The copy filmed here has been reproduced thanks to the generosity of:

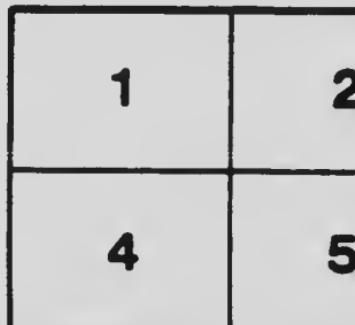

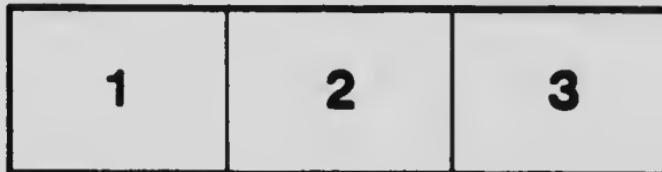

Library of the National Archives of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfilm shall contain the symbol → (meaning "CONTINUED"), or the symbol ▽ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

La bibliothèque des Archives nationales du Canada

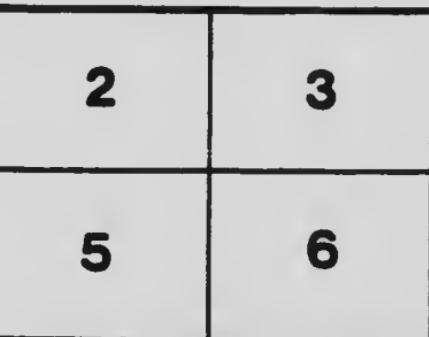

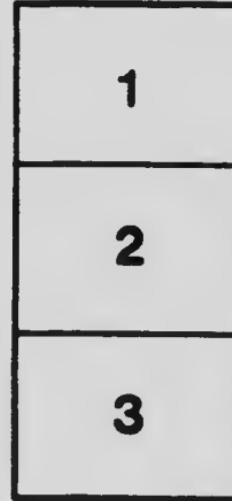

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▽ signifie "FIN".

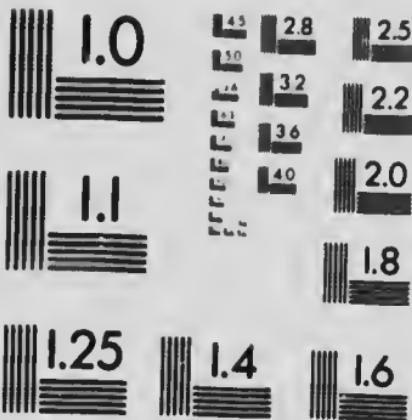

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

Mrs. G. McLEHOWS, Executive Agent	Vancouver, B.C.

WHEN in the summer of 1860 His Royal Highness the Prince of Wales, now His Most Gracious Majesty King Edward VII., visited America, the confederation of the different provinces which now constitute the Dominion of Canada was but a dream. Manitoba, Assiniboina, Alberta and Saskatchewan—that broad stretch of fertile prairie lying between the Red River of the North and the Rocky Mountains—was vaguely known as the Great Lone Land. Communication between British domains on the North Atlantic and North Pacific Coasts was infrequent

and difficult, and only by way of Cape Horn or the Isthmus of Panama. Since that Royal visit the Dominion of Canada has been born, and so marvellous has been its development and progress that Huron's shore, which was the western limit of the Prince of Wales' journey in Canada but forty-one years ago, forms merely the ending of the first stage of his son's tour across the Dominion. But for the construction of the Canadian Pacific Railway the welding of a number of widely separated provinces into one progressive, closely-knit possession would have been an impossibility, and the All-Red Line which girdles the globe and serves as a secure highway from Great Britain to the Far East would not have become the splendid reality it is to-day.

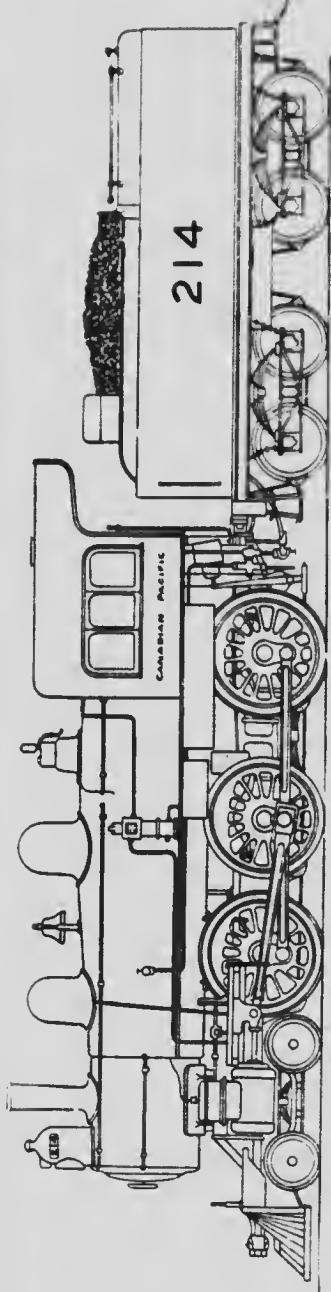

For over 3,000 miles the steel rails stretch from ocean to ocean, first along the margin of one of the world's greatest rivers, then gradually climbing to that watershed of Laurentian rock which divides the streams flowing southward from those hurrying toward Hudson's Bay, passing on the way those extensive deposits of nickel ore which have made Sudbury known in the world's markets. Here the older Canada is left behind, and after skirting the rugged shores of Lake Superior—the "Little Brother of the Sea," according to Ojibway legend—at Fort William the threshold of the New West is crossed.

Over four hundred miles—amongst rich quartz veins cutting the Huronian rocks which overlie much of this portion of New Ontario—the western way lies through a tangle of wood and lake land to the Red River of the North, on whose western bank stands the prosperous city of Winnipeg, which, a mere frontier post of the Hudson's Bay Company a quarter of a century ago, is now a busy commercial centre, commanding the trade of an immense fertile region that is destined to become the great granary of the World. In travelling toward the setting sun through the broad wheat lands of Manitoba and Assiniboina and the ranching country of Alberta, three successive steppes are climbed ere the

elevated plateaux bordering the foothills of the Rockies are reached; but so gentle is the rise that it can scarcely be realized that Calgary, nine hundred miles west of Winnipeg, although a prairie town, is at a greater elevation than the summit of the highest peak in the British Isles.

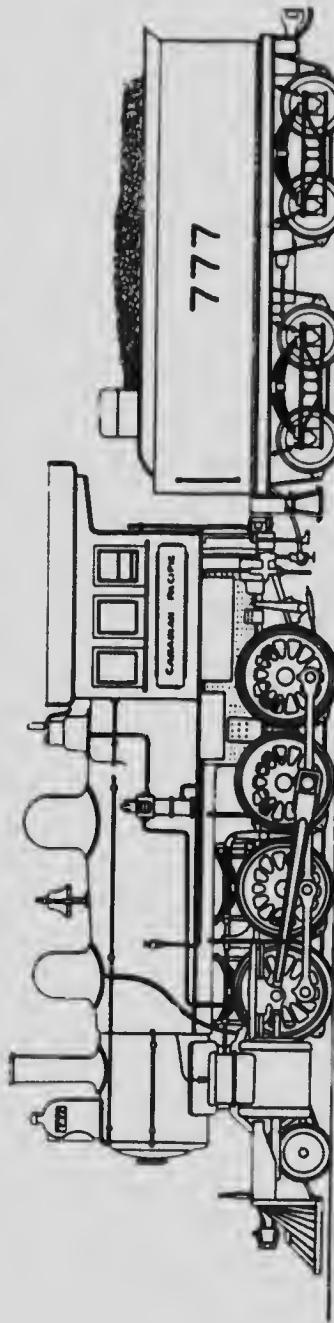

Beyond lie the mountains—four mighty ranges—the Rockies, full of wondrous colouring and astonishing the beholder by their marvellously variegated strata; the dark Selkirks, clothed from their base to crowning glacier by almost impenetrable forests; the rounded domes of the Gold Range; and lastly, the snow-capped Coast Alps, which for four degrees of latitude are the western barrier of the Dominion. Through this veritable sea of mountains the railway finds its way, traversing pleasant valleys guarded on either side by towering peaks, plunges down abysmal canons, and crossing raging torrents rushing impetuously to the sea, reaches the shores of the Pacific at Vancouver, the great Canadian gateway to the Orient. Separated from it by the sunny waters of the Gulf of Georgia, is charming Victoria, most English of all the cities of the New World.

THE ROYAL TRAIN

### *The Royal Train*

THIS train will consist of the day coach "Cornwall" and the night coach "York," each reserved for the use of Their Royal Highnesses; the compartment car "Canada" and the sleeping car "Australia" for the members of their suite; the dining car "Sandringham"; the sleeping car "India" for the attendants; the sleeping car "South Africa" for the members of the press and others invited to join the Royal progress; and two cars for luggage and the accommodation of railway train employees.

The train is 730 feet in length, and its weight 595 tons. Locomotives varying in weight and power, according to grades, will be used, and during the long run of over 3,000 miles from ocean to ocean about twenty changes of locomotives in all will be made.

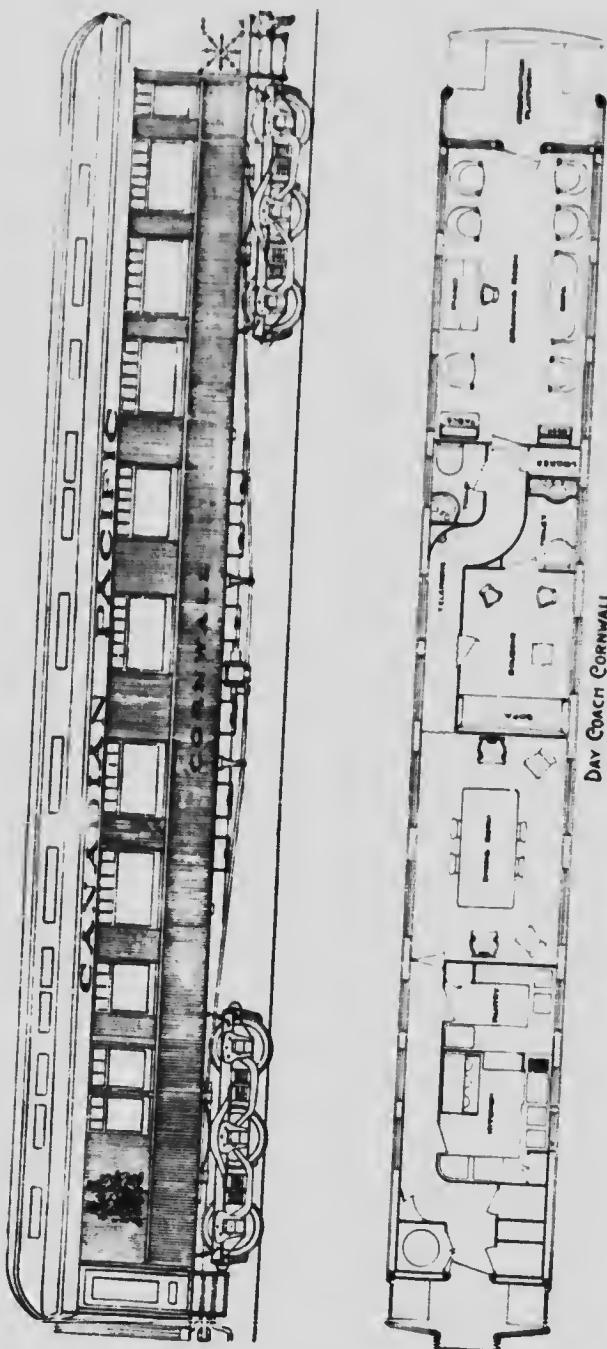

The cars are all vestibuled, communication being had from end to end of train. The exteriors are finished in mahogany. The entire train is lighted by electricity and equipped with electric bells, and there is telephone connection between all the cars.

The "Cornwall" is the rearmost coach, so that from its observation platform an uninterrupted view may be obtained of the scenes of interest and beauty through which the train will pass.

Immediately preceding the "Cornwall" is the "York" night coach, with bed chambers, bathrooms and accommodation for Their Royal Highnesses and their personal attendants.

The train was designed and constructed for the purpose for which it is to be used. Having in view the long run it is intended to make, the essentials for comfort and safety have been kept in mind in its construction, and it is believed that the train represents all that is best in Canadian railway equipment.

The train will be taken at Quebec for Vancouver via Montreal, Ottawa, and the main transcontinental line of the Canadian Pacific Railway, and from Vancouver the tour will be continued to Victoria, by the R. M. S. S. "Empress of India," which will also be employed on the return trip to cross the Straits of Georgia. From Vancouver the eastbound journey is via the Canadian Pacific to North Bay, thence to Toronto, Hamilton, Niagara Falls, etc.

DAV COACH CORNWALL

## Description of the "Cornwall"

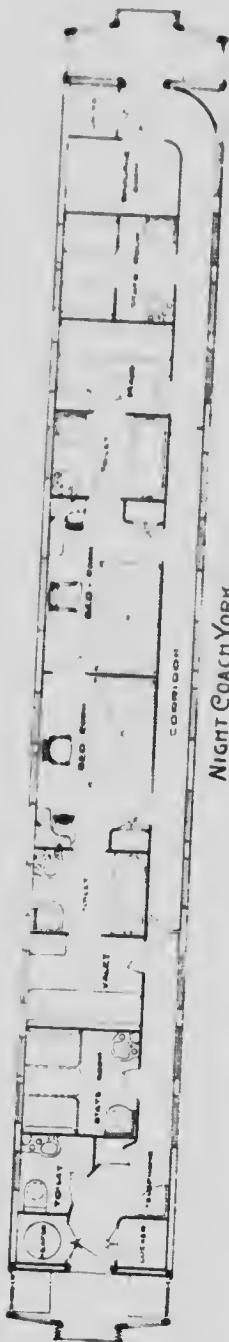

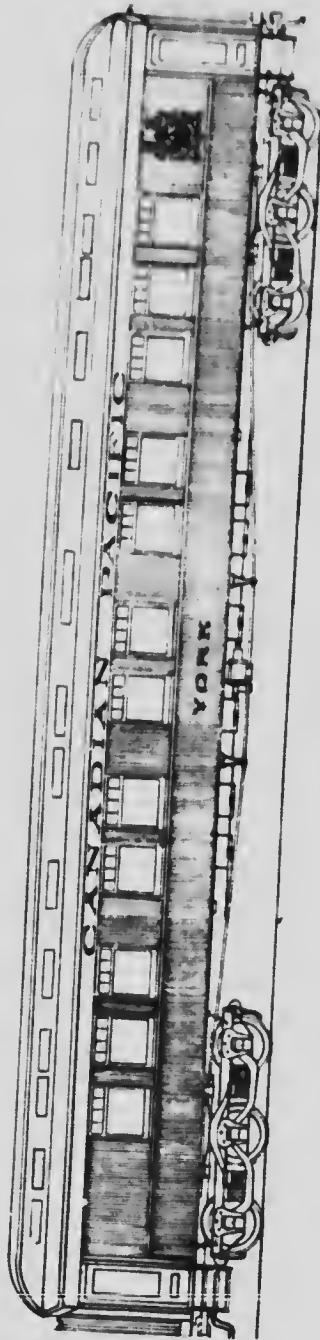

The "Cornwall" is a day couch 78 feet 6½ inches in length overall, with a width of 10 feet 3½ inches, an extreme height over rail of 14 feet, and a weight of over 20 tons. It is divided into a Reception Room, Boudoir, Dining Room and Kitchen, etc.

The Reception Room, the largest room of the suite, opens directly on to the observation platform at the rear of the train. The woodwork is of Cirensian walnut, and is undecorated save for a few ornamental moldings. The entire upper part of the room above the cornice is finished in quiet antique gold. The moldings and ornaments are touched with gold and blue. The decorations of the room are in the style of Louis XV. The curtains are plain, of dark blue velvet, draped simply back from the windows, and the floors are carpeted with heavy Wilton of a quiet grey-green tone. The furniture, consisting of a large sofa and light roomy arm-chairs and table and desk, is upholstered in blue velvet to match the draperies, and a specially designed piano of Cimolian manufacture is conspicuously placed in this room.

A short corridor, finished in mahogany, leads from the Reception to the Dining Room. Half-way in this corridor a door opens into the boudoir. This room is finished in pearl gray enamel. The walls are divided into panels framed with delicate modelled ornament in the style of Louis Quinze, and filled with paintings, soft yet rich in colour, after the manner of Watteau. Ornamented frames in the ceiling, fitted with lattice work, provide ventilation. These, as well as the ornament around the wall panels, are touched with gold. The draperies are of light blue moire silk. A couple of small chairs, a divan, and a table finished in gold, the latter carrying a reading light, complete the furnishings of this room.

The woodwork in the Dining Room is of African Coronandol; the coves and ceiling being carried out in a lighter tone. The ceiling is plain, save for the gold frames of the electric fixtures. Ornamental cartouches in brass relief display at one end the heraldic bearings of the King; at the other the combined coats-of-arms of the Duke and Duchess of Cornwall and York, while the arms of the Dominion and the private badge of the Duke face each other on opposite sides of the room. The hangings are of green velvet, the pictures and wall draperies being decorated with painted and embroidered applique in tones of gold and green. The furniture matches the other woodwork in the room, and is upholstered in velvet of a rich warm brown. A candelabrum-like electric fixture supplies light for the dining table, which is capable of extension to seat eight persons.

A corridor similar in finish to the one already mentioned leads forward past the pantry, kitchen and servants' towards the right end.

Night Coach York

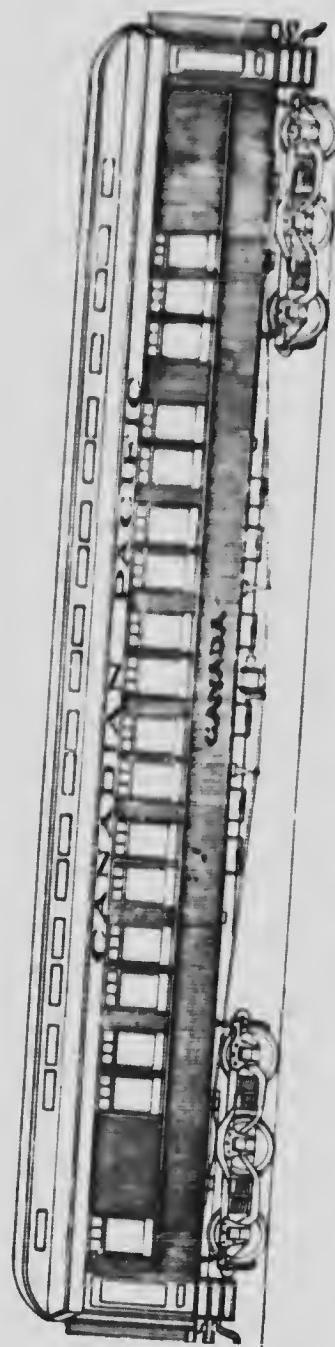

## *Description of the "York"*

THE "York" is the light coach, divided into sleeping apartments, bathrooms, etc. Its length is 78 feet 2 inches, and its weight about 37 tons, the other dimensions being uniform with those of the "Cornwall." A corridor extends the entire length of the car between the trucks for a length of about thirty feet is occupied by the two principal bedrooms, with the servants' rooms adjoining them. The bedrooms are finished in pearl grey chamois, and the walls panelled in silk to match the draperies. One corner of each room is occupied by a wardrobe, another by a convenient dressing-table with large mirrors. The headboards are of brass, finished in gold to match the hardware. Besides the usual ceiling lights, in these rooms there is a special fixture over each dressing-table designed to throw light upon the person sitting before it. The wall panels, draperies and furniture coverings in the Duke's bedroom are of red silk arras; in the Duchess' of light blue moire. The ornamental mouldings, ventilator screens, etc., are touched with colour, relieved in gold. The furniture is of satinwood.

Next to each bedroom, and communicating directly with it, is a commodious bathroom. These bathrooms are exactly alike. The walls are entirely covered with tuffed upholstery in waterproof rubber cloth.

Next to the bathrooms, and communicating therewith, are rooms for vallet and maid.

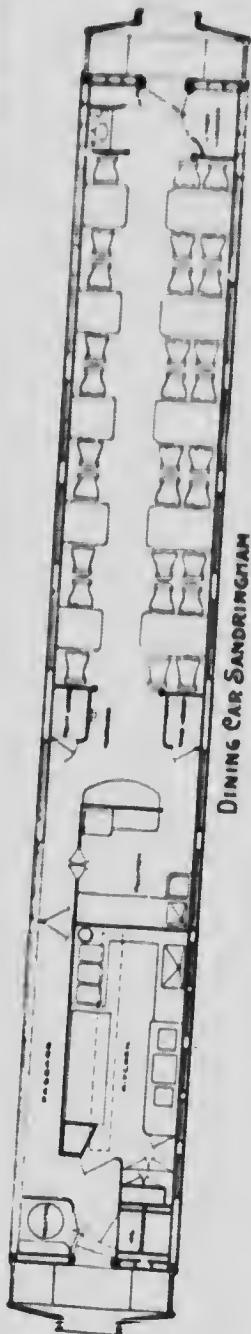

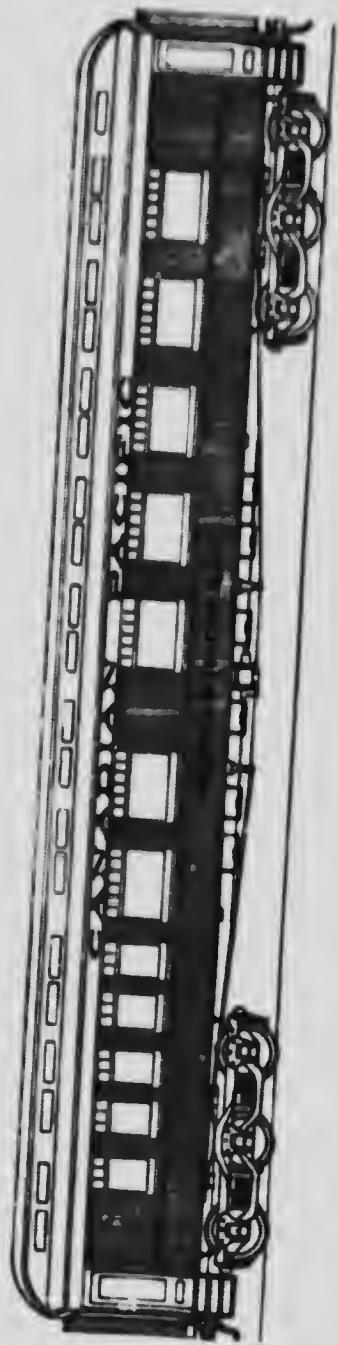

The remainder of the car is occupied by two staterooms finished in mahogany, a general toilet, luggage room, etc.

COMPARTMENT CAR CANADA

## *Description of the "Canada"*

The third car from the rear of the train is the "Canada," a comfortable car specially constructed for the accommodation of the suite of Their Royal Highnesses. The interior is finished in white mahogany and upholstered in terra cotta and olive green plush. The "Canada" contains six separate staterooms which are fitted with all conveniences; in the centre of the car is a commodious sitting or smoking room with a large table, lounge and luxurious easy chairs. At one end of the car is a bathroom with a full-sized bath, and at the other end is a large lavatory, adjoining which is a shower bath.

DINING CAR SANDRINGHAM

## *Description of the "Sandringham".*

The "Sandringham" is the dining car for the staff, and consists of main dining saloon, pantry, kitchen, etc. It is 77 feet 2 inches in length, weighs 57 tons, and is of similar size with width of that of the other cars. The dining room is finished in red figured mahogany with curtains of chintz with Liberty Walton, old gold in color, and the floor is carpeted with green Brussels. It is well lighted, having ten large windows, draped with green silk, and at night twenty-eight electric lights, besides five double. A row of lights, arranged in tables, which will accommodate thirty people, are arranged on two sides of an aisle—tables for four persons on one side, tables for two on the other. The chairs are upholstered in leather. The bulkheads at each entrance to the main room are draped with heavy green silk.

In the anteroom leading to the pantry on the left and the vestibule on the right stands a large mahogany sideboard, with silk coverings and fixings brass.

The pantry is spacious and is fitted up with latches, counter, etc., covered with metal. In the kitchen are standard ranges, etc.

The other cars, which make up the train, are of the standard class which has been adopted by the Canadian Pacific Railway Company.

### Standard Time

The 24-hour system is used at all Canadian Pacific Railway Stations from Port Arthur westward, and the hours from noon to midnight are from 12 to 21 o'clock.

**STANDARD TIME** is in use on all parts of the line as follows:

**EASTERN TIME** On C.P.Ry. East of Port Arthur and Detroit.

**CENTRAL TIME** Port Arthur to Brandon, including Manitoba branches.

**MOUNTAIN TIME** Brandon to Laggan and branches.

**PACIFIC TIME** Laggan to Vancouver and branches.

Thus, when it is 12 noon at Montreal,      Eastern Time  
" 11 o'clock at Winnipeg,      Central    "  
" 10       "      Regina,      Mountain    "  
" 9       "      Vancouver,      Pacific    "

**Canadian  
Pacific  
Railway**

**SPECIAL  
TIME TABLE**

**Eastern and Lake Superior Divisions**

- Mr. C. W. Spender, General Superintendent, *Eastern Division*.  
Mr. T. Williams, General Superintendent, *Lake Superior Division*.  
Mr. J. E. A. Robillard, Superintendent, Quebec to Montreal.  
Mr. W. J. Singleton, Superintendent, Montreal to St. Polycarpe Junction.  
Mr. H. B. Spender, Superintendent, Ottawa to Chalk River.  
Mr. T. Hay, Superintendent, Chalk River to Cartier.  
Mr. C. Murphy, Superintendent, Cartier to White River.  
Mr. R. J. E. Chaple, Superintendent, White River to Port Arthur.

Miles from Quebec	West bound From	STATIONS—DESCRIPTIVE NOTES	East bound To	Miles from Vancouver
0	A.M. 9.45  Wed- nesday Sep. 18	<b>Quebec</b> —Population 68,834. This old city occupies the base and summit of a lofty crag projecting into the St. Lawrence. Jacques Cartier, the first European who sailed into the river, spent the winter of 1535 at the base of the cliffs, and French fur companies soon after established here a headquarters for trading. As the settlement grew, and the fortifications were enlarged, Quebec became the stronghold of Canada, remaining so until captured by the English under Wolfe, in 1759. No other city in Amerien is so grandly situated or offers views from its higher points so diversified and lovely. In Upper Town, on the high bluffs are the public buildings, churches, convents, schools, business blocks and hotels, chief among which is the Chateau Frontenac on Dufferin Terrace. Lower Town is the commercial quarter and abounds in irregular narrow streets and quaint old houses. Enormous transactions in lumber go on here annually. The surrounding country is remarkably interesting in scenery, history, and opportunities for sport, and the city is a delightful resort both in the summer and winter months. Transatlantic steamers of the Allan, Beaver, Franco-Canadian and other lines land here in summer, and local steamers depart for the lower St. Lawrence and the Saguenay rivers.		3078

<b>Montreal</b> —(Windsor Street Station)—Population (with suburbs) 323,321. Chief city of Canada, situated on an island formed by the St. Lawrence and Ottawa Rivers, and on the site of the ancient Indian village of Hochelaga, visited by Jacques Cartier in 1535. A trading-post was established here by the French 250 years ago; and this was the last place yielded by the French to the English in 1760. For many years it was the chief centre of the fur trade. Atlantic steamships of the Allan, Beaver, Franco-Canadian and other lines run here. The St. Lawrence river and canals bring this way a large part of the trade of the Great Lakes. Numerous railway lines radiate from here in all directions. The city has a far-reaching trade, and great manufacturing establishments; has fine wharves of masonry, vast warehouses and grain elevators, imposing public buildings, handsome residences, etc. The Canadian Pacific has two stations. From the Windsor Street Station the transcontinental trains run through to the Pacific Coast without change.				
The usually travelled route across the continent from Montreal is along the Quebec bank of the Ottawa River

Large clear streams come rushing down to the Ottawa from the hills at the west, and these, and the Ottawa as well, afford fine fishing—maskinonge, trout and bass being common. There are frequent bright and busy manufacturing towns, and sawmills occur at favorable places all along the river. At Almonte (pop. 3,023) are large woollen mills and other manufactures. 	Factories	(pop. 2,200) and <b>Arnprior</b> (pop. 4,152) are also important manufacturing points. From <b>Renfrew</b> (pop. 3,154) the Kingston & Pembroke Ry. extends southward through a district abounding in iron to <b>KINGSTON</b> (on the St. Lawrence). <b>Pembroke</b> (pop. 5,000) is the most important town on this section of the line, having many substantial industries and commanding a large part of the trade of the lumbering districts towards the north. The Ottawa River is again navigable for a considerable distance above and below, and steamboats are frequently seen. From Pembroke to Mattawa the railway continues along the west bank of the Ottawa, whose valley narrows and the Ottawa flows deeply between the increasing hills. Little towns are growing up around the sawmills, which occur wherever water-power is to be had. As the wilder country is approached, opportunities for sport with gun and rod increase. <b>Chalk River</b> is the western terminus of Eastern Division and eastern terminus of Lake Superior Division. 	Copp'r nickel and gold	iron bridge affords connection with two American railway lines, one extending to Duluth and the other to St. Paul and Minneapolis, and thence on through Minnesota and North Dakota to Moose Jaw, in Assiniboia, on the Main Line of the C.P.R. Within a few miles of Sudbury, and reached by two short branch lines of railway, are the most extensive copper and nickel deposits known in the world. Large quantities of the ores have been shipped from the mines, and a number of smelting furnaces are in operation near Sudbury reducing the ores on the spot. Approaching <i>Phelans</i> a good view of the high falls of the Vermillion River is to be had for a moment; and from here to Biscotasing the scenery is particularly fine. <i>Cartier</i> is a divisional point, with the usual collection of sidings and railway structures. <i>Biscotasing</i> is situated on an extensive and irregular lake of the same name, and has a considerable trade in furs and lumber. <i>Chapleau</i> (pop. 700) is another divisional point, with railway workshops and is a thriving railway town. Farming operations on a small scale have recently been commenced here. It is charmingly situated on Lake Kabetogama, the waters of which flow into James' Bay. 2325			<i>White River</i> is another divisional point with extensive yards and sidings for the handling of trains. From White River station the railway follows the river of the same name to Round Lake, and then crosses a level tract with occasional rocky uplifts to the Big Pic River, which is crossed by a high iron bridge; and a mile beyond is <i>Heron Bay</i> , from which for sixty miles the line is carried through and around the bold and harshly promontories of the north shore of Lake Superior, with deep rock cuttings, viaducts and tunnels constantly occurring, and at frequent intervals, where the railway is cut out of the face of the cliffs, the lake comes into full view. There is a great sweep around Jack Fish Bay. Jack Fish is the great coaling station for the railway on the northeast angle of Lake Superior, and near it gold mines are being profitably operated. Beyond <i>Schreiber</i> (a divisional point and refreshment station) a chain of islands separates Nepigon Bay from Lake Superior, and the shore of the bay is followed to and beyond <i>Nepigon</i> station. Between <i>Rossport</i> and <i>Gravel River</i> is some of the heaviest construction work on the entire line of railway. The constantly changing views on Nepigon Bay are charming. All of the streams emptying into Lake Superior contain speckled trout in plenty, and in some of the streams, Nepigon River especially, they are noted for their	Laying Lake Superior

				the entrance to the bay, which is flanked on the west by Mackay Mountain, overlooking Fort William. Looking west, between Pie Island and Thunder Cape, Isle Royale may be seen in the distance. Fort William was formerly a very important Hudson's Bay Company's post, and was the great rendezvous of the hunters, voyageurs and chief factors of the Company. The former house of the old fort is now used as an engine house for the great coal docks and one of the largest grain elevators in the world overshadows all. There are railway workshops and the usual buildings and sidings incident to a divisional point. The Kaministiquia hotel is a favorite resort for tourists. From Fort William to Winnipeg the railway traverses a wild broken region, with rapid rivers and many lakes, but containing valuable forests and mineral deposits. <b>Murillo</b> is the railway station for the Rabbit Mountain silver district, and four miles from the station are the Kakabeka Falls, where the Kaministiquia leaps from a height rivaling that of Niagara. The falls are best reached from Fort William by railway. The railway follows up this river to Kaministiquia, and then ascends the Mattawan and Wabigoon rivers; and there is excellent trout fishing near all the stations as far as Finmark. Wolseley led an army from Fort William to Fort Garry (now Winnipeg).	Thunder Bay

		The railway passes through numerous rocky uplands. The scenery is of the wildest description, and deep rock-bound lakes are always in sight. The Sawbill mining country is reached from Bonheur station by Government wagon road. Wabigoon is the point of departure for the Manitou mining region and the Lower Sibley and Rainy Lake country can be reached by this route. At Hyden the Ontario Government has established an experimental farm. There being large areas of good land especially suited for mixed farming and dairying, settlement is progressing rapidly, the chief advantages of the district, besides the facility with which the land is cleared, being the proximity of good markets, the unlimited supply of timber and water, abundance of fish and game, winter employment for settlers in the lumber camps, and healthfulness of the climate. ## STATIONS. *Interim* Survey

The immediate vicinity and in the Rainy Lake and Nelson River districts to the south, which are easily reached by steamer, the route lying through one of the most picturesque regions on the continent. The Lake of the Woods is the largest body of water touched by the railway between Lake Superior and the Pacific. Its fisheries are very valuable, the annual shipments being large. The lake is studded with islands and is a favorite resort for sportsmen and pleasure seekers. Its waters break through a narrow rocky rim at Rat Portage and Keewatin, and fall into the Winnipeg River. Near Keewatin are the immense works of the Keewatin Power Co., creating one of the greatest waterpowers in the world, making of the Lake of the Woods a gigantic mill pond with an area of 3,600 square miles, and affording most convenient sites for pulp-mills, sawmills, flouring mills and other establishments for supplying the needs of the great Northwest and for manufacturing its products on their way to eastern markets. At Keewatin (pop. 1,400) is a mammoth flouring mill, owned and operated by the Lake of the Woods Milling Co., built of granite quarried on the spot. Numerous pretty lakes are passed, and Manitoba is entered just after leaving Ingolf. At Whitemouth, where settlement is reaching large proportions, sawmills again occur, and beyond, to Red River, the country flattens out and gradually assumes the characteristics of the prairie. At East Selkirk the line turns southward following Red River towards Winnipeg, and at St. Boniface (pop. 2,241) the river is crossed by a long iron bridge, and Winnipeg is reached.

**Winnipeg** Alt. 700 ft. Population 42,336. Capital of the Province of Manitoba formerly known as Fort Garry (pop. in 1871, 100). Situated at the junction of the Red and Assiniboine Rivers, both navigable by steamboats, it has been, for many years, the chief post of the Hudson's Bay Company, which has here very extensive establishments. Winnipeg commands the trade of the vast region to the north, east and west. The city is handsomely built, superior brick and stone being available; and has electric street railways, electric lights, parks, hospital, great flouring mills and grain elevators, a huge abattoir, and

313	Shepard	at <i>Langdon</i> in pumping water for the supply of the railway, and both there and at <i>Tilley</i> it can be seen burning brightly. From this station, on a very clear day, the higher peaks of the Rocky Mountains may be seen, 150 miles away. At <i>Crowfoot</i> they may again be seen. This station is on the borderland between the districts of Assiniboina and Alberta. Near <i>Crowfoot</i> , and south of the railway, is a large reservation occupied by the Blackfoot Indians, and some of them are seen about the stations. At <i>Namaka</i> is located one of the most productive farms owned by the Canadian Land & Range Company. The Company has 1,600 acres under crop here and resp. excellent harvests. Beyond <i>Gleichen</i> (a railway divisional point, alt. 2,000 ft.) the Rockies come into full view—a magnificent line of snowy peaks extending far along the southern and western horizon. At <i>Langdon</i> the railway falls to the valley of Bow River, where there is another 10,000 acre farm of the Canadian Land & Range Company, devoted principally to cattle and horse raising, and a few miles beyond <i>Shepard</i> the river is crossed by an iron bridge and the foot-hills are reached.	652

2459	Cochrane	Alt. 3,700 feet Cochrane is reached, the	633
2468	Padnor	traveller is well within the	619
2478	Morley	rounded grassy foot-hills and river "benches" or terraces. Here the valleys are seen to cut the mountains transversely. Further on, in the main ranges, as distinct from the foot-hills, the valleys will be found running parallel with the mountains, north and south, and these valleys open into each other across the mountain ranges by the passes, or what is locally known as "divides," the lowest of which is 5,000 feet above sea level, the highest 7,100 feet. Geologically the transverse valleys by which entrance is made to the mountains represent the ground course of ancient glaciers, and many of the rivers flowing in these beds can be followed directly up to the remnants of these ancient glaciers. The remnant glacier of the Bow River to day occupies a field thirty miles long by six to ten broad. Extensive ranches are passed in rapid succession—great herds of horses in the lower valleys, thousands of cattle on the terraces, and flocks of sheep on the hill-tops may be seen at once, making a picture most novel and interesting. Sawmills and coal mines appear along the valley. After leaving Cochrane, and crossing the Bow, the line ascends to the top of the first terrace, whence a magnificent outlook is obtained towards the left, where the foot-hills rise in successive tiers of sculptured heights to the snowy range behind them.	609
	Morley	Morley is interesting to the tourist as the reservation of the Stoney Indians, once the most warlike tribe of the native races of America, but now one of the most industrious and peaceful.	600

purple, and their sides flecked with white and gold, while high above, dimly outlined in the mists, are distant snowy peaks. The Kananaskis River is crossed by a high iron bridge, a little above where it joins the Bow, and the roar of the great falls of the Bow (called Kananaskis Falls) may be heard from the midway. Here the difference between an ordinary upland stream and a glacier-fed river is first noticed. Tumbling from great heights, the former may be foamy and tumultuous; but the latter is always milky-green, with the sediment of glacial silt, infinitesimally fine particles formed by the grinding of the ice over the rocks. The mountains now rise abruptly in great masses, streaked and capped with snow and ice, and just beyond *Kananaskis* station a bend in the line brings the train between two almost vertical walls of dizzy height. This is the gateway by which the Rocky Mountains are entered. Through this gateway the Bow River issues from the hills, beyond it the track turns northward and ascends the long valley between the Fairholme Range on the right and the Kananaskis Range opposite. The prominent peak on the left is Pigeon Mountain, and in approaching the station called *The Gap*, a magnificent view is obtained of Wind Mt. and the Three Sisters also on the left. A remarkable contrast between the ranges ahead is noticeable. On the right are fantastically broken and castellated heights; on the left, massive snow-laden promontories, rising thousands of feet, penetrated by enormous alcoves in which haze and shadow of gorgeous coloring lie engulfed. The jaggedness of profile observed from the plains is now explained. These mountains are tremendous uplifts of stratified rocks, of the Devonian and Carboniferous ages, which have been broken out of the crust of the earth slowly heaved aloft. Some sections miles and miles in breadth, and thousands of feet thick, have been pushed straight up, so that their strata remain almost as level as before; others are tilted more or less on edge (always on this slope towards the east) and lie in a steeply slanting position; still other sections are bent and crumpled under prodigious side-pressure, while all have been broken down and worn away until now they are only colossal fragments of the original

upheavals. This disturbed strata-  
tion is plainly marked upon the  
face of the cliffs, by the ledges that  
hold the snow after it has dis-  
appeared elsewhere, or by long lines  
of trees, which there alone can main-  
tain a foothold; and this peculiarity  
is one of the most striking and  
admirable features of the scenery.  
Many ranges of prodigious moun-  
tains like these must be traversed  
before the Pacific Coast is reached,  
and grandeur and beauty will crowd  
upon the attention without ceasing,  
as the train speeds through gorge  
and over mountain, giving here a  
vast outlook, and there an interior  
glimpse, then exchanging it for a  
new one with the suddenness of a  
kaleidoscope.

The  
Three  
Sisters

**Camrose** Alt. 4,230 feet. Pop. 300. Railway divisional point, near which are large coal mines, in which with those at Anthracite \$1,000,000 have been invested. From the station a striking profile of the Three Sisters, the third or farthest south rising to an altitude of 10,000 feet, is obtained, with Wind and Pigeon mountains looming up beyond. On a hill behind the station, and all along the embankments of the valley traversed by the railway, are group after group of isolated and curiously weathered conglomerate monoliths, called "hoodoos" giant earthen pillars, ten times the height of a man—some of them composed of hard enough material to withstand the erosions that have played havoc with the surrounding bank. On either side of the beautiful level valley, the mountains rise in solid masses westward, until the great bulk of Cascade Mt. closes the view.

2513

Cas-  
cade  
Mt.

7045

**Anthracite** —Alt. 4,350 ft. The pass narrows suddenly, and as the mountains are penetrated the scenery becomes grander and more awe-inspiring. The walled massomy, shooting up in Seven Peaks on the left, is Rundle, called after a missionary to the Indians. Here the line for a time leaves the low and strikes up the valley of the Cascade River, directly toward the face of Cascade Mt., which though miles away, is apparently but a stone's throw distant, and which seems to rise in enormous mass and advance bodily to meet us; this marvellous effect should not be missed by the traveller. In the shadow of the Cascade Mt., at Anthracite station, are the great coal mines which

2518	An- other line coal	Banff—Alt. 4,500 ft.—Station for Rocky Mountain Park and the Hot Springs—a medicinal watering place and pleasure resort. This park is a national reservation, 26 m. long N.E. and S.W. by 10 m. wide, embracing parts of the valleys of the Bow, Spray and Cascade rivers, Devil's Lake and several noble mountain ranges. No part of the Rockies exhibits a greater variety of sublime and pleasing scenery; and nowhere are good points of view and features of special interest so accessible, since many good roads and bridle paths have been made. The railway station at Banff is in the midst of impressive mountains. The huge mass northward is Cascade Mt. (at 8,750 ft.); eastward is Mt. Inglismiddle, and the heights of the Fairholme sub-range, behind which lies Devil's Lake. Southeastward from Inglismiddle, in the same range of the Fairholmes, the sharp cone of Peechee (called after an Indian chief), closes the view in that direction; this is the highest mountain visible, exceeding 10,000 ft. To the left of Cascade Mt., and just north of the track rises the wood ridge of Squaw Mt., beneath which lie the Vermillion Lakes, seen just after leaving the station. Up the Bow, westward, tower the distant, snowy, central heights of the Main Range about Simpson's Pass, most prominently the square wall-like crest of Mt. Massive. A little nearer, at the left, is seen the northern end of the Bourgeau Range, and still nearer, the razor-like back of Sulphur Mt., along the side of which are the Hot Springs. The isolated butte southward is Tunnel Mt., while just behind the station, Rundle Peak rises sharply, so near at hand as to cut off all the view in that direction. Just before reaching the station, the train passes along a large corral of 500 acres in which are a number of buffalo, the last specimens of the monarchs of the plains. The village of Banff is a short distance southwest of the station, on the higher side of the Bow, and the C.P.R. Hot Springs hotel about a mile further on. A steel bridge takes the embankment across to the hotel, built	Devil's Lake					

\* H. H. H. the Duchess of Cornwall and York will remain at Banff on the east-bound journey until 21:30 o'clock on Sunday, Oct. 6, and arrive at Poplar Point at 10:30 on Tuesday, Oct. 8.

by the railway company, on an eminence between the foaming falls in the Bow and the mouth of the rapid Spray River. There are also a sanitarium and hospital in the village, and a museum of more than local interest has been established by the Government. Eight miles from Banff, lying between Ingleside and Pocilose, is Devil's Lake. There is capital fishing, the trout being of extraordinary size. Wild sheep (the big-horn) and mountain goats are occasionally to be seen on the neighbouring heights. Some extraordinary fossil remains and markings of mammoth prehistoric creatures are found on the mountain slopes surrounding this lake as well as on Cascade Mountain. At the upper end of the lake is the valley of Tidest River, a strange region where the mountain rivulets gurgle off into subterranean reservoirs and the granite walls are pitted with caves. The hot springs are at different elevations upon the eastern slope of Sulphur Mt., the highest being 3000 feet above the Bow. All are reached by fine roads commanding glorious landscapes. The more important springs have been improved by the Government, and picturesque bathing houses have been erected and placed under the care of attendants. In one locality is a pool inside a dome-roofed cave, entered by an artificial tunnel; and nearby, another spring forms in open basin of warm, sulphurous water. During the summer months a corps of Swiss guides is stationed here and at other places in the mountains. Twenty miles south of Banff is Mt. Assiniboline, the Matterhorn of the new world, the ascent of which, after many unsuccessful attempts, has recently been made.

2524

**Sawback** Alt. 4,475 ft. Upon leaving Banff the railway rejoins the Bow and follows it up through a forested valley. The view backward is very fine. The Vermillion Lakes are skirted, and ahead an excellent view is had to the right of Mt. Massive and the snow-peaks far to the west, enclosing Simpson's Pass. Then a sharp turn discloses straight ahead the great heap of snowy ledges that form the eastern crest of Pilot Mt., the landmark of mountain trappers, for it is seen and easily recognizable from both ends of the Bow Valley. Hides-in-the-wall Mt. is passed upon the right, against

554

## TRANS-CONTINENTAL RAIL ROUTE

## STATIONS - Descriptive Notes

whose side can be seen a cavernous opening to a mountain grotto. This cave is 1,500 feet above the valley bed, 12 feet from floor to roof, and runs back to the mountain for 100 ft., where a round chimney-like aperture gives glimpses of the open sky. A little beyond the station (where the park is left at the western corner), Castle Mt. looms up ahead, on the right, a sheer precipice of 5,000 feet - a giant's keep, stretching for eight miles, with turrets, bastions and battlements complete. A natural drawbridge, portcullis and gateway can be plainly distinguished against this ochre wall. The back of this mountain is a gradual slope, glacier-covered and overlooking a wild region of canon, torrent and bridges of rock.

**2533** **Castle Mountain** - *Castle Mts.*  
Alt. 4,570 ft. - turn station is

**2542** **Eldon** - Alt. 4,729 ft. - at the base of the great peak whose name it is. After passing this point, the mountains on each side become exceedingly grand and prominent. Those on the right (north-east) form the bare, rugged and sharply serrated Sawback sub-range, with a spur, called the Stake Mts., in the foreground at Laggan. On the left, the lofty Bow Range fronts the valley in a series of magnificent snow-laden promontories. At first enchanting glimpses only are caught through the trees, as you look ahead; but before Eldon is reached, the whole long array is in plain view. Turning to the left, and looking back, the central peak of Pilot Mt. is seen, like a leaning pyramid high above the square-fronted ledges visible before. Next to it is the less lofty, but almost equally imposing, cone of Copper Mt., squarely opposite the sombre precipices of the Castle. Westward of Copper Mt., the gap of Vermillion Pass opens through the range, permitting a view of many a lofty spire and icy crest along the continental watershed, from whose glaciers and snow-fields the Vermillion River flows westward into the Kootenay. West of the entrance into Vermillion Pass, towering up tier after tier in a massive vertical bastion, stretches the square, rugged, wall-like front of Mt. Temple; and beyond it, standing supreme over this part of the range is the prodigious, isolated, Indent-shaped mountain named Lefroy - the loftiest and grandest in this whole panorama.

LEAVE	ARRIVE			
2553	9.20	Laggin Alt. 4,930 ft. Here the time goes back one hour to conform with the Pacific Standard. Beyond Laggin the railway leaves the Bow and ascends a tributary from the west, which courses through a gap in the Bow Range, looking upward to the right, north-west, through this gap towards Bow Lake and the huge rounded snow-capped peak of Mt. Hector, overtopping all others in this direction, a view is obtained of the first of the great glaciers. It is a broad, crescent-shaped river of ice, the further end concealed behind the lofty yellow cliffs that hem it in. It is 4,300 feet above you, and a dozen miles away. The glacial field, of which this section is the southernmost hem, is the source of three great continental rivers flowing to the three different oceans, the Athabasca or Mackenzie River flowing to the Arctic, the Saskatchewan to the Atlantic, and the Columbia to the Pacific. The glacier presents some exceptionally interesting features, among others an enormous cavernous passageway, the size of a railway tunnel, running for miles back under the ice, cut out by subterranean rivers. This is also the region of Mountains Bush, Bryce, Athabasca, Collie and other peaks, the highest yet known in the Rockies.	13.05	525

STATIONS—DESCRIPTIVE NOTES

one-half miles from the station by a pleasant carriage drive across the face of the mountain. On the margin of this beautiful lake there is a comfortable chalet hotel. There is a bridle path to Mirror Lake, 1,000 ft. higher up the mountain, and a still further ascent to Lake Agnes, during which a magnificent view of the Bow Valley and the surrounding mountains is obtained. Both lakes lie literally above the clouds, nestling in rocky cirques among the peaks of the Beehive, St. Piron, Niblock and Whyte. Trails also lead across the stream draining Lake Louise to Goat or Fairview Mountain on the left side, to the Saddleback still farther eastward, from which one can look across an abyssal gorge 2,000 ft. deep to the avalanches of Mt. Temple, the frosted vale called Paradise Valley, the scarred battlements of Mt. Sheol and the pinnacled heights of Castle Crags behind Goat Mountain. Other trails lead round to the right of Lake Louise directly on to the glacier bed of Mt. Victoria, the great palisade of snow 12,000 ft. high that shuts off all view to the south. This trail also connects with the route to Abbot's Pass, a beetling canon between Victoria and Lefroy. A still climb over this pass and down to the rear of Lefroy and Victoria leads by a chain of beautiful mountain tarns to O'Hara Lake and Cataract Creek, which flows directly down to Kicking Horse Lake on the main line at Hector Station. The trail eastward along the Bow River rounds to the rear of Mt. Temple and descends to a beautiful vale called the Valley of the Ten Peaks, in the midst of which lies Moraine Lake, an emerald gem set in a glacier crescent; for the Ten Peaks engirt one side of the lake like a scimitar and between each pair of the peaks is fathomless snow, with the ribboned green of a glacier hanging down to the valley bed. In these waters the supply of trout is exhaustless. In the surrounding valleys big game—goat, prong horn and bear—abounds. Northward from Lake Louise are the Slate and Waputehk ranges, and overtopping all, like the sky-line of a citadel, with white edging on every rock, ledge and crest hidden in the clouds, is the great buttressed mass called Mt. Hector, after Dr. Hector, of the Palliser expedition in 1858, one of the first to explore the Rockies. To the northwest of Mt. Hector lies the

Miles from Quebec	West-bound Train	STATIONS DESCRIPTIVE NOTES	East-bound Train	Miles from Vancouver
		vast Bow Glacier region. The Upper and Lower Bow Lakes are at the foot of this glacier, about a day's journey north from Lake Louise.		
2550		<b>Stephen</b> —Alt. 5,296 The station at feet.		519
2562	Sun- mit of the Rock- ies	<b>Hector</b> —Alt. 5,100 ft. like the stupen- dous mountain some miles ahead—the chief peak of the Rockies in this latitude—is named in honor of the first President of the Canadian Pacific Railway Co. Here is the "Great Divide" and a sparkling stream separates into two, the waters of one flowing to the Pacific, and of the other to Hudson Bay. From here the line descends rapidly, passing the beautiful Kicking Horse Lake at <i>Hector</i> , and crossing the deep gorge of the Kicking Horse River just beyond. The tumultuous cataract that comes racing down rocky ledges to the left to lose itself in the emerald waters of Kicking Horse or Wapta Lake is Cataract Creek. It flows down the rear slopes of Lefroy and Victoria behind Lake Louise. The trail nine miles up this creek leads to O'Hara Lake among the Wiwax Peaks, and a few miles farther on to one of the most marvellous phenomena in the mountains, to what the Indians call the Lake of Ice, a congealed tarn of such lofty altitude the ice melts for barely five weeks during the year. West of Kicking Horse Lake the scenery is sublime, almost terrible. The line clings to the mountain-side at the left, and the valley on the right rapidly deepens until the river is seen as a gleaming thread a thousand feet below, a naked wall of bronze, yellow and grey, against which have been sculptured by rain and frost a thousand fantastic figures, notably that of the rider and horse. Above is a serrated sky-line whose craggy margin hides the glaciers and the real summit of the range. Looking to the right, the Yoho, one of the grandest mountain valleys in the world, stretches away to the north, with great, white, glacier-bound peaks on either side. By actual count from any of the peaks in this region, eighty distinct glaciers are visible without the aid of a field glass among the glaciers of the Kicking Horse River. Looking forward to the right, the heights of Mt. Field are seen—not the real summit, that is hidden by the forewall. loom against the sky, and just beyond, with enormous ice-fields gleaming on its upper slopes, is the domo-like head of *Mt. Stephen*. On its shoulder is seen a vast shining, green glacier, the forepart of this monster, which hangs obliquely forward, measuring nearly a thousand feet, and its lower, outer edge showing a vertical depth of almost a hundred f. Here, too, can be seen a silver lead mine on the mountainside, 2,500 feet above its base. Passing through a short tunnel, and hugging the base of the mountain closely, the main peak is lost to view for a few minutes; but as the train turns sharply away, it soon reappears with startling suddenness, and when its highly-colored dome and spires are illuminated by the sun it seems to rise as a flame shooting into the sky.

**2569 10.45 Field** -Alt. 4,050 ft.—At *Field* is a charming chalet hotel managed by the railway company—the *Mt. Stephen House*—not far from the base of *Mt. Stephen* and facing *Mt. Field*. *Field* is at the southwest angle of that great glacier field first seen northward from *Laggan*, and is only—as it were—a stone's throw from all the mysteries and wonders of an upper ice world. There is excellent fly-fishing for trout in the lakelets and streams near the village, and a few minutes' walk from the hotel are the remnants of a crystal cave. Looking down the valley from the hotel, the *Ottertail Mountains* are seen on the left, and the *Van Horne Range* on the right. The two most prominent peaks of the latter are *Mts. Devil* and *King*, the former on the right. Fossil beds are also found in the *Van Horne Range*. The *Ottertail Range* with its sheer wall, snow caps and abrupt declivities giving unexpected views at every turn, is particularly attractive to the mountain climber. About a mile away from the valley-bed of the *Kicking Horse River*, at the base of the *Ottertails*, is a strange field of rakish-looking "hoodoos"—pillars left standing by the wash of mountain torrent, with stones tilted at all sort of tipsy angles on their heads. A trail crossing the bridge of the *Kicking Horse*, to the base of *Mt. Field* leads through a forest of spruce and balsam to a natural bridge of rock, under which the river pours in a cataract. Five miles farther along the same trail is *Emerald Lake*, a lovely expanse of green water nestling in the forest to

		<b>The Yoho Valley</b>		
	Takakkaw Falls	<p>the rear of Mt. Field and completely surrounded by lofty peaks, whose green, ribboned glaciers can be seen protruding from the rocky cirques of the upper slopes. Huts have been erected here for the accommodation of tourists wishing to spend some time at the lake, or to visit the great Yoho Valley which lies beyond. An excellent trail has been cut round the end of the lake and up the gravelly saddle of rock to the right, where one passes through a forest into the very lip of the summits. A tarn lies in the centre of this upland meadow and the trail leads to its right hand margin, a sheer drop of 2,000 feet into the gorge of the marvellous Takakkaw Falls. These recently discovered falls surpass anything in the known world, nearly ten times higher than Niagara. An enormous volume of seething, boiling water rushes over the precipice on the far side of the narrow gorge and shatters down the rock side in clouds of foam, a sheer drop of 1,400 feet, with a broken, boiling cascade for another 500 feet. Glaciers can be seen banking the surrounding precipices and feeding this great torrent.</p>		
2576	Ottertail—Alt. 3,700 ft.	Two miles beyond Field, very lofty, glacier-		503
2583	Leanchoil—Alt. 3,570 ft.	bearing heights are seen at the north. The line rises from the flats of the Wapta (or Kicking Horse), and after crossing a high bridge over the Ottertail River (whence one of the finest views is obtained), descends again to the Wapta, whose narrow valley divides the Ottertail and Van Horne Ranges. The Ottertail to the left appears sheer and pinnacled, with an amphitheatre among the craggy heights, while the Van Horne to the right are ochre-coloured in their slopes and show an undulated suc- cession of trough and crest among their summits. The line, which has gradually curved towards the south since crossing the summit at Stephen, runs due south from here to Leanchoil, where the Beaverfoot River comes in from the south and joins the Wapta. At the left, the highest peaks of the Ottertail Mts., walled, massive and castellated, rise abruptly to an immense height; and, looking south, a magnificent range of peaks extends in orderly array towards the southeast as far as the eye can reach. These are the Beaver- foot Mts., appearing to slope away		495

2501	Lower cany'n of the Wapta	<p>from the railway. At the right, Mt. Hunter, a long, gradual slope, pushes its huge mass forward like a wedge between the Ottertail and Beaverfoot ranges. The river turns abruptly against its base and plunges into the lower Kicking Horse canon, down which it disputes the passage with the railway.</p> <p><b>Palliser</b>—Alt. 3,250 ft.—The canon rapidly deepens until, beyond <i>Palliser</i>, the mountain sides become vertical, rising straight up thousands of feet, in a bronze wall crested by a long line of nameless peaks, and within an easy stone's throw from wall to wall. Down this vast basin go the railway and the river together, the former crossing from side to side to ledges cut out of the solid rock, and twisting and turning in every direction, and every infinite or two plunging through projecting angles of rock which seem to close the way. With the towering cliffs almost shutting out the sunlight, and the roar of the river and the train increased a hundredfold by the echoing walls, the passage of this terrible gorge will never be forgotten.</p>	487	Lower cany'n of the Wapta
2501	The Columbia and the Selkirks	<p><b>Glenogle</b></p> <p><b>Golden</b>—Alt. 2,550 ft.</p> <p><b>Moberly</b>—Alt. 2,510 ft.</p> <p>Ahead is the Columbia moving northward. The supremely beautiful mountains beyond to the left and the south are the Selkirks, rising from their forest-clad bases and lifting their ice-crowned heads far into the sky. They extend in an apparently unbroken line from the southwest to the northeast, gradually melting into the remote distance. Parallel with them, and rising eastward, to the right and the north from the Columbia, range upon range, are the Rockies, only the loftiest peaks to be seen just now over the massive benches upon which they rest. From Golden to Donald, the railway follows down the Columbia, on the face of the lower bench of the Rocky Mts., the Selkirks all the way in full view opposite, the soft green streaks down their sides indicating the paths of avalanches. <i>Moberly</i> is the site of the oldest cabin in the mountains, seen just to the left, where a government engineering party, under Mr. Walter Moberly, C. E., engaged in</p>	482	At the foot of the Rockies

		the preliminary surveys of the railway route, passed the winter of 1871-2.		
2620	<b>Donald</b> — Alt. 2,530 ft.	<i>Donald</i> lies in the shadow of the Selkirks.	458	
2625	<b>Redgrave</b>	From here the railway crosses the Columbia to	453	
2631	<b>Beavermouth</b> Alt. 2,500 ft.	the base of the Selkirks, always wooded in contrast to the naked stone of the Rockies. A little further down, the Rockies and Selkirks crowding together force the river through a deep, narrow gorge, the railway clinging to the slopes high above it. Emerging from the gorge at <i>Beavermouth</i> , the most northerly station on the transcontinental route, the line soon turns abruptly to the left and enters the Selkirks through the Gate of the Beaver River—a passage so narrow that a felled tree serves as a foot bridge over it—just where the river makes its final and mad plunge down to the level of the Columbia. Here a natural bridge is seen across the boiling torrent.	447	
2636	<b>Six-Mile Creek</b> — Alt. 2,900 ft.	A little way up the Beaver the line crosses to the right bank, where notched into the mountain side, it rises	442	
2642	<b>Cedar</b>		438	
2646	<b>Bear Creek</b> — Alt. 3,500 ft.	at the rate of 116 feet to the mile, and the river is soon left a thousand feet below, appearing as a silver thread winding through the narrow and densely forested valley. Opposite is a line of huge tree-clad hills, occasionally showing snow-covered heads above the timber line. Nature has worked here on so gigantic a scale that many travellers fail to notice the extraordinary height of the spruce, Douglas fir and cedar trees, which seem to be engaged in a vain competition with the mountains themselves. From <i>Six-Mile Creek</i> station one sees ahead, up the Beaver Valley, a long line of the higher peaks of the Selkirks, <i>en échelon</i> , culminating in an exceedingly lofty pinnacle, named Sir Donald (10,600 ft.), with which a more intimate acquaintance will be made at Glacier House. Again, from Mountain Creek Bridge, a few miles beyond, where a powerful torrent comes down from high mountains northward, the same view is obtained, nearer and larger, and eight peaks can be counted in a	432

grand array, the last of which is Sir Donald, leading the line. A little further on, Cedar Creek is crossed, and not far west of it is a very high bridge, spanning a foaming cascade, whence one of the most beautiful prospects of the whole journey is to be had. So impressed were the builders with the charm of this magnificent picture of mountains that they named the spot *The Surprise*. The principal difficulty in construction on this part of the line was occasioned by the torrents, many of them in splendid cascades, which come down through narrow gorges cut deeply into the steep slopes along which the railway creeps. The greatest of all these bridges crosses Stony Creek, a noisy till, flowing in the bottom of a narrow, V-shaped channel, 300 feet below the rails, one of the loftiest railway bridges in the world. As *Bear Creek* station is approached, a brief but precious glimpse is caught of Hermit Mt., through a gap in the cliffs on the right. This station is 1,000 feet above the Beaver, whose upper valley can be seen penetrating the mountains southward for a long distance. The line here leaves the Beaver and turns up Bear Creek, along continuing grades of 3.6 feet to the mile.—Many of the difficulties of the railway from snow in the winter occur between Bear Creek and the summit on the east and for a similar distance on the west slope of the Selkirks, and these have been completely overcome by the construction, at vast expense, of sheds, or more properly tunnels, of massive timber work. These are built of heavy squared cedar timber, dove-tailed and bolted together, backed with rock, and fitted into the mountain sides in such a manner as to bid defiance to the most terrible avalanche.—Beyond Stony Creek bridge, the gorge of Bear Creek is compressed into a vast ravine between Mt. Macdonald on the left and The Hermit on the right, forming a narrow portal to the amphitheatre of Rogers' Pass, at the summit. The cowl'd figure of a man, with his dog, on the western edge of one of the crags shapes itself out of the rocks, and gives the name of Hermit to the mountain. The way is between enormous precipices. Mt. Macdonald towers a mile and a quarter above the railway in almost vertical height. Its base is but a stone's

	The Brandy		Exit from Rogers Pass	
252	Peaks and glaciers in Rogers Pass	<b>Rogers' Pass</b> - Alt. 4,275 ft. - This pass was named after Maj. A. B. Rogers, by whose adventurous energy it was discovered in 1883, previous to which no human foot had penetrated to the summit of this great central range. The pass lies between two lines of huge snow-clad peaks. That on the north forms a prodigious amphitheatre, under whose parapet, seven or eight thousand feet above the valley, half-a-dozen glaciers may be seen at once, and so near that their shining green fissures are distinctly visible. The changing effects of light and shadow on this brotherhood of peaks, of which The Hermit and Macdonald are the chiefs, can never be forgotten by the fortunate traveller who has seen the sunset or sunrise tinting their battlements, or has looked up from the green valley at a snow-storm trailing its curtain along their crests with perchance a white peak or two standing serene above the harmless cloud. On the south stretches the line of peaks connecting Macdonald with Sir Donald, Uto, Eagle and Avalanche, from south to north - the rear slopes of which were seen in ascending the Beaver. This pass valley has been reserved by the Government as a national park.	428	Mrs. Mac- donald and the Hermit
253	A Na- tional Re- serve	<b>Selkirk Summit</b> - Alt. 4,300 ft. - Summit of the pass. The mountains to the right are: Hermit, the group of castellated granite crags directly above the Pass; Tupper, a rounded height; the Swiss Peaks, distinct from the peaks on each side by deeply notched ravines; Rogers' Peak sloping down a gradual sky-line to Grizzly, which is separated by a deep ravine from Roy, which in turn runs up to the pyramidal heights of Cheops, a veritable Titan of this group, with the profile of a	425	The sum- mit of the Sel- kirk

batted-Napoleon plainly silhouetted against that face of Cheops overlooking the vast glacial fields of the whole Hermit Range. On the crags of the Swiss Peaks a second cowléd figure with his inseparable dog can be seen as if a companion of his brother on Hermit Mt.; and looking out of the pass towards the west, and over the deep valley of the Illecillewaet, by Ross Peak, a massive cliff summit carrying an immense glacier on its eastern slope. Leaving the summit, and curving to the left, the line follows the slope of the summit peaks, of which Sir Donald is the chief. At the right is the deep valley of the Illecillewaet, which makes its way westward by a deviating course among numberless bony-bended mountain monoliths. Far below and for many miles away, can be traced the railway, seeking the bottom of the valley by a series of extraordinary curves, dooring upon itself again and again. Directly ahead is the Great Glacier of the Selkirks. Passing a long snow-slab (not through it, for an outer track is provided), that the summer scenery may not be lost) a sharp curve brings the train in front of the Great Glacier, which is now very near, at the left—a vast plateau of gleaming ice—one glacier of a group of glaciers altogether—as large, it is said, as all those of Switzerland combined, the ice field, of which the Great Glacier is one of a number of outlets, embracing more than 200 square miles.

left of Cheops the shoulders of Ross Peak are visible over the wooded slope of the mountain behind the hotel, which is called Abbott. Between Ross and Abbott in the background can be seen an enormous wall of snow. This is the Mt. Bonney Glacier, sometimes appropriately known as the Purity. To the right of Ross, between Ross and Cheops, a glimpse is caught of a snowy amphitheatre, the Cougar Range. Following the skyline of Mt. Abbott which appears behind the hotel like a forested wall, the eye rests on another lofty glacier with many peaks shooting up through the snow. This is the Asulkan Glacier in the Valley of the Asulkan and the peaks going from right to left are Aiton, the sharp apex; the Rampart, an oblong wall; the Dome, a rounded rock; Castor and Pollux, two sharp spires farthest south. To the left of the Asulkan Glacier comes a forested dome Glacier Crest, the western boundary of the Great Illecillewaet Glacier, which is bounded on the other side by the lower slopes of Sir Donald, from whose summit as many as 120 distinct glaciers can be seen. The Great Glacier is exactly a mile and a half away, and its slowly receding foreground with immense crevasses of abyssine depths cutting across the crystal surface is only a few hundred feet above the level of the hotel. Several good trails have been made to it, and its exploration is not only practicable, but easy; one by Glacier Crest, which is directly above the grotto-like, crystal seracs and yawning bergschrund, another up the centre of the ice-river, which necessitates guides to tread a way among the crevasses; a third up the slope of Sir Donald, which leads on the névé or snow-field before reaching the more difficult ice. Easy trails also lead to Marion Lake, on Mt. Abbott, 4,500 feet above the valley; to Cascade Summit, where a look-out house has been erected directly above the mountain torrent seen tumbling down the green bench of Eagle Peak; to the head of the Asulkan Valley, where the ice flow of two main branches of the glacier meet; and to the summits of Mts. Avalanche and Abbott. Good routes have also been mapped by the guides up Eagle and Sir Donald; but both are arduous climbs. Rogers' Pass above, and the Loop below, are within an easy walk. A glacial stream has been caught and

inhabits fountains about the hotel. Game is very abundant throughout these lofty ranges. Their summits are the home of the mountain goat, which are seldom found southward of Canada. Hares can also be obtained.

Contouring the descent from the Glacier House, and following around the mountainside, The Loup is soon reached, where the line makes several startling turns and twists, first crossing a valley leading down from the Mt. Denney glacier, touching for a moment on the base of Ross Peak, then doubling back to the right a mile or more upon itself to within a biscuit's toss; then sweeping around to the right touching Tongar Mt., on the other side of the Illecillewaet, crossing again to the left, and at last shooting down the valley parallel with its former course. Looking back, the railway is seen cutting two long gashes, one above the other, on the mountainslope, and farther to the left, and high above the long snow shed the summit range, near Rogers' Pass is yet visible, with Sir Donald overlooking all.

Canyons  
of the  
Illecillewaet

The Illecillewaet River is here of no great size, but of course turbulent. Its pebbles are green with glacial mud, but rapidly clarified. The gorge is sometimes of considerable width, filled with that remarkable forest of gigantic trees for which British Columbia is famous, and there are exceedingly grand outcrops all along. About Ross Peak station are many silver mines penetrating the crest of one of the lofty hills north of the railway. Caribou occur in numbers from here down to the Columbia.

**Albert Canon**—Alt. 2,815 ft.—Just east of the station the train runs suddenly along the very brink of several remarkably deep fissures in the solid rock, whose walls rise straight up, hundreds of feet on both sides, to wooded crags, above which sharp, distant peaks cut the sky. The most striking of these canons is the Albert, where the river is seen nearly 300 feet below the railway, compressed into a boiling flume scarcely 20 ft. wide.

**In the Eagle Pass** Lofty mountains rise abruptly on each side throughout, and the pass is seldom more than a mile wide. The highest point reached by the line in this pass is at Sunomit Lake, 8 miles from, and only 525 feet above the Columbia. Four beautiful lakes—Summit, Victor, Three Valley and Griffin—occur in close succession, each occupying the entire width of the valley, and forcing the railway into the mountain sides. At *Craigellachie* the last spike was driven in the Canadian Pacific Ry., on Nov. 7, 1885—the rails from the east and the west meeting here.

**The last spike** On the great Shuswap lakes, the centre of one of the best sporting regions on the line. Northward within a day caribou are abundant; the deer shooting southward within 30 miles is very good, and on the lakes there is glorious sport in deep trolling for trout. The London *Times* has well described this part of the line: "The Eagle River leads us down to the great Shuswap Lake, so named from the Indian tribe that lived on its banks and who still have a 'reserve' there. This is a most remarkable body of water. It lies among the mountain ridges, and consequently extends its long narrow arms along the intervening valleys like a huge octopus in half-a-dozen directions. These arms are many miles long, and vary from a few hundred yards to two or three miles in breadth, and their high, bold shores, fringed by the little narrow beach of sand and pebbles, with alternating bays and capes, give beautiful views. The railway crosses one of these arms by a drawbridge at Sicamous Narrows, and then goes for a long distance along the southern shores of the lake, running entirely around the end of the Salmon arm." *Sicamous* is the station for the mining and agricultural districts to the south where there is large settlement. A branch railway runs to Vernon and Okanagan, at the head of Lake Okanagan, a magnificent sheet of water on which the steamer "Aberdeen" plies. Near Kelowna, on the lake shore, thirty-five miles from Vernon, Lord Aberdeen, formerly Governor-General of Canada, has a fine farm, and another holding of 13,000 acres a few miles from Vernon, employing a small army of men, and growing

Miles from Quatet	West- bound Train	STATIONS DESCRIPTIVE NOTES	East- bound Train	Miles from Vancouver
		fruits of all kinds that the temperate zone will produce. Further down the lake is Peachland, a new town which is making considerable progress. This is a land of vineyards and orchards, as well as a Mecca for keen sportsmen, for there is an abundance and variety of large and small game, including caribou, bear, deer, Bighorn and mountain goats. On the west side of the lake are numerous bands of wild horses. Resuming the transcontinental trip, a writer says: "For 50 miles the line winds in and out the bending shores, while geese and ducks fly over the waters and light and shadow play upon the opposite banks. This lake with its bordering slopes, gives a fine remainder of Scottish scenery. The railway in getting around it, leads at different, and many, times towards every one of the thirty-two points of the compass. Leaving the Salmon arm of the lake rather than go a circuitous course around the mountain to reach the south-western arm, the line strikes through the forest over the top of the intervening hill [Notch Hill]. We come out at some 600 feet elevation above this arm, and get a magnificent view across the	Little Shus- wap Lake	
2778		<b>Notch Hill</b> —Alt. 1,708 ft.	"lake, its winding shores on both sides of	300
2794		<b>Shuswap</b>	"the long and narrow sheet	284
2810		<b>Ducks</b>	"of water stretching far on either hand, with high mountain ridges for the opposite background. The line gradually runs down the hill until it reaches the level of the water, but here it has passed the lake, which has narrowed into the south branch of the Thompson River. Then the valley broadens, and the eye that has been so accustomed to rocks and roughness and the uninhabited desolation of the mountains is gladdened by the sight of grass, fenced fields, growing crops, haystacks, and good farmhouses on the level surface, while herds of cattle, sheep and horses roam over the bordering hills in large numbers. This is a ranching country extending far into the mountain valleys west of the Gold Range on both sides of the railway, and is one of the garden spots of British Columbia."	268

2917	Gladwin	the river, and the railway crosses here the mouth of the Nicola River, whose valley southward is an important grazing and ranching region. Below this point the scenery becomes very striking and peculiar. The train runs upon a sinuous ledge cut out of the bare hills on the irregular south side of the stream, where the headlands are penetrated by tunnels, and the ravines spanned by lofty bridges, and the Thompson, in the purity of a trout brook, whirls down its winding torrent path as green as an emerald. Sometimes the banks are rounded cream-white slopes; next, cliffs of richest yellow, streaked and dashed with maroon, jut out; then masses of solid rust-red earth, suddenly followed by an olive green grass slope or some white exposure. With this fantastic colour, to which the brilliant emerald river opposes a striking contrast, and over which bends a sky of deepest violet, there is the additional interest of great height and breadth of prospect, and a constantly changing grotesqueness of form, caused by the wearing down of rocks of unequal hardness, by water and wind, into towers and monuments, goddins and griffins. The strange forms and gaudy hues of the rocks and scantily herbaged terraces impress themselves most strongly on the memory. Five miles beyond Drynoch, Nicomen, a little mining town is seen, and on the opposite bank of the river gold was first discovered in British Columbia, in 1857. The mountains now draw together again, and the railway winds along their face hundreds of feet above the struggling river. This is the Thompson Canon. The gorge rapidly narrows and deepens, and the scenery becomes wild beyond description. The frowning cliffs opposite are mottled and streaked in many striking colours, and now and then through breaks in the high escarpment, snowy peaks are seen glistening above the clouds. 2938		<b>Keefers</b>		140
	The cantilever bridge	Fraser, the chief river of the province, which comes down from the north between two great lines of mountain peaks, and whose turbid flood soon absorbs the bright green waters of the Thompson. The railway now enters the canon of the united rivers, and the scene becomes even wilder than before. Six miles below Lytton the train crosses the Fraser by a steel cantilever bridge, high above the water, plunges into a tunnel and shortly emerges at <i>Kanaka</i> . The line now follows the right-hand side of the canon, with the river surging and swirling far below. The old Government road, built in the early '60's and abandoned since the opening of the railway, attracts attention all along the Fraser and Thompson valleys. Usually twisting and turning about the cliffs, it sometimes ventures down to the river's side, whence it is quickly driven by an angry turn of the waters. Six miles below Kanaka, where it follows the cliffs opposite to the railway, it is forced to the height of a thousand feet above the river, and is pinned by seemingly slender sticks to the face of a gigantic precipice. The canon alternately widens and narrows. Indians are seen on projecting rocks down at the water's edge, spearing salmon or scooping them out with dip-nets, and in sunny spots the salmon are drying on poles. Chinamen are seen on the occasional sand or gravel bars washing for gold; and irregular Indian farms or villages, with their quaint and barbarously decorated graveyards, alternate with the groups of huts of the Chinese. 2988	The great canon	forced between vertical walls of black rocks where, repeatedly thrown back upon itself by opposing cliffs, or broken by ponderous masses of fallen rock, it madly foams and roars. Ten miles below North Bend is Hell Gate, near which a projecting narrow rock is called Lady Dufferin's Walk. The railway is cut into the cliff 200 feet or more above, and the jutting spurs of rock are pierced by tunnels in close succession. Near Spuzzum the Government road, as if seeking company in this awful place, crosses the chasm by a suspension bridge to the side of the railway, and keeps with it, above or below, to Yale. Ten miles below Spuzzum the enormous cliffs apparently shut together and seem to bar the way. The river makes an abrupt turn to the left, and the railway, turning to the right, disappears into a long tunnel, emerging into daylight and rejoining the river at Yale.	Entrance to the Fraser canon		
2995	Hope Peak	<b>Yale</b> —Alt. 200 ft. <b>Hope</b> —Alt. 200 ft.	<i>Yale</i> is the head of navigation and was formerly an outfitting point for miners and ranchmen northward. It occupies a bench above the river in a deep <i>de sac</i> in the mountains, which rise abruptly and to a great height on all sides. Indian huts are seen on the opposite bank, and in the village a conspicuous lass-house indicates the presence of Chinamen, who are seen washing gold on the river bars for a long way below Yale. Across the river from <b>Hope Station</b> is the village of the same name—a mining town and trading-post, whence trails lead over the mountains in different directions. Southwestward may be seen Hope Peaks, where great bodies of silver ore are exposed, and only awaiting suitable fuel to be worked profitably. Below Hope is the bottomless Devil's Lake. The canon widens out, and is soon succeeded by a broad, level valley with rich soil and heavy timber. The rude Indian farms give place to broad, well-cultivated fields, which become more and more frequent, and vegetation of all kinds rapidly increases in luxuriance as the Pacific is approached. 		<p>form and color, the opposite, and are vividly reflected in the mirror-like waters of the deepest inlet. At intervals along the heavily wooded shores are mills with villages around them, and with ocean steamships and sailing craft loading with sawn timber for all parts of the world; on the other hand, and towering high above, are gigantic trees, twenty, thirty and even forty feet around. Passing <i>Hastings</i>, formerly a watering-place, the young city of Vancouver soon appears.</p> <p><b>3078</b> <b>at 11:15</b> <b>Vancouver</b>—Pop. 20,000. The Pacific terminus of the railway. Until May, 1886, its site was covered with a dense forest. From May to July its growth was most rapid, but in July, a fire, spreading from the surrounding forest, swept away every house but one in the place, and, with this one exception, every building now seen has been made since that time. The city fronts on Burrard Inlet, and extends across a strip of land to English Bay, along the shore of which it is now reaching out. The situation is most perfect as regards picturesqueness, natural drainage, harbor facilities and commercial advantages. It has already extensive wharves and warehouses; many hotels, the Vancouver being a splendid structure and handsomely appointed; churches, schools, etc. It has many buildings of brick and granite, and some of its private residences would do credit to cities of a century's growth. It has many miles of asphalt streets, and is lighted both by gas and by electricity. An ample supply of pure water is provided by means of pipes laid under the inlet from a mountain stream opposite. There is a regular steamship service to Victoria, Nanaimo and San Francisco, to China and Japan, to Sydney, Australia via Honohni, H.L., and Brisbane, Queensland, and Puget Sound and Alaskan ports, it being one of the principal points of departure on the coast for the Klondike, Cape Nome and other northern gold-fields, and an outfitting headquarters for miners and prospectors. Vancouver is the Canadian gateway to the Orient, and the Great White Empresses of the Canadian Pacific make regular sailings to Japanese and Chinese ports and to Hong Kong, from which the tour around the world may be continued by other steamship lines.</p>

## STATIONS—DESCRIPTIVE NOTES

Re-  
marks

The country south, towards the Fraser, has thin farms, and is especially adapted to fruit growing. The coal supply comes from Nanaimo, directly across the Strait of Georgia, and almost within sight. The scenery all about is magnificent—the Cascade Mountains near at hand at the north; the mountains of Vancouver Island across the water at the west; the Olympics at the southwest; and Mt. Baker looming up at the southeast. Stanley Park is a magnificent public pleasure resort. Opportunities for sport are unlimited at no great distance—mountain goats, bear, and deer in the hills along the inlet; trout fishing in the mountain streams; and sea-fishing in endless variety; and Capilano Canon, a few miles across the Narrows, affords a pleasant outing.

From Vancouver the R.M.S.S. Empress of India will be taken across the Gulf of Georgia to Victoria.

3102

**Victoria**—Pop. 20,821.—Capital of British Columbia, charmingly situated at the southern extremity of Vancouver Island, overlooking the Straits of Fuca to the Pacific, and beyond the Gulf of Georgia, the mainland. Across the strait are the beautiful Olympic Mountains, and far away at the east the white cone of Mt. Baker is conspicuous. The climate is that of the south of England, and the town is peculiarly English in all its characteristics. Besides the magnificent Government buildings, which rank amongst the handsomest in America, the city has many fine public and private structures, among them a large and well appointed opera house. Beacon Hill Park affords a fine view of the waters and mountains on every side. The city has an extensive trade and many large commercial houses, which do a very large outfitting trade for the Klondike. The Chinese quarter is always interesting to visitors. A railway extends northeasterly 70 miles to the great coal-mines at Nanaimo. Esquimalt Harbor, two miles from Victoria, is the British naval station and rendezvous on the North Pacific, with naval storehouses, workshops, graving docks, etc. A number of men-of-war are to be found there at all times, and immense fortifications are being constructed.

## *Other Lines Owned and Operated by the Canadian Pacific Railway Co'y.*

---

In addition to its main transcontinental line, the Canadian Pacific Railway Company has many other lines throughout the various Provinces of Canada. These may be summarized as follows:

From Montreal to St. John, N.B., through Southern Quebec and the northern part of the State of Maine. St. John is one of the principal Canadian seaports, being specially noted for its exports of lumber. It is on the Bay of Fundy, famous for its high tides. A number of Canadian Pacific Branch Railways also traverse Northern and Western New Brunswick, reaching amongst other places St. Andrews-by-the-Sea, a popular Canadian watering-place, Fredericton, the capital of the Province, and the hunting-ground on the St. John River. The road from Montreal to St. John is known as the Short Line, and was built in order to bring Quebec and Ontario and the Western Provinces into more direct connection with the Maritime Provinces than was afforded by the longer route of the Government Railway. It runs through prosperous towns, such as Sherbrooke and Lennoxville, and carries a great deal of the winter export and import traffic of Canada.

### *Through the Laurentians*

From Montreal branches also lead through the Laurentian Mountains, to the north and east amongst pine forests, rivers and lakes, frequented by sportsmen and health-seekers from all parts of the Continent. This region contains hundreds of sawmills, and the settler follows in the wake of the lumberman. There are some prosperous mining industries, including phosphate and mica. One of the greatest water-powers in the world is at Shawinigan, reached by a branch line from the quaint old town of Three Rivers. The pulp and paper manufactured there on an immense scale are exported largely to the United Kingdom.

### *Through the Province of Ontario*

From Montreal to Toronto and Windsor, passing through some of the best farming and fruit-growing districts of the Province of Ontario, and other Canadian Pacific lines reach Hamilton and Niagara Falls; others again run to Owen Sound on the Georgian Bay, the Eastern headquarters of the Canadian Pacific fleet on the Upper Lakes, and to various points in the northwestern peninsula of Ontario.

## *Through Western Canada*

From Winnipeg branch lines run in all directions through the wheat-fields of Manitoba and Assinibina. Threshing will be nearly over by the time the Royal Party arrives in this section of the Dominion, but no doubt the glare of the burning straw stacks on the prairie will be seen at night, whilst in daytime the settler will be found hard at work preparing the land for sowing next spring. This season Manitoba and the Territories have produced 60,000,000 bushels of wheat and 20,000,000 bushels of other grain, and will probably ship 7,000,000 cattle and horses to the older provinces and the United Kingdom. The dairying industry is also a great source of revenue to the settlers. Thirty years ago they concealed not more than a mere handful of white-tail deer, half-breds and Indians. To-day the buffalo is extinct, the elk has been occupied by cattle ranches, wheat-fields and dry valleys. The census taken this year shows a population of 1,000,000 between Lake Superior and the Rocky Mountains. The lake trout, whitish and large, is the important fish of the lakes around Winnipeg and other inland waters. The town of Nelson is a grand place for sportsmen in the fall of the year. The numerous lakes abound with wild geese, wild duck, moose, caribou, etc. The chicken is found everywhere, while herds of reindeer now swarm in the regions lying north of the present zone of civilization.

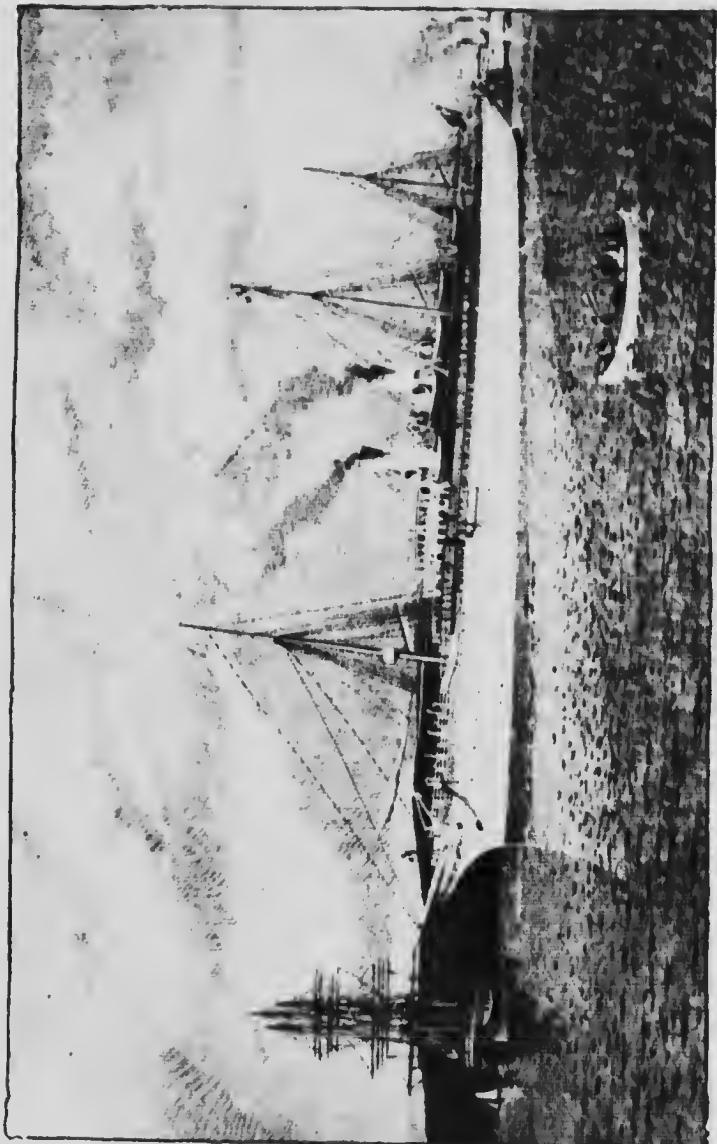

From Dunmore, on the great plains, the Crowsnest Branch of the Canadian Pacific Railway runs through the mining districts of Southern Alberta to the coal and gold areas, silver and lead mines of the Kootenay. This branch, which now runs as far as Kootenay Landing, will some day be pushed further west to make connection with the main transcontinental line near the Pacific Coast, thus serving as a duplicate alternative route through the mountains. The country which it traverses was little more than a wilderness four years ago. Now it is the seat on the eastern side of the mountains of splendid irrigation works, rich farms, extensive ranches and large coal mines; while in the different ranges some of the most productive gold and silver-lead mines in North America are in operation. Branch lines tap all the important mining centres of British Columbia and carry the yield of its famous fruit firms to market, besides opening up to the sportsman the haunts of its big game—the mountain sheep, mountain goat, elk, grizzly bear, etc. This Province has made excellent progress of late, and has now a population of nearly two hundred thousand.

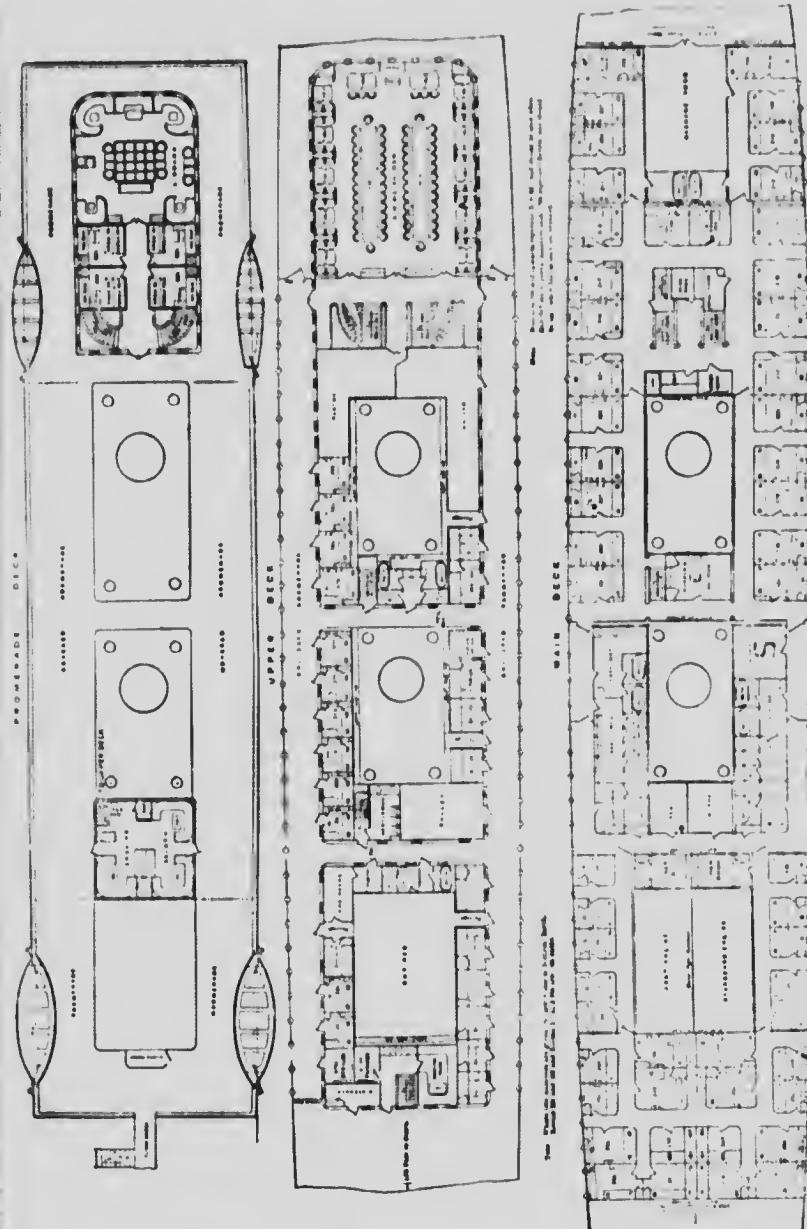

Altogether the mileage operated by the Canadian Pacific, in main line and branches, now aggregates 10,333 miles.

## *The Company's Steamship Service*

The operations of the Canadian Pacific Railway Company are not confined to land travel. Its fleets sail upon the Great Lakes of America, on the inland waters of British Columbia and through the coast channels northward to Alaska and across the Pacific Ocean. By these, water communication is established between points in Canada, some of which are also provided with railway facilities, and the ocean service is a potent factor in the expansion of the rapidly increasing trade with the Far East.

*Canadian Pacific Railway Company's Empress Steamer*

CABIN PLAN  
**CANADIAN PACIFIC RAILWAY COMPANY'S**  
ROYAL MAIL STEAMSHIPS

"Empress of India," "Empress of China," "Empress of Japan"

**Canada, Japan, China**

## *The Trans-Pacific Service*

The R. M. S. S. "Empress of India," "Empress of China," and "Empress of Japan," which form the Empress Line, sail between Vancouver and Japanese and Chinese ports and Hong Kong, from which point the circuit of the globe can be continued by connecting steamships. The Empresses were built at Barrow-in-Furness, under Admiralty supervision, and, each designed to carry 11 guns, can be transformed, if needed, into armed cruisers or troop ships within forty-eight hours. They are uniformly of 6,000 tons burthen and 10,000 horse-power, with a length of 485 feet and 51 feet beam. The propulsion is by twin screws, and a speed of 19 knots an hour is attainable. The usual time occupied in making the round trip between Vancouver and Hong Kong, including stoppages at Yokohama, Kobe, Nagasaki, Woosung (Shanghai) and Hong Kong, a total distance of 12,000 miles, is 4 days, but a record run was made across the Pacific from Yokohama to Vancouver in 10 days, 13 hours and 10 minutes, on which occasion the Japanese mails were landed in London via Canada in 21 days. The Empresses are manned from the Royal Naval Reserve and carry Chinese servants and stokers.

There is another service by the Company's Steamships "Athenian" and "Tartar" between Vancouver and Japanese, Chinese, and Russian ports. Other steamships belonging to the Company furnish a service through the fringe of islands on the North Pacific Coast, 1,000 miles to Skagway, from which Dawson and other points in the Yukon are reached by railway and river. The mineral wealth of the Yukon, although development work is only in an early stage, is marvellous; the output for the past year being estimated at \$22,000,000.

## *On British Columbia's Inland Waters*

On the inland lakes and rivers of British Columbia—on Lakes Kootenay, St. Mary, Arrow, Trout and Okanagan and on the Columbia and Kootenay rivers—the Company has a fleet of seventeen passenger and freight vessels, which furnish means of communication between the different mining camps of the Kootenay region and in the fertile valley of the Okanagan. These are nearly all light draught stern-wheelers especially adapted for a lake and river service. The Company owns also a number of large barges for carrying loaded trains, without breaking bulk, over miles of these inland waterways.

### *On the Upper Lakes*

The Company has three steel steamers, the "Alberta," "Athabasca" and "Manitoba," running on the Upper Lakes between Owen Sound, Sault Ste. Marie and Fort William. They carry thousands of passengers every season, together with a great deal of merchandise and wheat. The forty hour trip up or down is full of interest—the beautiful waters of Lake Huron and St. Mary's river, the immense locks of the Canadian and American canals at the "Soo," through which annually passes a tonnage double that of the Suez, and the majestic cliffs and promontories on the shores of Lake Superior. Situated at the outlet of Lake Superior, the "Soo" possesses one of the greatest water-powers of the world. Fort William was an important rendezvous of the early fur traders; today it is engaged chiefly in receiving and reshipping the wheat grown on the western plains.

### *Some of the Company's other Interests*

The Company, besides, operates a vast telegraph system covering the Dominion, in connection with far-reaching cable companies, which brings the entire civilized world in close electric touch with Canada, and its Parcel Express Company has extensive ramifications in America, Europe and Asia. It also operates a sleeping and dining car service, and its system of hotels stretching across the continent includes the famed Chateau Frontenac at Quebec, the Place Viger at Montreal, the Kaminitiquia at Fort William, and the Vancouver at Vancouver, B.C., besides several hotels at points of vantage in the mountains: The Banff Springs Hotel in the Canadian National Park, the Mount Stephen House at Field, B.C., on the western slope of the Rockies, the Glacier House at the base of the Great Glacier of the Selkirks, the Hotel Sicamous on Shuswap Lake, the gateway to the Okanagan Valley, and the Fraser Canoe House at North Bend, B.C., near the wild canons of that great western waterway.
