ON THE HARVEST MOON.

It is remarkable, that the MOON, during the week in which she is full, about the time of harvest, rises sooner after sun-setting than she does in any other full-moon week in the year. By this means, she affords an immediate supply of light after sunset, which is very beneficial for those employed in the harvest, and gathering in the fruits of the Earth. Hence this *full Moon* is distinguished by calling it the "HARVEST MOON."

The reason of this phenomenon is, that the MOON is full at this season in the signs of *Pisces* and *Aries*, which are directly opposite the Sun's place in *Virgo* and *Libra*; and because these parts of the ecliptic rise in a shorter space of time than others, the MOON rises more immediately after sunset, than when she is full at any other season of the year.

In our WINTER, the Moon is in *Pisces* and *Aries*, about the time of her first quarter, when she rises about noon, and therefore, her rising is not then noticed.

In SPRING, the Moon is in *Pisces* and *Aries* about the time of her change, but as she then gives no light, and rises with the Sun, her rising cannot be perceived.

In SUMMER, the Moon is in *Pisces* and *Aries* at the time of the last quarter; and then as she does not rise till midnight, her rising usually passes unobserved.

But in AUTUMN, the Moon is in *Pisces* and *Aries* at the time of her full, and rises soon after sunset, for several nights successively; which makes her regular risings very conspicuous at that time of the year.

All this would happen regularly, if the Moon's orbit lay in the *Ecliptic*; but her orbit makes with the *Ecliptic* an angle of $5^{\circ} 18'$, and crosses it at two points, called her *nodes*; so, thus, her rising, when in *Pisces* and *Aries*, will sometimes not differ above an hour and forty minutes, through a whole week; and at other times, in the same two signs, she will differ in a week three hours and a half, in the time of her rising, according to the different positions of the nodes, with respect to the signs; which positions are always changing, because the nodes go backward through the *Ecliptic*, in 18 years 225 days.

This revolution of the nodes causes the Harvest Moon to go through a whole course of the most advantageous and least beneficial states, with respect to the Harvest, every 19 years. They were least beneficial from 1789 to 1797; from that period most beneficial till 1807; from 1807 they again became least beneficial, and continued so till 1815.

NOVA SCOTIA (4) ALMANACK.

Their most advantageous period began again in 1816, and continued till 1825, when the opposite period commenced, and lasts to 1834; and again they are most beneficial from 1835, to 1843, and so on.

In the southern latitudes the Harvest Moon will rise in *Virgo*, and *Libra*, when it is spring with us. But about the equator, where the seasons are not so variable, and the weather changes seldom, and at stated times, the Moon constantly rises about fifty minutes later every night, than on the preceding; her light not being so necessary there for gathering in the fruits of the earth, as in the northern and southern climates of any considerable latitude.

At the polar circles, where the mild season is very short, the autumnal full Moon rises at sunset, from the *first* to the *third* quarter; and at the poles, where the *Sun* is absent for one half of the year, all the winter full Moons constantly shine without setting. These circumstances are very striking proofs of the great wisdom and beneficence of the DEITY! We may, therefore, reasonably say with the pious *Dr. Young*, in his "Night Thoughts,"

"An undevout astronomer is mad."

The phenomena of the "HARVEST MOON" may be easily and readily illustrated upon a circular artificial globe, in the following manner:

As the Moon moves through the *Ecliptic* about thirteen and one-sixth degrees, at a mean rate, every day, put a small patch upon the *Ecliptic*, about the twentieth or twenty-first degree of *Aquarius*, and then counting towards *Aries*, put another patch upon the *Ecliptic*, thirteen and one-sixth degrees from the *first*, a *third* at the same distance from the *second*, and so on till you come to the *seventh* patch, which will be placed on the ninth or tenth degree of *Taurus*. Then rectifying the globe for the given latitude (say *London*), and bringing the first patch, or twentieth degree of *Aquarius*, to the eastern edge of the horizon, and setting the hour index to twelve, (as being the most convenient hour to be remembered) turn the globe towards the west, and you will find, that the seven patches, which include as much of the *Ecliptic* as the Moon goes through in a week, will all rise successively in the time that the index goes over two hours. This shows that at the season we are speaking of, the Moon will not differ above two hours in her rising for a whole week. If you try the same experiment upon the signs *Virgo* and *Libra*, beginning to place your patches at the twentieth degree of *Leo*, you will find that when the Moon is in those signs, she will differ in her rising for a week about four times as much as she did before; and in both cases, if you turn the globe till the patches come to the western edge of the horizon, one after the other, you may observe, that when the moon differs least in the times of her rising, she will differ most in the times of her setting, and *vice versa*.

NOVA S

S T .

THE history of the four generally known to our readers, produced the life of St. Patrick, Andrew and St. David, with various other particulars, divesting them as much as possible from collecting together as many as they can afford.—*Ed. Ak.*

The early ages of Ireland were a scene of violence. In their own land they were the victims of hostilities; and upon the opposite coast of Scotland they were the authors of them. Not only all the booty upon which they landed in the town of Eibhlinn, but also great numbers of captives, marked their course with blood. The booty, they carried away from both sexes. Among these was a young man of Wales; who, on the arrival of the service of this chieftain, was sold by its commander, at sixteen years of age, continuing the same duties of a soldier, and degrading duties of a slave, have been doubly irksome and painful to him, during the period at which he lived, and during the pursuit of learning, and of a nature peculiarly susceptible of the pursuits. But, however galled by him, he submitted himself to the service of his master, and was suitably rewarded; and he was, while watching his master's conduct, something brilliant from the genius he found, to his infinite surprise, equal in value to the sum required for his purchase, and applied the welcomed gold to his own use, had been unjustly deprived.

It is necessary in this place to mention a Christian, the Irish warrior, who was a barous heathenism.

During his residence among the Irish, he had opportunities to observe the effects of superstition upon their character, and even during the hopelessness of their situation, and benevolent work of humanity. Indeed his subsequent conversion to Christianity. For he no sooner regained his liberty, than he was liberated, the course necessary for his glorious work. His uncle Saint Patrick, who was in France. Hastening to this country, he set forth to him his views and wishes. His views of the Irish greatly interested the

NOVA SCOTIA (5) ALMANACK.

ST. PATRICK.

THE history of the four Patron Saints of Great Britain, may not be generally known to our readers, we have in this year's Almanack introduced the life of St. Patrick of Ireland. Those of St. George, St. Andrew and St. David, will be given in our subsequent Annual publications, divesting them as much as possible of fabulous legends, and collecting together as many historical facts as our many Materials can afford.—*Ed. Ak.*

The early ages of Ireland were distinguished by very great turbulence. In their own land the Irish were continually engaged in petty hostilities; and upon the sea they were notorious as pirates. Upon the opposite coast of Scotland they made frequent descents, carrying away not only all the booty upon which they could lay their despoiling hands, but also great numbers of captives. Upon one of these occasions they landed in the town of Eiburn, in the firth of Clyde, and, as usual, marked their course with plunder and destruction. Besides other booty, they carried away from this luckless town several captives of both sexes. Among these was a youth named Patrick, a native of Wales; who, on the arrival of the piratical expedition in a Irish port, was sold by its commander to an Irish chieftain named McBain. In the service of this chieftain, Patrick, who, when captured, was only sixteen years of age, continued for six years, employed in the groveling and degrading duties of a swineherd. This mean condition must have been doubly irksome and galling to the youth, from his being, for the period at which he lived, well skilled both in profane and religious learning, and of a nature peculiarly inclined and adapted to learned pursuits. But, however galling and disagreeable his yoke proved to him, he submitted himself to it patiently, and without exhibiting any symptom of discontent or indignation. His patience at length was suitably rewarded; and he regained his liberty by a mere accident. While watching his master's swine, he observed one of them rooting up something brilliant from the ground, and on approaching to examine it, he found, to his infinite surprise and satisfaction, that it was GOLD, equal in value to the sum required for his ransom. He immediately applied the welcomed gold to the purchase of that liberty of which he had been unjustly deprived.

It is necessary in this place to observe that, though the young captive was a Christian, the Irish were plunged in the most degrading and barbarous heathenism.

During his residence among them, young Patrick had abundant opportunities to observe the injurious effects produced by their superstition upon their character and condition. It is probable that even during the hopelessness of slavery, he meditated upon the important and benevolent work of leading them into the knowledge of Christianity. Indeed his subsequent conduct renders this more than probable. For he no sooner regained his liberty than he commenced, wisely and deliberately, the course necessary for qualifying himself for that great and glorious work. His uncle Saint Martin, was at that time Bishop of Tours in France. Hastening to this relative, the young enthusiast unfolded to him his views and wishes. His description of the miserable condition of the Irish greatly interested the good bishop, who at once commended

NOVA SCOTIA (6) ALMANACK.

his pious wishes, and assured him of all necessary assistance in their fulfilment. Patrick, though already a scholar, was placed by his venerable relative under the direction and tuition of Germanus, Bishop of Auxerer, a city of Burgundy in France. With this learned and pious prelate he remained no less than forty years, sedulously pursuing all the various branches of learning calculated to facilitate his proselytizing endeavours. During this long period of study, Patrick was frequently and diligently engaged in preaching, and made himself exceedingly famous for learning, eloquence and piety. Having completed the long and arduous course of preparation which he modestly deemed necessary to qualify him for the conversion of the unenlightened Irish, he proceeded to Rome. Celestine, who was then pope, heard his relation, of designs and desires respecting Ireland, with great attention, and entered most cordially into his feelings. In order, the more effectually to serve Patrick, and to forward his great design, the pontiff created him, by anticipation, archbishop of that unenlightened land which he had devoted himself to redeeming from superstitious barbarism.

Towards the middle of the fifth century of the Christian era Patrick landed in Ireland. He now landed, not as formerly, an enslaved youth, but a learned, famous, and dignified prelate. He spoke the language of the country as though he had been a native; and in that language preached the majestic truths of Christianity. The Irish, even at this early period, were passionately fond of eloquent language: and Patrick was eloquent both in substance and in manner. His eloquence, and the simply beautiful truths of Christianity, added numbers daily to the ranks of proselytes. Among the *people* of Ireland he was most miraculously successful; but he found the superstition of Loigerius, their chief prince, utterly unconquerable. Ireland, at this period, was, as England originally was, governed by several petty and independent princes. He did not, directly or indirectly, interfere to prevent his subjects from listening to the Christian preacher, or from assenting to his doctrines and joining in his devotion. But this was the utmost extent to which Loigerius would stretch his toleration; he would neither listen to the preachings of the Irish apostle, nor accept of baptism at his hands. Saint Patrick seems to have been, at length, seriously displeased with the immovable resolution, or obstinacy of Loigerius. In his exhortations to him he was unceasing, and he at length declared that, as a punishment for his obstinate superstition, his kingdom should never pass into the possession of his children.

As has already been intimated, Saint Patrick, on arriving on his Christian mission, in Ireland, was nearly sixty years of age; for sixty years more he toiled, zealously and unceasingly, in his benevolent and blessed work. He visited every part of Ireland, and converted Pagans into Christians, and the temples of idols into churches and monasteries dedicated to the one true God. Having spent his life with equal benevolence and success, he at length departed to a better world, at the patriarchal age of one hundred and twenty years, on the 17th of March, in the year of our Lord 460.

ASTRONOMY, whether considered as the foundation of poetic description and imagery, or Mathematical calculations, or evidence of creative power and goodness,—is a science of paramount interests. It possesses sublimity which baffles the conception of the sage and the bard, yet the humblest peasant may exult in the comprehension of its beautifully simple outline.

NOVA S

There will be four Eclipses of the Sun and two of the Moon.

1st. There will be an Eclipse of the Moon on March 25th, but invisible at great southern latitude. The Antipodes of Great Britain will be eclipsed about the South in the north east direction, the Antipodes of Potosi on the West side of the earth generally a partial Eclipse.

2nd. There will be a partial Eclipse of the Moon on April 9th, and visible here.

First contact with the Sun . . .

Moon rises . . .

First contact with the Sun . . .

Middle of Eclipse . . .

Last contact with the Sun . . .

Last contact with the Moon . . .

There will be 7 1-5 digits of the Moon eclipsed.

3rd. An Annular Eclipse of the Moon, in the Province, on Tuesday, September 10th.

First contact of limit . . .

Ecliptic conjunction . . .

Middle of Eclipse . . .

Sun sets eclipsed . . .

10 2-5 digits eclipsed of the Moon commences about Kamschatka, and begins, near to Spitzbergen, and its appearance ends a little to the north of the central path the sun will be seen in a ring of light encircling the Earth, near to Panama.

It is a return of that beautiful Eclipse, which was visible here at a little after its next periodical revolution, and which passes nearly north and south of the Earth, opening so near to the Autumnal Equinox.

This Eclipse at each Century will be more to the north, and will so continue to the year 2238, when it will finish.

4th. A partial Eclipse of the Moon, on the 17th of March here, as the Moon will be below the horizon. It will be visible to all the world.

NOVA SCOTIA (7) ALMANACK.

ECLIPSES.

There will be four Eclipses in the year 1838, viz. two of the Sun and two of the Moon, as under :

1st. There will be a total Eclipse of the Sun on Sunday, March 25th, but invisible in Nova Scotia, owing to the Moon's great southern latitude. It begins at New Zealand, about the Antipodes of Great Britain, the Sun will be centrally and totally eclipsed about the South Polar regions, the path proceeding in a north east direction, the total eclipse will end about the golden mines of Potosi on the Western coast of America, and will end on the earth generally a few degrees west of the city of Quito.

2nd. There will be a partial Eclipse of the Moon on Monday, April 9th, and visible here at mean time, as follows :

First contact with Penumbra	6h	56m	evening.
Moon rises	6	36	
First contact with dark shadow	8	18	
Middle of Eclipse	9	44	
Last contact with dark shadow	11	11	
Last contact with Penumbra	12	32	morning of 10th.

There will be 7 1-5 digits eclipsed on the moon's northern limb.

3rd. An Annular Eclipse of the Sun, partially visible in this Province, on Tuesday, September 18th, at mean time.

First contact of limbs	3h	45m.	} In the } Afternoon.
Ecliptic conjunction	4	30	
Middle of Eclipse	5	2	
Sun sets eclipsed partially	6	3	

10 2-5 digits eclipsed on the Sun's south western limb. It commences about Kamscatka, the central and Annular Eclipse begins, near to Spitzbergen, and this beautiful and uncommon appearance ends a little to the N. E. of the Bermudas. All along the central path the sun will present the magnificent spectacle of a ring of light encircling the Moon. The Eclipse ends in the Bay of Panama.

It is a return of that beautiful Eclipse of September 7th, 1820, visible here at a little after Sun-rise. It will be invisible here at its next periodical revolution. The central and annular line traverses nearly north and south, which is owing to the Eclipse happening so near to the Autumnal Equinox.

This Eclipse at each Chaldean revolution has been creeping more to the north, and will so continue until the 28h of May, in the year 2238, when it will finally leave the earth at the North Pole.

4th. A partial Eclipse of the Moon on October 3rd, but invisible here, as the Moon will be below the horizon during its continuance. It will be visible to all the Eastern hemisphere, and be nearly total.

ORIENTAL AND OCCIDENTAL STARS.

Venus is in the Sun's rays until the middle of May when she will gradually become more and more visible as a Morning Star until the middle of October, when she will again be too near the Sun to be seen.

Mars is with the Sun until the middle of June, he will then be seen just before Sun rise, and continue a morning Star until the end of the year.

Jupiter is a Morning Star until January 25th when he rises late in the evening and continues to rise earlier, and is for some time both a morning and evening Star, until May 24th when he is only an evening Star until the middle of August; he is then invisible til October 9th, when he will continue a morning Star to the end of the year.

Saturn is visible in the morning till March 9, when he becomes both a morning and evening Star until the middle of July to October 3rd, he is then invisible to the end of the year.

The Georgian or Herschel, which can scarcely be distinguished by the naked eye, is in a favourable position for observation during the greater part of the year.

ASTRONOMICAL SYMBOLS.

☉ The Sun	♄ Saturn	SIGN OF THE ZODIAC.
☾ First Quarter	♃ Georgian	
☽ Full	♌ Conjunction	♈ Aries
☾ Last Quarter	☐ Quadrature	♉ Taurus
☉ New	♍ Opposition	♊ Gemini

NOVA SCOTIA (13) ALMANACK.

If now in beaded rows drops deck the spray,
 While Phœbus grants a momentary ray,
 Let but a cloud's broad shadow intervene,
 And stiffen'd into gems the drops are seen ;
 And down the furrow'd oak's broad southern side
 Streams of dissolving rime no longer glide.

Perhaps e'en now, whilst here those joys we boast,
 Full many a bark rides down the neighbouring coast,
 Where the high northern waves tremendous roar,
 Drove down by blasts from Hudsons' icy shore;
 And whilst in peaceful dreams secure we lie,
 The ruthless whirlwinds rage along the sky.

NOVA SCOTIA (17) ALMANACK.

Deep-plunging Cows their rustling feast enjoy,
 And snatch sweet mouthfuls from the passing boy,
 Who moves unseen beneath his trailing load,
 Fills the tall racks, and leaves a scattered road;
 Where oft the swine from ambush warm and dry
 Bolt out, and scamper headlong to their sty.

'Another SPRING!' his heart exulting cries;
 'Another YEAR' with promis'd blessings rise!
 Eternal Power! from whom those blessings flow,
 Teach me still more to wonder, more to know:
 And let me ever, midst thy bounties, raise
 A humble note of thankfulness and praise!—

NOVA SCOTIA (21) ALMANACK

Fled now the sullen murmurs of the North,
 The splendid raiment of the Spring peeps forth;
 Her universal green, and the clear sky,
 Delight still more and more the gazing eye.
 Wide o'er the fields, in rising moisture strong,
 Shoots up the simple flower.

NOVA SCOTIA (23) ALMANACK.

Sweet Hope with conscious brow before her flies,
 Anticipating wealth from Summer skies ;
 All Nature feels her renovating sway ;
 The sheep-fed pasture, and the meadow gay ;
 And trees, and shrubs, no longer budding seen,
 Display the new-grown branch of lighter green.

And if at times the transient breeze
 Break the blue chrystal of the seas,
 Or sweep one blossom from the trees,
 How welcome is each gentle air,
 That wakes and wafts the odours there !

NOVA-SCOTIA (27) ALMANACK.

'Tis midnight: on the mountains brown
 The cold, round moon shines deeply down;
 Blue roll the waters, blue the sky
 Spreads like an ocean hung on high,
 Bespangled with those isles of light,
 So wildly, spiritually bright.

NOVA SCOTIA (29) ALMANACK.

To climb the trackless mountain all unseen,
 With the wild flock that never needs a fold;
 Alone o'er steeps and foaming falls to lean;
 This is not solitude; 'tis but to hold
 Converse with Nature's charm, and view her stores unroll'd.

NOVA--SCOTIA (31) ALMANACK.

There is a pleasure in the pathless woods,
 There is a rapture on the lonely shore,
 There is society, where none intrudes,
 By the deep Sea, and music in its roar :
 I love not Man the less, but Nature more,
 From these our interviews.

NOVA--SCOTIA (33) ALMANACK.

Above me are the Alps,
The palaces of Nature, whose vast walls
Have pinnaced in clouds their snowy scalps,
And throned Eternity in icy halls
Of cold sublimity, where forms and falls
The avalanche—the thunderbolt of snow!

NOVA SCOTIA (36) ALMANACK.

ANSWERS TO QUESTIONS FOR 1837.

From our Correspondent, G. T. K.

[By Position.]

No. I.

Suppose

10 horses
25 cows and
700 Sheep

$$735 - 651 = x \ 84 = 1st \ err.$$

Suppose

6 horses
21 cows
540

$$651 - 567 = - 84 = 2d \ error.$$

No. II. By Algebra.

Let x = side of the square.

Then $\frac{8x^2}{12}$ = cost of paving in shillings.

And $20x$ = cost of inclosing in do.

But $\frac{8x^2}{12} = 20x$ by the question, and clearing this of fractions, it becomes $8x^2 = 240x$,

Dividing by $8x$ gives $x = 30$ = side of the square.
Consequently $30^2 = 900$ = extent of court yard.

Otherwise thus :

Multiply 41, the sides of the square, by 60d, the cost of 1 yard; and divide by 3d, the quotient is 30 = the side.

No. III.

$2180 \times 3.1416 = 6848.688$ = circumference, and 6848.688×2180 gives 14930139.84 = Superficial content.

No. IV.

By Mensuration, or by 18th Euclid's 12th Book. Spheres are to each other as the cubes of their diameters.

Cube 2180 = 10360232000 = cube of diameter. $10360232000 \times 5236 = 5424617475.2$ = cubic miles in the Moon.

No. V. By 4th of Euclid's 6th Book.

In shadow, In height, Feet shadow, Feet, Inches.

As $15\frac{1}{2}$: 9 :: $114\frac{3}{4}$: 66.7 17-31. height Ans.

No. VI.

From 12 passed over by minute hand,

Take 1 passed over by hour hand in same time,

11 gained by minute hand in one revolution.

Rule to find the horses.

1st Suppose

10, error $\times 84$

2d Suppose

6, error—84

$840 + 504 = 1344$ div. by 168 = Sum of Errors = 8 the number of Horses. Then 8.23. and 720 are the Nos. required.

PROBLEMS FOR THE ALMANACK.

Divide the number 10 into two such parts, that if the greater be divided by the lesser, the quotient will be 10.
 If a log be 3 feet in circumference at each end, and 60 feet long. How many feet of square edged two-inch plank may it be sawed into, allowing $\frac{1}{2}$ inch for the saw calf?

PROBLEMS FOR YOUNG MECHANICS.

- I. A beam twenty feet long, supported at both ends, carries a weight of 8 tons 4 feet from one end, and another of 3 tons 1 foot from the other end, what proportion of weight does each of the supporters bear?
- II. A weight of 100 tons is to be raised 380 feet in 15 minutes, by a power, the velocity of which is 220 feet per-minute. What is the power required?
- III. A power of 90 lbs. at the rate of 200 feet per minute, is applied to pull a weight up an inclined plane at the rate of sixty feet per minute, when the plane is 40 feet long and 20 feet high. How much will be the weight drawn?
- IV. The gate of a sluice is 16 feet deep, and 24 feet broad; what is the pressure of water against it?
 The number of feet in the perimeter of a right angled triangle, is equal to the number of square feet in the area, and the base is to the perpendicular as 6 to 6. Required the length of each of the sides?

QUESTIONS.

By JOSEPH OWENS, Royal Sappers and Miners.

- I. A person being asked what o'clock it was, replied, "The time past noon is $\frac{4}{5}$ ths of the time from this till midnight." Required the time by Vulgar Fractions?
 - II. A ship having struck against a rock, it was found on examination that there was a breach in her bow 12 inches square. The carpenter had at the time only one board measuring 9 by 16 inches, which was considered by a majority as useless on the occasion; the carpenter, however, being a mathematician, insisted that "the board would exactly answer his purpose;" which he proved to be the case by cutting it into two sections. How was it possible for those sections to be cut, in order that when joined again in another position, that they would EXACTLY fit the breach—omitting the waste of sawing, &c.?
 - III. There is a street 810 yards long, in which there is a certain number of cylindrical lamps in a right line, which are placed at equal distances. Each lamp is 2 feet in diameter. At the northern end of this street, there is a road leading in a N. N. W. direction, at the distance of 47 yards. On this road there is also a lamp. Now if a person who is placed at Lamp No. 1, (at the south end of the street) move forward in a S. S. E. direction, 120 yards, a direct ray in passing—to his eye—from the lamp on the N. N. W. road, will be respectively tangent to the 18th and 19th lamps in the street. Required the number of lamps in the street by calculation?
 - IV. On the 9th June, in latitude 54 degrees, 36 minutes north, I observed the Sun to be at its greatest altitude at 52 minutes past 11 o'clock, with my watch. On the 17th July, in the same parallel of latitude, at 12 o'clock, I made a second observation, and found his altitude to be 22 degrees less than on the former occasion. Supposing my watch to have performed regularly, I desire to know by calculation the distance between the places of observation expressed in English miles.
- [We have to acknowledge communications from A.—from S. E. M., and from J. F. N. The ANSWERS by G. T. K. are more satisfactory than those

NOVA SCOTIA (38) ALMANACK.

from other of our correspondents, inasmuch as they give, briefly, the mode of working, and the data. The disarrangement of the Almanack office by the Fire, and other cross occurrences, have obliged us to omit the greater part of the answers,—and several new Problems. This is cause for regret and apology, but we trust allowances will be made by our Patrons.

ANSWER TO CHARADE IN ALMANACK FOR 1837.

CHARADE.

My first includes whate'er is said or sung,
My second soonest marks the baby's tongue ;
My third is useful, though by science scorned,
My whole by truth and fancy is adorned.

Required—a Solution in Verse.

ANSWER.

All, doth include whate'er is said or sung ;
Ma, soonest marks the baby's lisping tongue ;
Knack, is of use, altho' by science scorned ;
And *Al-ma-nack*, is variously adorned.

ROLAND.

CHARADE FOR 1838.

BY ROLAND.

"*A Rowland for an Oliver.*"

Name that distinguished shrub the poet sings ;
And that which graceful round the turret clings ;
The plant whose starry buds grace winter's eve ;
The precious gold-tinged pebble of the wave ;
The cooling sphere which decks the tropic groves ;
The *queenly* flower that Philomela loves ;
The dark brow'd chieftain of the unplough'd sward ;
The link between earth's children and their Lord :—
The initials joined, will give a name, whose sound,
Stirs up the patriot's sympathy profound,—
While songs, and shouts, and cannon-peals, resound.

GOVERNMENTS.

REPUBLICS.—The only countries possessing a republican form of government, or a system which acknowledges the people to be the source of all power, and recognizes no self-appointed, or hereditary authority, are the following:—1. The United States of America, population

16,680,000. 2. Mexico, 8,500,000. 3. Columbia, 3,400,000. 4. Bolivia, 1,500,000. 5. Guatemala, 2,000,000. 6. Peru, 2,000,000. 7. Chili, 1,700,000. 8. Hayti, 810,000 (blacks). 9. Switzerland, 2,090,000. 10. San Marino, (in Italy) 12,000. 11. Cracow, 30,000. Total, 57,012,000.

LIMITED MONARCHIES.—The countries possessing a government in which the hereditary sovereignty of one chief magistrate or king, is balanced by a legislative representation of the people, upon constitutional principles, and a greater or less extension of the elective franchise are the following:—1. Great Britain, population, 25,690,000; in Hanover 1,000,000; in British India 140,362,000; in Canada, North America, and West India Islands, 3,100,000; in the Ionian Islands, (Mediterranean) 200,000; in the Cape of Good Hope, and other African Colonies, 1,200,000; in the island of Ceylon, 1,000,000. The whole population of the British Empire is thus—172,452,000. 2. France—home population, 34,000,000; Colonial, 2,500,000. 3. Spain, 14,000,000. 4. Portugal, 3,300,000. 5. Holland, 3,633,000. 6. Sweden and Norway, 5,000,000. 7. Belgium, 4,500,000. 8. Greece, 2,200,000. Total, 242,032,000.

DESPOTIC GOVERNMENTS.—The countries in which the will of the sovereign is the supreme law, but in which there are various codes of subordinate laws and governors, are the following:—1. Russia, which in Europe has a population of 52,000,000; in Asia, 3,440,000. 2. Egypt, 4,000,000. 3. Denmark, 2,000,000. 4. Prussia, 15,000,000. 5. Saxony, 1,500,000. 6. Turkey in Asia, 11,500,000; in Europe, 10,000,000. 7. Arabia (despotic chiefs) 11,500,000. 8. Tartary (despotic chiefs) 10,000,000. 9. China, 270,000,000. 10. Japan, 25,000,000. 11. Austria, 34,500,000. 12. Asiatic Isles, 20,000,000. 13. Bavaria, 4,400,000. 14. Italian States (despotic and papal) 10,000,000. 15. Persia, 9,000,000. 16. Brazil, 5,500,000. 17. Independent Indians, (by chiefs) 1,500,000. 18. Spanish Colonies, (despotic) 2,740,000. 19. Danish do. 110,000. 20. Annam in Asia, 14,000,000. 21. Siam, 3,000,000. 22. Burmah, 3,500,000. 23. Siam, 4,000,000. 24. Nepal, 2,500,000. 25. Sindhy, 1,000,000. 26. Cabaul, 6,600,000. 27. Belonches, 2,000,000. 28. Herat, 1,500,000. 29. Bucharia, 2,500,000. 30. Khokan, 1,000,000. 31. Yeman, 2,500,000. 32. Portuguese Asia, 500,000. 33. Bohemia, 3,100,000. 34. Thibet, 30,000,000. 35. African Nations, unknown, but supposed to be 200,000,000. Total, 665,990,000, in a state of political slavery.

Committee, M. G. Black and H. Bell, Esqrs. of Halifax, J. Newton, R. Barry, and J. Barss Esqrs. of Liverpool, Mr. A. Cocken of Shelburne, T. A. S. Dewolf Esq. and Mr. R. Dewolf of Horton, Mr. M. Smith of Windsor, J. Allison Esq. and Wm. Allison of Newport, Richard Smith Esq. Shubenacadie, C. E. Ratchford, of Parrsboro', J. Hewstis Esq. of Wallace; Judge Marshall, of Sydney, C. B. Mr. I. Smith of Charlotte Town, and J. Pope Esq. of Bedeque, P. E. Island.

Nova Scotia Philanthropic Society. Established April 7, 1834. President, G Roast, Esq; Vice President, W M Hoffman, Esq; senr. assist. V P, W A McAgy; junr. assist. V P, B Wier; Treasurer, W Caldwell; Secretary, R M Barratt; assistant Secretary, S Caldwell; Steward, R A Bigby.—Annual Meeting, 1st Monday in October.

CHARITABLE IRISH SOCIETY. J Howe, President; E Kenny, Vice President; W Skerry, Treasurer; D Creamer, Secretary.

NORTH BRITISH SOCIETY. J Munro, President; J F Gray, Vice President; senr. assistant Vice President, E Wallace; junr. assistant Vice President, A Primrose; Treasurer, J Watt; Secretary, J Lessell; assistant Secretary, G Esson.

Horticultural Society. Patrons, Sir Colin Campbell, K C B and

Sir Peter Halkett, G C H. Lady Patroness, Lady Campbell. President, Hon T N Jeffery. Vice Presidents, Hon C R Prescott, Hon J Allison. Treasurer, E Allison, Esq. Secretary, C H Wentworth, Esq. Royal Engineers.

Halifax Mechanic's Library. President, C H Belcher; Treasurer, J Naylor; B Carlisle, Secretary and Librarian.

HALIFAX MECHANIC'S INSTITUTE. Patron, Sir Colin Campbell, K C B.; President, G R Young, Esq.; 1st Vice President, Mr A McKinlay; 2nd V P, Mr A McKenzie; Treasurer, J Forman, jr. Esq.; Curator, Mr J McDonald; Secretary, Mr J S Thompson.

HALIFAX LITERARY AND SCIENTIFIC ASSOCIATION.—President, Mr. R M Barratt, 1st V P, R W Young. 2nd V P, W C Silver. Treasurer, J A Bell. Secretary, C E Patterson. Ass't do J McKenzie.

Carpenters' Society. W Marvin, President; W Cutlip, Vice President; -- McPherson, Secretary; R Richardson, Treasurer.

Dispensary. Open every day except Sunday, from 1 to 2 o'clock.

KEEFLER'S READING ROOM.—This establishment opposite Exchange building, was commenced by Mr. Charles Keefer in 1836;—this year a more commodious apartment, neatly fitted up, has been provided. The room is well supplied with English, Irish, Scotch, American and Colonial Newspapers, and with the English and Scotch Magazines. Mr. Keefer's attention to the shipping department, and the collection of late news, has repeatedly attracted the Notice of the Public. The Room is respectably supported.

HALIFAX LIBRARY.—President, Hon. H H Cogswell. Treasurer, E Allison. Secretary and Librarian, J J Chipman.

EXCHANGE READING ROOMS. Committee, W A Black, Esq. Chairman: G P Lawson, S Binney, W J Starr, W Murdoch, J Williamson, and L Hartshorne, Esqrs. Mr J Burkett, Superintendent.

Pictou Ladies' Benevolent Society. Instituted 1822. Directors, Mrs B Purvis, A Patterson; Mrs J D B Fraser, Secretary; Mrs T Fraser, Treasurer.—“*Pictou Friendly Society.*” President, Don Fraser; Secretary, J W Harris, Esq; Treasurer, J Patterson;—“*Pictou Literary Society.*” Instituted 1834. President, R McKay, Esq.; Sec'y. and Treasurer, C Robson.—“*Pictou, Aux Bible Society.*” Instituted 1813. President, George Smith, Esq; Treasurer, J Patterson; Secretaries, Rev J Robson and J Dawson.

AGRICULTURAL, &c.

To the Publisher of the Nova Scotia Almanack.

SIR—If you have a spare page, perhaps some of my gleanings, thrown into my own words, in the most brief manner, may answer to fill it.

Potatoes are of use for other purposes beside forming an accompaniment to roast beef, or an ingredient for a tea-cake, or the hundred other purposes which this generally useful root serves. Take shoots from choice apple trees, insert them in a potatoe, place both in the ground, except an inch or two of the shoot left

above the surface,—advance him to maturity, at least,—No

Weeds are inside the more valuable the soil, they crowd off great quantities of appearance of some harvest,” indeed, but pickpockets, and he garden, most compla

t them in a potatoe,
two of the shoot left

above the surface,—the potatoe will feed the youngster, and ad-
vance him to maturity in a first rate style: so say the Bohe-
mians, at least,—Nova Scotians may try.

Weeds are insidious enemies, in a variety of ways, to
the more valuable vegetable productions. They exhaust
the soil, they crowd their useful neighbours out, and they drain
off great quantities of valuable moisture; how creditable then, the
appearance of some persons' fields in summer,—not "white for the
harvest," indeed, but yellow and red and blue with the farmer's
pickpockets, and he, "good easy man," looking on at the weed
garden, most complacently, from year to year!

Good seeds are of great consequence in good crops. Plants in-
tended for seed should be carefully cultivated; they should be
kept apart, so that those of the same species could not intermix,
and produce inferior varieties; they should remain until perfectly
ripe, be well dried, and laid by in bags or boxes. Test their vi-
tality before sowing, by placing them in lukewarm water; the
good seed will sink, the useless, like other articles of little worth,
will lie on the surface.

Do not cheat your cattle, by turning them out to graze, before
Spring has provided them with the materials of a good bite. The
reverse of the conduct here recommended, causes injury to grass
roots, gives much useless tiresome work to the jaws of quadrupeds,
and spoils their after-feeding.

If you want productive poultry, give them commodious apart-
ments. Do not crowd them into one filthy pen, and then wonder
that they are not in good order. An apartment for roosting, one for
setting, and another for feeding, is not too much; the more slo-
venly mode will make your feathered bipeds uncomfortable, and
will be detrimental to your own pocket and table.

Iron rods have been used with good effect in hop growing.
Their attraction of the electric fluid has been found productive
of luxury in the plants, and their durability makes them cheap.
Do not, however, run among your iron-supported hops, during
a thunder storm.

It is said, that gypsum, strewed on fruit blossoms, greatly in-
creases productiveness. A trial would do no harm.

Beet sugar is "progressing" rapidly, in other parts,—could any
thing be done in this Province?

To extract fresh water from salt,—get a hoghead, make a false
bottom four inches above the other, perforate the false bottom
with holes, insert in it a large tube rising over the vessel, place
a filter of flannel over the false bottom, nearly fill the vessel
with fine sand beat down hard, pour your sea water into the
tube, and it will rise fresh through the sand.

CORNY COWHORN—No. 1.

[We have not space for any other numbers of our Correspondent.
The Fire, which has been already pleaded in excuse, obliges us to
cut short this department. Next year we must be earlier in the field,
under better circumstances.]
