates granted, irrespective of all other considerations, and I shall lay before you a few typical instances, which will serve to show what is generally done throughout the province. During the month of January, 1889, the following liquor was sold in the parish of——— 279 bottles of whisky, 217 bottles of gin, 28 bottles of brandy, 11 bottles of wine, 6 pints of whisky, 1 pint of beer and $\frac{1}{2}$ pint of brandy.

"In presence of the above facts, I confess, as I have already stated to you verbally, that I have no confidence in the certificate system, nor in that of prohibitory by-laws in general, and I would gladly see it done away with, and regular licenses issued in every municipality. This change however, cannot be hoped for at present: but, as the low price of these medicinal licenses is one of the inducements to their being applied for, as such large quantities of liquor are sold under them, and it seems next to impossible to reach the signer of the certificates, I would suggest that the rate of duties payable on such licenses (and what I now say applies equally to licenses issued under the Canada Temperance Act) be raised to the same figure as that fixed by the law for retail shop licenses, viz:—In cities, two hundred dollars; in incorporated towns, one hundred and sixty dollars; in organized territory, one hundred and twenty-five dollars; in unorganized territory, seventy dollars."

With regard to the forged certificates and other matters referred to in Mr. Brosnan's report, this question was put to him:—

"Have you reason to believe that a similar condition of things exists generally where local option is enforced?" To which he replied, "so everybody tells me. There are some parishes where the condition of things is better, but it depends a good deal upon local opinion, and a great deal, of course, on the ecclesiastical authorities of the parish and the physicians."

The following information in regard to the certificates for liquor issued in some districts was obtained:—

—	Number of Certificates Issued.	Issued by Clergymen.	Issued by Medical Practitioners.
In one parish †:			
In January, 1892	548	304	244
February, 1892	784	87	697
March, 1892	795	148	647
In another village municipality:			
In February, 1892	281	52	229
March 1892	250	51	199
In another village municipality:			
In February, 1892	136	84	52
March, 1892	90	61	29
In another municipality:			
In February, 1892	213	101	112
March, 1892	150*		
	179	80	99
	92*		

The certificates marked thus * are considered to have been forged.

†NOTE.—The population was estimated about 900. (Q. 20343).

With municipal local option by-laws administered as described their existence cannot safely be taken as indicative of a strong feeling in favor of prohibition of the traffic in the municipalities where they exist.

The Scott Act is in force in two counties in this province, viz., Brome, population 14,709; Chicoutimi and Saguenay,* population 28,726. The Dunkin Act is in force in Richmond, population 16,329.

The Scott Act was in force in Arthabaska from 1884 to 1888, when it was repealed; in Drummond from 1885 to 1892, when it was repealed. It was voted upon and rejected in Argenteuil in 1885, Compton in 1884, Megantic in 1879, Pontiac in 1886, Stanstead in 1880, and Missisquoi in 1885.

The vendors licensed to sell for medicinal, etc., purposes, are appointed by the provincial government on the recommendation of the municipal councils. There are eleven licensed vendors under the Canada Temperance Act.

Mr. Alfred Brosnan stated that there were 27 authorized vendors in municipalities which had adopted by-laws prohibiting the sale of liquor for beverage purposes. They were located: two in the district of Arthabaska, six in the district of Beauce, one in the district of Kamouraska, four in the district of Matane, one in the district of Montmagny, two in the district of Quebec, one in the district of Richelieu, four in the district of Rimouski, two in the district of Saguenay, two in the district of St. Francis, one in the district of Temiscouata, and one in the district of Three Rivers. A vendor sells on certificates sent in from other districts than that for which he is appointed, and one vendor may therefore sell to the inhabitants of four or five parishes.

The advance in the license fees made in 1892 appears to have led to a reduction in the number of these licensed vendors, as for the year 1893 only 9 licenses are said to have been issued.

Mr. Brosnan in his evidence stated that there were about 900 municipalities, and of these there were 210 in which a prohibitory by-law was in force.

A return which had to be prepared from information obtained out of the ordinary course, and is probably not wholly accurate, either as regards the places which have adopted local option laws, or the population of the districts in which they are in force, but which the Commissioners believe approximately represents the situation as regards local option laws in the province, shows the following:

	Number.	Population.
Parishes and villages in which local option laws exist.	163	221,593
Parishes and villages in which local option laws are not in force, but in which certificates for licenses are not issued.....	132	116,827
Parishes and villages which have repealed local option laws previously adopted.....	78	101,799

In some of the last-mentioned licenses are not issued although the by-laws have been repealed.

Mr. Brosnan said that there were many parishes in which no licensed vendor was appointed. In answer to the question as to how the districts were provided with liquor for medicinal purposes where there was no licensed vendor, he stated.—“If the people need it, they go to the next village and get it. That very often happens. There is sometimes an understanding between villages. For example, a parish priest at one village says they do not need a license there, and the same statement is made by the priest in the next parish, but at the third parish it is decided to have a licensed place, and when the people in any of these three parishes are sick, they run there and get liquor, and on this account it is considered useless to have a depot in every village. This is what I referred to when I said a moment ago that one licensee may sell for more than one parish.” He further stated that the certificates sent in to the collector of a revenue district could not be taken as

* NOTE.—Since the above was written the Act has been repealed in Chicoutimi and Saguenay.

Liquor Traffic—Commissioners' Report.

representing the liquor sold to the population in the municipality in which the licensed vendor was resident. "Those 548 certificates (which he had previously referred to), which appear as issued in only one parish, might," he said, "represent several parishes. At the same time, what made me use that as a basis for argument was the fact that I happen to know that the doctors who signed those certificates resided in that parish, and that, under the law, a physician can only issue certificates to patients under his immediate care." (Q. 20367.) He also stated that the population of the parish referred to was about 900. (Q. 20343); that 288 of the certificates were issued by the parish priest, 204 by one physician, 40 by another physician and 16 by the vicar. (Q. 20342.) In Chicoutimi, in the month of May, 1892, 232 pints, and in the month of July, 1892, 252 pints were sold by the vendor of one parish. (Q. 20381.) Licensed vendors should make returns to the collectors of provincial revenue for the districts in which they reside, and the certificates handed in to them should be forwarded to the collector, along with a complete statement of the sales.

Mr Brosnan explained that no general return had been laid before the Provincial parliament of the sales through licensed vendors; that they had never been called for, and that the Provincial government only called for returns from the collectors on special occasions. He had recently called for some returns for districts under the Scott Act, and also for districts under municipal prohibitory laws. He added that the government intended to have returns made regularly of the certificates issued, and also to have the certificates honored by the various licensed vendors sent in with the returns. He further added that there were a number of instances where the parish councils refuse to grant licenses. He thought there were about 121 parishes in which no licenses were issued. In a number of these parishes they were not issued because they were not asked for; but he had been informed that there were parishes in which applications for licenses had been made, and refused by the councils. (Q. 20378). It was probable that in many parishes where the population was small, the amount having to be paid for licenses deterred parties from applying for them.

The evidence tends to show that the places licensed partake of the character of ordinary liquor shops, and that in very few cases is either the spirit or the letter of the law strictly observed.

The population of the counties in which the Canada Temperance Act is in force, the one county in which the Dunkin Act is in force, the municipalities in which prohibitory by-laws have been enacted, and the municipalities in which no licenses are issued, is:

Canada Temperance Act counties....	43,435
Dunkin Act county	16,329
Prohibitory by-law municipalities.....	221,593
Municipalities not issuing licenses.....	116,827*

Mr. Brosnan expressed the opinion that, in the interests of temperance, the power ought to be taken away from the municipalities to grant licenses. He said: "They have a singular idea as to the exercise of that right. I received the following answer to the question as to whether a license should be granted. 'Yes, on condition that the gentleman gives a small present to the council.'" Asked what his opinion was as to the results of the application of the Scott Act, he replied; "I have heard for the first time the following words spoken by a deputy, 'We hear complaints everywhere, not because the law is bad, but because public opinion is not on a level with the law.'"

Of the total number of licenses reported in the year 1889-90 namely, 2,761, there were issued in the city of Montreal, 1,146, and in the district of Montreal, outside of the city, 338, making for the collector's district, 1,484 licenses, or more than one-half of all the licenses issued in the province.

*Deducting Chicoutimi where the Act Scott has been repealed, the population is now 14,709.

The figures from 1890 to 1893 were:—

	Total for the province.	Montreal city.	Montreal city and district.
1889-90	2,761	1,146	1,484
1890-91	2,453	1,138	1,478
1891-92	2,462	978	1,267
1892-93	2,567	962	1,256

The dates for which the licenses in the city of Montreal and in the city and district of Montreal are given vary somewhat from the dates covered by the provincial returns; but that does not materially alter the results, which really show that one-half of the whole of the licenses issued for the vending of intoxicants in the province are issued in the district of Montreal.

The large reduction shown to have taken place in the number of licences issued in the city of Montreal was mainly in shop licenses, which, in 1889-90, were 569, and in 1892-93, 460. There was also a reduction in the number of hotel licenses from 213 to 147. In the district outside of Montreal, hotel licenses were reduced from 195 to 180, and shop licenses from 143 to 111.

The number of licenses issued in 1892-93, throughout the whole province, gives one license for every 581 of the population. In Montreal they are one to every 234 of the population of the city. In the city of Toronto the licenses of all kinds issued are equal to about one to every 860 of the population, and in the province of Ontario, Toronto included, one to every 616 of the population. If the population and the number of licenses issued in the city of Montreal, are deducted from the total population and the total number of licenses issued in the province of Quebec, the ratio of licenses to the remainder of the population is one to every 796 of the population.

Various statements were made before the Commissioners in regard to the manner in which the license law is enforced in the city of Montreal, and the number of places where sales are illicitly made.

The Collector of Provincial Revenue stated that there were probably 2,000, or even 4,000, places in the city where illegal selling was carried on. This witness stated that the law was as well enforced as it could be with the means at his disposal. The provincial Revenue Police force was under his direction. Six men were employed, and assistance was obtained from the city police, but he depended principally upon informers to detect illicit vendors, and those breaking the law. He handed to the Commission a statement showing the prosecutions for infractions of the Quebec License Law which had been instituted in the district. They were as follows:—1889, about 340; 1890, about 3,970; 1891, about 2,118; 1892, about 212 and in 1893, 312. These prosecutions were for selling on Sundays, selling to minors, selling by glass in retail liquor shops, and gambling. The major part of the prosecutions, it was stated, fell under the first and second classifications. Witness stated that more prosecutions were not entered upon because of the difficulty in obtaining convictions, and that places licensed as groceries were running as drinking shops, but the difficulty was in many cases to prove the sale. He thought a larger police force would not secure more convictions, and that the only chance of securing proof in such cases was by the employment of private detectives and informers. He thought that about one-fourth of the licensees violated the law, and that the law in the city of Montreal was very imperfectly enforced. He further stated that in the district of Montreal, there were sixty-five municipalities, of which nineteen did not issue licenses.

Other witnesses gave evidence on the subject of the number of places where liquor was sold illegally in the city.

The Chief of the Provincial Revenue Police stated he was sure there were not from 2,000 to 4,000 unlicensed places in Montreal—that, at the outside, there were not more than 300 to 400 places. He had authority to engage more men to assist his force when he found it necessary. He considered that there were too many licensed places in Montreal. He could give no reason why the ratio of licenses to the population should be so much greater in Montreal than in Toronto.

The Chief of the City Police, questioned in regard to the places where liquor was sold illicitly, stated: "I am certainly of opinion directly the contrary of Mr.

Liquor Traffic—Commissioners' Report.

Lambe's statement. I do not believe there are 300 places in Montreal where liquor is sold without a license. (Q. 28795.) That is my opinion, and I am ready to swear to it. (Q. 28796.)"

The Inspector of Food for the Province of Quebec said that there was a large illicit sale in Montreal, probably 2,000 places selling without a license. He considered that there was a decided decrease in intemperance, largely due to the efforts of the temperance-workers and the clergy.

The Inspector of Inland Revenue for the district of Montreal said, with reference to the statement that there were 2,000 or 4,000 places in which liquor was sold illicitly: "I believe that perhaps there are a thousand, there are at all events hundreds, because prosecutions are taken out every week, and almost every day, against parties for selling liquor without a license." He did not believe, he said, that there were from 2,000 to 4,000 places. (Q. 25198-200.)

The chief officer of the detective force of the city, examined on the subject, said: "The Collector of Provincial Revenue has a right to know, but I would not say that there are 2,000 or 4,000 unlicensed places selling liquor in Montreal. First and foremost, 4,000 houses is a large number, for each of those places must be a dwelling house, and you would scatter 4,000 of these through the city. I know there are some people carrying on little shops that sell liquor, and those may be numbered among them. I would not say that there are 2,000." (Q. 26788.)

The Hon. Senator Thibaudeau, High Sheriff, questioned on the subject of the places selling illicitly, stated that he had no particular means of knowing how many of such places there might be, but added: "I do not think there is anything like that number—i.e., between 2,000 and 4,000."

In the session of the Provincial Parliament, 1893-4, some amendments to the license law were passed, and amongst them, the following:—

"In the city of Montreal, for the year beginning first of May, 1894, the number of hotels and restaurants licensed shall be limited to a maximum of 440, and for the year beginning on the first of May, 1895, to a maximum of 400, and that number shall not be exceeded in any year thereafter." (Q. 843a.) Provision was also made that "any licensee in the city of Montreal or Quebec, of good repute, who has had a license, and who has complied with the law during the preceding twelve months, and has not been convicted of any infringement thereof, may, on making a declaration to that effect under oath, obtain a renewal of his license without being obliged secure any certificate from the electors of the district in which his place is situated."

There does not seem to be any necessity, nor any local demand for such a large number of retail liquor shops and restaurants as exist in the city of Montreal. The reduction of each class to a number not in excess of the number of hotels now licensed, would, in the opinion of this Commission, be attended with beneficial results.

A statement of the number of arrests made by the police for a series of years, and the ratio of these to the population will be found in Appendix No. 19.

A very large number of these arrests result from offences against the city by-laws.

The Chief of the City Police, Col. Arthur St. George Hughes, gave evidence before the Commission, and explained the manner in which these statistics were compiled.

In the matter of arrests for drunkenness, enquiry showed that there was some divergence between the classification of offences in the reports of the police, and the classification made in the Recorder's Court, in which court all cases of drunkenness are tried. The Recorder of the city makes an annual report to the council of all cases dealt with in his court. The following is a statement of the plaintiffs for drunkenness taken from these reports from 1887 to 1892: 1887, 3,741; 1888, 3,089; 1889, 3,091; 1890, 3,432; 1891, 3,694; 1892, 3,095.

Every reasonable effort has been made to obtain correct information as to the amount received by the various municipalities for the granting of certificates, but only a comparatively small number of returns—probably from not more than one-third of those issuing certificates—have been received. The Provincial Government was so good as to send forms to be filled up, and addressed the various municipal authorities by circular on the subject.

The following is a summary of the amounts shown to have been received, for certificates and fines, in the returns sent in. Many of these returns are, however, obviously imperfect.

PARTIAL statement of the number of certificates for the obtaining of licenses to sell Liquor granted, and the amount received therefrom, by Municipalities, in the Province of Quebec.

YEAR.	MONTREAL.		QUEBEC.		OTHER PLACES.		TOTAL.	
	Certi- ficates.	Amount.	Certi- ficates.	Amount.	Certi- ficates.	Amount.	Certi- ficates.	Amount.
		\$ cts.		\$ cts.		\$ cts.		\$ cts.
1880		6,448 00			301	6,813 00	301	13,261 00
1881		5,856 00			312	9,700 00	312	15,556 00
1882		6,232 00			324	9,683 00	324	15,915 00
1883		6,632 00			305	12,320 00	305	18,952 00
1884		6,576 00			274	12,983 00	274	19,559 00

1889	1,092	8,736 00			386	21,934 00	1,478	30,670 00
1890	1,089	8,712 00			395	27,159 00	1,484	35,871 00
1891	942	7,536 00			384	14,428 00	1,326	21,964 00
1892	931	7,448 00						

NOTE.—1. No returns have been obtained from Quebec. The following is a copy of a telegram from the

Mayor of that city:

"Cannot supply information asked by Sir Joseph Hickson. Certificates of all kinds are issued, but no distinction is made in our books between license certificates and others."

2. The returns from places other than Montreal are not complete. Many places have not made any returns, and some of those which have been sent are incorrect.

These returns contain the receipts of the city of Montreal for granting certificates, which are a large proportion of the whole amount stated. The remainder, leaving out Montreal, does not probably represent more than a comparatively small percentage of the total sum received by the other municipalities.

It may be mentioned that the fines collected in the Judicial District of Montreal for breaches of the Quebec License Act, were:—

In 1890	\$15,760
" 1891	18,860
" 1892	21,040
" 1893	23,236

The fines for all offences collected in the recorder's court, Montreal, and paid over to the city treasurer, have been as under:—

Year.	Amount received.
1880	\$ 8,296.94
1881	12,475.97
1882	15,654.96
1883	12,956.68
1884	12,615.33
1885	11,239.03
1886	18,148.82
1887	24,719.68
1888	25,259.49
1889	22,845.27
1890	27,019.59
1891	23,767.37
1892	21,695.89

Liquor Traffic—Commissioners' Report.

The returns of convictions in the Province of Quebec (see page 62) for the earlier years covered by the statistics, were, in all probability, incorrect, and in later years they have been much fuller and more accurately compiled. The average ratio of the convictions for all offences in the province, per 1,000 of the population, for the five years ended 1885, was 4·79; for the five years ended 1890, 6·25, and for the three years ended 1893, 6·87. The highest ratio was reached in 1892, when the figure was 7·22 per 1,000 of the population. Since then there has been a reduction, and the ratio in 1893 was 6·43.

For drunkenness, the convictions were:

Five years ended 1895.....	1·26	per thousand of the population.			
“ “ “ 1890.....	2·22	“ “ “	“	“	“
Three “ “ 1893.....	2·61	“ “ “	“	“	“

The highest ratio was reached in 1891, when it was 2·82 per thousand. In 1893 it was 2·49 per thousand.

Convictions for breaches of municipal laws increased, as reported in the criminal statistics, from 1·98 per thousand in the first period, to 2·07 per thousand in the second, and 2·34 per thousand in the last.

According to the criminal statistics, the convictions in Montreal, under the Summary Trials Act, increased between 1887 and 1892 about 13½%; the summary convictions about 36%, and the total convictions about 34%. The population in the meantime had increased about 17%.

The following statement gives the number of prisoners admitted to the jails of the province from 1880 to 1892, and the number remaining therein at the end of each year from 1883 to 1893:—

Year.	Population.	Number admitted.	Ratio per 1,000.	Number remaining at end of year.	Ratio per 1,000.
1880.....	1,341,250	3,801	2·83		
1881.....	1,359,027	3,340	2·45		
1882.....	1,371,449	3,261	2·37		
1883.....	1,383,985	3,044	2·19	505	0·36
1884.....	1,396,635	3,559	2·54	564	0·40
1885.....	1,409,400	3,397	2·41	493	0·35
1886.....	1,422,282	3,383	2·37	428	0·30
1887.....	1,435,282	3,483	2·42	557	0·39
1888.....	1,448,401	3,973	2·74	541	0·37
1889.....	1,461,639	4,683	3·20	572	0·39
1890.....	1,474,998	3,653	2·47	503	0·34
1891.....	1,488,535	4,175	2·80	567	0·38
1892.....	1,502,140	3,478	2·31	451	0·30
1893.....	1,515,870	3,626	2·39	451	0·30

It will be seen that the ratio of admissions slightly decreased, as did also the ratio of those remaining at the close of the year. A table giving the ratios of those remaining in the jails of the various provinces at the close of each year, and in the jails of the State of Maine, will be found in Appendix No. 70. The figures for Nova Scotia and New Brunswick are not complete, as the commissioners have found themselves unable to obtain full information. The figures for the other provinces are believed to be accurately stated.

It will be seen that the ratio to the population of those incarcerated at the close of each year compares favourably with other provinces and with Maine.

1892.		Per M.
Dec.	31. In Nova Scotia	0·13
"	31. Prince Edward Island	0·22
"	31. New Brunswick.....	0·22
"	31. Quebec.....	0·30
Sept.	30. Ontario	0·38
Dec.	31. Manitoba.....	0·32
"	31. British Columbia	1·37
Nov.	30. Maine.....	0·60

If the total commitments to the jails for 1892 are taken, they will be found to stand as under :—

Nova Scotia	2·30
Prince Edward Island.....	1·73
New Brunswick.....	4·24
Quebec	2·31
Ontario.....	4·22
Manitoba	1·50
British Columbia.....	10·88

The returns for Nova Scotia and New Brunswick, as already remarked, are incomplete, but the information received indicates that the ratio of commitments in New Brunswick is much higher than it is in Quebec.

There has been published in the reports of the inspectors of prisons, for the Province of Quebec, a classification of the habits of the prisoners in the matter of the use of intoxicants. The following figures are extracted from these reports :—

Year.	Temperate.	Intemperate.	Total.	Percentage of intemperate.
1888.....	1,907	2,092	3,999	52·31
1889.....	2,214	1,746	3,960	44·09
1890.....	2,197	2,083	4,280	48·66
1891.....	2,392	1,785	4,177	42·73
1892.....	2,088	1,390	3,478	39·96

The following is a statement of the number of juveniles in reformatory institutions in the province :—

Year.	Quebec.		Ontario.		Year.	*Maine.	
	No.	Ratio per M.	No.	Ratio per M.		No.	Ratio per M.
1881	415	0·305	377	0·195	1880.....	116	0·179
1891.....	631	0·423	306	0·145	1890.....	169	0·255
1892.....	569	0·378	278	0·130	1892.....	162	0·244

*NOTE.—The figures for Maine for 1880 and 1890 are taken from the U. S. census returns; those for 892 from the State report.

Liquor Traffic—Commissioners' Report.

There has been placed along side the figures for Quebec the statistics for the Province of Ontario and the State of Maine.

It is possible that the methods of treating juvenile criminals in the two provinces and the State of Maine differ in some respects, and that the statistics do not represent exactly the relative numbers of juvenile criminals in the three communities.

Quebec has more places to which juvenile offenders are sent than Ontario, at any rate, more than are distinctly so designated, and it is probable that the placing of juvenile criminals under the charge of the religious communities, as is done in most instances, has a tendency to increase the number committed to such institutions.

The inspector of reformatories for the province of Quebec, in response to inquiries, expressed the opinion that it was probable that juvenile offenders in Ontario were sent in a larger proportion to other institutions than those designated "reformatories." In Quebec there are, in addition to these reformatories, several industrial schools to which unprotected and destitute children are sent, and in which they are cared for mainly at the expense of the Government. It is probably the case that in Ontario this work is more generally undertaken by private institutions, supported to a large extent by private contributions.

The numbers of the insane cared for in the asylums of the province are given in appendix No. 12. The ratio of those remaining at the end of each year has increased from 1.13 in 1876 to 1.67 in 1893, per thousand of the population. The total of the insane population reported in the census returns of 1891 was 4,550, in 1871, 3,300. The population increased in the two decades 25 per cent, the insane 37.8 per cent. The ratio per 10,000 of the population in 1891 was 30.

The statement (Appendix No. 12) includes only inmates in respect of whom the Government of the province makes a payment to the owners of the asylums in which they are, and there should be added, to cover inmates in the same asylums who either pay themselves or are paid for by their friends or relatives, about 6 per cent, both as respects admissions and remaining residents. Of the inmates of private asylums which are not made use of by the provincial Government for the care of the insane, the commissioners have not obtained any returns.

The ratio of the insane per thousand to the population in this province, according to the census return, was slightly in excess of that of Ontario and New Brunswick, and precisely the same as in Prince Edward Island and Nova Scotia.

Dr. Burgess, the medical superintendent of the Protestant hospital for the insane at Verdun, Montreal, stated that out of 377 cases of patients admitted to the hospital from the time it was opened, 24 were attributed to drink, or, in other words, that drink was the exciting cause in 24 cases. He further stated that it was almost impossible to get a correct statement from friends of the patients when they were admitted to the hospital. At Verdun they were in the habit of classifying the patients, when they entered the hospital, as accurately as the circumstances would permit. They had practically no means of verifying the statements of the friends of patients. There were patients in the hospital ranging from 17 to 80 years of age. He stated that it was quite impossible to come to a definite conclusion in each case. The only way that could be done would be by employing experts to investigate each case, a course which was impracticable. He expressed the opinion that a smaller proportion of the cases arising out of drunkenness recovered than of the cases arising out of other causes. He thought that a larger percentage than 24 to 377 would be attributable to drink; but he would not say that the 24 formed only a small percentage of the cases to be attributed to it. He thought that the percentage in which drink was the predisposing cause was a great deal larger than in cases in which it was set down as the exciting cause. He had had 19 years' experience in connection with an asylum, and his own observation went to show that the effect of drink was more marked in the off-spring than in the parents. He stated that he was not himself a total abstainer, but he thought that the world at large would be better off if there were no liquor in it. At the same time, in his own experience, he was not able to put his finger on a case where, the parents having been what he would call moderate drinkers, insanity from that cause sprung up in the children.

He thought the greater portion of the patients who sought admission to the hospital were from the agricultural population.

Arthur Vallée, M. D., Quebec, medical superintendent of the Beauport insane asylum, and inspector of Belmont retreat, said that the register kept of the history of cases was not always reliable. The Beauport institution belonged to private proprietors, to whom the provincial Government made a payment for each patient. Cases in which the insanity was caused by alcohol were placed in the Belmont Retreat. Very few were cured of intemperance, due, he believed, to the absence of a law compelling their residence in the institution for a certain period. If they remained sufficiently long, he thought 50 per cent would be permanently cured. A portion of the intimates in the Beauport insane asylum were there for intemperance, but the great majority were not drinkers. He did not consider that the moderate use of alcohol led to insanity; it was not a predisposing cause, but he did think that idiocy was often due to the intemperance of parents.

Several gentlemen who have taken a deep interest in the question of the prohibition of the liquor traffic, not resident in the province, were examined in Montreal, and much of their evidence will be found both instructive and interesting.

Altogether, there were examined 116 witnesses who may be classified as residents in the province. Of this number, 65 expressed the opinion that a prohibitory law could not be efficiently enforced; and the commissioners believe that not only would such a measure, if enacted, be found incapable of being properly carried out, but any attempt to force it upon the population of the province would probably lead to most determined opposition.

Much energetic work is being done in the province by temperance societies, and by the clergy of the various churches. The great majority of the people of the province belong to the Roman Catholic church, and the clergy of that body, as a general rule, look upon a general prohibitory law as undesirable and impracticable. A memorandum will be found, Appendix No. 71, showing what has been done by temperance organizations in this province for several years back. The weight of the evidence taken was to the effect that the offence of drunkenness has been decreasing of late years throughout the district; that there is much need for curtailment of the licensed places in the city of Montreal, for the separation of the sale of liquors from the sale of groceries and provisions in shops, and for more strict enforcement of the law, as well as for a more severe inspection of liquors sold. Two matters of importance will be found referred to in the evidence—which forms volume II, and of which an analytical summary is printed,—namely, the printing indiscriminately of labels for liquor which are used apparently almost as indiscriminately, and the sale of patent medicines, by far the larger portion of which are simply alcohol.

It may be mentioned, as a matter of historical interest, that one of the earliest enactments in regard to the liquor traffic in this province was the Imperial Act, 14 George III, chapter 88, known as "The Quebec Revenue Act, 1774," entitled "An Act to establish a fund towards further defraying the charges of the administration of Justice and support of the Civil Government within the province of Quebec, in America."

Section 5 reads: "And be it further enacted by the authority aforesaid that there shall from and after the fifth day of April, one thousand seven hundred and seventy-five, be raised, levied, collected and paid unto His Majesty's Receiver-General of the said province for the use of His Majesty, his heirs and successors, a duty of one pound sixteen shillings sterling money of Great Britain, for every license that shall be granted by the Governor, Lieutenant-Governor, or Commander-in-Chief of the said province, to any person or persons for keeping a house or any other place of public entertainment, or for the retailing wine, brandy, rum, or any other spirituous liquors within the said province; and any person keeping any such house or place of entertainment, or retailing any such liquors without such license, shall forfeit and pay the sum of ten pounds for every such offence upon conviction thereof; one moiety to such person as shall inform or prosecute for the same and the other moiety shall be paid into the hands of the Receiver-General of the province for the use of His Majesty."

Liquor Traffic—Commissioners' Report.

ONTARIO.

An abstract of the laws relating to the liquor traffic in this province is given in Appendix No. 128.

The laws relating to the liquor traffic immediately prior to the confederation of the British North American provinces (1867) were those of the united provinces of Upper and Lower Canada.

In Appendix No. 48 the license fees which have been charged from time to time are given.

Prior to the confederation of the provinces the legislature of the united provinces of Canada East and Canada West, now Ontario and Quebec, passed an Act in which were embodied clauses conferring local option within certain limits upon communities. A short abstract of the Act will be found in Appendix No. 130.

This Act was passed in 1864, and is 27-28 Vic., chap. 18, and entitled "An Act to amend the laws in force, and respecting the sale of intoxicating liquors and the issue of licenses therefor, and otherwise for the repression of the abuses resulting from such sale." The short title of the Act was "The Temperance Act of 1864," but the Act was more widely and better known under the name of the framer of it, viz., "The Dunkin Act."

The terms of this Act remained in force, as regarded the provinces of Ontario and Quebec, after the confederation of the North American provinces.

The first thirty-eight clauses of the Act comprised what was really a permissive bill, founded upon the plan of local option laws of the United States.

The Act recognized the principle of license. The clauses from number thirty-nine to the end of the Act, entitled "General provisions, irrespective of local prohibition," were designed to regulate, under license, the traffic in intoxicating liquors. In fact, it was simply a license Act, embodying the local option principle.

The Act did not interfere with the manufacture and importation of liquor.

The local option provisions were:—

"First.—The municipal council of every county, city, town, township, parish or incorporated village in this province, besides the powers at present conferred upon it by law, shall have power at any time to pass a by-law for prohibiting the sale of intoxicating liquors and the issue of licenses therefor, within such county, city, town, township, parish or incorporated village, under authority, and for enforcement of this Act, and subject to the provisions and limitations hereby enacted.

"Second.—Such by-law shall be drawn up and passed in ordinary form, and shall not have embodied therein any other provision than the simple declaration that the sale of intoxicating liquors and the issue of licenses therefor is by such by-law prohibited within such county, city, town, township, parish or incorporated village, under authority and for enforcement of this Act."

The municipal council might, at any time, take the initiative and submit a by-law, under the preceding conditions, to a vote of the electors. On the other hand, thirty or more duly qualified municipal electors might, by requisition, demand that at any time within one year from the date of their request, a by-law be submitted for the approval or rejection of the electors, and, in like manner, thirty or more electors might demand the passage of a by-law to repeal any by-law previously adopted under the Act, provided that not less than two full years had elapsed since the date of the submission of the previous by-law.

A by-law passed by the electors might be repealed by a vote of the municipal council, but such repealing by-law was to be submitted for the approval of the electors in the manner and with the formalities prescribed for the submission of a by-law, and such repealing by-law did not take effect unless it was approved by the municipal electors. If not approved, no repealing by-law could be again submitted until after the expiration of two years. (Subsec. 13, sec. 5.)

Two or more municipalities might concur in obtaining a joint by-law, and in the event of such by-law being adopted, it could not be repealed without the concurrence of the electors of each of the municipalities affected.

No license for the sale of liquors was to be issued within any district in which any by-law passed under the authority of the Act was in force; but provision was made for sale for medicinal, sacramental and manufacturing purposes.

Under the Act, licensed distillers were allowed to sell not less than five gallons. Licensed brewers were allowed to sell not less than five gallons, or of bottled ale or porter not less than one dozen bottles, containing at least three half pints each, at one time, the same to be removed wholly from the premises. Wholesale merchants were allowed to sell to the extent of not less than five gallons, and of bottled wine, ale or porter not less than one dozen bottles of at least three half pints each.

This law remains in force, but has practically become inoperative.

Under the existing provincial law a board of license commissioners is appointed by the Lieutenant-Governor for each city, county, union of counties, electoral district or license district, as His Honour may think fit. The board consists of three persons, two of whom are a quorum. They are appointed for twelve months, but may hold office for a longer period. They define the conditions and qualifications necessary to obtain tavern and shop licenses for ale-houses, beer-houses, or places of public entertainment where spirituous liquors are to be sold, the number of tavern and shop licenses, and the persons to whom such may be issued, all within the limits of the law.

An inspector for each district is appointed by the Lieutenant-Governor, and it is the duty of the inspector to report in writing upon every application for a license, and if the applicant is a fit and proper person to have a license.

Every applicant for a license has to proceed by petition to the commissioners in the district in which the license is to have effect. Any ten or more electors of any polling subdivision have the right to object by petition against the granting of any license within such subdivision. The decision of the board with regard to any license is not to be questioned or re-considered, except in cases in which the decision has not been unanimous, in which case the person affected by such decision may petition the board and allege facts or grounds for their reconsideration, not formerly before them, when the board may, by resolution, in which all the commissioners concur, decide to rehear the same. No license is to be granted in any subdivision (chap. 194, subsection 14, of section 11), if a majority of the electors duly qualified to vote as such in a subdivision for the election of a member of the Legislative Assembly of the province petition against it, and set forth the grounds mentioned in the Act against granting such licenses. The grounds of objections are :

(a.) That the applicant is of bad fame or character, or of drunken habits, or has previously forfeited a license, or that the applicant has been convicted of selling liquor without a license within a period of one year; or that he has kept within a period of two years, a place in which the illicit sale of liquors was frequent and notorious; or,

(b.) That the premises in question are out of repair, or have not the accommodation required by law, or reasonable accommodation if the premises be not subject to the said requirements; or,

(c.) That the licensing thereof is not required in the neighbourhood, or that the premises are in the immediate vicinity of a place of public worship, hospital, or school, or that the quiet of the place in which such premises are situated will be disturbed if a license is granted.

Any person who has signed a memorial against the granting of a license may be heard in opposition thereto by himself or his agent.

The clerk of the municipality in which the subdivision is situated is to decide, in case of dispute, as to the number of electors in the subdivision, and the number of those qualified electors who have signed said petition.

The number of tavern licenses to be granted is not to exceed in each year, in each municipality, that is to say, in cities, towns, and incorporated villages, one for each 250 of the first 1,000 of population, and one for each full 400 over 1,000 of the population; but in no case shall the limit authorise any increase in any municipality in excess of the number of licenses therein issued for the year ended the first day of March, 1876, unless the increase of population, in the opinion of the commis-

Liquor Traffic—Commissioners' Report.

sioners, justifies a larger number; but in no case shall the number exceed the limit imposed by the Act.

Every application for a license, and all objections to every such application, are to be heard and determined by the board of commissioners at a meeting open to the public. The commissioners are not permitted to issue licenses for the sale of spiritous, fermented or intoxicating liquors on the days of the exhibition of the agricultural association of Ontario, and industrial exhibition of Toronto, or of any electoral district or township or agricultural society exhibition, either on the grounds of such society, or within a distance of three hundred yards from such grounds. (Sec. 13, chap. 194.)

The council of every city, town, village or township may, by by-law, limit the number of tavern licenses to be issued therein for the then ensuing license year, beginning on the first day of May, or for any future license year, until such by-law is altered or repealed, provided such limit is within the limit imposed by the Act. (Sec. 20, chap. 194.)

"The council of every township, city, town and incorporated village may pass by-laws for prohibiting the sale by retail of spirituous, fermented or other manufactured liquors in any tavern, inn or other house or place of public entertainment, and for prohibiting altogether the sale thereof in shops and places other than houses of public entertainment, provided that the by-law, before the final passing thereof, has been duly approved of by the electors of the municipality. (Sec. 13, law of 1890.)

"No by-law passed under the provisions of this section shall be repealed by the council passing the same, until after the expiration of three years from the day of its coming into force, nor until a by-law for that purpose shall have been submitted to the electors and approved by them in the same manner as the original by-law, and if such repealing by-law (upon being submitted to the electors), be not so approved, no other repealing by-law shall be submitted for the like approval within the full term of three years thereafter." (Sec. 14, law 1892.)

The electors voting for the by-law must be a majority of the total electors entitled to vote for members of the Legislative Assembly of the municipal district.

The following statement shows the number of licenses issued, and the amount collected for licenses and fines, the total collections, the amount paid for salaries, expenses and commissions in collecting the revenue, and the apportionment of the receipts between the provincial Government and the municipalities since 1876:—

STATEMENT showing Population and Amount received from the granting of Licenses for the sale of Liquors and Fines imposed in Province of Ontario.

Licence Year.	Population.	*Number of licenses of all kinds.	Number of licenses proper.	Provincial Government's receipts for licenses and fines.	Municipalities' receipts from all licenses and fines.	Amount of fines collected.	Total collection of all kinds from licenses and fines.	Salaries, expenses and commission.	Proportion of population to each license, including transfers, &c., &c.	Proportion of population to each license, not including transfers.

138

NOTE.—There were issued in 1874, before the Crooks Act came into force, 6,185 licenses.
do do 5,818 do
do do 5,818 do

The above information is given as complete as possible from the records of the department.

*The "number of licenses of all kinds" includes transfers, removals and extensions.

Liquor Traffic—Commissioners' Report.

The total number of licenses is shown on the return, including transfers, extensions and removals, as well as the actual number issued from year to year (apart from transfers, etc.) with the number of the population to each class.

In Appendix No. 4, vol. 4, pt. 2, is given a statement of the places in which local option laws have been voted upon, and where they are now in force. On the statement are also mentioned the places which have passed local option laws, but which laws have been quashed by the courts, either for informality in the by-laws, or as being beyond the powers of the municipalities. By-laws are in force in twelve townships.

The Scott Act was in force in 9 districts (counties and cities) in 1885, 27 in 1886, 27 in 1887, and 19 in 1888. The law had, of course, the effect of reducing the number of regular licenses in the districts in which it was in force.

The following statement shows the number of, and the districts in which, licenses were issued by the Provincial Government under that Act for the sale of liquor, and also the number issued by the Dominion Government under the McCarthy Act in the same districts.

STATEMENT showing the number of licenses issued in counties where the Canada Temperance Act of 1878 was in force.

* Dates not given.

The Scott Act provides that in municipalities in which it is in force sales of intoxicating liquor for exclusively medicinal purposes, or for *bonâ fide* use in some art, or trade, or manufacture, shall be lawful only by such druggists and other vendors as may be thereto specially licensed by the Lieutenant-Governor in each province, the number not to exceed one in each township or parish, nor two in each town, and in cities not exceeding one for every four thousand inhabitants; such sales, when for medicinal purposes, to be in quantities of not less than one pint. Subsection 8 of the same Act makes provision for sales by wholesale, in quantities of not less than ten gallons, such sales to be to druggists and others licensed as aforesaid, or to persons who will forthwith carry the liquor beyond the limits of the municipality.

The operation of the Scott Act within the province has been already referred to in another part of this report, and it is only necessary to say here that the Act is not in force at the present time in any part of the province.

The centralization of the supervision of the traffic in one office in Toronto, a branch of the Treasury department, has resulted in more ample and reliable statistics of everything relating to it being kept, and the statutory enactments for the control of the traffic in Ontario are, the commissioners believe, more complete than in any other province of the Dominion.

The conflict of authority between the Dominion and provincial Governments, which resulted from the passage of the McCarthy Act (1883), undoubtedly led to confusion and, probably for a time, embarrassment, in the carrying out of the provisions of the Scott Act (1878). The embarrassments were, however, removed by the repeal of the McCarthy Act in July, 1885, and the leaving of the control of the licensing and regulating of the traffic entirely in the hands of the provincial Government.

Under the system now in force there has been a gradual reduction in the number of places licensed

Statistics of the consumption of liquor, although evidently not entirely accurate, being made up on the same system for one year as for another, indicate reliably that there has been a reduction in the consumption.

In the province of Ontario the ratio of convictions for drunkenness for the five years ended 1885 was 2.79 per thousand of the population. In the five years ended 1890 the convictions had risen to 3.10 per thousand, the highest ratio in the whole period between 1881 and 1893 being that for the year 1889, the one in which, or immediately following the period when, the Scott Act was finally abandoned throughout the counties of Ontario. The ratio that year was 3.40 per thousand of the population. From 1889 there was a gradual reduction in the number of convictions for drunkenness, until, in 1893, they had reached a ratio of 1.75 per thousand of the population. The convictions for offences against the municipal laws increased, as did, in a slight degree, the convictions for offences against the liquor laws. Notwithstanding this, the total convictions decreased, as will be seen on reference to the return, page (59-61).

The jail statistics (see Appendix No. 5), which are admirably kept, and regularly laid before the provincial Legislature, give the following results:—

Year.	Total population.	Number admitted.	Ratio per 1000.	Number remaining at end of year.	Ratio per 1000.
1880.....	1,893,719	11,300	5.90	901	0.47
1885.....	1,999,777	11,426	5.71	983	0.49
1890.....	2,094,721	11,810	5.63	979	0.47
1893.....	2,153,915	8,619	4.00	814	0.37

Liquor Traffic—Commissioners' Report.

The committals for drunkenness (see Appendix No. 53), were as follows:—

Year.	Population.	Number committed.	Ratio per 1000.
1880.....	1,893,719	3,795	2·00
1885.....	1,999,777	3,696	1·84
1890.....	2,094,721	4,573	2·18
1893.....	2,153,915	2,652	1·23

In Maine the total committals for the five years ended 1892 were:—

For all offences.....	5·60
For drunkenness.....	2·58

In Massachusetts:

For the year 1891—

All offences.....	12·05
For drunkenness.....	8·58

For the year 1892—

All offences.....	7·52
For drunkenness.....	3·63

In those parts of this report devoted to Maine and Massachusetts will be found comparative statements of prisoners remaining in the common jails, the insane in asylums, etc., etc., in these states, and those in similar institutions in Ontario, and some others of the provinces of the Dominion.

Dr. T. F. Chamberlain, inspector of prisons and reformatories for the province, in his report for the year 1892, made the following observations:—

“I am pleased to report that during the past year there has been a further large decrease in crime throughout the province, the number of committals being 1,412 less than last year, which also showed a wonderful decrease as compared with a number of years previous. In no year since 1873 have the committals been so low as in the past year, which may be accounted for by the energetic working of our clergy, the noble efforts of christian organizations for the amelioration of the condition of our poor working classes. The further decrease of 878 committals for drunkenness as against that of last year, which showed a decrease of 959 as compared with the year 1890, is a striking proof of the good work that is being done throughout the province by the efforts of organizations for the alleviation of the condition of the masses.

“The question is often asked, ‘How can the existing evil of intemperance be remedied?’ It is a difficult question to answer, for in the face of every effort in this direction by progressive legislation, the unwearying efforts of the clergy, the noble work of our women, the reduction of licenses, and the imposing of high license fees there seems to be but slow progress in abating the evil. It is true that a great reduction in the number of committals for drunkenness is shown during the past few years, still the evil abounds to such an extent as to awaken a feeling of alarm in the minds of all professing Christians, for undoubtedly drink is the cause of a large percentage of all the crime, destitution, misery and neglect that exists in our midst. I am convinced that the question of suppressing the liquor traffic depends upon the present mode of attack, as demonstrated by the decreased number of committals for drunkenness, namely, by teaching our children in the public schools and Sunday schools the evil effects of the use of intoxicating liquors; the efforts put forth by the various temperance organizations; the adoption of the more wise course of counsel and example to the young men of our land by those in social and financial positions, making the social drinking usages not only unpopular, but in reality a bar to good society; wise and progressive legislation to aid the peo-

ple as fast as they are prepared to accept and carry out the legislation offered. These are the lines upon which I think the most good can be accomplished, and believe they will be far more effectual than any arbitrary legislation at the present time."

The number of patients in the insane asylum of the province has very considerably increased (see Appendix No. 13). Extensions have been made from time to time in the accommodation afforded by these institutions, and the care with which they are conducted and supervised has doubtless led to their being more largely availed of in later years than they were previously.

The fact remains, however, that whilst there has been an increase in the number of inmates of these asylums, and also, as shown by the census returns of the Dominion, an increase in the ratio of insane persons to the population, there has been, according to the returns, a smaller consumption of liquor and fewer convictions for offences against the law (notwithstanding an increase in those against the municipal laws), and more especially for drunkenness in this province. There has also been a very marked decrease in the commitments to the jails of the province.

Daniel Clark, Esq., M.D., superintendent of the insane asylum, Toronto, who gave evidence before the commission in that city, said:—"I have paid a good deal of attention to the various causes of insanity * * * * The most prominent cause of insanity is hereditary inclination. Insanity is not bequeathed to anyone; it is only a tendency thereto, and when I say heredity, I mean simply that a tendency to insanity has been derived from the parents. This cause would cover about 60 per cent of those who come to the asylum. Then the other causes are varied, among which I may mention intemperance, domestic trouble, business worries, and disease being followed by insanity, such as injuries to the head. Anything that will produce unusual brain activity is conducive to insanity. There are so many causes of a minor sort that it is almost impossible to enumerate them * * * * About 3½ per cent are due to religious excitement—I mean 3½ per cent of the total number. * * * * Before stating my opinion on the point (as to a reliable number whose insanity may be attributed to, or, at any rate, excited by, the excessive use of intoxicants), I may say that statistics in regard to the causes of insanity are very unreliable often at the real. They are unreliable for this reason, that you cannot get very * * * * causes; you have largely to depend for your information upon non-professional people who bring patients to you as to the cause of insanity. In the next place, you may have two or three causes operating at once; you may have a hereditary tendency to insanity, and starvation, or injury to the head, or intemperance—two or three causes operating together to produce one effect, which any one operating singly might not produce. In regard to intemperance as a cause of insanity, a few years ago a clerical friend of mine in this city wished to write a monograph or a pamphlet on intemperance, and he asked me to give him information based upon people who came as insane to the Toronto asylum. This must have been five or six years ago. I went to work and examined the exciting causes of insanity in about 6,000 cases, from the books I had in the asylum and from the analysis that I made of intemperance as a cause of insanity, based largely upon the statement of the friends of the patient, I found about 9½ per cent. of the total cases which could be attributed to intemperance * * I gave it to my friend, but he had the impression that I must be wrong, because he thought that there were 30 or 40 per cent attributable to drunkenness, therefore he left it out of his pamphlet; it was not published * * It is in my lectures to students * * That is all, there is just the simple proportion. * * I took the books and looked up every name * * That was the result. I suppose I may say, in round numbers, that one in every ten of those who were admitted to the asylum came there presumably through intemperance."

Again speaking of the 9½ per cent, he says that he refers to intemperance as the exciting cause, and continues:—"I have no doubt in my own mind that intemperance in parents produces almost absolute degeneracy in children to a greater or less extent,"—asked, "Mental degeneracy?" "Yes, and physical degeneracy." I have watched closely those who are dipsomaniac, those who have intermittent bouts of

Liquor Traffic—Commissioners' Report.

drunkenness, but who for months together may hate the very sight of liquor; then when this maniacal condition comes on, nothing will stop them from their drunken bout, if they can get liquor. A large number of those dipsomaniacs who have intermittent sprees, so to speak, are so from hereditary causes * * It (intemperance in parents) is a predisposing cause * * The moment you get degeneracy in a child, you can scarcely tell in what direction it may make itself manifest. It might be hysteria, or a number of nervous diseases; it might be an inordinate taste for liquors, or it might be insanity pure and simple. The fathers have eaten sour grapes and the children's teeth are set on edge"

After speaking of total abstinence, he says: "I might say here also, from my experience, that at the present time there is much to be feared, and much to be dreaded, from the use of other intoxicants. I have no doubt in my own mind that for the last quarter of a century there has been a steady increase in the use of opium, of chloral, chloraline, Indian hemp, of hachis, and absinthe, which is menacing the mentality of the people. These things do not make their effects manifest in the same way as alcohol. The man who uses them does not make himself injurious in the neighbourhood, or in his family; but the effects are such, as I know, that it has become a serious question whether you will not have to take up all other toxicants as well as alcohol. It is the universal testimony of men who have paid attention to this matter, that there is a large number of those who are even temperate, who are even teetotallers, who take to these drugs, and give up alcohol * * I have cases coming to the asylum from the use of opium, chloral, and so on, and who become insane from that cause. Their effects are so insidious that the victims are far more hopeless than those from alcohol." After pointing out that there is practically no restriction on the sale of these drugs, he states, in dealing with the character of the drugs, and in answer to the question, "Are persons beginning with small doses of any of these drugs, liable to become habituated to their use and to go on taking more?"—"Very likely, and they are more likely to become drunkards from the use of these drugs than they are from the use of alcohol. They are very insidious and seductive, much more so than spirits * * Those who take these drugs scarcely ever take spirits. They trust to the drug alone as a rule * * When you get an opium eater, or chloral eater, or one who takes any of these other drugs, he is very apt to adhere to that alone." (Vol. IV., Part II., p. 988-991).

The commissioners were anxious to obtain from this province, as from others, full information in regard to—

- (1.) The expenditure incurred in the maintenance of jails, lunatic asylums, and in maintaining the poor.
- (2.) The number of persons committed to jail.
- (3.) The number of lunatics committed to the asylums.
- (4.) The number of poor receiving relief.
- (5.) The number of homes and almshouses for the poor.
- (6.) The cost, per head, of prisoners committed to the jails.
- (7.) The number committed for drunkenness.
- (8.) The number committed for offences against the liquor laws.
- (9.) The cost, per head, of those committed for drunkenness and offences against the liquor laws.

The return, printed as Appendix No. 132, was supplied by the Government of Ontario.

No information was obtained, however, in regard to the items numbers 4, 5 and 9.

The statement does not, apparently, contain the cost of the central prison, which appears to have been, on an average of four years, about \$62,000 per annum, after deducting receipts.

Taking the cost of maintaining jails put down on the return, and which is paid by the municipalities, say for the year 1891, the average was \$15.90 per head of the prisoners. Those committed for drunkenness in that year numbered 3,614, and for offences against the liquor laws 70, a total of 3,684, the cost of whom, taken at the same rate per head, would amount to \$58,575.60. The prisoners committed for

drunkenness probably remain a shorter time, on the average, than the other classes of offenders.

The City Council of Toronto, availing itself of the power given by the law to reduce the number of licenses issued within the city limits, has effected a large reduction in the number of licensed places, as is shown by the following statement:—

Year.	Tavern licenses.	Shop licenses.	Whole-sale licenses.
1874.....	309	184	21
1875.....	299	128	28
1876.....	216	100	39
1877.....	182	100	76
1878.....	181	92	20
1879.....	195	98	19

Taking the population of the city to have been, in 1892, 190,500, the number of licenses was equal to one for every 900 of the inhabitants. The ratio for the remainder of the province appears to have been in that year one to every 600 of the population.

A statement of the arrests for all offences, and of the arrests for drunkenness is given in Appendix, No. 35.

The following statement shows the ratio of these arrests to the population of the city:—

Year.	Population.	Arrests for all offences, per 1,000 of population.	Arrests for drunkenness, per 1,000 of population.
1880.....	86,700	68.50	33.13
1881.....	96,196	58.69	30.22
1882.....	105,618	55.40	28.15
1883.....	115,040	57.68	29.61
1884.....	124,462	59.35	29.27

1893.....	200,000	46.98	18.22

On the 13th May, 1892, the City Council, under the powers conferred by sub-section 39 of section 489 of the Municipal Act, passed the following by-law:—

“ Provided however when any person is brought to a police station on a charge of being drunk without being disorderly, the chief constable of the city or the

Liquor Traffic—Commissioners' Report.

“inspector in charge of such police station, may, in any case where it is, so far as known to the said officer, a first or second arrest for such offence, release such person without bringing him before a justice of the peace, or police magistrate. Any person arrested for the offence of being drunk without being disorderly, shall be a competent witness on his own behalf.”

It may be mentioned that the arrests for drunkenness in the year 1889 were 5,441, and the convictions for the same offence, 2,176. In 1890 the arrests were 5,023, the convictions, 1,969; in 1891 the arrests were 3,758, the convictions, 1,438; in 1892 the arrests were 3,657, the convictions 1,215, and in 1893 the arrests were 3,644, while the convictions were 996. The total arrests included those arrested and discharged by the police without being brought before the court.

The amount received by the city for liquor licenses was :

Year.	Number of licenses.	Amount.
		\$
1885.....	312	34,535 00
1886.....	303	32,984 00
1887.....	213	36,410 00
1888.....	212	32,773 00

1892.....	211	33,889 81
1893.....	209	34,263 25

The Dunkin Act is in force in three municipalities in Ontario, viz., the township of Pelham, in the county of Welland, and in the townships of North and South Colchester, in the county of Essex. A summary of this Act, which was passed prior to the confederation of the provinces, viz., in 1864, and applies to Ontario and Quebec, will be found in Appendix No. 130.

It may be observed in regard to the voting on the Scott Act in Ontario, that in only two counties out of the 27 counties and cities which at different times adopted it, was its continuance voted for when re-submitted, viz., Lambton and Halton.

The evidence taken in Ontario in regard to the adoption, operation, and repeal of the Scott Act will be found, when read, to be conflicting and inconclusive. Here the advocates of prohibition, very generally, as in other places where the results of coercive legislation have not been satisfactory, or there has been reaction, attribute them to the non-enforcement of the law. Some others say the Scott Act was not the legislation which they originally desired and there was indifference in regard to it, overlooking the fact that the continuance in force of the Scott Act was no bar to the advocacy of an extension of the principle which was embodied in that Act.

The renewal of licenses under the present system rests wholly with the commissioners, and the only way apparently in which the voters can intervene to obtain the discontinuance of a licensed place, which circumstances have arisen to, in their opinion, render desirable, is by petition to the commissioners, which the latter are not under any obligation to regard, unless infractions of the law are alleged and proved. The law in this respect would seem to call for amendment in the direction of giving the ratepayers more control over the renewal of licenses.

A memorandum showing the efforts of temperance societies and the means taken generally to promote temperance and total abstinence from the use of intoxicating liquors in Ontario, will be found in Appendix No. 133.

An analytical index to the voluminous evidence taken in this province will be found in volume IV, part 2, of the evidence presented with this report.

The total number of witnesses examined was 284. Of those, 169 expressed themselves in favour of a law prohibiting the importation, manufacture and sale for beverage purposes, of intoxicants; 90 expressed themselves as believing that it would be found impracticable to enforce such a law; 25 expressed no opinion.

Of those who expressed themselves in favour of a general prohibitory law, 32 either expressed doubt as to the possibility of its enforcement, or their conviction that it could not be enforced.

The total number of witnesses who expressed themselves in favour of the enactment of a prohibitory law may be classified as follows:—

Clergymen.....	35
Judges, magistrates and members of the legal profession. . . .	11
Members of the medical profession.....	8
Officers of the peace.....	18
Jailers, wardens of asylums, etc.....	2
Insurance agents.....	3
Merchants and manufacturers.....	27
Y. M. C. A. officials.....	1
Farmers.....	3
Journalists.....	8
Members of the labouring classes.....	3
Ladies, including Salvation Army "lasses".....	3
Excise and Customs officials and officials not elsewhere enumerated.....	47

Of the total number of witnesses examined, 104 expressed themselves in favour of some measure of compensation to those who might have their business destroyed by the enactment of a prohibitory law.

The following are the names of the more prominent persons who gave evidence in favour of the enactment of a prohibitory law:—Messrs. D. W. Karn, Woodstock, Stapleton Caldecott, W. H. Howland, Warring Kennedy, H. A. Massey, Elgin Schoff, F. S. Spence, J. K. Stewart, J. J. McLaren, Q.C., LL.D., and Mayor R. J. Fleming, of Toronto. The Hon. G. W. Ross, Dr. Aikins, Dr. J. T. Fisher, Bishop T. W. Campbell, and the Revs. E. H. Dewart, D.D., W. Frizzell, John Potts, D.D., of Toronto, and His Honour Judge Jamieson, of Guelph.

Of the witnesses who were either opposed to prohibition on principle, or because of the impracticability of enforcing it, the most prominent were:—Very Rev. G. M. Innes, Dean of Huron; Ven. Archdeacon Dixon, Guelph; Ven. A. H. Mulholland, Owen Sound; Revs. Prof. Clark, Canon Dumoulin, G. M. Milligan, D. J. MacDonnell, John Pearson, D.D., of Toronto; Hon. T. W. Anglin, Chief Justice Armour, Col. G. T. Denison, Judge McDougall, Prof. Chas. G. Richardson, Prof. Goldwin Smith, Ph. D.; Dr. W. H. Ellis, M.B., Dr. Daniel Clark, Dr. Jas. Thorburn, and Messrs. Edward Gourney, Robert Jaffrey and J. Gordon Mowat, of Toronto.

The Rt. Rev. Maurice S. Baldwin, D.D., Bishop of Huron, speaking of the state of the liquor traffic in London, Ont., said he thought that the number of licenses was gradually being reduced, and that that was beneficial to the community. If he had to make a choice he would prefer the saloons being done away with, rather than restaurants. He had had no personal experience of prohibitory laws, but from conversation with the clergy of his diocese he was led to think that the Scott Act was not beneficial in the majority of cases. One clergyman had said that it was most beneficial. "But I understand it was not the Act which was bad, but the mode in which it was enforced." He thought the country would be better without liquor, and would favour the enactment of a prohibitory law as an act of humanity. He considered the decline and fall of most of those who had become moral shipwrecks began through drink when they were young, and that, therefore, if a prohibitory law were actually established it would save thousands of young men. By "actually established," he meant that if prohibition were on the statute-book and liquor was sold freely it would not amount to anything. "I mean if the prohibition were real; the mere passing of a law would not answer the purpose unless it was carried out." He would exempt liquor for mechanical, medical and sacramental purposes from the operation of the law, although he did not personally believe in its usefulness as a medicine. However "in anything I say, I do not wish to contravene medical statements." He thought that it would be only a matter of justice to give compensation

Liquor Traffic—Commissioners' Report.

to brewers and distillers for plant and machinery rendered useless. He was of opinion that drunkards require different treatment from that of simply sending them to jail for a short time, a course which he did not believe produce much reformation. He considered remedial measures would be better than punitive measures. He believed that the influence of religious communions and temperance societies had been beneficial in the matter of promoting temperance sentiment and temperance habits. (Vol. IV., Pt. I, pp. 401-403.)

The Hon. George W. Ross, Minister of Education for Ontario, gave evidence which is well worthy of the most careful consideration. Speaking of the repeal of the Scott Act, Mr. Ross said (Q. 13319): "It indicates this, that unless a prohibitory law is effective, the common sense of the public prefers a license law. The Scott Act when passed, it was thought, would be made effective. Had it been, or could it have been made effective, it would not have been repealed. The fact that it was not effective led to the repeal, I believe, mainly."

Mr. Ross was asked: "Is there not always a danger in taking a special vote on such a question as prohibition that the actual supporters of the measure will come forward and vote, while those opposed to it are indifferent, and the result is that it is not really an expression of public opinion?" He replied: "Yes, I think that was the case sometimes when the Scott Act was passed." (Q. 13350a.)

Mr. Thomas Dexter, the inspector of licenses in the city of Toronto, stated that the curtailing of the number of licenses and increasing the license fees had not had the effect in that city of increasing the number of places where sales were carried on illicitly.

Professor Goldwin Smith, who gave evidence before the Commission, said: "In fact, you cannot enforce temperance by law, for temperance implies self-restraint, and self-restraint ends where coercion begins. I have long had the conviction that it is impossible to enforce total abstinence by law; that the attempt only makes matters worse."

The late Mr. W. H. Howland gave much valuable information in reference to the working of the license law in the city of Toronto. Mr. Howland for many years took an active part in promoting temperance. He was, at the time he gave evidence before the Commission, the president of the Ontario branch of the Dominion Alliance. He was a strong advocate of prohibition. One statement which Mr. Howland made before the commission deserves most careful attention. He said: "My judgment is that the people have shown at different times by their votes on the Scott Act, and local option, and other questions that they really do favour a prohibitory law. They have again shown by their votes that they are dissatisfied with the want of enforcement of the law, that they prefer not to have a law on the statute book unless it is properly enforced. But lying between those two facts is this other fact, that they have been careless with regard to the return of representatives to enforce the law. There is too much of that sort of thing, and it is a fault in our democratic system. People say, we will pass a law, or we will do a certain thing, and they then expect it to work itself. The efforts of the temperance people, I know on several occasions, markedly fell off. In the county of Halton they dropped nearly all their temperance organizations, they ceased to work among the young; and by-and-by the Scott Act was repealed, because there were no longer any active temperance organizations, and the young people were not being educated. There was a feeling that the law of itself would do the work. I hold the people responsible for the enforcement of the law; I do not think they have a right to say that the breaking of a law which they themselves have passed is to be blamed on anybody else but themselves. If they choose to elect proper men, they can have the law enforced at any time." (Q. 14167a.)

Mr. Spence, Secretary of the Dominion Alliance, gave much important evidence from the standpoint of the prohibitionists. He did not claim that the prohibitive system extinguished the evils of intemperance, only that it reduced them. (Q. 15892a.)

Chief Justice Armour, in his evidence, said: "I do not think that drinking intoxicating liquors makes a man a criminal any more than eating oatmeal makes a man a Presbyterian. I do not think it is what a man eats or drinks that forms his character. I believe the use of intoxicating liquors to excess is dangerous to a man physically and mentally. It induces him to be idle and good for nothing, and thus brings him among associates who are, perhaps, criminals; but the true source of criminality to a large extent is idleness, aversion to work. That is my view."

Chief Justice Sir John H. Hagarty was unable to appear before the Commission when it sat in Toronto. He addressed a letter to the secretary of the Commission, which is printed as appendix No. 171.

PROVINCE OF MANITOBA.

Prior to the transfer of the North-west Territories to the Dominion in the year 1870, the sale and distribution of liquors in the territory was controlled by ordinances or laws enacted by the Governor and Council of Assiniboia. The Governor was the Governor of the Hudson Bay Company, and the members of the Council were selected by that company. The functions of the latter appear to have been advisory and legislative, rather than executive. The territory thus legislated over was a radius of about fifty miles from Upper Fort Garry. In 1862 the following laws were enacted relating to the furnishing of intoxicants to Indians:

"If any person, without distinction of race, supply or sell to any person popularly known as an Indian, or any member of an Indian nation, the means of intoxication, he shall, on being convicted before a petty court, on the oath of one or more witnesses, be fined for each offence, as follows:—

"Two pounds for furnishing any brewing utensils, the fine to go to the informer.

"Three pounds for furnishing malt, the fine to go to the informer.

"Five pounds for furnishing beer or any fermented liquor, the fine to go to the informer.

"Ten pounds for furnishing distilled spirits, or any other immediate cause of intoxication than fermented liquors, half the fine to go to the informer.

"In every case the offender, after conviction, to be imprisoned until the fine is paid.

"In addition to these fines, the offender shall make restitution to the Indian of all the equivalent he may have received, if any, for such furnishing, every part of such equivalent, not being money itself, being valued for the purpose at prime cost.

"If an intoxicated Indian commit or threaten to commit an unprovoked violence, he may be imprisoned, in addition to any specific punishment, till he prosecute the person who may have been guilty in the matter.

"If any person possess, or have possessed, malt or beer or spirits, or any other of the above means of intoxication in the society or tent of any Indian, he shall be held guilty of furnishing such means of intoxication to Indians.

"It shall be lawful for the bench of magistrates of the peace and petty courts in their several districts assembled, on the first Monday in June in each year, or at other times when they deem it expedient, to issue licenses, which will be in force till the first Monday in June, then next following, to approved applicants (who shall be land owners in the settlement), allowing the sale by retail on their own premises of all spirits, wines and beer lawfully imported, or of native manufacture (all quantities of wine imported under one gallon, and all quantities of beer under eight gallons, shall be counted retail); the sum of ten pounds to be paid for a license so issued and for the sale by retail of beer alone; and any person selling spirits, wine or beer by retail, without such license, shall, on conviction before a petty court, on the oath of one or more witnesses, for each offence pay a fine of ten pounds sterling, and be imprisoned until the fine is paid—one-half the fine shall go to the informer,—and the form of the licenses shall be according to schedule A or B; any offence against the provisions of said license shall be paid by forfeiture of the

Liquor Traffic—Commissioners' Report.

same; and in addition, in case of infraction of the provisions of said licenses as regards Indians, the offender shall pay the special penalty for furnishing the means of intoxication to Indians."

The license law brought into force by the last clause was amended in 1866 and 1868. The retail quantity was fixed at anything under five gallons. It could not be sold between the hours of nine at night and six in the morning, nor at any hour during the Sabbath, nor to any intoxicated person, and under no conditions to an Indian, under penalty of the forfeiture of license. Each petty court, out of the fund arising from licenses and penalties, was authorized to defray any necessary expense incurred in enforcing laws against the illegal sale of spirits, wines or beer, or of furnishing the means of intoxication to Indians, accounting to the Governor in Council for all such receipts and expenditure. No action could lie for the recovery of penalties for any breach of the laws regulating the sale of intoxicating liquors unless information should be given within six months after the commission of the offence. In addition to the retail licenses, wholesale licenses could be issued to such persons as supplied intoxicating liquors in larger quantities than five gallons, the fee for such license being ten pounds.

These regulations, it was stated by His Honour ex-Lieut-Gov. Schultz, continued in force down to about November, 1869, when trouble occurred in the territory, and until that was settled by the arrival of the Canadian and British expeditionary force in 1870, the Governor stated that what he described as a very high-handed license indeed took the place of constituted authority.

The commission of the first Lieut-Governor of the Province of Manitoba empowered him, with the assistance of a council, to make and enforce laws for all of the Canadian North-west, and this council passed a general prohibitory law, which was enforced by the employment of the mounted police, which force promptly repressed the armed liquor forts known as "Stand Off" and "Whoop-up," and prevented the employment of liquor for trading purposes in the North-west. (Gov. Schultz, page 159, vol. 3.)

The powers of the North-west Council ceased, as regards the territory which now constitutes the Province of Manitoba, when a separate Government was given to the North-west Territories in the year 1887; but in the District of Keewatin, which is under the rule of the Lieutenant-Governor of Manitoba, limited prohibition is still in force.

The Dominion Act passed in 1886, chap. 73 of Consolidated Statutes, separated Keewatin from the Governor and Council of the North-west Territories. Section 35 of the said Act, which is a copy of section 74, chap. 49, 38 Victoria, was as follows:—

"No intoxicating liquor or other intoxicant shall be manufactured or made in the said district, except by special permission of the Governor in Council, nor shall any intoxicating liquor or intoxicant be imported or brought into the district from any province of Canada or elsewhere, or be sold, exchanged, traded or bartered, except by special permission in writing of the Lieutenant-Governor." Such importations from any place outside of Canada were made subject to the customs and excise laws of Canada. Practically, therefore, until the constitution was changed by ordinance of the North-west Council, the limited Dominion prohibition just described, extended from the boundaries of Manitoba, Ontario, British Columbia, the states of Minnesota, North Dakota and Montana, to the northern limit of Canada and the north-eastern limit of Alaska. When Canada obtained possession of the country in August, 1870, the Assiniboia liquor law was temporarily continued in the province, with about the same results as had been obtained previously." (Gov. Schultz, page 160, vol. 3.)

The ordinances passed by the first North-west Council will be referred to under the head of the North-west Territories. It will be found, on reference to the paper handed to the Commission by ex-Lieut-Gov. Schultz, and which is printed with the minutes of evidence, that that gentleman spoke very highly of the results achieved in the district of Keewatin under the system which has just been described. He stated that only two gallons were permitted to be imported by one person for medicinal purposes during one year, the application for which had to be endorsed by a

justice of the peace, a missionary, or the head of the Indian Department of the Hudson Bay Company, and that exceptions to this rule were only made in the case of sacramental wine.

The Provincial Legislature enacted a license law in the year 1871. In 1889 the law at present in force (52 Vic., chap. 15) was passed. It amends and consolidates all the previous enactments. Its chief provisions are :

Sec. 4. The Lieutenant-Governor in Council shall establish license districts throughout the province.

Sec. 5. The boards of license commissioners shall consist of three members (two of whom shall form a quorum), appointed by the Governor in Council. They shall hold office for twelve months, dating from the 31st of December each year. They shall be allowed all true travelling expenses and \$5.00 each for every day of sitting.

Sec. 6. There shall be one chief license inspector for the province, and under him one or more inspectors for each district. They shall be appointed by the Governor in Council, who shall also fix the salary and amount of security required.

(1). The security shall be in the form of bond.

(2). All sums of money payable as license fees under this Act shall be paid to the Provincial Treasurer.

Sec. 41. Any municipality may appoint an inspector or Inspectors of licenses within the limits of such municipality, who shall have all the powers conferred by this Act upon inspectors for the purposes of prosecution, and in case any person is convicted of an offence against the provisions of this Act, through the action of such inspector, or otherwise through the action of the municipality, then the Provincial Treasurer shall pay to such municipality one-half the fines recovered through such conviction.

Sec. 8. Provides for the following licenses :—

(1). Restaurant licenses, issuable in cities only. The premises require suitable kitchen, dining room, etc. The application must be accompanied by a certificate signed by 16 householders, resident in the ward, each occupying premises assessed at not less than \$2,500 at the last assessment, certifying to the necessity of the license. The inspector shall see that meals are served.

(2.) Wholesale licenses, covering sales of not less than one and one-half gallon in draught, or one reputed quart, or two reputed pint bottles. Allowing liquor to be consumed on the premises forfeits the license, and disqualifies the licensee. Cigars and tobacco only may be sold on the same premises.

Sec. 10. The licensing board shall sit in May each year. All applications for license, with the recommendation when required, and \$10.00, must be in the hands of the Provincial Treasurer by 15th April. The Treasurer notifies the chief inspector, who notifies the local inspectors.

The inspector shall advertise all applications by one insertion in a newspaper, and by posting on the building, where the license commissioners' office is situate, and on the nearest post-office, for twelve days.

Each applicant must send to the Provincial Treasurer six days before the meeting of the commissioners,—

(1.) The petition.

(2.) Affidavit of self.

(3.) Affidavit of neighbours.

(4.) The bond.

(5.) The certificate of the municipal clerk or treasurer, stating the amount of license fee provided by law, and that the same has been paid.

(6.) The amount of the provincial license fee, and ten per cent in addition, as prosecution fund.

Sec. 14. Provides for the Treasurer notifying the chief inspector, who notifies the local inspectors.

Sec. 18. Applications for license may be heard at other times than at the May session of the board; but all expenses must be borne by the applicant, or *pro rata* by the applicants, if there are more than one.

Liquor Traffic—Commissioners' Report.

Sec. 19. Provides that all revenue from application fees, extra fees, and license fees, be paid to the Consolidated Revenue Fund.

Sec. 20. Twenty of the nearest householders can protest against the issuing of any license on the following grounds:—

- (a.) Character of applicant.
- (b.) That the premises are out of repair or unsuitable.
- (c.) Insufficient signers to certificate.
- (d.) The protest must be accompanied by \$10.00 as fee, which is returnable if the protest is sustained, and must reach the Treasurer at least six days before the sitting of the Court.

Sec. 29. The fees payable to the province are as follows:—

Each restaurant in cities.....	\$ 250
Each hotel in cities.....	150
In towns of less than 2,000 inhabitants—each hotel.....	100
Wholesale licenses in cities and towns of over 2,000 inhabitants...	200
In towns of less than 2,000 inhabitants, villages and rural municipalities.....	100
Bottling ale and beer (one or both) one half the fees payable for wholesale license: (Sec. 29, 52 Vic., chap. 15).	

(1.) Municipalities may, by by-law, require each licensee to pay toward their municipal revenue such sums as they may determine, not exceeding the amount of provincial duty, and the commissioners shall in no case issue a license until they receive a certificate from the treasurer or clerk of said municipality showing the amount of such fees, and that such sum has been paid, and all fines levied under this Act shall go to the Consolidated Revenue Fund of the province.

(a.) The by-law must be sent to the chief inspector.

(b.) The by-law shall continue in force until amended or repealed; re-enactment is not necessary.

Sec. 30-31. Hotels must possess, in cities, 15, and in town 10 bedrooms. There must be a separate entrance, and stabling must be provided. No other business may be carried on in the same premises. Music, etc., is forbidden, under a penalty not exceeding \$20, or two months' imprisonment.

Sec. 41. The municipality may appoint the inspector.

Sec. 43. In rural districts one-half the fine may go to the prosecutor, provided that he is not the inspector.

The number of licenses in cities, towns and villages is limited to one for each 250 of the first 1,000 of the population, and one for each full 400 over 1,000; but two hotels may be licensed in any town or village where the population is less than 500.

In rural municipalities and places where there is no municipal organization, the commissioners determine the number of licenses to be issued; but they are not to exceed one for the first 300, and one for each 400 additional population.

The population is to be taken from the last official census.

The commissioners may grant two extra licenses, for six months each, from the 1st of June, in places of great resort; but in no place is it imperative upon the commissioners to grant the full number of licenses allowable under this Act.

Secs. 51-52. Provide that any city, town, or other municipality may pass a by-law forbidding the taking of any money for licenses, and such a by-law having been passed by such municipality, the commissioners cannot issue license for the sale of liquor therein.

This by-law is only submitted for the vote of the electors in the municipality, on the petition of 25 per cent of the resident electors, and three-fifths of the said electors have to vote in favour of it, in order to give it effect.

(k.) The by-law must be ratified by the council of the city, town, or village within six weeks of the vote being taken.

(m.) At any time after a by-law passed under this section has been in force for at least two years, the council of any such city, town, or village, on receiving a petition signed by 25 per cent of the resident electors, shall submit a by-law to repeal the same.

(n.) In case of repeal no new by-law can be submitted for two years.

Sec. 62. The commissioners shall report annually,—

- (a.) The names of all applications granted.
- (b.) The names of all not granted.
- (d.) Prosecutions under the Act and their results.

The inspector shall report annually to the chief inspector particulars of all prosecutions under the Act, giving names, dates, amounts of fines inflicted, and the names of the magistrates trying each case.

Sec. 67. Sales of liquor are prohibited on election days, from 10 p.m. on Saturday night till 7 a.m. on Monday morning, and from 11.30 p.m. to 6 a.m. on all other days.

Sale without a license incurs the following penalties:—

For first offence, from \$50 to \$250; for second offence, from \$200 to \$500; for third offence, from \$500 to \$1,000, or proportionate imprisonment in default.

Excessive drinkers may be interdicted; penalty for in any way supplying such interdicted person, \$100.

On the revision of the statutes in 1891 this Act remained intact, becoming "chap. 90."

In 1893 the Act was amended, the time for forwarding applications being made the fifteenth of October.

In case of the refusal of any license, the former holder might be granted a license for two months.

A conviction under this Act may, at the option of the owner of the premises, operate as an absolute forfeiture of any lease, whilst a second conviction will cancel the license and disqualify the premises for two years.

The inspector shall report annually on all the facts set out in the registry of license for the year, and such other information as the Attorney-General may require.

Civil damages up to \$1,000 are recoverable by the legal representatives of any person who comes to his death by drink.

The following statement was supplied by the provincial Government of the number of licenses issued, and the amount received by the Government for licenses and fines. The population has been added to the return since it was sent in.

STATEMENT of population and amount received in the Province of Manitoba from the granting of licenses for the sale of liquors and from fines imposed.

Year.	Population.	Number of licenses of all kinds.	Provincial Government's receipts for licenses.	Amount of fines collected.

Liquor Traffic—Commissioners' Report.

From the same source the following information in regard to the amounts received by the municipalities for licenses issued has been received:—

1889.....		\$16,937 85
1890.....		18,416 25
1891.....		18,506 70
1892.....		19,254 35
1893.....		19,199 60

The statement was accompanied by the intimation that for the years prior to 1889 the statistics were not on record in the Department of Agriculture of the province.

A statement of the quantities of liquor entered for consumption within the province from 1871 to 1893 will be found at page 40.

The following is an abstract of it:—

Period.	Population.	GALLONS PER CAPITA.		
		Spirits.	Beer.	Wine.
5 years ended 1875	30,466	0·822	0·535	0·154
do 1880	47,843	0·640	1·490	0·064
do 1885	78,757	1·363	4·143	0·119
do 1890	125,002	0·879	3·426	0·077
3 do 1893	163,462	0·905	3·436	0·063

It is probable that in the first period mentioned the province was to a large extent supplied with liquor on which the duties had been paid elsewhere, and which did not therefore enter into the entries for consumption in the province. The period showing the largest consumption (5 years ended 1885) was that in which the Canadian Pacific Railway was under construction, when there would be a large floating population.

A considerable portion of the liquor so entered for consumption may have been sent into the Territories, and some shipped across the line into the United States, but at the same time there have undoubtedly been shipments of liquors into the province upon which the duties have been paid elsewhere, and there has also been some smuggled, on which no duties have been paid.

A statement, taken from the criminal statistics of the Dominion, showing the convictions for all offences in the province, the ratio per thousand of such convictions, the total convictions for drunkenness, and the ratio per thousand of such convictions, from 1881 to 1893, will be found at page 66.

The following is an abstract of it:—

Year.	Population.	CONVICTIONS.			
		For all offences.	Ratio per M.	For drunkenness.	Ratio per M.
5 years ended 1885.	78,757	2,191	27·82	1,217	15·45
do 1890.	125,002	1,031	8·24	543	4·34
3 do 1893.	163,463	1,175	7·18	581	3·55

In Appendix No. 6 is a statement of the population in the jails of the province, showing the number admitted, and the number remaining therein, at the close of each year. The ratio per thousand of the population, it will be noticed, is, comparatively, a low one.

In Appendix No. 14 is given such information as it has been practicable to collect in regard to the inmates of the insane asylums of the province.

In a letter dated 14th April, 1894, the chief clerk of the Department of the Provincial Secretary, Winnipeg, said:—"We have also a home for incurables at Portage la Prairie, where harmless lunatics, as well as those who are incurable but sane, are cared for. Not more than one-third of the patients of this institution can be classed as sane and incurable. The number admitted to the home during the year 1892 was 18; the total number remaining at the close of the year 1892 was 47. The number admitted during the year 1893 was 9; and the number remaining at the end of the year was 48."

It was to be expected in a new country like Manitoba that the ratio of admissions, and the number remaining at the end of each year in the asylums, would show a continued increase. The ratio for 1892 is, however, when contrasted with the ratio in other provinces, comparatively a small one.

Appendix No. 45 shows the arrests for all offences in the city of Winnipeg between 1888 and 1893, the ratio per thousand of the total arrests, and the ratio per thousand of the arrests for drunkenness.

In Brandon the police magistrate stated that the number of arrests for drunkenness was about 15 per month. Estimating the population in 1892 at 4,000, and the arrests at 180, the ratio would be 45 per 1,000 of the population, as against 22.98 per 1,000 in Winnipeg.

The chief of police stated that the arrests which had been made for drunkenness from the 1st of January to the date when he was giving his evidence—October 29th, 1892—were 54, which would give a total of about 5.40 per month.

Brandon has eight licensed places to 4,000, and Winnipeg has about 54 to 30,000 population.

An analytical summary of the evidence taken in the province will be found printed along with Volume 3 of the Minutes of Evidence. Much of it had reference to the partially prohibitory system in force in the North-west Territories, which will be referred to in the portion of this report relating to that district.

A large proportion of the witnesses examined spoke strongly in favour of prohibition, a considerable number of them expressing the opinion that it was wrong—in fact, sinful—for the state to license the sale of intoxicants. They would like a Dominion law, and would have it enforced by Dominion officials; but they believe that a provincial law is desirable, and could be enforced.

Such witnesses as spoke of the failure to adopt and enforce the present local option law, and the Canada Temperance Act, attributed that failure to the non-appointment of inspectors and supineness on the part of the authorities in prosecuting offenders. They held that it was the duty of the inspectors to carry on prosecutions. (Q. 30496). Many of those in favour of prohibition as a principle either thought that it would be impracticable to carry it out, or were doubtful if it could be carried out.

In the city of Winnipeg it was stated that there had been a dispute between the city authorities and the Government as to whose duty it was to enforce the law.

There was a general concurrence that there was less drunkenness in the province than formerly; that the cities of Winnipeg and Brandon were orderly, and that the cases of drunkenness were not numerous. (Q. 30445-30608).

The superintendent of Indian agencies, Mr. E. McColl, stated in regard to the Indians, that "no intoxicating liquors are ever used by them outside the boundaries of civilization or white settlements, and of course, far north, there are no settlements. The only places where liquors are used are around Selkirk and the city of Winnipeg, and around the reservations. There is a reserve at the junction of the Rosseau River and the Red River, and along the Rainy River there is considerable drinking, especially at the time of treaty payments. The reason that they are able to get the liquor is that there are disreputable men who cross over from the United States and bring liquor with them. When they return across the river they are beyond our control. Within recent years the Dominion Government, however, sent there an excellent officer from Ottawa, who has almost stamped out the sale of liquor at

Liquor Traffic—Commissioners' Report.

the time of the treaty payments. This year it has been reported that little or no drinking has been going on there." (Q. 30626).

This gentleman suggested that if one or more officers were appointed at different places, similar to the one who has been appointed, and who has achieved such success at Rainy River, much good would arise. He said that the law in relation to the selling of liquor to Indians "has been put in force by myself and by the agencies, without fear or favour to any party." (Q. 30630-1). He further stated that there was a time when you could not go along the street in Winnipeg without seeing Indians in a state of intoxication. Now arrests quickly followed any case of drunkenness, and there was punishment of both drunkard and seller. (Q. 20-6301). "The Indian," he added, "cannot take a drink and do as white men do. There is no half-way with him."

Mr. McColl made the further statement: "Rum and tobacco were introduced by traders some years ago, but I believe the Hudson Bay Company put a stop to that trading altogether. Since that time the generation of Indians have passed away, and probably many of those who are old men now have never tasted liquor. Long ago it was rum which was obtained for their furs; but there is nothing of that sort now. Such trading is absolutely prohibited, and no liquor is given to Indians. Of course, occasionally disreputable people go from the city and give them liquor in order to get their furs." (Q. 30649).

This gentleman said a good deal in commendation of the efforts made by the missionaries, and the good they had done amongst the Indian tribes.

There is no distillery in the province of Manitoba. There are seven breweries and the Collector of Inland Revenue, Mr. H. A. Costigan, stated that there was occasionally a case of illicit distillation, potatoes being used. (Q. 30678). Most of the cases of illicit distillation were in the North-west Territories, to which his district extended. Any distillation which took place in Manitoba was from grain, and occasionally syrup and molasses. He said that all the cases of illicit distillation which had been detected in the Territories were before the new North-west Ordinance went into force. (Q. 30685). He expressed the opinion that the present license law of the province was a good one, if thoroughly enforced, and said that he had not had any case of tampering with liquors brought under his notice. (Q. 30705). As far as he knew there was very little smuggling of liquor into the province of Manitoba. (Q. 30687). He had travelled through the North-west Territory, but had not found that prohibition prohibited there. He did not think that the consumption, now under the license system, in the Territories was greater than it was before they had that system. (Q. 30715-6).

The manager of the grocery and liquor business of the Hudson Bay Co., at Winnipeg, Mr. E. B. Nixon, stated that their sales had decreased since the adoption of the license system in the North-west Territories. (Q. 30760.) The general belief was that smuggling prevailed very extensively during the time that the limited prohibitive system was in force in the Territories. (Q. 30770.) He expressed the opinion that the recent vote on prohibition was sandwiched in with politics. (Q. 30815), and he did not think if the people were to vote again, that the resolution in favour of the plebiscite would carry, irrespective of politics. (Q. 30816.) He had lived in Richmond, Quebec, during the period that the Dunkin Act was in force, and he found that liquor was used very extensively. (Q. 30834.)

The fishery officer for the Dominion Government, Mr. Richard Latouche Tupper, who had been chief license inspector for the province under the McCarthy Act, until it was declared *ultra vires*, and who had been engaged in framing the Manitoba Liquor Act, which had since been repealed, said that the McCarthy Act was a very beneficial Act for the province, and that it appeared to satisfy the people as a whole. It was a workable Act. (Q. 30856-7-8-9.) "I think," he continued, "social habits have improved, for the reason that, on account of cheaper transportation, a better class of liquor is obtained, and the people are able to get better liquor than formerly. I travelled from here to Edmonton and the Peace River country long before the railroad came in here. I walked from Ottawa River to the Rocky Mountains, with

the exception of 137 miles, and I constantly visited the Hudson Bay posts and other posts, and at some places I drank brandy and whisky. Now in Manitoba you can get light beverages, and, of course, there is less drunkenness than there was before. Although there may be more liquor drunk there is less drunkenness, and the people have improved under the change." (Q. 30870.) He never, he remarked, found much difficulty under the old system in getting liquor in the North-west Territories. (Q. 30891.) Traders and dealers would get hold of permits, and would obtain alcohol, and dilute it and fix it up with tobacco, &c. The people drank pain-killer all over the country, and subsequently the sale of it had to be stopped, and it could only be vended by permit. (Q. 30895.) He knew a man on the Saskatchewan who drank six or seven bottles a day of "Perry Davis' Pain-killer." (Q. 30896.)

This witness stated, in reply to a question as to the practicability of the enforcement of the prohibitory law, that "such a law would be desirable if it were practicable, but I do not believe it to be practicable. I believe it would be the means of giving us worse liquor and more crime every way, and it would not prohibit. I do not believe it is possible of enforcement. Smuggling and illicit manufacture would go on, particularly in the north-west country, and the people would resort to other methods of obtaining liquor. Smuggled liquor would take the place of the present supply. (Q. 30898.)

With regard to the vote recently taken on the question of prohibition, Mr. Tupper said that he did not think it meant anything, although there was a large majority. "A great many," he observed, "were very earnest, and a great many voted for fun. I have been told by a great many people that they did not want prohibition, but voted for it for fun. They voted without thinking. I am satisfied that if they came to consider the question again, and to vote again, and had the question fairly and fully placed before them, which was not done last time, the majority would vote the other way. I am satisfied that would be the result." (Q. 30966.)

He stated that under the license system the signatures of sixteen out of the nearest twenty neighbours were required to secure a license, and that meant prohibition all over the province if the people wished it. (Q. 30974.)

Mr. Edward L. Drewry, the owner of a brewery in Winnipeg, giving evidence before the commission, stated that they turned out about 300,000 gallons of ale, porter and lager beer, yearly. Of this quantity 60 p.c. would be lager. They shipped very little to the eastern provinces, but shipped westward over the territory as far as British Columbia. The arrangement for allowing 4 p.c. beer to go into the North-west Territories gave a great impetus to the brewing business in Winnipeg (Q. 31000.) During the time that the prohibitory system was in force in the North-west Territories he had been at Calgary, where he saw plenty of drinking. He found it difficult to get beer, but there was plenty of whiskey. (Q. 31011.) He had no doubt that large quantities of liquor were sent into the Territories without permits during the prohibition period. His brewery never sent in any, but it was not for lack of opportunity. They had studiously avoided either violating the law or the permit system. (Q. 31033.) He was quite satisfied with the present license law, and would like to see it fairly enforced. (Q. 31075.)

Mr. Thomas Nixon, right of way agent for the Canadian Pacific Railway Company, said he was in favour of prohibition, but would allow persons to have liquor in for their own use. (Q. 31138.) He expressed the opinion that people had better throw money into the river than buy liquor with it. (Q. 31188.) He thought a prohibitory law could be carried out. There might possibly be more smuggling under it than existed now. (Q. 31184.) With regard to the plebiscite recently taken in Manitoba, he said, "There was no fun about it. There was a solemn warning to the legislature of the country as to what the opinion of the people of Manitoba was on the subject. Many voters gave their votes in constituencies that have almost a prohibitory law now." (Q. 31200.) He thought no attempt had been made to pass the Scott Act in Winnipeg. Of course, the people had a right to take a vote on the subject; but they had not taken one. Asked if any steps had been taken in favour of prohibitory legislation since the recent vote was taken, he said, "We do not require to

Liquor Traffic—Commissioners' Report.

do so if the legislature carry out what they promised to do for us," which, he explained, was that if the vote was in favour of prohibiting the traffic, the Government would do it; that is, they would pass a prohibitory law, and that was what he and others were looking forward for them to do. The question submitted to the electors was "license or prohibition; for prohibition and against prohibition." The mode of prohibition was not submitted.

Mr. E. P. Leacock, agent of the Canadian Pacific Railway at St. Boniface, who has lived in the province for fourteen years, been reeve of Kildonan, warden of Selkirk, a member of the Legislative Assembly, and a magistrate, stated that he prepared the Manitoba License Act of 1886, and that he has observed very carefully the working of it since. The conclusion he had come to was that the law was not enforced; that its non-enforcement was owing to the laxity of the officers, the laxity of public opinion, and the lack of moral courage to carry it out on the part of the officers who should do so, from the Attorney-General down. "Every one of them," he said, "down to the lowest officer, has not the moral courage to enforce the license law.

Mr. Leacock was asked how he could account for this lack of moral courage to enforce the law, when so large a vote had just been so recently given in the province in favor of prohibition. He stated that the reason was "that a great many Conservatives wished to place the Government in an awkward position, and voted for prohibition. I imagine the motive of the Conservatives was to see what the Local Government would do if that vote were carried. (Q. 31293.) It was no expression of public opinion in favour of prohibition; it was rather an expression of opinion that the local license laws were not properly carried out and that very serious results would follow. (Q. 31294.) It was a declaration in favour of strong measures being taken in regard to dealing with the traffic, but not in favour of prohibition *per se*. The officers of both parties "are afraid of the hostile opinion of the licensed victuallers; they are also afraid of influences being brought to bear upon them to stop prosecutions. There is no reason whatever why a man who is Attorney-General of this province, whether he is a total abstainer or not, should not know perfectly well that the law is not enforced. It is not enforced, and no one attempts to enforce it. (Q. 41296.) "If the opinion of the majority of the people was favourable to strict enforcement, now could the Government resist that sentiment?—They do not resist it, they go to sleep." If that sentiment is for prohibition, how can they, in view of the power and influence exercised by those in favour of enforcement, yield to the other side?—For the very simple reason that the people talk and do not enforce their views. (Q. 31298.) I think it would be impossible to enforce such a law (a prohibitory law) as the public mind is not ready for it. It would amount to nil. There would be strong measures taken at the outset to oppose it. The first step, in my opinion, is to see that the law in regard to the sale of liquor is observed, especially in regard to allowing liquor to be drunk on the premises during illegal hours, and in such case the licensed victuallers should be fined and punished." (Q. 31309.)

This witness expressed the opinion that the working of the prohibitory law in the North-west Territories was absolutely nil; that "there was more drinking done then than there is now" that "the liquor was imported in kegs and the people were in the habit of getting two or three gallons of whiskey at a time, and they would drink it and remain like beasts for a day or two; and subsequently, for about a month, they would not have any liquor whatever. (Q. 31310-11.) The Manitoba law he referred to was that which was prepared by Mr. Tupper, but was very much modified, and was adopted by the present Government of the province with many restrictive clauses taken out of it." (Q. 31325.)

Speaking of the vote recently taken on prohibition, he said:—"I regard it as a vote which was largely manipulated for political purposes." (Q. 31318.)

He considered that the public sentiment was growing towards prohibition, "and eventually, in years to come," it would be adopted. He looked upon the rigid enforcement of the license law as a first step, and a most desirable one. (Q. 31330-1.)

The mayor of Winnipeg expressed the opinion that the temperance sentiment had increased; that prohibition was desirable, and, in his opinion, practicable; but he would have national prohibition. He thought the province could not very well enforce the provisions of a prohibitory Act. (Q. 31399). He stated that he had done business at different points in the North-west Territories for fifteen or sixteen years, and that the effect of prohibition there for the first eight or ten years was good. Recently the enforcement of the law had become more lax, and within the last four or five years, in his opinion, it was not enforced at all. He thought, in view of that condition of affairs, it was much better to drop the permit system, and adopt the improved system which now prevails. (Q. 31383-5). He considered that the recent vote in Manitoba was the expression of the opinion of the people on the question of prohibition. So far as he knew, the method of prohibition was not submitted, and he did not think that the vote had had the slightest legislative effect. (Q. 31413-31415).

Mr. James L. Steen, of Winnipeg, president of the Board of Trade, publisher of a "purely trade journal," and carrying on the business of a printer and publisher, stated that he thought it would be "a piece of the most unmitigated folly" to have an Act passed by the Dominion Parliament prohibiting the manufacture, importation and sale of alcoholic liquors for beverage purposes. There might be sections of the country in which prohibition could be carried out with profit, but a measure which would reach from the Atlantic to the Pacific could not. (Q. 31469).

The Hon. John F. Bain, judge of the Court of Queen's Bench, who has resided in Manitoba for about twenty years, expressed the opinion that there had been a marked change for the better in the drinking habits of the people, which he thought was in a great degree due to an improvement in the sentiment of the public in regard to the use of intoxicating liquors. He favored a system of high license. When in Maine he stated he had noticed that liquor was obtainable quite easily at the hotels where he staid. He thought that a prohibitory law could only be carried out if the people were in favor of it, not merely in favor of the law being passed, but sincerely in earnest in wishing it to be enforced. He did not care to express any opinion as to the benefit or otherwise of prohibition over high license. His own impression was that it would be perfectly impossible to strictly enforce a prohibition law. He had made visits to the North-west on business and otherwise, and had observed the working of prohibition there to some extent. He thought it was the very reverse of a success. He had not been in the Territories since 1885. He said: "The permit system was evidently abused, and under the operation of that permit system, liquor seemed to be obtainable to a very great extent. It struck me that I had never seen the use of liquors so utterly demoralizing as it was in the North-west at that time." (Pp. 65-69).

The Hon. William D. Ardagh, judge of the eastern judicial district of Manitoba for the last eight or nine years, referred to the working of the Scott Act in Simcoe, where he had resided prior to going to the North-west, and stated that it was not at all a success. His experience was that it led to greater home consumption. He thought that the people of Manitoba, and Winnipeg more particularly, were temperate and sober in their habits, and that there was probably less drinking generally. He had travelled through a part of Maine without knowing that prohibition was in force there, and it was only when somebody happened to mention it that he was aware of the fact. With regard to prohibition in Canada, he said: "In my opinion, from all the experience I have had, and I have been for many years *ex officio* a magistrate, and between ten and fifteen years mayor of the town where I lived, a proper license Act is the best means to minimize the evil, which everybody admits to be an evil, and that system should be tried before we resort to prohibition. My own impression about the license law is that the whole difficulty lies with politics. I think that is at the root of the whole matter. The one approach made to the proper regulation and control of the traffic, and the disruption of politics from it, was in the case of the Dominion Act which was declared *ultra vires*. The administration of the law was, to a large extent, placed in the hands of an independent authority,

Liquor Traffic—Commissioners' Report.

an authority which was *ex officio* and largely independent. The impression on my mind is that if a proper license law were enacted, with, perhaps, a permissive Act in regard to certain portions of the law, so as to enable the control to be placed under one authority—the local authority, including inspection—such a law, without interfering with revenue purposes, would minimize the evil and reduce it to its lowest limit, and it would have a less injurious effect on the community at large and on their morals than total prohibition." (Q. 31666). Judge Ardagh also explained his experience as a license commissioner under the Dominion Act, and gave much valuable information to the commission.

Dr. George Turner Orton expressed the opinion that the license law worked very fairly in the province; but he did not think that the permit system worked well in the North-west Territories. He had some experience of it as medical superintendent of the men employed in constructing the Canadian Pacific Railway (Q. 31-743), and found that the law was continually infringed, and that large quantities of spirits of a very inferior character were shipped there and used. He also explained that it was the general opinion that liquors were much adulterated. (Q. 31745-6-7). He thought the permit system was as well administered as it was practicable to carry out such a law. He expressed himself in favour of a well regulated license system as being better than prohibition. He would permit the sale of light wines and beer in public places, but would entirely prohibit the vending of spirituous liquors in public bar-rooms and saloons. He thought that popular opinion was not in favour of prohibition, notwithstanding the recent vote in the province, (Q. 31765), and that nine-tenths of the votes were given simply because the people thought it was respectable to vote on that side without giving any consideration to the question. "I do not think," he said "that the people to-morrow would feel sufficiently interested in the subject to assist in any way the officers of the law in carrying out such a measure. I do not believe any large number of them would make it a special object to do so" (Q. 31767). "Every farmer in the country is well aware that the breweries are of immense value to him, as offering him a market for the crop of barley, for which he has very little sale. The same might be said in respect to rye, which is used in the distilling of whisky." (Q. 31770). He had remarked, been insurance examiner for a number of companies for over thirty years, and did not remember a case refused where a man drank moderately and took stimulants in moderation. He said: "It is a well known fact that at one time the character of the liquor admitted into the North-west Territories was almost like poison, but still the people drank it. There was a very strong feeling in favour of greater liberty under the permit system. I know that as a fact, simply because people were often compelled or tempted to bring in liquors that were not fit for use, whereas by the extension of the permit system they would have been able to obtain proper, healthy and unadulterated liquors." (Q. 31847).

Mr. Louis W. Coutlee, barrister, Winnipeg, who had acted as Deputy Attorney-General in the disputed territory between Ontario and Manitoba, stated that he enforced the Public Works Act. There was much smuggling; liquor came in in eggs, the original contents having been blown out. It was also brought in on hand cars on the railway. He had seen something of the prohibitory law in the State of Maine, and it was practically not observed. (Q. 31923). He did not consider prohibition practicable.

Mr. Colin Inkster, of Kildonan, sheriff of the Eastern Judicial District of Manitoba, said that the first liquor law passed in Manitoba after it became a province was practically a copy of the old Assiniboia law. (Q. 32010). He expressed the opinion that the license law was very well observed. He had chiefly to do with civil cases. A large number of those with whom he had to deal had executions issued against them for debt. (Q. 32018). Of such, the drunkards were the very smallest proportion. In only a very small percentage of cases had the inability to pay arisen from drinking habits. (Q. 32020). He thought that a general prohibitory law well enforced would do good. He was of opinion, however, that it could be

enforced only with dangerous consequences, because it would lead to smuggling, for people would have liquor at any rate.

Mr. John W. Sifton, the inspector of public institutions in the province, expressed the opinion that the recent vote taken on prohibition was a very serious expression of public opinion. (Q. 32092). He said the people had had other opportunities of voting on the question, and they had voted in the same way. The Scott Act had been carried in three-fourths of the province; in all the counties except the district of Winnipeg. Asked why it did not go into operation, he said that it was because "there was some flaw in the Act, in consequence of which it was declared to be invalid. The people never had a chance of seeing how it would work. They started to enforce the law, and the case went to the Supreme Court, and the court threw it out." There was, he remarked, a considerable portion of the territory under local option, and he thought this kind of prohibition had worked very well. "It is practically all over the province," he added, "and there seems to be no very great difficulty in carrying it out except in towns, especially in towns near the railway, where liquor can be smuggled in." He said there was a jail in one of the districts under this prohibition, in which there were no prisoners, and no jailer. (Q. 32094-8.) He thought the prohibitory law could be enforced just as well in Manitoba as the license law then was, in fact, a little better. He had enforced the Public Works Act on contract No. 14 of the Canadian Pacific Railway, where he had seventy-six miles of road under his jurisdiction. (Q. 32105.) The financial difficulty which would be created by the adoption of a prohibitory measure was not insurmountable; the law would promote the moral standing of the country. "Take the places," he said, "where it is in force now; take those places I have mentioned (certain places in California), and the moral standing of the communities is high. Take the condition of affairs right in our own province and wherever the Act is enforced, we find the same excellent condition, and there is no question but that as the sentiment of the country has increased in that direction, we have improved morally. We think we are the most moral and sober people on this continent. We think we can bear that out by statistics. We think there is no city of the same size as sober as Winnipeg." Witness expressed himself in favour of a prohibitory law similar to that in force in the State of Maine. He explained that the vote in Winnipeg was largely in favour of prohibition, but that the citizens had taken no action on the subject since the vote. He thought it did not rest with them to do so.

Mr. William Small, carpenter, of Winnipeg, was in favour of Dominion prohibition. He thought the law would perhaps be better carried out if limited to the provinces which were strongly in favour of it. He was of opinion that the sale of liquor was an evil to the state, and the state had no right to license an evil. If the sale of liquor was not wrong, then the hotel-keepers and saloon-keepers had no right to pay for the privilege of selling it, and there ought to be either untrammelled sale or prohibition. That was his opinion of the question on principle. As a matter of expediency, the license law might be better than untrammelled sale. (Q. 32211-32234.)

The Rev. John Stewart, of Treherne, a minister of the Methodist church, gave his experience in Ontario. He had lived at Brampton where he found adulterated stuff was sold. He would rather have a license system than untrammelled sale, but he would prefer prohibition to license. The officials who were supposed to look after the carrying out of the law were so lax in their duties that if the system (license) were adopted it would probably not be enforced. Of course, it would be very much better than untrammelled sale. He thought that the officers appointed to enforce the license system should be put under bond and made to do their duty. In the district where he resided, on the 10th of May there was a vote taken on prohibition in the municipality. He thought the vote stood between forty and fifty against to between two hundred and three hundred for the local option law. The law was set aside by the judges on the ground of some technicality. If the people had had the money they would have been able to set aside the decision of the judge, because the premises on which the decision rested was not true. (Q. 32311). In the

Liquor Traffic—Commissioners' Report.

district there were about one thousand voters, out of which, if his statements were correct, the number voting would be about three hundred and fifty. The feeling of the people in the district was such that no licenses were granted at Treherne. He thought that prohibition had been beneficial wherever it existed. (Q. 32338). He considered that the recent vote in Manitoba was an intelligent expression of the views of the people, and that it was unfair to charge them with voting unthinkingly. (Q. 32333).

Mr. Duncan McArthur expressed himself in favour of prohibition, and said: "I further believe it to be practicable throughout the Dominion if properly enforced, and eminently so in the Province of Manitoba, which at present has a small population, by the majority of whom the principle has been endorsed." (P. 112).

Mr. Frederick W. Thompson, the manager of the Ogilvie Milling Company, who had resided in Winnipeg about ten years, stated that he did not observe any particular change in the habits of the people in the matter of the use of intoxicants. He had lived in Missisquoi during the period when the Dunkin Act was in force, but was not favourably impressed with the results. Drink was to be had. He lived in the county after the Act was repealed, and was struck by the fact that there was less drinking under license in the village where he resided than there was when the Dunkin Act was in force. (Q. 32365). He regarded the Dunkin Act "as a farce" (Q. 32377). His opinion in regard to prohibition was that the very fact it was made difficult to obtain liquor would lead to greater demoralization, and greater crime and breaking of the law. He said: "I believe that where a community is generally prosperous the people attend in a larger degree to sobriety."

Mr. Andrew Dykes, tea merchant, of Winnipeg, who had been a brewer in England, thought that prohibition enhanced the value of property. He would vote for unrestricted sale in preference to a license law. The demoralizing effects of the traffic if unrestricted he believed would remedy themselves. (Q. 32440). He would have all the laws in regard to the traffic observed. He thought that the present license law in Manitoba was not enforced; that as it stood it was a good law, if well carried out. There was no officer appointed to enforce it, or rather, there was only one. He thought the proper course would be to have more officers appointed by the Government, and they should see that the law was properly observed. (Q. 32475-80.)

Mr. George F. Gault, wholesale merchant, Winnipeg, who had been a resident in the province between ten and eleven years, and in business all that time, had been through some of the counties in Ontario when the Scott Act was in force. He never knew any of those laws to interfere with the sale of liquor. He found it more difficult to refuse to drink in places where such laws were in force than in those under license. (Q. 32534). He had been in the North-west Territories when the prohibitory law was in force there; but only for a limited time. It was possible to obtain liquor for beverage purposes. (Q. 32536). He was unfavourable to enforced prohibition. He did not consider that it could be practically carried out. He was in favour of high license, which would tend to prevent illicit sale, and the business would be better conducted. He stated his objections to a prohibitory law as follows:—

"I think it is demoralizing to a community. It raises all sorts of ill-feeling in the community, and the experiences of the past have pointed how very willing people may be to vote for prohibitory laws, and yet almost at the first opportunity they have invariably expressed a contrary opinion. Considering that fact, and the further fact that all the pressure is brought to bear on one side, that is, on the side of temperance, I think those votes when they are registered against prohibition should be conclusive, as they express the opinion of the people." Continuing, he said he did not believe that it was possible to enforce prohibition. He did not regard the recent vote on prohibition in Manitoba as significant. "I think," he remarked, "experience has shown that such a vote could be carried anywhere where the people have not had any experience of the two systems, and experience has shown that such an Act could not be carried where the people have had experience of the

two systems." He thought that was almost entirely correct. With reference to the position in the State of Maine, where prohibition had existed for forty years, and the position in Iowa, he said: "I have always understood that liquor can be had in those states, and so long as liquor can be had, the people who want it will not raise any great objection to any law, however much it is attempted to be enforced. (Q. 32593-32607).

Mr. W. R. Mulock, Q. C., Winnipeg, a resident of the city about ten years, expressed himself as strongly in favour of prohibition. He is president of the Prohibition League of Manitoba. He thought the recent vote in the province was the expression of public opinion. The liquor interests had, by the issue of pamphlets, endeavoured to influence the vote against prohibition, and the movement was not a one-sided agitation. He could see no more difficulty attending the enforcement of a prohibitory law than was connected with the observance of local option. (Q. 32678). The enforcement of local option was a matter dependent upon the officials. There was an indisposition on the part of citizens to become informers. (Q. 32680). He expressed the opinion that "God's law enforces prohibition." Though a member of the Church of England, he considered that the use of fermented wine at the communion was wrong. "From the economic standpoint," he said, "I think it would be well to take the money spent on liquor and bury it in the middle of the ocean, and the country would be an enormous gainer." (Q. 32696).

Mr. Edward A. Burbank, manager of the Merchants' Protective Law and Collection Association, Winnipeg, who had been in the province about four years, came from Australia, and had been in Kansas, Iowa and Maine. In Kansas he found a prohibitory law, but he did not find prohibition. There was pretty much the same condition of things in Iowa. (Q. 32772.) He quoted the number of liquor tax papers issued by the United States Government in the State of Maine as proving that the sale continued there. "I should judge," he said, "from my observations, that when people wanted liquor they could get it." He had been at Calgary, Banff and Regina. He remarked, "I think more drinking was done there than ever was seen in Winnipeg; particularly was that the case in Calgary." (Q. 32784.) Asked if liquor was sold in the Territories, he said, "It was freely drunk and freely used, but I do not know where it was obtained." He had taken no part in the recent vote on prohibition, except that about two or three days before the election he was requested to write something for the newspapers giving his views. Questioned if the opinion at which he arrived was favourable or unfavourable to prohibition, he replied, "I would vote for prohibition readily, and I would believe in absolute prohibition, if my impressions, observations, reading and study had not led me to believe that absolute prohibition was impracticable and impossible." This witness gave some information in regard to the traffic in the municipality of Carman, where a local option law was in force. The people had repealed the local option law, and he said the condition of matters since had improved under the license system adopted. Speaking of the vote taken on prohibition, he said, "I take it that even the vote fell two or three thousand short of the vote generally polled in the province. It would have been nine or ten thousand short if that question had come up separately. But the people were voting for candidates for the Provincial Legislature, and they were asked to vote and take in this measure, and that is the reason why so many voted as did vote." (Q. 32814.) There was no organized opposition to voting in favour of the Act. (Q. 32817.) With reference to the issue of the pamphlet (which he had referred to), he remarked, "My opinion is that Mr. Greenway was guilty of an attempt to evade the issue, and his opponents took advantage of that position in which the Greenway Government placed themselves, so as to put them in a hole on that issue. I believe that an absolutely strict and well enforced license law would be the best thing we could have in this country." He did not think the law was well enforced in Winnipeg. He went on to say: "There is only one license inspector for the province, and it is absolutely impossible for him to be in so many places at about the same time and enforce the law. In my opinion, he should have assistants. I think the people who call themselves prohibitionists and temperance

Liquor Traffic—Commissioners' Report.

people should have given support to the enforcement of the license law. If a license law cannot be enforced, I do not see how a prohibitory law could be enforced. (Q. 32826.)

Mr. C. H. Graburne, clerk of the executive council of the province, gave information in regard to the voting on the plebiscite. He thought the vote expressed a real desire on the part of the people of Manitoba for prohibition. (Q. 32,911.) He had the record only of two constituencies in which the vote had been against prohibition. One showed a majority of six and the other a majority of fifty. He was in favour of prohibition, and knew of nothing to prevent its being brought into force. He did not consider that the license law worked satisfactorily in Manitoba. He hardly knew what the difficulties were; probably non-enforcement of the Act would be one cause of it. Asked if it was a lack of a sufficient number of officers to carry out the Act, he said: "It is lack of stringent enforcement. I think there has been laxity in the enforcement of the law, which has given license to parties to break the law. I have seen so much trouble in connection with the sale of liquor after hours that I think the result has been found even worse than the sale of liquor during proper hours." He would prefer a license law to untrammelled sale, but desired prohibition. "Then you do not look on licensing as a sin *per se*?" he was asked, and he replied: "If it was properly observed and properly carried out, probably there would not be such a persistent cry against the license law and as to the necessity of prohibition." (Q. 32925.) The law had been amended from time to time, but he considered it still defective.

The Hon. Albert C. Killam, judge of the Court of Queen's Bench, resident in Manitoba for fourteen years, was born and brought up in Nova Scotia, studied law subsequently in Ontario, and practised there for some time before going to the North-west. He thought probably there had been a decrease, taking the increase in the population into consideration, in the use of intoxicating beverages in Winnipeg, which he considered an orderly and well-conducted city. He expressed the opinion that it would be better to put the persistent drunkard under some restraint. Such a provision had been made in the law in Manitoba, and although it was not repealed, it had been allowed to become a dead letter. He had occasionally been in counties where they had prohibition, but only temporarily. He had visited and resided at Yarmouth, N.S., where the sentiment appeared to be very strong against the sale of liquor. He was not aware that liquor was allowed to be retailed there by the glass. There had been no license granted in Yarmouth within his recollection. As a school boy he had heard of places talked about where liquor was sold illicitly. He had been in the North-west Territories when prohibition was in force there. Of the operation of the law, he said he had seen very little. "I remember," he remarked, "some time ago I was at Fort Macleod for a day or two, and at Calgary for a time, but never saw liquor sold. I have seen apparent evidence of parties having used it, and I have known it to be freely used; it has been offered to me and to others. I have seen bars that were pretty large and expensive to be kept up by the sale of ordinary liquor, and I have been told that they sold intoxicating liquors at them. But I did not see evidence of sale myself." He had not gone very deeply into the question of the advisability of a prohibitory enactment, but said: "As to enforcing such a law, it seems to me it would be so exceedingly difficult as to be almost impossible." (Q. 32972). Again, "I desire to say on the question of prohibition, that a large number of persons desire to use intoxicating liquors, and I think it would be an undue act on the part of the majority to prohibit their obtaining them." (Q. 32974). Further, he remarked: "The result of the recent vote was a surprise to me. In my opinion it may not have expressed the views of the people, for the reason that there was no practical outcome of it; it was not put into practical operation. Still, I may be mistaken in that regard. I was surprised at such a large vote being given in its favour." (Q. 32976). Asked if the majority being as strong as the vote indicated, it would be right for them to impose their views in the shape of a prohibitory law upon the minority, the honourable judge said: "That is a very difficult question to answer. I still hold my previous opinion, that the majority should not infringe on the natural rights of man."

Mr. J. K. McLennan, of Winnipeg, grain merchant, expressed himself most strongly in favour of prohibition. He had recently come to Winnipeg from Treherne. In the lastmentioned place, no licenses were issued. He thought that the municipality of Carman was better under prohibition than it was under license. (Q. 33013). He had been a commercial traveller, and had visited Carman regularly. He thought that whilst a local option law was in force there was very little drinking. He said: "I think a prohibitory law would be well enforced in Manitoba, judging from my impressions at Treherne, outside of a few parties who would be determined to keep a little liquor on hand. Outside of these few people, if the trade were prohibited, I believe there would be no difficulty in enforcing the law." (Q. 33013-33016).

Mr. Charles H. Cordingly, accountant, Winnipeg, thought that the enforcement of a prohibitory law would not only be impracticable, but impossible. (Q. 33071).

The Rev. John Semmens, minister of the Methodist church and president of the Manitoba and North-west Conference, who had resided five years in Winnipeg, described (pp. 135-137) the kind of prohibition enforced by the Hudson Bay Company. The following is a quotation from that gentleman's evidence:—

"Have you noticed the operation of the prohibition law in the North-west or in Keewatin?—Yes, I have, and I have also had a view of prohibition that no one has mentioned to this commission. Prohibition was introduced by the Hudson Bay Company many years ago, and its effect was felt over the whole territory then governed by the council of which Sir George Simpson was the president. That prohibition was decided upon by the Hudson Bay Company's council in session, for the purpose of protecting the hunters on the one hand and the company's trade on the other. It was carried into effect in the most wholesale fashion by the refusal of the authorities to ship any liquor from England, and for a number of years this prohibition prevailed all over the North-west. The immediate result of it was that business increased, that the health of the people was very much improved, and life was preserved. I know that from observation; I know it also from statements made, and I also know it from printed statements of the Hudson Bay Company, issued before this province was a province of the Dominion."

This gentleman stated that he had been a missionary in the Hudson Bay Territory for a number of years, and referred to cases of habitual drunkards, who, when the supply of liquor was shut off, became good citizens and able hunters.

The following is a further quotation:—

"Suppose the Hudson Bay Company had established, at various posts throughout the territories, licensed places under certain restrictions, do you think they would have accomplished the same result as was secured by adopting a drastic measure of prohibition?—They had that, practically, all the time. The people lived in forts, and were practically banished from the company of white men. They were practically prohibitionists, and yet under that system and under those restrictions, the evil crept in which the council saw must be removed."

He believed the recent vote on prohibition was an honest expression of the public desire and purpose respecting the liquor trade. He considered it a large vote as compared with the vote for members of the Legislature. He believed that a prohibitory law, if enacted, would be well enforced: He said, "I should be guilty of lacking respect for my fellow-countrymen if I made a statement to show that I did not believe it." In reply to the question, "So you expect the Provincial Government at the next session of the Legislature to introduce a measure for prohibition, I suppose?" he replied, "I do not think that I have faith enough to dare to expect that much. I have hope, however, that they will move in the right direction. I would not have prohibition unless it could be in force constantly." (Q. 33174). He said he would prefer Dominion to provincial prohibition. The Hudson Bay Company might have liquor in their stores, but it was for private supply. He stated that the private supply for their own factors was never done away with. They could always obtain liquor for their own use.

A highly interesting statement, made by ex-Lieutenant Governor Schultz, will be found printed with the evidence taken in the province.

Liquor Traffic—Commissioners' Report.

The evidence taken in Winnipeg, the most important place in the province, tends to show that the means taken to enforce the existing law are generally considered to have been inefficient and lacking in energy. The conclusion is irresistible that the agitation for prohibition has been much more vigorous than the agitation for a strict enforcement of the law. The people of the city of Winnipeg could at any time, if they were so disposed, have taken advantage of the provincial law and refused to issue licenses, as might any other town or municipal district in the province.

Much evidence was taken in Brandon.

The police magistrate, Mr. John Campden Todd, who declared himself in favour of prohibition, thought that a prohibitory law might be effectively worked, but that it would be a very difficult thing to do; liquor would be smuggled, and it would reach families who did not have it now. He said there were about eight licensed places in Brandon, and he did not think there were any places where liquor was sold illicitly, as they were pretty sharply looked after. The cases which came before him for sale after hours, he thought did not average more than one per month. About two-thirds of the vote taken at Brandon was in favour of prohibition, and he believed that it represented the opinions of the people. He added: "I do not think that any prohibitory law can be enforced, that is, so as to be able to keep liquor entirely out. I do not believe that it is possible to do it." On the question of voting on the occasion of the plebiscite, he said: "I noticed at the time the question was before the people that it was not placed before them or explained to them as explicitly as it might have been. It seemed to be an off-shoot of something that came in last, or at the tail end, or as something not worthy of much notice. I had occasion to observe that. If the question had been properly explained to the people, I think the vote would have been a different one to what it was at the last general election here. * * * I happened to be in one of the voting places at the time of the plebiscite for a couple of hours, and I noticed that the prohibition movement came up at the very last moment. The voters had cast their ballots for members of the Legislature, and this was taken up as a side issue. I noticed a great many people said: 'Oh, I do not care about it'; and started out. There did not seem to be the time and consideration given to it that should have been given. I observed that the question was asked individuals if they did not want to vote, and the answer was frequently given that they did not want to have anything to do with it. Then the men would start out. Of course, that man's vote counted for nothing; of course, it was neither for or against."

"He did not vote?—He would have voted against prohibition, and I noticed a great many people would have done so." (Q. 33259-33262.) He did not mean those who voted for prohibition, but those who did not vote at all.

The chief of police of Brandon said that between the 1st of January and the 29th of October, 147 cases had been before the police magistrate. Of these about 54 were cases of drunkenness, and of the remaining 98 cases he thought perhaps 31 might be attributed to drunkenness.

Mr. John McDiarmid, M.D., mayor of Brandon, in which place he had resided for about ten and one-half years, said that he considered prohibition might be a good thing if it were carried out, but he had great doubts about the practicability of the scheme (Q. 32298). If prohibition were enacted in Manitoba, he thought, in face of the vote which had been taken, it could be fairly well enforced.

Mr. Gordon Bell, M.D., medical superintendent of the Manitoba reformatory, had resided in the province for five years, and came from the county of Renfrew, Ont. He stated that of 47 inmates of the asylum—24 males and 23 females—there was only one case in which it could be proved that the lunacy had been caused by drink. (Q. 33340). He said that his experience had been somewhat limited, but from it he had come to the conclusion that about 3 per cent of the total lunacy cases could be attributed to alcoholism. (Q. 33367).

Mr. Frederick H. Hesson, collector of Customs, Brandon, thought from the experience he had had that prohibition could not be enforced. He considered that the license law was fairly carried out. He thought that for about two years there were no licenses issued in Brandon. The place was then under the North-west prohibitory law. He said that during 1882 and 1883 liquor was openly brought in without any permit and was sold. (Q. 33400-1). There were no mounted police to check the traffic, and it went on practically without hindrance. The result was that there was more drinking than under the license system.

Mr. A. M. Peterson, a member of the legal profession at Brandon, where he had resided for ten years, was favourable to prohibition, and did not see why it could not be enforced. (Q. 33430-2). Mr. Peterson's opinion with reference to the recent vote was expressed as follows:—"I heard plenty of men who had expressed themselves favourable to prohibition declare they would vote against it at the plebiscite, and I may state that lots of men who voted against prohibition would have voted for it if they had believed that the time was ripe for the enactment and enforcement of such a law. I think the people gave consideration to the matter, and voted as they thought best. I do not believe that those who voted for prohibition believed that it would be a bad measure, but I believe those who voted against prohibition believed that such a law would be a good thing, but that the time was not ripe to attempt its enforcement." (Q. 33452.)

"So the vote in favour of prohibition is not the expression of all the people favourable to it? I am not prepared to say that the people of Manitoba are fools, and I believe they expressed their honest sentiments." (Q. 33453.)

William A. Macdonald, M.P.P., barrister, of Brandon, who had resided in Manitoba over ten years, spoke of his experience under the Dunkin Act in the township of Pelham, Ont. It did not work satisfactorily. There was no license law in force when he went to Brandon. There was a great deal of sale, a great deal of liquor, and a great deal of drunkenness. He thought that the license law was fairly well observed in Brandon, (Q. 33473,) but he favoured prohibition if it was backed up by the sentiment of the people. The recent voting in Manitoba would be an indication of the feeling of the people, if they voted as they felt. In the city of Brandon they had a hot contest, and no doubt politics drove the question of temperance a little out of the public mind, though, for all that, he believed there was a fair expression of public opinion; but the people did not give the same thought to it as they would have done had the question been brought up separately. (Q. 33483.)

Rev. Alexander Urquhart, Presbyterian minister, had resided in Manitoba and the North-west Territories for about nine years; in Brandon for about three and one-half years. He was in favour of prohibition. He thought the license system had increased drunkenness. He presented a report of the Synod of his church on the liquor question. He considered that the prohibitory law in the North-west Territory was much preferable to the license system. He saw very little drunkenness in the Territories when the prohibition law was in force. He had resided in Regina. The Synod of his church had made a deliverance protesting against the way in which the permits were issued, and advocating that the law should be changed. The legislation of the Territories was in favour of a license system, and the members of the Legislature, elected by the people of the Territories, evidently did not agree with the sentiment expressed by the Synod of his church. He thought there was an increase of drunkenness after permission was granted to bring in beer for sale containing four parts of alcohol. He had no personal knowledge what the state of matters in the Territories was since the license law had been brought into force.

Mr. Richmond Spencer, M.D., of Brandon, had resided there for about eleven years, having gone from Montreal. He said that the permit system was in operation when he went to Brandon. The liquor traffic was prohibited when the railroad was opened, and you could not get liquor at that time except by permit. The whisky brought in was pretty good, he thought; the brandy and wine were nothing but poor whisky coloured. He considered that the present license law was fairly

Liquor Traffic—Commissioners' Report.

well observed. He was not in favour of prohibition, nor yet in favour of the provincial liquor license law. He thought that the common people ought to get a cheap drink, such as lager beer, or any other good drink, and the better classes get good wine; he meant those who were willing and able to pay for it. If there were those who wanted brandy or some liquors stronger than those commonly used, the proper way would be to place a large license fee on its sale; let them pay 50 cents per glass for it, but at the same time let it be good. Of course at 40 or 50 cents per glass there would be less drinking. They would not pay \$2 or \$3 for a few glasses of brandy. The reason men drank more under the permit system than under license, he considered, was that they would get one or two gallons at a time, gather their friends together, and drink it, not ceasing till they had finished. (Q. 33,580-1.) He remembered reading some extracts from an official report of Col. Herchmer, who said the condition of things under license was greatly worse than under the permit system, and that the change had been for the worse since the license system went into operation. He thought if the license system was properly looked after, it would not be so bad. (Q. 33585.) Prohibition was wrong in principle. He did not believe in prohibiting a man and "then having him sneak in by back doors. We would next have our children sneaking in by back doors, and practically stealing it." (Q. 33599-600.)

The Rev. S. Daniels, Methodist minister, Brandon, said he would like to see a Dominion Act. If that was not practicable, he would like to see a Provincial Act. He could not see why such an enactment could not be enforced. Something, no doubt, would depend upon public sentiment. He believed that the preponderance of public sentiment in Manitoba was most decidedly in favour of prohibition. (Q. 33644). He had only been in Brandon a few months, and had previously been at Portage la Prairie. The license law was then in force.

Mr. L. F. Hughill, employed on the editorial staff of the *Mail*, Brandon, had been almost constantly in Manitoba and the Territories since 1872. The prohibitionist enactment was the law when he was in the North-west, but it was not to any great extent enforced. Intoxicating beverages were obtainable in large quantities. They were of a very inferior quality. Consumption to excess occurred. Whenever what was called a "cargo" arrived, it was the occasion of dissipation. Permits were drawn out so that they covered the liquor for a sufficient length of time until someone else smuggled in a cargo, and when it did come it was used to excess. "If a man had a permit for five gallons of whiskey all his friends called on him, and there was what was called in that country a general jamboree until the liquor was finished." Liquor brought in under the permit system was of a better quality than that which was smuggled in. He had not been in the Territories since the license system came into operation. He thought that the bringing in of liquor under the permit system diminished smuggling, and the liquor was decidedly better after the railway was built. (Q. 33684). He had seen the working of the license law in Manitoba, and "as prohibition was carried out in the Territories, a license law is preferable, because the prohibitory law was not enforced in the slightest degree. (Q. 33687)." He was of opinion that in all cases a high license should be charged, and that a number of licensed places should be done away with and an effort made to obtain a better class of licenses. (Q. 33697). When he said that prohibition was not enforced at all, he intended to refer to the time previous to the license system. When he was first at Fort McLeod there was no permit system; whiskey was smuggled in from Fort Benton. Then Col. McLeod, commissioner of the North-west Mounted Police, received an order from the Government that he could issue permits to a limited extent, and afterwards Governor Laird issued permits when he came into the Territory. He thought the North-west mounted police arrived about 1874, and from that date to the fall of 1876 or 1877 the permit system was in existence. He did not believe that any good at all had been effected by the prohibitory law in the North-west Territories. (Q. 33715). That was because of non-enforcement. If the law had been rigorously enforced, he considered that some good might have been accomplished in certain sections. He did not think that the recent

vote as a vote was one on which anybody could reason anything. It was a political cry, and a great many people therefore voted that way. He knew men who voted for prohibition who every day of their lives drunk some alcoholic liquor. He would vote for prohibition if he thought it would be strictly enforced.

Mr. David H. Cooper, of Brandon, barrister, and manager of the Freehold Loan and Savings Company, did not think that the license law was very thoroughly enforced in Brandon. He believed there were some places where liquor was being sold illicitly. He did not see why a prohibitory law could not be enforced as well as any other law.

Mr. William Johnston, agricultural implement dealer, had had some experience in the working of the Dunkin Act in the County of Grey, township of Collingwood, and did not consider it a success. There was more liquor drunk then than under license. He was in favour of prohibition, and thought the manufacture of liquor should be stopped, and that the Government should stop the importation. He did not think the Government could stop the trade entirely, but they could make it very difficult to obtain liquor. Nobody seemed to take an interest in the matter in the township of Collingwood. He would expect to have a staff of Dominion officials appointed to see to the enforcement of a general prohibitory law, to see that no liquor was being manufactured and no smuggling carried on.

Rev. Alexander Cameron, Minister of the Presbyterian church of Canada, resident in Brandon, where he had been for only a few months, had been in charge of missions at Calgary and Revelstoke, (pp. 196-199). A prohibitory system was in force in the North-West Territories when he was there, with the permit system. He made Donald for a time his headquarters. There was high license in force. Revelstoke and Donald are both in British Columbia. The hotels were selling. There were about thirty places selling in Donald, sixteen under license and fourteen unlicensed. That was at the time of the construction of the Canadian Pacific snow sheds, the finishing up of the work in 1886-88. There was a fluctuating population of about 300. The town of Donald was now very much better; the population had slightly diminished, and he understood that the licensed places were reduced to four. He thought there were two licensed places between Donald and Revelstoke, and that liquor was sold at almost every place there. The liquor was spoken of as bad. The men at Donald and Revelstoke in the time he referred to were largely railway men working in the round house, on construction or on the bridges. They were largely strangers, but he thought they were nearly all Canadians. He had not been in the Territories since the license law came into operation. He was in favour of prohibition, which he thought applicable to the country as a whole, and was, from the observation of public contractors who carried on public works, of opinion that such a law could be carried out. On the matter of the practicability of preventing liquor coming into the country under a general prohibitory law, Mr. Cameron said that he did not care to go into that matter, but he thought that with the Government in favour of carrying out prohibition, it could be done. The force would have to be provided by the Government enacting the law and paid by that Government.

Mr. William Ferguson, of Brandon, a wholesale liquor dealer, who had resided for ten years in Manitoba, principally at Brandon, and came from Scotland, said that his business had increased, but he attributed it to the increase of population. In the summer the people required light liquors, and consumed a good deal of lager. He imported liquors direct from Europe, and also from Ontario and from Winnipeg. He had no experience of prohibition, except in the North-west Territory. He had been at Moose Jaw on business, where prohibition was then in force. He had gone there to push the permit trade. He saw people in the hotels, and gave them to understand that they could get "the goods" if they had permits. Permits allowed five or ten gallons at a time. At first it was two gallons; but it was afterwards increased. He did not know what they did with the liquor. There was a considerable trade built up in the way he had mentioned. As regarded the 4 per cent beer, he could not say whether there was more than that quantity of alcohol in it or

Liquor Traffic—Commissioners' Report.

not. He thought that occasionally the dealers would put something in it to make it stronger. Peddlers sometimes would put brandy in it, but he did not think the practice of peddling liquor prevailed to any extent. (Pp. 199-202). In reply to a question as to whether he had any opportunity of testing the liquor being peddled, he said: "I was very cautious; I was afraid of the whisky up there. I had heard so much about it." He had heard that blue-stone and tobacco were used to adulterate liquor, but he could not say positively what the ingredients were. If there was prohibition the world over, he would certainly be favourable to it. Prohibition in Manitoba only would not do at all; there would be smuggling across the line. Some people thought that liquor could be kept out, but he did not; it would come in by all kinds of ways.

Rev. James Woodsworth, Methodist minister at Brandon, superintendent of missions in Manitoba and the North-west Territories, had lived in the province a little over ten years, seven of which he had resided at Brandon. Under the working of prohibition in the North-west Territories, he said, he had seen men drunk, and he presumed they purchased the liquor. Of the people of Brandon and in Manitoba generally, if he spoke comparatively, and judged from the other provinces, he would say that generally he found that to be a sober and law-abiding community. He was opposed to the present license law, but on the question of whether the licensing of the traffic is or is not in itself sinful, he remarked: "There has been a doubt in my mind whether prohibition under some circumstances, for instance, as I saw it in some parts of the Territories, was better than license. But even if I were to suppose that license under some circumstances might perhaps be better than prohibition under certain circumstances, that would hardly answer your question. I have had no personal experience, and I do not know how I could give an opinion on the matter * * * I am inclined to that view (*i.e.*, that the licensing of drinking is a sin). He believed in the principle of prohibition. "Notwithstanding apparent difficulties," he was asked "do you think it would be practicable to enforce such a law?" He replied: "If the people would put a principle of that kind before their party politics, it could be carried out." In response to the question, "Then you think that politics interfere?" He said, "Yes." The present license system has been in operation only a very few months (October, 1892). "As yet I have visited the Territories only once, but the general impression as expressed to me in various parts of the country was that the drinking had been far in excess of what it was previously." (Pp. 202).

Mr. Edward Jukes, manager of the branch of the Imperial Bank at Brandon, has resided in the province thirteen years; ten years in Brandon. He considered that the people of Brandon were sober and law abiding. He had not paid much attention to the liquor license law. The liquor traffic had not affected the business of the bank in Brandon in any way. He was opposed to prohibition on principle; it took away a man's right to a certain extent to think and act for himself. Judging from the result of the recent plebiscite, it seemed as if the people of Manitoba would like to have prohibition. He thought they had expressed themselves in favour of it (Pp. 203-206.)

Mr. Stephen Clement, sheriff of the western judicial district of Manitoba, at Brandon, went to Manitoba in 1880. He had resided part of the time since at Shoal Lake, and in Brandon from 1882. He had had some experience of the working of prohibition in the North-west Territories. In some ways it was beneficial, but it was "a farce" to a great extent. (Q. 34042). They would get liquor occasionally, and when they did, then they would get together and drink to excess. Liquor was smuggled into the Territories; it was bad. There was liquor used for medicine that was mixed up with different articles and flavoured. Lots of "Pain-killer" was used. He thought that probably of the prisoners in the jail the greater portion of the crimes for which they were incarcerated were committed through liquor, directly or indirectly. He had not particularly observed the working of the license law. He did not know that there was much illicit sale in Brandon. He was favourable to the principle of prohibition, and thought it could be enforced with very little difficulty,

but he had not considered the machinery to be adopted for the purpose of enforcing it. He thought it should be the duty of the province to see that liquor was not brought in, and he held that, without incurring very great expense, liquor might be kept out. There was a great many people who said that if liquor was not manufactured there would be no difficulty. Asked if he did not think that at least two provinces would be against such a law, and if they would be likely to fall in and support it, he said: "I should not like to speak very much about those provinces that would oppose it. The French people are quite different from Ontario people, and are more disposed to drink. I have had very little experience of them, however" (Q. 34074).

John A. McDonald, M.D., who had resided nine years in Brandon, found the people sober and law-abiding. He thought the license law was well observed. The liquors which he had to use in his profession were very poor. Whisky that was supposed to be imported was adulterated, and unless he got a particular brand of brandy, it was very poor. These liquors were supposed to be imported, but he thought they were made in Brandon. He did not think that national prohibition was practicable. A continental law might be enforced. He did not think it would be possible, even with continental prohibition, to entirely prohibit the sale or use of liquors. He said he did not see how prohibition in the province could be carried out if it cut off the revenue from the traffic. If the Act were general all over the Dominion, then, of course, the Dominion, having power to tax other articles, would make up the deficit. Total prohibition in Manitoba could not be carried out.

The following is an extract from Mr. McDonald's evidence:—"The revenue at present obtained from liquor taxes would have to be raised in some other way, I suppose. I do not know how it could be done."

"Do you believe that when the people of Manitoba voted at that plebiscite, they voted in sober earnest? The assertion has been made that they did so; if that were the case, and the people were anxious for prohibition, would they not be willing, if necessary, to add to their provincial taxation?—I do not believe that the majority of the people want prohibition in Manitoba, and the rest of the Dominion to be free; for this reason, it would be a very great expense to prevent the entrance of liquor into this province, surrounded as it would be by provinces where there would be free trade. I believe that if the people were to vote again, and the question were to be put before them, they would not vote for prohibition.

"Do you believe that their principles are so weak that they would allow their feelings to interfere with them?—I think that a very large number who voted for it would look at it in that light. If it did not affect the revenue of the province, I think they would be in favour of trying it.

"Did not some people vote for prohibition because they wished to get rid of the evils of drink, and thought that this might be a way of getting rid of them?—I voted myself with that idea. If it were a question between high license, so that a man earning \$1 or \$1.25 per day would be unable to obtain sufficient drink to make himself drunk, and prohibition, I would vote for high license, because that is practicable and prohibition is not.

"So you voted for prohibition on account of its principle?—Yes; I should like to see less drunkenness.

"Do you think that others voted for it for the same reason?—Yes." (Q. 34144 to 34151, inclusive.)

The Rev. W. H. Jenkins, pastor of the Baptist Church, at Brandon, where he has resided for upwards of two years, went from Cumberland County, N.S. Cumberland County, he said, was under the Scott Act, which was pretty well enforced. Difficulty was found in managing the vessels, but the Act was fairly well carried out at the end of the county where he lived, Advocate. It was a great sea-faring community, and there were many captains there. They had schooners and, of course, saw their friends for a while. A great many of them drink more or less, as all sea-faring men do. They would take a bottle along with them, and have a time. Any trouble experienced there arose from that cause. He thought that licensing the

Liquor Traffic—Commissioners' Report.

traffic was wrong on moral principles, yet he considered that anything that lessened the traffic was a good thing. He had lived in Queens County, N.B., which was under the Scott Act, and it worked very successfully. He had noticed that whilst there seemed to be a great deal of drinking in Brandon among young men, the community was strongly in favour of prohibition. In passing through the streets in the evenings you would see that the bar-rooms were open to the street, and you would see crowds, especially of young men. He thought that the sentiment in favour of prohibition was growing, and said: "The different Protestant churches have a very strong hold on the province and all those denominations are very pronounced in their opinions, with the exception of the Episcopal church, and I am not in a position to know anything in regard to it, although I know that some of its leading members are strongly in favour of temperance." (Q. 34200).

Mr. Alfred Boisseau, hotel-keeper, Brandon, had lived there about ten years. He had been for two years previously in Winnipeg, and prior to that he had resided in Ottawa. He was asked if he noticed any change in the social habits of the city as far as regards the drinking of intoxicating liquors as a beverage, and said they had greatly improved since he went to Brandon. The fee he paid altogether was about \$250 per year. He thought there was no illicit sale in Brandon, and he believed the liquors sold were pure. He purchased his liquors delivered in bond, and they were taken out of the original packages in which they came from the old country. He bought through the wholesale dealers in Winnipeg and Brandon. He thought it would be well to increase the amount paid for licenses, and make the number of licensed places small, as practically that system could be carried out. On the question of prohibition, he stated: "As long as liquor is manufactured it cannot be prohibited." Being asked the following question: "Supposing the Manitoba Legislature next session should enact a prohibitory law, would it be wrong?" He answered: "No, for they have a perfect right to legislate a wrong. It would be an injustice to some people. I do not think the plebiscite was a fair vote of the people. Why I say so is because I have heard hundreds say that they would not vote as they did if another vote was taken. If that vote were retaken, the result would be different. If a prohibitory Act were passed by the legislature, it would be supposed to be all right; but I do not think that such an Act could be enforced." (Q. 34247.)

A large number of those who gave evidence before the Commission in the Province of Manitoba expressed themselves on principle in favour of the prohibitive system; many on the ground that it was morally wrong to license the traffic. Some of those who so expressed themselves were of opinion that a prohibitive law was impracticable of enforcement; others expressed doubt as to the possibility of effectively carrying out such a law. A considerable number did not express any opinion on the subject. If those who were doubtful as to the possibility of carrying out prohibition, and those who expressed the view that it was impracticable, were added to those who expressed no opinion on the subject at all, they would form a majority of the witnesses who gave evidence.

The evidence given in regard to the significance to be attached to the vote on prohibition taken at the last provincial election will be found to be very contradictory. Those in favour of the prohibitive system expressed the view that it must be taken as the deliberate and well considered vote of the people of the province; those opposed to prohibition, that the popular mind was influenced by political considerations, and that the vote being taken at the same time as the vote for the members of the legislature imported into the question party feeling. The evidence shows that the system or kind of prohibition was not distinctly submitted or explained.

One important witness who gave evidence at Brandon, in answer to the question, "have the people of Manitoba decided this question by the plebiscite?" said, "there was a meeting here and the president of the Prohibition Society, Mr. Mulock was present. I asked, 'is this prohibition for the whole Dominion or for Manitoba?' He said: 'The idea is to get the vote of the people of the different provinces by a

plebiscite, and as soon as the people have declared in favour of prohibition, we can then go to the Federal Government for a general prohibitory law.' So, I say this is an indication that the people do not want prohibition in Manitoba alone." Witness went on to say, "The point I make is this: 'It is generally taken that the people of Manitoba want prohibition for the province, because there is a feeling that way; but, I think, the large majority of the provinces do not care for prohibition, and I think the large majority of prohibitionists would not care for it in Manitoba, if in the rest of the Dominion the traffic were free.'"

The law authorizing the vote to be taken was passed in 1892, and was assented to by the Lieutenant-Governor of the Province on the 20th April, 1892. It was entitled "An Act to enable the electors of Manitoba to register their votes upon the advisability of the introduction of a law totally prohibiting the importation, manufacture and sale of intoxicating liquor as a beverage, into or in the Province of Manitoba." It is clear therefore that provincial prohibition only was contemplated.

The people of any city, or county, can by taking the necessary steps, adopt if, they are so disposed, the Canada Temperance Act, which prohibits the retail sale of intoxicating liquors for beverage purposes, within any city, town or county adopting it.

The Provincial Liquor Law (sections 51 and 52) provides that any city, town or other municipality may pass a by-law forbidding the taking of any money for licenses, which by-law shall remain in force for two years thereafter, and until repealed. A by-law having been passed by such municipality, the commissioners for licenses cannot issue a license for the sale of liquor therein. Such by-law is to be submitted to a vote of the electors of the municipality. The pre-requisite of this submission is a petition signed by twenty-five per cent of the resident electors, and three-fifths of the said electors have to vote in favour of the said by-law in order to give it effect. Of course, no liquor can be sold without a license under the existing law.

The people of Manitoba, therefore, have been at liberty for years past to adopt practical prohibition of the traffic (if prohibition is practicable at all) by the adoption either of the Scott Act or of the local option by-law. Two counties in the province, namely, Lisgar and Marquette, as far back as the years 1880 and 1881 adopted the Scott Act, but the law has practically remained inoperative.

Evidence was given before the Commission that many districts have adopted local option by-laws, and one witness stated that the Scott Act had been carried in three-fourths of the province (Q. 32094), and "prohibition," he said, is practically all over the province, and it seems to me that there is no very great difficulty in carrying out prohibition except in towns, especially in towns near the railway, where liquor can be smuggled in" (Q. 32098).* The same witness said that he considered a prohibitory law could be just as well enforced as the license law is now; in fact, he was inclined to think a little better.

It very naturally occurs to ask, why, with these facilities for putting in force prohibition in the Province of Manitoba, those favouring the adoption of that system of dealing with this question of the liquor traffic have not availed themselves of the opportunities which have lain within their reach for years past. A provincial prohibitory law would not get rid of the difficulties mentioned by the last witness in enforcing a prohibitory system; it would not prevent the smuggling of liquor over the boundaries of the province. Such a law would differ only slightly from the terms of the Scott Act and the local option law referred to. If it was carried so far as to prevent the manufacture of liquor within the boundaries of the province, and the importation into it of liquors for beverage purposes, exception would have to be made in favour of liquors required for medicinal, sacramental and mechanical purposes.

Under the Scott Act liquor may be manufactured and sold to be exported over the boundaries of the district adopting the Act, and across any neighbouring district

*NOTE.—In regard to this evidence and the Scott Act in Lisgar and Marquette, see letter from Mr. Greenway, page 114.

Liquor Traffic—Commissioners' Report.

or districts adopting the Act. It may be manufactured to be sold for the purposes just enumerated, namely, for medicinal, sacramental and mechanical purposes.

What advantage would be gained as regards the power of enforcing prohibition under a provincial law by which the manufacture within the boundaries of the province was forbidden, seeing that such manufacture might be carried on at any point just outside such boundaries, either in some of the other provinces or in the neighbouring districts of the United States, it is difficult to realize. If it is sought to prohibit the importation for personal use under provincial legislation, such a course would be without the support of any precedent, and in opposition to the views of many of the most advanced and experienced advocates of prohibition, and it is certain must raise a very serious constitutional question.

Many of the witnesses complained that the present law of the province is not enforced; that the necessary district inspectors have not been appointed by the Government, and the duty of enforcement by municipal officers was either entirely neglected or inefficiently performed.

It was stated that in the city of Winnipeg, where probably three-fourths of all the licensed places in the province exist, an attempt to put in force the Scott Act had never been made, and no evidence was given before this Commission to show that an effort had ever been made to submit a local option law to the people of the city. Yet the city of Winnipeg is said to have given, on the occasion of the last election, a large vote in favour of prohibition. The point was not raised before the Commission, but it might possibly be claimed by some that the conditions to be complied with, precedent to the submission of a local option law, are such as to make it a difficult matter to comply with them in such a city as Winnipeg. To such an argument it may justly be replied that if the Legislature of the province reflects what are said to be the sentiments of the population on this question of prohibition, it would not be difficult to secure an amendment to the law in that respect; and in this connection it is not irrelevant to point out that the conditions on which an inn or hotel license can be obtained in the city of Winnipeg are not more onerous than they are in the Province of Quebec. Then as to the appointment of inspectors, the provincial law contains a clause which authorizes any municipality to appoint an inspector or inspectors of license within the limits of such municipality, who shall have all the powers conferred by the Act upon inspectors for the purposes of prosecution, and in case any person is convicted of an offence against the provisions of the Act through the action of such inspector, or otherwise through the action of the municipality, the Provincial Treasurer is to pay to such municipality one-half of the fines recovered through such conviction.

It is highly probable that, although the people vote for prohibition, their representatives in the municipal councils object to incurring the necessary expenditure to give effect to prohibitory measures, and hence there is a continual effort to place the cost and responsibility of enforcing such laws upon others than the local authorities. That the Dominion Parliament should enact and enforce a prohibitory law is evidently the most popular view in those municipalities where the population favour prohibition. That course would have the effect of relieving the municipalities of some expenditure which they now incur, but whether it should be resorted to or a Provincial prohibitory law should be enacted, the municipalities as such, would be relieved of a certain amount of direct expenditure at least. The adoption of either course would almost certainly involve a resort to machinery for enforcing the law other than that employed for the enforcement of the ordinary criminal law of the country.

That is a view which may or may not be well founded, but the conclusion is irresistible that the people of this province have had it in their power to enforce prohibition of the traffic, if they had desired to do so, to a very much greater extent than they have done or apparently attempted to do.

In a letter from the honourable the Prime Minister of the province dated the 14th March, 1894, it is stated: "The only official action taken on the subject of prohibition since the vote upon that question in 1892, was a memorial passed by the Legislature in 1893, addressed to the House of Commons of Canada, a copy of which you will find in the Journals of the Legislative Assembly for that year, on pages 63 and 64. I am sending you a copy of the Journals for 1893 by this mail."

The following is a copy of the paper referred to:—

“To the honourable the House of Commons of the Dominion of Canada:

“The humble petition of the Legislative Assembly of the province of Manitoba, sheweth:—

“1. Whereas, by an Act of the Legislature of the province of Manitoba, assented to by the Lieutenant-Governor on the 20th day of April, 1892, entitled: ‘An Act to enable the electors of Manitoba to register their votes upon the advisability of the introduction of a law, totally prohibiting the importation, manufacture, and sale of intoxicating liquor as a beverage into, or in the province of Manitoba,’ it was provided that at the then next ensuing general election of members of the Legislative Assembly, an opportunity should be given the electors of the province of Manitoba to record their opinions upon the advisability of the introduction of a law totally prohibiting the importation, manufacture and sale of intoxicating liquors in the province of Manitoba, by marking ballot papers either ‘for prohibition,’ or ‘against prohibition,’ and depositing such ballot papers in the ballot boxes at the time of such general election.

“2. And whereas, afterwards, in accordance with the provisions of the said last-mentioned Act, on the 23rd day of July, 1892, the day on which such general election was held, a majority of the electors of Manitoba voted under the provisions of the said Act, and recorded their opinions upon the question in the said Act set forth, and the result of said vote, according to the ballot papers marked and deposited in manner aforesaid, in so far as the same have been returned, was as follows:—

“ For prohibition.....	18,637
“ Against prohibition.....	7,115

“Thereby demonstrating that an overwhelming majority of the electors of this province, who then voted, are in favour of the total prohibition of the importation, manufacture and sale of intoxicating liquors as a beverage into or in the Province of Manitoba.

“3. And whereas the liquor traffic, and its results, is an evil that entails upon the people of this province an incalculable amount of loss and suffering, and is productive of vice, disease, and crime to a greater extent than any other cause;

“4. And whereas it is deemed to be the duty of this House to place upon record its strong condemnation of a traffic demoralizing in its tendencies, and calculated to retard and hamper the moral and material welfare of the province.

“5. And whereas it is further deemed to be the duty of the Legislature of this province to take steps to secure such legislation as will carry into effect the opinions of the electors of Manitoba as declared upon the 23rd of July last:

“6. And whereas, in view of the provisions of the constitution, and the legal decisions given thereupon, it is uncertain what the powers of this Legislature are in regard to the prohibition of the liquor traffic, and it is desirable to secure the total prohibition thereof;

“7. And whereas it further appears that the full legislative power in respect of the premises rests in the Parliament of the Dominion of Canada;

“8. And whereas this Legislature agrees to supplement, if necessary, any effective prohibitory liquor law passed by the Dominion Parliament by appropriate legislation;

“The petitioners therefore pray that your honourable body shall, with all convenient speed, enact a law prohibiting the importation, manufacture and sale of intoxicating liquor as a beverage, into or in the Province of Manitoba, and your petitioners as in duty bound will ever pray.

“The Assembly met on the second of February, 1893, and on the first of March proceeded to consider the vote taken on the question of prohibition.

“Hon. Mr. Sifton, seconded by Mr. Young, moved the adoption of the preceding petition to the Dominion House of Commons.

“After a lengthy recital and a reference to the vote taken, Mr. Davidson moved in amendment, seconded by Mr. Hartney,

“Therefore be it resolved that a committee of this House composed of such members as are members of the Executive Council, be instructed to prepare a bill

Liquor Traffic—Commissioners' Report.

to provide for the total prohibition of the traffic in intoxicating liquors in the Province of Manitoba, and that they specially report to this House.'

"This amendment was negatived by 10 yeas to 28 nays, when Mr. Martin, seconded by Mr. Frame, moved,

"That all the words after 'that' be struck off and the following substituted therefor:—

"Whereas in the session of 1892, an Act entitled an Act to enable the electors of Manitoba to register their votes upon the advisability of the introduction of a law totally prohibiting the importation, manufacture and sale of intoxicating liquors as a beverage into or in the Province of Manitoba' was carried, and

"Whereas the promoters of the said Act have positively stated in the House that should the majority of the electors of this province pronounce in favour of such an Act to be introduced, that the same would be enacted accordingly, and

"Whereas the people of the province were thereby made to believe that this House had the power to pass such a Prohibition Act, and

"Whereas the electors of this province are desirous of having a Prohibitory Liquor Act carried by this House, and have the constitutionality of the same tested:

"Therefore be it resolved

"That a committee of this House, composed of such members as are members of the Executive Council, be instructed to prepare a bill to provide for the total prohibition of the traffic in intoxicating liquors in the Province of Manitoba, that they specially report to the House, and that such a Prohibitory Liquor Act shall only come into force by a proclamation of the Lieutenant-Governor in Council after having ascertained the constitutionality of the same.'

"This was also lost, the vote being, yeas 12, nays 25.

"The original petition of the Dominion House of Commons was then adopted, Mr. Martin being the only dissident in a House of 37."

NORTH-WEST TERRITORIES.

By 31-32 Vic., chap. 105 (1868), it was enacted:—

"It shall be competent to Her Majesty by any such Order or Orders in Council as aforesaid, on address from the Houses of the Parliament of Canada, to declare that Rupert's Land shall, from a date to be therein mentioned, be admitted into and become part of the Dominion of Canada; and therefore it shall be lawful for the Parliament of Canada, from the date aforesaid, to make, ordain and establish within the land and territory so admitted as aforesaid, all such laws, institutions and ordinances, and to constitute such courts and officers as may be necessary for the peace, order, and good government of Her Majesty's subjects and others therein; provided that until otherwise enacted by the said Parliament of Canada, all the powers, authority, and jurisdiction of the several courts of justice now established in Rupert's Land, and of the several officers thereof, and of all magistrates and justices now acting within the said limits shall continue in full force and effect therein" (section 5).

This Act was assented to on the 31st July, 1868.

By the 32-33 Vic. (1869), chap. 3, it was enacted:—

"2. It shall be lawful for the Governor, by any order or orders, to be by him from time to time made, with the advice of the Privy Council (and subject to such conditions and restrictions as to him shall seem meet), to authorize and empower such officer as he may from time to time appoint as Lieutenant-Governor of the North-west Territories, to make provision for the administration of justice therein, and generally to make, ordain and establish all such laws, institutions and ordinances as may be necessary for the peace, order and good government of Her Majesty's subjects and others therein; provided that all such Orders in Council, and all laws and ordinances so to be made as aforesaid, shall be laid before both Houses of Parliament as soon as conveniently may be after the making and enactment thereof respectively."

The Act provided for the appointment of—not exceeding fifteen nor less than seven—persons as a council to aid the Lieutenant Governor in the administration of the affairs of the territory.

The Act was continued in force until the end of the next session of the Dominion Parliament.

The laws in force in Rupert's Land and the North-west Territory at the time of their admission into the Union were, as far as they were not inconsistent with the British North America Act, to remain in force until altered by the Parliament of Canada, or by the Lieutenant Governor, under authority of the Act.

Public officers or functionaries, excepting the public officer at the head of the administration of affairs, were continued as public officers and functionaries of the North-west Territories, with the same powers and duties, until otherwise ordered by the Lieutenant Governor, under authority of the Act.

In 1870 the 33rd Vic., chap. 3, was passed and assented to on the 12th day of May, 1870. It was "An Act to amend and continue the Act, the 32-33 Vic., cap. 3, and to establish and provide for the government of the Province of Manitoba."

The 35th section of the said Act was as follows:—"And with respect to such portion of Rupert's Land and the North-west Territory, as is not included in the Province of Manitoba, it is hereby enacted that the Lieutenant Governor of the said Province (Manitoba) shall be appointed, by commission under the Great Seal of Canada, to be the Lieutenant Governor of the same, under the name of the North-west Territories, and subject to the provisions of the Act in the next section mentioned."

The Act referred to was the 32-33 Vic., chap. 3. It was re-enacted, extended and continued in force until the 1st day of January, 1871, and until the end of the session of parliament then next ensuing.

In 1871, by the 34th Vic., chap. 16, clause 4, the 32-33 Vic., chap. 3, and 33 Vic., chap. 3, were made permanent. The following is a copy of the clause:—

"All the laws in force in the North-west Territories at the time of the passing of this Act shall, so far as they are consistent with 'The British North America Act, 1867,' with the terms and conditions of the admission of Rupert's Land, and the North-western Territories into the Union, approved of by the Queen under the 146th section thereof, and with the said above-cited Acts and this Act, remain in force therein until altered by the Parliament of Canada, or by the Lieutenant Governor, under the authority of this Act."

In March, 1873, the Lieutenant-Governor of the North-West Territories, in Council, at a session of the Council assembled at Winnipeg, passed the following ordinance:—

"Whereas the giving, selling or bartering to Indians of spirituous liquors is subversive of public order and dangerous to the public peace, and the use or sale of such liquors in the North-West Territories is detrimental, not only to the Indian population and to the other residents therein; be it therefore enacted by the Lieutenant-Governor of the North-West Territories, by and with the advice of the Council of the said Territories, as follows:—

"1. The importation by any person or persons whatsoever into any portion of the North-western Territories, not being within the province of Manitoba, of any rum, whiskey or other spirituous liquor whatever, is prohibited; and any person who shall take, carry, send, bring or import, or have in his possession at any place within the said Territories, any such liquor as aforesaid, shall forfeit and pay a fine not exceeding £100, and such liquor shall be confiscated, and spilled on the ground by the officer seizing the same.

"2. Any Justice of the Peace, Quarantine or Peace Officer, constable or other person, with or without a warrant, and without any form of seizure, may take, confiscate and destroy all and any such spirituous liquors found or being within the Territories aforesaid.

"3. All fines imposed by this Act shall be recoverable before one Justice of the Peace, upon complaint, either oral or in writing, upon the oath of one credible witness, and one-half of the penalty imposed shall belong to the complainant, and one-half to the Government.

Liquor Traffic—Commissioners' Report.

" 4. Provided always that nothing in this Act shall be held to extend to any such liquors on the way by sea or land into Manitoba or other province of the Dominion, through the said North-western Territories.

" 5. Provided always that wine for sacramental purposes may be introduced into the Territories on a permit from the Lieutenant-Governor in favour of any Priest, Minister or Missionary in charge of a recognized Missionary Station, or of the Bishops or other Ecclesiastical authority, and shall not be liable to seizure. And any such wine introduced for such purposes shall if seized be released on proof that the same was, *bona fide*, brought on for such purposes as aforesaid."

This ordinance was not confirmed by the Governor-General in Council, for the reason that the Dominion Parliament had passed, in 1873, an Act (36 Vic., cap. 39) dealing with the same subject, subsection 2 of section 1 of which ran as follows:—

"Spirits or strong waters or spirituous liquors of any kind are hereby prohibited to be imported into any part of the North-west Territories, under the like penalty and forfeiture as are provided by the Customs laws of Canada, with respect to articles the importation whereof is prohibited; nor shall any such spirits, or strong waters or spirituous liquors of any kind be manufactured or made in the said North-west Territories, or brought into the same from any province of Canada, except by special permission of the Lieutenant-Governor of the said Territories; and if any such spirits or strong waters or spirituous liquors are imported and manufactured in the said Territories, or brought into the same, in contravention of this Act, they may be seized by any officer of the Customs or Excise, or by any constable, where-soever found; and on complaint before any Judge, Stipendiary Magistrate or Justice of the Peace, he may, on the evidence of any credible witness that this Act has been contravened in respect thereof, declare the same forfeited, and cause them to be forthwith destroyed; and the person in whose possession they were found may be condemned to pay a penalty not exceeding one hundred dollars, nor less than fifty dollars, and the costs of prosecution; and one half of such penalty shall belong to the prosecutor and the other half to Her Majesty for the public uses of the Dominion; and in default of immediate payment the offender shall be committed to the nearest jail or place of confinement for any time not exceeding six months, unless such fine and costs are sooner paid. No prosecution, conviction or commitment under this Act shall be invalid on account of want of form, so long as the same is according to the true meaning of this Act."

In the same year (1873) an Act was passed authorizing the embodying of the North-west Mounted Police.

In 1874 an Act was passed entitled "An Act to amend 'An Act to make further provision as to duties of Customs in Manitoba and the North-west Territories,' and further to restrain the importation or manufacture of Intoxicating Liquors into or in the North-west Territories." This Act (37 Vic. cap. 7) was assented to on the 26th May, 1874. In the clause amending the clause of the previous Act relating to the importation or manufacture of intoxicants, *wines, fermented and compounded liquors were included*. The maximum penalty for contravention of the Act was increased to \$200, and provision was made for the recovery of penalties imposed, and for imprisonment in default of payment.

In 1875 the 38th Vic. chap. 49 was passed.

By the 7th clause of this Act the Lieutenant-Governor, by and with the advice and consent of the Council of the North-west Territories, was empowered to make, ordain and establish ordinances, relating, amongst other matters, to the licensing of inns and places of refreshment. A copy of all ordinances passed by the Lieutenant-Governor in Council was to be submitted for the approval of the Governor General in Council.

The Act provided for the establishment of electoral districts, for the holding of elections, and for the election of representatives to the Council or Assembly. Section 13, subsection 6, provided that, "When the number of elected members amounts to twenty-one, the Council hereinbefore appointed shall cease, and be determined, and the members so elected shall be constituted and designated as the Legislative Assembly of the North-west Territories, and all the powers by this Act vested in the

Council shall be thenceforth vested in and exercisable by the said Legislative Assembly."

Section 74 of this Act reads as follows: "Intoxicating liquors and other intoxicants are prohibited to be manufactured or made in the said North-west Territories, except by special permission of the Governor in Council, or to be imported or brought into the same from any province of Canada, or elsewhere, *to be sold, exchanged, traded or bartered, except by special permission in writing of the Lieutenant Governor of the said Territories*, and if any such intoxicating liquor or intoxicant is imported or manufactured or made in the said Territories, or brought into the same, or is sold, exchanged, traded or bartered in contravention of this Act, it shall be absolutely forfeited, and may be seized by any officer of the customs or excise, or by any constable or other duly qualified person wheresoever found; and on complaint made before him any Judge, Stipendiary Magistrate, or Justice of the Peace may, on the evidence of one credible witness that this Act has been contravened in respect thereof, order the said intoxicating liquor or intoxicant so seized to be forthwith destroyed; or in case of the same not having been seized, then, on complaint as aforesaid, such Judge, Stipendiary Magistrate, or Justice of the Peace, may issue a search warrant, as in cases of stolen goods under the Acts in force respecting the duties of Justices of the Peace out of Sessions in relation to persons charged with indictable offences, and upon the same being found may cause them to be forthwith destroyed, and the still, machinery, keg, barrel, case, box, package or receptacle whence or in which any intoxicating liquor or intoxicant has been manufactured, imported or made, sold, exchanged, traded, or bartered, and as well that in which the original supply was contained as the vessel wherein any portion of such original supply was supplied as aforesaid, and the balance of the contents thereof, if such still, machinery, barrel, keg, case, box, package, receptacle, or vessel aforesaid, respectively can be identified, may be seized by any officer of the customs or excise, or by any constable or other duly qualified person, wheresoever found within the said Territories; and on complaint before any Judge, Stipendiary Magistrate or Justice of the Peace, he may, on the evidence of any credible witness that this Act has been contravened in respect thereof, declare such intoxicating liquor or intoxicant, still, machinery, vessel, or receptacle forfeited, and cause the same to be forthwith destroyed; and the person in whose possession any of them are found may be condemned to pay a penalty not exceeding one hundred dollars, nor less than fifty dollars, and the costs of prosecution; and one-half of such penalty shall belong to the prosecutor and the other half to Her Majesty."

Penalties for infringements of this clause are embodied in the Act, with a definition of what should be considered intoxicating liquor.

In 1876, 39 Vic., chap. 18, "An Act to amend and consolidate the laws respecting Indians" was passed. It was made to apply to all the provinces and to the North-west Territories, including the Territory of Keewatin.

It contained the usual prohibitions against supplying intoxicants to Indians which had applied to other portions of Canadian territory, with penalties for infringements of the law, all of which are to be found in sections 79 to 85 of the said Act.

This Act was amended in 1880 by 43 Vic., chap. 28; but all the prohibitory conditions against the sale of intoxicants to Indians were retained and slightly enlarged. In the same year an Act, 43 Vic., chap. 25, was passed to amend and consolidate the several Acts relating to the North-west Territories. Such clauses of the Act passed in 1875 as related to the prohibition of intoxicants were retained. The penalties in some instances were increased, and it was provided by sub-section 2 of section 90: "That the Lieutenant-Governor of the said Territories shall make an annual return up to the thirty-first December in each year, of the number of such permissions so given by him, and the quantity and nature of the intoxicants in each case, to the Minister of the Interior, who shall lay the same before Parliament."

In 1886, by 49 Vic., chap. 43, the Acts relating to Indians were consolidated. The prohibitions against supplying liquor to Indians, &c., were all retained.

Liquor Traffic—Commissioners' Report.

By 49 Vic., chap. 50, the statutes relating to the North-west Territories were consolidated, the clauses relating to the prohibition of intoxicants to Indians previously referred to being retained.

In 1887, 50-51 Vic., chap. 33, the Indian Act was amended. The only clause affecting the liquor question related to the arrest of Indians found in a state of intoxication, and to the manner in which they should be brought to trial.

In 1888, 51 Vic., chap. 19, "An Act to amend the Revised Statutes of Canada, chapter fifty respecting the North-west Territories," was passed. By section 18 the following sub-section was added to that Act:—

"Every vehicle on which any such intoxicating liquor or intoxicant is imported or conveyed into or through or over any portion of the Territories, contrary to the provisions of this Act, shall, together with the horses or other cattle employed in drawing any such vehicle as aforesaid, be forfeited to Her Majesty and may be seized and dealt with accordingly."

In 1888, by 51 Vic., chap. 22, "An Act further to amend the Indian Act, chapter 43 of the Revised Statutes," was passed. The clause of the previous Act relating to the supplying of intoxicants to Indians was repealed and the following substituted:—

"Every one, who by himself, his clerk, servant or agent, and every one who in the employment or on the premises of another, directly or indirectly, on any pretence or by any device, sells, barter, supplies or gives to any Indian or non-treaty Indian any intoxicant, or causes or procures the same to be done, or attempts the same or connives thereat, or opens, or keeps, or causes to be opened or kept on any reserve or special reserve, a tavern, house or building in which any intoxicant is sold, bartered, supplied or given, or who is found in possession of any intoxicant in the house, tent, wigwam, or place of abode of any Indian or non-treaty Indian, or of any person, or upon any other part of the reserve or special reserve, or who sells, barter, supplies, or gives to any person on any reserve or special reserve any intoxicant shall, on summary conviction before any judge, police magistrate, stipendiary magistrate, or two justices of the peace, or Indian agent, upon the evidence of one credible witness other than the informer or prosecutor—or in the Province of Manitoba, the Province of British Columbia, the North-west Territories, or the District of Keewatin, upon the evidence of the informer alone, if he is a credible person—be liable to imprisonment for a term not exceeding six months, and not less than one month, with or without hard labour, or to a penalty not exceeding three hundred dollars and not less than fifty dollars with costs of prosecution, or he shall be liable to both penalty and imprisonment, in the discretion of the convicting judge, magistrate, stipendiary magistrate, justices of the peace, or Indian agent; and a moiety of every such penalty shall belong to the informer or prosecutor, and the other moiety thereof shall belong to Her Majesty to form part of the fund for the benefit of that body of Indians or non-treaty Indians with respect to one or more members of which the offence was committed."

By 54-55 Vic., chap. 22 [1891] the Act 49 Vic., chap. 50, was amended as follows:—"Section ninety-five of the Act is hereby repealed and the following substituted therefor:—"Every person who, without special permission as aforesaid issued to him, manufactures, makes, compounds, imports, sells, exchanges, trades, or barter any intoxicating liquor or intoxicant, or in whose possession or on whose premises any intoxicating liquor or intoxicant of any kind is found, without such special permission issued to him, shall incur a penalty not exceeding two hundred dollars and not less than fifty dollars, a moiety of which penalty shall belong to the person laying the information."

This Act [1891] contained the following clause:—"Notwithstanding anything in this Act or the said Act contained, the Legislative Assembly may, by ordinance, repeal the provisions of sections twenty-six to forty, both inclusive, and also, in so far as they apply to the territories comprising the several electoral districts mentioned in the schedule to this Act, the provisions of sections ninety-two to one hundred, also both inclusive, of the said Act, together with all amendments thereto, and may re-enact the said provisions or substitute other provisions in lieu thereof."

The sections ninety-two to one hundred applied to the prohibition of intoxicants

The mounted police were given most extensive powers for the enforcement of the law relating to the liquor traffic. By the 15th section of the Act of 1873, 36 Vic., chap. 35, the commissioner and every superintendent of police was made *ex officio* a justice of the peace, and every constable and sub-constable was made a constable in and for the whole of the North west Territory, and was empowered to execute the office in any part thereof.

By an Act passed in 1874, 37 Vic., chap 22, section 15, the commissioner of police was given all the powers of a stipendiary magistrate, and all inspectors and such other officers of the force as might be approved by the Governor in Council were appointed to be *ex officio* justices of the peace.

At a later date the assistant commissioner was also given the powers of a stipendiary magistrate.

The police force were also given the power, upon information or upon reasonable grounds for suspicion, to enter any shop, store, hut, tent, wigwam, dwelling or building, or place or enclosure, and also to enter and for such purposes stop and detain any vessel, canoe, carriage, wagon, cart, sleigh, or other vehicle or means of conveyance of any description, and to dig in, rummage and search all parts thereof for any kind of spirits, strong waters, spirituous liquors, wines, fermented or compounded liquors, or intoxicating liquor of any kind and to break up and utterly destroy any vessels found containing any such intoxicants, and to spill, waste and utterly destroy the same forthwith. (41 Vic., chap. 36, 1879).

These extended extracts from the laws of the Dominion bearing upon the liquor question in the North-west Territories are given with a view to showing as fully as possible what the law in reference to the traffic was at the date the power to deal with it was transferred to the Legislative Assembly of the North-west Territories.

By the law of 1873 the importation and manufacture of spirits and spirituous liquors of all kinds into or in the North-west Territory was prohibited except by special permission of the Lieutenant-Governor of the said territories.

In 1874 wines and fermented and compounded liquors were added to the list of intoxicants previously prohibited.

In 1875 the law was changed, and the manufacture of intoxicating liquors and other intoxicants in the Territories was prohibited except by special permission of the Governor in Council, or to be imported or brought into the same from any province of Canada or elsewhere to be sold, exchanged, traded or bartered, except by special permission in writing of the Lieutenant-Governor of the said Territories. It is important to notice the introduction of the words "to be sold, exchanged, traded, or bartered" into the legislation of this year, as they enlarged the powers of the Lieutenant-Governor under the permit system.

Prohibition against giving and selling, etc., to Indians was continued, and still remains in force.

In 1884, the Council of the North-west Territories passed the following resolution, a copy of which was forwarded by the Lieutenant-Governor to the Dominion Government:—

"That, in the opinion of this Council, the rapid increase of the population in these territories has caused a necessity for some modification of the liquor law as at present in force. While acknowledging that the permit system has worked well in the past, and has been attended with good results, it appears to this Council that the system at present in force might be varied, so that beer and light wines should be excepted from the prohibition clauses of the North-west Territories Act; and that the manufacture of beer in the Territories may be permitted under regulations to be made by Your Excellency in Council."

On the 4th December, 1888, the Legislative Assembly, after discussion, passed by a vote of 13 yeas to 7 nays, the following resolutions, which were forwarded by the Lieutenant-Governor of the Territories, for the consideration of the Governor General in Council:—

"Whereas, on the 23rd of November, 1888, this assembly decided that a vote of the people should be taken on the question of License *vs.* Prohibition,

Liquor Traffic—Commissioners' Report.

"And whereas it has been decided that this assembly has not the power to make provision for taking such a vote,

"Be it resolved that in the opinion of this assembly a vote of the Territories on the question of License *vs.* Prohibition should immediately be taken;

"That in the event of provision for the taking of such vote not being made by the Dominion authorities at the next session of the Dominion Parliament, it is the opinion of this Assembly that powers similar to those enjoyed by provinces under the British North America Act in respect of the liquor question should forthwith be granted to this Assembly."

At a meeting of the Legislative Council held on the 21st October, 1887, it was resolved that Messrs. Turriff, Cayley, Lauder, Hughes, Ross, Jelly, and Messrs. Haultain and Wilson, be a special committee to take into consideration and report on the present state of the liquor law.

On the 18th November the committee made the following report:—

"Whereas, in the opinion of this council the present liquor system is unsatisfactory and ineffective, either as a temperance or prohibitory measure;

"And whereas, on account of the disfavour in which the present law is regarded and its consequent ineffectiveness, a large traffic in illicit liquor has sprung up, to the great detriment of the country morally and financially;

"And whereas the reasons for the introduction of the present law have ceased to exist, and with them the necessity for the law;

"And whereas, apart from any question of principle, the people of the Territories are united in the opinion that the time has come when they should be allowed to pronounce of themselves on the important subject of the liquor question;

"Resolved, that this council is of opinion:

"(a.) That power to deal with the liquor question similar to that enjoyed by provinces under the British North American Act be given to this council;

"(b.) That the provisions of the Canada Temperance Act be extended to the Territories, and that the present provisional districts of Assiniboia, Saskatchewan and Alberta be districts under the said act;

"(c.) That sections 92 to 100 of the North-west Territories Act be repealed, such repeal not to come into effect until one month after the close of the next session of the North-west Council or Assembly."

A copy of the resolution voted upon, upon the recommendation of the committee, was forwarded to the Dominion Government.

On the same day it was moved by Mr. Turriff, seconded by Mr. Crawford, "that the issue of permits except for medicinal, scientific, sacramental and mechanical purposes, be discontinued." Only the mover and seconder voted for this resolution, and the remainder of the members of the council present, fifteen voted against it.

On the 31st October, 1888, the first session of the first Legislative Assembly of the North-west Territories was held. The Lieutenant-Governor, in his address to the Assembly, pointed out the desirability of devising means by which the cause of temperance might be most effectually served, consistently with the exercise of the rights of the inhabitants of the Territories as British subjects. He said: "Whether exceptional legislation is to be continued or not is a matter upon which you as representatives of the people, have the sole right to speak with any degree of authority." And added that he would be happy to transmit any resolution or representation which the Assembly might think fit to pass to the honourable the Privy Council at Ottawa.

In response to the address of His Honour, the Legislative Assembly said: "The cause of temperance is one which we are glad to learn Your Honour proposes we should deal with. It is one which the present laws of the Territories do not deal satisfactorily with. Any resolution or representation to the honourable the Privy Council at Ottawa, which this Assembly may feel called upon to make, will be framed solely with a view to the temporal and moral interests of the community."

There was much discussion on the subject of the liquor laws during the session. A committee was appointed to report upon the advisability of taking a vote of the people to ascertain whether a prohibitory or license system was most desirable.

The committee reported in favour of having such a vote taken. There were several amendments moved to the report, and the committee was instructed to make a full recommendation as to the best method of securing "a full franchise," how the expense of taking a vote was to be provided for, how long the vote should hold good, providing for punishment of bribery and corruption, whether the vote should be an open one or by ballot, and an estimate of the total cost of the election. The committee made a further report, in which they estimated the total cost of the election to be \$3,000.

The Assembly decided to refer to the legal experts of the Legislative Assembly for their opinion on this question:—

"Has this Assembly a legal right to take a vote of the people on license or prohibition?"

The legal experts presented to the Assembly on November 30th, a report, the concluding paragraph of which was to this effect:—

"The only answer to the question propounded to the experts—after giving the subject their best consideration—is that the power to legislate in the direction suggested is not vested in the Assembly."

On the 4th of December, it was moved by Mr. Reaman, and seconded by Mr. Neff: "That this Assembly memorialize the Dominion Government to pass such legislation at its next session, as will give this Assembly the full power to deal with the liquor question in the Territories."

It was moved in amendment that the following should be substituted, and the amendment was, by a vote of thirteen to seven, adopted:—

"Whereas on the 23rd of November, 1888, this Assembly decided that a vote of the people should be taken on the question of license *vs.* prohibition;

"And whereas it has been decided that this Assembly has not the power to make provision for taking such a vote;

"Be it resolved that in the opinion of this Assembly, a vote of the Territories on the question of license or prohibition should immediately be taken;

"But in the event of provision for the taking of such a vote not being made by the Dominion authorities at the next session of the Dominion Parliament, it is the opinion of this Assembly that powers similar to those enjoyed by provinces under the British North America Act in respect of the liquor question should be forthwith granted to this Assembly."

This expression of the views of the Assembly was forwarded to the Secretary of State at Ottawa for the consideration of the Governor General in Council.

In the third session of the Legislative Assembly, on the 4th November, 1890, it was moved by Mr. Richardson, seconded by Mr. Plaxton:—

"That His Honour the Lieutenant-Governor be respectfully requested to discontinue the permission now being granted by him under the provisions of section 92 of the North-west Territories Act for the sale of beer." On the question being put, the House divided; and the names being called it was found that two members voted for the adoption of the motion, and eighteen against it.

In his address at the opening of this session of the Legislative Assembly, the Lieutenant-Governor stated that the North-west Mounted Police Force was entitled to special thanks for the valuable assistance they afforded in connection with the regulations governing the importation of liquor into the Territories, and their continued efforts to suppress illegal traffic in intoxicants.

A general election of members of the Assembly was held on the 31st October, 1891, and the first session of the second legislature was opened on the 10th December, 1891. The Act of the Dominion Parliament conferring upon the North-west Legislative Assembly the power of legislating in respect of intoxicating liquors within the electoral districts of the Territories had been passed. It received the Royal assent on the 30th September, 1891.

On the 14th December a motion was made in the Assembly to appoint a committee to prepare and bring in a bill respecting the sale of intoxicating liquors and the issue of licenses therefor. An amendment was moved to the effect that the authority to deal with the question had only been vested in the Assembly for a short

Liquor Traffic—Commissioners' Report.

time before the recent elections, and therefore the electors had not had due opportunity of considering the question as a matter under local control, and as the members of the Assembly had not been elected with a regard only to the question of amendment, repeal or substitution of the Dominion Act, there being no definite proposition before the electors, the Assembly was not in a position to say definitely what the wish of the majority of the people of the Territories was, and that no legislation should be passed amending, repealing or substituting for the sections of the Dominion Act 92 to 100, until such proposed amendment, repeal or substitution had been accepted or rejected by a majority vote cast by the electors. This amendment was rejected by a vote of 15 to 9, and the main question was carried by a vote of 17 to 7.

A bill authorizing the granting of licenses for the sale of intoxicating liquors was finally introduced and discussed at various sittings of the Assembly, sundry amendments being proposed, some of which were adopted. On the 20th January, 1892, when the Bill came up for the third reading, it was moved "That the bill be not now read a third time, but that the bill be read a third time this day six months." For the amendment there voted the proposer and seconder of the resolution and one other member—three in all—and against it twenty. It was then ordered that the bill pass, and be entitled, "An Ordinance respecting the sale of intoxicating liquor and the issue of licenses therefor." The Ordinance received the assent of the Lieutenant-Governor on the 25th January.

At a sitting of the Legislative Assembly on the 29th December, 1892, on the consideration of a bill to amend the Liquor License Act, it was moved by Mr. Knowling, and seconded by Mr. Oliver, "that no license of any kind shall be issued under this ordinance, unless there be within a radius of two miles of the proposed licensed premises not less than fifteen householders." The Journals of the Legislative Assembly simply report that, "The question being put upon the amendment, it passed in the negative."

These somewhat extended extracts from the proceedings of the North-west Assembly demonstrate that the representatives of the people dealt with the question very deliberately. The advocates of prohibition complain that the question was not referred to a vote of the electors of the territories. It is difficult to realize that such a vote, had it been taken, would have had any influence whatever upon the action of the legislature. The representatives of the people in the assembly were authorized by the Dominion Act to deal with the question, and unless it is to be supposed that the taking of a plebiscite resulting in a majority of the electors declaring themselves in favour of prohibition, or, in other words, as averse to a change in the law then existing, would have deterred the legislature from dealing with the subject at all, or so influenced the minds of the members as to have led them to deal with it otherwise than in the manner in which they did, the result must have been exactly what took place.

From the course adopted by some of the advocates of prohibition, it would almost seem as if they had intended that a vote of the electors taken as had been suggested should settle the question for some fixed period, and that it should thereby be removed practically from the jurisdiction of the legislature.

It will be seen from what has been said that the Dominion Government was urged for several years before the final action was taken, to give to the territorial assembly the power of legislating in regard to the liquor traffic. That power was no sooner given than it was availed of to put an end to the prohibitive system in force in the territories, and it is impossible to come to any other conclusion than that the action of the assembly was in accord with the views of the great majority of the electors; and to charge the executive of the territories, as has been done by some of the representatives of the prohibition organization in the country, with acts of maladministration is, in the opinion of this Commission, not justified by any evidence which they have been able to collect.

The preceding statements give the history of prohibition in the North-west. It may be said to have practically existed for a period of twenty years, modified only by the powers vested in the Lieutenant Governor to grant permits for the impor-

tation of liquors, at first very sparingly exercised, but, as population collected in the territories, by sheer force of circumstances, more extensively resorted to. The exercise of this power by the Lieutenant-Governor could never have been other than a source of annoyance and trouble.

When the white population was only a few thousands it is easy to see that the difficulty would be only comparatively slight, but as population increased, between the action of those who desired to see no permits issued and those who desired to obtain permits, and the difficulty of granting them in one case and refusing them in another, the representative of the Crown must have been placed in a most invidious and unenviable position. As His Honour Lieutenant-Governor Royal remarked in the paper which will be found printed with the evidence taken in the Territories, "While it was an easy task for the Lieutenant-Governor in a small community to promptly investigate any application for a permit, it will readily be seen how well-nigh impossible such an investigation would become as soon as the white population had reached the thousands." His Honour describes the course he adopted in carrying out the law, and it is difficult to realize in what manner it could have been improved. He says:—"As a natural consequence of the settlement of the Territories, and of a deeply altered condition of society, the necessity of a corresponding change in the laws that governed the country became apparent, and none so much as the liquor enactment applicable to the white settler."

The original intention of the law was to protect the Indians. To do this, and to meet the wishes of the white settlers, was the question which, doubtless, the framers of the law hoped to settle when they adopted the permit system. When that system was so changed as to cover sales as well as importations, it became in reality a limited license law, without many of the safeguards which are usually placed around a measure of that character. Lieutenant-Governor Royal seems to have realized this fact, for he says:—"While the Privy Council retained to itself the power to permit the manufacture of intoxicants in the Territories, all the powers generally vested in licensed bodies concerning the traffic were centralized in the Lieutenant-Governor's hand. This official was left to use his own discretion in granting exemption; the law did not preclude him from doing so; he was not circumscribed in his action. At the same time, he could not systematically refuse to issue such exemptions, and thereby ignore the intention of Parliament. Had the intention been to make the law prohibitory, the language of the statute, no doubt, would have been different, and the exemptions to be made by the Lieutenant-Governor would have been severally stated and carefully mentioned. On the other hand, such an enactment was desirable and possible only in a country where the white man had hardly penetrated. As a matter of fact, the white population of the Territories in 1875 was very small indeed, and consisted chiefly of the missionaries and employees of the missions, of some fur traders, of the officers and men of the Hudson Bay Company's forts, and of a limited number of settlers and officials of the North-West Government."

A perusal of the evidence taken by the Commission will show the demoralizing state of affairs which existed under the system in force in the North-west Territories after the population began to flow into the district. The active and efficient police force confessed themselves unable to prevent smuggling, which was carried on most extensively, and the vilest compounds were distributed and used as beverages by the population. Pain-killer, eau de Cologne, red ink, and other substances highly detrimental to health, were resorted to, and when such figures as are obtainable in regard to the importations of intoxicants into the Territory are referred to, it should constantly be borne in mind that there are no statistics of the quantities smuggled and sold illicitly prior to the adoption of the license system.

In the fall of 1891 the whole question connected with the liquor traffic came before the Legislature of the Territories. A license law was then enacted, known as "The Liquor License Ordinance of 1891-92." By it the country is divided into license districts, and the licensing body is a Board of Commissioners, composed of three persons, appointed by the Lieutenant-Governor in Council, for each licensing district, who are removable at the pleasure of the Lieutenant-Governor in Council.

Liquor Traffic—Commissioners' Report.

The licensing inspectors comprise a chief inspector, appointed by the Lieut.-Governor in Council, and one or more inspectors appointed by the Board of License Commissioners. Hotel licenses and wholesale licenses are granted. It is provided that in the incorporated towns, no business other than liquor business, except the sale of cigars and tobacco, shall be carried on in any premises covered by the license.

Licenses are issued under the direction of the Board of License Commissioners for the district in which the premises are situated. The Board, it is provided, shall sit during the month of May, and deal with the following matters: Fix and define the conditions and qualifications requisite to obtain hotel and wholesale licenses; regulate the hotels and wholesale premises to be licensed, and fix and define the duties, powers and privileges of the inspectors of licenses for the district. At that meeting protests shall be heard against applications, and as far as possible protests shall be tried in the locality for which the application for license is made.

On the first of April yearly the chief inspector shall advertise a list of all applications received for each hotel, showing the name of each applicant, description of license applied for, and the place sought to be licensed, together with a notice of the time and place of the meeting of the commissioners to consider such application. The chief inspector shall also send to the inspector of each district a list of all applications made in his district; and the instructor shall proceed to inspect the premises of each applicant and report to the Board. Each applicant is obliged to file a petition setting forth that he is an applicant, and for what premises; and it is provided that, "if the premises for which a license is sought are outside of town municipalities, the petition shall further set forth that the petitioner produces the recommendation of ten out of the twenty householders nearest to such premises," as well as certain affidavits that the applicant is 21 years of age, and has never been convicted of felony; also an affidavit from the "respectable neighbours," stating that the applicant is personally known to them, is of age, has never been convicted of felony and is a man of good moral character and temperate habits. A bond is also demanded from the applicant, and he is compelled not only to pay the Territorial license fee, but "5 per cent thereof, in addition to the prosecution fund."

The license fees are as follows: Hotel license, \$200; wholesale license, \$200; for bottling works where lager or ale only is bottled, a fee is payable of one-half the amount charged for a wholesale license. Town municipalities may, by by-law, require each licensee to pay towards municipal revenue such sums as they may determine, not exceeding the amount of territorial duty payable on such license. No license shall be granted to a married woman, unless she be the owner or tenant in her own right of the premises for which the license is sought.

Objection can be taken to the granting of a license, if made by any seven or more out of the twenty householders residing nearest to the premises in a municipality for which a license is asked. The objections taken may be one or more of the following: That the applicant is of bad fame and character, or of drunken habits, or has previously forfeited his license; or that the premises in question are out of repair, or have not the necessary accommodation required by law, or reasonable accommodation, if the premises be not subject to the said requirements; that the licensing thereof is not required in the neighbourhood; or that the premises are in the immediate vicinity of a place of public worship, hospital or school; or that the quiet of the place in which such premises are situated will be disturbed if a license be granted; or for other valid reasons which may be shown. The petition embodying these allegations must be sent to the chief inspector with \$10, which shall be placed in the trust fund, and in case the protest is successful, shall be returned, and if unsuccessful, the amount shall be paid into the general fund. Every hearing of a protest shall be open to the public, and the applicant must attend in person.

Further provisions are contained in the Act by which protests may be entered. The council of the municipality may authorize a representative to appear and oppose the granting of the license. The Commissioners may also of their own motion, whether a protest has been filed or not, take notice of any matter which would be an objection to the granting of a license. No license shall be granted to any applicant within two years of the date of a refusal.

In addition to the provisions respecting the filing of objections and entering of protests against the granting of licenses, the law contains local option clauses. These provisions are:—

“No license shall be granted by the Board for the sale of liquors within the limits of a license district, when it shall have been made to appear to the Board that a majority of three-fifths of the duly qualified electors therein, who have voted at a poll taken, have declared themselves to be in favour of a prohibition of the sale of intoxicating liquors in their district, and against the issue of licenses therefor.”

It is also provided that a vote shall be taken when a requisition is presented to any Commissioner, accompanied with the sum of \$200 to defray the expenses of the poll, the requisition being signed by at least one-fifth of the total number of electors in the district, the basis of such estimate being the number of electors who voted at the last election of a member of the Legislative Assembly. The vote is to be taken by a ballot in the manner provided by the Canada Temperance Act.

It is further provided that, in case of any such vote being taken, then no new vote shall be taken for a period of three years thereafter.

The law contains provisions respecting adulteration of liquor. In case of conviction for such an offence, the party is liable to a penalty not exceeding \$50. If the license of the offender is not forfeited, and inspector or constable of the district “shall cause a placard, stating such conviction, to be affixed to the premises; and be of such size and form as the convicting justice may think fit, and it shall remain posted for two weeks.”

Liquors may be seized and analysed. The inspector may enter the premises at any time. He may also “examine every room and every part of such premises, and take an account of all liquor therein, and may demand, select and obtain samples of any liquor there.”

The law likewise contains provisions for the interdiction of habitual drunkards.

The number of licenses is restricted. In towns and municipalities, where the population does not exceed 500, not more than two hotel licenses may be granted, and not more than one additional license shall be granted for each 500 of the population.

That these changes in the methods of dealing with the liquor traffic were called for by the population, this Commission have seen no reason whatever to doubt; but on the contrary they are led to conclude from their investigations that the Legislative Assembly of the Territories fully and fairly represented the public sentiment when it enacted this law.

Mr. McKay, member of the Legislative Assembly, and a native of the Territories, presented the situation in these terms when before the Commission:—“Before the permit system came into force there was free trade in liquor in the country. The Indians came around the forts, stayed for a time, and got what liquor they could, and then went to the hunting grounds. There was free sale among white people. When the Hudson Bay Company stopped the sale in 1865, it was still supplied by traders. Men peddled liquor between Prince Albert and York Factory.” (Q. 36059-36070.)

The Hon. Justice McLeod, than whom no higher authority on North-western affairs can, perhaps, be found, for, as Col. McLeod, he commanded the North-west Mounted Police force from 1876 to 1889, gave evidence before this Commission; and speaking of the permit said:—“The idea was to stop the traffic with the Indians. We (the North-west Mounted Police force) came into the country in October, 1874, and before that time I believe there was a good deal of drinking among the Indians.” (Q. 38187-38188.)

Two facts seem clearly established: First, that the prohibitory feature of the law was intended to apply to and protect the Indians, while the permissive feature was embodied in the statute to cover the case of the white population; second, that absolute power to regulate the supply for the white population was entrusted to the chief executive officer of the Territories, “by placing in his hands the power to dispense with certain provisions of the statute.”

Liquor Traffic—Commissioners' Report.

The system appears to have worked in a satisfactory manner during several years, and, in fact, until immigration commenced to flow in considerable volume into the country.

Lieutenant Governor Royal said that "for seven years and more the law of 1875 brought about all the good results that the legislation had anticipated."

The Hon. Justice McLeod stated:—"At first there were no difficulties at all in enforcing the prohibitory law. Subsequently, however, people came in, and liquor was brought in, and we had more trouble."

Commissioner Herchmer, in command of the North-west Mounted Police, testified that "There was less drunkenness during the early days, when the permit system was in force, and when it was difficult to get liquor."

Mr. Justice Richardson said:—"The permit system worked very well formerly; latterly there were complaints of gross abuse of permits." (Q. 34271-34272.)

Mr. Hayter Reed, Indian Commissioner, considered that the permit system "Worked very well in early times; latterly not so well." (Q. 34303.)

Mr. Justice McGuire said:—"In the early history of the country, when settlers were few and easily known by the Lieutenant-Governor and those about him, the permit system was exercised wisely, and discretion could be used in issuing permits. As the population increased, and more strangers came into the country, persons of whom the Lieutenant-Governor knew nothing got liquor, and permits were obtained by persons who were really dealers in liquor." (Q. 35375.)

Supt. Perry, of the North-west Mounted Police, testified that "In the early days the prohibitory law seemed very effective; that was before the introduction of railways." (Q. 35244.)

These opinions, extracted from the evidence before this Commission in the North-west, are emphasized by the report of officers of the North-west Mounted Police embodied in the Commissioner's reports from year to year. The value of the reports is enhanced by the fact that they were made by police officers stationed in different parts of the North-west Territories, and the opinions expressed were based on the local situation, and must be considered reliable and impartial.

Superintendent Steele, in his report of 1888, said: "The reason of passing the prohibitory act was to prevent the sale of intoxicants to Indians, and for that purpose it answered very well, as it was then. Six months after the arrival of the police in 1874 the illicit traffic was suppressed, and no serious trouble has been caused since from the drunkenness of the Indians. But when the same law is applied to the whites it is quite another thing."

Superintendent Perry, summarized the result in these words, "The early effects of the law are acknowledged by all to have been most beneficial, and to have been the chief cause of the peaceable settlement of the country."

Superintendent Cotton, in 1889, reported: "In the early days prohibition was a necessity. It was an important factor in maintaining peace among the Indians. The half-breed element also benefited by it."

Superintendent McIlree dealt with the whole subject very fully in his report of 1890. He said: "Years ago the prohibitory law was a necessity, and fulfilled what it was expected to do, namely, rescued the native population from the state of degradation they were in, from being able to obtain unlimited supplies of alcoholic beverages in trade for robes."

Superintendent Jarvis said that the prohibitory system "served its purpose in the early days of settlement."

That it was not applicable to a white population is obvious from the record of its attempted enforcement during subsequent years, when immigrants commenced to arrive in considerable numbers in the territories. These settlers had been accustomed, speaking generally, to use alcoholic beverages in their former homes, either

in Europe or in the older provinces of Canada. An agitation was commenced against the prohibitory law, which was maintained until a license law was finally enacted. Meanwhile the composition of the population of the territories was being gradually changed. This is illustrated by the following figures:—

Dominion Census, 1880-81—Rupert's Land.

Indians	49,472
Whites, including half-breeds.....	6,974

Dominion Census, 1885—Provisional districts of Assiniboia, Saskatchewan and Alberta.

Whites.....	28,192
Indians	20,170

Dominion Census, 1890-91—Same Provisional Districts.

Whites.....	53,046
Indians	14,508

It is important to consider somewhat in detail the permit system, and the manner in which it was endeavoured to be carried out during comparatively recent years. It has already been established that by the terms of the Act the exercise of the permissive provision incorporated in the prohibitory law was placed altogether in the hands of the chief executive officer of the Territories, the Lieutenant-Governor, without recourse. The practical working of the system may be now indicated. Application for a permit was made to the Lieutenant-Governor in writing, the application setting out the number of gallons required and the nature of the liquor. If the applicant was unknown personally to the Lieutenant-Governor, he required the party to be recommended by some well-known citizen. As the population increased, this safeguard became difficult of application. Accordingly, His Honour sought to obtain, in such cases, the recommendation of the local member of the district from which the application was received. If this plan could not be carried out, the application was referred to the police superintendent of the district for a report. In this way it was sought to prevent liquor being obtained by parties who would sell it, and at the same time to check habitual drinkers.

Many difficulties presented themselves in working this system. It is obvious that applicants would generally be unknown personally to the Lieutenant-Governor as immigration flowed into the Territories. The local members did not favour this system, by which they were called upon to endorse the application of constituents; and one of the leading members of the Assembly admitted to this Commission that he made it a rule to endorse every application submitted to him. Again, the reference of applications to police officers for their report tended to increase the odium cast upon them by the people generally in connection with the enforcement of the liquor law. Moreover, if the applicants failed to obtain permits, they were able to secure smuggled liquor from the United States in the early days, and from Manitoba or British Columbia during later periods, importers of such smuggled liquor being constantly on the alert to secure customers, and thus reap immense profits. Then, again, frauds were of common occurrence in regard to the use of the permits themselves. A common plan followed was that of sending the permit east to be filled, and arranging for it to be inclosed in the package sent into the Territories. If the officer happened to find the permit when the package was opened, it was cancelled; if he failed to find it, it was liable to be used for an additional supply at a later date.

Legal questions that arose in connection with the permit system increased the difficulties attending its enforcement. By a decision given by Mr. Justice Rouloau, at Calgary, it was decided that one man could be in possession of any quantity of liquor, provided some one had received a permit for it and given it to the holder. Consequently a saloon-keeper was provided by his friends with all the permits he required.

Liquor Traffic—Commissioners' Report.

Commissioner Herchmer, in his report of 1888, referred to this ruling, and said: "A saloon-keeper of any experience keeps about enough liquor on his premises to fill his permits, and whenever 'pulled' by the police he produces his permit or those of his friends, and keeps his reserve stock of contraband liquor in hay stacks and manure heaps, closets and other hiding places of the same sort. Consequently it is impossible for the force I command to do much." In 1890, the commissioner reiterated his complaint, and said: "The fact that counterfoils furnished, belonging to other people, can protect liquor, almost completely kills the enforcement of the North-west Act, in spite of the efforts of the Lieutenant-Governor of the North-west Territories to prevent the transfer of permits, and places the police in a most unfortunate position. In fact, as at present interpreted, it is impossible to enforce the Act."

Superintendent Steele, in the same year, reported that "None of the saloon-keepers have any trouble in borrowing a permit to cover any liquor they may have in the house at the time it is searched."

Mr. Justice Rouleau, when asked by the Commission the effect of the decision to which reference has been made, summarized as follows: "If I bring in liquor under a permit from the Lieutenant-Governor, it is legally imported, and it belongs to me, and there is no objection to my giving it to a neighbour, or giving a man a bottle, if I like, so long as the quantity covered by the permit is not exceeded. It does not make the action illegal or illicit to give the liquor away." (Q. 37503).

Mr. R. B. Gordon, secretary to the Lieutenant-Governor, explained the difficulties experienced in issuing permits, and detailed the system followed (pp. 228-232). He said that the Lieutenant-Governor "found it impossible to enforce the law so far as regards permits." He pointed out that it was impossible to distinguish between the applications that should and should not be granted; that the Lieutenant-Governor tried to get the applicants recommended, but the difficulty increased with the growing population; and he wound up by declaring that "prohibition is impracticable."

Again, enormous difficulties were encountered by the North-west Mounted Police in their efforts to enforce the law. Commissioner Herchmer, in the course of his testimony before this Commission, swore that, "As chief officer of the force, I did all I could, and the officers of the force did all they could, with the permit system." (Q. 35569).

Superintendent Gagnon went even further, and after stating that the police were, as a rule, very watchful and zealous in trying to enforce the law, declared: "We were very little helped by the people of the country, who would protect the whisky traders and smugglers; and we were hindered by the feeling among the people that it was wrong to endeavour to enforce such a law." (Q. 35707-8).

Commissioner Irvine, as far back as 1885, entered a similar complaint. He said: "Men who are law-abiding citizens in the old province think it no crime to evade the liquor law, and do so on every opportunity. If such men are not caught, then the police come in for abuse from temperance quarters. If, on the other hand, conviction follows, so much the worse for the police, for in nine cases out of ten the conviction becomes a conception, which eventually gives birth to most unsparing abuse, not of the law, but of those whose duty it is to enforce it."

In the following year Commissioner Herchmer stated that "The enforcement of the liquor law is the most disagreeable and trying service the North-west Mounted Police have to discharge, and in this particular service, more than in any other, our weakness is apparent." The Commissioner, in 1887, conceded that "The enforcement of the prohibitory law is more difficult than ever, the sympathy of the settlers being generally against us in this matter." In 1888 the Commissioner, in his report, declared that "In the towns, under the influence of whisky, any policeman who does his duty is taunted and shunned."

Supt. McIlree, in 1888, was constrained to declare that, "Under existing circumstances there is not the slightest incentive for a policeman to try and do his duty in this particular. A man is looked upon as a martyr if he is arrested for a breach of the Act."

Supt. Gagnon even goes the length of asking the Government to amend the law, so that no part of the fine imposed be given to the informer, as he says: "This system brings the force a great amount of discredit, the man being always charged with doing their duty with a mercenary object in view." And so the police officers asked for a change in the law.

Difficulties also arose from the fact that the prohibitory law proved to be unpopular among those to whom it was applied. Archdeacon McKay, of Prince Albert, explained the position in this way: "The feeling of a good many people in the Territories was that they were restricted as regards the sale of liquor, which was allowed in other places, and they rebelled against being treated differently from their neighbours." (Q. 36133).

Mr. Hayter Reed, Indian Commissioner, said that "People, though law-abiding in every other particular, would not see the prohibitory law enforced (Q. 34328), because they felt it was not workable under present circumstances" (Q. 34340).

Mr. Cayley, a leading member of the Assembly, declared that the people did not object to the prohibitory system, but to the powers of personal and domiciliary search given to the North-west Mounted Police. He said the present system was relaxed because it was "the people's wish" (Q. 34574-34575).

Mr. Forget, now Assistant Indian Commissioner, and formerly secretary to Lieutenant-Governor Dewdney and Lieutenant-Governor Royal, said: "If the Lieutenant-Governor was free in granting permits, he was assailed by persons inclined to be prohibitionists for being too liberal; if, on the other hand, he became a little strict, he was assailed by letters all over the country with discriminating against certain persons. So it was one of the hardest systems possible to administer, and to discriminate between the parties" (Q. 34772).

Commissioner Herchmer declared to the Commission that "A very large proportion of the population would evade the law if they could. They would try one dodge, and when we found that out they would invent another scheme" (Q. 35528-29.)

Mr. George Arkle, who has travelled extensively over this continent, and has resided in the North-west Territories during recent years, declared that prohibition in the Territories was practically class prohibition; that while wealthy men could obtain wine, "the settlers, like dogs, could not get a glass of beer without cringing for a permit (Q. 34838-34839). The people are supposed to have the making of the laws in any civilized country; but it is entirely out of their province to say what a man shall eat and what he shall drink. A man is a free agent or he is not a man at all" (Q. 34857).

Outside opinion was in the same direction. Dr. Orton, Medical Superintendent of the Canadian Pacific Railway during the construction period, presented his views to the Commission. He said: "There was a very strong feeling in favour of greater liberty under the permit system. People were often compelled or tempted to bring in liquors that were not fit for use, whereas by the extension of the permit system they would have been able to obtain proper, healthful and unadulterated liquors" (Q. 31847). The permit system did not work well. It has been continuously infringed, and I found large quantities of spirits of a very inferior character shipped in there, and largely used" (Q. 31743).

Mr. Robert Ward, of Victoria, B.C., a Justice of the Peace for the province, expressed his opinion in these terms: "From what I have seen of the North-west Territories of Canada, and I have passed through the Territories frequently, I am satisfied that there is a good deal more drunkenness, and a greater sale of liquors, than if such law had not been in force" (Q. 40137).

Sir Matthew Begbie, Chief Justice of British Columbia, described his trip into the Territories. He said: "I never was so pestered in my life, for I hate raw spirits, and the people were always asking me to take what they called whisky. They seemed to think it was the duty of a man to drink all the whisky he could,

Liquor Traffic—Commissioners' Report.

and everybody had it. I was like Gulliver when in Brobdignag, where the people were so exceedingly hospitable that they pitch-forked tid-bits from their mouth into the mouth of poor Gulliver" (Q. 39616).

Mr. Warberton Pyke, in his recent work, "The Barren Ground of Northern Canada," thus describes his experience of the working of the prohibitory law in the Territories: "At the present day the Prohibition Act orders that even the white man of the North-west must be temperate, thereby causing whisky to be dear and bad, but plentiful withal. It is surprising how such a law exists in a country where the white men not only want drink, but do drink, in defiance of the command of a motherly government."

Turning to the annual reports of the Commissioner of the North-west Mounted Police, similar statements are found on almost every page. As far back as 1885, Commander Irvine reported, "that the majority of the people living in the North-west do not respect, and do not hesitate to break the prohibitory liquor law." Supt. Perry, in 1886, expressed his opinion that, "The law as at present is not popular with any party, and does not receive the support and approval of the people. A discriminating law cannot be upheld by the people." Commissioner Herchmer, in 1887, said, "The enforcement of the North-west prohibitory law is more difficult than ever." Supt. Perry, in 1887, said, "The liquor traffic must be stopped, although the mass of people appear to be against the law." Assistant Commissioner Herchmer, in 1888, reported, "The liquor law is not working at all satisfactorily, and is no doubt being evaded, and would be even if there were five times as many police as there are." The same officer, in 1888, declared that, "The difficulty in enforcing the present law is due to want of co-operation of the people." In the same year Supt. Griesbach reported that "The present system, though it was no doubt useful and suited to the times in which it was first instituted, does not now suit either the people or the enforcers of the law, and there is no doubt that a change of some kind is expedient." Supt. Cotton, in 1889, said, "It must suffice for us to bear testimony to the fact that a prohibitory law does not give universal satisfaction." Supt. McIlree declared, "It is no use trying to deny the fact that the sentiment of the greater part of the country is distinctly adverse to the statute on this subject." Supt. Steele expressed a strong opinion. He said, "Nearly all classes in this district are strongly opposed to the existing liquor law, and there are but few who will not assist either in smuggling or screening the smugglers." Supt. Griesbach, in the same year, made this concise summary: "The present liquor laws are both easy to evade and hard to enforce. That the system must be altered is the general opinion, both of the public and the enforcers of the law." Inspector Saunders reported to the same effect, stating that, "The liquor law is throughout the country considered to have served its purpose. Public feeling is strongly against it." Supt. McIlree, in 1890, thus represented the position: "White people have swarmed into the country, and they expect to be allowed to judge for themselves by a majority of voices, whether they should have a prohibitory law or on the contrary. In consequence the present regulations are universally unpopular."

The consensus of testimony from this source was to the effect that the prohibitory law was ineffective and unpopular, and that the people desired a change.

A still further difficulty in connection with the enforcement of the law was the apathy of the temperance people. Commissioner Herchmer, in his evidence before this Commission, presented this point in a strong light. He said: "If the temperance people of the country had really meant work and business, they could have given the police a great deal of assistance. My experience here, however, was that great difficulty was met with in getting evidence, and in this the officers were not assisted by the temperance people. There was a want of moral courage on the part of people with temperance proclivities. The clergymen could have given a great deal more assistance than they furnished; they did not give us much assistance, in fact very little. They wrote in the newspapers in regard to the non-enforcement of the law, but when it came to the point there was very little evidence

to be got from them (Q. 35569). Supt. Perry, in his report of 1886, also referred to this matter, and said, "In every case it is to be remarked that the information has been laid by the police or by others on compulsion. There has not been a single civilian informer."

The permit system appears to have been surrounded not only with difficulties, but with positive evils. Many witnesses who gave evidence before this Commission recited the particulars of scenes of debauchery following the arrival of liquor obtained on permit. The custom appears to have been for the friends of the party receiving the liquor to assemble and finish the supply at a single sitting. Another evil was the injury caused by the consumption of smuggled liquor adulterated and of an injurious character. This was brought principally from Fort Benton, Montana, and no less than one month was occupied in transporting a cargo from the United States boundary to Regina or Calgary, most of the travelling having to be done at night, in order to evade the Mounted Police. Another evil arose from the inducements offered to perpetuate fraud. Misrepresentation, fraud and deceit were used to screen operations which, while contrary to the law, were passively sanctioned by the majority of the people of the country. The use of compounds, in which drugs formed the principal constituents, was another evil arising from the permit system. The evidence given before the commission showed that pain-killer cock-tails were a favourite beverage in the morning among a certain class, and red ink, Florida water and eau de cologne were drank for the alcohol they contained.

A further evil arose from the fact that spirits were commonly used on account of the high freight charges on beer. In fact, the principal reason why mild beer not exceeding four per cent of alcoholic strength was subsequently admitted was the poor quality of spirits smuggled and distributed throughout the Territories.

Various questions arose in regard to the interpretation of the liquor law, and especially in regard to the clause authorising the Lieutenant Governor to issue permits. It was contended by certain parties that the intention of the Dominion Parliament in passing the law was to give to the North-west Territories a measure securing total prohibition of the liquor traffic. It was contended, on the other hand, that the intention of parliament was simply to afford more effective means of preventing the distribution of alcoholic liquors among Indians. The opinion of Lieutenant Governor Royal has already been cited, to the effect that the latter was the true interpretation of the intention of Parliament. His Honour appears to have realized the difficult position in which he was placed, for his admission in his statements made to the Commission was that, the law in respect to liquor prohibition had degenerated into the most unsatisfactory and crude licensing organization possible, for a free people, and painfully retrograding, as compared with the measures which statesmen are now devising for the regulation of this social evil. While the original intention of the permit system undoubtedly was to enable the white settlers to obtain alcoholic liquors for medicinal and domestic use, under certain regulations, the experiment proved a failure. Each year evidences multiplied of the breaking down of the permit system, and both officials and people began to realize the necessity of adopting some new method of dealing with this difficult position.

In all quarters discussions arose as to the new methods of treating the liquor question. Lieutenant-Governor Royal, in his statements to the Commission, mentioned that, "In the absence of any action by Parliament to amend the law, numbers of good citizens discussed the propriety of allowing public houses to dispense beer to the traveller and visiting delegates". It was suggested that such a measure, besides having the result of inducing the opening of good hotels, would also be means of supplying the people with a cheap and healthy beverage, and keeping people away from stronger stimulants. Indian Commissioner Reed, in his evidence before the Commission, covered several important points in this connection. After mentioning that the original intention was that permits should be granted for medicinal and domestic purposes, he justified the action of the Lieutenant Governor in these terms: "I suppose the Governor, who had the power to issue the permits, thought it better to issue them rather than to see so much smuggling." (Q. 34344.)

Liquor Traffic—Commissioners' Report.

It is admitted that the number of permits issued steadily increased during the later years when the system was in operation. That there were many sufficient reasons for this increase is beyond question. The increased population of the country of itself caused an augmentation of the number. Then there was the fact that the new settlers largely consisted of immigrants from Europe, who had been accustomed to the use of alcoholic beverages from their youth, and also of people from the older provinces of Canada who had been accustomed to a license system. Again, the smuggling of inferior qualities of spirits from the United States naturally led the Lieut.-Governor to consider the advisability of permitting the importation of pure liquors from the east. In this connection two points arose, first, the desirability of retaining in the country money expended in bringing in from the United States alcoholic liquors of low quality, which enabled smugglers to reap enormous profits; second, the question whether the granting of an increased number of permits would not diminish the quantity of liquor smuggled.

About the year 1888-89 a crisis arrived in North-Western affairs as regards the administration of the liquor traffic. The permit system had been tried and had failed. In the days of the early settlement of the country it had proved successful as a means of keeping liquor from the Indians. That was its original object, and that was successfully accomplished. When efforts were made to pass beyond the original intention of the law, difficulties arose on every hand. The white settlers, who had been accustomed to the use of alcoholic beverages in Europe or the eastern provinces of Canada without let or hindrance as they pleased, resented any interference with their personal liberty. It was felt in all quarters that a change must be made. It was admitted that smuggling had reached extensive proportions, and that the quality of the article smuggled was universally bad and injurious to health. It was conceded that in consequence of the increased population and the changed circumstances of the country the permit system had broken down. It was felt, moreover, that if ale and beer could be introduced, their use would supersede the consumption of bad spirits, and thereby tend to the promotion of temperance. The desirability of replacing spirits by malt liquors was constantly presented to the attention of the Government by the officers of the North-West Mounted Police.

Inspt. Saunders, in his report of 1889, asserted that, "As the country is gradually becoming more settled, greater difficulties are experienced. My experience is that the law does a great deal of harm."

Supt. McIlree, in 1890, reported, "The general state of prohibition is as unsatisfactory as ever, both to the general public and ourselves, who are supposed to enforce the provisions of the statute on the subject. Saloons are plentiful, and the business of selling liquor is a profitable one, and instead of decreasing, the illicit traffic is increasing."

Commissioner Herchmer, in 1887, reported: "Liquor is run into the country in every conceivable manner—in barrels of sugar, salt, and as ginger ale, and even in neatly constructed imitation eggs—and respectable people, who otherwise are honest, will resort to every device to evade the liquor laws." Supt. Griesbach, in 1887, mentioned, "That the law as it now stands under the permit system is not a success, and it is most desirable from many points of view that some radical change should take place at an early date, possibly the introduction of a high license liquor law, with proper safe-guards, would now best meet the case, and would be in my opinion, more conducive to morality, good order and the carrying out of the law than the present system." Commissioner Herchmer, in 1888, reported that, "Under the present system there are undoubtedly the gravest reasons for complaint." Supt. Cotton, in 1888, referred to the discussions that had taken place in the public press and at many public meetings in connection with the prohibitory clauses of the North-west Act, and expressed his conviction that the Government had been placed in possession of the different views entertained throughout the territorial electoral divisions. Supt. McIlree, in 1888, regretted that the evils connected with the enforcement of the Act were increasing rapidly, and less regard was paid daily to the provisions of the Act. Supt. Steele declared that, "The illicit traffic in liquor has,

as a rule, the sympathy of the public, and the experience of the police force has shown that there is more drunkenness under the present system, and more injury done to the health of the individuals through this law, than if respectable houses were licensed. My recent experience in British Columbia also shows me that as far as the police force is concerned there are fewer offences against discipline, committed through the effects of drink in a country where there are numerous licensed houses, than in the North-west Territories. As far as the public in the Kootenay District, (British Columbia) are concerned, there was less drunkenness noticeable among them between my stay of over twelve months than I have seen during the last three months in the North-west Territories, although the very strictest steps were being taken by the officer commanding here to keep down the traffic." Supt. Cotton, in 1889, reviewed the effects of prohibition in the early days, and then said, "Now, however, the situation is changed; towns and settlements have sprung up all over the territories. The white population in discussing these changes has ventilated the subject freely and fully in the Territorial press." In the same year Inspector Saunders reported, "An unpopular law is always difficult to carry out, and as the country is gradually becoming settled, greater difficulties are experienced. As a furtherance of the temperance cause, few people who live in the North-west Territories, will disagree with me when I say it has been a failure."

The desirability of permitting the introduction of beer, and even establishing a brewery, in the Territories was constantly put forward in the reports of the police officers. As early as 1887, Commissioner Herchmer recommended that, "The importation and manufacture of a good article of lager beer, under stringent inland revenue regulations, would greatly assist the satisfactory settlement of this vexed question." In the following year the Commissioner stated that, "There is a feeling among the farmers, and naturally, that the sale of good beer should be allowed, and that it should be brewed in the country, out of home-grown barley, the present regulation allowing a wretched apology for beer to be brewed in the country out of grape sugar and poisons, while the brewing from home-grown malt of an article of equal intoxicating power is strictly prohibited." The Commissioner, in 1889, reiterated his recommendation in the following terms:—"It is generally conceded that permission to brew beer in the Territories, under proper restrictions, would have a beneficial result, besides in a measure allaying the considerable discontent which undoubtedly exists. Barley grows well, and in some sheltered places hops, but at present they are unsaleable. Home breweries would keep a considerable amount of money in the country, and afford a market for farmers for grain, which they could with great advantage grow." In 1891 the Commissioner returned to the charge, and in his annual report stated: "Beer is still imported, and I cannot understand why, when it is allowed in under permit, it cannot also be brewed here under permit, as barley is a safe crop, and of very excellent quality." Mr. Gordon, Secretary to the Lieutenant-Governor, stated in his evidence before the Commission, "That on account of the smuggling, the Governor thought it better to make beer sale legal." Lieutenant-Governor Royal, in his statement submitted to the Commission, reviewed the suggestion made of permitting the sale of beer at hotels, with a view of supplying the people with a cheap and healthy beverage, and keeping them away from stronger stimulants. He said:—"I accepted the idea, which was immediately carried into effect under a complete code of regulations. The licensing system developed under my predecessors was, to this further extent, completed by me, pending the decision of the legislative authorities at Ottawa. The regulations adopted referred to the personal character of the applicant, to the accommodation of the hotel, to the days and hours of closing, etc.; and the North-west Mounted Police were charged with the duty of keeping constant watch over these houses. As no license but a permit only was issued, and such permit had to be renewed frequently, any disorder or breach of the regulation was at once visited upon the applicant by a refusal to grant further privileges. The result of this new measure was a marked decrease in the demand for liquor permits since the increase of permits for beer, and, in the same time, an increase in the revenue."

Liquor Traffic—Commissioners' Report.

Thus it came about that, from the strength of public and official opinion, the Lieutenant-Governor was practically forced into the position of extending more widely the permit system, and allowing the sale of beer under certain regulations and restrictions.

The 4 per cent. beer plan has formed a debatable question between those holding prohibition views and the advocates of a license system. The Lieutenant-Governor himself stated that, "The public was not long in showing itself in favour of the new policy." Mr. Forget, formerly secretary to the Governor, expressed the opinion before this Commission that, "The introduction of the system had a beneficial effect as a whole, for it decreased the applications for strong drink." Commissioner Herchmer, in 1889, reported that, "The facility of obtaining four per cent beer, and the great improvement in the quality of the article, has, to a large extent, lessened the demand for stronger beverages, and I think there has been much less drunkenness in the country. Certainly the free use of four per cent beer in the police posts where canteens have been established for its sale, has made a very great difference in the conduct of the men.

The reduced demand for spirits naturally caused a falling-off in the quantity of smuggled liquor coming into the country. Supt. Steele, in 1890, referring to this fact, said:—"There has been a marked falling-off this year in the efforts to smuggle into the Territories the decoctions called whisky, from Montana."

In 1883 Lieutenant-Governor Dewdney introduced modifications, by which a fee of fifty cents per gallon was paid by the applicants for liquor permits, beer being free, as well as wine for sacramental purposes. In his report dated January, 1884 he thus explained the reasons for his action:—"In connection with the liquor question, I may state that on account of the large increase in the number of applications and increase of labour and expense consequent thereto, I deemed it expedient with the advice of my Council, to exact the payment of a fee of 50 cents per gallon for spirits and wine, to form part of the general revenue fund of the North-west Territories. This regulation came into force on 20th September last, and from that date to the 31st December following 599 permits had been granted, and \$763 realized. While I have continued to exercise the same care in granting permits as heretofore, I am glad to remark that the imposition of the tax had the effect of lessening the number of applications, for during the latter part of the year, instead of increasing in proportion to the rapid increase of population, they show about the same average daily as during the first part of the year. I may state that during the time I exacted the fee, \$238 were returned to parties who had applied for permits which I refused to grant."

Notwithstanding the imposition of a fee on spirits and wine, the number of permits issued increased steadily. That they were in excess of the growth of population is, however, open to doubt, and is a matter of contention between the advocates of prohibition and those of a license system. It was argued before this Commission that an increased number of permits simply meant a diminution in the quantity of liquor smuggled, with the advantage of a better article being consumed, and at the same time having the money kept in the country. It was also maintained that the introduction of 4 per cent beer reduced the consumption of smuggled spirits.

Mr. Gordon, secretary to the Lieutenant-Governor, stated to the Commission that, "The increase in the number of permits issued was with the view to decrease the quantity of smuggled liquor." (Q. 34428.) He further said, on account of the smuggling, the Governor thought it better to make beer sale legal. (Q. 34469.) He added, "The means of judging the wishes of the people were the applications for permits."

Mr. Hayter Reed, Indian Commissioner, when interrogated on this point, replied:—"The Governor who issued the permits must have been governed by the wishes of the people, or he would not have issued them." (Q. 34354.)

Mr. Forget, Assistant Indian Commissioner, speaking of the permit system and its effects, said:—"My own experience has led me to believe that there was as much

drinking done in the Territories and Manitoba when under permit as in Quebec and Ontario under license." (Q. 34803.)

Commissioner Herchmer, in his report in 1890, says that, "The importation of beer has lowered the demand for stronger liquor."

The following table presents in a concise form a statement of the number of permits issued, and the quantity of liquor imported, during a series of years:—

TABLE showing Number of Permits Issued and Quantity of Liquor Imported.

Year.	Number of Permits.	Spirits.	Wine.	Beer and Porter.	Four p. c. Beer.
		Galls.	Galls.	Galls.	Galls.

† The License Act of the Territories was assented to on January 25th, 1892, and came into force on May 1st, 1892.

Whether the statement be true or not that smuggling decreased as permits increased, it must be admitted that smuggling assumed enormous proportions in the Territories. It is not too much to assert that smuggling became a business in that country. Liquor was brought into the Territories by two particular routes, namely, from the South, especially from Fort Benton, Montana, and from the West, by way of Donald and other outposts in British Columbia. By the southern route liquor of vile character was purchased on the United States frontier and transported by waggons across the prairies, either to Regina or Calgary. The shortest route, namely, from the boundary line to Fort McLeod, which may be considered as the first Canadian station where liquor could be sold at a high profit, was 235 miles. In order to transport smuggled liquor to this point it was necessary to evade the North-West Mounted Police, who traversed the country in all directions and were constantly in movement. Of course, this force watched with exceeding care the fords crossing the various streams at different points *en route*. It was, therefore, necessary for the smugglers to obtain new crossings at the different streams, and, moreover, to ensure their safety, it was essential that they should travel the greater

Liquor Traffic—Commissioners' Report.

part of the distance at night. The journey was thus made. The liquor was carried 25 or 30 miles at night-time, over trails little frequented, and then was cached for 24 hours, and the journey resumed on the following night. Of course, the profits were of a magnitude sufficient to compensate the smugglers for their difficult and hazardous journey. It must, moreover, be borne in mind that the powers of the North-West Mounted Police were extraordinary and exceptional. They had the right to make domiciliary and personal search.

Inspector Harper, who had experience in different parts of the Territories, and especially on the southern and western frontiers, where this contraband trade was carried on, presented to the Commission the powers of the force in these words: "We could search anywhere; that is, a commissioned officer could do so, or a police constable, under orders of a commissioned officer. We could also make a personal search." It was also stated in evidence that the houses of settlers were searched, and even bed-rooms, in the general hunt for liquor.

The witnesses at McLeod admitted that that place was an important *rendezvous* for dealers in illicit liquor. It was conceded frankly that the North-West Mounted Police had endeavoured to discharge their arduous duties; but it was explained that, "owing to the police feeling that they were not supported, they considered it was of no use to try to enforce the law." The sentiment of the community was antagonistic to its enforcement. "There was the feeling," explained one witness, "that the law was an unjust one; that it was made by a government two thousand miles away; that it was made against the wishes of the people, and was directed against something that the people wanted; that it was against their feelings and ideas altogether, and that it was not wrong to break that law." It was admitted by everyone that the people were willing to obey the laws generally, but it was asserted that "they would break the liquor laws without compunction at all." Further, witnesses emphatically declared that, "the people would not be legislated for as to what they should eat and what they should drink." Besides the extraordinary powers possessed by the North-West Mounted Police force, as already indicated, it was provided by law that wagons and teams used in hauling liquor were liable to confiscation, in the event of seizure. This provision, it was admitted on all hands, proved a powerful weapon in the hands of the officers of the law.

Not only from the south, but from the west, contraband liquor was brought into the country by all available avenues and by every possible conceivable means. It was brought in secreted in packages of merchandise; in tins specially prepared and labelled "bibles"; as canned fruits, a single peach, perhaps, floating in alcohol valued at \$5; in casks of sugar and rice; in packages of bottles, supposed to contain nothing but temperance drinks; in carloads of hogs or lumber, and as eggs. Almost innumerable other devices were likewise resorted to. In some cases casks of liquor were attached to the cars or suspended in front of the engine, to be dropped off at a convenient spot. In other cases liquor was carried by the smugglers in the state-rooms of sleeping cars, and even the mattresses and pillows of colonists were used to secrete it. Inspector Harper, stationed at Banff, told the story of smuggling (Q. 38468), he said: "There was abundant means by which liquor could be smuggled in. They would smuggle it from British Columbia, and from other quarters. A whisky man would go west in the morning and engage a Pullman berth at a place where the train stops half an hour for supper. During the time it was there he would make arrangements with the porter by which he (the whiskey man) filled his berth with kegs of whisky. We were not allowed to search pullmans for whisky. When he got near Calgary the liquor would be thrown off just before the train pulled in. Another way was that a man coming down in the colonists' car would use rubber beds and pillows filled with whisky. They had it all over the train. It would be in the berths, on the top, underneath, in front, on the engine, on the tender, and where the water was kept, and they would let down tanks and kegs with a rope and let them stay there. The liquor would be dropped off at convenient places, and they would have men there on the spot ready to carry it away. Of course, the officers could not watch all these places."

The police possessed at one time the right of entering sleeping cars and making seizures. But the complaints from travellers became so serious that the power was withdrawn.

Another favorite method of bringing liquor into the country was that of having packages addressed to some well-known clergyman or public man. Of course, the parties to whom the package was addressed knew knowing of the transaction, but there were interested persons ready at the depot to claim it on its arrival.

Inspector Cuthbert, of Calgary, stated to this Commission that barrels, containing bottles of beer at both ends and whisky in the centre, arrived in under beer permits. He also mentioned that cases of aerated water came in, between the bottles of which were bottles containing spirituous liquors. He laid special emphasis on the fact that there had been continuously a great deal of smuggling, and large quantities of liquor had come in on the cars. He recited the circumstances of a case in which a man was informed against for having liquor in his possession, and who, during the same day, produced permits for double the quantity he had—permits that he had collected during the day. "Some of these permits," said the officer, "were for liquor obtained the year before. It was too absurd to pass over, so the permits were returned as not covering the liquor." (P. 385-389).

The fact that British Columbia was under license while the Territories were under a prohibitory system proved undoubtedly a drawback to the enforcement of the law in the latter. The Pacific province was made a basis of operation as regards the forwarding of liquor into the Territories. This was clearly shown by a statement submitted by Mr. J. E. Miller, of Vancouver, Collector of Inland Revenue, whose district ran up to the boundary line of the Territories. He explained that there was a bonding warehouse at Donald up to the time of the adoption of a license system in the Territories (Q. 42632-42640). During 1890-91 the spirits, warehouse, for consumption at that point, were of the value of \$2,739, and in 1891-92 of the value \$2,853. Of that amount, the Collector declared that 80 per cent went into the Territories. That this statement is warranted by the facts is made apparent by the admission that immediately on the enactment of a license law for the North-west Territories, there was no further sale there for liquor, and the bonding warehouse at Donald was immediately closed. The difficulties surrounding the suppression of smuggling, both on the western and southern frontiers in the North-west territories, were so great that nearly all the North-west Police officers, and many citizens, united in the conclusion that prohibition was impracticable of enforcement in that part of the Dominion. The vast extent of boundary to be watched night and day may be judged from the fact that Inspector Norman was in charge of a district covering 940 miles along the boundary line.

The effect of the prohibitory law in connection with the building of the Canadian Pacific Railway was brought prominently before the attention of this Commission during its sittings in the North-west. The claim was put forward, on the one hand, that the law had had the effect of producing a quiet, orderly and peaceful state of affairs during the railway construction period, and that, except for the prohibitory law, a similar condition would have prevailed in Canada to that which obtained in the United States when the trans-continental roads were in progress of construction. On the other hand, it was argued that the prohibitory law was only incidentally a factor in producing and maintaining the rule of order and law which prevailed in the Territories and along the Canadian Pacific line during the construction period. The fact is conceded by all that the building of the Canadian trans-continental road was distinguished by the absence of any serious troubles arising from the drinking habits of the men employed on the work. Governor Royal, adverting to this subject, said: "In 1882 and 1883 the Canadian Pacific Railway Co. placed under contract the construction of its line across the plains to the Rocky Mountains. Many apprehended, and not without reason, that the cortege of crime of all sorts, which had accompanied the construction of trans-continental lines in the United States, would inevitably appear from the moment the uninhabited territories were reached. Fears of interference by the Indians with the progress of the work was also entertained. Yet none of these fears or apprehensions were realized. Owing

Liquor Traffic—Commissioners' Report.

to the absence of strong liquors in the camps of the railway navvies, owing to the discipline and strict surveillance exercised by the North-west Mounted Police, the construction was proceeded with and carried on through more than 700 miles of vacant and silent plains with at least as much order and tranquility as if it had been across any of the provinces of Eastern Canada."

The annual reports of the North-west Mounted Police are remarkably silent in regard to the condition of the Territories during the construction period. Superintendent Cotton almost alone deals with this interesting point. In his report for 1889 he made special reference to the subject. He said: "The construction of the main line of the Canadian Pacific Railway proceeded quietly, and the total absence of all serious crime, notwithstanding the sudden influx of thousands of rough navvies, was remarked with astonishment. This was again and again borne testimony to by prominent railway men who had had experience in other countries. Even with the efficient police surveillance maintained, such happy results could not, I think, have come about but for the prohibitory laws existing. That these laws were sometimes broken, even in those days, is an undeniable fact. Such, however, was the exception, not the rule."

Superintendent Cotton, when before the Commission, enlarged on this point. On the opinion expressed in his report as above, being cited, the Superintendent added: "If all the working parties had had the right to bring in liquor and use it, the story of the construction of the Canadian Pacific Railway would have been exactly similar to the history of the Northern Pacific and Union Pacific railways. There would have been rows and murders of all kinds, I have no doubt." (Q. 30507.) Superintendent Perry, also attributed good effects to the prohibitory law during the construction period. When before this Commission, the Superintendent expressed his satisfaction that the effect of the law was "more beneficial during the construction period, when from four to five thousand men were at work on the Canadian Pacific Railway." (Q. 35263—35264.)

Mr. Thomas Dowling, who resided at Calgary during the construction of the Canadian Pacific Railway, and upon whom the duty of administering the prohibitory law to a large extent devolved, testified before this Commission that he was considered severe as a magistrate; "but, notwithstanding all I could do, quantities of liquor came into the country. People were arrested and fined, but it was impossible to keep out the stuff. We succeeded in doing so to some extent. I destroyed large quantities of liquor; I destroyed a carload one time." (Q. 37207—37210). Unlike the police officers, he attributed little of the desirable results to the effect of the prohibitory law. In fact, he made the charge that, "Some of the liquor was purchased by contractors on the Canadian Pacific Railway, who wanted to get liquor on the works in British Columbia, and to make money out of it." (Q. 37211). On being interrogated as to the probable condition, if sale of intoxicating liquors had been permitted along the line, and whether there would have been less desirable condition among the men, the witness answered that "the men got liquor anyway," and added, "I had the police force in Calgary under my command, but with my force I could not keep liquor out of the country." (Q. 37214).

The evidence given by Mr. John W. Sifton, contractor for section No. 14, seventy-six miles east of Selkirk, is interesting, as presenting a different view. He deposed before the Commission as follows:—

"I should like to tell the Commission about prohibition, and the possibility of enforcing it. I had seventy-six miles of road under my jurisdiction up to the time of its completion. I had authority under the Public Works Act to prevent the sale of liquor on that track. I decided that in my own interest, as well as in the interest of the men, I would endeavour to carry out that law. During those four years there never was any liquor sold on that contract; I say that emphatically. Liquor came in, it is true; but it did not get the chance of being sold, except to one man each time. I found it quite possible to enforce the Act. The people on my section knew that I desired to enforce the law, and that I would do so. I asked the assistance of Mr. Davis, who said that the only assistance I could have would be five constables

but he said, at the same time, that he would endeavour to assist me to carry out the law. Afterwards he sent me a communication, and I found that the responsibility rested on myself, and after that I had no trouble. I had no constable on the works except a man who acted as foreman. I had one of the engineers appointed as magistrate by the Governor of Keewatin, Hon. Mr. Morris, but no case came before him." (Q. 32105-32107).

It will be observed that the police officers attribute the peaceable circumstances surrounding the construction of the railway to the prohibitory law in force in the territories; that Mr. Dowling, who acted as magistrate in Calgary, and had charge of the district police force, says that liquor came into the country in large quantities, and that he was unable to prevent its distribution along the railway lines; and that Mr. Sifton, a railway contractor, ascribes all the benefits accruing to the exercise of vigilance in connection with carrying out the prohibitory provisions of the Public Works Act. Under these circumstances, it is hardly permissible to ascribe wholly to the prohibitory law of the territories, the peaceable and satisfactory condition of the country during the railway construction.

Important evidence was given by Mr. Harry Abbott, General Superintendent of the Pacific Division of the Canadian Pacific Railway. He had charge of Section No. 15, and subsequently of the whole district between Sudbury and Port Arthur. Speaking of his efforts to enforce the Public Works Act, he informed the Commission that he was afraid it was carried out "very inefficiently, although we did our best to carry it out. We could not prevent liquor coming in. We had constables stationed along the line, and they honestly endeavoured to suppress the smuggling of liquor, but found it impossible to do so." Mr. Sifton's statement that he found it easy to thoroughly enforce the provisions of the Act on the section of road which he built, having been read, Mr. Abbott replied: "I do not know that section, and unless it is situated very peculiarly, and unless he possessed unusual facilities for stopping smuggling, I should be very much inclined to doubt his statement." Mr. Abbott further declared that if a license system had been in force along the line, the liquor "would have been more easily kept track of, and there would have been a better class of liquor sold." As to the question whether there was much disorder among the men on the line of construction, the Western Superintendent said, "when the men got liquor there was disorder; in fact, it amounted to so much at one time that we had to call the provincial police to our aid. The riot was at Biscotassing. I remember a bullet was shot through my bedroom on one occasion." (Pp. 625-627.)

Accordingly, whether the condition of the country under prohibition, as compared with its probable condition under license, was superior, or whether its condition under prohibition was superior to its probable condition under license, was due to the prohibitory system itself as regards the district on the line of the Canadian Pacific Railway, or whether such was in fact due to the prohibitory provisions of the Public Works Act being enforced, constitute debatable questions.

It is manifest that advocates of license endeavoured to press prohibition to the front as an issue. The candidates favourable to a change of system stated openly their views. These candidates were many, while prohibition candidates very few indeed.

Mr. Betts, M.L.A., said: "I tried to make prohibition an issue, but I was not altogether successful, and very many temperance people voted for me, although they knew I was a license man. I suppose, however, they felt, as I felt, that a license law would be better than the permit system." (Q. 36032).

Mr. J. L. Reed, of Prince Albert, a Dominion officer, well acquainted with the country, stated that "Public opinion in the North-west Territories is in favour of license. The last election most decidedly settled that question. It was one of the questions up. License is a great improvement on the old system, which was spoken against everywhere." (Q. 35859-35861).

Mr. John McTaggart, of Prince Albert, another Dominion officer, said: "The matter was brought strongly before the people. The elections came on quickly, almost before the temperance people had time to look around them for candidates.

Liquor Traffic—Commissioners' Report.

I was told that all the candidates were rather in favour of license, so there was no option." (Q. 36288).

It may be remarked that the prohibitionists had just as much time to prepare for the election of 1891 as had their opponents.

Mr. Enoch Colpitts, who announced himself as a total abstainer and prohibitionist on principle, gave a clear explanation of the position. When asked to account for the fact that no temperance man appeared as a candidate in his district, he said: "It was just on this ground, Mr. Ross was our former member. He declared himself in favour of license. Mr. Gordon then came out, and when the question came up declared himself in favour of license. They were both supposed to be very strong men, and had a great many personal friends. The temperance men thought of starting a man; but on considering the matter, they came to the conclusion that on account of the personal esteem in which the two men were held, one or the other of them would be elected." He believed the temperance men, even if a temperance candidate had been brought out, would have supported one of the original candidates. (Q. 36724).

The advocates of prohibition having failed to place in the field candidates capable of successfully contesting the elections against advocates of license, appear to have devoted their attention to raising an agitation on the necessity of taking a plebiscite. They held several meetings, and adopted a memorial to the Lieutenant Governor asking that a plebiscite be taken. Governor Royal replied that his action would be guided by the decision of the legislature on the license question.

The elections duly came on, and the license candidates swept the field. Immediately the legislature was convened, the liquor license ordinance was passed, and the Territories came under a licensing system. The question of a plebiscite came up in the legislature, but, to quote Mr. Colpitts: "It had a very weak following and did not amount to anything."

The license law embodying local option provisions went into force on 1st May, 1892, and the number of licenses issued up to 6th of that month, for the year ending 30th June, 1893, was: (a) hotel, 73; (b) restaurant, 2; (c) wholesale dealers, 24.

The amount of revenue derivable from the licenses issued is: By the Territories, \$20,790; by municipalities and electoral districts, \$7,675.

Interest attaches to the results which have followed the adoption of the license system. Taking a few of the witnesses haphazard, we find the following expressions of opinion given in the testimony:—

Dr. Brett, M.L.A., one of the leading representatives in the Territories, said: "I think the license system is preferable to the old system. It was the concentrated sentiment of the people that influenced the Legislature in passing that law. I do not believe the people of the Territories wanted a law for revenue purposes, but they wanted a law that would regulate the traffic." (Q. 38909-38910).

Mr. Betts, M.L.A., declared: "I am satisfied in my own mind that the license law is a benefit. I think, speaking from memory, that, with the exception of three or four, every member of the Assembly was in favour of a license law. The only difference was as to the lines the law should take. There were some who believed in a prohibitory law, and some were in favour of free traffic. The stand I took was for high license and a very strict license law. I think temperance feeling is steadily growing throughout the country. The licensing of the traffic, together with the moral influence that will be brought to bear, and especially improved education, will undoubtedly be the means of considerably reducing the consumption of liquor." (Q. 36010-36016).

Mr. McKay, M.L.A., expressed his satisfaction with the operation of the law, and said it worked very well. (Q. 36079).

Commissioner Herchmer said: "It will increase the drinking among the half-breeds; but among the respectable portion of the community I do not think it will increase drinking. There is more ale consumed now." (Q. 35602).

Mr. Justice McGuire testified that, "The license system in force at present is a better system for the Territories, and it should be strongly enforced. A very small

percentage of the cases that come before me are traceable to the use of liquor. Of all the cases I have tried, only two that I recollect were the outcome of excessive use of liquor, and one of those, in which death occurred, was a case of murder, the verdict rendered being manslaughter, and it arose out of the prohibition system, I think." (Q. 35395).

Inspector Harper pronounced himself in favour of a license law, with a small number of police to enforce it, rather than a prohibitory law, with all the Mounted Police endeavouring to carry it out.

Inspector Norman called attention to the fact that drunkenness had diminished under the license system. He said, "There is less drunkenness, because under the old system I have known four or five hundred gallons to come in under permits, and so long as the liquor lasted, the place was the scene of a jamboree. The license system keeps liquor out of the houses; if carried out to the full extent, it is best." (Q. 35653-35655).

Superintendent Gagnon called attention to the increased consumption of ale in the country, and added that "If wines and ales were made cheaper, they would be used more, and there would be less drunkenness." (Q. 36721.)

Mr. Alexander Lucas, mayor of Calgary, said: "The law works satisfactorily, and there are now no illicit sales." (PP. 362-367.)

Mr. James Walker, chairman of the license commissioners at Calgary testified that "License was preferable to the last year or two of the prohibitory system." (Q. 37313.)

Mr. Frank Dick, license inspector of Calgary, gave his adhesion to the new system, although at the same time he intimated that on principle he favored prohibition.

In the report of Col. Herchmer, commissioner of the North-west Mounted Police, 1892, page 3, that officer says: "While I have not the actual figures of liquor imported since 1st May, and, under the permit system it was impossible to find out the actual quantity imported illegally, I have no hesitation in writing that the quantity of liquor used under the license system very greatly exceeds that under the permit system, and that while the heavy drinkers under the old system, except those who have taken the 'gold cure' with advantage, still drink heavily, a considerable number of settlers who formerly seldom or never obtained liquor are now using large quantities, and, as I stated before, half-breeds can get it whenever they have money, and consequently in many cases Indians, in spite of the closest watchfulness on our part." In his evidence before this Commission he gave his opinion of the present license law in these terms:—"I think the law is a good law if it is properly carried out; but I do not think it is as strongly enforced as it should be. * * * I think all bartenders and people handling liquor should be licensed as well as the regular licensees. If a man is caught evading the law he should not be allowed to be employed in any other bar or drinking place in the country. I also think all the licensed houses, hotels and bars in the country should have no back entrances, but only one entrance, and that the bar should be lighted up during prohibited hours. You would get in this way a better class of bartenders, and it would be worth their while to be careful. At the present time these men can be employed at one bar and then at another" (Q. 35553-35555).

Turning to the annual reports of the North-west Mounted Police officers for the year following the adoption of the license system, we observe frequent reference made to the new law.

Superintendent Deane reported: "I am of opinion that there is less drunkenness now than under the old system."

Superintendent Jarvis said: "The license system has come into force since the date of my last report, and seems to work well. So far as observed in this district there has been rather a diminution of drunkenness since its introduction."

Inspector Howe thus referred to what he termed the radical change effected in the liquor law through the introduction of the license system: "The increased

Liquor Traffic—Commissioners' Report.

facilities thus afforded for procuring intoxicants had the effect, for a short time, of causing an increase in drunkenness amongst a certain class, principally the poorer half-breeds; but after a time, when the novelty wore off, things settled down to their normal condition. Among the white people and the more prosperous half-breeds I think there has been less drunkenness."

Inspector Cuthbert reported that "The new system seemed to work satisfactorily."

Superintendent Perry truly said: "Past experience is the only infallible guide for future legislation, and not theoretical ideas, based upon conditions which do not present themselves in these territories."

Superintendent Cotton, in his report for 1892, says: "Partial prohibition, under the old system, had its strong points and its marked weaknesses. The present license system has both, though I trust the latter in a less degree. Public opinion will, I presume, weigh the advantages and disadvantages—the *pros* and *cons*—of both systems; and when amendments to the present law are desired they will, it is safe to anticipate, be forthcoming through the representatives of the people in the Legislative Assembly. In the meantime, it is to be hoped that licenses will in all cases be properly awarded, and that every care will be exercised to prevent the possibility of the number of licenses being excessive as compared to the population."

It was to be expected that defects in the system would be found, and that there would be faults of administration which, it is to be hoped, experience will correct. At any rate, the population have in their own hands the power of preventing the issue of licenses in any license district under the local option clause of the liquor license ordinance.

In his message at the opening of the second session of the second Legislature, His Honour the Lieutenant-Governor referred to the Liquor License Ordinance in these terms: "I am happy to know that the Liquor License Ordinance which you adopted last session has, upon the whole, given general satisfaction, and that any apprehensions as to the evil effects likely to arise from the change in the law have not been realized. I have no doubt that, after some months experience of the working of the ordinance, amendments may now suggest themselves for your consideration, which would tend to make its provisions more effective and complete."

The report of the Commissioner of the North-west Mounted Police for the year 1893 is one of peculiar interest, embodying, as it does, the opinions of the officers upon the working of the license law for the first clear twelve months since it was enacted.

The whole tone of the reports of the officers is not only one of satisfaction with the operation of the law, but the reports themselves show that drunkenness has decreased under it.

Commissioner Herchmer, in his report for 1892, expressed apprehension that under the license law drunkenness amongst Indians would increase. Such, however, has not been the case, and in his report for 1893, he says: "There has been a good deal of drunkenness among Indians in the vicinity of the towns, but not so much as usual, and, as the parties supplying the liquor have, on several occasions, been convicted and heavily fined, it is to be hoped that the practice will still further diminish." He also reports the maintenance of a strong patrol on the Athabasca river, and that but little liquor had been brought in.

Superintendent Griesbach, in his report says that at Athabasca Landing permits for 130 gallons of liquor have been cancelled.

Commissioner Herchmer further says: "I still think that there are too many licensed houses in some districts, and that some of the license inspectors do not exercise sufficient vigilance in closing bars at the proper time."

The superintendents of the force speak favourably of the operation of the ordinance. Superintendent Steele, Regina, says: "On this question I may say that there is much less liquor sold now than there was during the first year of the license

ordinance; and there is much less drunkenness amongst the public than when the permit system was in force."

Inspector Wilson, at Estevan, reports eleven cases of drunkenness, but explains that they were mostly amongst labourers of the Soo railway construction, for which Estevan was the district headquarters, that they occurred after pay days, and that the illicit liquor dives, the "blind pigs," were kept on the Dakota side, and did not enter Canada.

The favourable operation of the ordinance is especially shown by the report of Inspector Constantine, Moosomin, who writes: "The license ordinance of 1891 is fairly carried out, and drunkenness does not appear to be on the increase; on the contrary, the cases coming before the justices for the year ended November 30th, 1893, were twenty as against twenty-nine for the year ended November 30th, 1892."

Superintendent Griesbach, Fort Saskatchewan, reports that, "That the license system being in its second year, things have settled down to much the same state of affairs as exist in other places where the system is in force."

Superintendent Jarvis, of Calgary, expresses the condition well when he reports: "Under this heading (liquor laws) there used to be a good deal to say in the old permit days; but under the license ordinance the selling of liquor has been brought to the position of an exact science, which being carefully looked after by a board of commissioners and several inspectors, is found to work satisfactorily. Very few infractions of the law have come under my notice this year."

Superintendent Howe, of Battleford, also reports: "A great change was effected in the liquor laws through the introduction of licenses, on the whole the license system has given satisfaction."

"The liquor license in this district has worked fairly well, and, in my opinion, it is preferable to the old system."

With regard to the obtaining of liquor by Indians, Superintendent Perry, Regina, reports three cases.

Inspector McGibbon, Saltcoats, reports: "The Indians on the Côté Reserve are addicted to drinking, and will do anything to obtain liquor." He also reports that they obtain liquor from Yorkton, but where, he has not discovered.

Superintendent Deane, of Lethbridge, reports eight convictions of Indians for drunkenness; and Superintendent Griesbach reports eight convictions out of twelve prosecutions.

Superintendent Howe reports: "In the early part of the year a few Indians were arrested," and where proof was forthcoming, both the Indian and the furnisher of liquor were punished. This prompt action had the desired effect, and no cases have occurred since. He does not consider that much drunkenness prevails amongst the half-breeds at Battleford, though when license was first introduced, they drank considerable quantities of spirituous liquor. Since they found they could obtain liquor as they wanted it, and that it was good for neither their pockets nor their constitutions, drunkenness has decreased. He again suggests that the North Saskatchewan should be the northern boundary for license.

The report of the Minister of the Interior for 1893 embodies reports from the Lieutenant-Governors of the North-west Territories and Keewatin.

Lieutenant-Governor Mackintosh reports the issue of permits in the North-west Territories for the importation of the following:—

Whisky.....	56	gallons.
Brandy.....	47½	"
Rum.....	9	"
Total spirits.....	112½	"
Wine.....	23½	"
Total.....	136	"

Liquor Traffic—Commissioners' Report.

Lieutenant-Governor Schultz, of Keewatin, reports :—" I am again able to make you the gratifying announcement that still another year has passed with an entire absence of crime in this district. The clauses of the Keewatin Act regarding intoxicants have been rigidly enforced, and permits have only been issued on the recommendations of missionaries, justices of the peace and the higher officers of the Hudson Bay Company, and then for medicinal and sacramental purposes only."

The statistics of convictions for offences of all kinds in the Territories will be found at page 67 of this report. They include the convictions by magistrates and others forwarded to the Department of Agriculture, and published in the annual volume of criminal statistics, and also convictions by the officers of the North-west Mounted Police, which are included in the annual reports of the Department of the Interior.

As population increased in the Territories, it was to be anticipated that the ratio of the number of convictions to the population would also increase, and the more especially as the population was added to by immigrants accustomed to entirely different social conditions, and who were unacquainted with the laws and habits governing the people amongst whom they had come to settle. It may be stated, with reference to the population shown on the statement just referred to, that it includes the estimated population of the unorganized territory, which has remained well-nigh stationary. The census return showing that in 1871 it was 30,000; in 1881, 30,931, and in 1891, 32,168. The organized territory gave a population in 1871 of 18,000; in 1881, 25,515, and in 1891, 66,799. (Census 1891, tabe 9).

Adopting these latter figures as those of the population, the ratio of offences in 1881 would be 3.10 per thousand of the population; in 1891, 8.30 per thousand of the population. From 1888 offences steadily and largely increased, this whilst the permit system was in force. It was not to be expected that there would be a diminution in the number of offences immediately the license system was adopted. Between 1890 and 1891, the number of offences increased by 17 per cent. Between 1891 and 1892 the increase was nearly 32 per cent. The Liquor License Ordinance took effect in May, 1892. The increase in convictions between 1892 and 1893 was only a little more than three per cent.

Appendices Nos. 7 and 15 contain such information as the Commissioners have been able to collect in regard to the number of prisoners in jail, and lunatics confined in the asylum.

In the following letter are given the numbers of licenses issued, and the amount received for licenses for 1892 :—

" LIEUTENANT-GOVERNOR'S OFFICE,
" REGINA, N.W.T., 6th May, 1892.

" SIR,—I am directed by His Honour the Lieutenant-Governor of the North-west Territories to acknowledge the receipt of your letter of the 29th ultimo, requesting, on behalf of the Royal Commissioners appointed to inquire into the liquor traffic, such information upon the subject as may be procurable.

" In reply I am to state that a license system was established in the territories for the first time on the 1st of May instant, and the number of licenses issued up to date for the year ending 30th June, 1893, is :—

" 1. a. Hotels.....	73
" b. Restaurants.....	2
" c. Wholesale dealers.....	25

" 2. The amount of revenue derivable from the licenses issued is :—

" By the territories.....	\$20,790
" By municipalities and electoral districts.....	7,675

" It is impossible at present to form any calculation as to the probable amount of any fines which may be derived for infraction of the liquor law. I am further

to forward for your information, by this mail, copy of the North-west Liquor License Ordinances, 1891-92.

" I have the honour to be, sir,

" Your obedient servant,

" R. B. GORDON,

" *Secretary to Lieutenant-Governor.*

" J. HICKSON, Esq.,

" Chairman, Royal Commission on Liquor Traffic,
" Montreal."

The following statement shows the quantity of liquor brought into the Territories under permits from the Lieutenant-Governor, between 1883 and 1892, and the quantity *per capita* of the white population.

Year.	White Population.	Spirits.	Per Capita.	Wine.	Per Capita.	Malt Liquor.	Per Capita.	Beer.	Per Capita.

† The License Act of the Territories was assented to on January 25, 1892, and came into force on May 1, 1892.

BRITISH COLUMBIA.

The laws relating to the liquor traffic in British Columbia are somewhat complicated, and a complete and exact statement of them could only be made after examination of the ordinances and by-laws passed by such cities and municipalities as have been given power, either under the general licensing acts, the municipal acts, or acts of incorporation, to make by-laws regulating the traffic, fixing the fees, &c. Summaries of the statutory laws of Vancouver and British Columbia are given in Appendices 72 and 73.

Liquor Traffic—Commissioners' Report.

The statutory law prescribes:—

1st. The fees to be charged for licenses in what are known as town and rural districts, temporary licenses for booths, and licenses for sale on steamers, and the regulations under which these licenses are to be issued.

2. Authorizes the creation of a licensing authority in cities and municipal districts; fixes the maximum and minimum fees which the municipal authorities may exact for licenses; the conditions as to renewals, transfers, &c., and confers the power of making by-laws regulating the traffic.

3rd. The conditions in regard to granting licenses, in districts in the neighbourhood of which licensing courts are not held, by the Superintendent of provincial Police, or a stipendiary magistrate, and the granting in such districts of wholesale license by an agent of the Government.

The Municipal Act, 1892, contains most of the provisions relating to the granting of licenses in cities and municipal districts, but the cities of New Westminster and Vancouver are only subject to that Act "in so far as it is not repugnant to, or inconsistent with, their Acts of Incorporation, or any Acts or Proclamations applicable to either of them," and these two cities possess some exceptional powers in regard to the traffic under their Acts of incorporation and amendments thereto.

Towns, Rural Districts, Booths and Steamers.

The Provincial Government collects the fees for all licenses in what are called towns, townships, and rural districts, not being municipal districts. These fees are:—

For each person vending spirituous or fermented liquors, retail for each house or place in the province where such vending is carried on,

In a town of not less than fifty inhabitants, \$100 per six months.

In a rural district, not forming part of a town, \$30 per six months.

For a wholesale license, \$100 per annum.

For a license for a booth, to be in force not more than 48 hours, \$10.

For a license for a steamer, \$30 per six months.

To obtain a retail licence the applicant has to petition, and also present a certificate or requisition in favour of granting such licenses, signed by at least two-thirds of the residents (other than Chinese or Indians), over 21 years of age, in the town, village or settlement where the place sought to be licensed is situated, and no one is entitled to sign such requisition who has not been a resident for one month or more. The applicant for such license has to present his petition to two justices of the peace, fifteen days before the day of sitting of the justice of the court to consider and grant licenses, and has, further to give one month's notice of his intention to make such application; and no retail licenses is granted, excepting on the certificate of two justices of the peace. No person can obtain such a license for retailing liquor who has not been a resident of the province for a period of twelve months. Any interested person can appear before the justices of the peace and oppose the granting of the license. The license is only granted in respect of the premises mentioned in the certificate presented, and no person so licensed is allowed to carry on such business, under the authority of such license, in any other premises. The Act (51 Vic., chap. 73, 1888,) exempts houses or persons previously licensed from presenting the certificate or requisition in respect of a renewal of their licenses (Sec. 23); but provision is made for the judge of the supreme court or a judge of a county court cancelling any license for cause or on petition of residents, (Sec. 28). Anyone convicted of giving or selling to an Indian, in addition to other penalties may, on conviction, have his license cancelled, at the option of the convicting Justice. (Sec. 29). The sale of licensed premises does not include the transfer of the license. The purchaser must obtain a certificate from the Government Agent and two justices of the peace. (Chap. 10, 1889.)

To obtain a wholesale license in these districts, the person desiring the license has to make application to the government agent, and hand in a certificate signed by a majority of the registered voters being, householders, resident within a radius

of five miles from the premises sought to be licensed, and there must be resident within five miles of such premises at least twenty registered voters, who must be householders.

The power of granting and renewing these wholesale licenses rests apparently entirely with the government agent, subject to an appeal to the county court judge, in case of refusal to issue. Every license so granted remains in force for one year from the date of its issue, and is to be construed to mean a license for selling, bartering or trafficking, by wholesale only, in intoxicating liquors, in warehouses, stores, shops, or places other than hotels, inns, taverns, ale or beer houses, or other houses of public entertainment. The smallest quantity to be sold under this class of wholesale license is two gallons, or one dozen reputed quart-bottles.

A license for a booth, not lasting more than forty-eight hours, may be issued, on the certificate of two justices, to any person holding a regular retail liquor license.

A license may, on application to two justices, be issued at any time to any steamer plying in British Columbian waters, for the sale of fermented and spirituous liquors to the passengers and crew.

Licenses in Cities and Municipalities.

In cities licenses are granted by a Board of License Commissioner, composed of the Mayor (or substitute), the Police Magistrate, an Alderman, and two Justices of the Peace chosen by the Council.

In township or district municipalities licenses are granted by a Board of Commissioners composed of the Reeve (or substitute), two Councillors, and two justices of the Peace chosen by the Council.

To obtain a license in a city, a petition has to be sent in to the Board of License Commissioners by the applicant, and also a petition or requisition signed by two-thirds of the lot owners, and two-thirds of their wives (if any), also by at least two-thirds of the resident householders and their wives living with them (if any) on the block of land within which the place to be licensed is situated, and the same proportion of the same classes on the block on the same street opposite the premises to be licensed. In the case of a corner house being proposed to be licensed, the same classes in the same proportions opposite to each front of the said house have to sign the requisition.

No new license can be issued in any city or town municipality containing a population of less than 1,000, unless, in addition to other requirements and provisions, a petition or requisition in favour of the granting of such license, signed by at least two-thirds of the lot owners and resident householders, and the wives of such lot owners and householders living with them within the city or town municipality in which the premises sought to be licensed are situated, shall be presented to the board of Licensing Commissioners. The Licensing Board is not bound to grant licenses or transfers of licenses, even if all the formalities are complied with, but they are forbidden to grant them in any cause unless the applicant has, prior to the granting fully complied with the provisions of the law. The law provides for notice being given of intended application for licenses and the transfer and renewal of licenses, the presentation of a map or plan showing the place to be licensed, and the neighbourhood in certain cases, and a list of the residents and their wives (if any). The holders of licenses issued prior to the passing of the Municipal Act of 1891, namely, 20th April, are not required to make application for a renewal of their licenses. They simply require to pay each six months the amounts of their license fees, and apparently their licenses continue, except under the conditions hereinafter referred to. Every person to whom a license has been granted subsequent to April 20th, 1891, has, if he or she desire a renewal of the same, to make application to the Board of License Commissioners for such renewal, and the board may grant or refuse such renewal at its discretion. No new license is granted or renewed for a longer period than six months, and no such license is saleable or transferable under any conditions. The commissioners are empowered to hear complaints against the holders of licenses, and they have power to revoke or suspend licenses for any period. If the holder of a license be convicted of any criminal offence, the commissioners may, upon proof of

Liquor Traffic—Commissioners' Report.

conviction being furnished them, cancel and revoke his license. These powers in regard to complaints and convictions apply to licenses granted prior, and subsequent to, April 20, 1891.

A license may be granted for an hotel containing not less than thirty rooms, on application made direct to the Licensing Commissioners, after prescribed notice, and the Commissioners are empowered to grant and renew such license for one year, without requiring the presentation of a petition signed by the owners of lots, etc. Anyone of the full age of twenty-one years, resident in the district where licensed or proposed-to-be-licensed premises are situated, may appear in court and oppose before the Commissioners the granting, or renewal where granted, of a license.

In certain districts lying outside the municipalities wholesale licenses are issued and renewed by an agent of the government, and in districts in which the regular licensing courts are not held, the superintendent of provincial police or a stipendiary magistrate is empowered to grant, to fit and proper persons, licenses to sell intoxicating liquor by retail, such licenses to be for one year. Security may be required by bond, with two sufficient sureties, in a sum not exceeding \$500, for the orderly conducting of the licensed premises and the observance of the law against supplying liquor to Indians.

A stipendiary magistrate may, in open court held in the county within which the person concerned resides, prohibit the selling by any licensed person of liquor to a drunkard, the law defining the meaning of the term "drunkard," and inflicting penalties for selling or procuring, contrary to such order, liquor for such drunkard, except under the direction of a medical practitioner or minister of religion. The drunkard may himself make application for such order. Penalties are imposed upon licensed vendors selling to intoxicated persons.

Prior to the law of 1891, there does not appear to have been any Provincial enactment prescribing the hours of opening and closing licensed places, or against the sale on Sunday or any part of Sunday. The municipal councils had, it is true, been empowered to make by-laws in regard to these matters, but it would appear that the municipal authorities had taken no efficient action on the subject, seeing that the Provincial Legislature found it necessary in this year (1891) to enact that there should be no selling in licensed places between eleven o'clock on Saturday night and one o'clock on Monday morning, or, in other words, from one hour before midnight on Saturday to one hour after midnight on Sunday, nor on any day in which by statute in force in the province, or by any municipal by-law, the bar-room or bar-rooms of licensed places ought to be kept closed. The evidence taken by the Commission goes to show that this enactment has been attended with beneficial results. The Commissioners have not had placed before them anything indicating that the municipal authorities have extended this comparatively limited restriction on the hours of selling, but, on the contrary, it would appear that licensed premises may still be kept open in most places during the whole twenty-four hours of every day, save and except as restricted by this enactment. In New Westminster the Chief Constable stated that places were supposed to be closed at two a.m., and opened again at 6 a.m., but, as a matter of fact they generally closed between eleven p.m. and twelve midnight. (Q. 41775-41777.) The evidence taken does not show that there have been many breaches of this Sunday closing law. The officers charged with the carrying out of the law complain that they find a difficulty in securing convictions, owing to the fact that neither the law nor the by-laws provide that the bar-rooms or places where liquor is sold shall be kept absolutely locked up, and in consequence they are lighted up and used as sitting or lounging rooms in many cases, and when they are visited, unless parties are absolutely found partaking of liquor, a conviction cannot be obtained.

Licenses in municipal districts holding licenses granted prior to 1891, have what closely approaches a vested interest in their licenses. They are not called upon to make application for renewals, but the licensing authority may, for cause, suspend or cancel their licenses, and the municipal councils, it would appear, have the power, under the Provincial law (Municipal Act of 1892), to make such by-laws for regulating the manner and conditions under which the Board of Licensing Com-

missioners may authorize and grant, or withhold a renewal to any person holding a license, or to any person to whom a license may thereafter be granted, for limiting the number of licenses, for prescribing the form and conditions of the license to be granted by the Board of Licensing Commissioners, and for regulating and cancelling licenses by the Board of Commissioners before the expiry of the time for which such licenses were issued, as makes this privilege dependent upon the action of these councils. The intention of the law seems to be made clear by section 223 of the Act, which is as follows:—"Unless and until the Council shall pass a by-law under the power conferred upon them by section 242 of this Act, it shall not be requisite for any person holding a license granted before the passing of the Municipal Act of 1891 to make any application for the renewal of the same." Section 242 of the same Act is that which confers upon the councils the powers just referred to.

The fees charged for licenses within municipal districts are paid to the municipal authorities. They are fixed by the Provincial Government at:—

For retail licenses in cities, not less than \$100, or more than \$200, every six months.

For retail licenses in township or district municipalities, not less than \$50, or more than \$100, every six months.

License to sell by bottle, containing not less than one pint, in cities, not more than \$75 every six months.

For a wholesale license to sell not less than two gallons, not more than \$50 every six months.

For a restaurant selling beer, &c., with meals, not more than \$50 every six months.

For a hotel in cities, containing not less than thirty rooms, not less than \$100, or more than \$200, every six months.

For a club where liquor is sold, in municipalities, \$100 per annum.

In Vancouver it was given in evidence (Q. 42235) that there were places for which as high as \$500 per annum were charged. This is probably under a city ordinance passed under special powers conferred by the city's Act of incorporation.

The provincial law does not contain any local option powers, and, as nearly all the licenses were issued prior to the change in the law made in 1891, only those seeking new licenses are required to obtain the petition or recommendation of the lot-owners and householders provided for in the law.

The number of licenses which may be issued is not restricted under the general law, but selling to drunkards, minors and Indians is prohibited.

In the case of Vancouver, it was stated in evidence that the number of licenses which could be issued was restricted; that the maximum number had been reached, and that no more could be granted until an increase in the population had taken place.

It was given in evidence before the Commission that there were about one hundred and seven licenses of all kinds issued in the city of Victoria. (Q. 39097). The population, according to the census of 1891, was 16,841, and if it be assumed that in 1892 there were 18,000 people, that would give one license to every 168 of the population.

It was stated by Mr. Beaven, the mayor of the city, that at one time there were 80 saloons licensed, and that in 1892 there were only 47. (Q. 39169). The police Magistrate of the city stated that he had been struck, both as a magistrate and a citizen, by the fact that the saloons were open at all hours of the night, which was contrary to his previous experience in New Zealand and Australia, and that the only limitation as to the hours in which sales might take place was that imposed by the provincial statute having reference to selling on Sunday. (Q. 39352).

The city of Victoria derives a revenue from liquor licenses of from \$18,000 to \$20,000 per annum. It has, of course, a large floating population, and it is probable that there is a considerable quantity of liquor sold there which is exported from the city.

Liquor Traffic—Commissioners' Report.

The report of the chief of police of Victoria, for the year 1891, supplied the following information in regard to offences committed in the city, during the year:—

Nature of Offence.	Committed by all, except Indians and Chinese.	Committed by Indians.	Committed by Chinese.	Total.
Assault.....	30	8	4	42
Infraction of city by-laws.....	136	39	175
Drunkenness.....	406	175	1	582
Gambling.....	29	12	41
Infraction of public morals Act.....	36	5	41
Supply intoxicants to Indians.....	29	2	31
Vagrancy.....	42	4	46
Possession of intoxicants.....	35	35
Other offences.....	96	3	12	111
Total.....	804	221	79	1,104

SUMMARY OF CASES BEFORE THE COURT.

Convicted in police court.....	804	221	79	1,104
Sent for trial.....	31	2	6	39
Discharged.....	231	28	31	290
Grand total.....	1,066	251	116	1,433
Total cases before the court for drunkenness.....	423	182	1	606

Of the total number, 1,433, 917 were arrested by the police. The others were brought in by warrant, given in charge, or summoned. Taking the population as being 17,000 in round numbers, the total offences were equal to 84.29, and the cases of drunkenness to 35.64 per 1000 of the population, both very high ratios.

Evidence was given that the license law was well observed in this city (Q. 39244), and that the saloon and hotelkeepers were respectable men (Q. 40167).

In Nanaimo there are said to be twenty-one retail and two wholesale licenses issued. Holders of retail licenses pay \$300 per annum and holders of wholesale licenses \$100, so that the city derives at this rate a yearly revenue of about \$6,500 from liquor licenses. The population, according to last census, was 4,595. It was variously estimated by those who gave evidence before the Commission as between 4,000 and 5,000. Supposing it to be the latter number, the licenses would be 1 to every 217 of the population. Of the twenty-one retail licenses, twenty are said to have been issued prior to 1891 (Q. 40901), and are what are known as "old licenses." There appears to have been no restriction by the council in the hours within which liquor could be sold. The only restriction in that respect is what is imposed by the provincial law. Witnesses examined in this city stated that the Sunday closing law had been attended with beneficial results; that offences were not numerous, and that the community were orderly and law-abiding. The police magistrate, speaking of the holders of licenses, stated that they were men of good moral conduct and integrity, and of a worthy class. There is a large mining population in the neighbourhood of Nanaimo.

New Westminster, according to the census return, had, in 1891, a population of 6,678. The police magistrate stated that he had had 259 cases before his court in 1891, of which number 132 were cases of drunkenness. He thought the Sunday closing law was well observed. (Q. 41657).

The mayor, Mr. William B. Townsend, estimated the population of the city in 1892 at 7,000. He said that there were, in round numbers, 1,000 Chinese in New

Westminster, and a very mixed sea-faring population. Many of this class were Italians and Greeks, who went to New Westminster for fishing. (Q. 41513-15). He stated that there were fifteen hotels, two saloons and one wholesale place licensed. The saloons were places for the sale of liquor pure and simple. They had no hotels coming under the law relating to such establishments having thirty or more bedrooms. The amount of the license fee charged was \$100 for six months. At this rate, the revenue would be about \$3,600 per annum. The mayor also said that there was only one licensee who had complied with the conditions of the law requiring the signatures of lot owners and householders. (Q. 41609). He further stated that there was a city by-law under which barrooms had to be closed on Sundays. Under a local by-law licensed places had to be inspected by the chief of police, who was license inspector, and that the practice in regard to the removal of licenses was, that as long as the hotels and saloons were kept in an orderly and respectable manner, all the parties keeping them had to do was to come forward regularly and pay their fees, and their licenses would be renewed. He quoted the following clause of the city license law:—

“Whenever in consequence of the death of the person holding any license under the by-law, or in case of the lease having expired by the fluxion of time or by operation of the law he has been deprived of the licensed premises, the legal representative of such person or the landlord or other person interested in the premises or assignee at law may on applying to the licensing board, notwithstanding the non-protection of the license, obtain a transfer of such license on such premises as may to the board seem just: and the application for such transfer shall be accompanied by a fee of \$2.50, which shall be made as provided by the preceding clause; provided, nevertheless, that no such transfer shall be granted unless a majority of the board is of opinion that the person to whom it is proposed to make such transfer is a proper person to hold such license.” (Q. 41539.)

The evidence taken went to show that the law against selling on Sunday was well observed, and that the effect of it had been beneficial. The chief of police stated that the people of New Westminster were most orderly and law abiding; that the licensees observed the Sunday closing law; that they were supported by the citizens, and that there had been no complaints of violation of the law since it had been brought into force. He considered that it would be no advantage if the barrooms were locked up on Sunday, and no lights allowed in them. Witness explained that he was on a portion of the Canadian Pacific Railway, near Rat Portage, during construction, as constable; that he found it impossible to enforce prohibition under the Public Works Act, and that there was smuggling, the liquor brought in being of very poor quality. He spoke of it being brought in barrels, with meal packed all around, sometimes in barrels carried in front of an engine, and said that he and those with him faithfully endeavoured to carry out the law, but they found it impossible to do so. (Q. 41753-765).

In Vancouver there appear to be fifty retail, eight saloon, and seven wholesale licenses issued. The mayor, Mr. Frederick Cope, explained that the number could not be increased until an increase in the population had taken place. The population of the city, according to the census return, was, in 1892, 13,865. Mr. Cope estimated it in 1892 as 20,000, and said that there were about 1,000 Chinese in the city. There is a large floating population. One class of the license fees is as high as \$500. This is a higher figure than that named in the general licensing Act or in the general municipal Act. The authority to make this charge is evidently conferred under the special legislation referring to the city. The revenue collected by the city from liquor licenses appears to be about \$18,400 per annum. (Pp. 610-612).

The police magistrate stated that in the matter of sobriety and observance of the law Vancouver would compare very favourably with similar places in the east, of which he had had some experience (Q. 42031), and that the offenders who were brought before him were principally outsiders. (Q. 42092).

The chief of police stated that the Sunday law was very well observed. (Q. 42113). There were one or two convictions when the law came into operation. Most of the cases of disorderly conduct and drunkenness were amongst the floating population. With regard to the illicit sale of liquors, he thought there was very

Liquor Traffic—Commissioners' Report.

little outside of houses of ill-fame. There was, of course, some sale in these, and there were a considerable number of them in the city. (Q. 42153-9).

A license inspector is employed, who co-operates with the police. It is his duty to visit licensed places and report upon them, to see that licenses are properly issued, and that the licensees observe the law. (Q. 42181-3). This inspector considered that the Sunday law was fairly well observed (Q. 42189), and that in the matter of sobriety and order the city of Vancouver would compare favourably with other places similarly situated. (Q. 42176). Witness occupied the position of jailor as well as that of license inspector. He stated that of the total number committed to prison in 1890 (786), 232 were for drunkenness.

No return is made to the provincial Government of the number of licenses issued by the municipal authorities, or of the amount of revenue derived for licenses. There is no provision in the law requiring such returns.

It is well-nigh impracticable, in a summary, to do justice to the importance of the evidence taken in this province. Many of the witnesses examined were from Ontario, and made important statements as to the working of the Canada Temperance Act (Scott Act) in parts of that province. There were also witnesses who had visited New Zealand and the Australian colonies, and who had imparted interesting particulars in regard to the traffic in those countries.

The Province of British Columbia has a long coast line, and, as compared with the permanent, a large floating population, made up of sailors and fishermen of all nations. Under these circumstances, that the consumption of liquor and the convictions for offences against the laws should both be large, as compared with those in the other provinces, might reasonably be expected. The only information to be obtained in regard to the consumption of liquors is from the quantities entered, and on which duties have been paid, from year to year. The statement of these will be found at page 42. They were as follows:—

	GALLONS PER CAPITA.		
	Spirits.	Beer.	Wine.
Average for the 5 years ended 1875.....	1·214	1·839	·398
“ “ “ 1880.....	1·366	3·409	·424
“ “ “ 1885.....	1·359	3·825	·716
“ “ “ 1890.....	1·369	5·409	·518
“ 3 “ 1893.....	1·480	7·145	·466

There has been, doubtless, a very considerable export of liquors from British Columbia in sealing and fishing vessels, and to Alaska and the North-west Territories. Again, the floating population which cannot, of course, be taken into account in computing the *per capita* consumption, are unquestionably large consumers.

The statistics of convictions for crime are also much larger per 1,000 of the population than in the other provinces, probably in a great measure from the same cause, as everywhere the statements made to the commissioners were that the offenders in the seaport cities and towns were “outsiders” visiting the ports. A comparison will be found at pages 140-142, of the convictions in the various provinces and of the liquor *per capita* entered for consumption.

The convictions for offences in British Columbia were as under:—

	PER 1,000 OF THE POPULATION.		
	All convictions.	Drunkenness.	Offences against the liquor license laws.
Average for the 5 years ended 1885.....	9·78	4·94	1·54
“ “ “ 1890.....	11·16	4·60	1·22
“ 3 “ 1893.....	13·98	6·26	1·52

The great bulk of the evidence taken by the commission on the subject was to the effect that the liquor laws are well observed, and that there are comparatively few offences against them committed by the licensed vendors. The terms upon which vendors hold their licenses are such as, it would be natural to conclude, would make them careful, for, as the law stands at present, they seem to be assured of a renewal of their licenses unless they are reported against for breaches of the law. It will be noticed, however, that the ratio per thousand of convictions for offences against the liquor laws is much higher in this province than in any other. A very large proportion of these offences is classified as being for selling liquor to Indians. Of 148 convictions for offences against the liquor laws in 1892, 82 were due to this cause. The statement was made by witnesses who appeared before the commission that this supplying of liquor to Indians was not done by licensed vendors, and that in not a few instances the offence was committed by Chinese. (Q. 39275).

A statement will be found in appendix No. 16 of the number of persons admitted to the insane asylum of the province annually, and the number remaining therein at the close of each year, from 1872 to 1893, and in appendix No. 8 a statement of the number of prisoners committed annually to the jails of the province, and the number remaining at the end of each year, from 1890 to 1893.

The commissioners have made every effort to ascertain the exact amount of revenue derived by the provincial government and the municipalities from the issue of liquor licenses in the province. Notwithstanding the fact that their efforts were supported by the provincial authorities, they have been only partially successful. The following statement was received from the Provincial Secretary, with the intimation that, "the return shows the amount received by the Government only. To procure the same information from the municipalities I can only suggest that an application be made to the clerks of the respective municipalities, a list of which is inclosed."

VICTORIA, B. C., 10th May, 1892.

"Number of spirit licenses issued in the Province of British Columbia (exclusive of those issued in the several municipalities) during the following fiscal years:—

1st July, 1873, to 30th June, 1874.....	240 spirit licenses.....	\$20,910 00
1874-1875.....	218 " ".....	19,620 00
1875-1876.....	249 " ".....	21,050 00
1876-1877.....	248 " ".....	21,020 00
1877-1878.....	219 " ".....	19,630 00
1878-1879.....	189 " ".....	17,340 00
1879-1880.....	206 " ".....	18,980 00
1880-1881.....	220 " ".....	19,770 00
1881-1882.....	186 " ".....	16,090 00
1882-1883.....	165 " ".....	14,000 00
1883-1884.....	145 " ".....	13,330 00
1884-1885.....	188 " ".....	16,660 00
1885-1886.....	249 " ".....	21,260 00
1886-1887.....	240 " ".....	20,630 00
1887-1888.....	206 " ".....	18,650 00
1888-1889.....	143 " ".....	13,510 00
1889-1890.....	186 " ".....	16,090 00
1890-1891.....	174 " ".....	15,500 00

NOTE.—In the above are included steamboat licenses to sell liquor; but in any one year not more than five licenses were issued. The rural municipalities are not included in the above, and are as follows:—North Cowichan, Chilliwack, Delta, Richmond, Langley, Surrey and Maple Ridge. Their licenses, since 1876, would probably average \$100 each per annum.

"The only municipalities materially affecting the foregoing return are the cities of Victoria, New Westminster, Nanaimo and Vancouver, which issue and regulate their own licenses. It will be seen that the number of licenses issued in

Liquor Traffic—Commissioners' Report.

the different years varies considerably. This is partly accounted for by the fact that some are collected at the end of the fiscal year, when they are really intended for the following year."

Application was made to the municipal authorities, both direct and through the Provincial Secretary, who kindly undertook to communicate with each municipality. In a letter the secretary says:—"Certain blank forms of returns * * * were forwarded to the municipalities to which they were addressed, without delay, and the clerks were asked to lose no time in completing the forms and returning them to your address." It was explained that several of the municipalities had been in existence but a short time, and that no returns need be expected from them. In a later communication the Honourable Provincial Secretary wrote; In the event of no attention being paid by the municipal clerks to my last request, I am afraid I can render no further assistance in the matter."

From such returns as were received direct from some of the municipal authorities, and from facts collected from other sources applied to, the information which is given in the following statement has been compiled. It is probable that it is not complete, and does not embrace all the licenses issued and the amounts received by municipalities.

BRITISH COLUMBIA.

STATEMENT showing the number of licenses issued and the amounts received from licenses and fines from 1880 to 1892.

	No. of Licenses.	By the Government.		By the Municipalities.		Total.	
		Fees.	Fines.	Fees.	Fines.	Fees.	Fines.
		\$ cts.	\$ cts.	\$ cts.	\$ cts.	\$ cts.	\$ cts.
1880.....	222	18,980 00	2,465 00	21,445 00
1881.....	232	19,770 00	2,390 00	22,160 00
1882.....	202	16,000 00	2,500 00	18,500 00
1883.....	183	14,000 00	2,530 00	16,530 00
1884.....	161	13,330 00	2,510 00	15,840 00
1885.....	206	16,660 00	2,585 00	19,245 00
1886.....	293	21,260 00	9,530 00	100 00	30,790 00	100 00
1887.....	298	20,630 00	11,890 00	180 00	32,520 00	180 00
1888.....	283	18,650 00	15,075 00	220 00	33,725 00	220 00
1889.....	260	13,510 00	23,950 00	347 00	37,460 00	347 00
1890.....	300	16,000 00	25,660 00	452 00	41,750 00	452 00
1891.....	400	15,500 00	45,385 00	369 00	60,885 00	369 00
1892.....

NOTE—No returns from New Westminster prior to 1889. Number of licenses in Surrey County estimated; the largest number in any one year being 5. No returns from Chilliwack.

From these incomplete returns, it would appear that there were issued in the province in 1891, not less than 400 licenses, viz. :—

By the provincial government	174 licenses.
By the municipalities.....	226 do
	400

and the amounts collected therefor were:

By the provincial government.....	\$15,500 00
By the municipalities.....	45,754 00
	\$61,254 00

Taking the population as returned in the census for 1891, (98,173), these figures would give one license for every 245 of the people. Leaving out Indians (34,959), the ratio would be one license for every 158 of the population.

The amount collected by the provincial Government has decreased. This probably arises from the organization of a larger number of municipalities, or from municipalities organized taking charge of the licensing.

BRITISH COLONIES.

Such information as the Commissioners have been able to collect in regard to the laws of the British colonies, and the effect of these laws, has been got mainly from returns laid before the Imperial Parliament and from standard works in regard to the various dependencies of the Empire.

In the portion of this report which refers to the Cape of Good Hope will be found much interesting and valuable information in regard to the prohibition of supplying intoxicants to natives.

The information on Tasmania contains a report from Captain Shaw, the commissioner of police, giving some useful information. That gentleman reports that the offence of drunkenness has largely decreased, and is steadily decreasing in the colony.

In very many of the colonies local option laws exist. They are not uniform in character, but all apparently have one object well defined, viz., the checking of the extension of the traffic and such evils as flow from it. It does not appear that in this direction they have so far been successful, but in some instances, at least, they have not been in force a sufficiently long time to afford a fair test of their efficiency.

In the case of South Australia provision is made for compensation to owners and occupiers in the case of licenses being taken away by vote of the electors.

In the part of this report which refers to the colony of Victoria, reference is made to report of the chief commissioner of police, in which it is stated that in Melbourne, Ballarat East and Ballarat West, where the number of hotels has been materially reduced by local option polls, there has been no corresponding reduction in the number of arrests for drunkenness.

Newfoundland in 1871 passed an Act which conferred local option powers upon certain districts. The object of the Act was stated to be the repression and prevention of the abuses arising from the sale of liquor. Writing upon this Act in 1881, the administrator of the colony said: "I find that it was put in operation in two districts only, Brigus and Burin, for a period some time elapsed, and since then it has been practically a dead letter in the districts referred to. The general opinion was that the Act occasioned more mischief from clandestine sale than had existed under the more general licensing law."

BASUTOLAND.

The capital of this colony is Maseru, with a population of 862. The total population of the colony is (1891) 218,902, including 578 Europeans. No statistics of crime have been obtained.

The trading regulations prohibit the supplying of liquor to natives. Section 7 says: "The sale, or gift, or disposal in any way of wine, beer and spirituous liquors is strictly prohibited. Any person convicted thereof shall be liable to a penalty not exceeding the sum of £20 sterling, and in case of a second or subsequent offence, to a sum not exceeding £40 sterling, and in the case of a holder of any trading license, he shall, whether upon a first or any subsequent conviction, be liable to the forfeiture of his license, at the discretion of the resident commissioner." It further provides for the forfeiture of liquor in such case. The bringing in of liquor without written permission is punishable by forfeiture of the liquor and a fine not exceeding £20.

Mr. M. Clarke, resident commissioner in 1888, states that formerly a large illicit trade existed, but it has been almost entirely suppressed, and adds that prohibition of the traffic in liquors has had a most beneficial effect.

Liquor Traffic—Commissioners' Report.

The same statement was made to the Cape of Good Hope commission on the liquor laws, by Mr. G. T. Lagden, secretary of the resident commissioners.

BECHUANALAND.

The population of Bechuanaland is 60,376 including 5,254 Europeans. The capital is Vryburg.

No statistics of crime have been obtained.

Supplying natives is strictly prohibited. Sec. 60 of the laws and regulations contain this provision: "Whoever, whether licensed or unlicensed, shall sell, exchange, or for any valuable consideration give to or procure for any native in British Bechuanaland any wine or spirituous, or partly spirituous liquor, in any quantity whatever, shall be liable, in addition to any penalty which may be incurred in respect of the sale thereof without license, to a penalty not exceeding fifty pounds sterling, and in default of payment, to imprisonment, with or without hard labour for a term not exceeding six months, unless such penalty be sooner paid." The penalty for any breach thereof is a fine not exceeding £50, or imprisonment, with or without hard labour, for a term not exceeding six months. The only exception is liquor administered medicinally, the *onus probandi* resting on the person administering it. This was amended in 1888 by increasing the penalty, and, if a trader, adding forfeiture of license for a second offence within three years.

In evidence before the Cape of Good Hope liquor laws commission, it was stated: "The law as it now stands seems amply sufficient to check the supply of liquor to natives."

The prohibitory laws have been of increasing stringency, and it is now almost impossible in many districts for natives to obtain intoxicants.

GAMBIA.

There is a population (1891) of 14,266 in this colony, Bathurst, the capital, having 6,000. In the population there are included 62 whites.

The traffic in spirituous liquors in this colony is regulated by license. In addition to the customs duty on importation, gin and rum, the chief spirits used, pay a duty of 1s. 6d. per Sykes gallon, whilst grog shop licenses are £20 to £30.

"The Sale of Liquor Ordinance, 1880," makes it necessary for vendors to obtain licenses and provides for the punishment of the of the unlicensed vendor.

"The Navy Discipline Ordinance, 1886," prohibits the taking of liquor on board H. M. ships.

"The Palm Wine Excise Duty Ordinance, 1887," revives the duty on palm wines.

The Custom Tariff "Ordinances" impose specific export duties on spirituous liquors.

There are no special regulations having any reference to the sale to, or supplying of, natives.

GOLD COAST.

Gold Coast, the capital of which is Cape Coast Castle, has a total population of 1,473,382. The capital has a population of 11,614.

"The Spirit License Law, 1887," governs and controls the liquor traffic in this colony, as far as it is controlled, that is, within the district within three miles in a direct line from high water mark on the sea shore, or from the banks of the river Volta. Beyond this line no restriction has been attempted, as it could not be enforced. (*Vide* despatch from Governor Sir W. B. G. Griffith, 15th March, 1888.)

The are no special restrictions on the sale to natives.

LAGOS.

Lagos, including Yoruba, has a population of 3,000,000, including 6,000 whites. In 1877 Acts were passed for regulating the liquor traffic by license and customs.

The licenses provided for are: wholesale license, fee for 1 year, £25; for $\frac{1}{2}$ year £15. Retail license (a), for any store in Lagos, fee for 1 year £25; for $\frac{1}{2}$ year, £15; (b), for any store outside Lagos, fee for 1 year, £5; for $\frac{1}{2}$ year, £2 10s. The area covered by the licenses is only a small portion of the colony.

Customs duties: on wines, liquors, brandy, cordials, etc., per imperial gallon, 1s.; on other spirits, per gallon, 6d.; on malt liquors, per dozen bottles, 9d.; in wood, per gallon, $4\frac{1}{2}$ d. These are purely fiscal and police regulations, and natives may obtain an unlimited supply of liquor provided only all dues have been satisfied.

Governor Moloney, in 1888, in a despatch to Sir H. T. Holland, says: "This uncontrolled sale has, it is too visible, a vere degrading and degenerative effect on the aborigines." He advocates an international prohibition, or a uniform high tariff on imports, as probable to prove a very great boon to the natives.

The revenue of this colony is dependent on duties levied on spirits, and the success of any prohibitory, or high tariff policy would depend on its being accompanied by a complete international occupation of the West African coast line.

There was a continual increase in the importation of gin from 1878 to 1885, since when a decrease of from 1,369,912 to 561,412 gallons has taken place. All other liquors from 1878 to 1887 show a marked decrease in the course of the decade.

MAURITIUS.

Mauritius has a total population of 371,655. The capital of the colony is Port Louis, which has a population of 60,955. In 1892 there were 17,441 convictions in the inferior courts, and 94 convictions in the superior courts.

A system of license prevails in this colony. No special restrictions attach to the trade with the natives.

By the ordinance "To Amend the Law on Licenses," 1878, persons desirous of retailing spirits, etc., must take out licenses. A licensee may sell between 5 a.m. and 9 p.m. only, and taverns and billiard rooms must close at 11 p.m. Mixed drinks and adulterated liquor are forbidden. Selling to drunken or intoxicated men, to children under 15 years of age, or permitting drunkenness, are prohibited. Liquor may not be hawked, and (Ordinance 1866) distillers may not also be retailers.

SIERRA LEONE.

The reports from this colony are very scanty. The revenue in 1892 was £96,867, of which customs supplied £69,410. There are no restrictions on the sale to natives. No information regarding the working or nature of the license laws has been obtained.

ST. HELENA.

No information, beyond the fact that there are no restrictions specially applying to natives.

ZULULAND.

Capital, Eshowe; population (1892), native, 160,000; white, 700.

This protectorate is under the Natal liquor law, and severe penalties attach to in any way supplying liquor to a native, or obtaining it for him.

The penalty is, for offering for sale: First offence, not exceeding £20, or imprisonment up to six months; for second offence, not exceeding £40, or imprisonment up to twelve months, the confiscation of all liquor, and, if a trader, forfeiture of his license. For selling, not exceeding £50, or imprisonment up to six months, provided that liquor may be given medicinally. Kaffir beer, made by and supplied by a native, is exempt. Licenses to white traders for selling to white men are granted; fee £20. Drinking among Zulus is unknown. The existence of native law amongst the Zulus assists the operations of the liquor law.

BRITISH HONDURAS.

No official information has been obtained, except that no special restrictions affecting the trade with natives exist.

Liquor Traffic—Commissioners' Report.

CAPE OF GOOD HOPE.

The population of this colony is 1,527,224, of which 376,987 are Europeans. The population of the capital, Cape Town, is 83,714. The prisoners in jail at the end of 1892 numbered 2,584. The colony produces large quantities of wine and brandy. The yield in the year ended 31st March, 1893, was: wine, 6,156,943 gallons, and brandy, 1,550,360 gallons.

The liquor traffic in the colony of the Cape of Good Hope has been under regulation and license since the old days of Cape Colony. When the present form of government was established, 11th March, 1853, the traffic was regulated by Ordinance No. 9, of 1851, "For the Better Regulation of the Sale of Wines and Spirituous and Fermented Liquors." This was amended by Act No. 10, of 1860, "An Act to Make Better Provision for the Granting and Withholding of Licenses to Sell Wines and Spirituous and Fermented Liquors." This latter Act does not appear to have been sufficiently effective, for in 1875 Act No. 8, 1875, "An Act to Amend the Law Relating to the Sale of Wines and Spirituous and Fermented Liquors," was passed, the preamble setting forth as its *raison d'être*, that, "Whereas the vice of drunkenness prevails to a great extent, and it is expedient that the law relating to the sale of intoxicating liquors should be amended, and made more stringent, etc." This Act, after making provision for the interests of those then holding licenses, stipulated for the sitting of licensing courts in March and September yearly. Notice of application for license must be advertised in a newspaper for twenty-one days before the date of meeting. No retail license may be granted for any place, not being a town or village, more than six miles from the seat of magistracy, unless the applicant undertakes to keep reasonable accommodation, including food, for man and horse, as the board shall determine. No new license to sell liquor not to be consumed on the premises shall be issued, unless upon a petition in favour thereof, signed by at least one-third of the inhabitants of the ward or district.

Offences:—Selling liquor without a license, fine not to exceed £25, or in default, imprisonment up to three months, provided it be a first offence; for a second conviction, fine not exceeding £50, or in default, imprisonment up to six months, with forfeiture of license, if any; for a third or any subsequent offence, fine up to £100, with or without superadded imprisonment not exceeding six months, or, in default of payment, for twelve months, with temporary or permanent disqualification from holding a license; for contravening any section of the Act, fine up to £25, or, in default, imprisonment not exceeding three months; for a third conviction within three years, forfeiture of license, and permanent disqualification; for selling to intoxicated persons, fine not exceeding £10, or in default, three months' imprisonment; for selling to persons under 15 years of age, fine, 1st offence, not exceeding 20s.; 2nd, or any subsequent offence, not exceeding 40s.; for selling or keeping adulterated liquor, the penalty is the same as selling without a license.

An amendment to this Act, passed in 1876, gave auctioneers holding licenses to sell liquors by auction power to sell in any place.

In 1883 a law was passed prohibiting the sale and disposal of any intoxicating liquor to persons of native descent, or of issuing licenses in native locations, the word "native" being defined as applying to any person belonging to, or descended from, any of the native tribes of South Africa. This was by no means the first attempt to deal with this question. On the 29th April, 1825, Lord Charles Somerset, being Governor, issued a proclamation setting forth the serious evils which had arisen from the introduction and sale of intoxicating liquors amongst the natives, and prohibiting the practice, imposing a fine of from 50 to 100 rix-dollars, and the confiscation of liquor, for each offence. How far this was enforced, or beneficial, is not evident, but in 1881-2, when the Native Laws and Customs Commission were taking evidence, the question again came to the front, and in the Liquor Licensing Act of 1883, clauses 20, 21 and 22 provide as follows:—

"20. No license shall be issued for the sale of liquor within the limits of any native location, established or to be established under the provisions of the Native Locations Act, 1876, or the Native Location Amendment Act, 1878, or any Act here-

after to be framed for regulating native locations, except with the permission of the Governor.

"21. In districts where aboriginal natives of South Africa are located or resident, or are congregated upon public or other works or mines, the Governor may define areas, within the limits of which it shall not be competent for any licensing court to authorize the grant of a license for the sale of liquor, except with the permission of the Governor. Any licenses issued in contravention of this and the last preceding section shall be void.

"22 Save and except as to any liquor administered medicinally, no person shall sell, supply or give to any aboriginal native any liquor within the limits of any native location or area proclaimed as aforesaid. Any person who shall sell, supply or give liquor in contravention of this section shall be liable, upon conviction, to the same penalties and forfeiture of license, respectively, as are provided for selling liquor without a license."

In 1885, in accordance with these clauses, Sir Hercules Robinson issued a further proclamation having application to the Transkeian Territories, and including Transkei (embracing Fingoland and the Idutywa Reserve), Griqualand East, Tembuland Proper, Emigrant Tembuland, Bomvanland and Gealikaland. This proclamation provided for the issue of yearly licenses, fee £10, for sale between 8 a.m. and 6 p.m., week days, with closed houses on Sunday, Good Friday and Christmas day. No native, not being a chief, petty chief or councillor, or not holding a permit, could be supplied; penalty, fine not exceeding £10, or imprisonment up to three months. No liquor could be brought in, except on a permit from the chief or resident magistrate, under a penalty, of £20, or imprisonment up to six months, with forfeiture of the liquor. Any person selling without a license, or in unlicensed premises, incurred a penalty of £20, or six months' imprisonment. Licenses could supply lodgers at any time, or *bona-fide* travellers. The words "chief, petty chief, or councillor" were afterwards cancelled, so that the native population were entirely prohibited. The territories of Port St. John's and Walfish Bay were also added to the prohibitory territory.

When the Native Territories Penal Code was drafted a number of stringent provisions were suggested, but these were not embodied in the Act when it became law in 1886.

Proclamations were also made for eight other districts, or portions of districts, in Herschel, Bedford, East London, Hankey, Kimberly, and Beaconsfield, King Williams Town, on the Orange River, and Victoria East. In course of time the operation of the proclamations in some of these places was found by no means satisfactory, and the failure of the law was attributed to the narrow limits of the areas defined. A motion was therefore carried in the House of Assembly appointing a select committee to inquire into the desirability of increasing the areas, so as to include Albany, Alexandria, Bathurst, Peddie, Victoria East, Fort Beaufort, Somerset East, East London, Stutterheim, Kongha, King Williams Town, Wodehouse, Stockenstrom, Queenstown, Tarkastadt, and Cathcart. The committee commenced its labour, but the Attorney-General, foreseeing difficulties relative to parliamentary rules of procedure, and also the powers of the Government, no practical results followed.

In 1887 several of the proclamations were cancelled, and the same year an Act was passed granting exemption from the operation of this law to "all such natives as are graduates or undergraduates of the university of the Cape of Good Hope, ministers of the gospel who hold certificates as elementary teachers, or have reached the fourth or higher standards of education."

In September, 1889, Lieutenant-General Henry Augustus Smyth issued a commission appointing seven gentlemen to inquire,—1st, into the operation of existing laws; 2nd, whether or not drunkenness be increasing amongst the inhabitants, white or coloured; and, 3rd, the feasibility of affecting habits of consumption of intoxicating liquors by means of legislation. The members of this commission did not agree in their deductions. Four presented a majority report in March, 1890, and three presented a minority report in May, 1890. The majority report approved

Liquor Traffic—Commissioners' Report.

the principle dictating the constitution of the licensing courts, but found that many "houses of bad repute" obtained licenses, and that "these licensed haunts of vice and hotbeds of crime" formed a source of danger to the community, which it was the intention of the licensing Act of 1883 to suppress, and which could be effectively dealt with were the law enforced. For the purpose of securing thorough investigation of all applications for licenses, formal opposition by the inspector in every case was suggested. The report also recommended the appointment of an inspector of licenses, whose duty it should be to attend licensing courts and give any requisite information, to call and examine witnesses, and also to enforce the observance of the Act. Neither the public nor the police will act on these lines.

The licensing courts have not shown themselves able to cope with the increase in the number of licensed premises in some of the large towns, where the number has become much too large, especially canteens, and out of all proportion to the population. The license commissioners' powers of discretion have not always been wisely exercised in refusals to grant licenses. The report suggested that applications for renewal of license should be treated as if for new license, and that a petition signed by the majority of the registered voters of a locality or district should prevent the issue of any new licenses therein. Licensees of three years' standing should be forced to apply for renewal yearly, and all objections should be made in writing.

Railway licenses:—These being shown to be greatly abused, the places licensed should be open only on the arrival of passenger trains for the service of passengers only.

It was recommended that in the matter of shop licenses no liquor should be sold in the same premises as other merchandise, nor should merchants be allowed to give customers liquor in the room or rooms where they carried on business. No communication should be allowed between stores used for the sale of liquor and those used for the sale of other merchandise.

Informers:—Recommended that police should not receive any benefit from fines in liquor cases, as did common informers. Said the police were inadequate to carry out the law in many places. No licenses should be issued for places without police supervision.

Adulteration:—The present law being inadequate, it is recommended that provision be made for analysis, and that the poisonous ingredients constituting adulteration be specified as in the English act. Very little direct evidence of adulteration came before the Commission.

Distillation:—New brandy often contains fusil oil; recommended that more care be taken in the distillation, and improved stills introduced.

Selling to children: Present Act requires extending; the word "spirit" having a limited meaning, should be changed to the phrase "intoxicating liquors."

Sunday closing:—The restrictions of the present law should be enforced on all alike, or entirely removed.

Hours of closing:—These should be left to the discretion of the Licensing Boards.

Hawking liquor:—A practice of hawking home-made liquor prevails, and acts injuriously. It should be prohibited, and the prohibition enforced.

Roadside canteen:—These places, originally intended for the accommodation of travellers, have become too numerous, and are sources of evil and demoralization, leading to ruin. These should be reduced to lowest limit, and placed in the hands of respectable men. All applications for canteen license should require the written petition of the majority of the landed population of the district.

Paying wages in canteens:—This practice prevails. It should be suppressed—any offender incurring fine and imprisonment.

Giving liquor to labourers:—A prevalent habit, producing drunkards. It should be entirely suppressed, especially on farms.

Drunkennes:—The evidence as adduced to the growth or otherwise of this habit is extremely contradictory. Statistical returns, properly considered, show a decrease, and dealers say less Cape brandy is sold, and the consumption *per capita*

is less. The reports indicate that it has decreased, the improvement being marked in some places.

Habitual drunkards:—The establishment of curative institutions, to which habitual drunkards can be committed for a period not exceeding 12 months, is recommended.

Selling to natives:—This is dealt with very extensively, and the conclusion arrived at is that drunkenness has not increased amongst natives, nor has any great beneficial result been achieved by the labours of missionaries. The great difficulty is that drunkenness in a native has no shameful stigma. Some good resulted from the prohibitory proclamation, but very slight. Recommends that areas should be proclaimed within which the supplying of liquors to natives, without distinction of position, class, or political privilege, should be totally prohibited. The term "native" should include any aboriginal Kaffir, Fingo, Basuto, Hottentot, Bushman, or the like, all half-castes, coolies, or persons of mixed race living as members of any native community, kraal, tribe or location. The selling or in any way supplying should be prohibited under heavy penalties and the forfeiture of all liquor. Natives found in possession of liquor should be severely punished, and the police empowered to search huts or kraals, etc., on suspicion.

Kaffir beer:—The sale should be made punishable; it should be included in intoxicating liquors in prohibited areas, and any quantity over two gallons found in native possession seized and destroyed. This should extend to the Transkei excise. The weight of evidence that an excise tax is of any value in preventing drunkenness being fatally antagonistic, the Commission in this report do not recommend the imposition of a tax on intoxicating liquor as an effective means to cope with intemperance. (Two of the four members signing the majority report dissent from this last clause).

The minority report:—This commences with a very elaborate defence of the three signers' position with regard to the majority of the commissioners, and concludes by asking that the minority report be taken as partly supplementary to and partly corrective of the other.

Increase and decrease of drunkenness:—This report first deals with the second of the questions referred to the commissioners. A majority of the general witnesses testified to the increase in drunkenness, and native witnesses, with few exceptions, depose that the vice has increased, especially amongst their own people in the east. An analysis of the evidence on this point taken orally and by circular from ministers of religion, magistrates, and assistant magistrates, district and hospital surgeons, and police officers, is shown in the following table:—

Description of Witnesses.	Increase.	Decrease.	Stationary.	No definite opinion.
Ministers of religion.....	33	12	3	8
Police officers on native locations.....	6	14	2	2
Resident magistrates.....	19	39	12	27
District surgeons and superintendents of hospitals....	17	30	9	23
Total.....	75	95	26	60
Percentage on total opinion.....	29·30	37·11	10·16	23·43

Thus it will be seen the only class favouring the view that drunkenness has increased is that of ministers of religion, whilst the police, the magistrates and the medical faculty differ. The report finds that between the views of the "more emotional ministers of religion" and "the more matter of fact magistrates, etc.," it is impossible to form a conclusion; but taking statistical evidence of convictions, a valuable index can be obtained as to the increase or otherwise of drunkenness amongst the coloured population, but not amongst the whites, who, by drinking at home, avoid the clutches of the police. Bearing this in mind, the report finds an

Liquor Traffic—Commissioners' Report.

increase from 1884 to 1888 of 1,139 persons, exclusive of the Transkeian territories; but an analysis of the convictions in groups shows that 54·98 per cent were in Griqualand West, and 22·91 per cent in western districts, whilst in the portion included in the area suggested for prohibition by the majority report there is a decrease of 21·63 per cent, and in eastern districts, of 17·21 per cent. In conclusion, the report finds that if there be an increase in drunkenness it is in the face of,—

- I. Increased price of brandy.
- II. Decrease of about 11 per cent in the number of licensed houses.
- III. Fall in the output of colonial spirits.
- IV. Continuous rise in the overland export of such spirits.

Finally, references are made to the small number of licenses, one to every 1,094 inhabitants, and consumption *per capita*, 1·34 gallons.

Opinion of existing laws:—The present laws are pronounced good, but the enforcement is inefficient. The public are apathetic, and police insufficient. Low class canteens could, should, and must be abolished. Adulteration pronounced dangerously common, and should be suppressed. Roadside hotels are mere receptacles of stolen skins, wool and feathers. Hawking brandy common, and ought to be suppressed. Sales to intoxicated persons are frequent. The law is systematically violated. The prohibitory laws in proclaimed areas are utterly futile; liquor is largely sold illicitly, until the law is powerless.

Temperance legislation:—The minority agree with many of the recommendations and deductions of the majority. Recommend an excise tax as a cure for adulteration.

They disagree with the majority's suggestion to establish a prohibition area. They fail to see the reasons which could justify such a drastic measure. It would be impracticable, without enormous expense; less called for in the area proposed than anywhere else in the colony; not justified by very superior sobriety of the whites; a retrogressive step after the Natives Relief Act, 1887, and a violation of that Act; mischievous in character, and calculated to stir up a widespread and irritating agitation with regard to the political privileges of the natives.

Kaffir beer:—Several Kaffir beers exist, one thoroughly fermented and highly intoxicating, another of low strength, and comparatively innocuous, and yet a third used largely for food, and resembling thin porridge or gruel. They suggest licensing the sale of Kaffir beer, and forcing natives to give notice previously of any intended dances. They recommend an extended use of light wines and beer; the closing of canteens on Saturday afternoons, and that only applicants for new licenses should have to present a petition from a majority of the inhabitants.

In connection with this report is given the following table of the percentage of crime and disease caused by the consumption of alcoholic liquor in the districts named:—

Locality.	CRIME.	DISEASE.
	Average of percentage estimated by magistrates.	Average percentage estimated by district surgeons.
In proposed area.....	51·00	18·13
In remainder of eastern districts.....	32·89	18·13
In western districts.....	47·00	18·13
In Griqualand West.....	33·00	18·13
In Transkeian Territories.....	48·00	18·00

* The population for the whole colony in 1888, exclusive of the Transkeian Territories, is taken from the Statistical Register, and shows an increase of 34 p. c. over the population of 1875, according to the census of that year; i. e. after deducting an estimated population of 59,000 for Griqualand West, which did not belong to the colony in 1875, and the population of which therefore is not included in the number given for that year. The estimated population in 1888 for the various groups of districts were arrived at by adding 34 p. c. to the 1875 population of each group.

+ Slightly over the mark, owing to the inclusion of that part of the division of Tarka which, in 1875, belonged to Queen's Town.

‡ Slightly under the mark, owing to the impossibility of arriving at a correct estimate of population of that part of Tarka which, at the time of the last census (1875) belonged to Queen's Town, and which therefore has not been deducted from the population of the proposed area, as it ought to be.

§ The number given by the majority is 8,017, which is not the correct total of the numbers given for the various districts.

|| In 1877.

Liquor Traffic—Commissioners' Report.

The following shows the number of separate persons convicted of drunkenness and the total convictions for twelve years:—

	Separate persons.	Convictions.
1877	3,799	4,545
1878	3,097	3,527
1879	3,151	3,818
1880	3,391	3,989
1881	3,860	4,417
1882	5,510	6,390
1883	7,000	8,349
1884	8,017	9,968
1885	7,443	9,111
1886	6,920	8,398
1887	7,594	9,154
1888	9,096	10,890

In consequence of the recommendation of the Commission an Act was passed in 1891 entitled: "An Act to amend the law regulating the Sale of Intoxicating Liquors." It provides that no liquor shall be sold by any holder of a bottle license upon Sunday, Christmas day or Good Friday, nor for consumption on the premises, nor after 8 p.m. The hours of sale under a retail license may be fixed by the district licensing court at any hours between 7 a.m. and 9 p.m. on week days. In all cases of application for new licenses the inspector of license for the district must report on the following points:—

1. A description of the house, premises and furniture.
2. Whether the applicant is a fit and proper person to have the license applied for, and is known to be of good character and repute.
3. Whether the bestowal of the license sought for is or is not, in the opinion of the inspector, required for public convenience.
4. Whether the applicant appears to be or not to be the true owner of the business or the premises supposed to be licensed.
5. In case of application for the renewal of a license, a statement as to the manner in which the house has been conducted; if any convictions have been recorded against the license, the particulars of the convictions; and a statement as to the character of the persons frequenting the house.

In case the inspector is unable to supply any of the foregoing particulars, he shall specially state so in his report, together with the reasons of his inability.

The Act provides for the inspectors securing samples of liquor for the purposes of analysis, and for the infliction of very heavy penalties on any inspector accepting a bribe, and on any person giving or offering such bribe.

No application for a new license can be granted without the presentation to the licensing court of a memorial or memorials, signed by a majority of the registered voters of the section in which the premises in respect of which the license is sought are situated.

No renewal of any license can be granted in case there shall have been lodged with the court a memorial or memorials, signed by two-thirds of such registered voters, objecting to the said renewal, and in case it shall be proved that written notice has been given to the holder of the existing license, and to the owner of such premises, of the intention to lodge such petition. The absence of such memorial shall not render it imperative on the court to grant a renewal. The Act contains provisions prohibiting the payment of wages to workmen on licensed premises; regulating the sale of liquor at railway stations; providing for the furnishing of liquor with substantial lunch or dinner (if paid for) to guests of retail licensees on Sunday. The Governor may proclaim areas in the neighbourhood of mines, manufactories or other centres of labour, within which all bottle stores and canteens shall be closed at noon on Saturday, or such other week day as the Governor may determine.

FIJI.

The population of the Fiji Islands was, in 1892, said to be 125,442.

These islands are under a system of license, the Act being known as "The Publican's Ordinance, 1884."

Licenses are granted in the month of November by the stipendiary magistrate, one month's notice of intended application for either new license or renewal of license having been given in the *Gazette*, except packet (steamer) licenses, which require no notice. The stipendiary magistrate, on approving an application, grants the applicant a certificate, and forwards a list of certificates, with full particulars of the premises affected in each case, to the Receiver General. The applicant presents the magistrate's certificate to the Receiver General, who may, if he thinks fit, mark thereon his approval, whereupon the collector of customs shall issue the license accordingly. In 1892 the receipts from general licenses and inland revenue were £6,600.

At the hearing of any application either for license, renewal or transfer, a plan of the premises has to be produced, the applicant, unless prevented by illness, being present, and the magistrate may call and examine on oath such witnesses as he may deem necessary. A license to sell in a booth at races, &c., for a period of not more than seven days, may be granted by a stipendiary magistrate to a holder of a publican's license, without notice, and shall be subject to such conditions as the magistrate shall see fit to impose. License fees must be paid within 28 days of the date of certificate. In case of default on payment of the license fee, and an additional sum not exceeding £10, the Governor may, if he see fit, upon a statement of the case, cause the license to issue.

Transfer of license is allowed on payment of a fee of £2. Removal of license is permitted in the same district. Conditional and temporary licenses are granted in cases of new premises, or alterations to premises, or in case of destruction of premises by fire. In case of the death or bankruptcy of a licensee, his executors, administrators or assigns may carry on business, or the widow or any member of his family of the age of 21 years, for a period not exceeding 3 months. If a female licensee marry, her husband shall possess the same privileges, and receive the same duties, obligations and liabilities, under the license as she did, unless, within 14 days after the date of marriage, he shall, by writing under his hand, addressed to the magistrate, disclaim all interest in the license. On application to a stipendiary magistrate, a licensee may sell an absconding lodger's goods to the extent of his claim.

Premises for which a publican's license is asked require beyond the necessary sufficient accommodation for the family, two sittingrooms and four bedrooms, constantly ready for use, besides a separate house for not less than 10 natives. No publican can be compelled to entertain a native, not a servant or attendant on a guest of the house. Notice of application for license has to be posted on the premises. The licensee's name and qualification must be painted in letters, at least two inches long, on the front of his premises, and a lamp must be kept lit and burning from sunset to sunrise. Penalty, £2 for first offence, and not less than £2 or more than £10 for any subsequent offence.

The hours of sale are from 5 a.m. to 12 at night on week days; from 7 a.m. to 9 a.m., 1 p.m. to 3 p.m., and 8 p.m. to 10 p.m. on Sunday, Good Friday and Christmas Day, and on the last-mentioned days only for the sale of liquor not to be consumed on the premises; penalty for infringement of hours, £20. A *bona-fide* lodger may be supplied, not at the bar, or a *bona-fide* traveller (qualification not defined) may be supplied at the bar or elsewhere on the premises. Penalty for drinking on licensed premises, or leaving them with liquor in possession during prohibited hours, 40s. The penalty for allowing an unlicensed person to sell in any premises, vehicle, vessel or boat, is £20. For permitting common prostitutes, thieves, drunken or disorderly persons on licensed premises, the penalty is not exceeding £10. For permitting licensed premises to be used as a brothel, penalty not less than £20 or more than £50, and forfeiture of license for twelve months. For permitting

Liquor Traffic—Commissioners' Report.

gambling, the penalty is £10 for first offence, and £20 for any second or subsequent offence. The following penalties also attach under this Act:—

For permitting premises to be used as ball-room, without permit, for first offence, £20; for second offence, £20 and forfeiture of license.

Licensee convicted of felony forfeits license, which may be transferred.

Licensee absent from premises without leave forfeits license.

Refusing to admit officers, fine not exceeding £50.

Refusing to receive traveller, fine not exceeding £5.

Selling adulterated liquor, fine for first offence, £50 to £100; for second offence, £200, or 6 month's imprisonment, with forfeiture of license and goods. Cost of analysis follows each case. Notice of conviction is posted on premises.

Objections to the granting of a license may be made, either personally or to a licensing magistrate, by,—

1. Three or more residents of the district.

2. Police in charge of district, or persons authorized by them.

On the following grounds:—

1. That applicant is of drunken, or dissolute habits, or of bad repute.

2. Cancellation of license within twelve months.

3. Conviction of selling without a license, or of selling adulterated liquor within same period.

4. Insufficient accommodation.

5. Not reasonably requisite in neighbourhood.

6. Vicinity of church, hospital, public school, or native town.

7. Danger to quiet and order of neighbourhood.

Selling without a license:—For first offence, fine of not less than £30 or more than £50; for second offence, fine of £100, and imprisonment, with or without hard labour, for not less than three or more than six months, at the discretion of the magistrate. The forfeiture of all liquor and vessels containing the same follows each conviction, and disqualification from holding a license for one year follows second conviction.

Liquor carried about for sale, or exposed publicly for sale, together with all vessels, vehicles, horses or animals drawing the same, are subject to seizure; penalty not exceeding £50; in default, imprisonment for not more than three months with or without hard labour, at the discretion of the magistrate.

Prohibitory Act:—"The Liquor Prohibition Ordinance of 1892" regulates the "supply of spirituous liquors to natives and others." The term native is defined as including, not merely aboriginal natives of Fiji, but aboriginal natives of any part of Africa, India or Malaysia, or of any territory or island adjacent to either, and aboriginal natives of any island in the Pacific, or any person wholly descended from such. A half-caste is one either of whose parents has been of any of the races comprised in the term native.

Natives and half-castes are prohibited from having liquor in their possession, under a penalty not exceeding £10, or imprisonment with or without hard labour for not more than three months.

Any person licensed or otherwise giving, selling, or procuring liquor to or for a native or half-caste, shall be fined not exceeding £50, or in default, imprisonment up to three months for a first offence, and a fine not exceeding £100, or, in default, imprisonment up to six months for subsequent offences. If a licensee, the second conviction includes forfeiture of license. If unlicensed, the offender to incur the penalties for illicit trading in addition to the above.

Exceptions:—

1. Ministers giving wine in conformity with religious rites.

2. Medical men prescribing or giving liquor to patients as medicine.

3. Persons employed by medical men, and acting under their instructions.

4. Persons supplying a native personally exhibiting an exemption granted him by the Governor.

5. Domestic servants bearing employer's written dated orders for liquor for employer's use.

The *onus probandi* to lie on the defendant in every case.

Imprisonment for three months follows any evasion of this ordinance, such as lending a name or countenance for the purpose of procuring liquor for a native or half-caste.

Licenses are prohibited from supplying intoxicated persons; penalty for first offence, £2 to £5; for second offence, £10 to £20, with forfeiture of license; for taking a pledge for payments incurred, penalty up to £10.

A magistrate, upon application of a relative, may prohibit any person of confirmed intemperate habits from obtaining liquor. Three convictions in two years render such prohibition necessary. Penalty, any person not a publican, supplying a prohibited person with liquor, fine, not exceeding £10; in default, imprisonment up to one month; any publican supplying such person, fine, not exceeding £50, or, in default, imprisonment up to six months; any prohibited person found intoxicated, fine, not exceeding £2, or imprisonment up to 14 days.

Liquor found in the possession of natives shall be seized. Charges can be laid within three months, and a sum not exceeding one-quarter of any money penalty may be granted by the magistrate to a certified informer.

The Governor may grant an exemption, good during will, to any native or half-caste, allowing them to have liquor in their possession, or to drink it. Such exemption certificate found in the possession of other than the rightful owner shall be seized, and not returned to the owner, except on order by a magistrate.

Storekeepers and others are to keep liquor in such manner that no native or half-caste can obtain access thereto; penalty, not exceeding £5 for a first offence, and not exceeding £10 for a subsequent offence. The *onus probandi* in all cases to lie with the accused. No statistics have been obtained in regard to Fiji.

NATAL.

This colony was formerly part of Cape Colony, but separated from it in 1856. The capital of Natal is Pietermaritzburg; population, 17,500. The population of the whole colony is 543,913.

The colony is under license. Ordinance No. 9, 1847, for "Regulating the Sale of Wines and Spirituous and Fermented Liquors within the District of Natal," was in force until 1878, when it was amended by Act No. 23, 1878. This Act makes it necessary for anyone desiring a license to make application to the resident magistrate of the district, the application to be in writing, and to set forth the nature of the business to be carried on, whether inn, hotel or boarding house, a description of the premises, etc. He shall give notice of his intention to apply by advertising twice in the nearest local newspaper, and affixing a notice on a conspicuous place on his premises. The magistrate, on receiving notice, shall affix a copy in some conspicuous place inside and outside applicant's premises, on the church door, if there be one within seven miles, and on the gate of the public prison, together with 14 days' notice of the date of the meeting of the licensing board to consider the application. The licensing board is composed of the resident magistrate and two landed proprietors resident in the division, who are appointed by the Governor. They shall consider and determine on all applications, hearing objections of any person, whether grounded on character, unfitness, or misconduct of the applicant, insufficient or inconvenient premises, or sufficiency of already existing accommodation. Such board shall sit quarterly. The applicants must be either inn-keepers, hotel-keepers, keepers of accommodation houses, or storekeepers, who have, in connection with the store, houses of public entertainment and sufficient accommodation for man and horse for the exigencies of the district. A licensee must give security for good behavior.

In connection with the above, Act No. 23, 1878, "To prohibit the Sale and Disposal of Spirits and other Intoxicating Liquors to Persons of the Native Race," was enacted. From an early period in the history of the colony liquor has been prohibited to natives. In 1856 Ordinance No. 4 was passed to this effect. It was, however, not sufficiently stringent, and was repealed by Law No. 18, of 1863, which provided for imprisonment, with or without hard labour, in default of the payment of

Liquor Traffic—Commissioners' Report.

a fine, and for the informer receiving part of the penalty. Drunkenness increased, however, and yet more stringent measures were found necessary, and so Law No. 22, of 1878, was passed and enacted. It entirely prohibits in any way supplying natives with liquor, the penalty being from £10 to £20, with or without imprisonment, and with or without hard labour. Liquor administered medicinally is exempted. Fines go to the Crown; the informer may receive a portion up to one-half. In case a field cornet informs he shall receive one-half the fine, on conviction. In case the delinquent be a licensed dealer, his license may be suspended for three months for a first offence; for a second offence it must be suspended for a term of three months, and for a third offence it shall be cancelled. Natives may be supplied, if they be servants having a written dated order from their master, the licensee to give a pass with the liquor. Any native found in possession of liquor shall be fined up to 20s, or imprisonment for a term not exceeding one month.

On 6th May, 1889, Lord Knutsford, as Secretary of State for the Colonies, speaking in the House of Lords, said:—"With regard to Natal, although the law appeared to be sufficiently stringent, he admitted that, owing to lack of police supervision, there had not been sufficient enforcement of that law. The finances of the colony had not hitherto been in such a condition that any great additional expenditure could be lightly incurred, but proposals had just been received for appointing supervisors over natives, who would, amongst other duties, advise the chiefs against the excesses which prevailed at their ceremonies. He had been able to sanction the appointment of those supervisors, and would when giving his sanction, strongly urge upon the colonial government to see that the law prohibiting the sale of liquor to the natives was enforced. The view taken by the Cape government with regard to high tariffs was that, so far as the natives were concerned, the traffic could only be checked by internal duties, and that a high tariff would stimulate smuggling and illicit distillation, while the view taken by Natal was that it would be of little use for them to pass any measures until the Cape and Portuguese governments had acted in the matter." (*Times' report*, 7th May, 1889).

The attention of the Legislative Council was called to this, and a committee of the Executive Council enquired into the matter in 1889, and found that the Indian immigrant labourer from Madras drank largely, but that it would be unwise to prohibit them. Regarding the increase in drunkenness, 14 out of 21 magistrates did not believe in its existence, nor, except in Durban, had such increase taken place, neither were the police to blame. *Tjowala*, a Kaffir beer, it was shown, was largely used, but was harmless and wholesome. *Isitshimiyana*, an intoxicant made from treacle, was also largely used, but had been forbidden since 1870, a penalty of £2 attaching to its manufacture. The sale of Kaffir beer, it was stated, required an annual license of £4; half yearly, £2 10s. The committee recommended that the Act of 1878 be amended, making the fines fixed, not optional, £10 for a first offence, £25 for a second offence, and, if a dealer, cancellation of license. They also advised that no canteens be allowed in native localities, and that greater vigilance in the discovery and punishment of persons selling to natives be exercised by the magistrates. They draw attention to the absence of restrictions on the sale of intoxicating drinks to natives in the Cape and Transvaal, where many Natal natives acquired drinking habits.

The supervisor's report that natives obtain liquor from Indian coolies, one woman having paid £100 in £10 fines for selling. They recommend that Indians be allowed to buy only by the glass at the counter; that supervisors be granted police and that they also be empowered to prohibit the manufacture of *isitshimiyana* and to enforce such prohibition.

HONG-KONG.

The capital of this colony is Victoria, and the population in 1892 was reported as being 231,662, comprising 10,590 whites and coloured, and 231,072 Chinese.

The following figures were given in regard to crime:—

Convictions by superior courts, 1892.	18
Convictions by magistrates.....	13,098
In jail, December, 1892, including 18 Europeans.....	468

In Hong Kong the law as to the sale of intoxicating liquors to persons other than Chinese is assimilated to the law of the United Kingdom.

The Chinese use a native spirit as a beverage with their food, but in so moderate and temperate a manner that a license fee is imposed on its sale for purely fiscal reasons, and no other.

CEYLON.

The capital of Ceylon is Colombo, which had a population of 126,926 in 1891. The total population of the whole colony, including 6,068 English, was 3,008,466. In 1892 there were 19,705 summary convictions, and 395 convictions in the Supreme Court.

The liquor traffic is under license regulations, and there is no special restriction against the sale of intoxicating liquors to natives, as distinguished from others. The revenue from licenses for sale of spirituous liquors is about 2,200,000 rupees per annum.

LABUAN.

The total population of this colony is 5,853, of whom 30 are Europeans. The population of the capital, Victoria, is 1,500. The revenue of 1892 was £6,311, derived from licenses and customs duties on spirits, wines and tobacco.

There have been several license laws in this colony. That of 1871 empowered the Governor to appoint the superintendent of farms, or others to collect duties, and retail, and to suspend clauses which authorized the sale by wholesale for consumption in the island. In all these laws there is no clause or reference dealing with the restriction of sales to natives; but in a country where the bulk of the inhabitants are Mahomedans, such legislation would not, apparently, be necessary.

THE STRAITS SETTLEMENTS.

The population of the Straits Settlements is 512,342, divided as follows:—

Singapore.....	184,554
Penang.....	235,618
Malacca.....	92,170

The figures given in regard to crime in 1892 are as under:—

Supreme court convictions.....	239
Other courts	30,863
Admitted to jail.....	4,510

There is no restrictions placed on the sale of intoxicating liquors to natives, and drunkenness is a very rare vice amongst them.

The system of license is regulated by the Excise Amendment Ordinance, No. IV, of 1879.

Licensed houses are divided into three classes, all opening at 6 a. m., and closing at midnight, 11 p. m. and 10 p. m., according to class.

Drunkenness, disorder, gambling and the harbouring of prostitutes are prohibited.

Adulterated and unwholesome liquors are prohibited.

Police are to have free access to all houses for public purposes.

Licensed farm shops may open at 5 a. m. and close at 10 p. m. In other respects the regulations are as above. (Ordinance No. IV, 1870.)

Police may inspect books and stock at any time.

The right to collect duties on spirits in the various provinces, and the sole right to manufacture and sell, are farmed, the lessees being called farmers.

The British agent in Perak reports that the Larut spirit farm is leased to Yap Hap Keat for three years, at a monthly rental of \$4,600. He may collect 50c. duty on every gallon of spirits imported, grant licenses and collect fees, and receive fines, being bound to the extent of \$9,200 to enforce the law. The fine for infringing the lessee's rights is not exceeding \$400. Other licenses are similar. The farmer is bound to have pure spirits, under a penalty of \$100.

Liquor Traffic—Commissioners' Report.

Toddy and bhang farm leases fix the prices of toddy at 6 and 7½ cents per quart bottle, and bhang 4 cents per package. Fine for infringement of rights, \$50, and for breach of lease by the farmer, \$25. In Sungei Ujong, the excise law governs the licenses, their being no restriction on the sale of intoxicants to natives, "but," says the agent, "with very rare exceptions, both religion and inclination preclude the desire for stimulants of that nature."

BRITISH GUIANA.

This colony has a total population (1892) of 278,295, that of Georgetown, the capital, being 53,176. There are 205,090 coolies and Africans included in the population. The Europeans number 2,533.

The colony has been under license since 1855, when the first ordinance restricting the sale of rum was passed. It has been found necessary to extend the regulations for the sale of intoxicating drinks from time to time, and ordinances to accomplish this end were passed in 1868, 1869, 1877, 1880 and 1885. These laws simply regulated the license fees and sale. The licensing laws contain no special provisions for the prohibition of the furnishing of liquors to the aborigines. It was, however, found necessary to protect the Indians in their dealings with the class of traders with whom they came in contact in the forests of the interior, and certain protective regulations were included in the Crown Lands Ordinance, 12th September, 1881, which were maintained in section 43 of the Crown Lands Ordinance, No. 18, of 1887.

THE MEDITERRANEAN POSSESSIONS.

GIBRALTAR.

The population of Gibraltar was, in 1892, 26,050. The exports and excise are unimportant. The revenue, of which excise is a great factor, was £56,735.

The functions of government and legislation are all vested in the Governor, who is also commander-in-chief.

Under proclamations in 1885, and an ordinance of 1886 (1st), the introduction and sale of spurious liquors are prohibited; (2nd), duties are charged on the importation of all liquors, and licenses for sale are issued at fixed fees; (3rd), licensees have to conform to rules of conduct and regulation.

MALTA.

The capital of Malta is Valetta, and the total population of the possession, in 1892, was 166,889, including 1,702 English. There were committed in jail in 1892, 7,648 persons.

The liquor traffic is restricted by the police laws. These provide for the limitation of the number of licenses; for closing, from 9 p. m. to 4 a. m., without permission otherwise, and during hours of divine service; against the keeping of weapons where they may be reached; and for licensees being vigilant in the preservation of law, order and morality.

The Governor's regulations provide that a licensee must be of good character, have his neighbor's permission to keep a public-house, and it must be 50 paces distant from a church. Licenses, or renewal of licenses, can be refused for contravention of the police law, or by the court of judicial police. A licensee is responsible for his servants; may not allow blasphemous language or scandalous or indecent words or gestures; may allow no woman but his wife to sell in the shop; may not allow drunkenness, nor persons known to carry weapons, or who by words or gestures incite to quarrelling; may not supply children under 16, nor permit music or noise. Shop licenses shall not be granted in certain districts. Licenses may be granted or renewed at discretion.

CYPRUS.

The only restrictions in this dependency are the prohibition of sales to soldiers and of illicit selling to Her Majesty's sailors.

NEWFOUNDLAND.

The total population of Newfoundland, including Labrador, was, in 1891, 202,040, that of St Johns, the capital, being 29,007.

The liquor traffic in this colony is regulated by license. The Consolidated Statutes of 1874 contain this clause, which was incorporated in the statutes of 1872:—

“I. No intoxicating liquors shall be sold, unless in the original packages in which the same are imported, or by license, under a penalty of not less than ten dollars, nor more than fifty dollars for every offence.”

In 1871, an Act known as “The Temperance Act, 1871,” was passed. The preamble set forward that the object of the Act was to amend existing laws respecting the sale of intoxicating liquors, and licenses, therefor, and to otherwise provide for the repression and prevention of abuses arising from such sale.

It provided that, if two-thirds of the duly qualified electors should vote at a poll, to be taken according to the Act, in favour of the prohibition of the sale of intoxicating liquors, and the issue of licenses therefor, the Governor might, by proclamation, prohibit the sale, and put in force this Act in such electoral district.

Upon the delivery to the Governor, by a stipendiary magistrate, of a requisition, bearing the signature of one-fifth of the electors of any electoral district, demanding a poll under this Act, the Governor shall appoint a day in October, November, December, January or February for holding such poll.

No new licenses can be issued between the date of the poll and the issuing of the proclamation.

Vote is taken by open polling. No new poll can be taken for three years.

After the issuing of the proclamation no liquor can be sold, or license issued for three years. Medical, mechanical and sacramental liquor, or liquor for those uses, is excepted.

Any sales in proclaimed districts shall be punishable as for selling liquor without a license.

Writing of this Act in 1881, Sir F. B. T. Carter, administrator of the colony, said: “I find that it was put in operation in two districts only, Brigus and Burin, for a period some time elapsed, and since then it has been practically a dead letter. In the districts referred to, the general opinion was that the Act occasioned more mischief from clandestine sale than had existed under the general licensing Act.”

The then existing Acts regulating the traffic were consolidated in 1875 in “The Licensing Act, 1875.”

For selling without a license, the penalty is \$10 to \$100.

Stipendiary magistrates may grant licenses to persons approved of by them. All applicants, before applying, must enter into a bond with two approved sureties for \$200 to observe the law.

Wholesale license authorizes sale on specified premises, in quantities of not less than 2 gallons, to be consumed off the premises; fee, \$100.

Wholesale license for malt liquors only, terms as above; fee, \$50.

Retail license authorizes the sale in any quantity on premises named; fee, \$10 to \$70, to be fixed by the magistrate, in accordance with the annual value of the premises. In case of death or insolvency of a licensee, the magistrate may make an order to suit the circumstances.

A register of all licenses issued, parties and premises licensed, bonds taken, and fees, fines and penalties paid, shall be kept by the clerk of the peace, who shall, under penalty of \$100, pay the same to the Receiver-General.

Habitual drunkards may be prohibited. For selling to such prohibited drunkard, the penalty is not exceeding \$100 or 30 days' imprisonment.

Prohibited hours. All day Sunday, Good Friday and Christmas Day, week days from 10 p.m. to 6 a.m. between 1st April and 31st December, from 9 p.m. to 7 a.m. between 1st January and 31st March.

Special licenses for a period not exceeding 6 days may be granted retail licenses, upon such terms of fee and hours of closing as the magistrate may specify. The tent, room, booth or place specified shall for the time be a licensed place under this Act

Liquor Traffic—Commissioners' Report.

The possession of tumblers, decanters, bottles, etc., usually used in the trade, shall be *prima facie* proof of illicit sale, provided they have been recently used.

Licenses may be declared forfeited, in lieu of other penalty by the magistrate, or in addition to such penalty.

The Act contains stringent provisions against selling during prohibited hours, to children insane persons or habitual drunkards, against harbouring improper characters, constables, and other provisions for the maintenance of good order.

NEW SOUTH WALES.

The population of this colony was stated in 1892 as being 1,132,234. The summary convictions were put down as being 56,360, and the prisoners in jail on the 31st December, 1892, as 2,622. The population of the capital (Sydney) is 411,710.

The summary convictions would amount to 49·76 per thousand of the population, and the prisoners in jail were equal to 2·31 per thousand of the population.

The traffic in this colony was early brought under regulation by a license act.

An Act was passed in 1862 fixing the hours for sale (except for lodgers and *bona fide* travellers) at from 4 a.m. till midnight on week days, from 6 to 9 a.m. on Good Friday and Christmas Day, and from 1 to 3 p.m. on Sunday, the special day sales being only for consumption "off the premises." This Act was amended by an Act limiting the granting of new licenses in Sydney for a time only.

The Act of 1862 was amended in 1881 and again in 1883, when public houses were closed entirely on Sundays, a third conviction rendering the license liable to forfeiture.

In a memorandum dated June, 1890, the Inspector-General of Police states that the law in this respect has been so systematically broken as to have become almost inoperative. The licensee knows his customers, and, short of employing informers, who would themselves be guilty of a breach of the law, it is almost impossible to secure a conviction for Sunday selling. The result is demoralizing: 1st, it leads men, who would be contented with a moderate supply during restricted hours, to spend the day in drinking and expending all their wages; 2nd, it leads to home drinking; 3rd, it produces unblushing perjury.

The local option clauses have not been found beneficial or efficacious in operation. In Sydney the citizens have been apathetic. Though the number of licensed houses has decreased in relation to the population, it is still too great.

The effect of the law upon intemperance has not been very marked. Excessive drinking is not so prevalent in bad times. Police arrests are not a safe criterion, but they show that the percentage of arrests for drunkenness in 1881 (2·96) had been reduced to 1·98 in 1888.

In any way "supplying" natives is absolutely prohibited under a penalty of £10, in addition to any penalty for selling without a license. The administration of liquor as medicine is exempted.

A report laid before the British House of Commons (June, 1894) shows the law to be unaltered, but to require amending chiefly as regards Sunday trading. It also states that there are too many hotels licensed. The evidence as to any marked decrease in intemperance is discouraging. The local option law is too limited in its operation to afford a satisfactory test of the value of the principle. As a factor in the repression of drunkenness the local option vote in the metropolitan district of Sydney has not had any appreciable effect, though it prevented the licensing of new hotels. New licenses were negatived in every ward in the city and the granting of removals in five out of eight wards. In the suburban districts new publicans' licenses were granted in 1 case, refused in 3 and withdrawn in 1. Conditional licenses were granted in 17, refused in 47 and withdrawn in 45 cases.

An Act passed on 19th December, 1881, amends and embodies all previous Acts. It is divided into four parts:—

Part I provides for the establishment and constitution of licensing districts and Courts, and the procedure thereat; for the mode of applying for licenses, transfers and renewals; it also deals with the licensees and the appointment and duties of

Inspectors. The duties of an inspector include the inspection of premises, the examining and taking an account of all liquors. He may also demand, select and obtain samples of liquor which may be in or upon the premises, and, on paying or tendering payment for such samples, may remove the same for the purpose of analysis or otherwise. The penalty for obstructing an inspector is £50. The cost of analysis is to be reckoned as part of the costs of proceedings in cases of conviction. The penalties for an inspector taking a bribe, and anyone offering a bribe to such an officer, are exceedingly severe. Licensed premises may be entered day or night by any police officer of, or above, the rank of sergeant, any senior constable authorized by a licensing court, any inspector under the Act, or any constable duly authorized by a magistrate or superintendent of police.

Part II defines the nature of the various licenses, and contains the provisions therefor. The latter, in dealing with the matter of accommodation, contains a proviso that each room intended for the use of a guest shall contain not less than "twelve hundred cubic feet air space, and not be less than nine feet in height." Section 34 provides that, "after the commencement of this Act, the *granting of a new publican's license, or of a certificate of removal of a publican's license*, shall, within the area of every ward in the city of Sydney, or of any municipality subdivided into wards, as well as within the area of every municipality not so subdivided, be contingent upon the vote of the ratepayers of such areas, respectively, to be ascertained in manner hereinafter provided." The vote is to be taken every three years simultaneously with the voting for aldermen, the question reading: "Shall any new publican's licenses or removal of publican's licenses be granted in respect of premises situate within the above (*ward or municipality*) for the period of three years from this date?"

The schedule of fees for licenses is as follows:—

(1). For publican's license.....	£30
(2). For packet licenses—	
(a.) Class I.—Passenger vessels above 1,000 tons register.....	15
(b.) Class II.—Passenger vessels less than 1,000, over 250 tons.....	10
(c.) Class III.—Passenger vessels under 250 tons....	3
(3). For a colonial wine license.....	3
(4). For a booth or stand license.....	2

Furnishing liquor to any native is strictly prohibited.

Hours for lawful sale under this Act are from 6 a.m. to 11 p.m. on week days, from 7 to 9 a.m., 1 to 3 p.m., and 8 to 10 p.m. on Good Friday and Christmas Day, and on these two days for consumption off the premises only. *Bona fide* travellers and lodgers may be supplied.

Part III provides for the issue and regulation of brewers' and spirit merchants' licenses. The fee is £30 annually in Sydney, and £20 elsewhere.

Part IV provides for the cancellation of licenses, and for legal procedure, etc. Two convictions within three years under this Act incur cancellation of licenses. Three convictions within three years serve to disqualify the premises. There are various provisions for the maintenance of order and preservation of morals.

This Act was amended by the Licensing Act of 1883, but the amendments are mostly of a minor character. It provides for the reduction of the fee on a publican's license where public convenience demands such accommodation.

Section 12 divides the question to be voted upon triennially under the local option clause into two: 1st, as to the granting or not granting of new licenses; 2nd, as to the granting or not granting of removals.

It provides for the cancellation of a license on the holder's being convicted of a felony

Liquor Traffic—Commissioners' Report.

On the working of the liquor laws in New South Wales, the inspector-general of police, in a communication dated, Sydney, 27th May, 1893, written for the information of His Excellency the Lieutenant-Governor, said:—

“Some amendment in the law is no doubt desirable, chiefly as regards Sunday trading, as the Act is still violated, and the difficulties in the way of prosecution to conviction are increased by the experience licensed publicans have obtained in the best methods of evading detection and conviction. There are still far too many hotels licensed, leading to competition, with the usual inducements to the working classes to spend their wages in drink. I regret to add that the statistics and general information obtained from year to year are not encouraging as evidence of any marked decrease in intemperance.”

The superintendent of police for the metropolitan district, Sydney, in a letter written on the 26th May, 1893, addressed to the inspector-general of police, enclosing a report from the licensing inspector for the metropolitan police district relative to the operations of the Sale of Liquors Licensing Acts of 1882 and 1883, stated with reference to the local option law of the colony:—

“The local option law to which he (the license inspector) especially refers is much too limited in its operation to afford a satisfactory test of the value of the principle; but, considering that it has been the means of replacing a number of very inferior houses by buildings of a superior class, which are not much frequented by persons addicted to intemperance, its operation has certainly been beneficial, and I am decidedly in favour of such an extension of the principle as would approximate to full local option.” He adds: “The slight decrease in the number of persons arrested for drunkenness in 1892, relative to population, is, I think, as much the result of the absence of about one-half the metropolitan force at Broken Hill for several months as of the want of means to purchase liquor by the people. The difficulties experienced in enforcing the Sunday closing provisions of the Act have in no degree diminished.”

The district licensing inspector of the metropolitan district, writing on the 25th May, 1893, stated that no alteration in the licensing liquor law of the colony had taken place since 1883. He attached a copy of a report which he had previously made on the last local option vote taken in the metropolitan suburban municipalities in February, 1891, and also a report of the vote taken in the city of Sydney in the following December. He remarks: “The same apathy was shown as in former years; where no contested election took place scarcely any votes were recorded.” The number of hotels in this district were reported by the same gentleman to have been:—

December 1889,	855,	being one hotel to 411 mean population.
“ 1890,	852,	“ 435 “
“ 1891,	846,	“ 461 “
“ 1892,	833,	“ 487 “

And he remarked that although the population had increased, the number of hotels had been reduced by 22, caused principally by old worn-out houses having been closed through the objections made by the police to granting them renewals of licenses.” He appended to his report the following statement of arrests for drunkenness in the metropolitan district:—

Year.	No. of arrests.	Mean population.	Proportion of arrests to per 100 of mean population.
1889	9,924	351,475	2·8
1890	9,894	370,355	2·7
1891	11,442	389,655	2·9
1892	10,740	405,490	2·6

The inspector remarked: “The proportion for 1892 is lower than the previous years, caused by great depression and distress among the working classes through want of employment.”

The same officer reports: “As a factor in the repression of drunkenness, I do not think the local option vote in this district has had any appreciable effect. It

has certainly prevented the licensing of new hotels, except where buildings have been erected containing over thirty rooms, in order to overcome the operations of the vote. Such houses, when licensed, have proved in the majority of cases perfect failures as residential hotels, the sale of liquor being the only trade done."

It may be mentioned as a matter of interest that a return made of the result of local option voting in the city of Sydney in December, 1891, shows that in eight wards, containing 23,361 citizens entitled to vote, the total number of votes cast was 8,203 in all the wards.

On the question, "Shall any new publicans' licenses be granted in respect of premises situated within the above (ward or municipality) for the period of three years from this date?" the votes were divided as follows:—

Yes	1,566
No.....	2,606

The granting of new license was negatived in every ward.

On the second question, "Shall any renewals of publican's licenses be granted in respect of premises situate within the above (ward or municipality) for the period of three years from this date?" the vote was in five wards, "No," and in three wards, "Yes." The total numbers voting were:—

Against removals.....	2,154
In favor of removals	1,877

It appears that in the metropolitan licensing district votes were also taken in 1888 and 1891. The same gentleman, the inspector of licenses for the metropolitan licensing district, in a letter dated the 27th April, 1891, reported that in 1891, when the vote was taken, there were 58,766 voters on the list. It appears that the votes were taken in two divisions, in accordance with the local option law. In the first division A., the vote was on the question whether any new licenses should be granted or not. It appears that in division A. 12,101 votes were cast, and in division B, 11,626. These figures amount to about 21 per cent of the total voters on the list. This was said to be about 1 per cent more than the number which voted on the previous occasion, when the total on the list was 50,356. The result of the voting in 1891 was that out of 99 elections the local option vote was carried in 89 in the negative, and 10 in the affirmative in both divisions.

The following figures were given as the result of the licensing business in the suburbs from the date the local option vote was taken in 1888:—

New publicans' licenses:—

Granted	1
Refused	3
Withdrawn, etc	1

Conditional licenses:—

Granted	17
Refused	47
Withdrawn, etc.....	45

It was stated that in the suburban municipalities there were :

In 1885	298 hotels.
1888	330 "
1891	351 "

The inspector of licenses concludes his report with the following observations:

"I have again to remark that where no contested election took place very little interest, according to the result of numbers, seems to have been exhibited, and the majority of those entitled to vote appear to have been apathetic about the matter. In Bellvue ward, Woolahra, only one vote was recorded. The operation of the vote has been quite secondary to the firm stand taken by the licensing bench in refusing licenses to places that were not clearly shown to be of public convenience and required utility."

Liquor Traffic—Commissioners' Report.

NEW ZEALAND.

The total population of this colony, exclusive of Maoris, was given as being, in 1892, 650,433. In addition there were 41,993 Maoris. The population of Wellington, the capital, was, in 1891, 31,021.

The following figures were given in regard to crime, etc., in 1892 :—

Europeans summarily convicted.....	13,000
do convicted in higher courts.....	184
In jail, December, 1892.....	447
Indoor paupers, 1892	680
Children wholly or partly maintained by Government.....	1,489

This colony has in force a system of license for the restriction and regulation of the liquor traffic. Prohibition of liquor to natives is partially in force. The word "native" includes full-blooded Maoris, and half-castes.

"The Native Licensing Act" was passed in 1878. It provided that on a petition of one third of the adult male and female residents, or of not less than ten of the chief and principal natives, the Governor might proclaim an area as under prohibition, or he might so act of his own motion.

Supplying in any way liquor to a native or to persons for the consumption of natives, or bringing liquor into such area, becomes punishable by fine, £20 to £100, and forfeiture of license, if the offender is a licensee. Licenses held by natives are ended by the proclamation, and no licenses may be issued in such area. This does not apply to liquor used or administered medicinally.

"The Licensing Act, 1881," amended and consolidated all existing laws. It provided that "The Distillation Act, 1868," "The Adulteration Prevention Act, 1880," and "The Native Licensing Act, 1878," should remain in force, except where specifically amended in the present Act, and it exempted perfumery, liquor for medicinal purposes, home produce, if sold in quantities of not less than two gallons, auctioneers selling not less than five gallons, and the refreshment rooms of the Houses of Parliament and military canteens, if established by law, from the application of this Act.

Licensing districts:—Undivided boroughs, wards of divided boroughs, ridings of counties and road districts are ordinary licensing districts. Counties may be divided into special districts, or special districts may be formed in thinly-populated localities.

Licensing committees:—Any manufacturer of liquor, person directly or indirectly interested in the traffic, Government, county or borough official is disqualified, and incurs a penalty of £50 by acting on any licensing committee. Five persons will be annually elected as the licensing committee in each district. In case of vacancies by resignation or death, the Governor shall appoint persons, one to fill every such vacancy. In special districts the Governor shall appoint a committee.

Native districts:—The clauses of the Act of 1878 are re-affirmed, save that fixing the penalty for selling, etc. The penalty is here fixed as not exceeding £20.

Licenses :

1. Publican's license authorizes the sale of liquor in any quantity on premises specified, between the hours of 6 a.m. and 10 p.m. The fee in boroughs is £40, and elsewhere £25.

2. New Zealand wine license authorizes the sale on premises specified, between 6 a.m. and 10 p.m., of any liquor, being a production of the colony, of not more than 20 per cent of proof spirit in quantities not exceeding two gallons. These may be issued in boroughs only; fee £1.

3. Accommodation license authorizes the sale on premises specified on terms of repairing, or keeping in repair, a road, or bridge near the premises, which must be five miles from nearest licensed premises; fee not exceeding £20.

4. Bottle license authorizes the sale of liquor in bottles, six or twelve to the gallon, in quantities of not less than one reputed quart, not to be consumed on the premises; fee £40.

5. Packet license authorizes the sale on board vessel during voyage to passengers; fee, £5.

6. Wholesale license authorizes the sale in quantities not less than two gallons, not to be consumed on the vendor's premises; fee £20.

7. Conditional license authorizes licensee of hotel to sell till midnight, or to open and use more than one bar, each extra bar to be endorsed on the license; fee, not exceeding £30.

The Act fixes a standard of accommodation for all licensed places.

Licensing meetings shall be held in December, March, June and September in each year, and an annual meeting in June, one month's notice of all meetings to be given. All applications to be heard in open court. Applicants to be notified of objections.

Local option:—No new publicans, wine, bottle or accommodation license can be issued unless the ratepayers decide that the number of licenses may be increased. In case of such decision, the power of discretion still rests with the licensing committee. New licenses must be issued in June.

Applications:—Notice of application in writing must be given the clerk of the committee, twenty-one days before the meeting, and must be posted on the premises and published in three consecutive issues of a newspaper circulating in the district.

Objections:—Ten ratepayers, or male or female residents, may object to any application, by a petition lodged seven days previous to the date of hearing. Any inspector or male or female adult resident, or the owner of the premises, may object personally at the time of hearing. In native districts five adult male or female residents may object. The council of any town, or the governing body of any corporate town may object, on 1st, the character of the applicant; 2nd, the premises not being in repair, or not containing sufficient accommodation; 3rd, the license is not requisite, would endanger the peace of the district, or is in proximity to a church, hospital, or school.

The granting of licenses is to be at the discretion of the committee. Licenses may be cancelled for improper conduct of a house.

Licenses may be transferred, subject to objection; fee, £2.

Fees for licenses in borough, county and road districts shall go to the respective treasurers thereof; elsewhere, to the public treasury. Fines and penalties shall be applied to the public account.

All licenses, forfeitures, disqualifications, etc., shall be registered, such registers to be open to inspection on payment of a fee of one shilling.

The chief offences are not producing license when lawfully demanded, employing any female, other than the wife or daughter, in the house more than ten hours a day, or allowing a female to serve in bar after 11 p.m., employing or permitting girls to dance, refusing to receive travellers, employer paying wages in licensed premises, refusing to receive a corpse for inquest. The Act contains the usual provisions for the protection of morality.

Helpless drunks placed in the cells must be visited at intervals not exceeding three hours, and if the senior constable present deems advisable, shall have immediate medical attendance. Magistrates may remand such persons for a period not exceeding 7 days to a hospital, or other place for treatment, they being deemed in the custody of the jailer; costs of such treatment and maintenance to be paid by the person, in addition to the penalty imposed, or in default, imprisonment, with or without hard labor, for not more than three months.

In all cases of imprisonment under this Act hard labour may be added.

No conviction can be cited as a previous conviction after a lapse of five years.

Two convictions under this Act within six months may forfeit the license.

A second conviction within five years for permitting drunkenness, harbouring disorderly persons, permitting gambling, and supplying children, or two previous convictions, against one or more sections of the Act, shall disqualify for five years. Three convictions on the same premises shall disqualify the premises for two years.

Owners of premises, not being the occupiers, shall be notified of convictions, and provision is made for them to protect their interests under the Act.

Liquor Traffic—Commissioners' Report.

For defacing an indorsement of a license the penalty is not exceeding £5.

In case of riot, two justices can order the closing of licensed premises. For not obeying such order, penalty not exceeding £50.

In case of disturbance or rebellion, districts may be proclaimed, when all licensees must close their premises. The penalty for supplying liquor in such proclaimed districts is £20 to £100. No liquor can be brought into such a district without a permit, without being liable to seizure.

For insulting a member of a license committee, or interrupting their proceedings, the penalty is not exceeding £10; in default, 14 days' imprisonment.

For committing perjury before a license committee, the penalty is the same as ordinary perjury.

Clubs, not less than 20 members, must possess a charter and pay a fee of £5 annually. Clubs of not less than 10 members may obtain a provisional charter; fee £5. This charter is withdrawn unless the club secures the full number of members.

This Act was amended in 1882, when the licensing committee were given three years' life, being elected every three years instead of annually.

Power was also given the licensing districts, under local option clauses, to restrict the number of licenses to be issued.

The Earl of Onslow, Governor, in a despatch in 1890, states: "It is admitted on all sides that the 'local option' clauses of the Act have not had the effect anticipated, and it is in contemplation to introduce a Bill during the ensuing session of Parliament, to enable a direct issue to be placed before the people, and to be decided by them."

The despatch further stated that licenses could be obtained with comparative ease, and illicit sales were confined to remote settlements. The natives were described as being apathetic in the matter of the license law.

The following table shows the consumption of alcoholic liquors per head:—

Year.	BEER.		SPIRITS.		WINE.	
	Excluding Maoris.	Including Maoris.	Excluding Maoris.	Including Maoris.	Excluding Maoris.	Including Maoris.
	Galls.	Galls.	Galls.	Galls.	Galls.	Galls.
1881.....	10·215	9·377	1·159	1·064	0·335	0·308
1882.....	10·523	9·684	1·153	1·061	0·351	0·323
1883.....	9·435	8·709	1·088	1·005	0·315	0·291
1884.....	8·769	8·121	0·999	0·923	0·272	0·253
1885.....	8·414	7·840	0·899	0·825	0·261	0·243
1886.....	7·861	7·333	0·820	0·765	0·212	0·198
1887.....	7·561	7·148	0·770	0·719	0·198	0·185
1888.....	7·133	6·670	0·820	0·767	0·167	0·156

A return presented to the English House of Commons in June, 1894, shows that "no alterations of the Licensing Acts have been made in this colony."

NORTH SEA FISHERIES

The evils arising from the sale and bartering of liquor amongst the fishermen of the North Sea, outside of territorial waters, attracted such general notice that in 1882 active endeavours were made to secure an international convention. These were so far successful that in 1886 the representatives of Great Britain, Germany, Belgium, Denmark, France and the Netherlands assembled at the Hague, and on the 16th November, 1887, signed a convention to the following effect:—

Article I provides that the provisions shall apply to the North Sea, outside territorial waters.

Article II prohibits the sale or purchase of spirituous liquors in the district, and the exchange, especially for the products of fishing, gear, or equipment of boats, or fishing implements.

Article III. Boats dealing with fishermen in provisions, etc., must be licensed by their own government, subject to (1) : Not carrying spirits in greater quantity than is necessary for its own crew; (2) all barter for articles mentioned above is forbidden. Licensed vessels must carry a special and is uniform mark.

Article IV. High contracting parties must legislate for the punishment of offences against the foregoing articles.

Article V. Each tribunal will take cognizance of offences by their own vessels, notifying the other tribunals of offences by their respective vessels.

Article VI. Prosecutions for infractions to be by the State in each country, under its own laws.

Article VII. Cruisers of the high contracting parties having charge of the police of the fisheries shall enforce these provisions. Resistance to officers of such cruisers shall be considered as resistance to national authority. Offending boats may be taken into port of the nation to which they belong.

Article VIII. Proceedings under these provisions to be as summary as possible.

Article IX. Laws made in each country in respect to these provisions are to be communicated to the other countries interested.

Article X. States not signatory to the convention may adhere to it, on request notified to the Government of the Netherlands.

Article XI. The convention shall be in force for five years, but may be continued annually from year to year, on twelve months' notice being given.

Article XII. The convention to be ratified, if possible, within one year.

The last clause was not possible. The French Government refused to ratify the convention, and on February 13th, 1893, the remaining powers agreed to abide by it, allowing France, if she so desires, to come in under Article X.

The period of life of the convention was reduced to one year, three months' notice of continuance being necessary from year to year. .

QUEENSLAND.

The population of this colony was, in 1892, 421,297. The capital is Brisbane, which has a population of 48,738. The colony separated from New South Wales in 1859. There are collected £55,632 for licenses (not stated what kind). In 1892 the number of persons convicted for serious offences was 203.

This colony is under license, with provision for local option.

License.—The Licensing Act provides for the establishment and constitution of licensing districts and licensing authorities; of officers and the duties of officers under their direction; the granting, renewal, transfer, removal and transmission of licenses; the obligations, duties and liabilities of licensees; the sale of liquor by unlicensed persons; local option. The law also contains certain necessary general provisions.

Restrictions.—The Act places the following restrictions upon licensees. No licensee can leave his house open, or permit liquor to be consumed on the premises, except from 6 a.m. to 11 p.m., on the six business days of the week; from 6 to 9 a.m., from 1 to 3 p.m., and from 8 to 10 p.m., on Good Friday and Christmas day; nor shall he keep his house open for the sale of liquor on Sundays. A licensee is not prohibited from selling liquor at any time to a lodger in his licensed premises, a bona-fide traveller seeking refreshment on arriving from a journey, or to any person suddenly disabled by accident or sickness, and brought on his premises. A licensee is at liberty to close at 10 p.m., and remain closed till 7 a.m., and to remain closed on Christmas day and Good Friday. If in a municipality or town, he may refuse to supply a traveller on Sunday. Habitual drunkards, children under 14 years of age, any boy or girl apparently under 18 years of age, insane persons, or aboriginal natives of Australia, the Pacific Islands, or Polynesia, born in the colony, or any half-caste

Liquor Traffic—Commissioners' Report.

of these races, are interdicted from obtaining liquor. The penalty for supplying a native is £5 for each and every offence.

Local option.—The following is a brief summary of the provisions for local option contained in the Act. Any number of rate-payers in any area, not being less than one-sixth of the whole, may, by notice in writing, given not later than the 1st of November in any year, require the chairman of the local authority to take a poll of the ratepayers of such area for or against the adoption of all, or any, of the following resolutions, to have effect within that area:—

1st. That the sale of intoxicating liquor shall be prohibited.

2nd. That the number of licenses shall be reduced to a certain number, to be specified in the notice, not being less than two-thirds of the existing number.

3rd. That no new licenses be granted.

The chairman of the local authority to be the returning officer to take the poll.

To carry the first resolution requires a majority of two-thirds of the votes recorded, to carry the second or third, a bare majority of votes cast. Provided should the vote be taken upon more than one resolution, (a), only one resolution shall be adopted; (b), if the first resolution is carried, it shall be adopted, whether either or both of the other two resolutions be carried or not; (c), if the second resolution is carried and the first is not, it shall be adopted whether the third be carried or not; (d), if the third is carried, and the first and second not, it shall be adopted. The first resolution being carried, it comes into force June 30th in the year following that in which notice for the poll was given. The second being adopted, comes into operation at the next general meeting of the licensing and the licensing authorities on receiving notice of the carrying of the third, are precluded from issuing any fresh licenses. No new poll can be taken on the first resolution for three years after its adoption; on the second and third, for two years from the date of the first poll.

No test of local option. Mr. William T. Blakeney, Registrar-General of Queensland, in a report dated 18th January, 1890, says:—

“It will be observed that the principle of local option came into force under the Act at the close of 1885, and it was full six months later before any action was taken thereunder; therefore it is obvious that the period which has elapsed since the law was put in force is too short for any reliable deductions to be made as to its workings. I have, however, caused a return to be prepared showing the results of the voting by local tax payers under the local option clauses, and the localities in which the provisions of the Act have been enforced, or otherwise. Referring to this return, it will be seen that up to the present time no poll has been demanded on the first resolution, that only one poll has been taken on the second, and that the chief interest has been with regard to the third, on which 43 polls has been taken in different parts of the colony. As a result of the polling, the resolution was carried in 42 places, and lost in one, but in five places where a second poll has been taken in 1889, the action of carrying the resolutions in 1886 was rescinded, from which it would appear that a certain amount of reaction on the subject was taking place. In one case, owing to the poll having been improperly taken, on an application made to the Supreme Court the result of the poll carrying the resolutions was upset.

I would also draw attention to the comparatively small number of votes recorded respecting the resolutions, compared with the population (unfortunately I cannot now obtain a return of the number entitled to vote), which shows that for a large porportion of the people the subject has no interest, the opposition to the sale of liquor being principally worked up by persons influenced by conscientious objections to the use of alcohol, and on the opposite side are to be found principally those who have vested interests in the liquor traffic.

Drunkenness and crime in the colony. The action under the local option clauses of the Act, as previously stated, has not had a sufficiently long trial to prove whether or not it

will have any beneficial effect on the criminal statistics of the colony. The following is the return for ten years:—

Year.	Mean Population.	Convictions for Drunkenness.	Ratio per 1,000 of Population.
1879.....	214,180	2,101	9·81
1880.....	221,964	2,086	9·40
1881.....	226,022	2,839	12·56
1882.....	237,611	2,926	12·31
1883.....	267,865	3,580	13·36
1884.....	298,794	4,682	15·33
1885.....	318,414	4,972	15·62
1886.....	334,765	5,194	15·52
1887.....	354,777	5,661	15·96
1888.....	387,201	5,883	15·19

“It shows that there was a sudden increase in drunkenness in 1884; that the proportion fluctuated slightly since then up to the end of 1888, the last year for which complete statistics are available. Any beneficial effect can only be expected subsequent to the year 1886, but it is only in the proportion for 1888 that a slight decrease is observable.”

Mr. Blakeney also encloses statistics of cases disposed of by the benches of magistrates, from which is prepared the following table showing the number of convictions by the magistrates during a period of ten years, for the offences named (cases of drunkenness not included):—

Year.	Population.	Offences Against Person.		Offences Against Property.		Other Offences.	
		Convictions.	Ratio per 1000.	Convictions.	Ratio per 1000.	Convictions.	Ratio per 1000.
1879.....	214,180	646	3·01	456	2·13	2,559	11·96
1880.....	221,964	674	3·03	536	2·42	2,755	12·41
1881.....	226,022	642	2·83	566	2·50	3,206	14·18
1882.....	237,611	846	3·14	536	2·26	3,717	15·64
1883.....	267,865	1,368	5·11	655	2·45	4,185	15·62
1884.....	298,794	1,524	5·10	778	2·60	4,636	15·52
1885.....	318,414	1,129	3·55	747	2·35	4,603	14·46
1886.....	334,765	1,123	3·35	882	2·63	5,642	16·85
1887.....	354,777	1,290	3·64	1,011	2·85	4,487	12·08
1888.....	387,201	1,273	3·29	1,008	2·60	5,566	14·37

The above does not include those cases committed for trial or sentence, as no returns of the higher courts are contained in the report.

A return presented to the English House of Commons in June, 1894, shows that no changes have been made in the law. It also contains the data from which the following extension of Mr. Blakeney's table is prepared *re* convictions for drunkenness, and also the tables for convictions for other offenses. The figures in regard to

Liquor Traffic—Commissioners' Report.

population are taken from "the Statesman's Year Book," and include an estimate of 12,000 for the native population :

Year.	Population.	Convictions for Drunkenness.	Ratio per 1,000 of Population.
1889.....	399,463	6,002	15·03
1890.....	406,658	6,192	15·22
1891.....	410,330	5,450	13·28
1892.....	421,297	4,810	11·42

No explanation is given in the papers of the large reductions in the number of cases of drunkenness in the year 1891-1892.

OTHER OFFENCES.

Year.	Population.	Offences against person.		Offences against property.		Other offences.	
		Convict- ions.	Ratio.	Convict- ions.	Ratio.	Convict- ions.	Ratio.
1889.....	399,463	1,369	3·43	1,180	2·98	6,236	15·61
1890.....	406,658	1,496	3·68	1,176	2·89	5,706	14·03
1891.....	410,330	1,483	3·61	1,181	2·88	6,129	14·90
1892.....	421,297	1,291	3·06	1,113	2·64	6,449	15·31

In the return which embodied Mr Blakeney's report the population in many of the polling districts was not given. There was no record of the numbers voting for or against the resolution, in several instances the majority only being shown. Taking the cases where the population was set out, and also the number of votes polled, it appears that the numbers voting ranged from 2 to 17½ per cent of the population, in many cases the votes being less than 5 per cent of the population.

In 1894 another return was laid before the House of Commons (England), in which the results of the voting on local option in 49 municipalities were given, viz:—

1. In 30 instances the votes were against any increase in the number of licenses.
2. In three cases the resolution against any increase in licenses was defeated.
3. In 10 cases the vote was cast in favor of rescinding previous votes for no increase in licenses.
4. In 3 cases the vote was in favor of a decrease of the number of licenses.
5. In 1 case resolution No. 1, (that the sale of liquor be prohibited), was defeated.
6. In 1 case resolution No. 1, was carried, the total number of persons who recorded their votes being 96.

In 1 case the resolution in favor of no increase in licenses was carried, but was rescinded by the Supreme Court for informality.

The ten cases of repeal included the 5 cases referred to in Mr. Blakeney's memo., although they were not included in the report he presented with it.

SOUTH AUSTRALIA.

There is a population of 331,721 in this colony. The capital is Adelaide; population, 136,766.

The liquor traffic in South Australia has always been restricted and regulated by license. The more recent Acts are Act No. 16, of 1869-70; No. 22, of 1872; No. 52, of 1876; No. 68, of 1877; No. 69, of 1877, and No. 191, of 1880. A still later Act will be referred to presently. The Act of 1869 commenced the restriction of Sunday selling.

The Act of 1880 is most voluminous, containing 145 clauses and 25 schedules. It is called "The Licensed Victuallers' Act, 1880," and contains the following provisions:

"Bench" means licensing bench of justices for the district.

"Liquor" means any spirituous, malt, vinous, or fermented liquor.

"Mead, wine, cider or perry" mean these liquors made from fruit grown in the province, and from honey, the produce of the province, and not containing more than 35% of proof spirit.

"Town" means any corporate town and township containing 40 dwelling-houses within the radius of one mile.

Liquor in less quantities than five gallons may not be sold wholesale.

Spruce beer, liquor for medicinal purposes, mead, wine, cider and perry in quantities of not less than one quart bottle (reputed), not for consumption on the premises, sold by the occupier of a vineyard or orchard on any day but Sunday, and liquor supplied as "allowance" to a crew of a vessel, are exempt.

Licenses for the sale of liquor are of five kinds:

Publican's license, to sell liquor in any quantity on the premises specified; fee, £30 in towns, £15 elsewhere.

Storekeeper's license, to sell not less than one gallon of one kind of spirits, or one dozen reputed quart bottles of wine, not to be drunk on the premises; fee, £10.

Wine license, for the sale of wine, mead, cider and perry in any quantity; fee, £5.

Storekeeper's colonial wine license, to sell wine, mead, cider and perry in not less than one quart bottle, not to be drunk on the premises; fee, £3.

Packet license, for sale to passengers on board vessels; fee, £10.

Licenses take effect from day of issue. All licenses, except packet licenses, terminate on 25th March. Licenses issued for less than twelve months, pay proportion of fee only.

Justices interested in the trade in any way are excluded from the licensing bench. Each bench shall sit annually on March 25th, and quarterly on the second Tuesday in June, September and December. Special sittings shall be held for considering forfeitures of license.

Applications for license must be in writing, accompanied by plans, and be made at the meeting of the bench prior to the date of consideration. Notice of application shall be given by advertisement in two daily and two weekly issues of a newspaper, in two issues of the *Gazette*, and by notice posted on the house and land.

Objections to license: Two-thirds of the ratepayers of the district may object by signing memorial, of which notice has been served on applicant. New applicants for licenses in existence must be certified as to character. The penalty for signing a false character is "not exceeding" £5.

Objections may be based on the character of the applicant, the nature of the premises, not filing of plans, danger to the quiet of the locality, or the vicinity of a church, school or hospital.

Tap-rooms must be approved by the bench, and be under the management of an approved manager.

Proceedings for the transfer of license are the same as those for obtaining a license.

Provision for the protection of interests in case of death, insolvency, etc., are made.

Removal of license requires application and notice, and is open to objection.

Liquor Traffic—Commissioners' Report.

Five days' certificates to sell may be granted in case of races, regattas, cricket matches, shows, etc., to licensed persons only; fee, £2.

Certificates may be granted for the sale of liquor at a gold field; fee for liquor, £5, and for wine, £1 for three months.

Licenses are forfeited for the following causes:—Conviction for the felony of the licensee; three convictions of licensee for any offence. The landlord may in these cases temporarily carry on the business.

Liabilities and penalties: Any justice disqualified from sitting on the licensing bench, and who takes part in the business thereof; fine, £100. Allowing games on Sunday, harbouring prostitutes, thieves or disorderly persons; penalty, not exceeding £20. Not having name and light (at night) in front of the premises; penalty, 10s. to £10 for each night or part of a night. Having an unapproved tap or manager; penalty, £5 to £50. Refusing to receive travellers, horses, or a corpse for inquest; penalty, £1 to £20. Lodgers' goods are not seizable for rent. No debt for liquor less than 20s. at one time is recoverable at law. Taking any payment but money or bank notes; penalty, £10 to £50. In any way supplying an aboriginal native or half-caste; penalty, £1 to £10. Supplying children under 15; penalty, £1 to £5. Supplying a constable on duty; penalty, not exceeding £5. Supplying an intoxicated person; penalty, £10 to £50. Allowing music or dancing to take place without a permit; penalty, £5 to £10; fee for permit, 5s. Habitual drunkards may be interdicted for twelve months; penalty for supplying them, first offence, not exceeding £5; any subsequent offence, £5 to £10. Not having conspicuously posted in the tap-room or bar certain clauses of the Act prohibiting the supplying of liquor to those mentioned therein; penalty, 40s., and 10s. for each day that the law is not complied with. Having any retail store other than in the case of wine licenses, refreshment room or confectionery store, communicate with licensed premises; penalty, up to £5 per day. The same applies to eating houses and licensed premises. Employing a person who has been refused or forfeited a license; penalty, £2 to £20. Sharing profits with, or entrusting management of house to, an unlicensed person; penalty, £5 to £100. This does not apply to a partnership between a wine licensee and confectioner carrying on their respective businesses in the same premises. Keeping house open after 11 p. m., or before 5 a. m. on week days; penalty £2 to £10. A licensee may close at 10 p. m., or supply lodgers or *bona fide* travellers. Outer doors between any street and tap-room must be closed on Sunday; penalty, not exceeding £5. *Bona fide* travellers or lodgers may be supplied, others also between 1 and 3 p. m.; penalty for breach of restriction, £5 to £50.

The Act contains stringent provisions for the better maintenance of law and order.

This Act was the immediate outcome of the report of a commission appointed in 1879, and in accordance with their recommendations. Two members of this commission, however, strongly urged the adoption of an extended local option system in preference to the mode of granting licenses therein contained. In dealing with the promotion of temperance, the Commissioners say:—

"It must rest with the youth of both sex in South Australia. They should be taught to avoid the use of intoxicating drinks in connection with their work and recreation, to look upon them as dangerous and unnecessary, to discourage those who are addicted to the pernicious habit whenever they are met, to point out to those who advocate short hours of work that time so taken from healthy industry must not be wasted in habits of degrading indulgence and idleness."

On the 16th of September, 1890, "A bill for an act to amend the Licensed Victuallers Act, 1880," was introduced into the House of Assembly, and passed. It provides for the licensing of clubs of bona-fide character having, in Adelaide, not less than 50 members, and elsewhere 25, on payment of an annual fee of £5, the steward or manager to be registered and the club open to the inspector. Upon complaint proved, the certificate shall be cancelled and the club have to come under the full operation of the License Act.

License fees: The Act provides for the payment of fees in towns on the scale of assessment; in the country districts the annual fee to remain £15. The following is the scale:—

Annual Value.	License Fee.
£100	£15
200	20
300	30
400	35
over 400	40

Objections: Licenses may be objected to on the ground of the applicant's character; that he has forfeited a license within six months; that communication exists between the premises and some other retail store, or they have a common yard; insufficient accommodation; that such licensed premises are not necessary; vicinity to a church, school or hospital; lack of accommodation of places of decency; that recommendations of the bench have not been complied with. Premises 10 miles from Adelaide must provide one sitting room, and two sleeping rooms, with separate entrance, places of decency, and stabling for four horses. Objection can be made in the case of wine licenses on the ground of the applicant's character; that he is interested in the keeping of a brothel; that he is of drunken habits, and all the valid objections to a publican's license, except that of accommodation. In the case of store-keepers' licenses, the objections shall be as to character and previous conviction.

Part IV of this bill makes provision for local option. It provides that "All licenses not existing shall, after fifteen years from the passing hereof, not be renewed as a matter of course, but shall thereafter be renewed or not at the discretion of the licensing bench."

One-tenth of the residents in a district, whose names are on the roll of rate-payers, may petition for a vote to be taken as to:—

1. Whether any new publicans' wine or store-keepers' colonial wine licenses in respect of premises not being so licensed shall be granted in such local option district.

2. Whether the number of publicans' wine or store-keepers' colonial or wine licenses in such local option district shall be decreased to any number below the then existing number or not.

The law which was passed in 1891 further provided (clause 15) that if the rate-payers of any local option district determine that there shall be a reduction in the number of licenses issued below the then existing number, the licensing bench having jurisdiction in such district shall determine the licenses which shall not be renewed, and notice is to be forthwith given by the clerk of the licensing bench to the holders of licenses; "and such owners and occupiers shall be entitled to compensation, to be determined as hereinafter provided, and where the occupier is not the owner of any such premises, the lease or agreement under which such occupier holds the same shall, if he shall so elect, be deemed to be annulled; provided that no person shall be deprived of a publican's license in pursuance of any such determination, unless and until he has received the compensation, if any, due to him in respect thereof under this Act, or the same has been tendered to him."

It is provided (clause 18) that the amount of compensation to be paid to the owner of any premises by reason of the annual value of such premises being diminished, owing to the publican's license being taken away therefrom, in consequence of the determination of the ratepayers of the local option district in which such premises are situated, and to the occupier by reason of his lease or agreement being annulled, and for the loss of his license and business as a publican, shall be determined by arbitration only.

It is further provided (clause 22) that the compensation to be paid on the refusal of the bench to renew any license, in consequence of the result of the poll prescribed by this Act, shall be calculated on the following basis, and not otherwise:—

"The difference between the rental value of the premises as a licensed house, and as an unlicensed house, from the time of the non-renewal of such license, until

Liquor Traffic—Commissioners' Report.

a period of fifteen years from the passing hereof. Should the holder of the freehold of the licensed premises and the licensee be different persons, or should the lessee and the licensee be different persons, or should there be more than one lease subsisting of the said premises, or should the premises be mortgaged, or should there be any lean thereon, the said compensation shall be divided between all the persons interested in such proportions and manner as the said arbitrators, or a majority of them, may determine."

It is further provided (section 23) that no compensation shall be payable to any person in respect of the refusal to renew a license issued after the date of the passing of the Act in question.

No house may be open on Sunday, but lodgers and bona-fide travellers may be supplied. Penalty for selling, not exceeding £20; for falsely representing oneself a traveller, not more than £10.

Special permits to sell on board any packet during a period not exceeding one day may be granted by a special magistrate or two justices; fee, £1. Liquor may not be taken on board any of H.M. ships without leave of the commanding officer; penalty, seizure of the liquor; fine, not exceeding £10. All bars must be locked up during prohibited hours, an open door affording *prima facie* proof of sale; penalty, £5 to £20. Provision for carrying on business in case of death of licensee.

A return laid before the British House of Commons in June, 1894, contains a report furnished Lord Kintore by Mr. W. J. Peterswald, Commissioner of Police. who says:—

"The liquor traffic in this colony has, on the whole, been conducted in a manner which, compared with its operation in other countries, can only be regarded satisfactory. Last year the number of convictions for drunkenness was 2,399, being 7.26 per thousand of the population, and the number of convictions for offences by licensed victuallers against the provisions of the Act was only 81. As in 1883, the convictions for drunkenness reached 4,362; the improvement in this direction is most marked."

Mr. Peterswald also reports that the local option clauses, though tested in one or two instances, have not resulted in the closing of any public houses. The least satisfactory feature is the working of the Act respecting total Sunday closing. He says, "a good deal of stratagem is employed to evade the Act."

TASMANIA.

The population of this colony is 146,667, that of Hobart Town, the capital, being 24,905.

The prisoners in jail at the end of 1891 numbered 165.

This colony has long been under license, the present Act, known as "The Licensing Act 1889," repealing the Licensing Act 21 Victoria, No. 39, and eight subsequent amending Acts.

The Act 53 Victoria, No. 37, now in force, defines "liquor" as being any liquor whatever containing not less than 2½ per cent of alcohol by weight.

Selling without a license incurs cumulative penalties of from £20 to £100, or, in default, imprisonment, with or without hard labour, from 6 to 12 months. Purchasers of liquor from illicit sellers, unless informers and witnesses against them, also incur a penalty.

Licenses are granted by a licensing bench of nine magistrates, the police magistrate and mayor in cities, and the warden in municipalities being *ex-officio* members. The court has all the powers of a court of general session, and meets annually, on December 1st, for the issue of licenses, and quarterly, in February, May, August and November.

Public-house license: fee £25, and for a separate tap £20, with fees to the clerk of the court for drawing case, and superintendent of police for preparing a list of rate-payers. This license includes permission to sell liquor on the premises mentioned, or not less than 7 quarts in any bonded warehouse. Twenty-eight days' notice of application may be given.

No one but the certified agent may sell liquor in a separate tap.

No woman, except the wife of the landlord, may sell liquor after 10 p.m.

Any resident ratepayer may, on giving five days' notice, object to the granting, transfer or continuation of any license.

A majority of the ratepayers of any neighbourhood in which a license is sought may petition against such application, and it is imperative on the licensing bench to entertain such petition, if duly lodged with the clerk of the peace ten days previous to the hearing of said application.

When an application is refused, no renewal of it can be made for three years.

The applicant must bear costs of successful opposition, but if the opposition appear to be vexatious or malicious, the magistrate can condemn the petitioner or petitioners in costs.

Should a license, owing to conviction for any offence, forfeit his license, or leave and abandon his premises, the owner of the place may apply to any two justices for leave to continue selling until the next ensuing quarterly meeting of the licensing board, as also in a case where a tenant neglects to apply for a renewal of license.

Offences:—Giving or allowing the supplying of liquor to any one under sixteen years of age; allowing any female, not the wife, to serve liquor after 10 p.m.; selling, except to lodgers and travellers, on Sunday, Good Friday or Christmas day; keeping open after 11.30 p.m. on week days, or being open before 5 a.m. from August 1st to March 31st or before 6 a.m. from April 1st to July 31st; a licensee may close at 10 p.m., if he desires; refusing to receive travellers or horses of travellers; allowing a store or shop to connect with the house or tap; not measuring liquor, or refusing to re-measure; supplying intoxicated persons; permitting music or dancing, outside of his private apartments; permitting noise or disorder; allowing dog or cock-fighting, boxing or wrestling; not assisting the police; being drunk or allowing his servants to be so; harbouring prostitutes, allowing a disorderly house, or permitting gambling; selling or holding unwholesome, adulterated or deleterious liquors.

A special night license may be granted by any two justices of the peace in petty sessions for such occasions as a dinner, ball, or other entertainment being held in the house. Fee, five shillings.

A second conviction forfeits the license.

Other licenses:—

A packet or steamboat license for sale to passengers only during voyage; fee, £10.

Railway refreshment rooms for the sale of liquor at any railway station, for one half-hour before and after the arrival or departure of any passenger train, with the approval in writing of the general manager or directors of the line; fee, if applicant do not hold a publican's license, £12 10s.; if he hold a publican's license, £5.

Races, etc.:—Licenses to sell liquor at races, volunteer encampments, fairs, regattas, etc., may be granted, the holder only to sell, provided applicant have the written consent of the authorities, or officer commanding. Applicant must be holder of a publican's license.

Legislative Refreshment Rooms:—A public-house licensee may be authorized by the Joint Committee of both Houses of the Legislature to supply liquor in the refreshment rooms in the House, at any hour of day or night, during the sessions of Parliament.

Theatre license to supply liquor in the refreshment room of any theatre during the hours of performance; fee, £5.

The Treasurer may, upon a certificate accompanied by the approval in writing of any two justices, grant a wholesale brewers', druggists' or importers' license, as the case may be.

Wholesale license, fee £25, permits the sale of not less than seven quarts at any one time.

Brewers' license, fee £12 10s, permits the sale of not less than five gallons of malt liquor of his own manufacture.

Liquor Traffic—Commissioners' Report.

Druggists' license, fee £5, permits the sale of medicines, drugs or certain defined liquors in prescribed quantities.

Importers' license, fee £10, permits the sale of, in bond, not less than 100 gallons of liquor, or not less than 20 unbroken packages.

Licenses granted for portions of a year only, carry proportionate fees. All renewals must be applied for at the annual meeting of the Board.

Liquor may not be taken on board any of H. M. vessels without the permission of the commanding officer; penalty, £10 for each offence and seizure of all liquor.

Granting of all licenses must be announced in the *Gazette*.

Fees for theatre licenses, permission to sell during prohibited hours, such as for balls, etc., and for certificate of transfer of railway refreshment room license, go to the municipality where collected. All other fees go to the Treasurer, and are applied to the Consolidated Revenue Fund; also all fines.

The manufacture of cider, perry or native wine, and the sale of the same in quantities of not less than two gallons is permitted.

Prohibitive clauses. Confirmed inebriates may be interdicted for twelve months, such interdiction to be renewable. Any prohibited person procuring liquor incurs a penalty of £5 for the first offence.

Upon the application of a relative, the superintendent of police shall prohibit any person having the liquor habit from being supplied with intoxicants.

An official return gives the following table:--

TABLE showing the extent of crime, the amount of drunkenness, and the actual consumption per head of wines, spirits and malt liquors, for 12 years.

Year.	Per 10,000 of mean population.			Per head of mean population.

* Maximum, † Minimum, ‡ Less, cases of drunkenness.

§ The figures prior to 1884 are relatively somewhat higher than they ought to be, owing to the inclusion of petty cases of non-payment of rates, etc., subsequently included amongst civil cases.

Mr. Bernard Shaw, commissioner of police, in forwarding this report, says:—

"These figures present many interesting considerations with reference to drink, drinking and crime. It is curious to observe, although there is evidently a perceptible relationship between drunkenness and other minor offences, that the immediate relationship between drunkenness, the average yearly consumption of intoxicating liquor and serious crime is far from being apparent. This will be observed by reference to the signs indicating the year when the maximum and

minimum were reached under each specific head. Whatever indirect effects spring from the excessive use of intoxicating liquors, the extent of actual drunkenness and the year's drinking does not correspond with the actual extent of serious crime within any one year during the last decade in Tasmania. It is excessive drinking by the same individual within a brief space of time which immediately induces the state of drunkenness, and not the quantity taken over a long yearly period; and hence it is quite conceivable that individual excesses within, say, each 24 hours, may be more frequent in some cases where the mean quantity per head per year of total population may be comparatively low and, conversely, there may be fewer cases of individual excess in drinking in some cases where the average drinking per head per year of total population is comparatively high. Generally, however, the mean per year is a good, if not infallible, index to increase or decrease in drinking habits."

Speaking of the action of the Act, he says: "The convictions for the illegal sale of liquor by unlicensed persons have been confined for some years past to newly formed mining centres, where licensed houses had not been opened, and to Chinese camps at other mining districts. There is little or no illicit sale in other parts of the colony.

"The provisions of the Act under which stores or premises where liquor is suspected of being sold may be searched under a justice's warrant, and the liquor seized and condemned, operate very well, preventing no doubt in many places any attempt to keep liquor for the purpose of illegal sale.

Some of the most beneficial provisions are those under which the sale or giving of liquor to persons who are addicted to habits of intemperance may be prohibited. This power of prohibition may be exercised by justices, or by superior officers of police, and has been resorted to in many cases, to the great benefit of individuals and their families.

"The offence of drunkenness has largely decreased, and is steadily decreasing in the colony. Records which are carefully kept by the police show the very gratifying result that arrests and convictions have diminished in number year by year, and have fallen to less than one-half in ten years, although the population has increased considerably during that period. They are as follows:—

" In 1883.....	1,781
" In 1892.....	815

"This is not, of course, to be attributed solely to the operation of the laws for regulating the sale of liquor, although the restrictions placed upon that traffic have, in some degree, assisted to lead to the result, but rather to the marked improvement in the habits of the people, who, in common with all other British communities, have exhibited a steady progress in the direction of temperance."

VICTORIA.

The capital of Victoria is Melbourne; population, 490,896. The total population of the colony is 1,167,828.

The following figures are given in regard to crime:—

Arrested in 1891.....	35,429
Summarily convicted.....	22,280
Committed for trial.....	1,177
Sentenced.....	729
In jail, December, 1892.....	1,725

In this colony a license system has long been applied to the liquor traffic, the laws relating thereto being consolidated and amended by "The Licensing Act, 1876," which, in turn, was repealed in 1885.

"The Licensing Act of 1885" is a stringent and bulky one, divided into seven parts, and containing 151 clauses and six schedules. By clause 2 all previous Acts are repealed. Several exemptions to the operation of the Act are given, the principal being the refreshment rooms of the Houses of Parliament, military canteens,

Liquor Traffic—Commissioners' Report.

bona-fide clubs, vendors of cider, wine or perry in quantities of not less than two gallons at any one time, the produce of grapes, apples or pears of their own growth, and for consumption on the premises.

The schedule of licenses embraces nine classes, and the fees range from £2 to £50, being based, in the case of taverns, on the annual assessment of the premises. In the case of an inn or tavern assessed at £200, the license is £50.

The colony is divided into licensing districts, corresponding with the existing electoral divisions. The number of victuallers licensed in any one licensing district shall not exceed one for each full 250 of the first one thousand inhabitants, and a further one for each subsequent full 500 inhabitants of each licensing district.

Clause 22 provides: "When, after the commencement of this Act, the number of victuallers' licenses in any licensing district is in excess of the statutory number, not including those authorized in excess of such statutory number by this Act, or when such number of victuallers' licenses is below the statutory number, one-fifth of the number of persons whose names for the time being are on the rolls of electors for the electoral division forming such licensing district may petition the Governor-in-Council to cause a poll to be taken to determine whether or not the number of such victuallers' licenses in such licensing district shall be decreased to any number below the number then existing, but not below the statutory number or to determine whether or not the number of such victuallers' licenses in such licensing district shall be increased to any number above the number existing, but not above the statutory number."

In case of the ratepayers demanding a reduction in number, the licensing court shall decide upon the licenses not to be renewed, but the owners and occupiers of such premises from which the licenses are taken must receive compensation. The same process may be applied to grocers' licenses, except that no title to compensation is conferred. Every determination of ratepayers shall continue in force three years. The powers, authority and procedure of the licensing courts are carefully defined. License inspectors are to be appointed to inspect premises, and there are also to be inspectors of liquor, who shall examine all liquors, selecting samples for analysis. The offering or giving of any bribe to an inspector, and the acceptance thereof, are both met by clauses of prohibitory stringency.

In all cases of application for renewal of license the record of applicant's previous career, the way in which he has conducted the house, and the character of the frequenters shall be laid before the court.

Habitual drunkards may be interdicted, and persons under 16 years of age cannot be supplied with liquor.

Sunday selling is strictly prohibited. Only one bar is allowed in each house, and a bar found open during prohibited hours is *prima facie* evidence of sale.

Section 120 provides, "If any licensed grocer supply, or cause to be supplied, any liquor, and charge for it under a fictitious heading or description, he shall forfeit and for a first offence any sum not less than £10 nor more than £20, and for a second and any subsequent offence not less than £20 nor more than £50."

Three convictions within three years suffice to disqualify a licensee from holding a license for three years; three convictions within such period on the same premises disqualify the premises for two years. Under certain circumstances where the licensee is only an occupier, the owner of the premises may, in case of the licensee forfeiting his license, or becoming personally disqualified, appoint an agent to carry on the business until the end of the year for which such license was granted.

The Act also contains stringent provisions for the regulation of the traffic and the maintenance of good order and morality.

The Act of 1886 consists of merely verbal amendments to strengthen and perfect the foregoing Act, therein called "The Principal Act."

"The Licensing Amendment Act of 1887" is also chiefly composed of verbal amendments. It provides for the settling, by arbitration, of the amount of compensation due to any licensee or owner through the depreciation in value of any premises by reason of loss of license following on a vote of the ratepayers.

The effect of the two amending Acts has been to make the Principal Act much more stringent.

License fees in boroughs, less five per cent for the cost of administration, go to the municipal fund. All fees elsewhere than in boroughs form a part of the consolidated revenue.

In a memorandum dated 26th May, 1890, the chief commissioner of police states that the stringent restrictive licensing laws which have been in operation since 1885 have done much to lessen offences by publicans and others. The law is rigidly and systematically enforced, and its general tendency is towards increasing national sobriety. Eighteen superintendents of police report, 1st, that the character of the accommodation has vastly improved; 2nd, that drunkenness is about stationary, (in five districts there is an increase due to the carrying out of public works or in proportion to increase of population); 3rd, that Sunday trading is decreasing, (three superintendents dissent on this point); 4th, that the police find great difficulties in obtaining evidence against publicans, owing to reluctance on the part of witnesses, who in some cases commit perjury.

A return laid on the table of the British House of Commons in June, 1894, shows that no change has taken place in the laws. A decrease in the number of arrests for drunkenness and in the extent of Sunday trading is reported. This however, is not attributed to the operation of the license law, but to depression in trade. The lack of inspection of clubs, and the facilities for obtaining club licenses, require amendment, and the regulations for wine licenses should be more stringent. Local option, where enforced, has not reduced drunkenness.

WESTERN PACIFIC ISLANDS.

The Western Pacific Islands include many small groups and islets, amongst them being,

The Friendly Islands,
The Navigators Islands,
The Union Islands,
The Phoenix Islands,
The Ellice Islands,
The Gilbert Islands,
The Solomon Islands,
The New Hebrides Islands,
The Santa Cruz Islands,

The Manihiki Islands, and all other islands in the Western Pacific not within the limits of the colonies of Fiji, Queensland, New South Wales or New Guinea.

These islands are under a High Commissioner.

A regulation was made in 1888 to prohibit the supplying of intoxicating liquor to the natives of these islands. The word "natives" means every person not of European descent.

Any British subject directly or indirectly supplying any native of any island shall be liable:—

1. To imprisonment not exceeding three months, with or without hard labor, and with or without a fine not exceeding £10; or,

2. To a fine not exceeding £10, without imprisonment.

Liquor may be administered medicinally; but the onus of proof of necessity shall rest with the persons so administering it.

In Rarotongo, one of the Manihika group, a license law appears to have been recently introduced (1891), and to have given rise to vigorous protest from the New Zealand Alliance, through Sir William Fox, their president.

Liquor Traffic—Commissioners' Report.

WESTERN AUSTRALIA.

The population of this colony is 58,674; that of Perth, the capital, is 10,040. In 1891 the proportion of the white population which could neither read nor write was 13.20. The following figures were given in regard to crime:—Summary convictions, 3,577; convictions in superior courts, 58. This is a reduction on 1891, the ratio being 60.96 per 1,000 of population in 1892, as against 66.55 per 1,000 in 1891.

The colony has the liquor traffic regulated and limited by license.

In 1880 the then existing acts were consolidated by the "Wines, Beer and Spirit Sale Act, 1880." Under this Act licenses are divided into ten classes:—

1. Publican's license, for the sale of any liquor in any quantity upon specified premises; fee, £50 in Perth or Fremantle, and elsewhere £40.

2. Packet license, for sale to passengers; fee £10.

3. Wine and beer license for colonial produce; fee, £5.

4. Spirit merchant's license authorizes the sale of imported spiritous liquors or wine in not less than two gallons; or any other imported fermented liquor (exceeding 30 per cent. of proof spirit) in quantities not less than eight gallons, in original packages; fee £5.

5. A gallon license authorizes the sale of liquors in less quantities than one gallon, not to be consumed on the premises; fee £10.

(6). A colonial wine license for the sale of liquor, the produce of fruit grown in the colony, in quantities not less than one pint, and not to be consumed on the premises; fee, £2.

(7). Billiard table license, not required by holders of general license, and not covering sale of liquor; fee, £10.

(8). A temporary license authorizes a holder of licenses No. 1, No. 3, or No. 10, to sell at any fair, races, etc., during continuance of such public amusement; fee, £1.

(9). An eating, boarding, or lodging house license for the supplying of boarders and lodgers with liquor obtained from a duly licensed house; fee, £1.

(10). A wayside house license stipulates that the house must be 10 miles from a town site, or in a town not exceeding 50 persons; fee, £10.

Applications for licenses must be made in writing, posted on Court House and premises, and advertised in a newspaper. The licensing court for hearing applications shall be an open court. It shall be composed of the resident magistrate and justices of the peace. Any justice interested in the sale or manufacture of liquor sitting in a licensing court incurs a penalty of £100. No woman may hold a license. In case of the death of a licensee, the widow may obtain a transfer of the license for the residue of the term. Licenses may be transferred upon application; fee, £2. In case of the death or insolvency of a licensee, his administrators, executors or assigns may continue the business for six months. Selling liquor without a license incurs a penalty of £30 for the first offence, and £50 for a subsequent one. Imprisonment, in addition, shall be optional with the court. The license is forfeited should the licensee refuse or hinder the admission of the police. The hours of sale are from 4 a.m. to 10 p.m. from 1st October to 31st March, and from 6 a.m. to 10 p.m. from 1st April to 30th September. Penalty for selling during prohibited hours, not exceeding £50. A permit for extension of hours is obtainable. Sales of liquor on Sunday, Good Friday and Christmas day are prohibited. Conviction for felony, perjury or any infamous offence forfeits the license. Employing an unlicensed person to sell liquor, unless a servant; penalty, not exceeding £50. Upon evidence under oath, warrants to search for liquor intended for illegal sale may be granted. If found, the liquor to be seized, and holder fined up to £50. The Act is very strict in its provisions for the satisfactory maintenance of law and order and the protection of morals.

This Act was re-enacted, with amendments, in 1884 and 1886. The chief feature in the amendments is the increasing of the penalty for supplying a native from £5. to £20

In 1890 Sir Malcolm Fraser, Governor, in a despatch states:

"So far as it is possible to ascertain, I believe the liquor laws here work

fairly well; but I am informed by the commissioner of police 'they are inefficient to prevent Sunday trading and sly grog selling.' The sale of spirituous fermented liquors on Sunday is by law prohibited, except to *bona-fide* travellers and lodgers. I am, however, informed that it cannot be said the closing on Sunday of licensed houses really checks Sunday trading or tends to diminish drunkenness. In this respect the laws may be capable of amendment, though the penalties now inflicted by law, when breaches are discovered, should really be a powerful deterrence."

In 1888 the quantity of spirituous and fermented liquors imported was 256,421 gallons, being 6.08 gallons *per capita* of population. The duty was £52,270, 13s. 3d., being £1. 4s. 10d. *per capita*, or nearly one-seventh of the colonial revenue for the year.

THE WEST INDIES.

BAHAMAS.

The capital of the Bahamas is Nassau, which had a population in 1891 of 11,000. The total population of the colony is 47,565.

There were, in 1892, 1,414 summary convictions, and 25 convictions in the superior courts.

The sale of intoxicating liquors in this colony is regulated by law. The principal statute is 38 Vic., cap. 26. This Act prohibits the importation, except under license, as well as places the sale under license. Licenses are of two kinds: 1st., a general license for the sale of all kinds of liquor; 2nd., a special license for the sale of wine, cider and malt liquor. Licenses are granted to approved persons only.

No sale is permitted on Sunday, and on week days from 4. a. m. to 8. p. m. only. Any store connected with a place where liquor is sold, or where other goods besides liquor are sold, must be closed entirely during prohibited hours. Supplying or harboring drunken persons, seamen, or policemen on duty is unlawful. Licensees must close their houses while a poll is being held. Selling liquor without a license, if of a spirituous character, is punishable by a fine of £20, and if malt liquor, wine or cider, £10, for a first offence, and imprisonment for each and every subsequent offence in either case. 45 Vic., cap. 2, adopts the principle of local option. The employing of persons under 18 years of age in any place where liquor is sold, the selling to children under 16 years of age, and harbouring or permitting reputed prostitutes are prohibited. The local option principal in this Act was applied in several districts.

47 Vic. cap. 5, exempts from the operation of prohibition under the Local Option Act hotels and boarding houses, the keepers of which can be licensed to supply guests only.

50 Vic. cap. 13. This act extends to the colony the operation of the Imperial Statute prohibiting the carrying of liquor to H. M. ships without the consent of the officer commanding.

BARBADOES.

The population of this colony is 182,306. The capital is Bridgetown, which, in 1891, had a population of 21,000.

The following figures were reported in regard to crime, etc., in 1892:—

Summary convictions.....	9,193
Convictions in supreme court.....	98
In jail, December, 1892,.....	308
Spent in out-door relief	£39,917.

There are 23 rum distilleries in Barbadoes.

Several Acts to regulate the sale of intoxicating liquors have been passed in this colony. The chief are:—

"An Act to regulate the Sale of Liquors by Retail, 1876."

Liquor Traffic—Commissioners' Report.

“An Act to Amend an Act to Regulate the Sale of Liquors by retail, 1876, 1885.”

“An Act to Consolidate and Amend the Law of the Island Relating to the Distillation of Rum, and the Payment of Duty thereon, 1887.”

“An Act to further Amend the Liquor License Act, 1876, 1887.”

Under these Acts a licensed retailer may sell or barter liquors in any quantity less than 30 gallons, four dozen reputed quarts, or seven dozen imperial pint bottles, and wine in less quantities than a quarter cask, or in imported cases of less than one dozen quart or two dozen pint bottles.

Retail licenses vary from £10 to £30, according to the trade rating. Liquor must be sold in a shop, and not on the same premises as contain a distillery. Licensees must be “sober, discreet, and fit to be trusted” as retailers of spirits. A licensee allowing his premises to be a resort of prostitutes, gamblers, dissolute, disorderly, or idle persons forfeits his license. For selling without a license the penalty is double the amount of the license fee, or imprisonment from three to twelve months. Licensed hours for sale are, week days from 6 a.m. to 9 p.m., and till 10 p.m. on Saturdays. Sunday selling is prohibited. Liquor may be sold in any quantity for consumption off the premises. In 1887 the licenses issued were 469, viz.:—

11 at.....	£30
6 at.....	15
452 at.....	10

Twenty-nine licenses for the distillation of rum were issued. 355,207 gallons of proof rum were distilled, and 343,755 gallons sold.

BERMUDA.

The capital of Bermuda is Hamilton; population (1892), 1,296. The total population of the colony is 15,290. In 1892 there were 189 summary convictions, and 14 convictions in superior courts.

The liquor traffic is under license. The general license law was passed in 1880. It prohibits all Sunday selling, legalizes the transfer of licenses, besides providing for grocers' licenses for the sale of wine and beer in bottles. It also compels licensees to give sureties for the payment of fines.

LEEWARD ISLANDS.

This colony includes five presidencies, viz.:—

1. Antigua, Barbuda and Redonda, population	36,819
2. Virgin Islands.....	4,639
3. Dominica.....	26,841
4. St. Kitts, Nevis and Anguilla.....	47,662
5. Montserrat	11,762

Total population, 1891..... 127,723

Antigua is the seat of Government, but each presidency made its own laws until 1888.

Throughout the colony the liquor traffic is under license. In Antigua, St. Kitts, Nevis and Montserrat application for a license must be made to the magistrates. In Dominica and the Virgin Islands anyone can obtain a license on payment of the fee. There are no special restrictions in any part of the colony regarding the sale to natives. Selling on Sunday is prohibited throughout the entire Islands. Licensees must close their premises in Antigua at 6 p.m., in Montserrat at 7 p.m., St. Kitts, Nevis and Dominica at 9 p.m.; in the Virgin Islands there is no hour fixed. This early closing, it is said, tends to prevent drunkenness and street brawls. Stringent prohibition exists against payment for wages or work being made in liquor.

TRINIDAD.

The capital of Trinidad is Port of Spain, which had, in 1891, a population of 34,037. The entire population of the island is 218,381. In 1892 there were 395 summary convictions, and six convictions in the supreme courts.

A system of liquor license is in force in this colony, licenses being divided into two classes, 1st, manufacturers', and 2nd, dealers'.

Manufacturers' licenses are of two kinds. (1.) A still license authorizes the licensee to distill rum or other spirits. No revenue accrues from this license. The licensee is subject to excise supervision, prohibited from being directly or indirectly interested in the retail trade, and may sell not less than 80 gallons, subject to excise regulations and duty. He has to provide two sureties in £200 to observe the law. (2.) A certificate for the manufacture of compounds. Compounds are cordials, etc., of which rum, or any other spirit, is an ingredient. The licensee pays no fee, but is subject to excise supervision, and the cordials pay the same excise duties as rum.

Dealers' licenses are of five kinds. (1.) License to sell spirituous liquors by retail, granted by the magistrates. This license may be for a term of three to twelve months, and authorizes the holder to sell liquor for consumption on or off the premises specified. Fee, £30 to £200 per annum, and proportionately, according to duration. (2.) License to sell for consumption off the premises, in quantities of not less than 1 reputed quart; fee, £25. Premises must be entered as licensed. (3.) Hotel license granted only in Port of Spain and San Fernando. The house must be of £300 value, and no portion used as an ordinary public-house for the sale and consumption of liquor. Fee for one year, £50; for nine months, £40; for six months, £25; for three months, £15. (4.) Occasional retail license for sale of liquors by retail for twelve hours, place to be named in license. Fee, 20s., unless to a licensee under one of the previous clauses, when it is 10s. (5.) License to sell wine, malt liquor or cider for consumption on the premises. Fee, £2.

WINDWARD ISLANDS.

The Windward Islands consist of Grenada, the Grenadines, St. Vincent and St. Lucia. The population in 1891 was as follows:—

Grenada.....	55,333
The Grenadines.....	6,000
St. Vincent.....	41,054
St. Lucia.....	43,310
	<u>145,697</u>

The liquor traffic is under license in each island. In St. Vincent selling is prohibited on Sunday, Good Friday and Christmas Day, and also to children under 15 years of age. No special restriction is made in regard to selling to natives. A licensee may eject any one drunken, violent, quarrelsome or disorderly. Selling to any drunken person is prohibited.

JAMAICA.

No information has been obtained beyond the fact that there is no restriction on sales to natives.

Liquor Traffic—Commissioners' Report.

GREAT BRITAIN.

In Great Britain, although the liquor question has for many years past engaged much public attention, and the efforts of the various temperance organizations have been both numerous and energetic, legislation has been confined to the licensing and regulating of the business, such as the hours of selling, Sunday closing of houses of public entertainment, and kindred matters.

Various proposals have been embodied in bills brought before the present Parliament, none of which have been passed into law. An abstract of these bills will be found further on in this report.

The present Imperial Government is pledged to press for the enactment of a measure which will confer local control of the traffic upon the "local Government" electors.

BRIEF REVIEW OF ENGLISH STATUTES AND RETURNS.

To trace the ever varying course of public opinion in Great Britain regarding the liquor traffic would be too voluminous a work for the Commission to undertake, but a glance at the various acts and parliamentary returns since 1872 may be of some use and interest. The first statute in order is:

THE LICENSING ACT OF 1872.

35 and 36 Vic., ch. 94. This Act did not extend to Scotland. Its chief features are as follows:—

1st. The prohibition of sale without license, under heavy penalties, namely, fines as high as £100 and imprisonment for six months or less.

2nd. The prohibition of sale to children under sixteen.

3rd. The infliction of a penalty for being found drunk.

4th. The prohibition of gaming on the licensed premises.

5th. The prohibition of adulteration.

6th. The fixing of hours for closing. On Sundays, Christmas Day and Good Friday the closing hours are up to one o'clock in the afternoon and between three and six p. m., and after eleven o'clock at night, subject to certain exemptions, by law or by local authorities, in respect of certain trades.

7th. The right of constables, etc., to enter and search premises.

8th. The keeping of registers of licenses.

9th. The appointment annually of county licensing committees by the justice in quarter sessions.

10th. Conditions of valuation, legal proceedings, etc.

11th. Saving clauses, exempting from the Act the sale of spruce and black beer the sale of intoxicating liquor by proprietors of theatres and on packet boats, etc.,

This Act was amended by 37 & 38 Vic., ch. 49 and ch. 69, but the amendments involved no question of principle, the principle changes being in the hours of closing. It also contained, however, an important clause allowing liquor to be sold at any time to *bonâ fide* travellers; and in order to constitute a person a *bonâ fide* traveller, the place where he lodged during the preceding night should be at least three miles distant from the place where he demands to be supplied with liquor.

A glance at the statistics showing how these acts were applied may be useful.

ENGLAND AND WALES.

The number of licensed houses for consumption on the premises for every 1,000 of the population in each city, municipal borough, and petty sessional divisions, in England and Wales, is shown by a return dated 18th March, 1890. Middlesex

County shows the smallest average, 2.2 per 1,000, and Huntingdon the largest, 8.4 per 1,000. Among the cities, the following averages are shown:

London	11.7	per 1,000
Birmingham.....	4.2	" "
Bristol	4.6	" "
Hull ..	3.2	" "
Leeds	2.6	" "
Liverpool.....	3.7	" "
Manchester.....	6.2	" "
Newcastle upon Tyne	4.2	" "
Nottingham.....	3.5	" "
Portsmouth .	6.5	" "
Sheffield	4.4	" "

IRELAND.

A return dated 11th November, 1890, shows how the licensing act was applied in Ireland. Licenses were given as follows:

	Population.	
Belfast.....	208,122	5.3 per 1,000
Dublin	249,602	6.2 " "
Cork	80,124	7.3 " "
Dublin Metropolitan Police District, exclusive of City of Dublin.....	100,046	3.9 " "
Galway.....	19,171	7.3 " "
Kilkenny.....	12,299	9.7 " "
Limerick	38,562	6.7 " "
Londonderry	29,162	8.1 " "
Drogheda	12,297	8.1 " "
Sligor.	10,808	8.6 " "
Clonmel	9,325	12.1 " "
Waterford.....	22,457	10.3 " "
Wexford	12,163	7.3 " "

LICENSED PREMISES (SCOTLAND).

A very voluminous return of particulars, with abstract added, relating to premises licensed for the sale of intoxicating liquors in the burghs (Glasgow excepted) and counties of Scotland, was brought down on the 31st July, 1891:

Among the averages were the following:

Dundee.....	Population 140,063;	3.1 licenses per 1,000
Edinburgh	" 228,357;	3.3 " " "
Greenock	" 65,883;	2.8 " " "
Leith	" 58,196;	5.2 " " "
Paisley.....	" 55,621;	3.5 " " "

HOURS OF CLOSING (SCOTLAND).

A comparative statement dated 10th July, 1891, shows the hour of closing of licensed premises prescribed in each burgh and county in Scotland, in which such hour is earlier than 11 p.m., and the date of the adoption of such earlier hour; (2) in the case of each burgh and county in which an earlier hour than 11 p.m. has been prescribed, the number of arrests for drunkenness in the twelve months immediately succeeding the adoption of such earlier hours and the number of such arrests in each twelve months since completed in each such burgh and county, etc.

Liquor Traffic—Commissioners' Report.

We need give only the general results from closing at 10 p.m. :

Twelve months immediately preceding.	Twelve months immediately succeeding.	Each twelve months since completed. 1889-90.	1890-91.
5,112.	5,358.	5,456.	5,627.

SUNDAY CLOSING ACTS.

In 1878, an Act was passed, 41 & 42 Vic. cap. 72, prohibiting the sale of intoxicating liquor on Sunday in Ireland, except in the cities of Dublin, Cork, Limerick, Waterford and Belfast.

In 1881, the Sunday Closing (Wales) Act was passed, 44 & 45 Vic. cap. 61, prohibiting the sale during the whole of Sunday.

A select committee which was appointed in 1888 to enquire into the operation of the Sunday Closing Acts (Ireland) reported after an exhaustive enquiry as follows:—

1st. That the Act of 1878 should be made perpetual, and extended to the five cities now exempted from the full operation of the Act.

2nd. That the qualifying distance under the *bona-fide* provision should be extended to six miles. (This refers to sales to *bona-fide* travellers, a *bona-fide* traveller being one from at least three miles' distance.)

3rd. That all houses for the sale of intoxicating liquors in Ireland should be closed at 9 p.m. Saturdays.

A Royal Commission was appointed in 1889 to enquire into the operation of the Sunday Closing (Wales) Act, 1881. This commission reported in 1890. The facts given in evidence in favour of the Act, the commissioners embrace under three headings:—

1st. Improved order in the streets and roads on Sunday. The Commissioners were satisfied that in the urban districts, the enforcement of the act has resulted, generally speaking, in a considerable improvement, so far at any rate as the chief thoroughfares of populous places were concerned, but found that in many instances this improvement had been gained at the expense of outlying and suburban districts. This was due to working men taking advantage of the *bona-fide* travellers clause to go to these districts and drink on Sundays.

2nd. Increased regularity at work

The commissioners found that on the whole, the good effect of the act in this direction was substantially established, although it had to some extent and in some places been neutralized by the transfer of irregularity to other days in the week.

3rd. Improved condition of the people.

Under this heading, the commissioners say: "This improvement began, however, before 1881, and is not confined to Wales. In our opinion, it is due to a variety of causes, among other things, in no small degree to increased activity on the part of the churches and temperance societies. We agree, however, that it may be fairly claimed in the case of some individuals that the enforced abstention from intoxicating drinks in one day of the week, and that the day of greatest temptation has been a powerful factor in their moral and social improvement."

The commissioners sum up the objections to the act under three heads:—

1st. Unwarrantable interference with the legitimate liberty of the minority.

This they hold to be a question to be decided by Parliament.

2nd. Alleged disrespect for law. On this point they say: "Speaking generally, it may be said that over a large part of the country, especially in the rural districts and in nearly the whole of North Wales, the present law is in harmony with the sentiments and feelings of an overwhelming majority of the population. * * *

* * * It cannot be denied, however, that in certain other parts of the principality, where these sentiments and feelings do not exist, and where there is habitually violation and evasion of the act, those who do violate and evade it do not consider that in so doing they are guilty of any moral offence, but look upon themselves as only endeavouring to get rid of restrictions which they deem oppressive."

3rd. Increased abuse of the act by travellers.

The commissioners recommend that the three mile limit in the Act be repealed and suggest the following definition of a traveller: "No person shall be deemed to be within the exception relating to travellers unless he proves that he was actually engaged in travelling for some purpose other than that of obtaining intoxicating liquor, and that he has not remained on the licensed premises longer than was reasonably required for the transaction of his necessary business, or for the purpose of necessary rest, refreshment, or shelter from the weather."

The commissioners dismissed as impracticable the proposal to close public houses absolutely and for all purposes the whole of Sunday, and were also opposed to any modification of the act by permitting the opening of public houses for a shorter time on Sunday.

With regard to clubs, they failed to suggest any definition of what constitutes a club for disciplinary regulations, but were strongly of opinion that associations existing only for the purpose of supplying intoxicating drinks to the members, or only colourably for some other purpose, should be declared absolutely illegal.

Shebeens, they said, should be subject to entry and search, on a magistrate's warrant, and all persons in the building arrested.

OTHER STATUTES.

In 1880, there was an amendment made to the Wine and Beer-house Act of 1869. This amendment gave to justices certain discretion as to the granting or refusing of certificates for beer dealers retail licenses.

In that year was also passed the Spirits' Act, 43 and 44 Vic., ch. 24, consolidating and amending the law relating to the manufacture and sale of spirits. This Act prohibited distilling or brewing without license and made regulations to govern the manufacture and warehousing of the liquors and the mode of carrying on the business.

Chap. 34, 45 & 46 Vic., 1882, extended the discretion of licensing justices under the "Beer dealer's retail license Act of 1880."

A return relating to brewer's Licenses, shows that from 1st October, 1888 to 1st October 1889, the total export of beer from the United Kingdom amounted to 478,383 barrels, value £1,798,876, of which 7,346 barrels, value £28,358 went to British North America.

The sale to children under thirteen for consumption on the premises was prohibited in 1886, 49 and 50 Vic. ch. 56, but the Act did not extend to Scotland.

In May, 1892, a Departmental Committee was appointed by Mr. Secretary Matthews to "inquire into the best mode of dealing with habitual drunkards," because of, as the Commission sets forth, "great differences of opinion having arisen as to what kind and degree of punishment for offences committed by habitual drunkards would be most effectual both as a deterrent and to the view to the reformation of such offenders."

The Committee, of whom Mr. John Lloyd Wharton, M.P., was chairman, reported in 1893 (the report forming the Imperial Blue Book C 7008), and stated that they found their enquiry naturally divided itself into two branches.

"1. The cases of drunkenness to which the provisions of the Inebriates Act of 1879 and 1888 were directed and under which habitual drunkards who voluntarily (under section 10 of the Act, 1879), make an application for admission, are detained in retreats.

"2. Habitual drunkards who come within the action of the criminal law and are apprehended for and charged with drunkenness whether accompanied by violence or not."

The report advocates the preservation of the distinction between paying patients in retreats and those treated as criminals. They found in 1891 that there were seven retreats under Government inspection, and only 62 patients legally amenable to the discipline of the retreat. The Commissioners were informed that a considerable per centage of cures has been effected by the treatment and discipline of these retreats, but think considerable enlargement and improvement necessary.

Liquor Traffic—Commissioners' Report.

The evidence before them attributes the comparative failure of the existing acts to:—

(I.) The want of sufficient notoriety of their existence even among magistrates themselves.

(II.) The want of proper facilities for the admission of patients.

(III.) The want of a power of compulsion where a confirmed inebriate cannot be brought to enter a retreat voluntarily.

(IV.) The inefficiency of the maximum period of detention (12 months) and the obstacles in the way of re-admission.

(V.) The difficulty of recovering patients who have escaped from the retreats, and the want of efficient means of dealing with refractory patients.

They believe all these difficulties may be removed or greatly diminished.

After reviewing the evidence on these points in order, the committee in regard to the first branch of the enquiry:—viz. cases of drunkenness to which the provisions of the Inebriates Acts of 1879 and 1888 were directed, recommend.

(1.) That the Secretary of State be empowered to make rules and regulations for the admission of patients.

(2.) "That the establishment of retreats should be encouraged for those who cannot provide the whole of the funds necessary for their maintenance, the residue being supplied by voluntary contributions, and if thought desirable, by aid from the public rates, and that with regard to such retreats the Secretary of State should be empowered to make regulations by which a certain amount of work suited to each particular case should be enforced."

(3.) "That the maximum period for which a patient may be confined in a retreat should be extended to two years."

(4.) "That power should be given for the compulsory committal to a retreat of persons coming within the definition of an habitual drunkard, as laid down in the Act of 1879, on the application of their relations or friends, or other persons interested in their welfare, such application to be made to any judge of the high court, county court judge, stipendiary magistrate, or justice, sitting in quarter or petty session, who shall decide on the propriety of the application."

(5.) "That the property of the person committed should be liable for his maintenance, and that the order for committal should provide, when necessary, for the appointment of a trustee of the patient's estate during the period of committal, with power to apply the same to the support of his wife or family."

(6.) Recommends that rules as above and provisions for inspection be made by the Secretary of State, with the concurrence of the Lord Chancellor.

(7.) Recommends the provision of proper rules for release, retaking, and, when necessary, the enforcement of discipline.

(8.) Recommends right of appeal to a divisional court.

The remainder of the recommendations deal with the second branch of the enquiry.

(9.) Recommends increased powers of arrests to the police under the intoxicating liquors (Ireland) Act, 1874.

(10.) That increased powers be given magistrates under the Act.

(11.) That reformatory institutions for habitual drunkards be abolished.

(12.) Recommends the temporary utilizing the existing accommodation in prisons, lunatic asylums, or poor-houses.

(13.) The magistrates have power to commit habitual drunkards under certain specified conditions.

A return printed by order of the House of Commons, 1st August, 1891, supplies the following information in regard to licensed premises in Scotland, exclusive of the city of Glasgow.

The return gives the names of the owners and occupiers of each of the places. It may be mentioned that it is noted on the face of the return that there were 16 houses for which no rent was shown.

	Population.	No. of Licenses per 1,000 of Population.	Number of Licenses.			
			Grocer.	Public house.	Hotel	Total.

PROPOSED LEGISLATION.

Three measures were submitted to the House of Commons in 1893, none of which became law. The first proposed the establishment of licensing boards and the remodelling and simplifying of the license system, the second recognized the principle of local option or control, and the third proposed the establishment of authorized companies which alone would have the right to sell intoxicating liquor.

LICENSING BOARDS, &C.

This bill was prepared and introduced in 1893 by Mr. Bolitho, Mr. Courtney, Sir Mark Stewart, Sir Thomas Lea, Mr. David Brynmor-Jones and Mr. Little. Its chief provisions are as follows:—

Liquor Traffic—Commissioners' Report.

1st. The establishment of licensing boards, one for every licensing district. Such boards to consist of from seven to twelve elected members and not exceeding half that number *ex-officio* members appointed by the licensing justices of the district out of their number. Every three years the entire board must be renewed.

These boards replace the licensing justices and their decisions are subject to the same right of appeal.

2nd. New forms of licenses, viz.:—

1st. For consumption on the premises (hereinafter called on-licenses).

2nd. For consumption off the premises (hereinafter called off-licenses).

These licenses give the same rights, and entail the same obligations as the corresponding licenses previously granted by the licensing justices.

3rd. Local veto. Any ten ratepayers in any borough, ward or parish, may make a requisition to the mayor or the parish overseers to take a poll for or against the adoption of a resolution prohibiting the grant of on-licenses and off-licenses. No further poll shall be taken for at least three years, but after the three years a poll may be had either for or against the adoption or rescission of such resolution, provided it is demanded by at least one-tenth of all ratepayers.

The sale of methylated spirits for use in the arts or manufactures, under any statute permitting such sale, is not affected by this Act, and intoxicating liquors for medicinal purposes may still be sold under such conditions as the licensing board may direct.

4th. Regulation of number of licenses where no prohibiting resolution is in force. The number is restricted according to population. When, to reduce the number to the proportion allowed, the board refuses to renew a license, the value of that license must be paid to its holder by the council of the county out of the rate to be levied for that purpose on licensed premises. The value is the difference between what the premises are worth as licensed and as unlicensed premises. If not settled by agreement, recourse must be had to arbitration. The sum due is payable by means of an annuity for ten years. Should a prohibitory resolution come into force in the meantime, the annuity at once ceases.

5th. Special licenses for railway and hotels for the accommodation of travellers.

6th. *Bona fide* clubs used only for social purposes, and the entrance fee to which is at least £1, may be entered in a register kept by the licensing board, and thus be dispensed from a license. Undue drinking will be a cause for removal of the club from the register. The club may appeal to the county council.

7th. Suncay closing and limiting hours of closing. The licensing board may insert a condition in new licenses or in renewals or transfers, fixing the hours of closing on week days and prohibiting the opening on Sundays.

The remainder of the bill deals with matters of procedure.

LOCAL CONTROL BILL.

(*Government Measure.*)

Prepared and introduced in 1893 by Mr. Chancellor of the Exchequer, Mr. Secretary Asquith, Sir George Trevelyan, Sir John Hibbert and Mr. Burt.

Its chief provisions are as follows:—

1st. On a requisition from one-tenth of the local government electors in any borough, ward, parish or sanitary district, to the borough council, sanitary authority or parish overseers, a poll shall be taken to decide whether the grant or renewal of licenses within such area shall be prohibited.

2nd. If two-thirds of the vote cast be in the affirmative, no license shall be granted or renewed, subject to the usual exceptions.

3rd. No further poll shall be taken for three years.

4th. On a requisition from one-tenth of the local government electors, a poll may be had, after the three years have expired, on the question of abolishing the total closing, and if two-thirds of the votes cast be in favour of the abolition, it shall take effect.

5th. The question of Sunday closing shall be decided in a similar manner, except that a bare majority of the votes cast is all that is required either to close or to re-open.

6th. By "local government electors" is meant those registered in the Local Government Register within the area for which a poll is taken.

7th. This Act not to apply to:—

Refreshment rooms at railway stations for the use of travellers;

Hotels, for the accommodation of travellers or lodgers therein;

Eating house, for persons taking meals in the premises.

8th. This Act not to extend to Ireland.

SALE BY AUTHORIZED COMPANIES.

A bill for establishing a system of retail sale of intoxicating liquor by authorized companies was prepared by the Lord Bishop of Chester in 1893. This system was subject to local option, and the main provisions of the bill are as follows:—

1st. Any ten voters in the district may submit to the local government board for approval any company, and that company, if approved, shall be an authorized company.

2nd. No new license shall then be granted in that district except to the authorized company, nor shall any other licenses be renewed.

3rd. The company may require surrender of any license or the license holder may require the company to accept his surrender.

4th. The value of any license surrendered must be paid by the company.

5th. The value is arrived at by agreement or arbitration. It consists in the difference between what the premises are worth, licensed and unlicensed.

6th. The proportion of licenses to population is fixed at:—

In urban districts, one to every thousand.

In rural districts, one to every six hundred.

7th. An authorized company may be: incorporated as a limited company; incorporated by Royal Charter; or incorporated by Special Act. It must be approved by the Local Government Board.

8th. The capital must be sufficient, in the opinion of the Board, to carry out the objects of the company.

9th. The local authority of the district shall have power to nominate at least one-third of the directors.

10th. No director shall be interested in the production of any intoxicating liquor.

11th. Any profit over five per cent shall be paid to the local authority of the district and applied to public or charitable objects. The company may, however, retain one-third of the surplus profits to form a reserve fund.

12th. Railway refreshment rooms and hotels are, as regards travellers, not subject to this Act. Neither are *bona fide* clubs for social purposes. Such clubs must be registered by the licensing authority.

13th. Any ten qualified voters in a district may require the local authority to hold a ballot on the question of adopting the system of authorized companies, and a majority of the votes cast shall decide. No further ballot shall be held for three years.

14th. The High Court, on the petition of any ten qualified voters in a district and on proof, under such petition, may make an order declaring that the Act shall cease to operate.

15th. The Act not to extend to Scotland or Ireland.

16th. The penal and other provisions of Acts relating to the sale of intoxicating liquor shall apply to authorized companies.

Liquor Traffic—Commissioners' Report.

THE LIQUOR LAWS AND THE LIQUOR TRAFFIC OF THE UNITED STATES.

The legislation of the United States upon the liquor traffic is very varied in its character. It is the only country in which it has been attempted to prohibit the liquor traffic, if one or two of the British colonies, in which there have been attempts at partial prohibition, are excepted. That country supplies, it may almost be said, the only experience of prohibitory laws on a scale which deserves to be considered as a test of the efficiency of the system to satisfactorily regulate the use of intoxicants. The entire prevention of their use as beverages it has not in any case accomplished.

What has been done in the United States has been by state legislation, as the traffic is, under the Federal constitution, controlled by each of the separate states within its own boundary.

In so far as it is, or may become, an interstate or foreign traffic, it is subject to the Federal power. A citizen residing in a state where a prohibitory law exists cannot, by the laws of that state, be prevented from purchasing liquor in some other state, or in a foreign country where it is not illegal to make sales, and having it transported into his own state for his personal use. This statement of a well-known fact is sufficient to show that actual total legal prohibition of the traffic cannot exist in any single State of the Union until a change has been made in the Federal constitution, or all the States have adopted prohibition.

A letter was addressed to the Governors of the various States of the Union, which, together with the answers received thereto, and, in some instances, other information supplied, are printed in Appendix No. 76.

The following shows the character of the existing laws of the States from which the Commissioners have received replies to their communications:—

Prohibition:—Alaska (Territory), Iowa (this State in 1894 passed a law to tax the traffic and providing for local option), Kansas, Maine, New Hampshire, North Dakota, South Dakota and Vermont.

High License:—District of Columbia, Idaho and Indiana.

High License and Local Option:—Illinois, Massachusetts, Minnesota and Nebraska.

License and Local Option:—Arkansas, California, Colorado, Florida, Georgia, Kentucky, Maryland, Michigan, Mississippi, Montana, Texas, Virginia and Washington.

License.—Connecticut, Delaware, Nevada, Rhode Island and West Virginia.

Local Option and Dispensary Law:—South Carolina.

Tax and Local Option:—Ohio.

From the following named States no information has been received. The laws in force therein are understood to be those indicated opposite each:—

Alabama.....	License (in 1889).
Louisiana.....	License and Local Option.
Missouri.....	License and Local Option.
New Jersey.....	License and Local Option.
New Mexico.....	License and Local Option.
New York.....	License.
North Carolina.....	License and Local Option.
Oregon.....	License and Local Option.
Pennsylvania.....	License, with special local prohibitory laws.
Tennessee.....	License, with restricted areas.
Wisconsin.....	License and Local Option.

It was impracticable, even if it had been considered necessary, for the Commissioners to visit each separate State of the Union to make personal enquiries on the ground. Several states in which the liquor traffic has been more prominently before the people, and where measures have been resorted to to prohibit it, were visited, investigation made and evidence taken, which evidence forms a portion of

this report. The position of the traffic, and the results of the laws which have been enacted in some of the States, will be more fully referred to hereafter.

Under the internal revenue law of the United States the Federal Government collects what is called a special tax from the vendors and manufacturers of intoxicating liquors throughout the Union. The following is a copy of the document issued to the retail liquor dealers:—

This stamp is simply a receipt for a tax due the Government, and does not exempt the holder from any penalty or punishment provided for by the law of any state for carrying on the said business within such state, and does not authorize the commencement nor the continuance of such business contrary to the laws of such state, or in places prohibited by municipal law. See Section 3245 Revised Statutes U. S.

No. A28,487
Series of 1891.

UNITED STATES
STAMP FOR SPECIAL TAX

INTERNAL REVENUE

ACT OF OCTOBER 1, 1890.

1891.

Received from the sum of
Twenty-five Dollars, for Special Tax on the
Business of Retail Liquor Dealer at Houlton,
State of Maine, for the period represented by the
coupon or coupons hereto attached.

Dated at Portsmouth, N.H., July 7, 1891.

J. E. FINCH,

Collector Dist.

State of N. H.

\$25.00
PER YEAR.

SEVERE PENALTIES are imposed for neglect or refusal to place and keep this Stamp conspicuously in your establishment or place of business.

- Coupon for RETAIL LIQUOR DEALER'S SPECIAL TAX for June, 1892.
- Coupon for RETAIL LIQUOR DEALER'S SPECIAL TAX for May, 1892.
- Coupon for RETAIL LIQUOR DEALER'S SPECIAL TAX for April, 1892.
- Coupon for RETAIL LIQUOR DEALER'S SPECIAL TAX for March, 1892.
- Coupon for RETAIL LIQUOR DEALER'S SPECIAL TAX for Feb., 1892.
- Coupon for RETAIL LIQUOR DEALER'S SPECIAL TAX for Jan., 1892.
- Coupon for RETAIL LIQUOR DEALER'S SPECIAL TAX for Dec., 1891.
- Coupon for RETAIL LIQUOR DEALER'S SPECIAL TAX for Nov., 1891.
- Coupon for RETAIL LIQUOR DEALER'S SPECIAL TAX for Oct., 1891.
- Coupon for RETAIL LIQUOR DEALER'S SPECIAL TAX for Sept., 1891.
- Coupon for RETAIL LIQUOR DEALER'S SPECIAL TAX for Aug., 1891.
- Coupon for RETAIL LIQUOR DEALER'S SPECIAL TAX for July, 1891.

Liquor Traffic—Commissioners' Report.

The following is a summary of the portion of the law relating to the special tax. It appears in the Revised Statutes of the United States:—

"No person shall be engaged in or carry on any trade or business hereinafter mentioned until he has paid the special tax in the way prescribed. Name and residence of owner or owners of such business, or address of place of business, to be registered. The payment of one special tax does not exclude from payment of additional special taxes, but storage on manufactories do not need additional tax. Each trade requires additional tax. Special taxes are due 1st July, or from commencement of business. All special taxes to be paid in stamps. Stamps for special taxes to be conspicuously displayed on place of business; if not, penalty of double tax fee and costs, with minimum of \$10; if through wilful neglect or refusal, penalty is doubled. Collector of Inland Revenue is to keep list of payers of special taxes, with particulars, for public reference. If holder of special tax dies, executors or heirs may carry on business to end of term, or if holder remove his place of business—in either case Collector to be notified. The carrying on business as rectifier, wholesale or retail liquor dealers, wholesale or retail dealers in malt liquor, or manufacturer of stills, without paying special tax, or running distillery without having given bonds, or distilling with intent to defraud the United States of tax on all or part of goods distilled, subjects the offender to a penalty for every offence of \$100 to \$5,000 and imprisonment from thirty days to three years.

"And all distilled spirits or wines, and all stills or other apparatus fit or intended to be used for the distillation or rectifying of spirits, for the compounding of liquors, owned by such person, wherever found, and all distilled spirits or wines and personal property found in the distillery or rectifying establishment, or in any building, room, yard or inclosures connected therewith and used with or constituting part of the premises, and all the right, title and interest of such person in the lot or tract or land on which such distillery is situated, and all right, title and interest therein of every person who knowingly has suffered or permitted the business of a distillery to be there carried on, or has connived at the same, and all personal property owned by or in possession of any person who has permitted or suffered any building, yard or enclosure or any part thereof to be used for purposes of ingress or egress to or from any such distillery which shall be found in any building, yard or enclosure, and all the right, title and interest of every person in any premises used for ingress or egress to or from such distillery who has knowingly suffered or permitted such premises to be used for such ingress or egress, shall be forfeited to the United States."

Brewers pay \$100, unless they make less than 500 barrels annually, when the tax is \$50.

Manufacturers of stills pay \$50 tax, and \$20 for each still or worm.

Rectifiers pay \$200; if of less than 500 barrels of 40 gallons, tax is \$100. This applies to spirits made by any process and to making imitations.

Retail liquor dealers, if less than 5 gallons, \$25.

Wholesale liquor dealers, \$100.

Exempt, distilleries do not pay this wholesale tax if selling at distillery in unbroken packages.

Retailers of malt liquor.....	\$20
Wholesale malt liquor.....	50

Exempt, brewers do not pay this tax if selling at brewery in unbroken packages.

The Commissioners of Inland Revenue may issue special tax papers to retailers on cars and steamers. If special tax has been paid on still, to be refunded if still is exported. Distillers may manufacture wooden still for their own use, but must give notice of every one. If a special tax has been paid by a distiller, it is to be refunded. Special tax is not to be levied on vinters selling wine of their own growth at manufactory, if they have only one sale's office; nor by an apothecary using wine or spirits for medicinal purposes.

Section 3,243 of the Revised Statutes of the United States further provided that:—

"The payment of any tax imposed by internal revenue laws for carrying on any trade or business shall not be held to exempt any person from any penalty or

punishment provided by the laws of any state for carrying on the same within such state, or in any manner to authorize the commencement or continuance of such trade or business contrary to the laws of such state or in places prohibited by municipal law; nor shall the payment of any such tax be held to prohibit any state from placing a duty or tax on the same trade or business, for state or other purposes."

Through the kindness of Hon. John W. Mason, Commissioner of Internal Revenue, the commissioners were supplied with a statement of the special tax certificates issued in the fourteen months ended 30th June, 1891. From this information a statement has been prepared (appendix No. 77) showing the number of certificates issued in each State, the number of the population according to the last census, and the number of certificates per thousand of the population.

A similar statement for the year ended June 30, 1892, is also shown in appendix No. 78. Adding, say, two per cent per annum to the population of 1890 to get at the population of 1892, make a total of 65,150,000, which, divided by the total number of special tax papers of all kinds issued, gives one for every 275 of the population of the United States.

The revenue derived by the United States Government from this special tax on dealers in, and manufacturers of, liquors, was for the four years ended June 30, 1893, as under;—

(Report of the Commissioner of Internal Revenue, 1891 & 1893.)

	1890.	1891.	1892.	1893.
	\$	\$	\$	\$
Retail liquor dealers.....	4,534,175	3,234,155	5,080,177	4,867,324

Liquor Traffic—Commissioners' Report.

If the distinctively prohibition States are taken, the special tax payers for the years 1890, 1892 and 1893, were as under :—

—	1890.	1892.	1893.
Maine.....	956	1,034	1,087
Vermont.....	388	460	456
New Hampshire.....	1,583	1,909	1,936
Iowa.....	4,350	5,219	6,607
Kansas.....	1,778	2,570	2,839
Dakotas.....	1,086	1,465	1,834

The Year 1891 is left out, as the returns were for fourteen months.

The following table shows the consumption of the different kinds of liquor in the United States for the periods mentioned therein, and the consumption *per capita* of the population.

QUANTITIES of Distilled Spirits, Wines, and Malt Liquor consumed, and the average annual consumption per capita of population, in the United States, during each of the Years 1875, 1885, 1890, 1891 and 1892.

Year ending June 30—	DISTILLED SPIRITS CONSUMED.				WINES CONSUMED.				MALT LIQUORS CONSUMED.				TOTAL CONSUMPTION PER CAPITA OF POPULATION.			
	Domestic spirits. ^a		Imported spirits entered for consumption.	Total.	Domestic wines. ^b	Imported wines entered for consumption.	Total.	Domestic malt liquors. ^b	Imported malt liquors entered for consumption.	Total.	Total consumption of wines and liquors.	Of distilled spirits.	Of malt liquors.	Of wine.	Of malt liquors.

^a Includes domestic spirits exported and returned since 1886.

^b Product less exports.

NOTES.—(1) The production of domestic wines from 1875 to 1892 was estimated by the Department of Agriculture by Mr. Charles McK. Leoser, president of the Wine and Spirit Traders' Society of New York, and other well-informed persons, and the production for 1889 (opposite the year 1890) is that officially reported by the United States Census. (2) The consumption of domestic spirits and malt liquors from 1875 to 1892 was obtained from the reports of the Commissioner of Internal Revenue. (3) The consumption of imported liquors and wines from 1875 to 1892 was taken from the official return made to the Bureau of Statistics by collectors of customs. (4) In computing the quantity of sparkling and still wines and vermouth in bottles, five so-called quart bottles are reckoned as equivalent to the gallon.

Liquor Traffic—Commissioners' Report.

The following shows the number of distilleries in operation in the United States:—

1877.....4,510	18866,034
1878.....5,652	1887.....4,905
1879.....5,346	1888.....3,646
1880.....4,061	1889.....(not received)
1881.....5,210	1890.....6,211
1882.....5,022	1891.....3,819
1883.....5,129	1892.....5,925
18844,738	1893.....4,743
1885.....5,172	

These figures include all distilleries using grain, molasses and fruit. There was a large decrease in the number of distilleries operated in the year 1891; but the production of spirits was larger in that year than formerly, as the following figures show:—

	Gallons Produced.
1888.....	71,688,188
1889.....	91,133,550
1890.....	111,101,738
1891.....	117,767,101
1892.....	118,436,506
1893.....	131,010,330

The number of breweries registered and operated, were as shown below. (R.C. I.R., U.S.):—

1877.....2,758	1886.... .2,292
1878.....2,830	1887.....2,269
1879.....2,719	1888.....1,968
1880.....2,741	1889.....(not received)
1881.....2,474	1890.....2,156
1882.....2,371	1891.....2,138 (14 mos.)
1883.....2,378	1892.....1,967
1884.....2,240	1893.....1,930
1885.....2,230	

Whilst the number of breweries has decreased, the production of malt liquors has steadily increased, as the following figures demonstrate:—

MALT LIQUORS PRODUCED. (U. S. A.)

	Gallons.		Gallons.
1875.....	292,961,047	1889.....	777,420,207
1885.....	594,063,095	1890.....	853,075,734
1886.....	640,746,288	1891.....	974,427,863
1887.....	716,446,038	1892.....	984,515,414
1888.....	765,086,789		

The quantity of native wine consumed increased from 12,955,000 gallons in 1875, to 23,033,000 gallons in 1892.

The quantity of imported spirits consumed was 1,695,000 gallons in 1875, and 1,180,000 gallons in 1892.

The quantity of imported wines consumed in 1875 was 7,036,000 gallons; in 1892, 5,534,000 gallons.

The quantity of imported malt liquors consumed in 1875 was 1,992,000 gallons; in 1892, 2,981,000 gallons.

These statistics show,—

First,—That there has been a steady increase in the production of both spirituous and malt liquors in the United States.

Second,—That there has been, including all descriptions, an increase in the aggregate consumption and the consumption *per capita* of the population.

Third,—That there has been an increase in the number of those paying taxes for the right to make, and to deal in spirituous and malt liquors.

Fourth,—That in those States where sale is prohibited the number of those paying taxes for the right to deal in liquors has increased.

Fifth,—That the consumption of spirits and wines, *per capita*, has remained almost stationary since 1875, and that the consumption of malt liquors has increased one hundred and ninety-six per cent. (196 per cent.)

There are no general statistics of crime other than those which the census returns supply, and none are available for the purpose of comparison of convictions for offences in the United States and the number of such convictions in other countries.

From the census returns of 1890, the following figures have been extracted:—

	1890 (Population 62,622,250.)		1880 (Population 50,155,783.)	
	Inmates.	Per 1,000 of Population.	Inmates.	Per 1,000 of Population.
Paupers in almshouse.....	73,045	1.17	66,203	1.32
Prisoners in county jails.....	19,538	.31	12,691	.25
Convicts in penitentiaries.....	45,233	.72	35,538	.71
Inmates in juvenile reformatories.....	14,846	.24	11,466	.23

Insane. In United States Census Bulletin No. 62 it is stated:—

The ratio to 1,000 inhabitants of the whole United States of the insane in public institutions is 1.46, and including, both private and public institutions 1.56.

It must be mentioned that there are 17,558 prisoners of various classes distributed over the country, who are not included in the figures given above. (Census Office Letter, May 6, 1893.)

Liquor Traffic—Commissioners' Report.

The following tables show the number of convicts in the penitentiaries, the numbers of prisoners in the jails, and the number of paupers in the almshouses in the seven prohibition States, with the like information in respect of seven license States.

Totals.....	8,539,405	3,290	1,837	6,989
Ratios per 1,000.....		0.385	0.215	0.818

It will be seen that the ratio of convicts in the penitentiaries of the seven prohibition States was higher than the ratio of those in the penitentiaries of the seven licensed States referred to.

It will be found on reference to Appendix No. 79, that Maine has the lowest ratio of convicts in its penitentiary of any of the States of the Union, with the exception of Wyoming. New Hampshire and Vermont have also low ratios of convicts in their penitentiaries. Kansas has a higher ratio of prisoners in its penitentiary than thirteen of the licensed States. Its ratio is higher than that of Wisconsin with a larger population, than Minnesota, with slightly less population, and Mississippi, with about 140,000 less population. North Dakota has a larger ratio of prisoners in its penitentiaries than Minnesota, Wisconsin, Mississippi, Rhode Island or Wyoming. South Dakota has a lower ratio than any of the last mentioned States, with the exception of Wyoming.

It will also be noticed by reference to Appendix No. 80 that the ratio of prisoners in the common jails of the prohibition States was higher than the ratio of those in the jails of the seven licensed States. It may be mentioned that the ratio of prisoners in the common jails in Maine is larger than it is in twenty-five licensed States. The ratio in Kansas is larger than it is in seventeen licensed States.

The ratio of paupers in almshouses was larger in the seven prohibition States than in the seven license States.

It will be observed on reference to Appendix No. 81 that the ratio of paupers in almshouses in the North Atlantic division was 1.79; in Maine it was 1.76, and in Vermont, 1.63. Rhode Island had a lower ratio of paupers in almshouses than either of these States. Pennsylvania had a lower ratio than Maine, but a slightly higher

ratio than Vermont. Iowa was below the average of the North Central division in which it was placed. Both that State and Kansas had a higher ratio than Nebraska. The ratio of paupers in almshouses for the South Central division was lower than the ratio of any other of the divisions into which the States are divided.

It is not practicable to institute the same comparison as regards the inmates of juvenile reformatories. North Dakota and South Dakota have no reformatories. Maine, New Hampshire and Vermont show a very small ratio of inmates in juvenile reformatories compared with some of the other States in the North Atlantic division, as will be seen on reference to Appendix No. 8'. Pennsylvania, which is in the same division, however, has a lower rate of juveniles in reformatories than any of these three States mentioned.

Kansas, Iowa and the Dakotas are classed in the North Central division. The ratio of inmates in the juvenile reformatories shown in Iowa are 27 per 1,000. Ohio, Indiana, Michigan and Wisconsin have all higher ratios, as will be seen on reference to the same appendix; but Illinois, Minnesota, Missouri and Nebraska have all lower ratios than Iowa. Kansas shows the lowest ratio in the division with the exception of Illinois and Missouri.

The following interesting statement was forwarded to the Commission by the Chief of the Bureau of Statistics, Washington (the Hon. S. G. Brock), to whom the Commissioners are much indebted for valuable information supplied in the most prompt and courteous manner.

The material for this statement appears to have been supplied (by request) to the Bureau, by Mr. F. N. Barrett, of New York, and formed part of a larger statistical statement relating to some other subjects compiled by Mr. Edward Atchison, of Boston.

CONSUMPTION OF LIQUOR IN THE UNITED STATES.

“Standard of comparison—The production and consumption of liquors:—

Spirits withdrawn, including fruit brandy.....	89,554,919 gals.
Less 12 per cent used in the arts.....	10,746,589 “

Consumed as beverage.....	<u>78,808,330 “</u>
---------------------------	---------------------

Valuation of spirits, 78,808,330 gals. @ \$4.50	\$354,637,485
Valuation of beer, 974,247,863 gals. @ 50c.....	487,123,931
Domestic wines, 25,000,000 @ \$2.	50,000,000
Imported beer.....	3,051,893
Imported wines	40,000,000

Total in 1891.....	<u>\$934,813,312</u>
Estimated increase spirits in 1892.....	35,000,000
Actual increase beer.....	21,070,963
Increase domestic and imported wines.....	10,000,000

Total in 1892.....	<u>\$1,000,884,277</u>
--------------------	------------------------

Consumption of liquors <i>per capita</i> in 1892	\$15 28
Expenditure of the United States' Government.....	5 27

“The quantities of spirits, wine and beer, are well established by the data of taxation. The prices are assumed to be what are paid for consumption. A gallon of spirits yields sixteen half-pints; the average single portion is one-third of this quantity. At \$4 50 per gallon, the average charge would be $9\frac{36}{100}$ cents. A gallon of beer served in sixteen half-pints, computed at 50 cents a gallon, would give $3\frac{6}{100}$ cents each. Spirits, wine and beer per day per person $4\frac{187}{1000}$ cents. All Government expenditures, 1892, per day per person, $1\frac{444}{1000}$ cents.” In a letter from Mr. Brock (March 22nd, 1893), he writes:—“It will be impossible for us to ascertain

Liquor Traffic—Commissioners' Report.

the amount of liquor consumed in each State of the United States. The returns of collections of revenue in any one state are little, if any, index of the amount of liquor consumed in the state. As you are aware, our distilleries are located mostly in the western states (Illinois, Kentucky, etc.,) and it is there that the greater portion of the revenue for manufactured liquor is collected, while the liquor is consumed in all states of the Union."

There have been prepared from the United States census returns, statements of the number of convicts in penitentiaries (states prisons), of prisoners in county jails, of paupers in almshouses, and the population in reformatories by states and territories, and the ratio per 1,000 of these various classes to the population. These statements are printed as Appendices Nos. 79, 80, 81, 82.

It is necessary to state that the superintendent of the census office at Washington, to whom the commissioners are much indebted for valuable information, says, in reference to these returns (6th May, 1893):—

"The were confined in penitentiaries, 45,233; in county jails, 19,861; in city prisons, 3,264; in workhouses, 9,968; there were leased out in convict camps in the south, not included in any other class of prisons, 2,308; there were confined in military prisons, 794; and insane criminals confined in hospitals for insane criminals, 901.

"No bulletins have been issued by this office referring to any of these classes, except the penitentiaries and county jails, both of which have been sent to you.

"Only those returned as being in penitentiaries and county jails are included in the statement now given."

The following table is taken from the census reports of the United States (Bulletin No. 62.) The detailed statements from which it has been compiled have not been printed.

Table giving the number of insane in public institutions in each geographical division, the population of each division, and the ratio of insane to each 1,000 inhabitants in the United States:—

Geographical Division.	Number of insane.	Population.	Ratio to each 1000 inhabitants.
North Atlantic division.....	36,595	17,401,545	2.10
South ".....	11,288	8,857,920	1.27
North central division.....	28,690	22,362,279	1.28
South ".....	7,759	10,972,893	0.71
Western division.....	6,820	3,027,613	2.25

The ratio per 1,000 of the total population is 1.46, and including public and private institutions, 1.56.

ALASKA.

This territory is under prohibition, enforced by the United States government. According to the United States census for 1890, the population of the territory was 32,052, as follows:—

Whites.....	4,298
Mixed (Russian and native).....	1,823
Indians.....	23,531
Mongolians.....	2,288
All others.....	112

The enforcement of the law is entrusted to officers specially appointed by the Federal Government. Notwithstanding their most vigorous efforts, the prohibitory provisions are violated. Smuggling appears to be one of the most popular

branches of business, and illicit stills are established in different parts of the territory. The Indians, moreover, manufacture liquor from rice and molasses and in and by other primitive methods, even kelp being brought into requisition.

The basis of smuggling operations is British Columbia, from the ports of which even small schooners can sail along the coast, in the sheltered waters between the islands, to the Alaskan Territory. As different points are reached on the trip, kegs of liquor are thrown overboard and picked up by the traders, in accordance with pre-arranged plans.

In Alaska, prohibition has failed to prohibit, even in a territory sparsely settled, and with the law attempted to be enforced by Government officers, backed by the whole prestige of the Federal authority. Alaska occupies, however, a favourable position in many respects from a prohibition standpoint. It is comparatively isolated geographically. Access to the territory is mainly from the south, from British Columbia. On the north it is shut in by ice-bound seas; on the east it is bounded by the North-west territories, which, up to May, 1892, have been under a prohibitory system as regards the liquor traffic. Moreover, Alaska contains at the present time a sparse population. Still further, the prohibitory law is in the hands, as far as regards enforcement, of officers appointed by the United States Government. In these particulars, at all events, the territory occupies an exceptionally favourable position to secure a thorough enforcement of any law, whether prohibitory or otherwise.

Testimony taken by this Commission in British Columbia had special relation to the prohibitory situation of the territory of Alaska. As the commissioners were fresh from an inquiry instituted in the North-west Territories of Canada in regard to the enforcement of a prohibitory law under similar conditions, as regards the character of the law itself, a territory sparsely populated, and enforcement by Government officers, the inquiry as to the position of Alaska possessed special interest. Several witnesses called before the Commission described, with more or less detail, the condition of affairs in this recently acquired portion of American territory. The witnesses agreed on several points, which may be briefly summarized, namely, that the prohibitory law is a failure; that the whole force of Federal officers, supported by the Federal Government itself, has failed to enforce it; that the people themselves are opposed to the law, on principle; that accordingly smuggling is constantly going on between the territory and British Columbia; that smuggling operations are conducted not only by land but by sea; that while smugglers convey overland alcoholic liquors through difficult mountain passes and through a little-travelled country, schooners chartered to carry cargoes of liquors drift along the coast northward, taking advantage of the sinuosities of the coast, and drop portions of the cargo in bays and inlets, where the barrels are picked up by illicit dealers; that illicit stills are carried on by whites, as well as natives, who brew "hoochinoo," a native alcoholic drink, and that, in a word, the law is openly defied by all classes of the population.

The proof is contained in the evidence given by witnesses heard by this Commission in British Columbia. Mr. R. H. Hall, M. P., of Victoria, manager of the Hudson Bay Company's business, gave valuable information, gathered from a long residence on the border line of the province, and within the boundary of Alaska itself. He explained that the United States Government endeavoured to carry out prohibition in Alaska "by men from Washington." "It is a complete failure," was his emphatic statement. He declared that liquor was obtainable in any quantity, that it was smuggled. In Juneau, the principal town in the territory, with a population of 1,200 souls, there were no less than 33 saloons, when he visited it. The quality of the liquor was of the vilest character; to use his own words, "A very great deal of it was manufactured from proof spirits, and it was 'doctored' so as to make it look like whiskey or anything else." His experience in Sitka was similar—saloons, bad and crude liquor, unregulated trade, so-called prohibition, formed the record. As to the enforcement of the law, Mr. Hall stated, "I do not think the Government officials could put the trade down, unless they had a very large army in the territory. The majority would defy any interpretation of the law that would bring about pro-

Liquor Traffic—Commissioners' Report.

hibition." It was even stated that there were few places where liquor could not be obtained, and that both Indians and white men drank. Illicit manufacture was also common. The Indians manufactured liquor out of rice and molasses in their own stills, and in this direction, of course, it was impossible to enforce a prohibitory law. As to difficulties in the way of enforcement of the law, Mr. Hall said, "I think the difficulty is this: I do not suppose that the officials themselves, or the people, believe in the law that has to be enforced." Of course, the population of the territory is largely composed of fishermen and miners. Every effort appears to have been made to carry out the law, and this Commission was informed that the officers were constantly making seizures. Public opinion, however, was antagonistic to the law. The opinion was frankly stated to this Commission that the prohibitory law gave encouragement to lawlessness, from the fact that the people of the territories themselves admit the impracticability of its enforcement. In other respects, however, it was generally conceded that the people of Alaska were very law-abiding. Mr. Hall stated that two or three years ago the Governor of Alaska felt it was so difficult to deal with the liquor traffic that he undertook to assume the responsibility of granting temporary licenses to vendors of liquors, while he proposed to make such representations to Congress as would result in the license system being made permanent. The liquor dealers in Alaska, he explained, held a meeting to discuss the matter, and the result of their deliberations was, that they decided they would not accept temporary licenses or any other licenses, on the ground that the liquor trade was more profitable under prohibition than it would be to them under license.

A law to institute a license system in Alaska was introduced into the United States Senate in December, 1891, but after the second reading it was dropped.

Sir Matthew Begbie, Chief Justice of the Supreme Court of British Columbia, recited to this commission particulars of a journey in the northern country and over the Alaskan line. He declared that the Indians not only obtain considerable quantities of liquor by importation, but also manufacture liquor themselves. He explained that a small stock of wine which he had with him for the journey became exhausted, and he desired to obtain a fresh supply of alcoholic stimulants. He said: "I was at Fort Wrangel, and the people said that I could get as much liquor as I wanted for \$5 a bottle, good brandy, marked 'Martel.' I asked where I could get it, and they said that the Indians would sell me as much as I wanted. The Indians had plenty of liquor, and it was from them I got it. It was as good as you could get in Victoria. That was in Alaska, where there is prohibition."

Mr. Robert Ward, a prominent merchant in Victoria, and a justice of the peace for the whole Province of British Columbia, testified before this Commission respecting the trade in liquors between that province and Alaska. He said: "I remember in Alaska, some years ago, there was a large trade going on between it and British Columbia; in fact there was a large trade with nearly all points on the Stickeen River and Puget Sound in the illicit whiskey business. I have known cases where liquor was smuggled in casks of butter, small kegs of whisky being inside. The butter was melted and poured around the small keg, and it would be concealed and shipped as butter."

Interesting evidence was given by Mr. Alexander Choquette, of Fort Wrangel, Alaska. He had resided at Fort Wrangel during a period of five years, having previously lived in California, and also on the Stickeen River, British Columbia. He explained that, although a prohibitory law is in force in the territory, all kinds of liquors were sold, including Jamaica rum, brandy, gin and whisky. They were sold openly. Although there are not more than 30 white people at Fort Wrangel, there are no less than three saloons in which liquor is openly sold. The enforcement of the law is in the hands of a Government commissioner, who, as Mr. Choquette laconically observed, attends to all the troubles that occur, and tries to stop the sale, which has never been done yet. Then there is Juneau, with 14 or 15 saloons, according to this Indian trader. There liquor is sold openly and over bars. Deputy marshals are appointed to enforce the law, but they fail there, as elsewhere. As this witness put it, "They have tried several times, but they have not stopped the

trade." The population is composed there, as elsewhere, of fishermen and miners, and it was generally conceded that but few of the whites did not drink. Again, evidence was given with respect to Sitka, the capital and headquarters for Alaska traders. Mr. Choquette appeared to be quite familiar with this trading post, where, he said, liquor is freely sold, and although many attempts have been made to stop the sale by deputy marshals, they have failed, and they appear now to mainly confine their efforts to preventing liquor sales to Indians. The reason was explained in a sentence by this witness, "They are unable to do so." As to the popular sentiment respecting the sale, the testimony went to show that the people desired to have liquor sold, notwithstanding the prohibitory law. Among other odd ways in which liquor was shipped to the territory, may be mentioned that of shipment in corned beef barrels, it being the habit to thereby smuggle ten gallons of alcohol. While the whites obtained liquor in large quantities by these smuggling operations, the Indians manufactured their own to a large extent, the product being described as possessing great strength.

Mr. John Pawson, of Nanaimo, an old resident of British Columbia, declared that large quantities of liquor were shipped from British Columbia ports to Alaska. He gave some particulars in respect to the manufacture of "hoochinoo" by the natives of the territory, a native intoxicant prepared from molasses with kelp and the assistance of a primitive still in the shape of a coal-oil can.

A Government return shows that for the year ended 30th June, 1892, there were taken out in Alaska, United States certificates as follows:—

Retail liquor dealers.....	60
Brewers.....	4
Retailers in malt.....	3

Mr. Robert D. Porter, United States superintendent of the census, in his official report of the census of 1890, dated February 9, 1893, makes several very interesting references to the subject of prohibition in the volume devoted to Alaska. He explains that, for census purposes, the country is divided into seven districts, commencing at the southern boundary and ascending to the arctic boundary, each district being dealt with separately.

The following excerpts are taken from his report:—

SOUTH EASTERN DISTRICT.

"The duties of the collector of customs (at Fort Wrangel) are principally to see that no liquors or dutable goods are smuggled into Alaska from British ports; but it is evident that he requires much better facilities for executing his authority in order to stop the liquor traffic across the British line and among the natives in south-eastern Alaska." (Page 23.)

Speaking of Port Chester, the report says: "The Tsimpseans differ from all other tribes in south-eastern Alaska, unless perhaps the Haida can be excepted, in their total abstinence from the use of liquor, and the manufacturer of the vile 'hoochinoo' is unknown amongst them." (Page 29.)

Referring to the Kakes, "the most vicious tribes," it says: "I saw they were not only anxious to become civilized, but said that they would do anything to do away with the manufacture and drinking of 'hoochinoo,' if the Government would give them a school at which their children would be educated." (Page 35.)

Again, "Strict prohibition laws are decreed for the whole territory, but are not respected, and cannot be enforced in this section, where whisky smuggling is as fixed an occupation, or industry, as mining." (Mrs. Skidmore, in census report, page 42.)

Reference to severe fighting amongst the Chilcats in 1881, arising from a drinking bout on 'hoochinoo,' is made on page 45.

Mr. Henry Boursin, special census agent, speaking of the Thlingits, "the most intellectual tribe," says: "They are born liars and grossly immoral; drunkenness is the rule and not the exception, and all these vices have been strengthened, not checked, by contact with civilization." (Page 54.)

Liquor Traffic—Commissioners' Report.

KADIAK DISTRICT.

The report on this district mentions the people as industrious and fairly prosperous, but is silent as to the observance or non-observance of the law.

UNALASKA DISTRICT.

Mr. Samuel Applegate, the official for this district, in his report says: "When I first visited Unalaska, in 1881, I found the people living in filthy, barbarous, semi-subterranean sod houses. There were some few exceptions, of course, but by far the majority lived in a manner but little above that of the higher animals. I soon discovered that the cause of their degraded condition was their excessive indulgence in a home-brewed beer called "quass," made from flour, sugar and yeast. This was made almost constantly, and imbibed so persistently that the people would remain in a drunken stupor for days at a time. At that time, and for two years subsequently, this condition existed. At that period there were rival trading companies established in the district, with almost everything imaginable except liquor in their stores to attract trade. Prices were fair and sea otters plentiful. In looking back to those times one can but deplore the weakness of human nature. There is not an able-bodied native here but would have been comparatively well off had he saved his earnings. With the disappearance of competition a check was placed upon the consumption of sugar, and since then the people have improved wonderfully, both mentally and physically—physically, because they can now much better resist the diseases which seem to visit them annually, and which formerly carried them off so easily. * * * Even now, however, opportunities will occur to save up sugar for some special holiday, and to indulge in a prolonged period of general intoxication." (Page 81.)

NUSHAGAK DISTRICT.

Of this district the report says: "Some of the Eskimo have learned to distill from flour-paste, sugar, dried fruit, berries, etc., a horrible kind of liquor, which they drink without rectification, fusil oil and all. The trader at Nushagak dis-countenances such proceedings, and has tried to put a stop to them by giving orders that not more than 20 cents' worth of sugar shall be sold at one time to a customer. The natives, however, have frequently been discovered saving up this flour and sugar. They will deprive themselves for weeks of sweetening in their tea and will refrain from eating bread in order to indulge in a beastly debauch, as soon as they have stored up enough flour and sugar to make a brew." (Page 93.)

KUSKOKWIM DISTRICT.

The Eskimo are described, in this district, as "a primitive people who have not yet acquired the accomplishment of making or consuming strong liquors." (Page 103.)

YUKON DISTRICT.

"The influx of miners to the country has produced marked changes amongst the natives, and not to their benefit morally. The illicit manufacture and use of liquor, both by the traders of the company and the miners, is certainly demoralizing the natives to a great extent. It is openly carried on, both on the upper and lower river. At Andreafsky, on the lower river, it is a common sight to see intoxicated natives, more especially in the winter, and the natives have now learned the process of making liquor themselves, more particularly on the coast and the Lower Yukon." (Page 121.)

ARCTIC DISTRICT.

"The fondness for alcoholic liquor is a curse among these people, a circumstance that has been taken advantage of by the whalers in obtaining supplies of furs and bone. Within the past two years Kotzebue Sound and Point Hope natives have instructed the Point Barrow natives how to distill alcohol from molasses, sugar and flour. A mixture of these articles, with water, is boiled in an old coal oil or any other available can, into which is inserted an old gun barrel, fitted with dough or clay, to make it air tight. The barrel passes through a block of ice, and as the mixture boils, the vapor condenses as it leaves the tube into a crude spirit, and is caught in a receptacle. The utmost care is taken to avoid losing a drop of this precious mixture. Attempts to check the making of this vile liquor prove abortive, as the law does not prohibit the sale of sugar, molasses or flour to the natives, and until some strict Government surveillance is exercised over them during the winter, the manufacture will be continued. Under the influence of this alcohol men beat and maim the women unmercifully, accidents occur, and long spells of sickness succeed the drinking bout. A drunken Eskimo acts like a crazy man, and the sober men of the village try to divest the fellow of knives, or any weapon that might be used in his drunken paroxysms. The whalers, too, trade liquor to these people for various articles, but generally most of the drink is given to the women in payment for their favors. Efforts to restrain this traffic have been made by revenue marine officers; search is made on board the vessels for the contraband article, and in every instance, if it be found, the contents of the packages are dumped overboard. The trouble lies in the fact that both officers and men manage to obtain drink either from the ships that call at Honolulu, the Caroline islands, or Japanese ports, or secrete it in their effects prior to leaving San Francisco. It must be stated that the managers of the whaling firms of San Francisco use every endeavour to prevent liquor being taken on board their vessels proceeding to the Arctic. The love of strong drink has a firm hold on these people, and they will sacrifice their all to obtain it." (Page 145-6.)

The prohibition in the territory is carried out under the following regulations, prescribed under the authority of section 14 of the Act of May 17, 1884, entitled, "An Act providing a Civil Government for Alaska," and section 1955 of the Revised Statutes:

"1. No intoxicating liquors shall be landed at any port or place in the territory of Alaska without a permit from the chief officer of the customs at such port or place, to be issued upon evidence satisfactory to such officer that the liquors are imported, and are to be used solely for sacramental, medicinal, mechanical or scientific purposes.

"2. The importation to said territory of breech-loading rifles and suitable ammunition therefor, except for the personal use of white settlers or temporary visitors, not traders, is hereby prohibited.

"3. The master of any vessel departing from any port in the United States having on board intoxicating liquors or breech-loading rifles and ammunition suitable therefor, when such vessel is destined to any place in said territory, or, if not so destined, when the intended course lies within the waters of the territory, will be required to file with the collector of customs at the port of departure a special manifest, signed and verified in duplicate, of all such liquors, arms and ammunition; and no clearance shall be granted to any such vessel unless the articles embraced in the special manifest are shown to the satisfaction of the collector to belong to the necessary supplies and equipments of the vessel, or to be entitled to the above specified exemption, or are covered by bonds taken under the provision of said section 1955.

"4. One of the special manifests above provided for will be delivered to the master, together with the clearance, if granted, and any intoxicating liquors, breech-loading rifles, and ammunition found on board a vessel within the waters of the territory, without such special manifest, will be seized, and the offenders prosecuted under the provisions of section 1957 of the Revised Statutes."

The necessary executive order was issued by President Cleveland on 4th May, 1887, and this order remains in force.

Liquor Traffic—Commissioners' Report.

The following is a copy of one of the latest orders issued from the Treasury Department at Washington concerning the sale of intoxicating liquors in the territory of Alaska:—

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
WASHINGTON, D. C., March 12, 1892.

“For the purpose of more effectually carrying out the law of Congress prohibiting the sale of intoxicating liquors in Alaska, it is ordered that existing rules and regulations regulating the sale of intoxicating liquors in the territory of Alaska, pursuant to the Act of May 17, 1884, are hereby continued in force, except as herein modified:

“1. Existing statutes and regulations relating to the sale of intoxicating liquors shall be strictly enforced.

“2. The sale of intoxicating liquors for medicinal, mechanical and scientific purposes shall be made only by such persons in said territory as have obtained a special permit from the Governor of the territory to sell intoxicating liquors therein, upon the following conditions:—That before the application for the permit or renewal thereof shall be granted, the applicant shall make and subscribe an oath before an officer authorized to administer oaths in said territory as follows:—

“I (name), do solemnly swear that I will not sell, give or furnish any intoxicating liquors to any person otherwise than as provided by law and the regulations established by the President of the United States, under the Act of May 17, 1884; and especially that I will not sell or furnish any intoxicating liquors to any person who is not known to me personally, or duly identified; nor to any minor, intoxicated person, or persons who are in the habit of becoming intoxicated, and that I will not allow any intoxicating liquors to be drunk on or about my premises; and I will make true, full and accurate returns to all certificates and requests made to or received by me, as required by said regulations; and said returns shall show every sale and delivery of such liquors made by or for me during the month embraced therein, and the true signature to every request received and granted; and such returns shall show all the intoxicating liquors sold or delivered to any and every person as returned.”

Such applicant shall also file with his said application a bond to the Governor of said territory, in such penal sum as the Governor shall prescribe, not less than five hundred dollars (\$500), conditioned that for any violation of said Act of May 17, 1884, or the regulations established by the President thereunder, said bond shall be forfeited. Such bond shall be signed by the applicant or applicants, as principal or principals, and by at least two sureties, who shall justify under oath, in the sum of five hundred dollars (\$500) each, over and above all indebtedness and exemptions, and such bond shall be approved by and deposited with the Governor. The United States and any person or persons who may be injured or damaged by reason of any violation of said law, or the regulations thereunder, may have an action upon such bond.

“Upon taking said oath and filing said bond, the Governor of said territory may issue to the applicant a permit authorizing him to keep and sell intoxicating liquors as provided by said Act and regulations made thereunder; and every permit so granted shall specify the building, giving the location thereof by street or number, in which intoxicating liquors may be sold by virtue of the same and the length of time the same shall be in force, which in no case shall exceed twelve months.

“3. The sale for medicinal purposes shall be made only upon the prescription of a reputable practising physician of said territory, stating the kind and quantity of liquor necessary to be used by the patient.

“4. The sale for mechanical and scientific purposes shall be made only upon application duly subscribed and sworn to by the applicant in person, before some person authorized to administer oaths, made by the party desiring to use the same, stating the kind and quantity of liquor required, and that the same is necessary for mechanical or scientific purposes (stating particularly the purpose, and the exact locality where to be used).

"5. No licensed person shall sell or deliver any intoxicating liquors to any person if he has reason to believe that the applications, certificates, or affidavits, submitted to him by applicants are evasive or untrue; or to any minor, or intoxicated person, or to one addicted to intoxication. If the applicant is not personally known to the person selling, before filling his request he shall require identification by a person known to him, and a statement signed by such witness that the applicant is not a minor and is not in the habit of using intoxicating liquors to excess, and is worthy of credit as to the truthfulness of the statements in his application.

"6. At the end of each month each licensed person shall make out and forward to the Governor an itemized report of the date and quantity sold to each person, and the purpose for which it was bought; and if, upon a prescription, the name of the physician giving the same, which report shall be sworn to.

"7. Any person violating this regulations, or the provisions of law relative to the sale of distilled spirits or intoxicating liquors in Alaska, shall be liable, upon conviction in the proper tribunal, to the penalties imposed in section 1955 of the revised statutes of the United States, and, in any event, upon such violation by such persons his permit shall be revoked, and not renewed without approval of the Secretary of the Interior.

"8. In case any physician make a false certificate as to matters aforesaid, any certificated of his thereafter shall be rejected, and no application shall be granted thereon; and in any case when a false affidavit is made, all applications by such person thereafter shall be rejected. Co-partnerships, corporations and all associations are included within the foregoing rules.

"9. The Governor shall have power to suspend or revoke any permit issued by him to any person whenever, in his judgment, it is shown, after due notice, that such person has failed to comply with the rules and regulations prescribed therein, or that the best interests of the inhabitants of the territory require such suspension or revocation of the permit.

"10. Every person who, under these regulations, shall have obtained a special permit from the Governor of the territory of Alaska to sell intoxicating liquors for medicinal, mechanical and scientific purposes will also be required to pay to the Collector of Internal revenue of the district of Oregon (in which collection district the territory of Alaska is included) the special tax as a liquor dealer, and in all other respects to comply with the internal revenue laws.

"O. L. SPAULDING,
"Acting Secretary.

"EXECUTIVE MANSION, March 11, 1892.

"Approved,
"BENJ. HARRISON."

In a letter written by the assistant secretary of the Treasury on the 3rd March, 1894, he said:—

"Customs officers and officers of the revenue marine service have been instructed to be especially vigilant, with a view of preventing the violation of the laws relating to the importation of liquor within the territory named. Complaints have been made from time to time of the practice of smuggling small packages of liquors, and seizures have been occasionally made. There is nothing, however, to indicate that liquors in any considerable quantity are irregularly introduced into the territory. As you are aware, the law allows the importation and sale of liquors for medicinal, mechanical and scientific purposes, and permits for such sales have, so far as this department is advised, been issued only to druggists."

Through the kindness of Senator McMillan, of Michigan, the commissioners have been supplied with copies of very interesting reports from the governors of Alaska to the Government at Washington. Extracts from these reports will be found in Appendix No. 134. It is only necessary, perhaps, to quote here from His Excellency Governor James Sheakley, addressed to the Secretary of the Interior, on the 1st October, 1893. In that report His Excellency says:—"The law prohibiting the importation, manufacture or sale of intoxicating liquors in Alaska is (in its pre-

Liquor Traffic—Commissioners' Report.

sent construction) a source of irritation and discontent amongst all classes of people in the territory. It gives rise to a large traffic in smuggled liquors, mostly from British Columbia, which our customs officers cannot prevent and have not the means to suppress. Either the law should be changed or the revenue officers provided with the means to enforce its provisions."

Mr. Inspector C. Constantine, of the north-west mounted police, visited the valley of the Yukon River in 1894. He returned by way of Alaska, and subsequently reported at Ottawa. The inspector made a statement to the chairman of this commission embodying some information in regard to the liquor traffic in Alaska, a copy of which will be found in Appendix No. 135.

IOWA.

The state of Iowa lies entirely within the prairie region of the Mississippi valley and is bounded by the Missouri and Big Sioux river, on the west, and the Mississippi on the east. Its area is 55,045 square miles, and the population in 1890 was 1,906,729. There are no large cities in it, but a number of thriving towns.

Iowa was originally a part of the Louisiana purchase, and was made a territory in 1838, and in 1846 admitted to the Union as a state.

The state is under a prohibitory law.

In Iowa the sale of intoxicating liquors as a beverage, exclusive of wine and beer, has been continuously prohibited since 1855.

In that year a strong prohibition law was carried by nearly 3,000 majority in a total vote of 48,200. In 1858 the law was modified, permitting the sale of ale, beer and wine.

In 1875 the prohibitionists became a factor in the politics of the state. In that year, however, they polled only 737 votes out of a total of 218,862. In 1877 they cast 10,545 votes. In 1879 the vote declined to 3,291.

In 1882 a prohibitory amendment to the constitution was submitted to the people, in the following terms:—

"No person shall in the future sell or keep for sale as a beverage any intoxicating liquors whatever, including ale, wine or beer. The general assembly shall by law prescribe regulations for the enforcement of the prohibition herein contained, and shall thereby provide suitable penalties for violations of the provisions thereof." (Section 26).

This proposition was carried by 29,759 majority, there being for, 155,436; against, 125,677. Seventy-six counties gave majorities to the amendment, as compared with 23 that cast majorities against it.

Immediately after the election at which the amendment to the constitution was adopted, Governor Sherman issued his proclamation declaring the result. The prohibitionists held a convention and declared in favour of the holding of a special session of the Legislature to enact additional laws. The opponents of prohibition at once declared that the amendment was unconstitutional. A test case was tried, and an appeal taken to the Supreme Court of the state. The question was argued at length, and the Supreme Court decided that the amendment was unconstitutional, not having been passed in the form prescribed by the law. Then a movement began for a rehearing of the case, which occurred at the April term in 1883. The decision of the Supreme Court was sustained, one judge alone dissenting.

In the same year Governor Sherman refused to convene a special session of the Legislature. At the following session of the Legislature, held in January, 1884, statutory prohibition was enacted.

The law, which is still in force, may be thus summarized: All persons are prohibited from manufacturing selling or keeping for sale all kinds of intoxicating liquors, including wine and beer. All of such liquors, including the vessels containing the same together with the premises on which they are sold or kept for sale are declared nuisances.

Intoxicating liquors may be sold for pharmaceutical, medicinal, mechanical and sacramental purposes, provided a permit shall first be obtained for doing so. In order to secure such permit, the party making the application must give three

weeks' notice in some newspaper of his intention to apply therefor. The application is made to the district court. The application must be by petition signed by one-third of the freehold voters in the township, incorporated city, or town in which the permit is issued. After all the provisions of the statute have been complied with and no objection taken, the court may grant such permit upon the applicant entering into bond in the penal sum of 1,000, with good and sufficient sureties that he will observe the law. These permits remain in force unless revoked for such period as may be specified thereon.

The penalties for selling without a permit are fines varying from \$50 to \$100 for the first offence, and for subsequent offences \$300 to \$500, with imprisonment not exceeding six months. The penalty for keeping a place for the manufacture or sale of liquors contrary to law ranges from \$300 to \$1,000. There are special provisions respecting sale of liquor by pharmacists. A permit-holder may sell or deliver liquor only on a written request. He is to make a return every month of the sales, and must enter them in a book open to inspection. The proceeds of fines are given to the school fund.

Any person found in a state of intoxication is to be arrested and, on conviction, to be fined \$10, or imprisoned for 30 days. But the punishment may be wholly or partly remitted, upon the prisoner's stating on oath when, where and from whom he received the liquor.

Any wife, child parent, guardian, employer or other individual injured in person, property or means of support by any intoxicated person, or in consequence of his intoxication, habitual or otherwise, has a right of action for damages against the person who, by selling him liquor, caused the intoxication.

In 1884 the prohibitionists of the state inaugurated a movement looking towards national prohibition, and they cast that year 1,472 votes for that ticket. Since 1883 the prohibitionists have had a ticket in the field every year. The vote has usually run from 1,400 to 1,600, going down in 1887 to 334. In 1882, however, the prohibitionist polled 6,097 votes, the Republican candidate obtaining 219,464 and the Democratic candidate 196,686.

Notwithstanding the restrictions surrounding the sale by druggists, a large quantity of liquor is sold. In 1886, the year after the prohibitory law took effect, the number of United States tax certificates of all kinds issued was 3,997, as against 5,563 in 1883, 4,424 in 1884—whereas in 1891 the number for the 14 months ended 30th June was 7,630; for 12 months in 1892, 5,219: and in 1893, 6,607. The following table shows the number of United States certificates, of each class, issued from 1882 to the year ended 30th June, 1893:—

Years.	Retail liquor dealers.	Wholesale liquor dealers.	Retail dealers in malt liquors	Wholesale dealers in malt liquors	Brewers.	Rectifiers.	Totals.
1882.....	4,104	55	321	54			4,534
1883.....	5,001	86	283	57	117	20	5,563
1884.....	3,989	63	216	54	86	16	4,424
1885.....	3,549	52	229	60	100	7	3,997
1886.....	3,709	57	152	64	98	8	4,148
1887.....	3,584	54	283	66	78	13	4,078
1888.....	2,928	36	249	48	74	6	3,341
1889.....	3,575	42	270	68	50	7	4,012
1890.....	3,975	35	225	85	22	8	4,350
1891.....	6,874	54	395	267	29	11	*7,630
1892.....	4,706	58	250	158	37	10	5,219
1893.....	5,985	58	291	238	27	8	6,607

*For fourteen months.

In Iowa, in 1893, one United States certificate was issued to every 289 inhabitants, taking the population of 1890, while Alabama shows only one certificate to 1,203 inhabitants, and South Carolina, Arkansas, Mississippi, North Carolina, Georgia, Florida, West Virginia, Tennessee, Nebraska, Virginia, Delaware, Massachusetts, Texas and Pennsylvania all have a lower ratio.

Liquor Traffic—Commissioners' Report.

Governor Sherman, in his second biennial message, 1886, says:—

"The prohibitory liquor law has been reasonably successful * * * The law is violated in many of our cities, but this argues nothing for its repeal; the same may be said as regards the law against burglary and other graver crimes, yet none desire their modification. *Whatever failure has attended it, is largely due to the apathy of its original champions, who, while stentorinous in demand for its enactment, have been noticeably quiet in aiding its enforcement* * * * Singularly enough, the law for the suppression of the liquor traffic has had to contend not only against the vigorous onslaught of its enemies, but as well the *apologies of its hypocritical friends*, whose cowardly acts have really been more deadly in character. And yet * * * the law has sustained itself. There is less of liquor drinking * * * and less of crime. There is 'boot-leg' vending in some localities."

Governor Larrabee, in his biennial message in 1888, reports:—

"Much progress has been made in the enforcement of the prohibitory law. Not only has public sentiment much improved in relation to it, but judicial officers are more disposed to secure its enforcement. Many judges give strong testimony in its favour, showing that, where it has been well executed, there has been a marked reduction in criminal offences, and also in court expenses * * * There has been a marked improvement in the condition of our poorer people.

"While there is very little difficulty in enforcing the law in the rural districts, and in a very large majority of the counties, there are still a few portions of the state, particularly some of the larger cities, where the law is not enforced * * * In Des Moines, Sioux City and Cedar Rapids, the prohibitory law is now, and has been for the past year, well enforced."

In 1888, opinions of district and superior court judges were obtained respecting the working, etc., of the prohibitory law, and several of them advised its repeal.

Governor Larrabee, in a communication dated 16th February, 1889, states: "I think that more than half of the jails in the state are entirely empty at the present time. There are 98 less convicts in our penitentiaries than there were three years ago, notwithstanding the growth of the population."

Governor Larrabee, in his message, 1890, says: "Not one-tenth, and probably not one-twentieth, as much liquor is consumed in the state now as was five years ago. Nearly all judges are now disposed to enforce the law. The law should be amended so as to prevent undue searching of private houses and malicious prosecutions. The law has been more successful, and by far more beneficial, than its most hopeful friends anticipated."

The following table gives a comparison as regards the number of convicts and prisoners in penitentiaries and jails in Iowa under prohibition, and in Minnesota under high license, respectively:—

IOWA (Prohibition).

Population.	Convicts in penitentiaries and jails.	Per 1,000 of population	Average per 1,000.
1,911,896.....	1890—Penitentiaries.. 623	0·326 } 0·171 }	497
	Jails..... 327		
1,624,615.....	1880—Penitentiaries.. 546	0·336 } 0·157 }	493
	Jails..... 255		

MINNESOTA (High License).

1,301,826.....	1890—Penitentiaries.. 432	0·332 } 0·160 }	492
	Jails..... 208		
780,773.....	1880—Penitentiaries.. 248	0·317 } 0·136 }	452
	Jails..... 105		

The number of special liquor taxpayers reported for the year ended 30th June, 1893, was, for Iowa, 6,607; for Minnesota, 4,323. Taking the population as reported in the United States census returns, 1890, these figures give one special liquor taxpayer to each 301 of the population in Minnesota, and one to 289 of the population in Iowa.

The increase of the population between the years 1880 and 1890 was in Iowa 17.68 per cent; Minnesota, 66.74 per cent.

Supposing the increase to have continued in the same ratio for the years 1891, 1892, 1893, the population of the two states would be, in 1893, about as under:—

Iowa.....	1,999,000
Minnesota.....	1,459,000

The special liquor tax payers in Iowa would thus be one in 303; Minnesota, one in 337, of the population.

In Appendices Nos. 161 to 168 inclusive, statistics of arrests in several of the most important towns and cities of this state are given. In Appendix No. 136 a comparison of those arrests with those in other towns and cities in the States and Canada is made. The statements of these arrests in Iowa presents so many anomalies as to lead to the conclusion that they are not in all cases perfectly accurate.

Prohibition in this state has not, however, apparently had the effect of reducing the number of arrests for general offences or the arrests for drunkenness below the ratio of those in places elsewhere under license.

Much valuable information respecting the operation of the prohibitive liquor laws of this state is given in the report made by Mr. E. L. Fanshawe, Barrister-at-law of the Inner Temple, London, elsewhere referred to in this report. Mr. Fanshawe visited the State. He refers to a report made in 1885 by Senator Sutton on the working of prohibition in Iowa, in which that gentleman remarks that "prohibition has done great good wherever the field was prepared for it, and where the people wanted it, and would elect public officers to enforce it, and has restricted the traffic in places like Iowa city and Muscatine, even where only a minority favor it, but where that minority is determined and aggressive." (p 154).

Mr. Fanshawe says,—“In the river-side towns the law at the present time is generally and openly violated, as is fully admitted by prohibitionists who are at all familiar with facts. At Davenport there is no sort of concealment. At the principal hotel the “lunch-room” opens out of the “billiard-room.” It consists of an ordinary bar without any screen or curtain.” (p 155). He says that under license liquor was sold in about fifty places in Davenport, and the number of such places now approaches three hundred.

Mr. S. F. Smith, a resident of Davenport, and president of the Bankers' Association of the state of Iowa, said, speaking at Davenport: “The prohibitory law is not enforced at all, and there are two hundred and ten saloons open at all times, each saloon-keeper paying what is virtually a license fee of \$300 per year, selling what he likes. The fine is paid every three months in advance. The police force is comparatively small. There are some breweries running there, of course contrary to law. Mr. Smith said the law is fairly well enforced in the larger portion of the state, but not in the river towns of which Davenport is one.

Speaking of the state of matters in Sioux City, with a population of about 38,000, and which ranks as the second city in the state, Mr. Fanshawe says: “By a municipal ordinance the liquor dealers are compelled to make a monthly payment to the city. This payment, being exacted as a fine for violation of the law, is not in form a license fee, but in effect operates as such.....Fines levied for breach of a municipal ordinance go to the municipality. Therefore, by passing an ordinance ostensibly for the purpose of enforcing the state law, a municipality is enabled to institute proceedings thereunder, and appropriate to itself the fines. The arrangement thus introduced in Sioux City is obviously in fact, though not in name, a return to a licensing system in defiance of the prohibitory law of the state (p. 157).

“A greater measure of efficiency is justly claimed for prohibition in the interior of the state than that which it has achieved among the riverside towns. But even

Liquor Traffic—Commissioners' Report.

in the interior it can hardly be said to be attended with any marked success in the larger centres of population. I visited two out of three cities in the interior whose population exceeds 10,000. In Cedar Rapids the business is carried on much less openly than in Davenport or Council Bluffs. The saloons do not publicly proclaim themselves on the street front, but a prohibitionist of the place who had been an earnest worker for the enforcement of the law told me that there were a good many of them, and that they carried on business with little or no interference (p. 159).

Amongst those who gave evidence before the Commission, during their visit to the state, were several important witnesses from whose testimony the following synopses are made:—

Hon. Horace Boies, Governor of Iowa, stated:—"I suppose everybody understands my view of this law. It has been a matter of public discussion in every campaign in which I have been interested since I came into public life, and my speeches are of course familiar to all the people of the state. I ought to say that there is a division of sentiment in this state, a very wide division, as to the correctness of the conclusion I have reached. There are a great many people in this state who honestly believe that the prohibitory law is a good thing, that it lessens crime, that it is good from a moral point of view. For my own part I am just as thoroughly satisfied that they are wrong,—that the law is a bad law from every standpoint. I do not mean to say by that that in no part of Iowa is the law enforced, because that is not true. Wherever public sentiment upholds it, wherever a large majority of the people are opposed to the traffic in intoxicating liquors, the law is reasonably well enforced. But, on the other hand, where you get into a locality where the public sentiment is opposed to the law it is there that the law is worse than a dead letter. We have to-day in some of our cities ordinances passed for the sole purpose of licensing saloons in direct violation of the statute of the state. These ordinances are usually against disorderly houses, with the understanding that each saloon or place where intoxicating liquors are sold shall be classed as a disorderly house and each month the keeper of the saloon is notified to appear before the board, and a certain fine, which is the same in all cases, is imposed. He pays that fine and also the costs of the transaction, and considers that his license fee. That is the practice that prevails. And, with the exception of Des Moines, I think the saloons run openly, as openly as they ever did, in all the large cities of the state. But once in a while some friend of the law goes into one of those saloons and takes steps to enjoin the place, which anybody is entitled to do under the law; and for a few days or weeks, or possibly months, the saloon may be suppressed. In this city we have no open saloons, and yet I know that it is publicly charged that there are a great many places where liquor is sold. I do not know that of my own knowledge, for I have never entered one of these places. I see, as well as anybody, the evils that arise from the excessive drinking of intoxicating liquors, but I do not believe that this is the way to remedy them. I think the system in this state has thrown the business into the hands of our worst classes, and there being no inspection of the class of liquors sold, the cheapest and most injurious decoctions are dispensed. In other words I think we have the uncontrolled saloon where otherwise we should have the saloon controlled by the people..... It has put the business into the hands of a worse class of people than would be engaged in it under a license system, and the class of liquors sold, there being no way of inspecting them, or determining what they are, has been of the worst and cheapest class on which the vendor could make the largest profit."

Comparing the amount of temptation to drink under a license system, and with the secret drinking of a prohibitory system, he states:—"There is a wide difference of opinion amongst our people on that subject. So far as I am personally concerned I believe that the present system is a worse one for the young than the license. I know that a great many of our people believe that open saloons fitted up in a tempting manner are more enticing to the youth of the country, and that more are led to adopt the habit of an excessive use of liquor than would be under our present system. But, on the other hand, the intoxicating liquors that are purchased at these places now are purchased largely by the bottle and put into the coat pockets and

carried away, and young men get together in some room or some by place and consume them there. Now, my opinion is that more boys are taught to drink intoxicating liquors in this way than would ever contract the habit if they had to go into a saloon and buy liquors by the drink. In other words I believe they drink in a place of that kind when they would not go into a saloon and drink at all."

Speaking of the political aspect of prohibition he stated that the question of prohibition has been "made a party political question in both elections in which I was elected governor of the state," and continues:—"Ever since the enactment of the law, the Democratic party has opposed it in one form or another. Up to the time of my first election as governor, the platform of that party was in the same general terms. In substance it would be something like this, that they declared in favour of a well regulated license system, which would leave the opportunity for different constructions of the position of the party. When I was elected for the first time, the party took a more definite position on that subject. They declared in substance in favour of a local opinion law which would permit cities, towns and townships to determine for themselves whether they would have license system, or whether they would have a prohibitory law. They declared further, that, in the event of a license system being preferred by any of these municipalities, the fee should be at least \$500, to be paid into the county treasury, and to go to the general support of the county expenses. They declared further that the power should be conferred upon the municipal authorities of each municipality that declared for license to add any additional fee they saw fit for the use of the municipality. So that if that policy ever became the law of our state, no license could be issued for less than \$500, and it might be just as much more as the municipal authorities saw fit to add. At the time of my second election, that plank in our platform was re-adopted, and that is the position in which the democratic party have stood now for nearly four years, and on which they carried both the elections in which I was elected governor. Republicans have stayed with the Republican party and supported prohibition though honestly feeling that it was not the true method of dealing with the question..... I think in both campaigns it (the Republican party) practically pledged itself to the maintenance of the law." (Vol. 5, pp. 236-239.)

Hon. W. M. McFarland, secretary of State of Iowa, said that there had been a great deal of legislation and attempted legislation on the liquor question in the state. "I suppose it has been uppermost since we started it as a local issue. It has been made a party political question. The Republican party has taken it up. After a non-partizan election, the Republican party espoused that proposition, and carried it through two legislatures, and did amend the constitution in that respect. You are probably acquainted with the procedure that took place before the Supreme Court by which that amendment was declared null and void in consequence of its not being carried in pursuance of the provisions of the constitution. Then the Republican party, feeling under an obligation, proceeded to carry the legislation out in the form of a statute, and we have our present law as the result of several acts." Continuing, he describes the result as pretty badly mixed, there being fairly good enforcement of the prohibitory law in sixty out of the ninety-nine counties in the state whilst "in the other thirty-nine counties the law is not as well enforced as other laws," and admits that there are twenty-nine breweries taking out licenses in the state, though some are only "preserving the property in the event of start-up again in case the law should change," and, also, that there are 7,619 United States Government licenses taken out in the state of which "a large number would be for those selling or intending to sell illegally." Where the prohibitory law has been enforced he thought the result had been good. He considers that the effect of disregarded law is bad, and says: "My opinion has been that under existing circumstances we should so modify our present law, by an amendment, that those communities where the law is absolutely nullified, and not enforced at all, might be allowed to control the traffic. That has been my judgment and my recommendation through the public prints here, so that I do not hesitate to make the statement.....My idea is to leave prohibition as the general law of the state, but

Liquor Traffic—Commissioners' Report.

to allow a community to substitute license where prohibition cannot be enforced. Then it would not be necessary for any county that wanted to retain prohibition to do anything, while those who wanted to withdraw from the law and license and regulate the traffic could do so..... The cause of prohibition would be better served by allowing communities to settle the question for themselves than by spreading it out over the whole state and making a party issue of it." (Vol. 5, pp. 240-244).

Hon. John M. Baldwin, counsellor-at-law of Council Bluffs, speaking of sales of liquor in drug-stores, says:—"It is peculiar to large cities, and cities adjoining the river, and to certain counties where the sentiment of the people is strongly against prohibition. In those counties where the sentiment is for prohibition, the laws with reference to prohibition are enforced as well as any other laws with regard to crimes and misdemeanours. There are evasions, the same as there are of the law against murder, but murder is committed, and the law against thieving but people steal. We have the boot-legger and I suppose that under certain shifts and devices the druggists sell" and again: "If Iowa were simply one country by itself, prohibition would be a good thing to close every saloon and stop the manufacture of liquor all through the state." He sums up his evidence thus:—"With public sentiment every law can be enforced; without public sentiment no law can be enforced. I think it (the liquor traffic) should be regulated by license. I would prefer to have an option, to leave it to each particular community to determine. I think it (the effect of prohibition on the community with regard to law as a whole) is deleterious. There is an open disregard of law that affects the community generally." (Vol. 5, pp. 222-223).

Mr. J. A. Brewer, of Des Moines, Deputy Collector of Internal Revenue for the United States, testifies that:—"Prohibition has certainly done this country a great deal of good. It has had a great effect. We have driven the liquor traffic from the public streets to the back alleys and the lumber yards. There are two classes of people politically in this state. The Republican party as a mass are prohibitionists. They voted prohibition. The people asked for it, and they gave the people prohibition and they are willing to stand by it. The Democrats are opposed to prohibition, and have done everything in their power to show that prohibition is a failure. But don't forget that prohibition is just the thing anyway. It is all wrong to license a crime. The liquor traffic is the mother of crime." He also states that he issues 260 United States Government licenses in Polk County, in which Des Moines is situated, and that those licenses are used by illicit liquor vendors. (Vol. 5, pp. 245-248).

Mr. J. C. Broeksmit, of Cedar Rapids, Auditor of the Burlington Cedar Rapids and Northern Railway is a prohibitionist, but admits that as far as the law goes "the state of public sentiment has all to do with the enforcement. Where the people are in favour of it, it is rigidly enforced." Speaking of prohibition he considers that it has done a great deal of good. The company employ probably 2,000 men. The effect of the constant violation of the prohibitory law upon the public conscience "can only be the greatest anarchy within the next fifty years. It is only sowing the wind to reap the whirlwind; it is sure to come. The law should be upheld at every hazard." He said that in Cedar Rapids the prohibitory law is not enforced, owing to the foreign population, but an arrangement exists that "is worse than black mail" on the part of the city—"we have a Democratic administration." The Democrats and the liquor power get together and say to every man that he can do as he pleases. They say: "we the city government will not molest you, and you may go on as you like, if you come to the scratch every month with \$25. I know for certain that the mayor of the city has stated, "if they do not come to the scratch, I will close them up," while, on the other hand, he gives us to understand "that he cannot close them up." (Vol. 5, pp. 279-281).

Mr. Edmund Burke, chief of the fire department of Clinton, stigmatized an attempt which had been made to enforce the prohibitory law in that place as a flat failure. "It succeeded so far as causing a great deal of trouble and excitement, but

so far as the enforcement of the law is concerned it did not succeed. While it succeeded in closing the public saloons, there would spring up in their place lunch counters, where beer and whisky were sold. We had a good many of them, and also of places that are called holes-in-the-wall. Another thing that was practised a great deal was parties getting together and buying a keg of beer and going out on the flats and drinking it. There was a great deal more of that than I have noticed before or since. A great many boys were in the habit of drinking that way." The attempted enforcement ceased when a man named Marshall Judge who had been acting as informer was spotted and nearly lynched for shooting "a man through the bowels," a riot ensuing and the jail being "wrecked." (Vol. 5, pp. 286).

Mr. C. W. Chase, of Clinton, counsellor-at-law, formerly mayor of Clinton, stated that there had been spasmodic efforts to enforce the prohibitory law. His own attempt to enforce the law caused trouble and illicit selling, and ended because the judge declined to work. He accounted for the sentiment of the community being opposed to prohibition, "because of the effect it has on politics. Men who are in favour of prohibition are in favour of free whisky, or license at election times so long as they can control the floating vote. Furthermore, when you elect to office a man in favour of prohibition, and he undertakes to enforce the law, when his time is out they will see that the next man is not prohibitionist." Referring to the existing system of virtual license he said:—"I do not know that the effect upon the public conscience is any worse than it is to have a prohibitory law with everybody selling whisky free. Both of them are violations of the law *** I think at this time the majority of the people prefer the present arrangement to prohibition unenforced, because you do not have any more whisky, and you get a revenue from the saloons from which public improvements can be made *** We have as little crimes as any place of the same size under the same circumstances. There are other laws evaded in the city of Clinton besides this. The Sunday law and the law relating to gambling houses, and to houses of prostitution, for instance. Money is got from them in the same way *** as men are, I believe it is better to have a license law than prohibition. As long as men are influenced by rabble voters, and the question has a political bearing, I think it impossible to keep men in office who will enforce prohibition. License is better than prohibition not enforced and it amounts to that *** I believe local option is a humbug." (Vol. 5, pp. 300-304). Mr. Chase said that both in Clinton and Lyons, a place near by, breweries were being run contrary to law.

Mr. Walter Dale, of Clinton, wholesale liquor dealer, said: "The records will show that there was more drunkenness during the two years of Judge Chase's administration than ever before *** He brought in spies and appointed them on the police force, but they were not here long. He made a monkey out of the whole question. At the present time Mr. Hughes is getting more out of the traffic than ever before. We have quiet orderly people and everybody is satisfied." (Vol. 5, p. 315).

Mr. William P. Daniels, Mayor of Cedar Rapids, and Secretary of the International Organization of Railroad Conductors, having given evidence as to the spasmodic efforts at enforcement of the prohibitory law culminating in the virtual local license, said: "The public sentiment of the people of Cedar Rapids to-day, I believe, has amply demonstrated itself as in favour of permitting and controlling the liquor traffic *** I believe that we shall be able to control them (the saloons) so far as to keep them orderly and respectable—as respectable as saloons can be. I think we shall be able to close the lower class, the groggeries and dives. My experience is that the very worst places for boys or young men, the places where they learn the use of liquor and get into drunken habits, are those holes-in-the-wall that respectable people know nothing about. They are generally in out-of-the-way places, and are carried on by a class of people who would sell to a ten-year-old child as quickly as to any one else; and a boy going into one of those places is perfectly free from being caught by his parents or by any one interested in his welfare." (Vol. 5, pp. 269-274.)

Liquor Traffic—Commissioners' Report.

Rev. Henry DeLong, of Council Bluffs, Methodist minister, gave interesting testimony as to the effort to enforce the law made when it was first passed and said: "I took upon myself the duty of enforcing the law through the search warrant, and I used to have sometimes thirty or forty warrants in my pocket. I could not get a regularly-elected officer to serve the warrants faithfully; he would slip into a telephone office and telephone to the fellow that he was coming. All he wanted was the fees, so the law was amended so that I could be deputized as a special officer for a special case. So I went myself and executed the warrants * * * I was in the fight four or five years. I had no trouble in closing up a saloon that would not pay the lawyers, but, where they did pay the lawyers, instead of my getting a case against them, they would get a case against me * * * For instance, I went into one saloon, and the saloon-keeper's wife went at me with a hatchet, and the saloon-keeper went at my assistant with a revolver. They indicted me before the grand jury for assault, and they bound me over for personating an officer, and for burglary in breaking into the place. These cases were pigeon-holed, and never brought to trial * * * I saw I was putting the county to considerable expense, and just making money for men who were getting fees both from the county and from the saloons * * * Then I came to the conclusion that it was no use, and I stopped. I could have made money out of it, but what I wanted was the law enforced * * * For instance, if I had a warrant against a saloon-keeper, he would be willing to give me fifty dollars if I would give him time to get out of the way * * * If I were just made a constable I could shut up every saloon in Council Bluffs, because then I could get pay for my work and afford to spend the time necessary." (Vol. 5, pp. 229-230.)

Mr. Templeton, city marshal of Council Bluffs, said that in the year 1892, there was received by the city as a revenue from persons engaged in selling liquor, of course illicitly, \$46,000, and that in May, 1893, there were 78 places in the city in which the traffic was carried on, not including drug stores.

The system, for it had been reduced to a system, was to have a warrant issued and each liquor dealer notified on the first day of each month of such warrant, and that he must come in before the 10th day of the month and put up \$52.10 for his appearance the next morning. He would not appear and the money was forfeited, the \$50.00 being a fine and the \$2.10 for Marshal's fees. Thus each dealer paid a monthly fine of \$50.00, which meant a yearly license fee of \$600, besides the costs. The revenue was more than sufficient to meet the expense of the police department, there being a chief with sixteen men, besides the marshal's department with four in it. The marshal stated that Council Bluffs would compare favorably with any place in Iowa. This officer, speaking of the interior of the state generally, said,—“I have the first place to find yet where I cannot “get liquor, although I am not a drinking man.” He further stated that he thought, in the rural districts, the majority of the liquor was sold in so called drug stores. Instancing a friend of his own son who went into the drug business without knowing anything of it, he had a patent medicine business, but had a room at the back of the store where the corks were flying while witness was there.

The Mayor of Council Bluffs, in his address and recommendations to the City Council in April, 1893, spoke of the City Marshal as follows,—

“The report of the city marshal shows that he has collected and paid into the hands of the city clerk \$46,234.15. This has been accomplished in a great measure through his energetic and official attention to his official duties. I desire to avail myself of this opportunity to extend Marshal Templeton and his deputies my thanks as mayor of the city for the valuable assistance rendered by them to the police department. No petty jealousy has marred the official action of either the marshal's or police department, but, on the contrary, the members of each have in an emergency mutually assisted each other with hearty good will.”

E. R. Mason, clerk of the Circuit Court of the United States, stated that it might be said that the law is pretty rigidly enforced in Des Moines, but there are many places in the city where intoxicants are sold under the protection of the pharmacy law, places known as drug stores, at which, under a permit to sell for medicinal

purposes, liquor is sold to all comers, the observance of the law depending on the conscience of the druggist. Then there are places in the town where people do a boot legging business.

Chief of Police Fred. Johnson, stated that there is a police force, including detectives and health officers, of 42 men; that there is considerable drunkenness, there being some sixty odd drug stores in town to which the judges of the District Court have granted permits to sell intoxicating liquors, and that is where the people get their drinks; that they also have joints where what is called "boot-legging," is carried on, and the lower class of men go to the joints, and the better class to the drug stores. He said they have clubs in the city with which the police do not meddle, and at which the members drink liquor socially. The arrests the previous year had been about 3,100, quite a good many of which were for drunkenness.

Mr. Frank Eggleston of Des Moines, Police Judge, in answer to the question:—"Do you think the prohibitory law is as reasonably enforced here as laws against other offences?"—said:—"Perhaps not, and that is probably due to this reason. It is a law that a great many people, who are law abiding citizens in other respects, will not hesitate to violate. They think it is no crime to sell intoxicating liquors. While they know it is against the law of the state, still they think it is the right of the citizen to drink intoxicating liquors if he wants to, and they think this law deprives them of some of their rights. They think the selling of intoxicating liquor is not a crime in the sense that you would say stealing and a great many other things are crimes, and while they would not think of upholding those classes of crimes, they are not in favour of the enforcement of the prohibitory law that is the reason it is much harder to enforce this law than other laws." (Vol. 5, p. 265).

Mr. Fred W. Faulks of Cedar Rapids, editor of the *Evening Gazette* said:—"In the localities where they would not allow a saloon under any circumstances, no matter whether license or prohibition were the law, prohibition has been a success because the law was not needed to make it a success." He gives the following account of matters under the prohibitory law:—"Then the lawyer would have served original notice on the saloon keepers. He would serve a notice for a suit for \$1,000 or or \$500, or \$5,000 or any amount he saw fit, and it was stipulated that one half should go to the school fund and the other half to the informer, I believe. Then he would get the saloon keeper in his office and settle for \$100, \$150 or \$200, and pocket the money. The school fund got nothing, and the county paid in advance the costs of any proceedings that might have been taken." (Vol. 5, pp. 277-278).

Mr. Faulks said that in Iowa prohibition had been made a party political question, the Republicans having made it a plank in their platform. In the rural districts he had known many places where some farmer would go to the city and regularly cart out his load of beer for distribution among the farmers of the locality. For some years there were hundreds of agents travelling through Iowa taking orders for whisky to be shipped in barrels, boxes, kegs and jugs, and in every imaginable way, while during the last few years there had been no trouble in securing it at the drug stores anywhere. At one time there were 240 places in Cedar Rapids selling liquor, whereas in the old license days they had 40.

Mr. W. C. Howell, Assistant United States Attorney, speaking of Keokuk, says: "That city by an ordinance called 'The houses of public entertainment ordinance' licenses persons upon a payment of \$400 a year, payable quarterly to sell beverages not contrary to law. Under that ordinance the saloons run openly. There are about thirty of them. They are run under strict police regulations, which require them to close up every night at eleven o'clock, and to close on Sunday. That system operates just the same as a regular license system. Under the ordinance the saloon keepers sell beer and whiskey, and every kind of intoxicating liquor. No persons except a man who runs a saloon is required to take out a license of that kind. If a saloon keeper violates a police regulation, such as selling to minors, or selling on Sundays, the authorities refuse to renew his license, and he is prosecuted under the prohibitory state law for selling without a license. That is a case in which the machinery of the state is

Liquor Traffic—Commissioners' Report.

used for punishing a violation of the city ordinance, which itself violates the state law." In another place he says: "One of our parties, the Democratic party, has largely—not expressly in state utterances; but in the action of its officials—placed itself in the attitude of favouring the violation of that law. And where you have a large political party taking that position, it is impossible to keep the same sentiment out of the jury box. There is no question in my mind that to-day the prohibition law would be enforced in every part of it like any other law; but, where you find a city or a community controlled by that party you find the law nullified and set aside. On the other hand it is largely true, that where you find a city or community controlled by the Republican party, the law is enforced, and the sharpness with which it is enforced depends largely upon the extent to which you have that feeling. (Vol. 5, pp. 251-253).

Mr. E. A. Hughes, Mayor of Clinton, states that in Clinton the prohibitory law 'was partly enforced, at no time fully' and compares the merits of the system of enforcing the law, and that of periodical fining for breaches of the law, thus "The best idea I can give you of it is that under Mayor Chase's administration the city received in his last year for fines and licenses \$1,104. Under Mayor Gobble's administration, when the fining system was in force, the city received in the first year from these two sources, \$14,000, and in the second year, \$16,060; and in the first year of my administration the city received \$27,800 from the same sources." (Vol. 5, pp. 282-285).

Mr. N. D. Lawrence, M.D. Council Bluffs, speaking of the success which attained the efforts at strict enforcement said there had been "none at all. As soon as you closed a saloon, the 'holes-in-the-wall' would spring up, and there would be more crime and disorder, and more drunkenness." (Vol. 5, pp. 233).

Rev. Frank L. Loveland, Pastor of the Methodist Episcopal Church, Clinton, says of prohibition, that "it has been the means of closing the open saloon in the interior of the state," and further says:—"Our citizens will go to the mayor and the police force, and ask for protection against the violation of the laws in this city, —the violation of the laws relating to the Sabbath drunkenness, lewdness and obscenity, which is continually being carried on in the open parks on Sunday, and the open running of saloons on Sunday. There is no law in our city that seems to be regarded by either the municipal authorities, or any one else, unless a protest is raised." (Vol. 5, pp. 293.)

Mr. Christian Magnus, of Cedar Rapids, brewer, says:—"We have been closed, but not for any length of time. I have not lost anything, and I have kept my establishment in good order." (Vol. 5, pp. 268.)

Mr. Fred. Mittnacht, of Council Bluffs, agent for the Val Blatz Brewing Company, of Milwaukee, says:—"Recently I built a large storehouse in this city, near the North-Western depot in which I keep lager beer. Last winter I put in 300 tons of ice. The house is large enough to hold three car loads of beer." (Vol. 5, pp. 215.)

Mr. Thomas Maloney, of Council Bluffs, saloonkeeper, says:—"I am a prohibitionist myself. There are eighty places in this city for the sale of intoxicating liquors. Ten years ago this was a better town than Omaha. It was just as big as Omaha, and you see what prohibition has done for this town." (Vol. 5, pp. 215)

Mr. C. J. Schaefer, Deputy Chief of Police of Des Moines, speaking of the condition of facts under license said:—"We had a great many wretched homes in the city at that time, and those who used to be great drinkers themselves are better provided for now, and attend better to their families. I know that to be so. I can cite cases to illustrate that." (Vol. 5, pp. 264.)

Mr. Schaefer took the Commissioners to a cellar under the police station where he showed them a number of casks and bottles, and said these were the seizures of two days. There were 35 casks of beer, eleven of which were taken in one day, at different times of the day, from one man, who would keep replenishing his place as

soon as the seizures were made. He supposed there were from ten to fifteen "jointists" in the city in one day, and sometimes they run to as many as 24 or 25. Three or four of the regular jointists are women.

Mr. Henry C. Shaver, newspaper correspondent, of Des Moines, speaking of illicit saloons, under license, said:—"A great complaint is made that young men go to these places, and that drinking there in secret they have drunk more than they would in a public place; that they frequently get drunk there when they would not if we had open places. (Vol. 5, p. 262.) He said that at one time constables so construed the law as to claim that it gave them the right to go into a man's house and search it, and they did so and acted oppressively (Q. 3017*b*); now there is a class of men who pursue the liquor dealers for the money there is in it in the way of fees. Liquor is sold everywhere, and of the poorest quality. (Q. 3018*b*.) Every Monday morning you see the patrol wagon dumping men into the gaol who have been arrested on Sunday night. Many men carry private flasks. (Q. 3027*b*.) Speaking of Iowa City, at one time the capital of the state, at which the state university is located, he said that in that city the saloons are running openly, as openly as in Council Bluffs, and that the effort to enforce prohibition had been abandoned.

Mr. Henry Stivers, of Des Moines, editor of the *Daily Leader*, speaking of prohibition, said:—"In a large part of the state it has had the effect of closing the open saloons altogether. * * * The traffic, however, has simply been transferred to the drug stores and to private dealers. * * * We have just had a session of our Federal Court, which has been worse than the sessions of any police court. It is supposed to be the most dignified judicial body we have in America, and it has just put in three weeks here doing police-court business—calling a lot of niggers and low-lived fellows up for boot-legging. We had jurymen, the most respectable men we had in the state, and their whole time was given up to that petty business. That is nearly all the business of the Federal Court now—tracing and dragging up these boot-leggers." (Vol. 5, pp. 257-258.)

Speaking of Des Moines, Mr. Stivers said:—"In practice there is liquor everywhere (Q. 2977*b*); all the druggists sell liquor, and sell all they possibly can (Q. 2981*b*), and drunken men are seen on the street."

Ex-State Senator George F. Wright, counsellor-at-law, of Council Bluffs, said:—"I will be fair with you: I think the agitation in the state of Iowa has been a fine education of the people, and that as a consequence we are to-day a more temperate people than we were ten years ago. The public sentiment has been elevated." (Vol. 5, p. 226.)

Mr. George B. Young, of Clinton, counsellor-at-law, speaking of the prohibitory law, said:—"In some counties, especially border or river counties like this, it has always been difficult to enforce it. Here the enforcement has been largely, you might say, at the point of the bayonet. With the liquor sellers, it has been a matter of cold business—dollars and cents; with us temperance people, it has been a matter of what we might term purely sentiment or principle. * * * But just how the law is enforced to-day in the counties of Iowa, I could not say; I doubt if it is absolutely so in more than half the counties in the state. * * * I have been forced to the conclusion that the wiser course may be to pass what we know as an option law." (Vol. 5, pp. 287-289.)

Mr. Young further made the following statements:—"But the reason my mind has changed on the question of the prohibition law is based on two causes: the difficulty of enforcing the law in large places, in the larger towns, and the further fact that the non enforcement of the prohibitory law has tended to bring all law into disrepute seriously. That to me is the saddest feature of it all. Take my own city here. We have anywhere from sixty to eighty open saloons running in direct violation of a law, which was most solemnly enacted; but they are what you might term blackmailed by the officials here. They are paying \$25 a month each, with the tacit understanding that if they pay that, the officials will not molest them, which to me is nothing more or less than blackmail on behalf of the authorities. At the same time, public sentiment is such here that, if a vote were taken in this city to-day on

Liquor Traffic—Commissioners' Report.

the question, the people would vote for these officials to go right on doing as they are doing; they get quite a large revenue as the result. As I say, the saddest feature of this whole prohibition law is the tendency that it has had to bring all law into disrespect and disrepute. People seem to get the opinion that if it is popular to violate one law that can violate all others. If a dozen of the most prominent and wealthy citizens here were to endeavour to enforce this law it would take them 24 hours each day, and 365 days each year to do it. But then business men simply cannot drop their business and make the enforcement of that law their life work." Mr. Ycung also spoke of the honest and brave effort made by Mayor Chase to enforce the law, and said: "he did not seem to have the moral and financial support of the people. He was obliged to drop his own business to undertake to enforce that law; in the latter part of his term of office, it was not enforced. It became so burthen-some that he could not carry it on alone. He had to make the complaints himself and prosecute the cases himself." (Q. 3366b—3369b—3376b.)

The members of the Royal Commission who visited the Western States, Mr. G. A. Gigault, the Rev. Dr. McLeod and Judge McDonald, with Mr. A. Horton, stenographer, spent Sunday the 21st May, 1893, at the city of Omaha, in the state of Nebraska, which is a high license state lying on the west bank of the Missouri, just across from Iowa. Omaha and Council Bluffs (the latter being in Iowa) are connected by one or more bridges.

The Commissioners had been informed by a witness in Kansas that the Sunday law was enforced in Omaha (Q. 1022b), and that on Sundays people would cross the river to Council Bluffs and do their drinking there (Q. 2286b.) The experience of Commissioners was that Omaha was quiet and orderly on Sunday, and no drunkenness was seen, while one of them, who went over to the Iowa side of the river on Sunday afternoon, noticed a saloon, the front door of which was open, and going in found men before the bar drinking. Four glasses of lager beer were called for and taken in his presence. He saw a drunken man on the street, and also saw many saloons with signs openly displayed and men going in and out of them by the front doors.

On Tuesday the 23rd May, 1893, the commission entered upon its investigation in Iowa. Mr. Gigault, one of the commissioners started for home from Omaha on the previous day. Council Bluffs was the first place visited. The population of the city in 1892 was 21,409. In his "address and recommendation," to the city council dated 3rd April, 1893, shortly before the visit of the Commissioners, Mayor Lawrence said: "We have a prosperous city whose growth is steady and uninterrupted, possessing a great number of desirable homes, miles of paved streets lined with an abundance of elegant shade and ornamental trees; beautiful and picturesque parks, enchanting drives and more lovely suburban surroundings than any city in the west. The city also possesses twenty-seven churches, many of them fine structures, a public school system unsurpassed for excellence, with seventeen school edifices, erected at a cost of nearly \$200,000. An excellent system and supply of electric lights, an efficient and well equipped fire department, and a water system capable of supplying with abundance of water a city of 100,000 inhabitants. Again our city is a great railway centre, situated commodiously in the heart of the continent, on the most important highway leading from the Atlantic to the Pacific, in easy communication with all the great centres of civilization, and, it might be added, only a few minutes distant from a city of still greater magnitude."

The Commissioners saw open saloons and called at two of them and took the statements of the proprietors or barkeepers (Thomas Maloney and Fred Mittnacht). The last named had a place of business on Broadway, called "The Mountain Liquor House," which was quite liberally plastered with signs in reference to the proprietor's business. On the front window was the sign "Mountain Liquor House, fine liquors, jug trade a specialty, fine wine." In one window was a placard bearing the words, "best whisky,—ten cents a drink." In the windows were displayed a large number of bottles and flasks labelled as follows: "Pure stout mash whisky, 30 cents a flask"; "Extra fine rye whisky, 20 cents"; "St. Jacob's bitters, etc. In this

shop was found a large number of casks and bottles, and a long counter behind which was a bartender selling liquor.

From Council Bluffs the Commissioners went to Des Moines the capital of the state, arriving at a late hour. The Des Moines *Leader* of the following morning (24th May, 1893), after some preliminary remarks as to the arrival of the Commissioners and the work in which they were engaged, said:—

“If the distinguished visitors from the Dominion are really seeking information and will consent to place themselves under the guidance of any private citizen and carefully avoid association with officers during their visit to Des Moines, they can easily gain access to not less than three hundred places in Des Moines where liquor is sold.

“If they will call upon the federal district attorney he will tell them that the revenue collector for this district has granted three hundred government licenses in Des Moines alone for the sale of liquor. If they will visit the district court and inspect the records, and later call upon the justices of the peace, the police judge, the chief of police, they will strike a lead that will open up a mine of information. They will discover that two-thirds of the culprits arraigned and tried in the federal court at the term now in progress were arrested for violating, not only the government revenue laws, but the state prohibitory law. The gentlemen will remain in Des Moines two days, and if they follow the course indicated the reading of their subsequent report will awaken lively interest in Des Moines.”

The Commissioners were kindly received by His Excellency Governor Boies, Mr. Secretary of State MacFarland, and many others upon whom they called. (Q. 3073b). While at the police station the deputy chief showed them casks and bottles in the cellar, which are referred to in his evidence.

Upon fences in several places was noticed a placard which read as follows:—
“The best whisky in America, distilled, aged and bottled at the Mount Vernon Distillery, guaranteed strictly pure; fully matured before bottling.” In the centre of the placard was the picture of a bottle bearing a label containing these words:—
“In square bottles only; for sale by all retail druggists; wholesale only by C. H. Ward.”

On the evening of the same day through the kindness of Messrs. Stevens, proprietor and A. Moore, city editor, of the Des Moines *Leader*, one of the Commissioners was afforded an opportunity of seeing something of the system or systems in practice in Des Moines. Four or five drug stores, quite close together, and all near the post office, were visited. The front part had usually much the appearance of an ordinary drug store, there being in the window large jars with coloured liquors in them, while the counters were covered with show cases in which were cigar boxes. At the rear was a large wooden screen—in some or all cases labelled “dispensary,” behind which was found a room in which more or less liquor was stored, gin, whisky and beer being seen. Here were men drinking from glasses being served at the counter from bottles, some of which were labelled “lager beer,” and others labelled “whisky,” and there were no medical certificates or affidavits asked for. Two of these drug stores had an entrance from the rear into the rotunda of one of the principal hotels in the city, and in both of these intoxicating liquors were seen to be sold and drunk. A visit was made to a cigar and tobacco store. Passing through it and through a swing door at the rear end, access was had to a fully equipped drinking saloon, in one side of which was a large bar with a bartender, and in this room sixteen men were found. Subsequently two clubs were visited. To the first admittance was obtained by Mr. Moore knocking at the door. There were several rooms, among them an elaborately equipped bar in which liquors were exposed as they would be in a saloon, and at which several men were drinking what appeared to be beer, and there was a coloured bartender. There were a billiard room, a card room and a room in which a number of men were sitting engaged in conversation, reading papers, &c. It was stated that this club had 150 members who were admitted on payment of \$5 each, no further fee being required. Mr. Moore had a latch key for the outer door of the second club visited, and in this place was found a number of men who resembled mechanics, some of whom were sitting in a room with a keg

Liquor Traffic—Commissioners' Report.

of beer among them from which they were drinking. There was also a billiard room, a smoking room and a card room, but in neither of the clubs was card playing going on, and all the men seen in both these club rooms appeared to be perfectly sober. It was stated that the second of these places was a workingmen's club with a membership of about 100, and an entrance fee of \$2.50.

All the places visited, the drug stores, the saloon and the clubs, were within a limited area. An offer to show many other places throughout the city where liquor was illicitly sold was declined, as arrangements had been made for the Commissioners to leave the city at 11 p.m.

The Commissioners left Des Moines the same night. It may not be out of place to say that in honour of the birthday of our Gracious Sovereign, Her Majesty Queen Victoria, a part of "God Save the Queen" was softly sung in the rotunda of the hotel at Des Moines on the night of Wednesday the 24th May, 1893.

The investigation of the Commissioners was resumed at Cedar Rapids, Iowa, on Thursday, 25th May, 1893. This is an inland city with a population of about 20,000 people.

The Commissioners while at Cedar Rapids visited two breweries. At one of these the manufacture of a lager beer, called by the proprietor "Good Luck," was being carried on, such manufacture being illegal. The other brewery was not in operation, the proprietor having gone into a wholesale business and importing his liquor. In the cellar was a large number of casks piled up and some men at work removing them from one place to another, and on the railway tracks, near the breweries, were fourteen box cars, seven filled with empty casks and bottles which were to be returned and to be refilled, and the other seven filled with beer packed in ice. It was stated that about thirty-five cars a month were used in Mr. Williams' business.

The Commissioners were informed that at one time there were two hundred and forty places in Cedar Rapids at which liquor was sold, while at the time of their visit there was in operation, or about to come into operation, a quasi license system under which each saloon keeper would be called upon to pay a monthly fine of \$25, and the mayor said that some sixty days before the visit of the Commissioners there were about one hundred and thirty saloons in operation.

From Cedar Rapids one of the Commissioners, accompanied by the official stenographer, went to Clinton, a city on the eastern border of the state, with a population of about 15,000, and made investigation. Here were many open saloons, bearing signs announcing them as such, and carrying on business without concealment.

The next state visited was Minnesota.

In summing up what was seen and learned in Iowa the following positions may be laid down:—

1. (a) That in Iowa the prohibitory law has always had the support of the Republicans as a party, and the opposition of the Democrats as a party.

(b) That many Republicans, owing to their being opposed to the law, or to their disgust at the results of it, either voted with the Democrats or abstained from voting, and by their action brought about the election of a Democrat as Governor in one of the strongest Republican states in the Union.

2. That while many earnest prohibitionists honestly believe that in the rural districts the law is enforced, the fact is that in some of those sections there would not be any saloon even if a license law were in force, or, while in some of them the drug stores for the more respectable, and the "boot-leggers" for the lower classes, supply the demand for intoxicants, in all of them liquor may from other states be lawfully brought by or sent to the citizens for use in their own houses, and men may carry pocket flasks. (Q. 3027b.)

3. That there is not a pretence, even upon the part of prohibitionists, that the law is well observed in the cities and towns, with the exception of Des Moines and possibly some small places, and as to Des Moines it is shown incontrovertibly, both by the statements of citizens and others, and by personal observation on behalf of the Commission, that the law is flagrantly and systematically violated.

4. That "the law as it now (1893) exists gives the drug stores practical immunity for the sale of liquors," and that in fact very many of the so-called drug stores are in reality simply saloons for the sale of intoxicants.

5. That one of the worst evils which has resulted from the working of the prohibitory law in Iowa has been that in many communities there has been begotten a contempt for all law.

But this paper may not be concluded without calling attention to the fact that, since the Commission made the inquiry in the state, the Republican party changed its front and, by the thirteenth "plank" of its platform, declared:—

"That prohibition is no test of republicanism. (Iowa Official Register, 1894, page 100).

"The general assembly has given to the state a prohibitory law as strong as any that has ever been enacted by any country. Like any other criminal statute, its retention, modification or repeal must be determined by the general assembly (Legislature) elected by and in sympathy with the people, and to it is relegated the subject, to take such action as they may deem just and best in the matter; maintaining the present law in those portions of the state where it is now, or can be made, efficient, and giving to other localities such method of controlling and regulating the liquor traffic as will best serve the cause of *temperance and morality*."

At the election in 1891 Mr. Boies had been elected by a majority of about 9,000, and in 1893 (after the adoption of the above plank) he was defeated by the Republican candidate by a majority of over 32,000. (Q. 2765b).

The Legislature in 1894 passed "An Act to tax the traffic in intoxicating liquors and regulate and control the same."

The first section of the Act imposes a tax of \$600 per annum upon any real property and the owner thereof within or whereon intoxicating liquors are sold or kept with the intention of being sold, and the tax is made a perpetual lien upon all property both personal and real used in or connected with the business.

The second section provides that it shall be the duty of the assessor of each township, town or city in the months of December, March, June and December in each year to return to the auditor of each county a list of places with name of occupant or tenant, and owner or agent, where intoxicating liquors are sold or kept for sale, with a full description of said property.

The fifth section of the Act provides that if the owner, agent or tenant has paid a retail liquor dealers internal revenue tax to the United States covering the time and premises as set forth in the listing of the said real estate, it shall be *prima facie* evidence that the tax—i.e. the State tax—was properly levied.

The eleventh section makes it the duty of the person against whom or against whose property taxes as provided for in the Act have been assessed, to attend at the treasurer's office and pay the same in semi-annual instalments on or before the first days of April and October of each year.

The twelfth section provides that the county Treasurer may offer for sale at public auction at his office all lands, town lots or other real estate on which taxes for the sale of intoxicating liquors have become liens as provided in the Act.

The sixteenth section provides that "nothing in this act contained, shall be in any way construed to mean that the business of the sale of intoxicating liquors is in any way legalized, nor is the same to be construed in any manner or form as a license, nor shall the assessment or payment or any tax for the sale of liquors as aforesaid, protect the wrong doer from any penalty now provided by law, except that on conditions hereinafter provided certain penalties may be suspended."

In subsequent sections it is provided that in any city of 5,000 or more inhabitants, the tax specified may be paid quarterly in advance, on the first days of January, April, July and October, and after a written statement of consent signed by a majority of the voters resident in the said city who voted at the last general election, shall have been filed with the county auditor, the quarterly payment then made is to be a bar to proceedings under the statute prohibiting such business, provided the person appearing to pay the tax shall file with the county auditor a certified copy of a resolution regularly adopted by the city council consenting to such sales, and a written

Liquor Traffic—Commissioners' Report.

statement of consent from all the resident freeholders owning property within fifty feet of the premises where the said business is carried on, and the business is not to be carried on within 300 feet of any church or school house. The applicant has also to file a bond in the sum of \$3000 to be signed by himself as principal and by two sureties for the faithful observance of all the provisions of this Act, and for the payment of all damages that may result from the sale of intoxicating liquors upon the premises occupied.

The Act contains some further provisions in regard to selling in towns or cities of less than 5000 inhabitants.

This legislation really amounts to a recognition of the traffic, which may be carried on under certain conditions, and the payment of what may be considered as a high license fee.

IOWA.

The United States Census returns supply the following information. No statistics of commitments to jails, or convictions for crime are available.

KANSAS.

Kansas, the twenty-first state of the Union is bounded on the north by Nebraska, on the east by Missouri, on the south by Indian Territory (some of which is possibly now organized), and on the west by Colorado. It belongs to the tract of country purchased by the United States from France in 1803. Prior to 1854 it was in the hands of various Indian tribes, some native and others which had been removed from the older states. It was organized and opened for settlement as a territory by Act of Congress in May, 1854, in the midst of a heated contest on the slavery question. The slaveholders and the friends of freedom at once began a vigorous contest for the occupancy and control of the new territory, and thus it was that Kansas became the vanguard in the great struggle which resulted in the overthrow of slavery in the United States. Before the formal beginning of the war, societies were organized by the rival settlers and their friends in the state on both sides of the question, and even rival legislatures were elected and convened. The discussions frequently resulted in personal violence, and the greatest excitement prevailed until the breaking out of the civil war. During that war the state was frequently invaded, and the city of Lawrence was sacked and burned in August, 1863. It may, therefore, easily be seen that the first settlers were men of great determination of character and of strong views upon political and social questions, and in this respect the present citizens of the state are not unlike them.

The Governor of the State of Kansas, in reply to a communication addressed to him by this Commission, wrote (April 19th, 1893): "I have the honour to submit the document 'Prohibition in Kansas,' which, I think, covers most of the points referred to in your letter." (Appendix No. 76.)

No further information than that contained in the pamphlet referred to was sent. At a later date three members of the Commission visited the State of Kansas. The evidence collected by them will be found in Volume 5, and is referred to hereinafter.

The pamphlet referred to by the Governor of the State was entitled: "Prohibition in Kansas; Facts, not Opinions; Statement made by Hon. N. C. McFarland, late Commissioner of the United States Land Office, and Rev. Dr. F. S. McCabe, and endorsed by Governor Humphrey, the officers of the State, and Judges of the Supreme Court of Kansas." It was printed at Topeka by the Kansas Publishing House, in 1889. Mr. McFarland appears to have been, at the date of this pamphlet, president of the Kansas State Temperance Union. It is signed by the President, by A. H. Limerick, the secretary of the Union, James A. Troutman, ex-secretary, and by F. S. McCabe, ex-president.

The document bears the following certificate:—

"TOPEKA, KAN., April 16, 1889.

"We have examined the statement prepared by the president and secretary, and the ex-president and the ex-secretary of the Kansas State Temperance Union, upon the subject of prohibition and its results in our state. We find it a fair, honest and true statement of our condition, and we heartily endorse it as such.

(Signed) "LYMAN U. HUMPHREY, *Governor*,
 "WILLIAM HIGGINS, *Sec. of State*,
 "TIMOTHY MCCARTHY, *Auditor of State*,
 "J. W. HAMILTON, *Treasurer of State*,
 "G. W. WINANS, *Supt. Public Instruction*,
 "L. B. KELLOGG, *Attorney General*,
 "ALBERT H. HORTON, *Chief Justice*,
 "D. M. VALENTINE, *Associate Justice*,
 "W. A. JOHNSON, *Associate Justice*."

It is stated in the pamphlet that "the amendment to the constitution of the State of Kansas, forever prohibiting the manufacture and sale of intoxicating liquors, except for medicinal, scientific and mechanical purposes," was adopted at the general election in November, 1880. The liquor law, enforcing the amendment, was passed in February, 1881, and went into effect on the first of May, 1881. The pamphlet contains a quotation from an address made by Ex-Gov. John A. Martin, which sets forth the beneficial effects of prohibition on the material prosperity of the state.

In this it is stated that the population of the state was, in 1880, 996,096; that it had taken Kansas twenty-five years to attain that population, and at the date the Governor was writing, September 16th, 1886, Kansas had no less than 1,500,000 of a population. It had gained in five years half a million people. Statements in regard to the increased value of land, etc., not having any very important bearing on the question of prohibition, are referred to, and it is said that the state had, in 1880, 346 newspapers and 1,514 churches, whilst in 1885 it had 581 newspapers and 2,976 churches.

The Governor, in the same address, asks if the figures he has quoted do not establish the fact that the growth of Kansas during the six years of prohibition has far exceeded any other period of the state's marvellous development. In another part of the pamphlet (p. 6.) it is claimed that the vote of 1888 clearly established the fact that the population of Kansas was then full 1,651,000, or an increase of over 654,000 since 1880. That the school population in 1884 was 411,250, and in 1888, 532,010, an increase of 120,760. These estimates it is not practicable to verify by official returns.

Speaking of drunkenness and drinking in Kansas, the Governor of the State, on 8th April, 1889, quoted a statement made by an ex-attorney general, to the effect. "That there is not to exceed 10 per cent as much liquor sold in the State as was sold in 1880," and adds, "that other officials, in a position to judge intelligently, put it as low as 5 per cent."

The following quotations refer to crime in the state:—

"It is a significant fact connected with the Kansas Penitentiary, that the number of prisoners, when compared with the population of the state, has been steadily

Liquor Traffic—Commissioners' Report.

decreasing for eight years past, and that there has been an actual decrease in the number in confinement during the past two years. On the 1st January, 1870, the State prisoners (not including United States civil or military), numbered 218, or one for every 1,671 inhabitants. At the same date in 1875 the state prisoners numbered 435, or one to every 1,214 inhabitants. In 1880 the number was 633, or one to every 1,573 inhabitants; in 1885 the number was 673, or one to every 1,885 inhabitants; and on the first January, 1889, the state prisoners numbered 861, or one to every 1,921 inhabitants. On the 1st January, 1887, there were 895 State prisoners confined in the penitentiary; on the 1st January, 1888, there were 898; and on the 1st January of the present year (1889) 861."

"The warden states in his biennial report that more than 60,000 criminals are serving out sentences for felonies in the prisons of the United States, or about one prisoner for every thousand inhabitants. The same ratio in Kansas would give our penitentiary 1,651 state prisoners. We have to-day a total of only 861, or not much more than one-half the number of criminals *per capita* reported for the United States."

It is assumed that when the term "state prisoners" is used it is prisoners in the state's prison who are referred to. In the United States census they are treated as "convicts in penitentiaries."

The figures referred to above, tabulated, are as follows:—

1870.	218	States prisoners,	1	for every	1,671	of population.
1875	435	do	1	do	1,214	do
1880..	633	do	1	do	1,573	do
1885.....	673	do	1	do	1,885	do
1887.....	895	do	No computation made.			
1888	898	do	do			
1889	861	do	1 for every 1,921 of population.			

Turning to the United States census returns (Bul. No. 31, p. 18) we find convicts in the penitentiary given as under:—

On 30th June, 1880...	687	convicts, or	1	for every	1,450	of population.
do	1890...	918	do	1	do	1,554 do

It is manifest that the figures showing the ratio of prisoners for the years subsequent to 1880, quoted in the pamphlet, were either arrived at by estimating on an erroneous basis the population of the state, or there was a large decrease in the population in the years immediately preceding 1890. The decrease in the ratio of 1890 from that of 1880 was about .05 per 1,000 of the population according to the United States census. Nebraska, in the same group of states, had in the same period a reduction of .20 per 1,000 of its population.

The statement of the warden of the penitentiary of the state is somewhat difficult to follow. According to the census, the number of convicts in the penitentiaries of the United States on the 30th June, 1890, was 45,233 (Bul. 31). These figures, divided into the population, 62,622,250, give one for every 1,384 persons. If to the convicts in penitentiaries are added the prisoners in county gaols, 19,538 (Bul. No. 95), the total population in these institutions would be 64,771, or one for every 977 of the population. This is not very far from the figure used by the warden of the Kansas penitentiary. But if the convicts in the penitentiaries and prisoners in county gaols in the State of Kansas on the 30th June, 1890, are dealt with, the figures according to to the United States census, would be as under:—

In penitentiaries..	918
In county jails.	432

1,350 or one to every

1,057 of the population of the state. The ratio for the United States was one for every 967 of the population.

The states of the union are for census purposes grouped in divisions. Kansas is included in what is designated the "North Central Division." The ratio of the

convicts in the penitentiaries in this division in 1880 was 510 to each million of the population; in Kansas it was 690. In 1890 the ratio was 491 per million of the population; in Kansas 643 per million. Of prisoners in county jails the ratio in the division was, in 1880, 165 per million, and in 1890, 189 per million. In Kansas, in 1880, the ratio was 203 per million, and in 1890, 303 per million of population.

In a separate bulletin (No. 182) issued by the census office the total number of prisoners of all kinds, excepting those in juvenile reformatories is stated to be 82,329. These figures include the convicts in the penitentiaries, 45,233, prisoners in jails, 19,538, other prisoners not included in the census bulletins, 17,235. (Total 82,006.* These 17,235 are divided as follows:—In city prisons, 3,264; in the workhouse, 9,968; in convict camps in the south, 2,308; in military prisons, 794; insane criminals in hospitals, 901.

The census returns divided the 82,329 prisoners into divisions. The north central division had 19,854, and of that number Kansas contributed 1,928. The population of the north central division is 22,362,279. The ratio for the whole of the United States is one for 760 of the population.

In the north central division one for every 1,125; and in Kansas one for every 740 of the population. The Kansas figures may include military prisoners.

The following paragraph is taken from the report of the warden of the State Penitentiary, dated 1st July, 1888:—

“In 1886, Warden Hopkins, in his biennial report says: ‘Crime has apparently increased much more rapidly than has the population of the country, not only in this State, but in others.’ Following this was a list of States showing the increase. Among the list was Kansas, which, in 1873, had 333 prisoners. In 1880 she had 691 prisoners, making an increase of 358 in seven years. In 1873 Kansas had a population of 462,769; in 1880 a population of 996,096. In 1887 Kansas had a population of 1,750,000, and 929 prisoners, showing an increase in eight years of only 236, and an increase in the population of 753,904. In 1880 there was in Kansas one prisoner to 1,440 inhabitants. In 1888 there was one prisoner to 1,800 inhabitants. This includes about 100 United States military and civil prisoners, which would reduce the number to about one in 2,000. (Vol. 2, pt. D, 1887-88.)

If Kansas in 1887 had a population of 1,750,000 between that period and the date of the United States census—30th June, 1890—there must have been a decrease in the population of 322,914, which, if correct, would certainly not tend to show that prohibition was promoting the material prosperity of the state.

The following is a statement made in the pamphlet in regard to taxes:—

“The following tabulated statement shows the levy of taxes for general revenue purposes, both county and state, in Topeka and Shawnee county, for eleven years, beginning three years before we had prohibition, giving the amount of tax on each \$100 returned by the assessor, which represents about one-third of the actual value of the property assessed:—

Year.	State Tax.	County Tax.	Total.
1878.....	\$0.55	\$1.25	\$1.80
1879.....	.65	.50	1.15
1880.....	.65	.50	1.15
1881.....	.50	.50	1.00
1882.....	.50	.50	1.00
1883.....	.43	.50	.93
1884.....	.43	.50	.93
1885.....	.39	.50	.89
1886.....	.42	.50	.92
1887.....	.40	.50	.90
1888.....	.38	.33	.71

* The difference between 82,329 and 82,006 is explained by an alteration in the number of prisoners in county jails, which, in the census bulletin No. 95 is put down as 19,538, and in a subsequent bulletin (No. 182) at 19,861, a difference of 323.

Liquor Traffic—Commissioners' Report.

It is manifest that no conclusions can be based upon figures relating to this subject, unless a complete analysis is made of the character of the expenditure. Assuming the figures quoted to be correct, it has to be observed in the state expenditure, the reduction between 1878 and 1881 was 10 per cent, between 1881 and 1888 the reduction was 24 per cent. But in the county taxes the reduction between 1878 and 1881 was 60 per cent, whilst between 1881 and 1888 the reduction was only 44 per cent. If the total expenditure is dealt with, the reduction was from \$1.80 in 1878 to \$1 in 1881, and from \$1 in 1881 to 71 cents in 1888. The reduction therefore, in the first period was very nearly 45 per cent, and in the second period a little less than 30 per cent.

The prohibition law went into force in 1881. The increase in the population of the state between 1870 and 1880 was 173.35 per cent, and between 1880 and 1890 the increase was 43.27 per cent. From 1886 to 1888 the church membership in the state is said to have increased 44,988, or about 19 per cent, and church edifices to have increased 264, or about 14½ per cent. If these figures have any significance, they ought to be gauged, perhaps, by the increase in population, and it is difficult to apply that standard to the progress alleged to have taken place between the periods for which the United States census figures are not available. The church membership in 1886 may have been the church membership for some time before that, and the number of churches may likewise be the number existing before 1886.

The governor of the state, in January, 1889, in an address to the legislature remarked that "The present legislation in aid of the prohibitory amendment is, perhaps, not perfect, or free from objection, but so nearly satisfactory that I doubt if public opinion demands any radical revision of the law: and law should be but public opinion passed over into public will." He further stated that "Frequent change in such a law especially tends to unsettle public confidence, and begets distrust and doubt." It may therefore be concluded that the laws which existed then were considered to be satisfactory by the advocates of prohibition.

It was mentioned in the pamphlet that a governor of the state in 1889, in his message, stated,— "I affirm with earnestness and emphasis that Kansas is to-day the most temperate, orderly, sober community of people in the civilized world." It is stated also in the pamphlet that the law is efficiently and successfully enforced.

It has already been mentioned that the increase in population in the state of Kansas between 1880 and 1890 was 43.27 per cent, and while the increase in the whole north central division was 28.78 per cent, in Minnesota the increase was 66.74, and in Nebraska 134.06. The Dakotas, North and South, show very large increases, but in 1880 they practically only commenced to be settled. In 1870 the population of the two was 14,181; in 1880 it was 135,177, and in 1890, 501,527.

The following figures are taken from the reports of the Commissioner of Internal Revenue for the United States:—

STATEMENT showing the number of those paying the special tax imposed by the United States upon the makers of malt liquors, those dealing in them and in other intoxicating liquors in the State of Kansas.

In November, 1880, as has already been mentioned, a prohibitory amendment to the Constitution was adopted. The majority was about eight thousand votes, there being 91,874 for and 84,037 against the proposal. The total number of votes recorded at the nearest important election was 201,236. In 1888 the total of the votes cast for President was 334,035, in 1890 for the Governor of the State, 294,588. The prohibition vote for President in 1888 was 6,779, and for Governor in 1890, 1,230.

The result of the vote on the prohibitory amendment was the enactment of a prohibitory law in 1881. This measure was of a sweeping character. No person was permitted to sell intoxicating liquors, except a druggist holding a permit for that purpose, and then only for medicinal purposes on a physician's prescription, or for scientific or mechanical purposes.

In this State, as elsewhere, amendments to the law were found to be necessary at an early date. In 1885, the law was changed so as to enable druggists to sell liquor upon a sworn application by a party that it was needed for medicinal purposes. In 1887 this regulation was further strengthened. Other amendments included the granting of additional powers to county attorneys, and the conferring of special powers on police commissioners in cities.

The general prohibitory law may be thus summarized: The selling of liquor for purposes other than those specified, namely, medicinal, mechanical and scientific purposes, is declared to be a misdemeanor.

Liquor can only be sold by a druggist under permit from the Probate Judge of the county in which he does business. The permit is granted for one year, and the Judge may at any time revoke it. The application for a permit has to be signed by the applicant and twenty-five reputable freeholders having the qualification of electors, and twenty-five reputable women, over twenty-one years of age residing in the locality where the business is situated. The application must set out, among

Liquor Traffic—Commissioners' Report.

other things, that the applicant does not use intoxicating liquors as a beverage. Notice of the application and the time and place appointed for hearing are duly published. If the application is granted, the party must enter into a bond of \$1,000 as security for his compliance with the law. An appeal is given from the Probate Judge to the District Court.

On the presentation of a petition signed as prescribed in the case of an application for a license, and after an inquiry has been held as to whether or not the druggist has violated the law, the permit may be cancelled.

Special restrictions surround the physicians, who, in the event of illegally issuing prescriptions, are liable to a penalty from \$100 to \$500, and imprisonment from ten to ninety days.

In order to obtain liquor for medicinal purposes, the applicant must make an affidavit on oath before a druggist, stating that the liquor is necessary and actually needed by him, to be used as a medicine for a certain disease, to be specified, and that it is not intended for a beverage, or to sell or give away. Similar forms are required to be filled up and filed on application being made for liquor for mechanical and scientific purposes.

The druggist is compelled to keep a record of sales, and to make sworn monthly returns of such transactions. The penalty for false affidavits is imprisonment from six months to two years, at hard labour. The druggist's records and the affidavits are to be open to the public at all reasonable hours.

Provision is made in the law for manufacturing liquor for medicinal, scientific and mechanical purposes. The application for permission to manufacture, however, must be signed by a majority of the resident electors, and the party must give a bond to the amount of \$10,000. His permit continues during five years. The penalty for manufacturing or selling without a permit is a fine from \$100 to \$500, and imprisonment from thirty to ninety days.

The officer authorized to carry out the law is the county attorney.

Places in which liquor is sold may be declared to be common nuisances, and the owner fined from \$100 to \$500 and be imprisoned from thirty to ninety days. A perpetual injunction may also be obtained, violation of which is punishable by contempt of court. Civil damages can be sued for against liquor sellers. Selling liquor to minors is specially forbidden. Warrants for seizure can be obtained.

The law contains special provisions with regard to sales in clubs. Any person who keeps any club-room or other place, in which an intoxicating liquor is received or kept for use, barter, or sale, as a beverage, is liable to be fined from \$100 to \$500 or be imprisoned from thirty days to six months.

Common carriers are liable to punishment by fine and imprisonment for conveying liquor to be sold in violation of the law.

Provisions are embodied in the law by which a board of three police commissioners may be appointed for each city of the first class; these commissioners having authority to appoint a police judge, a city marshal, and as many policemen as are deemed necessary, not exceeding one to 1,500 inhabitants; but they may also, on occasions, appoint special policemen. The police force is entirely independent of the city authorities.

Prohibition in this state, as already mentioned, was enacted in 1881. Previously license and local option had prevailed.

Kansas is essentially an agricultural state. At the outset it was settled largely by people from the eastern states, these being, in the main American, settlers of a superior class. The vast public domain thrown open for settlement attracted immigration. Germans and Irish, together with representatives of European nationalities, settled on its fertile lands. Its population grew apace, increasing from 107,000 to 365,000 in 1870, nearly 1,000,000 ten years afterwards, and in 1890 1,427,000. The state contains no large city, Kansas City having a population of only 38,000. It has, however, seven towns with a population of about 10,000 each, these being scattered from its eastern border to its western limits, fronting on the Indian Territory.

In view of the fact that Kansas is essentially composed of farming communities; that it was settled largely by people of a superior class, the New Englanders at home and Germans from abroad, and that it does not contain any large manufacturing centres, it is obvious that it presents an eligible field for experimental work in the direction of the prohibition of the liquor traffic. That such is the popular prohibition view is manifest by the discussions and agitations that have prevailed during the last ten or twelve years.

Taking the state as a whole, various opinions were presented to this Commission as to the benefit or injury caused by the enactment of the prohibitory law. It is an undoubted fact that while during the decade from 1870 to 1880—about the period when prohibition was carried—the population increased 173 per cent, it only increased 43 per cent from 1880 to 1890. It is asserted in many quarters that not only did the growth of the state suffer a check, but, that during certain years, there was an absolute falling off in the population. The evidence taken by the Commissioners dealt largely with this point. It was argued, on the one hand, that the prohibitory enactment had been the means of preventing Germans and other European immigrants from settling in the state, and, on the other, it was asserted that prohibition had been the means of attracting parents from other states, who desired to protect their sons from the dangers of the liquor traffic. (Q. 639*b*.) It was undoubtedly established that many thousands of settlers had left the state on account of the existence of that prohibitory law, whilst many prominent witnesses deposed to the fact, that, in addition to this migration, large numbers of would-be immigrants had been deterred by this law from coming into the state. The loss in population to the state, from both these causes, was estimated at least 500,000 in the decade of prohibition's reign. (Q. 1914*b* and 1963*b*.)

Every effort appears to have been made to render the prohibitory law effective. Not only was the measure stringent in its enactment provisions, but, at different sittings of the Legislature, since its enactment, amendments have been proposed and adopted with a view to increasing its effectiveness and severity. The machinery for the enforcement of the law is elaborate, and even complicated. Under the metropolitan police system, which applies to cities of 15,000 and upwards, the Governor appoints three electors to act as a Police Board, these being representatives of the different political parties. This board possesses wide powers, and is practically independent in its operations. But not only do certain sections of the country possess the advantage, if such it may be termed, of a State prohibitory law, but some cities have themselves adopted additional measures to suppress the saloon as such. Kansas City, for example, has an ordinance against tippling shops, by which it is provided that those who keep a place where liquors are sold shall be deemed to keep a tippling shop, and be liable to a fine of \$50, and, at the discretion of the Court, sixty days imprisonment. (Q. 461*b*.) So not only are there here as factors in favor of prohibition, the superior class of settlers, the agricultural character of the population and the sparseness of the settlement, but also the most efficient means that can be devised for enforcing the law.

It is not even claimed that prohibition prohibits in Kansas. The utmost that is claimed in behalf of the prohibitory measure is that it has diminished drinking and cast odium on the liquor traffic. It is conceded that drinking has been reduced in the country districts but evidence, abundant and conclusive, was submitted to this Commission to establish the utter failure of the law in the cities. No better proof of this could be found than the fact that illicit sellers in Kansas City, for example, are summoned before the Police Judge at the beginning of each month, and fined \$50 and costs. In a word, the illicit dealer is allowed to continue his trade by making this payment monthly, on the demand of the police authorities, which is equivalent to paying a license of \$600 yearly. Sunday drinking is common, and apparently cannot be suppressed. Attempts to stamp out these illicit places utterly fail. Police Captain Porter, of Kansas City, stated to the Commissioners, "If there is a tippling shop in a block, and we get a case against it and close it up, it is only fifteen minutes before the people will go to another place and open up." (Q. 497*b*.) Generally, the evidence regarding Kansas City showed that the law

Liquor Traffic—Commissioners' Report.

was not enforced, but that the authorities were satisfied to permit illicit selling, provided the monthly toll was regularly collected for the benefit of the city treasury.

The working of the prohibitory law in Kansas City, was described by Rev. Father Kuhls. He said, in the course of his testimony before the Commission: "Prohibition in our state is a total humbug from top to bottom. There is not one particle of sense in it. It has filled the state with perjurers and thieves, and under it this city is actually filled with saloons. To my knowledge we have 110 saloons running now, a larger number than we had before the law was passed; and there is really more drunkenness going on than there was before. Besides, our neighbours across the state line, in Kansas City, Missouri, are making fortunes selling liquor in the State of Kansas, and we are losing the money. There are in Kansas City, Missouri, probably thirty wholesale houses all of which do business in Kansas, sending packages of liquor there. You can have it sent in quart bottles, or in ten gallons, or in fifty gallons, just as you want it, delivered at your house. I myself have counted at the Union Depot about 1,200 liquor packages at one time, all addressed to different places in this state. Our express companies make a great deal of money carrying these packages to and fro. I could take my oath there is more liquor used in Kansas to-day than there ever was before prohibition was enacted. So that, taking it, all in all, we have in this state a very deplorable condition of affairs, and if every state that adopts prohibition suffers as this state has, then God help this country—I think I would go to Canada." (Q. 506b).

Evidence was given before this Commission which established that enormous quantities of liquor are sold in Kansas, and these are transported to different points in the state, from dealers in Missouri, by means of the express companies. The liquor is conveyed in almost every conceivable variety of package. Mr. Arthur Clarke, of Leavenworth, said:

"The express companies bring in an immense quantity of liquor from Missouri and other outside states. Any day in the week, if you go to the station at Kansas City, you will see truck loads after truck loads of liquor in casks and boxes shipped by express on every train." (Q. 1641b).

Not only are spirituous liquors sent to customers, but breweries in the adjoining State do a brisk business. The drug stores in Kansas are, moreover, centres for liquor selling, according to the testimony taken by this Commission. Therefore, the existence of the liquor traffic is scarcely open to question. Mr. David Overmeyer, a counsellor-at-law in Topeka, thus defines the position:

"I think, to put it plainly, that the difference between prohibition and the license system is simply the difference between the traffic in sight and the traffic out of sight. Therefore, I think the license system is vastly preferable because it entails candour and openness of conduct, while prohibition does not, and never can stop the use of liquor, simply because you cannot watch all the people all the time. (Q. 802b). Perjury is common in the courts. To use Father Kuhls' words: There are oaths taken falsely for the trifling sum of five cents. A man gets so used to taking an oath that he does not think much of it. * * * If you will go into a court room and see the way these people handle the oath, you will not believe three out of a hundred witnesses." (Q. 515b). Referring to drug stores, the Rev. Father said: 'I have known one drug store that sold as much as a thousand bottles of beer in one month, and probably in the same time did not make up a single prescription.' (Q. 514b). It was conceded before this Commission that the suppression of illicit places was followed by the establishment of "blind pigs," "holes in the wall," "boot-leggers" and other still more degrading measures by which to pursue the liquor traffic. Notwithstanding the most vigorous efforts of the police authorities, it is found impossible to suppress these forms of violation of the law.

A favourite means adopted for evading prohibition is the establishment of "clubs." By this term is meant an organization which receives members on payment of one or two dollars as a fee, the member in return obtaining the value in liquor. He is handed a ticket, which is regularly punched as he obtained drinks, and it is required to be renewed when its value is exhausted. Another method was

thus described to the Commission: A certain number of men will club together and pay a keeper to furnish their rooms with lockers, each individual will buy his liquor and put it in the locker, of which he carries the key. Then, whenever he goes there, the attendant will take his key and go to his locker, and bring him what he wants out of it. He can take half a dozen friends in, and treat them from his own locker.

Speaking of this club system Mr. Edwin Rosewater, the principal proprietor and editor of the *Omaha Bee*, said,—“I made a personal enquiry in Kansas * * * as regards the traffic itself, and the methods pursued to get liquor * * * I arrived at Topeka about six o'clock in the evening, and the same evening about ten o'clock I visited a club house in which there was something like 200 odd members, where I found piled up thirty-eight kegs of beer, empty kegs that had been used there during one week.” (Q. 2194b).

In Kansas, as elsewhere, the prohibition question is made an issue between the different political parties. Even Mr. Troutman, an officer of the State Temperance Union, admits that, “It has been political contest, more or less, from the day of the adoption of the amendment to the constitution, to the present time.” (Q. 1047b).

Hon. Edward Carroll thus describes the position which prohibition occupies in the state:

“It has been a political football. The prohibitionists are nothing if not extremely radical and fanatical in their opinions, and my observation is that the prohibition party do not seek, as a rule, to run an independent party machine. They have been more wise and politic in that respect, though most of the leaders of the party are preachers. They seek to ally themselves with the dominant party in the state. For instance, in Kansas they allied themselves with the Republican party, it being a dominant party. In the south, I understand that, as a rule, they seek to ally themselves with the Democratic party. Prohibition has little or no following in centres of population. It is strongest in the rural districts. In this city the sentiment is all against it.” (Q. 1728b.)

That the prohibitory law is enforced spasmodically was generally admitted by the witnesses heard by this Commission. The force of public opinion, the views held by police commissioners and the exigencies of party politicians are all elements entering into the difficult question of enforcement. Mr. Overmeyer considered that “The worst feature of this prohibitory law consists in the spasmodic attempts which have been made to enforce it. This year is an off year, and it is being very vigorously enforced, but next year, when the election comes on, and when the political parties bid for the support of the classes interested in the sale of liquor, these efforts will be relaxed, and the old state of things will return. The party leaders will wish to keep everything quiet, so as not to lose any votes. This has been the history of prohibition in this state for many years.” (Q. 814b.)

Mr. Troutman, a representative prohibitionist, testified: “The enforcement of the law has gone in waves. There would be a period of rigid enforcement throughout the entire state, and then there would be an apathy of temperance sentiment, and the officers would relax their efforts in certain localities, and a state of demoralization would ensue in those localities, which would extend in time to other parts of the state. That would continue until there was a laxity of enforcement throughout the entire state, and the people would take hold of the matter again, and see that the law was enforced pretty thoroughly.” (Q. 1036b.)

In many of the principal centres of the state, not only is the law spasmodically enforced, according to the breeze of popular opinion, but a regular system is adopted of imposing fines on illicit sellers, which is equivalent to a license system, and creates a considerable revenue for municipal purposes. This was clearly explained by Deputy City Clerk Short, of Kansas City, who said: “The expense of our police department has been sustained out of fines imposed on liquor joints. The police arrest the keepers of these places once a month and bring them to the police court where they ordinarily plead guilty and pay a fine of \$50 and costs. The fines al-

Liquor Traffic—Commissioners' Report.

together in a year amounted to about \$45,000. After paying the police expenses the balance, \$5,000 or \$20,000 goes to the general fund of the city."

Mayor Barnes said that there were from sixty to eighty joints in the city, and that the revenue from the breaches of the liquor law amounted to over \$40,000 annually. (Q. 603b.)

Rev. James G. Dougherty entered into particulars. He said: "I will give you the state of the account here as it has been given by the police commissioners. For the eleven months ending 28th February, 1893, the police force has not only been self-sustaining, but a surplus of \$6,715 has been turned into the general funds of the city, and for the four years, from 15th March, 1889, to 1st March, 1893, the sum of \$12,893, has been paid to the credit of the city after all expenses of the police department has been paid * * * For those four years the total receipts were \$149,274. When the old commissioners were about to turn things over to the new board they called together the police force and congratulated them; not on having enforced the law and closed the joints and gambling houses, but, here is what the president said to the police force: 'Since they had been associated together over \$190,000 had been handled, and not the slightest suspicion had ever been uttered that a single cent had not been honestly accounted for, and the board had the first complaint to hear that any member of the force had abused his power or position in the slightest.' That is, the police force is an agency, not for the suppression of crime, but for the collecting of revenue, and the thing they are complimented for is that they have been such good collectors." (Q. 622b)

Not only do illicit places prevail in Kansas, together with boot-leggers and other individuals who appear to persistently violate the prohibitory law, but gambling in almost every form prevails extensively throughout the state, especially in the centres of population. Witnesses heard by this Commission stated that servants and the very poorest class took their chances at the revolving wheel. Crap and faro are popular pastimes. Indeed, Police Judge King, of Kansas City, declared that, "gambling has done more harm to our people than the saloons."

It is important to consider somewhat in detail the operations of the prohibitory law in the principal cities of the State.

Hon. L. D. Lewelling, Governor of the State, who defined his position in these terms, "I have not been an enthusiast either for or against prohibition," described the condition of affairs at Wichita as follows,—

"In my own town, Wichita, some years ago, the Governor appointed a Police Commission, of whom two, perhaps the whole three, of the members were radical prohibitionists. They took the appointment with the earnest desire to enforce the law absolutely according to its letter and spirit. Two of the Commissioners, Mr. Stanley and Col. Lewis, were prominent members of the Methodist church, and both earnest in their desire to enforce the law. Yet Mr. Stanley afterwards came out with a letter in which he stated that he believed that it was impossible to enforce the prohibitory law absolutely in accordance with its spirit and letter where public sentiment was so much against it." The Governor further mentioned that in some of the cities, "the system of fines in vogue practically amounts to a license. Men are arrested and fined practically." (p. 52-55, vol. 5).

The position in Achison is indicated by memorials contained in the journals of the State Legislature in 1891. B. P. Waggner, Mayor, writes as follows:—

"I do not believe that it is possible to enforce the prohibitory law to the extent of closing up all places where intoxicating liquors are sold in violation of its provisions. For ten years the experiment has been tried in the city of Achison, and I think I can safely say, without fear of successful contradiction, that during all of that time we have had many of the evils resulting from the traffic without receiving a fair revenue therefrom."

A special committee of the State Legislature reported respecting Topeka:

"The authorities of Topeka have made a more determined effort than any city of its class. They are expending \$15,000 per annum of the tax payers' money in

excess of all the revenue of the police department of the city, and yet the joints, drunkenness and crime has not been banished."

In Leavenworth there are admittedly open saloons. The system of monthly fines is there followed, and the witnesses declared that it was virtually a license system. The special committee of the Legislature thus reported respecting that city:

Leavenworth Board is at present composed of three aged men; the president, William Fairchild, is over eighty years of age. They were said to have been selected because of their belief in prohibition and prohibitory laws. The president's testimony, which was confirmed by the secretary of the board, was to the effect that they had tried to enforce the law and ordinance governing the city, but had failed to suppress the joints, and were not now trying to abolish houses of prostitution. They testified further that that there were many places where intoxicants were sold."

The situation in Kansas City has already been indicated.

Summing up the reports obtained from all the six cities, the Special Committee of the Legislature thus reports:

"Your Committee has heard no testimony that induces them to believe that the prohibitory law has been enforced in any city in the state, through the agency of the metropolitan police or any other machinery of the law. In all of the six cities fines, or forfeited recognisances called fines, are imposed. There is usually no other punishment inflicted. The more vigorous the effort made to enforce prohibition in cities, the more irresponsible and debased are the men engaged in the traffic, the more deceptive their devices and secluded their places of business."

An address delivered at the last annual meeting of the State Temperance Union by Mr. John A. Murray, author of the present prohibitory law of Kansas, contains many interesting points. The statements made by the author of the prohibitory law are diametrically opposed to those presented by prohibitionists in a pamphlet entitled "Prohibition in Kansas," and endorsed by Gov. Humphrey and others. This is made apparent by quotations subjoined, which are given in parallel columns.

Prohibition Pamphlet, "Prohibition in Kansas," issued by the State Temperance Society.

"The Prohibition Law and how to enforce it," by John A. Murray, author of the 'Kansas Prohibitory law,' issued by State Temperance Society.

"The evil results of the open saloon had been abolished in nearly every town and city of Kansas.

"To-day there is not a saloon in the city (Topeka).

"The traveller will marvel most as he contemplates the fact that he has not seen an open saloon within her border, thanks to prohibition.

"There are in Kansas thousands of boys eight years of age who have never seen a saloon, and to whom the word 'saloon' has a meaning hardly more definite than that conveyed to them by the Hindu word 'Bungalow' or the African word 'Kraal.'

"Gov. Martin, in his message of 1889, says: 'I affirm with earnestness and emphasis that this State is to-day the most temperate, orderly, sober community of people in the civilized world.'

"The jointists of this State are selling intoxicating liquors under various names, such as malt, pale malt, hop tea tonic, barley mead, &c.

"In some localities this class of goods is received by the jointists in car load lots while private bars are arranged for the convenience of the suffering public.

"The inertia of public sentiment upon the temperance question is cause for apprehension. The prohibitory law, once the emblem of our pride, has in parts of our State become a burden of apology.

"Its efficiency hath no impairment, but it suffers great disparagement because of non-enforcement.

"The very atmosphere of the principal streets of some of our flourishing cities is laden with the noxious odor of the undisturbed, defiant and prosperous 'joint.'

Liquor Traffic—Commissioners' Report.

"Judge Gathrie, of Topeka, in 1889, said: 'The law has so far accomplished all that was expected for it.'

"Gov. Humphrey, in 1889, said: 'The law generally is being respected and enforced.'

"The prohibition law has more than met the expectations of its warmest friends.

"Our citizens fully realize the happy results of the prohibition of the manufacture and sale of liquor. In our opinion the prohibition law is now stronger with the people than it was when adopted."

"We who now sit here are in a large measure responsible for the benighted condition of temperance inactivity.

"Many druggists are endeavouring to make it appear from the returns of their books that they are conforming to the law, while in truth they are only using the forms of law as a subterfuge for its violation. In many instances false certificates are systematically made to the affidavits, stating that they were subscribed and sworn to in the presence of the pharmacist, while, as a matter of fact, the applicant did nothing more than sign the application filled out by the druggist.

"Another very common form of violation is for the druggist to insert in the statement, in place of naming the particular disease, as required by law, some imaginary general ailment, of which perhaps one-half of the human family could at any time complain, as for example, 'cold' for 'quick consumption,' 'debility,' 'weakness,' 'chilliness,' &c.

"The utter recklessness with which this branch of the law is violated is but indicative of the temperance lethargy prevailing in the State.

"The institutions for the enforcement of this law are more complete, and its machinery, when put in operation, more effectual, than any other known statute in the world.

"First, unwise in our official selections; second, yielding to selfish lethargy, we have, almost without protest, beheld our proud statutes trampled underneath the feet of the defiant rummy, that vampire upon society."

An interesting pamphlet called "The Eye-Opener; or the Evil Fruits of the Prohibitory Law in Kansas," written by Charles Willslie, a member of the bar of the State, is published. He deals with the working of the prohibitory law. Referring to the allegation that prohibition is largely a political issue in some States of the Union, he says:—

"The Republicans in the State who wanted office, and who expected in the future to want office, were afraid to expose, or to advert to, the weak phases of the law, because they knew that the measure had been introduced by Republicans, and in a great degree, carried by Republicans; and these office-seekers were convinced that if it should be suspected that they were not wholly in sympathy with the most extreme measures proposed to enforce absolute prohibition in the State, their endorsement at the polls would be weak, and their aspirations for office hopeless. And too true were such surmises; for, no matter how able the man, no matter how upright he might be before his fellow-men, no matter how earnest a Republican he might have been and still be, no matter how gallant a record he might have had as a Union soldier, if he refused to join in the general prohibitory clamour, the merest nobody, the most ignorant in the entire community would be preferred to him, if the latter did but proclaim himself in favour of extreme penalties for the violation of the

prohibitory law. A large number of ultra prohibitionists, being Republicans, carried out their threats to defeat at the polls, every man who did not subscribe to their extreme views."

The author calls attention to the provision in the law which prohibits the alcoholic liquor obtained as a medicine to be taken on the premises of the drug store where it is obtained, or in the physician's office, if that office should happen to be in a drug store. He says:—

"It would seem that the law-makers were too familiar with the facts, and knew that while the liquor would be bought upon the sworn statement that it was for medicine, yet in reality it was for beverage; that while it would be sold under sworn restrictions, it would nevertheless be sold as a beverage and drank as a beverage. Else, why the necessity of requiring that it be drank off the premises?"

The facility with which liquor could be obtained in the State is thus referred to:—

"It is a well known fact that under the law of 1881, and until 1885, all over the State of Kansas, hundreds upon hundreds of parties would have prescriptions from physicians for brandy or any other kind of intoxicating liquor, most commonly beer, and would get the liquor not once but hundreds of times on one and identically the same prescription; and, while one person might have but few prescriptions, yet those few would be filled and refilled and filled again and again, until, in many instances, one prescription would have served the purpose of getting a whole barrel of beer or of other liquor in like proportion to the quantity originally prescribed. Beer in those days often came, and still comes, to Kansas in barrels containing 72 common three-half-pint bottles. I have known a whole barrel of beer to be sold out at one time on one prescription."

A common expedient is for young men in that community to give the physician prescribing for him a fictitious name.

The writer claims that the prohibitionists of the State well know that many of the drug stores are, in fact, liquor saloons, and the prohibitory law does not effectually prohibit or prevent the sale and use of whisky and beer as beverages.

Attention is called to the fact that when the police have closed up one place where whisky has been sold, the only effect is to open a dozen smaller places in the neighbouring barns, sheds, alleys and corners. He added: "In some places the metropolitan policemen are guyed, scoffed at, ostracised and boycotted, so that in a few days, from force of circumstances, they lose the interest they were expected to take in the execution of their duties, and in a few days more that nose which was expected to smell out numberless places where liquor was sold has so dwindled and lost its cunning that it cannot find an open saloon. And thus when these policemen are on the street, they walk about like other people, and, as likely as not, walk right by fifty saloons or joints in less than an hour and a-half."

The law of 1887 appeared to somewhat restrict, for a time, the operations of the druggists. The author of "An Eye Opener" says: "There is not that wholesale trade in whisky and beer by the druggists that there was under the law of 1885, but there is a trade so active that no express train in the state is ever known to be without whisky and beer, medicine en route to the address of some one druggist or more." He adds, speaking of the situation generally: "The people see an expensive and and useless metropolitan police force imposed upon the larger cities of the state for no other purpose than to attempt to compel obedience to the prohibitory law, the provisions of which from their wording were never expected to be adhered to. They see millions of gallons of spirits used as a beverage all over the state. They see the money that should remain in the state sent beyond its border to buy this liquor. They see corporations becoming wealthy carrying by express the liquor into and through the state. They see saloons without license. They see their prisons filled with vendors of liquor, and their courts crowded with criminal cases of violations, or alleged violations, of the prohibitory law. They see fines imposed and never paid. They see a steady increase in unlawful liquor traffic. They see thousands of youths being debased by taking part in this traffic."

Liquor Traffic—Commissioners' Report.

The author says: "The Republicans are responsible for the lies told by the prohibitionists to the effect that the prohibitory laws of Kansas do effectually prohibit and prevent the sale of liquor, and that there are no saloons in Kansas."

Mr. Willsie regrets "The mania among eminent men for misrepresenting facts relative to the liquor traffic in Kansas." He quotes a paragraph from a Topeka paper in which a university professor is stated to have exhibited a banner bearing the words "Not a saloon in the state," at a gathering of educationalists. At that very time, says the writer, "There were in Achison, Leavenworth, Topeka, Newton, Emporia, Kansas City, Kansas, Hutchison, Arkansas City, Dodge City, Medicine Lodge, Fort Scott, Oawego, Parsons, Winfield, Wellington and Wichita over five hundred saloons, and these cities are but a few of the spots in the state where whisky and beer are sold in places as public as any building in the city. Why apparently worthy people take so much pride in saying that there are no saloons in Kansas, can only be accounted for upon the theory that they are so in sympathy with prohibition that they think it is right even to lie in its behalf, that the end justifies the means.

The writer comes to the conclusion that though the persistent work of prohibitionists for a law to prohibit, instead of practical means to change man's habits from drunkenness to temperance, the people of Kansas find a steady increase of the drink habit.

Clubs are constantly organized in cities of Kansas. Mr. Willsie says "Their meeting places (the Floodwood clubs) are substituted for saloons as often as a temporary suppression of the business of the jointists and boot leggers may appear to require. They also appear frequently in the country. The police sometimes make a raid upon the meetings and disperse the crowd when they get somewhat noisy, but that does not stop the men from drinking their liquor any more than a prohibitory law does."

Referring to crime and insanity under prohibition, the author claims that a large increase has resulted. "We have," he says, "further evidence that crime is on the increase, and has been since 1880. Even felonies are increasing in number. Instead of the penitentiary becoming vacant, it is filling up. There were 178 more inmates in the penitentiary January 1st, 1890, than there were January 1st, 1880. The number of felons received in the penitentiary from January 1st, 1870, to January 1st, 1880, was 1808. The number of felons received in the penitentiary from January 1st, 1880, to January 1st, 1890, was 3,683. Does this look as if crime was decreasing under the moral influence of the prohibitory law?"

In appendices Nos. 151 to 156, inclusive, are given the figures of arrests in the cities of Atchinson, Fort Scott, Leavenworth, Wichita, Topeka, and Kansas City, Kansas.

On Saturday morning, the 13th May, 1893, Messrs. G. A. Gigault, the Reverend Dr. McLeod, and Judge McDonald, members of this Commission, and Mr. Albert Horton, stenographer, commenced an investigation in the state of Kansas.

The first place visited was Kansas City, the population of which in 1890 is said to have been 38,000. It and Kansas City, Missouri, are merely separated by the state line, which, in places, is on a street. The Armour Company, of Chicago, has large packing houses here. The mayor, the police judge, the police captain, the deputy city clerk, the superintendent of the Armour Packing Company, the Reverend Fother Kuhls (Roman Catholic), and the Reverend James G. Dougherty (Congregational), were examined.

The Commissioners saw in Kansas City, Kansas, places in which pool selling and gambling were publicly carried on—the pool selling in a room on the ground floor, while the gambling proper, with cards, dice, roulette tables and faro tables, was carried on in an upper room. At least three such places were visited. In the largest, called the Turf Exchange, the sign of which was conspicuously painted on the front window, there was a very large room on the ground floor, resembling an ordinary store, with an immense blackboard down the side of the room. Here pool selling was carried on, and there were congregated upwards of one hundred men of

various ages, and, apparently, of various conditions in life. At the rear-end of the room was a bar—a large bar of the ordinary kind with one or more bar-tenders behind it, just like an ordinary saloon, liquors being served to men in front of the counter. Up-stairs were many men engaged in gambling of one kind or another, most of the tables, about ten in number, being filled.

In another part of the city, a store at the corner of two streets, which bore the sign of "merchant tailor," was visited, and found to be an ordinary saloon with the usual fittings and furniture, and a bartender selling liquors to men. Again, in another part of the city, in answer to an enquiry, a place was found fitted up as an ordinary saloon, although there was no street sign.

The next place visited was Topeka, the capital of the State, with an estimated population (1894) of 34,000. The Commissioners were courteously received by His Excellency, Governor L. D. Lewelling, and other State officials, and made enquiries in different quarters, and as to different localities. While at the Copeland House, in Topeka, they saw a package of liquor delivered to a guest, at his room in the hotel, and understood that it had been sent by express from Kansas City, Missouri.

Two of the Commissioners next visited Ottawa, Kansas, which the Rev. James G. Dougherty, above-mentioned, had indicated as a place in which prohibition had thoroughly been successful. They found it to be a beautiful town with a population of possibly 7,000 people, and having railway repair shops, mills and other industries, the Santa Fe Hospital, four graded schools, a Baptist university, and a lovely park. It is called a "city of churches," there being sixteen church buildings. One witness thought it was the first place that had prohibition before there was a general State enactment. (1143*b*.)

Although it was admitted by some of the friends of the law that illicit sale goes on, and that it is thought that druggists (there being nine drug stores when there should not be more than three or four to do a legitimate trade) sell liquor to people for beverage purposes, and that a great deal is shipped to Ottawa on the sly by men who use liquor; notwithstanding all these admissions, the great majority of those who were examined,—in fact, nearly all of them,—stated that the prohibitory law had been of great benefit to their community, and they or many of them said that drunkenness had been virtually banished from the community. (Q. 1103*b*, 1142*b*, 1168*b*, 1208*b*, 1230*b*, 1231*b*.)

The Commissioners visited the office of the Probate Judge and examined some of the returns made to him by druggists in regard to the sale of intoxicating liquors under the Act. One set of returns was shown to them by the judge as having been made by the druggist doing the largest business in Ottawa. According to these returns the number of sales per day for the month of March, 1893, averaged from eight to ten. In most cases the ailments for which liquor was stated by the purchasers to be obtained were entered as "lungs," "la grippe" and "rheumatism."

The county gaol was visited. There were eight prisoners in confinement, one of whom was undergoing a sentence for what is called "boot-legging," that is, carrying liquor about on his person and selling it illicitly.

One of the Commissioners, accompanied by the Revd. Dr. Milner, or some citizen of Ottawa, called at one of the express offices and was shown there a package containing liquor which was awaiting delivery, but in Ottawa no liquor saloons were seen, nor were there any signs of drunkenness.

While two of the Commissioners visited Ottawa, another went to Salina, a town probably about as large as Ottawa, and further west. It had been named by the Hon. Mr. Gaines, superintendent of Public Instruction for the State, as a place in which the law was well enforced. A good deal of lawlessness appeared to exist here, and a good many "joints" for the illegal sale of liquor were open. At one of the leading hotels, liquors were sold and given openly. Statements were obtained from several citizens—including the mayor of the town, an ex-State senator, a justice of the peace, a Roman catholic priest, four physicians, a druggist, an insurance and real estate agent, and an editor. These men were, with the exception of the wo last named, practically unanimous in saying that the law is not observed, that it creates and leads to perjuries, and that there is great difficulty in getting witnesses to testify and juries to convict. The mayor said: "Prohibition is more a myth than

Liquor Traffic—Commissioners' Report.

a reality. I do not think the regular joints here will exceed twenty." The Rev. Father P. Maurer said; "The prohibitory law, instead of making people better, is bringing in its train a general disrespect of all laws. The prohibitory law is worse than a farce. It has not a good effect on the morals of the people. It brings into disrepute the sanctity of oaths."

On the 17th May, 1893, the Commissioners reached the city of Leavenworth. During their stay they visited the State Penitentiary and the Western Branch of the National Home for Disabled Volunteer Soldiers, at both of which institutions they received most courteous treatment and obtained information from the Hon. S. W. Chase, the warden of the prison, and from Col. Andrew J. Smith, the governor of the Soldiers' Home. The last named is a firm believer in the efficiency of the gold cure treatment, and many of the old soldiers who had tried it related their experience of its results, and the Commissioners saw it administered to a number of persons. (Q. 1419b.-1441b.)

Leavenworth is the oldest city in the state, and has a population of about 21,000. There are large coal industries here, some \$2,000,000 being invested in the mines, and about \$20,000 a week paid in wages. It is also a great corn market, has a large manufacture of bricks—some 60,000 paving brick a day having been made—and the Great Western Stove Company makes 60,000 stoves a year. There are also furniture factories, planing mills and cooperage works.

At Leavenworth the Commissioners saw a number of open saloons supplied with glasses, bottles, decanters and other usual fittings of such places. They were also shown gambling establishments with faro and other tables. At the hotel at which they were guests, there was an open bar, and it was said that there were about 175 places in which liquor was sold, and that a revenue of about \$4,000 per month or \$48,000 per year was being derived from persons engaged in this illicit sale. (Q. 1493b-1918b.)

On the night of the 19th May, 1893, the Commissioners left Leavenworth, the next point visited by them being the State of Nebraska.

To sum up in a very few words the state of matters as it was found in the State of Kansas, it may be observed that, while people not wishing to use intoxicants, or who are opposed to such use, seldom find themselves face to face with the saloon and its surroundings, yet there cannot be any doubt that the person, young or old, who really wishes to obtain intoxicating liquor for beverage purposes, need not wish in vain. He may from any place in the state send to any neighbouring state and order a supply which will be delivered to him openly by the express company, or he may in many sections, resort to the drug store, and in some can be supplied at the places called "joints," or by the persons called "boot leggers," or, if in a city or town where the authorities are in sympathy with the law, and have public sentiment with them, he may join others in a "club." And when this state of things exists, and at the same time in some communities there is an illegal licensing of the traffic which has a tendency to bring all law into contempt, and in almost every section of the state in which prosecutions are instituted, a prevalence of perjury in these liquor cases—the thoughtful man may well ask himself which after all is the better, or the worse, the state of things under a license law, or that under a so called prohibition law.

The United States census returns supply the following information. No statistics of commitments to jails or convictions for crime are available.

	1890.	Per 1,000 of population.	1880.	Per 1,000 of population.
Population	1,427,096	996,096
Convicts in penitentiaries	918	0.64	687	0.69
Prisoners in County jails	432	0.30	202	0.20
Paupers in almshouses	593	0.42	355	0.36
Inmates of juvenile reformatories	208	0.15	No returns.	

PROHIBITION IN MAINE.

A gentleman occupying a prominent public position, one of the representatives of the state in Congress, and an ardent supporter of the prohibitory system, remarked, when giving evidence before this Commission, that if prohibition were a failure in the State of Maine, it must be considered a failure everywhere.

When it is considered that the law has been upon the Statute Book of the state for upwards of forty years, that the Legislature has been ever ready to pass amendments calculated to make it more effective, that power was given to the Governor and Council of the state to supersede the municipal officers elected by the people, that the full weight of the executive of the state has been employed to give effect to the law, as is evident by the fact that a very large proportion of all the cases before the courts of the state have been those which arise out of breaches of this law, and that before its enactment a strong temperance sentiment prevailed amongst the people of the state, it is difficult to conceive that the law could anywhere have been surrounded by conditions more favourable to its success. It is, therefore, important to consider carefully the results of the prohibitive system in this state.

THE LAW.

As early as 1830 an energetic temperance movement was commenced in the State of Maine. It was followed in 1840 by what was known as the "Washington Movement," and as far back as 1846 the question of prohibiting dram shops became an issue in the state and municipal elections. In 1850 a Legislature was elected favourable to prohibition.

The law prohibiting the manufacture and sale, for beverage purposes, of intoxicating liquors within the State of Maine went into force, on approval, on 2nd June, 1851. It continued in force up to 1855, when it was repealed. During the years 1855 and 1856 licenses were granted. In 1857 the law was re-enacted and it has continued upon the statute book ever since. Prohibition has, therefore, been the law of the State for upwards of forty years. Very few, if any, sessions of the legislature of the State have been held at which amendments to the law have not been made. Those amendments are said to number between fifty and sixty, and they have generally been in the direction of increasing the severity of the punishments for breaches of the law and enlarging the powers of the officers entrusted with its administration, until it is as inquisitorial in its character, and as stringent and severe in its provisions, as it is possible to conceive any law would be, enacted and accepted by a self-governing community. During the session of the legislature of the State held in the beginning of the year 1893 a change was made in regard to the punishment of offenders, which was opposed by General Dow and some of his associates. By this amendment the judge trying liquor cases is allowed to exercise discretion in the matter of imposing a fine or imprisonment for a breach of the law.

The constitutional amendment making prohibition a part of the fundamental law of the State was passed in 1884. Votes on amendments to the constitution are said to be, as a general rule, small. On this occasion the total number voting was ninety-four thousand five hundred and ninety-four (94,594), of which number seventy thousand seven hundred and eighty-three (70,783) voted for the amendment.

The total of the votes cast in the same year, and at the same time, for the election of Governor for the State was 142,107, of which 78,318 were given in favour of the Republican candidate, Hon. F. Robie.

The amendment to the constitution was as follows:—

Amendment 5.

"Forever prohibiting the manufacture of intoxicating liquors, and prohibiting their sale, except for medicinal and mechanical purposes and the arts.

"The manufacture of intoxicating liquors, not including cider, and the sale and keeping for sale of intoxicating liquors are, and shall be, forever prohibited.

Liquor Traffic—Commissioners' Report.

Except, however, that the sale and keeping for sale of such liquors for medicinal and mechanical purposes and the arts, and the sale and keeping for sale of cider, may be permitted under such regulations as the legislature may provide. The legislature shall enact laws, with suitable penalties, for the suppression of the manufacture, sale and keeping for sale of intoxicating liquors, with the exception herein specified.

"Resolved, that the Aldermen of the cities, select men of towns, and assessors of plantations in the State are hereby empowered and directed to notify the inhabitants of their respective cities, towns and plantations, in the manner prescribed by law, at the September election next ensuing after the passage and approval of these resolves, to give in their votes on the question whether the amendment to the constitution proposed in the foregoing resolves shall be made; and the question so submitted shall be: Shall the constitution be amended so as to prohibit forever the manufacture, sale and keeping for sale of intoxicating liquor as provided by the said amendment? And the inhabitants of said towns, cities and plantations shall vote by ballot on said question, those in favour of the amendment expressing it by the word "yes" upon their ballots, and those opposed to the amendment by the word 'no' upon their ballots; and the ballots shall be received and sorted, counted, declared and recorded in open ward, town and plantation meeting, and lists of the votes so received shall be made and returned to the Secretary of State in the same manner as votes for governor. And the Governor in Council shall open, examine and count the same, and make returns thereof to the next legislature, and if it shall appear that a majority of the votes is in favour of said amendment, the Governor shall, by his proclamation, declare such amendment to be adopted, and the Constitution shall be amended accordingly, to take effect on the first Wednesday of January in the year of Our Lord, one thousand eight hundred and eighty-five."

The full text of the prohibitory law of the State is given in Appendix, No. 104.

THE ENFORCEMENT OF THE LAW.

The sheriffs are entrusted with the execution of the prohibitory law. Section 60, provided that:

"Sheriffs and their deputies and county attorneys shall diligently and faithfully inquire into all violations of law within their respective counties, and institute proceedings against violations, or supposed violations of the law, and particularly the laws against the illegal sale of intoxicating liquors, and the keeping of drinking houses and tippling shops, gambling houses or places, and houses of ill-fame, either by promptly entering a complaint before a magistrate and executing the warrant issued thereon, or by furnishing the County Attorney promptly and without delay with the names of the alleged offenders and of the witnesses.

The sheriffs are elected by the people, apparently on purely political party lines. Under the State Constitution they retain office for two years. They appoint their own deputies, and both the sheriffs and deputy sheriffs are paid \$2 per day when on duty, together with allowances for travelling expenses and certain fees for the service of warrants, &c. In some cases warrants are served by constables or the city police, but in the cities and towns the work is almost invariably performed by the sheriffs' deputies, those specially charged with looking after the liquor traffic, being commonly known as "Liquor Deputies."

Liquors seized are taken charge of by the sheriff, who, in the cities of Portland and Auburn (for Lewiston) which were visited, had large stocks on hand. The practice under the law now is to dispose of all confiscated liquors containing less than 20 per cent of alcohol by emptying them into the common sewer. All containing 20 per cent and upwards of alcohol are poured into barrels, and when five barrels have been collected they are shipped, under contract, to someone outside of the State; the alcohol is extracted and the value of it, according to contract price, which contract is made with the Sheriff, is remitted to the Treasurer of the county from whence the liquor is sent. The sheriff at Portland estimated that the shipments by him would average about two and one-half barrels per month.

The mode of procedure in Portland, where the system was more particularly investigated, and it is practically the same elsewhere, is for the sheriff or one of his deputies to make an affidavit before the Judge of the municipal court, on one or other of the forms printed as appendices to this report, as the case may dictate. Declaration A, Appendix No. 105, is for a warrant to search a dwelling house; B, Appendix No. 106, for a warrant to search a shop; C, Appendix No. 107, for a warrant to search the premises and cars of a railroad company; and D, Appendix No. 108, for a warrant, *ex post facto*, to seize, take possession of and hold certain liquors and vessels. The Judge then issues his warrant, armed with which the sheriff proceeds to make search and seizure.

A return, prepared by the Recorder of the municipal court of Portland, shows the number of warrants issued each year between 1888 and 1892, with the number of cases in which liquors were found. It is as follows:—

Year.	Warrants issued.	Seizures made.
1888.....	2,887	961
1889.....	2,856	839
1890.....	3,637	978
1891.....	3,979	1,562
1892.....	10,863	1,082
Totals	24,222	5,422

RESULTS OF THE ENFORCEMENT OF THE LAW.

It is obvious that a system which necessitates or admits of so extensive a resort to domiciliary visits must be dangerously liable to abuse, and to become a means of coercion and serious corruption. On this subject very strong opinions were expressed by witnesses who gave evidence before the Commission:—

The Hon. Chas. F. Libby, Counsellor-at-Law, Portland, ex-President of the State Senate, ex-Mayor of Portland, prosecuting Attorney for the State of Maine from 1873 to 1878, said:—

“I consider that the prohibitory law is a failure so far as the city of Portland in concerned. I consider that it has tended directly and indirectly to bring about a certain condition of affairs which I consider is not favourable from a moral point of view. Now, I will give you my experience as prosecuting officer, and I am going to speak of some matters which are rather personal so that you may fairly understand my attitude in the enforcement of this law. I received the nomination to the office which was followed by my election as attorney for the State over this country without my knowledge or desire. I went into the office perfectly free. I went in there with the disposition, as I think every officer should have, to make no enquiry into the operation of the law, but as the law was on the statute book, to enforce it. I think I enforced that law impartially with all the vigor I could control, and I would be willing to let the judges and officers of the court speak on that question. I had five years' experience with the enforcement of the prohibitory law. During that time I prosecuted nearly 1,000 indictments, and I collected in these five years, I think over \$80,600 in fines in this county, and largely in the city of Portland. I had sentences passed in a month on liquor sellers that aggregated fifty years. The liquor cases exceeded very largely all the other cases that I prosecuted. Cases of murder and capital offences were included in the crimes that came before me as prosecuting officer. I kept a careful record of every liquor seller that I had indicted or prosecuted before the courts, and I had a progressive system of fines and punishments. I kept a record of all these men and the number of times they came before me. * * * I looked it all over to see what I had accomplished at the end of my time. I found that I had driven out of the business one set of men,

Liquor Traffic—Commissioners' Report.

and another set of men had come in, and so far as I can judge from my experience, the last set of men engaged in the business was worse than the first set who were out of the business and were in jail; according as they were driven out of the business they got other men to take their place. In addition to that I found, especially if the sheriff co-operated with me and if the marshal of the city aided me, that when the law was very stringently enforced it created a demand for club houses, and I found the young men were establishing club rooms here in the city, and not only did they become places where drinking was carried on, but by supplying larger quantities than they generally would have in their possession as a means of gratifying their appetite for drink, they were also getting to gambling and other vices, and I had to break up quite a number of these places. I found that, while I was driving the liquor out of the ordinary shops where it had been sold, I was driving it into the houses and kitchens where the children of the family, who up to that time never saw it, were accustomed then to see it dealt out in that surreptitious manner. The rigid enforcement of the law introduced the system of pocket peddling, something which we never had in the city before. Not only that, but I found that perjury was becoming alarming common in the courts. The prohibitory law does not prohibit, it simply restricts it; it does not do more than that, and I believe it does that badly. In our own city of Portland the law has become a foot-ball in politics, more or less. It enters into state and municipal politics, and the variations in these figures (returns of arrests by the police) which you have before you are due in my judgment, more or less, to the efforts by some administrations to make it appear that there has been an improvement in one way or another, or perhaps, they may think there is something to be gained by showing an increase in one year over the other. I am very sorry to say it, but it is true, that this liquor law opens up such an avenue for bribes that it tends greatly to corruption; the liquor sellers are given immunity by officers on their beats, and that has been a large source of corruption. It is matter of history that our sheriffs and police force become corrupted. I therefore say that, to my mind, this prohibitory law has not been good to us as a whole, because it does not effect what its friends claim for it, claim in good faith." (Q 5207b, 5208b).

Mr. Leander Cram, of the city of Portland, Sheriff of the County of Cumberland, was asked:—

"Does it come within your duty to enforce the prohibitory law? It is part of my duty under the statute.

"I suppose the enforcement of the law varies in different years? Some years it is enforced more rigorously than others.

"For instance, the same man is not sheriff always? Exactly, it varies with the zeal and interest of the officer.

"What are the chief difficulties in the way of enforcement of the prohibitory law? Well, I should say dishonesty.

"Dishonesty on the part of the officers? Yes." (Q. 4439b-4446b).

The Hon. Judge Gould, of the Municipal Court, Portland, was asked:—

"I have heard the statement made that under this prohibition system, it occasionally happens that blackmail is levied by the officers upon vendors of liquor, that is to say, that if they find a man selling liquor, they threaten to bring him before the court, and the man compromises with the officers. Have you any reason to suppose that anything of that sort is done? It has been common report that dealers have been in the habit of paying licenses to the officers for allowing them to continue in the business. I do not know anything of that, to my own knowledge. It has not been brought before the Court." (Q. 4995b).

The Right Reverend Dr. Healy, Roman Catholic Bishop of Maine, who gave evidence before the Commission when at Portland, said:—

"I was a witness on the same matter when the law existed in the State of Massachusetts, and I was called before the Legislature in connection with it, * * * In my parish then, which was one of the largest in Boston, this prohibition exerted a very bad effect, and in this way: The poor people made it a rule to oppose it.

When it was carried out,—as it always was for a little while when a new Sheriff or a new Chief of Police got into office—it sent rum into the families. Instead of taking a drink, a man carried it home, and I found there, as I find here, that it did a great deal of harm in that way. * * * The intention of those who made such a law, I am not going to question; but it corrupts every set of officers that has anything to do with it. It is a fruitful school of perjury to all the witnesses who are called upon to testify in these cases; and it degrades the idea of law to the poor people, who say that it is only law to them, and that it is not law to the richer classes. * * * In the rural districts where it is supported by public sentiment, it does prohibit to a degree, but it does not completely prohibit. * * * All along the New Brunswick line they always get what they want, and my priests who are in charge of my Acadian people up there make a great deal of complaint about the abuse of liquor among them. I can say that these are a good people. Among the twelve or fifteen thousand people a case of adultery has never been tried before the courts; there never has been but one man tried for attempt to kill, and he was not convicted. I speak of the North-eastern district of Maine, up along the St. John's river. * * * I merely mention this to show that the liquor law does not prohibit in that rural district.

"I do not deny the good intentions of those who made the law. They are perfectly savage in their attempts to enforce it, and they are always wanting to make it more stringent. There is another feature with regard to it: the more of these poor people they put into prison the less dreadful the prison becomes to them. They do not look upon it as a disgrace to be sent to gaol, but they rather look on themselves as victims. I think in our prison there are a hundred and twenty persons, sometimes in the winter; first the father, then the mother, and then the children. But they do not look upon it as a disgrace: rather, as I have said, they look upon themselves as victims of an oppressive law. I am sorry to say that they are mostly among my own people, and it distresses me very much. We preach to them of temperance; we are bound to do it as we preach on all virtues; but what can I say when I come to preach to them about this law? If I endorse the law they say, 'You are putting yourself in the hands of those who are oppressing us'; and this law, therefore, completely destroys our influence over them. To tell you the truth, we scarcely dare to speak to them of it.

"This prohibitory law corrupts the officials from high to low. Every sheriff and official connected with it, whom I have known, has submitted to bribery in some way; and every officer that I have ever heard of, who was on the force for any length of time, has accepted bribes. I know that the men selling liquor were levied on for bribes; they had to pay so much a week, or so much a month, and that went into the corruption fund."

"Have you any temperance organization in connection with your church?"

"We have not any now. We had some in former years, but, as I say, this prohibitory law has destroyed it. We have but one in the state, I think. The law takes all the enthusiasm out of it."

"Do I understand you to say that you have one temperance organization now?"

"There is only one that I know of."

"And previously?" "There were several. When I came here there were quite a number. We had one in Portland, and kept it up for a length of time. Some of the men said, 'There is no use in an association for me, because I have to be temperate, and I will not join.' You see how it is with us. We cannot join in a principle that we consider is an unsound one. Now, when they (the prohibitionists) say that it is a sin and a crime to taste liquor or to sell liquor, we cannot join in that.

"Do you think that the prohibitive law has had the effect of demoralizing the efforts of temperance people? I cannot answer that, but with us it has had that effect. The execution or enforcement of the law is made a political engine, and every time there is an election there is a let-up of this enforcement: that is beyond all doubt. There is no public man in Portland or in Maine who will not tell you that, if he speaks out his mind. It has made quite a corruption fund for the elec-

Liquor Traffic—Commissioners' Report.

tions. The principal thing against it, in my opinion, is—and I look upon it as a great evil—that under this law witnesses do not hesitate to perjure themselves. A man may have nothing to do with liquor himself,—he may be a respectable, quiet man, he may never have touched liquor in his life,—but if a policeman sees him coming out a place that is suspected, he is brought before the court, and he is obliged to tell whom he saw in that place, whether he saw liquor or not; and if he does not tell, he goes to jail for contempt. You know how that works with poor people, and with other people too. The poor people have to go to jail if they do not tell all, and in some cases I am afraid that a man may commit perjury rather than betray a friend. All the preaching in the world will not convince them that an oath is as sacred and as binding in that as in other cases. I do not hesitate to say that, as far as the officers enforcing the law are concerned, it is a school of corruption. There is a second fact which has a very serious effect on the people, and that is that this prohibitory law destroys their reverence for all law. They compare this law with other laws, and they say it is the oppression of the poor. They say that a rich man can have all the liquor he wants, and can order it for himself, and that this law is only aimed at and executed against the poor." (Q 5212b-5229b).

The Roman Catholic portion of the population of the state is said to have largely increased, and to now form probably nearly twenty-five (25) per cent of the whole (Q. 8662b-8663b).

The following are extracts from evidence given before the Commissioners by the Right Reverend Dr. Neely, Episcopal Bishop of Maine:—

"I do not think it is claimed, even by those who are most enthusiastic in support of the measure, that it has done any very distinct service in our cities. I should say that it has not done any good during the time of my residence here. There is no marked change in the condition of the cities.

"Have you any temperance organizations in connection with your church, Bishop Neely?—A. We never have had here. There is a Church of England Temperance Society that has numerous branches throughout the world. I have never introduced that society into Maine, because of the feeling that the moment we would do anything of that sort, we should be denounced as friends of the rum sellers. We should be denounced, as our friend the inventor of this law denounced the Church of England temperance societies when he came back to Portland from a visit in England. I have felt that if we introduced that temperance society here, we would put ourselves into this position. People who call themselves temperance people, by which they mean total abstainers, denounce moderate drinking, as the Bishop of London was denounced and all his associates, because they do not insist on total abstinence. A gentleman who was courteously invited to make an address before them, because he was known to be a great temperance advocate in America, came back to Portland here, having accepted their courtesy, and gave an address here and made astounding statements with regard to the effect of this prohibitory law, and publicly denounced the Bishop of London and his associates as not temperance men at all, but as advocates of drinking. They were denounced as opposed to temperance because they did not believe, in England at any rate, the practicability of prohibitory measures. I have not very much confidence in legal measures or law of any kind for enforcement of morality of that kind, and I have very much more confidence in the cultivation of a high moral religious sentiment in this matter. I think they ought to put drunkenness where it ought to be. It is not the use of this or that or the other thing, but the abuse of it, which is destructive morally and physically. Drunkenness is put down by St. Paul in the category of a deadly sin, shutting out a man from the Kingdom of Heaven as much as adultery or murder. Let it be regarded as a deadly sin and let the law punish it as it would any crime, and you will stop drunkenness."

"Shall we be correct in concluding, Bishop Neely, that your Church is not making efforts which it otherwise would make in the temperance movement, because the sentiment here is directed towards the enforcing of prohibition?—I officially have not thought it expedient, in response to requests to me to that effect, to ask my people to take up that matter, because I felt that many people were so wedded

to this one system of prohibition that I did not want to have them feel that I was out of sympathy with them in their efforts to suppress this vice, or, rather let them think that I had less desire than any one else for its suppression."

"The other clubs which have been spoken of to the Commissioners are not organized clubs, they are simply coteries of young men who call these clubs, and get together and have their bottles in their closets. I am afraid that these clubs have had a very bad effect indeed, and that young men who never drank at all previously have done so in the secrecy of the club, as they call it. They would not be seen to drink over a bar; but they do it in these club rooms. I do not think, however, that that exists to such an extent as it did a few years ago.

"The system which I have described of issuing so many search and seizure warrants, is it not likely to lead to corruption? A. One would think so."

In the Portland *Daily Advertiser* appeared on 1st July, 1892, a list showing the disposition of each appeal case and indictment for violation of the laws regulating the use and sale of intoxicating liquors at the May term of the Superior Court of Cumberland County. The list, published in accordance with the law, contains 234 cases. Portland is in Cumberland County. The population of the county, including that of the city, in 1890, was 90,949, of the city 36,425.

A statement prepared by the Clerk of the Supreme Judicial Court of Penobscot County, population 72,865, for the information of the Commission, shows that at the beginning of the year 1881 there were 95 cases of all kinds pending in the court, of which 24 were liquor cases; and between that date and the year 1893, the cases entered were as shown in the following table:—

Year.	Liquor cases.	Other cases.	Total.
1881.....	37	59	96
1882.....	54	27	81
1883.....	54	71	125
1884.....	87	65	152
1885.....	60	148	208
1886.....	59	157	216
1887.....	61	56	117
1888.....	99	60	159
1889.....	70	78	148
1890.....	68	63	131
1891.....	39	56	95
1892.....	287	57	344
1893.....	259	35	294

The clerk estimated that of the liquor cases about three originated in the city of Bangor, as compared with one in other parts of the county, and added, in a letter dated 17th July, 1893, the following explanation:—

"As to the causes of a large number of prosecutions in 1892 and 1893, I can only say that our County Attorney in the discharge of his duties as such in this county caused everyone holding a United States license as a liquor seller to be indicted under a clause of section 4, chapter 132, of the Public Laws of 1891, which states that 'the payment of the United States tax as a liquor seller, or notice of any kind in any place of resort indicating that intoxicated liquors are there sold, kept or given away unlawfully, shall be held to be *prima facie* evidence that the person or persons paying said tax, and the party or parties displaying said notices, are common sellers of intoxicating liquors, and the premises so kept by them common nuisances.'"

In the Lewiston *Journal* of 1st July, 1893, there was published a list of 125 seizures of liquors of various kinds made in the cities of Auburn and Lewiston between 28th March and 27th June, 1893. These seizures comprise 4,566 gallons of ale and beer, 446 gallons of whisky, 13 gallons of brandy, 57 gallons of rum, 75 gallons of gin, and 281 gallons of alcohol. (Appendix 5, vol. 5.)

The High Sheriff of the county (the Hon. Benjamin F. Hill), in giving evidence before this commission, stated that this list was only incorrect in that it did not

Liquor Traffic—Commissioners' Report.

embrace all seizures actually made. Over 200 seizures were reported between January and July, 1893.

In the evidence given by an ex-marshal of the city of Augusta (Henry F. Morse), it was stated that 750 packages of liquor had been seized by the police of the city from the express companies between June 25 and August 5.

The evidence taken before the Commission tends to show that the enforcement of the law is not uniformly energetic and effective, but, nevertheless, that its enforcement leads to prosecutions which constitute 54 per cent of all the cases before the Superior Courts of the State. (Appendix No. 110).

General Neal Dow, in answer to questions put to him, said: Do you know if it is a fact that there was a wide open bar there (Augusta) during the last session of the legislature?—I do not know, but I should not wonder, because the politicians stay there, and the law has been very imperfectly enforced in recent years.

"How are we to account for the frequent appearance of the patrol wagon on the streets and the number of drunken people we saw (in Portland) yesterday, Sunday?—I suppose they were drunk.

"But the present sheriff has been rigorously enforcing the law, and I understood from the liquor agent that he closed up on Saturday afternoon?—Yes.

"I saw quite a number of drunken people yesterday, and the patrol wagon out two or three times? As matters are going now, there would be no great difficulty in persons who are bound to have liquor finding it in some way or other. Those people who are under the influence of the alcohol habit will find some way to obtain it, but they have to go out of the way to get it.

"The sheriffs were empowered by special act to look after this matter, because the police force throughout the country did not do anything. (Q. 5443b-5453b).

"You have stated, I think, that the majority of the people in Portland are in favor of the prohibitory law?—That was their vote on the constitutional amendment.

"We have it in evidence that liquor is sold very extensively in the city agency, and it is certainly not confined to the purposes which the law, in establishing the agency, designed it should. Is it quite consistent on the part of a community favoring prohibition to permit practically a free sale of liquor at that agency, and to employ at the same time a large force of men to go round the city and convict people for selling liquor? You have a staff going around taking these people before the courts, and yet under the auspices of the city you have free sale of liquor. Is that in accordance with prohibition sentiment?—The Methodists are a very great body of religionists in this country, and always at their conventions they form a grand resolution against the liquor traffic. There is hardly any language in the English tongue that they do not use against the liquor traffic. Nice men they are, and educated men too; but after that they go directly round and vote for rum. The Presbyterians all do the same thing, and the Congregationalists will do the same. When I have occasion to speak to them, I say 'I would rather you would resolve against temperance, and pray against temperance, and then vote against rum, rather than you would pray and resolve against intemperance and then go and vote against rum.' This whole question of redeeming the nation from the liquor traffic is a question of votes. It never can be done in this country, or any other country, without the votes of the people. And so the *Christian at Work*, a great New York religious paper said: The liquor traffic as it exists in this country is by the permission of the Christian churches.' That is so. Those people, as I said, pray against rum and resolve against rum, but they vote for rum. What I mean by that is, that they go and vote the Republican ticket, as I did for years. Neither the Methodists, nor the Presbyterians, nor the Congregationalists vote against rum, but they vote the Republican ticket, rum and all.

"What is it difficult to understand, is why if the prohibition sentiment is so strong as it is asserted to be in this state, the people do not put into office those who would give effect to the law? It is a wonder and I cannot account for it very easily I was walking in the street some time ago, and I met a Doctor of Divinity, a man who was widely known and he said: 'It will take you a long time to accomplish your purpose of putting down grog shops when the temperance people are not voting for

it.' 'That is very possible,' I said, 'it may take us a very long time, but if it takes a long time, it is because you and such as you do not help. If you did help we would put the grog shops down to-morrow.'

"If the prohibition sentiment is predominant in the state of Maine, what steps are the people taking to put an end to this condition of things? We are trying to show the people of Maine that if they are in favour of prohibition, they must show it by their votes, and not by what they say. On the platform I very often refer to the action of the Republican and Democratic parties in this respect. I say that the Democrats like whisky, and go for whisky honestly and openly, and the Republican party do not believe in whisky, but they go for whisky all the same. That is the only difference between the two.

"May we attribute the laxity of enforcement throughout the different parts of the state to a want of sympathy amongst the politicians? Yes, the state of things existing here is really demoralizing. Although the law of the state has been on our statute book for forty-two years, and has been re-affirmed by a majority of 47,075 of our people, it is not enforced in some places. I am sorry to see some of our judges ignoring the law. That is very demoralizing, and it tends to lead the whole people of the State to illegality." (Q. 5740b-5812b.)

The Hon. Judge Gould was asked: "Have you formed any impression from the cases that have come before you as to what proportion of those that got drunk got their supplies from the city agency? For two or three years it was pretty difficult to tell, but I should say that probably last year one-third did." (Q. 4938b.)

Judge Gould in giving evidence, stated that there had not been one conviction against the city liquor agency; that the law provided that liquor at the agency should be sold only for medicinal or mechanical purposes, and that he had no doubt but at any time last year (that was 1892), if any one had taken the pains to go and make enquiry, the agent could have been convicted for illegal selling. (Q. 4947b-4950b.)

The devices resorted to in order to obtain liquor by those who sell contrary to law are numerous and ingenious. One not unfrequently adopted is to have packages of liquor addressed to respectable citizens, whose names are a guarantee that they would not act contrary to either the spirit or the letter of the law. These packages are intercepted before they reach their destination. This practice has doubtless led to seizures being made by the sheriffs of liquor imported for their own use, this being legal under the law, the consignees being able, only after much trouble and publicity, to obtain the supplies purchased by them. Then there are sales under false designations, and it is certain to a very large extent the spirits supplied are inferior in quality and are frequently adulterated.

In consequence of statements made to the Commissioners who visited Maine in regard to a regulation said to be in force under which liquor is supplied to the disabled veteran soldiers who are cared for in the National Home at Togus, the chairman of the Commission communicated with the governor of the home, General Luther Stephenson, from whom a letter was received which contains the following statements:—

"I would say that the practice of selling lager beer to the members of the home was commenced about twenty years ago, and was first introduced at this place with the idea that by furnishing members with this beverage they would be less inclined to drink the more intoxicating liquors. The result of the experiment proved this idea to be correct, and since that time the sale of lager beer has been introduced generally, by order of the board of managers, into all the other branches of the National Home.

"A large majority of the soldiers who seek admission to the National Home are men who have been accustomed to the use of liquor. It was found necessary, in order to preserve discipline in the home and to keep this class of men from going outside and purchasing the vile liquors which are sold all through the state of Maine, to provide them with this mild beverage, and the result has been, in some of the homes after its introduction, that the amount of drunkenness has been decreased fifty per cent. Although this is known as a prohibition state, yet my experience of

Liquor Traffic—Commissioners' Report.

ten years as governor of the home has fully convinced me that the law prohibiting the sale of liquor in the State of Maine, with the manner of its enforcement, is simply a farce. There is no difficulty, at least for the veteran soldiers, to procure liquor, not only in the cities of Gardiner and Augusta which are situated nearest to this place, but also in the immediate vicinity of the home, where there are a score of places where compounds of an intoxicating nature can be purchased.

"I get but little assistance from the officers of the law and the enforcement of the statutes in relation to the sale of liquor, and am obliged to depend almost entirely upon what we furnish them in the shape of lager beer and the enforcement of the penalty for drunkenness."

The evidence taken shows that anyone desiring to secure a supply of liquor can get it by depositing in an express office the amount which he wishes to expend, with directions to whom the money is to be paid in Boston or elsewhere.

Mr. W. H. Greene, express proprietor, stated:—

"If a man or woman comes in and says he or she wants a gallon of whisky or keg of beer, I take her order, and ordinarily in every case ask if it is for her own personal use. I cannot do any more than that. I comply with the law and I let her sign an order and I send away and I get the liquor. I find that within the past ten years you cannot place much reliance in most anyone in regard to liquor. Almost anyone will lie about it. If they want the liquor for sale they will tell you sometimes they want it for their own use. They know the law as well as I do, and they know that if we bring it into the state knowing it is for sale we are liable to the law.

"I had occasion, in conversation with Judge Fox of the United States court, previous to his death, to speak on the subject. I made the statement that I thought the prohibitory law had lowered the standard of truth in the state of Maine more than anything else that had happened here, and he agreed with me.

"In general, large quantities of liquor come every day, and previous to holidays extremely large quantities come in. I have no doubt that next week, on the night of the 3rd of July, it would be no exaggeration to say that we will have forty or fifty packages.

"What is about the quantity of each package?—Well, from one to two or three gallons, and malt liquors come in kegs and half barrels.

"Are there many express companies in this city besides your own?—Yes sir there are four run to Boston.

"Do the other express companies receive as large quantities of liquor as you do?—My impression is that they have more.

"Each of them?—Yes, each one of them transports more; because it is a well-known fact among the people of Portland that we do not cater for that business. We take it merely as we take any other business.

"How many packages do the five express companies receive generally every day, and bring into the city of Portland?—I cannot say for the other companies.

"Well, about how many packages?—If they have as many as we, and I think they have more, I should say there would be 100 packages a day come in by express. I think, however, that is but a drop in the bucket to what does come in. I judge that from a question I asked of a man in the liquor business. He was a wholesale liquor seller here a few years ago, at a time when the law was being fully as rigidly enforced as it is now. He used to send his money and pay his bills in Boston, to our agency, and one night he came in with somewhere about one thousand dollars. While I was counting out the money, I said to him: 'I should think these thousands of yours would worry you to death. I would not be in it for any consideration.' He said: 'I do not worry much about it. The getting in of two or three barrels of beer causes me more worry than a whole carload of whisky.'" (Q. 6435b-6450b).

It follows as a matter of course, that under the operation of this law all amounts paid for liquor consumed in the state of Maine are remitted to places outside the state, excepting in the case of cider, or such other liquor as may be manufactured

illicitly. The quantity of the latter is probably comparatively small, although evidence was given of very vile compounds being concocted occasionally and sold for beverage purposes. (Q. 7557-6015b).

The evidence of judges and others is emphatic in declaring that false swearing in connection with these liquor cases is of frequent occurrence.

The law of the state provides for the establishment of a State Liquor Agency, under the charge of a commissioner, for supplying pure liquor for medicinal, mechanical and manufacturing purposes at cost price, plus a percentage to cover expenses, to all city, town and county Liquor Agencies.

The following is the report of the Commissioner for the year 1893:—

Augusta, Dec. 29—State Liquor Commissioner P. P. Gilmore made his annual report to the council to-day. His total sales of liquors to twenty-four towns and cities were \$130,812.29, divided as follows:

Auburn.....	\$ 9,179
Augusta.....	5,145
Albany.....	348
Biddeford.....	19,676
Bath.....	3,862
Bangor.....	8,631
Bethel.....	850
Bucksport.....	2,832
Fayette.....	116
Greenwood.....	1,206
Gardiner.....	3,400
Hartland.....	813
Lewiston.....	9,723
Machias.....	2,215
Mt. Vernon.....	184
Portland.....	48,437
Phillips.....	979
Richmond.....	3,527
Rangeley.....	248
Rockland.....	2,916
Randolph.....	1,204
Topsfield.....	6
Turner.....	250
Waterville.....	5,065

The sub-agencies, which are established and regulated by the local authorities, order their supplies of liquor from the State Commissioner. The practice seems to be for the latter to supply the names of a few persons or firms from whom liquor is to be purchased, and the sub-agents, in their applications, can name any of these as the person or firm from whom they wish their supplies to be purchased. The city, town and district agents sell to the public, adding to the price paid to the State Commissioner a certain percentage to cover the expenses of the agency.

It will be sufficient for the purpose of illustrating the system to describe what is done in the city of Portland, where the Commissioners had full opportunity of making themselves acquainted with the working of the agency. It is possible, however, that there are other agencies which are conducted more strictly in conformity with the spirit of the law. In Portland, as elsewhere, the appointment to the agency, which is considered a valuable one, appears to be bestowed as a reward for political services. The establishment is situated at the corner of two important thoroughfares near the city hall. The agency was visited by some of the members of the Commission on two or three occasions, and there was at no time an absence of purchasers, occasionally members of both sexes being present.

Liquor Traffic—Commissioners' Report.

The following is a statement of the amount of sales at this agency from 1870 to 1892:—

1870-71.....	\$ 3,050 55
1871-72.....	6,677 00
1872-73.....	19,340 62
1873-74.....
1874-75.....
1875-76.....	1,748 82
1876-77.....	6,500 00
1877-78.....	18,025 00
1878-79.....	9,786 54
1879-80.....
1880-81.....	26,850 00
1881-82.....
1882-83.....	19,615 50
1883-84.....	20,885 69
1884-85.....	20,520 31
1885-86.....	28,974 66
1886-87.....	22,164 74
1887-88.....	26,133 33
1888-89.....	20,667 89
1889-90.....	23,770 27
1890-91.....	22,356 51
1891-92.....	58,742 76
1892-93.....	84,848 33

It will be noticed that for the last year the sales amounted to nearly \$85,000, and it may be mentioned that there was, after payment of all expenses, a net surplus of \$17,758, which was applied to schools, quarantine station, &c. The agency is closed at 4.30 p.m. on Saturday, and on June 24th, one of the days on which the commissioners were in Portland, the pressure of work at the agency was so great that the agent, although he is supplied with assistants, was unable to make an appointment with the commissioners until after the hour mentioned. The present agent is entering upon his second year in office. The circumstances under which he was continued are stated in the evidence. The agency is supervised by a committee of three members of the board of aldermen. That board, in 1893, was composed of four Democrats and Republicans. The mayor has in certain matters the casting vote.

The evidence taken by the Commission tends to show that when the terms of the prohibitory law are very strictly enforced in the city the sales at the agency increase, and, on the other hand, when the law is not very stringently enforced, the sales at the agency diminish.

It was not claimed by anyone from whom the Commissioners obtained evidence that the sales of this agency were confined to the purposes which the law contemplated, namely, medicinal, mechanical and sacramental. The system pursued is to keep a register of all liquors sold. Every applicant is required to state verbally if it is for himself and the purpose for which he needs the supply he desires to purchase. If it is for some other person he must present an order. The agent uses his discretion as to granting or refusing the application; but he is forbidden by the terms of the Act to sell to the following persons, namely:

“To minors, without written direction of their parents, master or guardian; an Indian, soldier, a drunkard, an intoxicated person, any person liable to guardianship, to any intemperate person, of whose habits he has been notified by his relatives, or by the aldermen, selectmen, or assessors of any city, county or plantation.”

The accounts of the agent in Portland are audited by the City Auditor, and the business of the agency is supervised by the committee of aldermen already referred to.

The Commissioners could not ascertain that proceedings had at any time been taken to secure that the sales at the agency in Portland should be confined to those purposes which the law contemplated, and the anomaly is presented of sales of liquor being made on a large scale, under arrangements sanctioned by the city government, whilst the county and city officials are simultaneously engaged in prosecuting illicit vendors of half-pints of whisky or other spirits.

The following are further extracts from the evidence given before the Commissioners by General Neal Dow.

"The State Commissioner nominates these Boston people from whom the city liquor agents must get their liquors? It is all a violation of the law. Everything he does in that way is a violation of the law. The law contemplates that he shall buy the liquor and keep it in stock, and when the law creating the State Commissioner was enacted, that is the way it was done." (Q. 5417*b*).

"Are we to understand from you that the state commissioner does not keep a supply of liquor himself? No, because it costs a great deal of trouble, and he would have to invest money in it." (Q. 5418*b*).

"To what party does that state commissioner belong?—He is a Republican." (Q. 5419*b*).

"And that Republican officer nominates these rum sellers or wholesale liquor merchants from whom the liquor agents have to buy?—He evades the law." (Q. 5420*b*).

"The Republican State commissioner evades the law?—Yes, he evades the spirit of the law. The law contemplates that he shall have a stock of liquor on hand from which he will supply the local agents. The commissioners, when first appointed, did that. My friend, Mr. Chance, who was a temperance man in this town, was commissioner. He had a large stock of liquor on hand and a good deal of money was invested in it, and of course he lost the interest in the investment; and when he was changed he had a good deal of trouble in getting the new man to take his stock of liquors off his hands. The state commissioner, when he comes into office, does not want the trouble of keeping a stock of liquors on hand from which he will supply the agents, and so they give an order to the local agent on Mr. So-and-so, of Boston, to supply them in the name of the commissioner." (5421*b*).

"We are informed by persons who testified here, and I believe it is a fact, that the state commissioner says, 'You must buy your liquors from these four men'—I suppose so." (Q. 5424*b*).

"We do not understand why the local agents should be restricted to buying from four firms?—Because the commissioner is making as much as he can out of it, and the commissioner goes around and makes a bargain with those four people that he will give so much for the liquor." (Q. 5425*b*).

"That is the suspicion? Yes, we do not know it. We are not there when they do it." (Q. 5426*b*).

"At any rate, the State Commissioner can purchase liquor from whom he likes? Yes." (Q. 5427*b*).

"Although he is supposed to keep a stock on hand, he does not do so, and he can buy whenever he wishes? Yes, that is right." (Q. 5428*b*).

"If he (the State Commissioner) says to the local agent, 'you shall only purchase from these four firms which I name,' the city agent in Portland has no alternative but to comply with that order? Yes, that is so. You may very well wonder why it is that this state of things should exist, and the reason of it is that the Republican party in power does not want to do anything more than it can possibly help to offend the rumsellers, because they want their votes."

"Did the legislature in that year not also amend the law in this respect, that they gave the judges discretionary power to impose a fine or imprisonment, whereas previously the law provided for a fine and imprisonment? Yes, the legislature did that; but even the judge had exercised that discretion irrespective of law, and so last year they enacted that the judges might use their discretion. I told the legislature that, no matter how good the law might be, it would amount to very little, unless they took away all the discretion from the courts.' That was in the original Maine law. The original law said that cases arising under this Act should take

Liquor Traffic—Commissioners' Report.

precedence in the courts of law of other cases, except those where parties were actually in jail." * * *

"I am sorry to say that some of the courts manage these rum cases in a very scandalous way. A man will be convicted, and they will put him on what they call a special docket. The fine will not be imposed upon him, and the penalty of imprisonment will not be imposed upon him, and there will be written at the foot of the docket the word "continued," that is, that he is not to be brought forward for punishment without special order from the court. In one case there was one man's name eight times, one under the other.

"My conviction is settled, that we can never sweep out entirely the liquor traffic in the lifetime of the Republican party, because they refuse to give us amendments to the law which are absolutely necessary towards that end. The liquor traffic can never be put down so long as there is any profit remaining in it. It is carried on for the profit and not for the fun of the thing. If I could drive you around our streets, I could show you some very fine houses owned by rum sellers, who made their money out of the rum.

"Have these rum sellers amassed this property since the prohibitory law came into force? Yes." (Q 5429b-5436b.)

The claim frequently advanced that the prohibitory law has closed all the breweries and distilleries in the state, and thereby largely reduced the sale of intoxicants, is doubtless literally correct. It is manifest that if the law was to be enforced at all, brewing and distilling in the state must cease, and, moreover, that the manufacture having ceased, the sale of intoxicating liquors within the state must be diminished, the sales of these establishments being included in the one period and not in the other. A large proportion of the products of the distilleries and breweries previously carrying on business was doubtless, however, sold for exportation from the state, and the closing of these establishments does not necessarily demonstrate that the actual consumption of liquor has largely diminished. It is to be regretted, in so far as the work of this Commission is concerned, that there are no statistics from which information can be gathered concerning the consumption of intoxicating liquors within the State of Maine. One witness, Mr. W. H. Orr, who gave evidence in Toronto, made the statement that he thought he could get statistics of the consumption of liquor in the State of Maine in a little while, and he was solicited to do so, and supply them to the Commissioners. (Q. 10457a, 10536a, 10540a.) In a letter dated 18th July, 1894, which will be found in the volume of evidence No. IV., pt. 2, as Appendix No. 6, he has explained his inability to supply the information. The suggestion of Governor Burleigh, that the Commissioners should apply to Gen. Neal Dow, was acted upon. The General appeared on two occasions before the Commission, but he was not prepared to furnish particulars of the consumption of liquor either before, or subsequent to the adoption of the prohibitory law, and the Commissioners are justified in concluding, looking at the statement made by the chief of the Bureau of Statistics, Washington, referred to at page 666 of this report, that anything approaching to exact information on this point is not to be obtained, but that very considerable quantities of liquor are consumed in the state, the sales at the various liquor agencies and the evidence of the express agents and others, together with the statistics of drunkenness referred to elsewhere, conclusively prove.

In social clubs in some of the larger centres of population the members procure their own supplies of liquors, and are provided with conveniences which secure them the individual control thereof. Clubs are formed, in some instances at least, with the sole object of enabling members to secure intoxicants for personal use, without subjecting them to the penalties of the law. What is known as "pocket peddling" is common in many of the cities, which simply means that a supply of intoxicants is secured and carried about on the person and retailed at the corners of streets, or in lanes and in alleys to whomsoever may be willing to purchase. The evidence collected by the commission all tends to show that the liquor sold in this way is of the very worst description.

In small communities, or what may be called villages and townships, the prohibitory law is unquestionably more effective in preventing the distribution of intoxicants. It is natural that such should be the case, for where the inhabitants are all known to each other, and the business of each is known to his neighbour, the carrying on of an illicit trade is obviously rendered difficult, especially if public sentiment is in favour of the law; but, nevertheless, it would probably be a very difficult matter to find any village with more than one thousand inhabitants where intoxicants could not be purchased by those who were bent on obtaining them.

At Augusta, the capital of the state, there is very little attempt made to conceal the fact that liquor is sold, and some of the Commissioners had pointed out to them several places where it could be obtained. They also were informed that during the session of the legislature, which took place in the early part of the year, there were practically open bars at one or more of the leading hotels. A liquor agency was established in that city in 1893. The receipts from 15th May to 9th December, 1893, were \$4,475. At Bangor there is an open sale of liquor, and the prohibitory law is not enforced. The city government cannot, of course, make by-laws regulating the sale, as it is prohibited by the state law, but the authorities act upon an unwritten regulation, which is to the effect that if the vendors keep orderly places, close at ten o'clock at night, do not open before six o'clock in the morning and keep their places closed on Sunday, the police authorities will not meddle with them. A liquor agency exists in that city, the receipts of which from 1881 to 1891, inclusive, were as follows:—

Year.	Receipts.
1880-81.....	\$ 9,377 25
1881-82.....	11,350 00
1882-83.....	9,825 00
1883-84.....	8,340 46
1884-85.....	6,161 28
1885-86.....	6,722 95
1886-87.....	5,815 00
1887-88.....	9,594 51
1888-89.....	11,973 12
1889-90.....	13,504 91
1890-91.....	14,045 37
1891-92.....	9,960 36
1892-93.....	9,984 34

With open sale of liquor in the city, it would follow that the sales at the agency would be comparatively small.

The number of cases before the Supreme Court of the county of Penobscot, in which Bangor is situated, for breaches of the liquor law, compared with the total number of all cases, has been already referred to.

Pittsfield, a village with about 2,500 inhabitants, possessing three large woollen mills, situated on the main line of the Maine Central railway, was visited. It was selected as a place that would fairly illustrate the working of the prohibitory law in the rural districts. The Commission sat in Pittsfield on July 3rd, and left it on the morning of the 4th, when there was a good deal of excitement over the celebration of Independence Day. The village was orderly, and there were few cases of intemperance. The hotel in which the commissioners stayed, in reality the only one in the village, had been searched the previous autumn, and liquor being found, proceedings were taken against the landlord, as a result of which the house was closed for about three weeks. Suspended sentence was hanging over the man at the time the Commissioners were in the village. Comparatively recent proceedings had been taken against one or more persons for selling liquor in the village; and the opinion was entertained, and was expressed by the strongest advocate of prohibition in the village, that liquor was probably being sold at a certain establishment not far from the hotel. There had been no arrests for drunkenness for some time previous to the date of the Commissioners' visit.

Liquor Traffic—Commissioners' Report.

The district in and around Pittsfield, like many others in the State of Maine, produces very excellent apples, and cider is made in considerable quantities. A cider mill in the village was visited by the Commissioners. The law in regard to the sale of cider is, that while its manufacture is permitted, the sale is prohibited if it is sold "to be used as a beverage or for tipping purposes." (Sections 28 & 29).

The provisions of the law have been amended once or twice, so that practically the sale of cider for beverage purposes is now prohibited; but any person producing apples within a reasonable distance of a mill could take them to it, and have them manufactured into cider for his own use. There is undoubtedly a good deal of cider drunk by the agricultural population. Various estimates of the quantity of alcohol in cider were given, ranging from four to ten per cent.

Winthrop, another village on the line of the Maine Central railway, and containing a population of about 1,200, was visited on July 4th. There was a large number of strangers in the village on that day, and all were very orderly. Little evidence of drunkenness was observable, although it was apparent that liquor could be obtained. The inhabitants, embracing a considerable number of French-Canadians, appear to be sober and industrious.

The city of Lewiston was next visited, the population of which is about 22,000. There was a large influx of visitors on the day of the Commissioners' arrival, and the inhabitants were keeping holiday. There was some drunkenness seen in the street, and the evidence gathered by the Commission shows that only a limited restriction is placed upon the sale of liquor in that city. Important evidence was given by the Hon. W. H. Newell, Counsellor-at-law, Mayor of the city for the year 1892. Mr. Newell is a gentleman of position and high character in the community. His statements in regard to the not infrequent partizan proceedings of officers charged with the enforcement of the law are supported by evidence obtained elsewhere in the state. Recent seizures of liquors appear to indicate that there is a large number of vendors and a wide demand for liquor in this district.

The following are extracts from Mr. Newell's address to the City Council, printed in the official report of the city for the year 1892:—

"The law does not mean that a warrant shall be taken out of court by an officer, and that before searching the place described, a trusty messenger shall call upon the owner and notify him that the officers are about to come. It is a matter of common knowledge that this method is pursued. For ten years there has not been a man engaged in the business against whom there was not the strongest kind of suspicion that he was taking bribes from the liquor sellers.

"I have said to you, gentlemen, but a tithe of what is known, not only to you, but to myself and every other citizen. It is not possible at all times to draw a line between the rum seller, the rum sympathizer, the temperance advocate, and the temperance reformer. There are times during the year when the interests of all the above classes become so intermingled that it is difficult to distinguish to which class a certain coterie of each kind belong, for the reason that they all work in the same line, to accomplish the same result, and forget, for the time being, their differences.

In evidence before the Commissioners, Mr. Newell said:—

"This prohibition subject is entirely a political matter. That is the truth of it, and that is the ruination of it.

"I think the prohibitory law, so far as the country portion of the state is concerned, is a success. Public sentiment backs it up; but so far as the cities of the state are concerned, I do not think it is a success in any sense of the word. For instance, I was in Augusta, when the Legislature was in session, for some two weeks last winter. The Governor, the Speaker of the House, and about every leading member of the House and Senate stopped at the Augusta House. There was an open bar in that house, and everybody knew it, and it was run all the time, and the highest officers of the state were right there, and knew it, and winked at it. This is one example of the way the thing is done. * * *

"We have at the present time two deputy sheriffs, whose entire business consists of the enforcement of the liquor law. I rather think that when I was Mayor,

they had two deputy sheriffs, and two state constables appointed by the Commissioner, who did no other business.

"By common consent, when these men were put on, the city police force did not have anything to do with the liquor traffic, and these state and county sheriffs did the business. I would not say anything about the two sheriffs that are there now, because I do not know anything about them, but up to the time of the appointment of these two, I do not think there was an honest man in the lot, nor do I think there was a man amongst them who was not bought.

"What do you mean by that?—I mean to say that a certain lawyer in this town is one man, the sheriff of this county is another man, the two liquor deputy sheriffs were two more men. This lawyer, as it is claimed, went around to the different men who wanted to sell liquor: one man paid \$5 per month, another \$10, and another \$15, according to his traffic and means. This lawyer collected the amounts. The sheriff had half, and the other two had the other half: that is hearsay, but from everything that I could understand, it points in that direction.

"You say it is hearsay, but do you believe it to be true? Yes, sir. Two years ago last Fair time, there was an agreement between the hotel-keepers and liquor sellers in town, that during Fair time nobody should be touched for selling liquor; that they should be allowed to sell freely.

"Who was that arrangement made with? With the Sheriff of the county, the hotel men and the liquor sellers. The leading grocer in this town was the middleman who did the business. (Q. 8884b-8898b).

"They are using this question of prohibition in politics? Yes, and it is a disgrace to the politics of the State of Maine that this thing is as it is. There is an enormous lot of crime and perjury, and everything of that kind, done in the name of temperance here. (8919b).

"Do you think that the strict enforcement of the prohibitory law has had the effect of driving the use of liquor into the homes of the people? I have no knowledge of that, but it is generally understood that it has that effect. If you shut down on these places in Lincoln and Lisbon streets, which are two business streets, for every place you shut down there, you will open half a dozen kitchen bars and dives. It is not so easy to reach these places, and they are the worst things in the world." (Q. 8931b).

In Auburn, a city on the other side of the Androscoggin River, with a population of 11,000 inhabitants, the law is said to be more strictly enforced. The number of arrests made by the police (Appendix, No. 4, M), would indicate that there has not been much intemperance in the community. A letter from the City Marshal (see Appendix, No. 4, M), indicates that there was a great increase in the arrests for drunkenness in the year which ended in February, 1894. The distance between this city and Lewiston is short, and so long as liquor is plentiful in the latter, the people of Auburn will experience no difficulty in getting a supply. There is a large French population in both of these cities. In Lewiston the cotton manufacture is carried on extensively, and Auburn produces large quantities of boots and shoes.

The publishers of the *Lewiston Journal*, a strong advocate of the prohibitory law, in 1892 sent out circulars to representative men in 300 Maine towns and cities, in which the following questions were submitted:—

"Do you know whether there are any secret grog shops in your town? If so, how many?

"Are there any open grog shops in your town, meaning thereby open bars, either on the street or in a rear room with a bar accessible and a lay out of decanters, bottles, and so on, as in old license days?

"Has drinking or drunkenness increased in your place in the past two years?

"Have you any active moral suasion movement, either reform club or other temperance society in your midst?

"If the law is not well enforced, is the fault official or public?

"Are the officers lax in spirit in spite of a healthy public opinion, or because of lax public sentiment.

Liquor Traffic—Commissioners' Report.

"In your judgment has the number of rum shops, disguised as drug stores, decreased since the new law took effect?"

"Will you be kind enough to make suggestions regarding the needs of prohibition and temperance in Maine at present?"

"You will perceive that we want two things: 1st, well established facts regarding the liquor question in your locality; 2nd, your opinions."

In the paper of the 30th July, 1892, the replies received were published. They will be found in Appendix No. 111 of this report.

From Lewiston the Commissioners went to Biddeford, a city with a population of 15,000 inhabitants. Here also are extensive cotton mills. On the occasion of the Commissioners' visit the regularly elected Marshal of the city had been superseded by a marshal appointed by the Governor and Council of the State. Public feeling on the subject of the liquor traffic evidently runs high in this city. A perusal of the evidence taken will show that there is a comparatively free sale. The statistics of the police arrests are given in Appendix No. 118.

Under the internal revenue laws of the United States, every person dealing in liquors must take out a permit, or special tax paper. An abstract of the law is given at page 655. From the returns supplied by the Commissioner of Internal Revenue at Washington, already referred to, it is ascertained that the following certificates were issued to residents in the State of Maine for the years 1890 to 1893.

Statement showing the population of the State of Maine and number of persons who have paid special taxes as vendors and manufacturers of liquors from April 30, 1889, to June 30, 1893.

Date.	Population.	Re-tail Liquor Dealers.	Wholesale Liquor Dealers.	Retail Dealers in Malt Liquors.	Wholesale Dealers in Malt Liquors.	Malt.	Number of Inhabitants to each Special Tax Payer.
Year ended April 30, 1890.....	661,000	868	7	73	8	956	691
* Year ended June 30, 1891.....	662,000	1,193	8	126	11	1,336	495
Year ended June 30, 1892.....	663,000	808	7	214	5	1,034	642
Year ended June 30, 1893.....	664,000	866	10	207	4	1,087	610

* Fourteen months. Population is taken from the United States Census for 1890; other years estimated

These returns practically represent the number of persons who paid the special tax, with the intention, doubtless, of dealing in liquors in some way which they considered would render them liable to the penalties imposed by the law, if they did not hold certificates.

The following table shows the number of cases entered in 1891 against persons selling in various states without having paid the special tax. It will be noticed that Maine has proportionately the largest number of any of the New England States.

State, 1891.	Population.	Cases entered, 1891.
Maine.....	662,000	67
New Hampshire.....	377,000	11
Vermont.....	332,000	8
Massachusetts.....	2,239,000	135
New Jersey.....	1,445,000	2
Connecticut.....	746,000	5
Delaware.....	168,000	1
New York.....	5,998,000	46
Pennsylvania.....	5,258,000	13
Rhode Island.....	346,000	*

* Internal Revenue Commissioner's Report, 1891.

A considerable number of these certificates are, no doubt, held by druggists, and it is singular that there should exist, in view of the fact that the law has been in force for so many years, any doubt as to the obligation of the dealers in drugs and dispensers of medicines of which alcohol may be a component part, to hold such certificates.

A member of the legal profession, Mr. L. T. Carleton, county attorney for Kennebec County, who gave evidence before the Commission at Winthrop on this point, expressed his opinion in the following terms:—

“We have two druggists. They have not taken out tax certificates, but they used to do so. A couple of years ago they stopped, and have not taken out certificates since. The officers of the United States revenue department go round and persuade people to take out the tax certificates. They say it is for their own protection, and the officers get their salaries and fees on the number of tax certificates taken out.” (Q. 8449b.)

A gentleman who visited this continent in 1892, for the purpose of investigating the liquor legislation of the United States and Canada from an entirely non-partizan standpoint, and whose report* forms a very interesting volume on the subject, says in regard to the United States liquor tax:—

“I am quite unable to say why apothecaries in Maine (or in any other prohibitory state), if they are not permit holders, should pay the retail liquor tax, unless they intend to sell liquor in defiance of the state law.”

CRIME, PAUPERISM, &C.

There are no complete statistics of convictions for offences of all kinds in the State of Maine. In cities the arrests can be obtained, but the convictions can only be got from the records of the various courts throughout the state. The commitments to the jails are embodied in reports which are laid before the legislature and printed.

In Canada the criminal statistics are made up on the basis of convictions. Comparisons, therefore, become most difficult to make in any case, and in most instances impracticable, *i. e.*, impracticable on a scale which would cover the whole field of inquiry. Such statistics as exist cannot, however, be ignored, for they are constantly being appealed to, on the one hand, as evidence of the beneficent effects of the prohibitive system, and, hardly less frequently, on the other hand, as proving its failures, unfortunately, in many instances, without sufficient investigation on either side.

Appendices 112 to 124 show the arrests for offences of all kinds, the arrests for drunkenness, and the ratio of these arrests per 1,000 of the population in Bath, Bangor, Lewiston, Portland, Auburn, Augusta, Biddeford, Hallowell, Waterville, Westbrook, Rockland, Gardiner and Saco, for the dates mentioned therein. Efforts have been made, but unsuccessfully, to obtain like information from several other places.

It will be noticed that in the year 1892 there was a large decrease in the arrests reported in the city of Portland, attributed by those in favour of the prohibitive system to the fact that the sheriff was in full sympathy with the law and fearlessly executed it. The facts, as far as the Commissioners have been able to gather them, are, that the smaller number of arrests was due wholly to the action of the police, who were less zealous in locking up offenders. They also discharged many of those arrested without bringing them before the court. In his report for the year 1892, the city marshal remarked:—

“On my induction to office I was given to understand that it had not been the practice to put ‘simple drunks,’ first, or rare offences before the court, which I believe to be a good policy, and have adhered to.”

* “Liquor legislation in the United States and Canada,” by E. L. Fanshawe, barrister-at-law, London.

Liquor Traffic—Commissioners' Report.

The Hon. George F. Gould, judge of the Municipal Court, Portland, having had pointed out to him that the city marshal's report showed that there had been a great decrease in the number of arrests in 1892, stated :—

"That was Marshal Swett's year."

"Can you give us any explanation of the cause of the decrease? I do not know. I have thought that drunkenness had decreased here a little, or that it had kept about the same right through. I did not think the total number of arrests decreased quite as much as that."

"It has dropped 50 per cent? Well, I would not pay much attention to last year's return, because men staggered right up in front of officers and dared them to arrest them."

"When was that? From March, 1892, to March, 1893."

"Did the same condition of things exist in 1891? It did not to such an extent. The police department, however, had dropped in efficiency during those six or seven years." (Q. 4903*b*–4907*b*).

A statement (Appendix No. 125), shows the number of persons convicted of the offence of intoxication and of being common drunkards, in the city of Portland, for the years 1888 to 1892, inclusive. It will be noticed that the convictions for the year 1892 were just about one-half of those for 1891, and less than one-half of those for 1890. A new marshal took office in the beginning of 1893, and he decided that it was not his duty to constitute himself a judge, but to apprehend and bring before the court all those offending against the law. The arrests at once largely increased as will be seen on referring to the statement (Appendix No. 115). They were as under:—

Year.	Total arrests.	Arrests for drunkenness.
1888	2,169	1,368
1889	1,947	1,230
1890	1,822	1,211
1891	1,500	917
1892	1,313	874
1893	2,110	1,464

The same gentleman held the office of sheriff in 1892 and 1893, Sheriff Cram having been re-elected in 1893. On both occasions on which he was a candidate, he was the nominee of his party (Republican), and it perhaps, to a certain extent indicates the feelings of the electors in regard to the enforcement of the law (for it is on all hands admitted that Sheriff Cram executes the law), that on the first occasion he was elected by a majority of 2,335 votes, and on the last by 55 only.

In Bangor the ratio of arrests for drunkenness is very high. It is the head quarters of the lumbering industry of the state. Large numbers of men gather in that city and proceed to the woods to carry on lumber operations during the winter. They return in the spring, and this class, with the sailors who frequent the port, are alleged to add a large quota to the arrests for drunkenness.

Similar statements of arrests in some of the Canadian cities have been compiled, and are given in Appendices, Nos. 21 to 47.

Every reasonable effort has been made to ascertain the practice pursued in regard to the making of arrests, and the basis on which the statistics are prepared. These differ in some instances; but in the larger cities the methods do not apparently vary materially. In Lewiston the recorded arrests are evidently below the actual arrests, and this may probably also be said of the arrests in Auburn.

In Halifax, Nova Scotia, the figures returned appear to more nearly represent the convictions for drunkenness than the arrests.

The statistics of arrests in the various cities of the State of Maine, already referred to, compare with the arrests in the cities of the Dominion as follows :

*Scott Act in force.

In the report of the Canadian Commissioners who visited certain places in the United States in the year 1874, and which report was printed and laid before parliament in 1875, certain information was given in regard to the arrests for drunkenness in the cities of Portland, Bangor, Augusta, Rockland and Lewiston. (P. 27).

The Commissioners stated that:—

“The cities are here placed according to the activity used in each in enforcing the law, Portland displaying the least, and it will be seen * * * that whilst Portland has double the population of Lewiston, she has nearly ten times the amount of drunkenness, and nearly seven times the number of arrests.”

In the following table is shown the number of arrests for drunkenness in the cities referred to (placed in the same order), reported at that time, and the number for later periods in regard to which this Commission has been able to obtain information.

PORTLAND.

Arrest for ten years ended 1873.....	1 to 24	of the population.
do do 1893.....	1 to 29	do
do the year ended 1893.....	1 to 18	do

BANGOR.

Arrests for eight years ended 1874.....	1 to 49	do
do do 1892.....	1 to 20	do
do the year ended 1892.....	1 to 20	do

AUGUSTA.

Arrests for five years ended 1874.....	1 to 60	do
do do 1892.....	1 to 41	do

ROCKLAND.

Arrests for ten years ended 1873....	1 to 83	do
do do 1892.....	1 to 53	do
do the year ended 1892.....	1 to 28	do

LEWISTON.

Arrest for nine years ended 1874.....	1 to 237	do
* do two do 1892.....	1 to 77	do
do the do 1892.....	1 to 84	do

The population in the rural districts of the state is probably smaller to-day than it was ten years ago, such increases as have taken place, having been in the towns and cities. This condition has doubtless increased the difficulty of giving effect to the prohibitory law in cities, whilst in the rural districts it has contributed to its better enforcement.

The methods adopted in compiling criminal statistics in the states of the United States differ in most cases so materially from the methods adopted in Canada as to make it impracticable to institute perfectly satisfactory comparisons. The Commissioners have not been able, as has been mentioned, to obtain complete statistics of convictions for offences covering the whole of the State of Maine, and they have not, therefore, been able to compare the whole volume of crime in the state with that of the Dominion.

* Arrests for two years only have been obtained.

Liquor Traffic—Commissioners' Report.

The following table shows the commitments to jail in the State of Maine for each of the years during the quintennial period ended November 30th, 1892:—

STATE OF MAINE.

Year.	Population.	Total commitments.	Per 1000.	Commitments for drunkenness	Per 1000.
1888.....	658,500	3,398	5.17	1,383	2.10
1889.....	660,000	3,957	6.00	1,345	2.04
1890.....	661,000	3,780	5.73	2,300	3.48
1891.....	662,000	3,655	5.53	1,624	2.46
1892.....	663,000	3,723	5.62	1,714	2.58
Average.....	660,900	3,703	5.60	1,673	2.53

The population is taken from the United States census in 1890, other years being estimated.

This statement, it must be borne in mind, represents the commitments to prison.

The following table has been compiled from the criminal statistics of Canada, showing the convictions for offences of all kinds and for drunkenness in the three Maritime Provinces of the Dominion for each of the years during the quintennial period ending September 30th, 1892:—

NOVA SCOTIA, NEW BRUNSWICK AND PRINCE EDWARD ISLAND.

Year.	Population.	Total convictions.	Per 1000.	Convictions for drunkenness.	Per 1000.
1888.....	878,000	3,744	4.26	1,029	2.19
1889.....	879,000	4,154	4.72	2,370	2.69
1890.....	880,000	4,563	5.17	2,490	2.83
1891.....	881,000	4,573	5.19	2,574	2.89
1892.....	882,000	4,462	5.05	2,268	2.57
Average.....	880,000	4,297	4.88	2,326	2.64

If the year 1892 is taken separately, the comparison is as follows:—

	All offences.	For drunkenness.
Committals—Maine.....	5.62	2.58
Convictions—Lower Provinces.....	5.05	2.57

The basis of comparison here is, as regards drunkenness, favourable to Maine, as in the provinces convictions, including cases where fines are imposed, are taken, whereas in Maine the commitments to the jails only are given. The Commissioners regret that they have not been able to obtain full classified statistics of the commitments to the jails of the Maritime Provinces. The position of the three provinces resembles that of Maine. They are contiguous, and all border on the Atlantic;

their populations are largely engaged in similar occupations, and there has not been any great increase in the numbers thereof for the last decade. If, in the case of drunkenness, the number who were fined, paid fines and were discharged, could be eliminated from the total convictions in the provinces, the ratio of the remainder to the population would be much smaller than that of the commitments in the State of Maine.

Assuming that the terms "tramps" and "vagrants" are synonymous, Maine has a larger number of this class committed to jail than the provinces show convicted.

In the province of Ontario statistics of the commitments to the common jails of the province have been kept in an admirable manner, and the results have been embodied in annual reports presented to the Legislature.

The following table shows the commitments to all the jails of the province for all offences, and the commitments for drunkenness, with the ratio per thousand of the population, during the five years ended September 30th, 1892:—

PROVINCE OF ONTARIO.

Year.	Population.	Total Commitments.	Per 1000.	Commitments for drunkenness.	Per 1000.
1888.....	2,056,000	12,454	6.05	4,451	2.16
1889.....	2,074,000	12,531	6.03	4,777	2.31
1890.....	2,094,000	11,810	5.63	4,573	2.18
1891.....	2,114,000	10,423	4.92	3,614	1.70
1892.....	2,134,000	9,011	4.22	2,736	1.28
Total.....	10,473,000	56,229	26.85	20,151	9.63
Average.....	2,094,000	11,246	5.37	4,030	1.92

The ratio of all commitments to the jails of Ontario, with its large business centres and constantly increasing population, is, it will be observed, less than the ratio in the State of Maine, and the commitments for drunkenness much below those of that state. Properly classified statistics of the commitments to jails of the other provinces of the Dominion are not available.

As nearly as can be ascertained, about 69 per cent of those convicted for drunkenness in Ontario are sent to jail. There are no statistics showing what the proportion is in the whole State of Maine, but taking the return of the Municipal Court of Portland as a fair index, the commitments to jail do not amount to as high a percentage of the total convictions for drunkenness as they are in Ontario.

It is not claimed that these are exact statistics; in fact, exact statistics are not obtainable, but they indicate very clearly that the vice of drunkenness has not been eradicated by the operation of the prohibitory law in the State of Maine, and that the results obtained in that direction, after a lengthened experience under very favorable conditions, are not more satisfactory than they are under the license system prevailing in the Dominion.

The following figures show the number of prisoners in the common jails, the number of prisoners in the penitentiaries, (in Maine, the state prison), the number of inmates in reformatories, and the number of lunatics in the asylums of the State of Maine and in the provinces of the Dominion mentioned:—

* In Nova Scotia there appears to be an increasing number of harmless insane cared for in the county and city institutions. The figures here given are taken from the reports of the Provincial Hospital for the Insane.

In the report for 1889, it is stated: "During the past year, Cape Breton and Inverness counties have made provision for their chronic insane, and, according to chap. 44 of Acts of 1886, they have removed 23 men and 16 women."

It has not been found practicable to separate the insane from other inmates in these last-mentioned institutions, which partake of the character of almshouses.

1892.....	278	0·130	569	0·378	1892	162	0·244	State Report.

In the province of Quebec, juvenile offenders are sent to reform schools, which are under the charge of one or other of the religious institutions, the Government of the province paying a certain sum *per capita* for their maintenance. The Inspector of Reformatories for the province, in response to inquiries as to the causes leading to Quebec showing such a much larger number of inmates in reformatories than Ontario, stated that the latter has fewer establishments of the kind than Quebec, and that it is probable that the juvenile offenders are sent in a larger proportion to other institutions.

In the State of Maine capital punishment was abolished some years ago, there are many prisoners in the state prison who have been convicted of the crime of murder.

The relationship which intemperance bears to lunacy is a matter about which specialists differ widely. Opinions on the subject must be considered as almost wholly speculative.

There has been in Canada a large increase in the number of inmates in the insane asylum. This is probably owing, in some degree, to the improved methods of treatment adopted, to the increased accommodation provided, and the extra care and attention bestowed in these institutions upon those so afflicted, creating an increasing confidence on the part of the public in their management. The practice of communities undoubtedly differs, and a mere comparison of the number of the inmates in asylums is not a safe guide to the prevalence, or the reverse, of insanity in different countries or states. The harmless insane are cared for privately in some

communities to a larger extent than in others, and in such cases, of course, they do not add to the population of the asylums.

Mr. George Johnson, Government Statistician, in bulletin No. 16, 1893, of the Census of Canada, draws attention to the increase of the insane. He shows that the increase in the number of insane in Ontario, Quebec, Nova Scotia and New Brunswick, was at the rate of 34.4 per cent between 1871 and 1891, whilst during the same period the population increased only 25.5 per cent. From these figures it appears that during twenty years insanity in Canada increased more rapidly, proportionately, than its population. In 1891 there were 2,900 insane in every million, and in 1871 there were 2,703 in every million of the population of the four original provinces of the Dominion. These figures refer to the total insane in the four provinces, including those in asylums, as well as those cared for elsewhere.

The Commissioners have been unable to obtain statistics of the total insane in the United States, or even in a single state. From a statement showing the number of inmates in the Maine Insane Hospital (Appendix, No. 126), it appears that the number has steadily increased; and the trustees, in their report for 1892, intimate that the present accommodation for patients is exhausted. No doubt a large number of harmless lunatics are cared for in private families, and the number of inmates in the state hospital cannot be accepted as representing the total number of the insane in the state.

The poor are cared for in Canada mainly by the various charitable societies and in the religious houses of the Roman Catholic community. It has not been found practicable to compare pauperism in the State of Maine with pauperism in Canada. The following figures, taken from the United States census returns, show, however, the position which Maine occupies in this respect in the group of the North Atlantic division of states:—

RETURN of Paupers in almshouses in the undermentioned states for the years 1890, and 1880, with population of states and the ratio of per thousand of the population.

State.	1890.			1880.		
	Population.	Paupers.	Ratio per 1,000 of Population.	Population.	Paupers.	Ratio per 1,000 of Population.

A large number of divorces are applied for and granted in the State of Maine. According to statistics collected under the supervision of Hon. Carrol Wright, and issued from the Labour Bureau at Washington, there were, between the years 1867 and 1886, 8,412 divorces granted in the state, and of these 117 were granted on the direct ground of intemperance.

Liquor Traffic—Commissioners' Report.

The following figures show the number of cases in which intemperance formed one of the charges preferred:—

Adultery, cruelty and habitual intoxication.....	2
do and habitual intoxication.....	10
do habitual intoxication and neglect to provide.....	1
Convictions for felony and habitual intoxication.....	2
Cruel and abusive treatment and habitual intoxication.....	134
do do habitual intoxication and neglect to provide.....	13
Cruelty and habitual intoxication.....	311
do do and neglect to provide.....	21
Desertion and habitual intoxication.....	28
do habitual intoxication and neglect to provide.....	5
do do and refusal to cohabit.....	1
Habitual intoxication.....	117
do and neglect to provide.....	315
Total.....	960

There are no general statistics of a later date published, but a return prepared by the clerk of the court supplies the following information in regard to divorces decreed by the Supreme Court of Maine, in the county of Penobscot, from 1881 to 1893:—

1881.....	79	15
1882.....	65	9
1883.....	57	11
1884.....	31	3
1885.....	53	5
1886.....	58	10
1887.....	73	15
1888.....	69	8
1889.....	82	18
1890.....	59	9
1891.....	69	15
1892.....	48	8
1893.....	41	9
Total.....	783	135

For gross and confirmed habits of intoxication, or for intoxication, one in six, (1 in 6).

Mr. Benjamin C. Stone, Clerk of the Supreme Judicial Court, Portland, stated, in reply to a question as to divorces granted in the court, that in 1891, at the three terms of the court, there were 68 divorces; in 1892, 48 divorces, and in the two first terms of the court in 1893, 36 divorces, granted; that out of the 68 divorces granted in 1891, 17 were on account of gross and confirmed habits of intoxication; of the 48 divorces granted in 1892, 12 were for gross and confirmed habits of drunkenness, and of those granted at the first two terms of the court, in 1893, 2 were for gross and confirmed habits of intoxication. He further stated that the population of the district was in 1890, 91,000.

In the evidence of the Hon. C. W. Jones, Chairman of the Board of Inspectors of State Prisons, page 564, Vol. V, statistics of the number of certain classes of criminals in the prisons of the State in the year 1886 are given. Mr. Jones was kind enough to promise to supply the comparative figures for the year 1851. (Q. 6810b). In a letter dated 4th November, 1893, that gentleman wrote,—“I find by

the records that there were in prison on the 30th April 1851, and on November 30th, 1886, convicts committed for the crimes mentioned as follows:—

	1851.	1886.
Murder.....	4	30
Manslaughter.....	1	5
Arson.....	4	4
Robbery.....	0	1
Piracy.....	0	2
Other high crimes	5	13
	<hr/>	<hr/>
	14	55

“The repeal of the death penalty in 1878 and former repeals which had been in force a part of the time prior to that date, accounts in part for the large number of murderers in custody in 1886. The number of convicts in prison in 1851 was about half the number in 1886, while the population was not enough smaller in 1851 than in 1886 to make a great difference in the percentages.”

Leaving out the murderers in each period, the number would be,—1851, 10, 1886, 25.

In the census returns of the United States, the number of those charged with homicide remaining in the prisons of the State of Maine, were, in 1880, 29, in 1890, 42. The increase was 42·22 per cent; the increase in population was 1·87 per cent. In the same returns the population of the State Penitentiary was given as being in 1880, 213, in 1890, 170, a decrease of 20·18 per cent.

THE SAVINGS OF THE PEOPLE.

The amount deposited in the savings banks are frequently referred to in connection with the liquor legislation of this State as evidence of its beneficial effects. It is evident that the occupations of the people must largely influence the amount of their savings, and it therefore becomes difficult to make comparisons which are of much value.

The savings banks throughout the New England States are simply associations. They are managed by trustees for the benefit of the depositors. There is no shareholders' capital, as is the case in Canada, where, outside of the Government Savings Banks, such institutions are simply joint stock companies allowing to depositors a fixed rate of interest, and reserving the profits made beyond that rate for the payment of dividends to their shareholders. A comparison between the depositors and deposits in such institutions and those in the State of Maine, therefore, would be misleading, even were it otherwise of any value.

The following figures showing the number of depositors, the total amount of deposits, the average to the credit of each depositor, and the population of sundry States of the Union are taken from a paper prepared by Mr. George Johnson from the returns of the Comptroller of the United States Treasury.

Liquor Traffic—Commissioners' Report.

STATEMENT showing number of depositors in savings banks, the amount and average of each deposit, and the proportion of depositors to population in the following states :—

1891-92.

State.	Population, 1890.	Number of Depositors.	Proportion to Population.	Amount of Deposits.	Average to each Depositor.
				\$	\$ cts.
Maine	661,086	146,668	22 18	50,278,452	342 80

California	1,208,130	167,667	13 87	127,312,088	759 39

The Maine savings banks accept deposits up to \$2,000, from any one depositor, and to a larger extent from widows and orphans and in the case of certain trust funds.

WHAT PROHIBITION IN MAINE IMPLIES.

A very general misapprehension exists as to what prohibition in Maine really implies. This is due no doubt due to some extent to the very general terms which the advocates of the system have used when urging its claims to public support. The popular conception outside the state is, that the law prohibits and makes illegal the use of intoxicants as a beverage. The fact is, the law simply aims at preventing trading in any form in the manufacture and sale of intoxicants within the state; but every citizen of Maine has the right to purchase outside and bring into the state whatever he may desire in the shape of intoxicants for his personal use or the use of his family.

On this question of importation for personal use, the following statements were made by General Neal Dow :—

“You are credited with being the father of the Maine law, and you have no doubt, considered it more than any other person in your state who has made it a study. Do you find that a law permitting liquor to come in as it does for private consumption tends to prevent your getting the full benefit you wish, in other words, if public opinion would permit it, would you stop importation for private consumption? I would want to think over that a little. We do not want any more than we can help to interfere with the private habits of people, except so far as they interfere with the public good. We think we are warranted by law in interfering in every way when the public good is endangered. I was talking once to John Stuart Mill, who asked me if I thought we should not let people drink as much as they liked, provided they do not interfere with others. Then he said ‘you should have places where they can get it.’ I said I disagreed with him, because the places where they get the drink inflict more injury on people than all other sources of mischief combined. If they can get their liquor in any way consistent with the public good, though we do not advise them to use it, still we would not object.” (Q. 26122.)

Hon. Judge Rounds, of Calais, who also appeared before the Commission, said upon the subject :—

“ Is your law such that if a citizen chooses to go to Boston and buy a cask of wine or a box of bottles of ale for home consumption, he can do so? Our law does not touch the personal use of intoxicating liquors. A man can go to Boston and purchase a case of liquor and bring it to Calais and take it to his home and use it at his own table. There is nothing in our law to interfere with it.

“ Practically, has it not this effect, that the man who is wealthy and can afford to buy wine in Montreal or Boston, is placed in a position of advantage over the man of smaller means who cannot do so? He has the advantage that wealth always gives. I think that practically the wealthy do not get as much liquor as the poor. My idea is that the wealthy in this State, as a rule, do not use it; it is more largely used by men of small means. (Q. 10508-10510.)

The advocates of the prohibitory system claim as one of its greatest advantages, that it makes the liquor traffic disreputable, drives it into holes and corners and out of the way places, where only those who have lost their self-respect will go. This is a result which some persons, on the other hand, consider as otherwise than advantageous. They contend that the system increases the consumption of liquor in the homes of the working classes, and that the young are in this way brought in contact with conditions, and of necessity made familiar with scenes and incidents, whose influences must be hurtful.

A commission recently appointed by the Governor of Massachusetts to investigate the Gothenburg and Norwegian systems of licensing the sale of intoxicating liquors, engaged Mr. John Koren to visit Sweden and Norway and report, after personal investigation. That gentleman's report has been printed this year (1894) and circulated as a state paper. In it Mr. Koren says :—

“ It may be mentioned that one of the first acts of the company was to remove the bars from the dingy back streets and courts, and locate them on much travelled thoroughfares, where they may be, as it were, under the surveillance of the public. Complaint is made that this is placing temptation directly in the way of many. But the policy of the company is more than justified by the fact that this turning broad daylight on the saloons has resulted in stamping out the usual loafing outside such places, as well as in exterminating, to a large extent, the confirmed toper and the vicious class of drinkers.”

A number of gentlemen who gave evidence before the Commission were in favour of local option and high license, and others, who have always supported the present prohibitory law, expressed themselves as somewhat in doubt as to its advantages over the last mentioned system. Under local option and license the greater portion of the rural communities would, it is highly probable, continue to prohibit the traffic, whilst the cities and larger towns would license it.

His Worship, Mayor Baxter, of Portland, a supporter of the prohibitory law was asked :—

“ Have you given any study at any time to the question of the superiority of the one system over the other, that is, the superiority of the license system over the prohibitory system, or *vice versa*?” In reply he stated, “ I have paid considerable attention to it, and I have heard the matter discussed a good deal. I must say that I am a little in doubt about the the matter. If there could be a licensing system which could be controlled properly, it seems to me that it would be better than our system here.” (Q. 4567b).

Again :—

“ If the liquor agency is to be made a source of revenue for the municipality, what is the difference between licensing that and licensing other persons to sell?— That is the point, of course, and that is why, in mentioning this matter, I stated that I was somewhat in doubt as to what was the best method. I do not know if there could be a license system perfectly controlled, but if we had such a license system, I have no doubt but that it would do as well as our present system. (Q. 4569b).

Liquor Traffic—Commissioners' Report.

Alderman George Tolman, of Portland, chairman of the committee of the City Council controlling the liquor agency, when asked if he would prefer a license law, replied, "I believe that high license and local option would work much better in every large town and every city in the state. (Q. 5057b).

Mr. George L. Swett, ex-city marshal, of Portland, when asked as a "public officer and one who has been chief of police and been connected with the enforcement of the municipal ordinances and the preservation of the law and order in this city (Portland) have you come to any conclusion as to whether it is possible to enforce the prohibitory law in this city. My opinion is that a high license or local option law would be in the interest of the better morals of society. (Q. 5382b).

Mr. Franklyn R. Barrett, President of the Portland Savings Bank, the largest bank in the state, said that the requirements of the law might have something to do with the amount of the deposits, for instance the taxes paid to the state might be higher in one state than another, and the latitude given for investments greater. When asked if the prohibitory law had a beneficial effect or otherwise on matters in the state at large, he said, "I have always been inclined to doubt it, but yet I do not know that I can justify my doubt. I have no absolute knowledge of my own; but my impression is that any other law would do just as well as the prohibitory law. Of course the prohibitory law is easy to enforce in sparsely settled communities, and it has some effect there, but in my opinion a rigid license law would probably do the same thing. (Q. 5859b).

Mr. Benjamin C. Stone, Clerk of the Supreme Judicial Court, stated:—

"It is a question in my mind as to whether a prohibitory law is better than high license law. I think that prohibitory or license law is better than no law; that is to say, I would not be in favour of unrestricted sale of intoxicants in the state. I think that the prohibitory law has had a beneficial effect, and that it is far above an unrestricted sale. But it is a question in my mind whether or not high license would have done fully as well. It is a matter which I have considered quite frankly, though I am free to acknowledge that I have always been a prohibitionist, and I am in favour of restricting the sale of intoxicants, but, however, since I have been connected with the courts it is a question to my mind whether the prohibitory law has worked as well as a high license law might have done. (Q. 5974b).

Hon. George P. Westcott, President of the Portland and Rochester Railway, a member of the State Senate, and ex-Mayor of Portland, said:—

"In looking at the operation of the law, and reviewing its operation from 1866 to the present time, and especially from 1869 up to now, I see but little change. While the law has grown stronger, I do not see that the effect of it has been to reduce the number of arrests or the amount of drunkenness in this city (Portland). I do not see that there has been any decrease in drunkenness which would not have occurred to the same extent through the enlightenment and the general habits of the people. I believe that the same result would have been produced under a license system, and that there would have been less drinking now than formerly. (Q. 6082b).

"You mean that there is more liquor in private houses in the city of Portland than there used to be?—Yes, more than there was when liquor was sold freely, or than there would be if there were respectable places in the city where liquor could be purchased. (Q. 6103b).

"If a vote were taken in the city of Portland for local option, I believe that local option would carry, and that the sale of rum would diminish.

"When you say 'rum,' you mean, of course, liquors of all kinds?—Yes." (Q. 6145b-6146b).

Writing to the Chairman of the Commission, Mr. Westcott said:—

"The policy of the state and the majority of voters in the state, both Republicans and Democrats, are in favour of the prohibitory law remaining on the statute book. It is true, however, that they do so with this qualification, that they want prohibition in the country where public sentiment of both political parties will sustain prohibition in the country-towns, but they want free rum practically in the

cities; and I believe that a majority of both parties in the cities, freely expressed, would be for local option or, rather, high license. * * * In Portland the law has been fairly well enforced for years, while in Bangor the contrary is true. They have had for years in Bangor, where public sentiment is in favour of the prohibitory law, but against its enforcement, practically free rum."

Mr. L. T. Carleton, County Attorney for Kennebec County, said:—

"This drink question is a great question. I suppose that liquor will always be drunk so long as liquor is made, and what the outcome is going to be I do not know. I think the prohibitory law is a success in some directions, and it is a failure in other directions. I think, however, it is ahead of any we have ever had in this line. I believe it is ahead of the license law. * * * Whether the high license law and local option would be better or not I do not know. If we had, however, a town of this size under local option, I believe we would have no rum shops.

"Do I understand you to say that you have not made up your mind as to whether high license or local option would produce better results than prohibition? I cannot say that I have made up my mind as to that." (Q. 8475b-8477b.)

"Do you think that a vote to repeal the prohibitory law would have any chance in this state? If this matter would be submitted again to the people in the State of Maine, under an Australian ballot system, as we have it now, I am much afraid that there would be no 47,000 majority in favour of prohibition, as there was before. I do not say that the vote would be against prohibition, but it would be very close in my judgment.

"What effect would the Australian ballot system have? Well, of course everybody knows that any number of people desire to be considered as temperance people and teetotalers, and yet they take a glass of liquor once in a while, but when they come to vote openly they will vote for temperance. A great many do not vote on this question as they believe, but as they practise." (Q. 8491b-8492b.)

Mr. Charles B. Chick, city clerk of Augusta, when questioned in reference to his opinion regarding the working of a license law as compared with prohibition, said:—"I have always been a high license man. I think it is the wisest system. I think it is better than this prohibitory law."

"Why? Because I think the condition of things here is degrading and demoralizing. It puts in contempt, not only our prohibitory law, but all our laws." (Q. 6672b-6673b.)

"As a matter of fact, as a citizen of Maine, you would favour a high license law? Yes, if I had a chance to vote for it, I would vote for it, and advocate its adoption.

"Would it be a political question? Not with me. In my opinion, I think the majority of the people would vote for high license, as we have now the Australian ballot system and not open voting." (Q. 6689b-6690b.)

Mr. C. W. Jones, chairman of the State Board of Inspectors of Prisons and Jails, said:—"I am most heartily in favour of the license system, although I voted for putting prohibition in the constitution." (Q. 6793b.)

"For what reason would you prefer a licensing system to the prohibitory law? I think a license law would make the trade more honourable, for one thing. Now a large part of the rum is sold in low dives and by pocket peddlers. They pay no United States license, and they sell to the lowest class of the people, just the class of people who commit crime when under the influence of liquor." (Q. 6812b.)

"The state derives more revenue from it (high license); and if you put the liquor sellers in jail under prohibition, it is more expensive for maintaining them. I believe that if you had license system you would drive out of the business these low dives which sell cheap liquor. * * * The people who hold the license would be as much interested as any one in driving them out." (Q. 6821b.)

A. D. Andrews, Esq., Judge of the Municipal Court of Augusta, on being asked if the prohibitory law made the traffic in liquor disreputable, replied:—

"I should say so.

"Is that a benefit for the community? That is a question to be argued either way. I do not think any respectable man in the State of Maine to-day would want

Liquor Traffic—Commissioners' Report.

to be known as a liquor seller. I should sadly deplore to see a license law. Even with all the hypocrites and perjurers that the liquor law has caused, I should be sad to see a liquor license here." (Q. 6889b-6890b.)

Mr. E. Norton, High Sheriff of the County of Kennebec, after remarking that the prohibitory law was not an entire success, continued, "I think that better results could be obtained under the license law. I think it would be better if we had a high license law. (Q. 6949b.)

"As a citizen of the city, born here, are you satisfied with this law? No, I think a license law would be better." (Q. 6985b.)

Mr. A. S. Bangs, of Augusta, lumber merchant, an ex-Grand Chief Templar for the State of Maine, said:—

"I have had an opportunity of seeing the working of the prohibitory law in all parts of the state, and to compare it with the license system. * * * Whether it (the prohibitory law) was the wisest law that could be enacted, or whether the subsequent amendments have been the wisest is of course a question which various people differ upon. * * * Of course there are those who believe that a high license law would be preferable to a prohibitory law, and I know that they are honest in their opinions. I used to think so myself. I am free to state that before my connection with the temperance organization, I believed in high license, and sought to strengthen myself in regard to it by visiting those places where high license prevailed. But you find the same difficulties in high license cities that you find here under the prohibitory law. High license does not stop people from selling liquor who have no license." (Q. 7127b.)

Thos. W. Vose, Esq., Judge of the Municipal Court of Bangor, said, on his examination before the Commission:—

"I would suggest nothing to take the place of prohibition. There is license and local option, but prohibition involves both local option and license to this extent: you may say we have license because we do not enforce the law, and we have local option because we do not enforce the law. Public sentiment is what controls all three.

"I am inclined to think the people in Bangor would favour local option. It is only a question of whether we would have more rum sold or whether we should have it in our power to say we would stop it at any moment or let it be controlled.

"If local option were carried out in accordance with the sentiment of the people, what do you say as to that compared with the present state of things? I am for prohibition." (Q. 7343b-7346b.)

Mr. J. Norman Towle, of Bangor, wholesale grain merchant, was asked—

"Is it your opinion that, if a vote were taken on the question of prohibition, the people of Bangor would vote for some other law than the prohibitory law? Yes, I think that the people would vote for high license in their city." (Q. 7483b.)

Mr. T. O. Beal, Mayor of Bangor, said in his examination—

"Do you believe that the prohibitory law has had the effect of promoting total abstinence? I do not think it has. I think it has been a signal failure in that respect. (Q. 7580b.)

"Were you originally in favour of the prohibitory law? I was young when the law was first started, so that I cannot say that I know much about it * * * My experience of the operation of the law was not calculated to make me a radical temperance man. I may say, however, to you that I do not take a drink myself, and that I hate to see anyone else taking a drink * * * I doubt if the principle of the law is solid." (Q. 7610b.)

Mr. Chas. H. Bailey, County Attorney for Penobscot County, Bangor, said:—

"The object of the prohibitory law was, if possible, to restrain the sale of intoxicating liquors, in making certain limitations under which it could be sold * * * It has not accomplished that purpose manifestly here * * * I think that the result of the law has been to cause a great deal of good. I think, however, the moral effect of such a law is good. I think that amongst our rural population it is work-

ing well. In our cities and large centres of population, the prohibitory law does not work so well.

"Have you given any thought to a local option law? The matter has received some consideration from me, but I have never thought that that would very much restrict the sale of liquor. There are a great many people who think, however, that local option would be nearer the correct idea than the state of affairs we have." (Q. 7702b-7703b).

Joseph S. Smith, Esq., President of the Manufacturing and Bangor Extension Leather Company, said:—

"Has the (prohibitory) law, taking the city all over, done any good? I do not think it has. I believe in high license.

"Do you mean to say that you prefer high license to prohibition, and always have done so? I always have preferred high license and I prefer it to-day, because I think it will control better the sale of liquor. I would have a law that would limit the number of licenses and control the sale." (Q. 7834b-7835b).

Mr. William Dobson, of Pittsfield, woollen manufacturer and mill owner, in his evidence before the Commission, said:—

"If we had a license law with local option, I should vote against it. I would have no license so far as Pittsfield (population about 2,500) is concerned. If I lived in Boston, I should vote for licenses. I think there are places where prohibition can be enforced pretty well, as it is in this town, because public opinion sustains it, where in other places it does not sustain it.

"You think you would prefer no license? If we had a license law in the State of Maine, with local option, I would vote against it, and against having license in this place.

"Are you in favour of license and local option being the law? I am not prepared to say that I am. I feel more inclined that way, however, than I did formerly. There are some things that are not right in the prohibitory law * * There are a great many things that I do not like under prohibition, and my position in that respect is a little different from a good many others here. (Q. 8268b-8270b).

"Do you believe that a license system, like the one they have in Boston, would work better in Bangor than the present system? I do firmly believe so. I do not want to be understood as saying that I believe in local option absolutely, but I am inclined to that belief." (Q. 8281b).

Hon. William H. Newell, ex-Mayor of Lewiston, and ex-County Attorney, said:—

"Would you not give country places the right to decide whether they should or should not have a license in their midst. I do not think that I would have any licensed places in the country.

"You would give them local option with high license? Yes. (Q. 8925b-8026b).

"Do you believe that the prohibitory law is not promoting total abstinence? No, I do not believe that any well informed man who meets men and who has lived here, would say that it did." (Q. 8940b).

Hon. A. D. Cornish, Lewiston, Judge of the Municipal Court of Lewiston, when questioned as to what effect the prohibitory law had upon the sobriety of the people in Lewiston, replied that he had no doubt that it had greatly lessened the number of cases of intoxication, and the consumption of liquor. (Q. 8989b-8990b).

Hon. Mr. Staples, Mayor of Biddeford, was examined before the Commission. He was asked,—

"What system do you think would work better than the present prohibitory law? I think that a license law with local option would be the best law.

"Do you know anything of how the license law with local option is working in Massachusetts? Well, most of the cities in Massachusetts have license. If a city in Massachusetts votes for no licenses this spring, they are sure to change it next spring, and have licenses." (Q. 9097b, 9099b).

Liquor Traffic—Commissioners' Report.

"Taking the state as a whole, do you think the law has done good or harm?—I think the law has been a benefit in the sparsely settled parts of the state, that is in the country districts.

"If you had local option, would you have license in Biddeford?—Yes, sir; some would and some would not vote for license. I have no doubt but that Biddeford would have license. (Q. 9108b-9110b).

Hon. Judge Cram, Judge of the Municipal Court, Biddeford, said :—

"Our present prohibitory law will drive any man out of the business if they enforce it against him. (Q. 9213). From my knowledge of the prohibitory law, I believe it has done good in the country towns. (Q. 9214). It is easier to enforce in country places. (Q. 9215). I do not think it has worked satisfactorily in the large cities of the state. (Q. 9229).

The evidence collected in the State of Maine is too extensive to admit of a summary being made of it here, and will require to be read by those who desire to fully understand the working of the prohibitory law in that state. On all hands it seems to be admitted that prohibition has come to be considered as a question to be handled by the two great political parties in the manner best calculated to procure them votes. The Democrats openly condemn the law, the Republicans openly commend it; but they are not unfrequently charged with neglecting, when in office, to enforce its provisions. They are said to thus secure in many instances the votes of the illicit dealers in liquor, who object to their policy, but approve their practice. That the earnest and active prohibitionists are dissatisfied with the conduct of both parties may be assumed from the fact that they now regularly put in the field candidates of their own for some of the public offices. The prohibitionist candidate for the position of governor of the state polled in 1890, 2,981 votes, and in 1892, 3,732 votes. The successful candidate polled in 1890, 64,259, and in 1892, 67,609 votes. These figures would seem to indicate that the electors attach more importance to the success of their political candidates than to any more active and energetic enforcement of the prohibitory liquor law.

There are many religious denominations in the state, and most of the churches probably endorse and support the prohibitory system. The evidence of several clergymen was taken, and the Bishops of the Roman Catholic and Episcopalian churches of the state both expressed their views before the commission.

President Hyde, of Bowdoin College, Brunswick, Maine, writing in the *Forum* in June, 1892, on "Impending Paganism in New England," says :—

"The word *paganus*, pagan, originally meant simply countryman or villager. It acquired its present meaning in consequence of the fact that as Christianity entered the Roman Empire through the cities, the rural regions were the last to be converted. In New England, on the contrary, Christianity came first to the town. Yet New England to-day is confronted with the danger that the country village will be the first to lapse from vital Christianity, that here the English word countryman will repeat the history of its Latin predecessor, and that rusticity will again become synonymous with godlessness and superstition.

"Statistics recently gathered by the Maine 'Bible Society' show that Waldo County, Maine, has 6,987 families divided in religious preference as follows :—Adventist, 239; Baptist, 713; Christian, 159; Congregationalist, 691; Episcopal, 24; Free Will Baptist, 734; Methodist, 1,818; Roman Catholic, 136; Unitarian, 126; Universalist, 619; other denominations, 541; without preference, 1,046; not recorded, 141. Of the total 4,850 report themselves as not attending church. Oxford County contains 7,288 families, of which 4,577 report that they attend no church. The combined statistics of 15 counties show that of 133,445 families, 67,842 are not attendants upon any church."

These statistics go to show that the fact of the prohibition of the liquor traffic being a part of the constitution of Maine has not had the effect of strengthening the religious life of families in the State, and that the influence of religion is diminishing. This diminution must affect all lines of temperance work, and in this State give point to the assertion frequently made that religious and other efforts in behalf of

voluntary temperance have weakened contemporaneously with the attempt to compel the people by legislative enactments to become total abstainers.

The attention of the undersigned has been called to the inaugural addresses of the governors of the state to the Legislature, since 1880, which refer to the prohibitory law.

In Appendix, No. 169 will be found copies of the portions of these addresses which relate to that law. They must, of course, be read as the utterances of public men engaged in party politics in the state. Statistics or other evidence in support of the statements made in regard to the beneficial effects of the law are not supplied, and it is impossible to ignore the fact that there are many other public men taking part in the affairs of the state whose opinions do not agree with those expressed in these addresses.

The President of the Maine Pharmaceutical Association, in an address delivered before the members of that body in October, 1891, said:—

“In the first place the old Washingtonian temperance revival did more for temperance than any individual or law ever could. It was a movement founded on self abnegation and co-operation, without the baneful influence of sumptuary laws. Under it bar-rooms and grog shops were made dry in Maine, through lack of customers, and would never have appeared again had wise legislation regulating the sale of intoxicants been adopted. But prohibition came; with it the saloon; and though its author is credited with saying to the Legislature that first enacted it: ‘give me this law and in thirty days I will suppress the rum traffic in the city of Portland,’ the fact remains, that in nearly half a century which has since elapsed, at no time has the rum traffic been suppressed in that city, except at brief spasmodic spurts, when people were excited and misled by inflammatory appeals to believe for a time, that prohibition and temperance were synonymous terms. It is unnecessary to state that such ‘enforcements’ were, as they always will be, ghastly caricatures on voluntary temperance, and at no time has the main object, the lessening the consumption of intoxicants, been achieved; and as soon as the pressure was off the conditions were worse than before.”

This gentleman in support of his views that persuasion is more effective than prohibition in dealing with intemperance, referred to the opinions of Mr. Francis Murphy, Mr. John B. Gough, and Dr. Dio Lewis.

When it is claimed that under prohibition the people of Maine have become more temperate and that the open sale of liquor in country districts (called towns in Maine) has been discontinued, it has to be borne in mind that the people in many other places where prohibition does not exist, have also become more temperate in the use of intoxicants, and that under the law in the State of Maine, open sale means open defiance of the law, but that the absence of open sale by no means implies that sale is not carried on, or that liquor is not supplied to those who desire to get it. As a matter of fact, the evidence taken by this Commission proves the reverse to be the case.

The addresses show that very exceptional measures have been taken to give effect to the law, such as that of superseding the local officials by officers appointed by the state, and the issue, in one instance, by the Governor of the state, of exceptional instructions to public functionaries. They form a striking commentary upon the statements frequently made that it is no more difficult to enforce a prohibitory law than it is to enforce the law against murder and other serious criminal offences.

Notwithstanding the reference in every inaugural address for years past, and the urgent appeals and exceptional measures taken to enforce the law, that it is not efficiently enforced is admitted in almost every case in these state papers, and we have the further evidence of the most distinguished, and perhaps the most able, advocate of the system, General Neal Dow, to prove. That gentleman gave the following evidence:—

“You say that you have gone to the State Legislature and tried to get amendments to the prohibitory law, and that you did not succeed in some cases. If the Legislature of Maine was anxious to make the law effective, would they not have given you the amendments you sought? Yes.

Liquor Traffic—Commissioners' Report.

"Did they reflect public opinion in withholding these amendments? They did not reflect the public opinion of Maine.

"The Republican party has been dominant in this State for many years. Did the Republican legislators reflect public opinion by pursuing this course and defeating your efforts to make the law efficient? Yes.

"Does the Republican sentiment in the legislature play with the law, so as to make it a political foot ball? They do.

"How about the Democrats. Are they any warmer friends of the prohibitory law than the Republicans? No, they are utterly opposed to the law and always have been.

"The action of one party, the Republicans, is to use the prohibitory law as a political lever? Yes.

"And that of the other party, the Democrats, is open opposition to the law? Yes.

"Is it possible that there can be a fair enforcement of the law under such a condition of things? No.

"If the prohibition sentiment is predominant in the State of Maine, what steps are the people taking to put an end to this condition of things? We are trying to show the people of Maine that if they are in favour of prohibition they must show it by their votes and not by what they say. On the platform, I very often refer to the action of the Republican and Democratic parties in this respect. I say that the Democrats like whisky and go for whisky honestly and openly, and the Republican party do not believe in whisky, but they go for whisky all the same. That is the only difference between the two.

"Then there is nothing to be hoped for in the way of a rigid enforcement of the prohibitory law from either of the recognized political parties in the State of Maine? No.

"And the law will not be rigidly enforced until there is some new party returned to power, which will make prohibition the principal plank in their platform? That is what we are after.

"We may attribute the laxity of enforcement throughout the different parts of the State to a want of sympathy among the politicians? Yes; the state of things existing here is really demoralizing. Although the law of the State has been on the statute books for forty-two years, and has been reaffirmed by a majority of 47,075 of our people, it is not enforced in some places. I am sorry to see some of our judges ignoring the law. That is very demoralizing and it tends to lead the whole people of the state to illegality.

"Is it not possible that the people of State, a great majority of whom are so strongly in favour of prohibition, as you say, would throw off party allegiance for one or two years, so as to secure the amendments to the prohibitory law which are necessary? It is a wonder they do not. If they did that, they would soon abolish rum." (Q. 5801-5813.)

In the Governor's address for 1885, it was stated that "The present law may therefore be considered sufficient to cover all violations of its provisions that can possibly occur, and its weakness seems to be in its non-enforcement by those officers whose duty it is to execute the laws of the State." Notwithstanding this, we find that in 1887 the Governor states that "the more zealous friends of the temperance cause think that an increase of the penalties, especially for the first offence of liquor selling, would cure the admitted evil of imperfect enforcement," and it may be said that in every session of the State Legislature since 1887, amendments to the law have been passed.

Judge Charles R. Rounds of the Municipal Court of Calais, Me., who gave evidence before the Commission at St. Stephen, N.S., speaking of the disadvantage of increased penalties, said: "I think it (the Maine law) has not been so thoroughly enforced under imprisonment for the first offence as it was before. I talked the matter over with two of the judges of the Supreme Court. They told me they found difficulty with juries in regard to obtaining convictions for the first offences, the juries now finding excuses to let off the parties which they did not before. * * *

It is said to be because there is now imprisonment for the first offence, and the juries thought it too severe. To the common mind that penalty is too severe for the first offence. Judge Libby, one of the judges of the Supreme Bench, said he found considerable difficulty, and that whereas he could get convictions without any difficulty formerly, he now found that juries hesitated about rendering them in cases of first offence." (Vol. 1, p. 535, Q. 10496-10497.)

On this question of increased penalties Governor Joseph R. Bodwell, in his address to the Legislature, January, 1887, said: "Some of the more zealous friends of the temperance cause think that an increase of the penalties, especially for the first offence of liquor selling, would cure the admitted evil of imperfect enforcement, but the more prudent, and I think by far the larger number, are of the opinion that an increase of the penalty would do harm rather than good. What is actually needed at the points named is a sound public opinion to urge and uphold the enforcement of the law. Where that is wanting the case is made difficult with the prohibitory law, as indeed it always is with every form of law. Perhaps an increase of penalty would, in the place referred to, enhance rather than diminish, the evils of indifference and of hostility."

In Appendix, No. 76, will be found letters and papers forwarded by order of His Excellency the Governor of the State of Maine for the use of this Commission.

NEW HAMPSHIRE.

The law in this state is somewhat similar to the prohibitory laws of Maine and Vermont. It has been in operation since 1855. Brewing and distilling are not prohibited.

Secretary of State Stevens, who replied to the letter addressed to the Governor of the State, says:—

"In towns where public opinion does not encourage it the law is not uniformly enforced, and sales are made with more or less freedom; but in a majority of the towns of this state the law is enforced, and no open, if any, sales are made. Our statute generally restrains and prevents a general sale, and, as stated, in many places entirely prohibits the sale."

By the Act entitled "An Act for the Sale of Spirituous or Intoxicating Liquors," provision is made for legal sales. The Governor appoints a person to sell liquor to town agents, who are chosen by the selectmen of towns. They sell spirituous liquors to be used "in the arts, and for medicinal, mechanical and chemical purposes."

It is provided that the act shall not be construed "to prohibit the sale, keeping for sale of domestic wine, nor the sale of any foreign spirituous liquors imported under the authority of the laws of the United States by the importer thereof, in the original casks or packages in which they are imported." (Section 22.)

"The selectmen shall prosecute, at the expense of the town, every person guilty of a violation of any previous section of this chapter, of which they can obtain reasonable proof; and if any selectman shall neglect his duty as specified in this section, he shall be fined not more two hundred dollars. But this provision shall not be construed to prevent any person from making complaint, and instituting and carrying on prosecutions for such offences, and such complainant, whether a town or city by its officers or an individual, shall be entitled to one-half of every fine collected through such prosecution." (Section 23.)

"If any person charged with the offence of drunkenness shall, before conviction thereof, disclose the name of the person from whom he obtained liquor whereby he became intoxicated, and whenever required shall testify fully concerning the same, he shall thereupon be discharged." (Section 26.)

In 1892 there appear to have been five breweries in the state and two distilleries.

Liquor Traffic—Commissioners' Report.

The following is a summary of the number of special tax payers in the state for the year ending 30th June, 1892:—

Retail dealers in malt liquor	160
Wholesale dealers in malt liquor.....	68
Retail dealers in spirits.....	1,669
Wholesale dealers in spirits.....	9
Rectifiers	1
Brewers	5
Total	1,912

The population in 1890 was 376,530; assuming it to be in 1892, 380,000, there would be one special tax payer for every 198 of the population.

Appendices 141 to 146, inclusive, give particulars of arrests for offences of all kinds and arrests for drunkenness in Portsmouth, Rochester, Manchester, Keene, Concord and Nashua. The ratios of these arrests are all comparatively high, and do not compare favourably with similar places elsewhere. In most instances they are largely in excess of the ratios of arrests in towns and cities in Canada, where the liquor traffic is carried on under license. In appendix number 136 comparative figures for a large number of towns and cities in the United States and Canada will be found.

The United States census returns supply the following information. No statistics of commitments to gaols, or convictions for crime, are available:—

	1890.	Per 1,000 of population.	1880.	Per 1,000 of population.
Population.....	376,530		346,991	
Convicts in penitentiaries.....	116	0·31	154	0·44
Prisoners in county gaols.....	113	0·30	57	0·16
Paupers in almshouses.....	1,143	3·04	1,198	3·45
	1889.		1881.	
Inmates of insane asylums.....	339	0·97	285	0·81
	1890.		1880.	
Inmates of juvenile reformatories.....	102	0·27	111	0·32

NORTH DAKOTA.

Letters from the Secretary of the Governor of this State and from the Secretary of State, will be found in appendix number 76. The State is under prohibition. A prohibitory amendment to the constitution was carried in 1889 by a vote of 18,552 for, to 17,393 against. From the letter of the Secretary of State it will be seen that there are practically no statistics in existence which afford any information as to the effect of prohibition in this State. The two largest towns in the State adjoin Minnesota, from which, being a license state, liquor can easily be obtained. The Commissioners have not been able to obtain any statements of arrests in these towns.

The reports of the Board of Trustees for the hospital for the insane at Jamestown, shows that on the 1st November, 1890, there were 221 inmates in the hospital. On the 31st October, 1892 (the reports are made biennially) the number was 262. Taking the population in 1890 to have been 182,719, the ratio per thousand of the insane in the hospital would be 1·20. If the population in 1892 is assumed to have been 200,000, the ratio per thousand would be 1·31.

The report of the Trustees of Bismarck penitentiary (page 41) shows that in the year ending 31st October, 1890, there were 50 inmates in the penitentiary. In the report of the 31st October, 1892 (page 35) the population was shown to be 76.

Of the convicts received in the penitentiary between 31st October, 1890, and 31st October, 1892, 89 in all, 19 were classed as temperate, and 70 as intemperate. 77 were classed as using tobacco, and 12 as not using tobacco.

The United States census returns supply the following information. No statistics of commitments to jails or convictions for crime are available.

	1890.	Per 1,000 of population.	1880.	Per 1,000 of population.
Population	182,719	36,909

Prisoners in county jails	25	0·19	† 55	0·41
Paupers in almshouses	35	0·19	*
Inmates of juvenile reformatories	‡

*Includes North and South Dakota in 1880. The ratio is based on the population of the two states.

†No returns for 1880.

‡There is no juvenile reformatory in North Dakota.

SOUTH DAKOTA.

In Appendix No. 76 will be found letters from executive officers of this state. It has not been practicable to obtain any statistics showing the effect of the prohibitory law in South Dakota. The Assistant Secretary of State, writing on the 15th January, 1894, says in response to request for copies of reports on asylums, jails, &c. :—

“I have to inform you that we have no records at hand with which to furnish you the statistics asked for. Neither could we get it, as no such record is kept within the state.”

A prohibitory amendment to the state constitution was carried in 1889 by a vote of 39,509 for, to 33,456 against.

The United States census returns supply the following information :—

	1890.	Per 1,000 of population.	1880.	Per 1,000 of population.
Population	328,808	98,268
Convicts in penitentiaries	97	0·29	†

Paupers in almshouses	53	0·16	†
‡Inmates in juvenile reformatories

*Includes South and North Dakota in 1880. The ratios are based on the population of the two states.

†No returns for 1880.

‡There is no juvenile reformatory in South Dakota. Census bulletin No. 72.

VERMONT.

This state is under prohibition. The law has been nearly forty years in operation. Sale is controlled by county commissioners, who appoint town agents to sell for medicinal, chemical and mechanical purposes only. Selectmen furnish liquor and fix selling price, which is as nearly as possible actual cost.

Section 1 of the law provides that nothing shall prevent the manufacture, sale or use of wine for the commemoration of the Lord's Supper, nor for the manufacture, sale and use of cider, or, for medicinal purposes only, of wine made in the state from grapes or other fruits the growth of the state, and which is without the admixture

Liquor Traffic—Commissioners' Report.

of alcohol or spirituous liquor, nor the manufacture by any one, for his own use, of fermented liquor.

The prohibition as regards "furnishing" and "giving away" shall not apply to the giving away by a person in his own dwelling, unless given to a minor other than a member of his own family, or habitual drunkard.

A penalty of \$25 and costs is imposed for carrying liquor by freight or express, unless said barrel or other vessel is legibly marked with name of person to whom it is sent or to be delivered.

The penalties for selling, furnishing and giving away are \$10 and costs for a first offence; \$20 and costs for a second, and \$20 and costs, and imprisonment for not less than three months, nor more than six, for a third subsequent offence. An amendment gives discretion to judges to imprison for a first offence, and to impose a fine of not less than \$10, nor more than \$100.

Penalties are imposed for drunkenness, of \$5 and costs for a first; \$10 and costs for a second; and \$20 and costs and imprisonment for one month for a third and each subsequent offence.

A person refusing to disclose where he obtained liquor may be committed to prison until he makes such disclosure.

A references to appendices numbers 79 to 82 will show that this state has a very low ratio of criminals and also a very low ratio of paupers. The commitments to jail for drunkenness are small. The arrests for drunkenness in the few places from which it has been practicable to obtain statistics are given in Appendices 137 to 140 inclusive.

In a letter from the secretary of His Excellency the Governor of the State, it is mentioned that the law is not uniformly thoroughly observed. That there is opposition to it in certain localities, is evident from the number of prosecutions for offences against it which are also referred to in the letter.

The reports of the Department of the Interior, Washington, show one brewery within the state.

In the letter referred to it is added, "it is the opinion of those best versed in the matter that the effect of the law in Vermont has been to decrease the consumption of intoxicating beverages; that it is diminishing drunkenness and having a marked tendency to diminish crime and lessen the poor expenditure; and that our insane asylums have less inmates than they would have were it not for the existence and enforcement of the prohibitory law, though in many cases it has failed of a very strict enforcement."

It may be mentioned that there is no city or town within the state with a larger population than 15,815, and only one with that number of inhabitants. The population is mainly rural.

The state reports presented to the legislature are all for periods of two years. The first one obtained by the Commission is for a broken period of 23 months, viz. from the 1st August, 1888, to the 30th June, 1890. The commitments to the county jail and the house of correction for that period were:—

For all offences	684
For drunkenness	205
For offences against the liquor law	62

Which would give for 24 months an average of about 714, 214 and 65.

For the two years ended 30th June, 1890, the commitments were:—

For all offences.	842
Drunkenness.....	291
Offences against the liquor law.....	74
	1,207

Taking the population as 332,000, the commitments per annum per 1,000 of the population would be :—

	1888-89.	Per 1,000.	1889-90.	Per 1,000.	1890-91.	Per 1,000.	1891-92.	Per 1,000.
All offences	357	1·07	357	1·07	421	1·26	421	1·26
Drunkness	107	0·32	107	0·32	145	0·43	146	0·43
Offences against the liquor laws	32	0·09	33	0·09	37	0·11	37	0·11

Comparing these figures (which have been worked out as accurately as the data available would permit) with the commitments in the State of Maine, the result is, per 1,000 of the population :—

	All Offences.	Drunkness.	Offences against Liquor Laws.
Maine, 1889	6·00	2·10	0·28
do 1890	5·73	2·04	0·29
do 1891	5·53	3·48	0·35
do 1892			
Vermont, 1889	1·07	0·32	0·09
do 1890	1·07	0·32	0·09
do 1891	1·26	0·43	0·11
do 1892	1·26	0·43	0·11

The following statement shows the amount collected for fines imposed for offences against the liquor laws, and the expenses of prosecuting offenders :—

EXPENSES AND REVENUE.

	Cost of prosecuting in Liquor Cases.	Fines paid.	Net Revenue.
	\$ cts.	\$ cts.	\$ cts.
1886..	23,100 00	30,636 00	7,535 00
1887..	21,417 00	44,386 00	22,969 00
1888..	25,324 00	44,386 00	38,176 00
1889..	25,986 00	47,396 00	21,409 00
1890..	24,731 00	37,449 00	12,717 00
1891..	30,470 00	50,254 00	19,784 00
1892..	33,183 00	69,914 00	31,730 00

DISTRICT OF COLUMBIA.

The District of Columbia, the seat of the United States Government, is under a recently passed measure of high license.

In 1888 an attempt was made to secure a prohibition act for this district, but it proved abortive, notwithstanding the acknowledged weakness of the then existent license law. The fees paid for licenses under the old law were:—For a wholesale license, \$25 per annum; for a retail license, \$100. Under this Act there were in the city of Washington alone from 900 to 1,400 liquor licenses granted.

The new law was approved 3rd March, 1893. It constitutes the three Commissioners of the District an excise board for the consideration and disposal of all applications for license, such disposal to be final. The board must appoint a clerk, who shall also be license inspector.

All applications must set forth that the applicant is 21 years of age, and was never convicted of any violation of the liquor laws, nor of gambling, and is not already a licensee. This must be confirmed by an affidavit before a notary, and any false statement shall revoke the license, and constitute perjury. The applicant's declaration must be supported in the cities of Washington and Georgetown by the written permission of the majority of the residents and persons owning real estate on the side of the square on which the proposed bar-room is to be placed; if the place is at a corner, then the majority on both streets must signify their consent. Outside these two cities the majority of residents and owners within 250 feet on each side of the proposed bar-room must consent. Hotels having 20 chambers for guests need not make annual application for renewal of license, but during good behaviour have only to pay the annual license fee. No one under the age of sixteen may be served or employed on any licensed premises, and selling is prohibited on Sunday, and between the hours of twelve (midnight) and four o'clock in the morning.

The fee for a wholesale license under this Act is \$250, and for a bar-room license \$400 per annum. One pint is the minimum wholesale quantity. Druggists may sell under medical prescription only; any other sale constitutes sale without license.

The penalty for selling without a license is: for first offence, from \$250 to \$800, with or without imprisonment of from two to six months; for a second offence, as above, with imprisonment from three months to one year. The violation of any condition of the license incurs a fine of from \$50 to \$200 for a first offence, and for every subsequent offence a similar fine, with 25 per cent of the amount of the previous fine added; in default, imprisonment for six months, or until the fine is paid. No license can be granted after a second conviction. For aiding or abetting in any violation of the license, the fine is \$50 to \$100, or imprisonment for one month.

No licensed place may exist within 400 feet of any schoolhouse or place of public worship.

The life of a license shall be twelve months only.

The Commissioners are indebted to the Hon. Senator McMillian, Michigan, for valuable information respecting the District of Columbia. In a letter from Mr. McMillan dated 8th March, 1894, he states, with reference to the liquor law of the District of Columbia, that "it was passed while I was chairman of the District Committee, and was drawn by me after a long study of the subject. The results have been excellent, both in the way of revenue, and also in closing saloons, especially in the residential portions of Washington."

The United States census returns supply the following information. No statistics of commitments to gaols or convictions for crime are available:—

	1890.	Per 1,000 of population.	1880.	Per 1,000 of population.

Inmates of juvenile reformatories	187	0·81	168	0·95

† There is no penitentiary in the District of Columbia. (Census Bulletin No. 31.)

IDAHO.

The State is under high license.

The Governor of the State, in a communication to this Commission writes (see appendix 76):—"At the last session of the legislature a high license law was enacted, which in all the counties of the state, except one, has been carefully enforced. I am not advised that there has been any diminution of consumption of alcoholic liquors, or decrease of crime, or increase of insanity as a result of its enactment and enforcement."

The licensing board for each county is composed of the county commissioners.

Each licensee must enter into a bond of \$1,000, with two sureties, resident householders or freeholders of the county, that he will observe the law. The license fee is \$500 per annum in cities and towns, and \$300 per annum in villages or hamlets. Notice may be given to licensees not to sell to habitual drunkards, and if sale is subsequently made to such, a civil action may be brought and damages recovered; and the Board shall cancel and annul the license. In the event of a licensee being convicted of a violation of any of the provisions of the License Act, he shall lose his license. It is further provided that any licensee, "who shall keep a disorderly house, or allow boisterous or disorderly conduct therein, or shall allow the peace and quiet of the neighbourhood to be disturbed by loud and unusual noises therein, or threatening abusive or obscene language therein, shall be guilty of a misdemeanour, and upon conviction thereof shall be punished accordingly; and his license may likewise be revoked."

The United States census returns supply the following information. No commitments to jails, or convictions for crime, are available:—

	1890.	Per 100 of popu- lation.	1880.	Per 1,000 of popu- lation.

Prisoners in county jails	45	0·53	10	0·31
Paupers in almshouses	20	0·24	7	0·21
Inmates of juvenile reformatories				

There is no juvenile reformatory in Idaho—(Census Bulletin, No. 72.)

Liquor Traffic—Commissioners' Report.

INDIANA.

High license prevails in this state.

The Governor in reply to a communication from this Commission writes:—
(Appendix 76.)

“Briefly, this state has never had any prohibitory law legislation. The liquor traffic is now regulated by stringent laws, and what is termed a high license system.”

The earliest provision for the regulation of the liquor traffic in this state was made in 1805, when the Governor was empowered to prohibit the sale of liquor to Indians. In 1807 an act was passed providing that the Court of Common Pleas should issue licenses, upon bonds to obey the law, not exceeding \$300. In 1816 the right to grant licenses was transferred to the county commissioners, upon production of a certificate of moral character signed by twelve householders, stating that the place would be a convenience to travellers, and the giving of a bond to the extent of \$500. In 1819 this power was transferred to the Circuit Court, only to be retransferred to the county commissioners in 1824, and given to the County Court in 1828.

On the consolidation of the laws in 1832, a provision was added that licenses to retail should not be granted in any town or township where the majority of the freeholders remonstrated against the granting of the same. The license fee was placed at from \$25 to \$200, whilst the penalty for allowing disorder was fixed at from \$25 to \$100. Under this Act, in 1842, the issuing of licenses was prohibited in twelve counties, whilst in sixteen other counties the fee was at the discretion of the board.

A prohibitory, or Maine law, was passed in 1855, but was repealed in 1858, after having been declared unconstitutional generally. A new license law was passed in 1859, which fixed the fee at \$50, and contained several restrictive clauses. In 1861 this was amended by giving a remonstrant against a license the right to appeal and in 1873 a stricter license law was enacted, requiring a petition for license to be signed by a majority of the voters in the townships or wards, and the giving of a bond of \$3,000, with penalty of forfeiture of license for violation of the act, and disqualification for five years. No fee for license “permit to sell,” was required, beyond the cost of procuring it. This is virtually the law of to-day, except that fees have been added. These fees are applied to the school fund of the county, and are: For selling all liquors, \$100; for vinous or malt liquors, or both, \$50. No city may charge more than \$250 additional, and no incorporated town more than \$150 additional. The penalty for selling without a license is from \$20 to \$100, and the court may add imprisonment for from ten to thirty days. The license jurisdiction of a city extends two miles beyond the city limits.

The State Board of Health has to report annually what, in its best judgment, is the effect produced on the industry, health and lives of the people by the use of liquor.

The strictest prohibition is enforced in regard to the territories inhabited by the Cherokees, Chickasaw and Choctaw nations of Indians.

The United States census returns supply the following information. No statistics of commitments to jails, or convictions for crime are available:—

	1890.	Per 1,000 of population.	1886.	Per 1,000 of population.
Population	2,192,404		1,978,301	
Prisoners in penitentiaries	1,416	0.65	1,238	0.63
Prisoners in county jails	464	0.21	289	0.15
Paupers in almshouses	2,927	1.33	3,052	1.54
Inmates of juvenile reformatories	636	0.29	463	0.23

ILLINOIS.

A letter from the secretary of the Governor of this state will be found in Appendix No. 76.

This state is under license and local option.

The county board of each county may grant as many licenses to sell by retail as they may think the public good requires, upon the application by petition, signed by a majority of the legal voters of a town, or, if not under township organization, then of a majority of the legal voters of the electoral district where the place proposed to be licensed is located. The fee for such license shall not be less than \$50 nor more than \$300. The board is not to issue a license in or within two miles of any incorporated town, city or village in which the corporate authorities have authority to regulate, or in any place where the sale of liquor is prohibited.

A fee of not less than \$150 is collected for selling malt liquors. Any person having such license who is convicted of selling other liquor is liable to fine or imprisonment, or both (and may be proceeded against summarily for the fine), and a "conviction under this section shall forfeit the license held by the defendant, and the court rendering judgment upon such conviction shall, in such judgment, declare a forfeiture of such license.

"Any license may be revoked by the county board whenever they shall be satisfied that the person licensed has violated any of the provisions of this Act, or keeps a disorderly or ill-governed house, or place of resort for idle or dissolute persons, or allows gambling in his dram-shop, or any house or place adjacent thereto."

Every licensee must enter into bond in \$3,000, with two sureties, being freeholders in the same county, that he will pay to all persons all damages that they may sustain, either in person or in property or means of support, by reason of his selling or giving away any intoxicating liquors.

Anyone selling or giving liquor to, or procuring for, a minor without the written order of his parent, guardian or family physician, or to any person intoxicated, or in the habit of getting intoxicated, is liable to a fine and imprisonment.

Any keeper of a dram-shop where liquor is retailed in less quantities than one gallon, who sells without a license, is liable to a fine of from \$20 to \$100, or imprisonment for ten to thirty days, or both.

Places where liquor is sold in violation of the Act are declared to be common nuisances. The keeper, on conviction, is subject to fine, and imprisonment of from twenty to fifty days, "and it shall be part of the judgment, upon the conviction of the keeper, that the place so kept shall be shut up and abated until the keeper shall give bond, with sufficient security to be approved by the court, in the penal sum of \$1,000, payable to the people of the state, on condition that he will not sell intoxicating liquors contrary to the laws of the state, and will pay all fines, costs and damages assessed against him for violation thereof."

The penalty for drunkenness is a fine not exceeding \$5, and, on subsequent conviction, not exceeding \$25. The fine may be remitted in whole or in part, if the public welfare and the good of the offender require it.

The ordinances of the city of Chicago make provision for the licensing of dram-shops.

Licenses are required to be granted by the mayor to persons furnishing satisfactory evidence of good character, and entering into a bond of \$500, with two sureties, to observe the ordinances and keep closed on Sunday all doors opening on the streets. The license fee is \$500. The separate beer licenses have been abolished. Licenses are not to be granted in any prohibited area which becomes annexed to the city. Any license may be revoked by the mayor when the licensee has violated any of the ordinances or conditions of his bond. Licensed places are required to be closed from midnight to 5 a.m. One per cent of the license fees is given to the police and firemen's relief fund. Ten per cent goes to the Washingtonian Home, Chicago.

During the past two years (prior to 1893) the license fee in Chicago has been raised twice, from \$52 to \$103, and then to \$500.

Liquor Traffic—Commissioners' Report.

Local option is exercised through the general law of the state, which gives local authorities of incorporated cities and villages power to "license, regulate and prohibit the liquor traffic." The law also enables each county board, as regards so much of the county as is not included in an incorporated place, to grant licenses on a petition from a majority of the voters of the district. The law is thus one of local option, exercised in the towns by the municipalities and in the rural districts by popular vote. In the latter case, the option is one to be exercised affirmatively, licenses not being issuable until the decision of the majority has been given in favour of their issue.

The following is a summary of the law:—

City councils and boards of trustees in villages have power to license, regulate and prohibit the selling or giving away of intoxicating liquors, subject to the general law of the state, and to punish the selling or giving to minors, insane, drunkards, or intoxicated persons.

A penalty is provided, not exceeding \$1,000, or imprisonment not exceeding one year, or both, for adulterating liquor intended for drink with cocculus indicus, vitriol, grains of paradise, opium, alum, capsicum, copperas, laurel waters, logwood, brazil wood, cochineal, sugar or lead, or any other substance which is poisonous or injurious to health.

A fine not exceeding \$200 is enacted for keeping open on Sunday any place where liquor is sold or given away.

It is claimed that the number of saloons throughout the state has been reduced under the high license system from 13,000 to 9,000, with the advantages of a revenue raised from \$700,000 to \$4,500,000.

It is claimed that 26 towns in the state are under prohibition, but none have a population exceeding 6,000. Some of the towns, after closing the saloons for a time, have reverted to license.

The following figures are taken from the annual police report:—

MASSACHUSETTS.

In a communication sent to the Commission by order of the Governor of the commonwealth of Massachusetts, it is stated:—

“The legislature of this state enacted in 1860 (?) a prohibitory law, and provided for the appointment of a special police force for its enforcement. In 1869 the law was changed, giving authority to cities and towns to appoint agents to sell spirituous and intoxicating liquors of pure quality. In fact, from the year mentioned, the several legislatures have amended certain provisions of the law.” (Appendix 76.)

In the year 1852 a prohibitory law, which was practically a copy of the original Maine law, was passed by the state of Massachusetts. In 1855 a new prohibitory law was enacted, changing the penalties imposed by the law of 1852 and elaborating that Act. This law was repealed in 1868, and restored in 1869. In 1865 a state police force was created for the purpose of suppressing liquor shops, gambling places and houses of ill-fame. In 1870 an amendment to the prohibitory liquor law was made, authorizing anyone to manufacture and sell ale, porter, strong beer and lager beer. In 1873 this amendment was repealed. In the fall election of 1874 the popular vote appears to have been against the prohibitory law and the maintenance of the special constabulary force, and both were abandoned, and a license system was again resorted to. In 1881 the license system was supplemented by a local option enactment. In the year 1882 a bill for the restoration of the prohibitory law was defeated in the House of Representatives by the casting vote of the Speaker. In March, 1889, it was resolved to submit a proposed amendment to the constitution of the state, prohibiting the manufacture and sale of intoxicating liquors for use as a beverage, to the people of the state. A vote was taken in April, 1889, and the proposed amendment was rejected by a majority of about 46,000.

Under the law of 1869, cities and towns had the right to appoint agents to sell spirituous and intoxicating liquors of pure quality, for other than beverage purposes, and it was provided that licenses might issue for the manufacture for export, and also for the appointment of a state assayer of liquor.

In 1867 a Joint Special Committee of the Senate and House of Representatives was appointed to consider various petitions of nearly 35,000 legal voters, praying for the enactment of a law for the regulation of the sale of spirituous and intoxicating liquors, and the petition of the Massachusetts College of Pharmacy, asking for such alterations in the then existing law as would enable druggists and apothecaries to sell liquors for medicinal and certain other purposes, together with the various remonstrances from nearly 26,000 legal voters, the officers of many temperance organizations and conventions, and of 14,471 women and others, severally against the passage of a license law.

The committee appears to have consisted of five members of the Senate and nine members of House.

Liquor Traffic—Commissioners' Report.

A majority, consisting of three members of the Senate and five members of the House, reported very strongly against the prohibitory law, and submitted a draft of an Act to regulate the sale of spirituous and intoxicating liquors.

A minority report, signed by one member of the Senate and three member of the House, was also submitted; and, accompanying it, was a draft of an Act to amend the then existing law, so as to provide for the appointment by a commissioner, under the direction of the Governor in Council, of as many agents, not exceeding fifty, for the purchase and sale of spirituous and intoxicating liquors in the city of Boston, for the purposes set forth in the then existing law, as he might consider to be in the interest of the citizens.

Mr. Frank B. Fay, a member of the Senate, made a separate report, and submitted the drafts of two bills; the one was an Act to empower druggists and apothecaries to sell alcohol, spirits and wines for medicinal purposes, if they should keep registers and be subject to the penalties prescribed in the then existing law for any illegal sale; the second was an Act concerning a state liquor commissioner and a state assayer. Mr. Fay starts upon the assumption that it is impossible entirely to prevent by law the sale, use and abuse of spirituous liquors as a beverage, quoting ex-Governor Washburn as having said: "It is idle to think of enforcing it (the prohibitory law) in our large cities and towns by means of the few civil officers known to the law. Against the passions, the appetites and the cupidity of the thousands who will be found active, busy and united in opposing it, these officers will be powerless." Mr. Fay considered it inadvisable to make any changes in the law of the state beyond those he recommended in regard to druggists, the commissioner and the state assayer.

Mr. Sherman (another member of the committee) stated that in most of the smaller towns of the state the existing prohibitory law, or the license law in connection therewith, would suppress the sale of liquor, and that the question under consideration related only to the cities and large towns, and he expressed his conviction that it was desirable to have the experience of another year before changing the law, in order to determine what effect some recent decisions of the United States court, and an increase in the state constabulary force, would have. "If," Mr. Sherman said, "the experience of another year should prove the present law a success, no friend of total abstinence can, with reason, ask for a license law; and then it will remain to be seen whether public sentiment will sustain prohibition enforced, as well as prohibition in theory only. If, however, it is not successful, and successful not merely by fitful efforts, attended with no permanent effect, not merely by closing particular places of sale, *but by stopping the sale, and the drinking*: if it shall be found still to work the manifest injustice of seizing the liquors of certain individuals and closing up certain places of sale, while other places of larger traffic are not interfered with, but with special favouritism are allowed to continue to sell, with great increase of business,—then the present law ought to be regarded as a failure, and a license law, like that proposed in the majority report, meet with general favour."

Those signing the minority report held that the states had the power, in "the exercise of that great conservative right of self-preservation," to pass laws restraining or wholly prohibiting the sale of articles of commerce which were found to be productive of irreparable injury to the community, and if there was a beneficial and injurious use which might be made of such articles, it was beyond all controversy that the state will permit the first and prohibit the latter. They quoted a statement not infrequently made, that men cannot be made moral by an Act of the legislature, but held that it was clearly within the legitimate scope and duty of legislation to guard against the corruption of morals. "If," says the minority, "men cannot be made moral and good by legislation, the legislation has at least the power and the right to forbid and punish a traffic which uniformly makes men criminal and vicious. And it is on this ground that the law forbids and punishes, with heavy penalties, the sale of intoxicating liquors as beverages. It is not simply because alcohol is a poison, or that its use as a beverage is an *immorality*, that the traffic in it is forbidden for such purpose, but for the reason that the traffic,

resulting in that use, produces a vast amount of crime, poverty, disease and general demoralization, followed by what would be otherwise unnecessary taxation to support the pauperism thus created, and to protect society from the disastrous consequences of crime thus occasioned." They endorse a statement made by an ex-governor of the state, who said, "I do consider the selling of liquors under licenses to be a *moral evil*; if I could prohibit the sale of these liquors as a beverage I would." They continue by saying: "The hope was expressed that the evil might be restrained or limited by licensing it. In other words, a vice or an evil is to be rendered less by throwing over it the protection and respectability which comes from governmental authority. Herein lies the fallacy of the whole license system. For since it has been declared by an older and higher law than any merely human enactment, that it shall never be lawful for individuals to do evil that good may come, it is impossible to see how an aggregation or society of men, acting under and through the forms of self-constituted government, can rightfully grant to any of their number licenses or indulgences for the doing of evil."

The majority of the committee strongly condemned the prohibitory law. They spoke of the measures which had to be taken to enforce it, the setting aside of the ordinary means by which other criminal laws were enforced, and pointed out that if the sale of intoxicating liquors was wrong, the purchaser, as well as the vendor, should be punished, and that if this course was resorted to, under the penalties to which the seller was liable, the result would be that, if the law was enforced, almost all the male population of the state would, at some time or other, be fined and imprisoned; that legislative records of the state showed that bills to punish the buyer of intoxicating liquor, equally with the seller, had repeatedly been rejected by almost unanimous votes.

The committee summed up in three propositions their statement of the defects in the theory of the prohibitory law:—

"1. It is not sinful nor hurtful in every case to use every kind of alcoholic liquors as beverages. It is not, therefore, wrong in every case to sell every kind of alcoholic liquors to be used as beverages. But this law prohibits every sale of every kind of alcoholic liquors to be used as beverages.

"2. It is the right of every citizen to determine for himself what he will eat and drink. A law prohibiting him from drinking every kind of alcoholic liquors, universally used in all countries and ages as a beverage, is an arbitrary and unreasonable interference with his rights, and is not justified by the consideration that some men may abuse their rights, and may, therefore, need the counsel and example of good men to lead them to reform. But this law does, in theory, prohibit him from drinking every kind of alcoholic liquors, since it prohibits every sale of every kind of alcoholic liquors to be used as a beverage.

"3. Finally, if the use should be totally prohibited, because it is either sinful or hurtful in all cases, or may be in some cases, the use should be punished. But this law punishes the sale, and does not punish the use."

The committee says further:—

"Upon careful inquiry into the present condition of things throughout the state, it would probably appear that in the small towns there is hardly any liquor sold, but that in all the large cities and towns it can be had without difficulty; that in most of them the sales are open, and that whenever by peculiarly vigorous efforts the open places are closed, large numbers of secret places are established, and the cases of drunkenness largely increased. The mere fact that the law seeks to prevent them from drinking rouses the determination to drink in many; the fact that the place is secret takes away the restraint upon them, which in more public and respectable places would keep them within temperate bounds. The fact that the business is contraband, and liable to interruption, and its gains hazardous, tends to drive honest men from it and to leave it in the control of dishonest, men who will not scruple to poison the community with vile adulterations. Another serious result in the operation of the present law is the immoral business practices which it has suggested and sanctioned. A man, without violating any law, may purchase liquors to the extent of his credit, and then repudiate the debt. Though the liquors as

Liquor Traffic—Commissioners' Report.

articles of commerce are worth to him all he agreed to pay, the law permits him to hold them without making payment. Still further, a man may put all his property into liquors, and so escape the payment of any of his debts, for his liquors cannot be attached, as the officer will violate the law in selling them upon execution. They cannot be distrained for taxes even, for the Government officer is liable to prosecution if he sells. These attempts to outlaw a commercial article whose place in trade has been undisputed for centuries, have had no effect in preventing honest men from paying their debts, but they have held out temptations too powerful to be resisted by swindlers. It is unworthy of the good name of the commonwealth that her laws should protect and encourage a man who has bought merchandise, without violating the law, in refusing to pay the price thereof to the seller. It is unworthy of the state that dishonest men should be enabled to escape the payment of their debts by converting their property into liquors. It is not less unworthy that the state herself should, without compensation, seize and sell for her own benefit articles of merchandise which the citizen has brought in violation of no law."

The conclusions of the committee are summed up in the following paragraph:—

"The committee believe that the time has come when this prohibitory law, unsound in theory, inconsistent with the traditional rights and liberties of the people, tempting to fraud and protecting those who commit it, in many communities not enforced because of the thorough disbelief in its principles, in other communities, when enforced, driving the liquor traffic into secret places and so increasing, rather than diminishing, the amount of drunkenness and other crimes, should be so far modified as that the rights of the citizen will be respected, while, at the same time, the general peace and order of the community will be better promoted. Let the law cease to attempt to interfere arbitrarily with what a man shall drink, while, nevertheless, it places such regulations as experience has shown to be necessary over the persons who may make the sale and the times and places when and where the sales shall be made. Let it be regarded as a fact that the demand on the part of those who desire, wisely or unwisely, to use liquor as a beverage, has always been met, and always will be met, by men who will sell, either under the law, or in defiance of the law, and that wise legislation should recognize and act upon that fact."

This somewhat lengthy statement of what took place in the State of Massachusetts prior to the abandonment of the prohibitory system, and the adoption of local option, is made simply to show how thoroughly the whole question was discussed before the prohibitory system was abandoned in that state.

The law of 1881 contained the following provision:—

"The aldermen and selectmen respectively shall insert in the warrant for the annual municipal election or town meeting, an article providing for a vote upon the question, Shall licenses be granted for the sale of intoxicating liquors in this city (or town)? The vote shall be by separate ballot; and the ballot shall be 'Yes' or 'No,' in answer to said question, and in taking said vote the check list shall be used. The clerk of each city or town shall, within thirty days after such vote is taken, transmit a true statement thereof to the secretary of the commonwealth; and shall annually, in November, make a return to said secretary showing the number of licenses of each class issued, the amount received for the same by classes, and the number revoked, if any."

The law also provided that the powers conferred upon the mayor and aldermen of cities should be exercised in the city of Boston by a board of police commissioners; and in any other city of the commonwealth said powers and duties might be exercised by a board of license commissioners, if the city council of such city so determined, such board to consist of three inhabitants of said city, to be appointed by the mayor and confirmed by the city council thereof, and to hold office until the first day of May next after their appointment, or until their successors were appointed and confirmed, they were to receive such compensation as the city council might determine.

The licenses established by this Act were:

First class.—To sell liquors of any kind to be drunk on the premises.

Second class.—To sell malt liquors, cider and light wines, containing not more than 15 per cent of alcohol, to be drunk on the premises.

Third class.—To sell malt liquors and cider to be drunk on the premises.

Fourth class.—To sell liquors of any kind not be drunk on the premises.

Fifth class.—To sell malt liquors, cider or light wines, containing not more than 15 per cent of alcohol, not be drunk on the premises.

Sixth class.—Licenses to druggist and apothecaries to sell liquors of any kind for medicinal, mechanical and chemical purposes only, and to such persons only as may certify in writing for what use they want it.

This Act also provided (section 14), that "The treasurer of a city or town shall pay to the treasurer of the commonwealth one-fourth of all moneys received by him for licenses within one month after he receives the same."

The Act further provided that the Governor, with the advice and consent of the Council, shall annually appoint and commission a competent person as an inspector and assayer of liquors.

In 1888 it was enacted (section 1) that "In all towns and cities which vote to grant licenses of the first five classes described in section ten of chapter one hundred of the public statutes, to sell intoxicating liquors, the number of places licensed for the sale of such liquors shall not exceed one for each one thousand of population, as ascertained by the last preceding national or state census, except that in the city of Boston one place may be licensed for each five hundred of the population. No more than one such place may be licensed by any one vote of the licensing board; such licenses shall be numbered in regular order as granted and any licence contrary to, or in excess of the provisions of this Act shall be void; provided that, in towns having an increase of resident population during the summer months, the selectmen may, during the month of June, cause a census to be taken, and may grant one such license for each five hundred of said resident population, as ascertained by said special census, to take effect on the fifteenth day of June and to expire on the fifteenth day of September following; but no such license shall be granted unless the town at its last annual town meeting votes 'Yes' in answer to the question, 'Shall licenses for the sale of intoxicating liquors be granted in this town?'

"The foregoing section shall not prevent the licensing of one place in any town voting for license whose population is less than one thousand (Section 2)."

By section 2, chapter 139, it was enacted;

"The fees for licenses shall be as follows:—

"For a license of the first class, not less than one thousand dollars.

"For a license of the second or third class, not less than two hundred and fifty dollars.

"For a license of the fourth class, not less than three hundred dollars.

"For a license of the fifth class, not less than one hundred and fifty dollars.

"For a license of the sixth class, one dollar.

"No license shall be issued until the license fee has been paid to the treasurer of the city or town by which it is to be issued, and until he has received a satisfactory bond, payable to him as such treasurer, in the sum of one thousand dollars, signed by the licensee and sufficient surety or sureties, who shall be jointly and severally liable, and conditioned for the payment of all costs, damages and fines incurred by violation of the provisions of this chapter. Separate suits may be brought on such bond by any persons at their own expense. Such bond, after approval, shall be filed in the office of the city or town clerk, and may be sued in any court having jurisdiction under the provisions of this chapter; and a certified copy thereof shall be admissible in evidence, and shall have the same force and effect as the original bond would have if offered in evidence. No bond given under the provisions of said chapter shall be accepted or approved until each surety has made and subscribed a sworn statement that he is worth not less than two thousand dollars, over and above all liabilities and indebtedness, the statements so made shall designate sufficient property, real or per-

Liquor Traffic—Commissioners' Report.

sonal, to cover the requirement of the bond, and shall be kept on file with the bond in connection with which said statement is made." *

Upon the recommendation of the board of commissioners of prisons, the legislature of the commonwealth passed an Act (chapter 356), which came into force on the first day of July, 1891. Under this Act the justice of each municipal or police district court was required to appoint one person to perform the duties of "probation officer." In Boston the appointment was to be made by the chief justice of the municipal court. The officer so appointed was to hold his office during the pleasure of the court. He was not to be an active member of the regular police force, but was, in the execution of his duties, to have all the powers of police officers. Each probation officer under the Act was required to inquire into the nature of every criminal case brought before the said court under whose jurisdiction he acted, and he could recommend that any person convicted by the said court should be placed upon probation. The court could place such person so convicted in the care of the said probation officer for such time and upon such conditions as the judge thought proper. The person released upon probation was to be furnished with a written statement of the terms and conditions of his release, and the probation officer was required to keep full records of all cases investigated and all cases placed in his care by the court.

The following is a copy of section 7 of the law :—

"A probation officer may, at the request of any justice of the superior court, investigate the case of any person on trial in that court, and make a report upon the same to said justice, and may, upon the order of the court, take on probation any person convicted in said court; the compensation for such services shall be paid from the treasury of the commonwealth upon vouchers approved by said justice. The officers appointed under this act may also perform the services of probation officers named in sixty-nine of chapter two hundred and twenty of the public statutes, and for said services may receive such compensation as the county commissioners or the commissioners of public institutions, as the case may be, shall approve."

An Act passed in the same year, and coming into effect also on the first day of July, specially related to the punishment of drunkards, provided, that anyone found in a state of intoxication in a public place might be arrested without warrant, and kept in custody in some suitable place until he recovered from his intoxication. That any person so arrested might make a statement in writing to the officer in charge of the place of custody, declaring that he had not been arrested for drunkenness twice before within twelve months next preceding, or having been arrested, he had been tried and acquitted in one of the cases. The statement to contain a request to be released from custody. The officer being satisfied with the statement, was authorized to release the person arrested from custody, pending investigation.

If the arrest was made within the jurisdiction of a court having a probation officer, the statements and requests so made were then to be referred to the probation officer for investigation, who was to endorse thereon, over his own signature, for the use of the court, a statement as to the truth or falsity thereof. If the said investigation sustained the truth of the said statement, the court thereupon might direct that such person might be released from custody without being brought into court, if he had not been already released, and no further action was to be taken. If, on the other hand, it should appear to the probation officer that the statement was untrue, it was his duty to notify the officer who made the arrest, who would then make a complaint against the said person for drunkenness. If the case was within the jurisdiction of a trial justice (and there was no probation officer), he was to make such enquiries as he thought necessary, and he was empowered to release the person from custody without bringing him into court, if he was satisfied the said complaint was false. The officers making the arrests under such conditions were not to be liable for damages for illegal arrest or imprisonment, if the person arrested was released from custody upon his own request, as provided in the act. No one was to be released unless he preferred such request to the officer making the arrest.

* Liquor laws of the United States, pp. 36-37.

The following is a copy of section 5 of the Act:—

“If a male person is convicted of drunkenness by the voluntary use of intoxicating liquor, he may be punished by imprisonment in the jail, or in any place provided by law for common drunkards, for not more than one year, or in the Massachusetts reformatory, as provided by chapter three hundred and twenty-three of the acts of the year eighteen hundred and eighty-six. If a female person is so convicted, she may be punished by imprisonment in the jail, or in any place provided by law for common drunkards, for not more than one year, or in the reformatory prison for women for not more than two years; provided, however, that if the person so convicted shall satisfy the court or trial justice, by his own statement or otherwise, that he has not been arrested for drunkenness twice before within the twelve months next preceding, or that having been so arrested, he has been tried and acquitted in one of the cases, his case may be placed on file.”

The Act provides that the superintendent of houses of industry, etc., etc., should furnish all information, on application, to the probation officers. This Act repealed previous acts which imposed fines as penalties for drunkenness; thus the power of the judges to impose any other penalty than imprisonment for drunkenness was removed.

The effect of the enactment of this law upon the commitments for drunkenness was referred to in the following terms by the commissioners of prisons in their report for the year ended 30th September, 1891:—

“The Legislature of 1891 passed an Act relating to the punishment of drunkenness; this has materially affected the number of commitments to the jail and houses of correction, and to the Boston house of industry since the first of July last. In the county prisons the number of commitments has been reduced, but the population has increased, in nearly all cases, owing to the fact that the fine as a punishment for drunkenness has been abolished, and all sentences are now for a stated term, which, in most cases, is much longer than the usual thirty days for which prisoners committed for non-payment of fine and costs were held under the old law.”

In their report for 1892 the commissioners also referred to the matter. (Page 287). They say:—

“The large falling off in the number of cases begun in the lower courts has already been noticed, but it is proper to say that, inasmuch as the decrease is altogether owing to the change in the law for the punishment of drunkenness, as contained in chapter 427 of the Acts of 1891, the amount of work to be performed by the clerks of the courts has not in the slightest degree lessened by the decrease in the number of cases; on the contrary, in some courts the work of the clerks has been very much added to by the requirements of that Act that the clerk shall keep a record of each case in which a person is released from custody without being brought into court. One clerk of a court in Suffolk county reports more than 2,300 cases recored by him under section 4 of that act. If all such cases were included in the returns, the number for 1892 would be greater than in any other year named in the table.” And the commissioners recommended that the Act of 1891 should be amended, so that the probation officers might be relieved of the duty of investigating the statements made to the police by persons arrested for drunkenness. They state that, “Unless such a change is made, the courts cannot give the probation law a fair trial.”

Mr. Pettigrove, the secretary of the commissioners of prisons, in his evidence before this Commission stated: “The probation system was introduced into our courts in Boston by some charitable persons who believed that some boys, young men and young girls might be reformed and corrected without being subjected to the dangerous influences of a prison. The first probation officer was appointed by the board of aldermen in Boston to act in the municipal court of the city. Then came after that a statute passed in 1880 which provided that the mayor and aldermen of a city, or the selectmen of a town, could appoint a probation officer. Under that Act the chief of police in places outside of Boston usually performed the duty of probation officer, but the system was not carried on very well, and in 1890 we

Liquor Traffic—Commissioners' Report.

made an investigation to ascertain how many of the cities had appointed a probation officer and we found there were only 49. Then we went to the legislature for this new law, * * * that provides, "that the justice of each municipal court shall provide a probation officer to inquire into every case brought before the court where he is, that is that he find out what the circumstances of the offender are, and make his report to the court. If the court thinks that the interest of the community will warrant it he puts the boy on probation. That is to say, he convicts him of the offence and he says, "Now I am going to place you in charge of the probation officer for six months, or for nine months or for twelve months." If he finds from the report of the probation officer that there is reason to believe that the boy can be reformed without being sent to prison, and that the interests of the community will not suffer, he puts the boy in charge of the probation officer. The custom is that the probation officer shall become security for his appearance at some date specified by the court. He is released on certain conditions, and one of the conditions is that he shall report regularly to the probation officer. Whenever he violates any of these conditions, the probation officer can surrender him at any time to the court." (Q. 9297b.)

"And with regard to drunkenness?—The probation officer, as a special duty, inquires into their statement. The probation officer takes the statement signed by the man who is under arrest, and makes a report as to the truth of it. (Q. 9299b.)

"If the statement made by the offender is found to be true is he allowed to go without appearing before the court?—He would be, up to the first of July of this year (1893), but on the first of July that was changed. Now he can be released without going to court, but he cannot be released without the order of the court. Under the old law the police officer could release him when the report of the probation officer was made, but under the present law there has to be an order of the court. For instance, if a police officer got an old rounder into his custody, and the man made a statement that he had not been arrested twice before within twelve months, and the probation officer made a report that it was true, the police officer must release him.

"There was no fine?—There was no fine or any further action to be taken if the statement was true, but at present the court may direct his release without bringing him into court.

"What is done in a case when probation officer finds the statement of the offender to be untrue?—If he finds the statement to be untrue he notifies the police officer to that effect, and it becomes the duty of the officer to make a complaint against the prisoner for drunkenness, and if he has been let loose he must be arrested again. There is a feeling that it is an unwise provision of the law of 1891 which gives to the police officer power to release." (Q. 9301b-9303b.)

Mr. Pettigrove proceeds to say that the law of 1891 abolished fines for drunkenness. That the courts had no power to impose a fine for two years, from the first of July, 1891, to the first of July, 1893; but that since the 1st of July, 1893, the court may impose a fine upon any person who has been twice before arrested, within twelve months. He may be fined a sum of not exceeding \$10, and, failing payment, may be imprisoned for 30 days. He stated that the system had not much effect upon the present population of the jails; that the commitments for drunkenness, although fewer, had usually been for longer terms. Quoting his own language "the sentences have been longer, so that the prisoners have been kept up the same as before, and the procession has been going on, in and out, all the time." (Q. 9305b-9308b.)

There was a large increase in the number of arrests in 1892, and at the same time a large reduction in the number of commitments to prison for drunkenness, the causes of which are explained in the evidence given by Mr. Whiting, chairman of the police commissioners of Boston, and Mr. Pettigrove. The releasing, under the law of 1891, of a very large number of those arrested without bringing them before the courts, reduced the numbers committed to jail, because of those who previously came before the courts, a large number were fined, and being unable to pay their fines, were sent to jail. (Q. 9320b-9371b.) On the other hand, the police officers, by the system being to a large extent relieved from attending the courts to

give evidence against offenders, were less reluctant to make arrests, added to which the establishment of an efficient patrol and telephone system, by which the officers were enabled to send prisoners to the police stations, without having to accompany them through the crowded streets of the city, incurring the risk of being assaulted, led to greater efficiency in making arrests. (Q. 9372*b*.)

Mr. Whiting expressed the opinion that there was more drunkenness when the city was under the prohibitory law than there is under the present system. (Q. 9374*b*.)

Probably in no State of the union has so much attention been given to the collection of information in regard to crime, or to the elaboration of statistical data bearing upon social and economic questions, as in the state of Massachusetts; it is, nevertheless, a fact that this very elaboration has rendered the work of making sound deductions in many instances most difficult, and conclusions not a little uncertain, at least in the matter of the statistics of crime and the relation of those to the legislation of the state upon the liquor traffic. Most admirable reports are printed annually of arrests and commitments throughout the state, and of the population in the various institutions for the punishment and correction of offenders. It has, however, to be borne in mind, in comparing the general results of one period with those of another, that, "you have now six or seven classes of offenders where you had previously only three." (Q. 9335*b*.) So many have been the changes that it has been said the legislature of the state has made the creation of offences a state industry, and, further, that the methods of dealing with those offending have, from time to time, been changed.

Mr. Pettigrove has superintended the compilation of many of the annual reports of the board of prison commissioners, and is thoroughly conversant with the laws relating to the liquor traffic and their administration. He is in principle a prohibitionist, and thinks the system has advantages over the license system, but admits that "there was drunkenness under prohibition, and that was apparent to any one in the community; but whether there was as much drunkenness under the prohibitory law as there is under the license law, is still an open question." His personal opinion is that there was not, but he adds in another part of his evidence, "I do not think it is possible to prohibit the sale of liquor to persons who have acquired the habit and want it. I believe they will get it under any system." And further, "It is a difficult matter to reform a man by statute. As I say, a man who is disposed to drink will get liquor under any system. They always get liquor under the prohibitory law. They get it in Maine, although in the town where I was born and brought up in Maine, there was no liquor sold. It was in Calais. When I was a boy and saw a man staggering through the street, it was just as good evidence that he had been across the river to St. Stephens as if we had the testimony of a decent witness." He considered that the present law worked very satisfactorily. Under it, he said, a single property-owner within 25 feet of a place proposed to be licensed, could, by making an objection, prevent such license being issued. He stated that the present system of statistics did not cover the prohibition period, and for that period they were only obtainable from the returns of prosecutions.

The prison commissioners caused the returns for the year 1891 and 1892 to be dissected, and the *arrests* in cities separated from those made in towns. The following is the result; the ratio per 1,000 being added by this Commission:—

	Population 1890.	Drunkenness.		Other offences.		Total.		Year.
		Total.	Ratio per 1,000.	Total.	Ratio per 1,000.	Total.	Ratio per 1,000.	
In cities	1,372,300	51,093	37·23	24,508	17·78	75,601	55·09	1891
do	1,372,300	65,853	47·98	28,314	20·65	94,167	58·61	1892
In towns	866,643	5,419	6·25	6,094	7·03	11,513	13·28	1891
do	866,643	4,829	5·5	9,204	10·62	14,033	16·19	1892

Liquor Traffic—Commissioners' Report.

The population in towns is, of course, much smaller than in cities, and in many of them no licenses are issued. The population is that given in the United States census returns (1890) and adopted in the commissioners' reports; but it was doubtless in many of both the cities and towns larger in 1891 and 1892 than in 1890. The increase in the population of the state between 1885 and 1890 was 15·3 per cent. Of the increase in arrests for drunkenness in cities between 1891 and 1892, in round figures, 15,000, the city of Boston contributed about 8,000; and of the increase in arrests for other offences, in round numbers, 4,000, Boston contributed 25 per cent.

In the year ended 30th September, 1891, the number of convictions for all offences in the state of Massachusetts was 58,372. Taking the population as shown in the United States census on the 30th June, 1890, namely, 2,239,000, the ratio of convictions is 26·07 per 1,000. In Canada, in the same year, the convictions were 7·75 per 1,000. The convictions for drunkenness are not given separately in the Massachusetts returns.

The following table shows the *arrests* of all kinds in the State of Massachusetts from 1886 to 1892:—

Year.	Population.	Drunkenness.	Ratio per 1,000 of Population.	Other offences.	Ratio per 1,000 of Population.	Total.	Ratio per 1,000
1886.....	2,001,376	35,402	17·68	25,938	12·96	61,340	30·69
1887.....	2,062,417	41,456	20·10	26,235	12·67	67,691	32·08
1888.....	2,125,320	48,153	22·65	28,084	13·21	76,237	35·87
1889.....	2,190,142	53,158	24·27	29,958	13·67	83,116	37·67
1890.....	2,239,000	52,814	23·58	28,030	12·51	86,844	38·78
1891.....	2,306,100	56,512	24·50	30,602	13·27	87,114	37·77
1892.....	2,375,200	70,682	29·76	37,518	15·79	108,200	45·55

The following figures are taken from the reports of the prison commissioners of the state for the years 1891 and 1892. They show that, taking periods of ten years, the largest number *committed* to prison for *drunkenness* were of the ages from 31 to 40 in 1891, and 21 to 30 in 1892:—

Age.	1891.	1892.
From 12 to 20 years of age.....	612	280
“ 21 “ 30 “	6,380	2,812
“ 31 “ 40 “	6,422	2,665
“ 41 “ 50 “	4,034	1,800
“ 50 upwards.....	2,346	1,077
	19,794	8,637

Combining all offences, the largest numbers were in the period between 21 and 30 years of age both in 1891 and 1892.

In the class committed for drunkenness the reports show that there were, in 1891, 12,200, out of a total of 19,794, who had been previously committed. Of these 12,200, over 5,000 had been committed from six to fifty times and upwards. In 1892, 5,358, out of a total of 8,634, had been previously committed for the same offence, and of these 5,358, 1,960 had been committed from six to fifty times and upwards.

The commissioners, in their report for the year ended 30th September, 1892, remark :—

“The fact that 185 prisoners, whose ages range all the way from sixteen years to fifty, were committed (to the reformatory) for drunkenness during the year, leads us to call the attention of the general court to the unadvisability of sentencing persons for that offence to this institution. If the prisoner is a confirmed drunkard, who has been repeatedly sentenced to the house of correction, it seems to be a waste of time to commit him to the reformatory; if he is a young man whose only offence is that of drunkenness, it seems to be unwise to expose him to the influences of a prison for criminals for the purpose of attempting his reformation. It would undoubtedly be far better for the state if the persons who are repeatedly committed could be imprisoned in a workhouse, where they would be compelled to earn their own living. Unfortunately a large number of this class of drunkards have also the vagrant disposition, and might as properly be committed for tramping as for drunkenness. It would seem to be in the interest of good public policy to make the attempt to reform and correct the younger drunkards without subjecting them to the dangers already referred to.”

The following table shows the commitments to prisons in the state of Massachusetts from 1881 to 1892, inclusive :—

Year.	Population.	Offences against the person.	Offences against property.	Against public order, etc.	Total commitments.	Ratio per 1,000 of population.	Drunkenness.	Ratio per 1,000 population.
1881.....	1,814,823	1,686	2,223	2,223	17,062	9.45	10,930	6.02
1882.....	1,847,126	1,691	2,283	2,122	22,865	12.37	16,769	9.07
1883.....	1,880,004	1,660	2,352	2,259	24,125	12.83	17,854	9.47
1884.....	1,913,400	1,833	2,639	2,705	26,739	13.97	19,564	10.22
1885.....	1,942,141	1,879	2,918	3,153	26,651	13.72	18,701	9.62
1886.....	2,001,376	1,771	2,448	3,258	25,458	12.72	17,981	8.98
1887.....	2,062,417	1,651	2,449	2,773	26,825	13.00	19,952	9.67
1888.....	2,125,320	1,754	2,491	3,031	30,683	14.43	23,407	11.01
1889.....	2,190,142	1,888	2,779	3,548	34,094	15.56	25,879	11.81
1890.....	2,238,943	1,821	2,547	3,242	33,290	14.86	25,680	11.42
1891.....	2,306,100	1,799	2,762	3,440	27,795	12.05	19,794*	8.58
1892.....	2,375,200	2,195	2,899	4,133	17,861	7.52	8,634*	3.63

*The commitments for drunkenness were reduced by the change in the law for the punishment of that offence. (See evidence of Mr. Pettigrove and Mr. Whiting, pp. 737-748).

N.B.—In 1890 the population is taken from the U. S. census returns; in other years it is estimated.

Liquor Traffic—Commissioners' Report.

The commitments to prisons for the whole Dominion cannot be given accurately but those for the province of Ontario are published annually, and per 1,000 of the population they compare as follows with those of Massachusetts :—

Year.	MASSACHUSETTS.			ONTARIO.		
	Population.	For all offences.	Drunkenness.	Population.	For all offences.	Drunkenness.
		Per 1,000 of population.	Per 1,000 of population.		Per 1,000 of population.	Per 1,000 of population.
1882.....	1,847,126	12 37	9 07	1,944,889	4 94	1 79
1883.....	1,880,004	12 83	9 49	1,963,016	5 03	1 98
1884.....	1,913,400	13 97	10 22	1,981,311	6 09	2 34
1885.....	1,942,141	13 72	9 62	1,999,777	5 71	1 84
1886.....	2,001,376	12 72	8 98	2,018,415	5 27	1 76
1887.....	2,062,417	13 00	9 67	2,037,227	5 40	2 05
1888.....	2,125,320	14 43	11 01	2,056,214	6 05	2 16
1889.....	2,190,142	15 56	11 81	2,075,378	6 03	2 31
1890.....	2,238,943	14 86	11 42	2,094,721	5 63	2 18
1891.....	2,306,100	12 05	*8 58	2,114,321	4 92	1 70
1892.....	2,375,200	7 52	*3 63	2,134,026	4 22	1 28

*The commitments for drunkenness were reduced by the change in the law for the punishment of that offence. (See evidence of Mr. Pettigrove and Mr. Whiting, p. p.).

N.B.—For Massachusetts, in 1890 the population is taken from U. S. census returns, in other years it is estimated; for Ontario, the population is taken from census returns for 1891, and estimated for other years.

If the total convictions in Canada are taken, they compare as follows with the commitments to prison in the state of Massachusetts :—

Year.	Per 1,000 of the population.			
	Canada : Convictions.		Massachusetts : Commitments.	
	All offences.	Drunkenness.	All offences.	Drunkenness.
1882.....	7 16	2 63	12 37	9 07
1883.....	7 58	2 89	12 83	9 49
1884.....	6 66	2 22	13 97	10 22
1885.....	7 52	2 49	13 72	9 62
1886.....	7 49	2 45	12 72	8 98
1887.....	7 49	2 53	13 00	9 67
1888.....	8 08	2 74	14 43	11 01
1889.....	8 17	2 94	15 56	11 81
1890.....	8 09	2 94	14 86	11 42
1891.....	7 78	2 69	12 05	8 58
1892.....	7 22	2 35	7 52	3 63

The following table shows the number of votes cast in the state for and against the issue of licenses, from 1888 to 1894, the number of the various classes of licenses granted, and the amounts received therefor:—

Votes refer to the years	Shall licenses be granted?		Licenses issued in the preceding year.							Amounts received for licenses.
	Yes.	No.	1st class.	2nd class.	3rd class.	4th class.	5th class.	6th class.	Re-voked.	
										\$ cts.
1888.....	109,988	117,188	2,530	244	20	1,989	179	704	44	1,034,103 00
1889.....	125,481	107,404	2,544	227	23	1,851	187	999	96	1,286,305 83
1890.....	108,894	114,550	1,168	102	4	914	89	983	13	1,812,810 00

1894.....	147,812	147,108	1,206	44	1	1,081	64	1,019	15	1,922,105 25

It is, perhaps, unsafe to draw very decided conclusions from the arrests by the police in the different cities and towns in the state of Massachusetts, when comparing years in which no licenses have been granted with those in which the sale of liquor has been legalized. The changes from one system to another in some instances have been so rapid, and such small periods have intervened, that the no-license plan cannot, in some cases at any rate, have had a fair trial. The arrests in a number of cities have been obtained, and they, with the ratio per 1,000 thereof to the population, are set out in appendices Nos. 83 to 95. On the statements, the years in which no licenses were issued have been distinguished from those in which they were granted, and an examination of the figures will show that the arrests, as a rule, but not in all cases, were smaller in the years of no license than in those of license. But the ratio of arrests generally in Massachusetts is very largely in excess of the ratio in Canada. Malden, a place of 27,000 inhabitants, and where no licenses have been issued for several years back, has, as compared with other cities in the state, a low ratio of arrests; but it is not lower than the ratio in Quebec or Ottawa. The same remarks may be made in regard to Quincy, where the contest between the advocates of license and no-license has been carried on in a most belligerent manner, and apparently with success on the part of the no-license party. In both of these cities of Massachusetts the ratio of arrests has increased since 1889. Brocton, another no-license city, shows a much larger ratio of arrests than either Malden or Quincy. Cambridge is so near to Boston that the number of arrests there does not probably afford a safe basis for making comparisons. No licenses have been issued in that city for several years past, but the arrests for drunkenness have very largely increased since 1889.

On the question of drunkenness, the Hon. A. T. Whiting, chairman of the police commissioners of the city of Boston, was asked:—

“Do you think that there is more drunkenness now than there was when the previous law existed?” No, I cannot say that I think there is. * * * The number of assaults on constables under the present system has greatly decreased; it is not one in twenty-five of what it was under the old system.

“Can you remember the time when the city of Boston was under the prohibitory law?—Most decidedly I can. I remember it perfectly well, because I had a bar-room in operation then opposite my place of business, right under my nose. * * * I know how prohibition worked here; it was a perfect disgrace to Boston and to the state of Massachusetts. There was more intoxication here than ever I remember before or since.” (Q. 9372b-9574b.)

The commissioners of prisons in their report for the year 1893, in regard to the arrests in the state, show that the arrests in towns and cities for the year ended

Liquor Traffic—Commissioners' Report.

30th September, were 107,632. As compared with the previous year, there was a decrease of 568, and that, although there were fewer arrests, taking all offences together, than in the preceding year, the total arrests for drunkenness numbered 995 more in 1893 than in 1892. The total arrests in cities show a slight decrease, and those in towns an increase, and the arrests for drunkenness show a slight decrease in cities, but a considerable increase in towns.

The commissioners say: "In the period from 1st July to 30th September, 1893, 14,653 persons were arrested for drunkenness, whereas, during the same period in 1892, there were 18,588 so arrested. As the falling off in the three months is so great it will be seen that the number of arrests for this offence from 1st September, 1892, to 30th June, 1893, must have largely exceeded the number for the corresponding period in the preceding year. It is very evident, therefore, that the effect of the law which went into operation on 1st July, has been to largely reduce the number of arrests for drunkenness, particularly in the cities."

The law under which the large number of cases of drunkenness were dealt with outside of the court was changed in July, 1893, as has already been explained. It is evident that the effect of this change has been to largely reduce the number of arrests for drunkenness, which in the three months ended 30th September, 1893, were over 21 per cent less than in the same period of 1892. This fact has to be borne in mind when considering the tables for arrests in the cities of the state of Massachusetts given in Appendices Nos. 83 to 95. For instance, Lawrence, which issued no licenses in 1893, shows a reduction in the number of arrests for drunkenness of 470 in the year. Of this reduction it appears that no less 358 took place between the 1st of July and the 30th of September, 1893. Again, Lynn, which issued no licenses in 1893, shows a reduction of 996 in the number of arrests for the year ended 30th September, 1893, as compared with 1892. Between the 1st of July and the 30th of September, 1893, the reduction was 557.

An analysis of the voting on the question of issuing licenses in 1892 shows the following result:—

Places previously under license.	Population.	Voted.		Places not previously under license.	Population.	Voted.	
		Yes.	No.			Yes.	No.

Total votes cast for granting of licenses,	119,191.
“ “ “ against granting “	127,123.

In 1893, the Governor of the commonwealth appointed a commission to investigate the Gothenburg and Norwegian systems of licensing the sale of intoxicating liquors.

The report of the commission was published in 1894 (House document, number 192, 1894). The commission appointed a gentleman to visit Sweden and Norway, who, after making a full investigation on the ground, made a report for the information and guidance of the commission. This report has been printed, along with the draft of “An Act to establish the Norwegian system of selling intoxicating liquors” in the state of Massachusetts.

It provides that a petition signed by qualified voters of any city or town, not less in number than one for every one hundred persons who voted at the immediately preceding annual election in such city or town, to the board of aldermen of such city, or the selectmen of such town, asking them to insert in the warrant for the annual municipal election or town meeting an article providing for a vote upon the question: “If licenses for the sale of intoxicating liquors are granted in this city (or town), shall they be granted under the Norwegian system?” If the petition is duly filed with the bond as provided for in the Act, the aldermen or selectmen, as the case may be, shall insert such article in said warrant.

The bond is to be in the penal sum of one thousand dollars in towns, or five thousand dollars in cities, executed by five citizens, approved by a master in chancery. The obligation is that permission being granted to sell on the Norwegian system, the petitioners will form a corporation to take over the licenses which may be issued, and carry on the business for at least three years. Only one corporation is to do business within a town or city. Shareholders are not to receive more than 5 per cent on the par value on their stock.

“After all the expenses of the business and the dividend have been paid, there shall first be established a reserve fund equal to the par value of the capital stock, and after the payment of said dividend and the establishment of said reserve fund, the remainder of the net profits, if any, shall, at a fixed time in each year, be expended for one or more objects of general public benefit and utility, such as industrial education, coffee-houses and reading-rooms, parks, hospitals, public baths and sanitary improvements. The objects of such expenditure in each year, and the proportion of said remainder to be expended for each one of the objects selected, shall be determined by the shareholders at a meeting called for that purpose.”

Liquor Traffic—Commissioners' Report.

The commissioners of saving banks are empowered to investigate, examine and proceed against every such corporation in like manner and with the same powers as they now have or shall be given in the case of saving banks. The commissioners are to see that the shareholders do not, either directly or indirectly, receive a larger dividend than five per cent. The corporation shall annually, within ten days after the last business day of its fiscal year, make a return to the said commissioners, specifying such details as to its business as the said commissioners may direct. The commissioners are to supply the necessary blank forms for the making of such returns. The licenses granted to the corporation are to be subject to all the existing laws and to all the conditions imposed upon licenses granted to private licensees, which are not inconsistent with the Act. The number of licenses to be issued to any corporation is to be fixed by the directors of the corporation, subject to the approval of the licensing authority of the city or town, but the licenses under the first four classes, as set forth in the existing law, are not to exceed one for each two thousand of the population, as ascertained by the last national or state census. There are two other classes of licenses besides the four; one is licenses to clubs, the other licenses to druggists and apothecaries, the latter to sell only for medicinal purposes on the prescription of a physician. The act specifies the limits of the charges to be made for licenses. Five or more persons may form a corporation.

The proposals have not yet (December, 1894,) received the approval of the legislature of the state.

BOSTON.

The liquor traffic in the city of Boston is regulated by a board of police commissioners, three in number, the members of which are appointed by the state government. This board has been in existence for upwards of eight years. The Hon. Albert Whiting has been chairman of the board from the day of its creation. The Board appoints the chief of police and the police force.

Mr. Whiting very kindly supplied much information to the commissioners, and in his evidence very fully described the manner in which the liquor traffic in the city is regulated.

In Boston, as in other cities and municipal districts of Massachusetts, a vote is taken every year on the question of whether licenses shall be issued or not. The following table shows the votes cast each year since 1888. In 1892 the majority in favour of licenses was only 1,140. The opinion was expressed to the commissioners that that this comparatively close vote could not be taken as indicating a stronger opposition than previously to the granting of the licenses, but was the result of a feeling amongst certain classes of the community who look upon the high licenses exacted in Boston as favouring the wealthier class, and rendering it impossible for a man without considerable capital to engage in the business.

CITY OF BOSTON, MASS.

Votes cast on the question of licenses. "Shall licenses be granted for the sale of intoxicating liquors in this city (or town)?"

Year.	Population.	Yes.	No.	Remarks.
1888.....	390,392	35,744	17,660	
1889.....	390,393	27,134	17,875	
1890.....	448,477	29,150	13,910	
1891.....	448,477	25,648	21,552	
1892.....	448,477	31,616	30,476	
1893.....	448,477	30,145	20,556	

The number of licenses issued is restricted to one to every five hundred of the population. The board of police commissioners appear to issue annually a notice in the form printed in Appendix 96. This notice sets forth the fees to be paid, and it

will be seen from the terms of it, that persons holding a license and expecting to obtain a renewal of it, have to make application to the board. Printed forms on which applications have to be made are supplied. These forms are numerous, and are, of course, varied to meet the conditions on which the various classes of licenses are issued. Every application has to be reported upon by the police on the form prescribed, copies of which are given in Appendices Nos. 101-2-3. If the application is rejected, a simple notification by the clerk of the board is given to the applicant. In cases where the application is approved, an intimation is sent on form Appendix No. 98. The licensee has to provide sureties who give a bond to the city in the form printed in Appendix No. 99. The sureties have also to make the statement shown in form Appendix No. 100. In the case of a report being made against the holder of a license, which the commissioners think of sufficient importance to be considered, the licensee is cited before the commissioners, who, if after giving the accused a reasonable opportunity to be heard, considers that he has violated, or permitted to be violated, the conditions of the said license, order it to be cancelled. A notice signed by the clerk of the board in the form B, Appendix No. 97, delivered by the police, cancels the license, and the holder is debarred from obtaining any license thereafter. In cases where the transfer of a license is desired, a petition has to be sent to the commissioners, who can, if they think proper, authorize such transfer. A transfer being authorized, a fee is charged to cover the expense of notice, etc.

Mr. Whiting was so good as to supply to the commission a statement of the amounts received and paid into the city treasury for license fees from 1st May, 1885, to 1st December, 1892, which are as under:—

From May 1st, 1885, to Dec. 1st, 1885.....	\$505,093
“ Dec. 1st, 1885, to Dec. 1st, 1886.....	608,113
“ Dec. 1st, 1886, to Dec. 1st, 1887.....	588,497
“ Dec. 1st, 1887, to Dec. 1st, 1888.....	618,918

Liquor Traffic—Commissioners' Report.

It will be noticed that, for almost every class of license, the fees were steadily increased from 1885 to 1890, and that from that year to 1892 no change was made. The total revenue collected, it will be seen, fell off slightly in the year which ended in 1887, but, with that exception, it has steadily increased, notwithstanding the fact that the number of licenses granted were very largely reduced. The following statement also supplied to the commissioners gives much very interesting information.

LIQUOR work, etc., of the Police Department under the Board of Police.

	July 23 to Dec. 1, 1885.	1886.	1887.	1888.	1889.	1890.	1891.	1892.

<i>Number of hearings given.</i>								
Complaints against liquor licensees	207	267	133	164	75	32	20	26
Rejected applications for liquor licenses.....	48	426	248	215	14	12	30	40
Complaints against officers.....	44	123	94	80	98	131	90	60
Miscellaneous hearings.....	19	31	20	23	50	90	64	41
Total.....	6,318	847	495	482	237	265	204	167
Arrests for drunkenness.....	6,067	16,179	19,141	23,044	24,991	23,970	27,396	33,698
Total number of arrests.....	11,062	28,510	30,681	36,009	40,066	37,492	41,132	48,463

From the preceding figures it will be observed that the number of licenses, which in 1885 were 2,677, fell to 896 in 1892.

The number of complaints for violation of the conditions of the licenses made to the board fell from 207 in 1885 to 26 in 1892, and the number of complaints made in court from 125 to 16. The seizures made, however, increased from 240 in 1885 to 1,633 in 1892, and the arrests for selling without license from 150 to 401. The number of licenses forfeited, which in 1886 were 108, fell to 1 in 1892. Applications for licenses which were rejected by the commissioners were, in 1886, 1,068, and in 1892, 229.

The statement shows a very large increase in the arrests for drunkenness; in short, in 1892 they were more than double what they were in 1886. The population in 1885 was 390,406, and in 1892, 448,477, and increase of 15 per cent.

MINNESOTA.

This state is under high license and local option. Governor Merriam, in a very interesting letter to this Commission, writes :—

“What is known as the high license system is in vogue in this state. The license fee in cities of 10,000 or more population is fixed at \$1,000, or such fee in excess of such sum as the city council shall prescribe; and in cities with less than 10,000 population, and in country villages or boroughs the license fee is \$500, or such fee in excess of said sum as the city council of a city, or in case of a county, the county commissioners, or of a village or borough the municipal authorities, of such village or borough shall fix and prescribe. I am unable to furnish you any definite statistics bearing on this subject, but in my opinion there can be no question but that high license reduces the consumption of intoxicating beverages, and so diminishes drunkenness, resulting, further, in a less number of criminals, of paupers, of insane, and so of all public expenditure of every class.

“The statistics of this state, however, with reference to crime, pauperism and insanity could not be directly shown, for two reasons :—First, high license laws have not been in operation long enough to show so marked an effect as to enter into our public statistics; second, there are, besides drunkenness, so many concurrent causes of crime, pauperism and insanity that the student of sociology is very careful not to attribute a specific increase or diminution to some specific cause without being quite certain that no other causes have been active during the same time. One thing is certain, that the number of liquor saloons has been largely decreasing in Minnesota by reason of the adoption of the high license and bond laws, and the liquor traffic would be very glad to be relieved from the burden. License, therefore, tends to diminish drunkenness and the prosperity of the liquor traffic in all countries.’ (Appendix 76.)

The Act provides that the licensing authorities are the commissioners of a county or the authorities of any municipal corporation. The applications for licenses, when received by the county auditor or the clerk of the municipal corporations are published in a newspaper at least two weeks before the hearing takes place.

Liquor Traffic—Commissioners' Report.

Any person may appear and object to the granting of a license, and if it should appear that the applicant had knowingly violated the license act within the year preceding the application, or sold to minors, habitual drunkards, or intemperate drinkers, after receiving a notice forbidding such sale, within five years preceding such application, the board shall refuse to grant the license. Licensees shall file a bond of \$2,000 to carry out the law.

The following are the license fees:—In a city of 10,000 people or more, \$1,000, or such amount in excess as the city council may from time to time prescribe; in a city of less than 10,000, \$500, or such amount in excess as the city council may prescribe; in county, village or borough, \$500, or such amount in excess as the county commissioners or municipal authorities may fix and prescribe.

The following punishment is prescribed for drunkards:—For first offence, fine of not less than \$10 or more than \$40, or imprisonment from ten to forty days; for second offence, imprisonment from thirty to sixty days, or a fine from \$20 to \$50; for the third and all subsequent offences, imprisonment from sixty to ninety days.

Unlawful sales include sales to a minor, student or pupil in any public school, seminary, academy or other institution of learning, as well as to a drunkard or intemperate drinker. The punishment is a fine of not less than \$25 or more than \$100, or thirty to ninety days imprisonment.

The Act contains provision forbidding the sale of liquor within the capitol building during the session of the legislature, or on the state fair grounds, or within half a mile of the state university.

Provision is made for the preparation of a complete list of licensees, and this shall be open to the inspection of any resident of the county without charge.

The local option feature of the law is embodied in section 1856, and is as follows:—

“The board of county commissioners may grant licenses for the sale in any quantity of spirituous, vinous, fermented or malt liquor within the proper counties to any person of the age of 21; provided, that nothing herein contained shall be so construed as to prevent the people of any municipal county from deciding for themselves whether licenses shall be granted to any person or persons in said township, and the town clerk is hereby required, on the petition of ten or more legal ‘voters’ of said township at any time not less than twenty days before any annual town meeting, to give notice that the question of license will be submitted at said election. And notice therefor shall be given to the town clerk, and the said question of license shall be determined by ballot containing the words, ‘in favour of license,’ or, ‘against license,’ which vote shall be returned, and if such returns show that a majority of the votes cast at said election shall be against license, then it shall be the duty of the town clerk to notify the county auditor thereof, and in such case the board of county commissioners shall grant no licenses to said township.”

Statistics of arrests in St. Paul and Minneapolis will be found in Appendices Nos. 159 and 160.

The United States census returns supply the following information. No statistics of commitments to jails, or convictions for crime, are available.

NEBRASKA.

Correspondence which has passed between the executive of this state and the commission will be found in Appendix No. 76. The Secretary of State, writing on the 19th March, 1894, says:—"We have what is known as the Slocum law, or local option. I know of but one county in the state (York) where this law is in force."

The state is under high license and local option.

The present law has been in operation since 1881. The previous law, passed in 1858, allowed the county commissioners to grant licenses and to fix the license anywhere between \$25 and \$500 and cities could impose an additional amount, not exceeding \$1,000.

In 1890 a popular vote was taken on a prohibition amendment to the constitution, but it was rejected by 111,728 votes to 82,292. A proposal to add a licensing amendment to the constitution was also rejected by 91,084 to 75,462 votes.

Applicants for licenses must obtain the support of a majority of the freeholders in towns under township organization, and in other places a majority of the freeholders of the precinct where the house proposed to be licensed is situate. The licensing authorities, however, may refuse all applications, if public sentiment, in their opinion, demands such action. There are, in fact, many places in the state where no licenses are issued. The state has really local option, as the question of license or no license is sometimes made a direct issue in the election of commissioners.

The present law, which is known as the "Slocum" law, provides that the licensing authority in Omaha shall be the board of fire and police commissioners; in Lincoln, the excise board; in other cities, the city council; in incorporated villages, the board of trustees; and elsewhere the county board. Notice of application for a license has to be published, and if objection is made, a day is appointed for the hearing. If it appears that the applicant has violated the liquor law within a year, or has had a former license revoked, the application must be refused; in other cases, the licensing authority may grant the licenses "as deemed expedient."

A license may be granted only upon application, by petition of a majority of the resident freeholders of the town, if the county is under township organization; and if not under township organization, then a majority of the resident freeholders of the precinct where the sale of such liquor is proposed to take place.

The license fee is fixed by the licensing authority, but may not be less than \$1,000 in cities with a population exceeding 10,000; or \$500 elsewhere. The licensee is required to enter into a bond in the sum of \$5,000 with two freeholders of the county as sureties.

The following penalties are provided: Selling to a minor, \$25; selling or giving liquor to an Indian not a citizen, \$1,000, or imprisonment from two to five years; selling or keeping for sale without license, \$100 to \$500, or imprisonment not exceeding one month; selling liquor adulterated with strychnine, strontia, sugar of lead, or any other substance, \$100.

Permits may be issued to druggists, each of whom is obliged to keep a detailed record, open to public inspection, of his sales of liquor, and to report on oath half-yearly to the licensing authority. The penalty provided is a fine from \$20 to \$100, and imprisonment ten to thirty days.

All vendors of liquors are required to keep their doors and windows unobstructed by screens or otherwise.

"Treating," or giving away liquor in any saloon or public place where liquor is sold for consumption on the premises is prohibited under penalty.

Any person found intoxicated is to be arrested, and on conviction fined \$10 or be imprisoned not more than thirty days; but the punishment may be wholly or partly remitted on his giving sworn evidence when, where and from whom he received the liquor.

There is a civil damage law which provides as follows: "The person so licensed shall pay all damages that the community or individuals may sustain in consequence of such traffic; who shall support all paupers, widows or orphans, and

Liquor Traffic—Commissioners' Report.

the expenses of all civil and criminal prosecutions growing out of or justly attributed to his traffic in intoxicating drinks." Such damages and expenses may be recovered by an action on his bond. On the person becoming a pauper by reason of intemperance, the poor authorities may sue on the bond of any licensee who was in the habit of supplying him with liquor. All fines are paid to the school board, and the complaining witness is to receive out of the local funds under the control of the licensing authority a sum equal to one-fourth of the amount so paid.

It is claimed that the effect of the high license system has been to largely reduce the number of licenses issued. In Omaha 251 licenses were granted in 1891, besides 72 permits to druggists. This gives a ratio of one license to nearly 600 people. In Lincoln only about 40 liquor licenses are granted, considerably less than one to 1,000.

Mr. Fanshawe in his book gives the following table of total arrests and arrests for drunkenness in Omaha under high license, and in Council Bluffs, Iowa, under prohibition:—

	1889.		1890.		1891.	
	Total arrests.	Arrests per 1,000.	Total arrests.	Arrests per 1,000.	Total arrests.	Arrests per 1,000.
Omaha, Nebraska—Under high license : Population (1890,) 140,500 :—

Arrests for drunkenness.....	2,094	14·90	2,275	16·19	1,667	11·86
Council Bluffs, Iowa—Under prohibition : Population (1890) 21,500 :—			1889.		1892.	
Total arrests.....			1,815	84·41	1,482	68·93
Arrests for drunkenness.....			736	34·23	696	32·37

NOTE.—In Appendices Nos. 158 and 168 will be found statements of arrests obtained from Omaha and Council Bluffs.

The state bureau of labour statistics in their report for 1893-4 state that in response to circulars sent to every village or city clerk in the state, over 1,000 blanks were sent out and seven hundred replies were received 475, reported "no saloons," and 225 reported a total of 873 saloons, paying license fees ranging from \$25 to \$1,500 per annum, and aggregating the sum of \$713,550. Of this amount 80 saloons paid \$13,880 occupation and municipal tax, which amount, however, is included in the above total.

Omaha and Lincoln, with a total population of 200,000, collect \$269,000 from 269 saloons. The average license fee in the state is \$818.80. The report says:—"A rough estimate of the total receipts of the average saloon for the year necessary to cover known expenses, including license fee and all other expenses, is certainly not less than \$4,000; 873 saloons at \$4,000 each make \$3,492,000, or \$3.23 for every man, woman and child constituting our population of 1,058,910." It concludes by contrasting this sum with the amount (\$1,104,470) voted by the last legislature for current expenses. (P. 277).

The United States census returns supply the following information. No statistics of commitments to jails or convictions for crime are available :—

	1890.	Per 1,000 of population.	1880.	Per 1,000 of population.

*No information for 1880.

ARKANSAS.

This state is under high license and local option.

A letter from the governor of the state, dated the 17th day of May, 1892, will be found in Appendix No. 76. No communication was received from Dr. Bennett, the gentleman mentioned in Gov. Eagle's letter.

In the early days, to prevent disorder, no person was allowed to keep a public house without a license, the fee being from \$10 to \$30, whilst slaves and soldiers were prohibited from obtaining liquor. In 1838 the fee was made \$10 to \$100, with a \$50 penalty for any violation. Licenses under both these arrangements were granted by the county court, and under the latter the applicant had to procure a petition, signed by a majority of the resident voters of the township, in favour of his license being granted. In 1854 Phillips county and Taylor county, in Columbia district, were placed under prohibition, and sales to Indians were forbidden, under a penalty of from \$1 to \$500. In 1860 thirteen local prohibitory laws were enacted for churches, schools and townships, and four more in 1866. At this time the minimum license fee was raised to \$25 and the maximum to \$500 in any county where licenses could be issued. In 1871 a county tax of \$100 was placed on all liquor sellers, and in 1873 a state tax of \$100 was added, sales for medicinal purposes being exempted, whilst the penalty for selling without a license became, instead of from \$1 to \$500, from \$200 to \$1,000. In Washington county the principle was introduced of awarding civil damages in favour of those injured by the sale of intoxicating liquors, and against the vendor. Prohibition on account of race or colour was done away with.

Six local prohibitory laws were enacted in 1874, six in 1879 and over twenty in 1881, whilst about the same number have been passed every session since.

The present law was passed in 1879, and was added to in 1881 and 1883. It provides :—

That all sales of liquor must be under license, except that manufacturers may sell in original packages of not less than five gallons each. The county court may issue licenses to any one who is 21 years of age, provided that the vote of the township for which the license is required has been recorded in allowing the issue of licenses. Application must be verified by oath, and accompanied by the receipt of the collector for \$400 as county tax, \$300 as state tax, 1 per cent on the amount paid as collector's fees, and \$2 as clerk's fee. The penalty for selling without a license is double the amount of license fee, and each day of such sale constitutes a special offence.

Every applicant shall give bond in \$2,000 conditioned to pay all damages caused by reason of liquors sold at his house, and all such sums of money as may be lost at gaming in his saloon.

Before the license is granted the applicant must produce the receipts for the foregoing payments, and further pay for the use of the county such additional sum,

Liquor Traffic—Commissioners' Report.

being not less than \$50 nor more than \$200, as shall be determined by the county court.

Wines from grapes, berries, and other fruits, sold by the manufacturer, who must manufacture and sell no other liquors, are exempted.

No debts for liquor are recoverable.

Allowing gaming or selling to United States soldiers forfeits the license. Selling liquor to a minor without the consent of the parent or guardian incurs a fine of \$50 to \$100. Selling to Indians incurs a fine of \$1 to \$500. For selling on Sunday the fine is from \$25 to \$100.

The provisions for preventing the sale of intoxicating liquors in any locality comprise three distinct methods:—

At each general election for state officers, the question shall be submitted to the electors whether or not licenses shall be issued in the county for the next two years.

Whenever the adult inhabitants residing within three miles of any school-house, academy, or institution of learning, or of any church-house, shall desire it, and a majority thereof shall petition therefor, the county court shall make an order prohibiting the sale of liquor there for two years. Females, as well as males, are included as inhabitants in this section. This is the second method of local prohibition.

The third method is by means of a special act of the legislature. A large number of these special acts have been passed since 1883, and so far none of them have been repealed.

The three-mile law does not prohibit the use of wine for sacramental purposes, or sales on a physician's prescription. The physician prescribing has to make an affidavit of necessity.

At the elections in September, 1892, twenty-four counties, about one-third of those in the state, voted against the issue of licenses. It is estimated that at present about one-half of the whole state is under local option. More bills affecting the liquor interest were introduced into the state legislature than on any other subject.

It would appear that the term "local prohibitory laws for churches, schools and townships" means that if the adult population residing within three miles of a church, schoolhouse, academy or institution of learning, petition the clerk of the county court, that court is bound to issue an order prohibiting the sale of liquor within the district for a period of two years.

The United States census returns supply the following information. No statistics of commitments to jails or convictions for crime are available:—

CALIFORNIA.

Letters received from the executive department of this state, dated 10th April, 1893, and 15th January, 1894, will be found in appendix No. 76.

Under the constitution of California, any county, city, town or township may make and enforce within its limits all such local, police, sanitary and other regulations as are not in conflict with general laws. The effect of this is to give to every

municipality of local administration the power of dealing with the liquor traffic; or, in other words, the constitution gives to each local authority power to make such arrangements as it may think fit, regulating, restricting or entirely prohibiting the sale of liquor within the area which it controls.

The secretary of the governor of the state, in a letter to the commission, says:—"The sales of liquor are affairs of the counties, they having the right to adopt ordinances concerning them." (Appendix 76.)

The state has therefore no general liquor law. The license system prevails in San Francisco and the principal centres. Prohibition prevails in one or two counties and several towns and districts.

California is a large wine-producing state, and in this respect occupies an exceptional position. According to statements in the national census of 1890, there is an established home demand for California wine to the amount of 1,000,000 gallons a month, and there were exported in 1889 about 312,000 gallons, valued at \$217,000.

The city ordinances of San Francisco provide as follows:—

"No license as a retail liquor dealer, or as a grocer and retail liquor dealer, shall be issued by the collector of licenses, unless the person desiring the same shall have obtained the written consent of a majority of the board of police commissioners of the city and county of San Francisco to carry on or conduct said business; but in case of refusal of such consent upon application, said board of police commissioners shall grant the same upon the written recommendation of not less than two citizens of San Francisco owning real estate in the block or square in which said business of retail liquor dealer is to be carried on. (Ordinance xxxix, clause 2).

"As a matter of practice, the commissioners require every new application to be backed by the support of some persons in the block." (Liquor Legislation, by Fanshawe, page 310.)

Licenses are issued for a period of three months, and the penalty of infringement of the law is a fine not exceeding \$1,000, or imprisonment not exceeding six months, or both.

Bar-rooms must be closed between midnight and 6 a. m. The penalty for drunkenness in the public streets or public places is a fine not exceeding \$1,000, or imprisonment not exceeding six months, or both.

No liquor may be sold to a minor under 18 years; and no minor may be permitted to enter a saloon or public place where liquors are sold under a penalty payable by the keeper of the place ranging from a \$100 to \$300.

The number of liquor shops on June 30, 1892, was reported to be 3,192.

In some cities and towns the license fee is as high as \$1,000 per annum. In Los Angeles the fee is \$50 per month, and the applicant is required to get the support of three-fourths of the owners in the same block.

The towns of Pasadena and Riverside were formerly under prohibitory ordinances; but these were repealed. What has taken place since the visit of the commissioners is referred to in a later part of this paper.

RIVERSIDE AND PASADENA.

His Honour Judge McDonald and Rev. Dr. McLeod, members of this commission, visited Southern California, and made inquiry on the spot as to the method adopted for regulating the liquor traffic in Riverside and Pasadena.

Their visit was the outcome of statements made by Mr. John W. Sifton, of Winnipeg, when giving evidence before this commission, to the effect that prohibition was successfully enforced in these towns. His testimony was as follows:—

"Have you any knowledge of any prohibition in any other place?—I lived for some time in southern California and was in two prohibition towns, one with 10,000 inhabitants near Los Angeles—Pasadena, where I was for a considerable time.

"And the other was what?—Riverside.

"How far are they from each other?—About 40 miles.

Liquor Traffic—Commissioners' Report.

"From your observation, was prohibition enforced there?—I think it was the most thorough and successful thing I ever knew. They had it in Pasadena. There was one constable there, and he was also night watchman and health inspector, and held two or three other offices.

"And did he succeed in enforcing the law?—He told me he had no trouble. He told me they would come down from Los Angeles drunk, they would get out of the train, and they would be put into the lock-up. It is ten miles from Los Angeles, and nearly 600 south of San Francisco." (Q. 32109-32113.)

The Commissioners ascertained, on visiting Pasadena and Riverside, that neither town is under total prohibition; that while these new western towns had been established under a prohibitory system, and were being settled by people from the eastern states, from some of the western states and from Canada, all of the higher class, and the majority entertaining total abstinence principles, they had found total prohibition impracticable, and that consequently these communities reverted to a system of regulation, rather than of total prohibition. The history of the settlement of the southern portion of California possesses many points of interest.

The state itself permits localities to deal with the liquor traffic. Outside of incorporated cities, an applicant for a license simply requires to obtain signatures of twelve freeholders to a petition to the supervisors of the county. Although discretion rests with the licensing board, it is not exercised unless the applicant is of bad character. The license fee is regulated according to the prospective business, and ranges from \$25 to \$100. The effect of this plan is practically to give free trade in liquor in communities outside of incorporated municipalities. In these incorporated municipalities many experiments have been made with a view to satisfactorily solving the problem of how effectually to deal with the liquor traffic. Prohibition has been tried in several towns, notably in Pasadena and Riverside. Riverside undoubtedly offered a suitable field in which to carry out a prohibition experiment. The settlement was commenced with the idea of adopting permanently a prohibitory system. The settlers belonged to a superior class and were largely total abstainers. They were generally possessed of some means; they were settled in a portion of the continent having exceptional advantages as regards climate; they were led by men who had occupied prominent positions in eastern communities, and were resolved to build up on the Pacific slope a model town. No pauper class or criminal class threatened the success of the scheme. Thus the men and their environment were calculated in the highest degree to achieve success for the prohibitory system, if such were possible.

The settlement grew rapidly, the population increasing from a nucleus of two or three score to 5,000 people within about five years. The community is a model one in every respect. It is temperate, law-abiding, progressive and prosperous. But even here it is divided practically into two classes, one being the owners of orange groves or ranches, as they are termed, and the other being composed mainly of the business people and others who earn their living by trade.

Riverside, according to the terms of the state law, was under the control of the supervisors of the county, as regards the liquor traffic, until its incorporation. Accordingly there was practically free liquor for a brief period in the very early days. Then the town elected an anti-saloon board of trustees, and that board abolished the traffic. Three saloons were running at that time, and it was reported that there was a good deal of drinking going on. During two years saloons were abolished. There was, however, illicit sale. The number of places illegally selling was placed at from a dozen to twenty-five. There was, moreover, a large importation of liquor from outside, San Bernardino and Los Angeles being within easy distance. The drug stores sold liquor in large quantities, and prescriptions, it appears, could be obtained for a small consideration for any purpose wanted. The board of trustees, composed altogether of prohibitionists, with one exception, ruled the town for two or three years. They raised large sums of money for the purpose of carrying out prohibition ideas, and they expended \$2,000 of the town's money in trying to prevent clandestine sale of liquor. The attempt to suppress the sale, however, was like an effort, as a witness put it, "to put out fire with oil. It started

on the other side, and simply went to another place, for the demand for liquor had to be met." (Q. 8c.) Prohibition proved impossible of enforcement. Liquor was obtained in the city; it was brought in from outside places; it was obtained in drug stores. And the consumption increased. While residents could obtain alcoholic beverages freely, tourists visiting this winter resort were prohibited obtaining wine at meal times, even when ordered by their physicians. Witnesses concurred in the opinion that when tourists found they could not get even the wines of the country for beverage purposes they frequently left town by an early train, so that, eventually, a high license board was elected. A high license system had been in force two and a-half years when this commission visited the town. Under it two licenses are granted. The board, however, allows anyone keeping an hotel with 40 rooms to furnish wine and beer to guests at meal times, but no bar is allowed in such hotels.

Under the present system the licensee is called upon to pay fees to the amount of \$2,325 annually, viz., \$2,000 to the city, \$300 to the county, and \$25 to the Federal Government for the United States tax certificate. It was stated before the Commission that, notwithstanding this high license, the trade is profitable. Application for a third license was made some time ago, but was refused by the licensing board, on the ground that satisfactory bonds had not been filed; but popular opinion in the town appeared to be adverse to the granting of an additional license.

The town appeared to be most orderly and well conducted in every particular, and the people to be a superior class, and generally in comfortable circumstances. It was stated in evidence that while there had been a little more crime during the first month of the licensing system, it had even diminished during the last two months, as compared with the prohibition period. It was, moreover, conceded that there were not so many unlicensed places now as formerly.

Prohibition or license appears to constitute the sole issue at the elections for members of the board of supervisors. The voting takes place every two years, and as the elections are carried by narrow majorities, this question will doubtless continue for some years to be the issue.

Meanwhile the town is growing rapidly in wealth and population, and it has become a popular resort. The saloons do not appear to be detrimental to the public interest. They are situated outside of the residential wards, and are even outside of the main business streets, so that, as a leading banker stated, "a man could go through the town twenty times and not find them (the saloons)." They are not allowed to be within a hundred feet of church, schoolhouse or postoffice. (Q. 107b and 108b.)

Pasadena, another model town and winter resort, was visited by the members of the Commission. Within five years it has acquired a population of 3,000 inhabitants. Like its sister city, Riverside, Pasadena commenced as a prohibition town. It was first settled by the best class of people from the east, especially from the New England states, and the leading men who promoted its settlement were total abstainers. For three years after the city was organized, the "rank prohibition element," as local witnesses called it, ran the town. The prohibition advocates were not only opposed to saloons, but desired to prevent the inhabitants obtaining liquor from outside towns and keeping it in their own homes. An ordinance was passed for absolute prohibition; no liquor could be sold in the town for drinking purposes. Even tourists arriving from the east who were recommended to drink California wine were sought to be prohibited, and the prohibitionists publicly declared that no wine, beer or liquor of any kind should be used in the town.

A considerable section of the people were opposed to this extreme measure, and candidates were nominated for the board of supervisors on the platform that the board would allow restaurants and hotels to serve liquor at meals, but under no circumstances would a bar be permitted.

Mr. T. P. Lukens, president of the Pasadena National Bank, and also one of the trustees of the town, stated to this commission that "within one year from the time that we were elected and put that system into operation, the people were satisfied that it was the best thing to do, and the city made much more rapid

Liquor Traffic—Commissioners' Report.

strides than it had ever done under absolute prohibition, because the young men growing up here have no temptation laid before them whatever. We began to educate our people not to use liquor, and they have not acquired a taste for it, and so the next generation will be comparatively temperate people. The fact is, they have no occasion to drink. The system is working beautifully. We have now been elected three years on this platform, and even a great many of the strongest prohibitionists are satisfied that it is the best thing to do." (Q. 197*b*.)

Under prohibition there was much illicit selling. Strong efforts were made to suppress the illicit places, but it was found almost impossible to convict the parties according to the statements of gentlemen heard by this Commission. Mr. Lukens, referring to this matter, said: "As soon as our party was elected, every one of the places shut up of its own accord. They were satisfied with the new system, and they thought it was a reasonable one. The present system is very much better than the former system of attempted prohibition, and we have accomplished a great deal more under the present system than under prohibition." (Q. 213*b*. and 220*b*.)

The opinion generally held by the people was thus stated: A large majority of the citizens would be glad to see liquor annihilated from the face of the earth, but there is not a majority who favour absolute prohibition; they are in favour of voluntary total abstinence. Mr. P. M. Greene, president of the First National Bank of Pasadena, and one of the original founders of the settlement, said: "The community is a sober and law-abiding one. You very seldom see a drunken man. We have from the beginning endeavoured to keep down the open bar, and we have been successful. Theoretically, I have been a strict prohibitionist, but it is impossible to enforce such a law here under our circumstances." (Q. 262*b*–263*b* and 278*b*.)

Mr. W. H. Rose, recorder of the town, considered that the modified system worked most satisfactorily. Under prohibition, he said, there was much illicit sale of beer, wine and whisky; there was also a large sale at the drug stores. He explained the reason for adopting the modified system, as follows: "I think the principal reason that led to it (the change) was the fact that the more rigid prohibitionists were prosecuting everybody—they were not particular. Another action which the people resented was the employment of paid spies, men who worked themselves into the confidence of the saloon keepers who were supposed to be selling, and induced them, or rather seduced them, to act in violation of the ordinance, and then arrested and prosecuted them. That caused a revulsion on the part of more temperate men, who did not approve of that way of doing business. Then there was a good deal of talk in regard to the revenue question, and there was a good deal of complaint by visitors that they could not get at the hotels liquors which they had been ordered to take by their physicians." (Q. 329*b*.) Under the interpretation of the trustees, the hotels and restaurants are allowed to furnish liquor to their guests at meal times. There is no ordinary saloon for selling liquor by the glass. There is less drunkenness than under the old system. "The record shows double the number of arrests for drunkenness under the first system, as compared with the number of arrests at the present time. A large proportion of the people are favourably impressed with it (the present system), and even rank prohibitionists do not now complain." (Q. 338*b*. and 348*b*.) Opportunity to express their opinions was afforded at the election of the council; but the people were so well satisfied that last year, at the elections, no opposition was offered. (Q. 349*b*–352*b*.)

In regard to the use of California wine, evidence was given before this Commission that, in the Napan wine district, out of one hundred families there are only two or three who have not wine in their houses always. Yet they are absolutely temperate, and, as witnesses testified, "You will not find there any drunkenness whatever."

Since the visit of the Commissioners, the following communication was received from the city clerk of Riverside:—

"RIVERSIDE, CAL., 12th March, 1894.

"In December, 1892, we had what was known as a high license ordinance controlling the traffic, requiring all dealers to pay a license of \$2,000 per year. There has been no change in our city law, but the board of supervisors of the county of

Riverside have passed or adopted a prohibitory law, closing all saloons and prohibiting the selling of liquor by anyone except druggists upon the prescription of a physician, and hotels are allowed to serve liquors at meal time with meals furnished to regular guests of such hotel, and at meal time only. This took effect 1st October, 1893, since which time there have been no saloons in this country. This law was brought about by a petition of the board of supervisors asking for such a law, signed by a majority of all voters and tax-payers of the whole county, and including the city of Riverside, which is in this matter controlled by the higher authority, and on the 2nd Tuesday of next November the question will be submitted to a vote of the people in this county, whether they want high license or prohibition, and the result of such vote settles the matter for four years, when it may be again submitted."

Application was made to the city clerk of Riverside for information as to the result of the vote which was to be held in November last, but no reply was received.

The United States census returns supply the following information. No statistics of commitments to jails or convictions for crime are available:—

COLORADO.

This state is under a license law.

The Governor, in reply to a communication from this Commission, writes: (Appendix 76):

"In this state no laws have been enacted prohibiting the sale of liquor, except those relating to Sunday closing and the selling to minors and habitual drunkards. Regulative laws are limited to issuing licenses. These matters are under the control of the county commissioners of the several counties, or of the police machinery in cities and incorporated towns."

The law of the state provides that the licensing authority in cities shall be the city council, in incorporated towns the board of trustees, and elsewhere, the board of county commissioners.

In cities or towns the council or board of trustees has: "The exclusive right to license, regulate or prohibit the selling or giving away of any intoxicating, malt, vinous, mixed or fermented liquor within the limits of the city or town, or within one mile beyond the outer boundaries thereof, except where the boundaries of two cities or towns adjoin, the license not to extend beyond the municipal year in which it shall be granted, and to determine the amount to be paid for such license."

The retail license fee must not be less than \$600 in cities, \$500 in incorporated towns, and elsewhere \$300.

When the county commissioners are a licensing authority they have power to grant or reject applications in their discretion, and on complaint made, may revoke licenses.

Each applicant, before receiving his license, must execute a bond in not less than \$2,000 with two good and sufficient sureties of the county.

The licensing authority may, in its discretion, grant licenses for malt liquors only, on payment of half the fee.

Liquor Traffic—Commissioners' Report.

The law contains a civil damage clause, limited to the case of habitual drunkards' after notice not to sell.

The penalties provided are. For selling liquors in quantities less than one quart, without a license, \$50 to \$200; for procuring intoxicating liquor of any kind for an habitual drunkard, \$100 to \$300, or imprisonment from three to twelve months, or both.

Sheriffs and constables are required to arrest all persons found violating the law respecting minors or habitual drunkards, and saloon keepers are to post up conspicuously the words, "No minor or habitual drunkard allowed here."

Under the ordinance of the city of Denver the fine for drunkenness on a public place is \$1 to \$25, and it was made the duty of the police to arrest offenders and keep them in custody until sober, unless they were taken charge of by relatives or friends.

In 1892 an ordinance was passed under which applicants for a new license are called upon to accompany their applications by a petition from a majority of the owners of frontage property in the same block. No license can be granted for premises within 500 feet of a public school.

The same ordinance provides that liquor shall not be supplied to females, nor may females be permitted to be in saloons or dram shops for the purpose of drinking, or be employed in the liquor business.

The legislature of this state in 1893 passed the following Act to provide for the treatment and care of habitual drunkards:—

An Act to provide for the treatment and cure of habitual drunkards.

"BE IT ENACTED by the General Assembly of the State of Colorado:—

"Section 1. Any inhabitant of this state who is of kin to, or a friend of an habitual drunkard as hereinafter defined, may petition the board of county commissioners of the county of the residence of such drunkard, for leave to send such drunkard, at the expense of such county, to any reputable gold cure institute for the treatment of drunkenness, which petition shall set forth the name, age and condition of such habitual drunkard; that such drunkard, or those of kin petitioning, are not financially able to incur the expense of such cure, and shall set forth that such habitual drunkard is willing and has agreed to attend such institute for the cure of drunkenness, which petition shall be verified by the person making such request, and shall contain, in addition thereto, the written agreement of such habitual drunkard, his desire to take such treatment, and the names of three reputable taxpayers in the county in which said habitual drunkard resides, stating that they are familiar with the facts set forth in the petition and that they are familiar with the financial circumstances of the drunkard and of the petitioning kin, and think it a proper case for assistance from the county commissioners.

"Section 2. When such petition is filed, the board of county commissioners shall, if satisfied from their examination that the facts set forth in the petition are true, that he has been a resident of the county for six months, and that such drunkard of his own free will desires to take such treatment, send such habitual drunkard to some reputable gold cure institute, for the treatment of such disease, that will treat the same at the lowest figure; but such board of county commissioners shall not be compelled to send such person to the institute making the lowest bid, unless in their judgment the best interest of such drunkard shall be promoted thereby; and the said board of county commissioners shall make an order that the expense for the treatment be paid out of the county treasury in the manner that other claims and bills of the said county are paid: Provided, however, that the cure and treatment of such drunkard shall at all times be under the supervision of the board of county commissioners, who may, at any time they see proper, stop the treatment of any such drunkard, or change him from one institute to another, as to them shall seem meet and proper. Provided, that no county shall be required to send the same person to any such institute a second time at its expense.

"Section 3. A drunkard as mentioned in the foregoing sections shall be deemed to include a person who has acquired the habit of using morphine, opium or other narcotics to such a degree as to deprive him of reasonable self-control.

Approved, 31st March, 1893."

The United States census returns supply the following information. No statistics of commitments to jails or convictions for crime are available :—

* No reformatory.

FLORIDA.

This state is under license and local option.

The governor of the state, in reply to a communication from this Commission, said :

"Up to 1883 liquor was sold simply on the payment of a license tax. At that time an Act was passed prohibiting the sale of intoxicating liquors, except if persons desiring to sell the same should procure a petition signed by a majority of the registered voters in the electoral district of the county in which such application could be made, and also provided for the publication of such petition. Upon the presentation of such petition to the county commissioners they were authorized to permit the applicant to sell liquor, upon the payment of the license tax. The statute also prohibited the sale of intoxicating liquors to any minor, or person in a state of intoxication. The license tax at that time was \$300 for the state, and the county was also authorized to collect a license of \$150, and the city or town in which the liquor seller might be, a similar tax of \$150. The state license increased in 1887 to \$400 and the city and county license proportionately. In 1889 the state license was increased to \$500, and the city and county license proportionately.

"In 1886 a new constitution was adopted by the state, one feature of which provided for local option in the selling of liquor, that is, permitting each county by a vote to decide whether or not liquor should be sold therein. The ensuing legislature of 1887 passed an Act in accordance with that constitutional provision, providing the machinery for such elections, etc. In pursuance of such laws, elections were held in 1887 in some 18 of the 45 counties of this state, in 16 of which the result was in favour of the prohibition of the sale of liquor; in 10 of which prohibition has been removed by subsequent elections. Two other counties have prohibited the sale of liquor since 1887, so that at the present time there are 8 counties in which the sale of liquor is prohibited, 26 in which licenses to sell have been issued, and 11 where, though not prohibited, no licenses are issued, the petitions, as hereinbefore stated, being requisite to procure a license. The high license in some of the sparsely settled counties operates as a prohibition.

"I am impressed that it is the opinion of the majority of our people, including those who are earnestly desirous of the promotion of temperance, that the experiment of prohibition in this state has generally proved to be a failure; and that in many of the counties which prohibited the sale there was as much liquor sold clandestinely, and as much drunk, as before prohibition.

"Where a license system prevailed there is but little temptation to sell in violation of the law; but the profits of the sale of liquor are such that to supply those desirous of procuring it, the temptation is great to sell clandestinely when the law prohibits, even at the risk of conviction, which is generally difficult. The trials in such cases frequently develop deceptive methods and the betrayal of confidence in the efforts to procure testimony to convict. There is no doubt that the closing of bar rooms in 'dry counties' removes convenient places for gratifying the appetite

Liquor Traffic—Commissioners' Report.

for intoxicating liquors; but, on the other hand, there are not a few instances where persons cut off from such sources procure liquor by the quantity in consignment from places where the sale is not prohibited, keep it at home, and drink more than before.

“With every desire for the promotion of temperance, I favour the system of high license, with reasonable restrictions and regulations as to the sale, rather than prohibition.” (Appendix 76.)

The following is the provision of the law respecting local option:—

The board of county commissioners of each county in the state, not oftener than once in every two years, upon the application of one-fourth of the registered voters of any county, shall call and provide for an election in the county in which application is made, to decide whether the sale of intoxicating liquors, wines or beer shall be prohibited therein, the question to be determined by a majority of those voting at an election called under this section, which election shall be conducted in the manner prescribed by law for holding general elections; provided, that intoxicating liquor, either spirituous, vinous, or malt, shall not be sold in any election district in which a majority vote was cast against the same at the said election. Elections under this section shall be held within sixty days from the time of presenting said application, but if any such election should thereby take place within sixty days of any state or national election, it shall be held within sixty days after any such state or national election. (Section 1.)

The legislature shall provide necessary laws to carry out and enforce the provisions of section 1 of this article. (Section 2.)

The United States census returns supply the following information. No statistics of commitments to jails, or convictions for crime, are available.

	1890.	Per 1,000 of population.	1880.	Per 1,000 of population.

Paupers in almshouses	24	0.06	45	0.17
Inmates of juvenile reformatories				

There is no juvenile reformatory in Florida. (Census Bulletin, No. 72).

GEORGIA.

This state is under high license and local option.

The Governor, in answer to a communication from this Commission, says:—

“We have no state law prohibiting the sale of spirituous liquors and drugs. We have a general local option law for the state, applicable to such localities (counties) as vote upon the question. Before this general law was enacted, we had the sale of whiskey prohibited in many counties by local enactments.

“We have 137 counties in this state. The sale of liquors under the provisions above named is prohibited in more than 100 of these counties. This prohibition does not cover any county in which is located a large city.” (Appendix 76.)

The general licensing law of the state, which applies to those portions of it which are not subject to prohibition or to any special local law, provides that application for a license to sell spirituous liquors must be made annually to the ordinary of the county, who has power to grant or refuse the application. On a license being granted, the applicant must take an oath not to sell to a minor without the consent of his parents or guardian, and must give a bond in \$500 to abide by his oath and to keep an orderly house. The county retail license fee is \$25.

Another general law provides for the inspection of liquors. City and incorporated town authorities, and in counties the ordinary, may appoint inspectors to

examine liquors every month, and require the destruction of such as are injuriously adulterated. Dealers are required, under penalty, to have their liquors inspected before sale.

Penalties are enacted for selling without a license, keeping open on Sunday, selling to minors, etc., and the court sentencing the offender is required to cancel his license, whereupon he becomes disqualified for a year from obtaining another.

By a law enacted in 1887, it is provided that in counties having prohibition, with a saving clause for any kinds of wine (domestic or other) dealers in such wines, unless also manufacturers, are required to pay a tax of \$10,000 annually; and such wines are not to be sold in less quantities than a quart, and are not to be drunk on the premises.

By an Act passed in 1891, the sale of liquor within three miles of any church or school-house, except in incorporated towns and cities, is forbidden under penalty, subject to a saving clause for domestic wines, and for physicians, and for manufacturers selling to legally authorized dealers, in original packages of not less than 40 gallons. Local prohibition has been brought about in the state in three distinct ways—by the operation of the general local option law; by special prohibitory or local optional legislation, affecting particular areas; and by corporation acts conferring powers of local self-government on individual municipalities.

The general local option law of the state, enacted in 1885, may be thus summarized:—

A local option election is to be held on the application of one-tenth of the qualified voters in the county. The election is to be distinct from any other election, and is not to be held in the same month with any general election. If the majority is against the sale, no person within the county may “sell or barter for valuable consideration, either directly or indirectly, or give away to induce trade at any place of business, or furnish at other public places any alcoholic, spirituous, malt or intoxicating liquor, or intoxicating bitters, or other drinks which, if drunk to excess, will produce intoxication.”

There is a saving clause for domestic wines and cider (but not to be sold in bars-rooms by retail) and for sale of wine for sacramental, medicinal, art, scientific and mechanical purposes.

Elections under the Act are not to be held more frequently than once in two years, and no such election is to be held for any county, city, town or other place having prohibition under a local law. A large body of special liquor legislation appears on the statute book of the state. During the last eight years no less than 160 local liquor laws have been passed. These include acts prohibiting the sale of liquor in a county, town or district, or repealing such prohibition, sometimes prohibiting for a county, exclusive of a particular town, and sometimes subject to a power of reversal by popular vote; acts providing for submission of the question to local option, these acts having been passed before the enactment of the general local option law; acts prohibiting within a certain distance, varying from one to five miles, of a particular church or place of education; acts regulating the traffic in a county or town, sometimes requiring each application for a license to be supported by a majority, or by two-thirds of the freeholders within the licensing area, or within three miles of the premises; sometimes introducing a very high license fee, one county placing the fee at \$10,000; acts providing for the election of an agent to sell liquor for medicinal and mechanical purposes. Acts have also been passed conferring power on municipal corporations to make ordinances regulating or prohibiting the liquor traffic.

The number of prohibition counties has been as high as 108, but a few have gone back on the license, and the number maintaining prohibition is now placed at 100.

The city of Atlanta, which is the largest city in the state, having a population of about 65,500, was under prohibition for two years, Fulton county, in which Atlanta is situated, adopting it by popular vote under the general local option law in 1885. The majority given against the saloons is 225 votes. The city returned to license in 1887. The result of the election in that year was a majority of 1,128 for a return to the licensing system, the total number of votes cast being something over 9,000.

Liquor Traffic—Commissioners' Report.

The licensing regulations of Atlanta are of a very stringent character, and contain several novel features.

The licenses are of three kinds, wholesale, retail, and retail for malt liquor only. Licenses of the first two classes may be issued only in specified business portions of certain streets, enumerated in the ordinance. Beer licenses may not be issued within those limits, but may be issued outside of them, "on business portions of business streets, within practicable and efficient police supervision, and in localities where there is no reasonable objection thereto."

The mayor and council have full power and authority to regulate the retailing of ardent spirits within the corporate limits of the city, and to fix the license fee at any sum not exceeding \$2,000.

The applicant is required to pay a license fee, and to make an oath and give a two thousand dollar bond to observe the law. He must also produce a certificate from two or more of his "sober, respectable, near neighbours, not interested in the application," one of whom must be an adjoining neighbour. The applicant must also produce a written consent of the owner of the premises.

Before a license is granted the police are personally to examine the locality and give notice to adjacent tenants or owners, and also to the owner of the place going to be licensed, and are to report to the mayor and council.

The license fees are as follows:—Wholesale, \$25; retail, \$1,000; retail beer license, \$250.

Licensed premises, whether wholesale or retail, are required to be closed from ten at night till five in the morning. The premises where retail trade is carried on must have no screen, blinds painted black, or other obstructions to the view through the doors and windows, and, subject to a saving clause for bar-rooms in hotels, must front or have its main entrance on, and be substantially on a level with the public street, subject to a power to license for sale "in basements sufficiently open to view."

Conviction of an offence against the license law not only subjects the offender to fine and imprisonment, or both, but operates as a forfeiture of his license. Any one convicted of selling spirits under cover of a beer license is to be imprisoned for 30 days, as well as being fined. The mayor and council are to forfeit licenses of places becoming a nuisance or of evil repute by disorder thereat, or otherwise.

The penalty for drunkenness is a fine not exceeding \$100, or imprisonment not exceeding 30 days, or both.

The police committee of Atlanta, in their annual report for 1891, say: "We believe that Atlanta has the liquor traffic, where the same exists at all, under the best control of any city in the Union; and though this is strong language, we use the same after mature consideration. It is impossible to get liquor after ten o'clock at night, and before five o'clock in the morning, or on Sunday at all; and under no circumstances are minors allowed in bar-rooms.

The number of liquor licenses issued in 1891 was 84; also one brewer's license.

A system somewhat resembling the Gothenburg system is in force in the city of Athens, in Clarke county. This city contains a population of about 9,000, and is the seat of the State university. Under a statute passed in August, 1891, three commissioners are appointed, of whom one retires annually, his place being filled by nomination of the two remaining commissioners, subject to the approval of the mayor-in-council. The duty of the commissioners is to determine and maintain a dispensary for the sale of liquors, and place it in charge of a manager under their supervision. He is paid a fixed salary, his remuneration being in no way dependent on the amounts of his sales.

All bills for the maintenance of the dispensary and purchase of stock are to be paid by the city treasurer.

The commissioners make regulations for the operation of the dispensary. "The quantity to be sold to any purchaser shall be determined by them, but in no event shall wine or liquor be furnished in less quantities than one half pint, and none shall be drunk in the building or on the premises where the dispensary is established. The dispensary shall not be opened before sunrise, and shall be closed

each day before sunset, and it shall be closed on Sunday, public holidays, election days, and such other days as the commissioners shall direct. Liquor is not supplied to any university student, except on the written order of the chancellor. The commissioners are to fix the prices to be charged for liquors, which, however, are not to be sold for a profit exceeding 50 per cent. above the actual cost, it being the purpose of this Act that the dispensary shall use it in such a way as to pay its expenses, and any revenue derived shall be simply an incident to, and not the object of the dispensary." Liquor is to be sold only in sealed packages. All of it is to be examined and analyzed by a chemist, and passed by him as pure before sale.

No liquor is sold for re-sale. Any profits are divided between the city of Atlanta and the county of Clarke.

The following table shows the number of convicts in the State penitentiary (State penitentiary report, 1890):—

Year.	Colored Males.	White Males.	Colored Females.	White Females.	Total.	Net Increase.
1888.....	1,336	149	52	0	1,537	} 157
1890.....	1,478	168	48	0	1,694	

From the above it will be seen that the negro race contributed 90 per cent, and the white race 10 per cent of the penitentiary population.

Mr. E. L. Fanshawe, in his work on liquor legislation in the United States and Canada, supplied the following information in regard to crime in the city of Atlanta, Georgia, extracted from the statistical information given in the yearly reports of the city. The offences for which the arrests were made, Mr. Fanshawe explains, were not classified. The years 1886 and 1887 were those in which prohibitory laws were in force. The population of Atlanta city in 1890 was 65,533. In 1880 it was 37,409:—

—	1883.	1885.	1886.	1887.	1888.	1889.	1890.	1891.
Arrests.....	5,578	6,305	5,578	6,138	7,817	10,379	12,837	13,351
Fines in Recorder's Court	\$20,800	\$21,900	\$23,800	\$27,700	\$28,200	\$37,000	\$46,400	\$41,100
Amount collected for retail liquor licenses.....	\$.....	\$37,700	\$12,500	\$ 775	\$52,700	\$60,700	\$67,950	\$70,400

The number of police employed was as under:—

1883.	1885.	1886.	1887.	1888.	1889.	1890.	1891.
51	58	60	76	74	98	118	133

In 1889 the city limits were greatly enlarged, nearly doubled. The population largely increased, and it is stated that the efficiency of the police was much greater. In addition to these causes operating in bringing about a larger number of arrests, new city ordinances were created.

Liquor Traffic—Commissioners' Report.

The United States' census returns supply the following information. No statistics of commitments to jails, or convictions for crime, are available.

	1890	Per 1,000 of population.	1880	Per 1,000 of population.
Population.....	1,837,353		1,542,180

“ jails (1890).....	80 “

KENTUCKY.

The state is under license and local option.

The governor of the state in reply to a communication from this Commission says:—(Appendix No. 76.)

“Up to this time efforts in connection with dealing with the liquor traffic have been only in the way of local laws affecting certain designated districts, and by a general law by which each magisterial district may at certain periods by a vote of a majority prohibit the legal sale of liquor within such districts. These local or special bills, by which the liquor traffic is regulated in designated localities, are printed in the Session Act extending through a number of years, but are not incorporated in the general statutes, and hence an accurate list of the counties coming within the provision of such laws cannot be obtained without great trouble, but it is estimated that in about one-third the area of the state no whisky is sold, except surreptitiously and in violation of the law.”

This system of special legislation which had been in force was superseded by the adoption of a new constitution in 1891. No fewer than sixty special liquor acts were passed in 1890 alone, some of them prohibiting the sale of liquor in the particular county or town, or within, one, two or three miles of a particular church or school; others providing for the taking of a local option vote; others giving licensing powers to certain municipalities; and, in one case at least, fixing a high license fee. In some instances the sale by retail, or in quantities less than the fixed amount, such as ten gallons, is alone forbidden.

The present general license law provides for the granting of licenses by the county court. Notice to be given of each application, and if the majority of the legal voters in the neighbourhood protest against it, it shall be refused. The county court determines what constitutes the “neighbourhood.” The license shall not be granted unless the court believes the applicant is prepared with house, stabling, bedding and provender (the provision respecting stabling does not apply to cities having over 15,000 inhabitants), to keep an orderly, law-abiding tavern. The court must also be satisfied that the keeping of a tavern at the place proposed is necessary for the accommodation of the public. The court likewise is to fix the prices to be paid in taverns for liquor, lodging, stabling, etc.

A license-holder who furnishes liquor to a known inebriate is liable to a fine of \$20; and if notice forbidding the supply of liquor to such person has previously been given, a relative is entitled by action to receive not less than a like amount.

The license taxes are as follows:—To keep a tavern, \$10; if with privilege to retail malt liquors, \$50; to retail spirituous and vinous liquors, \$100; to retail spirituous, vinous and malt liquors, \$150.

Local option provisions are contained in an act passed in 1874. The county judge, on petition from twenty voters in any civil district, town or city in the county, is required to cause an election to be held on the question whether or not spirituous, vinous or malt liquors should be sold in such district, town or city. If a majority is against the sale, any person selling is to be fined from \$25 to \$100 for each offence; but the prohibition does not extend to sales by wholesale, nor to sales by druggists for medicinal purposes, on a medical prescription. An election under this law can only be held once in every two years.

A local option bill, intended to supersede this act, was introduced in the Legislative session of 1893; but it does not appear to have been passed.

The United States census returns supply the following information. No statistics of commitments to jails, or convictions from crime, are available.

	1890.	Per 1,000 of the population.	1880.	Per 1,000 of the population.
Population	1,858,635		1,648,600	
Convicts in penitentiaries	1,235	0.66	802	0.49
Prisoners in county jails	646	0.35	471	0.29
Paupers in almshouses	1,578	0.85	1,366	0.83
Inmates of juvenile reformatories	273	0.15	223	0.13

MARYLAND.

The State of Maryland in the year 1894 passed an Act providing for the treatment of habitual drunkards. A copy of it will be found in appendix No. 127. It provides that the drunkard himself assenting, the relation of any such person, or friends, may petition for his removal to some establishment for the treatment of drunkards, and if the facts alleged are proved to the satisfaction of a judge of the circuit court, and it is a case deserving of financial assistance, the said judge may send the drunkard to some institution for the treatment of drunkards, at an expense not to exceed \$100, to the county in which he resided, or the city of Baltimore, if he resides therein. The same person cannot be committed a second time at the expense of the county or city.

Maryland, according to the United States Internal Revenue reports, had

	Wholesale.	Retail.	
In 1878	217	4,887	} Liquor dealers.
In 1889.....	183	6,223	

The figures included the district of Columbia from October 2nd, 1876 to June 30th, 1887, and the States of Maryland and Delaware and the district of Columbia since July 1st, 1887.

The state has a law passed in 1886 requiring scientific temperance instruction in the public schools.

The Encyclopedia of Temperance and Prohibition gives many interesting facts respecting legislation in regard to the liquor traffic in this State. It appears that as far back as 1642, it was provided that drunkenness should be punished by a fine of 100 pounds of tobacco, or, if the offender was a servant and not able to pay, imprisonment, or to be set in the "bilbos," and to fast for 24 hours. In 1858 drunkenness was punished by confinement in the stocks for six hours and a fine of a 100 pounds of tobacco—half to the informer,—and for a second offence, by public whipping or a fine of 300 pounds of tobacco; for the third offence the offender was adjudged infamous

Liquor Traffic—Commissioners' Report.

and disfranchised for three years. In 1662 there was legislation having for its object to encourage honest persons to set up "ordinaries." In 1666 their scale of charges having been complained of, was regulated by legislation. In 1746 it was provided that licenses were to be granted by the justices of each county. In 1846 there was legislation of the character of local option and local prohibition.

The law as it existed in 1889 is a license law. It provides that any person intending to sell spirituous or fermented liquors or lager beer in quantities less than one pint, shall make application to the clerk of the Circuit court or of the Common Pleas at Baltimore, for a license therefor. It describes the amounts to be paid, which are based on the value of the stock of liquor to be kept on hand, the formalities to be complied with, and sets forth certain persons to whom licenses are not to be granted. The clerk is not, without a special order of a judge, to grant a license to any person to sell liquor from whom the grand jury has recommended a license to be withheld, nor to any person, who being previously the holder of a license, has had it suppressed by the court. No license is to be issued to a married woman or a minor, without the special order of a judge, and no judge is to give such order without the recommendation of at least ten respectable freeholders of the ward or district. Any person carrying on a shad, herring, or ale-wife fishery may obtain a license to sell liquors during the fishing season on payment to the clerk of the court of a sum of \$6.00

The United States census returns supply the following information. No statistics of commitments to jails or convictions for crime, are available.

	1890.	Per 1,000 of population.	1880.	Per 1,000 of population.
Population	1,042,390	934,943
Convicts in penitentiaries	690	0·66	685	0·73
Prisoners in county jails	163	0·16	148	0·16
Paupers in almshouses	1,599	1·53	1,187	1·27
Inmates of juvenile reformatories	1,061	1·02	759	0·81

MICHIGAN.

This state is under license and local option.

The Secretary of State, in reply to a communication addressed to the Governor by this Commission, says:

"Our prohibition law, which is in effect, was not enacted until 1889, and only five counties have put it into effect, and four of these within the last four months. The first county to adopt it had considerable trouble in enforcing the law, as its officers were not in sympathy with the measure. But have since got the matter well in hand, and are carrying out the law to the entire satisfaction of the people who favour it." (Appendix 76.)

The state constitution contained a provision prohibiting the legislature from passing an act authorizing the granting of licenses for the sale of intoxicating liquors. Prohibition prevailed in the state (with an interval of only two years) from 1853 to 1875. In 1876 a resolution antagonistic to the provision in the constitution respecting the liquor trade was carried by a vote of the people.

In 1887 a prohibitory amendment to the constitution was submitted to the people, and was defeated by the following vote:—For the amendment, 178,636 against, 184,281; majority against, 5,645. The vote showed conclusively that agricultural counties favoured prohibition, while the cities and lumbering districts were opposed to it. Accordingly the state is divided into license and prohibition communities on this basis. The state is under the License Act of 1887 wherever the sale of liquor is not prohibited under the local option law.

The following is a summary of the existing license law:—

Every liquor dealer is obliged every year, before the first of May, to make a statement as to his name, place of business, etc., and to pay the license tax. He has also to enter into a bond of not less than \$3,000, or more than \$6,000, with two sureties, male freeholders of the town or village.

It is the duty of every police officer or other person having knowledge of any violations of the act to inform the county attorney, and it is the duty of the county attorney to prosecute. If any officer wilfully neglects or refuses to do his duty, he is liable to a fine of \$100 for each offence, and the governor may appoint someone else to act for him.

Liquor may not be sold in a theatre or place of amusement; and saloons must be closed back and front on Sundays, election days or holidays; and from 9 p. m. to 7 a. m., except in cities and incorporated villages, where the hour for closing may, by local ordinance, be postponed till 11 p. m.

Anyone who has been intoxicated in any public building or place may be compelled to appear and give testimony in regard to the person or persons from whom, and the time when, and the place where, the liquor was procured. According to his answer, proceedings are taken against anyone who appears to have violated the law; but he himself is not to be prosecuted for his intoxication.

In addition to the usual civil damage clause, both actual and exemplary damages are recoverable by a parent or master for the illegal sale of liquor to a minor.

The village and city marshals, or the police, are required to visit weekly all places where liquor is sold or kept, and to prosecute all offenders against the liquor law.

The adulteration of liquor is made a misdemeanor, punishable by fine from \$50 to \$500, or imprisonment from ten days to six months, or both; and all casks are to be branded "pure from drugs or poison." The section of the Act is in the following terms:—

"If any person shall adulterate any spirituous or alcoholic liquors used or intended for drink, by mixing the same in the manufacture or preparation thereof, or by process of rectifying or other wise, with any deleterious drug, substance or liquid which is poisonous or injurious to health, or if any person shall sell or offer to sell any wine or spirituous or alcoholic liquors, or shall import into this State any wine or spirituous or intoxicating liquors, and sell or offer for sale such liquors, knowing the same to be adulterated, or shall sell or offer to sell any spirituous or intoxicating liquors from any barrel, cask or other vessel containing the same, and not branded as hereinafter provided, he shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine not exceeding \$500, or less than \$50, and shall be imprisoned in the jail of the county not more than six months or less than ten days."

During the hours of closing all screens, etc., obstructing the view from the street must be removed.

The license fees are as follows:—

Retail, \$500; wholesale, or retail, or both, for malt liquor only, \$300; wholesale for spirituous liquors, \$500; wholesale and retail, \$800; brewers, \$65; distillers, \$800.

The number of liquor licenses issued in the whole State is shown on the following tables:—

Licenses.	1885.	1890.
General:—		
Wholesale.....	38	30
Retail.....	2,915	2,506
Beer and Wine:—		
Wholesale.....	20	55
Retail.....	1,183	1,678
Tax paid by Retailers;—		
General.....	\$824,014	\$1,186,318
Beer and Wine.....	211,946	479,154

Ratio of retail licenses to population, 1 to 500.

See Fanshawe, p. 284.

Liquor Traffic—Commissioners' Report.

The local option law of 1889 may be thus summarized :—

It is provided that the Board of Supervisors of any county may prohibit the sale of liquor in their county by resolution, passed after a vote of the electors in the county has been cast in favor of prohibition. A popular vote has to be taken, on a requisition from one-fourth of the qualified electors in the county. The Board of Supervisors, however, is not bound by the popular vote; but it is decided by a vote of the Board whether the prohibitory resolutions shall be passed. The resolution once passed cannot be revoked for two years, and then only if a popular vote has been passed in favor of its revocation.

Statements of arrests in some of the principal places in the State will be found in Appendices Nos. 147 to 150 inclusive.

The United States census returns supply the following information. No statistics of commitments to jails, or convictions for crime, are available.

	1890.	Per 1,000 of population.	1880.	Per 1,000 of population.
Population	2,093,889		1,636,937	
Convicts in penitentiaries	1,108	0·53	1,183	0·72
Prisoners in county jails	399	0·19	220	0·13
Paupers in almshouses	1,916	0·91	1,746	1·07
Inmates of juvenile reformatories	696	0·33	314	0·19

MISSISSIPPI.

A license law with what are practically local option conditions exists in this state.

An interesting letter from His Excellency Governor Stone will be found in Appendix, No. 76.

In this letter he explains that during the last twenty years they have had so much legislation on the subject of the liquor traffic in the State of Mississippi, that it is impracticable to furnish a copy of the laws; that there have been local prohibitory laws enacted, and that the sale is prevented in many counties in the State under what is called local option. The provisions of a new code, which took effect in November, 1892, authorize the Board of County Supervisors to grant licenses to persons residing in their respective counties, but not within a city, town or village. The corporation authorities of cities, towns and villages are authorized to grant licenses for twelve months, but no such licenses are to be granted unless a majority of the qualified voters of a district, city, town or village, sign a petition in favour of such granting. Heavy penalties are imposed for sale on the Sabbath, and for selling to minors, to intoxicated persons or to habitual drunkards.

The following is Governor Stone's answer to the specific questions asked by the Commission :—

("a.) There has been a gradual decrease in the sale and use of intoxicating liquors."

("b.) There has been a marked diminution in drunkenness."

("c.) The number of criminals has been very greatly reduced."

("d.) There is no perceptible change in the number of poor persons requiring to be assisted by the state, the municipality or other means."

("e.) The malady of insanity continues to increase, notwithstanding the reduction in the use of liquor."

("f.) The expenditures of the State have been reduced in the same ratio as crime has been reduced "

He expresses his regret that he cannot give a more accurate reply, for the reason that the necessary data are not obtainable, no statistics being kept in the State.

The United States census returns supply the following information. No statistics of commitments to gaols, or convictions for crime, are available:—

	1890.	Per 1,000 of population.	1880.	Per 1,000 of population.
Population	1,289,600		1,131,597	
Convicts in penitentiaries	429	0·33	1,088	0·96
Prisoners in county gaols	284	0·22	206	0·18
Paupers in almshouses	494	0·38	345	0·30
Inmates of juvenile reformatories				

There is no juvenile reformatory in Mississippi. (Census Bulletin No. 72.)

MONTANA.

The state is under a general license law, regulated by municipalities.

The governor of the state, in a communication to this Commission, says: "The saloons run wide open night and day, Sundays included. While there is a great deal of drinking, there is very little drunkenness, and anyone in an intoxicated condition is promptly arrested and fined." (Appendix 76).

The United States census returns supply the following information. No statistics of commitments to jails, or convictions for crime, are available.

	1890.	Per 1,000 of the population.	1880.	Per 1,000 of the population.
Population	132,159		39,159	
Convicts in penitentiaries	225	1·70	53	1·35
Prisoners in county jails	193	1·46	23	0·58
Paupers in almshouses	132	1·00	*	
Inmates of juvenile reformatories				

* No information for 1880. There is no juvenile reformatory in Montana. (Census Bulletin, No. 72.)

TEXAS.

The state is under local option law.

The Secretary of State of Texas, writing to this Commission, says:—(Appendix 76.)

"You are respectfully advised that this state has no prohibitory legislation experience, or statistical data relative to the effect of intoxicating drinks.

"The only laws of the kind in force in this state are our laws which give to counties and subdivisions of counties the right—by election for such purposes—to have local option; that is to decide that, with certain localities, intoxicating drinks shall not be sold."
