Technical and Bibliographic Notes/Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

- Coloured covers/
Couverture de couleur
- Covers damaged/
Couverture endommagée
- Covers restored and/or laminated/
Couverture restaurée et/ou pelliculée
- Cover title missing/
Le titre de couverture manque
- Coloured maps/
Cartes géographiques en couleur
- Coloured ink (i.e. other than blue or black)/
Encre de couleur (i.e. autre que bleue ou noire)
- Coloured plates and/or illustrations/
Planches et/ou illustrations en couleur
- Bound with other material/
Relié avec d'autres documents
- Tight binding may cause shadows or distortion
along interior margin/
La reliure serrée peut causer de l'ombre ou de la
distortion le long de la marge intérieure
- Blank leaves added during restoration may
appear within the text. Whenever possible, these
have been omitted from filming/
Il se peut que certaines pages blanches ajoutées
lors d'une restauration apparaissent dans le texte,
mais, lorsque cela était possible, ces pages n'ont
pas été filmées.

The copy filmed here has been reproduced thanks to the generosity of:

Seminary of Quebec
Library

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol \rightarrow (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Séminaire de Québec
Bibliothèque

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole \rightarrow signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

**TWO MUMMIES FROM THEBES,
IN UPPER EGYPT.**

By REV. JAMES DOUGLAS.

(Read before the Society, 15th February, 1865.)

When my father opened the mummy before you, in November last, he protected himself from the ridicule which follows mistakes on such occasions, by stating the many sources of error which may falsify the most careful diagnosis of the mummy. It was well that he did so, for a more thorough examination than we could make that night revealed a man and not a woman, as he judged it to be from the lid of the case.

The examination disclosed some curious particulars. It is a mummy of a youth who had hardly attained the age of manhood, and who had struggled up to that period of life through suffering and fearful physical deformity. He was only five feet in height,—had a small head and a sharp, thin face—was hump-backed—and lame, through the left leg being shorter than the right. The foot of the deformed leg is furnished with six toes. So crooked was he, that his embalmers—for the purpose of straightening him—passed a stick through the pelvis, transfixing the body. But that means failing, they bound him down to a heavy piece of wood, which they concealed among the bandages. The vertebral column is very much distorted, and the sternum lies almost upon the back bone. In order, therefore, to make the figure shapely, the embalmers stuffed a quantity of cloth between the integument and the ribs.

It was not a mummy of the first quality, nor yet of the most inferior preparation. The extremities seem to have been dipped in liquid bitumen; and bitumen appears to have been laid evenly over

the back, but only at spots upon the front of the body. The chest is covered with almost half an inch, of what is now a fine powder, but was, when laid on fresh, a consistent gummy substance, as its composition shows. And the head and face, upon which traces of bitumen are found, are preserved with the same compound. Under the microscope this powder presents the appearance of yellow crystals of different shapes and density of color. Dr. Anderson was so kind as to analyse 30 grains of it. The result he communicates in the following memorandum :

"I digested the 30 grs. for forty-eight hours in hot alcohol at 90°; the residuum I digested for forty-eight hours more in the same way in water. On filtering there remained matter inodorous and tasteless, evidently vegetable ligneous matter, and weighing 12 grains—thus shewing that *eighteen* grains had been dissolved. The solutions, both in spirits and water, were bright and transparent, and on evaporation some salt of ammonia was carried off. I evaporated the spirituous solution to the consistence of ordinary varnish, and on applying it either to earthenware or wood, it answers as a varnish. That it is a resin and insoluble in water, is proved by dropping it into water which it at once renders milky and turbid. The watery solution is evidently vegetable mucous or gum, mixed with a certain portion of animal mucous or gelatine; the latter probably from some of the insects whose bodies were completely disintegrated."

The wood is probably cassia bark, which was largely used, and with which the whole cavity of the body is sometimes filled.

That the body had gone through the usual salting process is proved by the appearance of crystals of netron upon the brain, soon after exposure to the air. The brain had not been extracted. Upon removing the calvaria we found it lying on the occiput in a compact mass, shrivelled to about three and a half inches in its longitudinal diameter, and two inches in thickness. It retains distinctly its shape—the under part exhibiting the division between the cerebrum and cerebellum, and the upper part the division of the hemispheres and the convolutions. The dura mater adhered to the skull and retained, to a certain degree, its toughness.

The viscera were either in whole or in part mummied, wrapped up in cloth and shoved up into the chest, but their remains were undistinguishable. The abdomen was filled with cloth.

In the abdominal cavity, beneath the skin of the chest and face, in the orbits, and within the skull were found a few specimens of *Necrobia mummiarum*, and a great many perfect specimens of the *Dermestes pollinctus*, with some pupæ and innumerable empty cases.

Beside the gold emblem of the soul, found at our first examination on the pit of the stomach, nothing was enveloped with the body. That emblem was often worn as a personal ornament, and was thought to act as a charm. It has the body, wings and tail of a bird, with the head of a woman. The specimen in question weighs 3 dwts. and 10grs. The wings are coated with enamel, some fragments of which had fallen out before it was buried with the dead; and it bears other signs of having been well worn by the living.

The only peculiarity in the bandaging was in the unusual quantity of padding, which the decrepid form of the body rendered necessary.

On a previous visit to Egypt my father procured at Thebes a handsome male-mummy case, with body enclosed. From its elaborate workmanship it evidently contained a person of consequence. This was corroborated by the occurrence, among the usual hieroglyphical sentences upon the cover, of the name of King Amunoph I., the second ruler of the 18th dynasty—circa 1500 B.C., and by the discovery in the tomb of a very beautifully sculptured stone tablet and a painted wooden tablet, with the names of Amunoph and his immediate successor. We concluded that the mummy was that of a servant about the court, or some public officer of trust. On being unrolled, it revealed a life the very opposite of that which the poor decrepid lad had led. It was the mummy of a strongly-built man of 5 feet 10 inches, with a fine well-balanced head. The skull tells the story of his life. The frontal bone had been seriously fractured immediately behind the frontal eminence of the right side by a blunt instrument, which had depressed the bone over the surface of a square inch. The injury had been received so long before his death as to afford

time for all the changes which take place subsequent to fracture with great depression of the bone.

Another peculiarity illustrates his life. He was mummied when almost a skeleton. The skull clearly evinces this. Other parts of the body had been considerably injured by moisture, but the wrappings of the head were as sound as when they came from the loom. Beneath the wrappings we found spread a coat of transparent, ruby-colored gum, of about the consistence of honey, as fresh apparently as when laid on. But between this preservative layer and the bone, there does not exist a trace of integument. The bone was quite moist. The gum, on exposure to the air, soon dried, and now resembles the preservative mixture of the first mummy. Crystals of salt have since appeared upon the dry surface of the gum.

The rest of the body was in much the same state. Here and there only a little dry integument adhered to the bones. The cavity of the abdomen and chest was filled with earthy matter, and the skull contained only a few drachms of the preservative substance in fine powder. Not any trace of the lining membranes exist.

No ornament was found; but an unusual quantity of cloth was used to compensate for the deficiency of flesh.

There is no doubt that little else than the skeleton was embalmed. Coupling this with the fractured skull, we may suppose him to have been a warrior of rank and distinction who died on some foreign campaign, and whose remains were brought home in a state of decomposition to be embalmed and buried with pomp in the Theban necropolis. With whatever imaginary circumstances however we surround his death, his posthumous history was strange.

It is not often that marks of this kind occur to give an insight into the history of the mummified man. It is difficult to associate the ideas of humanity and even mortality with a mummy, until some sign of our common frailty reminds us that the mummy was once a suffering being like ourselves. Others than myself felt this

when we came to the deformed members of the poor lad. He had been a repulsive cripple—as deformed as is almost possible to be. Yet he had retained throughout his dreary life the love of parents who, though poor, had done their best to give him decent burial, and protect him in his passage to the other world by perhaps the only costly thing they had in their possession—a well-worn heirloom. These simple circumstances form a link most intimate between that far-off past and the present, and make us feel that amidst the more external difference, whether of thought and opinion, or of outer life, there existed then as now the common human sympathies and natural impulses of the heart, which afford the best argument for the essential unity of our human race.
