Technical and Bibliographic Notes/Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

- Coloured covers/  
Couverture de couleur
- Covers damaged/  
Couverture endommagée
- Covers restored and/or laminated/  
Couverture restaurée et/ou pelliculée
- Cover title missing/  
Le titre de couverture manque
- Coloured maps/  
Cartes géographiques en couleur
- Coloured ink (i.e. other than blue or black)/  
Encre de couleur (i.e. autre que bleue ou noire)
- Coloured plates and/or illustrations/  
Planches et/ou illustrations en couleur
- Bound with other material/

The copy filmed here has been reproduced thanks to the generosity of:

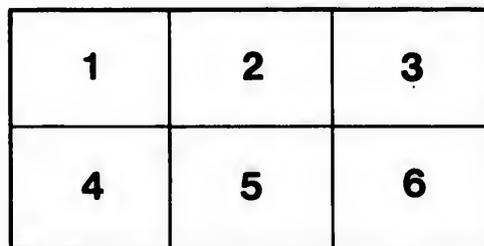

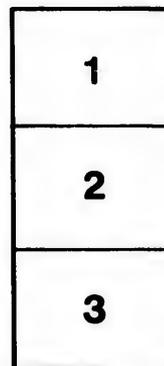

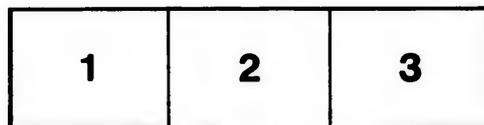

Harriet Irving Library  
University of New Brunswick

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol  $\rightarrow$  (meaning "CONTINUED"), or the symbol  $\nabla$  (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

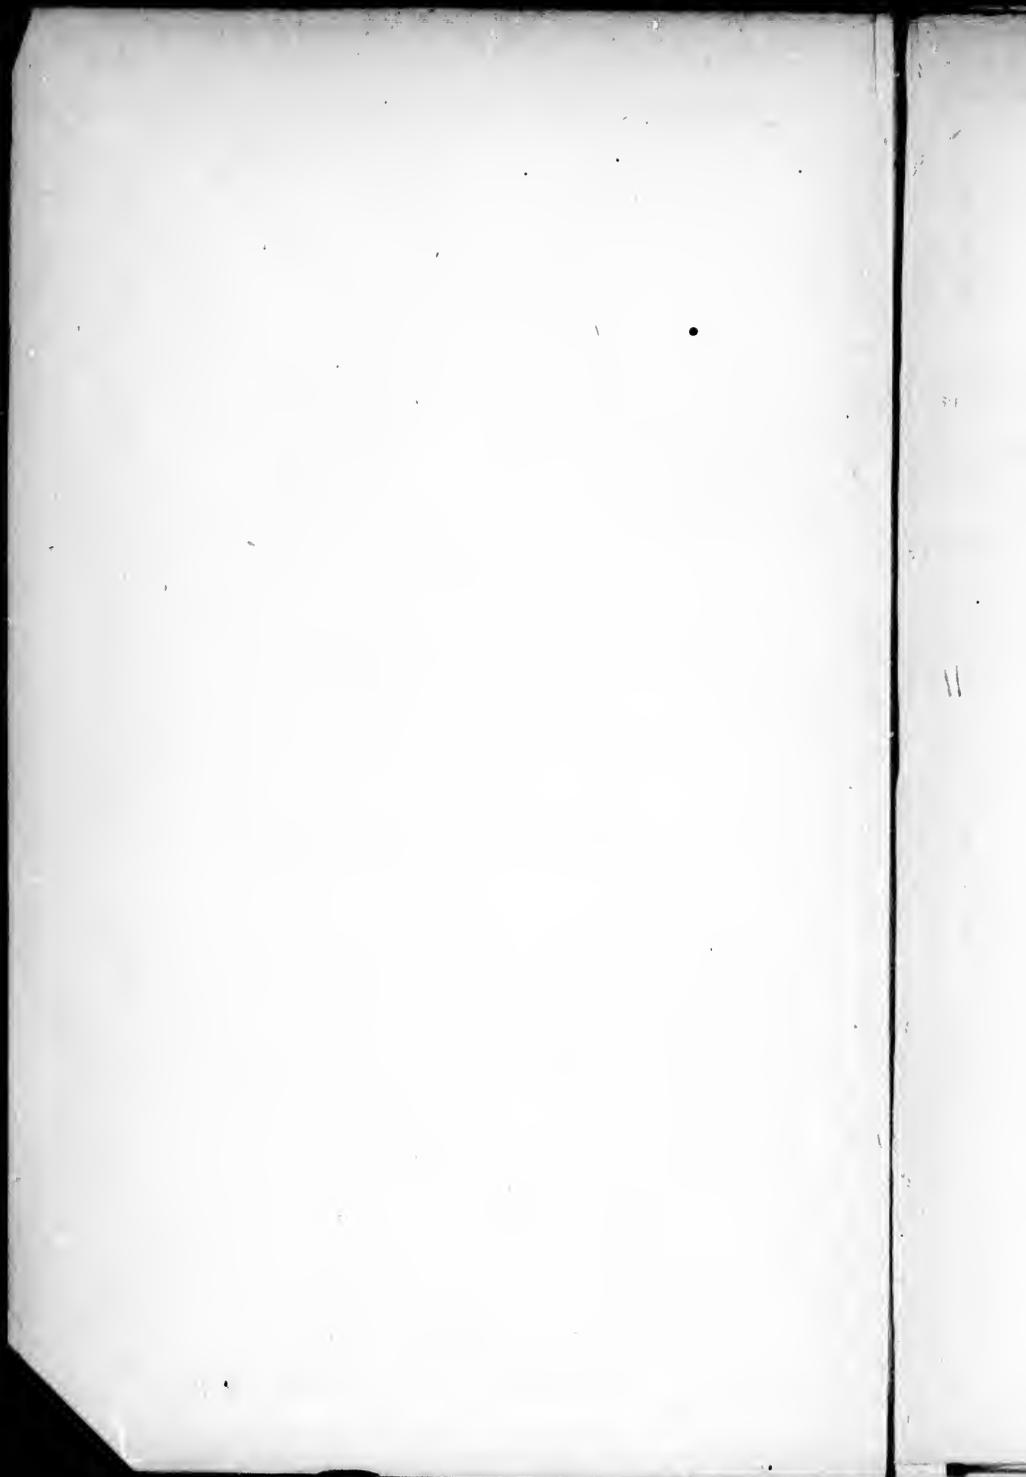

Harriet Irving Library  
University of New Brunswick

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole  $\rightarrow$  signifie "A SUIVRE", le symbole  $\nabla$  signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

LONDON:  
LONGMAN, BROWN, GREEN, AND LONGMANS,  
PATERNOSTER-ROW.  
1850.

" Though immediately and primarily written for the merchants, this Commercial Dictionary will be of use to every man of business or of curiosity. There is no man who is not in some degree a merchant ; who has not something to buy and something to sell, and who does not therefore want such instructions as may teach him the true value of possessions or commodities. The descriptions of the productions of the earth and water which this volume contains, may be equally pleasing and useful to the speculatist with any other Natural History. The descriptions of ports and cities may instruct the geographer as well as if they were found in books appropriated only to his own science ; and the doctrines of funds, insurances, currency, monopolies, exchanges, and duties, is so necessary to the politician, that without it he can be of no use either in the council or the senate, nor can speak or think justly either on war or trade.

" We, therefore, hope that we shall not repent the labour of compiling this work, nor flatter ourselves unreasonably, in predicting a favourable reception to a book which no condition of life can render useless, which may contribute to the advantage of all that make or receive laws, of all that buy or sell, of all that wish to keep or improve their possessions, of all that desire to be rich, and all that desire to be wise."

JOHNSON, *Preface to Rolt's Dict.*

## ADVERTISEMENT TO THIS EDITION.

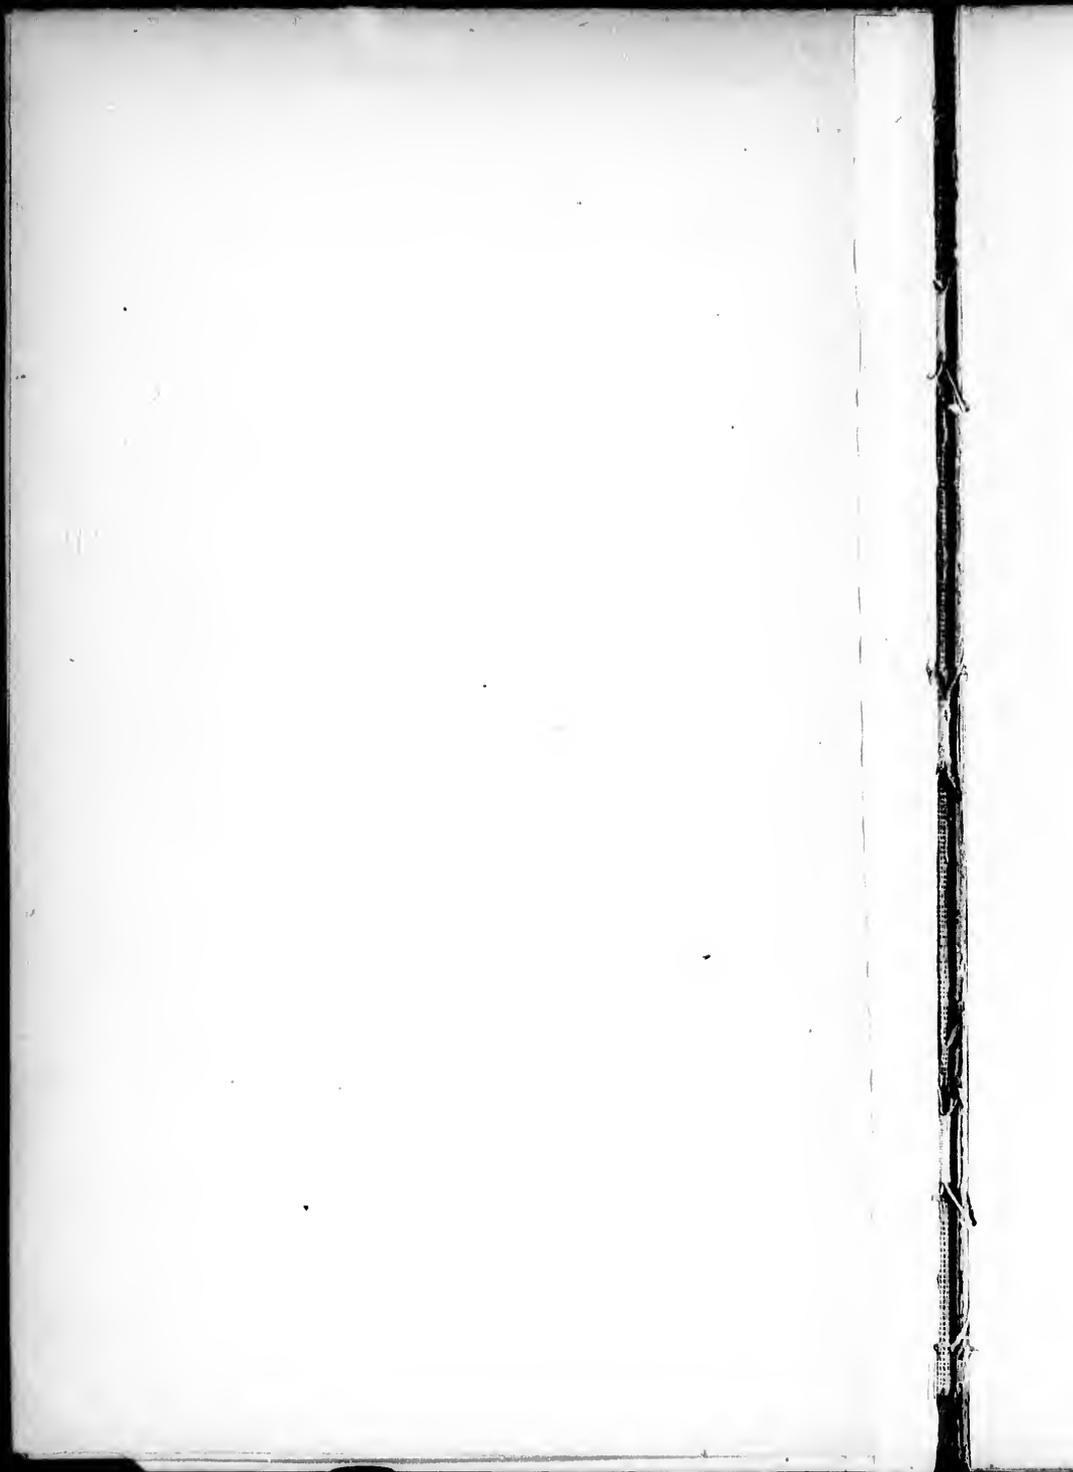

---

THE principal changes which have taken place in the Commerce and commercial regulations of this and other countries, during the last three years, have been carefully noted in this edition. Of these, the repeal of the greater portion of the Navigation Laws has been the most important. Besides a full abstract of the new Navigation Act, we have endeavoured to exhibit the circumstances under which it originated, and to estimate its probable influence over the mercantile marine and well-being of the country. The articles Corn Laws and Corn Trade, and the articles on Dantzic, Galacz (SUPPLEMENT), New York, Odessa, Taganrog, &c., embrace a number of details illustrative of the Corn Trade during the four years ending with 1849. And though it would be wrong to speak with undue confidence on such a point, we confess that, after the most careful investigation, we see no grounds for thinking that the measures adopted in 1846 will be really injurious to agriculture.

Wherever it could be done, we endeavoured to introduce the new matter and amendments into the body of the work. But this was not always practicable; and the Supplement contains a good deal of late and valuable information. It embodies, for example, the most recent details in regard to the Corn and Cotton Trades, with the new Act regulating the Conveyance of Passengers from the U. Kingdom, the latest accounts of the trade of Calcutta, Canton, the U. States, &c.

We beg again earnestly to solicit our friends, in this and other countries, to point out such mistakes as they may happen to notice, and to supply us with the means of obviating them, and of rendering the work still better entitled to the public confidence.

London, 2d March, 1850.

## PREFACE TO THE EDITION OF 1847.

---

THE last complete edition of this work, though published so lately as February, 1844, has already become all but obsolete. This has been occasioned by the extraordinary changes that have been made in the interval in our commercial policy and regulations. Of these the act of last session providing for the immediate modification and speedy abolition of the Corn Laws, is the most important. It was the crowning measure in the memorable administration of Sir Robert Peel; and went far to complete the great series of commercial reforms begun in 1842. The opening of the ports to the free importation of foreign cattle, sheep, and hogs, which had previously been wholly prohibited; the repeal of the Excise duty on glass, and of the Customs duties on about 500 different articles, including some of the greatest importance, and their reduction on many more; the vast improvement effected in our banking and monetary systems; and the measure respecting the Corn Laws, were all accomplished in the short space of four or five years; and, in as far as can at present be seen, not only with infinite advantage to the public, but without injury or even sensible inconvenience to any class! And it is obvious that such could not have been the case had not the determination to carry these measures been subordinate to the skill and ability with which they were prepared.

These, however, are not the only alterations that have taken place since February, 1844. New acts have been passed in that interval relating to navigation, the intercourse with the colonies, the importation and exportation of foreign and native produce, the hiring of seamen, the registry of shipping, &c., with the important act of last session in regard to the sugar duties. And in addition to the many fundamental changes that have taken place at home, a greatly improved Tariff has recently been enacted in the U. States; while minor changes have been effected in other parts of the commercial world.

The edition of this Dictionary now given to the public has been accommodated to this altered state of things. Wherever it was practicable we have introduced the new matter under its proper head; the circumstance of the work being stereotyped having generally enabled us to do this without resetting the types of the other portions. In most cases the space occupied by the articles that have been superseded afforded room for those by which they have been replaced; and where it happened that the new articles could not be confined within the former limits, the addition of extra pages, supplied the necessary accommodation. Hence, notwithstanding the great amount of matter inserted for the first time in this edition, the SUPPLEMENT added to it is of comparatively limited dimensions. The separate Supplement prepared for the use of the purchasers of the editions of 1844 and 1846 is considerably larger, inasmuch as it contains the more important portions of the new information dispersed throughout the present work.

The extreme difficulty of procuring recent and authentic information in relation to the commerce and commercial regulations of foreign and remote countries will, we venture to hope, be admitted as some excuse for the errors which, despite

every effort to be accurate, may, no doubt, be discovered in this book. We shall reckon it a favour if those by whom they may be detected will have the goodness to point them out; and we shall be still more obliged if they will, at the same time, supply us with matter available for their correction. We beg farther to state that whatever information may be communicated to us by gentlemen versed in any of the matters treated of in this work, will be most gratefully received; and that it will be employed to render it, what we are most anxious it should be, a digest of late, readily accessible, and *trustworthy* information on all matters relating to the commerce and commercial navigation of this country and of the world.

PREFACE  
TO  
THE EDITION OF 1844.

---

THE last edition of this work that underwent a complete revision was published in 1834. Since that epoch several considerable impressions have been exhausted; the more important changes in the commercial laws and regulations of this and other countries, and in the channels of commercial intercourse, that took place in the interval, having been specified in successive Supplements. These, however, notwithstanding the limited plan on which they were compiled, had become rather voluminous; and the changes made in our commercial policy by the Tariff Act of 1842, and the late acts for regulating the corn and colonial trades, &c., were so very important, and affected so many articles and interests, that it would have been difficult to notice them and the other subjects that required to be brought under the reader's eye in a new Supplement, without extending it to something like the size of the original work, which would thus have been rendered clumsy, costly, and inconvenient. Under these circumstances, we had no choice, except to abandon the work altogether, or to undertake the laborious task of its reconstruction. Having determined upon the latter, we have endeavoured to make it a Digest and Repertory of the most useful and authentic information respecting the past and present state of the commerce of this and most other countries, including the means and devices resorted to for facilitating commercial operations, and the laws and regulations under which they have been carried on. The various details are brought down to the latest period; and such additional subjects and statements have been introduced as had been overlooked in the former editions, or have since come into existence or grown of importance. We have tried to effect these improvements without adding, very materially, to the size of the work, by subjecting it to an unsparing retrenchment, and rejecting whatever was superseded by late changes, or appeared to be unnecessary.

It must, however, be admitted of works of this description, that they are less susceptible than most others of being improved in successive editions. An error in a bygone statement may, of course, be detected and rectified; but few comparatively of those who refer to a Commercial Dictionary care for historical notices or theoretical discussions. The practical details belonging to the present moment are the prime objects of interest with most men of business; and the same difficulties recur in attempting to give an account of commerce and commercial legislation in 1842 and 1843 that had to be encountered in describing their state in 1832 and 1833. The subject is not stationary but progressive, and variable in the extreme. The information, too, to which we have been compelled to resort, has been often very deficient; and when more abundant, it has not infrequently been obscure, contradictory, and but little to be depended upon. And even though it had been of a less ques-

tionable description, the all but endless variety of subjects we have had to notice, and the perpetual and often unmarked changes to which most of them are subject, prevent our flattering ourselves with the notion that we have been much more successful on this than on former occasions in avoiding mistakes. We have, however, resorted to every means within our reach by which accuracy was likely to be attained; and can honestly affirm that, in attempting to render our work worthy of the public confidence, we have shrunk from no labour nor grudged any reasonable expense.

Except in one or two instances, we have seen no reason to modify any general principle laid down in the previous editions. The freedom of industry and of trade appears to us, speaking generally, to be the only sound foundation on which the commercial legislation of any country can safely or permanently rest. But we are not of the number of those who think that this is a principle to which there can be no exception, and that it is to be enforced at all times, without regard to existing interests, or to the peculiar situation of the branches of industry to which it may be proposed to be applied. There are, in truth, no absolute principles; that is, there are no principles that can be safely and advantageously carried out to their full extent, at all hazards and under all circumstances, either in Commercial Economy or any thing else. In conducting national affairs, the interests, and even the unreasonable prejudices, of great classes must be consulted; and governments should frequently, or, perhaps, we might say, generally, adopt that line of conduct which may seem to be on the whole best fitted to conciliate and promote the varying interests of those for whom they legislate, in preference to that which may be more in accordance with principle. A policy of this sort, while it is consistent with the effectual reform of every abuse, makes all changes be carefully considered, and cautiously introduced; and provides for the permanent advantage of the community with as little immediate injury as possible to individuals.

It is not, therefore, as many appear to suppose, enough to prove that a rule or regulation is wrong, that it interferes with the absolute freedom of industry or of trade. Such interference may be justifiable or unjustifiable, according to the peculiar exigencies of the case. The decisions of men of sense are not to be guided, on topics of this sort, by clamour, or by a cuckoo-cry in favour of any general principle, however well-established, but by a comprehensive investigation of what is under the circumstances the wisest and best course of policy to be adopted. Who can doubt that the regulations with respect to the truck system, the exclusion of females from mines, and the employment of young people in factories, though interfering to a considerable extent with the freedom of industry, are highly judicious, and necessary for the protection of the largest and not least important portion of society?

It may be doubted whether the commercial code of any country was ever so much liberalised and improved in the same space of time as ours has been between the important reforms begun by Mr. Huskisson in 1825, and those effected by Sir Robert Peel in 1842. The more ardent reformers allege, indeed, that these were not sufficiently extensive, that they were introduced slowly and with greater diffidence than necessary, and that many abuses are still unredressed. But those who reflect on the difficulty, in an extremely artificial state of society, of correctly appreciating the remote influence of any considerable change, and the impossibility of retracing any false step, will probably be disposed to applaud the prudence manifested in effecting these reforms. The progress already made has, however, paved the way for farther advances; and the reforms that still remain to be undertaken may now be

attempted with comparatively little risk. The greater number of these are, we believe, pointed out in this work; and we have endeavoured to show how they may be best introduced, and the advantages which may be fairly anticipated from their being carried into effect.

Some of the most important subjects of which we have had to treat are, unfortunately, much mixed up with party politics, and the agitation of the day. But our pages, we trust, are not polluted by any factious or partisan taint. We have endeavoured to treat the subjects in question in the spirit of lookers on who have no wish to participate in the game, and not in that of the players, who may, perhaps, have staked their all on the result; and are not conscious of having been biased by political or personal predilections.

We firmly adhere to the opinion we have endeavoured to establish in the former editions of this work and elsewhere, that it would be sound policy to permit the importation of foreign corn at all times, under a moderate fixed duty accompanied by a corresponding drawback. A duty of this sort would not interpose any serious obstacle to our getting supplies of foreign corn when necessary; at the same time that it would tend to prevent any sudden shock being given to agriculture by the opening of the ports to free importation, and would countervail the peculiar burdens the agriculturists at present sustain, or which, at all events, they would most certainly have to sustain, were the ports open to importation without any duty. It appears to us that justice to all parties — to the manufacturers and merchants on the one hand, and to the agriculturists on the other, requires that some such method of settling this *vezata questio* should be attempted. It has been truly said, that what a mercantile country like Great Britain most requires is the adoption of "a decided and unflinching course of commercial policy." This is necessary to give those engaged in agricultural and commercial pursuits that feeling of security which lies at the bottom of all steady, vigorous, and prolonged exertion; and to make all classes bring their industry and capital into full activity. Unluckily, however, the most formidable obstacles appear to stand in the way of our entering upon such a course; and so long as one great class claim every thing, and another great class will concede nothing, our policy can inspire but little confidence. But we would fain hope that both parties, or at least that the more reasonable and considerate portions of both, may become sensible of the many pernicious consequences which cannot fail to result from prolonging the agitation with respect to the corn laws; and that these laws may be finally settled so as to reconcile and secure the just rights and interests of all classes. Unfounded anticipations of advantage on the one hand, and unfounded anticipations of loss on the other, are the only real obstacles to some such arrangement being effected; and it will be much to be deplored should the great interests of the empire be sacrificed to such delusions, and to the sinister designs of those who represent them as real, and exaggerate their magnitude.

We have thought it necessary to say thus much; for, though our work, being a Commercial Dictionary, might be supposed to be beyond the sphere of politics, we have been reluctantly compelled, on various occasions, in consequence of the way in which commercial and political questions are now mixed up, to engage in what may be called political discussion. And when such has been the case, we have not scrupled freely to state our opinions, and to censure such principles, laws, or regulations, as we believe to be injurious. But we have not done this wantonly, or without briefly stating the grounds on which we have presumed to found our conclusions. We have, also, as on former occasions, taken care to separate the theoretical and historical from the practical and legal parts of the

work. Those by whom it is consulted merely for mercantile information need not, therefore, trouble themselves about the other matters embodied in it. They are not forced on their attention; but they may easily be found, if, at any time, they should think it worth while to refer to them.

In preparing this edition we have met, as on former occasions, with every assistance from numerous official and private gentlemen. We are especially indebted to the Earl of Aberdeen for allowing us the perusal of many valuable consular Reports. To Mr. Porter, of the Board of Trade, so advantageously known by his statistical works, we owe various unpublished documents belonging to his department. Mr. Wood, the able and efficient chairman of the Board of Excise, Mr. Mayer, of the Colonial Office, and Mr. Walcott, secretary to the Emigration Commissioners, have, also, discovered on every occasion an anxious desire to add to the utility of our work, and have enriched it with various important returns. We regret our inability to notice the numerous private gentlemen who have, without regard to trouble or expense, exerted themselves to supply us with information not otherwise attainable. But, while we beg to return our best thanks to all, we cannot forbear mentioning the names of James Cook, Esq., of Mincing Lane; Archibald Hastie, Esq., M. P.; Jacob Herbert, Esq., of the Trinity House; Joshua Milne, Esq., of the Sun Life Assurance Office; William Ellis, Esq., of the Marine Indemnity Insurance Office; Robert Slater, Esq., of Fore Street; John Brown, Esq., of Liverpool; C. B. Fripp, Esq., of Bristol; David Maitland, Esq., of New York; and William Mure, Esq., of New Orleans; to all of whom we are under the greatest obligations. In fact, it is only by the assistance of individuals engaged in different lines of business, in different parts of the empire and of the world, that a work of this sort can be rendered of any real value. No diligence of inquiry can derive satisfactory information respecting the state of commerce from books and official returns, even when these exist and are accessible, which is frequently not the case: it can only be learned, if it is to be learned at all, from the communications of intelligent individuals engaged in and familiar with its details.

London, February, 1844.

## PREFACE

TO

### THE SECOND EDITION

---

THE first impression of this Dictionary, consisting of 2,000 copies, was entirely sold off in less than nine months from the date of its publication. We feel very deeply indebted to the public for this unequivocal proof of its approbation; and we have endeavoured to evince our gratitude, by labouring to render the work less undeserving a continuance of the favour with which it has been honoured. In the prosecution of this object, we have subjected every part of it to a careful revision; have endeavoured to eradicate the errors that had escaped our notice; to improve those parts that were incomplete or defective; and to supply such articles as had been omitted. We dare not flatter ourselves with the idea that we have fully succeeded in these objects. The want of recent and accurate details as to several important subjects, has been an obstacle we have not, in all cases, been able to overcome; but those in any degree familiar with such investigations will not, perhaps, be disposed severely to censure our deficiencies in this respect.

The changes in the law bearing upon commercial transactions have been carefully specified. Copious abstracts of the late Customs Acts are contained in the articles **COLONIES AND COLONY TRADE, IMPORTATION AND EXPORTATION, NAVIGATION LAWS, REGISTRY, SMUGGLING, WAREHOUSING, &c.**

The abolition of the East India Company's commercial monopoly, and the great and growing interest\* that has in consequence been excited amongst all classes respecting the commercial capabilities and practices of India, China, and other Eastern countries, have made us bestow peculiar attention to this department. The articles **BANGKOK, BATAVIA, BOMBAY, BUSHIRE, BUSSORAH, CALCUTTA, CANTON, COLUMBO, EAST INDIA COMPANY AND EAST INDIES, INDIGO, MACAO, MADRAS, MANILLA, MAULMAIN, MOCHA, MUSCAT, NANGASACKI, OPIUM, RANGOON, SINGAPORE, TATTA, TEA, &c.** contain, it is believed, a greater mass of recent and well-authenticated details as to the commerce of the vast countries stretching from the Arabic Gulph to the Chinese Sea, than is to be found in any other English publication.

The article **BANKING** is mostly new. Besides embodying the late act prolonging the charter of the Bank of England, and the more important details given in the Report of the Select Committee on the Renewal of the Bank Charter, this article contains some novel and important information not elsewhere to be met with. No account of the issues of the Bank of England has hitherto been published, that extends farther back than 1777. But this deficiency is now, for the first time, supplied; the Directors having obligingly furnished us with an

\* The recent events in China have added greatly to this interest, and have made us enter, in this edition, into several additional details.

account of the issues of the Bank on the 28th of February and the 31st of August of each year, from 1698, within four years of its establishment, down to the present time. We have also procured a statement, from authority, of the mode of transacting business in the Bank of Scotland; and have been able to supply several additional particulars, both with respect to British and to foreign banks.

We have made many additions to, and alterations in, the numerous articles descriptive of the various commodities that form the materials of commerce, and the historical notices by which some of them are accompanied. We hope they will be found more accurate and complete than formerly.

The Gazetteer department, or that embracing accounts of the principal foreign emporiums with which this country maintains a direct intercourse, was, perhaps, the most defective in the old edition. If it be no longer in this predicament, the improvement has been principally owing to official co-operation. The sort of information we desired as to the great sea-port towns could not be derived from books, nor from any sources accessible to the public; and it was necessary, therefore, to set about exploring others. In this view we drew up a series of queries, embracing an investigation of imports and exports, commercial and shipping regulations, port charges, duties, &c., that might be transmitted to any port in any part of the world. There would, however, in many instances, have been much difficulty in getting them answered with the requisite care and attention by private individuals; and the scheme would have had but a very partial success, had it not been for the friendly and effectual interference of Mr. Poulett Thomson. Alive to the importance of having the queries properly answered, he voluntarily undertook to use his influence with Lord Palmerston to get them transmitted to the Consuls. This the Noble Lord most readily did; and answers have been received from the greater number of these functionaries. There is, of course, a considerable inequality amongst them; but they almost all embody a great deal of valuable information, and some of them are drawn up with a degree of skill and sagacity, and display an extent of research and a capacity of observation, that reflect the highest credit on their authors.\*

The information thus obtained, added to what we received through other but not less authentic channels, supplied us with the means of describing twice the number of foreign sea-ports noticed in our former edition; and of enlarging, amending, and correcting the accounts of such as were noticed. Besides much fuller details than have ever been previously published of the nature and extent of the trade of many of these places, the reader will, in most instances, find a minute account of the regulations to be observed respecting the entry and clearing of ships and goods, with statements of the different public charges laid on shipping, the rates of commission and brokerage, the duties on the principal goods imported and exported, the prices of provisions, the regulations as to quarantine, the practice as to credit, banking, &c., with a variety of other particulars. We have also described the ports; and have specified their depth of water, the course to be steered by vessels on entering, with the rules as to pilotage, and the fees on account of pilots, light-houses, &c. As it is very difficult to convey a sufficiently distinct idea of a sea-port by any description, we have given plans, taken from the latest and best authorities, of about a dozen of the principal foreign ports. Whether we have succeeded, is more than we can venture to say; but we hope we have said enough to satisfy the reader, that we have spared no pains to furnish him with authentic information in this important department.

\* The returns furnished by the Consuls at Hamburg, Trieste and Venice, Naples, Danzig, Bordeaux, Christiania, Amsterdam, Elsinour, New York, Charleston, &c. are particularly good.

The **TARIFF**, or Table of Duties on Imports, &c., in this edition, is peculiarly valuable. It is divided into three columns: the first containing an account of the existing duties payable on the importation of foreign products for home use, as the same were fixed by the Act of last year, 3 & 4 Will. IV. cap. 56.; the next column exhibits the duties payable on the same articles in 1819, as fixed by the Act 59 Geo. III. cap. 52.; and the third and last column exhibits the duties as they were fixed in 1787 by Mr. Pitt's Consolidation Act, the 27 Geo. III. cap. 13. The duties are rated throughout in Imperial weights and measures; and allowances have been made for differences in the mode of charging, &c. The reader has, therefore, before him, and may compare together, the present customs duties with the duties as they stood at the end of the late war, and at its commencement. No similar Table is to be met with in any other work. We are indebted for it to J. D. Hume, Esq., of the Board of Trade, at whose suggestion, and under whose direction, it has been prepared. Its compilation was a work of much labour and difficulty; and could not have been accomplished by any one not well acquainted with the Customs Acts, and the various changes in the mode of assessing the duties.

On the whole, we trust it will be found that the work has been improved throughout, either by the correction of mistakes, or by the addition of new and useful matter. Still, however, we are well aware that it is in various respects defective; but we are not without hopes that those who look into it will be inducement enough to believe that this has been owing as much to the extreme difficulty, or rather, perhaps, the impossibility, of obtaining accurate information respecting some of the subjects treated of, as to the want of care and attention on our part. Even as regards many important topics connected with the commerce and manufactures of Great Britain, we have had to regret the want of authentic details, and been obliged to grope our way in the dark. The condition and habits of the English and Scotch are so very different from those of the Irish, that conclusions deduced from considering the trade or consumption of the United Kingdom *en masse*, are frequently of little value; and may, indeed, unless carefully sifted, be the most fallacious imaginable; while, owing to the want of any account of the cross-channel trade between the two great divisions of the empire, it is not possible accurately to estimate the consumption of either, or to obtain any sure means of judging of their respective progress in wealth and industry. As respects manufactures, there is a still greater deficiency of trustworthy details. The articles relating to them in this work have been submitted to the highest practical authorities; so that we incline to think they are about as accurate as they can well be rendered in the absence of official returns. It is far, however, from creditable to the country, that we should be obliged, in matters of such importance, to resort to private and irresponsible individuals for the means of coming at the truth. Statistical science in Great Britain is, indeed, at a very low ebb; and we are not of the number of those who suppose that it will ever be materially improved, unless government become more sensible, than it has hitherto shown itself to be, of its importance, and set machinery in motion, adequate to procure correct and comprehensive returns.

The statistical Tables published by the Board of Trade embrace the substance of hundreds of accounts, scattered over a vast mass of Parliamentary papers. They seem to be compiled with great care and judgment, and are a very valuable acquisition. We have frequently been largely indebted to them. But their arrangement, and their constantly increasing number and bulk, make them quite

unfit for being readily or advantageously consulted by practical men. Most part of the returns relating to the principal articles given in this work, go back to a much more distant period than those published by the Board of Trade.

We have seen no reason to modify or alter any PRINCIPLE or COMMERCIAL POLICY advanced in our former edition. In some instances, we have varied the exposition a little, but that is all. In every case, however, we have separated the practical, legal, and historical statements from those of a speculative nature; so that those most disposed to dissent from our theoretical notions will, we hope, be ready to admit that they have not been allowed to detract from the practical utility of the work.

The maps given with the former edition have been partially re-engraved, and otherwise improved. Exclusive of the plans already referred to, the present edition contains two new maps: one, of the completed and proposed canals and railroads of Great Britain and Ireland; exhibiting, also, the coal fields, the position of the different light-houses, &c.: the other map exhibits the mouths of the rivers Mersey and Dee, and the country from Liverpool to Manchester, with the various lines of communication between these two great and flourishing emporiums. Care has been taken to render them accurate.

We are under peculiar obligations to many official, mercantile, and private gentlemen in this and other countries, who have favoured us with communications. We hardly ever applied to any one, however much engaged in business, for any information coming within his department, which he did not readily furnish. We have not met with any mystery, concealment, or affectation of concealment. Every individual seemed disposed to tell us all that he knew; and several gentlemen have taken a degree of trouble with respect to various articles in this work, for which our thanks make but a poor return.

## PREFACE

TO

### THE FIRST EDITION.

---

It has been the wish of the Author and Publishers of this Work, that it should be as extensively useful as possible. If they be not deceived in their expectations, it may be advantageously employed, as a sort of *vade mecum*, by merchants, traders, ship-owners, and ship-masters, in conducting the details of their respective businesses. It is hoped, however, that this object has been attained without omitting the consideration of any topic, incident to the subject, that seemed calculated to make the book generally serviceable, and to recommend it to the attention of all classes.

Had our object been merely to consider commerce as a science, or to investigate its principles, we should not have adopted the form of a Dictionary. But commerce is not a science only, but also an *art* of vast practical importance, in the prosecution of which a very large proportion of the population of every civilised country is actively engaged. Hence, to be generally useful, a work on commerce should combine practice, theory, and history. Different readers may resort to it for different purposes; and every one should be able to find in it clear and accurate information, whether his object be to make himself familiar with details, to acquire a knowledge of principles, or to learn the revolutions that have taken place in the various departments of trade.

The following short outline of what this Work contains may enable the reader to estimate the probability of its fulfilling the objects for which it has been intended:—

I. It contains accounts of the various articles which form the subject matter of commercial transactions. To their English names are, for the most part, subjoined their synonymous appellations in French, German, Italian, Russian, Spanish, &c.; and sometimes, also, in Arabic, Hindoo, Chinese, and other Eastern languages. We have endeavoured, by consulting the best authorities, to make the descriptions of commodities as accurate as possible; and have pointed out the tests or marks by which their goodness may be ascertained. The places where they are produced are also specified; the quantities exported from such places; and the different regulations, duties, &c. affecting their importation and exportation, have been carefully stated, and their influence examined. The prices of most articles have been given, sometimes for a lengthened period. Historical notices are inserted illustrative of the rise and progress of the trade in the most important articles; and it is hoped that the information embodied in these notices will be found to be as authentic as it is interesting.

II. The Work contains a general article on COMMERCE, explanatory of its nature, principles, and objects, and embracing an inquiry into the policy of restrictions intended to promote industry at home, or to advance the public interests by excluding or restraining foreign competition. Exclusive, however, of this general

article, we have separately examined the operation of the existing restrictions on the trade in particular articles, and with particular countries, in the accounts of those articles, and of the great sea-port towns belonging to the countries referred to. There must, of course, be more or less of sameness in the discussion of such points, the principle which runs through them being identical. But in a Dictionary this is of no consequence. The reader seldom consults more than one or two articles at a time; and it is of infinitely more importance to bring the whole subject at once before him, than to seek to avoid the appearance of repetition by referring from one article to another. In this Work such references are made as seldom as possible.

III. The articles which more particularly refer to commercial navigation are **AVERAGE, BILLS OF LADING, BOTTOMRY, CHARTERPARTY, FREIGHT, INSURANCE (MARINE), MASTER, NAVIGATION LAWS, OWNERS, REGISTRY, SALVAOE, SEAMEN, SHIPS, TONNAGE, WRECK, &c.** These articles embrace a pretty full exposition of the law as to shipping: we have particularly endeavoured to exhibit the privileges enjoyed by British ships; the conditions and formalities, the observance of which is necessary to the acquisition and preservation of such privileges, and to the transference of property in ships; the responsibilities incurred by the masters and owners in their capacity of public carriers; and the reciprocal duties and obligations of owners, masters, and seamen. In this department, we have made considerable use of the treatise of Lord Tenterden on the Law of Shipping,—a work that does honour to the learning and talents of its noble author. The Registry Act and the Navigation Act are given with very little abridgment. To this head may also be referred the articles on the **COD, HERRING, PILCHARD, and WHALE** fisheries.

IV. The principles and practice of commercial arithmetic and accounts are unfolded in the articles **BOOK-KEEPING, DISCOUNT, EXCHANGE, INTEREST AND ANNUITIES, &c.** The article **BOOK-KEEPING** has been furnished by one of the official assignees under the new Bankrupt Act. It exhibits a view of this important art as actually practised in the most extensive mercantile houses in town. The tables for calculating interest and annuities are believed to be more complete than any hitherto given in any work not treating professedly of such subjects.

V. A considerable class of articles may be regarded as descriptive of the various means and devices that have been fallen upon for extending and facilitating commerce and navigation. Of these, taking them in their order, the articles **BANKS, BROKERS, BUOYS, CANALS, CARAVANS, CARRIERS, COINS, COLONIES, COMPANIES, CONSULS, CONVOY, DOCKS, FACTORS, FAIRS AND MARKETS, LIGHT-HOUSES, MONEY, PARTNERSHIP, PILOTAGE, POST-OFFICE, RAIL-ROADS, ROADS, TREATIES (COMMERCIAL), WEIGHTS AND MEASURES, &c.** are among the most important. In the article **BANKS**, the reader will find, besides an exposition of the principles of banking, a pretty full account (derived principally from official sources) of the Bank of England, the private banks of London, and the English provincial banks; the Scotch and Irish banks; and the most celebrated foreign banks: to complete this department, an account of Savings Banks is subjoined, with a set of rules which may be taken as a model for such institutions.\* There is added to the article **COINS**, a Table of the assay, weight, and sterling value of the principal foreign gold and silver coins, deduced from assays made at the London and Paris Mints, taken, by permission, from the last edition of Dr. Kelly's *Cambist*. The article **COLONIES** is one of the most extensive in the work: it contains a sketch of the ancient and modern systems of colonisation; an examination of the principles of colonial policy; and a view of the extent, trade, population,

\* Some of the improvements made on this article are noticed in the Preface to the Second Edition.

and resources of the colonies of this and other countries. In this article, and in the articles **CAPE OF GOOD HOPE, COLUMBO, HALIFAX, QUEBEC, SYDNEY, and VAN DIEMEN'S LAND**, recent and authentic information is given, which those intending to emigrate will find worth their attention. The map of the British possessions in North America is on a pretty large scale, and is second to none, of those countries, hitherto published in an accessible form. The article **COLONIES** is also illustrated by a map of Central America and the West Indies. An engraved plan is given, along with the article **DOCKS**, of the river Thames and the docks from Blackwall to the Tower; and the latest regulations issued by the different Dock Companies here and in other towns, as to the lloeking of ships, and the charges on that account, and on account of the loading, unloading, warehousing, &c. of goods, are given verbatim. The statements in the articles **LIGHT-HOUSES** and **PILOTAGE** have been mostly furnished by the Trinity House, or derived from papers printed by order of the Admiralty, and may be implicitly relied upon. In the article **WEIGHTS AND MEASURES** the reader will find tables of the equivalents of wine, ale, and Winchester measures, in Imperial measure.

VI. Besides a general article on the constitution, advantages, and disadvantages of Companies, accounts are given of the principal associations existing in Great Britain for the purpose of conducting commercial undertakings, or undertakings subordinate to and connected with commerce. Among others (exclusive of the Banking and Dock Companies already referred to) may be mentioned the **EAST INDIA COMPANY**, the **GAS COMPANIES**, the **INSURANCE COMPANIES**, the **MINING COMPANIES**, the **WATER COMPANIES**, &c. The article on the East India Company is of considerable length; it contains a pretty complete sketch of the rise, progress, and present state of the British trade with India; an estimate of the influence of the Company's monopoly; and a view of the revenue, population, &c. of our Indian dominions. We have endeavoured, in treating of insurance, to supply what we think a desideratum, by giving a distinct and plain statement of its principles, and a brief notice of its history; with an account of the rules and practices followed by individuals and companies in transacting the more important departments of the business; and of the terms on which houses, lives, &c. are commonly insured. The part of the article which peculiarly respects marine insurance has been contributed by a practical gentleman of much knowledge and experience in that branch.

VII. In addition to the notices of the Excise and Customs regulations affecting particular commodities given under their names, the reader will find articles under the heads of **CUSTOMS, EXCISE, IMPORTATION AND EXPORTATION, LICENCES, SMUGGLING, WAREHOUSING, &c.** which comprise most part of the practical details belonging to the business of the Excise and Customs, particularly the latter. The most important Customs Acts are given with very little abridgment, and being printed in small letter, they occupy comparatively little space. The article **TARIFF** contains an account of the various duties, drawbacks, and bounties, on the importation and exportation of all sorts of commodities into and from this country.— We once intended to give the tariffs of some of the principal Continental states; but, from the frequency of the changes made in them, they would very soon have become obsolete, and would have tended rather to mislead than to instruct. But the reader will notwithstanding find a good deal of information respecting foreign duties under the articles **CADIZ, HAVRE, NAPLES, NEW YORK, TRIESTE, &c.**

VIII. Among the articles of a miscellaneous description, may be specified **ALIENS, APPRENTICE, AUCTIONEER, BALANCE OF TRADE, BANKRUPTCY, CONTRABAND, CREDIT, HANSEATIC LEAGUE, IMPORTS AND EXPORTS, IM-**

PREMISES, IONIAN ISLANDS, MARITIME LAW, PASSENGERS, PATENTS, PAWN-BROKING, PIRACY, POPULATION, PRECIOUS METALS, PRICES, PRIVATEERS, PRUSSIAN OR GERMAN COMMERCIAL UNION, PUBLICANS, QUARANTINE, REVENUE AND EXPENDITURE, SLAVES AND SLAVE TRADE, TALLY TRADE, TRUCK SYSTEM, &c.\*

IX. Accounts are given, under their proper heads, of the principal emporiums with which this country has any immediate intercourse; of the commodities usually exported from and imported into them; of their monies, weights, and measures; and of such of their institutions, customs, and regulations, with respect to commerce and navigation, as seemed to deserve notice. There are occasionally subjoined to these accounts of the great sea-ports, pretty full statements of the trade of the countries in which they are situated, as in the instances of ALEXANDRIA, AMSTERDAM, BORDEAUX, BUENOS AYRES, CADIZ, CALCUTTA, CANTON, COPENHAGEN, DANTZIC, GALACZ, GALVESTON, HAVANNAH, HAVRE, LIMA, MONTEVIDEO, NAPLES, NEW YORK, ODESSA, PALERMO, PETERSBURG, RIO DE JANEIRO, SMYRNA, STOCKHOLM, TRIESTE, VALPARAISO, VERA CRUZ, &c.\* To have attempted to do this systematically would have increased the size of the Work beyond all reasonable limits, and embarrassed it with details nowise interesting to the English reader. The plan we have adopted has enabled us to treat of such matters as might be supposed to be of importance in England, and to reject the rest. We believe, however, that, notwithstanding this selection, those who compare this work with others, will find that it contains a much larger mass of authentic information respecting the trade and navigation of foreign countries than is to be found in any other English publication.

The reader may be inclined, perhaps, to think that it must be impossible to embrace the discussion of so many subjects in a single octavo volume, without treating a large proportion in a very brief and unsatisfactory manner. But, in point of fact, this single octavo contains about as much letter-press as is contained in two ordinary folio volumes, and more than is contained in Macpherson's Annals of Commerce, in four large volumes quarto, published at 8*l.* 8*s.*! This extraordinary condensation has been effected without any sacrifice of beauty or distinctness. Could we suppose that the substance of the book is at all equal to its form, there would be little room for doubt as to its success.

Aware that, in a work of this nature, accuracy in matters of fact is of primary importance, we have rarely made any statement without mentioning our authority. Except, too, in the case of books in every one's hands, or Dictionaries, the page or chapter of the works referred to is generally specified; experience having taught us that the convenient practice of stringing together a list of authorities at the end of an article is much oftener a cloak for ignorance than an evidence of research.

Our object being to describe articles in the state in which they are offered for sale, we have not entered, except when it was necessary to give precision or clearness to their description, into any details as to the processes followed in their manufacture.

Besides the maps already noticed, the work contains a map of the world, on Mercator's projection, and a map of Central and Southern Europe and the Mediterranean Sea. These maps are on a larger scale than those usually given with works of this sort; and have been carefully corrected, and compared with the best authorities.

Such is a rough outline of what the reader may expect to meet with in this

\* Several of these articles have been inserted for the first time in this (the third complete) edition of the work; but we thought it most convenient to enumerate them with the others.

Dictionary. We do not, however, flatter ourselves with the notion that he will consider that all that has been attempted has been properly executed. In a work embracing such an extreme range and diversity of subjects, respecting many of which it is exceedingly difficult, if not quite impossible, to obtain accurate information, no one will be offended should he detect a few errors. At the same time we can affirm that neither labour nor expense has been spared to entitle the Work to the public confidence and patronage. The author has been almost incessantly engaged upon it for upwards of five years; and he may be said to have spent the previous part of his life in preparing for the undertaking. He has derived valuable assistance from some distinguished official gentlemen, and from many eminent merchants; and has endeavoured, wherever it was practicable, to build his conclusions upon official documents. But in very many instances he has been obliged to adopt less authentic data; and he does not suppose that he has had sagacity enough always to resort to the best authorities, or that, amidst conflicting and contradictory statements, he has uniformly selected those most worthy of being relied upon, or that the inferences he has drawn are always such as the real circumstances of the case would warrant. But he has done his best not to be wanting in these respects. Not being engaged in any sort of business, nor being under any description of obligation to any political party, there was nothing to induce us, in any instance, to conceal or pervert the truth. We have, therefore, censured freely and openly whatever we considered wrong; but the grounds of our opinion are uniformly assigned; so that the reader may always judge for himself as to its correctness. Our sole object has been to produce a work that should be generally useful, particularly to merchants and traders, and which should be creditable to ourselves. Whether we have succeeded, the award of the public will show; and to it we submit our labours, not with "frigid indifference," but with an anxious hope that it may be found we have not misemployed our time, and engaged in an undertaking too vast for our limited means.

The following notices of some of the most celebrated Commercial Dictionaries may not, perhaps, be unacceptable. At all events, they will show that there is at least room for the present attempt.

The *Grand Dictionnaire de Commerce*, begun and principally executed by M. Savary, Inspector of Customs at Paris, and completed by his brother, the Abbé Savary, Canon of St. Maur, was published at Paris in 1723, in two volumes folio: a supplemental volume being added in 1730. This was the first work of the kind that appeared in modern Europe; and has furnished the principal part of the materials for most of those by which it has been followed. The undertaking was liberally patronised by the French government, who justly considered that a Commercial Dictionary, if well executed, would be of national importance. Hence a considerable, and, indeed, the most valuable, portion of Savary's work is compiled from Memoirs sent him, by order of government, by the inspectors of manufactures in France, and by the French consuls in foreign countries. An enlarged edition of the *Dictionnaire* was published at Geneva in 1750, in six folio volumes. But the best edition is that of Copenhagen, in five volumes folio; the first of which appeared in 1759, and the last in 1765.

More than the half of this work consists of matter altogether foreign to its proper object. It is, in fact, a sort of Dictionary of Manufactures as well as of Commerce; descriptions being given, which are, necessarily perhaps, in most instances exceedingly incomplete, and which the want of plates often renders unintelligible, of the methods followed in the manufacture of the commodities described. It is also filled with lengthened articles on natural history, the

bye laws and privileges of different corporations, and a variety of subjects nowise connected with commercial pursuits. No one, however, need look into it for any development of sound principles, or for enlarged views. It is valuable as a repertory of facts relating to commerce and manufactures at the commencement of last century, collected with laudable care and industry; but it is pervaded by the spirit of a customs officer, and not of a merchant or a philosopher. "*Souvent dans ses réflexions, il tend plutôt à égarer ses lecteurs qu'à les conduire, et des maximes nuisibles au progrès du commerce et de l'industrie obtiennent presque toujours ses éloges et son approbation.*"

The preceding extract is from the Prospectus, in one volume octavo, published by the Abbé Morellet, in 1769, of a new Commercial Dictionary, to be completed in five or probably six volumes folio. This Prospectus is a work of sterling merit; and from the acknowledged learning and talent of its author, and his capacity for laborious exertion, there can be no doubt that, had the projected Dictionary been completed, it would have been infinitely superior to that of Savary. It appears (Prospectus, pp. 353—373.) that Morellet had been engaged for a number of years in preparations for this great work; and that he had amassed a large collection of books and manuscripts relative to national economy, and the commerce, navigation, colonies, arts, &c. of France and other countries. The enterprise was begun under the auspices of M. Trudaine, Intendant of Finance, and was patronised by Messrs. L'Averdy and Bertin, Comptrollers General. But whether it were owing to the gigantic nature of the undertaking, to the author having become too much engrossed with other pursuits, the want of sufficient encouragement, or some other cause, no part of the proposed Dictionary ever appeared. We are ignorant of the fate of the valuable collection of manuscripts made by the Abbé Morellet. His books were sold at Paris within these few years.

A Commercial Dictionary, in three volumes 4to, forming part of the *Encyclopédie Méthodique*, was published at Paris in 1783. It is very unequally executed, and contains numerous articles that might have been advantageously left out. The editors acknowledge in their Preface that they have, in most instances, been obliged to borrow from Savary. The best parts of the work are copied from the edition of the *Traité Général du Commerce* of Ricard, published at Amsterdam in 1781, in two volumes 4to.\*

The earliest Commercial Dictionary published in England was compiled by Malachy Postlethwayt, Esq., a diligent and indefatigable writer. The first part of the first edition appeared in 1751. The last edition, in two enormous folio volumes, was published in 1774. It is chargeable with the same defects as that of Savary, of which, indeed, it is for the most part a literal translation. The author has made no effort to condense or combine the statements under different articles, which are frequently not a little contradictory; at the same time that many of them are totally unconnected with commerce.

In 1761, Richard Rolt, Esq. published a Commercial Dictionary in one pretty large folio volume. The best part of this work is its Preface, which was contributed by Dr. Johnson. It is for the most part abridged from Postlethwayt; but it contains some useful articles pilloined from other works, mixed, however, with many alien to the subject.

In 1766, a Commercial Dictionary was published, in two rather thin folio volumes, by Thomas Mortimer, Esq., at that time Vice-Consul for the Netherlands. This is a more commodious and better arranged, but not a more valuable work than that of Postlethwayt. The plan of the author embraces, like that of his predecessors, too great a variety of objects; more than half the work being

\* This, when published, must have been a very valuable work. It is now, however, in a great measure obsolete.

filled with geographical articles, and articles describing the processes carried on in different departments of manufacturing industry; there are also articles on very many subjects, such as architecture, the natural history of the ocean, the land-tax, the qualifications of surgeons, &c., the relation of which to commerce, navigation, or manufactures, it seems difficult to discover.

In 1810, a Commercial Dictionary was published, in one thick octavo volume, purporting to be by Mr. Mortimer. We understand, however, that he had but little, if any thing, to do with its compilation. It is quite unworthy of the subject, and of the epoch when it appeared. It has all the faults of those by which it was preceded, with but few peculiar merits. Being not only a Dictionary of Commerce and Navigation, but of Manufactures, it contains accounts of the different Arts: but to describe these in a satisfactory and really useful manner, would require several volumes, and the co-operation of many individuals: so that, while the accounts referred to are worth very little, they occupy so large a space that room has not been left for the proper discussion of those subjects from which alone the work derives whatever value it possesses. Thus, there is an article of twenty-two pages technically describing the various processes of the art of painting, while the general article on commerce is comprised in less than *two* pages. The articles on coin and money do not together occupy four pages, being considerably less than the space allotted to the articles on engraving and etching. There is not a word said as to the circumstances which determine the course of exchange; and the important subject of credit is disposed of in less than *two lines*! Perhaps, however, the greatest defect in the work is its total want of any thing like science. No attempt is ever made to explain the principles on which any operation depends. Every thing is treated as if it were empirical and arbitrary. Except in the legal articles, no authorities are quoted; so that very little dependence can be placed on the statements advanced.

In another Commercial Dictionary, republished within these few years, the general article on commerce consists of a discussion with respect to simple and compound demand, and simple and double competition: luckily the article does not fill quite a page; being considerably shorter than the description of the kaleidoscope.

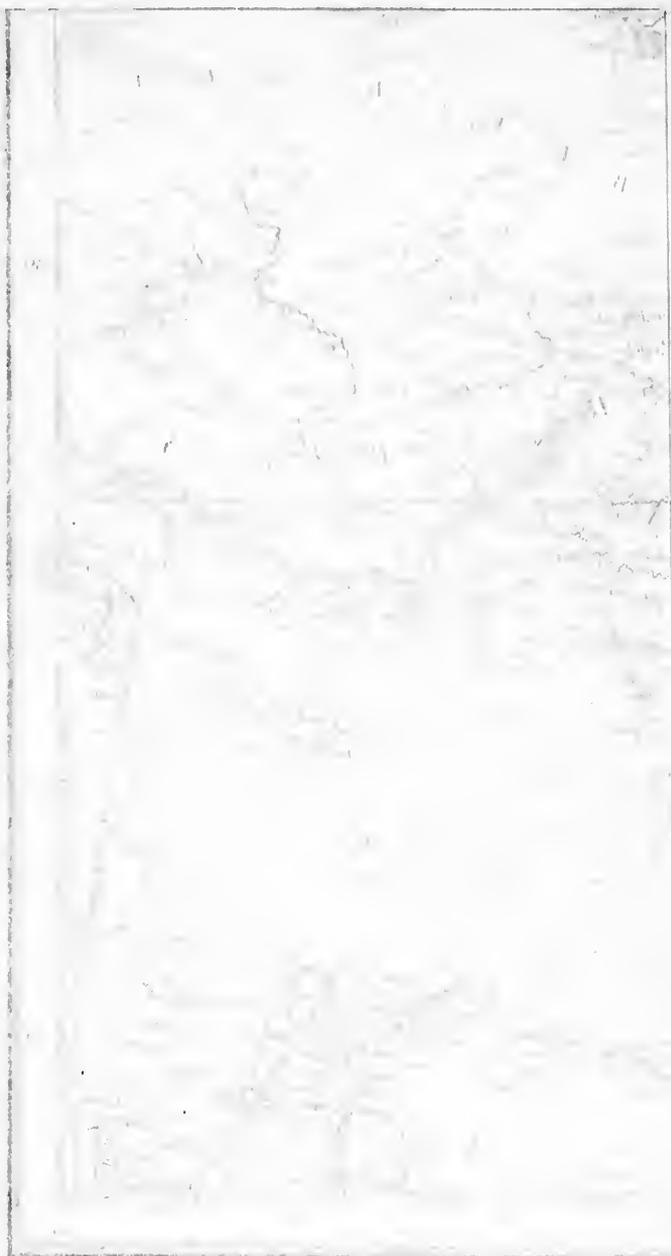

Under these circumstances, we do think that there is room for a new Dictionary of Commerce and Commercial Navigation: and whatever may be thought of our Work, it cannot be said that in bringing it into the field we are encroaching on ground already fully occupied.

MR. M<sup>C</sup>CULLOCH'S PUBLICATIONS.

---

Besides this Dictionary, Mr. M<sup>C</sup>CULLOCH has published the following Works, viz. : —

1. A DICTIONARY, GEOGRAPHICAL, STATISTICAL, AND HISTORICAL, of the various Countries, Places, and principal Natural Objects in the World. Third and improved Edition. 2 thick vols. 8vo. Illustrated with Maps. London, 1849.
2. A DESCRIPTIVE AND STATISTICAL ACCOUNT of the BRITISH EMPIRE, exhibiting its Extent, Physical Capacities, Population, Industry, and Civil and Religious Institutions. Third, and greatly improved Edition, 2 thick vols. 8vo. London, 1847.
3. SMITH'S WEALTH OF NATIONS; with 1. Life of the Author, Notes, and Supplemental Dissertations, handsomely printed in 1 vol. 8vo., double columns, with Two Portraits. The Fourth and much improved Edition Edinburgh, 1850.
4. THE PRINCIPLES OF POLITICAL ECONOMY; with some Inquiries respecting their Application, and a Sketch of the Rise and Progress of the Science. Fourth and amended Edition. 1 vol. 8vo. Edinburgh, 1849.
5. A TREATISE ON THE PRINCIPLES AND PRACTICAL INFLUENCE OF TAXATION and the FUNDING SYSTEM. 1 vol. 8vo. London, 1845.
6. THE LITERATURE OF POLITICAL ECONOMY: a Classified Catalogue of Select Publications in the different Departments of that Science, with Historical, Critical, and Biographical Notices. 1 vol. 8vo. London, 1845.
7. A TREATISE ON THE SUCCESSION TO PROPERTY VACANT BY DEATH: including Inquiries into the Influence of Primogeniture, Entails, Compulsory Partition, Foundations, &c., over the Public Interests. 1 vol. 8vo. London, 1848.

A  
DICTIONARY  
OF  
C O M M E R C E  
AND  
COMMERCIAL NAVIGATION.

---

**A**AM, AUM, or AHM, a measure for liquids, used at Amsterdam, Antwerp, Hamburg, Frankfort, &c. At Amsterdam it is nearly equal to 41 English wine gallons, at Antwerp to 36½ ditto, at Hamburg to 38½ ditto, and at Frankfort to 39 ditto.

**ABANDONMENT**, in commerce and navigation, is used to express the abandoning or surrendering of the ship or goods insured to the insurer.

It is held, by the law of England, that the insured has the right to abandon, and to compel the insurers to pay the whole value of the thing insured, in every case "where, by the happening of any of the misfortunes or perils insured against, the voyage is lost, or not worth pursuing, and the projected adventure is frustrated; or where the thing insured is so damaged and spoiled as to be of little or no value to the owner; or where the salvage is very high; or where what is saved is of less value than the freight; or where further expense is necessary, and the insurer will not undertake to pay that expense," &c. — (*Marshall*, book i. cap. 13. § 1.)

Abandonment very frequently takes place in cases of capture: the loss is then total, and no question can arise in respect to it. In cases, however, in which a ship and cargo are recaptured *within such a time that the object of the voyage is not lost*, the insured is not entitled to abandon. The mere *stranding* of a ship is not deemed of itself such a loss as will justify an abandonment. If by some fortunate accident, by the exertions of the crew, or by any borrowed assistance, the ship be got off and rendered capable of continuing her voyage, it is not a total loss, and the insurers are only liable for the expenses occasioned by the stranding. It is only where the stranding is followed by *shipwreck*, or in any other way renders the ship incapable of prosecuting her voyage, that the insured can abandon.

It has been decided, that damage sustained in a voyage to the extent of forty-eight per cent. of the value of the ship did not entitle the insured to abandon. If a cargo be damaged in the course of a voyage, and it appears that what has been saved is less than the amount of freight, it is held to be a total loss. — (*Park on Insurance*, cap. 9.)

When by the occurrence of any of the perils insured against the insured has acquired a right to abandon, he is at liberty either to abandon or not, as he thinks proper. He is in no case bound to abandon; but if he make an election, and resolve to abandon, he must abide by his resolution, and has no longer the power to claim for a partial loss. In some foreign countries specific periods are fixed by law within which the insured, after being informed of the loss, must elect either to abandon or not. In this country, however, no particular period is fixed for this purpose; but the rule is, that if the insured determine to abandon, he must intimate such determination to the insurers within a *reasonable period* after he has got intelligence of the loss, — any unnecessary delay in making this intimation being interpreted to mean that he has decided not to abandon.

No particular form or solemnity is required in giving notice of an abandonment. It may be given either to the underwriter himself, or the agent who subscribed for him.

The effect of an abandonment is to vest all the rights of the insured in the insurers. The latter become the legal owners of the ship, and as such are liable for all her future outgoings, and entitled to her future earnings. An abandonment, when once made, is irrevocable.

B

In case of a shipwreck or other misfortune, the captain and crew are bound to exert themselves to the utmost to save as much property as possible; and to enable them to do this without prejudice to the right of abandonment, our policies provide that, "in case of any loss or misfortune, the insured, their factors, servants, and assigns, shall be at liberty to sue and labour about the defence, safeguard, and recovery of the goods, and merchandises, and ship, &c., without prejudice to the insurance, to the charges whereof the insurers agree to contribute, each according to the rate and quantity of his subscription."

"From the nature of his situation," says Mr. Serjeant Marshall, "the captain has an implied authority, not only from the insured, but also from the insurers and all others interested in the ship or cargo, in case of misfortune, to do whatever he thinks most conducive to the general interest of all concerned, and they are all bound by his acts. Therefore, if the ship be disabled by stress of weather, or any other peril of the sea, the captain may hire another vessel for the transport of the goods to their port of destination, if he think it for the interest of all concerned that he should do so; or he may, upon a capture, appeal against a sentence of condemnation, or carry on any other proceedings for the recovery of the ship and cargo, provided he has a probable ground for doing so; or he may, upon the loss of the ship, invest the produce of the goods saved in other goods, which he may ship for his original port of destination; or for whatever is recovered of the effects insured, the captain is accountable to the insurers. If the insured neglect to abandon when he has it in his power to do so, he adopts the acts of the captain, and he is bound by them. If, on the other hand, the insurers, after notice of abandonment, suffer the captain to continue in the management, he becomes their agent, and they are bound by his acts."

As to the sailors, when a misfortune happens, they are bound to save and preserve the merchandise to the best of their power, and while they are so employed they are entitled to wages, so far, at least, as what is saved will allow; but if they refuse to assist in this, they shall have neither wages nor reward. In this the Rhodian law, and the laws of Oleron, Wisby, and the Hanse Towns, agree.

The policy of the practice of abandonment seems very questionable. The object of an insurance is to render the insurer liable for whatever loss or damage may be incurred. But this object does not seem to be promoted by compelling him to pay as for a total loss, when, in fact, the loss is only partial. The captain and crew of the ship are selected by the owners, are their servants, and are responsible to them for their proceedings. But in the event of a ship being stranded, and so damaged that the owners are entitled to abandon, the captain and crew become the servants of the underwriters, who had nothing to do with their appointment, and to whom they are most probably altogether unknown. It is admitted that a regulation of this sort can hardly fail of leading, and has indeed frequently led, to very great abuses. We, therefore, are inclined to think that abandonment ought not to be allowed where any property is known to exist; but that such property should continue at the disposal of the owners and their agents, and that the underwriters should be liable only for the damage really incurred. The first case that came before the British courts with respect to abandonment was decided by Lord Hardwicke, in 1744. Mr. Justice Buller appears to have concurred in the opinion now stated, that abandonment should not have been allowed in cases where the loss is not total.

For further information as to this subject, see the excellent works of Mr. Serjeant Marshall (book i. cap. 13.), and of Mr. Justice Park (cap. 9.) on the Law of Insurance.

**ABATEMENT, or REBATE,** is the name sometimes given to a discount allowed for prompt payment; it is also sometimes used to express the deduction that is occasionally made at the custom-house from the duties chargeable upon such goods as are damaged, and for loss in warehouses. This allowance is regulated by the act 3 & 4 Will. 4. c. 52. § 32. No abatement is made from the duties charged on coffee, currants, figs, guineas-grains, lemons, opium, oranges, raisins, pepper, tobacco, and wine.

**ACACIA.** See **GUM ARABIC.**

**ACAPULCO,** a celebrated sea-port on the western coast of Mexico, in lat. 16° 50' 29" N., long. 99° 46' W. Pop. 4,000 (?). "It is," says Captain Hall, "the very best ideal of a harbour. It is easy of access; very capacious; the water not too deep; the holding ground good; quite free from hidden dangers; and as secure as the basin in the centre of Portsmouth dockyard."—(*South America*, ii. 172.) Previously to the emancipation of Spanish America, a galleon or large ship, richly laden, was annually sent from Acapulco to Manilla, in the Philippine Islands, and at her return a fair was held, which was much resorted to by strangers. But this sort of intercourse is no longer carried on, the trade to Manilla and all other places being now conducted by private individuals. The exports consist of bullion, cobineal, cocoa, wool, indigo, &c. The

\* This is not quite accurate. There is one shoal on which a vessel was lost in 1781; but being laid down in the charts it is easily avoided.—(*Humboldt, Nouvelle Espagne*, iv. 50.)

imports principally consist of cotton goods, hardware, articles of jewellery, raw and wrought silks, spices, and aromatics. Acapulco is extremely unhealthy; and though it be the principal port on the west coast of Mexico, its commerce is but inconsiderable. The navigation from Acapulco to Guayaquil and Callao is exceedingly tedious and difficult, so that there is but little intercourse between Mexico and Peru. The monies, weights, and measures are the same as those of Spain; for which see Cantz.

ACIDS, are a class of compounds which are distinguished from all others by the following properties. They are generally possessed of a very sharp and sour taste; reddens the infusions of blue vegetable colours; are often highly corrosive, and enter into combination with the alkalies, earths, and metallic oxides; forming compounds in which the characters of the constituents are entirely destroyed, and new ones produced differing in every respect from those previously existing. The quality or strength of an acid is generally ascertained either by its specific gravity, which is found by means of the hydrometer, if the acid be liquid, or by the quantity of pure and dry subcarbonate of potash or soda, or of carbonate of lime (marble), which a given weight of the acid requires for its exact neutralisation. This latter process is termed Acidimetry, or the ascertaining the quantity of real acid existing in any of the liquid or crystallised acids.

The principal acids at present known are, the Acetic, Benzoic, Boracic, Bromic, Carbonic, Citric, Chloric, Cyanic, Fluoric, Ferrous, Gallic, Hydrobromic, Hydriodic, Iodic, Lactic, Malic, Margolic, Meconic, Muratic or Hydrochloric, Nitrous, Nitric, Oleic, Oxalic, Phosphoric, Prussic or Hydrocyanic, Purpuric, Saccolactic, Suberlic, Sulphurous, Sulphuric, Tartaric, Uric, and many others which it would be superfluous to detail. It is the most important only of these, however, that will be here treated of, and more particularly those employed in the arts and manufactures.

*Acetic or pyroligneous acid.*—This acid, in its pure and concentrated form, is obtained from the fluid matter which passes over in distillation, when wood is exposed to heat in close iron cylinders. This fluid is a mixture of acetic acid, tar, and a very volatile ether; from these the acid may be separated, after a second distillation, by saturating with chalk, and evaporating to dryness; an acetate of lime is thus procured, which, by mixture with sulphate of soda (Glauber's salt), is decomposed, the resulting compounds being an insoluble sulphate of lime, and a very soluble acetate of soda; these are easily separated from each other by solution in water and filtration; the acetate of soda being obtained in the crystalline form by evaporation. From this, or the acetate of lime, some manufacturers employing the former, others the latter, the acetic acid is obtained by distillation with sulphuric acid (oil of vitriol), as thus procured. It is a colourless, volatile fluid, having a very pungent and refreshing odour, and a strong acid taste; its strength should be ascertained by the quantity of marble required for its neutralisation, as its specific gravity does not give a correct indication. It is employed in the preparation of the acetate of lead (sugar of lead), in many of the pharmaceutical compounds, and also as an antiseptic.

Vinegar is an impure and weakly diluted acetic acid, obtained by exposing either weak wines or infusions of malt to the air and a slow fermentation; it contains, besides the pure acid, a large quantity of colouring matter, some muckage, and a little spirit; from these it is readily separated by distillation. The impurities with which this distilled vinegar is sometimes adulterated, or with which it is accidentally contaminated, are oil of vitriol, added to increase the acidity, and oxides of tin or copper, arising from the vinegar having been distilled through tin or copper worms. These may be easily detected; the oil of vitriol by the addition of a little solution of muriate of barytes to the distilled vinegar, which, should the acid be present, will cause a dense white precipitate; and the oxides of tin or copper by the addition of water impregnated with sulphureted hydrogen. Vinegar is employed in many culinary and domestic operations, and also very largely in the manufacture of the carbonate of lead (white lead).

*Benzoic acid*—exists naturally, formed in the gum benzoïn, and may be procured either by submitting the benzoïn to repeated sublimations, or by digesting it with lime and water, straining off the clear solution, and adding muriatic acid, which enters into combination with the lime, and the benzoic acid, being nearly insoluble in water, falls as a white powder; this may be further purified by a sublimation. Benzoic acid is of a beautiful pearly white colour when pure, has a very peculiar aromatic odour, and an acrid, acid, and bitter taste; it is used in making pastilles and perfumed incense. This acid also occurs in the balsams of Tolu and Peru, and in the urine of the horse and cow.

*Boracic acid*—is found in an uncombined state in many of the hot springs of Tuscany, as also at Sasso in the Florentine territory, from whence it has received the name of Sassoïin. In Thibet, Persia, and South America, it occurs in combination with soda, and is imported from the former place into this country in a crystalline form, under the name of Tincal. These crystals are coated with a rancid, fatty substance, and require to be purified by repeated solutions and crystallisations, after which it is sold under the appellation of borax (bi-borate of soda); from a hot solution of this salt the boracic acid is readily obtained, by the addition of sulphuric acid in slight excess; sulphate of soda is formed, and the boracic acid crystallises as the solution cools. When pure, these crystals are white, and have an unctuous greasy feel; they are soluble in alcohol, communicating a green tinge to its flame; when fused it forms a transparent glass, and has been found by Mr. Faraday to unite with the oxide of lead, producing a very uniform glass, free from all defects, and well adapted for the purpose of telescopes and other astronomical instruments. Borax is much employed in the arts, particularly in metallurgical operations as a flux; also in enamelling, and in pharmacy. (See BORAX.)

*Carbonic acid*—This acid occurs very abundantly in nature, combined with lime, magnesia, barytes, acrid acid, fixed air, mephitic acid; from any of these it is easily separated by the addition of nearly any of the other acids. In its uncombined form it is a transparent, gaseous fluid, having a density of 1.53, atmospheric air being unity; it is absorbed to a considerable extent by water, and when the water is rendered slightly alkaline by the addition of carbonate of soda, and a large quantity of gas forced into it by pressure, it forms the well-known refreshing beverage soda water. This gas is also formed in very large quantities during combustion, respiration, and fermentation. Carbonic acid gas is destructive of animal life and combustion, and from its great weight accumulates in the bottoms of deep wells, cellars, caves, &c., which have been closed for a long period, and numerous fatal accidents arise frequently to persons entering such places incautiously; the precaution should always be taken of introducing a lighted candle prior to the ascent, or entrance of any one; for should the candle be extinguished, it would be dangerous to enter until properly ventilated. The combinations of carbonic acid with the alkalies, earths, and metallic oxides are termed carbonates.

*Citric acid*—exists in a free state in the juice of the lemon, lime, and other fruits, combined, however with muckage, and sometimes a little sugar, which renders it, if required to be preserved for a long period, very liable to ferment; on this account the crystallised citric acid is to be preferred. It is pre-

pared by saturating the lemon juice with chalk: the citric acid combines with the lime, forming an insoluble compound, while the carbonic acid is liberated; the insoluble citrate, after being well washed, is to be acted upon by dilute sulphuric acid, which forms sulphate of lime, and the citric acid enters into solution in the water; by filtration and evaporation the citric acid is obtained in colourless transparent crystals. The chief use to which it is applied is as a preservative of sea scurvy, and in making refreshing acidulous or effervescent drinks; for which latter purposes it is peculiarly fitted from its very pleasant flavour.

**Fluoric acid**—is found in the well-known mineral fluor spar in combination with lime; from which it is procured in the liquid form by distillation with dilute sulphuric acid in a leaden or silver retort; the receiver should be the same material as the retort, and kept cool by ice or snow. This acid is gaseous in its pure form, highly corrosive, and intensely acrid; it is rapidly absorbed by water, communicating its properties to that fluid. Its chief use is for etching on glass, which it corrodes with great rapidity. For this purpose a thin coating of wax is to be melted on the surface of the glass, and the sketch drawn by a fine hard-pointed instrument through the wax; the liquid acid is then poured on it, and after a short time, on the removal of the acid and coating, an etching will be found in the substance of the glass. A very excellent application of this property, possessed by fluoric acid, is in the roughing the shades for table lamps. All the metals, except silver, lead, and platinum, are acted upon by this acid.

**Galic acid**.—The source from which this acid is generally obtained is the nut gall, a hard protuberance produced on the oak by the puncture of insects. The most simple method of procuring the acid in its pure form is to submit the galls in fine powder to sublimation in a retort, taking care that the heat be applied slowly and with caution; the other processes require a very long period for their completion. When pure, gallic acid has a white and silky appearance, and a highly astringent and slightly acid taste. The nut galls, which owe their properties to the gallic acid they contain, are employed very extensively in the arts, for dyeing and staining silks, cloths, and woods of a black colour; this is owing to its forming with the oxide of iron a black precipitate. Writing ink is made on the same principle, a very excellent receipt of the late Dr. Black's is, to take 3 oz. of the best Aleppo galls in fine powder, 1 oz. sulphate of iron (green vitriol), 1 oz. logwood finely rasped, 1 oz. gum arabic, one pint of the best vinegar, one pint of soft water, and 8 or 10 cloves; in this case the black precipitate is kept suspended by the gum.

**Hydriodic acid**,—a compound of iodine and hydrogen,—in its separate form is of very little importance in the arts; its combinations with potash, soda, and other of the metallic oxides, will be treated of hereafter.

**Malic acid**—exists in the juices of many fruits, particularly the apple, as also in the berries of the service and mountain ash.

**Meconic acid**—is found in opium, in combination with morphia, forming the meconate of morphia, on which the action of opium principally depends.

**Muriatic acid, or spiritus of acids**.—This acid (the hydrochloric of the French chemists) is manufactured from the chloride of sodium (dry sea salt), by the action of sulphuric acid (oil of vitriol). The most economical proportions are 20 pounds of fused salt, and 20 pounds of oil of vitriol previously mixed with an equal weight of water; these are placed in an iron or earthen pot, to which an earthen head and receiver are adapted, and submitted to distillation; the muriatic acid passes over in the vaporous form, and may be easily condensed. The liquid acid thus obtained should have a specific gravity of 1.17, water being equal to 100; it has a strong acid taste, and a slight yellow colour; this is owing to a small quantity of oxide of iron. By redistillation in a glass retort at a low temperature, it may be obtained perfectly pure and colourless. It sometimes contains a little sulphuric acid; this is detected by a solution of muriate of barytes. Muriatic acid, in its uncombined state, is an invisible elastic gas, having a very strong affinity for water; that fluid absorbing, at a temperature of 40° Fahrenheit, 400 times its volume, and the resulting liquid acid has a density of 1.2. So great is this action of water, that when the gas is liberated into the air, it combines with the moisture always present in that medium, forming dense white vapours. Its combinations with the alkalies, &c., are termed muriates; those of the greatest importance are the muriates of tin, ammonia, barytes, and sea salt. The test for the presence of muriatic acid in any liquid is the nitrate of silver (lunar caustic), which causes a curdy white precipitate.

**Nitric acid, or aquafortis**.—This, which is one of the most useful acids with which the chemist is acquainted, is prepared by acting upon saltpetre (nitric or nitrate of potash) with oil of vitriol: the proportion best suited for this purpose are three parts by weight of nitre and two of oil of vitriol; or 100 nitre, and 60 oil of vitriol previously diluted with 20 of water; either of these proportions will produce a very excellent acid. When submitted to distillation, which should be conducted in earthen or glass vessels, the nitric acid passes over in the form of vapour, and a bisulphate of potash (sal mimum) remains in the retort.

Nitric acid of commerce has usually a dark orange-red colour, giving off copious fumes, and having a specific gravity of 150, water being 100. It is strongly acid and highly corrosive. It may be obtained perfectly colourless by a second distillation, rejecting the first portion that passes over. It is much employed in the arts, for etching on copper-plates for engraving; also, for the separation of silver from gold, in the process of quartation. In pharmacy and surgery it is extensively used, and is employed for destroying contagious effluvia. Combined with muriatic acid, it forms aqua regia (nitro-muriatic acid), used as a solvent for gold, platinum, &c. This acid is frequently contaminated with the muriatic and sulphuric acids; these may be detected by the following methods.—A portion of the suspected acid should be diluted with three or four times its volume of distilled water, and divided into two glasses; to one of which nitrate of silver (lunar caustic in solution) is to be added, and to the other nitrate of barytes: if muriatic acid be present, a white curdy precipitate will be thrown down by the former; and if sulphuric, a white granular precipitate by the latter.

**Oxalic acid**—occurs in combination with potash as bisulphate of potash in the different varieties of sorrel, from whence the most esteemed salt of potash has been derived. This acid is usually prepared by the action of nitric acid upon sugar, evaporating the solution, after the action has ceased, to the consistence of a syrup, and redissolving and recrystallising the crystals which are thus procured.

It is sold in small white acicular crystals, of a strongly acid taste and highly poisonous, and sometimes in its external appearance bears a strong similarity to Epsom salts (sulphate of magnesia), which it has been unfortunately frequently mistaken for. It is instantly distinguished from Epsom salts by placing a small crystal upon the tongue; when its strong acid taste, compared with the nauseous bitter of the sulphate of magnesia, will be quite a sufficient criterion. In cases of poisoning, however, by this acid, lime or chalk, mixed with water to form a cream, should be immediately administered, the combination of oxalic acid with these substances being perfectly inert. It is employed in removing ink-stains, iron-rusts, &c. from linen and leather; the best proportions for these purposes are 1 oz. of the acid to a pint of water. The most delicate test of the presence of oxalic acid is a salt of lime or lime-water, with either of which it forms a white precipitate, insoluble in water, but soluble in acids. Its combinations are termed oxalates.

**Phosphoric acid**—is of very little importance in a commercial point of view, except as forming with lime the earth of bones (phosphate of lime). It is prepared by heating bones to whiteness in a furnace; from this phosphoric acid is obtained by the action of sulphuric acid, still combined, however, with a small quantity of lime. The action of nitric acid upon phosphorus, the latter being added gradually and in small pieces, yields this acid in a state of purity; its combinations are termed phosphates.

**Prussic acid, or hydrocyanic acid**.—This acid, which is the most virulent and poisonous acid known, is contained in peach blossoms, bay leaves, and many other vegetable productions, which owe their peculiar

odour to the presence of prussic acid. For the purposes of medicine and chemistry, this acid is prepared either by distilling one part of the cyanuret of mercury, one part of muriatic acid of specific gravity 1.18, and six parts of water, six parts of prussic acid being collected; or, by dissolving a certain weight of cyanuret of mercury, and passing a current of sulphureted hydrogen through the solution, until the whole of the mercury shall be precipitated; if an excess of sulphureted hydrogen should be present, a little carbonate of lead (white lead) will remove it; on filtering, a colourless prussic acid will be obtained. By the first process, which is the one followed at Apothecaries' Halls, the acid has a density 995, water being equal to 1000; by the latter, it may be procured of any required strength, depending on the quantity of cyanuret of mercury dissolved. The best test for the presence of this acid is, first to add a small quantity of the protosulphate of iron (solution of green vitriol), then a little solution of potassa, and lastly diluted sulphuric acid; if prussic acid be present, prussian blue will be formed. Its combinations are called prussiates or hydrocyanates; when in its concentrated form, it is so rapid in its effects that large animals have been killed in the short space of 80 seconds, or from a minute to a minute and a half.

**Sulphurous acid**—is formed whenever sulphur is burnt in atmospheric air; it is a suffocating and pungent gas, strongly acid, bleaches vegetable colours with great rapidity, and arrests the process of vinous fermentation. For these purposes it is therefore very much employed, especially in bleaching woollen goods and straws. Fermentation may be immediately arrested by burning a small quantity of sulphur in casks, and then racking off the wine while still fermenting into them; this frequently gives the wine a very unpleasant taste of sulphur, which is avoided by the use of sulphate of potass, made by impregnating a solution of potass with sulphurous acid gas.

**Sulphuric acid, or oil of vitriol**—called oil of vitriol from its having been formerly manufactured from green vitriol (sulphate of iron). In some parts of the Continent this process is still followed. The method generally adopted in this country is to introduce nine parts of sulphur, intimately mixed with one part of nitre, in a state of acety combustion, into large leaden chambers, the bottoms of which are covered with a stratum of water. Sulphurous and nitrous acid gases are generated, which entering into combination form a white crystalline solid, which falls to the bottom of the chamber; the instant that the water comes in contact with it, this solid is decomposed with a hissing noise and effervescence, sulphuric acid combines with the water, and nitrous gas is liberated, which combining with oxygen from the air of the chamber is converted into nitrous gas, and again combines with sulphurous acid gas, and again falls to the bottom of the chamber; this process continues as long as the combustion of the sulphur is kept up, or as long as atmospheric air remains in the chamber; the nitrous acid merely serving as a means for the transference of oxygen from the atmosphere to the sulphurous acid to convert it into sulphuric acid. The water is removed from the chamber when of a certain strength, and replaced by fresh. These acid waters are then evaporated in leaden boilers, and finally concentrated in glass or platine vessels. As this manufactured sulphuric acid is a dense oily fluid, colourless, intensely acid, and highly corrosive, and has a specific gravity of 1.846, water being equal to 1,000. This acid is the most important with which we are acquainted; it is employed in the manufacture of the nitric, muriatic, acetic, phosphoric, citric, tartaric, and many other acids; also in the preparation of chlorine, for the manufacture of the bleaching powder (oxy-muriate of lime or chloride of lime), for the preparation of sulphate of mercury, in the manufacture of calomel and corrosive sublimate, and in innumerable other chemical manufactures. In the practice of physic it is also very much employed. It usually contains a little oxide of lead, which is readily detected by diluting the acid with about four times its volume of water, and allowing the sulphate of lead to subside. Its combinations are denominated sulphates. The fuming sulphuric acid, as manufactured at Norwihusen, contains only one half the quantity of water in its composition.

**Tartaric acid**.—This acid is procured from the cream of tartar (bitartrate of potass), obtained by purifying the crust which separates during the fermentation of wines by solution and crystallization. When this purified bitartrate is dissolved, and lime or carbonate of lime added, an insoluble tartrate of lime falls, which after washing should be acted upon by sulphuric acid; sulphate of lime is thus formed, and the tartaric acid enters into solution, and may be obtained by evaporation and crystallisation. It is employed very much in the arts, in calico-printing, also in making effervescent draughts and powders in pharmacy.

**Uvic acid**—is an animal acid of very little importance, except in a scientific point of view; it exists in the excrement of serpents, to the amount of 95 per cent., and forms the basis of many of the urinary calculi and gravel.

N. B. This article, and that on alkalis, has been furnished by an able practical chemist.

**ACORNS** (Ger. *Eicheln*, *Eckern*; Fr. *Glandes*; It. *Ghiande*; Sp. *Bellotas*; Rus. *ledudii*; Lat. *Glandes*), the seed or fruit of the oak. Acorns formed a part of the food of man in early ages, and frequent allusion is made in the classics to this circumstance (*Virgil*, *Georg.* lib. i. lin. 8.; *Ovid*, *Met.* lib. i. lin. 106, &c.). In some countries they are still used, in periods of scarcity, as a substitute for bread. With us they are now rarely used except for fattening hogs and poultry. They are said to make, when toasted, with the addition of a little fresh butter, one of the best substitutes for coffee. Their taste is astringent and bitter.

**ACRE**, a measure of land. The Imperial or standard English acre contains 4 roods, each rood 40 poles or perches, each pole 272 square feet; and consequently each acre = 43,560 square feet. Previously to the introduction of the new system of weights and measures by the act 5 Geo. 4. cap 74., the acres in use in different parts of England varied considerably from each other and from the standard acre; but these customary measures are now abolished. The Scotch acre contains four roods, each rood 40 fells, and each fell 36 ells; the ell being equal to 37.06 Imperial inches. Hence the Imperial is to the Scotch acre nearly as 1 to 1½, one Scotch acre being equal to 1.261 Imperial acres. The Irish acre is equal to 1 acre, 2 roods, and 19½ poles; 30½ Irish being equal to 49 Imperial acres. (See WEIGHTS and MEASURES.)

**ADJUSTMENT**, in commercial navigation, the settlement of a loss incurred by the insured.

In the case of a total loss, if the policy be an *open one*, the insurer is obliged to pay the goods according to their *prime cost*; that is, the invoice price, and all duties and expenses incurred till they are put on board, including the premium of insurance. Whether they might have arrived at a good or a bad market, is held by the law of England to be immaterial. The insurer is supposed to have insured a constant and not a variable sum; and in the event of a loss occurring, the insured is merely to be put into the same situation in which he stood before the transaction began. If the policy be a *valued one*, the practice is to adopt the valuation fixed in it in case of a total loss, unless the insurers can show that the insured had a colourable interest only, or that the goods were greatly over-valued. In the case of all partial losses, the value of the goods must be proved.

"The nature of the contract between the insured and insurer is," says Mr. Justice Park, "that the goods shall come safe to the port of delivery; or, if they do not, that the insurer will indemnify the owner to the amount of the value of the goods stated in the policy. Wherever then the property insured is lessened in value by damage received at sea, justice is done by putting the merchant in the same condition (relation being had to the prime cost or value in the policy) in which he would have been had the goods arrived free from damage; that is, by paying him such proportion of the prime cost or value in the policy as corresponds with the proportion of the diminution in value occasioned by the damage. The question then is, how is the proportion of the damage to be ascertained? It certainly cannot be by any measure taken from the prime cost; but it may be done in this way:—Where any thing, as a hoghead of sugar, happens to be spoiled, if you can fix whether it be a third, a fourth, or a fifth worse, then the damage is ascertained to a mathematical certainty. How is this to be found out? Not by any price at the port of shipment, but it must be at the port of delivery, when the voyage is completed and the whole damage known. Whether the price at the latter be high or low, it is the same thing; for in either case it equally shows whether the damaged goods are a third, a fourth, or a fifth worse than if they had come sound; consequently, whether the injury sustained be a third, fourth, or fifth of the value of the thing. And as the insurer pays the whole prime cost if the thing be wholly lost, so if it be only a third, fourth, or fifth worse, he pays a third, fourth, or fifth, not of the value for which it is sold, but of the value stated in the policy. And when no valuation is stated in the policy, the invoice of the cost, with the addition of all charge, and the premium of insurance, shall be the foundation upon which the loss shall be computed."

Thus, suppose a policy to be effected on goods, the prime cost of which, all expenses included, amounts to 1,000*l.*; and suppose further, that these goods would, had they safely reached the port of delivery, have brought 1,200*l.*; but that, owing to damage they have met with in the voyage, they only fetch 800*l.*; in this case it is plain, inasmuch as goods that would otherwise have been worth 1,200*l.* are only worth 800*l.*, that they have been deteriorated one third; and hence it follows, conformably to what has been stated above, that the insurer must pay one third of their prime cost (1,000*l.*), or 333*l.* 6*s.* 8*d.* to the insured.

In estimating the value of goods at the port of delivery, the gross and not the net proceeds of the sales are to be taken as the standard.

A ship is valued at the sum she is worth at the time she sails on the voyage insured, including the expenses of repairs, the value of her furniture, provisions, and stores, the money advanced to the sailors, and, in general, every expense of the outfit, to which is added the premium of insurance.

When an adjustment is made, it is usual for the insurer to indorse upon the policy "adjusted this loss at (so much) per cent.," payable in a given time, generally a month, and to sign it with the initials of his name. This is considered as a note of hand, and as such is *prima facie* evidence of the debt not to be shaken, but by proving a pamphlet, or of a servant being out of place, as on an intimation of the sale of a valuable estate? But as it is altogether impossible to impose the duty on an *ad ealorem* principle, this injustice cannot be obviated so long as it is maintained. In a commercial country, a duty on advertisements is peculiarly objectionable, inasmuch as it checks the circulation of information of much importance to mercantile men. We, therefore, hope that means may be found of repealing the tax, for an account of its operation on literature, see Books.

**ADMEASUREMENT.** See **TONNAGE.**

**ADVANCE,** implies money paid before goods are delivered, or upon consignment. It is usual with merchants to advance from a half to two thirds of the value of goods consigned to them, on being required, on their receiving invoice, bill of lading, orders to insure them from sea risk, &c.

**ADVERTISEMENT,** in its general sense, is any information as to any fact or circumstance that has occurred, or is expected to occur; but, in a commercial sense, it is understood to relate only to specific intimations with respect to the sale of articles, the formation and dissolution of partnerships, bankruptcies, meetings of creditors, &c.

Previously to 1833 a duty of 3*s.* 6*d.* was charged upon every advertisement, long or short, inserted in the Gazette, or in any newspaper, or literary work published in parts or numbers. This duty added about 100 per cent. to the cost of advertising, for the charge (exclusive of the duty) for inserting an advertisement of the ordinary length in the newspapers rarely exceeds 3*s.* or 4*s.*; and having been in consequence much objected to, it was reduced in the above-mentioned year to 1*s.* 6*d.* We ventured in the former edition of this work, to express our conviction that this reduction would not be productive of any very serious injury to the revenue, and the result has not disappointed our expectations. In 1832, the last year of the high duty, the revenue from advertisements amounted to 170,650*l.*, and in 1841 it amounted to 131,004*l.* The measure has, therefore, been eminently successful. It were, however, much to be wished that the duty could be dispensed with. Its operation is necessarily most unequal, and in many instances oppressive. Can any thing be more unjust than to impose the same duty on a notice of the publication of a sixpenny pamphlet, or of a servant being out of place, as on an intimation of the sale of a valuable estate? But as it is altogether impossible to impose the duty on an *ad ealorem* principle, this injustice cannot be obviated so long as it is maintained. In a commercial country, a duty on advertisements is peculiarly objectionable, inasmuch as it checks the circulation of information of much importance to mercantile men. We, therefore, hope that means may be found of repealing the tax, for an account of its operation on literature, see Books.

**ADVICE,** is usually given by one merchant or banker to another *by letter*, informing him of the bills or drafts drawn on him, with all particulars of date, or sight, the sum, to whom made payable, &c. Where bills appear for acceptance or payment, they are frequently refused to be honoured for want of advice. It is also necessary to give advice, as it prevents forgeries; if a merchant accept or pay a bill for the honour of any other person, he is bound to advise him thereof, and this should always be done under an *act of honour* by a notary public.

**AGATE** (popularly CORNELIAN). Ger. *Achat*; Du. *Achaat*; Fr. *Agate*; It. *Agata*; Rus. *Agat*; Lat. *Achatas*. A genus of semi-pellucid gems, so called from the Greek *axarax*, because originally found on the banks of the river of that name in Italy. It is never wholly opaque like jasper, nor transparent as quartz-crystal; it takes a very high polish, and its opaque parts usually present the appearance of dots, eyes, veins, zones, or bands. Its colours are yellowish, reddish, bluish, milk-white, honey-orange, or ochre-yellow, flesh-blood, or brick-red, reddish brown, violet blue, and brownish green. It is found in irregular rounded nodules, from the size of a pin's head to more than a foot in diameter. The lapidaries distinguish agates according to the colour of their ground; the finer semi-transparent kinds being termed oriental. The most beautiful

agates found in Great Britain are commonly known by the name of *Scotch pebbles*, and are met with in different parts of Scotland, principally on the mountain of Cairngorm; whence they are sometimes termed Cairngorms. The German agates are the largest. Some very fine ones have been brought from Siberia and Ceylon. They are found in great plenty at the eastern extremity of the settlement of the Cape of Good Hope; and are still met with in Italy. But the principal mines of agate are situated in the little principality of Rajpepla, in the province of Gujrat, fourteen miles distant from the city of Broach, where they are cut into beads, crosses, snuff-boxes, &c. They are exported in considerable quantities to other parts of India, and to this country; and hence, perhaps, the jewellers' term "broach."

AGENT. See FACTOR.

AGIO, a term used to express the difference, in point of value, between metallic and paper money; or between one sort of metallic money and another.

ALABASTER (Ger. *Alabaster*; It. *Alabastro*; Fr. *Albâtre*; Rus. *Alabastr*; Lat. *Alabastrites*). A kind of stone resembling marble, but softer. Under this name are confounded two minerals, the *gypseous* and *calcareous* alabasters; they are wholly distinct from each other when pure, but in some of the varieties are occasionally mixed together. The former, when of a white or yellowish or greenish colour, semi-transparent, and capable of receiving a polish, is employed by statuaries. It is very easily worked, but is not susceptible of a polish equal to marble. Calcareous alabaster is heavier than the former; it is not so hard as marble, but is notwithstanding susceptible of a good polish, and is more used in statuary. The statuaries distinguish alabaster into two sorts, the common and oriental. Spain and Italy yield the best alabaster. That produced at Montania, in the papal states, is in the highest esteem for its beautiful whiteness. Inferior sorts are found in France and Germany. Alabaster is wrought into tables, vases, statues, chimney-pieces, &c.

ALCOHOL (ARDENT SPIRIT), (Fr. *Esprit de Vin*; Ger. *Weingest*; It. *Spirito ardente*, *Spirito di Vino*, *Acquarzente*), the name given to the pure spirit obtainable by distillation, and subsequent rectification, from all liquors that have undergone the vinous fermentation, and from none but such as are susceptible of it. It is light, transparent, colourless; of a sharp, penetrating, agreeable smell; and a warm stimulating taste. It is quite the same, whether obtained from brandy, wine, whisky, or any other fluid which has been fermented. The specific gravity of alcohol when perfectly pure is from .792 to .800, that of water being 1,000; but the strongest spirit afforded by mere distillation is about .820; alcohol of the shops is about .835 or .840. Alcohol cannot be frozen by any known degree of cold. It boils at 174°. It is the only dissolvent of many resinous substances; and is extensively used in medicine and the arts. — (*Drs. A. T. Thomson, Ure, &c.*)

ALDER, the *Betula alnus* of botanists, a forest tree abundant in England and most parts of Europe. It thrives best in marshy grounds and on the banks of rivers. It rarely attains to a very great size; its wood is extremely durable in water or in wet ground; and hence it is much used for piles, planking, pumps, pipes, sluices, and generally for all purposes where it is kept constantly wet. It soon rots when exposed to the weather or to damp; and when dry, it is much subject to worms. The colour of the wood is reddish yellow, of different shades, and nearly uniform. Texture very uniform, with larger septa of the same colour as the wood. It is soft, and works easily. — (*Tredgold's Principles of Carpentry.*)

ALE and BEER, well known and extensively used fermented liquors, the principle of which is extracted from several sorts of grain, but most commonly from barley, after it has undergone the process termed malting.

1. *Historical Notice of Ale and Beer.*—The manufacture of ale or beer is of very high antiquity. Herodotus tells us, that owing to the want of wine the Egyptians drank a liquor fermented from barley (lib. ii. cap. 77.). The use of it was also very anciently introduced into Greece and Italy, though it does not appear to have ever been very extensively used in these countries. Mead, or metheglin, was probably the earliest intoxicating liquor known in the North of Europe. Ale or beer was, however, in common use in Germany in the time of Tacitus (*Morib. Germ. cap. 23.*). "All the nations," says Pliny, "who inhabit the West of Europe have a liquor with which they intoxicate themselves, made of corn and water (*frugs madida*). The manner of making the liquor is somewhat different in Gaul, Spain, and other countries, and it is called by many various names; but its nature and properties are every where the same. The people of Spain, in particular, brew this liquor so well that it will keep good for a long time. So exquisite is the ingenuity of mankind in gratifying their vicious appetites, that they have thus invented a method to make water itself intoxicate." — (*Hist. Nat. lib. xiv. cap. 22.*) The Saxons and Danes were passionately fond of beer; and the drinking of it was supposed to form one of the principal enjoyments of the heroes admitted to the hall of Odin. — (*Mallet's Northern Antiquities, cap. 6, &c.*) The manu-

facture of ale was early introduced into England. It is mentioned in the laws of Ina, King of Wessex; and is particularly specified among the liquors provided for a royal banquet in the reign of Edward the Confessor. It was customary in the reigns of the Norman princes to regulate the price of ale; and it was enacted, by a statute passed in 1272, that a brewer should be allowed to sell two gallons of ale for a penny in cities, and three or four gallons for the same price in the country.

The use of hops in the manufacture of ale and beer seems to have been a German invention. They were used in the breweries of the Netherlands, in the beginning of the fourteenth century; but they do not seem to have been introduced into England till 300 years afterwards, or till the beginning of the sixteenth century. In 1530, Henry VIII. enjoined brewers not to put hops into their ale. It would, however, appear that but little attention was paid to this order; for in 1552 hop plantations had begun to be formed. — (*Beckmann's Hist. Invent.* vol. iv. pp. 396—341. Eng. ed.) The addition of hops render ale more palatable, by giving it an agreeable bitter taste, while, at the same time, it fits it for being kept much longer without injury. Generally speaking, the English brewers employ a much larger quantity of hops than the Scotch.

3. *Distinction between Ale and Beer, or Porter.*—This distinction has been well elucidated by Dr. Thomas Thomson, in his article on Brewing, in the Encyclopædia Britannica:—"Both ale and beer are in Great Britain obtained by fermentation from the malt of barley; but they differ from each other in several particulars. Ale is light-coloured, brisk, and sweetish, or at least free from bitter; while beer is dark-coloured, bitter, and much less brisk. What is called *porter* in England is a species of beer; and the term 'porter' at present signifies what was formerly called *strong beer*. The original difference between ale and beer was owing to the malt from which they were prepared. Ale malt was dried at a very low heat, and consequently was of a pale colour; while beer or porter malt was dried at a higher temperature, and had of consequence acquired a brown colour. This incipient charring had developed a peculiar and agreeable bitter taste, which was communicated to the beer along with the dark colour. This bitter taste rendered beer more agreeable to the palate, and less injurious to the constitution than ale. It was consequently manufactured in greater quantities, and soon became the common drink of the lower ranks in England. When malt became high-priced, in consequence of the heavy taxes laid upon it, and the great increase in the price of barley which took place during the war of the French revolution, the brewers found out that a greater quantity of wort of a given strength could be prepared from pale malt than from brown malt. The consequence was that pale malt was substituted for brown malt in the brewing of porter and beer. We do not mean that the whole malt employed was pale, but a considerable proportion of it. The wort, of course, was much paler than before; and it wanted that agreeable bitter flavour which characterised porter, and made it so much relished by most palates. The porter brewers endeavoured to remedy these defects by several artificial additions. At the same time various substitutes were tried to supply the place of the agreeable bitter communicated to porter by the use of brown malt. Quassia, cocculus indicus, and we believe even opium, were employed in succession; but none of them was found to answer the purpose sufficiently. Whether the use of these substances be still persevered in we do not know; but we rather believe that they are not, at least by the London porter brewers."

3. *Adulteration of Ale and Beer—substitution of Raw Grain for Malt.*—The use of the articles other than malt, referred to by Dr. Thomson, has been expressly forbidden, under heavy penalties, by repeated acts of parliament. The act 56 Geo. 3. c. 58. has the following clauses:—

"No brewer or dealer in or retailer of beer shall receive or have in his possession, or make, or use, or mix with, or put into any worts or beer, any liquor, extract, calx, or other material or preparation for the purpose of darkening the colour of worts or beer; or any liquor, extract, calx, or other material or preparation other than brown malt, ground or unground, as commonly used in brewing; or shall receive, or have in his possession, or use, or mix with, or put into any worts or beer, any molasses, honey, liquorice, vitriol, quassia, cocculus indicus, grains of paradise, Guinea pepper, or opium, or any extract or preparation of molasses, honey, liquorice, vitriol, quassia, cocculus indicus, grains of paradise, Guinea pepper, or opium, or any article or preparation whatsoever, for or as a substitute for malt or hops, upon pain that all such liquor, extract, calx, molasses, honey, vitriol, quassia, cocculus indicus, grains of paradise, Guinea pepper, opium, extract, article, and preparation as aforesaid, and also the said worts and beer, shall be forfeited, together with the casks, vessels, or other packages, and may be seized by any officer of excise; and such brewer or dealer in, or retailer of beer, so offending, shall for each offence forfeit 200l."

"No druggist or vendor of or dealer in drugs, or chemist, or other person whatever, shall sell, send, or deliver to any licensed brewer of, or dealer in, or retailer of beer, knowing him to be so licensed, or reputed to be so licensed, or to any other person for, or on account of, or in trust for, or for the use of such brewer, dealer, or retailer, any colouring, from whatever material made, or any other material or preparation other than *unground brown malt*, for the purpose of darkening the colour of worts or beer; or any liquor or preparation heretofore or hereafter made use of for darkening the colour of worts or beer, or any molasses or other articles, as mentioned in the first section, for or as a substitute for malt or hops respectively; and if any druggist, or vendor of or dealer in drugs, or any chemist, or other person whatever, shall do, all such liquor called colouring, and material or preparation for the purpose aforesaid, and liquor and preparation used for darkening the colour of worts or beer, molasses, and article or pre-

paration to be used as a substitute for malt or hops, shall be forfeited, and may be seized by any officer of excise; and the druggist, vendor, dealer, chemist, or other person so offending, shall forfeit 500*l*.

By the act 1 Will. 4. c. 51. for the repeal of the ale and beer duties, it is enacted (§ 17.), "that no brewer shall have in his brewery, or in any part of his entered premises, or in any mill connected with such brewery, any raw or unmaltered corn or grain; and all unmaltered corn or grain which shall be found in such brewing premises or mill, and all maltered corn or grain with which such unmaltered corn or grain may have been mixed, shall be forfeited, and may be seized by any officer, together with all vessels or packages in which such raw or unmaltered corn or grain shall be contained, or in which such unmaltered corn or grain, and the maltered corn or grain with which the same may have been mixed, shall be contained; and every brewer shall for every such offence forfeit 200*l*."

4. *Descriptions of Ale and Beer.* — Previously to 1823 there were only two sorts of beer allowed to be brewed in England, viz. *strong beer*, that is, beer of the value of 16*s*. and upwards the barrel, exclusive of the duty; and *small beer*, or beer of the value of less than 16*s*. a barrel, exclusive of the duty. In 1823, however, an act was passed (4 Geo. 4. c. 51.) authorising the brewing, under certain conditions, of an *intermediate beer*. But this sort of beer was either not suited to the public taste, or, which is more probable, the restrictions laid on the brewers deterred them from engaging extensively in its manufacture.

This limitation and classification of the different sorts of ale and beer, according to their strength, originated in the duties laid upon them; and now that these duties have been repealed, ale and beer may be brewed of any variety or degree of strength.

The brewing of ale has long constituted a principal, or rather, perhaps, we might say the principal, manufacturing employment carried on in Edinburgh. The best Edinburgh ale is of a pale colour, mild, glutinous, and adhesive. It is much stronger and more intoxicating than porter, from 4 to 5 bushels of malt being generally used in brewing a barrel of ale, with about 1 lb. of hops to a bushel of malt. At present (1843) the produce of the ale breweries of Edinburgh may be estimated at about 195,000 barrels a year. Very good ale is also made at Preston Pans, Alloa, and other Scotch towns. Considerable quantities of Edinburgh ale are sent to London; though this trade has latterly been decreasing. Very good ale may be produced by brewers on a small scale, but it is doubtful whether this be the case with porter; at all events the best porter is all produced in very large establishments.

Formerly it was not supposed that really good porter could be made any where except in London. Of late years, however, Dublin porter has attained to high and not unmerited reputation; though we certainly are not of the number of those who consider it equal to the best London porter.

Large quantities of a light, pale, and highly-hopped variety of ale have been for some considerable time past exported to the East Indies, where it is in high estimation; and it is now, also, rather extensively used in summer in this country.

5. *Regulations as to the Manufacture of Ale and Beer.* — Since the abolition of the beer duties, these regulations are very few and simple; and consist only in taking out a licence, entering the premises, and abstaining from the use of any article, other than malt, in the preparation of the beer. A brewer using any place, or mash-tun, for the purpose of brewing, without having made an entry thereof at the nearest excise office, forfeits for every such offence 200*l*; and all the worts, beer, and materials for making the same, together with the mash-tun, are forfeited, and may be seized by any officer. — Brewers obstructing officers shall, for every such offence, forfeit 100*l*. — (1 Will. 4. c. 51. §§ 15, 16.)

6. *Licence Duties.* — *Number of Brewers.* — The licence duties payable by brewers of ale and beer, and the numbers of such licences granted during the years 1841 and 1842 were as follows: —

Account showing the Number of Licences issued to Brewers in the Years 1841 and 1842, with the Rates of Duty charged thereon (supplied by the Excise).

	Sums charged for Licences.		Number of Licences granted.	
			1841.	1842.

N. B. — The barrel contains 36 gallons, or 4 firkins of 9 gallons each, Imperial measure. It is enacted

(1 Will. 4. c. 51. § 7.), that, from the 10th of October, 1830, brewers are to pay their license duty according to the malt used by them in brewing, and that every brewer shall be deemed to have brewed *one* barrel of beer for every *two* bushels of malt used by such brewer.

Account of the Number of Brewers, Licensed Victuallers, Persons licensed for the Sale of Beer to be drunk on and off the Premises, &c., with the Quantities of Malt used by such Brewers, &c. in England, Scotland, and Ireland, during the Year 1842 (supplied by the Excise).

	Number of				Number who brew their own Beer.				Bushels of Malt consumed by each Class.			
	Brewers.	Victuallers.	Persons licensed to sell Beer.		Victuallers.	Persons licensed to sell Beer.		Brewers.	Victuallers.	Persons licensed to sell Beer.		
			To be drunk on the Premises.	Not to be drunk on the Premises.		To be drunk on the Premises.	Not to be drunk on the Premises.			To be drunk on the Premises.	Not to be drunk on the Premises.	
England	2,951	57,291	31,821	4,477	26,599	14,948	1,246	16,180,442	7,629,153	2,671,322	339,169	
Scotland	193	15,699	-	-	193	228	-	760,128	85,598	-	-	
Ireland	115	15,843	-	-	143	-	-	993,114	-	-	-	
United Kingdom	2,889	67,231	31,821	4,477	26,937	15,178	1,246	17,933,684	7,714,751	2,671,322	339,169	

It is enacted (1 Will. 4. c. 51.), that every person who shall sell any beer or ale in less quantities than four and a half gallons, or two dozen reputed quart bottles, to be drunk elsewhere than on the premises where sold, shall be deemed a dealer in beer.

7. *Progressive Consumption of Ale and Beer.* — Malt liquor early became to the labouring classes of England what the inferior sorts of wine are to the people of France, at once a necessary of life and a luxury, the taste for it was universally diffused. There are, however, no means by which an estimate can be formed of the quantity actually consumed previously to the reign of Charles II. But duties, amounting to 2s. 6d. a barrel on strong, and to 6d. a barrel on small ale or beer, were imposed, for the first time, in 1660. These duties being farmed until 1694, the amount of the revenue only is known; and as there are no means of ascertaining the proportion which the strong bore to the small beer, the quantities that paid duty cannot be specified. But, since the collection of the duty was entrusted to officers employed by government, accurate accounts have been kept of the quantities of each sort of beer on which duty was paid, as well as of the rate of duty and its amount. Now, it appears, that, at an average of the ten years from 1694 to 1698 inclusive, the amount of ale annually charged with duty was as follows: —

Strong ale - - - 4,567,293 barrels.  
Small do. - - - 2,376,278 do.

Soon after the Revolution several temporary duties were imposed on ale and beer; but in 1694 they were consolidated, the established duties being then fixed at 4s. 9d. a barrel on the strong, and at 1s. 3d. on the small beer, instead of 2s. 6d. and 6d., which had been the rates previously to 1690. This increase of duty had an immediate effect on the consumption, the quantity brewed during the ten years from 1694 to 1703 being as follows: —

Strong ale - - - 3,374,604 barrels.  
Small do. - - - 2,180,764 do.

The whole of this decrease must not, however, be ascribed to the increase of the beer duties only, the duties on malt and hops having been, at the same time, considerably increased, operated partly, no doubt, to produce the effect.

During the five years ending with 1750 the ale brewed amounted, at an average, to 3,803,580 barrels of strong, and 2,162,540 barrels of small. — (*Hamilton's Principles of Taxation*, p. 255.)

The ale brewed in private families for their own use has always been exempted from any duty; and it may, perhaps, be supposed that the falling off in the consumption, as evinced by the statements now given, was apparent only, and that the decline in the public brewery won't be balanced by a proportional extension of the private brewery. But, though there can be no doubt that the quantity of beer brewed in private families was increased in consequence of the peculiar taxes laid on the beer brewed for sale, it is abundantly certain that it was not increased in any thing like the ratio in which the other was diminished. This is established beyond all dispute, by the fact of the consumption of malt having continued *very nearly stationary*, notwithstanding the vast increase of population and wealth, from the beginning of the last century down to 1750, and, indeed, to 1830. — (See *MALD.*) Had the fact as to malt been different, or had the demand for it increased proportionally to the increase of population, it would have shown that the effect of the malt and beer duties had not been to lessen the consumption of beer, but merely to cause it to be brewed in private houses instead of public breweries; but the long continued stationary demand for malt completely negatives this supposition, and shows that the falling off in the beer manufactured by the public brewers had not been made up by any equivalent increase in the supply manufactured at home.

It appears from the following tables, that the quantity of strong beer manufactured by the public brewers had increased about a third between 1787 and 1830; but the quantity of malt consumed in 1787 was quite as great as in 1828, a fact which shows conclusively, either that the *quality* of the beer brewed in the public breweries had been deteriorated since 1787, or that less, comparatively, was then brewed in private families, or, which is most probable, that both effects had been produced.

# ALE AND BEER.

I. An Account of the Quantity of the different Sorts of Beer made in England and Wales, in each Year from 1787 to 1825, both inclusive, the Rate of Duty, and the Total Produce of the Duties (English Ale Gallons).

Years ended 5th July.	Strong Beer.		Table Beer.		Small Beer.		Total Amount of Duty.

N. B.—The duty on beer being repealed in 1830, there are no later accounts of the quantity brewed.

The stationary consumption of malt and beer during the greater part of last century is, most probably, in great part ascribable to the introduction and rapid diffusion of a taste for tea and coffee, and to the consequent change that was effected in the mode of living of the middle and upper classes. No doubt, however, the oppressive duties with which malt and beer were loaded in the latter part of last century and down to 1830 narrowed their consumption in an extraordinary degree. After various previous additions the duty on malt was raised in 1804 to 4s. 8d. per bushel, or 36s. 10d. a quarter, the beer duties being then also raised to 10s. per barrel (old measure); and as a quarter of malt produced about three or three and a half barrels of beer, it follows that the duty on malt used in breweries really amounted at that period to from 6s. 10d. to 70s. 10d. a quarter, making the duty on strong beer, exclusive of that on hops, about 20s. a barrel. The duty on malt continued at this exorbitant rate till 1816; and to show its influence it is only necessary to state that during the 12 years ending with 1816 the consumption of malt amounted to no more than 23,197,784 bushels a year, being, notwithstanding the vast increase of wealth and population in the interval, less than it had been a century previously, the consumption having amounted to 24,191,304

\* The ale gallon contains 282 cubic inches, and the Imperial gallon 277½; the latter being 1/60th part less than the former.

bushels a year during the 12 years ending with 1730 1 — (See art. M.L.T.) The duties had, in fact, been completely overdone, and besides hindering the consumption of malt and malt liquors, they had the mischievous effect of violating the public taste and stimulating the consumption of ardent spirits, especially of those made from raw grain. In 1816, however, the duty on malt was reduced to 2s. 6d. a bushel, and since 1823 it has amounted to 2s. 7d. a bushel, or 20s. 8d. a quarter and the beer duty having been abolished in 1830, this has been the only duty with which malt liquor has since been affected. And though we are unable, from the want of subsequent returns, to state how much the consumption of beer has increased since 1830, the increase in the consumption of malt shows that it must be very considerable. We subjoin

An Account of the Quantities of Malt brewed by the Twelve principal London Porter and Ale Brewers, during the 8 Years ending with October 1842 (from Slater's Brewers' Malt List).

\* Those marked thus \* brewer porter only.

The duties on beer were even more indefensible from the mode in which they were charged than from their amount. They affected only that description of beer which was brewed for sale; and as all the higher classes brewed their own beer, the duty fell only on the lower and middle ranks of the community, and particularly the former. It is singular that a tax so grossly unequal and oppressive should have been so long submitted to.

But besides the obstacles to the consumption of beer arising from the oppressive duties with which it was burdened, the system formerly in force for granting licences for its sale opposed obstacles that were hardly less formidable. Previously to 1830 no one could open a house for the sale of beer without first obtaining a licence renewable annually from the magistrates; and as these functionaries were accustomed only to grant licences to the occupiers of particular houses, the brewers naturally endeavoured, in order to ensure the sale of their beer, either to buy up those houses or to lend money upon them: and in many extensive districts a few large capitalists succeeded in engrossing most of the public houses, so that even the appearance of competition was destroyed, and a ready market and good prices secured for the very worst beer. We, therefore, look upon the abolition of the beer duties, and the granting of leave to all persons to retail beer on their taking out proper licences, as highly advantageous measures. The conditions under which such licences are taken out, and the sale of beer conducted, are fixed by the acts 1 Will. 4. c. 64. and the 4 & 5 Will. 4. c. 85. Under the former the commissioners of excise, or other persons duly authorised, were bound to grant licences, costing 2l. 2s. a year, to all persons not excepted in the act, empowering them to sell ale, beer, porter, cider, &c. to be drunk indifferently either on or off the premises. But in consequence of the complaints (whether well or ill founded it is now needless to inquire) of the increase and bad character of beer shops the act 4 & 5 Will. 4. c. 85. makes the obtaining of a licence to retail beer to be drunk on the premises contingent on the applicant being able to produce a certificate of good character, subscribed by certain persons rated at a certain amount to the poor; it also raised the cost of such licence to 3l. 3s., and reduced the cost of a licence to sell beer not to be drunk on the premises to 1l. 1s. We subjoin an abstract of the acts—

*Persons applying for a Licence to sell Beer to be drunk on the Premises, to deposit a Certificate of good Character, &c.*— Every person applying for a licence to sell beer or cider by retail, to be drunk in the house or on the premises, shall annually produce to and deposit with the commissioners of excise, collector, or other person authorised to grant such licence within the parish or place in which the person applying intends to sell beer or cider by retail, a certificate signed by 6 persons residing in and being and describing themselves to be inhabitants of such parish, place, &c., and respectively rated therein to the poor at not less than 6l., or occupying a house therein rated to the poor at not less than 6l., none of whom shall be malsters, common brewers, or persons licensed to sell spirituous liquors or beer or cider by retail, nor owners or proprietors of any houses licensed to sell liquors, beer, or cider by retail, stating that the person applying for the licence is of good character; and at the foot of such certificate one of the owners of the parish, township, or place shall certify (if the fact be so) that such 6 persons are inhabitants respectively rated as aforesaid; and such certificate shall respectively be in the form of the schedule annexed to this act; provided always, that in any parish, township, or district maintaining its own poor, in which there are not 10 inhabitants rated to their relief to the amount of 6l. each, or not occupying houses respectively rated to the poor at 6l. each (not being malsters, common brewers, or persons licensed to sell spirituous liquors or beer or cider by retail), the certificate of the majority of the inhabitants of such parish, township, or district maintaining its own poor, as are rated to the amount of 6l. each, shall be deemed to be a sufficient certificate for the purposes of this act.—4 & 5 Will. 4. § 2.

*Fewalty or Offence.*— Any overseer who shall, without due cause, refuse to certify that the persons who have signed the certificates are respectively rated to the poor's rate as aforesaid, to forfeit not more than 5l.—§ 3.

*Beer drunk in Shops.*— Any persons licensed under the act 1 Will. 4. c. 64., to sell beer, cider, &c. not to be consumed on the premises, who shall employ, permit, or suffer any person or persons to take or carry any beer, &c. from his house or premises, to be drunk or consumed for his benefit or profit, in any other house, tent, shed, &c. belonging to, or hired, used, or occupied by such licensed person, such beer, &c. shall be held to have been consumed on the premises, and the person selling the same shall be subject to the like forfeitures and penalties as if he had been actually drunk or consumed in a house or upon premises licensed only for the sale thereof.—§ 4.

*Billings.*— Provisions for billiting soldiers under motley acts to attend only to those licensed to sell beer or cider to be drunk in the house or on the premises, and not to extend to those licensed to sell beer not to be consumed on the premises.—§ 5.

*Justices to regulate the Opening and Closing of Houses.*— Justices in petty sessions are authorised to fix the hours at which houses and premises licensed to sell beer under this act shall be opened and closed; but any person thinking himself aggrieved by any such order may appeal at any time, within 4 months from its date, to the justices in quarter sessions, on giving the jus-

In any way adulterate; at such breach, such offender shall for the first offence forfeit not less than 10*l.*, nor more than 20*l.*, and for the second such offence such offender shall be adjudged to be disqualified from selling beer, ale, or porter, by retail, for the term of two years, or to forfeit not less than 50*l.*, nor more than 50*l.*, and shall be subject to a like penalty at every house where he shall commit such offence; and if any person shall during any term in which it shall not be lawful for beer to be sold by retail on the premises of any retailer, sell any beer or retail on such premises, knowing that it was not lawful to do so, such offender shall forfeit not less than 10*l.*, nor more than 20*l.*; every person authorizing the conditions of the licence to be infringed to be deemed guilty of disorderly conduct. — § 15.

Retailing houses not to be open before four in the morning, nor after ten in the evening; nor between the hours of ten in the forenoon and one in the afternoon, nor at any time between the hours of three and five in the afternoon, on any Monday, Good Friday, Christmas day, or any day appointed for a public fast, or of thanksgiving; and any person offending hereon shall forfeit 50*l.* for every offence; every separate sale to be deemed a separate offence. — § 14.

All penalties under this act, except for selling beer by any person not duly licensed, shall be recovered, upon the information of any person before two justices in petty sessions; and every such penalty shall be prosecuted for within three calendar months next after the offence; and every person licensed under this act, who shall be convicted before two justices, shall, unless proof be adduced to the satisfaction of such justices, that such person had been theretofore convicted before two justices, within the space of twelve calendar months next preceding, be adjudged by such justices to be guilty of a first offence under this act, and to forfeit and pay any penalty by this act imposed for such offence, or if no specific penalty be imposed, then any sum not exceeding 10*l.*, together with the costs of conviction; and if proof be adduced to the satisfaction of such justices, that such person had been previously convicted, within the space of twelve calendar months next preceding, of one such offence only, such person to be adjudged guilty of a second offence against this act, and to forfeit and pay any penalty by this act imposed for such offence, or if no specific penalty be so imposed, then any sum not exceeding 10*l.*, together with the costs of conviction; and if proof shall be adduced that such person had been previously convicted within the space of eighteen calendar months next preceding, of two such separate offences, and if proof be adduced that such person, so charged, is guilty of the offence charged against him, such person shall be adjudged to be guilty of a third offence against this act, and to forfeit and pay any penalty imposed by this act, in respect of such offence, or if no such specific penalty shall be imposed, then to forfeit and pay the sum of 50*l.*, together with the costs of conviction. — § 13.

The party, convicted of any such third offence, may appeal to the general sessions, or quarter sessions then next ensuing, unless held within twelve days after conviction, and in that case, to the then next subsequent sessions; and, in such case, the party convicted shall enter into a recognizance, with two sureties personally to appear at the said general or quarter sessions, to abide the judgment of the court, and to pay such costs as shall be by the court awarded; or, in failure of the party convicted entering into such recognizance, such conviction shall remain good and valid; and the said justices who shall take such recognizance, are also required to examine the party convicted, and to be sworn to give evidence as each general or quarter sessions to be held, such party shall give evidence against the person charged, and, in like manner, to bind any other person who shall have any knowledge of such offence; and it shall be lawful for the said general or quarter sessions to adjudge such person to be guilty of such third offence against this act, and such adjudication shall be lawful for such general or quarter sessions to make, and shall be as valid as if the offender lay fine, not exceeding 100*l.*, together with the costs of such appeal, or to adjudge the licence to be forfeited, or that no beer be sold by retail in the house for the term of two years, and if such licence shall be adjudged to be forfeited, it shall hereafter be void; and whenever in such case, the licence of such offender or of an adjudged to be void, such offender shall be deemed incapable of selling beer, ale, or porter, by retail, in any house kept by him, for the space of two years; to be computed from the time of such adjudication; and any licence granted to such person during such term shall be void. — § 16.

In default of payment of penalties, proceedings may be had against the sureties. — § 19.

Any person summoned as a witness, who shall neglect or refuse to appear, and not make such reasonable excuse for such neglect, &c. as shall be adjudged by such justices of sessions, or who, appearing, shall refuse to be examined, shall, on conviction, forfeit not exceeding 10*l.*. — § 20.

Offenders refusing or neglecting, within seven days after conviction, to pay the penalty imposed, and any costs assessed, such justice may issue that warrant to levy the amount by distress and sale, together with the costs of distress and sale; and in every such case, such offenders, if in custody, shall be forthwith discharged; but if the goods and chattels are not sufficient, such justices may commit the offender to the common goal or house of correction for not exceeding one calendar month, if the penalty shall not be above 5*l.*; for not exceeding three calendar months, if the penalty shall be above 5*l.*, and not more than 10*l.*; and for not exceeding six calendar months, if the penalty shall be above 10*l.*; provided, that whenever such offender shall pay to the gaoler or keeper, or to whomsoever such justices shall have appointed, the penalty and costs, together with all the costs of apprehension and conveyance to goal, at any time previous to the expiration of the time for which such offender shall have been committed, such offender shall be forthwith discharged. — § 21.

No conviction under this act, nor any adjudication made upon appeal therefrom, shall be quashed for want of form, nor removed by certiorari. — § 22.

Every action against any justice, constable, or other person, for any thing done in execution of his duty under this act, to be commenced within three calendar months, and not afterwards; and if any person be sued, he may plead the general issue, and give the special matter in evidence. — § 23.

This act not to affect the two universities, nor the vintners' company in London; nor to prohibit the sale of beer at fairs, as heretofore.

11. *Scotch Ale and Beer Duties.* — The duties on ale and beer in Scotland have been for a lengthened period the same as in England.

At the union in 1707, the English duties on ale and beer were introduced into Scotland. But, besides strong and small beer, the Scotch had an intermediate species, which they called *two-penny*, and which was their favourite beverage. The duty on this sort of beer was fixed, at the union, at 2*s.* 1*d.* a barrel. For thirty years after its imposition, the quantity of two-penny that paid duty was always above 400,000, and sometimes exceeded 500,000 barrels a year. But in 1760 the duty on two-penny was increased to 3*s.* 4*d.* and the consumption immediately fell off to between 100,000 and 200,000 barrels. The quantity that paid duty in 1800 amounted to 149,803 barrels. The manufacture of this species of beer ceased entirely in 1802.

No account has been kept of the quantity of beer brewed in Ireland since 1809, when it amounted to 960,200 barrels. — (*Morewood on Intoxicating Liquors* p. 353.) Perhaps it may now amount to from 1,000,000 to 1,200,000 barrels.

An Account of the Number of Barrels of Beer exported from the United Kingdom to Foreign Countries in 1841 and 1842; specifying the Countries to which they were principally sent. — (*Part. Papers*, No. 175. Sess. 1843.)

	To West Indies.	To Australia.	To East Indies.	To other Countries.	Total.
In 1841	34,252	47,632	54,376	34,415	166,975
In 1842	35,711	29,983	51,150	33,692	145,536

12. *Regulations as to the Exportation of Beer.* — Ale or beer exported to foreign parts as merchandise is allowed a drawback of 5*s.* the barrel of 36 gallons, Imp. mea. But before any drawback for the above drawback shall be paid, the exporter or principal clerk or manager shall make oath thereon, before the proper officer of excise, that such ale or beer was put on board the exporting ship or merchandise to be sent beyond seas, and no part thereof for the ship's use; and that, according to the best of his knowledge and belief, the same has been brewed wholly from malt which has been charged with and paid the duty of 2*s.* 7*d.* a bushel, and shall also specify in such oath the time when and the place where; and the brewer, being an entered and licensed brewer for ale, by whom such beer or ale was brewed, and that the quantity of malt used in brewing was not less than 4 bushels (Imp. mea.) for every 36 gallons of such beer or ale. Persons making false statements forfeit the sum of 200*l.*, and the delinquency is void. — 11 *Will.* 4. cap. 51. § 11.

ALEXANDRIA, so called from its illustrious founder, Alexander the Great, the principal seaport of Egypt, on the coast of the Mediterranean, about 14 miles W.S.W. of the Canopic mouth of the Nile; the lighthouse being in lat. 31° 11' 31" N., long. 29° 51' 28" E. The situation of this famous city was admirably chosen. Until the discovery of the route to India by the Cape of Good Hope, Egypt formed the centre of the commerce between the eastern and western worlds; and Alexandria was placed in the most favourable position in Egypt for an emporium, being the only port on its northern coast, where there is, at once, deep water, and security for shipping throughout the year. The ports of Rosetta and Damietta, the former on the west, and the

latter on the eastern arm of the Nile, are both difficult of entrance, each having a bar, upon which there is always a dangerous surf. Ships bound for Alexandria avoid this serious inconvenience; and by means of an artificial navigation, stretching from the city to the western branch of the Nile, it has almost the same facilities for internal navigation that are enjoyed by the cities referred to.

It may be proper, however, to mention that this artificial communication with the Nile has not always been open. It existed in antiquity, but fell into decay during the barbarism of more modern times. After being shut up for some centuries, it has been re-opened by Mehemet Ali, who dug the Mahmoudie canal from Alexandria to Atfeh on the Nile, about 27 miles above Rosetta. This important work is 44 miles in length, 90 feet in breadth, and from 15 to 18 feet deep. It was opened in 1819; but owing partly to the nature of the ground, partly to some defects in its construction, and partly to the mud deposited by the water of the Nile, it is difficult to keep in repair; and can only be navigated by boats that draw little water, and are not suitable for the navigation of the Nile. But, with all its defects, the construction of this canal has been of the greatest advantage, not to Alexandria only, but to Egypt and even Europe.

**Pharos, &c.**—The ancient city was situated a little more inland than the modern one, opposite to the small island of Pharos, on which was erected the lighthouse, so celebrated in antiquity.—(*Cæsar, de Bello Civili*, lib. iii. cap. 112.) This island was, partly by artificial means, and partly by natural causes, gradually joined to the land by a mound, and on this the modern town is principally built. The isthmus and island have now the form of a T, its head being N. E. and S. W. A square castle, or tower, built on a small lake or rock, at the extremity of a mole projecting from the north-east angle of the city, is still called the Pharos, and may, perhaps, occupy the site of the ancient lighthouse; a light was exhibited on it down to 1842, when it ceased. On each side of the city there is a port. That on the western, or African side, called the Old Port, the *Eumostos* of the ancients, is by far the largest and best. It stretches from the town westwards to Marabout, about 6 miles, and is about 1½ miles in width. It is bounded on the north by the great eastern tongue or angle of the island on which the city is situated, built, at the extremity of which is the new lighthouse, and partly by rocks and sand banks. It has three entrances. The first, or that nearest the city, having 17 feet water, is about ½ mile S. W. from the lighthouse; but it is too narrow and difficult to be attempted by any one not thoroughly acquainted with the port. The *enters* side of the second or middle entrance is marked by buoys which lie about 2½ miles S. W. from the lighthouse; it is about a quarter of a mile wide, and has, where shallowest, 27 feet water. The third or western entrance has its *western* boundary within about three-eighths of a mile from the east end of Marabout island; it is about half a mile wide, and has from 25 to 27 feet water in its shallowest places. This last is the best entrance. Ships, when in, may anchor close to the town in from 22 to 40 feet water, and there is good anchorage in deep water all along the shore. Foreigners were formerly excluded from this port; but this prohibition no longer exists, and it is now principally resorted to by the shipping frequenting the port.

What is called the New (though it be really the oldest) or Asiatic harbour is on the eastern side of the town. A rock called the Diamond lies a little to the east of the Pharos tower; and ships entering the port ought to have this rock about a cable's length on the right. If they get much further to the left, they will come in contact with a shoal which stretches westward from the Pharillon, or little tower, on the east side of the port. The water immediately within the port S. W. from the Pharos is from 30 to 40 feet deep; but the space for anchorage is very limited, and is exposed to the northerly gales; and the ground being foul and rocky, hempen cables are very apt to chafe, and several accidents have happened in consequence to ships unprovided with iron cables. Ordinary tides rise 2 feet; but during the overflow of the Nile the rise is 4 feet. Variation 139° west.—(See *Plan of Alexandria*, by Lieut. Falbe.)

**Lighthouse.**—The new lighthouse, on the most westerly point of the island (an *Pharos*) on which the city is partly built, was erected in 1842. It exhibits a fixed light, elevated 180 feet above the level of the sea, and is visible in clear weather at a distance of nearly 20 miles. This light must, of course, be kept on the left by ships entering the great eastern harbour, and on the right by those entering the small or eastern harbour. We may mention that a British vessel was totally lost in attempting to enter the W. harbour by night, in December, 1844. The captain trusted to a chart which identified the lighthouse with the old tower at the entrance to the E. harbour. But the light on the latter has, as already stated, ceased to be exhibited since 1842, and all charts should be corrected accordingly.

**Ancient and Modern City.**—Under the Ptolemies and Romans, Alexandria was the first commercial city in the world. It suffered greatly by its reduction by the Saracens in 640; but it continued to be a place of considerable commercial importance till the despotism of the Mamelukes and Turks, and the discovery of the route to India by the Cape of Good Hope completed its ruin. Under the Ptolemies, the population is believed to have amounted to about 300,000, and the city was adorned by a vast number of magnificent structures. At present the population varies with the seasons of the year, but, when greatest, it is not supposed to exceed 60,000; and may vary between this amount and 45,000. The appearance of the modern town is most unpromising. "It may be justly said, that in the new city of Alexandria we find a poor orphan, whose sole inheritance has been the venerable name of its father. The vast extent of the ancient city is contracted in the new to a little neck of land, between the two ports. The most superb temples are changed into plain mosques; the most magnificent palaces into houses of a bad structure; the royal seat is become a prison for slaves; an opulent and numerous people has given way to a small number of foreign traders, and to a multitude of wretches, that are the servants of those on whom they depend; a place formerly so famous for the extent of its commerce, is no longer any thing more than a mere place of embarking; in fine, it is not a phoenix that revives from its own ashes. It is, at most, a reptile, sprung from the dirt, the dust, and corruption with which the Alcoran has infected the whole country."—(*Norden's Travels*, Eng. trans. 8vo. ed. p. 32.) But this striking description, though accurate at the time when it was written (1737), conveys too unfavourable an idea of the present state of Alexandria. The vigorous government of Mehemet Ali, by introducing comparative security and good order into Egypt, has latterly revived the commerce of Alexandria, which has again become a place of much importance in the trading world; and many new warehouses and other buildings have been constructed.

**Trade of Alexandria.**—The imports principally consist of cotton stuffs, timber, woollen and silk stuffs, iron and hardware, including copper and tin plates, jewellery, machinery, ammunition, paper and stationery, cutlery, &c. &c. The exports consist principally of raw cotton, rice, wheat and barley, beans, linseed, sesam, and other drugs and gums brought from the interior; indigo, opium, rich leathers, dates, soda, linen cloth, coffee from Arabia, &c. The exports of wheat, barley, and pulse have declined in consequence of the superior encouragement given to the growth of cotton; the culture of fax has also declined; formerly from 50,000 to 60,000 quarters of linseed have been exported from Alexandria in a single season, but the exports are now much less. Sugar has been long cultivated in Egypt; but not to any great extent, though the soil and climate of Upper Egypt are said to be especially favourable to its growth. Indigo and madder are among the articles of culture introduced by the Fuchs.

Cotton has been grown in Egypt from a very remote period; previously, however, to the ascendancy of Mehemet Ali it was but little cultivated, and that little was of an inferior quality, short-stapled, and closely resembling "Surats," under which name the small quantities exported from the country were usually sold. But, in 1820, a Frenchman of the name of Jumel accidentally observed a very valuable

variety of long-stapled cotton, raised from seeds brought from Dongola and Senaar, growing in the garden of Mahi Bey at Cairo. Jumel having represented its superiority to the Facha, its cultivation was undertaken on a large scale on account of the latter; and has succeeded so well, that Mahi Bey's cotton has been for a lengthened period by far the principal article of export from Egypt. The other period seeds of the Sea-Island cotton were introduced, and for a while it also answered remarkably well. Its produce, which in Egypt was called Senaar, and in England "Egyptian Sea-Island," ranking next in the estimation of the manufacturers to genuine "sea-Island." Unfortunately, however, this variety was found to degenerate, and its culture, which was never very extensive, as well as that of the old short-stapled variety, has, we believe, been wholly abandoned.—We subjoin

An Account of the Exports of Cotton from Egypt from 1831 to 1840, both inclusive.

N. B.—The gross weight of a bale of Egyptian cotton at Alexandria averages 230 rotoli or 238-07 lbs., and allowing 10 rotoli as tare for packing and cartage, the net weight of the bale will be about 210 lbs. The cantar of cotton was fixed in 1836 at 100 rotoli. Exclusive of the cotton shipped from Egypt, about 20,000 cantars a year are supposed to have been annually wrought up in the Facha's cotton factories at an average of the 10 years ending with 1838; but, owing to the failure of most of these establishments, the quantity is now much less.—(See the valuable Tract of George R. Ulidson, Esq. on the Cotton of Egypt.)

We doubt, however, whether the encouragement given to the culture of cotton has not been really injurious to Egypt.

At all events, we apprehend that the cotton of that country will have great difficulty in finding a profitable vent in the European markets in competition with American cotton, considering the extreme low price at which the latter can be sold. We have alluded to the degeneracy of the Sea-Island cotton in Egypt, and it is alleged that the Maha is also degenerating. We need not, therefore, be surprised should it be found necessary to abandon the culture of cotton in Egypt. But in the culture of wheat, beans, barley, and rice, Egypt has nothing to fear from any rivalry. In this department of industry she is, if not superior to every other country, inferior to none.

We subjoin some accounts illustrative of the trade and navigation of Alexandria in 1811 and 1842.

Account of the Quantities and Values of the different Articles from Alexandria in 1842.

Denominations.	Quantity.	Value.	Denominations.	Quantity.	Value.

tween Asia and Europe that had at a more early period centered at Tyre, was gradually diverted to this new emporium. An intercourse between the ports on the eastern coast of Egypt, and those on the opposite coast of Arabia, had subsisted from a very early period. That between Egypt and India was more recent. It was at first carried on by ships, which having sailed down the Red Sea from Myos Hormos and Berenice, coasted along the Arabian shores till they reached Cape Rassegate, whence a short course brought them to India near the mouth of the river Indus. This was the course followed during the dynasty of the Ptolemies; but about 80 years after Egypt had been annexed to the Roman empire, Hippalus, the commander of an Egyptian ship trading to India, having observed the regular shifting of the trade winds, ventured to sail with the western monsoon from the Straits of Bab el Mandeb right across the Arabian Ocean; and was fortunate enough, after a prosperous voyage, to arrive at Musiris, in that part of India now known by the name of the Malabar coast. Having taken on board a cargo of Indian produce, Hippalus returned in safety with the eastern monsoon to Egypt. This discovery was deemed of so much importance, that the name of the discoverer was given to the wind which had carried him across the ocean to India; and how trifling soever this voyage may now appear, those who consider that Hippalus had no compass by which to direct his course, and that owing to this circumstance, and the otherwise imperfect state of the art of navigation, the ancients seldom ventured out of sight of land, even in seas with which they were well acquainted, will be forward to admit that his enterprize and daring were nowise inferior to his success; and that he was well entitled to the gratitude of his contemporaries, and the respect of posterity.

From the epoch of this discovery, fleets traded periodically from Egypt to Musiris, the products of Europe to India, and conversely. The Indian goods having been landed at Myos Hormos and Berenice were thence conveyed by caravans to Coptos (the modern Kenna), on the Nile, where they were put on board lighters and sent to Alexandria, whence they were distributed all over the western world. The goods sent to India were conveyed to Myos Hormos and Berenice by the same route. Myos Hormos was situated on the shore of the Arabian gulf, about a degree to the north of the modern port of Cosser. The distance from it to Coptos, in a straight line, is about 70 English miles. Berenice was situated a good way further south, being nearly under the tropic. It was built by Ptolemy Philadelphus. Its distance from Coptos is stated by Pliny at 258 Roman miles; the different resting-places on the road were determined by the wells, and the journey occupied about 12 days. Ptolemy seems to have preferred this station to Myos Hormos, though the land carriage to Coptos was so much further, from its greater proximity to the Straits of Bab el Mandeb, and its lessening the voyage up the Red Sea.

Pliny says that the cost of the Indian commodities brought to Rome through Alexandria was increased a hundred fold (*centuplicato venant*) by the expense of carriage, &c. We suspect, however, that this is a rhetorical exaggeration, meaning merely that their price was very materially enhanced. If the increase was anything like that mentioned, it must have been owing to the imposition of oppressive tolls and duties, for it could not possibly have been occasioned by the mere expense of conveyance.—(*Plin. Hist. Nat. lib. vi. cap. 23; Amelikon, Commerce des Egyptiens, pp. 161—176, &c.; Robertson's Ancient India, note 20, &c.*)

Besides this important traffic, which supplied Rome and the western world with the silks, spices, precious stones, and other products of Arabia and India, a great trade in corn was carried on from Alexandria to Rome. Egypt, for a lengthened period, constituted the granary from which Rome, and afterwards Constantinople, drew the principal part of their supplies; and its possession was, on that account, reckoned of the utmost consequence. Augustus employed merchantmen of a larger size than any that had previously traded in the Mediterranean to convey the corn of Egypt to Ostia. They were escorted by ships of war. The fleet received the names of *aurora* and *felix embos*; and enjoyed several peculiar privileges. The ships belonging to it were the only ones authorized to hoist the small bill called *supparum*, when they drew near the coasts of Italy. Some of the fast-sailing vessels attached to the fleet were sent on before, to give notice of its approach; and a deputation of senators went down to Ostia to receive the ships, which anchored amid the acclamations of an immense number of spectators. The captains were obliged to make oath that the corn on board their ships was that which had been delivered to them in Egypt, and that the cargoes were entire as shipped.—(*Hist. Commerce et Navigation des Anciens, cap. xlviii.; Seneca Epist. cap. lxxvii. &c.*)

*Intercourse with India through Alexandria.*—These few details will, perhaps, serve to give a faint idea of the importance of Alexandria in the commerce of antiquity. It is impossible, indeed, for any one to glance at a map of the world, or of the ancient hemisphere, and not to perceive that Egypt is the natural entrepôt of the commerce between Europe, and all the east countries stretching from Arabia to China. The discovery of the route to India by the Cape of Good Hope, in 1498, must, no doubt, have, under any circumstances, diverted a considerable portion of the trade with the western states of Europe, and in the heavier and bulkier class of articles, into a new channel. It is, however, abundantly certain, that had the same facilities for conducting the trade with the East existed in Egypt in the sixteenth and seventeenth centuries, like that which actually, she would have continued to be the centre of the trade for all the lighter and more valuable products, and the route of the greater number of the individuals passing between Europe and Asia. But the lawless and arbitrary dominion of the Mamelukes, who loaded all individuals passing through the country with oppressive exactions, at the same time that they treated all foreigners, and especially Christians, with injustice and contempt, put an entire stop to the intercourse so long carried on by this shortest, most direct, and most convenient route. Happily, however, a new era has begun, and Egypt has once more become the grand thoroughfare of the eastern and western worlds. After good order and a regular government had been introduced into Egypt by Mehemet Ali, it was seen that it might be again made the channel of communication with India; and the importance of facilitating the intercourse with that continent forcibly attracted the attention of the British government and the East India Company. We believe, however, that the public are principally

\* In the 16th century, the cost of Indian commodities brought to Western Europe by way of Alexandria and Aleppo was about three times the cost of those brought by the Cape of Good Hope.—(See *put. East India Company, History of*.) But Egypt was then occupied by the Mamelukes and Turks, who threw every sort of obstacle in the way of commerce, and loaded it with the most oppressive exactions.

indebted to the exertions of Mr. Waghorn for the early and successful opening of what has been called the "over-land route" to India. At all events the establishment of a steam communication between Europe and Southern Asia, by way of Alexandria and Suez, is one of the most striking and important events in recent times. It has shortened the journey to India from England more than a half, and rendered it comparatively safe and expeditious. Steamers ascend the Nile as far as Cairo; and the passengers and mails are thence conveyed across the desert to Suez; and conversely, by horses and carriages, no fewer than 7 Inns or khans being established along this road, which is travelled with comfort and expedition! We subjoin the following details:—

OVERLAND MAILS Outward.	Dispatched from London.		Arrive at Alexandria about	Leave Suez about	Arrive in Bombay about
	Via Southampton.	Via Marseilles.	10th of every month.	2d of every month.	9th of every month.
	20th of every month by contract steamers.	24th of every month.	6th or 7th of every month.	9th or 10th of every month.	6th and 7th of every month.
					Arrive at Calcutta about

The steamers that take the Southampton mail call at Gibraltar, and arrive at Malta about the 30th. The mails from Marseilles leave that port by one of her Majesty's steamers about the 16th and 27th of each month, and arrive at Malta the 14th and 31st. At Malta the mails are transhipped, and conveyed by steamers to Alexandria.

OVERLAND MAILS.— Homeward.	Dispatched from Bombay about	Arrive at Suez about	Leave Alexandria about	Arrive in London about	
	1st of each month.	18th of each month.	21st of each month.	Via Marseilles.	Via Southampton.
	Dispatched from Calcutta.				
	7th of each month. Dispatched from Bombay about 20th of each month.	8th of each month.	10th of each month.	21st of each month.	26th of each month.

The contract steamer with the outward mail waits at Alexandria for the homeward mail, and arrives at Malta about the 17th and 28th of every month, where the Marseilles portion is transferred to one of her Majesty's steamers, which carries it to Marseilles, whence it is sent by land to Paris and via Dover to London; the remaining portion is landed at Southampton, and is thence sent by railway to London. Average time to or from Bombay via Marseilles 31 days, and to or from Calcutta via Marseilles about 42 and 43 days, and via Southampton about 47 and 48 days. By ship round the Cape 4 months. The newspaper proprietors run expresses from Marseilles on the arrival of each mail, and thus are enabled to publish the news some 2 days before the letters arrive in London.

Fares and Passages. See p. 12, for Southampton.	Time of starting.	Fare to Alexandria.	Alexandria to Suez.	Suez to Bombay.	From Suez to Ceylon, Madras, or Calcutta.
		1st Cabin.	1st Cabin.	1st Cabin.	1st Cabin.
	Steamers leave Southampton the 9th of every month, and call at Gibraltar and Malta, arriving at Alexandria about the 17th of every month.	£ s. d.	£ s. d.	£ s. d.	61l. to 76l.

**Sea Route, via Marseilles.**—By steamer to Boulogne; railway to Paris and Chalon-sur-Saone; thence to Lyons, Ajaccio, and to Marseilles. Time occupied 3 days. French government steamers leave Marseilles the 9th, 19th, and 29th of every month, calling at Leghorn, Civita Vecchia, Naples, Malta, and Messina. French government steamers also leave Marseilles on the 6th and 23d of every month for Alexandria and Beyrou, direct, calling at Malta on the way.

The Peninsular and Oriental Steam Navigation Company has published the following Statements:—

	First Class.	Second Class.	Servants.		
Rates of Passage between England and Malta	£ s. d.	£ s. d.	£ s. d.		
— Alexandria	27 10 0	18 18 0	15 15 0

Native servants	22 0 0	24 0 0	30 0 0	36 0 0	
For large families an allowance will be made in the foregoing rates to Ceylon, Madras, and Calcutta.					

**N. B.**—In addition to the above-mentioned rates of passage by the Company's steamers, the expenses of transit through Egypt will be charged at the Company's offices, at the time of securing the passage, for account of the Egyptian Government, in conformity with the subjoined extract from the

TRANSIT ADMINISTRATION TARIFF.

From Alexandria to Suez, and vice versa.

A Lady	12	In vans across the Desert.	Free.
A Gentleman	12		
A Child above ten years	12		
A Child of five years and under ten	6		
A Child of two years and under five	6		
A Child under two years	10		
A European Female Servant	8		
A European Male Servant or Mechanic	8		
A Native Female Servant	4		
A Native Male Servant on a dromedary or donkey	4		

The rates of passage include steward's fees and table, wine, &c., for first-class passengers. Bedding, linen, and all requisite cabin furniture, is provided in the Company's steamers, together with the attendance of experienced male and female servants.

**Baggage.**—First-class passengers are allowed, in the Company's steamers only on either side of the Isthmus, 5 cwt. of personal baggage free of freight, and children and servants 1½ cwt. each.

All baggage must be shipped on the day previous to sailing, except carpet bags or hat boxes. All other baggage received on board on the day of sailing will be considered as extra baggage, and charged freight as such. The charge for conveyance of extra baggage, should there be room in the vessel, will be 2s. per cwt. between Suez and India, and 1s. per cwt. between England and Alexandria.

Passengers will have to pay the Egyptian Transit Company in Egypt 15s. per cwt. for conveyance of baggage through, should it exceed, for first-class passengers, 2 cwt., and children and servants 1 cwt. No package of baggage should exceed 80 lbs. weight. The best dimensions for a trunk or portmanteau are, length, 2 ft. 3 in.—breadth, 1 ft. 2 in.—depth, 1 ft. 1 in.

Passengers taking articles of merchandise in their baggage will incur the risk of seizure by the Customs' authorities, and of detention for freight by the Company's agents.

**Canal between the Nile and the Red Sea.**—We are assured, that were it not for the hostilities in which the Pacha has been almost always engaged, he would have attempted to reopen the famous canal that formerly connected the Red Sea and the Nile. According to Herodotus, this canal was commenced by Nechos, king of Egypt, and finished by Darius (lib. ii. §. 158. iv. 39.). Under the Ptolemies, by whom, according to some authorities, it was completed, this canal became an important channel of communication. It joined the E., or Pelusiac branch of the Nile at Bubastis the ruins of which still remain; it thence proceeded E. to the bitter or natron lakes of Temrah and Cheik-Aneded, whence it followed a nearly S. direction to its junction with the Red Sea at Arsinoe, either at or near where Suez now stands. It is said by Strabo (lib. xvii. p. 805.) to have been 1000 stadia (122 m.) in length; but if we measure it on the best modern maps, it could hardly have exceeded from 85 to 95 miles. Herodotus says that it was wide enough to admit two triremes sailing abreast. This great work having fallen into decay after the downfall of the Ptolemiac dynasty, was renovated either by Trajan or Adrian; and it was finally renewed by Amrou, the general of the caliph Omar, the conqueror of Egypt, anno 639 (Herodote, par Larcher, iii. 450.). The French engineers traced the remains of this great work for a considerable distance, and it would be of singular advantage to Egypt and the commerce of the world were it reopened.

Marshal Marmont states that the ground has been carefully examined by M. Lepère, an able engineer, and that it presents no sort of difficulty that may not easily be overcome. This, indeed, might have been inferred from the fact of its former construction; for the ancients being unacquainted with the use of locks had to encounter difficulties in the construction and working of canals which are now obviated with the utmost facility. According to M. Lepère, the cost of constructing a navigable canal from the Nile to the Red Sea would not exceed 17,000,000 francs, or less than 700,000l. (Marmont, iv. 161.) The completion of this work need not, therefore, be despair'd of. The opening of the Mahmoudieh canal from Alexandria to Atfeh shows what the present government is able to achieve; and an enterprise like that now under consideration, though more difficult, would be of still greater importance to Egypt as well as to Europe and Asia. Marshal Marmont appears to think that the ground between Suez and Cairo is quite unsuitable for a railway, to which project the Pacha is, however, understood to be most favourable. In fact, a portion of the iron rails for this undertaking have been ordered from England, and are now in Egypt; but the attention of the Pacha having been diverted to other matters, the project has been, for the present, abandoned.

**ALICANT**, a sea-port town of Spain, in Valencia, lat. 38° 20' 41" N., long. 0° 30' W. Population about 14,000, and declining.

The port is an open and spacious bay, between Cape de la Huerta on the north-east, and Isla Plana on the south, distant from each other S. W. and N. E. about 10 miles. Ships may enter on any course between these points, steering direct for the castle, which stands on an eminence about 400 feet high. Those of considerable burden moor N. and S., distant from ½ to 1 mile from shore, in from 4 to 8 fathoms water; they are exposed to all winds, from E. N. E. to S. by W.; but the holding ground is good, and there is no instance during the last twenty years of a ship having been driven from her moorings. Small craft lie alongside the mole, which is already 320 yards in length, and is continuing to be projected still further into the sea. There are no pilots. The trade of Alicant, though still considerable, has declined much within the last few years; a consequence partly of the emancipation of America from the Spanish yoke, but more of the oppressive duties laid on the importation of most articles of foreign produce into Spain (see CADIZ), and the extensive smuggling carried on from Gibraltar, Algiers, &c.

Raisins form the principal article of export; and their produce, which amounts to nearly 200,000 cwt., has increased rapidly of late years. They are principally taken off by England, the shipments thither, in 1842, having been 146,436 cwt. But with this single exception all the other articles of export have declined. The principal are silk, wool, barilla, almonds, wine, salt, oil, lead, mats, saffron, brandy, anise, saffron, &c. The exportation of barilla, which formerly amounted to from 50,000 to 100,000 cwt., has declined, partly from its having been largely adulterated, but principally from its being to a great extent superseded by *soude factice* (artificial soda), to little more than 20,000 cwt. The imports consist principally of sugar, coffee, cocoa, and other colonial products; cotton, and linen stuffs, and other manufactured goods, from England and France; salted fish, tobacco, iron and hardware, deals and tar, &c. &c.; but it is impossible to form any estimate of the imports from official or other returns, as by far the largest portion are supplied clandestinely. Indeed, the whole population of this part of Spain are clothed in prohibited articles, which are sold as openly in the towns as if they were of Spanish manufacture! (Consul's Report for 1841.) An *Association Britannica* has recently been formed in this port for smelting and refining the rich argentiferous lead ores of Almagrera and other parts of the province of Murcia.

# ALIENS.

Last year (1842) the produce amounted to 400,000 os. pure silver and 400 tons lead. The manufacture of woollens is carried on pretty extensively at Alcoy, 23 miles N. from Alicante; but they are coarse and of inferior quality.

*Port Charges on Shipping entering and clearing out.*  
N. B.—A vessel of 300 tons pays the maximum rate. One of less burthen pays proportionally less.

*Custom-house Regulations.*—A manifest of the cargo, the ship's tonnage, and number of crew, must be presented within 24 hours after pratique being given, when two officers are put on board to prevent smuggling. The consignee then makes entry of the articles consigned to them, and obtains an order to discharge from the collector, or custom-house authorities, a certificate of origin from the Spanish consul at the port of loading being no longer requisite. To load the whole or part of an outward cargo, the master reports his intention to the collector, who gives him order permitting goods to be shipped, and the shippers make their specific entries. When the vessel is loaded, the waiting officers make their return to the collector; who, on being presented with the receipts of the captain of the port and of the Pratique office for their respective charges, grants his clearance, upon which a bill of health is obtained, and the vessel is clear for sea.

*Warehousing Duties.*—Goods legally imported may be deposited in bonded warehouses for twelve months, paying, in lieu of all charges, 2 per cent. ad valorem, but at the end of the year they must be either taken for home consumption or re-shipped. The 2 per cent. is charged, whether the goods lie for a day or the whole year. In charging duties, no allowance is made for waste or damage in the warehouses.

*Rates of Commission* are usually 2½ per cent. on sales and purchases; ½ per cent. is commonly charged on the negotiation of bills. Goods are commonly sold at 3 months' credit. Ordinary discount at the rate of 6 per cent. per annum.

*Vessels* with foul bills of health, or coming from an infected or suspected place, though with clean bills, are usually ordered to FortMahon to perform quarantine. But vessels coming with clean bills obtain, under ordinary circumstances, immediate pratique.

*Money.*—Accounts are kept in libras of 20 sordos; each sordo containing 12 dineros; the libra, also called the peso, = 10 reals; and a real of Alicante = 27½ maravedis of plate, or 31½ maravedis vellon. The libra may be valued at 3s. 6d. sterling, and the real at 4½ d. ditto.

*Weights and Measures.*—The carga = 2½ quintals = 10 arrobas. The arroba consists either of 36 large pounds, or of 36 small ditto; the latter being 12 Cantilian ounces to the pound, the former 15. The arroba = 27 lbs. 4 oz. avoirdupois; but at the Custom-house the arroba = 25 lbs. or 25 lbs. of 16 oz. each.

The principal corn measure is the cahiz or cahise, containing 12 barchillas, 96 medios, or 192 quartillos. The cahiz = 7 Winchester bushels nearly.

The principal liquid measure is the cantero of 8 medios, or 16 quartillos. The cantero = 3.08 English wine pailons. The tomecilla or ton contains 2 pipes, 50 arrobas, or 100 cantaros.

The yard or vara, divided into 4 palmos, is = 29.96, or very nearly 30 English inches.—(Consul's Reports to Foreign Office for 1841 and 1842; *Spain in 1830*, li. 394, &c.; *Kelly's Combia*, &c.)

**ALIENS.** According to the strict sense of the term, and the interpretation of the common law, all individuals born out of the dominions of the crown of England (*alibi natus*) are aliens or foreigners.

It is obvious, however, that this strict interpretation could not be maintained without very great inconvenience; and the necessity of making exceptions in favour of the children born of native parents resident in foreign countries was early recognised. The 25 Edw. 3. stat. 2. enacts, that all children born abroad, provided both the parents were at the time of their birth in allegiance to the king, and the mother had passed the seas by her husband's consent, might inherit as if born in England. And this relaxation has been carried still further, by several modern statutes: so that all children born out of the king's allegiance, whose fathers, or grandfathers by the father's side, were natural born subjects, are now deemed to be themselves natural born subjects; unless their ancestors were outlawed, or banished beyond sea for high treason, or were, at the birth of such children, in the service of a prince at enmity with Great Britain.

*Naturalisation of Aliens.*—Aliens may be naturalised by act of parliament, which puts them in exactly the same condition as natural-born subjects, except that they are incapable of being members of the privy council, of being elected to serve in parliament, or of holding any office of trust under the crown.

A *denizen* is an alien born, who has obtained letters patent, *ex donatione regis*, to make him an English subject. He occupies a kind of middle station between a natural-born subject and an alien. He may acquire lands by purchase or devise, but not by inheritance; and may transmit such lands to his children born after his denization, but not to those born before. — (*Blackstone's Com.* book 1, cap. 10.)

An alien may also be naturalised by serving on board any of his Majesty's ships of war, in time of war, for three years, or, if a proclamation has been issued to that effect, for two years. — (6 *Geo.* 4, cap. 109. §§ 16, 17.)

*Influence of the Residence of Aliens.* — There can be no doubt that, generally speaking, the resort of foreigners to a country, and their residence in it, are highly conducive to its interests. Those who emigrate in order to practise their calling in an old settled country are pretty uniformly distinguished for activity, enterprise, and good conduct. The native inhabitants have so many advantages on their side, that it would be absurd to suppose that foreigners should ever come into any thing like successful competition with them, unless they were acquainted with some branch of trade or manufacture of which the others were ignorant, or possessed superior skill, industry, or economy. But whether aliens practise new arts, or introduce more perfect processes into the old, or display superior economy, &c., their influx cannot fail to be of the greatest advantage. They practically instruct those among whom they reside in what it most concerns them to know, that is, in those departments of art and science in which they are inferior to others; and enable them to avail themselves of whatever foreign sagacity, skill, or practice has produced that is most perfect. It is not easy, indeed, to overrate the benefits conferred on most countries by the resort of aliens. Previously to the invention of printing, there was hardly any other way of becoming acquainted with foreign inventions and discoveries; and even now it is far easier to learn any new art, method, or process, from the example and instruction of those familiar with its details, than from the best possible descriptions. The experience, indeed, of every age and country shows that the progress of nations in the career of arts and civilisation depends more on the freedom of commerce, and on the liberality with which they have treated foreigners, than on almost any thing else.

*English Legislation as to Aliens.* — But, notwithstanding what has been stated above, an antipathy to resident foreigners seems to be indigenous to all rude and uncivilised nations. Whatever is done by them appears to be so much taken from the employment, and, consequently, from the subsistence of the citizens; while the advantages resulting from the new arts or improved practices they introduce, for the most part manifest themselves only by slow degrees, and rarely make any impression on the multitude. Hence the jealousy and aversion with which foreigners are uniformly regarded in all countries not far advanced in civilisation. The early Greeks and Romans looked upon strangers as a species of enemies, with whom, though not actually at war, they maintained no sort of friendly intercourse. "*Hostis*," says Cicero, "*apud majores nostros is dicebatur, quem nunc peregrinum dicimus.*" — (*De Off.* lib. 1. cap. 12.) It may, therefore, be considered as a striking proof of the good sense and liberality of those by whom it was framed, that a clause is inserted in Magna Charta which has the encouragement of commerce for its object; being to the effect, that "all merchants (if not openly prohibited before) shall have safe and sure conduct to depart out of and to come into England, to reside in and go through England, as well by land as by water; to buy and sell without any manner of evil tolls, by the old and rightful customs, except in time of war; and if they be of a land making war against us, and such be found in our nation at the beginning of the war, they shall be attached without harm of body or goods, until it be known unto us, or our chief justice, how our merchants be entreated in the land making war against us; and if our merchants be well entreated there, shall be so likewise here."

But until the era of Edward I. the stipulation in the Great Charter as to foreign merchants seems to have been little attended to. It is doubtful whether, previously to his reign, they could either hire houses of their own, or deal except through the medium of some Englishman. But this intelligent prince saw the advantage that would result to the trade and industry of his subjects from the residence and intercourse of Germans, Flemings, Italians, and other foreigners, who, at that time, were very superior to the English in most branches of manufactures and commerce. He, therefore, exerted himself to procure a repeal of some of the more oppressive restrictions on aliens, and gave them a charter which conveyed considerable privileges.\* Down, however, to the reign of Edward III., it continued to be customary to arrest one stranger for the debt, and even to punish him for the crimes and misdemeanors of others! It may appear extraordinary that the gross injustice of this barbarous regulation ever permitted it to be adopted; and yet it was probably, at one period, the common law of most European states. As soon, however, as the foundations of good order and civilisation began to

\* This charter was confirmed by Edward III. in 1328. Among other clauses, it has the following; viz. 1st, That on any trial between foreigners and Englishmen the jury shall be half foreigners; 2d, That a proper person shall be appointed in London to be justiciary for foreign merchants; and, 3d, That there shall be but one weight and measure throughout the kingdom. — (*Anderson*, anno 1302.)

be laid, its operation was seen to be most pernicious. In 1325, Edward II. entered into a convention with the Venetians, in which it was expressly stipulated that they should have full liberty to come to England to buy and sell commodities, without being liable for the debts or crimes of others. Conventions to the same effect were entered into with other foreigners. At length, in 1353, this disgraceful practice was put an end to by 27 Edward 3. stat. 2. cap. 17.; it being provided in this statute, not only that no stranger shall be impeached for the trespass or debt of another, but that, in the event of a war breaking out with any foreign power, its subjects, residing amongst us, shall be warned thereof by proclamation, and be allowed forty days to arrange their affairs, and to depart out of the kingdom; and that, under special circumstances, this term may be extended. There are few acts in the statute-book that reflect more credit on their proposers, or that have been more advantageous than this.

In consequence of the encouragement given by Edward III. to such of the woollen manufacturers of Flanders as chose to immigrate to England, a good many came over; and it is from their immigration that we may date the improvement and importance of the woollen manufacture in this country.—(See WOOLLEN MANUFACTURE.) But this policy, however wise and judicious, was exceedingly unpopular. The foreigners were openly insulted, and their lives endangered, in London and other large towns; and a few of them in consequence returned to Flanders. Edward, however, was not to be driven from his purpose by an unfounded clamour of this sort. A proclamation was issued, in which every person accused of disturbing or attacking the foreign weavers was ordered to be committed to Newgate, and threatened with the utmost severity of punishment. In a parliament held at York, in 1335, an act was passed for the better protection and security of foreign merchants and others, by which penalties were inflicted on all who gave them any disturbance. This seems to have had the effect, for a while at least, of preventing any outrages.

The corporations of London, Bristol, and other great towns, have been at all times the principal enemies to the immigration of foreigners. Perhaps, indeed, they were not more hostile to them than to such of their own countrymen, belonging to another part of the kingdom, as should have attempted to settle amongst them without being free of their corporation. But in denouncing foreigners they had the national prejudice on their side; and their attempts to confirm and extend their monopolies by their exclusion were regarded as the noblest efforts of patriotism! Edward III. was fully aware of the real motives by which they were actuated, and steadily resisted their pretensions. But in the reigns of his successors they succeeded better: some of these were feeble and unfortunate, whilst others enjoyed the crown only by a disputed title, and in defiance of powerful competitors. The support of the great towns was of the utmost consequence to such princes, who, whatever might be their own opinion as to its policy, could hardly venture to resist the solicitations of such powerful bodies to exclude strangers, and to impose restrictions on commerce. From the death of Edward III. to the reign of Elizabeth, the progress made by the country was not inconsiderable, but it was little promoted by legislative enactments. Throughout the whole of this period, the influence of corporations seems to have predominated in all matters relating to trade and the treatment of foreigners; and our legislation partook of the selfish, monopolising character of the source whence it was principally derived. Were the acts and proceedings as to aliens the only memorials of our policy from 1377 to 1560, we should certainly seem to have retrograded materially during the interval. Some of these acts were passed with so little consideration, and were so very absurd, that they had to be immediately repealed. Of this sort was the statute of the 8 Henry 6. cap. 24., to the effect "that no Englishman shall within this realm sell, or cause to be sold, hereafter, to any merchant alien, any manner of merchandises, but only for ready payment in hand, or else in merchandises for merchandises, to be paid and contented in hand, upon pain of forfeiture of the same." But as an enactment of this sort was very speedily found to be more injurious to ourselves than to the foreigner, it was repealed in the following session.

The more tyrannical their conduct in other respects, the more were our princes disposed to humour the national prejudice against foreigners. If not a cheap, it was, at least, an easy method of acquiring popularity. In the very first parliament after the accession of Richard III., a statute was passed full of the most ridiculous, contradictory, and unfounded allegations as to the injury sustained by the influx of foreigners, and laying them under the most oppressive restraints. Considering, indeed, the sort of treatment to which aliens were then exposed, it may excite surprise that they should ever have thought of visiting the country; and, in point of fact, it appears that the resort of foreign merchants to our ports was materially impaired by the statutes referred to, and others of the same description. This is evident from the act 19 Henry 7. cap. 6., where it is stated that "woollen cloth is not sold or uttered as it hath been in divers parts," and that "foreign commodities and merchandises are at so dear and exceeding

high price that the buyer cannot live thereon." But in despite of this authoritative exposition of the mischiefs arising from the restraints on aliens, and on trade, they were both increased in the reign of Henry VIII. And it was not till the reign of Elizabeth that the pretensions of the corporations seem to have been disregarded, and an attempt made to act, not by starts, but consistently, on the policy of Edward III.

The influx of foreigners during the reign of Elizabeth was occasioned chiefly by the persecutions of the Duke of Alva and the Spaniards in the Low Countries. The friends of the reformed religion, which, at the time, was far from being firmly established, and the government, were glad to receive such an accession of strength; and from the superiority of the Flemings in commerce and manufactures, the immigrants contributed materially to the improvement of the arts in England. It would seem, however, that the ministers of Elizabeth contented themselves, perhaps that they might not excite the public prejudice, with declining to enforce the laws against aliens, without taking any very active steps in their favour.

In the reign of James I. the corporation of London renewed with increased earnestness their complaints of aliens. In 1622, a proclamation was issued, evidently written by James himself, in which, under pretence of keeping "a due temperment" between the interests of the complainants and those of the foreigners, he subjects the latter to fresh disabilities.

Since the revolution, more enlarged and liberal views as to the conduct to be followed with respect to aliens have continued to gain ground: several of the restraining statutes have fallen into disuse, while others have been so much modified by the interference of the courts, which have generally been inclined to soften their severity, that their more offensive provisions are become inoperative. In 1708, an act was passed, notwithstanding the strenuous opposition of the corporations, for the general naturalisation of all foreign protestants; but the prejudice against them was still so powerful that it was repealed within about three years. Some unsuccessful attempts have since been made to carry a similar measure. One of these, about the middle of last century, occasioned the publication by Dr. Tucker of two excellent pamphlets, in which the policy of the naturalisation act is most ably vindicated, and the arguments against it successfully exposed.\* But no such statute has hitherto been passed, and aliens still continue subject to various disabilities.

*Disabilities of Aliens.* — The principal of these regards the possession of fixed property. It is ruled that lands purchased by an alien for his own use may be seized by the king. "If," says Blackstone, "he could require a permanent property in lands, he must owe an allegiance, equally permanent with that due to the king of England, which would probably be inconsistent with that which he owes to his own natural liege lord; besides that, thereby the nation might in him be subject to foreign influence, and feel many other inconveniences. Wherefore by the civil law such contracts were made void, but the prince had no such advantage of forfeiture thereby as with us in England." — (*Commentaries*, book i. cap. 10.)

An alien cannot take a benefice without the king's consent, nor can he enjoy a place of trust, or take a grant of lands from the crown. Aliens may, however, acquire property in money, goods, or other personal estate, and may have houses for the purpose of their habitation, and for carrying on their business. They may bring actions as to their personal effects, and may dispose of them by will. The *droit d'aubaine* (*Jus albinatus*, i. e. *alibi natus*), or the right of the crown to succeed to the effects of an alien at his death, so long the custom in France, never obtained in England. If an alien abroad die intestate, his whole property here is distributed according to the law of the country where he resided; but such residence must have been stationary, and not occasional, otherwise the foreign municipal regulations will not apply to the property.

Aliens may trade as freely as natives; and for these many years past the duties of *package* and *scavage* in the port of London, repealed in 1833, were the only peculiar duties with which they were burdened. The statutes of Henry VIII. restraining alien artificers from working for themselves are understood to have been repealed by the stat. 5 Ell. c. 7., and they are quite at liberty to employ themselves as they please.

Aliens indicted for felony or misdemeanor are tried by a jury of which half are foreigners, a privilege they have enjoyed, as already seen, with some partial interruptions, from the reign of Edward I.

*Conditions of Residence.* — During the late war aliens were placed under the surveillance of the police; they were obliged to send frequent reports of their residence, and of the mode in which they were employed, and were liable to be sent out of the kingdom at any moment by an order from the secretary of state. The conditions under which they now reside amongst us are embodied in the 6 Will. 4. c. 11.

Every master of a ship arriving from foreign ports shall, to the best of his knowledge and belief, immediately declare, in writing, to the chief officer of customs, the name or names, rank, occupation, &c. of any alien or aliens on board his ship, or who may have landed therefrom at any place within the realm, under a penalty of 20*l.* for omission or false declaration, and of 10*l.* for every alien omitted in the declaration. This regulation does not, however, extend to foreign mariners navigating the vessel. — § 2.

On arrival in this country the alien is to declare his name, description, &c. and to produce his passport; which declaration is to be registered by the officer of customs, who is to deliver a certificate in the alien. A copy of this declaration is to be transmitted, within two days, to the secretary of state, or (if the alien land in Ireland) to the chief secretary of the lord lieutenant. The original certificate given to the alien is to be transmitted to the secretary of state on his leaving the country. New certificates to be granted in lieu of such as may be lost, without fee, under a penalty of 20*l.* Forging certificates, or falsely personating aliens, punishable by imprisonment, not exceeding three months, or by fine, not exceeding 100*l.* — §§ 3, 4, 5, &c.

*Policy of the Laws as to Aliens.* — The reasons assigned by Mr. Justice Blackstone and others for preventing aliens from acquiring fixed property seem to be very unsatis-

\* Historical Remarks on the late Naturalisation Bill, 1751; Queries occasioned by the late Naturalisation Bill, 1752.

factory. In small states there might be grounds, perhaps, for fearing lest the easy admission of aliens to the rights of citizenship should give them an improper bias; but in a country like England, such apprehensions would be quite futile. In this respect the example of Holland seems quite decisive. Notwithstanding the comparatively limited population of that country, it was "the constant policy of the republic to make Holland a perpetual, safe, and secure asylum for all persecuted and oppressed strangers; no alliance, no treaty, no regard for; no solicitation of any potentate whatever, has at any time been able to weaken or destroy, or make the state recede from protecting, those who have fled to it for their own security and self-preservation."—(*Proposals for amending the Trade of Holland*, printed by authority. Lond. 1751.)

A short residence in the country, and a small payment to the state, was all that was required in Holland to entitle a foreigner to every privilege enjoyed by a native. And it is of importance to remark, that it has not been so much as insinuated that this liberal conduct was in any instance productive of a mischievous result. On the contrary, all the highest authorities consider it as one of the main causes of the extraordinary progress made by the republic in wealth and commerce. It is said in the official paper just quoted, that "Throughout the whole course of all the persecutions and oppressions that have occurred in other countries, the steady adherence of the republic to this fundamental law has been the cause that many people have not only fled hither for refuge, with their whole stock in ready cash, and their most valuable effects, but have also settled and established many trades, fabrics, manufactures, arts, and sciences, in this country; notwithstanding the first materials for the said fabrics and manufactures were almost wholly wanting in it, and not to be procured but at a great expense from foreign parts."—(*Ibid.*)

With such an example to appeal to, we are warranted in affirming that nothing can be more idle than to suppose that any number of foreigners which it is at all likely should ever come to England under the most liberal system, could occasion any political inconvenience; and in all other respects their immigration would be advantageous. A general naturalisation act would, therefore, as it appears to us, be a wise and politic measure. It might be enacted, that those only who had resided three or four years in the country, and given proofs of their peaceable conduct, should be entitled to participate in its advantages.

(Some parts of this article have been borrowed from the *Treatise on Commerce*, written for the Society for the Diffusion of Useful Knowledge by the author of this Work.)

**ALKALIES.** The distinguishing characters of these bodies are, a strong acrid and powerfully caustic taste; a corrosive action upon all animal matter, destroying its texture with considerable rapidity; exposed to the atmosphere, when in their caustic state, they absorb carbonic acid with great rapidity, and become carbonated (or mild). Their action upon vegetable colours also affords us means by which the presence of an uncombined or carbonated alkali may be detected; the yellow colour of turmeric is changed to a red brown tint when immersed into solutions containing them; the blue colour of the litmus, after being reddened by an acid, is again restored; the infusions of the red cabbage, the violet, and many other purple vegetable colours, are converted to green. Litmus paper reddened by carbonic acid is, however, the most delicate test of the presence of an alkali. With the various acids they also combine, forming the very important and extensive class of compounds generally called salts; a salt being any compound formed by the union of an acid with an alkali or a metallic oxide.

*Alkali-metry.*—The method by which the value of the alkalies, or carbonated alkalies, is determined, being of considerable importance in a commercial point of view, we shall here treat it somewhat in detail. It is an established fact, that 49 parts by weight of oil of vitriol of the specific gravity of 1.8485 are exactly equivalent to the neutralisation of 70 parts by weight of pure carbonate of potash, or 45 of pure potash, or 54 of carbonate of soda, or 32 of soda, and that 70 parts of oil of vitriol will therefore be necessary to neutralise 100 parts of carbonate of potash. Hence, by employing a glass tube of about two ounces' capacity, and accurately divided into 100 equal parts, taking 70 grains of oil of vitriol, and diluting it with water, to make the 100 measures complete, every measure of this dilute acid must be equal to a grain of pure carbonate of potash. The per-centage of real carbonate of potash existing in any sample of pearlash may be at once ascertained by taking 100 grains of the sample, dissolving it in hot water, straining, and adding by degrees 100 measures of the test acid above mentioned; the point of neutralisation (when it ceases to affect litmus paper or reddened litmus) being accurately ascertained, the residual acid will give the per-centage of impurities; for instance, say that 75 measures of the dilute acid have been employed to render 100 grains of a sample of pearlash perfectly neutral, then we have ascertained that it contains 25 per cent. impurities. The same process of course must be followed in examining samples of barilla or kelp, except that the alkali contained in them, being carbonate of soda, 90.75 of oil of vitriol must be employed instead of 70. The process recommended by Mr. Paraday, and in which he uses only one test acid, is as follows:—Into a tube about three quarters of an inch in diameter, and nine and a half long, and as cylindrical as possible throughout its whole length, 1,500 grains of water are to be weighed, and the space occupied marked on the tube by a fine file; this space is then divided from above downwards into 100 equal parts. At 32.44, or 76.56 parts from the bottom an extra line should be made, and soda marked opposite to it; at 48.96 potash should be marked in the same way; at 54.03 carbonate of soda; and at 66 carbonate of potash. A diluted acid is now to be prepared, which shall have a specific gravity 1.127, and this is made by mixing intimately together 19 parts by weight of oil of vitriol and 81 of water. The method to be followed in the employment of this acid is as follows:—The diluted acid is to be measured in the tube up to the line opposite to which the alkali sought for is marked; if barilla, which contains carbonate of soda, 54.63

measures are to be taken. The 100 measures are then made up by the addition of water, and is then ready for use, following the method before stated.

The alkalies are four in number, namely, ammonia (or volatile alkali), potass (or vegetable alkali), soda (or mineral alkali), and lithia; which last is of so little importance that we shall not treat of it here.

The combinations of these alkalies with the various acids, whenever they form compounds of any importance, will be noticed.

**Ammonia, or Spirit of Hartshorn, or Volatile Alkali,** in its uncombined form, is an elastic gaseous body, having a very pungent and suffocating odour, destroys animal life, converts the yellow of turmeric paper to a brown, which, from the volatility of the alkali, is again restored by a gentle heat to its original colour. This gas is rapidly absorbed by water, which takes into solution about 780 times its volume, forming the liquid ammonia, or what is commonly called hartshorn. Ammonia is liberated whenever any of the compounds of this alkali are acted upon by potass, soda, lime, and many other alkaline earths. Lime, from its being the most economical, is generally employed; the best proportion for its preparations are equal weights of sal ammoniac (muriate of ammonia), and fresh slaked lime. When these are introduced into a retort, and heat applied, ammonia is liberated in the gaseous form, and is conducted by a Welter's safety tube into a vessel of water, by which the gas is instantly absorbed. Muriate of lime remains in the retort; sometimes water is added to the mixture, and then distilled. As thus obtained, it has a specific gravity of 930 or 940, water being equal to 1000. The most concentrated solution of ammonia has the specific gravity 875.

**Carbonate of Ammonia, or Volatile Salt, or Subcarbonate of Ammonia.**— This salt, which is very much employed in various processes of the arts, was formerly obtained by the action of chalk (carbonate of lime) upon muriate of ammonia; a double decomposition takes place. Carbonic acid and ammonia are sublimed in vapour, and muriate of lime remains in the vessel. A much less expensive process is, however, now followed, namely, from the waste gas liquors obtained in the purification of coal gas; these are evaporated, and the black impure sulphuric acid added. By this means a sulphate of ammonia is formed, and the carbonate procured by the action of powdered chalk, as in the former process.

Its uses are principally in forming other compounds of ammonia, as smelling salts; and it is likewise employed rather extensively by pastry-cooks for making light pastry, which is caused by the volatile carbonate of ammonia escaping and raising up the pastry by the heat of the oven. It is entirely dissipated during the baking, so that no ill effect can arise from its use.

Both this compound and the preceding act as violent stimulants on the animal system.

**Muriate of Ammonia, or Sal Ammoniac,** was formerly brought to this country from Egypt, where it was procured by submitting the soot of camels' dung (there employed for fuel) to sublimation in closed vessels; it is, however, at present manufactured in very large quantities in this country in a variety of ways. The most economical processes are either submitting sulphate of ammonia mixed intimately with muriate of soda (see salt) to sublimation, or by substituting the bittern of sea water, which consists chiefly of muriate of magnesia, for the sea salt. In the first process a sulphate of soda is formed, and the muriate of ammonia, which, being volatile, rises in the vaporous form, and is condensed in the cool parts of the apparatus; in the latter process a sulphate of magnesia (Epsom salt) results. It is generally from this salt (muriate of ammonia) that the liquid ammonia is manufactured; it is also employed in tinning and soldering, to preserve the metals from oxidation. It is a semi-transparent, tough salt, having an acrid acid taste, and is usually met with in the form of hemispherical masses. Sal ammoniac is made at Calcutta, and is thence exported to Great Britain, the United States, and the Arabian and Persian gulfs. In 1824-25 the exports amounted to 114 tons.

**Sulphate of Ammonia.**— The preparation of the sulphate has been already given under the head of ammonia; it is employed in the manufacture both of the carbonate and muriate.

**Acetate of Ammonia.**— The spirit of Mindererus is obtained by acting upon the carbonate of ammonia by acetic acid; the carbonic acid escapes with effervescence, and an acetate of ammonia is formed; it is employed in medicine as a febrifuge.

All these salts of ammonia have the following properties;— they are volatile at a low red heat; the fixed alkalies decompose them, combining with their acids, and the ammonia is liberated.

When combined with a fixed acid, such as the benzoic or phosphoric, they are decomposed, the ammonia alone being volatilized, and the acid remaining pure. This process was described for obtaining pure phosphoric acid.

**Potass, or Vegetable Alkali.**— The original source of this alkali is in the vegetable kingdom, whence it derived its name of vegetable alkali. When wood is burnt, and the ashes lixiviated with water, boiled, strained, and evaporated to dryness, an intensely alkaline mass is obtained, which is known by the name of potash, from this process being conducted in iron pots. It is then removed to a reverberatory furnace, and submitted to heat, and a current of air. This burns out extractive matter and other impurities, and the salt assumes a pearly white colour, and is hence called pearl-ashes. Care should be taken, during this process, that the potashes do not enter into fusion, as this would destroy the full effect of the operation.

**Pearl-ashes.**— Pearl-ashes generally contain about from 60 to 83 or 84 per cent. of pure carbonate of potass. Its uses in manufactures are numerous and important. It is employed in making flint-glass, of which it constitutes about one sixth of the materials employed; in soap-making, especially for the softer kinds of soap; for this purpose, however, it is first rendered caustic by means of lime. In the rectification of spirits large quantities are employed to combine with the water previously in union with the spirit.

**Subcarbonate of Potass, or Salt of Tartar,** is used in preparing the subcarbonate of potass of the Pharmacopœia (carbonate of potass of the chemical nomenclature), and likewise in rendering hard spring waters soft, and in cleansing substances from grease: it is sometimes called salt of wormwood. When made by the deliquation of two parts of tartar of argol and one of nitre, it is called black flux, and is used extensively in metallurgical operations.

From the subcarbonate of potash the pure and uncombined potash is obtained, by adding an equal weight of fresh burnt lime, previously slaked, and boiling them with half their weight of water. By this process the lime combines with the carbonic acid, and the potash remains in solution in its caustic state; by boiling the clear solution rapidly in iron vessels, and submitting it to fusion, we obtain the fused potash.

If it is required perfectly pure for chemical purposes, it is necessary to evaporate in silver vessels, and dissolve in strong alcohol. This takes up the pure potash, and leaves any portion of the subcarbonate that may not have been acted upon by the lime; then the alcohol is to be distilled off, and the potash fused at a red heat, and poured out in its liquid state on a cold slab. As thus procured, it is a white, brittle mass, highly deliquescent, absorbing moisture and carbonic acid rapidly from the atmosphere. When evaporated in iron vessels it has a dirty colour, and lets fall a quantity of oxide of iron, when dissolved in water from its having acted upon the iron boilers.

Potass acts with great rapidity upon animal substances, destroying their texture, and is on this account employed as a caustic, and was formerly called *lapis infernalis*.

**Carbonate (or, in the chemical nomenclature, Bicarbonate) of Potass,** is prepared by passing carbonic acid gas through a solution of the subcarbonate, and evaporating at a temperature below 212°, and crystallizing. It is used in making effervescing draughts. It loses one proportion of its carbonic acid when heated, and is converted into the subcarbonate.

**Sulphate of Potass, or Sal Polychrest, or Vitriolated Tartar,** is obtained by submitting the salt, which remains after the manufacture of nitric acid from nitre and sulphuric acid, to a red heat, or by neutralizing the excess of acid contained in that salt by subcarbonate of potass.

**Bisulphate of Potass, or Sal Enisum.**—This is the salt mentioned above, as the residue from the process for obtaining nitric acid. It is employed, in very large quantities, in the manufacture of alum; and also in tanning iron, for which it is termed *le sel*. It is sometimes also used as a flux.

**Nitrate of Potash, Nitre, or Salpêtre.**—This salt, which is of so much importance in every branch of the arts, is found native in many parts of the world, especially in the East Indies. It is obtained from soils composed of decomposing granite, the felspar of which gives rise, as is supposed, to the potass. The nitric acid is not so easily accounted for, except it is by a union of the nitrogen and oxygen gases in the atmosphere taking place in these hot countries; for, from authenticated accounts, no decaying animal or vegetable matter exists in the nitre districts of India. By lixiviation with water the nitre is dissolved from the soil, which is again thrown out into the air, to be washed the following year; so that it is formed continually. These lixiviations are then evaporated; and when of a certain strength, a quantity of common salt separates, which is removed as it falls; and the nitre is then crystallised and imported to this country, always containing a certain quantity of impurities, which are deducted in the purchase of large quantities of the article, being termed its refraction. It is generally used for the manufacture of gunpowder and pure nitric acid, refined or re-crystallised.

Nitre may be also made artificially, in beds of decaying vegetable or animal substances, mixed with old mortar, or other refuse calcareous earth; these are watered occasionally, too much moisture being hurtful; after a certain period, depending on the rapidity with which the process has gone on, the whole is submitted to lixiviation together with wood-ashes, which contain subcarbonate of potass, and which decomposes any nitrate of lime formed, of which there is generally a considerable quantity. After the lixiviation is complete, which takes some time, the solution is separated and boiled down; the salt separates as in the other process, and the nitre is then crystallised. It was from this source that the whole of the nitre, nearly, employed by the French during the long protracted war with the continental powers was obtained.

Nitre has a cold, penetrating, and nauseous taste; enters into igneous fusion at a gentle heat, and is then moulded into round cakes called *sal prunella*. It is employed in the manufacture of nitric acid; of gunpowder, which is composed of 75 parts by weight of nitre, 16 of charcoal, and 5 of sulphur (the nitre for this purpose being of great purity); in the manufacture of oil of vitriol; as a preservative of the most powerful we possess; it is also used for the preservation of animal food, and in making frigorific mixtures: 1 oz. of nitre dissolved in 5 os. of water lowers its temperature 15 degrees of Fahrenheit's thermometer. — (See *SALTPETRE*.)

**Oxalate and Bisoxalate of Potass.**—The bisoxalate of potass, or salt of lemon, or sorrel, by both which last names it is very commonly known, is procured from the juice of the common sorrel (*Rumex Acetosella*), or the wood sorrel (*Oxalis Acetosella*), by crystallisation, after the feculent matter has been separated by standing a few days. Its chief uses are, in removing ink spots or iron moulds; and also as a refreshing beverage when mixed with sugar and water.

The neutral oxalate is obtained from this salt by combining the excess of acid which it contains with a solution of subcarbonate of potass. Is very much used in chemistry, as the best test of the presence of lime.

**Tartrate and Bitartrate of Potass.**—Bitartrate of potass, or cream of tartar, is, when in its crude and impure state, called *argol*, and is deposited in the interior of wine casks during fermentation, and from this source the whole of the cream of tartar is obtained. It is generally of a very dark brown colour, but may be purified and rendered perfectly white by solution and crystallisation. It is employed very extensively in dyeing, hat-making, and in the preparation of tartaric acid, and many of the compounds of tartaric acid, as tartar emetic, soluble tartar (tartrate of potass); when heated to redness it is converted into carbonate of potass and charcoal; mixed with half its weight of nitre and thrown into a red hot crucible it forms the black flux, and with its own weight of nitre the white flux, both of which are very much employed in metallic operations. The tartaric acid is made by the addition of a certain amount of potass to a solution of the bitartrate until perfectly neutral: it is used in medicine as a mild purgative.

**Ferrocyanate or Prussiate of Potass.**—This salt is obtained by the action of subcarbonate of potass, at a low red heat, upon refuse animal matter, such as hoofs, horns, skin, &c., in the proportion of two of subcarbonate to four or five of the animal matter. But the process recommended by M. Gaultier is preferable; he finds that when animal matter is heated with nitre, it yields a much larger quantity of the ferrocyanate than when either potass or subcarbonate of potass are employed; the proportions he finds most economical are, 1 part by weight of nitre, 3 parts of dry blood, and iron scales or filings equal to a fiftieth of the blood employed.

The coagulum of blood is mixed intimately with the nitre and iron filings, and dried by exposure to the air; they are then submitted to a very low red heat, in deep iron cylinders, as long as vapours continue to be liberated; when cold, the contents are dissolved in 12 or 15 times their weight and strained. On evaporation till of the specific gravity 1.284, and allowing it to cool, a large quantity of bicarbonate of potass crystallises, and by further evaporation till of the specific gravity 1.306, the ferrocyanate of potass crystallises on cooling. This is to be re-crystallised. It is a beautiful yellow salt, very tough, having a tenacity similar to gummeal, and is decomposed at a red heat. It is employed very extensively in dyeing blues, and in calico printing; also in the manufacture of Prussian blue, which is a compound of the ferrocyanic acid and oxide of iron, prepared by adding 1 part of the ferrocyanate of potass dissolved in water, to 1 part of copperas, and 4 parts of alum in solution.

**Chromate of Potass.**—This salt is obtained from the native chromate of iron by the action of nitre at a full red heat in equal proportions. By solution, filtration, and evaporation, a beautiful lemon-yellow coloured salt results. It is very much employed in dyeing, calico printing, and calico making, from its producing bright yellow precipitates with solutions of lead.

**Bichromate of Potass**—is prepared from the above-mentioned salt, by the addition of nitric acid to the yellow solution obtained from the heated mass by the action of water; on evaporating this, a dark red coloured salt crystallises, which is the bichromate. This is also very largely employed by the calico printers, and when mixed in solution with nitric acid possesses the property of destroying vegetable colours; on this account it is of great importance, as it at the same time removes a vegetable colour, and forms a base for a yellow dye.

**Chlorate or Hyperoxymeriate of Potass.**—The preparation of this salt is attended with some little difficulty, and requires a great deal of nicety. It is obtained by passing a current of chlorine gas through a solution of caustic potass; then boiling and evaporating; the first salt that separates is the chlorate of potass; and by further evaporation, muriate of potass is obtained. It is used in making matches for instantaneous light boxes, which are prepared by first dipping the wood in melted sulphur, and then into a thin paste, formed of 3 parts chlorate of potass, 2 parts starch, and a little vermilion; with sulphur it forms a very explosive compound; generally employed for filling the percussion caps of fowling-pieces.

**Soda, or Mineral Alkali.**—The sources of this alkali in nature are various. It is obtained in combination with carbonic acid, when plants which grow by the sea-side are burnt. The ashes thus obtained are called *barilla* and *kelp*; and also in some countries it is found as an efflorescence upon the surface of the earth, and is called *nitrum* or *natron*; this occurs particularly in Egypt and South America. Trona is also another native carbonate of soda, and is exported from Tripoli. In combination with muriatic acid it is also found in immense abundance, forming the rock salt, and sea salt or muriate of soda. It is obtained from the carbonate exactly in the same way as potass is obtained from its carbonate, namely, by boiling it with fresh burnt lime previously slaked, decanting the clear solution, and evaporating and filtering. It is a white brittle substance, and by exposure to the air becomes converted into a dry carbonate. Its uses in the arts and manufactures are of considerable importance. In soap-making it is

employed in very large quantities, and for this purpose is generally procured from barilla or kelp, by mixing them with lime, and by the infusion of water procuring a caustic soda ley; this is mixed with oil and fatty matters in various proportions, and boiled; the saponification of the fatty matter takes place, and the soap formed rises to the surface; the ley is then drawn from beneath, and fresh leys added, until the soap is completely free from oil; it is then allowed to dry. Soda is also employed in the manufacture of plate, crown, and bottle glass, though for this purpose it is generally in the form of carbonate or sulphate.

**Subcarbonate of Soda.** (In the chemical nomenclature it is called *carbonate*.)—This is generally prepared from barilla, which contains about 16 to 24 per cent. Barilla is procured by incinerating the *salata soda*, and other sea-side plants; it is made in large quantities on the coast of Spain. Kelp is another impure carbonate of soda, but does not contain more than 4 or 5 per cent.; it is the ashes obtained from sea weeds by incineration, and is made on the northern shores of Scotland. From these, the crystallised carbonate (or subcarbonate, as it is more frequently called) is made by the addition of a small quantity of water, boiling, straining, evaporating, and skimming off the common salt as it forms on the surface; on cooling, the subcarbonate of soda crystallises. Another method is by heating the sulphate of soda with carbonate of lime and charcoal, and then dissolving out the soluble carbonate; also, by the action of carbonate of potash (pearlash) upon solutions of sea salt. — (See *BARILLA* and *KELP*.)

**Bicarbonate of Soda**—is procured by driving a current of carbonic acid gas through solutions of the carbonate, and then evaporating at a temperature below 32° Fahrenheit; it is chiefly employed in making soda water powders. This is the carbonate of soda of the Pharmacopœia. By the application of a red heat it loses carbonic acid, and is converted into the subcarbonate.

**Sulphate of Soda, or Glauber Salts.**—This salt, which has received the name of Glauber, from its discoverer, is the residue of a great many chemical processes; for instance, when muriate of soda is acted upon by oil of vitriol, muriatic acid and sulphate of soda result; in making chlorine gas for the manufacture of the chloride of lime, or bleaching powder, sulphate of soda and sulphate of manganese result; the materials employed being sea salt, sulphuric acid (oil of vitriol), and black oxide of manganese; also, in the preparation of acetic acid from the acetate of soda, and in the preparation of muriate of ammonia from sea salt and sulphate of ammonia. Sulphate of soda is a colourless, transparent salt, effloresces readily when exposed to the air, and becomes converted into a dry powder; it has a cold, bitter taste; it is used for the preparation of carbonate of soda, and as a medicine. It is found native in some countries, particularly in Persia and South America—frequently as an efflorescence upon new walls.

**Nitrate of Soda.**—This salt is found native in some parts of the East Indies, and is called, from its square form, cubic nitre; it is, however, very little used.

**Muriate of Soda, or Sea Salt.**—This compound is found in immense quantities in the earth, and is called from this circumstance rock salt, or sal gem. The mines of Cheshire and Droltwelt, in this country, and those in Poland, Hungary, and Spain, and many others, afford immense quantities of this compound. It is also obtained by the evaporation of sea water, both spontaneously in pits formed for the purpose, and in large iron boilers; the uncrystallisable fluid is called the bittern; basket salt is made by placing the salt after evaporation in conical baskets, and passing through it a saturated solution of salt, which dissolves and carries off the muriate of magnesia or lime. Pure salt should not become moist by exposure to the air; it decrepitates when heated; it is employed for the preparation of muriatic acid, carbonate of soda, muriate of ammonia, and many other operations; also in glazing stone-ware, pottery, &c.; and from its great antiseptic properties, is used largely for the preservation of animal food; as a flux also in metallurgy.

**Borate of Soda, or Borax.**—This salt is found in Tibet and Persia, deposited from saline lakes; it is called tincal, and is imported into this country, where it is purified by solution; the fatty matter with which the tincal is always coated being removed, and the solution evaporated and crystallised; its principal uses are as a flux, from its acting very powerfully upon earthy substances.

**ALKANET, or ANCHUSA** (Ger. *Orkanet*; Du. *Ossetong*; Fr. *Orcanette*; It. *Ancusa*; Sp. *Arcaneta*), a species of bugloss (*Anchusa tinctoria* Lin). It has been cultivated in England; but is found of the finest quality in Siberia, Spain, and more particularly in the South of France, in the vicinity of Montpellier. The roots of the plant are the only parts that are made use of. When in perfection, they are about the thickness of the finger, having a thick bark of a deep purplish red colour. This, when separated from the whitish woody pith, imparts a fine deep red to alcohol, oils, wax, and all unctuous substances. To water it gives only a dull brownish hue. It is principally employed to tint wax, pomatum, and unguents, oils employed in the dressing of mahogany, rose-wood, &c. The alkanet brought from Constantinople yields a more beautiful but less permanent dye than that of France.—(*Lewis's Mat. Med.*; *Magnien, Dictionnaire des Productions*.)

The duty, which was previously very oppressive, was reduced in 1832 to 2s. a cwt.; and by the tariff of last year (1843) to 1s. a cwt. The imports are inconsiderable. The price varies from 2s. to 3s. a cwt.

**ALLOWANCES, TARES, &c.** In selling goods, or in paying duties upon them, certain deductions are made from their weights, depending on the nature of the packages in which they are inclosed, and which are regulated in most instances by the custom of merchants, and the rules laid down by public offices. These allowances, as they are termed, are distinguished by the epithets *Draft*, *Tare*, *Tret*, and *Cloff*.

**Draft** is a deduction from the original or gross weight of goods, and is subtracted before the tare is taken off.

**Tare** is an allowance for the weight of the bag, box, cask, or other package, in which goods are weighed.

**Real or open tare** is the actual weight of the package.

**Customary tare** is, as its name implies, an established allowance for the weight of the package.

**Computed tare** is an estimated allowance agreed upon at the time.

**Average tare** is when a few packages only among several are weighed, their mean or average taken, and the rest tared accordingly.

**Super-tare** is an additional allowance, or tare, where the commodity or package exceeds a certain weight. When tare is allowed, the remainder is called the net weight; but if tret be allowed, it is called the *uttle weight*.

**Tret** is a deduction of 4 lbs. from every 104 lbs. ofuttle weight.

This allowance, which is said to be for dust or sand, or for the waste or wear of the commodity, was formerly made on most foreign articles sold by the pound avoirdupois; but it is now nearly discontinued by merchants, or is allowed in the price. It is wholly abolished at the East India warehouses in London; and neither tret nor draft is allowed at the Custom-house.

**Cloff, or Clough**, is another allowance that is nearly obsolete. It is stated in arithmetical books to be a deduction of 2 lbs. from every 3 cwt. of the *seconduttle*; that is, the remainder after tret is subtracted;

but merchants, at present, know cloff only as a small deduction, like draft, from the original weight, and this only from two or three articles.—(See *Kelly's Cambist*, art. "London.")  
For an account of the tares and allowances at London, see TARA; for the tares and allowances at the great foreign trading towns, see their names.

**ALMONDS** (Ger. *Mandeln*; Du. *Amandelen*; Fr. *Amandes*; It. *Mandorli*; Sp. *Almendras*; Port. *Amendo*; Rus. *Mindal*; Lat. *Amygdala amara, dulces*), a kind of medicinal fruit, contained in a hard shell, that is enclosed in a tough sort of cotton skin. The tree (*Amygdalus communis*) which produces this fruit nearly resembles the peach both in leaves and blossoms; it grows spontaneously only in warm countries, as Spain, and particularly Barbary. It flowers early in the Spring, and produces fruit in August. Almonds are of two sorts, sweet and bitter. They are not distinguishable from each other but by the taste of the kernel or fruit. "The Valencia almond is sweet, large, and flat-pointed at one extremity, and compressed in the middle. The Italian almonds are not so sweet, smaller, and less depressed in the middle. The Jordan almonds come from Malaga, and are the best sweet almonds brought to England. They are longer, flatter, less pointed at one end and less round at the other, and have a paler cuticle than those we have described. The sweet almonds are imported in mats, casks, and boxes; the bitter, which come chiefly from Mogadore, arrive in boxes."—(*Thomson's Dispensatory*.)

Previously to 1832, almonds were grossly overtaxed; but the duties were then considerably reduced, and they were also still further reduced in 1842. At an average of the years 1840 and 1841, the entries for home consumption amounted to 8,019 cwt. They are mostly imported from Spain and Northern Africa. The (1843) duties are, almonds, not Jordan or bitter, 10s. a cwt.; Jordan, 2s. per ditto; bitter, 2s. per ditto. Almonds were quoted in bond in London, in January 1843, Jordan (sweet), 150s. a cwt.; Valencia (sweet, shipped from Alicante,) 78s. per ditto; African bitter, 65s. per ditto; African sweet, 46s. to 47s. per ditto.

**ALOES** (Du. *Aloe*; Fr. *Alôës*; Ger. and Lat. *Aloe*; Rus. *Алоэ*; Sp. *Alôe*; Arab. *Mucibar*), a bitter, gummy, resinous, inspissated juice, obtained from the leaves of the plant of the same name. There are four sorts of aloes met with in commerce; viz. *Socotrine*, *Hepatic*, *Caballine*, and *Cape*.

1. *Socotrine*—so called from the island of Socotra, in the Indian Ocean, not very distant from Cape Guardafui, where the plant (*Aloe spicata*), of which this species is the produce, grows abundantly. It is in pieces of a reddish brown colour, glossy as if varnished, and in some degree pellicid. When reduced to powder, it is of a bright golden colour. Its taste is extremely bitter; and it has a peculiar aromatic odour, not unlike that of the russet apple decaying. It softens in the hand, and is adhesive; yet is sufficiently pulverulent. It is imported by way of Smyrna and Alexandria, in chests and casks, but is very scarce in England.

2. *Hepatic*.—The real hepatic aloes, so called from its liver colour, is believed to be the produce of the *Aloe perfoliata*, which grows in Yemen in Arabia, from which it is exported to Bombay whence it finds its way to Europe. It is duller in the colour, bitterer, and has a less pleasant aroma than the Socotrine aloes, for which, however, it is sometimes substituted. Barbadoes aloes, which is often passed off for the hepatic, is the produce of the *Aloe vulgaris*. It is brought home in calabashes, or large gourd shells, containing from 60 to 70 lbs. It is dusker in its hue than the Bombay, or real hepatic aloes, and the taste is more nauseous, and intensely bitter. The colour of the powder is a dull olive yellow.

3. *Caballine* or *Horse Aloes* seems to be merely the coarsest species or refuse of the Barbadoes aloes. It is used only in veterinary medicine; and is easily distinguished by its rank fetid smell.

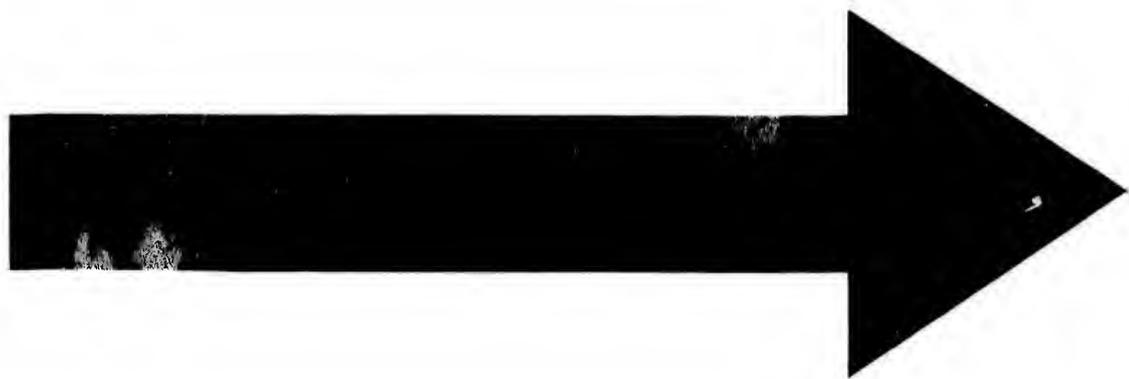

4. *Cape Aloes* is the produce of the *Aloe spicata*, which is found in great abundance in the interior of the Cape colony, and in Melinda. The latter furnishes the greater part of the extract sold in Europe under the name of Socotrine aloes. The odour of the Cape aloes is stronger and more disagreeable than that of the Socotrine; they have, also, a yellower hue on the outside; are less glossy; softer, and more pliable; the colour of the powder is more like that of gamboge than that of the true Socotrine aloes.—(*Ainslie's Mat. Indica*; *Thomson's Dispensatory* and *Mat. Medica*.)

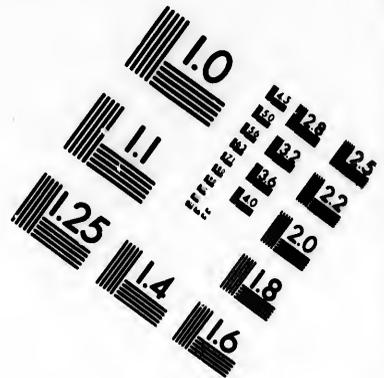

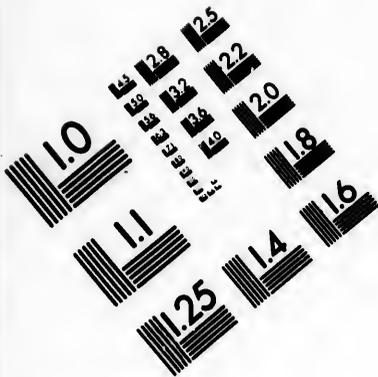

The entries of aloes for home consumption amounted, at an average of the years 1841 and 1842, to 170,780 lbs. a year. Previously to 1842 the duties were 2d. per lb. on those from a British possession, and 6d. on those from a foreign country; but they were then reduced to 1d. and 2d. per lb.

**ALOES-WOOD** (Ger. *Aloeholz*; Du. *Aloëhout*, *Paradyshout*; Fr. *Bois d'Alôës*; It. *Legno di Aloe*; Sp. *Alôe chino*; Lat. *Lignum Aloes*; Sans. *Aguru*; Malay, *Agila*; Siam. *Kiana*), the produce of a large forest tree, to be found in most of the countries between China and India, from the 24th degree of north latitude to the equator.

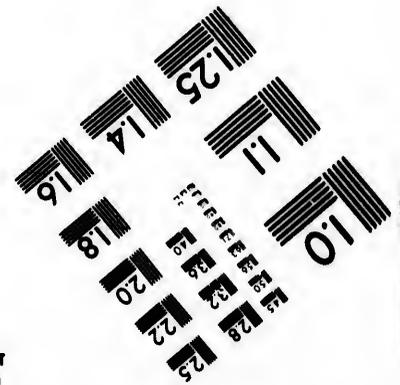

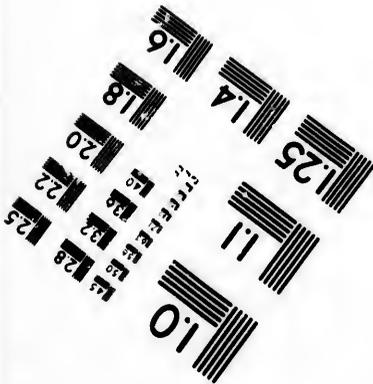

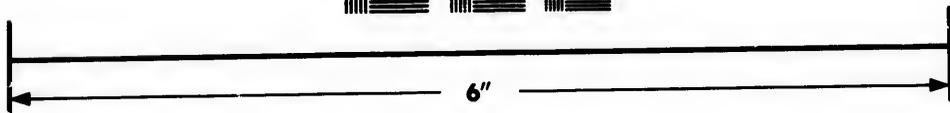

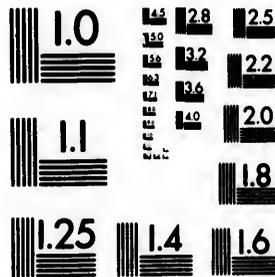

It seems to be the result of a diseased action confined to a small part of a few trees, of which the rest of the wood is wholly valueless. It appears to be more or less frequent according to soil and climate, and from the same causes to differ materially in quality. It is produced both in the greatest quantity and perfection in the countries and islands on the east coast of the Gulf of Siam. This article is in high repute for fumigations, and as incense, in all Hindu, Mohammedan, and Catholic countries. It formerly brought a very high price, being at one time reckoned nearly as valuable as gold. It is now comparatively cheap, though the finest specimens are still very dear. The accounts of this article in most books, even of good authority, are singularly contradictory and inaccurate. This is more surprising, as La Loubère has distinctly stated, that it consisted only of "certains endroits corrompus dans des arbres d'une certaine espèce. Toute arbre de cette espèce n'en a pas; et ce qui en ont, ne les ont pas tous en même endroits."—(Royaume de Siam, t. 1. p. 45. 12mo. ed.) The difficulty of finding the trees which happen to be diseased, and of getting at the diseased portion, has given rise to the fables that have been current as to its origin. The late Dr. Roxburgh introduced the tree which yields this production into the Botanical Garden at Calcutta, from the hills to the eastward of Sylhet, and described it under the name of *Aguilaria Agalocha*.

**ALUM** (Ger. *Alaun*; Du. *Aluin*; Fr. *Alun*; It. *Allume*; Sp. *Allumbre*; Rus. *Квасцъ*; Lat. *Alumen*; Arab. *Sheb*), a salt of great importance in the arts, consisting of a ternary compound of *aluminium*, or pure argillaceous earth, potash, and sulphuric acid. Alum is sometimes found native; but by far the greater part of that which is met with in commerce is artificially prepared. The best alum is the Roman, or that which is manufactured near Civita Vecchia, in the Papal territory. It is in irregular,

octahedral, crystalline masses, about the size of a walnut, and is opaque, being covered on the surface with a farinaceous efflorescence. The Levant, or Roch alum, is in fragments, about the size of the former, but in which the crystalline form is more obscure; it is externally of a dirty rose-colour, and internally exhibits the same tinge, but clearer. It is usually shipped for Europe from Smyrna; but it was anciently made at Roccha, or Edessa, in Syria; and hence its name Roch alum. English alum is in large, irregular, semi-transparent, colourless masses, having a glassy fracture; not efflorescent, and considerably harder than the others. It is very inferior to either the Roman or Roch alum. The principal use of alum is in the art of dyeing, as a mordant for fixing and giving permanency to colours which otherwise would not adhere at all, or but for a very short time; but it is also used for a great variety of other purposes.

Beckmann has shown (*History of Inventions*, vol. 1, art. "Alum") that the ancients were unacquainted with alum, and that the substance which they designated as such was merely vitriolic earth. It was first discovered by the Orientals, who established alum works in Syria in the thirteenth or fourteenth century. The oldest alum works in Europe were erected about the middle of the fifteenth century. Towards the conclusion of the reign of Queen Elizabeth, Sir Thomas Chaloner established the first alum work in England, in the vicinity of Whitby, in Yorkshire, where the principal works of the sort in this country are still carried on; the shipments of alum from Whitby in 1641 amounted to 3,537 tons. There is, also, a large alum work at Hurler, near Paisley, the produce of which may be estimated at about 1,200 tons a year. Alum is largely manufactured in China, and is thence exported to all the western Asiatic countries. In 1837, 35,643 piculs (2,120 tons) were exported from Canton.

**AMBER** (Ger. *Bernstein*; Du. *Barnsteen*; Da. *Bernsteen*, *Rav.*; Fr. *Ambre jaune*; It. *Ambra gialla*; Sp. *Ambar*; Rus. *Jantar*; Pol. *Bursztyn*; Lat. *Succinum, Electrum*), a brittle, light, hard substance, usually nearly transparent, sometimes nearly colourless, but commonly yellow, or even deep brown. It has considerable lustre. Specific gravity 1.065. It is found in nodules or rounded masses, varying from the size of coarse sand to that of a man's hand. It is tasteless, without smell, except when pounded or heated, when it emits a fragrant odour. It is highly electric. Most authors assert that amber is bituminous; but Dr. Thomson states, that "it is undoubtedly of a vegetable origin; and though it differs from resins in some of its properties, yet it agrees with them in so many others, that it may without impropriety be referred to them."—(*Chemistry*, vol. iv. p. 147. 5th ed.)

Pieces of amber occasionally enclose parts of seeds and insects in their substance, which are beautifully preserved. It is principally found on the shores of Eomerania and Polish Prussia; but it is sometimes dug out of the earth in Ducal Prussia. It is also met with on the banks of the river Giarretta, in Sicily. Sometimes it is found on the east coast of Britain, and in gravel pits round London. The largest mass of amber ever found was got near the surface of the ground in Lithuania. It weighs 18 lbs., and is preserved in the royal cabinet at Berlin. Most of the amber imported into this country comes from the Baltic, but a small quantity comes from Sicily. Amber was in very high estimation among the ancients, but is now comparatively neglected.

**AMBER-GRIS, or AMBER-GREASE** (Ger. *Amber*; Du. *Amber*; Fr. *Ambregris*; It. *Ambra-grigia*; Sp. *Ambar-gris*; Lat. *Ambra, Ambra grisea*), a solid, opaque, generally ash-coloured, fatty, inflammable substance, variegated like marble, remarkably light, rugged and uneven in its surface, and has a fragrant odour when heated; it does not effervesce with acids, melts freely over the fire into a kind of yellow resin, and is hardly soluble in spirit of wine. It is found on the sea-coast, or floating on the sea, near the coasts of India, Africa, and Brazil, usually in small pieces, but sometimes in masses of 50 or 100 lbs. weight. "Various opinions have been entertained respecting its origin. Some affirmed that it was the concrete juice of a tree, others thought it a bitumen; but it is now considered as pretty well established that it is a concretion formed in the stomach or intestines of the *Physeter macrocephalus*, or spermaceti whale."—(*Thomson's Chemistry*.) Ambergris ought to be chosen in large pieces, of an agreeable odour, entirely grey on the outside, and grey with little black spots within. The purchaser should be very cautious, as this article is easily counterfeited with gums and other drugs.

**AMETHYST** (Ger. *Amethyst*; Fr. *Amethyste*; It. *Amatista*; Sp. *Ametista*; Lat. *Amethystus*), a precious stone, of which there are two species differing widely in quality and value.

The *Oriental amethyst* is a gem of the most perfect violet colour, and of extraordinary brilliancy and beauty. It is said to be as hard as the sapphire or ruby, with which it also corresponds in its form and specific gravity—(see *SAPPHIRE*), differing in colour merely. It has been met with in India, Persia, Siam, and other countries; but it is exceedingly scarce. That found in India is said by Pliny to be the best. (*Principatum amethysti Indice tenent.*—Nat. Hist. lib. xxxvii. cap. 9.) Mr. Mawe says he had rarely seen an oriental amethyst offered for sale, unless small and inferior in colour. Mr. Hope, the author of *Anastasis*, had in his cabinet the finest gem of this sort in Europe. This exquisite specimen exceeds an inch in its greatest diameter; in daylight it exhibits the most beautiful violet colour, while by candlelight it is a decided blue.

The *Occidental amethyst* is merely coloured crystal or quartz.—"When perfect, its colour resembles that of the violet, or purple grape; but it not unfrequently happens that the tinge is confined to one part of the stone only, while the other is left almost colourless. When it possesses a richness, clearness, and uniformity of hue, it is considered a gem of exquisite beauty; and as it occurs of considerable size, it is suited to all ornamental purposes. In specific gravity and hardness it bears no comparison with the oriental amethyst; it is also inferior in beauty and lustre; though I have often seen the common amethyst offered for sale as oriental. Brazil, Siberia, and Ceylon produce very fine amethysts: they are found in rolled pieces in the alluvial soil, and finely crystallised in fissures of rock. From the first of these localities, they have lately been imported in such quantities as considerably to diminish their

value; but as they are the only coloured stones, except garnets, that are worn with mourning, they still retain, when perfect, a distinguished rank among the precious gems. The present price of inferior light-coloured stones, in the rough state, is about 50s. per pound, whilst those of good quality sell at 10s. or 12s. per ounce. Amethysts calculated for brooches or seals may be purchased at from 15s. to two or three guineas each, for which, ten years ago, treble that sum would have been given."—(*Muses on Diamonds*, 3d ed. pp. 115—117.)

**AMIANTHUS, ASBESTOS**, or **MOUNTAIN FLAX**, a mineral of which there are several varieties, all more or less fibrous, flexible, and elastic. It is incombustible by a high degree of heat; and in antiquity the art was discovered of drawing the fibres into threads, and then weaving them into cloth. Pliny says that he had seen napkins made of this substance, which, when soiled, were thrown into the fire, and that they were better cleaned by this means than they could have been by washing! Hence it obtained from the Greeks the name of *Apuarros* (undefiled). Its principal use, as stated by Pliny, was to wrap the bodies of the dead previously to their being exposed on the funeral pile, that the ashes of the corpse might not be mixed with those of the wood. And in corroboration of this statement we may mention, that in 1702, a skull, some calcined bones, and a quantity of ashes, were found at Rome, in a cloth of amianthus nine Roman palms in length by seven in width. Its employment in this way was, however, confined to a few of the very richest families, incombustible cloth being very scarce, and bringing an enormously high price. *Rarum inventu, difficile textu propter brevitatem. Cùm inventum est, aequat pretia excellentium margaritarum.*—(Plin. Hist. Nat. lib. xix. cap. 1.) The disuse of the practice of cremation, or of burning the dead, caused the manufacture of amianthine cloth to be neglected. Several moderns have, however, succeeded in making it; but, if it be not lost, the art is now rarely practised.—(For further particulars, see *Rees's Cyclopædia*.)

**AMMONIACUM** (Fr. *Gomme Ammoniaque*; It. *Gomma Ammoniac*; Sp. *Goma Ammoniac*; Lat. *Ammoniacum*; Arab. *Feshook*), a concrete resinous juice obtained from a plant resembling fennel, found in the north of Africa, Arabia, Persia, the East Indies, &c. Pliny says that it derived its name from its being produced in the vicinity of the temple of Jupiter Ammon in Africa.—(Hist. Nat. lib. xii. cap. 23.) It has a faint but not ungrateful smell; and a bitter, nauseous, sweet taste. The fragments are yellow on the outside and white within, brittle, and break with a vitreous fracture; their specific gravity is 1.207. The best ammoniacum is brought from Persia by Bombay and Calcutta, packed in cases and chests. It is in large masses, composed of small round fragments or tears; or in separate dry tears, which is generally considered a sign of its goodness. The tears should be white internally and externally, and free from seeds or other foreign substances. Reject that which is soft, dark-coloured, and foul. It is used principally in the materia medica, and the quantity imported is but small.—(*Rees's Cyclopædia*; *Thomson's Dispensatory*; *Milburn's Orient. Com. &c.*)

**AMMONIAC (SAL)**. See **ALKALIES** (*Muriate of Ammonia*).

**AMMUNITION**, a term expressive of the various implements used in war.

No ammunition can be imported into the United Kingdom by way of merchandise, except by licence from his Majesty, for furnishing his Majesty's stores only, under penalty of forfeiture.—(3 & 4 *Will. 4*. cap. 52. § 58.) His Majesty may forbid, by order in council, the exportation of any saltpetre, gunpowder, or any sort of ammunition. Any master of a vessel exporting ammunition when so forbidden, shall for every such offence forfeit 100*l.*—(29 *Geo. 2*. c. 16.)

**AMSTERDAM**, the principal city of Holland, situated on the Y, an arm of the Zuyder Zee, in lat. 52° 22' 17" N., long. 4° 53' 15" E. From 1580 to 1750, Amsterdam was, perhaps, the first commercial city of Europe; and though her trade has experienced a great falling off since the last-mentioned epoch, it is still very considerable. In 1785, the population is said to have amounted to 235,000; in 1815 it had declined to 180,179; but its increase in the interval has been such, that it amounted in 1840 to 210,077. The harbour is spacious and the water deep; and it has recently been much improved by the construction of docks, two of which are already completed, and a third in a very advanced state. Owing, however, to a bank (the Pampus) where the Y joins the Zuyder Zee, large vessels going or coming by that sea are obliged to load and unload a part of their cargoes in the roads. The navigation of the Zuyder Zee is also, by reason of its numerous shallows, very intricate and difficult; and as there were no hopes of remedying this defect, it became necessary to resort to other means for improving the access to the port. Of the various plans suggested for this purpose, the preference was given to the scheme for cutting a canal capable of admitting the largest class of merchantmen, from the north side of the port of Amsterdam to Newdiep, opposite to the Texel, and a little to the east of the Helder. This canal has fully answered the views of the projectors, and has proved of signal service to Amsterdam, by enabling large ships to avoid the Pampus, as well as the difficult navigation of the Zuyder Zee, where they were frequently detained for three weeks, and to get to and from Newdiep without any sort of risk in less than 24 hours. The canal was begun

in 1819, and completed in 1825. It has 5 sluices large enough to admit ships of the line; the dues and charges on account of towing, &c. being at the same time very moderate. At Newdiep the water is deeper than in any other port on the coast of Holland, and ships are there in the most favourable position for getting expeditiously to sea.—(See CANALS.) The imports principally consist of sugar, coffee, spices, tobacco, cotton, tea, indigo, cochineal, wine and brandy, wool, grain of all sorts, timber, pitch and tar, hemp and flax, iron, hides, linen, cotton and woollen stuffs, hardware, rock salt, tin plates, coal, dried fish, &c. The exports consist partly of the produce of Holland, partly and principally of the produce of her possessions in the East and West Indies, and other tropical countries, and partly of commodities brought to Amsterdam, as to a convenient *entrepôt* from different parts of Europe. Of the first class are cheese and butter (very important articles), madder, clover, rape, hemp, and linseeds, rape and linseed oils, Dutch linen, &c. Geneva is principally exported from Schiedam and Rotterdam; oak bark principally from the latter. Of the second class are spices, coffee, and sugar, principally from Java, but partly also from Surinam, Brazil, and Cuba; indigo, cochineal, cotton, tea, tobacco, and all sorts of eastern and colonial products. And of the third class, all kinds of grain, linens from Germany, timber and all sorts of Baltic produce; Spanish, German, and English wools; French, Rhenish, and Hungarian wines, brandy, &c. The trade of Amsterdam may, indeed, be said to comprise every article that enters into the commerce of Europe. Her merchants were formerly the most extensive dealers in bills of exchange; and though London be now, in this respect, far superior to Amsterdam, the latter still enjoys a respectable share of this business.

The Bank of the Netherlands was established at Amsterdam in 1814. It is not, like the old Bank of Amsterdam, which ceased in 1796, merely a bank of deposit, but a bank of deposit and circulation formed on the model of the Bank of England. Its capital, which originally amounted to 5,000,000 fl., was doubled in 1819. It has the exclusive privilege of issuing notes. Its original charter, which was limited to 25 years, was prolonged in 1838 for 25 years more.

For an account of the Dutch fisheries, see the articles HERRING FISHERY and WHALE FISHERY.

About 250 or 260 large ships belong to Amsterdam; they are employed in the East and West India trades, and in trading to the Baltic, the Mediterranean, &c. There is comparatively little coasting trade at Amsterdam, the communication with most other ports in the vicinity being principally kept up by canals, and that with Friesland by regular packets.

The following account (No. II.) of the value of the trade of Amsterdam in 1840 (given in Macgregor's Tariff for Holland) was derived from returns transmitted by the French consul at Amsterdam to his government. We do not know the precise degree of credit to which it may be entitled, though we are inclined to think that it is not far from accurate. This, however, is certainly not the case with the account taken by Mr. Macgregor from the same source of the navigation of Amsterdam in 1840. It states, for example, that 4,177 ships, of which 1,062 were English, entered the port in the course of that year; whereas in point of fact only 2,198 ships entered the port, and of these (though we have no exact return), the English were considerably under 300.—(Private communications from Holland.) It is really, however, not a little difficult to get any authentic information as to the present state of Dutch commerce. Government rarely publishes any statements having reference to it; and those of private parties are not always to be depended on.

1. Account of the Value of the Principal Articles Imported into and exported from Amsterdam, in 1840.

Imports.	Fl.		L.		Exports.	Fl.		L.	
Sugar	84,170,000	4,014,185			Sugar (Refined)	23,890,000	1,085,000

How deficient soever, the previous statements show that Amsterdam still continues to preserve no inconsiderable portion of her former importance as a commercial city. The extent of her transit trade cannot fail to attract the reader's attention; the more especially as Rotterdam, from her situation on the Meuse, and her greater facilities of communication with the interior, has very superior advantages for the prosecution of this department of commercial industry. Subjoined is

An Account of the Quantities of the principal Articles of Foreign and Colonial Produce (exclusive of Manufactured Goods) imported into Amsterdam, in 1840.

Ashes	7,569	barls.	Spirits, Spirit 3-6ths		573	cacks.	
Barley	2,699	lasts.	Brandy		294	cacks.

There is besides, the merchants' and brokers' commission on receiving and preparing freight, generally settled by agreement. The average duty is 45 cents (1d.) the Netherlands ton (nearly equal to the British) inwards, and the same outwards, with the addition of the franchise duty of 15 cents per ton on native ships, and by ships belonging to countries which have reciprocity treaties with Holland. Others pay 57½ cents (11½d.) per ton inwards, and the same outwards, every way.

The charge called port money is payable half on entry, and half on departure; and that called haven money the same. The hire of a berth for towing along the whole line of the canal amounts to 18 flor. 40 cents, or about 1½ l.

Quarantine. — The quarantine station is at the island of Wieringen, near the Heide. Convention. — The usual rate of the commission or brokerage on the purchase or sale of goods is 3 per cent., and on bill transactions 1 and 1½ per cent., according to their nature.

Profits of the firms are abundant at Amsterdam, and reasonably cheap. The wages of ships' carpenters vary from 1 flor. 20 cents to 1 flor. 40 cents a day, from about 12 to 16 s. a day.

For an account of the coin trade of Amsterdam, see COIN TRADE AND COIN LAWS. Custom-house Regulations. — Captains of ships are bound to make within 24 hours of their arrival at Amsterdam, or any Dutch port, a declaration in writing of the goods of which their cargo consists. If the captain be not acquainted with the goods of which the cargo consists, they must make their declaration under the general term of *waremateen*, and exhibit the bill of lading along with the declaration. The Custom-house officers are instructed to inform the captain of all formalities required by law.

The ships entering Amsterdam during each of the 6 years ending with 1848 have been, —

Years.	Ships.	Years.	Ships.	Years.	Ships.
1847	- 1,033	1849	- 2,335	1841	- 2,131
1848	- 2,074	1840	- 2,198	1840	- 2,166

Of these ships by far the largest number come from ports on the Baltic and the North Sea. The numbers entering in 1848 from the more distant countries are specified above.

The warehousing system has long been established in Amsterdam; and all goods, whether for home consumption or transit, may be deposited in bonded warehouses. It is, however, material to observe that merchandise re-exported by sea or by the Rhine has no transit duty to pay; whereas a small transit duty is payable on all merchandises re-exported by roads, canals, or otherwise than by the Rhine, for the interior; but the impression is that this duty will at no distant period be repealed. Speaking generally, goods can only be kept in bonded warehouses for two years; but grain of all kinds may be kept for an unlimited period. The warehouse rent chargeable per month on a quarter of wheat is, on an upper loft, 1d. and 3-6ths on an under loft. On a ton (Eng.) of sugar is charged the charge is 1 s. in bags and 1 s. in casks.

The docks and its adjacent warehouses, belonging to the *Entrepoort General*, or establishment for warehousing goods imported by sea or intended to be re-exported by sea or by the Rhine, are large and commodious. The dock has water to float the largest ships, and the dues and other charges are exceedingly moderate. Merchants may employ their own men or those of the dock in loading and unloading; and may either place their property in separate vaults or floors of which they keep the key, or entrust it to the care of the dock officers.

*Dutch Trading Company.* — A large proportion of the foreign trade of Holland has been for a considerable period engrossed by the large trading company called the *Nederlandsche Handelsmaatschappij*, created in 1824. Its capital, which consisted originally of 37 millions flor., was reduced in 1826 to 34 millions do.; but as the company borrowed 10 millions flor. in 1836, and 13 millions more in 1837, its capital consists at present of 47 millions fl. At first it extended its operations to America and the West Indies, as well as to the East Indies. But it has latterly very much contracted the scale of its operations; and having lent 40 millions of its capital to government, it is now merely the agent employed by the latter to bring home and sell that part of the produce of Java which, under the new colonial system, belongs to the state, and to carry on the trade with Japan, which, however, is of little or no value. The company has no ships of its own, but chartered those of private individuals. Its charges on importation are limited to certain fixed rates.

This company is believed to be principally indebted for its existence to the late king, who held a tenth part of the shares, and who, to encourage the undertaking, guaranteed the shareholders a dividend of 4½ per cent. It is, however, to be little doubted that it were better had it never existed. Government might have directly chartered the ships of private parties to bring home the produce of Java, on any conditions it might have chosen to specify, under a system of open competition, which would have been ten times more advantageous to itself and to the public. It has no doubt been said, that owing to the demand of the company the trade and shipping of Holland have increased so much; that while Holland and Belgium had together in 1820 only 1,76 vessels (exclusive of fishing boats) of the burden of 146,000 tons, Holland alone had on the 1st of January, 1840, no fewer than 1,524 vessels of the burden of 370,676 tons. But this is altogether illusory; the company has, in fact, had nothing to do with this increase, which, as every body knows, has been wholly a consequence of the astonishing increase of produce in Java, and of the plan pursued of bringing it home to Holland for sale. The privileges conferred upon or usurped by the company are so many encroachments on the rights of individuals, and obstruct that private enterprise and free competition that are the soul of trade. It seems, indeed, to be the general opinion of all the most intelligent persons in Holland unconnected with the company, that the sooner it is dissolved the better; and now that it has lost its most powerful protector, this event is probably not very distant.

The business of insurance is extensively practised at Amsterdam; the premiums are moderate, and the security unexceptionable. The high duty imposed in this country on policies of insurance has contributed to the increase of this business in Holland.

*Credit Discount, &c.* — Holland is, and has always been, a country of short credit. A discount is usually given for prompt payment, at the rate of 1 per cent. for six weeks, and of 2 per cent. for two months; but the terms of credit on most articles, and the discount allowed for ready money, have been fixed by usage, and are regulated as essential conditions in every bargain. Some of the more important of these terms and discounts are specified in the following table. In consequence of the preference given in Holland to ready money transactions, it is not a country in which adventures without capital have much chance of speedily making a fortune. *« Rien en effet, de plus facile que d'établir à Amsterdam un malin plus difficile que de s'y enlever sans des grandes ressources. Dans cette ville, où l'argent abonde, où on le prête contre les arbres à élim marche, il est cependant impossible de se faire un grand crédit, et de le conserver; il y a plus de possibilité d'y travailler, que de trouver quelque chose qui vaille de charge d'un papier nouveau qui se sert pas appuyé d'un crédit que l'opinion, la protection, ou des effets réels puissent valoir à la bourse. Les Hollandais suivent la même des maximes très sages, même à l'égard des maisons d'usure considérables qu'ils ont fondées. Commerce: 11 p. 60th. But this country is not a disinterested one, but the reverse. It prevents commerce from degenerating, as it has too often done in other places, into gambling adventures, and places it on a comparatively solid foundation. And it should be mentioned to the honour of the Dutch, and as a proof of the excellence of this system, that notwithstanding its strictness and loss of trade consequent on the invasion and occupation of their country by the French, the bankruptcies in 1795 and subsequent years were not, comparatively, so numerous as in England in ordinary seasons. The regulations in the Code Napoléon as to bankruptcy are enforced in Holland.*

It has long been the practice in Holland to melt, on ordinary articles, considerable deductions from their weight, particularly from those of large bulk, as compared with their value. These rates and drafts, as they are termed, are now fixed by ancient usage; and the most important amongst them are here specified.

Tare and Allowance on the principal Articles sold at Amsterdam.		Coffee, East and West	
Tare.	Allowance.	India in general	bag 3 per cent., 10 lbs. real tare.
Ashes	48 lbs per cask	Bourbon	10 lbs. per original; 10 lbs. per punny; 10 lbs. per half.
Barilla	per cent.	Cotton, Surat and Bengal	2 per cent. — 2 per cent.
Cocoa, Camero	48 lbs.	all other kinds	2 per cent.
Marrubian	ditto	Cotton yarn twist	1 per cent.
Myrrine	ditto	Indigo, Bengal	real tare
Narrinque	ditto		
Narrinain	6 per cent.		

Cochineal.....	3 & 4 lbs.	4 per cent. and 1 per cent. deduct.
Galls.....	6 lbs. or 30 lbs.	1 per cent.
Gums, Benzoin.....	6 lbs., 14 lbs. or 21 lbs.	2 per cent. and 2 per cent.
Harbury.....	14 lbs. or 30 lbs.	1 per cent.
Indigo.....	2 and 8 per cent.	2 per cent.
Resin, Benzoin, Myrrh, &c.....	12 lbs. per hide	2 per cent. and 1 per cent.
Linens, Flemish.....	—	1 per cent.
Oil, all other kinds.....	—	1 per cent.
Rice, Carolina.....	real tare	2 per cent. and 2 per cent.
East India.....	6 lbs.	1 per cent.
Saltpetre.....	5 & 14 lbs.	1 per cent. and 1 1/2 per cent.
Liquorice.....	real tare and 4 lbs.	2 per cent. and 1 per cent.
Spices, pepper.....	25 lbs. or 12 lbs.	1 per cent.
cinnamon.....	45 lbs. and above	1 per cent.
nutmeg.....	15 per cent.	1 per cent.
ginger.....	1 lb. & 16 lbs.	2 per cent.
Sugars, Martinique.....	18 per cent.	2 per cent.
St. Domingo.....	—	2 per cent.
St. Croix.....	—	2 per cent.
Surinam.....	—	2 per cent.
English Colonies.....	20 per cent.	2 per cent. and 2 per cent.
Demerara.....	—	2 per cent.
Berbice.....	—	2 per cent.
Sassaparilla.....	18 per cent.	2 per cent.
Brazil, white.....	—	2 per cent.
Ditto, Muscovado.....	—	18 months' discount, 2 per cent. and 2 per cent.
Havannah.....	80 lbs.	2 per cent. and 2 per cent.
Java.....	48 lbs.	2 per cent.
Salt.....	100 lbs.	1 per cent.
Tea, bohea.....	—	1 per cent.
ouchong.....	21 lbs. & 24 lbs.	1 per cent.
camphir.....	18 lbs.	1 per cent.
hyson.....	18 lbs. & 49 lbs.	1 per cent.
petcha.....	—	1 per cent.
tonquin.....	—	1 per cent.
Tobacco, Maryland.....	casks tared	2 per cent. and 1 per cent. damaged, and 1 per cent.
Virginia.....	2 and 8 per cent.	2 per cent.
Tin plates.....	2 per cent.	21 months' discount, and 1 per cent.
Wool, Spanish.....	bags tared, and 24 lbs. per 175 lbs.	1 per cent.
Wines.....	—	1 per cent. per cask, and 2 per cent.
Madder.....	casks tared.....	2 per cent. and 2 per cent.
Herrings.....	5 or 2 per cent.	2 per cent.
Smalts.....	56 lbs.	1 per cent.
Flax, hams, seeds, &c.....	—	1 per cent.
nerv, grain.....	—	none.
Butter.....	—	2 and 1 per cent.
Hides.....	—	2 per cent.
Cheese, Dutch.....	—	1 per cent.
Gouda.....	—	1 per cent.

The above are the customary terms and other allowances made by the merchants in their transactions with each other. But in paying the import duties at the Custom-house, the tare upon goods paying duty by weight is, with the exceptions un-dermentioned, fixed at 15 per cent. for such as are in casks or barrels, and at 8 per cent. for such as are in packages, canisters, mats, barrels, &c. Merchants dissatisfied with these allowances may pay the duty according to the real weight, ascertained by the customs officers at their expense.

**Exemption.**—The tare upon grain imported in sacks is fixed at 2 per cent.  
**Porcelain,** 15 per cent.  
**Indigo** in chests, 25 per cent.  
 in barrels, 15 per cent.  
 chests from Havannah 12 per cent., other places 20 per cent.  
**Sugar** in casks, 10 per cent.  
 casks and packages, 15 and 8 per cent. The tare upon sugar refined in the interior and exported, is 12 per cent. per barrel, 5 per cent. per package.  
**Allowance for Seals.**—Seals are made upon all liquids, including treacle and honey, as follows, viz.:—  
 Coming from England, the northern parts of Europe, and France, by inland navigation, 6 per cent.  
 From France by sea, and from other countries by the rivers Rhine and Waal, 12 per cent.

We subjoin an account illustrative of the amount of the trade of the United Kingdom with Holland. The greater part of this trade is, however, carried on with Rotterdam, which is more favourably situated for the intercourse with this country than Amsterdam. (See Table next page.)

**Magnitude of the Commerce of Holland in the Seventeenth Century.—Causes of its Prosperity and Decline.**—We believe we need make no apology for embracing this opportunity to lay before our readers the following details with respect to the commerce and commercial policy of Holland. It forms one of the most instructive topics of investigation; and it is to be regretted that so little attention should have been paid to it in this country.

From any other port or place, 14 per cent.  
 Finally, from whatever place the same may come, upon trials of 12 per cent.; blubber, 6 per cent.  
 In case liquors shall have experienced, upon the voyage, such leakage as shall cause the importer to be dissatisfied with the allowance before specified, he is permitted to pay the duty upon the actual quantity, to be ascertained by the officers at the importer's option.  
**Money.**—Accounts used to be kept at Amsterdam by the pound Flemish = 8 florins = 120 schillings = 120 stivers = 240 groats = 1,200 pennies. But in 1820 the decimal system was introduced. In order, however, to cause as little inconvenience as possible, the florin was divided into 100 parts of the unit of the new system. The florin is supposed to be divided into 100 equal parts or cents; and the other silver coins are equal multiples or sub-multiples of it. The new gold coin is called the florin piece, and is worth 104. very nearly. But accounts are still sometimes kept in the old way, or by the pound Flemish. For of exchange between Amsterdam and London is 11 flor. 50 cents per pound sterling.  
**Weights and Measures.**—In 1820, the French system of weights and measure was introduced into the Netherlands, the names only being changed.  
 The pond is the unit of weight, and answers to the French *livre*. Its divisions are the *once*, *loot*, *wijgje*, and *korrel*.  
 The *elle*, which is the unit or element of long measure, equals the French *metre*. Its decimal divisions are the *palm*, *quain*, and *strop*; and its decimal multiples, the *roede* and *mille*.  
 The *vierkante elle*, or square ell, is the unit of superficial measure; and answers to the *are* of the *metre* of France. Its divisions are the *viertale palm*, *viertale quain*, and the *viertale strop*; and its multiples, the *viertale roede* and *viertale mille*.  
 The *kubieke elle* is the unit of measure or capacity; and equals the French *stere*. Its divisions are the *kubieke palm*, *kubieke quain*, and *kubieke strop*.  
 The term *voet* is given to a kubieke elle of fire-wood.  
 The *top* is the unit of measure for dry ware, and is the cube of the *palm*; answering to the French *hecto*. Its divisions are the *maatje*, and its multiples the *schepel* and *mudder*; the latter is also called the *mat*, and equals the French *hecto*.  
 30 *mudden* make 1 last.  
 The *ton* is the unit for liquid measure, and is the cube of the *palm*; it corresponds to the French *litre*. Its divisions are the *maatje* and *vingerhoed*, and 100 *kare* make a *vat* or *cask*, which equals the French *hecto*.  
 The apothecary's new pound is 15 ounces, 96 drachms, 258 scruples, or 5,760 grains; and answers to 375 grammes, or 5,760 English grains.

By the old method of calculating, which is not yet entirely superseded, the pound of Amsterdam was = 1.09 lb. avoirdupois, or 100 lb. Amsterdam = 109.923 lb. avoirdupois. The last or measure for corn = 37 *mudden* = 10 qurs. 03 bushels Winchester measure. The *aan* liquid measure = 4 *ankers* = 8 *schekels* = 21 *viertale* = 64 *stropen* = 251 *mungles* = 256 pints = 41 English wine gallons.  
 The *strop* contains 5 1/8 pint English measure.  
 100 *mungles* are equal to 34 English wine gallons, or 65 1/2 English beer gallons, or 33 3/4 Imperial gallons.  
 French wine is sold per *hoppel* of..... 180 mungles.  
 Spanish and Portuguese wine, per *strop* of..... 49 ditto.  
 French brandy per *hoppel* of..... 20 viertale.  
 Beer, per *barrel* (equal to the *aan*)..... 180 ditto.  
 Vegetable oil, per *aan*, of..... 180 ditto.  
 Whale oil, per *ditto*,..... 18 ditto.  
 Raisin is sold per *anker* of 9 *steken* = 10 English wine gallons.  
 The foot of Amsterdam = 11 1/7-th English inches.  
 The Rhine-foot..... = 19        do.  
 The *el*, cloth measure = 27 1/10 ditto.  
 Rack salt is sold per *honderd* of 400 *maaten*, making 20 tons, or 4,000 lbs. Dutch.  
 Pit coal is sold per *hond* of 36 *maaten*; nine *honds* are five *chaldrons* of Newcastle, or six *honds* are five *chaldrons* of London.  
 Butter is sold per *barrel*; the barrel of Leyden is 380 lbs. nett — that of Friesland 30 lbs. nett — and the common Dutch barrel 326 lbs. gross.  
 A last of herrings is reckoned at 12, 15, or 14 barrels.  
 A last of fish is 12 barrels.  
 A last of tar, 13 barrels.  
 A bag of seed = 24 Winchester quarters.  
 A last for freight is reckoned 4,000 lbs., equal to two English tons.

Eight *hoppels* (or *ankers*) of wine  
 Twelve barrels of pitch  
 Thirteen barrels of tar  
 Twenty chests of lemons, &c.  
 4,000 lbs. of iron, copper, and colonial produce  
 4,000 lbs. of almonds  
 4,000 lbs. of wool or feathers  
 A last of wheat is considered 10 per cent. higher than one of rye, and the latter 20 per cent. higher than oats, and 12 per cent. higher than seed. A last of ballast is only 2,000 lbs.  
 These details have been derived from the answers by the British consuls to the circular queries of the *Dictionnaire de Commerce* (Ency. Method.), tom. II. pp. 554-560.; *Kelly's Cambist*, private information, &c.

Previously to the commencement of the long-continued and glorious struggle made by the Dutch to emancipate themselves from the blind and brutal despotism of Old Spain, they had a considerable marine, and had attained to distinction by their fisheries and commerce; and the war, instead of being injurious to the trade of the republic, contributed powerfully to its extension. After the capture of Antwerp by the Spaniards, in 1585, the extensive commerce of which it had been the centre was removed to the ports of Holland, and principally to Amsterdam, which then attained to the distinction she long enjoyed, of the first commercial city of Europe.

In 1602, the Dutch East India Company was formed; and notwithstanding the pernicious influence of that association, the Indian trade increased rapidly in magnitude and importance. Ships fitted either for commercial or warlike purposes, and having a considerable number of soldiers on board, were sent out within a few years of the establishment of the company. Amboyna and the Moluccas were first wrested from the Portuguese, and with them the Dutch obtained the monopoly of the spice trade. Factories and fortifications were in no long time established, from Bussorah, near the mouth of the Tigris, in the Persian Gulph, along the coasts and islands of India as far as Japan. Alliances were formed with several of the Indian princes; and in many parts, particularly on the coasts of Ceylon, and in various districts of Malabar and Coromandel, they were themselves the sovereigns. Batavia, in the large and fertile island of Java, the greater part of which had been conquered by the Dutch, formed the centre of their Indian commerce; and though unhealthy, its port was excellent, and it was admirably situated for commanding the trade of the Eastern Archipelago. In 1651, they planted a colony at the Cape of Good Hope, which had been strangely neglected by the Portuguese.

Every branch of commerce was vigorously prosecuted by the Dutch. Their trade with the Baltic was, however, by far the most extensive and lucrative of which they were in possession. Guicciardini mentions that the trade with Poland, Denmark, Prussia, &c., even before their revolt, was so very great, that fleets of 300 ships arrived twice a year at Amsterdam from Dantzic and Livonia only; but it increased prodigiously during the latter part of the sixteenth and the beginning of the seventeenth centuries. The great population of Holland, and the limited extent and unfruitful nature of the soil, render the inhabitants dependent on foreigners for the greater part of their supplies of corn. The countries round the Baltic have always furnished them with the principal part of those supplies; and it is from them that they have been in the habit of bringing timber, iron, hemp and flax, pitch and tar, tallow, ashes, and other bulky articles required in the building of their houses and ships, and in various ma-

manufactures. Nothing, however, redounds so much to the credit of the Dutch, as the policy they have invariably followed with respect to the trade in corn. They have, at all times, had a large capital embarked in this business. The variations which are perpetually occurring in the harvests, early led them to engage very extensively in a sort of speculative corn trade. When the crops happened to be unusually productive, and prices low, they bought and stored up large quantities of grain, in the expectation of profiting by the advance that was sure to take place on the occurrence of an unfavourable year. Repeated efforts were made, in periods when prices were rising, to prevail on the government to prohibit exportation; but they steadily refused to interfere. In consequence of this enlightened policy, Holland has long been the most important European *entrepôt* for corn; and her markets have on all occasions been furnished with the most abundant supplies. Those scarcities which are so very disastrous in countries without commerce, or where the trade in corn is subjected to fetters and restraints, have not only been totally unknown in Holland, but became a copious source of wealth to her merchants, who then obtained a ready and advantageous vent for the supplies accumulated in their warehouses. "Amsterdam," says Sir Walter Raleigh, "is never without 700,000 quarters of corn, none of it of the growth of Holland; and a dearth of only one year in any other part of Europe enriches Holland for seven years. In the course of a year and a half, during a scarcity in England, there were carried away from the ports of Southampton, Bristol, and Exeter alone, nearly 200,000*l*.; and if London and the rest of England be included, there must have been 2,000,000*l*. more." — (*Observations touching Trade and Commerce with the Hollander*, Miscel. Works, vol. ii.)

The very well informed author of the *Richesse de la Hollande*, published in 1778, observes, in allusion to these circumstances, "Que la disette de grains regne dans les quatre parties du monde; vous trouverez du froment, du seigle, et d'autres grains à Amsterdam; *ils n'y manquent jamais*." — (Tome i. p. 376.)

The Bank of Amsterdam was founded in 1609. The principal object of this establishment was to obviate the inconvenience and uncertainty arising from the circulation of the coins imported into Amsterdam from all parts of the world. The merchants who carried coin or bullion to the Bank obtained credit for an equal value in its books: this was called bank-money; and all considerable payments were effected by writing it off from the account of one individual to that of another. This establishment continued to flourish till the invasion of the French in 1795.

Between the years 1651 and 1672, when the territories of the republic were invaded by the French, the commerce of Holland seems to have reached its greatest height. De Witt estimates its increase from the treaty with Spain, concluded at Munster in 1643, to 1669, at fully a half. He adds, that during the war with Holland, Spain lost the greater part of her naval power; that since the peace, the Dutch had obtained most of the trade to that country, which had been previously carried on by the Hanseatic merchants and the English; that almost all the coasting trade of Spain was carried on by Dutch shipping; that Spain had even been forced to hire Dutch ships to sail to her American possessions; and that so great was the exportation of goods from Holland to Spain, that all the merchandise brought from the Spanish West Indies was not sufficient to make returns for them.

At this period, indeed, the Dutch engrossed, not by means of any artificial monopoly, but by the greater number of their ships, and their superior skill and economy in all that regarded navigation, almost the whole carrying trade of Europe. The value of the goods exported from France in Dutch bottoms, towards the middle of the fourteenth century, exceeded 40,000,000 livres; and the commerce of England with the Low Countries was, for a very long period, almost entirely carried on in them.

The business of marine insurance was largely and successfully prosecuted at Amsterdam; and the ordinances published in 1551, 1563, and 1570, contain the most judicious regulations for the settlement of such disputes as might arise in conducting this difficult but highly useful business. It is singular, however, notwithstanding the sagacity of the Dutch, and their desire to strengthen industrious habits, that they should have prohibited insurance upon lives. It was reserved for England to show the advantages that might be derived from this beautiful application of the science of probabilities.

In 1690, Sir William Petty estimated the shipping of Europe at about 2,000,000 tons, which he supposed to be distributed as follows:—viz. England, 500,000; France, 100,000; Hamburg, Denmark, Sweden, and Dantzic, 250,000; Spain, Portugal, and Italy, 250,000; that of the Seven United Provinces amounting, according to him, to 900,000 tons, or to nearly one half of the whole tonnage of Europe! No great dependence can, of course, be placed upon these estimates; but the probability is, that, had they been more accurate, the preponderance in favour of Holland would have been greater than it appears to be; for the official returns to the circulars addressed in 1701 by the commissioners of customs to the officers at the different ports, show that

the whole mercantile navy of England amounted at that period to only 261,222 tons, carrying 27,196 men. — (*Macpherson's Annals of Commerce, anno 1701.*)

It may, therefore, be fairly concluded that during the seventeenth century the foreign commerce and navigation of Holland was greater than that of all Europe besides; and yet the country which was the seat of this vast commerce had no native produce to export, nor even a piece of timber fit for ship-building. All had been the fruit of industry, economy, and a fortunate combination of circumstances.

Holland owed this vast commerce to a variety of causes: partly to her peculiar situation, the industry and economy of her inhabitants, the comparatively liberal and enlightened system of civil as well as of commercial policy adopted by the republic; and partly also to the wars and disturbances that prevailed in most European countries in the sixteenth and seventeenth centuries, and prevented them from emulating the successful career of the Dutch.

The ascendancy of Holland as a commercial state began to decline from about the commencement of last century. After the war terminated by the treaty of Aix-la-Chapelle, the attention of the government of Holland was forcibly attracted to the state of the shipping and foreign commerce of the republic. The discovery of means by which their decline might be arrested, and the trade of the republic, if possible, restored to its ancient flourishing condition, became a prominent object in the speculations of every one who felt interested in the public welfare. In order to procure the most correct information on the subject, the Stadtholder, William IV., addressed the following queries to all the most extensive and intelligent merchants, desiring them to favour him with their answers: —

“ 1. What is the actual state of trade? And if the same should be found to be diminished and fallen to decay, then, 2. To inquire by what methods the same may be supported and advanced, or, if possible, restored to its former lustre, repute, and dignity?”

In discussing these questions, the merchants were obliged to enter into an examination, as well of the causes which had raised the commerce of Holland to the high pitch of prosperity to which it had once attained, as of those which had occasioned its subsequent decline. It is stated that, though not of the same opinion upon all points, they, speaking generally, concurred as to those that were most important. When their answers had been obtained, and compared with each other, the Stadtholder had a dissertation prepared from them, and other authentic sources, on the commerce of the republic, to which proposals were subjoined for its amendment. Some of the principles advanced in this dissertation apply to the case of Holland only; but most of them are of universal application, and are not more comprehensive than sound. We doubt, indeed, whether the benefits resulting from religious toleration, political liberty, the security of property, and the freedom of industry, have ever been more clearly set forth than in this dissertation. It begins by an enumeration of the causes which contributed to advance the commerce of the republic to its former unexampled prosperity: these the authors divide into three classes, embracing under the first those that were natural and physical; under the second, those they denominated moral; and under the third, those which they considered adventitious and external; remarking on them in succession as follows: —

“ I. The natural and physical causes are the advantages of the situation of the country, on the sea, and at the mouth of considerable rivers; its situation between the northern and southern parts, which, by being in a manner the centre of all Europe, made the republic become the general market, where the merchants on both sides used to bring their superfluous commodities, in order to barter and exchange the same for other goods they wanted.

“ Nor have the barrenness of the country, and the necessities of the natives arising from that cause, less contributed to set them upon exerting all their application, industry, and utmost stretch of genius, to fetch from foreign countries what they stand in need of in their own, and to support themselves by trade.

“ The abundance of fish in the neighbouring seas put them in a condition not only to supply their own occasions, but with the overplus to carry on a trade with foreigners, and out of the produce of the fishery to find an equivalent for what they wanted, through the sterility and narrow boundaries and extent of their own country.

“ II. Among the moral and political causes are to be placed. The unalterable maxim and fundamental law relating to the free exercise of different religions; and always to consider this toleration and conivance as the most effectual means to draw foreigners from adjacent countries to settle and reside here, and so become instrumental to the peopling of those provinces.

“ The constant policy of the republic to make this country a perpetual, safe, and secure asylum for any persecuted and oppressed strangers. No alliance, no treaty, no regard for or solicitation of any potentate whatever, has at any time been able to weaken or destroy this law, or make the state recede from protecting those who have fled to it for their own security and self-preservation.

“ Throughout the whole course of all the persecutions and oppressions that have occurred in other countries, the steady adherence of the republic to this fundamental law has been the cause that many people have not only fled hither for refuge, with their whole stock in ready cash, and their most valuable effects, but have also settled, and established many trades, fabrics, manufactures, arts, and sciences in this country, notwithstanding the first materials for the said fabrics and manufactures were almost wholly wanting in it, and not to be procured but at a great expence from foreign parts.

“ The constitution of our form of government, and the liberty thus accruing to the citizen, are further reasons to which the growth of trade, and its establishment in the republic, may fairly be ascribed; and all her policy and laws are put upon such an equitable footing, that neither life, estates, nor dignities, depend on the caprice or arbitrary power of any single individual; nor is there any room for any person,

who, by care, frugality, and diligence, has once acquired an affluent fortune or estate, to fear a deprivation of them by any act of violence, oppression, or injustice.

"The administration of justice in the country has, in like manner, always been clear and impartial, and without distinction of superior or inferior rank, whether the parties have been rich or poor, or were this a foreigner and that a native; and it were greatly to be wished we could at this day boast of such impartial quickness and despatch in all our legal processes, considering how great an influence it has on trade.

"To sum up all, amongst the moral and political causes of the former flourishing state of trade may be likewise placed the wisdom and prudence of the administration, the intrepid firmness of the councils, the faithfulness with which treaties and engagements were wont to be fulfilled and ratified, and particularly the care and caution practised to preserve tranquillity and peace, and to decline instead of entering on a scene of war, merely to gratify the ambitious views of gaining fruitless or imaginary conquests.

"By these moral and political maxims were the glory and reputation of the republic so far spread, and foreigners animated to place so great a confidence in the steady determinations of a state so wisely and prudently conducted, that a concourse of them stocked this country with an augmentation of inhabitants and useful hands, whereby its trade and opulence were from time to time increased.

"III. Amongst the adventitious and external causes of the rise and flourishing state of our trade may be reckoned —

"That at the time when the best and wisest maxims were adopted in the republic as the means of making trade flourish, they were neglected in almost all other countries; and any one reading the history of those times may easily discover that the persecutions on account of religion, throughout Spain, Brabant, Flanders, and many other states and kingdoms, have powerfully promoted the establishment of commerce in the republic.

"To this happy result, and the settling of manufacturers in our country, the long continuance of the civil wars in France, which were afterwards carried on in Germany, England, and divers other parts, have also very much contributed.

"It must be added, in the last place, that during our most burthensome and heavy wars with Spain and Portugal (however ruinous that period was for commerce otherwise), these powers had both neglected their navy; a neglect of the navy of the republic, by a conduct directly the reverse, was at the same time formidable; and in a capacity not only to protect the trade of its own subjects, but to annoy and crush that of their enemies in all quarters."

We believe our readers will agree with us in thinking that these statements reflect the greatest credit on the merchants and government of Holland. Nothing, as it appears to us, could be conceived more judicious than the account they give of the causes which principally contributed to render Holland a great commercial commonwealth. The central situation of the country, its command of some of the principal inlets to the Continent, and the necessity under which the inhabitants have been placed, in consequence of the barrenness of the soil and its liability to be overflowed, to exert all their industry and enterprise, are circumstances that seem to be in a great degree peculiar in Holland. But though there can be no doubt that their influence has been very considerable, no one will pretend to say that it is to be compared for a moment with the influence of those free institutions, which, fortunately, are not the exclusive attributes of any particular country, but have flourished in Phœnicia, Greece, England, and America, as well as in Holland.

Many dissertations have been written to account for the decline of the commerce of Holland. But, if we mistake not, its leading causes may be classed under two prominent heads: viz. first, the natural growth of commerce and navigation in other countries; and, second, the weight of taxation at home. During the period when the republic rose to great eminence as a commercial state, England, France, and Spain, distracted by civil and religious dissensions, or engrossed wholly by schemes of foreign conquest, were unable to apply their energies to the cultivation of commerce, or to withstand the competition of so industrious a people as the Dutch. They, therefore, were under the necessity of allowing the greater part of their foreign, and even of their coasting trade, to be carried on in Dutch bottoms, and under the superintendance of Dutch factors. But after the accession of Louis XIV. and the ascendancy of Cromwell had put an end to internal commotions in France and England, the energies of these two great nations began to be directed to pursuits of which the Dutch had hitherto enjoyed almost a monopoly. It was not to be supposed that when tranquillity and a regular system of government had been established in France and England, their active and enterprising inhabitants would submit to see one of their most valuable branches of industry in the hands of the foreigners. The Dutch ceased to be the carriers of Europe, without any fault of their own. Their performance of that function necessarily terminated as soon as other nations became possessed of a mercantile marine, and were able to do for themselves what had previously been done for them by their neighbours.

Whatever, therefore, might have been the condition of Holland in other respects, the natural advance of rival nations must inevitably have stripped her of a large portion of the commerce she once possessed. But the progress of decline seems to have been considerably accelerated, or rather, perhaps, the efforts to arrest it were rendered ineffectual, by the extremely heavy taxation to which she was subjected, occasioned by the unavoidable expenses incurred in the revolutionary struggle with Spain, and the subsequent wars with France and England. The necessities of the state led to the imposition of taxes on corn, on flour when it was ground at the mill, and on bread when it came from the oven; on butter, and fish, and fruit; on income and legacies; the sale of

• The Dissertation was translated into English, and published at London in 1751. We have quoted from the translation.

houses; and, in short, almost every article of either necessity or convenience. Sir William Temple mentions that in his time—and taxes were greatly increased afterwards—one fish sauce was in common use, which directly paid no fewer than *thirty* different duties of excise; and it was a common saying at Amsterdam, that every dish of fish brought to table was paid for *once* to the fishermen, and *six* times to the state.

The pernicious influence of this heavy taxation has been ably set forth by the author of the *Richesses de la Hollande*, and other well-informed writers; and it has also been very forcibly pointed out in the Dissertation already referred to, drawn up from the communications of the Dutch merchants. "Oppressive taxes," it is there stated, "must be placed at the head of all the causes that have co-operated to the prejudice and discouragement of trade; and it may be justly said, that it can only be attributed to them that the trade of this country has been diverted out of its channel, and transferred to our neighbours, and must daily be still more and more alienated and shut out from us, unless the progress thereof be stopped by some quick and effectual remedy; nor is it difficult to see, from these contemplations on the state of our trade, that the same will be effected by no other means than a *diminution of all duties*."

"In former times this was reckoned the only trading state in Europe; and foreigners were content to pay the taxes, as well on the goods they brought hither, as on those they came here to buy; without examining whether they could evade or save them, by fetching the goods from the places where they were produced, and carrying others to the places where they were consumed; in short, they paid us our taxes with pleasure, without any farther inquiry."

"But, since the last century, the system of trade is altered all over Europe: foreign nations, seeing the wonderful effect of our trade, and to what an eminence we had risen only by means thereof, they did likewise apply themselves to it; and, to save our duties, sent their superfluous products beside our country, to the places where they are most consumed; and in return for the same, furnished themselves from the first hands with what they wanted."

But, notwithstanding this authoritative exposition of the pernicious effects resulting from the excess of taxation, the necessary expenses of the state were so great as to render it impossible to make any sufficient reductions. And, with the exception of the transit trade carried on through the Rhine and the Meuse, which is in a great measure independent of foreign competition, and the American trade, most of the other branches of the foreign trade of Holland, though still very considerable, continue in a comparatively depressed state.

In consequence principally of the oppressiveness of taxation, but partly, too, of the excessive accumulation of capital that had taken place while the Dutch engrossed the carrying trade of Europe, profits in Holland were reduced towards the middle of the seventeenth century, and have ever since continued extremely low. This circumstance would of itself have sapped the foundations of her commercial greatness. Her capitalists, who could hardly expect to clear more than two or three per cent. of nett profit by any sort of undertaking carried on at home, were tempted to vest their capital in other countries, and to speculate in loans to foreign governments. There are the best reasons for thinking that the Dutch were, until very lately, the largest creditors of any nation in Europe. It is impossible, indeed, to form any accurate estimate of what the sums owing them by foreigners previously to the late French war, or at present, may amount to; but there can be no doubt that at the former period the amount was immense, and that it is still very considerable. M. Demeunier (*Dictionnaire de l'Economie Politique*, tom. iii. p. 720.) states the amount of capital lent by the Dutch to foreign governments, exclusive of the large sums lent to France during the American war, at *seventy-three* millions sterling. According to the author of the *Richesses de la Hollande* (ii. p. 292.), the sums lent to France and England only, previously to 1778, amounted to 1,500,000 livres tournois, or sixty millions sterling. And besides these, vast sums were lent to private individuals in foreign countries, both regularly as loans at interest, and in the shape of goods advanced at long credits. So great was the difficulty of finding an advantageous investment for money in Holland, that Sir William Temple mentions, that the payment of any part of the national debt was looked upon by the creditors as an evil of the first magnitude. "They receive it," says he, "with tears, not knowing how to dispose of it to interest with such safety and ease."

Among the subordinate causes which contributed to the decline of Dutch commerce, or which have, at all events, prevented its growth, we may reckon the circumstance of the commerce with India having been subjected to the trammels of monopoly. De Witt expresses his firm conviction, that the abolition of the East India Company would have added very greatly to the trade with the East; and no doubt can now remain in the mind of any one, that such would have been the case.\* The interference of the

\* For proofs of this, see the article on the Commerce of Holland in the Edinburgh Review, No. 102., from which most part of these statements have been taken.

administration in regulating the mode in which some of the most important branches of industry should be carried on, seems also to have been exceedingly injurious. Every proceeding with respect to the herring fishery, for example, was regulated by the orders of government, carried into effect under the inspection of officers appointed for that purpose. Some of these regulations were exceedingly vexatious. The period when the fishery might begin was fixed at five minutes past twelve o'clock of the night of the 24th of June; and the master and pilot of every vessel leaving Holland for the fishery were obliged to make oath that they would regulate the regulation. The species of salt to be made use of in curing different sorts of herrings was also fixed by law; and there were endless regulations with respect to the size of the barrels, the number and thickness of the staves of which they were to be made; the gutting and packing of the herrings; the branding of the barrels, &c. &c.—(*Histoire des Pêches, &c. dans les Mers du Nord*, tom. I. chap. 24.) These regulations were intended to secure to the Hollanders that superiority which they had early attained in the fishery, and to prevent the reputation of their herrings from being injured by the bad faith of individuals. But their real effect was precisely the reverse of this. By tying up the fishers to a system of routine, they prevented them from making any improvements; while the facility of counterfeiting the public marks opened a much wider door to fraud, than would have been opened had government wisely declined interfering in the matter.

In despite, however, of the East India monopoly, and the regulations now described, the commercial policy of Holland has been more liberal than that of any other nation. And in consequence, a country not more extensive than Wales, and naturally not more fertile, conquered, indeed, in a great measure from the sea, has accumulated a population of upwards of two millions; has maintained wars of unexampled duration with the most powerful monarchies; and, besides laying out immense sums in works of utility and ornament at home, has been enabled to lend hundreds of millions to foreigners.

During the occupation of Holland by the French, first as a dependent state, and subsequently as an integral part of the French empire, her foreign trade was almost entirely destroyed. Her colonies were successively conquered by England; and, in addition to the loss of her trade, she was burdened with fresh taxes. But such was the vast accumulated wealth of the Dutch, their prudence, and energy, that the influence of these adverse circumstances was far less injurious than could have been imagined; and, notwithstanding all the losses she had sustained, and the long interruption of her commercial pursuits, Holland continued, at her emancipation from the yoke of the French in 1814, to be the richest country in Europe! Java, the Moluccas, and most of her other colonies were then restored, and she is now in the enjoyment of a large foreign trade. Her connection with Belgium was an unfortunate one for both countries. The union was not agreeable to either party, and was injurious to Holland. Belgium was an agricultural and manufacturing country; and was inclined, in imitation of the French, to lay restrictions on the importation of most sorts of raw and manufactured produce. A policy of this sort was directly opposed to the interests and the ancient practice of the Dutch. But though their deputies prevented the restrictive system from being carried to the extent proposed by the Belgians, they were unable to prevent it from being carried to an extent that materially affected the trade of Holland. Whatever, therefore, may be the consequences as to Belgium, there can be little doubt that the separation of the two divisions of the kingdom of the Netherlands will redound to the advantage of Holland. It must ever be for the interest of England, America, and all trading nations, to maintain the independence of a state by whose means their productions find a ready access to the great continental markets. It is to be hoped that the Dutch, profiting by past experience, will adopt such a liberal and conciliatory system towards the natives of Java, as may enable them to avail themselves to the full of the various resources of that noble island. And if they do this, and freely open their ports, with as few restrictions as possible, to the ships and commodities of all countries, Holland may still be the centre of a very extensive commerce, and may continue to preserve a respectable place among mercantile nations. Even at this moment, after all the vicissitudes they have undergone, the Dutch are, beyond all question, the most opulent and industrious of European nations. And their present, no less than their former state, shows that a free system of government, security, and the absence of restrictions on industry, can overcome almost every obstacle; "can convert the standing pool and lake into fat meadows, cover the barren rock with verdure, and make the desert smile with flowers."

ANCHOR (*Fr. Ancre; Lat. Anchora; Gr. Ἀγκυρα*), a well-known maritime instrument used in the mooring or fastening of ships. It consists of a shank having two hooked arms at one end, and at the other end a bar, or stock, at right angles to the arms, with a ring to which the cable is fastened. The arms, shank, and ring should be made of the very best and toughest iron; the stock is for the most part of oak, but it

is frequently also, especially in the smaller anchors, made of iron. On being let go, or cast into the water, the anchor sinks rapidly to the bottom, and is thrown by the stock into such a position that the *flukes*, or point of one of the arms, is sure to strike the ground perpendicularly, and being kept in that direction, unless the bottom be particularly hard or rocky, sinks into it, and cannot be dislodged, where the ground is not soft or oozy, without a violent effort. When the anchor is dislodged, it is said, by the sailors, to *come home*.

Seeing that the safety and preservation of ships and crews are very frequently dependent on their anchors and cables, it is needless to say that it is of the utmost importance that these should be of the most approved quality and construction.

Every ship has, or ought to have, three principal anchors; viz. 1st, the *sheet anchor*, the largest of all, and only let down in cases of danger, or when the vessel is riding in a gale of wind; 2d, the *best bower anchor*; and, 3d, the *small bower anchor*. There are, besides, smaller anchors for mooring in rivers, ports, &c. The largest class of men-of-war have six or seven anchors. The weight of an anchor is determined principally by the tonnage; it being usual to allow, for every 20 tons of a ship's burden, 1 cwt. for the weight of her best bower anchor; so that this anchor in a ship of 400 tons should weigh about 20 cwt., or a ton.

To *cast, or let go, the anchor*, is to let the anchor fall from the ship's bows into the water, so that it may take hold of the ground.

To *drag the anchor*, is to make it come home; that is, to dislodge it from its bed, and to drag it over or through the ground. This may be occasioned by the anchor being too light, by the violent straining of the cable in a storm or a current, by the too great hardness or softness of the ground, &c.

To *weigh the anchor*, is to dislodge it from its hold, and heave it up by means of the capstan, &c.

*Laws as to Anchors let or parted from, &c.*—By the 1 & 2 Geo. 4. c. 76. pilots and other persons taking possession of anchors, cables, and other ship materials parted with, cut from, or left by any vessel, whether in distress or otherwise, shall give notice of the same to a deputy vice-admiral, or his agent, within forty-eight hours, on pain of being considered as receivers of stolen goods; and if any person shall knowingly and wilfully purchase any such anchor, &c. that shall have been so obtained, without its being so reported, he shall be held to be a receiver of stolen goods, and suffer the like punishment as for a misdemeanour at common law, or be liable to be transported for seven years, at the discretion of the court. Any master of a ship or vessel outward-bound finding or taking on board any anchor, &c. shall make a true entry of the circumstance in the log-book of such ship or vessel, reporting the same by the first possible opportunity to the Trinity House, and on his return shall deliver the article to the deputy vice-admiral, or his agent, nearest to the port where he shall arrive, under a penalty of not more than 100*l.*, nor less than 30*l.*, on conviction before a magistrate on the oath of one witness, one half to go to the informer, the other half to the Merchant Seamen's Society, established by 20 Geo. 3. c. 28.; he shall also forfeit double the value of the article to the owner. And every pilot, hoveler, boatman, &c. who shall convey any anchor, &c. to any foreign harbour, port, creek, or bay, and sell and dispose of the same, shall be guilty of felony, and be transported for any term not exceeding seven years.—(See SALVAGE.)

*Invention of the Anchor.*—This instrument, admirable alike for its simplicity and effect, is of very considerable antiquity. It was not, however, known in the earliest ages. The President de Gouget has shown that it was not used by the Greeks till after the Trojan war; and that they were then accustomed to moor their ships by means of large stones cast into the sea, a practice which still subsists in some rude nations.—(*Origin of Laws*, vol. ii. p. 330. Eng. trans.) Pliny ascribes the invention of the anchor to the Tyrrhenians.—(*Hist. Nat. lib. vii. cap. 56.*) At first it had only one arm, the other being added at a subsequent period; some authors say, by Anacharsis the Scythian.—(*Origin of Laws*, vol. i. p. 293.) Since this remote epoch, the form and construction of the instrument seem to have undergone very little change.

**ANCHORAGE, or ANCHORING GROUND.** Good anchoring ground should neither be too hard nor too soft; for, in the first case the anchor is apt not to take a sufficient hold, and in the other to drag. The best bottom is a stiff clay, and next to it a firm sand. In a rocky bottom the flukes of the anchor are sometimes torn away, and hempen cables are liable to chafe and be cut through. It is also essential to a good anchorage that the water be neither too deep nor too shallow. When too deep, the pull of the cable, being nearly perpendicular, is apt to jerk the anchor out of the ground; and when too shallow, the ship is exposed to the danger, when riding in a storm, of striking the bottom. Where a ship is in water that is land-locked, and out of the tide, the nature of the ground is of comparatively little importance.

The anchorage of ships, especially ships of war, being a subject of great importance to the naval and commercial interests of the kingdom, several statutes have been enacted with respect to it. The first which it is necessary to notice here is 19 Geo. 3. c. 22. It prohibits masters of ships from casting out ballast, or rubbish of any kind, into any harbour or channel, except on the land where the tide never comes, on pain of forfeiting not more than 5*l.*, nor less than 5*0s.*, on conviction before a justice on view, or on the oath of one witness, or of being committed to prison for two months; which penalty is increased to 10*l.*, over and above the expense of removing the same, by 54 Geo. 3. c. 109. In pursuance of the same object, 54 Geo. 3. c. 109. enables the Lords of the Admiralty to establish regulations for the preservation of the king's moorings or anchorages, as well as for those of merchant ships, in all the ports, harbours, channels, &c. of the United Kingdom, as far as the tide flows, where or near to which his Majesty has, or may hereafter have, any docks, dock-yards, arsenals, wharfs, or moorings. It prohibits all descriptions of private ships from being moored or anchored, or placed in any of his Majesty's moorings, &c. without special licence obtained from the Admiralty, or other persons appointed to grant such licences, on pain of forfeiting not exceeding 10*l.*, one moiety to his Majesty, the other to the informer, on conviction before any justice of the peace or commissioner of the navy.

It further prohibits the breaching of private vessels in such places otherwise than appointed by the said authority of the Admiralty; and the receiving or having gunpowder, beyond a certain limited quantity,

under a penalty of *l.* for every five pounds' weight of such powder beyond the quantity allowed. It prohibits likewise all such private vessels in any such places having any guns on board shotted or loaded with ball, as well as firing and discharging any such before sun-rising and after sun-setting, under a penalty of *l.* for every gun so shotted, and *l.* for every gun so fired. It further gives to every officer of vessels of war, to harbour-masters, and others in their aid, a right of search in all private vessels so moored in such places, and inflicts a penalty of *l.* on resistance.

**ANCHORAGE** also means a duty laid on ships for the use of the port or harbour.

**ANCHOVY** (Fr. *Anchois*; It. *Acciughe*; Lat. *Engrauliscopus*), a small fish (*Clupea nasusculcus* Linn.), common in the Mediterranean, resembling the sprat. Those brought from Gurgona in the Tuscan Sea are esteemed the best. They should be chosen small, fresh pickled, white outside and red within. Their backs should be round. The sardine, a fish which is flatter and larger than the anchovy, is frequently substituted for it. About 190,000 lbs. are annually entered for home consumption.

**ANGELICA**, a large umbelliferous plant, with hollow jointed stalks, of which there are several varieties. It grows wild, and is cultivated in moist places near London, and in most European countries from Lapland to Spain. Its roots are thick, fleshy, and resinous; have a fragrant agreeable smell, and a bitterish pungent taste, mixed with a pleasant sweetness glowing on the lips and palate for a long time after they have been chewed. To preserve them, they must be thoroughly dried, and kept in a well-aired place. The other parts of the plant have the same taste and flavour as the roots, but in an inferior degree. The leaves and seeds do not retain their virtues when kept.

The London confectioners make a sweetmeat of the tender stems. The faculty used to direct that none but the roots of Spanish angelica should be kept by the druggists. In Norway the roots are sometimes used as bread, and in Iceland the stalks are eaten with butter. Here the plant is used only in confectionary and the materia medica. — (*Lewie's Mat. Med.*; *Rees's Cyclopadia*, &c.)

The duty of *4s.* per cwt. on Angelica produced, in 1840, 88*l.* 4*s.* 6*d.*, showing that 441 cwt. had been entered for home consumption.

**ANISEED** (Fr. *Anis*; It. *Anise*; Lat. *Anisum*), a small seed of an oblong shape. It is cultivated in Germany, but the best comes from Alicante in Spain. It is also a product of China, whence it is exported. It should be chosen fresh, large, plump, newly dried, of a good smell, and a sweetish aromatic taste.

The duty of *8s.* a cwt. on aniseed produced, in 1840, 78*l.* 5*s.* 10*d.*, showing that 315 cwt. had been entered for consumption.

**ANKER**, a liquid measure at Amsterdam. It contains about 10½ gallons English wine measure.

**ANNOTTO**, or **ARNOTTO** (Fr. *Rocou*; Ger. *Orlean*; It. *Oriana*), a species of red dye formed of the pulp enveloping the seeds of the *Bixa Orellana*, a plant common in South America, and the East and West Indies; but dye is made, at least to any extent, only in the first. It is prepared by macerating the pods in boiling water, extracting the seeds, and leaving the pulp to subside; the fluid being subsequently drawn off, the residuum, with which oil is sometimes mixed up, is placed in shallow vessels and gradually dried in the shade. It is of two sorts, viz. *flag* or *eake*, and *roll* annotto. The first, which is by far the most important article in a commercial point of view, is furnished almost wholly by Cayenne. It is imported in square cakes, weighing 2 or 3 lbs. each, wrapped in banana leaves. When well made, it should be of a bright yellow colour, soft to the touch, and of a good consistence. It imparts a deep but not durable orange colour to silk and cotton, and is used for that purpose by the dyers. Roll annotto is principally brought from Brazil. The rolls are small, not exceeding 2 or 3 oz. in weight; it is hard, dry, and compact, brownish on the outside, and of a beautiful red colour within. The latter is the best of all ingredients for the colouring of cheese and butter; and is now exclusively used for that purpose in all the British and in some of the continental dairies. In Gloucestershire it is the practice to allow an ounce of annotto to a cwt. of cheese; in Cheshire, 8 dwts. are reckoned sufficient for a cheese of 60 lbs. When genuine, it neither affects the taste nor the smell of cheese or butter. The Spanish Americans mix annotto with their chocolate, to which it gives a beautiful tint. (*Gray's Supplement to the Pharmacopœias*; *Loudon's Encyc. of Agriculture*, and *private information*.)

At an average of the years 1840 and 1841, 296,821 lbs. annotto were entered for home consumption. Previously to 1839 the duty on flag annotto was 18*s.* 8*d.* a cwt., and on other sorts 8*l.* 12*s.*; but the duty was then reduced to 1*s.* a cwt. on the former, and to 4*s.* on the latter, and is now 1*s.* a cwt. on both sorts. The price of flag annotto varies in the market from 6*d.* to 7*d.* per lb., and of roll from 1*s.* to 1*s.* 6*d.*

**ANNUITIES**. See **INTEREST** AND **ANNUITIES**.

**ANTIMONY** (Ger. and Du. *Spiegelas*; Fr. *Antimoine*; It. *Antimonio*; Rus. *Antimonia*; Lat. *Antimonium*), a metal which, when pure, is of a greyish white colour, and has a good deal of brilliancy, showing a radiated fracture when broken; it is converted by exposure to heat and air into a white oxide, which sublimes in vapours. It is found in Saxony and the Harz, also in Cornwall, Spain, France, Mexico, Siberia, the Eastern

Islands, and Martaban in Pegu. We are at present wholly supplied with this metal from Singapore, which receives it from Borneo; it is imported in the shape of ore, and commonly as ballast. It is about as hard as gold; its specific gravity is about 6·7; it is easily reduced to a very fine powder; its tenacity is such that a rod of  $\frac{1}{4}$ th of an inch diameter is capable of supporting 10 lbs. weight. Antimony is used in medicine, and in the composition of metal types for printing. The ores of antimony are soft, and vary in colour from light lead to dark lead grey; their specific gravity varies from 4·4 to 6·8; they possess a metallic lustre, are brittle, and occur in the crystallized massive forms. (*Thomson's Chemistry, and private information.*)

ANTWERP, the principal sea-port of Belgium, lat. 51° 13' 16" N., long. 4° 24' 10" E. A large, well-built, and strongly fortified city, on the Scheldt. Pop. in 1836, 75,363. Previously to its capture by the Spaniards, under Farnese, in 1585, Antwerp was one of the greatest commercial cities of Europe; but it suffered much by that event. In 1648, at the treaty of Westphalia, it was stipulated by Spain and Holland, that the navigation of the Scheldt should be shut up; a stipulation which was observed till the occupation of Belgium by the French, when it was abolished. In 1803, the improvement of the harbour was begun, and extensive new docks and warehouses have since been constructed. Ships of the largest burden come up to the town, and goods destined for the interior are forwarded with the greatest facility by means of canals and railways. Almost all the foreign trade of Belgium is at present centred in Antwerp, which has again become a place of much commercial importance.

Goods may be warehoused in Antwerp *en entrepôt*, at the rates of charge specified in a fixed tariff. The exports chiefly consist of flax, cotton and linen manufactured goods, refined sugar, glass, zinc, oak-bark, grain and seeds, lace, &c. The imports consist principally of coffee, sugar, and other colonial products, cotton stuffs, and other manufactured goods, corn, raw cotton, leather, timber, tobacco, wool, rice, dye-stuffs, salt, wines, fruits, &c. A large proportion of the imports not being intended for home consumption, but for transit to other countries, their amount is always much greater than the amount of the exports. Of the total value of the articles imported into Antwerp in 1833, amounting to 97,960,200 fr. (3,518,468 sterling), those supplied by England were worth very near 30,000,000 fr.; ditto by Russia, 14,366,900 fr.; ditto by the United States, 4,217,800 fr.; ditto by France, 7,630,200 fr.; &c. The principal articles were coffee, worth 14,745,500 fr.; grain and seeds, 13,936,800 fr.; sugar, 11,430,800 fr.; woven fabrics, 11,339,100 fr.; raw cotton, 5,225,200 fr.; metals, 4,972,300 fr., &c. The total value of the articles exported during the same year was 55,630,000 fr. (1,425,440), whereof those sent to England were worth 14,349,100 fr.; ditto to Holland, 5,777,500 fr.; the Hanse Towns, 4,320,200 fr.

*Money, Weights, and Measures.*—The French system of monies, weights, and measures has been adopted in Belgium. Formerly accounts were kept in florins worth 1s. 8d. sterling. The quotal formerly in use, and still sometimes referred to, = 103½ lbs. avoirdupois. In 1837 the Commercial Bank, a joint-stock association, was founded in Antwerp. It has a capital of 25,000,000 fr. (1,000,000 sterling), divided into 25,000 shares of 1,000 fr. each, and transacts all sorts of banking business. Here also are two considerable insurance companies. The railway from Antwerp to Brussels, 28½ miles in length, has been signally successful, and has been of great advantage to both cities, but especially to Antwerp.

*Custom-house Regulations.*—Captains of ships arriving at Antwerp, or any of the Belgian ports, must make, within 24 hours, a declaration in writing of the goods of which their cargo consists, specifying the marks and numbers of the bales, parcels, &c., their value, according to the current price at the time when the declaration is made, the name of the ship or vessel, as well as that of the captain, and of the country to which she belongs, &c.

*Port Charges.*—These, as will be seen from the subjoined statement, are rather heavy.

Account of Port Charges at Antwerp on a national Ship, or on a foreign privileged Ship of 250 Tons, arriving with a Cargo, discharging the same, and clearing out in Ballast.

	fr. cts.		fr. cts.
1. Custom-house officers from Flushing, about 24	0	11. For the cooking-houses in the dock, four	18
2. Pilotage from sea to Flushing, 15 Dutch feet	156	12. Ballast, 100 lasts, at 2 fr. per last	200
3. Pilot, for moving the vessel into the dock	2	13. Surveyor's visit of the vessel outwards in ballast	15
4. Charges for clearing in at Flushing	36	14. To pilot, for moving the vessel into the river	2
5. Leads put to the hatches by the Custom-house, and sealing the ship's provisions, about	12	15. Water-bull's certificate, in and out	25
6. Harbour dues and quay money	0	16. Charterparty and stamps (if required)	8
7. Tonnage duty on 250 tons, at 1 fr. 80 centimes per ton, and additional duty 13 centimes, and stamps 12 fr.	591	17. Broekrage on 250 tons, at 35 cent. per ton	187
8. Clearance, passport of the tonnage duty, measuring, and stamps	21	18. To the excise, for town dues on ship's provisions, clearance in and out	16
9. Custom-house clearance, certificate outwards	30	19. Pilotage to Flushing on 12 feet	112
10. Dock duty on 250 tons, at 52 centimes for three months	130	20. Ditto from Flushing to sea, and clearing charges there	110
		21. Cancelling custom-house bonds, postage, and small expenses	7
		22. Pilotage-office for hooking the vessel	7

N. B. All vessels leaving Antwerp must be provided with a surveyor's certificate that they are seaworthy. When in ballast, this certificate costs from 6 fr. to 13 fr. 50 cent.; when loaded, from 10 fr. to 30 fr., according to the burden of the vessel, besides 11 fr. 40 cent. for certificate of tribunal. The cooking-house duties depend on the size of the vessel, and must be paid whether the house be used or not.

*Shipping.*—In 1839 there entered the port of Antwerp 1182 ships of the burden of 202,038 tons, whereof 237 ships were from England, 231 from Russia, 109 from France, 44 from the United States, &c. In 1839 there belonged to Antwerp 61 vessels (of which 2 were steamers) of the burden of 9,557 tons. From 4,000 to 5,000 passengers arrive annually at the city by the steam-packets from England. We subjoin a Statement of the Imports, &c. (See Table, next page.)

*Conditions under which Goods are sold.*—On goods generally 2 per cent. is allowed for payment in 30 days, and 1½ per cent. on credit of 6 weeks or 2 months. On cottons, at 20 days' credit, 3 per cent. are allowed, and 1½ per cent. on a credit of 2 or 3 months. On ashes, hides, and sugar, 3 per cent. for 20 days, and 1½ per cent. for three months' credit.

For further information as to the trade, &c. of Antwerp, see Houschling, *Statistique Générale de la Belgique*; Macgregor's Commercial Tariff, art. BRUXELLES; the *Revue Commerciale et Maritimee d'Anvers*, &c.

Statement of the Imports and Sales of some of the principal Articles imported into Antwerp in 1840, 1841, and 1842, with the Stocks on hand on the 31st of December each Year.

APPLES, the fruit of the *Pyrus Malus*, or apple tree. It is very extensively cultivated in most temperate climates. An immense variety and quantity of excellent apples are raised in England, partly for the table, and partly for manufacturing into cider. Those employed for the latter purpose are comparatively harsh and austere. The principal cider counties are Hereford, Monmouth, Gloucester, Worcester, Somerset, and Devon. Mr. Marshall estimated the produce of the first four at 30,000 hhd. a year, of which Worcester is supposed to supply 10,000; but it is now probably much greater. Half a hoghead of cider may be expected, in ordinarily favourable seasons, from each tree in an orchard in full bearing. The number of trees on an acre varies from 10 to 40, so that the quantity of cider must vary in the same proportion, that is, from 5 to 20 hhd. The produce is, however, very fluctuating; and a good crop seldom occurs above once in three years. — (*Loudon's Encyc. of Agriculture, &c.*)

Besides the immense consumption of native apples, we import, for the table, considerable supplies of French and American apples, especially the former. Owing, however, to the duty previously to 1842 having been an *ad valorem* one of 5 per cent., we are unable to specify the quantities imported. They must, however, have been very considerable, as their declared value amounted, in 1841, to 41,197*l.* 4*s.* 10*d.* In 1842, the duty was fixed at 6*d.* per bushel on raw, and 2*s.* per do. on dried apples. The apples produced in the vicinity of New York are universally admitted to be the finest of any; but unless selected and packed with care, they are very apt to spoil before reaching England. The exports of apples from the United States, during the year ended the 30th of September, 1841, amounted to 25,216 barrels, valued at 48,396 dollars. Of these, 5,059 barrels were shipped for the United Kingdom. — (*Papers laid before Congress*, 21st of July, 1842.)

APPRENTICE, a person of either sex, bound by indenture to serve some particular individual, or company of individuals, for a specified time, in order to be instructed in some art, science, or trade.

According to the common law of England, every one has a right to employ himself at pleasure in every lawful trade. But this sound principle was almost entirely subverted by a statute passed in the fifth year of the reign of Queen Elizabeth, commonly called the Statute of Apprenticeship. It enacted that no person should, for the future, exercise any trade, craft, or mystery, at that time exercised in England and Wales, unless he had previously served to it an apprenticeship of seven years at least; so that what had before been a bye-law of a few corporations, became the general and statute law of the kingdom. Luckily, however, the courts of law were always singularly disinclined to give effect to the provisions of this statute; and the rules which they established for its interpretation served materially to mitigate its injurious operation. But though its impolicy had been long apparent, it was continued till 1814, when it was repealed by the 54 Geo. 3. c. 96. This act did not interfere with any of the existing rights, privileges, or bye-laws of the different corporations; but wherever these do not interpose, the formation of apprenticeships, and their duration, is left to be adjusted by the parties themselves.

The regulations with respect to the taking of apprentices on board ship, the only part of this subject that properly comes within the scope of this work, are embodied in the 7 & 8 Vict. c. 112. They are as follow:—

The master of every ship belonging to any subject of the United Kingdom of the burden of 80 tons and upwards (except pleasure yachts), shall have on board thereof, on clearing from, and when absent from, the U. K., one apprentice or more, in the following proportion to the number of tons of her measurement, according to the certificate of registry, viz.—

For every vessel of 80 tons and under 200 tons, 1 apprentice at least.	
— 200 — 400 — 2 —	—
— 400 — 500 — 3 —	—
— 500 — 700 — 4 —	—
— 700 and upwards — 5 —	—

all of whom, at the period of being bound, shall be above 12 and under the age of 17 years, and shall be duly indentured for at least four years; and all masters neglecting to have on board such number of apprentices shall forfeit 10*l.* for every apprentice that may be deficient. — § 37.

Indentures and assignments of apprentices are to be registered in books kept for that purpose by the registrar in London, and by the collector and comptroller at any other port; and masters neglecting to register indentures within 10 days after the binding or assignment, shall for every such offence forfeit 10*l*. Masters permitting apprentices to quit their service or the service of the ships to which they belong, except for the purpose of entering H. M.'s service, shall, for every such offence, forfeit 30*l*.—§ 43. See the act at length, art. ШАНЖЕ.

**AQUA FORTIS.** See ACID (Nitric).

**AQUAMARINE.** See BEAUV.

**AQUA VITÆ** (Ger. *Aquavit*; Fr. *Eau de vie*; It. *Acqua vite*; Sp. *Agua de vida*; Rus. *Wodka*; Lat. *Aqua vita*), a name familiarly applied to all native distilled spirits; equivalent to the *eau de vie*, or brandy, of the French, the *whisky* of the Scotch and Irish, the *geneva* of the Dutch, &c. In this way it is used in the excise laws relating to the distilleries.

**ARANGOES**, a species of beads made of rough carnelian. They are of various forms, as barrel, bell, round, &c., and all drilled. The barrel-shaped kind, cut from the best stones, are from two to three inches long, and should be chosen as clear as possible, whether red or white, having a good polish, and free from flaws. The bell-shaped are from one to two inches long, being in all respects inferior. Considerable quantities were formerly imported from Bombay, for re-exportation to Africa; but since the abolition of the slave trade, the imports and exports of Arangoes are comparatively trifling.—(*Milburn's Orient. Com.*)

**ARCHANGEL**, the principal commercial city of the north of Russia, in lat. 64° 39' 8" N., long. 40° 33' E., on the right bank of the Dwina, about 35 English miles above where it falls into the White Sea. Pop. 24,500. The harbour is at the island of Sollenbole, about a mile from the town. The bar at the mouth of the Dwina has from 13 to 14½ feet water; so that ships drawing more than this depth must be partially loaded outside the bar from lighters. The Dwina being a navigable river, traversing a great extent of country, and connected by canals with the Wolga on the one hand, and the Neva on the other, Archangel is a considerable *entrepôt*. It was discovered in 1554, by the famous Richard Chancellor, the companion of Sir Hugh Willoughby in his voyage of discovery; and from that period, down to the foundation of Petersburg, was the only port in the Russian empire accessible to foreigners. Though it has lost its ancient importance, it still enjoys a pretty extensive commerce. The principal articles of export are grain, tallow, flax, hemp, timber, linseed, iron, potash, mats, tar, &c. Deals from Archangel, and Onega in the vicinity of Archangel, are considered superior to those from the Baltic. Hemp not so good as at Riga, but proportionally cheaper. Tallow is also inferior. Iron same as at Petersburg, sometimes cheaper and sometimes dearer. The quality of the wheat exported from Archangel is about equal to that from Petersburg. The imports, which are not very extensive, consist principally of sugar, coffee, spices, salt, woollens, hardware, &c.

Account of the Quantities and Values of the various Articles exported from Archangel in 1847, specifying the Quantities of each sent to the different Countries to which they were exported, with the total Value of the Exports to such Countries, and the aggregate Value of the Exports:—

Articles exported.	Great Britain.	Holland.	Hanseatic Towns.	France.	Belgium.	Denmark.	Norway.	America.	Total Exports.	Value of Exports.

The total value of the exports from Archangel, in 1841, was 2,873,733 silver rubles, and that of the imports, in the same year, only 356,889 do. The value of the flax exported, in 1841, was estimated at 851,863 silver rubles, and that of the linseed at 758,163 do. (*Russian Official Returns.*)

The trade of Archangel has latterly been declining. It is much influenced by the demand from the more southerly parts of Europe, and especially from England, for corn. When a brisk demand is anticipated, oats are brought in large quantities from the interior, sometimes even from a distance of 1,600 miles, in covered barks capable of holding several hundred quarters. But as there are few extensive mercantile establishments here, the supplies are scanty, except when a large demand is expected for some time previously to the season for bringing them down.—(*Osby's European Commerce, and private information.*)

*Monies, Weights, and Measures, same as at Petersburg; which see.*

**ARGOL, ARGAL, or TARTAR** (Ger. *Weinstein*; Du. *Wynstein*; Fr. *Tartre*; It. *Sp.* and Port. *Tartaro*; Rus. *Winnoi kamen*; Lat. *Tartarus*), a hard crust formed on the sides of the vessels in which wine has been kept; it is red or white according to the colour of the wine, and is otherwise impure. On being purified, it is termed *cream* or *crystals of tartar*. It consists principally of bitartrate of potash. White argol is preferable to red, as containing less drossy or earthy matter. The marks of good argol of either kind are, its being thick, brittle, hard, brilliant, and little earthy. That brought from Bologna is reckoned the best, and fetches the highest price. Argol is of considerable use among dyers, as serving to dispose the stuffs to take their colours the better. Pure argol, or cream of tartar, is extensively used in medicine. It has an acid and rather unpleasant taste. It is very brittle, and easily reduced to powder: specific gravity 1.95.

The duty on argol, which is 6d. per cwt., produced, in 1840, 551*l.*, showing that 22,040 cwt. had been entered for consumption. The price of argol in the London market, in January, 1843, varied, Bologna, from 50*s.* to 52*s.* per cwt., Leghorn, 4*s.* to 4*s.* per ditto, Oporto, 2*s.* to 3*s.*, Rheinish, 3*s.* to 4*s.*

**ARISTOLOCHIA** (Fr. *Serpentaire*; Ger. *Schlangenwurz*; It. *Serpentaria*; Lat. *Aristolochia serpentaria*), the dried root of Virginia snake-root, or birthwort: it is small, light, and bushy, consisting of a number of fibres matted together, sprung from one common head, of a brownish colour on the outside, and pale or yellow within. It has an aromatic smell something like that of valerian, but more agreeable; and a warm, bitterish, pungent taste, very much resembling camphor.—(*Ency. Metrop.*)

**ARMS.** See **FIXE-ARMS.**

**ARRACK, or RACK** (Fr. *Arac*; Ger. *Arrack, Rack*; Du. *Arak, Rak*; It. *Araco*; Sp. *Arak*; Port. *Araca*; Rus. *Arak*), a spirituous liquor manufactured at different places in the East.

Arrack is a term applied in most parts of India, and the Indian islands, to designate every sort of spirituous liquor; a circumstance which accounts for the discrepancy in the statements as to the materials used in making it, and the mode of its manufacture. The arrack of Goa and Batavia is in high estimation; that of Colombo or Ceylon has been said to be inferior to the former; but this is doubtful. Goa and Colombo arrack is invariably made from the vegetable juice, *toddy*, which flows by incision from the cocoa-nut tree (*Cocos nucifera*). After the juice is fermented, it is distilled and rectified. It usually yields about an eighth part of pure spirit. Batavia or Java arrack is obtained by distillation from molasses and rice, with only a small admixture of toddy. When well prepared, arrack is clear and transparent; generally, however, it is slightly straw-coloured. Its flavour is peculiar; but it differs considerably, no doubt in consequence of the various articles of which it is prepared, and the unequal care taken in its manufacture. In England, arrack is seldom used except to give flavour to punch; formerly the imports were quite inconsiderable; but they have recently been a good deal greater, though, as they are mixed up in the official returns with rum from India, it is impossible to state their exact amount. The duty on rack from a British possession is 9*s.* 4*d.* a gallon, and on that from a foreign country 22*s.* 10*d.* per gallon. In the East its consumption is immense. It is issued to the soldiers in India as part of the established rations; and it is supplied, instead of rum, to the seamen of the royal navy employed in the Indian seas. It is one of the principal products of Ceylon. Its prime cost in that island varies from 8*d.* to 10*d.* a gallon; and large quantities are exported to India and elsewhere. It is sold in Ceylon by the legger of 150, and in Java by the legger of 160 gallons. In 1841 the exports from the latter amounted to 4,672 leggers, or 747,520 gallons, valued at 286,313 florins. Batavia arrack sold in bond in London in January, 1843, at from 1*s.* 6*d.* to 2*s.* per gallon.

*Pariah-arrack* is a phrase used to designate a spirit distilled in the peninsula of India, which is said to be often rendered unwholesome by an admixture of *ganga* (*Cassia sativa*), and a species of *Datura*, in the view of increasing its intoxicating power. But it is not clear whether the term pariah-arrack be meant to imply that it is an inferior spirit, or an adulterated compound. This liquor is sometimes distilled from cocoa-nut toddy, and sometimes from a mixture of jaggery, water, and the barks of various trees.—(See *Milburn's Orient. Com.*; and *Mr. Marshall's valuable Essay on the Cocoa Nut Tree*, p. 18.)

**ARROW-ROOT**, the pith or starch of the root *Maranta arundinacea*. It has received its common name from its being supposed to be an antidote to the poisoned arrows of the Indians. The powder is prepared from roots of a year old. It is reckoned a very wholesome nutritious food: it is often adulterated, when in the shops, with the starch or flour of potatoes. It is a native of South America; but has been long intro-

duceo into the West Indies, where it forms a pretty important article of cultivation. An excellent kind of arrow-root, if it may be so called, is now prepared in India from the root of the *Curema saguifolia*. The plant is abundant on the Malabar coast, where the powder is made in such quantities as to be a considerable object of trade. Some of it has been brought to England. The *Maranta arundinacea* has been carried from the West Indies to Caylon, where it thrives extremely well, and where arrow-root of the finest quality has been manufactured from it.—(*Ainslie's Med. Indica*.)

At an average of the years 1840 and 1841, the entries of arrow-root for home consumption amounted to 484,600 lbs. a year. The duty on arrow-root from a British possession is 1s., and from a foreign country, 2s. a cwt. It was quoted in the London market, in Jan. 1843, at from 8d. to 12. 6d. per lb.

**ARSENIC** (*Ger. Arsenik*; *Fr. Arsenic*; *It. and Sp. Arsenico*; *Rus. Mischak*; *Lat. Arsenicum*). This metal has a bluish white colour not unlike that of steel, and a good deal of brilliancy. It has no sensible smell while cold, but when heated it emits a strong odour of garlic, which is very characteristic. It is the softest of all the metallic bodies, and so brittle that it may easily be reduced to a very fine powder by trituration in a mortar. Its specific gravity is 5.76.—(*Thomson's Chemistry*.)

Metallo arsenic is not used in the arts, and is not, therefore, extracted from the ore, except for the purposes of experiment or curiosity. The arsenic of commerce is the white oxide, or *arsenious acid* of chemists. It is a white, brittle, compact substance, of a glassy appearance; is inodorous; has an acrid taste, leaving on the tongue a sweetish impression; and is highly corrosive. In its metallic state arsenic exerts no action on the animal system; but when oxidized, it is a most virulent poison. The arsenic of the shops is sometimes adulterated with white sand, chalk, or gypsum; the fraud may be detected by heating a small portion of the suspected powder, when the arsenic is dissipated, leaving the impurities, if there be any, behind. Though the most violent of all the mineral poisons, the white oxide of arsenic, or the arsenic of the shops, is yet, when judiciously administered, a medicine of great efficacy. It is also used for various purposes in the arts. It is principally imported from Saxony and Bohemia.—(*Thomson's Chemistry*; *A. T. Thomson's Dispensatory*.)

**ASAFETIDA** (*Ger. Teufelsdröck*; *Du. Duivelsdröck*; *Fr. Asa-fetida*; *Sp. Asa-fetida*; *Lat. asa-fetida*; *Per. Ungoash*), a gum resin, consisting of the inspissated juice of a large umbelliferous plant, the *Ferula asafetida*. It is produced in the southern provinces of Persia, and in the territory of Sindh, or country lying at the mouth of the Indus.

It is exported from the Persian gulf to Bombay and Calcutta, whence it is sent to Europe. It has a nauseous, somewhat bitter, biting taste, and an excessively strong, fetid, alliaceous smell; the newer it is, it possesses its smell and other peculiar properties in the greater perfection. It is imported, packed in irregular masses, in mats, casks, and cases; the last being, in general, the best. It should be chosen clean, fresh, strong-scented, of a pale reddish colour, variegated with a number of fine, white tears; when broken, it should somewhat resemble marble in appearance; and, after being exposed to the air, should turn of a violet red colour. That which is soft, black, and foul, should be rejected. The packages should be carefully examined, and ought to be tight, to prevent the smell from injuring any other article. Neither the imports nor the quantities cleared for consumption are considerable, though the latter are probably greater than might have been expected, amounting to about 9,000 lbs. a year. The duty is 1s. a cwt. In this country, it is used only in the materia medica. In France, it is used both in that way, and, to some extent, also as a condiment. It is worth, in bond, in the London market, from 25s. to 30s. per cwt.—(*Milburn's Orient. Com.*; *Earl. Papers*; and *private information*.)

**ASH (COMMON)**, the *Fraxinus excelsior* of botanists, a forest tree of which there are many varieties. It is abundant in England, and is of the greatest utility.

The ash is of very rapid growth; and, unlike most other trees, its value is rather increased than diminished by this circumstance. Like the chestnut, the wood of young trees is most esteemed. It grows on a great variety of soils, but is best where the growth has been most vigorous. It is inferior to the oak in stiffness, and is more easily split; but in toughness and elasticity it is far superior to the oak, or to any other species of timber. Hence its universal employment in all those parts of machinery which have to sustain sudden shocks, such as the circumference, teeth, and spokes of wheels, ship-blocks, &c., and in the manufacture of agricultural implements; in the latter, indeed, it is almost exclusively made use of. The want of prolonged durability is its greatest defect; and it is too flexible to be employed in building. The wood of old trees is of a dark brown colour, sometimes beautifully figured; the wood of young trees is brownish white, with a shade of green. The texture is alternately compact and porous; where the growth has been vigorous, the compact part of the several layers bears a greater proportion to the spongy, and the timber is comparatively tough, elastic, and durable. It has neither taste nor smell; and, when young, is difficult to work. The mountain ash (*Pyrus aucuparia*) is quite a different tree from the common ash, and its timber is far less valuable.—(*Fredgold's Principles of Carpentry*; *Timber Trees and Fruits*; in *Lib. of Entertaining Knowledge*, &c.)

**ASHES** (*Fr. Cendres*; *Ger. Weidasche*; *Du. Weedas*; *Da. Veedsake*; *It. Fecola bruciata*; *Sp. Alumbre de hez*; *Rus. Weidasch*; *Lat. Cineres infectioris*), the residuum, or earthy part, of any substance after it has been burnt. In commerce, the term is applied to the ashes of vegetable substances; from which are extracted the alkaline salts called potash, pearlsh, barilla, kelp, &c.; which see.

**ASPHALTUM**. See BITUMEN.

**ASSETS**, in commerce, a term used to designate the stock in trade, and the entire property of all sorts, belonging to a merchant or to a trading association. It is also applied to goods or property placed, for the discharge of some particular trust or obligation, in the hands of executors, assignees, &c.

**ASSIENTO**, a Spanish word signifying a contract. In commercial history, it means the contract or agreement by which the Spanish government ceded first to a company of French, and afterwards (by the treaty of Utrecht) to a company of English merchants, the right to import, under certain conditions, a specified number of slaves into the

Spanish colonies.—(For full particulars with respect to this contract see Mr. Bandinel's valuable work on the Slave Trade.)

**ASSIGNEE**, a person appointed by competent authority to do, act, or transact some business, or exercise some particular privilege or power, for or on account of some specified individual or individuals.

Assignees may be created by deed, or by law: by deed, where the lessee of a farm assigns the same to another; by law, where the law makes an assignee, without any appointment of the person entitled, as an executor is assignee in law to the testator, and an administrator to an intestate. The term is most commonly applied to the official assignees appointed to manage bankrupt estates.—(See **BANKRUPT**.)

**ASSIZE**. See **BREAD**.

**ASSURANCE**. See **INSURANCE**.

**AUCTION**, a public sale of goods to the highest bidder. Auctions are generally notified by advertisement, and are held in some open place. The biddings may be made either by parties present, or by the auctioneer under authority given to him; the sale is usually terminated by the fall of a hammer.

The duties on property sold by auction were repealed in the course of the present year, (1845). We observed upon them in our Treatise on Taxation, as follows:—

"The auction duties, which were first imposed in 1777, consist of duties proportioned to its value, charged on certain descriptions of property when sold by auction. They amount to 7d. per pound sterling on the value of estates, houses, annuities, shares in public companies, ships, funds, and some other articles; and to 1s. per pound on the value of household furniture, books, horses, carriages, and all other goods and chattels. The exemptions are, however, very numerous, comprising various descriptions of movable property, with all sorts of property sold by order of the Courts of Chancery and Exchequer, or for behoof of creditors, or under distress for rent, &c. These duties were strongly, and, we think, justly objected to by the Commissioners of Excise Inquiry. As it is admitted on all hands that the exposure of property to sale by auction affords the readiest means of ascertaining its value, it seems unreasonable, by imposing duties on auctions, to prevent resort being had to them in the disposal of property. Certainly, however, the duties materially lessen the number of auctions; and very many, perhaps we might say the greater number, of the estates put up to auction, are merely exposed in the view of ascertaining their value; being, to avoid the duty bought in by the exposers, and then sold by private bargain. But it is not easy to see why, if a duty is to be laid on the transfer of fixed property, it should not be made to press equally on it whatever be the mode of its transfer, or why it should be made to fall heaviest on what has been transferred by auction. We, therefore, are inclined to approve of the suggestion made to the Commissioners of Excise Inquiry, and sanctioned by them, for commutating the duties on the sale of estates and other fixed property by auction for a small *ad valorem* duty upon all transfers of such property conveyed by deed or written instrument, without regard to the mode in which the transfer has been brought about. And were such commutation effected, the duty on sales of other property might be advantageously relinquished; for, while it is of no great importance to the revenue, it presses, from the number of exemptions, severely and unjustly on certain individuals."—(p. 240.)

The commutation suggested above was not, however, adopted, the duty being unconditionally repealed by the act 8 Vict. c. 15.

**AUCTIONEER**, a person who conducts sales by auction. It is his duty to state the conditions of sale, to declare the respective biddings, and to terminate the sale by *knocking down* the thing sold to the highest bidder. An auctioneer is held to be lawfully authorised by the purchaser to sign a contract for him, whether it be for lands or goods. And his writing down the name of the highest bidder in his book is sufficient to bind any other person for whom the highest bidder purchased, even though such person be present, provided he do not object *before entry*. The following provisions with respect to auctioneers are embodied in the 8 Vict. c. 15.

Every auctioneer must take out a licence (renewable annually on the 5th of July), for which he is to be charged 10s.

The statute then goes on to enact:

*Auction Licences not necessary in certain Cases*.—It shall not be necessary for any person selling any goods or chattels by auction in any of the cases herein-after mentioned to take out the licence by this act required, viz. any person selling any goods or chattels by auction under a distress for nonpayment of rent or tithes to less amount than 20s.; or under authority of the act 8 Geo. 4. c. 48., "For the Recovery of Small Debts in Scotland;" or under authority of the act 6 & 7 Will. 4. c. 76., intitled "An Act to extend the Jurisdiction and regulate the Proceedings of the Civil Bill Courts in Ireland;" and the act 7 Will. 4. & 1 Vict. c. 43., intitled "An Act to amend the Laws for the Recovery of Small Debts by Civil Bill in Ireland;" or under authority of the act 7 Will. 4. & 1 Vict. c. 41., intitled "An Act for the more effectual Recovery of Small Debts in the Sheriff Courts, and for regulating the Establishment of Circuit Courts for the Trial of Small Debt Causes by the Sheriffs in Scotland;" or under authority of any other act or acts of parliament now in force in which the like exemption as by the act specified is given to the proper officers of court executing the process of such court to sell the effects seized by him by auction, without taking out or having any licence as an auctioneer, provided the sum for which such process is enforced is under 20s.—§ 8.

6 Geo. 4. c. 51. s. 8. repealed, and 1 Excise Licence to be sufficient.—So much of the act 6 Geo. 4. c. 51. as enacts "that every person exercising or carrying on the trade or business of an auctioneer, or selling any goods or chattels, lands, tenements, or hereditaments by auction shall, over and above any licence to him or her granted as an auctioneer, take out such licence as is required by law to deal in or retail, or to vend, trade in, or sell, any goods or commodities, for the dealing in or retailing or vending, trading in or selling of which an excise licence is specially required, before he or she shall be permitted, or authorised to sell such goods or commodities by auction; and if any such person shall sell any such goods or commodities as aforesaid by auction without having taken out such licence as aforesaid for that purpose, he or she shall be subject and liable to the penalty in that behalf imposed upon persons dealing in or retailing, vending, trading, or selling any such goods or commodities without licence, notwithstanding any licence to him or her before granted as aforesaid for the purpose of exercising or carrying on the trade or business of an auctioneer, or selling any goods or chattels, lands, tenements, or hereditaments by auction, any thing herein contained to the contrary notwithstanding," together with the proviso thereto attached, and so much of any other act or acts of parliament by which it is required that a separate and distinct licence shall be taken out by any auctioneer selling by auction gold or silver plate or patent medicines, or any other articles, are hereby repealed; and any auctioneer having at the time in force a licence on which the duty under the provisions of this act has been paid may sell by auction any such property, goods, or commodities, without taking out any other licence in such respect, any other act or acts to the contrary thereof notwithstanding.—§ 6.

Clause 7. orders that every auctioneer, before he shall commence any sale, shall suspend or affix a ticket or board containing his full Christian name and surname and place of residence in large letters to some conspicuous part of the room or place where the auction is held, under a penalty of 20*l*.

Clause 8. enacts that every person acting as auctioneer shall produce his licence, or make a deposit of 10*l*., on pain of 1 month's imprisonment, on the demand of any sale by auction of any officer of excise, customs, or stamps and taxes.

An auctioneer who declines to disclose the name of his principal at the time of sale makes himself responsible. But if he disclose the name of his principal, he ceases to be responsible, either for the soundness of or title to the thing sold, unless he have expressly warranted it on his own responsibility.

If an auctioneer pay over the produce of a sale to his employer, after receiving notice that the goods were not the property of such employer, the real owner of the goods may recover the amount from the auctioneer.

It has long been a common practice at certain auctions (called for that reason *mock* auctions) to employ *puffers*, or mock bidders, to raise the value of the articles sold by their apparent competition, and many questions have grown out of it. It was long ago decided, that if the owner of an estate put up to sale by auction employ puffers to bid for him, it is a fraud on the real bidder, and the highest bidder cannot be compelled to complete his contract.—(6 *T. Rep.* p. 642.) But it would seem as if the mere employment of puffers under any circumstances were now held to be illegal. "The inclination of the courts at the present time is, that a sale by auction should be conducted in the most open and public manner possible; that there should be no reserve on the part of the seller, and no collusion on the part of the buyers. Puffing is illegal, according to a late case, even though there be only one puffer; and it was then decided that the recognised practice at auctions, of employing such persons to bid upon the sale of horses, could not be sustained."—(*Woolrych on Commercial Law*, p. 262.)

A party bidding at an auction may retract his offer at any time before the hammer is down. Another clearly established principle is, that verbal declarations by an auctioneer are not to be suffered to control the printed conditions of sale; and these, when pasted up under the box of the auctioneer, are held to be sufficiently notified to purchasers.

Auctioneers, like all other agents, should carefully observe their instructions. Should those who employ them sustain any damage through their carelessness or inattention, they will be responsible. They must also answer for the consequences, if they sell the property intrusted to their care for less than the price set upon it by the owners, or in a way contrary to order.

An auctioneer who has duly paid the licence duty is not liable, in the city of London, to the penalties for acting as a *broker* without being admitted agreeably to the 6 Anne, c. 16.

The establishment of mock auctions is a common practice among swindlers in London. Persons are frequently placed at the doors of such auctions, denominated *barkers*, to invite strangers to come in; and puffers are in wait to bid up the article much beyond its value. A stranger making an offer at such an auction is almost sure to have the article knocked down to him. Plated goods are often disposed of at these auctions; but it is almost needless to add, that they are of very inferior quality. Attempts have sometimes been made to suppress mock auctions, but hitherto without much success. (For an account of the produce of the late duties on auctions, see head of next page.)

AVERAGE, a term used in commerce and navigation to signify a contribution made by the individuals, when they happen to be more than one, to whom a ship, or the goods on board it, belong, or by whom it or they are insured; in order that no particular individual or individuals amongst them, who may have been forced to make a sacrifice for the preservation of the ship or cargo, or both, should lose more than others. "Thus," says Mr Serjeant Marshall, "where the goods of a particular merchant are thrown overboard in a storm to save the ship from sinking; or where the masts, cables, anchors, or other furniture of the ship, are cut away or destroyed for the

preservation of the whole; or money or goods are given as a composition to pirates to save the rest; or an expense is incurred in reclaiming the ship, or defending a suit in a foreign court of admiralty, and obtaining her discharge from an unjust capture or detention; in these and the like cases, where any sacrifice is deliberately and voluntarily made, or any expense fairly and *bona fide* incurred, to prevent a total loss, such sacrifice or expense is the proper subject of a general contribution, and ought to be rateably borne by the owners of the ship, freight, and cargo, so that the loss may fall equally on all, according to the equitable maxim of the civil law — no one ought to be enriched by another's loss: *Nemo debet locupletari aliena factura.*"

Upon this fair principle is founded the doctrine of average contributions; regulations with respect to which having been embodied in the Rhodian law, were thence adopted into the Roman law; and form a prominent part of all modern systems of maritime jurisprudence. The rule of the Rhodian law is, that "if, for the sake of lightening a ship in danger at sea, goods be thrown overboard, the loss incurred for the sake of all, shall be made good by a general contribution." — (*Dig. lib. 14. tit. 2. § 1.*; *Schomberg on the Maritime Laws of Rhodes, p. 60.*)

Formerly it was a common practice to ransom British ships when captured by an enemy, the ransom being made good by a general average. But this practice having been deemed disadvantageous, it was abolished by statute 22 Geo. 3. c. 25., which declares, "That all contracts and agreements which shall be entered into, and all bills, notes, and other securities, which shall be given by any person or persons, for ransom of any ship or vessel, merchandize, or goods, captured by the subjects of any state at war with his Majesty, or by any person committing hostilities against his Majesty's subjects, shall be absolutely void in law, and of no effect whatever;" and a penalty of 500*l.* is given to the informer, for every offence against this act.

Average is either *general* or *particular*; that is, it either affects all who have any interest in the ship and cargo, or only some of them. The contributions levied in the cases mentioned above, come under the first class. But when losses occur from ordinary wear and tear, or from the perils naturally incident to a voyage, without being *voluntarily* encountered, such as the accidental springing of masts, the loss of anchors, &c., or when any peculiar sacrifice is made for the sake of the *ship only*, or of the *cargo only*, these losses, or this sacrifice, must be borne by the parties immediately interested, and are consequently defrayed by a *particular* average.

There are also some small charges called *petty* or *accustomed* averages; it is usual to charge one third of them to the ship and two thirds to the cargo.

No general average ever takes place, except it can be shown that the danger was imminent, and that the sacrifice made was *indispensable*, or *supposed to be indispensable*, by the *captain and officers*, for the safety of the ship and cargo. The captain, on coming on shore, should immediately make his protests; and he, with some of the crew, should make oath that the goods were thrown overboard, masts or anchors cut away, money paid, or other loss sustained, for the preservation of the ship and goods, and of the lives of those on board, and for no other purpose. The average, if not settled before, should then be adjusted, and it should be paid before the cargo is landed; for the owners of the ship have a *lien* on the goods on board, not only for the freight, but also to answer all averages and contributions that may be due. But though the captain should neglect his duty in this respect, the sufferer would not be without a remedy, but might bring an action either against him or the owners.

The laws of different states, and the opinions of the ablest jurists, vary as to whether

the loss incurred in defending a ship against an enemy or pirate, and in the treatment of the wounded officers and men, should be made good by general or particular average. The Ordinance of the Hanse Towns (art. 35.), the Ordinance of 1681 (liv. iii. tit. 7. § 6.), and the *Code de Commerce* (art. 400. §. 6.), explicitly declare that the charges on account of medicine, and for attendance upon the officers and seamen wounded in defending the ship, shall be general average. A regulation of this sort seems to be founded on reason. But other codes are silent on the subject; and though the contrary opinion had been advanced by Mr. Serjeant Marshall, and by Mr. Justice Park in the earlier editions of his work, the Court of Common Pleas has unanimously decided that in England neither the damage done to a ship, nor the ammunition expended, nor the expense of healing sailors wounded in an action with an enemy or pirate, is a subject of general average. — (*Abbott on the Law of Shipping*, part iii. cap. 8.)

Much doubt has been entertained, whether expenses incurred by a ship in an intermediate port in which she has taken refuge, should be general average or fall only on the ship. But on principle, at least, it is clear, that if the retreat of the ship to port be made in order to obviate the danger of foundering, or some other great and imminent calamity, the expenses incurred in entering it, and during the time she is forced by stress of weather, or adverse winds, to continue in it, ought to belong to general average. But if the retreat of the ship to port be made in order to repair an injury occasioned by the unskillfulness of the master, or in consequence of any defect in her outfit, such, for example, as deficiencies of water, provisions, sails, &c., with which she ought to have been sufficiently supplied before setting out, the expenses should fall wholly on the owners.

When a ship (supposed to be *seaworthy*) is forced to take refuge in an intermediate port, because of a loss occasioned by a peril of the sea, as the springing of a mast, &c., then, as the accident is not ascribable to any fault of the master or owners, and the retreat to port is indispensable for the safety of the ship and cargo, it would seem that any *extraordinary expense* incurred in entering it should be made good by general average.

Supposing, however, that it could be shown, that the ship was not, at her outset, seaworthy, or in a condition to withstand the perils of the sea; that the mast, for example, which has sprung, had been previously damaged; or supposing that the mischief had been occasioned by the incapacity of the master; the whole blame would, in such a case, be ascribable to the owners, who, besides defraying every expense, should be liable in damages, to the freighters for the delay that would necessarily take place in completing the voyage, and for whatever damage might be done to the cargo.

These, however, are merely the conclusions to which, as it appears to us, those must come who look only to principles. The law with respect to the points referred to differs in different countries, and has differed in this country at different periods. "A doubt," says Lord Tenterden, "was formerly entertained as to the expenses of a ship in a port in which she had taken refuge, to repair the damage occasioned by a tempest; but this has been removed by late decisions. And it has been held, that the wages and provisions of the crew during such a period must fall upon the ship alone. But if a ship should necessarily go into an intermediate port for the purpose only of repairing such a damage as is in itself a proper object of general contribution, possibly the wages, &c. during the period of such detention, may also be held to be general average, on the ground that the accessory should follow the nature of its principal." — (*Law of Ship.*, pt. iii. c. 8.)

Perhaps the reader who reflects on the vagueness of this passage will be disposed to concur with Lord Tenterden's remark in another part of the same chapter, "That the determinations of the English courts of justice furnish less of authority on this subject (average) than on any other branch of maritime law."

The question, whether the *repairs* which a ship undergoes that is forced to put into an intermediate port ought to be general or particular average, has occasioned a great diversity of opinion; but the principles that ought to regulate our decision with respect to it seem pretty obvious. Injuries voluntarily done to the ship, as cutting away masts, yards, &c. to avert some impending danger, are universally admitted to be general average. It seems, however, hardly less clear, and is, indeed, expressly laid down by all the great authorities, that injuries done to the ship by the violence of the winds or the waves should be particular average, or should fall wholly on the owners. The ship, to use the admirable illustration of this principle given in the civil law, is like the tool or instrument of a workman in his trade. If in doing his work he break his hammer, his anvil, or any other instrument, he can claim no satisfaction for this from his employer. — (*Dig. lib. xiv. tit. 2. § 2.*) The owners are bound, both by the usual conditions in all charterparties, and at common law, to carry the cargo to its destination; and they must consequently be bound, in the event of the ship sustaining any accidental or natural damage during the voyage, either to repair that damage at their own expense, or to provide another vessel to forward the goods. In point of fact, too, such subsidiary ships have often been provided; but it has never been pretended that their hire was a subject of general average, though it is plain it has quite as good a right to be so considered

as the cost of repairing the damage done to the ship by a peril of the sea. Hence, when a ship puts into an intermediate port for the common safety, the charges incurred in entering the port, and down to the earliest time that the wind and weather become favourable for leaving it, ought to be general average; but the repair of any damage she may have sustained by wear and tear, or by the mere violence of the storm, or an accidental peril, and the wages of the crew, and other expenses incurred after the weather has moderated, should fall wholly on the owners.

It has been, however, within these few years, decided, in the case of a British ship that had been obliged to put into port in consequence of an injury resulting from her accidentally coming into collision with another, that so much of the repair she then underwent as was absolutely necessary to enable her to perform her voyages should be general average. The Judges, however, spoke rather doubtfully on the subject; and it is exceedingly difficult to discover any good grounds for the judgment. — (Plummer and Another v. Wildman, 3 M. & S. 482.) — It seems directly opposed to all principle, as well as to the authority of the laws of Rhodes (*Dig.* 14. tit. 2.), of Oleron (art. 9.), of Wisby (art. 12.), and to the common law with respect to freight. Lord Tenterden has expressed himself as if he were hostile to the judgment. It is, indeed, at variance with all the doctrines he lays down; and the terms in which he alludes to it, "*yet in one case,*" appear to hold it forth as an exception (which it certainly is) to the course of decisions on the subject.

It is now usual in this country, when a vessel puts into port on account of a damage belonging to particular average, which requires to be repaired before she can safely proceed on her voyage, to allow in general average the expense of entering the port and unloading, to charge the owners of the goods or their underwriters with the warehouse rent and expenses attending the cargo, and to throw the expense of reloading and departure on the freight.

Considerable doubts have existed in regard to the policy of making the loss of goods stowed upon the deck and thrown overboard the subject of general average. The French Ordinance of 1681, proceeding on the assumption that deck stowage is in all cases improper, has expressly excluded goods so stowed from the benefit of such average. — (*Liv.* iii. tit. 8. § 13.) This, however, is plainly a matter in regard to which no invariable rule can be safely laid down; for, though speaking generally, stowage on the deck be improper and dangerous in most distant voyages, it may not be so, at least in certain seasons of the year, and in certain descriptions of vessels, in the coasting or cross-channel trades, or in over-sea voyages to contiguous countries. And such being the case, the preferable plan would seem to be to leave cases of the jettison of the deck cargo to be decided according to the practice of the peculiar trade in which they may happen to take place. This, too, we infer, though the point has not been judicially determined, is, in fact, the law of England at this moment. *Prima facie*, deck goods are excluded from the benefit of general average; but if it can be shown that stowage on deck is the usage of the trade in which a jettison takes place, and the custom of the parties engaged in it, the general presumption against the practice would be defeated, and the goods would be admitted to the benefit of general average. — (See Mr. Serjeant Shee's valuable edition of Lord Tenterden's work on the Law of Shipping, pp. 481 — 489.)

A late statute, the 5 Vict. 2 sess. c. 17., makes it illegal for ships laden with timber and clearing out from any port in British N. America between the 1st of November and the 1st of May to have any portion of the cargo on deck. But, with this exception, the propriety of stowing goods on the deck must be determined by the opinions of those engaged in the particular trade in which it may have occurred.

According to the law of England, when a ship is injured by coming into collision with or running foul of another, if the misfortune has been accidental, and no blame can be ascribed to either party, the owners of the damaged ship have to bear the loss. In cases where a collision has taken place through the fault of one party only, of course, is responsible for the consequences; but where both parties are to blame, without its being possible to discriminate the precise culpability of each, the loss or damage is to be defrayed equally by both parties. And this, also, is the rule laid down by the laws of Oleron and Wisby, and the famous French Ordinance of 1681, in reference to accidental collisions. The *Code de Commerce* (art. 407.), however, throws the loss resulting from accidental collisions on the suffering party, harmonising in this respect with the law of England. — (See COLLISION, in Supplement.)

The ship and freight, and every thing on board, even jewels, plate, and money, except wearing apparel, contribute to general average. But the wages of seamen do not contribute because, had they been laid under this obligation, they might have been tempted to oppose a sacrifice necessary for the general safety.

Different states have adopted different modes of valuing the articles which are to contribute to an average. In this respect the law of England has varied considerably at different periods. At present, however, the ship is valued at the price she is worth on

her arrival at the port of delivery. The value of the freight is held to be the clear sum which the ship has earned after seamen's wages, pilotage, and all such other charges as come under the name of petty averages, are deducted. It is now the settled practice to value the goods lost, as well as those saved, at the price they would have fetched in ready money, at the port of delivery, on the ship's arrival there, freight, duties, and other charges being deducted. Each person's share of the loss will bear the same proportion to the value of his property, that the whole loss bears to the aggregate value of the ship, freight, and cargo. The necessity of taking the goods lost into this account is obvious; for otherwise their owner would be the only person who would not be a loser.

When the loss of masts, cables, and other furniture of the ship, is compensated by general average, it is usual, as the new articles will, in all ordinary cases, be of greater value than those that have been lost, to deduct *one third* from the value of the former, leaving two thirds only to be contributed.

But the mode of adjusting an average will be better understood by the following example, extracted from Chief Justice Tenterden's valuable work on the *Law of Shipping*, part iii. cap. 8.

"The reader will suppose that it became necessary, in the Downs, to cut the cable of a ship destined for Hull; that the ship afterwards struck upon the Goodwin, which compelled the master to cut away his mast, and cast overboard part of the cargo, in which operation another part was injured; and that the ship, being cleared from the sands, was forced to take refuge in Ramsgate harbour, to avoid the further effects of the storm.

Amount of Losses.		Value of Articles to contribute.	
	L.		L.
Goods of A. cast overboard . . . . .	500	Goods of A. cast overboard . . . . .	500
Damage of the goods of B. by the jettison . . . . .	300	Sound value of the goods of B., deducting freight and charges . . . . .	1,000
Freight of the goods cast overboard . . . . .	100	Goods of C. . . . .	500
Price of a new cable, anchor, and mast . . . . .	L.300	— D. . . . .	5,000
Deduct one third . . . . .	100	— E. . . . .	5,000
Expence of bringing the ship off the sands . . . . .	300	Value of the ship . . . . .	1,000
Pilotage and port duties going into the harbour and out, and commission to the agent who made the disbursements . . . . .	100	Clear freight, deducting wages, victuals, &c. . . . .	500
Expence there . . . . .	25		
Adjusting this average . . . . .	4		
Portage . . . . .	1		
<b>Total of losses . . . . .</b>	<b>L. 1,150</b>	<b>Total of contributory values . . . . .</b>	<b>L. 11,600</b>

Then, 11,600L. : 1,150L. :: 100L. : 10L.

That is, each person will lose 10 per cent. upon the value of his interest in the cargo, ship, or freight. Therefore, A. loses 50L., B. 100L., C. 50L., D. 300L., E. 500L., the owners 300L.; in all, 1,150L. Upon this calculation, the owners are to lose 300L.; but they are to receive from the contribution 360L., to make good their disbursements, and 100L. more for the freight of the goods thrown overboard; or 460L. minus 300L.

They, therefore, are actually to receive . . . . .	L. 400
A. is to contribute 50L., but has lost 300L.; therefore A. is to receive . . . . .	450
B. is to contribute 100L., but has lost 300L.; therefore B. is to receive . . . . .	100
<b>Total to be actually received . . . . .</b>	<b>L. 750</b>

On the other hand, C., D., and E. have lost nothing, and are to pay as before; viz. . . . .	{ C. L. 500
	{ D. 300
	{ E. 500
<b>Total to be actually paid . . . . .</b>	<b>L. 900</b>

which is exactly equal to the total to be actually received, and must be paid by and to each person in rateable proportion.

"In the above estimate of losses, I have included the freight of the goods thrown overboard, which appears to be proper, as the freight of the goods is to be paid, and their supposed value is taken clear of freight, as well as other charges. In this country, where the practice of insurance is very general, it is usual for the broker, who has procured the policy of insurance, to draw up an adjustment of the average, which is commonly paid in the first instance by the insurers without dispute. In case of dispute, the contribution may be recovered either *by a writ in equity*, or by an action at law, instituted by each individual entitled to receive, against each party that ought to pay, for the amount of his share. And in the case of a general ship, where there are many consignees, it is usual for the master, before he delivers the goods, to take a bond from the different merchants for payment of their portions of the average when the same shall be adjusted."

The subject of average does not necessarily make a part of the law of insurance; though as insurers, from the terms of most policies, are liable to indemnify the insured against those contributions which are properly denominated *general average*, its consideration very frequently occurs in questions as to partial losses. But in order to confine assurances to that which should be their only object, namely, an indemnity against real and important losses arising from a peril of the sea, as well as to obviate disputes respecting losses arising from the perishable quality of the goods insured, and all trivial subjects of difference and litigation, it seems to be the general law of all maritime states, and is expressly, indeed, provided by the famous Ordinance of 1681 (see liv. iii. tit. 6. § 47., and the elaborate commentary of M. Valin), that the insurer shall not be liable to any demand on account of average, unless it exceed *one per cent.* An

article (No. 408.) to the same effect is inserted in the *Code de Commerce*; and, by stipulation, this limitation is frequently extended in French policies to three or four per cent. A similar practice was adopted in this country in 1749. It is now constantly stipulated in all policies, that upon certain enumerated articles of a quality peculiarly perishable, the insurer shall not be liable for any partial loss whatever; that upon certain others liable to partial injuries, but less difficult to be preserved at sea, he shall only be liable for partial losses above five per cent.; and that as to all other goods, and also the ship and freight, he shall only be liable for partial losses above three per cent. This stipulation is made by a memorandum inserted at the bottom of all policies done at Lloyd's, of the following tenour:—"N. B. Corn, fish, salt, fruit, flour, and seeds are warranted free from average, unless general, or the ship be stranded; sugar, tobacco, hemp, flax, hides, and skins are warranted free from average under five per cent.; and all other goods free from average under three per cent, unless general, or the ship be stranded."

The form of this memorandum was universally used, as well by the Royal Exchange and London Assurance Companies as by private underwriters, till 1754, when it was decided that a ship having run aground, was a stranded ship within the meaning of the memorandum; and that although she got off again, the underwriters were liable to the average or partial loss upon damaged corn. This decision induced the two Companies to strike the words "or the ship be stranded" out of the memorandum; so that now they consider themselves liable to no losses which can happen to such commodities, except general averages and total losses. The old form is still retained by the private underwriters.—(See STRANDING.)

The reader is referred, for the further discussion of this important subject, to the article MARINE INSURANCE; and to *Mr. Stearns's Essay on Average*; *Abbott on the Law of Shipping*, part iii. cap. 8.; *Marshall on Insurance*, book i. cap. 12. s. 7.; *Park on Insurance*, cap. 7.; and *Mr. Bensch's* elaborate and able work on the *Principles of Indemnity in Marine Insurance*.

AVOIRDUPOIS, a weight used in determining the gravity of bulky commodities. See WEIGHTS AND MEASURES.

B.

BACON and HAMS. The former is made from the sides and belly of the pig, and the latter from its hind legs. The process of curing may be effected indifferently by the employment of salt or sugar, or both; but the first is by far the most commonly used: after being impregnated with salt or sugar, and allowed to remain a certain time in the solution, the bacon and hams are taken out, dried, and smoked. The counties of England most celebrated for bacon and hams are York, Hants, Berks, and Wilts. Ireland produces great quantities of both; but they are coarse, and not so well cured as the English, and much lower priced. Of the Scotch counties, Dumfries, Wigtown, and Kirkcudbright are celebrated for the excellence of their bacon and hams, of which they export large quantities, principally to the Liverpool and London markets.

The imports of bacon and hams from Ireland have increased rapidly of late years. The average quantity imported during the three years ending the 25th of March, 1800, only amounted to 41,948 cwt.; whereas during the three years ending with 1820, the average imports amounted to 204,380 cwt.; and during the three years ending with 1825, they had increased to 338,218 cwt. In 1825, the trade between Ireland and Great Britain was placed on the footing of a coasting trade; and bacon and hams are imported and exported without any specific entry at the Custom-house. We believe, however, that the imports of these articles into Great Britain from Ireland amount, at present, to little less than 600,000 cwt. a year. The quantity of bacon and hams exported from Ireland to foreign countries is inconsiderable.

Previously to 1842 the duty on bacon and hams being 3s. a cwt. was in effect prohibitory of the former, and little or none was imported. It was then, however, reduced to 1s. a cwt. (9 & 6 Vict. c. 47.), and there can be little doubt that this reduction will occasion a considerable increase of importation.

The exports of bacon and hams from the United States during the year ended the 30th September 1841 amounted to 2,794,817 lbs. (*Papers printed by order of Congress*, 21 July 1842, p. 210.); and it was stated during the discussions on the tariff in the House of Commons in 1842, that large quantities of American bacon and hams would, most probably, be imported into this country. It is doubtful, however, whether such will be the case. At present American bacon is very inferior, the exports going principally to Cuba and other West India islands, where it is mostly employed in feeding slaves; and unless it be very much improved, the presumption is that it will not be sent to our markets. It is highly probable, however, that America will henceforth supply us with considerable quantities of salted pork, the duty on which is now only 8s. a cwt.

The old duty on hams produced, in 1840, 2,882s., showing that only 1,710 cwt. had been imported. But there can be no doubt that the imports will in future be largely increased. Westphalia hams being of a very superior quality, it is probable that they will be principally imported. Virginia hams are, also, of good quality.

**BAGGAGE**, in commercial navigation, the wearing apparel and other articles destined for the sole use or accommodation of the crews and passengers of ships. The following are the Custom-house regulations with respect to baggage:—

Baggage and apparel accompanied by the proprietor, worn and in use (not made up for the purpose of being introduced into this country), exempted from all duty on importation.

Articles in baggage subject to duty or prohibited may be left in custody of the officers of customs for a period of six months, to give the party an opportunity of paying the duty or taking them back.—(Customs Order, August 6, 1822.)

If unaccompanied by proprietor, proof must be made by the party that it is as aforesaid, and not imported as merchandise, otherwise it is subject to a duty of 20 per cent.

If not cleared at the expiration of six months from the date of landing, it is liable to be sold for duty and charges, the residue (if any) to be paid to the right owner on proof being adduced to the satisfaction of the honourable Board.

One fowing-piece and one pair of pistols accompanying the party, *bond fide* in use, free per Customs Order, July 8, 1825.

Spirits being the remains of passengers' stores may be admitted to entry.—(G. Geo. 4. c. 107. § 107.)

One pint of drinkable spirits of whatever strength, or half a pint of cordial or Cologne water, in baggage for private use—free.—(Treasury Order, October 20, 1820.)

Carriages of British manufacture, in use—free.—(Treasury Order, September 26, 1817.)

Glass, in dressing or medicine cases of British manufacture, free upon proof that no drawback has been received.—(Treasury Order, December 6, 1821.)—(Nyrén's Tables.)

Passengers denying having Foreign Goods in their Possession.—The following clause in the act 3 & 4 Will. 4. c. 65, has reference to this subject:—"If any passenger or other person, on board any vessel or boat, shall, upon being questioned by any customs officer whether he or she has any foreign goods upon his or her person, or in his or her possession, deny the same, and any such goods shall, after such denial, be discovered upon his or her person, or in his or her possession, such goods shall be forfeited, and such person shall forfeit treble the value of such goods."—§ 37.

**BAHIA**, on **ST. SALVADOR**, a large city (formerly the capital) of Brazil, contiguous to Cape St. Antonio, which forms the right or eastern side of the entrance of the noble bay of Todos os Santos, or All-Saints. According to the observations of M. Roussin, the light-house on the Cape is in lat. 13° 0' 30" S., long. 38° 30' W. The opposite side of the entrance to the bay is formed by the island of Taporia, distant from Cape St. Antonio about 2½ leagues. But a bank along the shore of the island narrows the passage for large ships to about two thirds this distance. Another bank runs S. S. W. from Cape St. Antonio about 1½ league. Within, the bay expands into a capacious basin, having several islands and harbours, the depth of water varying from 8 and 10 to 40 fathoms, affording ample accommodation and secure anchorage for the largest fleets.

There is another entrance to the bay, partly exhibited in the annexed plan, on the west side of the island of Taporia; but it is narrow, intricate, and at its mouth has not more than 6 feet water. Several rivers have their embouchure in the bay, which generally occasions a current to set from the north end of the island by Cape St. Antonio; when the rivers are flooded, this current is sometimes very strong. The light-house at the extremity of the cape has no great elevation, and cannot be seen at a distance of more than 3 or 3½ leagues. The usual place of anchorage is abreast of the city, north and south of Fort do Mar.

The city is partly built on the beach, but principally on pretty high ground immediately contiguous. The public buildings, particularly the churches, are numerous, and some of them magnificent; but the streets are narrow, ill paved, and filthy. Population estimated at from 125,000 to 160,000. The city is defended by several forts, but none of them are of very great strength.

Account of the Quantities, Prices, &c. of the principal Articles exported from and imported into Bahia in 1841.

Principal Exports.	Quantities.	Average Price.		Principal Imports.	Average Price.		Value as per Customs Tariff.

Total value of exports in 1841	8,440,554,480	Reis.	Duties.	Total value of imports in 1841	7,836,840,332	Reis.	Duties.
1840	5,391,000,000	867,670,881	284,000,000	1841	- - -	1,486,327,669	- - -
Increase in 1841	3,049,554,480	45,670,551					
				There being a decrease in the amount of imports as compared with 1832 of - - -	8,000,000,000		
				Of the above imports Gt. Britain furnished - - -	- - -	Reis.	3,838,260,784

The above table shows that the trade of Bahia is very considerable. The principal exports amount, at present (1842), to about 52,000 chests (13 cwt. each) of sugar;

16,000 bags (170 lbs. each) of cotton; 12,500 bags (160 lbs. each) of coffee, with hides, tobacco, rice, dye and fancy woods, bullion, &c. The imports consist principally of cottons and other manufactured goods, provisions, flour, salt, salt fish, soap, wines, &c.

The exports from Bahia have rather decreased of late years, in consequence, as is alleged, of the greater obstruction thrown in the way of importing slaves; and the greater scarcity and high price of labour.

No articles are prohibited to be imported, nor are there any privileges in favour of ships belonging to any country. The exporting trade is exclusively carried on by Brazilian vessels.

There is no difference made in the duty on goods, whether imported in native or foreign vessels.

All foreign goods imported, pay 10 per cent. on the valuations of the Custom-house tariff, with the exception of wines, liquors, sugar, and tea, which pay as follows:—

White and spirituous liquors (except produce of Great Britain, which pay only 10) - - - 45 per cent.  
Sugar - - - - - 50  
Tea - - - - - 50

An additional 5 per cent. is invariably charged under the plea of warehouse rent, &c.  
Vessels putting into Bahia in distress pay no tonnage dues. Those which discharge or take in cargo, pay 30 reis per ton

per day, Brazilian measurement; but should a vessel remain in port more than 30 days, this payment ceases to be entered.

*Port Dues on Vessels.*  
Brazilian hospital for each man specified in muster-roll - - - - - 640 reis

Bit of health - - - - - 3,200  
English, Portuguese, and Brazilian vessels pay - - - - - 6,720

Lighthouse, &c. - - - - - 10,240  
Vessels of other nations ditto - - - - - 10,240

Bahia is the only port of this province where goods may be warehoused on importation, and afterwards exported. A duty is charged thereon at the rate of 4 per cent. on tariff valuation.

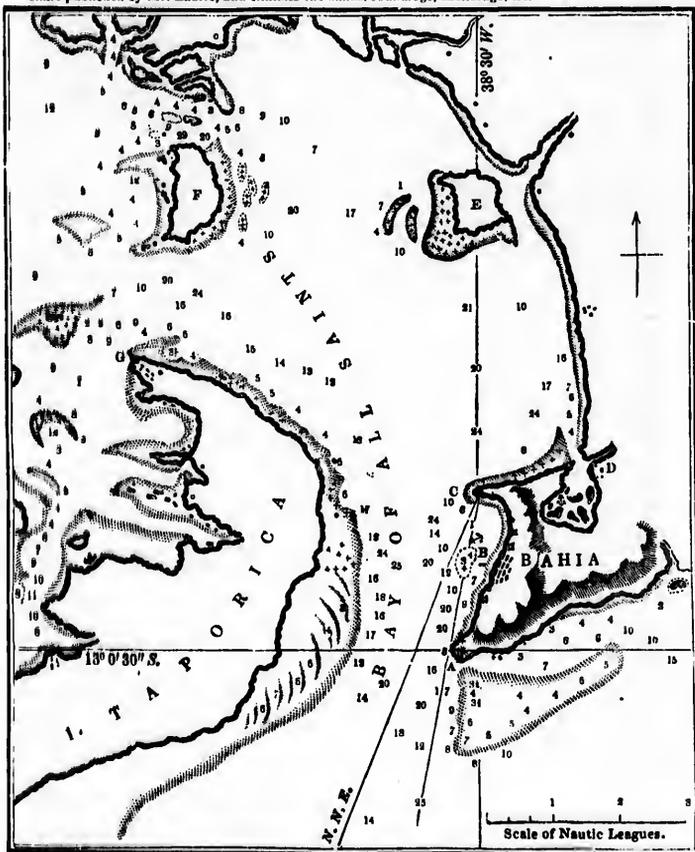

The duty of 15 per cent. formerly levied on chronometers and other nautical instruments, in use on board vessels has been recently abolished.

*Average Exchange, 30d. per 1000 reis.*  
*Weights and Measures.*

1 quintal = 4 arrobas - - - 1 arroba = 32 lbs.  
1 Canada = 2 imperial gallons. 1 square = 7 1/2ths of a bushel.

(Consider Returns, and private information.)

*Plan.*—The subjoined wood-cut conveys a clearer and better idea of this celebrated bay than could be acquired from any description. It is copied, without any reduction, from a revised edition of a Portuguese chart published by Mr. Laurie, and exhibits the banks, soundings, anchorage, &c.

*References to the Plan.*—A, Cape, light-house, and fort of St. Antonio; B, Fort do Mar; C, Fort St. Philip; D, Tapagippe; E, Isla do Mar; F, Isla dos Frades; G, Fort Besumont. The figures in the plan are the soundings in fathoms.

sugar;

**BALACHONG**, an article consisting of pounded or bruised fish. It consists principally of small fish, with prawns and shrimps. Though fetid and offensive to strangers, this substance, used as a condiment to rice, is largely consumed in all the countries to the east of Bengal, including the southern provinces of China, and the islands of the Eastern Archipelago. Its distribution gives rise to an extensive internal traffic.

**BALANCE**, in accounts, is the term used to express the difference between the debtor and creditor sides of an account.

**BALANCE**, in commerce, is the term commonly used to express the difference between the value of the exports from and imports into a country. The balance is said to be favourable when the value of the exports exceeds that of the imports, and unfavourable when the value of the imports exceeds that of the exports. According to the Custom-house returns, the official value of the exports from Great Britain, exclusive of foreign and commercial merchandise, during the year ending 5th of January, 1842, amounted to 102,180,517*l.*; and the official value of the imports during the same year amounted 64,377,962*l.*; leaving a favourable balance of 37,802,555*l.*

The attainment of a favourable balance was formerly regarded as an object of the greatest importance. The precious metals, in consequence of their being used as money, were long considered as the only real wealth that could be possessed either by individuals or nations. And as countries without mines could not obtain supplies of these metals except in exchange for exported products, it was concluded, that if the value of the commodities exported exceeded that of those imported, the balance would have to be paid by the importation of an equivalent amount of the precious metals; and conversely. A very large proportion of the restraints imposed on the freedom of commerce, during the last two centuries, grew out of this notion. The importance of having a favourable balance being universally admitted, every effort was made to attain it; and nothing seemed so effectual for this purpose as the devising of schemes to facilitate exportation, and to hinder the importation of almost all products, except gold and silver, that were not intended for future exportation. But the gradual though slow growth of sounder opinions with respect to the nature and functions of money, showed the futility of a system of policy having such objects in view. It is now conceded on all hands that gold and silver are nothing but commodities; and that it is in no respect necessary to interfere either to encourage their importation, or to prevent their exportation. In Great Britain they may be freely exported and imported, whether in the shape of coin or bullion. — (See *COIN*.)

The truth is, however, that the theory of the balance of trade is not erroneous merely from the false notions which its advocates entertained with respect to money; but proceeds on radically mistaken views as to the nature of commerce. The mode in which the balance is usually estimated is, indeed, completely fallacious. Supposing, however, that it could be correctly ascertained, it would be found, in opposition to the common opinion, that the imports into every commercial country generally exceed the exports; and that when a balance is formed, it is only in certain cases, and those of rare occurrence, that it is cancelled by a bullion payment.

I. The proper business of the wholesale merchant consists in carrying the various products of the different countries of the world, from the places where their value is least to those where it is greatest; or, which is the same thing, in distributing them according to the effective demand. It is clear, however, that there could be no motive to export any species of produce, unless that which it was intended to import in its stead were of greater value. When an English merchant commissions a quantity of Polish wheat, he calculates on its selling for so much more than its price in Poland, as will be sufficient to pay the expense of freight, insurance, &c., and to yield, besides, the common and ordinary rate of profit on the capital employed. If the wheat did not sell for this much, its importation would obviously be a loss to the importer. It is plain, then, that no merchant ever did or ever will export, but in the view of importing something more valuable in return. And so far from an excess of exports over imports being any criterion of an advantageous commerce, it is directly the reverse; and the truth is, notwithstanding all that has been said and written to the contrary, that unless the value of the imports exceeded that of the exports, foreign trade could not be carried on. Were this not the case—that is, were the value of the exports always greater than the value of the imports—merchants would lose on every transaction with foreigners, and the trade with them would be speedily abandoned.

In England, the rates at which all articles of export and import are officially valued were fixed so far back as 1696. But the very great alteration that has since taken place, not only in the value of money, but also in the cost of most part of the commodities produced in this and other countries, has rendered this official valuation, though valuable as a means of determining their quantity, of no use whatever as a criterion of the true value of the exports and imports. In order to remedy this defect, an account of the *real*

or declared value of the exports is annually prepared, from the declarations of the merchants, and laid before parliament: there is, however, no such account of the imports; and, owing to the difficulties which high duties throw in the way, it is, perhaps, impossible to frame one with anything like accuracy. It has also been alleged, and apparently with some probability, that merchants have not unfrequently been in the habit of exaggerating the value of articles entitled to drawbacks on exportation; but the recent extension and improvement of the warehousing system, and the diminution of the number of drawbacks, must materially lessen whatever fraud or inaccuracy may have arisen from this source. Most articles were formerly charged with an *ad valorem* duty of 10s. per cent. on exportation, so that, if anything, their value was probably rather under than over-rated; but now that this duty has been repealed (5 and 6 Vict. cap. 47. § 40.), the presumption is that their declared value comes very near the truth; at least, sufficiently so for all practical purposes.

Now the declared value of the exports in 1841 was 51,634,623*l.*, being only about half their official value, and nearly 13,000,000*l.* under the official value of the imports. What the excess of the latter might be, had we the means of comparing their real value with that of the exports, it is impossible to say: but there can be no manner of doubt, that, generally speaking, it would be very considerable. The value of an exported commodity is estimated at the moment of its being sent abroad, and *before* it is increased by the expense incurred in transporting it to the place of its destination; whereas the value of the commodity imported in its stead is estimated *after* it has arrived at its destination, and, consequently, after it has been enhanced by the cost of freight, insurance, importer's profits, &c.

In the United States, the value of the imports, as ascertained by the Custom-house returns, always exceeds the value of the exports. And although our practical politicians have been in the habit of considering the excess of the former as a certain proof of a disadvantageous commerce, "it is nevertheless true," says Mr. Pitkin, "that the real gain of the United States has been nearly in proportion as their imports have exceeded their exports." — (*Commerce of the United States*, 2d. ed. p. 280.) The great excess of American imports has in part been occasioned by the Americans generally exporting their own surplus produce, and, consequently, receiving from foreigners not only an equivalent for their exports, but also for the cost of conveying them to the foreign market. "In 1811," says the author just quoted, "flour sold in America for nine dollars and a half per barrel, and in Spain for fifteen dollars. The value of the cargo of a vessel carrying 5,000 barrels of flour would, therefore, be estimated at the period of its exportation at 47,500 dollars; but as this flour would sell, when carried to Spain, for 75,000 dollars, the American merchant would be entitled to draw on his agent in Spain for 27,500 dollars more than the flour cost in America; or than the sum for which he could have drawn, had the flour been exported in a vessel belonging to a Spanish merchant. But the transaction would not end here. The 75,000 dollars would be vested in some species of Spanish or other European goods fit for the American market; and the freight, insurance, &c., on account of the return cargo, would probably increase its value to 100,000 dollars, so that, in all, the American merchant might have imported goods worth 52,500 dollars more than the flour originally sent to Spain." It is as impossible to deny that such a transaction as this is advantageous, as it is to deny that its advantage consists entirely in the excess of the value of the goods imported over the value of those exported. And it is equally clear that America might have had the real balance of payments in her favour, though such transactions as the above had been multiplied to any conceivable extent.

II. In the second place, when a balance is due by one country to another, it is but seldom that it is paid by remitting bullion from the debtor to the creditor country. If the sum due by the British merchants to those of Holland be greater than the sum due by the latter to them, the balance of payments will be against Britain; but this balance will not, and indeed cannot, be discharged by an exportation of bullion, *unless bullion be, at the time, the cheapest exportable commodity*; or, which is the same thing, *unless it may be more advantageously exported than anything else*. To illustrate this principle, let us suppose that the balance of debt, or the excess of the value of the bills drawn by the merchants of Amsterdam on London over those drawn by the merchants of London on Amsterdam, amounts to 100,000*l.*: it is the business of the London merchants to find out the means of discharging this debt with the least expense; and it is plain, that if they find that any less sum, as 96,000*l.*, 97,000*l.*, or 99,900*l.*, will purchase and send to Holland as much cloth, cotton, hardware, colonial produce, or any other commodity, as will sell in Amsterdam for 100,000*l.*, no gold or silver will be exported. The laws which regulate the trade in bullion are not in any degree different from those which regulate the trade in other commodities. It is exported only when its exportation is advantageous, or when it is more valuable abroad than at home. It would, in fact, be quite as reasonable to expect that water should flow from a low to a high level, as it is

to expect that bullion should leave a country where its value is great to go to one where it is low! It is never sent abroad to destroy, but always to find, its level. The balance of payments might be ten or a hundred millions against a particular country, without causing the exportation of a single ounce of bullion. Common sense tells us that no merchant will remit 100*l.* worth of bullion to discharge a debt in a foreign country, if it be possible to invest any smaller sum in any species of merchandise which would sell abroad for 100*l.* exclusive of expenses. The merchant who deals in the precious metals is as much under the influence of *self-interest*, as he who deals in coffee or indigo: and what merchant would attempt to extinguish a debt, by exporting coffee which cost 100*l.*, if he could effect his object by sending abroad indigo which cost only 99*l.*?

The argument about the balance of payment is one of those that contradict and confute themselves. Had the apparent excess of exports over imports, as indicated by the British Custom-house books for the last hundred years, been always paid in bullion, as the supporters of the old theory contend is the case, there should at this moment be about 450,000,000 or 500,000,000 of bullion in the country, instead of 50,000,000 or 60,000,000, which it is supposed to amount to! Nor is this all. If the theory of the balance be good for anything—if it be not a mere idle delusion—it follows, as every country in the world, with the single exception of the United States, has its favourable balance, that they must be paid by an annual importation of bullion from the mines corresponding to their aggregate amount. But it is certain, that the entire produce of the mines, though it were increased in a *tenfold* proportion, would be insufficient for this purpose! This *reductio ad absurdum* is decisive of the degree of credit that should be attached to conclusions respecting the flourishing state of the commerce of any country drawn from the excess of the exports over the imports!

Not only, therefore, is the common theory with respect to the balance of trade erroneous, but the very reverse of that theory is true. In the *first* place, the value of the commodities imported by every country which carries on an advantageous commerce (and no other will be prosecuted for any considerable period), invariably exceeds the value of those which she exports. Unless such were the case, there would plainly be no fund whence the merchants and others engaged in foreign trade could derive either a profit on their capital, or a return for their outlay and trouble; and in the *second* place, whether the balance of debt be for or against a country, that balance will neither be paid nor received in bullion, unless it be at the time the commodity by the exportation or importation of which the account may be most profitably settled. Whatever the partisans of the doctrine as to the balance may say about money being a preferable product, or *merchandise par excellence*, it is certain it will never appear in the list of exports and imports, while there is any thing else with which to carry on trade, or cancel debts, that will yield a larger profit, or occasion a less expense to the debtors.

It is difficult to estimate the mischief which the absurd notions relative to the balance of trade have occasioned in almost every commercial country;—here they have been particularly injurious. It is principally to the prevalence of prejudices to which they have given rise, that the restrictions on the trade between this country and France are to be ascribed. The great, or rather the only, argument insisted upon by those who prevailed on the legislature, in the reign of William and Mary, to declare the trade with France a *nuisance*, was founded on the statement that the value of the imports from that kingdom considerably exceeded the value of the commodities we exported to it. The balance was regarded as a *tribute* paid by England to France; and it was sagaciously asked, what had we done, that we should be obliged to pay so much money to our natural enemy? It never occurred to those who so loudly abused the French trade, that no merchant would import any commodity from France, unless it brought a higher price in this country than the commodity exported to pay it; and that the profit of the merchant, or the national gain, would be in exact proportion to this excess of price. The very reason assigned by these persons for prohibiting the trade affords the best attainable proof of its having been a lucrative one; nor can there be any doubt that an unrestricted freedom of intercourse between the two countries would still be of the greatest service to both.

BALE, a pack, or certain quantity of goods or merchandise; as a *bale* of silk, cloth, &c.

*Bales* are always marked and numbered, that the merchants to whom they belong may know them, and the marks and numbers correspond to those in the bills of lading, &c. Selling under the *bale*, or under the *cords*, is a term used in France and other countries for selling goods wholesale, without sample or pattern, and unopened.

BALKS, large pieces of timber.

BALLAST (Du. *Ballast*; Fr. *Lest*; Ger. *Ballast*; It. *Savorra*; Sp. *Lastre*; Sw. *Ballast*), a quantity of iron, stones, sand, gravel, or any other heavy material laid in a ship's hold, in order to sink her deeper in the water, and to render her capable of carry-

ing sail without being overset. All ships clearing outwards, having no goods on board other than the personal baggage of the passengers, are said to be in ballast.

The quantity of ballast required to fit ships of equal burden for a voyage, is often materially different; the proportion being always less or more, according to the sharpness or fitness of the ship's bottom, called, by seamen, the *floor*.

The proper ballasting of a ship deserves peculiar attention, for, although it be known that ships in general will not carry sufficient sail, till they are laden so that the surface of the water nearly glances on the extreme breadth midships, more than this general knowledge is required. If the ship have a great weight of heavy ballast, as lead, iron, &c. in the bottom, the centre of gravity will be too low in the hold; this no doubt will enable her to carry a press of sail, but it will, at the same time, make her sail heavily, and roll so violently, as to run the risk of being dismasted.

The object in ballasting a ship is, therefore, so to dispose of the ballast or cargo, that she may be duly poised, and maintain a proper equilibrium on the water, so as neither to be too stiff, nor too *crank*, qualities equally pernicious. If too stiff, she may carry much sail, but her velocity will not be proportionally increased; whilst her masts are endangered by sudden jerks and excessive labouring. If too crank, she will be unfit to carry sail without the risk of upsetting.

Stiffness in ballasting is occasioned by disposing a too great quantity of heavy ballast, as lead, iron, &c., in the bottom, which throws the centre of gravity very near the keel; and this being the centre about which the vibrations are made, the lower it is placed, the more violent is the rolling.

Crankness, on the other hand, is occasioned by having too little ballast, or by disposing the ship's lading so as to raise the centre of gravity too high; this also endangers the masts when it blows hard; for when the masts cease to be perpendicular, they are raiu on the shrouds in the nature of a lever, which increases as the sine of their obliquity; and it is superfluous to add, that a ship that loses her masts is in great danger of being lost.

Hence the art of ballasting consists in placing the centre of gravity to correspond with the trim and shape of the vessel, so as to be neither too high nor too low; neither too far forward, nor too far aft; and to lade the ship so deep, that the surface of the water may nearly rise to the extreme breadth midships; she will then carry a good quantity of sail, incline but little, and ply well to windward. — (See *Falmer's Marine Dictionary*.)

The mischievous consequences of not attending to the circumstances now mentioned are often experienced by ships loading barilla, brimstone, and such heavy articles, on the coast of Sicily and Spain. The habit there is to cut large quantities of brushwood and taggots, and to spread them in the hold, to hinder the cargo from sinking the centre of gravity too low, and causing the ship to labour violently; but it very frequently happens that the pressure of the cargo on this sort of dunnage is so great as to squeeze it into a much smaller space than could at first have been supposed; so that ships after getting to sea are sometimes obliged to return to port, to unload a part of their cargo, to prevent their foundering. In such cases firm dunnage, such as oak staves, should, if possible, be always employed. — (See *Jackson's Commerce of the Mediterranean*, p. 125—128.)

Ships that have cargoes of light goods on board require a quantity of ballast; increasing, of course, according to the greater lightness of the goods. The following table shows the average quantity of ballast allowed to ships of war:—

Ballast allowed to the following Ships.

Guns.	Tonnage.	Iron, Tons.	Shingles, Tons.	Guns.	Tonnage.	Iron, Tons.	Shingles, Tons.
110	2,250	180	370	36	870	65	160
100	2,050	180	370	32	700	65	140

38	830	70	170	Sloop - -	—	—	—

The iron ballast is first stored fore and aft, from bulk-head to bulk-head; then the shingle ballast is spread and levelled over the iron.

The soil of the river Thames from London Bridge to the sea is vested in the Trinity House corporation, and a sum of 10*l.* is to be paid for every ton of ballast taken from the channel of the river without due authority from the said corporation. Ships may receive on board land ballast from the quarries, pits, &c. east of Woolwich, provided the quantity taken in a year do not exceed the number of tons notified to the Trinity corporation. Land ballast must be entered, and 1*d.* paid per ton on entering. No ballast is to be put on board before entry at the ballast office, under a penalty of 5*l.* a ton. The Trinity corporation is authorised by the 3 Geo. 4. c. 111. to charge the following rates for all ballast demanded and entered at the ballast office, viz:—

- For every ton (20 cwt.) of ballast, not being washed ballast, carried to any ship or vessel employed in the coal trade, the sum of 1*s.*
- For every such ton carried to any other British ship or vessel, the sum of 1*s.* 3*d.*
- For every such ton carried to any foreign ship or vessel, the sum of 1*s.* 7*d.*
- For every ton of washed ballast carried to any ship or vessel employed in the coal trade, the sum of 2*s.*
- For every ton of washed ditto carried to any other British ship or vessel, the sum of 2*s.* 6*d.*
- For every ton of washed ditto carried to any foreign ship or vessel, the sum of 3*s.* 2*d.*
- And for every ton of ballast delivered or unladen from the inward West India Dock, the further sum of 10*d.*; and for every ton of ballast delivered in or unladen from the Outward West India Dock, the further sum of 4*d.*; and for every ton of ballast delivered in or unladen from the London Docks, the further sum of 4*d.*; and for every ton of ballast delivered in or unladen from the inward East India Dock, the further sum of 10*d.*; and for every ton of ballast delivered in or unladen from the Outward East India Dock, the further sum of 4*d.*; and for every ton of ballast delivered in or unladen from the Commercial Dock, the further sum of 4*d.*; and for every ton of ballast delivered in or unladen from the East Country Dock, the further sum of 4*d.*; and for every ton of ballast delivered in or unladen from the City Canal, the further sum of 4*d.*; and for every ton of ballast delivered in or unladen from the Surrey Canal, the further sum of 4*d.*; and for every ton of ballast delivered in or unladen from the Regent's Canal, the further sum of 4*d.*

Which further rates or prices shall be payable and paid over and above the respective rates first mentioned.

The ballast of all ships or vessels coming into the Thames, is to be unladen into a lighter, at the charge of 6*s.* a ton. If any ballast be thrown or unladen from any ship or vessel into the Thames, the captain, master, &c. shall for every such offence forfeit 20*l.* No ballast is to be received on board otherwise than from a lighter. By the stat. 54 Geo. 3. c. 149. It is enacted, that no person shall, under a penalty of 10*l.* over and above all expenses, discharge any ballast, rubbish, &c. in any of the ports, harbours, roadsteads, navigable rivers, &c. of the United Kingdom; nor take ballast from any place prohibited by the Lords of the Admiralty.

The masters of all ships clearing out in ballast, are required to answer any questions that may be put to them by the collectors or comptrollers, touching the departure and destination of such ships.—(3 & 4 Will. 4. c. 52. § 80.)

If a foreign ship clear out in ballast, the master may take with him British manufactured goods of the value of 20*l.*, the mate of the value of 10*l.*, and 5*l.* worth for each the crew.—§ 87.

**BALSAM** (Ger. *Balsam*; Du. *Balsam*; Fr. *Baume*; It. and Sp. *Balsamo*; Lat. *Balsamum*). Balsams are vegetable juices, either liquid, or which spontaneously become concrete, consisting of a substance of a resinous nature, combined with benzoic acid, or which are capable of affording benzoic acid by being heated alone, or with water. The liquid balsams are copaiva, opobalsam, balsam of Peru, storax, and Tolu; the concrete are benzoin, dragon's blood, and red or concrete storax.—(Ure.)

1. *Copaiva* (Fr. *Baume de Copahu*; Ger. *Kopaiwa Balsam*; Sp. *Copaywa*), obtained from a tree (*Copaifera*) growing in South America and the West India islands. The largest quantity is furnished by the province of Para in Brazil. It is imported in small casks, containing from 1 to 1½ cwt. Genuine good copaiva or copaiwa balsam has a peculiar but agreeable odour, and a bitterish, hot, nauseous taste. It is clear and transparent; its consistence is that of oil; but when exposed to the action of the air it becomes solid, dry, and brittle, like resin.—(Thomson's Dispensatory.)

2. *Opobalsam* (Fr. *Balsamier de la Mecque*; It. *Opobalsamo*; Vat. *Balsamum terrum album, Egyptianum*; Egypt. *Balsam*), the most precious of all the balsams, commonly called Balm of Gilead. It is the produce of a tree (*Amirya Gileadensis*), indigenous to Arabia and Abyssinia, and transported at an early period to Europe. It is obtained by cutting the bark with an axe at the time that the juice is in the strongest circulation. The true balsam is of a pale yellowish colour, clear and transparent, about the consistence of Venice turpentine, of a strong, penetrating, agreeable, aromatic smell, and a slightly bitterish pungent taste. By age it becomes yellower, browner, and thicker, losing by degrees, like volatile oils, some of its finer and more subtle parts. It is rarely if ever brought genuine into this country; dried Canada balsam being generally substituted for it. It was in high repute among the ancients; but it is now principally used as a cosmetic by the Turkish ladies.—(Drs. Ure and Thomson.)

The Canada balsam, now referred to, is merely *fine turpentine*. It is the produce of the *Picea balsamea*, and is imported in casks, each containing about 1 cwt. It has a strong, but not a disagreeable odour, and a bitterish taste; is transparent, whitish, and has the consistence of copaiwa balsam.—(See TURPENTINE.)

3. *Safras* and *Beder* are the only places in the Hedjaz where the balsam of Mecha, or Balaesam, can be procured in a pure state. The tree from which it is collected grows in the neighbouring mountains, but principally upon Djebel Sobh, and is called, by the Arabs, *Bashem*. It was informed that it is from 10 to 15 feet high, with a smooth trunk, and thin bark. In the middle of summer small incisions are made in the bark and the juices, which immediately issues, is taken off with the thumb nail, and put into a vessel; the gum appears to be of two kinds, one of a white, and the other of a yellowish white colour; the first is the most esteemed. I saw here some of the latter sort in a small sheep-skin, which the Bedouins use in bringing it to market; it had a strong turpentine smell, and its taste was bitter. The people of Safras usually adulterate it with sesamum oil and tar. When they try its purity, they dip their finger into it and then set it on fire; if it burns without burning or leaving a mark on the finger, they judge it to be of good quality, but if it burn the finger as soon as it is set on fire, they consider it to be adulterated. I remember to have read, in Bruce's Travels, an account of the mode of trying it, by letting a drop fall into a cup filled with water, the good balsam falling conglobated to the bottom, and the bad dissolving and swimming on the surface. I tried this experiment, which was unknown to the people here, and found the drop swim upon the water. I tried also their test by fire upon the finger of a Bedouin, who had to regret his tameness; I therefore regarded the balsam sold here as adulterated; it was of less density than honey. I wished to purchase some; but neither my own baggage, nor any of the shops of Safras could furnish any thing like a bottle to hold it; the whole skin was too large. The Bedouins, who bring it here, usually demand two or three dollars per pound for it when quite pure; and the Safras Arabs sell it to the heads of the great caravan at between 8 and 12 dollars per pound in an adulterated state. It is bought up principally by Persians.—(Burckhardt's Travels in Arabia, vol. ii. p. 123.)

3. *Balsam of Peru* (Fr. *Baume de Peru*; Ger. *Peruvianischer Balsam*; Sp. *Balsamo de Quinquina*; Lat. *Balsamum Peruvianum*), the produce of a tree (*Myroxylon Peruvianum*) growing in the warmest parts of South America. The balsam procured by incisions made in the tree is called *white liquid balsam*; that which is found in the shops is obtained by boiling the twigs in water; it is imported in jars, each containing from 30 to 40 lbs. weight. It has a fragrant aromatic odour much resembling that of benzoin, with a warm bitterish taste. It is viscid, of a deep reddish brown colour, and of the consistence of honey.—(Thomson's Dispensatory.)

4. *Storax* (Fr. *Storax*; Ger. *Stryaxbroom*; It. *Storace*; Sp. *Asumbhar*; Lat. *Syrax*; Arab. *Usterak*), the produce of a tree (*Syrax officinale*) growing in the south of Europe and the Levant. Only two kinds are found in the shops: storax in tears, which is pure, and storax in the lump, or red storax, which is mixed with sawdust and other impurities. Both kinds are brought from the Levant in chests and boxes. Storax has a fragrant odour, and a pleasant, sub-nutritious, slightly pungent, and aromatic taste; it is of a reddish brown colour, and brittle.—(Thomson's Dispensatory.)

5. *Tolu Balsam* (Fr. *Baume de Tolu*; Ger. *Toluanischer Balsam*; Sp. *Balsamo de Tolu*). The tree which yields this balsam is the same as that which yields the balsam of Peru, it being merely the white balsam of Peru hardened by exposure to the air.

6. *Benzoin*, or *Benjamin* (Fr. *Benzoin*; Ger. *Benzoin*; Sp. *Bengui*; It. *Belinino*; Lat. *Benzoinum*; Arab. *Liban*; Hind. *Endam*; Ev. *Benoin*; Malay, *Campino*), is an article of much greater commercial importance than any of these balsams previously mentioned. It is obtained from a tree (*Syrax Benzoin*) cultivated in Sumatra and Borneo, but particularly the former. The plants produce in the seventh year. The balsam is obtained by making incisions in the bark, when it exudes, and is scraped off. During the first three years the balsam is of a clear white colour, after which it becomes brown. Having borne 10 or 12 years, the tree is cut down, every inferior article being obtained by scraping the wood. The balsams procured in these different stages are distinguished in commerce, and differ widely in value. Benzoin has a very agreeable, fragrant odour, but hardly any taste. It is imported in large masses, packed in chests and casks. It should be chosen full of clear, light-coloured, and white spots, having the appearance of white marble when broken; it is rarely, however, to be met with in so pure a state, but the nearer the approach to it the better. The worst sort is blackish, and full of impurities.—(Mebius's *Orbit. Com.* and private information.) The price of Benjamin in bond varied in the London market in February, 1843, from 3*l.* to no less than 46*l.* per cwt. 1

Mr. Crawford has given the following interesting and authentic details with respect to this article:—“Benzoin, or frankincense, called in commercial language Benjamin, is a more general article of commerce than camphor, though its production is confined to the same islands. Benzoin is divided in commerce, like camphor, into three sorts (head, belly, foot), according to quality, the comparative value of which may be expressed by the figures 106, 45, 18. Benzoin is valued in proportion to its whiteness, semi-transparency, and freedom from adventitious matters. According to its purity, the first sort may be bought at the *emporion* to which it is brought, at from 80 to 100 dollars per picul (133½ lbs.), the second

from 25 to 45 dollars, and the worst from 8 to 20 dollars. According to Linschoten, bensoin in its true cost, in the market of Sunda Calapa or Jacatra, from 15 to 25 Spanish dollars the picul. By Niebuhr's account, the worst bensoin of the Indian islands is more esteemed by the Arabs than their own best *olibanum*, or frankincense. In the London market, the best bensoin is fourteen times more valuable than *olibanum*, and even the worst 2½ times more valuable. Bensoin usually sells in England at 10s. per pound. The quantity generally imported into England in the time of the monopoly was 312 cwt. The principal use of this commodity is as incense, and it is equally in request in the religious ceremonies of Catholics, Mohammedans, Hindus, and Chinese. It is also used as a luxury by the great in fumigations in their houses, and the Japanese chiefs are fond of smoking it with tobacco. Its general use among nations in such various states of civilization, and the steady demand for it in all ages, declare that it is one of those commodities the taste for which is inherent in our nature, and not the result of a particular caprice with any individual people, as in the case of Malay camphor with the Chinese." — (*Indian Archipelago*, vol. iii. p. 418.) The imports of bensoin, which are not specified in the Customs' returns, amount to about 40,000 lbs. a year.

An inferior description of bensoin, the produce of a different tree from the *Syrax bensoin*, is produced in Slam. It is comparatively cheap and abundant.

7. *Dragon's blood* (Fr. *Sang-Dragon*; Lat. *Sanguis Draconis*; Arab. *Damsidkhwan*; Hind. *Nerakuly*), the produce of a large species of rattan (*Calamus Draco*) growing on the north and north-east coast of Sumatra, and in some parts of Borneo. It is largely exported to China, and also to India and Europe. It is either in oval drops, wrapped up in flag-leaves, or in large and generally more impure masses composed of smaller tears. It is externally and internally of a deep dusky red colour, and when powdered it should become of a bright crimson: if it be black, it is worth little. When broken and held up against a strong light, it is somewhat transparent: it has little or no smell or taste; what it has of the latter is resinous and astringent. Dragon's blood in drops is much preferable to that in cakes, the latter being more friable, and less compact, resinous, and pure than the former. Being a very costly article, it is very apt to be adulterated. Most of its alloys dissolve like gums in water, or crackle in the fire without proving inflammable, whereas the genuine dragon's blood readily melts and catches flame, and is scarcely acted on by watery liquors. It sells in the market of Singapore at 15 to 35 dollars per picul, according to quality; but the Chinese have the art of purifying and refining it, when it sells at 80 to 100 dollars per picul. — (*Milburn's Orient. Com.*; *Craufurd's East. Archip.*; and *private information*.) The price of dragon's blood in bond in the London market varied, in February, 1843, from 3l. to 7l. per cwt.

BALTIMORE, a large and opulent city of the United States, in Maryland, on the north side of the Patapoco river, about 14 miles above its entrance into Chesapeake bay, lat. 39° 17' N., long. 76° 36' W. Population in 1840, 102,313. The harbour is spacious, convenient, and the water deep. The exports principally consist of wheat-flour and wheat, tobacco, Indian corn and meal, rice, bacon, pork, beef, lard, butter, cheese, and other articles of provision, with tallow, staves, shingles, &c. The imports principally consist of cottons and woollens, sugar, coffee, tea, wine, brandy, silk goods, spices, rum, &c. The registered, enrolled, and licensed tonnage belonging to Baltimore, in June, 1847, amounted to 100,456 tons, of which about a half were employed in the coasting trade. The total value of the articles imported into Maryland, in the year ending the 30th of June, 1847, almost the whole of which were through Baltimore, was 4,432,314 dollars; the total value of the exports during the same year being 9,762,244 ditto. (*Papers laid before Congress*, 14th of December, 1847.) In Maryland the dollar is worth 7s. 6d. currency, 1l. sterling being = 1l. 13s. 4d. currency. For an account of the currency of the different states of the Union, with a table of the value of the dollar in each, see New York; and to it also the reader is referred for an account of the foreign trade of the United States. Weights and measures same as those of England.

Summary View of the Condition of the Banks of the City of Baltimore on the 4th of January 1847, with their Dividends in the course of that Year.

The number of arrivals by sea in 1859, which is of course exclusive of bay and river craft and vessels through canals, were ships 70, barges 60, brigs 374, schooners 175, and sloops 11. Total, 1561 vessels. (Statements derived from private information, and from *Muse's Commercial Magazines*.)

**BAMBOO** (Fr. *Bambou*, *Bambouchés*; Ger. *Indianischer Rohr*; It. *Bambu*; Hind. *Rass*; Malay, *Báláh*; Jav. *Prenng*), a species of cane, the *Bambos arundinacea* of botanists. It grows every where within the tropics, and is of the greatest utility: strictly speaking, it is a gigantic grass with a ligneous stem. It often rises to the height of 40 or 50 feet, and sometimes to even double those heights. Like most plants long and extensively cultivated, it diverges into many varieties. Some of these are dwarfish, while others, instead of being hollow canes, are solid. The bamboo is of rapid growth, and in four or five years is fit for many uses, but does not bear fruit or grain till it be 25 years old, after which it perishes. The grain makes tolerable bread. The young, but gigantic shoots, as they spring from the earth, make a tender and good esculent vegetable. The mature bamboo is employed in an immense variety of ways, in the construction of houses, bridges, boats, agricultural implements, &c. Some varieties grow to such a size as to be, in the largest part, near two feet in circumference, and single knees of these are used as pails or buckets. The Chinese are believed to fabricate their cheap and useful paper of macerated bamboo. The canes used in Europe as walking sticks are not bamboos, but rattans—a totally distinct class of plants. Bamboos are never used for that purpose. — (*Private information*.)

**BANDANAS**, silk handkerchiefs, generally red spotted with white. They were formerly manufactured only in the East Indies; but they are now manufactured of a very good quality at Glasgow and other places.

**BANK.—BANKING.** Banks are establishments intended to serve for the safe custody and issue of money; for facilitating its payment by one individual to another; and, sometimes, for the accommodation of the public with loans.

- I. BANKING (GENERAL PRINCIPLES OF).
- II. BANK OF ENGLAND (ACCOUNT OF).
- III. BANKS (ENGLISH PRIVATE AND PROVINCIAL).
- IV. BANKS (SCOTCH).
- V. BANKS (IRISH).
- VI. BANKS (FOREIGN).
- VII. BANKS (SAVINGS).

#### I. BANKING (GENERAL PRINCIPLES OF).

Banks are commonly divided into the two great classes of *banks of deposit* and *banks of issue*. This, however, appears at first sight to be rather an imperfect classification, inasmuch as almost all banks of deposit are at the same time banks of issue, and almost all banks of issue also banks of deposit. But there is in reality no ambiguity; for, by banks of deposit are meant banks for the custody and employment of the money deposited with them or intrusted to their care by their customers, or by the public; while by banks of issue are meant banks which, besides employing or issuing the money intrusted to them by others, issue money of their own, or notes payable on demand. The Bank of England is our principal bank of issue; but it, as well as the other banks in the different parts of the empire that issue notes, is also a great bank of deposit. The private banking companies of London, and the various provincial banks that do not issue notes of their own, are strictly banks of deposit. Banking business may be conducted indifferently by individuals, by private companies, or by joint stock companies or associations.

(1.) *Utility and Functions of Banks of Deposit.*—Banks of this class execute all that is properly understood by banking business; and their establishment has contributed in no ordinary degree to give security and facility to commercial transactions. They afford, when properly conducted, safe and convenient places of deposit for the money that would otherwise have to be kept, at a considerable risk, in private houses. They also prevent, in a great measure, the necessity of carrying money from place to place to make payments, and enable them to be made in the most convenient and least expensive manner. A merchant or tradesman in London for example, who employs a banker, keeps but very little money in his own hands, making all his considerable payments by drafts or checks on his banker; and he also sends the various

checks, bills, or drafts payable to himself in London, to his bankers before they become due. By this means he saves the trouble and inconvenience of counting sums of money, and avoids the losses he would otherwise be liable to, and would no doubt occasionally incur, from receiving coins or notes not genuine. Perhaps, however, the great advantage derived by the merchant or tradesman from the employment of a banker, consists in its relieving him from all trouble with respect to the presentation for payment of due bills and drafts. The moment these are transferred to the banker, they are at his risk. And if he either neglect to present them when due, or to have them properly noted in the event of their not being paid, he has to answer for the consequences.

"This circumstance alone must cause an immense saving of expense to a mercantile house in the course of a year. Let us suppose that a merchant has only two bills due each day. These bills may be payable in distant parts of the town, so that it may take a clerk half a day to present them; and in large mercantile establishments it would take up the whole time of one or two clerks to present the due bills and the drafts. The salary of these clerks is, therefore, saved by keeping an account at a banker's; besides the saving of expense, it is also reasonable to suppose that losses upon bills would sometimes occur from mistakes, or oversights—from miscalculation as to the time the bill would become due—from errors in marking it up—from forgetfulness to present it—or from presenting it at the wrong place. In these cases the indorsers and drawees are exonerated; and if the acceptor do not pay the bill, the amount is lost. In a banking house such mistakes occur sometimes, though more rarely; but when they do occur, the loss falls upon the banker, and not upon his customer."—(*Gilbart's Practical Observations on Banking.*)

It is on other grounds particularly desirable for a merchant or tradesman to have an account with a banking house. He can refer to his bankers as vouchers for his respectability; and in the event of his wishing to acquire any information with respect to the circumstances, or credit, of any one with whom he is not acquainted, his bankers render him all the assistance in their power. In this respect they have great facilities, it being the common practice amongst bankers in London, and most other trading towns, to communicate information to each other as to the credit and solvency of their customers.

To provide for the public security, the statute 7 & 8 Geo. 4. c. 29. § 49. "for the punishment of embezzlement committed by agents intrusted with property," enacts, "That if any money, or security for the payment of money, shall be intrusted to any banker, merchant, broker, attorney, or other agent, with any direction in writing to apply such money, or any part thereof, or the proceeds, or any part of the proceeds of such security, for any purpose specified in such direction, and he shall, in violation of good faith, and contrary to the purpose so specified, in any wise convert to his own use or benefit such money, security, or proceeds, or any part thereof respectively, every such offender shall be guilty of a misdemeanor, and being convicted thereof shall be liable, at the discretion of the court, to be transported beyond seas, for any term not exceeding fourteen years, nor less than seven years, or to suffer such punishment by fine or imprisonment, or by both, as the court shall award; and if any chattel or valuable security, or any power of attorney for the sale or transfer of any share or interest in any public stock or fund, whether of this kingdom, or of Great Britain, or of Ireland, or of any foreign state, or in any fund of any body corporate, company or society, shall be intrusted to any banker, merchant, broker, attorney, or other agent, for safe custody, or for any special purpose, *without any authority* to sell, negotiate, transfer, or pledge, and he shall, in violation of good faith, and contrary to the object or purpose which such chattel or security, or power of attorney, shall have been intrusted to him, sell, negotiate, transfer, pledge, or in any manner convert to his own use or benefit such chattel or security, or the proceeds of the same, or any part thereof, or the share or interest in stock or fund to which such power of attorney shall relate, or any part thereof, every such offender shall be guilty of a misdemeanor, and being convicted thereof shall be liable, at the discretion of the court, to any of the punishments which the court may award, as heretofore last mentioned."

This act is not to affect trustees and mortgagees, nor bankers receiving money due upon securities, nor securities upon which they have a lien, claim, or demand, entitling them by law to sell, transfer, or otherwise dispose of them, unless such sale, transfer, or other disposal shall extend to a greater number or part of such securities or effects than shall be requisite for satisfying such lien, claim, &c.—§ 50.

Nothing in this act is to prevent, impeach, or lessen any remedy at law or in equity, which any party aggrieved by any such offence might or would have had, had it not been passed. No banker, merchant, &c. shall be convicted as an offender against this act, in respect of any act done by him, if he shall at any time previously to his being indicted for such offence have disclosed such act on oath, in consequence of any compulsory process of any court of law or equity, in any action *bonâ fide* instituted by any party aggrieved, or if he shall have disclosed the same in any examination or deposition before any commissioner of bankrupt.—§ 52.

The Bank of England, and the private banking companies of London, as well as some of the English provincial banks, charge no commission on the payments made and received on account of those who deal with them. And until the recent introduction of joint-stock banks, none of the London bankers, except in peculiar cases, allowed interest on deposits; nor is it yet allowed by the great majority of the metropolitan private bankers. It is also either stipulated or distinctly understood that a person employing a banker should, besides furnishing him with sufficient funds to pay his drafts, keep an average *balance* in the banker's hands, varying, of course, according to the amount of business done on his account; that is, according to the number of his checks or drafts to be paid, and the number of drafts and bills to be received for him. The bankers then calculate, as well as they can, the probable amount of cash that it

will be necessary for them to keep in their coffers to meet the ordinary demands of their customers, and employ the balance in discounting mercantile bills, in the purchase of securities, or in some other sort of profitable adventure; so that their profits consist of the sum they realize from such part of the monies lodged in their hands as they can venture to employ in an advantageous way, after deducting the various expenses attendant on the management of their establishments. A bank of deposit would never be established if it had to depend on its own capital; it makes no profit, in its capacity of bank, till it begins to employ the capital of others.

The directors of the Bank of England do not allow any individual to overdraw his account. They answer drafts to the full extent of the funds deposited in their hands; but they will not pay a draft if it exceed their amount. Private bankers are not generally so scrupulous; most of them allow respectable individuals in whom they have confidence to overdraw their accounts, those who do so paying interest at the rate of 5 per cent. on whatever sums they overdraw. The possession of this power of overdrawing is often a great convenience to merchants, while it is rarely productive of loss to the banker. The money which is overdrawn is usually replaced within a short period; sometimes, indeed, in a day or two. The directors of the Bank of England decline granting this facility, from a disinclination on their part to come into competition in a matter of this sort with private bankers, who transact this kind of business better, probably, than it could be done by a great establishment like the Bank.

Banks afford great facilities to the public in the negotiation of bills of exchange, or in the making of payments at distant places. Many of the banking companies established in different districts have a direct intercourse with each other, and they have all correspondents in London. Hence an individual residing in any part of the country, who may wish to make a payment in any other part, however distant, may effect his object by applying to the bank nearest to him. Thus, suppose A. of Penzance has a payment to make to B. of Inverness: to transmit the money by letter would be hazardous; and if there were fractional parts of a pound in the sum, it would hardly be practicable: how then will A. manage? He will pay the sum to a banker in Penzance, and his debtor in Inverness will receive it from a banker there. The transaction is extremely simple: the Penzance banker orders his correspondent in London to pay to the correspondent of the Inverness banker the sum in question on account of B., and the Inverness banker, being advised in course of post of what has been done, pays B. A small commission charged by the Penzance banker, and the postages, constitute the whole expense. There is no risk whatever, and the whole affair is transacted in the most commodious and cheapest manner.

Recently, however, the facilities given to the transmission of money by means of post-office orders have materially interfered with this branch of banking business, especially in the transmission of small sums, and are a great convenience to the public. —(See *POST OFFICE*.)

By far the largest proportion both of the inland bills in circulation in the country, and also of the foreign bills drawn upon Great Britain, are made payable in London, the grand focus to which all the pecuniary transactions of the empire are ultimately brought to be adjusted. And in order still further to economise the use of money, the principal bankers of the metropolis are in the habit of sending a clerk each day to the *clearing house* in Lombard-street, who carries with him the various bills in the possession of his house that are drawn upon other bankers; and having exchanged them for the bills in the possession of those others that are drawn upon his constituents, the balance on the one side or the other is paid in cash or Bank of England notes. By this contrivance the bankers of London are able to settle transactions to the extent of several millions a day, by the employment of not more, at an average, than from 200,000*l.* to 300,000*l.* of cash or bank notes. —(See *CLEARING HOUSE*.)

In consequence of these and other facilities afforded by the intervention of bankers for the settlement of pecuniary transactions, the money required to conduct the business of an extensive country is reduced to a trifle only, compared with what it would otherwise be. It is not, indeed, possible to form any very accurate estimate of the total saving that is thus effected; but, supposing that 50 or 60 millions of gold and silver and bank notes are at present required, notwithstanding all the devices that have been resorted to for economising money, for the circulation of Great Britain, it may, one should think, be fairly concluded that 200 millions would, at the very least, be required to transact an equal extent of business but for those devices. If this statement be nearly accurate, and there are good grounds for thinking that it is rather under than over rated, it strikingly exhibits the vast importance of banking in a public point of view. By its means 50 or 60 millions are rendered capable of performing the same functions, and in an infinitely more commodious manner, that would otherwise have required four times that sum; and supposing that 20 or 30 millions are employed by the bankers as a capital in their establishments, no less than 120 or 130 millions will be

altogether disengaged, so as to be employed as an instrument of circulation, and made available for employment in agriculture, manufactures, and commerce.

The security afforded by a bank of deposit is a matter as to which there must always be more or less of doubt. When, indeed, a banking company confines itself to its proper business, and does not embark in speculations of unusual hazard, or from which its funds cannot be easily withdrawn, in the event of any sudden run or demand, it can hardly ever fail of being in a situation to meet its engagements; whilst the large private fortunes that most commonly belong to the partners afford those who deal with it an additional guarantee. Much, however, depends on the character of the parties, and on a variety of circumstances with respect to which the public can never be correctly informed; so that though there can be no doubt that the security afforded by many private banks of deposit is of the most unexceptionable description, this may not be the case with others.

All joint-stock banks, or banks having more than six partners, whether for deposit and issue, or for deposit merely, are ordered, by the act 3 & 4 Will. 4. cap. 83., to send quarterly returns of the number and names of their partners to the stamp office. But this act does not apply to private banks, or banks not having more than six partners, though we see no good reason why similar returns should not, and several why they should, be required from them as well as from others. At present few have any certain knowledge of the partners in private banks. Individuals often appear in the names of firms who have been dead for many years; and it has not unfrequently been found in cases of bankruptcy that parties of large fortune, who were supposed to have belonged to the concern, had withdrawn long previously. All uncertainty and obscurity of this kind might, however, be easily put an end to by making periodical declarations of the names of the partners; and provided this were done, and the names made sufficiently public, we doubt whether any other step should be taken for interfering in any way with banks of deposit. There is in this respect a wide difference between them and banks of issue. It is the duty of the government to take care that the value of the currency shall be as invariable as possible; but it has never been pretended that it is any part whatever of its duty to inquire into the security given by the borrowers to the lenders of money, any more than into the security given by the borrowers to the lenders of any thing else. Government very properly obliges a goldsmith to have his goods stamped, this being a security to the public that they shall not be imposed on in buying articles of the quality of which they are generally ignorant; but it does not require that the persons to whom the goldsmith sells or lends his goods should give him a guarantee for their payment. This is a matter as to which individuals are fully competent to judge for themselves; and there neither is nor can be any reason why a lender or depositor of bullion or notes should be more protected than a lender or depositor of timber, coal, or sugar. Gold being the standard or measure of value, government is bound to take effectual precautions that the currency shall truly correspond in the whole and in all its parts with that standard, — that every pound note shall be worth a sovereign, and that the amount and value of the aggregate notes in circulation shall vary exactly as a gold currency would do were it substituted in their stead. But this is all that government is called upon to do. If A. trust a sum of money in the hands of B., it is their affair, and concerns no one else. Provided the money afloat correspond with the standard, it is of no importance, in a public point of view, into whose hands it may come. The bankruptcy of a deposit bank, like that of a private gentleman who has borrowed largely, may be productive of much loss or inconvenience to its creditors. But if the paper in circulation be equivalent to gold, such bankruptcies cannot affect either the quantity or value of money, and are therefore injurious only to the parties concerned.

(2.) *Substitution of Notes for Coins — Banks of Issue — Means by which the Value of Notes may be kept on a Level with the Value of the Precious Metals.* — Notwithstanding the precious metals are in many respects admirably fitted to serve as media of exchange (see art. MONNY), they have two very serious drawbacks — their cost, and the difficulty and expense of carrying them from place to place. If the currency of Great Britain consisted only of gold, it would amount to at least sixty millions of sovereigns; and the expense attending such a currency, allowing only  $\frac{1}{4}$  per cent. for wear and tear and loss of coin, could not be reckoned at less than 3,250,000*l.* a year. The weight of 1000 sovereigns exceeds 21 lbs. troy; so that were there nothing but coins in circulation, the conveyance of large sums from place to place to discharge accounts would be a very laborious process, and even small sums could not be conveyed without considerable difficulty. Hence it is that most commercial and civilised nations have fabricated a portion of their money of less costly and heavy materials, and resorted to various devices for economising the use of coin. Of the substitutes for the latter hitherto suggested, paper is in all respects the most eligible. When governments are sufficiently powerful and intelligent to enforce the observance of contracts, individuals

possessed of written promises from others that they will pay certain sums at specified periods begin to assign them to those to whom they are indebted; and when those by whom such obligations are subscribed are persons of whose solvency no doubt can be entertained, they are readily accepted in payment of the debts due by one individual to another. But when the circulation of obligations or bills in this way has continued for a while, individuals begin to perceive that they may derive a profit by issuing them in such a form as to fit them for being readily used as a substitute for money in the ordinary transactions of life. Hence the origin of bank notes or paper money. An individual in whose wealth and discretion the public have confidence being applied to for a loan, say of 5,000*l.*, grants the applicant his bill or note payable on demand for that sum on his receiving adequate security for its repayment with interest. Now, as this note passes, in consequence of the confidence placed in the issuer, currently from hand to hand as cash, it is quite as useful to the borrower as if he had obtained an equivalent amount of gold; and supposing that the rate of interest is 4 per cent., it will yield, so long as it continues to circulate, a revenue of 200*l.* a year to the issuer. A sense of the advantages that might, in this way, be derived from the circulation of bills or notes led to the formation of banks for their regular issue. Those who issue such notes, coin as it were their credit. They derive the same revenue from the loan of their written promises to pay certain sums that they would derive from the loan of the sums themselves; and while they thus increase their own income, they at the same time contribute to increase the wealth of the society. Besides being incomparably cheaper, bank notes are also incomparably more commodious than a metallic currency. A bank note for 1,000*l.* or 100,000*l.* may be carried about with as much facility as a single sovereign. It is of importance, too, to observe, that its loss or destruction, whether by fire, shipwreck, or otherwise, would be of no greater importance, in a public point of view, than the loss or destruction of as much paper. No doubt it might be a serious calamity to the holder; but to whatever extent it injured him, it would proportionally benefit the issuer, whereas the loss of coin is an injury to the holder without being of service to any one else; it is, in fact, so much abstracted from the wealth of the community.

To obviate the endless inconveniences that would arise from the circulation of coins of every weight and degree of purity, were there no restrictions on their issue, all governments have forbidden the circulation of coins except they be of a certain specified or standard weight and fineness. And the recurrence of similar inconveniences from the issue of notes for varying sums, and payable under varying conditions, has led, in all countries in which paper money is made use of, to the enacting of regulations forbidding the issue of notes below a certain amount, and laying down rules for their payment. In England at this moment no note payable to bearer on demand can be issued for less than five pounds, and they must all be paid the moment they are presented. In Scotland and Ireland the minimum value of bank notes is fixed at one pound, the regulations as to payment being the same as in England. In order to preserve the monopoly of the London circulation to the Bank of England, no notes payable to bearer on demand are allowed to be issued by individuals or associations, other than the Bank of England, within sixty-five miles of St. Paul's. But beyond these limits every one who complies with the above regulations as to the minimum amount of notes, and who promises to pay them on demand, may, on paying the stamp-duty, and making returns of the issues to the stamp office, circulate any amount of notes he can succeed in getting the public to take off.

But though the condition that they shall be paid on demand, and the belief that this condition will be complied with, be necessary to sustain the value of notes issued by private parties or associations, it is not necessary to sustain the value of paper money, properly so called, or of notes which have been made *legal tender*. The only thing required to sustain the value of the latter description of currency is, that it should be issued in *limited quantities*. Every country has a certain number of exchanges to make; and whether these are effected by the employment of a given number of coins of a particular denomination, or by the employment of the same number of notes of the same denomination, is, in this respect, of no importance whatever. Notes which have been made legal tender, and are not payable on demand, do not circulate because of any confidence placed in the capacity of the issuers to retire them; neither do they circulate because they are of the same real value as the commodities for which they are exchanged; but they circulate because, having been selected to perform the functions of *money*, they are, as such, readily received by all individuals in payment of their debts. Notes of this description may be regarded as a sort of tickets or counters to be used in computing the value of property, and in transferring it from one individual to another. And as they are nowise affected by fluctuations of credit, their value, it is obvious, must depend entirely on the quantity of them in circulation as compared with the payments to be made through their instrumentality, or the business they have to perform. By reducing the supply of notes below the supply of coins that would circulate in their

place were they withdrawn, their value may be raised above the value of gold; while, by increasing them to a greater extent, it is proportionally lowered.

Hence, supposing it were possible to obtain any security other than immediate convertibility into the precious metals, that notes declared to be legal tender would not be issued in excess, but that their number afloat would be so adjusted as to preserve their value as compared with gold nearly uniform, the obligation to pay them on demand might be dispensed with. But it is needless to say that no such security can be obtained. Wherever the power to issue paper, not immediately convertible, has been conceded to any set of persons, it has been abused; or, which is the same thing, such paper has uniformly been over-issued, and its value depreciated from excess. And it is now admitted on all hands to be quite indispensable, for the prevention of injurious fluctuations in the value of money, that all notes be made payable, at the pleasure of the holder, in an unvarying quantity of gold or silver.

But though such be the law in this and most other countries, it is, we are sorry to say, operative only on the richest, most cautious, and respectable bankers; and is found to afford no real security against the roguery and misconduct of others. This security is, however, the more indispensable, seeing that the issue of notes is, of all businesses, that which seems to hold out the greatest prospect of success to the schemes of those who attempt to get rich by preying on the public. The circumstances that excite the public confidence in the first instance, and that afterwards keep it up, are often of the most treacherous description. The cost of engraving and issuing notes is also but an inconsiderable item, compared with the sums for which they are issued, and provided they be got into anything like extensive circulation, they become at once considerably productive. They are seldom issued, except on the deposit of bills or other securities yielding a considerable rate of interest; so that if an individual, or set of individuals, with little or no capital, contrive, by fair appearances, promises, and similar devices, to insinuate himself or themselves into the public confidence, and can maintain 20,000*l.*, 50,000*l.*, or 100,000*l.* in circulation, he or they secure a good income in the mean time; and when the bubble bursts, and the imposture is detected, they are no worse off than when they set up their bank. On the contrary, the presumption is that they are a great deal better off; and that they have taken care to provide, at the cost of the credulous and deceived public, a reserve stock for their future maintenance. Hence, seeing the facilities for committing fraud are so very great, the propriety, or rather necessity, of providing against them.

It must not be imagined that this is mere hypothetical reasoning. On the contrary, as every body knows, innumerable instances have occurred of the population of extensive districts having suffered severely from the insolvency of bankers in whom they placed the utmost confidence. In 1793, 1814-16, and 1825-26, a very large proportion of the provincial banks stopped payments, and produced by their fall an extent of bankruptcy and ruin that has seldom been equalled in any other country. But when such gigantic disasters had already happened, and were on the eve of again happening in 1837-38, it became the bounden duty of government to hinder, by every means in its power, their recurrence. It is no exaggeration to affirm that we have sustained a thousand times more injury from the circulation of worthless paper, or paper issued by persons without the means of retiring it, than from the issue of spurious coin.

It has been supposed that the objections to the issue of notes because of the risk of non-payment might be obviated, were they issued only by associations or joint stock companies. But there is no real foundation for any such supposition. There cannot, in fact, be a greater error than to suppose that because a bank has a considerable number of partners it will necessarily be either rich or well managed. It may be neither the one nor the other. A single individual may possess more wealth than a number of individuals associated together; and the chances are, that if he engage in banking or any other business it will be better managed than by a company. Under our present system, (and it cannot be prevented under any system,) the partners in joint stock banks, as in others, may be men of straw, or persons without property, and unable to fulfil their engagements. It is of the essence of a secure and well established paper currency that the notes of which it consists should be of the exact value of the gold or silver they profess to represent, and that, consequently, they should be paid the moment they are presented. But it is not enough to order that this condition shall be uniformly complied with. Such order is obeyed only by the opulent, prudent, and conscientious banker, and forms little or no check on the proceedings of those of a contrary character. It is the latter class, however, that it is especially necessary to look after; and it is needless to say that any system that permits notes to be issued without let or hindrance by speculative, ignorant, or unprincipled adventurers, must be essentially vicious.

It has sometimes been contended, in vindication of the plan of allowing any individual, or set of individuals, how bankrupt soever in fortune and character, to issue notes

without check or limitation of any kind other than the promise to pay them on demand, that they are essentially *private paper*; that their acceptance in payment is optional; and that as they may be rejected by every one who either suspects or dislikes them, there is no room or ground for interfering with their issue! But every body knows that, whatever notes may be in law, they are in most parts of the country *practically and in fact legal tender*. The bulk of the people are totally without power to refuse them. The currency of many extensive districts consists in great part of country notes, and such small farmers or tradesmen as should decline taking them would be exposed to the greatest inconveniences. Every one makes use of or is a dealer in money. It is not employed by men of business only, but by persons living on fixed incomes; by women, labourers, minors; in short, by every class of individuals, very many of whom are necessarily, from their situation in life, quite unable to form any estimate of the solidity of the different banks whose paper is in circulation. Such parties are uniformly severe sufferers by the failure of banks. The paper that comes into their hands is a part of the currency or money of the country; and it is quite as much the duty of Government to take measures that this paper shall be truly and substantially what it professes to be, as that it should take measures to prevent the issue of spurious coins or the use of false or deficient weights and measures.

The fact is, that the paper currency of the country cannot be on a perfectly sound footing until the issue of notes, whether by joint stock banks or private individuals, be suppressed. It has been proposed to obviate any recurrence of the wide-spread ruin that has so frequently resulted from the bankruptcy of banks of issue, to compel them to give security for the payment of their notes; and the adoption of such a regulation would, no doubt, have been a vast improvement on the late system.\* But though the exacting of security would have materially mitigated, it would not have eradicated the vices of a system which allowed banks to be established at the pleasure of individuals. A paper currency is not in a sound or wholesome state, unless, 1st, means be taken to insure that each particular note or parcel of such currency be paid immediately on demand; and unless, 2nd, the whole currency vary in amount and value exactly as a metallic currency would do were the paper currency withdrawn and coins substituted in its stead. The last condition is quite as indispensable to the existence of a well-established currency as the former; and it is one that cannot be fully realised otherwise than by confining the issue of paper to a single source.

It is easy to see that were paper issued only by the Bank of England, or some one source in London, and then only *in exchange for bullion*, the currency would be in its most perfect state, and would fluctuate exactly as it would do were it wholly metallic. But at present, the currency is supplied by hundreds of individuals and associations, all actuated by different and frequently conflicting views and interests. The issues of the Bank of England, previously to the late changes, were generally, though not always, governed by the state of the exchange, or rather by the influx and efflux of bullion, increasing when it flowed into, and decreasing when it flowed out of the country. But it was quite otherwise with the provincial bankers. Their issues were not regulated by any such standard, but by the state of credit and prices in the districts in which they happened to be situated. If their managers supposed that these were good or improving, they rarely hesitated about making additional issues. Hence, when the state of the exchange and the demand on the Bank of England for bullion showed that the currency was redundant, and ought to be contracted, the efforts of the Bank to effect its diminution were often impeded, and met by a contrary action on the part of the country banks. This was not owing to the ignorance of the latter. Under the supposed circumstances, the country bankers saw, speaking generally, that they ought also to contract; but being a very numerous body, comprising several hundred establishments scattered over all parts of the country, each was impressed with the well founded conviction that all that he could do in the way of contraction would be next to imperceptible; and no one ever thought of attempting it, so long as he felt satisfied of the stability of those with whom he dealt. On the contrary, every banker knew, were he to withdraw a portion of his notes, that some of his competitors would most likely have embraced the opportunity of filling up the vacuum so created; and that consequently he should have lost a portion of his business, without in any degree lessening the amount of paper afloat. Hence, in nineteen out of twenty instances, the country banks went on increasing their aggregate issues long after the exchange had been notoriously against the country, and the Bank of England had been striving to pull up. But the moment the pressure extended to them they ran headlong into the opposite extreme, and unreasonable suspicion took the place of blind unthinking confidence. The cry of *sauses qui pout* then became all but universal. A recoil seldom took place without destroying more or fewer of the provincial banks, involving those who held their notes or had deposits in

\* We stated at length the grounds on which such security might be demanded in the previous edition of this dictionary.

their hands, in bankruptcy and ruin; and provided the others succeeded in securing themselves, little attention was usually paid to the interests of those they had taught to look to them for help, who were commonly destroyed by thousands. (See post.)

It is exceedingly difficult to prevent the issue of forged notes. Various schemes have been suggested for this purpose; and though it be hardly possible to suppose that an *inimitable* note will ever be produced, it is contended that by judiciously combining different sorts of engraving, forgery may be rendered so difficult, as to be but rarely attempted. But however this may be, during the period from 1797 to 1819, when the Bank of England issued 1*l.* notes, their forgery was carried on to a great extent. And the desire to check this practice, and to lessen the frequency of capital punishments, appears to have been amongst the most prominent circumstances which led to the return to specie payments in 1821, and the suppression of 1*l.* notes.

(5.) *Bank of England Notes legal tender.*—According to the law as it stood previously to 1834, all descriptions of notes were legally payable at the pleasure of the holder in fulfilment of the standard weight and purity. But the policy of such a regulation was very questionable; and we regard the enactment of the stat. 3 & 4 W<sup>m</sup>. 4. c. 98., which makes Bank of England notes legal tender, every where except at the Bank and its branches, for all sums above 5*l.*, as a great improvement. The unjust liabilities imposed upon the Bank of England by the old system, placed her in a situation of great difficulty and hazard. They obliged her to provide a supply of coin and bullion, not for her own exigencies only, but for those of *all* the country banks; and, what is harder still, they exposed her to be deeply injured by any misconduct on the part of the latter, as well as by the distress in which they might accidentally be involved. In consequence, her free action was at all times in some degree impeded; and her power to render assistance to the banking and mercantile interests in periods of discredit materially diminished. The country banks kept but a small supply of coin in their coffers. They were all, however, holders, to a greater or less extent, of government securities; and whenever any circumstance occurred to occasion a demand upon them for coin, they immediately sold or pledged the whole or a portion of their stock, carried the notes to the Bank to be exchanged, and then carried the specie to the country. Hence, when any suspicions were entertained of the credit of the country banks, or when a panic originated amongst the holders of their notes, as was the case in 1793 and 1825, the whole of them retreated upon the Bank of England, and 700 or 800 *comptes* were opened, to draw off the specie of that establishment, which was thus, it is evident, exposed to the risk of stoppage without having done anything wrong. It was not the drain for gold from abroad, but the drain for gold from the country, that nearly exhausted the Bank's coffers in 1825, and forced her to issue about a million of 1*l.* and 2*l.* notes. The currency could not be in a sound healthy state, while the Bank of England, and, through her, public credit, were placed in so perilous a situation. But the making of Bank of England notes legal tender at all places except the Bank, has tended materially to protect her from the injurious consequences of panics or runs among the holders of country bank paper; and while it does this, it has not, as it appears to us, anyway impaired the securities against over-issue or depreciation.

It has, no doubt, been contended that the measure now referred to might lead to the depreciation of provincial paper; inasmuch as the expense of sending notes from a distance to London, to be exchanged for gold, would prevent any one from demanding Bank of England notes from country banks in good credit, till the value of the notes issued by them was so much depreciated below the value of gold that the difference would more than pay the expense of sending them to London, and bringing gold back. There cannot, however, be the least difference, as respects value, in the provisions, between Bank of England paper, now that it is legal tender, and gold. London being the place where the exchanges are adjusted, the value of money in every part of the empire must depend on its value in it; and *this*, it is plain, is not in any degree affected by the measure under consideration. Formerly the provincial currency, gold as well as paper, might be, and indeed frequently was, depreciated. This was brought about either by an over-issue on the part of the country banks, generally in the first instance the effect, but always in the end the cause, of a rise of prices; or by the issues of the Bank of England being, in consequence of an adverse exchange, narrower sooner or more rapidly than those of the country banks. In either case, the provincial currency being redundant as compared with that of the metropolis, there was a demand on its issuers for bills on London; but it is material to observe, that, unless their credit was suspected, there was not, in such cases, any demand upon them for gold. It is, indeed, obvious that a redundancy of the currency is a defect that cannot be obviated by getting gold from the country banks, unless (as hoarding is out of the question) it be intended to send it abroad; and that may always be done *better and cheaper* by getting from them Bank of England notes, or bills on London. A

local redundancy of the currency may take place now as it has done formerly; and its occurrence cannot be prevented, even though paper were wholly banished from circulation, so long as the whole currency is not supplied from *one* source, and as London is the focus where the exchanges with foreign countries are adjusted. But the statements now made show that it is a radical mistake to suppose that it can take place more readily, or to a greater extent, under the present system than formerly. In this respect no change was made in 1834. And while our ancient security against over-issue was maintained unimpaired, the arrangements then made increased the stability of the Bank of England, and consequently improved our pecuniary system.

If any doubt could possibly remain as to the operation of this system, it would be removed by referring to Scotland. Gold has been practically banished from that country for a long series of years; and yet no one pretends to say that prices are higher in Scotland than in England, or that her currency is depreciated. The Scotch currency is kept at its proper level, not by the check of gold payments, but by the demand for bills on London; and it is as effectually limited in this way as it would be were the banks universally in the habit of exchanging notes for gold. On what grounds, then, is it to be apprehended that the obligation to give Bank of England notes or bills on London will be less effectual in restraining over-issue in Yorkshire or Durham than in Scotland?

A banker who issues notes must keep beside him such a stock of cash and bullion as may be sufficient to answer the demands of the public for their payment. If the value of the cash and bullion in his coffers were equal to the value of his notes in circulation, he would not, it is plain, make any profit; but if he be in good credit, a third, a fourth, or even a fifth part of this sum, will probably be sufficient; and his profit consists of the excess of the interest derived from his notes in circulation over the interest of the sum he is obliged to keep dormant in his strong box, and the expenses of managing his establishment. The Bank of England, as will be afterwards seen, keeps an average stock of coin and bullion equal to a third of her liabilities.

(4.) *Legal description of Bank Notes.*—Bank notes are merely a species of promissory notes. They are subscribed either by the parties on whose account they are issued, or by some one in their employment, whose signature is binding upon them. A Bank of England note for 5*l.* is as follows:—

**Bank of England.**

*I promise to pay Mr. Matt<sup>w</sup> Marshall, or Bearer,  
on Demand, the Sum of Five Pounds.*

1846 Dec<sup>r</sup> 9 London 9 Dec<sup>r</sup> 1846.

*For the Gov<sup>r</sup> and Comp<sup>y</sup> of the*

£ five.

BANK OF ENGLAND.

A. B.

No particular form of words is necessary in a bank note. The essential requisites are, that it should be for a definite sum (in England and Wales not less than 5*l.*, and in Scotland and Ireland not less than 1*l.*), that it should be payable to bearer on demand, and that it should be properly stamped. Promissory notes, though issued by bankers, if not payable to bearer on demand, do not come under the denomination of bank notes; they are not, like the latter, taken as cash in all ordinary transactions; nor are they, like them, assignable by mere delivery.

The circulation of notes for less than 5*l.* was restrained by law (stat. 15 Geo. 3. c. 51.) from 1766 to 1797. In 1808, it was enacted by stat. 48 Geo. 3. c. 88., that all bank notes, promissory notes, or other negotiable instruments for less than 20*s.*, should be absolutely void: a penalty of from 20*s.* to 5*l.*, at the discretion of the justices, being imposed on their issuers. It was enacted by the 7 Geo. 4. c. 6., that the issue of all bank notes or promissory notes for less than 5*l.* by the Bank of England, or by any licensed English bankers, and stamped on the 5th of February, 1826, or previously (after which period such notes were not stamped), should terminate on the 5th of April, 1829.

The stamp duties on bank notes or promissory notes payable on demand are—

Not exceeding	s. d.	Exceeding	s. d.	and not exceeding	s. d.	Exceeding	s. d.	10 0 0 and not exceeding	s. d.	Exceeding	s. d.
1 1 0	-	2 2 0	0 0 10	30 0 0	-	80 0 0	-	100 0 0	0 6 6	30 0 0	0 3 0
2 2 0	-	5 5 0	0 1 3	30 0 0	-	80 0 0	-	100 0 0	0 6 6	30 0 0	0 3 0
5 5 0	-	10 0 0	0 1 9	30 0 0	-	80 0 0	-	100 0 0	0 6 6	30 0 0	0 3 0

Which notes may be reissued after payment, as often as shall be thought fit, provided

they be issued by a banker or person who has taken out a licence, renewable annually, and costing 30*l.*, to issue notes payable to bearer on demand. Any banker or other person issuing such reissuable notes, without being duly licensed, shall forfeit 100*l.* for every offence.—(55 Geo. 3. c. 184. § 27.)

These conditions do not apply to the Bank of England. The stamp duties on the notes of that establishment were formerly compounded for at the rate of 3,500*l.* per million of those in circulation; but the act 7 and 8 Vict. c. 32. has wholly exempted them from all charge on account of stamp duties.

Notes or bills not payable to bearer on demand are not reissuable, under a penalty of 50*l.* For the stamp duties affecting them, see EXCHANGE.

By the 9 Geo. 4. c. 23., English bankers not in the city of London, or within three miles thereof, are authorised to issue promissory notes, and to draw and issue bills of exchange, on unstamped paper, for any sum of 5*l.* or upwards, expressed to be payable to the bearer on demand, or to order at any period not exceeding 7 days after sight (bills may also be drawn at any period not exceeding 21 days after date), upon obtaining licences, costing 30*l.*, to that effect; provided such bills of exchange be drawn upon bankers in London, Westminster, or Southwark; or provided such bills be drawn by any banker or bankers at the place where he or they shall be licensed to issue unstamped notes and bills, upon himself or themselves, or his or their copartner or copartners, payable at any other place where such banker or bankers shall be licensed to issue such notes and bills. Bankers having such licences are to give security, by bond, that they will keep a true account of all promissory notes and bills so issued, and account for the duties on them at the rate of 3*s.* 6*d.* for every 100*l.*, and also for the fractional parts of 100*l.* of the average value of such notes and bills in circulation. Persons post-dating unstamped notes or bills shall, for every such offence, forfeit 100*l.*

(5.) *Legal Effect of the Payment of Bank Notes.*—Notes of the bank of England were not, previously to the act 3 & 4 Will. 4. c. 98., like bills of exchange, mere securities, or documents of debt, but were treated as money or cash in the ordinary course or transactions of business; the receipts given upon their payment being always given as for money. Now, however, they are legal tender, everywhere except at the Bank, for all sums above 5*l.* All notes payable to bearer are assignable by delivery. The holder of a bank note is *prima facie* entitled to its prompt payment, and cannot be affected by the previous fraud of any former holder in obtaining it, unless evidence be given to show that he was privy to such fraud. Such privity may, however, be inferred from the circumstances of the case. To use the words of Lord Tenterden, "If a person take a bill, note, or any other kind of security, under circumstances which ought to excite suspicion in the mind of any reasonable man acquainted with the ordinary affairs of life, and which ought to put him on his guard to make the necessary inquiries, and he do not, then he loses the right of maintaining possession of the instrument against the lawful owner."—(Guildhall, 25th October, 1826.)

Country bank notes are usually received as cash. But though taken as such, if they be presented *in due time* and not paid, they do not amount to a payment, and the deliverer of the notes is still liable to the holder. It is not easy to determine what is a due or reasonable time, inasmuch as it must depend in a great measure on the circumstances of each particular case. On the whole, the safest rule seems to be to present all notes or drafts payable on demand, if received in the place where they are payable, on the day on which they are received, or as soon after as possible. When they have to be transmitted by post for payment, no unnecessary delay should be allowed to intervene.—(*Chitty's Commercial Law*, vol. iii. p. 590.; and the art. CHECK in this Dictionary.)

6. *Distinction between Bank Notes and Bills of Exchange.*—It is common with those who object to any restrictions being laid on the issue of bank notes to represent them as substantially identical with ordinary bills of exchange, and to contend that if it would be imprudent or impracticable to interfere with the issue of the latter, the issue of the former should also be left to the discretion of the parties. The cases, however, are not parallel. It is true that bills of exchange perform in some respects the functions of money; and being transferred from one individual to another make payments much in the same way as if they were bank notes. But though there are, no doubt, certain points in which bills of exchange and bank notes closely resemble each other, there are others, and those too of the greatest importance, in which there is a distinct and material difference between them. Bank notes are issued only by parties licensed for the purpose, or by bankers; they are uniformly payable on demand, or when presented; they are not indorsed by the holder on his paying them away; the party receiving has no claim on the party from whom he received them in the event of the failure of the issuer\*; and every one is thus encouraged, reckoning

\* Practically speaking, this is the fact; but, as seen above, a person paying away a country bank note is liable to be recalled upon for repayment, should the bank fail before it was in the power of the party

on the facility of passing them to others, to accept bank notes, "even though he should doubt the ultimate solvency of the issuers."—(*Thornton on Paper Credit*, p. 172.) Bills, on the contrary, may be drawn by all individuals; they are mostly all made payable at some distant period; and those into whose hands they come, if they be not in want of money, prefer retaining them in their possession, in order that they may get the interest accruing upon them. But the principal distinction between notes and bills is, that the latter are not assignable by mere delivery, but that every individual, in passing a bill to another, has to indorse it, and by doing so makes himself responsible for its payment. "A bill circulates," says Mr. Thornton, "in consequence chiefly of the confidence placed by each receiver of it in the last indorser, his own correspondent in trade; whereas the circulation of a bank note is owing rather to the circumstance of the name of the issuer being so well known as to give it an universal credit." (P. 40.) Nothing, then, can be more inaccurate than to represent bills and notes in the same point of view. If A. pay to B. 100*l.* in satisfaction of a debt, there is an end of the transaction; but if A. pay to B. a bill of exchange for 100*l.*, the transaction is not completed; and, in the event of the bill not being paid by the person on whom it is drawn, B. will have recourse upon A. for its value. It is clear, therefore, that a great deal more consideration is always required, and may be fairly presumed to be given, before any one accepts a bill of exchange in payment, than before he accepts a bank note. The note is payable on the instant, without deduction—the bill not until some future period; the note may be passed to another without incurring any risk or responsibility, whereas every fresh issuer of the bill makes himself responsible for its value. Notes form the currency of all classes, not only of those who are, but also of those who are not engaged in business, very many of whom are, as already seen, without the power to refuse them, and without the means of forming any correct conclusion as to the solvency of the issuers. Bills, on the other hand, pass only, with very few exceptions, among persons engaged in business, who, being fully aware of the risk they run in taking them, reject such as they apprehend might involve them in loss. There is plainly, therefore, a wide and obvious distinction between the two species of currency; and it would be ridiculous to argue that because government is bound to interfere to regulate the issue of the one, it should also regulate the issue of the other.

## II. BANK OF ENGLAND (ACCOUNT OF).

(1.) *Historical Sketch of the Bank.*—This great establishment, which has long been the principal bank of deposit and circulation, not in this country only, but in Europe, was founded in 1694. Its principal projector was Mr. William Paterson, an enterprising and intelligent Scotch gentleman, who was afterwards engaged in the ill-fated colony at Darien. Government being at the time much distressed for want of money, partly from the defects and abuses in the system of taxation, and partly from the difficulty of borrowing, because of the supposed instability of the revolutionary establishment, the bank grew out of a loan of 1,200,000*l.* for the public service. The subscribers, besides receiving eight per cent. on the sum advanced as interest, and 4,000*l.* a year as the expense of management, in all 100,000*l.* a year, were incorporated into a society denominated the *Governor and Company of the Bank of England*. The charter is dated the 27th of July, 1694. It declares, amongst other things, that they shall "be capable in law to purchase, enjoy, and retain to them and their successors, any manors, lands, rents, tenements, and possessions whatsoever; and to purchase and acquire all sorts of goods and chattels whatsoever, wherein they are not restrained by act of parliament; and also to grant, demise, and dispose of the same.

"That the management and government of the corporation be committed to the governor, deputy governor, and twenty-four directors, who shall be elected between the 25th day of March and 25th day of April, each year, from among the members of the Company duly qualified.

"That no dividend shall at any time be made by the said Governor and Company, save only out of the interest, profit, or produce arising by or out of the said capital stock or fund, or by such dealing as is allowed by act of parliament.

"They must be natural-born subjects of England, or naturalised subjects; they shall have in their own name and for their own use, severally, viz.—the governor at least 4,000*l.*, the deputy governor 3,000*l.*, and each director 2,000*l.* of the capital stock of the said corporation.

"That thirteen or more of the said governors and directors (of which the governor or deputy governor must be always one) shall constitute a court of directors, for the management of the affairs of the Company, and for the appointment of all agents and servants which may be necessary, paying them such salaries as they may consider reasonable.

to whom it was paid, using ordinary diligence, to present it. The responsibility seldom exceeds a couple of hours, and can hardly in any case exceed a couple of days. In practice it is never adverted to.

"Every elector must have in his own name and for his own use, 500*l.* or more capital stock, and can only give one vote. He must, if required by any member present, take the oath of stock; or the declaration of stock, in case he be one of the people called Quakers.

"Four general courts to be held in every year; in the months of September, December, April, and July. A general court may be summoned, at any time, upon the requisition of nine proprietors, duly qualified as electors.

"The majority of electors in general courts have the power to make and constitute by-laws and ordinances for the government of the corporation, provided that such by-laws and ordinances be not repugnant to the laws of the kingdom, and be confirmed and approved, according to the statutes in such case made and provided."

The corporation is prohibited from engaging in any sort of commercial undertaking other than dealing in bills of exchange, and in gold and silver. It is authorised to advance money upon the security of goods or merchandise pledged to it; and to sell by public auction such goods as are not redeemed within a specified time.

It was also enacted in the same year in which the Bank was established, by statute 6 William and Mary, c. 20., that the Bank "shall not deal in any goods, wares, or merchandises (except bullion), or purchase any lands or revenues belonging to the crown, or advance or lend to their Majesties, their heirs or successors, any sum or sums of money by way of loan or anticipation, or any part or parts, branch or branches, fund or funds of the revenue, now granted or belonging, or hereafter to be granted to their Majesties, their heirs and successors, other than such fund or funds, part or parts, branch or branches of the said revenue only, on which a credit of loan is or shall be granted by parliament." And in 1697 it was enacted, that the "common capital and principal stock, and also the real fund of the Governor and Company, or any profit or produce to be made thereof, or arising thereby, shall be exempted from any rates, taxes, assessments, or impositions whatsoever, during the continuance of the Bank; and that all the profit, benefit, and advantage, from time to time arising out of the management of the said corporation, shall be applied to the uses of all the members of the said corporation of the Governor and Company of the Bank of England, rateably and in proportion to each member's part, share, and interest in the common capital and principal stock of the said Governor and Company hereby established.

It was further enacted, in 1697, that the forgery of the Company's seal, or of any sealed bill or bank note, should be felony without benefit of clergy, and that the making of any alteration or erasure in any bill or note should also be felony.

In 1696, during the great recoinage, the Bank was involved in considerable difficulties, and was even compelled to suspend payment of her notes, which were at a heavy discount. Owing, however, to the judicious conduct of the directors, and the assistance of government, the Bank got over the crisis. But it was at the same time judged expedient, in order to place her in a situation the better to withstand any adverse circumstances that might afterwards occur, to increase her capital from 1,200,000*l.* to 2,201,171*l.* In 1708, the directors undertook to pay off and cancel one million and a half of Exchequer bills they had circulated two years before, at 4½ per cent., with the interest on them, amounting in all to 1,775,028*l.*; which increased the permanent debt due by the public to the Bank, including 400,000*l.* then advanced in consideration of the renewal of the charter, to 3,375,028*l.*, for which they were allowed 6 per cent. The Bank capital was then also doubled or increased to 4,402,343*l.* But the year 1708 is chiefly memorable, in the history of the Bank, for the act that was then passed, which declared, that during the continuance of the corporation of the Bank of England, "it should not be lawful for any body politic, erected or to be erected, other than the said Governor and Company of the Bank of England, or for any persons whatsoever, united or to be united in covenant or partnership, exceeding the number of 6 persons, in that part of Great Britain called England, to borrow, owe, or take up any sum or sums of money on their bills or notes payable on demand, or in any less time than 6 months from the borrowing thereof."—This proviso, which has had so powerful an operation on banking in England, is said to have been elicited by the Mine-venture Company having commenced banking business, and begun to issue notes.

It has been pretty generally imagined, from the private banking companies in the metropolis not issuing notes, that they were legally incapacitated from doing so. But the clause in the act of 1708, which has been the only restriction on the issue of notes, applied generally to all England, and had no peculiar reference to London. The fact that banks with 6 or fewer partners have not issued notes in the metropolis, as well as in the provinces, is, therefore, ascribable either to their being aware that their notes would obtain no considerable circulation concurrently with those of a great association like the Bank of England, or from their believing that their issue would not be profitable.

We subjoin

An Account of the successive Renewals of the Charter, of the Conditions under which these Renewals were made, and of the Variations in the Amount and Interest of the Permanent Debt due by Government to the Bank, exclusive of the Dead Weight.

Year of Renewal.	Conditions under which Renewals were made, and Permanent Debt contracted.	Permanent Debt.
		£ s. d.
1694.	Charter granted under the act 5 & 6 Will. 3. c. 30., redeemable upon the expiration of 12 months' notice after the 1st of August, 1703, upon payment by the public to the Bank of the demands therein specified. Under this act the Bank advanced to the public 1,300,000 <i>l.</i> , in consideration of their receiving an annuity of 100,000 <i>l.</i> a year, viz. 4 per cent. interest, and 4,000 <i>l.</i> for management	1,300,000 0 0
1697.	Charter continued by the 8 & 9 Will. 3. c. 20. till 12 months' notice after 1st of August, 1710, on payment, &c. Under this act the Bank took up and added to their stock 1,001,171 <i>l.</i> Exchequer bills and tallies.	
1708.	Charter continued by 7 Anne, c. 7. till 12 months' notice after 1st of August, 1733, on payment, &c. Under this act the Bank advanced 400,000 <i>l.</i> to government, without interest; and delivered up to be cancelled 1,775,027 <i>l.</i> 17 <i>l.</i> 10 <i>d.</i> Exchequer bills, in consideration of their receiving an annuity of 106,501 <i>l.</i> 13 <i>s.</i> being at the rate of 8 per cent.	2,175,027 17 10
1713.	Charter continued by 12 Anne, stat. 1. c. 11. till 12 months' notice after 1st August, 1743, on payment, &c. In 1716, by the 3 Geo. 1. c. 8., Bank advanced to government, at 5 per cent. And by the same act, the interest on the Exchequer bills cancelled in 1708 was reduced from 6 to 5 per cent. In 1721, by 6 Geo. 1. c. 21., the South Sea Company were authorised to sell 300,000 <i>l.</i> government annuities, and corporations purchasing the same at 36 years' purchase were authorised to add the amount to their capital stock. The Bank purchased the whole of these annuities at 30 years' purchase Interest was payable on this sum to Midsummer, 1727, and thereafter, 4 per cent. At different times between 1727 and 1738, both inclusive, the Bank received from the public, on account of permanent debt, 2,375,027 <i>l.</i> 17 <i>l.</i> 10 <i>d.</i> , and advanced to it on account of ditto, 3,000,000 <i>l.</i> ; difference	3,000,000 0 0 4,000,000 0 0 2,375,027 17 10 275,027 17 10
1743.	Debt due by the public in 1738 - - - - - Charter continued by 13 Geo. 2. c. 13. till 12 months' notice after 1st of August, 1764, on payment, &c. Under this act the Bank advanced 1,600,000 <i>l.</i> , without interest, which being added to the original advance of 1,300,000 <i>l.</i> , and the 400,000 <i>l.</i> advanced in 1710, bearing interest at 6 per cent., reduced the interest on the whole to 3 per cent. In 1746, under authority of 10 Geo. 2. c. 6., the Bank delivered up to be cancelled 986,000 <i>l.</i> of Exchequer bills, in consideration of an annuity of 39,472 <i>l.</i> , being at the rate of 3 per cent. In 1749, the 23 Geo. 2. c. 6. reduced the interest on the 4 per cent. annuities held by the Bank to 3 per cent. for 7 years from the 30th of December, 1750, and thereafter to 3 per cent.	9,100,000 0 0 1,600,000 0 0 986,000 0 0
1764.	Charter continued by 4 Geo. 3. c. 23. till 12 months' notice after 1st of August, 1786, on payment, &c. Under this act the Bank paid into the Exchequer 110,000 <i>l.</i> free of all charge.	
1781.	Charter continued by 21 Geo. 3. c. 60. till 12 months' notice after 1st of August, 1812, on payment, &c. Under this act the Bank advanced 3,000,000 <i>l.</i> for the public service for 3 years at 3 per cent.	
1800.	Charter continued by 40 Geo. 3. c. 28. till 12 months' notice after 1st of August, 1833, on payment, &c. Under this act the Bank advanced to government 3,000,000 <i>l.</i> for 6 years without interest; but in pursuance of the recommendation of the committee of 1807, the advance was continued without interest till 6 months after the signature of a definitive treaty of peace. In 1816, the Bank, under authority of the act 56 Geo. 3. c. 96., advanced 3 per cent. to be repaid on or before 1st of August, 1833.	3,000,000 0 0
1833.	Charter continued by 3 & 4 Will. 4. c. 98. till 12 months' notice after 1st of August, 1855, with a proviso that it may be dissolved on 12 months' notice after 1st of August, 1845, on payment, &c. This act directs that in future the Bank shall deduct 120,000 <i>l.</i> a year from their charge on account of the management of the public debt, and that a fourth part of the debt due by the public to the Bank, or 3,671,700 <i>l.</i> , be paid off Permanent advance by the Bank to the public, bearing interest at 3 per cent., independent of the advances on account of dead weight, &c.	14,686,800 0 0 3,671,700 0 0
1844.	Charter continued by 7 & 8 Vict. c. 32. till 12 months after the 1st of August, 1855, on payment, &c. This act, an abstract of which is given in a subsequent part of this article, exempts the notes of the bank from all charge on account of stamp-duty, and directs that in future the bank shall deduct 120,000 <i>l.</i> a year from the charge on account of the management of the public debt. It also separates the banking from the issuing department of the establishment, and effects other important changes.	11,015,100 0 0

The charter of the Bank of England, when first granted, was to continue for eleven years certain, or till a year's notice after the 1st of August, 1703. The charter was further prolonged in 1697. In 1708, the Bank having advanced 400,000*l.* for the

public service, without interest, the exclusive privileges of the corporation were prolonged till 1733. And in consequence of various arrangements made at different times, the exclusive privileges of the Bank have been continued by successive renewals, till a year's notice after the 1st of August, 1855. — (See table opposite.)

(For further details as to this subject, see the *Appendix No. 1. of the Report of 1833 on the Renewal of the Bank Charter*, and the Acts of Parliament referred to in it; see also *Postlethwait's History of the Revenue*, pp. 301—310; and *Fairman on the Funds*, 7th ed. pp. 88—89, &c.)

The capital of the Bank on which dividends are paid has never exactly coincided with, though till of late it seldom differed very materially from, the permanent advance by the Bank to the public. We have already seen that it amounted, in 1708, to 4,402,343*l*. Between that year and 1727 it was increased to near 9,000,000*l*. In 1746, it amounted to 10,780,000*l*. From this period it underwent no change till 1782, when it was increased 8 per cent., or to 11,642,400*l*. It continued stationary at this sum down to 1816, when it was raised to 14,553,000*l*. by an addition of 25 per cent. from the profits of the Bank, under the provisions of the act 56 Geo. 3. c. 96. The act for the renewal of the charter, in 1833, the 3 & 4 Will. 4. c. 98., directed that the sum of 3,671,700*l*. of the debt due to the bank should be repaid by the public, giving the directors power, if they thought fit, to deduct it from the bank capital. But this was not done; the sum being reinvested in a government annuity, terminable in 1860.

The Bank of England has been frequently affected by panics amongst the holders of its notes. In 1745, the alarm occasioned by the advance of the Highlanders under the Pretender as far as Derby, led to a run upon the Bank; and in order to gain time to concert measures for averting the run, the directors adopted the device of paying in shillings and sixpences! But they derived a more effectual relief from the retreat of the Highlanders; and from a resolution agreed to at a meeting of the principal merchants and traders of the city, and very numerous signed, declaring the willingness of the subscribers to receive Bank notes in payment of any sum that might be due to them, and pledging themselves to use their utmost endeavours to make all their payments in the same medium.

During the tremendous riots in June, 1780, the Bank incurred considerable danger. Had the mob attacked the establishment at the commencement of the riots, the consequences might have proved fatal. Luckily, however, they delayed their attack till time had been afforded for providing a force sufficient to insure its safety. Since that period a considerable military force is nightly placed in the interior of the Bank, as a protection in any emergency that may occur.

In the latter part of 1792 and beginning of 1793, there was in consequence of a previous over-issue on their part, a general run on most of the private banks; and about a *third* part of these establishments were forced to stop payments. This led to a considerable demand for coin from the Bank.

The year 1797, is, however, the most important epoch in the recent history of the Bank. Owing partly to events connected with the war in which we were then engaged — to loans to the Emperor of Germany — to bills drawn on the treasury at home by the British agents abroad — and partly, and chiefly, perhaps, to the advances most unwillingly made by the Bank to government, which prevented the directors from having a sufficient control over their issues, — the exchanges became unfavourable in 1795, and in that and the following year large sums in specie were drawn from the Bank. In the latter end of 1796 and beginning of 1797, considerable apprehensions were entertained of invasion, and rumours were propagated of descents having been actually made on the coast. In consequence of the fears that were thus excited, runs were made on the provincial banks in different parts of the country; and some of them having failed, the panic became general, and extended itself to London. Demands for cash poured in upon the Bank from all quarters; and on Saturday, the 25th of February, 1797, she had only 1,272,000*l* of cash and bullion in her coffers, with every prospect of a violent run taking place on the following Monday. In this emergency an order in council was issued on Sunday the 26th, prohibiting the directors from paying their notes in cash until the sense of parliament had been taken on the subject. And after parliament met, and the measure had been much discussed, it was agreed to continue the restriction till six months after the signature of a definitive treaty of peace.

As soon as the order in council prohibiting payments in cash appeared, a meeting of the principal bankers, merchants, traders, &c. of the metropolis, was held at the Mansion House, when a resolution was agreed to and very numerous signed, pledging, as had been done in 1745, those present to accept, and to use every means in their power to cause Bank notes to be accepted as cash in all transactions. This resolution tended to allay the apprehensions that the restriction had excited.

Parliament being sitting at the time, a committee was immediately appointed to examine into the affairs of the Bank; and their report put to rest whatever doubts might have been entertained with respect to the solvency of the establishment, by

X. for the

showing that at the moment when the order in council appeared the Bank was possessed of property to the amount of 15,513,690*l.*, after all claims upon her had been deducted.

Much difference of opinion has existed with respect to the policy of the restriction in 1797; but, considering the peculiar circumstances under which it took place, its expediency seems abundantly obvious. The run did not originate in any over-issue of Bank paper; but grew entirely out of political causes. So long as the alarms of invasion continued, it was clear that no Bank paper immediately convertible into gold would remain in circulation. And as the Bank, though possessed of ample funds, was without the means of instantly retiring her notes, she might, but for the interference of government, have been obliged to stop payment; an event which, had it occurred, must have produced consequences in the last degree fatal to the public interests.

It had been generally supposed previously to the passing of the Restriction Act, that Bank notes would not circulate unless they were immediately convertible into cash; but the event showed, conformably to principles that have since been fully explained, that this was not really the case. Though the notes of the Bank of England were not, at the passing of the Restriction Act, publicly declared to be legal tender, they were rendered so in practice, by being received as cash in all transactions on account of government, and of the vast majority of individuals. For the first three years of the restriction, their issues were so moderate that they not only kept on a par with gold, but actually bore a small premium. In the latter part of 1800, however, their quantity was so much increased that they fell to a discount of 8 per cent. as compared with gold, but they soon after rose nearly to par; and it was not until 1808 that the decline of their value excited any considerable attention. Early in 1810, they were at a discount of about 13½ per cent; and this extraordinary fall having attracted the attention of the legislature, the House of Commons appointed a committee to inquire into the circumstances by which it had been occasioned. The committee examined several witnesses; and in their report, which was drawn up with considerable ability, they justly ascribed the fall to the over-issue of Bank paper, and recommended that the Bank should be obliged to resume cash payments within two years. This recommendation was not, however, acted upon; and the value of Bank paper continued to decline, as compared with gold, till 1814.

At the period when the restriction on cash payments took place in 1797, it is supposed that there were about 280 country banks in existence; but so rapidly were these establishments multiplied, that they amounted to above 900 in 1813. The price of corn, influenced partly by the depreciation of the currency, and the facility with which discounts were obtained, but far more by deficient harvests, and the unprecedented difficulties which the war threw in the way of importation, had risen to an extraordinary height during the five years ending with 1813. But the harvest of that year being unusually productive, and the intercourse with the Continent being then also renewed, prices, influenced by both circumstances, sustained a very heavy fall in the latter part of 1813, and the beginning of 1814. And this fall having ruined a considerable number of farmers, and produced a general want of confidence, such a destruction of provincial paper took place as has rarely been paralleled. In 1814, 1815, and 1816, no fewer than 240 country banks stopped payment; and *eighty-nine* commissions of bankruptcy were issued against these establishments, being at the rate of *one* commission against every *ten and a half* of the total number of banks existing in 1813.

The great reduction that had been thus suddenly and violently brought about in the quantity of country bank paper, by extending the field for the circulation of Bank of England paper, raised its value in 1817 nearly to a par with gold. The return to cash payments being thus facilitated, it was fixed, in 1819, by the act 59 Geo. 3. c. 78., commonly called Sir Robert Peel's Act, that they should take place in 1823. But to prevent any future over-issue, and at the same time to render the measures as little burdensome as possible, it was enacted, in pursuance of a plan suggested by the late Mr. Ricardo, that the Bank should be obliged, during the interval from the passing of the act till the return to specie payments, to pay her notes, if required, in bars of standard bullion of not less than sixty ounces weight. This plan was not, however, acted upon during the period allowed by law; for, a large amount of gold having been accumulated at the Bank, the directors preferred recommencing specie payments on the 1st of May, 1821.—(See Table I. for an account of the price of bullion, the depreciation of paper, &c. from 1800 to 1821.)

A great diversity of opinion has been entertained with respect to the policy of the return to the old standard, in 1819. By one party it has been represented as a wise and politic measure; they contend that Sir Robert Peel's Act not only put an end to those fluctuations in the value of money, which had previously been productive of great mischief, and gave effect to the solemn engagements into which the public had entered

with the national creditor, but that it did this without adding anything material to the national burdens. But another, and also a very numerous party, take a totally different view of this measure; they contend that the public was not really bound to return to cash payments at the old standard at the termination of the war; that the return has very greatly enhanced the value of the currency; and that this enhancement, by adding proportionally to the fixed burdens laid on the industrious classes, has been most injurious to their interests. It will, however, be found in this, as in most cases of the sort, that the statements of both parties are exaggerated; and that if, on the one hand, the measure has not been so advantageous as its eulogists represent, neither, on the other, has it been nearly so injurious as its enemies would have us believe.

In discussing this question, it is material to observe that the value of paper, which had been in 1815 and 1816 about 16½ per cent. below that of gold, rose in 1817 and 1818, from the causes already mentioned, without any interference whatever on the part of government, to within little more than 2½ per cent. of the value of gold; and that in 1819 the depreciation only amounted to 4½ per cent.—(See Table I.) It is, therefore, quite ludicrous to ascribe to the act of 1819, as is often done, the whole rise that has taken place in the value of the currency since the peace, seeing that the currency had been for three years previously to its enactment from 12½ to 14½ per cent. above its value in 1815, and from 21 to 23 per cent. above its value in 1814! The main object which the promoters of the act of 1819 had in view, was to sustain the value of the currency at the point to which it had recovered itself without legislative interference. This, however, could not be done without recurring to specie payments; and the difference of 4½ per cent. that obtained in 1819 between the value of gold and paper, was not deemed sufficiently considerable to warrant a departure from the old standard, and from the acts engaging to restore it.

But it is alleged that those who suppose that the act of 1819 added only 4½ per cent. to the value of the currency mistake altogether the effect of the measure. It is admitted, indeed, that paper was then only 4½ per cent. less valuable than gold; but by reverting to specie payments, we made an unexpected purchase of thirty millions of gold; and it is affirmed that this novel and large demand, concurring simultaneously with the contraction of paper in several of the Continental states, and with a falling off in the supply of bullion from the mines, had the effect of adding very greatly to the value of gold itself, and consequently to that of the currency. It is very difficult, or rather, perhaps, impossible, to determine the precise degree of credit that should be attached to this statement; but, while we incline to think that it is well founded to a certain extent, we see no grounds for believing that it is so to anything like the extent that has been stated. The gold imported into Great Britain, to enable the Bank to resume specie payments, was not taken from any particular country or district, but was drawn from the market of the world; and considering the vast extent of the supply whence it was derived, it is against all reason to suppose that its value could be materially influenced by our purchases. We doubt, too, whether the contraction of the paper currency of some of the Continental states, and the substitution of specie in its stead, was not more than balanced by the cessation of the demand for specie for the military chests of the different armies, by the stoppage of the practice of hoarding, and the greater security consequent to the return of peace. And with respect to the falling off in the supplies from the mines, it is not a circumstance, supposing it to have had a considerable influence, that parliament could take into account. It could neither determine the extent to which bullion had been raised, nor at what point the rise would stop, nor how soon it might again begin to decline. The diminution in the supply of bullion had then continued for too short a period, and its influence on the value of gold was much too uncertain, to make it a ground for interfering in any degree with the standard. And notwithstanding the falling off in the productiveness of the American mines still continues, the diminution thence arising has been since more than compensated by the extraordinary increase that has taken place of late years in the produce of the Russian mines and washings.

The decline in the price of most articles that has taken place since the peace has been often referred to, as a conclusive proof of the great enhancement in the value of bullion. But the inference is by no means so certain as has been represented. The prices of commodities are as much affected by changes in the cost of their production, as by changes in the quantity of money afloat. Now, there is not one of the great articles of commerce the cost of which has not been considerably reduced, or which has not been supplied from new and more productive sources, within the last few years. The growth of corn, for example, has been vastly extended in France, Prussia, and generally throughout the Continent, by the splitting of large estates, and the complete subversion of the feudal system; and the reduction of its price in this country has been wholly owing to the astonishing improvements made in agriculture, and to the increase of

imports from Ireland. The fall in the price of wool is satisfactorily accounted for by the introduction and rapid multiplication of Merino sheep in Germany, where they seem to succeed even better than in Spain; and by the large and rapidly growing imports from Australia, where little more than 50 years ago there was not a single sheep! And a very large portion, if not the whole, of the fall in the price of colonial products, is admitted, on all hands, to be owing to the destruction of the monopoly system, and the vast extension of cultivation in Cuba, Brazil, Java, Louisiana, &c. Although, therefore, we do not deny that the falling off in the supply of bullion from the mines must, at first, have had some influence over prices, we hold it to be the greatest imaginable error to ascribe to it the entire fall that took place after the peace. Were its effect rated at from 5 to 10 per cent., we believe it would be very considerably overstated.—(See art. *PRECIOUS METALS*.)

On the whole, therefore, we are disposed to approve of the conduct of those who framed the act of 1819. That it added somewhat to the burdens of the industrious classes, and has been in so far hostile to the public interests, it seems impossible to doubt; but it has not been so in anything like the degree which its enemies represent. The period, too, when it was passed is now so distant, that the existing engagements amongst individuals have almost all been formed with reference to the altered value of the currency; so that whatever injury it may have occasioned in the first instance must be nearly gone by. To modify or change the standard at this late period, would not be to repair injustice, but to commit it afresh. At the end of the war, the circumstances were considerably different. The standard had been really abandoned for the previous 18 years; and perhaps we may now say, that it would have been better, all things considered, had the mint price of bullion been raised in 1815, to the market price. But having surmounted all the difficulties attendant upon the restoration of the old standard, and maintained it since 1821, it would be in the last degree impolitic to subject it to new alterations. Should the country become, at any future period, unable to make good its engagements, it will better consult its honour and its interest by fairly compounding with its creditors, than by endeavouring to slip from its engagements by resorting to the underhand and dishonest expedient of enfeebling the standard.

The price of corn, which had been very much depressed in 1821 and 1822, rallied in 1823; and this circumstance contributed, along with others peculiar to that period, to promote an extraordinary rage for speculation. The issues of the country banks being in consequence far too much extended, the currency became redundant in the autumn of 1824; and the exchanges having been depressed, a drain for gold began to operate upon the Bank of England. But the directors of the Bank having entered, in the early part of that year, into an engagement with government to pay off such holders of 4 per cent. stock as might dissent from its conversion into a 3½ per cent. stock, they were obliged to advance a considerable sum on this account after the depression of the exchange. This tended to counteract the effect of the drain on the Bank for gold; and, in consequence, the London currency was not very materially diminished till September, 1825. When, however, the continued demand of the public on the Bank for gold had rendered money scarce in the metropolis, the pressure speedily extended to the country. Such of the provincial banks—and they were a numerous class—as had been originally established without sufficient capital, or had conducted their business upon erroneous principles, began to give way the moment they experienced an increased difficulty of obtaining pecuniary accommodations in London. The alarm, once excited, soon became general; and confidences and credit were, for a while, almost wholly suspended. In the short space of 6 weeks, above 70 banking establishments were destroyed, notwithstanding the very large advances made to them by the Bank of England; and the run upon the Bank for cash to supply the exigencies of the country banks was so heavy, that she was well nigh drained of all the coin in her coffers, and obliged, as already remarked, to issue about a million of 1*l.* and 2*l.* notes.

To guard against a recurrence of the wide-spread mischief and ruin produced by this and the previous bankruptcies of the country banks, it was resolved, in 1826, with consent of the Bank of England, to make a change in the law of 1708, limiting the number of partners in banking establishments to 6 only. And it was accordingly enacted, that thenceforth any number of partners might form themselves into associations to carry on the business of banking, including the issue of notes, any where not within *sixty-five miles* of London. The directors of the Bank of England came, at the same time, to the resolution of establishing branches in some of the principal towns; and these have since been established in Gloucester, Manchester, Birmingham, Leeds, Liverpool, Bristol, Exeter, Newcastle-upon-Tyne, Hull, Norwich, &c.

The branch banks have been highly useful, but the benefits which it was supposed would result from the formation of joint-stock banks have not been so great as was anticipated.—(See *post*, *BANKS (ENGLISH PROVINCIAL)*.) At best, the

formation of joint-stock banks was but a feeble palliative of inveterate disorders. It was quite illusory to expect to make any real improvement upon the system of country banking in England, by the mere introduction of a plan for *allowing* banking establishments with large capitals to be set on foot. There had always been, and were at the moment, a great number of such establishments in England. What we really wanted was the adoption of a system that should suppress all local issues, or exclude the possibility of notes being discredited, by *preventing* all individuals or associations from issuing such as had not been previously guaranteed.

Besides attempting to lessen the frequency of bankruptcy among the country banks by repealing the law limiting the number of partners, it was further resolved, in 1826, to prohibit the issue of 1*l.* notes. The policy and effects of this measure gave rise to much dispute. It seems clear that it went far to shut up one of the most convenient channels by which the inferior class of country bankers contrived to get their notes into circulation, and must, in so far, have done good. But there were many other channels still open to them; and to imagine that this measure was to place the provincial currency on that solid basis on which it should be placed, was quite visionary. There were no notes under 5*l.* in circulation in 1792; and yet fully *one third* part of the country banks then in existence became bankrupt! The truth is, as already stated, that it is not possible to guard against loss and fraud from the proceedings of the country bankers, otherwise than by compelling them to give security for their issues; and as security may as easily be given for 1*l.* notes as for those of 5*l.*, the suppression of the former does not appear to be essential. No doubt can, however, be entertained, that the representations of the extreme injury occasioned by the withdrawal of 1*l.* notes were greatly exaggerated; — though it is at the same time obvious that the means of the bankers to make advances, as well as the profit derived from making them, must both have been diminished by the suppression of the small notes; and it would be foolish to deny that this circumstance must have occasioned some loss and inconvenience to many individuals.

These remarks are meant to apply only to the case of the country banks. The extraordinary extent to which the forgery of the 1*l.* notes of the Bank of England was carried affords a sufficient vindication of the policy of their suppression. But the comparatively limited circulation of the country banks, and perhaps we may add the greater attention paid to the manner in which their notes were engraved, hindered their forgery from becoming injuriously prevalent.

(3.) *New System of 1844.* — The defects inherent in the old system were again fully developed in 1836 and 1837. It is needless now to enter upon any investigation of the circumstances which led to the overtrading of these years; but it was carried to a great extent both here and in the U. States. In nothing, however, was this more strikingly evinced, than in the rapid increase of joint-stock banks; their number, which in 1834-35 had amounted in England and Wales to 55, having risen in 1835-36 to no fewer than 100! Many of these were banks of issue, and in consequence of the large additions that were thus suddenly made to the number of notes afloat, and still more to the number of bills, checks, and other substitutes for money, the currency became redundant and the exchange depressed; and the deficient harvests of 1838 and 1839, conspiring with this redundancy, occasioned a farther fall in the exchange, and a severe drain upon the Bank of England for gold. But while the latter was narrowing her issues by supplying the exporters of bullion with gold in exchange for notes, the country banks went on increasing their issues! What the former did by contracting on the one hand, the latter more than undid by letting out on the other. The vacuum created by the withdrawal of Bank of England paper, was immediately filled up, and made to overflow, by the issue of a more than equal amount of provincial paper; so that had it not been for the rise in the rate of interest, and the other repressive measures adopted by the Bank, the probability is that she might have gone on paying away bullion for notes, till she was drained of her last sixpence, without in any degree affecting the exchange; and as it was, the bullion in her coffers in August 1839 was reduced to 2,420,000*l.*, so that we narrowly escaped a tremendous crisis.

This perilous experience having again forcibly attracted the public attention to the state of our banking system, Sir Robert Peel was encouraged to attempt its improvement. The clause in the act 3 & 4 Will. IV. c. 98, for the renewal of the charter in 1833, which gave to parliament power to revise or cancel it in 1845, afforded a legitimate opportunity for the introduction of the new system. But, however desirable, the total suppression of the issue of notes by joint stock and private banking companies, would have been a measure too much opposed to popular prejudices, and to the real or supposed interests of a large and powerful class, to have had any chance of being carried; and there also would have been great, though inferior, difficulties in the way of the plan for taking security. It was, indeed, indispensable in attempting to obviate the defects inherent in our banking system, to proceed cautiously, to respect, in as

far as possible, existing interests, and to avoid taking any step that might excite the fears or suspicions of the public; the grand difficulty being to reconcile the introduction of such a course with the adoption of any plan that would obviate in any considerable degree the defects complained of. Happily this difficult problem has been dexterously and satisfactorily solved by Sir Robert Peel; the measures he introduced and carried through Parliament in 1844 and 1845, for the improvement of our banking system, having been so skillfully contrived as to provoke little opposition, at the same time that they effected very extensive and (as we think) most beneficial changes.

The measures in question consist of the Act 7 and 8 Vict. c. 32., which refers to the Bank of England, and the English country banks; and the acts 8 & 9 Vict. c. 37, 38., referring to the banks of Scotland and Ireland. The principal object of these statutes has been to obviate the chances of over-issue and of sudden fluctuations in the quantity and value of money, by limiting the power to issue notes payable on demand, and by making the amount of such notes in circulation vary more nearly than previously with the amount of bullion in the possession of the issuers. Sir Robert Peel adopted, in dealing with the Bank of England, the proposal made by Mr. Loyd, in 1837, for effecting a complete separation between the issuing and banking departments of that establishment. And while the directors are left at liberty to manage the latter at discretion, their management of the former, or issue department, is subjected to what seems to be a well-devised system of restraint. The Bank is allowed to issue 14,000,000*l.* of notes upon securities (of which the debt of 11,015,100*l.* lent by her to government is a part); and whatever paper the issue department may at any time issue over and above this maximum amount of securities, it must have an equal amount of coin and bullion in its coffers.\* Hence it is impracticable for the issue department to increase its issues without, at the same time, proportionally increasing its stock of coin and bullion; or to diminish the latter without proportionally diminishing the amount of paper supplied to the public and the banking department. And, therefore, if the latter issued the whole notes assigned to it, the total amount issued by the issue department and the amount in circulation would be identical; and it might under such circumstances be truly said that, in so far as the currency consists of Bank of England notes payable on demand, it varied in amount and value as it would do were it wholly metallic, and, consequently, by being so closely identified with the standard, realised the *beau idéal* of a paper currency.

But, though the currency approaches to, it has not arrived at this degree of perfection. The public does not deal alone with the issue, but also, and to a far greater extent, with the banking department. And this latter department retained such a portion of the notes issued to it by the former, under the 2nd clause of the 7 & 8 Vict. c. 32., as was supposed at the time to be sufficient to carry on its business, their amount having since varied with the varying demands for bullion, the sales and purchases of securities, &c. But it is sufficient, in illustration of what is now stated, to observe that during the week ended the 4th of November, 1848, notes to the amount of 26,796,660*l.* had been issued to the public and the banking department, of which the latter had 8,242,575*l.* in its coffers, making the sum in the hands of the public 18,554,085*l.* And as it is sometimes supposed that the banking department might issue this sum of 8,242,575*l.*, or the spare notes at any time in its coffers, in the discount of bills, or any other way, it is concluded that there is still room for some, though but little, derangement of the currency from mistaken proceedings on the part of the Bank; and this, no doubt, may be sometimes true, at least to some extent. But it is idle to suppose that the banking department could carry on business without a large reserve of notes or of coin. This department may have, owing to a variety of circumstances, to meet a drain for deposits; and as it is very unsafe to trust to the sale of securities in periods of discredit, a very considerable supply of notes or of bullion, or of both, can never be advantageously or safely dispensed with.

This shows the little weight to be attached to the statements of those who contend that the late measure has laid no real restraint on the issues of the Bank, because, say they, she has a large reserve of unissued notes which she might legitimately throw on the market. But in truth and reality she can do nothing of the sort. A reserve is indispensable, not only to her safety, but to her ability to carry on banking business; and it is at present (November, 1848) sufficiently narrow. More vigilance and caution are now required on the part of the Bank Directors than formerly; for otherwise the banking department of the Bank may be reduced to the greatest difficulties, without its being possible for it to obtain any assistance from the issue department, how able soever the latter might be to render it. This was strikingly evinced in the autumn of

\* A clause is inserted in the act allowing the Bank to increase her issue upon securities in the event of her notes being used instead of those of any or all of the existing banks of issue.

1847; and nothing but the exercise of a proper degree of foresight and caution can prevent its recurrence. The gold can now be obtained from the issue department except in exchange for notes; nor can the latter be obtained from it except in exchange for gold. Hence it is no longer, as formerly, in the power of the Bank to create paper money at pleasure to supply the place of cash in any emergency in which she may be involved; and instead of less she requires to act with more circumspection under the new system than under the old.

But though the check on the over-issue of Bank notes be thus nearly effectual, it appears rather singular that no check should be established on the issue of bank post-bills, which amounted to 1,048,503*l.* on the 4th November, 1848, and which are and may be substituted for notes. No doubt, however, were the Bank (which is hardly to be imagined) to abuse the privilege of issuing post-bills, by making advances in them which she could not have made in notes, measures would be taken to prevent the abuse; and perhaps, on the whole, it was as well to postpone devising means for the prevention of what seems so unlikely to occur.

Weekly returns are now published of the issues of the Bank, and of the securities, bullion, &c., in her possession. The sum to be deducted by the Bank from the charge on account of the management of the national debt is in future to be 180,000*l.* instead of 120,000*l.* a year, as fixed by the act 3 & 4 Will. 4. c. 98. The charter is to be continued till twelve months' notice after the 1st of August, 1855.

The provisions made in this act for restraining the country circulation were, perhaps, still more important. The maximum future issue of the joint-stock and other banks in England and Wales was limited to the average amount of the circulation of each during the twelve months preceding the 27th of April, 1844. It was further enacted that no new bank shall be established for the issue of notes, and that the names of the partners in joint-stock and other banks shall be periodically published.

The regulations in the statutes relating to banking in Scotland and Ireland are nearly similar. The maximum amount of notes to be issued by the banks of both countries is, in time to come, not to exceed the average amount which each bank had in circulation during the twelve months ending the 1st of May, 1845. Certain returns, including amongst others the amount of gold and silver coin held by the banks, the names of the partners, &c., are to be periodically published. The small-note currency of Scotland has not been affected by the measure.

It is impossible to doubt that these regulations interpose a formidable obstacle to over issue; and that, consequently, they discourage overtrading, and tend to reduce both the number and the violence of those commercial revolutions and changes in the value of money, that have always been, and must necessarily continue to be, productive of the greatest mischief. No one ever pretended to say that these or any other measures which could be adopted with respect to the currency would wholly prevent unsafe speculation and overtrading. These may originate in an endless variety of circumstances; but in times past the tendency to speculation and gambling, when once set on foot, was, in most cases, powerfully stimulated by the facility which banks then possessed of issuing additional quantities of paper; and of that facility they are now all but deprived. It is, perhaps, true, that the fair and legitimate influence of the acts now referred to may be in some degree counteracted by the circulation to a greater extent than formerly of bills and other sorts of paper not payable on demand but at short dates; and it is not improbable that sooner or later the question may arise, whether any regulations should be adopted in regard to the issue of such paper. In so far, however, as respects the issue of *paper money*, or notes payable on demand, the regulations in the act of 1844 appear to have left little to be desired. No doubt, also, numbers of the private and other banks that now issue notes will from time to time wind up their affairs; and as no new banks of issue can be established in their stead, the vacuum caused by the withdrawal of their notes will be supplied by those of the Bank of England; so that a gradual progress will be made towards the desirable consummation of having only one bank of issue.

It is sometimes contended, by those opposed to the policy of limiting the issues, that they never can be in excess so long as they are payable on demand. Such, however, is not the case; notes payable, and *really paid*, on demand cannot, it is true, fall below the value of specie in the country in which they are issued; but the check of payment in specie does not, in fact, begin to operate till their over-issue has depreciated the value of the whole currency, gold as well as paper, in such country, below its level in the surrounding countries, and till, consequently, the exchange becomes unfavourable, and it is of advantage to export gold. Then, of course, the over-issue is stopped, but such stoppage is almost always accompanied by a great deal of public distress and inconvenience; while it by no means necessarily follows that any considerable portion of the loss thence arising will fall on those banks by whose misconduct or over-issue the fall in the exchange and the demand for bullion may have been occasioned.

The measures adopted in 1844, though they deeply affected many powerful private interests, were, as already stated, passed with little difficulty, and were very generally approved of. In this respect, however, the public opinion has, to some extent, changed; and the act of 1844 has been charged with having aggravated the pressure experienced by the mercantile world in 1847. But we are satisfied that there is no real room or ground for any such imputation. The crisis of 1847 was a consequence, partly of the railway mania of the previous year, and partly of the failure of the potato crops of 1845 and 1846. The failure in the latter year deprived fully two-thirds of the people of Ireland, and a considerable portion, also, of those of Great Britain, of their accustomed supplies of food. In consequence of this deficiency, and of Government having come forward to provide the means for its relief, there was an unprecedented importation of all sorts of corn; and the demand for bullion for exportation to meet this importation, occurring simultaneously with a vast railway expenditure, pecuniary accommodations were obtained with the greatest difficulty, and the rate of interest rose to an extraordinary height. Instead, however, of being increased by the act of 1844, it is abundantly certain that the operation of the latter contributed to alleviate the severity of the crisis. The restraints it imposed on the issues of the country banks had hindered them from embarking on any great extent in railway adventures, so that they were better able to assist their customers; and it also prevented the Bank of England from attempting to meet the exigencies of the case, otherwise than by raising the rate of interest, and restricting her issues. And besides being the natural and proper, these were, in fact, the only means by which the value of bullion could be raised in this country, its demand for foreign remittance checked, and the exchange turned in our favour. A great many mercantile houses that had been trading upon very insufficient capitals, or which had previously been virtually insolvent, were, of course, swept off during the crisis; and the alarm that was thereby occasioned, though for the most part without any good foundation, gave rise to a species of panic. During the prevalence of the latter, Government consented (25th October, 1847) to a temporary suspension of the act of 1844; but there is now, we believe, little doubt that this was an unwise proceeding. When it took place the violence of the crisis had abated. The drain for gold for exportation had not only ceased, but had begun to set in our favour; and the probability is, that in a very few days all alarm would have passed off, without the dangerous precedent which was set by the interference of ministers. Hence, in our view of the matter, the experience afforded by the crisis of 1847 tells strongly in favour of the act of 1844. But for its influence, it is most probable that the Bank would have attempted to meet the demand for bullion without raising the rate of interest, at least to the extent to which she did raise it; and if so, we should have been exposed to the imminent risk of a suspension of cash payments. If, therefore, the act of 1844 should be subjected to any modifications, it is to be hoped that they may be such as may tend to carry out and strengthen the principles on which it is founded.

ABSTRACT OF THE ACT 7 & 8 VIOT. c. 32. FOR REGULATING THE ISSUE OF BANK NOTES, AND FOR GIVING TO THE BANK OF ENGLAND CERTAIN PRIVILEGES FOR A LIMITED PERIOD. 19 JULY, 1844.

*Bank to establish a separate Department for the Issue of Notes.*—Whereas it is expedient to regulate the issue of bills or notes payable on demand: and whereas the act 3 & 4 WILL. 4. c. 98. gave to the corporation of the governor and company of the Bank of England certain privileges for a limited period, under certain conditions; and it is expedient that the privileges of exclusive banking therein mentioned should be continued to the said governor and company of the bank of England, with such alterations as are herein contained, upon certain conditions: be it therefore enacted, that from and after the 31st day of August, 1844, the issue of promissory notes of the governor and company of the bank of England, payable on demand, shall be separated and thenceforth kept wholly distinct from the general banking business of the said governor and company; and the business of and relating to such issue shall be thenceforth conducted and carried on by the said governor and company in a separate department, to be called "The Issue Department of the Bank of England," subject to the rules and regulations hereinafter contained; and it shall be lawful for the court of directors of the said governor and company, if they shall think fit, to appoint a committee or committees of directors for the conduct and management of such issue department of the bank of England, and from time to time to remove the members, and define, alter, and regulate the constitution and powers of such committee, as they shall think fit, subject to any bye-laws, rules, or regulations which may be made for that purpose: provided nevertheless, that the said issue department shall always be kept separate and distinct from the banking department of the said governor and company.—§ 1.

*Management of the Issue by Bank of England.*—Upon the 31st August, 1844, there shall be transferred, appropriated, and set apart by the said governor and company to the issue department of the bank of England securities to the value of 14,000,000*l.*, whereof the debt due by the public to the said governor and company shall be and be deemed a part; and there shall also at the same time be transferred, appropriated and set apart by the said governor and company to the said issue department so much of the gold coin and gold and silver bullion then held by the bank of England as shall not be required by the banking department thereof; and thereupon there shall be delivered out of the said issue department into the said banking department of the bank of England such an amount of bank of England notes as, together with the bank of England notes then in circulation, shall be equal to the aggregate amount of the securities, coin, and bullion so transferred to the said issue department of the bank of England; and the whole amount of bank of England notes then in circulation, including those delivered to the banking department of the bank of England as aforesaid, shall be deemed to be issued on the credit of such securities, coin, and bullion so appropriated and set apart to the said issue department; and from thenceforth it shall not be lawful for the said governor and company to increase the amount of securities

for the time being in the said issue department, save as herein-after is mentioned, but it shall be lawful for the said governor and company to diminish the amount of such securities, and again to increase the same to any sum not exceeding in the whole the sum of 14,000,000*l.*, and so from time to time as they shall see occasion; and from and after such transfer and appropriation to the said issue department as aforesaid it shall not be lawful for the said governor and company to issue bank of England notes, either into the banking department of the bank of England or to any persons or person whatsoever, save in exchange for the bank of England notes or for gold or silver bullion received or purchased for the said issue department under the provisions of this act, or in exchange for securities acquired and taken in the said issue department under the provisions herein contained: provided always, that it shall be lawful for the said governor and company in their banking department to issue all such bank of England notes as they shall at any time receive from the said issue department or otherwise, in the same manner in all respects as such issue would be lawful to any other person or persons:—§ 9.

**Proportion of Silver Bullion to be retained in the Issue Department.**—Whereas it is necessary to limit the amount of silver bullion on which it shall be lawful for the issue department of the bank of England to issue bank of England notes; be it therefore enacted, that it shall not be lawful for the bank of England to retain in the issue department of the said bank at any one time an amount of silver bullion exceeding 1-11th part of the gold coin and bullion at such time held by the bank of England in the issue department:—§ 8.

**All Persons may demand of the Issue Department Notes for Gold Bullion.**—From and after the 31st day of August, 1844, all persons shall be entitled to demand from the issue department of the bank of England bank of England notes in exchange for gold bullion, at the rate of 3*l.* 17*s.* 3*d.* per ounce of standard gold provided always, that the said governor and company shall in all cases be entitled to require such gold bullion to be melted and assayed by persons approved by the said governor and company at the expense of the parties tendering such gold bullion:—§ 4.

**Power to increase Securities in the Issue Department, and issue additional Notes.**—If any banker who is at the time of the passing of this act issuing his own bank notes shall cease to issue his own bank notes, it shall be lawful for H. M. in council at any time after the cessation of such issue, upon the application of the said governor and company, to authorise and empower the said governor and company to increase the amount of securities in the said issue department beyond the total sum or value of 14,000,000*l.*, and to empower to issue additional bank of England notes to an amount not exceeding such increased amount of securities specified in such order in council, and so from time to time: provided always, that such increased amount of securities specified in such order in council shall in no case exceed the proportion of 1-11th the amount of bank notes which the banker so ceasing to issue may have been authorized to issue under the provisions of this act; and every such order in council shall be published in the next succeeding London Gazette:—§ 5.

**Account to be rendered by the Bank of England.**—An account of the amount of bank of England notes issued by the issue department of the bank of England, and of gold coin and of gold and silver bullion respectively, and of securities in the said issue department, and also an account of the capital stock, and the deposits, and of the money and securities belonging to the said governor and company in the banking department of the bank of England, on some day in every week to be fixed by the commissioners of stamps and taxes, shall be transmitted by the said governor and company weekly to the said commissioners in the form prescribed in the schedule hereto annexed marked (A), and shall be published by the said commissioners in the next succeeding London Gazette in which the same may be conveniently inserted:—§ 6.

**Bank of England exempted from Stamp Duty upon their Notes.**—From and after the said 31st day of August, 1844, the said governor and company of the bank of England shall be released and discharged from the payment of any stamp duty, or composition in respect of stamp duty, upon or in respect of their promissory notes payable to bearer on demand; and all such notes shall therefore be and continue free and wholly exempt from all liability to any stamp duty whatsoever:—§ 7.

**Bank to allow 180,000*l.* per Annum.**—From and after the said 31st day of August, 1844, the payment or deduction of the annual sum of 180,000*l.*, made by the said governor and company under the provisions of the said act passed in the 4th year of the reign of his late Majesty King William IV., out of the sums payable to them for the charges of management of the public unredeemed debt, shall cease, and in lieu thereof the said governor and company, in consideration of the privileges of exclusive banking, and the exemption from stamp duties, given to them by this act, shall, during the continuance of such privileges and such exemption respectively, but no longer, deduct and allow to the public, from the sums now payable by law to the said governor and company for the charges of management of the public unredeemed debt, the annual sum of 180,000*l.*, any thing in any act or acts of parliament, or in any agreement, to the contrary notwithstanding; provided always, that such deduction shall in no respect prejudice or affect the rights of the said governor and company to be paid for the management of the public debt at the rate and according to the terms provided in the act 48 G. 3. c. 4, intitled "An Act to authorise the advancing for the Public Service, upon certain Conditions, a proportion of the balance remaining in the Bank of England, for the Payment of Unclaimed Dividends, Annuities, and Lottery Prizes, and for regulating the Allowances to be made for the Management of the National Debt":—§ 8.

**Bank to allow the Public the Profits of increased Circulation.**—In case, under the provisions hereinafore contained, the securities held in the said issue department of the bank of England shall at any time be increased beyond the total amount of 14,000,000*l.*, then and in each and every year in which the same shall happen, and so long as such increase shall continue, the said governor and company shall, in addition to the said annual sum of 180,000*l.*, make a further payment or allowance to the public, equal in amount to the net profit derived in the said issue department during the current year from such additional securities, after deducting the amount of the expenses occasioned by the additional issue during the same period, which expenses shall include the amount of any and every commission or payment to be made by the said governor and company to any banker in consideration of the discontinuance at any time of the issue of bank notes by such banker; and such further payment or allowance to the public by the said governor and company shall, in every year while the public shall be entitled to receive the same, be deducted from the amount by law payable to the said governor and company for the charges of management of the unredeemed public debt, in the same manner as the said annual sum of 180,000*l.* is hereby directed to be deducted therefrom:—§ 9.

**No new Bank of Issue.**—From and after the passing of this act no person other than a banker who on the 31st day of May, 1844, was lawfully issuing his own bank notes shall make or issue bank notes in any part of the U. K.:—§ 10.

**Restriction against Issue of Bank Notes.**—From and after the passing of this act it shall not be lawful for any banker to draw, accept, make, or issue, in England or Wales, any bill of exchange or promissory note or engagement for the payment of money payable to bearer on demand, or to borrow, owe, or take up, in England or Wales, any sums or sum of money on the bills or notes of such banker payable to bearer on demand, save and except that it shall be lawful for any banker who was on the 6th day of May, 1841, carrying on the business of a banker in England or Wales, and was then lawfully issuing, in England or Wales, his own bank notes, under the authority of a licence to that effect, to continue to issue such notes to the extent and under the conditions herein-after mentioned, but not further or otherwise; and the right of any company or partnership to continue to issue such notes shall not be in any manner prejudiced or affected by any change which may hereafter take place in the personal composition

of such company or partnership, either by the transfer of any shares or share therein, or by the admission of any new partner or member thereto, or by the retirement of any present partner or member therefrom; provided always, that it shall not be lawful for any company or partnership now consisting of only 6 or less than 6 persons to issue bank notes at any time after the number of partners therein shall exceed 6 in the whole.—§ 11.

*Bankers ceasing to issue Notes may not resume.*—If any banker in any part of the U. K. who after the passing of this act shall be entitled to issue bank notes shall become bankrupt, or shall cease to carry on the business of a banker, or shall discontinue the issue of bank notes, either by agreement with the governor and company of the bank of England or otherwise, it shall not be lawful for such banker at any time thereafter to issue any such notes.—§ 12.

*Existing Banks of issue to continue under certain Limitations.*—Every banker claiming under this act to continue to issue bank notes in England or Wales shall, within 1 month next after the passing of this act, give notice in writing to the commissioners of stamps and taxes at their head office in London of such claim, and of the place and name and firm at and under which such banker has issued such notes during the 12 weeks next preceding the 27th day of April last; and thereupon the said commissioners shall ascertain if such banker was, on the 6th day of May, 1844, carrying on the business of a banker, and lawfully issuing his own bank notes in England or Wales, and if it shall so appear, then the said commissioners shall proceed to ascertain the average amount of the bank notes of such banker which were in circulation during the said period of 12 weeks preceding the 27th day of April last, according to the returns made by such banker in pursuance of the act 4 & 5 Vict. c. 60, intitled "An Act to make further provision relative to the Returns to be made by Banks of the Amount of their Notes in circulation," and the said commissioners or any 2 of them shall certify under their hands to such banker the said average amount, when so ascertained as aforesaid; and it shall be lawful for every such banker to continue to issue his own bank notes after the passing of this act; provided nevertheless, that such banker shall not at any time after the 10th day of October, 1844, have in circulation upon the average of a period of 4 weeks, to be ascertained as herein-after mentioned, a greater amount of notes than the amount so certified.—§ 13.

*Provision for united Banks.*—If it shall be made to appear to the commissioners of stamps and taxes that any 2 or more banks have, by written contract or agreement (which contract or agreement shall be produced to the said commissioners), become united within the 12 weeks next preceding such 27th day of April as aforesaid, it shall be lawful for the said commissioners to ascertain the average amount of the notes of each such bank in the manner herein-before directed, and to certify the average amount of the notes of the 2 or more banks so united as the amount which the united bank shall thereafter be authorised to issue subject to the regulations of this act.—§ 14.

*Duplicate Certificate to be published in the Gazette.*—The commissioners of stamps and taxes shall, at the time of certifying to any banker such particulars as they are herein-before required to certify, also publish a duplicate of their certificate in proof in the next succeeding London Gazette in which the same may be conveniently inserted; and the Gazette in which such publication shall be made shall be conclusive evidence in all courts whatsoever of the amount of bank notes which the banker named in such certificate or duplicate is by law authorised to issue and to have in circulation as aforesaid.—§ 15.

*If Banks become united, Commissioners to certify the Amount of Bank Notes which each Bank was authorised to issue.*—In case it shall be made to appear to the commissioners of stamps and taxes, at any time hereafter, that any 2 or more banks, each such bank consisting of not more than 6 persons, have, by written contract or agreement (which contract or agreement shall be produced to the said commissioners), become united subsequent to the passing of this act, it shall be lawful to the said commissioners upon the application of such united bank, to certify, in manner herein-before mentioned, the aggregate of the amounts of bank notes which such separate banks were previously authorised to issue, and so from time to time; and every such certificate shall be published in manner herein-before directed, and from and after such publication the amount therein stated shall be and be deemed to be the limit of the amount of bank notes which such united bank may have in circulation; provided always, that it shall not be lawful for any such united bank to issue bank notes at any time after the number of partners therein shall exceed 6 in the whole.—§ 16.

*Penalty on Banker issuing in excess.*—If the monthly average circulation of bank notes of any banker, taken in the manner herein-after directed, shall at any time exceed the amount which such banker is authorised to issue and to have in circulation under the provisions of this act, such banker shall in every such case forfeit a sum equal to the amount by which the average monthly circulation, taken as aforesaid, shall have exceeded the amount which such banker was authorised to issue and to have in circulation as aforesaid.—§ 17.

*Issuing Bank to render Accounts.*—Every banker in England and Wales who, after the 10th day of October, 1844, shall issue bank notes, shall on some 1 day in every week after the 19th day of October, 1844 (such day to be fixed by the commissioners of stamps and taxes) transmit to the said commissioners an account of the amount of the bank notes of such banker in circulation on every day during the week ending on the next preceding Saturday, and also an account of the average amount of the bank notes of such banker in circulation during the same week; and on completing the first period of 4 weeks, and so on completing each successive period of 4 weeks, every such banker shall annex to such account the average amount of bank notes of such banker in circulation during the said 4 weeks, and also the amount of bank notes which such banker is authorised to issue under the provisions of this act; and every such account shall be verified by the signature of such banker or his chief cashier, or, in the case of a company or partnership, by the signature of a managing director or partner or chief cashier of such company or partnership, and shall be made in the form to this act annexed marked (B); and so much of the said return as states the weekly average amount of the notes of such bank shall be published by the said commissioners in the next succeeding London Gazette in which the same may be conveniently inserted; and if any such banker shall neglect or refuse to render any such account in the form and at the time required by this act, or shall at any time render a false account, such banker shall forfeit the sum of 100*l.* for every such offence.—§ 18.

*Mode of ascertaining the average Amount of Bank Notes of each Banker.*—For the purpose of ascertaining the monthly average amount of bank notes of each banker in circulation, the aggregate of the amount of bank notes of each such banker in circulation on every day of business during the first complete period of 4 weeks next after the 10th day of October, 1844, such period ending on a Saturday, shall be divided by the number of days of business in such four weeks, and the average so ascertained shall be deemed to be the average of bank notes of each such banker in circulation during such period of 4 weeks, and so in each successive period of 4 weeks, and such average is not to exceed the amount certified by the commissioners of stamps and taxes as aforesaid.—§ 19.

*Commissioners empowered to cause the Books of Bankers to be inspected.*—Whereas, in order to insure the rendering of true and faithful accounts of the amount of bank notes in circulation, as directed by this act, it is necessary that the commissioners of stamps and taxes should be empowered to cause the books of bankers issuing such notes to be inspected, as herein-after mentioned, be it therefore enacted, that all and every the book and books of any banker who shall issue bank notes under the provisions of this act, in which shall be kept, contained, or entered any account, minute, or memorandum or relating to the bank notes issued or to be issued by such banker, or of or relating to the amount of such notes in circulation from time to time, or any account, minute, or memorandum the sight or inspection whereof may tend to secure the rendering of true accounts of the average amount of such notes in circulation, as directed by this act, or to test the truth of any such account, shall be open for the inspection and

examination, at all seasonable times, of any officer of stamp duties authorised in that behalf by writing, signed by the commissioners of stamps and taxes or any 2 of them; and every such officer shall be at liberty to take copies of any such book or account as aforesaid; and if any banker or other person keeping any such book, or having the custody or possession thereof, or power to produce the same, shall, upon demand made by any such officer, showing (if required) his authority in that behalf, refuse to produce any such book to such officer for his inspection and examination, or to permit him to inspect and examine the same, or to take copies thereof or extracts therefrom, or of or from any such account, minutes or memorandums as aforesaid, contained, or entered therein, every such banker or other person so offending shall for every such offence forfeit the sum of 100*l.*: provided always, that the said commissioners shall not exercise the powers aforesaid without the consent of the Lords of the Treasury. — § 20.

*All Bankers to return Names once a Year to the Stamp Office.* — Every banker in England and Wales who is now carrying on or shall hereafter carry on business as such shall, on the 1st day of January in each year, or within 15 days thereafter, make a return to the commissioners of stamps and taxes at their head office in London of his name, residence, and occupation, or, in the case of a company or partnership, of the name, residence, and occupation of every person composing or being a member of such company or partnership, and also the name of the firm under which such banker, company, or partnership carry on the business of banking, and of every place where such business is carried on; and if any such banker, company, or partnership shall omit or refuse to make such return within 15 days after the said 1st day of January, or shall wilfully make other than a true return of the persons as herein required, every banker, company, or partnership so offending shall forfeit and pay the sum of 50*l.*: and the said commissioners of stamps and taxes shall on or before the 1st day of March in every year publish in some newspaper circulating within each town or county respectively a copy of the return so made by every banker, company, or partnership carrying on the business of bankers within such town or county respectively, as the case may be. — § 21.

*Bankers to take out a separate Licence for every Place at which they issue Notes or Bills.* — Every banker who shall be liable by law to take out a licence from the commissioners of stamps and taxes to authorise the issuing of notes or bills, or a separate and distinct licence for every town or place in which he shall, by himself or his agent, issue any notes or bills requiring such licence to authorise the issuing thereof, any thing in any former act contained to the contrary thereof notwithstanding; provided always, that no banker who on or before the 6th day of May, 1844, had taken out four such licences, which on the said last-mentioned day were respectively in force, for the issuing of any such notes or bills at more than 4 separate towns or places, shall at any time hereafter be required to take out or to have in force at one and the same time more than 4 such licences to authorise the issuing of such notes or bills at all or any of the same towns or places specified in such licences in force on the said 6th day of May, 1844, and at which towns or places respectively such bankers had on or before the said last-mentioned day issued such notes or bills in pursuance of such licences or any of them respectively. — § 22.

*Compensation to certain Bankers named in the Schedule.* — Whereas the several bankers named in the schedule hereto annexed marked (C) have ceased to issue their own bank notes under certain agreements with the governor and company of the bank of England; and it is expedient that such agreements should cease and determine on the 31st day of December next, and that such bankers should receive by way of compensation such composition as hereafter mentioned; and a list of such bankers, and a statement of the maximum sums in respect of which each such banker is to receive compensation, hath been delivered to the commissioners of stamps and taxes, signed by the chief cashier of the bank of England; be it therefore enacted, that the several agreements subsisting between the said governor and company and the several bankers mentioned in the schedule hereto relating to the issue of bank of England notes shall cease and determine on the 31st day of December next; and from and after that day the said governor and company shall pay and allow to the several bankers named in the schedule hereto marked (C), so long as such banker shall be willing to receive the same, a composition at and after the rate of 1*l.* per cent per annum on the average amount of the bank of England notes issued by such bankers respectively and actually remaining in circulation, to be ascertained as follows; (that is to say,) on some day in the month of April, 1845, to be determined by the said governor and company, an account shall be taken of the bank of England notes delivered to such bankers respectively by the said governor and company within 3 months next preceding, and of such of the said bank of England notes as shall have been returned to the bank of England, and the balance shall be deemed to be the amount of the bank of England notes issued by such bankers respectively and kept in circulation; and a similar account shall be taken at the expiry of 3 calendar months; and the average of the balances ascertained on taking 4 such accounts shall be deemed to be the average amount of bank of England notes issued by such bankers respectively and kept in circulation during the year 1845, and on which amount such bankers are respectively to receive the aforesaid composition of 1 per cent. for the year 1845; and similar accounts shall be taken in each succeeding year; but in each year such accounts shall be taken in different months from those in which the accounts of the last preceding year were taken, and on different days of the month, such months and days to be determined by the said governor and company; and the amount of the composition payable as aforesaid shall be paid by the said governor and company out of their own funds; and in case any difference shall arise between any of such bankers and the governor and company of the bank of England in respect of the composition payable as aforesaid, the same shall be determined by the Chancellor of the Exchequer for the time being, or by some person to be named by him, and the decision of the Chancellor of the Exchequer, or his nominee, shall be final and conclusive; provided always, that it shall be lawful for any banker named in the schedule hereto annexed marked (C) to discontinue the receipt of such composition as aforesaid, but no such banker shall by such discontinuance as aforesaid thereby acquire any right or title to issue bank notes. — § 23.

*Bank of England to be allowed to compound with Issuing Banker.* — It shall be lawful for the said governor and company to agree with every banker who under the provisions of this act shall be entitled to issue bank notes, to allow to such banker a composition at the rate of 1 per cent. per annum on the amount of bank of England notes which shall be issued and kept in circulation by such banker, as a consideration for his relinquishment of the privilege of issuing his own bank notes; and all the provisions herein contained for ascertaining and determining the amount of composition payable to the several bankers named in the schedule hereto marked (C) shall apply to all such other bankers with whom the said governor and company are hereby authorized to agree as aforesaid; provided that the amount of composition payable to such bankers as last aforesaid shall in every case in which an increase of securities in the issue department shall have been authorized by any order in council be deducted out of the amount payable by the said governor and company to the public under the provisions herein contained; provided always, that the total sum payable to any banker under the provisions herein contained by way of composition as aforesaid, in any 1 year, shall not exceed, in case of the bankers mentioned in the schedule hereto marked (C), 1 per cent. on the several sums set against the names of such bankers respectively in the list and statement delivered to the commissioners of stamps as aforesaid, and in the case of other bankers shall not exceed 1 per cent. on the amount of bank notes which such bankers respectively would otherwise be entitled to issue under the provisions herein contained. — § 24.

*Compositions to cease on 1st August 1856.* — All the compositions payable to the several bankers mentioned in the schedule hereto marked (C), and such other bankers as shall agree with the said governor and company to discontinue the issue of their own bank notes as aforesaid, shall, if not previously determined by the act of such banker as herein-before provided, cease and determine on the 1st day of August, 1856, or on any earlier day on which parliament may prohibit the issue of bank notes. — § 25.

*Banks within Sixty-five Miles of London may accept, &c. Bills.*—From and after the passing of this act it shall be lawful for any society or company or any persons in partnership, though exceeding six in number, carrying on the business of banking in London, or within six miles thereof, to draw, accept, or endorse bills of exchange, not being payable to bearer on demand, any thing in the herein-before recited act passed in the 4th year of the reign of his said majesty King William IV., or in any other act, to the contrary notwithstanding.—§ 26.

*Bank to enjoy Privileges, subject to Redemption.*—The said governor and company of the bank of England shall have and enjoy such exclusive privilege of banking as is given by this act, upon such terms and conditions, and subject to the termination thereof at such time and in such manner as by this act is provided and specified; and all and every the powers and authorities, franchises, privileges, and advantages, given or recognised by this act recited act, 3 & 4 Will. 4. c. 98, as belonging to or enjoyed by the said governor and company of the bank of England, or by any subsequent act or acts of parliament, shall be and the same are hereby declared to be in full force, and continued by this act, except so far as the same are altered by this act; subject nevertheless to redemption upon the terms and conditions following; viz. at any time upon 12 months' notice to be given after the 1st day of August, 1856, and upon repayment by parliament to the said governor and company or their successors of the sum of 11,015,100*l.*, being the debt now due from the public to the said governor and company, without any deduction, discount, or abatement whatsoever, and upon payment to the said governor and company and their successors of all arrears of the sum of 100,000*l.* per annum, in the last-mentioned act mentioned, together with the interest or annuities payable upon the said debt or in respect thereof, and also upon repayment of all the principal and interest which shall be owing unto the said governor and company and their successors upon all such tallies, exchequer orders, exchequer bills, or parliamentary funds which the said governor and company or their successors shall have remaining in their hands or be entitled to at the time of such notice to be given as last aforesaid, then and in such case, and not till then, the said exclusive privileges of banking granted by this act shall cease and determine at the expiration of such notice of 12 months; and any vote or resolution of the house of commons, signed under the hand of the speaker of the said house in writing, and delivered at the public office of the said governor and company, shall be deemed and adjudged to be a sufficient notice.—§ 27.

*Interpretation Clause.*—The term "bank notes" used in this act shall extend and apply to all bills or notes for the payment of money to the bearer on demand other than bills or notes of the governor and company of the bank of England; and the term "bank of England notes" shall extend and apply to the promissory notes of the governor and company of the bank of England payable to bearer on demand; and the term "banker" shall extend and apply to all corporations, societies, partnerships, and persons, and every individual person carrying on the business of banking, whether by the issue of bank notes or otherwise, except only the governor and company of the bank of England; and the word "person" used in this act shall include corporations; and the singular number in this act shall include the plural number, and the plural number the singular, except where there is any thing in the context repugnant to such construction; and the masculine gender in this act shall include the feminine, except where there is any thing in the context repugnant to such construction.—§ 28.

SCHEDULE A.

An Account pursuant to the Act 7 & 8 Vict. cap. 92. for the Week ending on Saturday the 9th of January, 1847.

<i>Issue Department.</i>			
Notes issued . . . . .	- 27,552,100	Government debt . . . . .	- 11,015,100
		Other securities . . . . .	- 2,284,200
		Gold coin and bullion . . . . .	- 11,481,448
		Silver bullion . . . . .	- 2,769,552
			- 27,552,100

Dated the 14th of January, 1847.

(Signed) M. MARSHALL, Chief Cashier.

*Banking Department.*

Proprietors' capital . . . . .	- 14,255,000	Government securities (including Dead Weight Annuity) . . . . .	- 12,757,326

and that it can only be safely undertaken under very peculiar circumstances. It should always be borne in mind that however a drain for gold may originate, the fact of its existence is of itself a conclusive proof that gold is more valuable abroad than here, and consequently that the currency is redundant and ought to be diminished. Under such circumstances it is the imperative duty of the Directors, in order to provide for the safety of the Bank, to prevent the vacuum caused by the exchange of bullion for notes from being again filled up by the issue of fresh notes. This may be done in various ways; but the best and surest way is by raising the rate of discount so as to lessen the number of applicants for loans.—(See post.) It is at such periods, however, that the applications for assistance are the most urgent; and it is exceedingly difficult to yield to them, and at the same time to enforce that systematic and continuous reduction of the issues that is now indispensable to reduce the currency to its proper level and to restore the exchange to par. Unquestionably the Bank allowed the stock of bullion in her coffers to be reduced in 1839 a great deal too low. And though, perhaps, as things turned out, less hardship was in the end inflicted on individuals than if the directors had adhered more to the stern path of duty, still it is extremely hazardous to trust in matters of such vast importance to the chapter of accidents; and we incline to think that in this, as in most other cases, the safest plan, or the systematic reduction of the issues whenever the exchange becomes unfavourable, is that also which, speaking generally, is most advantageous to all classes. And this, as already seen, is now all but imperative on the Bank.

In 1839, and we believe, also, on a previous occasion, the Bank negotiated credits abroad, and endeavoured to restore the exchange to par by selling bills on the Continent. The policy of this device gave rise to a good deal of discussion at the time; but in the particular cases it appears to us to have been most judicious; and we incline, also, to think that under the old system the same course might and should have been followed on various occasions. This device is now less necessary; but we may still easily conceive occasions when it might be advantageous. What merchants want during an adverse exchange is good foreign bills, it being only in default of such that they export bullion; and the Bank, by supplying them with such bills, and getting, of course, her notes in exchange, is able to diminish her issues quite as effectually as if her notes were sent in for bullion. Another advantage of this plan is, that no one knows when it is in operation, and, consequently, that it goes far to obviate that internal discredit and alarm that are apt to be produced when the stock of bullion in the Bank is reduced unusually low. In fact, had the Bank not acted, in part at least, on this plan in 1839, the probability is that she must have suspended payments.

No doubt the Bank would be exposed, if she adopted this plan, to the contingency of losing by her foreign securities in the event of the breaking out of hostilities, or of the occurrence of any event by which their value might be reduced. These events may, however, be in general foreseen and provided against; and if the Bank's investments were judiciously made, not in one only but in several quarters, the risk they would involve does not appear to be at all equivalent to the advantage. Perhaps, as the law now stands, there may be legal objections to the Bank's holding foreign securities; but if it be expedient that she should do so, the law might be easily altered.

The amount of the discounts of private paper at the Bank and her branches varies, as already seen, greatly in different periods; and depends, indeed, wholly on contingent and accidental circumstances. Thus on the 1st of January, 1839, the bills discounted in London amounted to only 396,000*l.*, whereas on the 3d of December of the same year they amounted to 3,926,000*l.*

The annual average loss by bad debts on the discounts of the Bank of England in London, from 1791 to 1831, both inclusive, was 31,698*l.*—(*Appen. to Rep. on Bank Charter, No. 60.*)

*Advances by the Bank to Government.*—These are made on account of the produce of taxes not yet received, and on the security of the Exchequer bills, &c. They varied, from 1792 down to 1810, from about 10,000,000*l.* to about 16,000,000*l.* During the remainder of the war, and down to 1820, they were a good deal larger; but in 1819 provision was made for reducing the amount of these advances; and they do not at present, excluding the permanent advance on account of the dead weight, exceed a fourth part of their amount in 1820. They are represented by the Exchequer bills and deficiency bills in the hands of the Bank.

*Balances of Public Money.*—In point of fact, however, a very large part of these advances has been nominal only, or has been virtually cancelled by the balances of public money in the hands of the Bank. Thus, from 1806 to 1810, both inclusive, the average advances to government amounted to 14,492,970*l.* But the average balance of public money in possession of the Bank during the the same period amounted to about 11,000,000*l.*; so that the real advance was equal only to the difference between these two sums, or to about 3,500,000*l.* This statement completely negatives, as Mr. Tooke

has justly stated, the supposition so commonly entertained and reasoned upon as a point beyond doubt, that the Bank was rendered, by the restriction, a mere engine in the hands of government for facilitating its financial operations.—(*First Letter to Lord Grenville*, p. 64.)

The Bank being enabled to employ the greater part of the balances of public money in her hands as capital, they have formed one of the main sources of the profit she has derived from her transactions with the public. This subject was brought very prominently forward in the Second Report of the Committee of the House of Commons on Public Expenditure in 1807. And it was agreed in the same year, that the Bank should, in consideration of the advantages derived from the public balances, continue the loan of 3,000,000*l.* made to government in 1800 for 6 years, without interest, on the same terms, till 6 months after the signature of a definitive treaty of peace. In 1816, this sum was finally incorporated with the debt due by government to the Bank, at an interest of 3 per cent.

*Management of Public Debt.*—Previously to 1786, the Bank received an allowance on this account—that is, for trouble in paying the dividends, superintending the transfer of stock, &c., of 562*l.* 10*s.* a million. In 1786, this allowance was reduced, to 450*l.* a million, the Bank being, at the same time, entitled to a considerable allowance for her trouble in receiving contributions on loans, lotteries, &c. This, however, though long regarded as a very improvident arrangement on the part of the public, was acquiesced in till 1808, when the allowance on account of management was reduced to 340*l.* per million on 600,000,000*l.* of the public debt; and to 300*l.* per million on all that it exceeded that sum, exclusive of some separate allowances for annuities, &c. The impression, however, was still entertained, that the allowances for management should be further reduced. In consequence the act 3 & 4 Will. 4. c. 98. directed that 120,000*l.* a year should be deducted from their amount; and the late act, the 7 & 8 Vict. c. 32. directs that this deduction shall be increased to 180,000*l.* During the year ended the 5th of January 1846 the Bank received 93,111*l.* 19*s.* 10*d.* for the management of the public debt, and annuities.

It should be observed, that the responsibility and expense incurred by the Bank in managing the public debt are very great. The temptation to the commission of fraud in transferring stock from one individual to another, and in the payment of the dividends, is well known; and notwithstanding the skilfully devised system of checks adopted by the Bank for its prevention, she has frequently sustained very great losses by forgery and otherwise. In 1803, the Bank lost, through a fraud committed by one of her principal cashiers, Mr. Astlett, no less than 340,000*l.*; and the forger, Fauntleroy the banker cost her a still larger sum! At an average of the 10 years ending with 1831, the Bank lost, through forgeries on the public funds, 40,204*l.* a year.\*—(*Report on Bank Charter*, Appen. p. 165.)

The total sums paid by the public to the Bank on account of the loans raised, Exchequer bills undred, transfer of 3½ per cent. stock, &c. from 1793 to 1820, both included, amounted to 426,795*l.* 1*s.* 11*d.*—(*Parl. Paper* No. 81. Sess. 1822.)

*Dead Weight.*—Besides the transactions alluded to, the Bank entered, on the 20th of March, 1823, into an engagement with government with respect to the public pensions and annuities, or, as they have been more commonly termed, the *dead weight*. At the end of the war, the naval and military pensions, superannuated allowances, &c. amounted to above 5,000,000*l.* a year. They would, of course, have been gradually

\* We subjoin an abstract of the principal provisions of the statute 1 Will. 4. c. 66., with respect to the forgery of bank notes, powers of attorney, &c.

It is enacted, that if any person shall forge or alter, or shall offer, utter, dispose of, or put off, knowing the same to be forged or altered, any Exchequer bill or Exchequer debenture, or any indorsement on or assignment of any such bill or debenture, or any East India bond, or indorsement upon or assignment of the same, or any note or bill of the bank of England, or a bank post bill, or any indorsement on or assignment of any bank note, bank bill of exchange, or bank post bill, with intent to defraud any person whatsoever, he shall be guilty of felony, and shall upon conviction suffer death as a felon.—§ 3.

Persons making false entries in the books of the Bank of England, or other books in which accounts of public stocks or funds are kept, with intent to defraud, shall suffer death as felons.—§ 5.

By the same act, the forging of any transfer of any share of, or interest in, or dividend upon, any public stock, or of a power of attorney to transfer the same, or to receive dividends thereon, is made capital. If any person, falsely personating the owner of any share, interest, or dividend of any of the public funds, thereby transfer such share, &c., and receive the money due to the lawful owner, he shall upon conviction suffer death as a felon.—§ 6.

And any person endeavouring by such false personation to procure the transfer of any share, interest, &c. in the public funds, may, upon conviction, be transported beyond seas for life, or for any term not less than seven years, or be imprisoned for any term not more than four nor less than two years.—§ 7.

The forgery of the attestation of any power of attorney for the transfer of stock is to be punished by transportation for seven years, or by imprisonment for not more than two and not less than one year.—§ 8.

Clerks or servants of the Bank of England knowingly making out or delivering any dividend warrant for a greater or less amount than the party in whose behalf such warrant is made out is entitled to, may, upon conviction, be transported beyond seas for the term of seven years, or imprisoned for not more than two nor less than one year.—§ 9.

lessened and ultimately extinguished by the death of the parties. But it was resolved in 1822 to attempt to spread the burden equally over the whole period of *forty-five* years, during which it was calculated the annuities would continue to decrease. To effect this purpose, it was supposed that, upon government offering to pay 2,800,000*l.* a year for 45 years, capitalists would be found who would undertake to pay the entire annuities, according to a graduated scale previously determined upon, making the first year a payment of 4,900,000*l.*, and gradually decreasing the payments until the forty-fifth and last year, when they were to amount to only 300,000*l.* This supposition was not, however, realised. No capitalists were found willing to enter into such distant engagements. But in 1823 the Bank agreed, on condition of receiving an annuity of 585,740*l.* for *forty-four* years, commencing on the 5th of April, 1823, to pay, on account of the pensions, &c., at different specified periods, between the years 1823 and 1828, both inclusive, the sum of 13,089,419*l.*—(4 Geo. 4. c. 22.)

*Rate of Discount.*—The bank discounted private bills at 5 per cent. during nearly the whole period from her establishment till 1824, when the rate was reduced to 4 per cent. It was again raised to 5 per cent. on the 13th December 1825, since which period the variations have been as under :

From 13 Dec. 1825, to 5 July 1827	- - - 5 per cent.	55 days to run, and on 8 June 1841 again extended to bills of 20 days.	
5 July 1827, to 31 July 1828	- - - 4	From 7 April 1842 to 3 Sept. 1844	- - - 4 per cent.
31 July 1828 to 1 Sept. 1836	- - - 4½	3 Sept. 1844 to 13 March 1845	bills ½ notes 3
1 Sept. 1836 to 15 Feb. 1838	- - - 5	13 March to 16 Oct. 1845	minimum rate 2½
15 Feb. 1838 to 16 May 1839	- - - 4	16 Oct. 1845 to 6 Nov. 1845	- - - 3
16 May 1839 to 20 June 1839	- - - 5	6 Nov. 1845 to 27 Aug. 1846	- - - 3½
20 June 1839 to 1 Aug. 1839	- - - 5½	27 Aug. 1846 to 14 Jan. 1847	- - - 5 and
1 Aug. 1839 to 23 Jan. 1840	- - - 6	On the 14 Jan. 1847 raised to	- - - 5½
23 Jan. 1840, to 7th April 1849	- - - 5		

Limited on the 15 Oct. 1840 to bills not having more than

When the currency happens, from any cause, to become redundant, its contraction, always a matter of some difficulty, is to be effected only (if she hold no foreign securities) by the sale of bullion or public securities by the Bank, or by a diminution of the usual discounts, or both. But were the Bank to throw any considerable amount of public securities upon the market, the circumstance would be apt to excite alarm; and, even though it did not, it would be difficult to dispose of them without a heavy loss. Hence, when a reduction is determined upon, it is most commonly effected, in part at least, by a contraction of discounts; and it is plain that such contraction cannot be made except by rejecting altogether some of the bills sent in for discount, or, which is in effect the same thing, by shortening their dates, or by raising the rate of interest, so that fewer may be sent in. Of these methods, the last seems to be in every respect the most expedient. When bills are rejected for no other reason than that the currency may be contracted, the greatest injury is done to individuals, who, entertaining no doubt of getting their usual accommodation from the Bank, may have entered into transactions which they are thus deprived of the means of completing. When the reduction is made by raising the rate of interest, it principally affects those who are *best able to bear it*; at the same time that its operation, instead of being, like the rejection of bills, arbitrary and capricious, is uniform and impartial. It does, therefore, seem that the Bank should seldom or never throw out good bills that she may contract her issues; but that, when she has resolved upon such a measure, she should, provided the contraction cannot be made by the sale of bullion and public securities, raise the rate of discount so as to lessen the demands upon her for loans.

The dividends on Bank stock, from the establishment of the Company to the present time, have been as follows:—

Years.	Dividend.	Years.	Dividend.
1694	8 per cent.	Lady-day - 1747	5 per cent.
1697	9	Ditto - 1753	4½
1708 ?	Varied from 9 to	Michaelmas - 1764	5
1729 }	5½ per cent.	Ditto - 1767	5½
Lady-day - 1730	6	Ditto - 1781	6
Michaelmas - 1730	5½	Lady-day - 1788	7
Lady-day - 1731	6	Ditto - 1807	10
Michaelmas - 1731	5½	Ditto - 1823	8
Lady-day - 1732	6	Lady-day - 1839	7
Michaelmas - 1732	5½		

Previously to 1759, the Bank of England issued no notes for less than 20*l.* She began to issue 10*l.* notes in 1759; 5*l.* notes in 1793; and 1*l.* and 2*l.* notes in March, 1797. The issue of the latter may be said to have ceased in 1821; though they were again issued on the emergency in 1825.

*Interest on Deposits.*—The Bank of England does not allow, either in London or at her branches, any interest on deposits; but it would be exceedingly desirable if she could safely make some alteration in this respect. The want of the power readily to invest small sums productively, and, at the same time, with perfect security, tends to weaken the motives to save and accumulate. Nothing has contributed more to diffuse

a spirit of economy, and a desire to save, amongst all classes of the population of Scotland, than the readiness with which deposits of small sums are received by banks of undoubted solidity in that part of the country, and the allowance of interest upon them.—(See *BANKS (SCOTCH)*.) This advantage is now, however, in some degree secured in England, not only by the institution of savings banks, but by the joint stock banks that have been opened in most parts of the country. The receiving of deposits is indeed an essential part of the proper business of a bank. "A banker is a dealer in capital, an intermediate party between the borrower and the lender. He borrows of one party and lends to another; and the difference between the terms at which he borrows and those at which he lends is the source of his profit. By this means, he draws into active operation those small sums of money which were previously unproductive in the hands of private individuals, and at the same time furnishes accommodation to another class, who have occasion for additional capital to carry on their commercial transactions."—(See *Gilbart's Practical Observations on Banking*, p. 52.)

In further corroboration of what has now been stated, it may be mentioned that it is estimated by the best authorities that the deposits in the Scotch banks may amount at present (1846) to about 30,000,000*l.*, of which more than a half consists of sums of from 10*l.* to 200*l.*! This is a most satisfactory proof of the vast importance of the system. Perhaps it is not going too far to affirm, that but for the receiving of deposits by the banks, and the allowing of interest upon them, not a third part of the sums under 200*l.*, and not a half of those above it, would ever have been accumulated. (See *BANKS (SCOTCH)*.)

We are not, however, able to say whether the Bank of England could offer interest on deposits without having so large a sum forced upon her as might in periods of distress seriously endanger her stability. And it were better that the system should continue as at present, than that any risk of this sort should be incurred.

Since 1826, the private deposits in the hands of the Bank have been greatly augmented. Their increase is mainly ascribable to the preceding panic, and the loss that was then occasioned by the failure of private banks.

*Method of conducting Business at the Bank.*—All accounts kept at the Bank with individuals are termed *drawing accounts*; those with whom they are opened being entitled to draw checks upon them, and to send the bills and drafts in their favour to be presented by the Bank, exactly as if they dealt with private bankers. There is no fixed sum with which an individual must open a drawing account; nor is there any fixed sum which the Bank requires him to keep at his credit to indemnify them for their trouble in answering his drafts, &c. Mr. Horsley Palmer gave in his evidence, in 1832, the following statement as to the facilities granted by the Bank in drawing accounts since 1825:—

1. The Bank receives dividends by power of attorney for all persons having drawing accounts at the Bank.
2. Dividend warrants are received at the Drawing-office for ditto.
3. Exchequer bills and other securities are received for ditto; the bills exchanged, the interest received, and the amount carried to their respective accounts.
4. Checks may be drawn for 5*l.* and upwards, instead of 10*l.* as heretofore.
5. Cash-boxes taken in, contents unknown, for such parties as keep accounts at the Bank.
6. Bank notes are paid at the counter, instead of drawing tickets for them on the pay clerks as heretofore.
7. Checks on city bankers paid in by three o'clock may be drawn for between four and five; and those paid in before four will be received and passed to account the same evening.
8. Checks paid in after four are sent out at nine o'clock the following morning, received and passed to account, and may be drawn for as soon as received.
9. Dividend warrants taken in at the Drawing-office until five in the afternoon, instead of three as heretofore.
10. Credits paid in to account are received without the Bank book, and are afterwards entered therein without the party claiming them.
11. Bills of exchange accepted payable at the Bank are payable with or without advice; heretofore with advice only.
12. Notes of country bankers payable in London are sent out the same day for payment.
13. Checks are given out in books, and not in sheets as heretofore.

A person having a drawing account may have a *discount account*; but no person can have the latter without, at the same time, having the former. When a discount account is opened, the signatures of the parties are entered in a book kept for the purpose, and powers of attorney are granted, empowering the persons named in them to act for their principals. No bill of exchange drawn in the country is discounted by the Bank in London under 20*l.* nor London note under 100*l.*, nor for a longer date, under existing regulations, than three months.

The number of holidays formerly kept at the Bank has recently been reduced about a half, in the view, as stated by the directors, of preventing the interruption of business. There are no holidays in the months of March, June, September, and December, excepting Christmas; Easter Monday and Tuesday are no longer kept.

We subjoin an account of the days for transferring stock, and when the dividends are due at the Bank, the South Sea House, and the East India House:—

Transfer Days of the Bank.		Dividends	Dividends	
Bank Stock.— Tues. Wed. Thurs. and Frid.		Jan. 5.	1844.	
3 per Cent. Red.— Tues. Wed. Thurs. and Frid.	Oct. 10.	1845.	1844.	
3 per Cent. Blue.— Tues. Thurs. and Frid.	Jan. 5.	1846.	1844.	
Long Annuity to Jan. 1850.— Tues. Wed. Thurs. and Frid.	April 5.	1847.	1844.	
New 2½ per Cent. Annuity.— Tues. Wed. Thurs. and Frid.	Jan. 5.	1848.	1844.	
New 3 per Cent. Annuity.— Tues. Wed. Thurs. and Frid.	Jan. 5.	1849.	1844.	
Annuities for Terms of Years, some payable on	April 5.	1850.	1844.	
Ditto, others on	Jan. 5.	1851.	1844.	
18th Annuity, if transferred between Jan. 5. and	Jan. 5.	1852.	1844.	
April 5., or between July 5. and Oct. 5.	July 5.	1853.	1844.	

Tickets for preparing transfer of stock must be given in at each office before one o'clock; at the East India House, before two o'clock. Private transfers may be made at other times than as above, the books not being shut, by persons of the Bank and India House, &c. extra for such transfer; at the South Sea House, &c. &c.

Transfer at the Bank must be made by half-past two o'clock; at the India House, by three; at the South Sea House, by two.

Expenses of transfer in Bank Stock, for 25*l.* and under, 6*o.*; above that sum, 1*2s.*

India Stock for 10*l.* ..... 1*1s.*

South Sea Stock, if under 100*l.* .... 5*o.*

Powers of attorney for the sale or transfer of stock to be left at the Bank, &c. for examination, one day before they can be acted upon; if for receiving dividends, they may be left at any time.

The expense of a power of attorney is 1*l.* 1*s.* 6*d.* for each stock; but for Bank, India, and South Sea stock, 1*l.* 1*s.* 6*d.* If wanted for the same day, half-past twelve o'clock is the latest time for receiving orders. The losses for receiving powers of attorney for sale close at two.

Probates of wills, letters of administration, and other proofs of decease, must be left at the Bank, &c. for registration, from two to three clear days, exclusive of holidays.

Stock cannot be added to any account (whether single or joint) in which the decrease of the individual, or one or more of a joint party, has taken place; and the decrease to be proved as soon as practicable. Powers of attorney, in case of the death of the party or parties granting them, become void.

The unaltered possession of 500*l.* or upwards Bank stock, for six months clear, gives the proprietor a vote.

**Branch Banks of the Bank of England.**—The Bank of England, as already observed, has within these few years established branch banks at several of the most considerable towns throughout the country. The mode and terms of conducting business at these establishments have been described as follows;—

“The branch bank at Swansea (and the same is true of those established in other places) is to be a secure place of deposit for persons having occasion to make use of a bank for that purpose; such persons are said to have *drawing accounts*; to facilitate to the mercantile and trading classes the obtaining discounts of good and unexceptionable bills, founded upon real transactions, two approved names being required upon every bill or note discounted; these are called *discount accounts*. The applications of parties who desire to open discount accounts at the branch are forwarded to the parent establishment for approval, and an answer is generally received in about ten days. When approved, good bills may be discounted at the branch without reference to London. Bills payable at Swansea, London, or any other place where a branch is established, are discounted under this regulation. The dividends on any of the public funds, which are payable at the Bank of England, may be received at the branch, by persons who have opened ‘drawing accounts,’ after signing powers of attorney for that purpose, which the branch will procure from London. No charge is made in this case, except the expense of the power of attorney and the postages incurred in transmitting it. Purchases and sales of every description of government securities are effected by the branch at a charge corresponding to that made by the local bankers where the branch is situated. A commission, including brokerage in London, and all expenses of postage, is charged on paying at the Bank of England bills accepted by persons having drawing accounts at Swansea, such bills to be advised by the branch; also for granting letters of credit on London, or on the other branches. The branch grants bills on London, payable at seven days’ date, without acceptance, for sums of 10*l.* and upwards. Persons having drawing accounts at Swansea may order money to be paid at the Bank in London to their credit at Swansea, and *vice versa*, at a charge of 6*d.* in lieu of postage. The branch may be called upon to change any notes issued and dated at Swansea; but they do not change the notes of the Bank in London, nor receive them in payment, unless as a matter of courtesy where the parties are known. Bank post bills, which are accepted and due, are received at the branch from parties having drawing accounts, and taken to account without any charge for postage; but unaccepted bank post bills, which must be sent to London, are subject to the charge of postage, and taken to account when due. No interest is allowed on deposits. No advance is made by the branch upon any description of landed or other property, nor is any account allowed to be over-drawn. The notes are the same as those issued by the parent establishment, except being dated Swansea, and made payable there and in London. No note issued exceeds the sum of 500*l.*, and none are for a less amount than 5*l.*”

The following clauses of the act 3 & 4 Will. 4. c. 98. are still in force.

*No Banking Company of more than 6 Persons to issue Notes payable on Demand within London or 65 Miles thereof.*—That during the continuance of the said privilege, no body politic or corporate, and no society or company, or persons united or to be united in covenant or partnership, exceeding 6 persons, shall make or issue in London, or within 65 miles thereof, any bill of exchange or promissory note, or engagement for the payment of money on demand, or upon which any person holding the same may obtain payment on demand; provided always, that nothing herein or in the said act of the 7 Geo. 4. c. 46. contained shall be construed to prevent any body politic or corporate, or any society or company.

or incorporated company or corporation, or co-partnership, carrying on and transacting banking business at any greater distance than 65 miles from London, and not having any issue of business or establishment of bankers in London, or within 65 miles thereof, (except as hereinafter mentioned,) to make and issue their bills and notes, payable on demand or otherwise, at the place at which the same shall be issued, being more than 65 miles from London, and alien in London, and to have an agent or agents in London, or at any other place at which such bills or notes shall be made payable, for the purpose of payment only, but no such bill or note shall be for any sum less than £1, or be re-issued in London, or within 65 miles thereof.—§1.

*Companies or Partnerships may carry on Banking in London, or within 65 Miles thereof.*—And whereas the intention of this act is, that the Bank of England should, during the period stated in this act (subject nevertheless to such redemption as is described in this act), continue to hold and enjoy all the exclusive privileges of banking given by the act 39 & 40 Geo. 3, c. 28, as regulated by the act 7 Geo. 4, c. 66, or any prior or subsequent act or acts of parliament, but no other or further exclusive privilege of banking; and whereas doubts have arisen as to the construction of the said acts, and as to the extent of such exclusive privilege; and it is expedient that all such doubts should be removed, be it therefore declared and enacted, that any body politic or corporate, or society, or company, or partnership, although consisting of more than 6 persons, may carry on the trade or business of banking in London, or within 65 miles thereof, provided that such body politic or corporate, or society, or company, or partnership, do not borrow, owe, or take up in England any sum or sums of money on their bills or notes payable on demand, or at any less time than 6 months from the borrowing thereof, during the continuance of the privileges granted by this act to the said Governor and Company of the Bank of England.—§2. But this last condition is repealed by the 7 & 8 Vict. c. 32, § 20.

*All Bank of England Notes payable on Demand issued out of London payable at the Place where they are issued, &c.*—From and after the 1st of August, 1834, all promissory notes payable on demand of the Governor and Company of the Bank of England issued at any place in England out of London, where the trade and business of banking shall be carried on for and on behalf of the said Governor and Company, shall be made payable at the place where such promissory notes shall be issued; and it shall not be lawful for the said Governor and Company, or any committee, agent, cashier, officer, or servant of the same to issue at any place out of London any promissory note payable on demand not made payable at the place where the same shall be issued, any thing in the said act 7 Geo. 4, c. 46, to the contrary notwithstanding.—§3.

*Bank Notes to be legal Tender, except at the Bank and Branch Banks.*—From and after the 1st of August, 1834, unless and until parliament shall otherwise direct, a tender of a note or notes of the Governor and Company of the Bank of England, expressed to be payable to bearer on demand, shall be a legal tender to the amount expressed in such note or notes, and shall be taken to be valid as a tender to such amount for all sums above £1, on all occasions on which any tender of money may be legally made, so long as the Bank of England shall continue to pay on demand their said notes in legal coin; provided always, that no such note or notes shall be deemed a legal tender of payment by the Governor and Company of the Bank of England, or any branch bank of the said Governor and Company; but the said Governor and Company are not to become liable or be required to pay and satisfy, at any branch bank of the said Governor and Company, any note or notes of the said Governor and Company not made specially payable at such branch bank; but the said Governor and Company shall be liable to pay and satisfy at the Bank of England in London all notes of the said Governor and Company, or of any branch thereof.—§6.

*Bills not bearing more than 3 months to run not subject to Usury Laws.*—No bill of exchange or promissory note made payable out of London, any promissory note payable on demand not made payable to run, shall, by reason of any interest taken thereon or secured thereby, or any agreement to pay or receive or allow interest in discounting, negotiating, or transferring the same, be void; nor shall the liability of any party to any bill of exchange or promissory note be affected by reason of any statute or law in force for the prevention of usury; nor shall any person or persons drawing, accepting, indorsing, or signing any such bill or note, or lending or advancing any money, or taking more than the present rate of legal interest in Great Britain and Ireland respectively for the loan of money on any such bill or note, be subject to any penalties under any statute or law relating to usury, or any other penalty or forfeiture; any thing in any law or statute relating to usury in any part of the United Kingdom to the contrary notwithstanding.—§7.

Clause 10 authorized the proprietors, if they saw fit, to reduce the Bank capital from 14,558,000, to 10,914,500, but this clause has not been acted upon.

*Tables exhibiting a view of the Circulation, Deposit, Profits, &c. of the Bank of England.*

No. 1.—An Account of the Average Market Price of Bullion in each Year, from 1800 to 1821 (taken from Official Documents) of the Average Value per Cent. of the Currency, estimated by the Market Price of Gold for the same Period; and of the Average Depreciation per Cent.

BANK OF ENGLAND.

No. III. — The following is an Account of all Distributions made by the Bank of England amongst the Proprietors of Bank Stock, whether by Money Payments, Transfer of 5 per Cent. Annulles, or otherwise, under the Heads of Bonus, Increase of Dividend, and Increase of Capital, betwixt the 26th of February, 1797, and 31st of March, 1832, in addition to the ordinary Annual Dividend of 7 per Cent. on the Capital Stock of that Corporation, exhibiting in 1797, including therein the whole Dividend paid since June 1816, on their increased Capital, stating the Period when such Distributions were made, and the Aggregate Amount of the Whole. — (Appen. No. 59.)

Denomination and Periods of Distribution.	Amount.
In June, 1799: 10s. per cent. bonus in 2 per cents. 1797, on 11,648,400 <i>l.</i>	1,164,240
May, 1801: 5 <i>l.</i> per cent. ditto, in Navy 2 per cents. ditto	582,150
November, 1801: 2 <i>l.</i> 10s. per cent. ditto, ditto	231,000
October, 1804: 5 <i>l.</i> per cent. ditto, cash, ditto	582,150
October, 1808: 5 <i>l.</i> per cent. ditto, ditto	582,150
October, 1808: 5 <i>l.</i> per cent. ditto, ditto	582,150
From April, 1807, to Oct. 1812, both inclusive	8,584,538
16 years Increase of dividends at the rate of 2 <i>l.</i> per cent. per annum on 11,648,400 <i>l.</i>	2,910,500
From April, 1812, to Oct. 1819, both inclusive	1,891,880
17 years Increase of capital at 2 <i>l.</i> per cent. <i>l.</i>	1,891,880
In June, 1819	2,095,458
From Oct. 1816, to Oct. 1827, both inclusive	417,516,070
11 years Dividend at the rate of 10 <i>l.</i> per cent. per annum on 2,910,500 <i>l.</i> increased capital, 6 1/2 years	417,516,070
From April, 1825, to Oct. 1831, both inclusive	417,516,070
6 1/2 years Dividend at the rate of 5 <i>l.</i> per cent. per annum on 2,910,500 <i>l.</i> increased capital, 5 years	417,516,070
Aggregate amount of the whole	
Annual dividend payable on Bank stock in 1797, on a capital of 11,648,400 <i>l.</i> at the rate of 7 <i>l.</i> per cent. per annum	814,968
Annual dividend payable since June, 1816, on a capital of 14,555,000 <i>l.</i> , to October, 1832, inclusive, at the rate of 10 <i>l.</i> per cent. per annum	41,455,900
Annual dividend payable from April, 1825, to the 31st of March, 1832, both inclusive, on a capital of 14,555,000 <i>l.</i> at the rate of 5 <i>l.</i> per cent. per annum	41,164,240

WILLIAM SMEE, Dep. Act.

Bank of England, 27th of June, 1832.

## BANKS (ENGLISH PRIVATE AND PROVINCIAL). 101

No. X.—Expenses of the Bank of England, for the Year ending 29th of February, 1832.

	Dr.		£		Cr.	
National debt department	-	-	164,143	Salaries and pensions	-	218,008
Bank notes	-	-	105,021	House expenses	-	39,171
Banking department	-	-	69,165	Directory allowance	-	8,000
				Rent	-	40,000
				Expenses at eleven branches, arising from the banking department	-	5,708
				Expenses attending the circulation of 2,500,000 <i>l.</i> of branch Bank of England notes, at eleven branches	-	25,508
			4389,400			4389,400

### III. BANKS (ENGLISH PRIVATE AND PROVINCIAL).

Besides charging the usual rate of interest on bills discounted, the provincial bankers are mostly in the habit of charging 5*s.* or 6*s.* per cent. as commission. They also charge a commission on all payments, and derive a profit from charges for the transmission of money, &c. They usually allow from 2 to 3 per cent. on money deposited; but the numerous failures that have taken place amongst them have, by generating a feeling of insecurity in the minds of the depositors, confined this branch of their business within comparatively narrow limits. When their customers overdraw their accounts, they are charged with interest at the rate of 5 per cent.

Country banks, established by individuals possessed of adequate funds, and managed with due discretion, are productive of the greatest service. They form commodious reservoirs, where the floating and unemployed capital of the surrounding districts is collected, and from which it is again distributed, by way of loan, to those who will employ it to the best advantage. It is, therefore, of the utmost importance, in a public point of view, that these establishments should be based upon solid foundations. But in England, unfortunately, this, till recently, has been but little attended to; and the destruction of country banks has, upon three different occasions,—in 1792, in 1814, 1815, and 1816, and in 1825 and 1826,—produced an extent of bankruptcy and misery that has never perhaps been equalled, except by the breaking up of the Mississippi scheme in France. Government is bound to interfere to hinder such disastrous results, and we have already given some account of the measures adopted in this view.—(See *anté*, p. 64, &c.)

The following is an account of the number of commissions of bankruptcy issued against country bankers in England from 1809 to 1830, both inclusive:—

Years.	Commissions.	Years.	Commissions.	Years.	Commissions.	Years.	Commissions.
1809	4	1815	25	1821	10	1826	43
1810	20	1816	37	1822	9	1827	8
1811	4	1817	3	1823	9	1828	3
1812	17	1818	3	1824	10	1829	3
1813	8	1819	13	1825	37	1830	14
1814	27	1820	4				

(Appen. to Report on Bank Charter, p. 116.)

Exclusive of the above, many banks stopped payments, to the great injury of their creditors, and the public, that afterwards resumed them; at the same time that the affairs of some bankrupt concerns were arranged without a commission. During the whole of this period not a single Scotch bank gave way.

The stamp duties on country bank notes have been already specified (p. 72.).

Besides the stamp duties payable on notes, each individual or company issuing them must take out a licence, renewable annually, which costs 30*l.* This licence specifies the names and places of abode of the body corporate, person or persons, in the firm to whom it is granted, the name of such firm, the place where the business is carried on, &c.; and a separate licence is to be taken out for every town or place where any notes shall be issued by or on account of any banker, &c. Unless the licence granted to persons in partnership set forth the names and places of abode of all persons concerned in the partnership, whether their names appear on the notes issued by them or not, such licence shall be absolutely void.—(55 Geo. 3. c. 184. s. 24.) For the regulations as to the issue of unstamped notes, see *anté*, p. 69.

The issue of notes for less than 5*l.* was prohibited in England, as previously shown, from 1777 to 1797; but they continued to be issued from the latter period down to the 5th of April, 1829, when their further issue ceased, in consequence of an act passed in 1826. This act did not extend to Scotland or Ireland, and was intended to give greater stability to the system of country banking in England, by shutting up one of the principal channels through which the inferior class of bankers had been in the habit of getting their notes into circulation.

The joint-stock banks established in different parts of England and Wales, under the provisions of the act 7 Geo. 4. c. 46. authorising their establishment, consist of bodies of partners, varying from seven, the minimum, to any greater number. Each partner

## 102 BANKS (ENGLISH PRIVATE AND PROVINCIAL).

holds one or more shares of the company's stock, and is individually liable for the entire debts and engagements of the company; so that a person holding a 50*l.* or 100*l.* share in a joint-stock bank, may, in the event of its becoming bankrupt, be called upon to make payment of as many thousands of pounds! They are uniformly almost managed by boards of directors appointed by, and generally responsible to, the body of shareholders. The conditions of co-partnership vary materially in different associations; but the above are distinguishing features common to them all. The shares in many joint-stock banks are very small, few being above 100*l.*, the greater number not exceeding 50*l.*, whilst many are only 25*l.*, and some not more than 10*l.* and even 5*l.*! Generally, too, it is understood or rather it is distinctly set forth in the prospectus, that not more than five, ten, or twenty per cent. of these shares is to be called for; so that an individual who has ten or twenty shillings to spare may become a shareholder in a bank. And owing to a practice, or rather a flagrant abuse, introduced into the management of various banks, by which they make large advances or discounts on the credit of the stock held by the shareholders, not a few individuals in doubtful or even desperate circumstances, take shares in them, in the view of obtaining loans, and bolstering up their credit! The great danger arising from such banks is obvious; and were one of them to stop payment, it is plain, even though the claims on it should be ultimately made good, that they could be so only at the cost, and perhaps ruin, of such of its proprietors as had abstained from the abusive practices resorted to by others. It may well excite astonishment, that any one who can really afford to make a *bond fide* purchase of shares in a bank should be foolhardy enough to embark in such concerns.

No doubt a joint-stock bank, if it possess adequate capital and be discreetly managed, may afford ample security to its shareholders and the public. But there is no foundation for the notion, that because a bank has 50 or 100 partners, it will, therefore, be better managed than if it had only 5 or 10. On the contrary, the fair presumption is that it will not be so well managed. A few wealthy individuals engaged in banking, or any other sort of business, must, if they would protect themselves from ruin, pay unremitting attention to their concerns, and act in a discreet and cautious manner. But the partners and managers of a great joint-stock company act under no such direct and pressing responsibility. "I think," said the highest authority on such subjects, "that joint-stock banks are deficient in every thing requisite for the conduct of banking business, except extended responsibility; the banking business requires peculiarly persons attentive to all its details, constantly, daily, and hourly watchful of every transaction, much more than mercantile or trading businesses. It also requires immediate, prompt decisions, upon circumstances when they arise,—in many cases a decision that does not admit of delay for consultation; it also requires a discretion to be exercised with reference to the special circumstances of each case. Joint-stock banks being, of course, obliged to act through agents, and not by a principal, and therefore under the restraint of general rules, cannot be guided by so nice a reference to degrees of difference in the character or responsibility of parties; nor can they undertake to regulate the assistance to be granted to concerns under temporary embarrassment by so accurate a reference to the circumstances, favourable or unfavourable, of each case."—(*Evidence of S. J. Loyd, Esq., before the Committee of 1832 on the Renewal of the Bank Charter.*)

In fact more than nine tenths of the partners in joint-stock banks are wholly ignorant of banking business, and have nothing better to trust to than the supposed honesty and intelligence of the directors; and, even if they were acquainted with the business, the result would be nearly the same, as it would not be possible for any one, by a mere cursory inspection of the books of any bank (if such were permitted), to form any accurate estimate of its condition, or of the mode in which it transacted business. And hence the directors in these establishments are practically all but absolute. If they be worthy of the confidence placed in them, all goes on smoothly; and this also is the case when they are most unworthy, till they have involved the concern in inextricable difficulties! The history of the Norwich Bank, of the Northern and Central Bank, the Marylebone Bank, the Manchester Bank, and a host of others, sufficiently attests the truth of what has now been stated. The responsibility of the directors to the shareholders has not been found, in any of these instances (and it is, indeed, ludicrous to suppose that it ever should be otherwise), to have been any check whatever, over their frauds and improvidence. The whole paid up capital of the Manchester Bank, amounting to about 750,000*l.*, had been wasted in the most improvident speculations, and additional debts incurred, before the great body of the shareholders had the least suspicion that the company was otherwise than prosperous!

We may observe, by the way, that the mischief occasioned by an establishment of this sort, when perverted from its proper objects, and mismanaged, is not to be estimated by the ruin it entails on its partners, and probably, also, on its customers. It becomes, in fact, a public nuisance, and entails privations on many who might be supposed to be beyond the sphere of its influence. Within the ten years ending with

1849, we believe it may be moderately estimated that about 1,500,000*l.* of banking capital was wholly dissipated in Manchester and its immediate vicinity. And as nine tenths of this enormous loss was occasioned by advances made to manufacturers who had little or no capital of their own, it is not easy to imagine what a ruinous stimulus it must have given to reckless competition, and how very injurious it must have been to parties trading on their own capital. Indeed no inconsiderable portion of the distress in Manchester, in 1842 and 1843, may be traced to this source.

A knowledge of the agency by which certain joint-stock banks had been established, of the way in which some of them were conducted, and a well-founded anticipation of the evils of which they would, most likely, be productive, led in 1836 to the appointment of a secret committee by the House of Commons, to inquire into the operation of the act 7 Geo. 4. cap. 46., permitting the establishment of joint-stock banks; and whether it was expedient to make any alteration in its provisions. The report of this committee, and portions of the evidence taken before it, were afterwards published, and confirmed all the conclusions of those who had contended that the existing system required material amendment. The committee state that—

" Subject to the local restrictions imposed for the protection of the privilege of the Bank of England, it is open to any number of persons to form a company for joint-stock banking, whether for the purpose of deposit, or of issue, or of both.

" 1. The law imposes on the joint-stock banks no preliminary obligation beyond the payment of a licence duty, and the registration of the names of shareholders at the Stamp Office.

" 2. The law does not require that the deed of settlement shall be considered or revised by any competent authority whatever; and no precaution is taken to enforce the insertion in such deeds of clauses the most obvious and necessary.

" 3. The law does not impose any restrictions upon the amount of nominal capital. This will be found to vary from 5,000,000*l.* to 100,000*l.*; and in one instance an unlimited power is reserved of issuing shares to any extent.

" 4. The law does not impose any obligation that the whole or any certain amount of shares shall be subscribed for before banking operations commence. In many instances banks commence their business before one half of the shares are subscribed for, and 10,000, 50,000, and 20,000 shares are reserved to be issued at the discretion of the directors.

" 5. The law does not enforce any rule with respect to the nominal amount of shares. These will be found to vary from 1,000*l.* to 5*l.* The effects of this variation are strongly stated in the evidence.

" 6. The law does not enforce any rule with respect to the amount of capital paid up before the commencement of business. This will be found to vary from 10*l.* to 5*l.*

" 7. The law does not provide for any publication of the liabilities and assets of these banks, nor does it enforce the communication of any balance-sheet of the proprietors at large.

" 8. The law does not impose any restrictions by which care shall be taken that dividends are paid out of banking profits only, and that bad or doubtful debts are first written off.

" 9. The law does not prohibit purchases, as *ca.*, and speculative traffic on the part of these companies in their own stock, nor advances to be made on the credit of their own shares.

" 10. The law does not provide that the guarantee fund shall be kept apart and invested in government or other securities.

" 11. The law does not limit the number of branches, or the distance of such branches from the central bank.

" 12. The law is not sufficiently stringent to insure to the public that the names registered at the Stamp Office are the names of persons *bond fide* proprietors, who have signed the deed of settlement, and who are responsible to the public.

" 13. The provisions of the law appear inadequate, or, at least, are disregarded, so far as they impose upon banks the obligation of making their notes payable at the places of issue. All these separate questions appear to your committee deserving of the most serious consideration, with a view to the future stability of the banks throughout the United Kingdom, the maintenance of commercial credit, and the preservation of the currency in a sound state."

*Remedial Measures that should be adopted.*—The act of 1844, 7 & 8 Vict. c. 32. (see *anté*, p. 84.) has successfully obviated some of the defects formerly existing in the joint-stock and private banking system, especially by limiting the extent of their issues—but in other respects the system is still open to serious objections; and our readers may not, perhaps, be displeased if we retain the remarks made upon it in our former edition, before the act of 1844 was passed. "We do not, however, think that it would be at all necessary, in providing for a secure system of joint-stock banking, to make any regulations with respect to many of the points noticed by the committee as to which the law is silent. At present every partner in a joint-stock bank is liable to the public for the whole debts of the firm; and this may be truly said to be the saving principle of the system, and without which it would be an unmixed evil. No individual should, however, by merely withdrawing from a joint-stock concern, get rid of his liabilities in connection with it. To prevent fraud, and to ensure due caution, these ought to continue for a period of three years at least after he has publicly withdrawn his name. The public, too, are clearly entitled to know the partners in joint-stock associations; that is, to be informed who the individuals are with whom they are dealing, and who are responsible to them. But, unluckily, no effective means are taken for supplying this necessary information, or, consequently, of properly discriminating between one establishment and another. The act of 1833 (3 & 4 Will. 4. c. 83.) directed that an account of the places where they carry on business, and of the names and residences of the partners, should be quarterly transmitted to the Stamp Office. But doubts have been entertained as to the correctness of these returns, and comparatively little use has been, or, indeed, can be made of them. The accounts of the names and residences of the proprietors are not published, but are

## 104 BANKS (ENGLISH PRIVATE AND PROVINCIAL)

secluded from the public eye in the repositories of Somerset House! It is true that these lists may be seen, by those who choose to apply at the office, for a small fee, and that certified copies may be procured at no great expense. But few know that such returns exist; and fewer still have the opportunity, or think of availing themselves of them as sources of information. To render them of any real utility, they should be brought under the public eye, by being hung up in the offices of the banks to which they refer, and periodically published in the newspapers of the places where they carry on business. By this means the public would know exactly to whom they had to look, and would act accordingly. They would not be deceived, as they are liable to be at present; by supposing that, because a bank has a number of partners, some of them must be opulent and trustworthy. They would know the precise state of the fact; and if it were seen, from the quarterly returns, that opulent and intelligent individuals were withdrawing from a bank, every one would be put on his guard, and would naturally conclude that the parties had very sufficient reasons for quitting the concern. Thus far publicity may be made effectual, and would be of the greatest importance. Neither is it possible to allege a single plausible objection to this proposal. It interferes in no degree, nor in any way, with the proceedings of the parties; all that it does is to declare who and what they are; and to this degree of publicity no honest man will object." And we are glad to have to state that this is now effected by the act 7 & 8 Vict. c. 52. § 21. See *anté*, p. 84.

"But we have great doubts whether it be possible to carry publicity farther than this. The committee state that 'the law does not provide for any publication of the liabilities and assets of these banks, nor does it enforce the publication of any balance-sheet to the proprietors at large;' and it has been proposed to compel the periodical publication of a statement of this sort; but it is very questionable whether any such publication would not be a great deal worse than useless. It is not proposed that commissioners should be appointed to inspect the accounts of the different banks, and to see that the returns are accurate; this would be too inquisitorial, too cumbersome, and too costly a plan to be thought of for a moment. There would be nothing for it, in fact, but to trust entirely to the honour of the parties! Hence, in all cases in which a disclosure would be really useful, the publication of an account of assets and liabilities would afford the means of deceiving the public, and of representing a bankrupt concern as being in a prosperous condition. Supposing, however, that the parties were, in all instances, perfectly honest, still the publication of a balance-sheet would be good for nothing. Every one knows how sanguine people are in relation to their own affairs; and that debts and obligations that other parties would hardly reckon worth any thing, are estimated by them as if they were so much bullion. But, independently of this, the futility of the thing is obvious. A bank with a capital of 100,000*l.*, discounts bills and other obligations to the extent, perhaps, of 300,000*l.* or 400,000*l.*; the fact that it has discounted them shows that it believes these bills and obligations to be good; and they will, consequently, be reckoned among its assets. But should a revulsion take place, or any circumstance occur to shake credit, these bills may not be worth 100,000*l.*; and those who have dealt with the bank, on the hypothesis of its having capital and assets more than enough to meet all its obligations, may find, to their cost, that it is not possessed of a single shilling, out is, on the contrary, some 200,000*l.* or 300,000*l.* worse than nothing!

"The committee seem to think that some regulation should be enacted, providing that a certain portion of its capital should be paid up before a bank begins business. But the better way would be to prohibit all advertising of *nominal* capital. This, in fact, is a mere device by which to entrap and delude the public. A bank is announced with a capital of 1,000,000*l.*, 2,000,000*l.*, or 3,000,000*l.*; and a great number of people, perhaps the majority, immediately conclude that there can be no risk in dealing with an establishment possessed of so great an amount of property. But what is the fact? The capital advertised is nominal merely; not more perhaps than a tenth or a fifth part of it has been received into the coffers of the bank, and we have nothing better than the statement of the bank proprietors, or their agents, that they will pay up the remainder, if necessary; of which necessity they of course are to be the only judges! Practically this is neither more nor less than a fraud upon the public; it is a contrivance for making 10,000*l.* pass in the public estimation for 100,000*l.*, and for procuring the same degree of credit to its holders. This, however, is not all. Where is the security that if a greater amount of capital were really required, it would be forthcoming? The notion that the bulk of the shareholders in many, we are pretty sure we might safely say most, of the joint-stock banks now in existence, could pay up the full amount of their shares, is too ludicrous to deserve notice. We might as well call upon a man worth 5*l.* to extinguish a debt of 500*l.*

"There can be no doubt, therefore, unless it be meant to affirm that deception and fallacious statements are indispensable to the success of joint-stock banking schemes, that

all advertising of nominal capitals should be put an end to; and that no association should be allowed to represent its capital as exceeding the sum actually paid up by the proprietors. But though this would obviate one source of fraud and deception, there would still be abundant means of practising on the credulity of the public at the disposal of parties inclined to use them. Admit that a bank has a capital of 500,000*l.* actually received into its coffers, what is to hinder the directors from lending out the whole of this sum, or even more, to themselves or to partners in the bank? or supposing them not to do this, who can tell whether the entire capital, or some considerable part of it, be not wholly engulfed in ruinous speculations? It is indeed alleged, and truly too, that this could not happen with any 'respectable' bank; that 'gentlemen of character' would not lend themselves to such transactions! Unluckily, however, there are no decisive marks or tests by which the public can, *a priori*, say what is or what is not a 'respectable' bank, or who is or is not a 'gentleman of character;' and it is not a little hazardous in such matters to indulge in speculative remarks. Hence it is that the Marylebone Bank, the Bank of Manchester, and indeed all banks, are held to be respectable, that is, solvent, till the event prove the contrary; and that all gentlemen connected with banks are held to be 'men of character,' paragons, in fact, of honour, honesty, and intelligence, till their fraud or ignorance has involved hundreds or thousands in bankruptcy and ruin.

"We do not state these circumstances in order to raise any prejudice against joint-stock banks or other associations, for they apply equally to banks with one or a small number of partners; but we state them to show the folly of placing any reliance on statements as to the capital of any bank, or the character of its managers. Such statements may be either true or false; but, as the public cannot tell which, they are plainly good for nothing. The only real security is to be found, if it exist at all, in the names of the partners responsible for the debts and obligations of the bank. The number of such partners is a very inferior consideration. There cannot, in truth, be a greater error than to suppose that because a bank has a great number of partners, its security may be safely depended upon. A single individual worth 100,000*l.* is an incomparably better security than fifty individuals worth 2,000*l.* each; and a hundred individuals worth 1,000*l.* would hardly be any security at all; at least for a sum of 10,000*l.* or 20,000*l.* A private bank with six may be a safer place of deposit than a joint-stock bank with six hundred partners. Every thing depends upon the *available wealth* of those responsible for the debts of the concern; and hence the propriety and justice, whether the firm consist of one or of many partners, of publicly declaring and specifying their names.

"We are decidedly hostile to a proposition we have heard mooted, and which seems to be countenanced by the committee on joint-stock banks, for obliging all banks to establish a guarantee fund; that is, for obliging them to accumulate a *portion of their profits* as a reserve stock. Where is the security that such reserve would be always deducted from profits? The truth is, that bankrupt and fraudulent concerns, and none else, would gain by such a regulation; inasmuch as it would enable them, by appearing to be prosperous, the better to deceive the public, and to blind them to the real state of their affairs. It is worse than absurd to induce the public to depend on guarantees that cannot be enforced, and which, consequently, must be good for nothing. The knowledge of whom the partners in banks really consist, and their unlimited responsibility, are the only securities that, speaking generally, are worth a pinch of snuff. If these cannot protect the public from fraud or loss, nothing else will; and the question will come to be, not whether the system should be reformed, but whether it should be abated as an incurable nuisance. On this ground also we should be disposed to dissent from any attempt to prevent, by legislative enactment, the making of loans upon the credit of bank stock. We do not question the advantage of such a regulation, provided it were honestly carried into effect. But it is useless to say that, whenever the parties were disposed to defeat such a regulation, it would be quite inoperative.

"Some of the joint-stock banks have an extraordinary number of branches; and the multiplication of these subordinate establishments all over the country is not one of the least striking features of the system. Neither is it very difficult to discover why banks of issue, at least, are so very anxious about the formation of these outworks. They are bound, it seems, by the present law to pay their notes *only at the parent establishment*; so that by issuing them at a branch bank, perhaps a hundred miles distant from the head bank, the chances are ten to one that they will continue for a much longer period in circulation, and that they will consequently be able to carry on business with a less amount of capital, than if they were, as they ought to be, obliged to pay their notes at the branches as well as at the principal office. It is obvious, indeed, that the convertibility of the paper, even of first-class banks, into either cash or Bank of England notes, is at present exceedingly imperfect; and that very great facilities are afforded for getting the worst class of notes into circulation, and for keeping

## 106 BANKS (ENGLISH PRIVATE AND PROVINCIAL).

them afloat, even after their quality may be suspected. This defect in the law should, undoubtedly, be amended, by obliging all banks that issue notes to pay them indifferently at any of their offices. But we incline to think that parliament might go further than this; and that it should enact that no branch be established, whether for the issue of notes or otherwise, beyond a certain distance (say fifty miles) from the head office.

"Several of the points recapitulated by the committee, as to which the law is silent, respect the rights and interests of the partners in joint-stock banks, in relation to each other, and not as between them and the public. But it is always a very difficult matter to interfere to dictate the footing on which parties in any undertaking should stand among themselves. Much should, in such cases, be left to the judgment of the parties; and public regulations, if enforced at all, should only go to prevent obvious and acknowledged abuse; the parties may, in most cases, be safely left to take care of themselves. The protection of the public interest is the paramount consideration; and we do not well know what can be done to effect this, in the case at least of such banks as do not issue notes, other than the making known who their partners are.

"The joint-stock banks formed in the city of London offer a fair rate of interest for deposits; and if they go on successfully in doing this, they will confer no slight advantage on the community, and will become, as it were, so many savings banks for the middle classes, and for the rich as well as the poor. But the responsibilities this system will bring along with it are neither few nor small. A bank with a numerous body of partners of undoubted wealth and integrity that should give 2 per cent. interest on all deposits of 10*l.* and upwards, how short soever the period for which the deposit might remain in the bank, would, there is little doubt, speedily have ample funds at its disposal. In quiet and prosperous times, the system would work exceedingly well; and the bank and the public would be vastly well pleased with each other. But when the cycle of prosperity has gone by, and the cycle of adversity has begun; when the waters are out and the winds begin to blow,—it is doubtful whether either the bank or its depositors may feel quite at ease. The former will probably raise the rate of interest; but it is doubtful whether that will have the wished-for effect. Should the exchange set against us, and the Bank of England be forced to narrow her issues, and should bankruptcy and a feeling of insecurity begin to prevail, as they have done hitherto on all similar occasions, a run for deposits may, and most probably will, be made upon the bank; and in such a case her situation, however well she may have been managed, will be most critical. She will be compelled to dispose of or pledge securities in a market where they may be all but unsaleable; and it will be impossible for her suddenly to pull up in discounting, without exposing herself to the imminent danger of extra loss, by bringing on the stoppage of those who have been accustomed to trust to her for loans.

"It will be said, perhaps, that this is all imaginary, and that nothing of the sort ever occurs in Scotland! But it would really be about as much to the purpose to say that nothing of the sort ever occurs in Japan. London is the pivot on which the foreign exchanges turn, and when they become depressed many of the London depositors will do what the Scotch depositors never so much as dreamed of; that is, they will demand their deposits, convert them into gold, and either send this gold abroad, or get a profit from those who will. From this source of annoyance and loss the Scotch banks are perfectly free; and this, by exhausting the resources of the London banks, and subjecting the weaker ones to difficulties, occasions discredit, and, in the end, runs or panics. Nothing, therefore, can be more perfectly futile than to contend that because this system has proved profitable for the Scotch banks, it will also be profitable for the London banks. We do not presume to affirm that such will not, and we hope that it may, be the case. But it would be rather illogical to affirm, because wheat succeeds remarkably well in the vale of Gloucester, that it will succeed equally well on the Welsh mountains.

"The joint-stock banks may, if they do not already, endeavour to obviate some of the difficulties now stated, by declining to pay interest on deposits unless they lie for a certain time, or by stipulating for a certain notice before they are paid. But either the one condition or the other is subversive of what is meant by granting interest on deposits, and goes far to make the announcements to that effect little better than a hoax upon the public. All, or nearly all, the existing banks are banks of deposit in this sense of the word; that is, they give interest on deposits of a certain amount, provided they be not called for till after the lapse of an agreed-on period, and that the depositors give them no farther trouble. But it is doubtful whether money deposited at 2 per cent. under such conditions, and still more under an engagement to give notice of demand, be as well laid out as if it were deposited with the Bank of England, or any other bank of undoubted solidity, at no interest, but payable on demand. Most men of business would, undoubtedly, prefer the latter. Nobody, indeed, not wishing to get into difficulties, would be disposed to deal with any bank that required notice of demand; and it is questionable whether any such stipulation should be sanctioned by law.

## BANKS (ENGLISH PRIVATE AND PROVINCIAL). 107

"The committee on joint-stock banks omitted all reference to what is by far the most prominent evil in our banking system—we mean the power conceded to all private and joint-stock banks and companies, whether with or without property or character, to issue paper money or notes payable on demand, without let or hindrance of any sort. This abuse should certainly be put down;" and we have already seen that this power can now be but little abused.

"Responsibility ought not, in any case, to be limited.—We protest against the proposal for allowing the partners in banks not issuing notes to limit their responsibility. Such a measure would be good for nothing, except to serve as a premium on every species of fraud. What check would there be, under such a system, to hinder the partners of a bank going on for a series of years dividing large profits, when perhaps they were really incurring a loss, until every farthing of its capital and deposits was absorbed? To talk of subjecting such persons to punishment as fraudulent bankrupts, on evidence derived from their books, is absurd; for, supposing that it was the intention of the parties to defraud, they might easily keep their books so that they could afford no information that was not false or misleading. The annexed list of joint-stock banking companies shows that there is no disinclination on the part of individuals to engage in such concerns, even with the present unlimited responsibility. And the way in which some of them are conducted proves sufficiently, if such proof were wanted, that the serious liabilities incurred by the partners are not more than enough for the protection of the public. To lessen them would be an act of gratuitous folly. If we are to interfere, let them be increased, not diminished. But in the case of banks not issuing notes, enough is done if measures be taken to prevent deception, by letting the public know the partners in them, and making sure that they shall have no means of evading the responsibility attaching to their engagements. The first object may be secured by compelling all banking associations whatever to publish annually a list of the names and addresses of their partners, with the amount of their paid-up capital; and to accomplish the latter object, we have merely to abstain from interference, and to let the law take its natural course."

*The existing Regulations in regard to private and joint-stock Bankers in England and Wales* are embodied in clauses 11—26 of the stat. 7 & 8 Vict. c. 32., of which we have given a very full abstract. (See *anté*, p. 84.)

*Drawing on London.*—The act 3 and 4 Will. 4. c. 83. repeals the regulation in the 7 Geo. 4. c. 46., prohibiting banks with more than 6 partners from drawing on London on demand, or otherwise, for sums of less than 50*l.*—§ 2.

An Account of the Number of Private and Joint Stock Banks registered in each Year, from 1820 to 1842, both inclusive.—(*Parl. Paper No. 85. Session 1843.*)

Year.	Number of Private Banks.	Number of Joint Stock Banks.	Year.	Number of Private Banks.	Number of Joint Stock Banks.
1820 to 1821	521	—	1831 to 1832	424	25
1821 to 1822	538	—	1832 to 1833	413	25
1822 to 1823	547	—	1833 to 1834	418	47
1823 to 1824	547	—	1834 to 1835	411	25

## IV. BANKS (SCOTCH).

The act of 1708, preventing more than 6 individuals from entering into a partnership for carrying on the business of banking, did not extend to Scotland. In consequence of this exemption, several banking companies, with numerous bodies of partners, have always existed in that part of the empire.

*Bank of Scotland.*—This institution was projected by Mr. John Holland, merchant, of London, and was established by act of the Scotch parliament (Will. 3. Parl. 1. § 5.) in 1695, by the name of the Governor and Company of the Bank of Scotland. Its original capital was 1,200,000*l.* Scotch, or 100,000*l.* sterling, distributed in shares of 1000*l.* Scotch, or 83*l.* 6*s.* 8*d.* sterling, each. The act exempted the capital of the bank from all public burdens, and gave it the exclusive privilege of banking in Scotland for 21 years. The objects for which the bank was instituted, and its mode of management, were intended to be, and have been, in most respects, similar to those of the Bank of England. The responsibility of the shareholders is limited to the amount of their shares.

The capital of the bank was increased to 200,000*l.* in 1744, and was enlarged by subsequent acts of parliament, the last of which (44 Geo. 3. c. 23.) was passed in 1804, to 1,500,000*l.*, its present amount. Of this sum, 1,000,000*l.* has been paid up. The last-mentioned act directed that all sums relating to the affairs of the bank should henceforth be rated in sterling money; that the former mode of dividing bank stock by shares should be discontinued; and that, for the future, it should be transferred in any sums or parcels. On the union of the two kingdoms in 1707, the Bank of Scotland undertook the recoinage, effected the exchange of the currency in Scotland: it was also the organ of government in the issue of the new silver coinage in 1817.

The Bank of Scotland is the only Scotch bank constituted by act of parliament. It began to establish branches in 1696, and issued notes for 1*l.* so early as 1704. The Bank also began, at a very early period, to receive deposits on interest, and to grant credit on cash accounts; a minute of the directors with respect to the mode of keeping the latter being dated so far back as 1729. It is, therefore, entitled to the credit of having introduced and set on foot the distinctive principles of the Scotch banking system, which, whatever may be its defects, is probably superior to every other system hitherto established. Generally speaking, the Bank of Scotland has always been conducted on sound and liberal principles; nor can there be a doubt that it has been productive, both directly and as an example to other banking establishments, of much public utility and advantage.

It may be worth mentioning, that the act of Will. 3., establishing the Bank of Scotland, declared that all foreigners who became partners in the Bank should, by doing so, become, to all intents and purposes, naturalised Scotchmen. After being for a long time forgotten, this clause was taken advantage of in 1818, when several aliens acquired property in the bank in order to secure the benefit of naturalisation. But after being suspended, the privilege was finally cancelled in 1822.

We subjoin an *official* abstract of the constitution and objects of the Bank of Scotland, printed for the use of the proprietors;—the terms and mode of transacting business are, of course, sometimes altered, according to circumstances.

I. The Bank of Scotland is a public national establishment; erected and regulated by the legislature alone; and expressly as a public bank in this kingdom; for the benefit of the nation, and for the advancement of agriculture, commerce, and manufactures; and for other objects of public policy.—(Will. Parl. 1. § 5.; 14 Geo. 3. c. 32; 24 Geo. 3. c. 8.; 32 Geo. 3. c. 25.; 34 Geo. 3. c. 19.; 44 Geo. 3. c. 23.)

II. The statutory capital is at present 1,500,000*l.* sterling. It is raised by voluntary subscription; and has been subscribed for, 1,000,000*l.* has been called for, and paid in.—(44 Geo. 3. c. 23.)

III. Subscribers, if not under obligation to the Bank, may, at pleasure, transfer their right. If under obligation to the Bank, the obligation must be previously liquidated; or the proceeds of the sale, at a price to the satisfaction of the directors, must be applied towards such liquidation. Transfers are made by a short assignment and acceptance thereof, both in a register appointed for that purpose. The expense, beside the government stamp, is 1*l.*—(Will. Parl. 1. § 5.)

IV. Bank of Scotland stock may be acquired, in any portions by any person, community, or other lawful party whatsoever; without selection, exclusion, or limitation of numbers.—(Will. Parl. 1. § 5., 44 Geo. 3. c. 23.)

V. Bank of Scotland stock may be conveyed by will, and, if specially mentioned, without expense of confirmation. It cannot be arrested: the holder's right may be adjudged. Dividends may be arrested.—(Will. Parl. 1. § 5.)

VI. The Bank of Scotland is a public corporation by act of parliament. The Bank's transactions are distinct from those of the stockholders; and theirs from those of the Bank.—(Will. Parl. 1. § 5.)

VII. The establishment is expressly deferred from any other business than that of banking.—(Will. Parl. 1. § 5.)

VIII. The management is vested, by statute, in a governor, deputy governor, twelve ordinary, and twelve extraordinary directors. They are chosen annually, on the last Tuesday of March, by the stockholders having 250*l.* of stock or upwards. Those above 250*l.* have a vote for every 250*l.*, to 5,000*l.*, or 20 votes. No person can have more than 20 votes. The governor must hold, at least, 2,000*l.* of stock; the deputy governor 1,000*l.* and each director 750*l.* They swear to be equal to all persons; and cannot hold any inferior office in the Bank.—(Will. Parl. 1. § 5.; 14 Geo. 3. c. 23.; 44 Geo. 3. c. 23.)

IX. The executive part is conducted by a treasurer, secretary, and other public officers, all sworn. Those having the official charge of cash find due security.—(Will. Parl. 1. § 5.)

X. The Board of directors sits for the general administration of the Bank, at the Bank's Public Head

Office in Edinburgh. The local business of that district is also conducted at that office. For the local business in the other parts of the kingdom, the Bank has its regular public offices in the principal towns. At each of these offices there is the bank agent or cashier, who gives due security, and conducts the Bank's business for that district in the manner after mentioned. There is also the bank's accountant for that office, who is appointed by the directors.—(*Will. Parl. 1. § 8.*)

XI. The Bank takes in money, at all its public offices, on deposit receipts or promissory notes, or on current deposit account.\* At the head office, draughts on London, or on any of the agencies, are given at each agency, draughts on London, or on the Head Office, are given. All these documents are on the Bank's check (and sealed with the Bank's seal †). They bear, in words, to be "For the Bank of Scotland," or, "For the Governor and Company of the Bank of Scotland." These documents are signed, if at Edinburgh, by the treasurer, and countersigned by the principal accountant; if at an agency, they must be signed by the Bank's agent as agent, and countersigned by the Bank's accountant for that agency; otherwise they infer no obligation on the Bank.—(*Resolution of Court, 24th Feb. 1788.*)

XII. Bills on London, Edinburgh, or any town where the Bank has its official correspondents, are discounted and purchased at all the Bank's public offices. The Bank's agents Judge, in ordinary cases, of the bills presented, so that parties meet with no delay. The Bank does not sell, at any of its offices, the bills which it has discounted and purchased. Its agents cannot indorse its bills, unless officially to the treasurer.—(*Resolution of Court, 23d Feb. 1789.*)

XIII. Government stock and other public funds, transferable in London, may be purchased or sold, and dividends thereon may be received through the Bank.

XIV. The Bank gives credit on cash accounts at any of its offices, on bond, with security. The security may be personal co-obligants, conjunctly and severally; or Bank of Scotland stock; or both; or such other security as may be specially agreed on. Applications for cash accounts are given in to the office where the cash account is wanted, and must specify the credit desired, and the security proposed; and the individual partners, where copartners are proposed. Cash accounts are granted by the directors only, and are not recalled unless by their special authority. It is understood that these credits are not used as dead loans, to produce interest only. In the fair course of business, the advantage of the Bank is secured by an active circulation of its notes, and by frequent repayments to it in a way least affecting the circulation.—(*Resolutions of Court, 6th Nov. 1795, and 23d Feb. 1789.*)

XV. The Bank's dividend of profits has been for some considerable period 6 per cent. per annum, on its paid-up capital of 1,000,000 sterling. The dividends are paid regularly twice a year, without expense. They may be drawn either at the Bank's Head Office, or at any of its other offices, as most agreeable to the stockholder.

Most of the other Scotch banks are conducted on the same principles and in the same way as the Bank of Scotland, so that the details as to its management will nearly apply to them all.

The *Royal Bank of Scotland* was established in 1727. Its original capital of 151,000*l.* has been increased to 2,000,000*l.*

The *British Linen Company* was incorporated in 1746, for the purpose, as its name implies, of undertaking the manufacture of linen. But the views in which it originated were speedily abandoned; and it became a banking company only. Its capital amounts to 800,000*l.*

None of the other banking companies established in Scotland are chartered associations, with limited responsibility; the partners being jointly and individually liable, to the whole extent of their fortunes, for the debts of the firms. Some of them, such as the National Bank, the Commercial Banking Company, the Dundee Commercial Bank, the Perth Banking Company, &c., have very numerous bodies of partners. Their affairs are uniformly conducted by a Board of Directors, annually chosen by the shareholders.

The Bank of Scotland began, as already stated, to issue 1*l.* notes so early as 1704; and their issue has since been continued without interruption. "In Scotland," to use the statement given in the Report of the Committee of the House of Commons of 1826 on the Promissory Notes of Scotland and Ireland, "the issue of promissory notes payable to the bearer on demand, for a sum of not less than 20*s.*, has been at all times permitted by law; nor has any act been passed limiting the period for which such issue shall continue legal in that country. In *England*, the issue of promissory notes for a less sum than 5*l.* was prohibited by law from the year 1777 to the epoch of the Bank Restriction in 1797. It has been permitted since 1797; and the permission will cease, as the law at present stands, in April, 1829."

There have been comparatively few bankruptcies among the Scotch banks. In 1793 and 1825, when so many of the English provincial banks were swept off, there was not a single establishment in Scotland that gave way. This superior stability seems to be ascribable partly to the formation of so many banks with numerous bodies of partners, which tends to prevent any company with only a few partners, unless they are known to possess considerable fortunes, from getting paper into circulation; partly to the less risk attending the business of banking in Scotland; and partly to the facility afforded by the law of Scotland of attaching a debtor's property, whether it consist of land or moveables, and making it available to the payment of his debts.

In the Report already quoted, the last-mentioned topic is touched upon as follows:—"The general provisions of the law of Scotland bearing upon this subject are calculated to promote the solidity of banking establishments, by affording to the creditor great facilities of ascertaining the pecuniary circumstances of individual partners, and

\* The Bank has always allowed interest on deposits. The rate allowed varies, of course, with the variations in the market rate. During the greater part of the late war it was as high as 4 per cent.; but at present (January 1847) it is only 3 per cent.

† The seal is now dispensed with, except on the Bank's notes.

by making the private fortunes of those partners available for the discharge of the obligations of the bank with which they are connected. There is no limitation upon the number of partners of which a banking company in Scotland may consist; and, excepting in the case of the Bank of Scotland and the two chartered banks, which have very considerable capitals, the partners of all banking companies are bound jointly and severally, so that each partner is liable, to the whole extent of his fortune, for the whole debts of the company. A creditor in Scotland is empowered to attach the real and heritable, as well as the personal estate of his debtor, for payment of personal debts, among which may be classed debts due by bills and promissory notes; and recourse may be had, for the purpose of procuring payment, to each description of property at the same time. Execution is not confined to the real property of a debtor merely during his life, but proceeds with equal effect upon that property after his decease.

"The law relating to the establishment of records gives ready means of procuring information with respect to the real and heritable estate of which any person in Scotland may be possessed. No purchase of an estate in that country is secure until the seisin (that is, the instrument certifying that actual delivery has been given) is put on record, nor is any mortgage effectual until the deed is in like manner recorded.

"In the case of conflicting pecuniary claims upon real property, the preference is not regulated by the date of the transaction, but by the date of its record. These records are accessible to all persons; and thus the public can with ease ascertain the effective means which a banking company possesses of discharging its obligations; and the partners in that company are enabled to determine, with tolerable accuracy, the degree of risk and responsibility to which the private property of each is exposed."

*Deposits.*—As was previously observed, all the Scotch banks receive deposits of so low a value as 10*l.*, and sometimes lower, and allow interest upon them.

"The interest," says the committee, "allowed by the Bank upon deposits varies, from time to time, according to the current rate of interest which money generally bears. At present (1826) the interest allowed upon deposits is 4 per cent." (At this moment (1846) the interest allowed on deposits is 3 per cent.) "It has been calculated that the aggregate amount of the sums deposited with the Scotch banks amounts to about 20,000,000*l.* or 21,000,000*l.*" (It is believed to be now (1846) little, if any thing, under 28,000,000 or 30,000,000*l.*) "The precise accuracy of such an estimate cannot of course be relied on. The witness by whom it was made thought that the amount of deposits could not be less than 16,000,000*l.*, nor exceed 25,000,000*l.*, and took an intermediate sum as the probable amount. Another witness, connected for many years with different banks in Scotland, and who has had experience of their concerns at Stirling, Edinburgh, Perth, Aberdeen, and Glasgow, stated that more than one half of the deposits in the banks with which he had been connected were in sums from ten pounds to two hundred pounds. Being asked what class of the community it is that makes the small deposits, he gave the following answer; from which it appears that the mode of conducting this branch of the banking business in Scotland has long given to that country many of the benefits derivable from the establishment of savings banks.

"*Question.* What class of the community is it that makes the smallest deposits?—*Answer.* They are generally the labouring classes in towns like Glasgow: in country places like Perth and Aberdeen, it is from servants and fishermen, and that class of the community, who save small sums from their earnings till they come to be a bank deposit. There is now a facility for their placing money in the Provident Banks, which receive money till the deposit amounts to 10*l.* When it comes to 10*l.* it is equal to the minimum of a bank deposit. The system of banking in Scotland is an extension of the Provident Bank system. Half-yearly or yearly these depositors come to the bank, and add the savings of their labour, with the interest that has accrued upon the deposits from the previous half-year or year, to the principal; and in this way it goes on, without being at all reduced, accumulating (at compound interest) till the depositor is able either to buy or build a house, when it comes to be 100*l.*, or 200*l.*, or 300*l.*, or till he is able to commence business as a master in the line in which he has hitherto been a servant. A great part of the depositors of the bank are of that description, and a great part of the most thriving of our farmers and manufacturers have arisen from such beginnings."

*Cash Accounts or Credits.*—The loans or advances made by the Scotch banks are either in the shape of discounts, or upon cash credits, or, as they are more commonly termed, *cash accounts.*

This species of account does not differ in principle from an over-drawing account at a private banker's in England. A cash credit is a credit given to an individual by a banking company for a limited sum, seldom under 100*l.* or 200*l.*, upon his own security, and that of two or three individuals approved by the bank, who become sureties for its payment. The individual who has obtained such a credit is enabled to draw the whole sum, or any part of it, when he pleases, replacing it, or portions of it, according as he

finds it convenient; interest being charged upon such part only as he draws out. "If a man borrows 5,000*l.* from a private hand, besides that it is not always to be found when required, he pays interest for it whether he be using it or not. His bank credit costs him nothing, except during the moment it is of service to him, and this circumstance is of equal advantage as if he had borrowed money at a much lower rate of interest."—(*Hume's Essay on the Balance of Trade.*) This, then, is plainly one of the most commodious forms in which advances can be made. Cash credits are not, however, intended to be a *dead loan*; the main object of the banks in granting them is to get their notes circulated, and they do not grant them except to persons in business, or to those who are frequently drawing out and paying in money.

The system of cash credits has been very well described in the Report of the Lords' Committee of 1826 on Scotch and Irish Banking. "There is also," say their lordships, "one part of their system, which is stated by all the witnesses (and, in the opinion of the committee, very justly stated) to have had the best effects upon the people of *Scotland*, and particularly upon the middling and poorer classes of society, in producing and encouraging habits of frugality and industry. The practice referred to is that of cash credits. Any person who applies to a bank for a cash credit is called upon to produce two or more competent sureties, who are jointly bound; and, after a full inquiry into the character of the applicant, the nature of his business, and the sufficiency of his securities, he is allowed to open a credit, and to draw upon the bank for the whole of its amount, or for such part as his daily transactions may require. To the credit of the account he pays in such sums as he may not have occasion to use, and interest is charged or credited upon the daily balance, as the case may be. From the facility which these cash credits give to all the small transactions of the country, and from the opportunities which they afford to persons who begin business with little or no capital but their character, to employ profitably the minutest products of their industry, it cannot be doubted that the most important advantages are derived to the whole community. The advantage to the banks who give these cash credits arises from the call which they continually produce for the issue of their paper, and from the opportunity which they afford for the profitable employment of part of their deposits. The banks are indeed so sensible that, in order to make this part of their business advantageous and secure, it is necessary that their cash credits should (as they express it) be frequently operated upon, that they refuse to continue them unless this implied condition be fulfilled. The total amount of their cash credits is stated by one witness to be 5,000,000*l.*, of which the average amount advanced by the banks may be one third."

The expense of a bond for a cash credit of 500*l.* is 4*l.* stamp duty, and a charge of from 5*s.* to 10*s.* 6*d.* per cent. for filling it up.

*Law in regard to Banking in Scotland.* We subjoin a full abstract of the act 8 & 9 Vict. c. 38., regulating the issue of bank notes in Scotland.

ABSTRACT OF THE ACT, 8 & 9 VICT. c. 38., TO REGULATE THE ISSUE OF BANK NOTES IN SCOTLAND.

*Bankers claiming to issue Bank Notes to give Notice to Commissioners of Stamps and Taxes.*—Whereas by the act 7 & 8 Vict. c. 32. s. 10., intitled "An Act to regulate the Issue of Bank Notes, and for giving to the Bankers and Company of the Bank of England certain Privileges for a limited Period," it was enacted, that, from and after the passing of that act no person, other than a banker who on the 6th day of May, 1844, was lawfully issuing his own bank notes, should make or issue bank notes in any part of the U. K.: and whereas it is expedient to regulate the issue of bank notes by such bankers as are now by law authorized to issue the same in Scotland: be it therefore enacted, that every banker claiming to be entitled to issue bank notes in Scotland shall, within 1 month next after the passing of this act, give notice in writing to the commissioners of stamps and taxes, at their head office in London, of such claim, and of the place and name and firm at and under which such banker has issued such notes in Scotland during the year next preceding the 1st day of May, 1845, and thereupon the said commissioners shall ascertain if such banker was on the 6th day of May, 1844, and from thence up to the 1st day of May, 1845, carrying on the business of a banker and lawfully issuing his own bank notes in Scotland, and if it shall so appear, then the said commissioners shall proceed to ascertain the average amount of the bank notes of such banker which were in circulation during the said period of 1 year preceding the 1st day of May, 1845, according to the returns made by such banker in pursuance of the act 4 & 5 Vict. c. 50., intitled "An act to make further Provision relative to the Returns to be made by Banks of the Amount of their Notes in circulation;" and the said commissioners, or any 2 of them, shall certify under their hands to such banker the average amount when so ascertained as aforesaid, omitting the fractions of a pound: if any 1 and it shall be lawful for every such banker to continue to issue his own bank notes after the 31st day of December, 1845, to the extent of the amount so certified, and of the amount of gold and silver coin held by such banker at the head office or principal place of issue of such banker, in the proportion and manner herein-after mentioned, but not to any further extent; and from and after the 6th day of December, 1845, it shall not be lawful for any banker to make or issue bank notes in Scotland, save and except only such bankers as shall have obtained such certificate from the commissioners of stamps and taxes.—§ 1.

*Provision for united Banks.*—If it shall be made to appear to the commissioners of stamps and taxes that any 2 or more banks have by written contract or agreement (which contract or agreement shall be produced to the said commissioners) become united within the year next preceding such 1st day of May, 1845, it shall be lawful for the said commissioners to ascertain the average amount of the notes of each such bank in the manner herein-before directed, and to certify a sum equal to the average amount of the notes of the 2 or more banks so united, as the amount which the united bank shall thereafter be authorized to issue, subject to the regulations of this act.—§ 2.

*Duplicate of Certificate to be published in the Gazette.*—The commissioners of stamps and taxes shall, at the time of certifying to any banker such particulars as they are herein-before required to certify, also

publish a duplicate of their certificate thereof in the next succeeding London Gazette in which the same may be conveniently inserted; and the Gazette in which such publication shall be made shall be conclusive evidence in all courts whatsoever of the amount of bank notes which the banker named in such certificate or duplicate is by law authorized to issue and to have in circulation as aforesaid, exclusive of an amount equal to the monthly average amount of the gold and silver coin held by such banker as herein provided.—§ 3.

*If Banks become United.*—Commissioners to certify the Amount of Notes which each Bank was authorized to issue.—In case it shall be made to appear to the commissioners of stamps and taxes, at any time hereafter, that any 2 or more banks have by written contract or agreement (which contract or agreement shall be produced to the said commissioners) become united subsequently to the passing of this act, it shall be lawful to the said commissioners, upon the application of such united bank, to certify in manner herein-before mentioned the aggregate of the amount of bank notes which such separate banks were previously authorized to issue under the separate certificates previously delivered to them, and so from time to time; and every such certificate shall be published in manner herein-before directed, and from and after such publication the amount therein stated shall be and be deemed to be the limit of the amount of bank notes which such united bank may have in circulation, exclusive of an amount equal to the monthly average amount of the gold and silver coin held by such bank, as herein provided.—§ 4.

*Issue of Notes for fractional Parts of a Pound prohibited.*—All bank notes to be issued or re-issued in Scotland shall be expressed to be for payment of a sum in pounds sterling, without any fractional parts of a pound; and if any banker in Scotland shall, from and after the 6th day of December, 1845, make, sign, issue, or re-issue any bank note for the fractional part of a pound sterling, or for any sum together with the fractional part of a pound sterling, every such banker so making, signing, issuing, or re-issuing any such note as aforesaid shall for each note so made, signed, issued, or re-issued forfeit or pay the sum of 20l.—§ 5.

*Limitation of Bank Notes in circulation.*—From and after the 6th day of December, 1845, it shall not be lawful for any banker in Scotland to have in circulation, upon the average of a period of 4 weeks, to be ascertained as herein-after mentioned, a greater amount of notes than an amount composed of the sum certified by the commissioners of stamps and taxes as aforesaid and the monthly average amount of gold and silver coin held by such banker at the head office or principal place of issue of such banker during the same period of 4 weeks, to be ascertained in manner herein-after mentioned.—§ 6.

*Issuing Banks to render Accounts weekly.*—Every banker who after the 6th day of December, 1845, shall issue bank notes in Scotland shall, on some one day in every week after the 15th day of December, 1845, (such day to be fixed by the commissioners of stamps and taxes), transmit to the said commissioners a just and true account of the amount of bank notes of such banker in circulation at the close of the business on the next preceding Saturday, distinguishing the notes of M. and upwards, and the notes below M., and also an account of the total amount of gold and silver coin, held by such banker at the head office or principal place of issue in Scotland of such banker at the close of business on each day of the week ending on the same Saturday, and also an account of the total amount of gold and silver coin in Scotland held by such banker at the close of business on that day; and on completing the first period of 4 weeks, and so on completing each successive period of 4 weeks, every such banker shall annex to such account the average amount of bank notes of such banker in circulation during the said 4 weeks, distinguishing the bank notes of M. and upwards and the notes below M., and the average amount of gold and silver coin respectively held by such banker at the head office or principal place of issue in Scotland of such banker during the said 4 weeks, and also the amount of bank notes which such banker is, by the certificate published as aforesaid in the London Gazette, authorized to issue under the provisions of the act; and every such account shall specify the head office or principal place of issue in Scotland of such banker, and shall be verified by the signature of such banker or his chief cashier, or in case of a company or partnership by the signature of the chief cashier or other officer duly authorized by the directors of such company or partnership, and shall be made in the form to this act annexed marked (A); and if any such banker shall neglect or refuse to render or send any such account in the form and at the time required by this act, or shall at any time render a false account, such banker shall forfeit the sum of 100l. for every such offence.—§ 7.

*What shall be deemed to be Bank Notes in circulation.*—All bank notes shall be deemed to be in circulation from the time the same shall have been issued by any banker, or any servant or agent of such banker, until the same shall have been actually returned to such banker, or some servant or agent of such banker.—§ 8.

*Commissioners of Stamps and Taxes to make a monthly Return.*—From the returns so made by each banker to the commissioners of stamps and taxes the said commissioners shall, at the end of the first period of 4 weeks after said 6th day of December, 1845, and so at the end of each successive period of 4 weeks, make out a general return in the form to this act annexed marked (B) of the monthly average amount of bank notes in circulation of each banker in Scotland during the last preceding 4 weeks, and of the average amount of all the gold and silver coin held by such banker, and certifying under the hand of any officer of the said commissioners duly authorized for that purpose, in the case of each such banker, whether such banker has held the amount of coin required by law during the period to which the said return shall apply, and shall publish the same in the next succeeding London Gazette in which the same can be conveniently inserted.—§ 9.

*Mode of ascertaining the average Bank Notes of each Banker in circulation and Gold Coin, during the first Four Weeks after 31st December, 1845.*—For the purpose of ascertaining the monthly average amount of bank notes of each banker in circulation, the aggregate of the amount of bank notes of each such banker in circulation at the close of the business on Saturday of each week during the first complete period of 4 weeks next after the 6th day of December, 1845, shall be divided by the number of weeks, and the average so ascertained shall be deemed to be the average of bank notes of each such bank in circulation during such period of 4 weeks, and so in each successive period of 4 weeks; and the monthly average amount of gold and silver coin respectively held as aforesaid by such banker shall be ascertained in like manner from the amount of gold and silver coin held by such banker at the head office or principal place of issue in Scotland of such banker at the close of business on Saturday in each week during the same period; and the monthly average amount of bank notes of each such banker in circulation during any such period of 4 weeks is not to exceed a sum made up by adding the amount certified by the commissioners of stamps and taxes as aforesaid and the monthly average amount of gold and silver coin held by such banker as aforesaid during the same period.—§ 10.

*In taking the Account of Coin held by Bankers, Silver Coin not to exceed the Proportion of One-fourth of Gold.*—In taking account of the coin held by any such banker as aforesaid, with respect to which bank notes to a further extent than the sum certified as aforesaid by the commissioners of stamps and taxes may, under the provisions of this act, be made and issued, no amount of silver coin exceeding 1-4th part of the gold coin held by such banker as aforesaid shall be taken into account, nor shall any banker be authorized to make and issue bank notes in Scotland on any amount of silver coin held by such banker exceeding the proportion of 1-4th part of the gold coin held by such banker as aforesaid.—§ 11.

*Commissioners of Stamps and Taxes empowered to cause the Books of Bankers to be inspected.*—Whereas in order to ensure the rendering of true and faithful accounts of the amount of bank notes in circulation, and the amount of gold and silver coin held by such banker, as directed by this act, it is necessary that the commissioners of stamps and taxes should be empowered to cause the books of bankers issuing such notes, and the gold and silver coin held by such bankers as aforesaid, to be inspected as herein-after mentioned; be it therefore enacted, that all and every the book and books of any banker who shall issue

bank notes under the provisions of this act, in which shall be kept, contained, or entered any account, minute, or memorandum of or relating to the bank notes issued or to be issued by such banker, or of or relating to the amount of such notes in circulation from time to time, or of or relating to the gold and silver coin held by such banker from time to time, or any account, minute, or memorandum the sight or inspection whereof may tend to secure the rendering of true accounts of the average amount of such notes in circulation and gold and silver coin held as directed by this act, or to test the truth of any such account, shall be open for the inspection and examination at all reasonable times of any officer of stamp duties authorized in that behalf by writing signed by the commissioners of stamps and taxes, or any two of them; and every such officer shall be at liberty to take copies of or extracts from any such book or account as aforesaid, and to inspect and ascertain the amount of any gold or silver coin held by such banker; and if any banker or other person keeping any such book, or having the custody or possession thereof or power to produce the same, shall, upon demand made by any such officer showing (if required) his authority in that behalf, refuse to produce any such book, or such officer for his inspection and examination, or to permit him to inspect and examine the same, or to take copies thereof or extracts therefrom, or of or from any such account, minute, or memorandum as aforesaid, kept, contained, or entered therein, or if any banker or other person having the custody or possession of any coin belonging to such banker shall refuse to permit or prevent the inspection of such gold and silver coin as aforesaid, every such banker or other person so offending shall for every such offence forfeit the sum of 100*l.*: provided always, that the said commissioners shall not exercise the powers aforesaid without the consent of the Lords of the Treasury. — § 12.

*All Bankers to return their Names once a Year to the Stamp Office.* — Every banker in Scotland who is now carrying on or shall hereafter carry on business as such, other than the Bank of Scotland, the Royal Bank of Scotland, and the British Linen Company, shall, on the 1st of January in each year, or within 15 days thereafter, make a return to the commissioners of stamps and taxes, at their head office in London, of his name, residence, and occupation, or, in the case of a company or partnership, of the name, residence, and occupation of every person composing or being a member of such company or partnership, and also the name of the firm under which such banker, company, or partnership carry on the business of banking, and where such business is carried on, and any such banker, company, or partnership shall omit or refuse to make such return within 15 days after the said 1st of January, or shall wilfully make other than a true return of the persons as herein required, every banker, company, or partnership so offending shall forfeit or pay the sum of 50*l.*; and the said commissioners of stamps and taxes shall on or before the 1st of March in every year publish in some newspaper circulating within each town or county to which the head office or principal place of issue of any bank or company shall be situated a copy of the return so made by every banker, company, or partnership carrying on the business of bankers within such town or county respectively, as the case may be. — § 13.

*Penalty on Bankers issuing in excess.* — If the monthly average circulation of bank notes of any banker, taken in the manner herein directed, shall at any time exceed the amount which such banker is authorized to issue and to have in circulation under the provisions of this act, such banker shall in every such case forfeit a sum equal to the amount by which the average monthly circulation, taken as aforesaid, shall have exceeded the amount which such banker was authorized to issue and to have in circulation as aforesaid. — § 14.

*Bank of England Notes not a legal Tender in Scotland.* — Whereas by an act passed in the 3 & 4 Will. 4. intituled "An Act for giving to the Corporation of the Governor and Company of the Bank of England certain Privileges for a limited Period, under certain Conditions," it was enacted, that from and after the 1st of August, 1834, unless and until parliament should otherwise direct, a tender of a note or notes of the governor and company of the Bank of England, expressed to be payable to bearer on demand, should be a legal tender to the amount expressed in such note or notes, and should be taken to be valid as a tender to such amount for all sums above 5*l.* on all occasions on which any tender of money may be legally made, so long as the Bank of England should continue to pay on demand their said notes in legal coin; provided always, that no such note or notes should be deemed a legal tender of payment by the governor and company of the Bank of England, or any branch bank of the said governor and company; and whereas doubts have arisen as to the extent of the said enactment; for removal whereof be it enacted and declared, that nothing in the said last-mentioned act contained shall extend or be construed to extend to make the tender of a note or notes of the governor and company of the Bank of England a legal tender in Scotland; provided always, that nothing in this act contained shall be construed to prohibit the circulation in Scotland of the notes of the governor and company of the Bank of England, as heretofore. — § 15.

*Notes for less than 20*l.* not negotiable in Scotland.* — All promissory or other notes, bills of exchange, or drafts, or undertakings in writing, being negotiable or transferable, for the payment of any sum or sums of money, or any orders, notes, or undertakings in writing, being negotiable or transferable, for the delivery of any goods, specifying their value in money less than the sum of 20*l.* in the whole, heretofore made or issued, or which shall hereafter be made or issued in Scotland, shall, from and after the 1st day of January, 1846, be and the same are hereby declared to be absolutely void and of no effect, any law, statute, usage, or custom to the contrary thereof in anywise notwithstanding; and if any person or persons shall, after the 1st day of January, 1846, by any art, device, or means whatsoever publish or utter in Scotland any such notes, bills, drafts, or engagements as aforesaid for a less sum than 20*l.*, or on which less than the sum of 20*l.* shall be due, and which shall be in anywise negotiable or transferable, or shall negotiate or transfer the same in Scotland, every such person shall forfeit and pay for every such offence any sum not exceeding 20*l.* nor less than 5*l.*, at the discretion of the justice of the peace who shall hear and determine such offence. — § 16.

*Notes of 20*l.* or above, and less than 5*l.*, to be drawn in certain Form.* — All promissory or other notes, bills of exchange, or drafts, or undertakings in writing, being negotiable or transferable, for the payment of 20*l.*, or any sum of money above that sum and less than 5*l.*, or on which 20*l.*, or above that sum and less than 5*l.*, shall remain undischarged, and which shall be issued within Scotland, any time after the 1st day of January, 1846, shall specify the names and places of abode of the persons respectively to whom or to whose order the same shall be made payable, and shall bear date before or at the time of drawing or issuing thereof, and not on any day subsequent thereto, and shall be made payable within the space of 21 days after the day of the date thereof, and shall not be transferable or negotiable after the time hereby limited for payment thereof, and every endorsement to be made thereon shall be made before the expiration of that time, and to bear date at or not before the time of making thereof, and shall specify the name and place of abode of the person or persons to whom or to whose order the money contained in every such note, bill, draft, or undertaking is to be paid; and the signing of every such note, bill, draft, or undertaking, and also of every such endorsement, shall be attested by 1 subscribing witness at the least; and which said notes, bills of exchange, or drafts, or undertakings in writing, may be made or drawn in words to the purport or effect as set out in the schedules to this act annexed marked (C) and (D); and all promissory or other notes, bills of exchange, or drafts, or undertakings in writing, being negotiable or transferable, for the payment of 20*l.*, or any sum of money above that sum and less than 5*l.*, or in which 20*l.*, or above that sum and less than 5*l.*, shall remain undischarged, and which shall be issued in Scotland at any time after the said 1st day of January, 1846, in any other manner than as aforesaid, and also every endorsement on any such note, bill, draft or other undertaking to be negotiated under this act, other than as aforesaid, shall and the same are hereby declared to be absolutely void, any law, statute, usage, or custom to the contrary thereof in anywise notwithstanding; provided always, that nothing in this clause contained shall be construed to extend to any such bank notes as shall be lawfully issued by any banker in Scotland authorized by this act to continue the issue of bank notes. — § 17.

Joint Stock Banking Companies in Scotland—*continued*.

## V. BANKS (IRISH).

"In no country, perhaps," says Sir Henry Parnell, "has the issuing of paper money been carried to such an injurious excess as in Ireland. A national bank was established in 1783, with similar privileges to those of the Bank of England, in respect to the restriction of more than 6 partners in a bank; and the injury that Ireland has sustained from the repeated failure of banks may be mainly attributed to this defective regulation. Had the trade of banking been left as free in Ireland as it is in Scotland, the want of paper money that would have arisen with the progress of trade would, in all probability, have been supplied by joint-stock companies, supported with large capitals, and governed by wise and effectual rules.

"In 1797, when the Bank of England suspended its payments, the same privilege was extended to Ireland; and after this period the issues of the Bank of Ireland were rapidly increased. In 1797, the amount of the notes of the Bank of Ireland in circulation was 621,917*l.*; in 1810, 2,266,471*l.* and in 1814, 2,986,999*l.*

"These increased issues led to corresponding increased issues by the private banks, of which the number was 50 in the year 1804. The consequence of this increase of paper was a great depreciation of it; the price of bullion and guineas rose to 10 per cent. above the mint price, and the exchange with London became as high as 18 per cent., the par being 8*½*. This unfavourable exchange was afterwards corrected, not by any reduction in the issues of the Bank of Ireland, but by the depreciation of the British currency in the year 1810, when the exchange between London and Dublin settled again at about par.

"The loss that Ireland has sustained by the failure of banks may be described in a few words. It appears by the Report of the Committee on Irish Exchanges in 1804, that there were at that time in Ireland 50 registered banks. Since that year a great many more have been established; but *the whole have failed*, one after the other, involving the country from time to time in immense distress, with the following exceptions:—first, a few that withdrew from business; secondly, four banks in Dublin; thirdly, three at Belfast; and, lastly, one at Mallow. These eight banks, with the New Provincial Bank, and the Bank of Ireland, are the only banks now existing in Ireland.

"In 1821, in consequence of 11 banks having failed nearly at the same time in the preceding year in the south of Ireland, government succeeded in making an arrangement with the Bank of Ireland by which joint-stock companies were allowed to be established at a distance of 50 miles (Irish) from Dublin, and the Bank was permitted to increase its capital 500,000*l.* The act of 1 & 2 Geo. 4. c. 72. was founded on this agreement.

"But ministers having omitted to repeal in this act various restrictions on the trade of banking that had been imposed by 33 Geo. 2. c. 14., no new company was formed. In 1824 a party of merchants of Belfast, wishing to establish a joint-stock company, petitioned parliament for the repeal of this act of Geo. 2., and an act was accordingly passed in that session repealing some of the most objectionable restrictions of it (the 5 Geo. 4. c. 73.).

"In consequence of this act the Northern Bank of Belfast was converted into a joint-stock company, with a capital of 500,000*l.*, and commenced business on the 1st of January, 1825. But the remaining restrictions of 33 Geo. 2., and certain provisions contained in the new acts of 1 & 2 Geo. 3. and 5 Geo. 4., obstructed the progress of this company, and they found it necessary to apply to government to remove them; and a bill was accordingly introduced which would have repealed all the obnoxious clauses of the 33 Geo. 2., had it not been so altered in the committee as to leave several of them in force. In 1825 the Provincial Bank of Ireland commenced business, with a capital of 2,000,000*l.*; and the Bank of Ireland has of late established branches in all the principal towns in Ireland.

"The losses that have been sustained in Ireland by abusing the power of issuing paper have been so great, that much more is necessary to be done, by way of protecting the public from future loss, than the measure proposed last session (1826) by ministers of abolishing small notes, and the measure already adopted of allowing joint-stock companies to be established in the interior of the country. As the main source of the evil consists in the interference of the law in creating a national bank with exclusive privileges, the first step that ought to be taken for introducing a good system into Ireland is the getting rid of such a bank, and opening the trade of banking in Dublin. The next measure should be the requiring of each bank to give security for the amount of paper that is issued; for after the experience of the ignorance with which the Irish banks have conducted their business, and the derangement of the natural course of the trade by the long existence of the Bank of Ireland, it would be unwise to calculate upon a sound system of banking speedily supplanting that which has been established.

"Under the circumstances in which Ireland is placed, nothing would so much contri-

bute to her rapid improvement in wealth as the introducing of the Scotch plan of cash credits, and of paying interest on deposits. By cash credits the capital which now exists would be rendered more efficient, and the paying of interest on small deposits would lead to habits of economy, and to the more rapid accumulation of new capital."—(*Observations on Paper Money, &c.*, by Sir Henry Parnell, pp. 171—177.)

The capital of the Bank of Ireland at its establishment in 1783 amounted to 600,000*l.*; but it has been increased at various periods, and has, since 1821, amounted to 3,000,000*l.* The Bank of Ireland draws on London at 10 days' date. She neither grants cash credits, nor allows any interest on deposits. She discounts at the rate of 5*l.* per cent.

In 1828 the currency of Ireland was assimilated to that of Great Britain. Previously to that period the currency of the former was 8½ per cent. less valuable than that of the latter.

Subjoined is

A Statement exhibiting the Amount of the Liabilities and of the Assets of the Bank of Ireland on the 20th February, 1841.

*Provincial Bank of Ireland.*—This important establishment was, as already stated, founded in 1825. Its subscribed capital consists of 2,000,000*l.*, divided into 20,000 shares of 100*l.* each, of which 25 per cent., or 500,000*l.*, has been paid up. Its head office is in London; and at present it has subordinate offices in Cork, Limerick, Clonmel, Londonderry, Sligo, Wexford, Waterford, Belfast, Galway, Armagh, Athlone, Coleraine, Kilkenny, Ballina, Tralee, Youghall, Enniskillen, Monaghan, Banbridge, and Ballymena. The last 5 have been opened since 1831. The entire management of the establishment is vested in the court of directors in London. The business of the branch banks is conducted, under the control of the head office, by the managers, with the advice and assistance of 2 or more gentlemen of respectability in the district, each holding 10 shares in the bank. The business consists of discounting bills; granting cash credits after the manner of the Scotch banks; receiving deposits, on which interest, varying according to circumstances, is allowed; in drawing and giving letters of credit on other places of Ireland, Great Britain, &c.; and of other details incident to banking. It has had several pretty severe runs to sustain. In the course of a single week, in October, 1828, about 1,000,000*l.* in gold was sent from England to Ireland on account of the Provincial Bank! This prompt and ample supply effectually maintained the credit of the establishment, and did much to restore confidence.

The notes of the Provincial Bank have always been payable at the places where they are issued. The Bank of Ireland began to establish branches in 1825; but the notes issued by her branches were not, at first, payable except at the head office in Dublin. This distinction, which tended to throw the principal pressure of runs in the country on the Provincial Bank and other private companies, was abolished by the act 9 Geo. 4. Several joint-stock banks have been established in Ireland since 1825, especially in 1836. But the greatest of these, the Agricultural and Commercial Bank, which had nearly 4,000 partners and 28 branches, was in no long time obliged to suspend payments, and is now in the course of having its affairs wound up. Some of the others have also been abandoned. There are comparatively few private banks in Ireland.

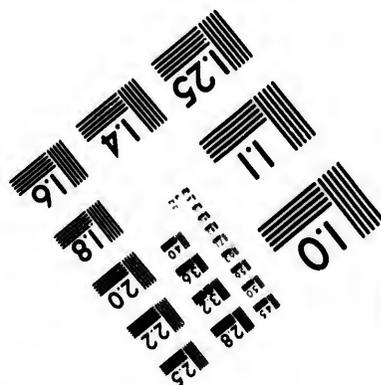

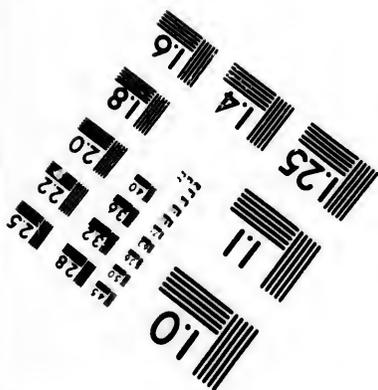

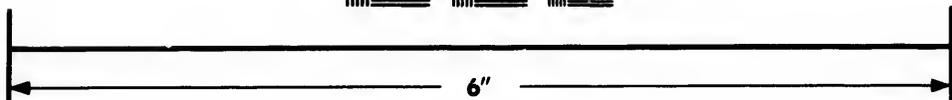

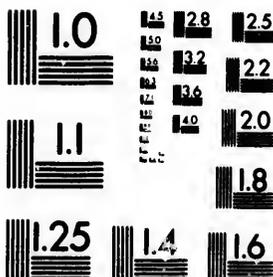

The provisions in the act 8 & 9 Vict. c. 37., with regard to banking in Ireland, do not differ materially from those in the preceding act relating to Scotland. The prohibition that formerly existed against joint-stock banks carrying on business in Dublin or anywhere within 50 miles thereof is repealed; the charter of the Bank of Ireland is prolonged till January, 1855, when it may be dissolved on notice; notes of the Bank of England are declared not to be legal tender in Ireland; and notes for less than 20*l.* are not to be negotiable.

shares. The affairs of the bank are managed by a president, secretary, and 5 directors, who are chosen every 6 months, but may be indefinitely re-elected. This bank discounts bills of exchange with three responsible signatures; it takes continuations on stock, and sometimes lends on bullion at such a rate of interest and to such an extent as may be agreed upon. It occasionally, also, makes loans on merchandise, but never at less than 5 per cent. Its notes vary from 1,000 florins to 25 florins; that is, from 83*l.* to 2*l.* The dividends have varied from 3 to 7 per cent. The shares are each 1,000 florins. The responsibility of the shareholders is limited to the amount of their stock. Its original charter, which was limited to 25 years, was prolonged in 1838 for 25 years more.

The *Bank of Hamburg* is a deposit bank, and its affairs are managed according to a system that insures the fullest publicity. It receives no deposits in coin, but only in bullion of a certain degree of fineness. It charges itself with the bullion at the rate of 442 schillings the mark, and issues it at the rate of 444 schillings; being a charge of  $\frac{1}{10}$ ths, or nearly  $\frac{1}{4}$  per cent., for its retention. It advances money on jewels to  $\frac{1}{10}$ ths of their value. The city is answerable for all pledges deposited with the bank; they may be sold by auction, if they remain 1 year and 6 weeks without any interest being paid. If the value be not claimed within 3 years, it is forfeited to the poor. The *Bank of Hamburg* is universally admitted to be one of the best managed in Europe.

The *Bank of France* was founded in 1803. The exclusive privilege of issuing notes payable to bearer was granted to it for 40 years, and was continued by a law passed in 1840 till 1867. This law was preceded by a very able Report, drawn up by M. Dufaure, in which, among other questions, the policy of having only one bank of issue in Paris is examined, and decided in the affirmative. The capital of the bank consisted at first of 45,000,000 fr.; but it was subsequently increased to 90,000,000 fr., divided into 90,000 shares or *actions* of 1,000 fr. each. Of these shares 67,900 are in the hands of the public: 22,100 having been purchased up by the bank out of her profits were subsequently cancelled; so that her capital consists at present of 67,900,000 fr. (2,716,000*l.*) exclusive of a reserve fund of 10,000,000 fr. represented by 500,000 fr. 5 per cent. rentes. The capital of the bank was divided on the 1st of January, 1840, among 4,207 shareholders. The notes issued by the bank are for 1,000 and 500 fr. The dividend varies from 4 to 5 per cent. Bonuses of 200 fr. and 132 fr. a share were paid out of this reserve to the shareholders in 1820 and 1831. No bills are discounted that have more than three months to run. The customary rate of discount is 4 per cent., but it varies according to circumstances. The discounts in 1839 amounted to 1,188,719,400 fr., of which 136,640,000 fr. were by the bank's branches. At an average of the 10 years ending with 1838, the bank notes in circulation amounted to 213,730,000 fr., and the average amount of the specie in reserve in the bank's coffers during the same period amounted to 188,706,000 fr. The bank is obliged to open a *compte courant* for every one who requires it, and performs services for those who have such accounts similar to those rendered by the private banks of London to their customers. She is not allowed to charge any commission upon current accounts, so that her only remuneration arises out of the use of the money placed in her hands by the individuals whose payments she makes. This branch of the business is said not to be profitable. The bank advances money on pledges of different kinds, such as foreign coin or bullion, government or other securities, &c. It also undertakes the care of valuable articles, as plate, jewels, title-deeds, &c. The charge is  $\frac{1}{4}$  per cent. of the value of each deposit for every period of 6 months or under.

The administration of the bank is vested in a council-general of 20 members, viz. a governor and deputy governor, nominated by the king; and 15 directors and 3 censors, chosen by the general body of the shareholders. We beg to subjoin

(For farther information as to the Bank of France, see the Report of M. Dufaure, already referred to, in the Appendix (p. 356), of the Report of 1840 on Banks of Issue; with the *Comptes Rendus* of different years; the returns in the *Monteur*, &c.)

Banks have also been established in Berlin, Copenhagen, Vienna, and Petersburg. Those who wish for detailed information with respect to these establishments, may consult the 4th vol. of the *Cours d'Economie Politique* of M. Storch, which contains a good account of the paper money of the different Continental states. The objects we have in view will be accomplished by laying before our readers the following details with respect to the *Commercial Bank of Russia*, established in 1818:—

This bank receives deposits in gold and silver, foreign as well as Russian coin, and in bars and ingots. It has a department for transferring the sums deposited with it, on the plan of the *Hamburg Bank*. It discounts bills, and lends money on deposits of merchandise of Russian produce or origin. Its capital consists of 8,571,429 silver rubles. It is administered by a governor and 4 directors, appointed by government; and 4 directors, elected by the commercial body of Petersburg. The property in the bank is protected against all taxation, sequestration, or attachment; and it is enacted, that subjects of countries with which Russia may be at war shall be entitled at all times to receive back their deposits without any reservation. It is also declared, that at no time shall the bank be called upon for any part of its capital to assist the government. All deposits must be made for 6 months at least, and be repayable at or before that period, and not be less than 500 paper rubles: sums so deposited to pay 4 per cent. The deposits, if in bars, ingots, or foreign specie, are estimated in Russian silver coin, and so registered in the attestation; and if not demanded back within 15 days of the expiration of 6 months, or the necessary premium paid for the prolongation, the owner loses the right of claiming his original deposit, and must take its estimated value in Russian silver coin. No bills are discounted that have less than 8 days or more than 6 months to run. The rate of discount is 6 per cent. No interest is allowed on money deposited in the bank, unless notice be given that it will be allowed to lie for a year, and 3 months' notice be given of the intention to draw it out, when *six* per cent. interest is allowed. This bank has branches at Archangel, Moscow, Odessa, Riga, &c.

By means of its capital and deposits, which in 1839 amounted together to 161,381,530 silver rubles, the Bank effected in that year the following operations:—

	Rbla.	Cop.
1. Repayments on deposits in transfer	21,366,101	45
2. Transfers from one city to another	49,985,515	96
3. Drafts purchased	7,532,651	64
4. Repayment of deposits at interest	81,283,778	91
5. Discount of bills of exchange	17,117,541	7
6. Advances on deposits of merchandise	1,245,601	68

7. Advances on the notes of other banks	Rbla.	Cop.
8. Discount of notes of the Lombard	350,001	13
9. Advanced on fixed property by branch at Kiev	1,929,271	43
10. The net profit during the same year amounted to 656,561 silv. rbla., and the reserve capital of the bank was then also 1,379,976 silv. rbla. (See <i>Suppl. to the Journal de St. Petersbourg</i> for 1839, p. 67.)		

**American Banks.**—The system of banking in America has attracted a great deal of attention in this country; principally, perhaps, from the extent to which English capital has been embarked in it; but partly, also, from the peculiar principles on which it has been founded, and the mode in which it has been conducted. And certainly it deserves to be carefully studied and meditated, were it only for the incontestible evidence which it affords that, how flourishing soever in other respects, a country cursed with a vicious banking system may be every now and then involved in the greatest difficulties, and reduced almost to a state of bankruptcy. Considering the peculiarly favourable circumstances under which the United States are placed, the boundless extent of their fertile and unoccupied lands, the lightness of their public burdens, and the intelligence, enterprise, and economy of the people, it might be presumed that distress and bankruptcy would be all but unknown in the Union, and that she would be exempted from those revulsions which so seriously affect less favourably situated communities. But the very reverse of all this is the fact: discredit and bankruptcy are incomparably more prevalent in America than in any European country; and all sorts of industrious undertakings and monied fortunes are infinitely more secure in Russia, and even in Turkey, than in the United States! This anomalous and apparently inexplicable state of things is entirely a consequence of the American banking system, which seems to combine within itself every thing that can make it an engine of unmixed evil. Had a committee of clever men been selected to devise means by which the public might be tempted to engage in all manner of absurd projects, and be most easily duped and swindled, we do not know that they could have hit upon any thing half so likely to effect their object as the existing American banking system. It has no one redeeming quality about it, but is from beginning to end a compound of quackery and imposture. Our own banking system is bad enough,

certainly; but it is as superior to the American as can well be imagined. A radical reform of the latter, or, if that cannot be effected, its entire suppression, would be the greatest boon that can be conferred on the Union, and would be no small advantage to every nation with which the Americans have any intercourse.

The American banks are all joint-stock associations. But instead of the partners being liable, as in England, for the whole amount of the debts of the banks, they are in general liable only for the amount of their shares, or for some fixed multiple thereof. It is needless to dwell on the temptation to commit fraud held out by this system, which has not a single countervailing advantage to recommend it. The worthlessness of the plan on which the banks are founded was evinced by the fact, that between 1811 and the 1st of May, 1830, no fewer than 195 banks became altogether bankrupt, many of them paying only an insignificant dividend; and this exclusive of a much greater number that stopped for a while, and afterwards resumed payments.—(*Report from Secretary of the Treasury of the United States*, 12th February, 1841.) The wide-spread mischief resulting from such a state of things led to the devising of various complicated schemes for insuring the stability and prudent management of banks; but, as they all involved regulations which it was impossible to enforce, they have been practically worse than useless. In Massachusetts, for example, it was provided that no bank for the issue of notes should go into operation in any way until at least half its capital stock had been paid in gold and silver into the bank, and been lodged in its coffers, and seen in them by inspectors appointed for that purpose; and the cashier of every bank was bound to make specific returns once a year of its debts and assets, on being required to do so by the secretary of state. But our readers need hardly be told that these elaborately contrived regulations are really good for nothing, unless it be to afford an easy mode of cheating and defrauding the public. Instances have occurred of banks having borrowed an amount of dollars equal to half their capital for a single day, and of such dollars having been examined by the inspectors appointed for that purpose, and reported by them, and sworn by a majority of the directors, to be the first instalment paid by the stockholders of the bank, and intended to remain in it!—(*Gouge's Paper Money and Banking in the United States*.) We do not of course imagine that such disgraceful instances can be of common occurrence; but what is to be thought of a system which permits a company for the issue of paper money, founded on such an abominable fraud, to enter on business with a sort of public attestation of its respectability? The publicity, too, to which the American banks are subject is injurious rather than otherwise. Those who are so disposed may easily manufacture such returns as they think most suitable to their views; and the more respectable banks endeavour, for a month or two previously to the period when they have to make their returns, to increase the amount of bullion in their coffers by temporary loans, and all manner of devices. The whole system is, in fact, bottomed on the most vicious principles. But it is unnecessary, after what has recently occurred, to insist further upon the gross and glaring defects of American banking. Perhaps no instance is to be found in the history of commerce of such a wanton over-issue of paper as took place in the United States in 1835 and 1836. The result was such as every man of sense might have anticipated. The revulsion to which it necessarily led, after producing a frightful extent of bankruptcy and suffering in all parts of the Union, compelled, in May, 1837, every bank within the States, without, we believe, a single exception, to suspend specie payments! In 1838, such of them as were not entirely swept off resumed specie payments; but in 1839, by far the larger number of them, with the Bank of the United States at their head, again suspended payments; and this institution, with many of the others, has been found to be altogether insolvent.

It is stated, in the Report referred to above by the Secretary of the Treasury of the United States, that between 1830 and 1840, 150 banks, having an aggregate capital of 45,000,000 dol., became entirely insolvent; and it farther appears that between the date of the above Report and the 1st of September, 1842, no fewer than 161 additional banks had failed, having (including the Bank of the United States) an aggregate capital of 132,362,339 dol., with notes in circulation to the amount of 43,320,554 dol. (See the list of these banks in *Downe's American Almanac* for 1843, pp. 293-295.) And if we add to the losses thus occasioned the depression in the value of the stocks of the other banks and the diminution of their circulation, the bankruptcy of a vast number of railway, canal, and other joint-stock associations, the discredit of the stocks of most of the States, the avowed bankruptcy of some of those most able to pay their debts, and the violent shock given to all private credit, we may form some faint idea of the injury inflicted on the Union by this revulsion. But the loss to individuals in a pecuniary point of view, vast as it has been, is nothing to the influence of this wretched system on public morals. It bids fair to convert the whole people of America into a nation of gamblers and swindlers. "The greatest injury to society," says a writer in the *American Almanac*, "resulting from this state of things, is in the

upheaving of the elements of social order, and the utter demoralisation of men by the temptation to speculation, which ends in swindling to retain ill-gotten riches. In illustration, the Journal of Banking chronicles thirty odd millions of plunder by bank defalcations in this single revulsion, as far as they have been discovered and have reached the eye of the editor."—(P. 257.)

Here the writer stops; but he might have added, that "swindling to retain ill-gotten riches" is no longer confined to bank clerks and bank agents. It infects and pollutes every order of society. The repudiating legislatures of Pennsylvania and other states may come into competition for the palm of dishonesty with the worst agents of the worst banking schemes in the Union.

The United States Bank, originally incorporated by Congress in 1816 for 20 years, had a paid-up capital of 35,000,000 dollars, or of more than seven millions sterling. The question, whether the charter should be renewed, was debated with extraordinary vehemence in all parts of the Union. The then president, General Jackson, was violently opposed to the re-incorporation of the bank; and rejected a bill for that purpose that had been approved by the other branches of the legislature. He also followed up this blow by removing the government deposits from the bank in 1833. But, notwithstanding this hostility on the part of the executive government, the credit of the institution continued unimpaired; and, in 1835 and 1836, the Bank of the United States, like other banks in the Union, made enormous additions to her issues; which went on increasing till the issue of the famous treasury circular of the 11th of July, 1836, directing that all deposits of money on sales of public lands (the speculations in which had been pushed to an unprecedented extent) should be paid in specie. This may be said to have been the first step in that extraordinary reaction that has overspread America with public and private bankruptcy, and from the effects of which she has not yet recovered (1843), and will not speedily recover.

But, despite the opposition of the president, the Bank of the United States succeeded, in 1836, in obtaining a charter of incorporation from the legislature of Pennsylvania. But there can be no doubt that its capital had been seriously impaired before it received this charter; and this diminution of its strength, combined with the reckless imprudence with which it made advances on state stocks, the stocks of public companies, and the cotton and other products of private individuals, completed its ruin. We have seen no very late statement of its affairs on which we should be inclined to place any reliance; but it is certain that the bankruptcy is of the very worst description, and that all, or nearly all, the capital belonging to the bank has been lost.

Out of the 350,000 shares into which the capital stock of the Bank of the United States was divided, it is understood that in the latter period of its existence about 84,000 were held by foreigners, and mostly by Englishmen. The question, whether the charter will be adequate to protect these parties in their limited liability, is one that may not improbably be mooted, should the bank not be able to discharge the various claims upon her. If they are protected, we incline to think that the sooner the law is changed the better.

Had the United States Bank not opened an agency office here, the case would have been different; but having opened an office, and transacted a large amount of business in London, it became to all intents and purposes an English establishment; and the partners belonging to it in England must, one should think, be amenable to English law, and not to the law of Pennsylvania. If this be not the case, it will necessarily follow that any institution, though consisting wholly of Englishmen, that obtained a charter from any foreign state, even though it were not generally known that it was chartered, as the foreign law might not require this to be divulged, might open places of business in London and Liverpool, and, after getting some hundreds of thousands of pounds into debt, might suspend payments, and laugh at the credulous dupes they had reduced to beggary and ruin. The legislature of England has wisely refused to allow of partnerships (excepting in extraordinary cases) being instituted here with limited responsibility, being well convinced that, despite every possible precaution, they would be sure, in many instances, to be perverted to the basest purposes. And is it to be endured that foreigners should acquire privileges in this country denied to natives? or that foreign governments should have power to organise and establish institutions amongst us on a principle which parliament justly regards as most objectionable? If the law of England authorise *this*, it is most certainly high time that it were amended, and that a check were given to what must otherwise be one of the safest and most profitable species of swindling. But we hardly think that such can be the law. British subjects who embark their capital in foreign trading associations may, in so far as respects their interest in them, be amenable only to the foreign law, provided the associations to which they belong restrict their operations to foreign countries. But should these associations send agents here, and open offices and carry on business within the United Kingdom, the case is altogether different: the legislature of Pennsylvania may be omnipotent at home, but it is luckily

impotent in England; it may, if it choose, institute trading companies with limited responsibility, or with no responsibility at all; but if these be joined by Englishmen, make England the scene of their operations, and issue their balance sheets in the city of London, what are they in practice but English companies? And such of our countrymen as have embarked in them would seem to have but slender grounds of complaint, should they be taught that they are responsible to our law; that the law of a foreign country cannot protect them; and that they will be made liable, in the event of the concern becoming bankrupt, to the utmost shilling of their fortunes for its liabilities to British subjects.

Owing to the privilege claimed by the different states, and exercised without interruption from the Revolution downwards, it is, we fear, impossible to effect the suppression of local paper in America, or to establish a paper currency which should at all times vary in amount and value, as if it were metallic. But the states have it in their power to do that which is next best; they may compel all banks which issue notes to give security for their issues. This, though it would not prevent oscillations in the amount and value of the currency, would, at all events, prevent those ruinous and ever-recurring stoppages and bankruptcies of the issuers of paper money that render the American banking system one of the severest scourges to which any people was ever subjected. Common sense and experience alike demonstrate the inefficacy of all the regulations enacted by the American legislatures to prevent the abuse of banking. It is in vain for them to lay it down that the issues shall never exceed a certain proportion of the capital of the bank, and so forth. Such regulations are all very well, provided the banks choose to respect them; but there are no means whatever of insuring their observance, and their only effect is to make the public look for protection and security to what is altogether impotent and worthless for any good purpose. If the suppression of local issues be impossible in America, there is nothing left but to take security from the issuers of notes. The reader may be assured that all schemes for the improvement of banks, by making regulations as to the proportion of their issues and advances to their bullion, capital, &c., are downright delusion and quackery.

Owing to the extensive destruction of bank paper, and the still more extensive destruction of bills and other substitutes for money, occasioned by the total prostration of private credit, there has lately been a great scarcity of currency in the Union, and very large quantities of specie have been imported, most of which has found its way into the coffers of the existing banks. We may, therefore, at no distant day, expect a revival of credit and of all sorts of speculations in the Union. Whether Englishmen will be again stupid enough to adventure their money in the new projects that will then, no doubt, be set on foot, remains to be seen; but if they do, they will certainly deserve to lose every farthing they may so invest. They may be assured that unless the present banking system be cut up by the roots, of which there is not the smallest prospect, an increase of specie in the banks is only giving them the means of entering on a new career of over-issue and swindling.

Comparative View of the Condition of all the Banks in the United States, near the Commencement of each Year, from 1835 to 1st September 1842.

	According to Returns nearest 1st January.							
	1835.	1836.	1837.	1838.	1839.	1840.	1841.	1842.
	dollars.	dollars.	dollars.	dollars.	dollars.	dollars.	dollars.	dollars.
Whole number of banks and branches in operation	704	718	758	829	840	801		
Capital paid in	\$31,930,337	\$31,875,292	\$90,773,091	\$17,536,778	\$27,129,518	\$58,448,690	\$35,469,514	\$63,107,185
Loans and discounts	\$61,108,754	\$47,546,061	\$11,708,483	\$31,527,498	\$49,478,015	\$63,969,293		\$30,000,000
Specie	\$4,267,022	\$0,019,694	\$7,010,310	\$5,144,112	\$5,179,673	\$3,105,150	\$7,131,522	\$6,819,951
Circulation	\$103,097,159	\$10,461,038	\$49,142,890	\$16,138,910	\$35,170,990	\$106,968,272	\$115,905,518	\$5,874,790
Deposits	\$5,218,100	\$16,106,440	\$17,897,185	\$4,561,184	\$0,240,148	\$5,896,857		\$0,000,000

It is seen from this table that while the loans and discounts, specie, circulation, and deposits, amounted near the 1st of Jan. 1836, to 703,831,521 doll., they did not amount, in September 1842, to 460,000,000 (for the estimated numbers are known to be very near the truth), showing a decrease of no less than 342,831,521 doll.

VII. BANKS FOR SAVINGS.

Are banks established for the receipt of small sums deposited by the poorer class of persons, and for their accumulation at compound interest. They are managed by individuals who derive no benefit whatever from the deposits. All monies paid into any Savings Bank established according to the provisions of the act 9 Geo. 4. c. 92. are ordered to be paid into the Banks of England and Ireland, and vested in Bank annuities or Exchequer bills. The interest payable to depositors is not to exceed 2½ per cent. per diem, or 3½ per cent. per annum. No depositor can contribute more than 40s. exclusive of compound interest, to a Savings Bank in any one year; and the total

deposits to be received from any individual are not to exceed 150*l.*; and whenever the deposits, and compound interest accruing upon them, standing in the name of any one individual, shall amount to 200*l.*, no interest shall be payable upon such deposit so long as it shall amount to 200*l.* The commissioners for the reduction of the national debt have the disposal of the sums vested in the public funds on account of Savings Banks.

This system began in 1817; and on the 20th of November, 1842, there was due to depositors, including interest accruing on deposits, 25,319,336*l.* It farther appears that from the 6th of August, 1815, down to the 20th of November, 1842, the public paid on account of interest and charges on the sums due to Savings Banks and Friendly Societies under the act 9 Geo. 4. c. 92., 14,070,341*l.* 2*s.* 6*d.*, and that the dividend received during the same period on the stock and other public securities in which the commissioners for the reduction of the national debt invested the said sums, amounted to 12,039,781*l.* 8*s.* 6*d.*, leaving a balance of 2,030,559*l.* 14*s.*, which consequently may be said to be the sum which the system has cost the public. — (*Parl. Paper No. 258. Sess. 1843.*)

The principle and object of Savings Banks cannot be too highly commended. In the metropolis, and many other parts of England, public banks do not receive small deposits, and until recently they did not pay any interest on them. And even in Scotland, where the public banks allow interest upon deposits, they do not generally receive less than 5*l.* or 10*l.* But few poor persons are able to save even this much except by a lengthened course of economy. The truth, therefore, is, that until Savings Banks were established, the poorest classes were every where without the means of securely and profitably investing those small sums they are not unfrequently in a condition to save; and were consequently led, from the difficulty of disposing of them, to neglect opportunities for making savings, or, if they did make them, were tempted, by the offer of high interest, to lend them to persons of doubtful characters and desperate fortunes, by whom they were, for the most part, squandered. Under such circumstances, it is plain that nothing could be more important, in the view of diffusing habits of forethought and economy amongst the labouring classes, than the establishment of Savings Banks, where the smallest sums are placed in perfect safety, are accumulated at compound interest, and are paid, with their accumulations, the moment they are demanded by the depositors. The system is yet little more than in its infancy; but the magnitude of the deposits already received, sets its powerful and salutary operation in a very striking point of view.

We subjoin a copy of the rules of the St. Pancras Savings Bank, which may be taken as a model for similar institutions, inasmuch as they have been drawn up with great care, and closely correspond with the provisions in the act 9 Geo. 4. c. 92.

1. *Management.* — This bank is under the management of a president, vice-presidents, trustees, and not less than fifty managers, none of whom are permitted to derive any benefit whatsoever, directly or indirectly, from the deposits received, or the produce thereof. One or more of the managers attend when the Bank is open for business.

2. *Superintending Committee.* — A committee of not less than ten managers, three of whom form a quorum, is empowered to superintend, manage, and conduct the general business of this Bank; to add to their number from among the managers; to fill up vacancies in their own body, and to appoint a treasurer or treasurers, agent or agents, auditors, an actuary and clerks, and other officers and servants, and to withdraw any such appointments, and to appoint others, should it be considered necessary so to do. — The proceedings of this committee are regularly laid before the general meetings of the Bank.

3. *Elections.* — The superintending committee is empowered to add to the number of managers, until they amount to one hundred and twenty, exclusively of the president, vice-presidents, and trustees. And any vacancies of president, vice-presidents, and trustees are to be filled up at a general meeting.

4. *General Meetings.* — A general meeting of the president, vice-presidents, trustees, and managers of this Bank shall be held once a year, in the month of February. The superintending committee shall lay before every such meeting a report of the transactions of the Bank, and state of the accounts. The superintending committee for the succeeding year shall be elected at such general meeting; and failing such election, the former committee shall be considered as reappointed.

5. *Special Meetings.* — The superintending committee are authorized to call special general meetings when they think proper; and also, on the requisition of any ten managers, delivered in writing to the actuary, or to the manager in attendance at the bank; and of such meeting seven days' notice shall be given.

6. *Liability of Trustees, Managers, Officers, &c.* — No trustee or manager shall be personally liable except for his own acts and deeds, nor for any thing done by him in virtue of his office, except where he shall be guilty of wilful neglect or default; but the treasurer or treasurers, the actuary, and every officer intrusted with the receipt or custody of any sum of money deposited for the purposes of this institution, and every officer, or other person, receiving salary or allowance for their services from the funds thereof, shall give good and sufficient security, by bond or bonds, to the clerk of the peace of the county of Middlesex, for the just and faithful execution of such office of trust.

7. *Investments and Limitation of Deposits.* — Deposits of not less than one shilling, and not exceeding thirty pounds in the whole, exclusive of compound interest, from any one depositor, or trustee of a depositor, during each and every year ending on the 20th of November, will be received and invested, pursuant to 9 Geo. 4. c. 92. s. 11., until the same shall amount to one hundred and fifty pounds in the whole; and when the principal and interest together shall amount to two hundred pounds, then no interest will be payable on such deposit, so long as it shall continue to amount to that sum. But depositors, whose accounts amounted to, or exceeded, two hundred pounds, at the passing of the said act, on the 20th of July, 1829, will continue to be entitled to interest and compound interest thereon.

8. *Interest to be allowed to Depositors.* — In conformity with the 9th clause of the 9 Geo. 4. c. 92., an interest at the rate of 3*q*d. per cent. per day, being 2*l.* 8*s.* 3*q*d. per cent. per annum (the full amount authorized by the said act), will be allowed to depositors, and placed to their accounts as a cash deposit, in the month of November in each year. 9. *Descriptions and Declaration.*—Every person desirous of making any deposit in this Bank, shall, at the time of making their first deposit, and at such other times as they shall be required so to do, declare their residence, occupation, profession, or calling, and sign (either by themselves, or, in case of infants under the age of seven years, by some person or persons to be approved of by the trustees or managers, or their officer), a declaration that they are not directly or indirectly entitled to any deposit in, or benefit from, the funds of any other Savings Bank in England or Ireland, nor to any sum or sums standing in the name or names of any other person or persons in the books of this Bank. And in case any such declaration shall not be true, every such person (or the person on whose behalf such declaration may have been signed) shall forfeit and lose all right and title to such deposits, and the trustees and managers shall cause the sum or sums so forfeited to be paid to the commissioners for the reduction of the national debt; but no depositor shall be subject or liable to any such forfeiture, on account of being a trustee on behalf of others, or of being interested in the funds of any Friendly Society legally established.

10. *Trustees on behalf of others.*—Persons may act as trustees for depositors, whether such persons are themselves depositors in any Savings Bank or not, provided that such trustee or trustees shall make such declaration on behalf of such depositor or depositors, and be subject to the like conditions in every respect, as are required in the case of persons making deposits on their own account, and the receipt and receipts of such trustee or trustees, or the survivor of them, or the executors or administrators of any sole trustee, or surviving trustee with or without (as may be required by the managers) the receipt of the person on whose account such sum may have been deposited, shall be a good and valid discharge to the trustees and managers of the institution.

11. *Minors.*—Deposits are received from, or for the benefit of, minors, and are subject to the same regulations as the deposits of persons of 21 years of age and upwards.

12. *Friendly and Charitable Societies.*—Friendly Societies, legally established previous to the 28th of July, 1826, may deposit their funds through their treasurer, steward, or other officer or officers, without any limitation as to the amount. But Friendly Societies formed and enrolled after that date are not permitted to make deposits exceeding the sum of 300*l.*, principal and interest included; and no interest will be payable thereon, whenever the same shall amount to, or continue at, the said sum of 300*l.* or upwards.

Deposits are received from the trustees or treasurers of Charitable Societies, not exceeding 100*l.* per annum, provided the amount shall not at any time exceed the sum of 300*l.*, exclusive of interest.

13. *Deposits of Persons unable to attend.*—Forms are given at the office, enabling persons to become depositors, who are unable to attend personally; and those who have previously made a deposit, may send additional sums, together with their book, by any other person.

14. *Depositors' Book.*—The deposits are entered in the books of the Bank at the time they are made, and the Depositor receives a book with a corresponding entry therein; which book must be brought to the office every time that any further sum is deposited, also when notice is given for withdrawing money, and at the time the repayment is to be made, so that the transactions may be duly entered therein.

15. *Withdrawing Deposits.*—Depositors may receive the whole or any part of their deposits on any day appointed by the managers, not exceeding fourteen days after notice has been given for that purpose; but such deposits can only be repaid to the depositor personally, or to the bearer of an order under the hand of the depositor, signed in the presence of either the minister or a churchwarden of the parish in which the depositor resides, of a justice of the peace, or of a manager of this Bank.

16. *The Depositor's Book must always be produced when notice of withdrawing is given.*

16. *Money withdrawn may be re-deposited.*—Depositors may withdraw any sum or sums of money, and re-deposit the same at any time or times within any one year, reckoning from the 20th day of November, provided such sum or sums of money re-deposited, and any previous deposit or deposits which may have been made by such depositor in the course of the year, taken together, shall not exceed, at any time in such year, the sum of 300*l.* additional principal money bearing interest.

17. *Returns or Refusal of Deposits.*—This Bank is at liberty to return the amount of the deposits to all or any of the depositors, and may refuse to receive deposits in any case, where it shall be deemed expedient so to do.

18. *Deposits of a deceased Depositor exceeding Fifty Pounds.*—In case of the death of any depositor in this Bank, whose deposits, and the interest thereon, shall exceed in the whole the sum of fifty pounds, the same shall only be paid to the executor or executors, administrator or administrators, on the production of the probate of the will, or letters of administration.

19. *Deposits of a deceased Depositor not exceeding Fifty Pounds.*—In case a depositor in this Bank shall die, whose deposits, including interest thereon, shall not exceed the sum of fifty pounds, and that the trustees or managers shall be satisfied that no will was made and left, and that no letters of administration will be taken out, they shall be at liberty to pay the same to the relatives or friends of the deceased, or any or either of them, or according to the statute of distribution, or require the production of letters of administration, at their discretion. And the Bank shall be indemnified by any such payments from all and every claim in respect thereof by any person whatsoever.

20. *Certificates.*—In all cases wherein certificates shall be required of the amount of deposits in this Bank belonging to depositors therein, for the purpose of obtaining, free of stamp duties, a probate of will, or letters of administration, such certificates shall be signed by a manager, and countersigned by the actuary for the time being, as a true extract from the Ledger of the institution.

21. *Arbitration of Differences.*—In case any dispute shall arise between the trustees or managers of this Bank, or any person or persons acting under them, and any individual depositor therein, or any trustee of a depositor, or any person claiming to be such executor, administrator, or next of kin, then, and in every such case, the matter so in dispute shall be referred to the barrister at law appointed by the commissioners for the reduction of the national debt, under the authority of the 6 Geo. 4. c. 92. s. 45. s. and whatever award, order, or determination shall be made by the said barrister, shall be binding and conclusive upon all parties, and shall be final, to all intents and purposes, without any appeal.

*Purchase of Government Annuities by Depositors in Savings Banks.*—The act 2 & 3 Will. 4. c. 14. enables depositors in Savings Banks and others to purchase government annuities for life or for years, and either immediate or deferred. At present these annuities are limited to 20*l.* a year. The money advanced is returnable in case the contracting party does not live to the age at which the annuity is to become payable, or is unable to continue the monthly or annual instalments. That this measure was benevolently intended, and that it may be productive of advantage to many individuals, cannot be doubted; but we look upon all attempts, and particularly those made by government, to get individuals to exchange capital for annuities, as radically objectionable; and as being subversive of principles which ought to be strengthened rather than weakened.—(See FUNDS.) We subjoin

An Account exhibiting a Summary View of the Number and State of the Savings Banks in England, Wales, Scotland, and Ireland respectively, on the 30th of November 1841.

These returns have been extracted from the History of Savings Banks, published in 1842 by Mr. Tidd Pratt, the very intelligent barrister appointed to certify the rules on which Savings Banks, Friendly Societies, &c. have been founded.

\* The comparatively small amount of the deposits in Savings Banks in Scotland is wholly a consequence of the unusual facilities so long afforded in that part of the United Kingdom for the investment of comparatively small sums at interest in public banks of undoubted solidity. We have previously noticed the very great amount of these investments.

BANGKOK, the capital of the kingdom of Siam, situated about 20 miles from the sea on both sides the river Menam, but chiefly on its left or eastern bank, in lat. 13° 40' N., long. 101° 10' E. The Menam opens in the centre nearly of the bottom of the Gulf of Siam. There is a bar at its mouth, consisting, for the most part, of a mud flat 10 miles in depth. The outer edge of this flat, which is little more than 200 yards broad, is sandy and of harder materials than the inner part; which is so soft that when a ship grounds on it during the ebb, she often sinks 5 feet in the mud and clay, which supports her upright, so that she is but little inconvenienced. The highest water on the bar of the Menam, from February to September, is about 13½ feet; and in the remaining 4 months, somewhat more than 14 feet, — a difference probably produced by the accumulation of water at the head of the bay after the south-west monsoon, and by the heavy floods of the rainy season. On account of the deficiency of water on the bar, vessels sent to Bangkok had better, perhaps, not exceed 200 or 250 tons burden. In all other respects, the river is extremely safe and commodious. Its mouth is no sooner approached, than it deepens gradually; and at Paknam, two miles up, there are 6 and 7 fathoms water. This depth increases as you ascend, and at Bangkok is not less than 9 fathoms. The only danger is, or rather was, a sand bank off Paknam, bare at low water; but on this a fort or battery has been erected within the last few years, affording at all times a distinct beacon. The channel of the river is so equal, that a ship may range from one side to another, approaching the banks so closely that her yards may literally overhang them. The navigation is said to be equally safe all the way up to the old capital of Yuthia, 80 miles from the mouth of the river.

The city of Bangkok extends along the banks of the Menam to the distance of about 2½ miles; but is of no great breadth, probably not exceeding 1½ mile. On the left bank there is a long street or row of

rupt, is equivalent to insolvent, and is applied to designate any individual unable to pay his debts. But in the law of England bankrupts form that particular class of insolvents who are engaged in trade, or who "seek their living by buying and selling," and who are declared, upon the oath of one or more of their creditors, to have committed what the law has defined to be an *act of bankruptcy*. At present, however, we shall merely lay before the reader a few observations with respect to the principles and leading provisions embodied in the law as to bankruptcy and insolvency; referring the reader to the article *INSOLVENCY AND BANKRUPTCY*, for a detailed statement of these and the other provisions in that law.

"All classes of individuals, even those who have least to do with industrious undertakings, are exposed to vicissitudes and misfortunes, the occurrence of which may render them incapable of making good the engagements into which they have entered, and render them bankrupt or insolvent. But though bankruptcy is most frequently, perhaps, produced by uncontrollable causes, it is frequently also produced by the thoughtlessness of individuals, or by their repugnance to make those retrenchments which the state of their affairs demands; and sometimes also by fraud or bad faith. Hence it is that the laws with respect to bankruptcy occupy a prominent place in the judicial system of every state in which commerce has made any progress, and credit been introduced. They differ exceedingly in different countries and stages of society; and it must be acknowledged that they present very many difficulties, and that it is not possible, perhaps, to suggest any system against which pretty plausible objections may not be made.

"The execrable atrocity of the early Roman laws with respect to bankruptcy is well known. According to the usual interpretation of the law of the twelve tables, which Cicero has so much eulogised, the creditors of an insolvent debtor might, after some preliminary formalities, cut his body to pieces, each of them taking a share proportioned to the amount of his debt; and those who did not choose to resort to this horrible extremity, were authorised to subject the debtor to chains, stripes, and hard labour; or to sell him, his wife, and children, to perpetual foreign slavery *trans Tyberim*! This law, and the law giving fathers the power of inflicting capital punishments on their children, strikingly illustrate the ferocious and sanguinary character of the early Romans.

"There is reason to think, from the silence of historians on the subject, that no unfortunate debtor ever actually felt the utmost severity of this barbarous regulation; but the history of the republic is full of accounts of popular commotions, some of which led to very important changes, that were occasioned by the exercise of the power given to creditors of enslaving their debtors, and subjecting them to corporal punishments. The law, however, continued in this state till the year of Rome 427, 120 years after the promulgation of the twelve tables, when it was repealed. It was then enacted, that the persons of debtors should cease to be at the disposal of their creditors, and that the latter should merely be authorised to seize upon the debtor's goods, and sell them by auction in satisfaction of their claims. In the subsequent stages of Roman jurisprudence, further changes were made, which seem generally to have leaned to the side of the debtor; and it was ultimately ruled, that an individual who had become insolvent without having committed any fraud, should upon making a *cessio bonorum*, or a surrender of his entire property to his creditors, be entitled to an exemption from all personal penalties. — (*Terasson, Histoire de la Jurisprudence Romaine*, p. 117.)

"The law of England distinguishes between the insolvency of persons engaged in trade, and that of others. The former can alone be made bankrupts, and are dealt with in a comparatively lenient manner. 'The law,' says Blackstone, 'is cautious of encouraging prodigality and extravagance by indulgence to debtors; and therefore it allows the benefit of the laws of bankruptcy to none but actual traders, since that set of men are, generally speaking, the only persons liable to accidental losses, and to an inability of paying their debts without any fault of their own. If persons in other situations of life run in debt without the power of payment, they must take the consequences of their own indiscretion, even though they meet with sudden accidents that may reduce their fortunes; for the law holds it to be an unjustifiable practice for any person but a trader to encumber himself with debts of any considerable value. If a gentleman, or one in a liberal profession, at the time of contracting his debts has a sufficient fund to pay them, the delay of payment is a species of dishonesty, and a temporary injustice to his creditors; and if at such time he has no sufficient fund, the dishonesty and injustice are the greater: he cannot, therefore, murmur if he suffer the punishment he has voluntarily drawn upon himself. But in mercantile transactions the case is far otherwise; trade cannot be carried on without mutual credit on both sides: the contracting of debts is here not only justifiable, but necessary; and if, by accidental calamities, as by the loss of a ship in a tempest,

\* *Fremant omnes, licet I dicam quod sentio; bibliothecas, mehercule, omnium philosophorum unius milii videtur duodecim tabularum libellus; alicui legum fontes et capita videntur et autoritatis pondero et utilitatis ubertate superare.* — *De Oratore*, lib. 1.

the failure of brother traders, or by the nonpayment of persons out of trade, a merchant or trader becomes incapable of discharging his own debts, it is his misfortune and not his fault. To the misfortunes, therefore, of debtors, the law has given a compassionate remedy, but denied it to their faults; since, at the same time that it provides for the security of commerce, by enacting that every considerable trader may be declared a bankrupt, for the benefit of his creditors as well as himself, it is also, to discourage extravagance, declared that no one shall be capable of being made a bankrupt but only a trader, nor capable of receiving the full benefit of the statutes but only an *industrious* trader.—(Commentaries, book ii. cap. 31.)

“After the various proceedings with respect to bankruptcy have been gone through, the bankrupt may apply for a certificate or discharge liberating his person and any property he may afterwards acquire from the claims of his creditors. The power to grant this certificate was formerly vested in the creditors; but the statute 5 & 6 Viet. c. 122, has enacted that the power to grant certificates shall be vested in the court, which, after hearing such creditors as may be opposed to the allowance of a certificate, shall, on taking all the circumstances into account, refuse or grant it, as may seem most conformable to justice. In the event of the certificate being granted, the bankrupt is entitled to a reasonable allowance out of his effects; which is, however, made to depend partly on the magnitude of his dividend. Thus, if his effects will not pay half his debts, or 10s. in the pound, he is left to the discretion of the court, to have a competent sum allowed him, not exceeding 3 per cent. upon his estate, or 300*l.* in all; but if his estate pay 10s. in the pound, he is to be allowed 5 per cent. provided such allowance do not exceed 400*l.*; if it pay 12*s.* 6*d.*, then 7½ per cent. under a limitation as before of its not exceeding 500*l.*; and if it pay 15*s.* in the pound, then the bankrupt shall be allowed 10 per cent. upon his estate, provided it do not exceed 600*l.*.”

“According to our present law, when a person not a trader becomes insolvent, he may, after being actually imprisoned at the suit of some of his creditors for fourteen days, present a petition to the court to be relieved; and upon surrendering his entire property, he is, unless something fraudulent be established against him, entitled to a discharge. While, however, the certificate given to the bankrupt relieves him from all future claims on account of debts contracted previously to his bankruptcy, the discharge given to an insolvent only relieves him from imprisonment; in the event of his afterwards accumulating any property, it may be seized in payment of the debts contracted anterior to his insolvency. This principle was recognised in the *cessio bonorum* of the Romans, of which the insolvent act is nearly a copy.

“It may be questioned, however, notwithstanding what Blackstone has stated, whether there be any good ground for making a distinction between the insolvency of traders and other individuals. There are very few trades so hazardous as that of a farmer, and yet should he become insolvent, he is not entitled to the same privileges he would have enjoyed had he been the keeper of an inn, or a commission agent! The injustice of this distinction is obvious; but, without dwelling upon it, it seems pretty clear that certificates should be granted indiscriminately to all honest debtors. Being relieved from all concern as to his previous incumbrances, an insolvent who has obtained a certificate is prompted to exert himself vigorously in future, at the same time that his friends are not deterred from coming forward to his assistance. But when an insolvent continues liable to his previous debts, no one, however favourably disposed, can venture to aid him with a loan; and he is discouraged, even if he had means, from attempting to earn any thing more than a bare livelihood; so that, while creditors do not, in one case out of a hundred, gain the smallest sum by this constant liability of the insolvent, his energies and usefulness are for ever paralysed.

“The policy of imprisoning for debt seems also exceedingly questionable. Notwithstanding the deference due to the great authorities who have vindicated this practice, we confess we are unable to discover any thing very cogent in the reasonings advanced in its favour. Provided a person in insolvent circumstances intimate his situation to his creditors, and offer to make a voluntary surrender of his property to them, he has, as it appears to us, done all that should be required of him, and ought not to undergo any imprisonment. If he have deceived his creditors by false representations, or if he conceal or fraudulently convey away any part of his property, he should of course be subjected to the pains and penalties attached to swindling; but when such practices are not alleged, or cannot be proved, sound policy, we apprehend, would dictate that creditors should have no power over the persons of their debtors, and that they should be entitled only to their effects. The maxim, *carcer non solvit*, is not more trite than true. It is said, that the fear of imprisonment operates as a check to prevent persons from getting into debt, and so no doubt it does. But then it must, on the other hand, be borne in mind, that the power to imprison tempts individuals to trust to its influence to enforce payment of their claims, and makes them less cautious in their inquiries as to the condition and circumstances of those to whom they give credit. The carelessness of tradesmen, and their

extreme earnestness to obtain custom, are, more than any thing else, the great causes of insolvency, and the power of imprisoning merely tends to foster and encourage these habits. If a tradesman trust an individual with a loan of money or goods, which he is unable to pay, he has made a bad speculation. But why should he, because he has done so, be allowed to arrest the debtor's person? If he wished to have perfect security, he either should not have dealt with him at all, or dealt with him only for ready money. Such transactions are, on the part of tradesmen, perfectly voluntary; and if they place undue confidence in a debtor who has not misled them by erroneous representations of his affairs, they have themselves only to blame.

"It would really, therefore, as it appears to us, be for the advantage of creditors, were all penal proceedings against the persons of honest debtors abolished. The dependence placed on their efficacy is deceitful. A tradesman ought rather to trust to his own prudence and sagacity to keep out of scrapes, than to the law for redress; he may deal upon credit with those whom he knows; but he should deal for ready money only with those of whose circumstances and characters he is either ignorant or suspicious. By bringing penal statutes to his aid, he is rendered remiss and negligent. He has the only effectual means of security in his own hands, and it seems highly inexpedient that he should be taught to neglect them, and put his trust in prisons.

"It is pretty evident, too, that the efficacy of imprisonment in deterring individuals from running into debt has been greatly overrated. Insolvents who are honest must have suffered from misfortune, or been disappointed in the hopes they entertained of being able, in one way or other, to discharge their debts. The fear of imprisonment does not greatly influence such persons; for when they contract debts, they have no doubt of their ability to pay them. And though the imprisonment of *bona fide* insolvents were abolished, it would give no encouragement to the practices of those who endeavour to raise money by false representations; for these are to be regarded as swindlers, and ought as such to be subjected to adequate punishment. (See CASBRR.)

"At present, indeed, the law is much too indulgent to this description of persons. Traders, or others, who endeavour to obtain goods or loans of money, whether by concealing or misrepresenting the real state of their affairs, are, in fact, about the very worst species of cheats; and the temptation to resort to such practices, and the facility with which they may be carried into effect, should make them, when detected, be visited with a proportionally increased severity of punishment, on the principle laid down by Cicero, that *ea sunt animadvertenda peccata maxime, qua difficillime præcæntur*.<sup>\*</sup> But honesty and dishonesty are not to be treated alike; and unless fraud of some sort or other be established, the imprisonment or penal pursuit of debtors appears to be alike oppressive and inexpedient. The legislature appears, indeed, to be coming round to this way of thinking; for under a recent act (5 & 6 Vict. c. 116.), all persons not liable to the bankrupt laws, and those liable to them whose debts are under 300*l.*, may, on giving certain notices, and making over all their property, present and future, for the benefit of their creditors, obtain from the Bankruptcy Court a protection against all process whatever, unless fraud, or other offence of that kind, be proved against them.

"We may further observe, that the regulations with respect to bankruptcy and insolvency differ materially in other respects. Until the act 1 & 2 Vict. c. 110., an individual could not be subjected to the insolvent law except by his own act, that is, by his petitioning for relief from actual imprisonment for debt. But under that act, any creditor who may have taken a debtor in execution may, unless his debt be satisfied within 21 days from the date of the debtor's imprisonment, get the latter subjected to the insolvent laws, and procure the vesting of his property in an assignee for the benefit of his creditors, in the same way as if the debtor had himself petitioned for relief. An individual cannot, however, in any case, be made a bankrupt, and subjected to the bankrupt law, except by the act of another, that is, of a petitioning creditor †, as he is called, swearing that the individual in question is indebted to him, and that he believes he has committed what is termed an act of bankruptcy.

"While, however, the law of England has always given the creditor an unnecessary degree of power over the debtor's person, it did not, till very recently, give sufficient power over his property. In this respect, indeed, it was so very defective, that one is almost tempted to think it had been intended to promote the practices of fraudulent debtors. The property of persons subject to the bankrupt and insolvent laws was, it is true, nominally placed at the disposal of assignees or trustees, for the benefit of their creditors; but when a person possessed of property, but not subject to the bankrupt laws, contracted debt, if he went abroad, or lived within the rules of the King's Bench

\* Oratio pro Sexto Roscio, § 40.

† One creditor whose debt is to the amount of 50*l.* or upwards; or two, whose debts amount to 70*l.* or three whose debts amount to 100*l.*

or the Fleet, or remained in prison without petitioning for relief, he continued most probably to enjoy the income arising from that property without molestation.

"The law, no doubt, said that creditors should be authorised to seize the debtor's lands and goods; a description which an unlearned person would be apt to conclude was abundantly comprehensive: but the law used to be so interpreted, that neither funded property, money, nor securities for money, was considered goods: if the debtor had a copyhold estate, it could not be touched in any way whatever; if his estate were freehold, the creditor might, after a tedious process, receive the rents and profits, but no more, during the lifetime of his debtor. If the debtor died before judgment against him in a court had been obtained, then, unless the debt were on bond, the creditor had no recourse upon the land left by the debtor, whatever might be its tenure; nay, though his money, borrowed on note or bill, had been laid out in buying land, the debtor's heir took that land wholly discharged of the debt!\*"

"In consequence of the facilities thus afforded for swindling, an individual known to have a large income, and enjoying a proportionally extensive credit, was able, if he went to Paris or Brussels, or confined himself within the rules of the King's Bench or the Fleet, to defraud his creditors of every farthing he owed them, without their being entitled to touch any part of his fortune. All owners of funded, monied, and copyhold property, had thus, in fact, a licence given them to cheat with impunity: the only wonder is, not that some did, but that a vast number more did not, avail themselves of this singular privilege.

"But we are glad to have to state, that this preposterous system has been materially changed within the last dozen years. The acts 3 & 4 Will. 4. c. 104. and the 1 & 2 Vict. c. 110. have made copyhold as well as freehold estates, with the monied, funded, and other property, of deceased and living debtors, against whom judgment has been obtained, available for the satisfaction of their just debts. Hence it is no longer in the power of any knave, who might choose to reside abroad or in prison, to preserve his property from the grasp of those to whom he is really indebted. Indeed, there is now little to object to in this peculiar department of the law, unless it be the expensive machinery (Court of Chancery) under which the administration of a deceased debtor's effects is conducted in litigated cases. Speaking generally, however, the various proceedings with respect to bankruptcy and insolvency are still, perhaps from their extreme difficulty, in an unsatisfactory state; and it is probable they will, at no distant date, be materially changed."—(See the *Principles of Political Economy*, by the author of this work, 3d. ed. pp. 270—279.)

BARCALAO, or BACALAO, the Spanish name for cod.

BARCELONA, the capital of Catalonia, and the principal town of Spain, on the Mediterranean, lat.  $41^{\circ} 22' 58''$  N., long.  $2^{\circ} 8' 11''$  E. It is a strongly fortified, well-built city. The population is supposed to amount to about 120,000. Barcelona is eminently distinguished in the history of the middle ages for the zeal, skill, and success with which her citizens prosecuted commercial adventures at a very early period. She would seem also to be entitled to the honour of having compiled and promulgated the famous code of maritime law known by the name of the *Consolato del Mare*; and the earliest authentic notices of the practice of marine insurance and of the negotiation of bills of exchange are to be found in her annals.† Catalonia has continued, amidst all the vicissitudes it has undergone, to be the most industrious of the Spanish provinces. Several extensive manufactures have been established in Barcelona, especially of cotton, and no fewer than 23 steam engines were erected in Catalonia in 1842, the greater number being in Barcelona. Latterly, however, her commerce, owing to a variety of causes, but principally to oppressive restrictions on the importation of foreign goods, the emancipation of South America, and internal dissensions, has very much declined.

*The Harbour*, which is naturally bad, is formed by a mole or Jetty, which has recently been a good deal enlarged, running out to a considerable distance in a southerly direction, and having a light-house and some batteries near its extremity. The depth of water within the mole is from 18 to 20 feet; but there is a bar between the mole and Moutil, which has frequently not more than 10 feet water; and which would, it is believed, entirely shut up the harbour, were it not occasionally lowered by means of dredging machines. Vessels in the harbour moor at a short distance from the mole; where, though exposed to the southerly gales, they are so well protected that no accident of any consequence has taken place since the dreadful storm of 1821. Large ships must anchor outside the mole, and in winter are much incommoded by winds. Vessels entering the harbour are under no obligation to take a pilot on board; but they are always in attendance, and it is generally deemed safest to have their assistance in passing the bar.

\* Bringham's "Speech on the State of the Law," p. 108.

† For proofs of this, see the articles MARITIME LAW, INSURANCE, &c. in this Dictionary. The *Memorias Historicas sobre la Marina, Comercio, &c. de Barcelona*, by Capmany, in 4 vols. 4to, is one of the most valuable and authentic works that has been published on the commerce, arts, and commercial and maritime legislation of the middle ages. The first volume is the most interesting, at least to the general reader; the others consisting principally of extracts from the archives of the city. There is a brief but pretty good account of the early trade of Barcelona, drawn principally from Capmany, in the work of Depping, *Histoire du Commerce entre le Levant et l'Europe depuis les Croisades*, &c. tom. 1. c. 5.

Custom-houses and Warehousing Regulations, same as at ALICANTE; which see.

**Port Charges.**—The following are the various charges of a public nature that would be paid by a Spanish and a British ship, each of 300 tons burden, unloading and loading mixed cargoes in Barcelona:—

Spanish Vessels.	Reals.	British Vessels.	Reals.
Anchorage	75	Anchorage	75
New do.	15	Double do.	15
Cleaning of port	10	New do.	10
Lantern	8	Cleaning of port	10
Captain of the port	8	Lantern	6
Light-house of Tarragona	16	Captain of the port	8
Loading (1 real per ton)	300	Light-house of Tarragona	211
Extraordinary contribution	40	New mole (18 real per ton)	8,400
New mole	16	Loading (1 real per ton)	300
		Extraordinary contribution	40
Total	875		
		Consular fees usually required	160
		Total	5,200

Taking the real of 4d., this would be 9l. 11s. 2d. on the Spanish ship, and 53l. on the British do.  
**Commission** is at the rate of 3 per cent. on goods shipped, and 2 per cent. on those received on consignment. Goods are sometimes sold for ready money, and sometimes on credit for 4 or 6 months; mercantile discount is put on, per month. There are no banking establishments in Barcelona.  
**Insurance** on ships is effected by individuals, but insurances on houses, lives, &c. are unknown here.  
**Taxes.**—At the Custom-house, real taxes only are allowed; and the net weights must be rigorously manifested. A sur-

**Imports.**—The principal articles of import are raw cotton; sugar, coffee, cocoa, and other colonial products, principally from Cuba and Porto Rico; salted fish, hides, and horns; iron and hardware, &c. Most species of manufactured goods are prohibited; but it is needless to add that they are notwithstanding largely imported into this as into most other parts of Spain. The trade with the colonies, France, and the coasting trade is pretty active. The imports from England are not very considerable, and the exports little or nothing. In 1842, no fewer than 3,667 vessels entered the port; but these were mostly coasters of small size, the burden of the whole being only 193,117 tons, whole and half.

**Exports.**—The principal exports are wrought silks, soap, fire-arms, paper, hats, laces, ribands, steel, &c. But no vessels, except a few that take on board manufactured goods for the Spanish West Indies, are loaded here; and even this trade is much fallen off. Upwards of 2,000 hands used formerly to be employed in the city in the manufacture of shoes for the colonies; but their export has now nearly ceased. The principal articles of native produce that Catalonia has to export are most conveniently shipped at Villanov, Tarragona, and Salon. They consist of wine, brandy, nuts, almonds, cork, bark, wool, fruits, &c. Of these, Cuba takes annually about 12,000 pipes of wine, worth at an average 4l. per pipe, and about 3,000 pipes of brandy, worth 8l. per do.; South America, 16,000 pipes of wine, and 6,000 do. brandy; the north of Europe, 2,000 pipes of wine, and 2,000 do. brandy. A good deal of brandy is sent to Cadix and Cetta; most part of the former finds its way into the wine vaults of Xeres; and the latter, being conveyed by the canal of Linguadoc to the Garonne, is used in the preparation of Bordeaux. From 25,000 to 30,000 bags of nuts are annually sent from Tarragona to England. Tarragona also exports about 12,000 bags of almonds.

The ships belonging to the port carry on no foreign trade except to the Spanish West Indies; they are few in number, and are daily decreasing. Those engaged in the coasting trade are usually of very small burden.

(We have derived these details from various sources; but principally from *Consular Returns*, and from *Ingén's Spain in 1830*, vol. ii. pp. 384-387. and 362.)

**BARILLA (Du. Soda; Fr. Soude, Barille; Ger. Soda, Barilla; It. Barriglia; Port. Sôda, Barrilha; Rus. Socianka; Sp. Barilla; Arab. Kali),** carbonate of soda—(see ALKALIES), is found native in Hungary, Egypt, and many other countries. It is largely used by bleachers, manufacturers of hard soaps, glass-makers, &c. The barilla of commerce consists of the ashes of several marine and other plants growing on the sea-shore. The best, or Alicant barilla, is prepared from the *Salsola soda*, which is very extensively cultivated for this purpose in the *huerta* of Murcia, and other places on the eastern shores of Spain. — (*Townsend's Travels in Spain*, vol. iii. p. 195.) The plants are gathered in September, dried, and burned in furnaces heated so as to bring the ashes into a state of imperfect fusion, when they congregate into hard, dry, cellular masses of a greyish blue colour. Sicily and Teneriffe produce good barilla, but inferior to that of Alicant and Carthagena. Kelp, which is a less pure alkali, is formed by the incineration of the common sea-weed. — (See KELP.)

The Saracens established in Spain seem to have been the first who introduced the manufacture of barilla into Europe. They called the plants employed in its preparation *kali*; and this, with the Arabic article *al* prefixed, has given rise to the modern chemical term alkali. Prime quality in barilla is to be distinguished by its strong smell when wetted, and by its whitish colour. Particular attention should be paid to have as little small or dust as possible. The duties on barilla have recently been very considerably reduced. — (See TANNERY.)

The manufacture of artificial soda (*soude factice*), now very extensively carried on, has occasioned an extraordinary decline in the imports of barilla, the quantity entered for home consumption in 1834, amounting to 237,712 cwt., having been reduced in 1841 to 47,380 cwt. Considerable quantities used formerly to be imported from Teneriffe, but it now comes principally from Alicant in Spain and Sicily. Thus, of 42,618 cwt. imported in 1841, 20,341 came from Spain, 18,570 from Italy (Sicily), and only 3,696 from the Canaries. The duty on barilla was reduced in 1842 from 2l. to 8s. per ton. It remains to be seen what effect this reduction may have on its consumption; but the entries in 1842 were rather less than in 1841. — (See *Parl. Papers*, No. 261. Sess. 1839, and No. 45. Sess. 1841.)

**BARK**, the outer rind of plants. There is an immense variety of barks known in

plus of 3 per cent. is, however, allowed to cover any inaccuracy in the proportion between foreign and Spanish weights; but if the weight of any parcel should turn out to be 3 per cent. greater than is marked in the manifest, the surplus is seized, at the same time that the importer loses the benefit of the rate of cent. allowed by law, and becomes liable to the penalties of smuggling. The rates usually allowed by merchants are, on Havannah sugar 13 per cent.; on coffee 3 per cent., exclusive of the barrel, bag, &c. in which it is contained; on cocoa and pepper 2 per cent.; Pernambuco cotton 4 lbs. per bale; other cotton 1 lb. per cwt.  
**Sea-stores** of all sorts are dear at Barcelona, but they may always be obtained. Beef costs about 7d. per lb., and lard about 5 dollars per cwt.  
**Money.**—Accounts are kept <sup>3</sup>/<sub>4</sub> *libras* of 20 *soldos*, 240 *denarios*, or 480 *maravedis*. The libra is likewise divided into *reales de plata Catalana*, of 3 *soldos* each; and into *reales ovales*, of 3 *soldos* each. Hence, 6'7 of the former, or 10 of the latter, = 1 *libra Catalana*.  
 The *libra Catalana* is = 2s. 4d. sterling nearly.  
 The *peso duro*, or hard dollar, is valued at 37 <sup>1</sup>/<sub>2</sub> *soldos Catalana*, eight such dollars making 15 *libras*.  
**Weights and Measures.**—There are endless discrepancies amongst the weights and measures in the different Spanish provinces, and there is a very great discrepancy in the accounts of the authors who have written upon them. The following statements are taken from Nelkenbecker:—  
 The quintal is divided into 4 *arrobas*, or 104 lbs. of 12 oz. to the pound. The pound = 6'174 English grains = 4 Kilog. = 8320'5 of Holland, 100 lbs. of Hispania = 88-213 lbs. avoirdupois.

The yard, named *caña*, is divided into 8 *palmas*, of 4 *quarteros*, and is 21 inches very nearly. Hence, 100 *cañas* = 23-09 metres = 77-5 yards of Amsterdam = 58'514 English yds.  
 The *quartero*, or measure for grain, is divided into 13 *cordeles* or *arrobas*, 21 *cordeles*, 100 *quarteros* = 52-536, or 234 Winchester quarters.

The *carra*, or measure for liquids, is divided into 12 *cordeles* or *arrobas*, 21 *cordeles*, and 72 *mitadillos*. It is 36-7 English wine gallons, 4 *carraes* = 1 pipe. The pipe of Mallorca oil contains 107 corgans.

commerce, as cinnamon, Peruvian bark, oak bark, quercitron, &c. The term "bark" is, however, generally employed to express either Peruvian bark, or oak bark; and it is these only that we shall notice in this place.

1. *Peruvian or Jesuit's Bark* (Fr. *Quinquina*; Ger. *Kron-china*; Du. *China-bast*; Sp. *Quina*, *Quinquina*; Lat. *Quina, Cortex Peruvianus*). There are three principal species of this bark known in commerce, which have been elaborately described by Dr. A. T. Thomson, from whose account the following particulars are selected.

The first species is the *pale bark* of the shops. It is the produce of the *Cinchona incognita*, and is the original cinchona of Peru. It is now very scarce. It is imported in chests covered with skins, each containing about 200 lbs., well packed, but generally mixed with a quantity of dust and other heterogeneous matter. It consists of pieces 8 or 10 inches long, some of them being scarcely one tenth of an inch thick, singly and doubly quilled, or rolled inwards, the quills generally being in size from a swan's quill to an inch and a half. It is internally of a pallid fawn or cinnamon hue, but approximates, on being moistened, to the colour of a pale orange. When in substance it has scarcely any odour, but during decoction the odour is sensible, and agreeably aromatic. The taste is bitter, but not unpleasant, acridulous, and austere.

The second species, or *red bark*, is obtained from the *Cinchona oblongifolia*, growing on the Andes. It is imported in chests containing from 100 to 150 lbs. each. It consists of variously sized pieces, most of them flat, but some partially quilled or rolled. The internal part is woody, and of a rust red colour: it has a weak peculiar odour, and its taste is much less bitter, but more austere and nauseous, than that of the other bark.

The third species, or *yellow bark* of the shops, is obtained from the *Cinchona cordifolia*, growing in Quito and Santa Fé. It is imported in chests containing from 90 to 100 lbs. each, consisting of pieces 8 or 10 inches long, some quilled, but the greater part flat. The interior is of a yellow colour, passing to orange. It has nearly the same odour as the pale; the taste is more bitter and less austere, and it excites no astringent feeling when chewed. The goodness decreases when the colour varies from orange yellow to pale yellow; when of a dark colour, between red and yellow, it should be rejected.

It is needless to add, that bark is one of the most valuable medical remedies. The Indians were unacquainted with its uses, which seem to have been first discovered by the Jesuits. It was introduced into Europe in 1632, but was not extensively used till the latter part of the seventeenth century. According to M. Humboldt, the Jesuits' bark annually exported from America amounts to from 12,000 to 14,000 quintals. Of these, 2,000 are furnished by Santa Fé, and 110 by Loxa; Peru furnishing the remainder, which is shipped at Callao, Guayaquil, &c.

2. *Oak Bark* (Fr. *Ecorce de la Chêne*; Ger. *Eichenrinde*; It. *Corticella della Quercia*; Lat. *Quercus cortex*). The bark of the common oak is a powerful astringent, and is preferred to all other substances for tanning leather. The bark of the larch is now, however, used for the same purpose. Though the importation of oak bark for tanning has somewhat declined of late years, it is still very considerable. It is impossible, however, to state its exact amount, inasmuch as a species of oak bark, called quercitron, the produce of the *Quercus tinctoria*, imported from abroad, and used to give a yellow dye to silk and wool, is mixed up in the custom-house returns with bark for tanning. The latter, which is by far the most important, is brought principally from Belgium and Holland, Germany, Italy and Spain, Norway and Australia. Quercitron comes principally from the United States. The quality of bark differs according to the age and size of the tree, the season when it is barked, &c., so much that its price varies from 5s. to 10s. a ton. The duty on bark for tanning and dyeing, which previously to 1842 was 8d. a cwt. on that imported from a foreign country, was then reduced to 3d. We subjoin an

Account of the Quantities of Bark for Tanning and Dyeing imported into the United Kingdom during the 11 Years ending with 1841, specifying the Countries from whence they came, and the Quantities brought from each (from the Tables published by the Board of Trade).

(*Parl. Paper* No. 45, Sess. 1843)

We are indebted for the discovery and application of the useful properties of quercitron to Dr. Bancroft. The doctor obtained a patent for his invention in 1775; but the American war breaking out soon after, deprived him of its advantages. In consideration of this circumstance, parliament passed, in 1785, an act (25 Geo. 3. c. 38.) securing to him the privileges conveyed by his patent for 14 years. At the expiration of the latter period the House of Commons agreed to extend the doctor's privilege for an additional 7 years, but the House of Lords rejected the bill. Like too many discoveries, Dr. Bancroft profited but little by his invention, though it has been of great use to the arts and manufacturers of the country.—(See *Bancroft on Permanent Colours*, vol. ii. p. 112., and the *Report of the Committee of the House of Commons on Patents*, Appendix, p. 175.)

Oak bark, the produce of Europe, is not to be imported into the United Kingdom for home consumption, except in British ships, or in ships of the country of which it is the produce, or in ships of the country from which it is imported, on pain of forfeiting the goods, and 100l. by the master of the vessel.—(3 & 4 Will. 4. c. 54.)

BARLEY (Fr. *Orges*; Ger. *Gerstengraupen*; Du. *Rygg*; It. *Orzo*; Sp. *Cebada*; Rus. *Futschmet*; Lat. *Hordeum*; Arab. *Dhourra*; Hind. *Jow*), a species of bread-corn (*Hordeum* Lin.), of which there are several varieties. It is extensively cultivated in most European countries, and in most of the temperate districts of Asia and Africa. It may also be raised between the tropics; but not at a lower elevation than from 3,000

to 4,000 feet, and then it is not worth cultivating. Large quantities of barley have been supposed, though probably on no good grounds, to be declining. In 1763, Mr. Charles Smith estimated the number of barley consumers in England and Wales at 739,000; and as a large proportion of the population of Wales, Westmoreland, and Cumberland continue to subsist chiefly on barley bread, we are inclined to think that this estimate may not, at present, be very wide of the mark. But the principal demand for barley in Great Britain is for conversion into malt, to be used in the manufacture of ale, porter, and British spirits; and though its consumption in this way has not certainly increased proportionally to the increase of wealth and population, still there does not seem to be any grounds for supposing that it has diminished. Barley is also extensively used in fattening black cattle, hogs, and poultry. It now generally follows turnips, and is a very important crop in the rotation best adapted to light soils. The principal barley counties of England are Norfolk, Suffolk, Cambridge, Bedford, Hertford, Leicester, Nottingham, the upper parts of Hereford, Warwick, and Salop. The produce varies, according to soil, preparation, season, &c., from about 20 to 60 or 70 bushels an acre. The most usual crop is from 28 to 36 or 38 bushels. The Winchester bushel of good English barley generally weighs about 50 lbs., but the best Norfolk barley sometimes weighs 53 or 54 lbs. Its produce in flour is about 12 lbs. to 14 lbs grain. Barley is a tender plant, and easily hurt in any stage of its growth. It is more hazardous than wheat, and is, generally speaking, raised at a greater expense; so that its cultivation should not be attempted except when the soil and climate are favourable for its growth.—(For details as to the prices of barley, the quantities imported and exported, &c., see CORN LAWS and CORN TRADE. And for further details as to its consumption and culture, see *Smith's Tracts on the Corn Trade*, 2d ed. p. 182.; *Brown on Rural Affairs*, vol. ii. p. 42.; *London's Encyc. of Agriculture*, &c.)

**BARRATRY**, in navigation, is, in its most extensive sense, any fraudulent or unlawful act committed by the master or mariners of a ship, contrary to their duty to their owners, and to the prejudice of the latter. It appears to be derived from the Italian word *barratrare*, to cheat. It may be committed by running away with a ship, wilfully carrying her out of the course prescribed by the owners, delaying or defeating the voyage, deserting convoy without leave, sinking or deserting the ship, embezzling the cargo, smuggling, or any other offence whereby the ship or cargo may be subjected to arrest, detention, loss, or forfeiture.

It is the practice in most countries to insure against barratry. Most foreign jurists hold, that it comprehends every fault which the master and crew can commit, whether it arise from fraud, negligence, unskillfulness, or mere imprudence. But in this country it is ruled, that no act of the master or crew shall be deemed barratry, unless it proceed from a *criminal or fraudulent* motive.

Barratry can only be committed by the master and mariners by some act contrary to their duty in the relation in which they stand to the owners of the ship. It is, therefore, an offence against them, and consequently an owner himself cannot commit barratry. He may, by his fraudulent conduct, make himself liable to the owner of the goods on board, but not for barratry. Neither can barratry be committed against the owner *with his consent*; for though he may be liable for any loss or damage occasioned by the misconduct of the master to which he consents, yet this is not barratry. Nothing is more clear than that a man can never set up as a crime an act done by his own direction or consent."—(*Marshall on Insurance*, book i. c. 12. § 6.)

When, therefore, the owner of a ship is also the master, no act of barratry can be committed; for no man can commit a fraud against himself.

It is a maxim in law, that fraud shall not be presumed, but must be clearly proved; and it is a rule in questions of insurance, that he who charges barratry must substantiate it by conclusive evidence.

It is not necessary, to render an act barratrous, that it should be committed with a criminal intent as respects the owners, in order to injure them, or to benefit the captain or crew. It may even be committed with a view to promote the owner's interests; for an *illegal act* done without the authority or privity of the owners, and which proves detrimental to them, is barratry, whatever be the motives in which it originated. Lord Ellenborough, in an able judgment, has laid it down as clear law, "that a breach of duty by the master in respect of his owners, with a fraudulent or criminal intent, or *ex maleficio*, is barratry; that it makes no difference whether this act of the master be induced by motives of advantage to himself, malice to the owner, or a *disregard of those laws which it was his duty to obey*; and that it is not for him to judge or suppose, in cases not entrusted to his discretion, that he is not breaking the trust reposed in him, when he endeavours to advance the interests of his owners by means which the law forbids, and which his owners also must be taken to have forbidden."

The circumstance of the owners of ships being permitted to insure against the barratry of the master and mariners can hardly fail, it may be not uncharitably presumed, of rendering them less scrupulous in their inquiries with respect to their character than they would otherwise be. Perhaps, therefore, it might be expedient to prohibit such insurances, or to lay some restrictions upon them. They were, indeed, expressly forbidden by the Ordinance of Rotterdam; and Lord Mansfield, whose authority on all points connected with the law of insurance is so deservedly high, seems to have thought that it would be well to exclude barratry entirely from policies, and to cease "making the underwriter become the insurer of the conduct of the captain whom he does not appoint, and cannot dismiss, to the owners who can do either." But though it were expedient to prevent the owners from making an insurance of this sort, nothing can be more reasonable than that third parties, who freight a ship, or put goods on board, should be allowed to insure against such a copious source of loss.—(For a further discussion of this subject, see the article MARINE INSURANCES; and *Marshall on Insurance*, book i. c. 12. § 6., and *Park on Insurance*, c. 5.)

Owners, masters, or seamen, who wilfully cast away, burn, or destroy ships, to the prejudice of freighters or insurers, incur the penalty of death.—(See SHAMEN.)

**BARREL**, a cask or vessel for holding liquids, particularly ale and beer. Formerly the barrel of beer in London contained only 32 ale gallons = 32½ Imperial gallons; but it was enacted by 43 Geo. 3. c. 69. that 36 gallons of beer should be taken to be a

barrel; and by the 6 Geo. 4. c. 58. it is enacted, that whenever any gallon measure is mentioned in any excise law, it shall always be deemed and taken to be a standard Imperial gallon. At present, therefore, the barrel contains 36 Imperial gallons. It may be worth while observing that the barrel or cask is exclusively the produce of European ingenuity; and that no such article is known to any nation of Asia, Africa, or America, who have not derived it from Europeans.

**BARWOOD**, a red dye wood brought from Africa, particularly from Angola, and the river Gaboon. The dark red which is commonly seen upon British Bandana handkerchiefs is for the most part produced by the colouring matter of barwood, saddened by sulphate of iron.—(*Bancroft on Colours.*) The imports of barwood, in 1841, amounted to 2,012 tons. It brought, in January 1843, from 3*l.* to 4*l.* a ton (duty 2*s.* included) in the London market.

**BASKETS** (Fr. *Corbeilles*; Ger. *Kürbe*; It. *Paniere*; Sp. *Canastas*, *Canastos*; Rus. *Korsnii*) are made, as every one knows, principally of the interwoven twigs of willow, osier, birch, &c., but frequently also of rushes, splinters of wood, straw, and an immense number of other articles. They are used to hold all sorts of dry goods, and are constructed of every variety of quality and shape. Besides the vast quantities produced at home, some of the finer kinds are imported under an *ad valorem* duty, which, previously to 1842, was 20, but has since been only 10 per cent. In 1841, the old duty produced 2,06*l.*, showing that the value of the foreign baskets entered for home consumption in that year had been 10,800*l.*

**BAST**, for straw hats or bonnets. See *Hats*.

**BATAVIA**, a city of the island of Java, the capital of the Dutch possessions in the East Indies, and the principal trading port of the Oriental islands, lat. 6° 12' S., long. 106° 54' E., on the north-west coast of the island, on an extensive bay. The harbour, or rather road, lies between the main land and several small uninhabited islands, which, during the boisterous or north-western monsoon, afford sufficient shelter and good anchorage. Ships of from 300 to 500 tons anchor at about 14 mile from shore. A small river runs through the town, which is navigable for vessels of from 20 to 40 tons, a couple of miles inland; a number of canals branch off from it into different parts of the town, affording great conveniences for trade. Batavia was formerly so very insalubrious, that General Daendels was anxious to transfer the seat of government to Sourabaya; but being thwarted in this, he set about building a new town, a little further inland, on the heights of Weltevreden, whither the government offices were immediately removed. Most of the principal merchants have now their residences in the new town, repairing only to the old city, when business requires it, during a portion of the day. In consequence, the old town is at present principally occupied by Chinese, and the descendants of the ancient colonists, several of its streets having been deserted and demolished. More recently, however, the Baron Capellen, whose enlightened administration will long be gratefully remembered in Java, sensible of the superior advantages of the old town as a place of trade, exerted himself to prevent its further decay, by removing the causes of its unhealthiness; to accomplish which, he widened several of the streets, filled up some of the canals, and cleaned others, demolished useless fortifications, &c.; and the effect of these judicious measures has been, that Batavia is now as healthy as any other town in the island. The population, according to an accurate census taken in 1824, consisted of 9,025 Europeans and their descendants, 23,108 natives, 14,708 Chinese, 601 Arabs, and 12,419 slaves; in all, 53,861 persons, exclusive of the garrison. As the population has increased since, it may at present be estimated at from 60,000 to 70,000, independently of the military, of which there are always a considerable number. Among the principal merchants are Dutch, English, Americans, French, and Germans. The island of Java forms the most important portion of the Dutch possessions in the East, and is, in fact, one of the finest colonies in the world. It contains an area of 50,000 square miles, with a population of (probably) about 7,000,000 individuals, or 140 to the square mile.

During the year 1841 the total imports into Java and Madura, on account of private parties, amounted to		
Merchandise	20,156,976 fl.	
Specie	1,807,065 fl.	21,964,041 fl.

**Bank of Batavia.** — A bank for the issue of notes and other banking business, was established at Batavia in 1827, with branches at Samarang and Sourabaya; the history of which is not uninteresting. The capital of the bank, consisting of 2,000,000 fl., divided into 4,000 shares, was subscribed with difficulty; and the most unfavourable anticipations were entertained of the success of the establishment. No sooner, however, had the bank been set on foot, than she began to enjoy a large share of prosperity. The rapid increase of cultivation and commerce in Java led to a corresponding demand for capital, and to the payment of a very high rate of interest on loans; and as the loans made by the bank consisted of bank notes, which cost next to nothing, the profits became quite enormous; so much so that they amounted in 1837 to 33 per cent., the price of the 500 fl. share of bank stock being then only 1,850 fl. But this prosperity was as brief as it was signal. — The offer of an exorbitant interest had tempted, in not a few cases, the bank to make advances on doubtful security; and in Java, as elsewhere, issues of paper payable on demand necessarily stop the moment the circulation has been fully saturated with notes; and this result having been attained in 1838, and the notes issued by the bank being henceforth returned on her for payment, she speedily became involved in the greatest difficulties; many of those who depended on her advances for support were no longer able to meet their engagements; and the whole island was subjected to a severe pecuniary and commercial crisis: in fact, but for the intervention of the government, in 1840, when bank notes were made legal tender for a limited period, she must have stopped payments! This intervention has, however, given her time to recover from the difficulties into which she had been precipitated; and having again, after sustaining a very heavy loss, resumed specie payments, it is to be hoped that she may profit in future by her past experience. — We subjoin

An Account of the Dividends paid by the Bank of Java from 1829 to 1840, both inclusive.

Year.	Dividend.	Year.	Dividend.
1829	9 per cent.	1833	20 per cent.

		1839	26
		1840	9

(See the Brochure of M. d'Argout on Java, Singapore, &c., Paris, 1842.)

**General Remarks on Java.** — The previous statements show that the produce and trade of Java have increased during the last dozen years with a rapidity unknown in any other colony, Cuba, perhaps, excepted. And if the resources and capabilities of this noble island be fully developed, it is quite impossible to say how much farther her trade may be extended. It would far exceed our limits, and even were this not the case, it would involve us in discussions nowise suitable for this work, were we to enter into any detailed examination of the means by which the extension of culture in Java has been brought about. We may, however, shortly mention that the produce for exportation is principally raised on account of government, partly by contributions in kind, and partly and principally by contributions of compulsory labour applied to its production. And, provided these contributions be not carried to an excess, we incline to think that they are at once the least onerous mode in which the natives can be made to pay their taxes, and the most profitable for the government. It is, we apprehend, idle to suppose that industry, if left to itself, will ever become flourishing in a country like Java, where the wants of the inhabitants are so few and so easily satisfied, or where

the climate indisposes to exertion. No doubt the system of compulsory labour may be easily abused and converted into an instrument of the most grinding oppression; but so long as it is managed with discretion and good sense, we are disposed to believe, from all we can learn, that it is preferable to every other system hitherto devised for developing the resources of tropical countries. (For some remarks on this subject, see the learned and able *Dissertatio Historico-Practica*, on the Dutch East India Company, by Van IJnden, published in 1839, pp. 161.—171.)

Very great public improvements have also been already effected, and are still in progress, in the island. Among others, an excellent high road has been constructed through its whole length, from Bantam on its W. to Sourabaya on its E. coast, whence cross roads lead to all the principal stations. A number of forts have, also, been constructed in commanding situations in the interior, the principal of which at Surackarta, near the centre of the island, is a regular and strong citadel. It is said to be the intention to transfer the seat of government thither from Batavia. These forts have been erected principally to keep the natives in check, and to prevent those outbreaks that have done so much to retard the prosperity of the island. Several important establishments have also been recently founded along the S. coast, which had previously been all but neglected. (See *Argout sur Java, Singapore, &c.*)

Rice used to be the staple product of Java; but it is now far surpassed by coffee and sugar, the culture of both of which has been astonishingly increased. In proof of this we may mention that the exports of coffee, which in 1830 amounted to 288,740 piculs, had increased in 1844 to 1,006,190 do., or to 61,090 tons: while the exports of sugar, which in 1830 amounted to 108,640 piculs, had increased, in 1845, to 1,455,423 piculs, or 88,995 tons. More than half the trade of the island centres in Batavia.

Indigo has also become an important product. The other principal articles of export are tin from Banca, tobacco, tea, and birds' nests.

The imports comprise cottons, woollens, and other manufactured goods; wines and spirits, with iron, hardware, and machinery; opium from the Levant and from Bengal; and a great variety of other articles.

*Port Regulations.*—The following is the substance of the port regulations of Batavia (No. 14). The commander of a ship arriving in the roads, is not to land himself, or permit any of his crew or passengers to land, until his vessel be visited by a boat from the guard-ship. — 16. The master, on landing, is first to wait on the master attendant, and afterwards report himself at the police office. — 18. A manifest of the whole cargo must be delivered at the Custom-house within 24 hours of the ship's arriving in the roads. — 19. The master of a vessel must lodge the ship's papers with the master attendant when he first lands, which are afterwards to be delivered up to him when he receives his port clearance from the same authority. — 20. No goods can be shipped or landed after sunset, under a penalty of 500 florins. — 21. No goods can be shipped or landed without a special permission from the water fiscal, which, however, is never refused on application. — 22. No tickets or ammunitions can be imported, but the prohibition does not extend to fowling pieces amounting 100 florins value.

*Tariff.*—After a good deal of negotiation, it has been fixed that goods imported in British vessels shall pay an ad valorem duty of 15 per cent., and under the Netherlands flag, of 14 per cent.; that is, a duty upon the wholesale price at Batavia, not in bond. The export duty on coffee, if exported on a foreign bottom to a foreign country, is 3 florins per picul; if on a foreign bottom to a port in the Netherlands, 4 florins; and if on a Netherlands bottom in a Netherlands port, 3 florins. Sugar exported on a foreign bottom, pays 4 florins per picul; but if exported on a Netherlands bottom, 1 florin. Rice on whatever bottom exported, and in whatever country, pays a duty of

3 florins per syang of 97 piculs. Tin, exported on a foreign ship to whatever port, 4 florins per picul; and by a Netherlands ship, 2 florins per picul. The trade in spices is monopolized by the Netherlands Trading Company.

Goods are received in *redepôt* not only at Batavia, but at the ports of Samarang, Sourabaya, and Anjier in Java, and Illio in the Straits of Malacca, on payment of a duty of 1 per cent. levied on the invoice value.

*Money.*—Accounts are kept, at Batavia, in the florin or guilder, divided into centimes, or 100 parts, represented by a copper coinage or dells. The florin is a new coin made expressly for India, but of the same value as the florin current in the Netherlands. It is usually estimated at the rate of 14 to the pound sterling, but the correct par is 11 florins 29 cent. per pound. Doubloons, and the coins of Continental India, are receivable at the Custom-house at a fixed tariff; the Spanish dollar, for example, at the rate of 100 for 850 florins.

*Weights.*—The Chinese weights are invariably used in commercial transactions at Batavia, and throughout Java and the other Dutch possessions in India. These are the picul and the catty, which is its hundredth part. The picul is commonly estimated at 135 Dutch, or 133½ lbs. avoirdupois, but at Batavia it has been long ascertained and considered to be equal to 136 lbs. avoirdupois.—(*Reglement, Comp. d'Est sur l'île de Java*, cap. II, Sec. 1; *Evidence of British Resolutions, &c.* before the Select Committee of the House of Commons on the Affairs of the East India Company, 1831; *Niederländische Staats-Verordn.*, 13 August, 1842, and other official information.)

**BATTEN**, a name in common use for a scantling of wood 2½ inches thick and 7 wide. If above 7 inches wide, it is called deal.

**BAZAAR**, a term used in the East to designate a market, or building in which various articles of merchandize are exposed for sale. Bazaars are now met with in most large cities of Europe. There are several in London, of which the one in Soho-square is the most considerable.

**BDELLIUM** (Arab. *Aflaton*), a gum-resin, semi-pellucid, and of a yellowish brown or dark brown colour according to its age, unctuous to the touch, but brittle; soon, however, softening between the fingers; in appearance it is not unlike myrrh, of a bitterish taste, and moderately strong smell. Two kinds have been distinguished: the *oposopannum* of the ancients, which is thick like wax; and the common dark sort. It is found in Persia and Arabia, but principally in the latter; all that is met with in India is of Arabian origin. The tree which produces it has not been clearly ascertained.—(*Annals of Materia Medica*.)

**BEACONS**, in commerce and navigation, public marks or signals to give warning of rocks, shoals, &c. No man is entitled to erect a light-house, beacon, &c., without being empowered by law. The Trinity House corporation are authorised to set up beacons in whatever places they shall think fit; and any person who shall willfully remove or run down any buoy, beacon, &c. belonging to the Trinity House, or to any other corporation, individual or individuals, having authority to establish it, shall, besides being liable to the expense of replacing the same, forfeit a sum of not less than 10*l.* nor more than 50*l.* for every such offence.—(*G. Geo. 4 c. 125. § 91.*)—(See **BUOYS**.)

**BEADS** (Fr. *Rosaires*; Ger. *Rosenkränze*; Du. *Paternosters*; It. *Corone*; Sp. *Coronas*), small globules or balls used as necklaces, and made of different materials; as pearl, steel, amber, garnet, coral, diamonds, crystal, glass, &c. Roman Catholics use beads in rehearsing their Ave Marias and Paternosters. Glass beads or bugles are imported in large quantities into India and Africa, 288,058 lbs. having been shipped from this country to the W. coast of the latter in 1841. Large quantities are sent from China to India, the Eastern islands, &c. The glass beads sent from England are nearly all imported, principally from Venice, where they are very largely produced. Their non-manufacture in this country is said to be a consequence of the excise regulations as to the manufacture of glass; but the truth is, that the Venetian manufacturers colour them better, and give them a better finish than the English.

**BEANS** (Fr. *Fèves*; Ger. *Bohnen*; It. *Fave*; Rus. *Boobü*; Sp. *Habas*; Lat. *Faba*; a well-known vegetable of the pulse species, largely cultivated both in gardens and fields. Its cultivation is of much importance in rural economy, inasmuch as it has gone far to supersede fallows on strong loams and clays.

**BEAVER.** See **SKINS**.

**BEECH** (*Fagus sylvatica*), a forest tree to be met with every where in England. There is only one species, the difference in the wood proceeding from the difference of soil and situation. A considerable quantity of beech is grown in the southern parts of Bucks. It is not much used in building, as it soon rots in damp places; but it is used as piles in places where it is constantly wet. It is manufactured into a great variety of tools, for which its great hardness and uniform texture render it superior to all other sorts of wood; it is also extensively used in making furniture.

**BEEF**, as every one knows, is the flesh of kine. It is used either fresh or salted. Formerly it was usual for most families, at least in the country, to supply themselves with a stock of salt beef in October or November, which served for their consumption until the ensuing summer, but in consequence of the universal establishment of markets where fresh beef may be at all times obtained, the practice is now nearly relinquished, and the quantity of salted beef made use of as compared with fresh beef is quite inconsiderable. Large supplies of salted beef are, however, prepared at Cork and other places for exportation to the East and West Indies. During the war, large supplies were also required for victualling the navy. The vessels engaged in the coasting trade, and in short voyages, use only fresh provisions.

The English have at all times been great consumers of beef; and at this moment more beef is used in London, as compared with the population, than any where else. — Previously to 1842 the importation of fresh beef was prohibited; and salt beef from a foreign country was at the same time charged with a duty of 12s. a cwt. The entries of the latter for consumption were in consequence inconsiderable, having amounted in 1840 to only 3,892, and in 1841 to 1,698 cwts. (principally hung beef from Hamburg). Both fresh and salted beef may now be imported on paying a duty of 8s. a cwt. For farther details with respect to the consumption of beef, &c. see arts. **CATTLE** and **PROVISIONS**.

**BEER.** See **ALE** and **BEER**.

**BELL-METAL** (Fr. *Metal de Fonte ou de cloches*; Ger. *Glockengut*; Du. *Klokspys*; Sp. *Campanil*; Rus. *Kolokhnaja mjed*), a composition of tin and copper, usually consisting of 3 parts of copper and 1 of tin. Its colour is greyish white; it is very hard, sonorous, and elastic. Less tin is used for church bells than for clock bells; and in very small bells, a little zinc is added to the alloy. — (*Thomson's Chemistry*.)

**BENZOIN.** See **BALSAM**.

**BERGEN**, the first commercial city of Norway, situated at the bottom of a deep bay, in lat. 60° 24' N., long. 5° 20' E. Population 22,500. The bay is inclosed on all sides by rugged rocks and islands: the water is deep; but, owing to the number and intricacy of the passages, the access to the town is attended at all times with a good deal of difficulty, and should never be attempted without a pilot. Codfish, salted or dried, is the principal article of export; when dried, it is called stock-fish, and goes chiefly to Italy and Holland. The fishery is the principal employment; and considerable quantities of fish and other products are also brought hither for exportation from the more northerly parts of the kingdom. At an average, from 25,000,000 to 30,000,000 lbs. salted and dried fish are annually exported. Herrings, whale oil, skins, bones, tar, lobsters, &c. are also largely exported. The exports of timber from Bergen are inconsiderable, and none has latterly gone to England. Norway timber is not so large as that brought from Prussian ports, nor so free from knots; but, being of slower growth, it is more compact, and less liable to rot. The planks are either red or white fir or pine: the red wood is produced from the Scotch fir; the white wood, which is inferior in price and estimation, is the produce of the spruce fir: each tree yields three pieces of timber of 11 or 12 feet in length; and is 70 or 80 years of age before it arrives at perfection. The planks or deals of Bergen are, however, a good deal inferior to those of Christiania.

The imports into Bergen principally consist of grain from the Baltic; and salt, hardware, coffee, sugar, &c. from England.

For *Monies, Weights, and Measures*, see CHRISTIANA; where there are further details as to the trade and navigation of Norway.

**BERRIES** (*Bacca*), the fruits or seeds of many different species of plants. The berries quoted in London Price Currents are bay, juniper, Turkey, and Persian.

1. *Bay Berries* (*Fr. Baies de Laurier*; Ger. *Lorbeerens*; It. *Bacchi di Lawro*; Sp. *Bayas*), the fruit of the *Laurus nobilis*. This tree is a native of the south of Europe, but is cultivated in this country, and is not uncommon in our gardens. The berry is of an oval shape, fleshy, and of a dark purple colour, almost black; it has a sweet fragrant odour, and an aromatic astringent taste. Bay berries, and the oil obtained by boiling them in water, are imported from Italy and Spain.—(*Thomson's Dispensatory*.)

2. *Juniper Berries* (*Fr. Genévrier*; Du. *Sevenboom*; It. *Ginepro*; Sp. *Embro*), the fruit of the common juniper (*Juniperus communis*). They are round, of a black purple colour, and require two years to ripen. They have a moderately strong, not disagreeable, but peculiar smell, and a warm, pungent, sweetish taste, which, if they be long chewed, or previously well bruised, is followed by a considerable bitterness. They are found in this country; but most of those made use of here are imported from Holland, Germany, and Italy. They should be chosen fresh, not much shrivelled, and free from mouldiness, which they are apt to contract in keeping. On distillation with water, they yield a volatile essential oil, very subtle and pungent, and in smell resembling the berries. The peculiar flavour and diuretic qualities of Geneva depend principally on the presence of this oil. English gin is said to be, for the most part, flavoured with oil of turpentine.—(*Lewis's Mat. Med.*; *Thomson's Dispensatory*.)

The duty on juniper berries, previously to 1832, was 11s. 1d. a cwt., being more than 100 per cent. on their price in bond. The oppressiveness of this duty seems to have been the principal reason why turpentine, which in regard to all other respects is so inferior, was largely used in preference to juniper berries in the preparation of gin. This oppressive duty was reduced, in 1832, to 2s., and again, in 1842, to 1s. 6d.; and we entertain little doubt that this wise and liberal measure will at no distant period occasion the receipt of an equal amount of revenue, at the same time that it can hardly fail materially to improve the beverage of a large proportion of the people. In 1842, 7,773 cwt. juniper berries were entered for consumption.

Italian juniper berries fetch at present (Jan. 1843), in the London market, from 10s. to 12s. a cwt., duty included; and German and Dutch ditto, from 9s. to 10s.

3. *Turkey Yellow Berries*, the unripe fruit of the *Rhamnus infectorius* of Linnæus. They are used as a dye drug, in preparing a lively but very fugitive yellow, for topical application in calico-printing. Considerable quantities of them are exported from Salonica, to which they are brought from Thessaly and Albania. An inferior sort is produced in France.—(*Bancroft on Colours*.) The duty on Turkey berries is 1s. 1d. and their price, duty included, in the London market, is (Jan. 1843) 34s. to 36s. a cwt.

4. *Persian Yellow Berries* are said by the merchants to be of the same species as the Turkey yellow berries. The colours which they yield are more lively and lasting. They are high priced, fetching (duty 1s. included) from 110s. to 130s. a cwt. The entries of yellow berries (Turkey as well as Persian) for home consumption, amounted in 1842 to 4,944 cwt.

**BERYL**, called by the jewellers *Aquamarine*. This stone was suspected by Pliny to be a variety of the emerald; a conjecture which modern mineralogists have completely confirmed. The term emerald is applied to that particular variety which presents its own peculiar colour, or *emerald green*; while that of beryl is given indiscriminately to all the other varieties; as the sea green, pale blue, golden yellow, and colourless. Pliny says that the beryl is found in India, and rarely elsewhere; but besides India, it is found in Peru and Brazil; in Nantes and Limoges, in France; in the Wicklow mountains, in Ireland; in the district of Cairngorm, in Scotland; and in various other places.—(*Plin. Hist. Nat. lib. xxxvii. cap. 5*; *Ency. Brit. new edit.*)

"Those only which are of good colour and sufficient depth are manufactured; they have a pretty, lively effect, if in good proportion and well polished. Large stones, from one to three and four ounces, are not uncommon, but from their bulk are only in request as specimens for the cabinet; smaller stones suitable for necklaces may be bought at low prices, within the reach of every description of purchasers; ring stones may be had at a few shillings each; and larger, for brooches or seals, from 1l. to 5l. and often lower."—(*Natue on Diamonds, &c. 2d edit.*)

**BETEL-NUT**, or **ARECA** (Sans. and Hind. *Suapri*; Malay, *Pinang*; Javan. *Jambi*), the fruit of the *Areca catechu*, a slender and graceful palm, rising to the height of about 30 or 40 feet; it produces fruit at the age of five or six years, and continues bearing till its 25th or 30th year. The fruit, which is the only part of the palm that is made use of, is eaten both in its unripe and in its mature state. When ripe, it is of the size of a small egg, and of an orange colour; the exterior part consists of a soft, spongy, fibrous matter, inclosing a nucleus resembling a nutmeg in shape, internal structure, and colour, but usually larger, and always harder. A single tree produces, according to its situation, age, culture, &c., from 200 to 800 nuts. They are objects of great importance in the East, forming the principal ingredient of a compound in universal use as a masticatory in all Central and Tropical Asia. The other ingredients are the leaf of the Betel pepper — (which see), in which the areca nut is wrapped; a little CHUNAM — (which see); and generally, but not always, a little *catechu* or terra japonica — (see CATZCHU). The whole compound is called *betel*, and is used to an extent of which it is difficult for a European to form a just idea. All individuals, without exception of age or sex, begin at an early period to accustom themselves to betel. They are unceasingly masticating it, and derive a gratification from its use that strangers can neither understand nor explain. It reddens the saliva, gives a bright hue to the lips, and, in course of time, renders the teeth quite black. It is said to dispel nausea, excite appetite, and strengthen the stomach. Besides being used as an article of luxury, it is a kind of ceremonial which regulates the intercourse of the more polished classes of the East. When any person of consideration visits another, after the first salutations,

leaf is presented; to omit it on the one part would be considered neglect, and its rejection would be judged an affront on the other. No one of inferior rank addresses a dignified individual without the previous precaution of chewing betel; two people seldom meet without exchanging it; and it is always offered on the ceremonious interviews of public missionaries. The areca nut is, in consequence, an article of very extensive trade. The countries which yield it most largely for exportation are Malabar, Ceylon, and Sumatra. Of the extent of this trade some notion may be formed from the fact, that the imports of areca into Calcutta in 1841-42 amounted to 53,633 Ind. maunds, or 1,966 tons, and those into Canton, in 1837, by British ships only, amounted to 25,978 piculs, or 1,502 tons, notwithstanding Bengal and Southern China are countries in which areca is largely produced.—(See the article *Betel* in the new edition of the *Ency. Britannica*; *Bell's Review of the External Commerce of Bengal*; *Crawford's Indian Archipelago*, vol. i. p. 102, vol. iii. p. 414.; *Chinese Kalender and Register*.)

**BETEL-LEAF** (Hind. *Pan*; Malay, *Sireh*; Javan. *Suro*), the leaf alluded to in the foregoing article. It is the produce of a species of pepper vine (*Piper Betle*), and somewhat resembles the ivy leaf. In their fresh state, betel leaves form an important article of Eastern traffic, being every where used in the preparation of betel. The *Piper Betle* is a scandent plant, and poles are placed in the ground, round which it twines itself. In consequence of the great consumption of its leaves, it is extensively cultivated throughout Tropical Asia. It grows in the greatest perfection in rich soils close to the equator; and is raised with more difficulty the further we recede from it.—(*Ency. Britannica*, new edition, article *Betel*; *Crawford's Indian Archipelago*, vol. i. p. 403.)

**BEZOAR** (Arab. *Fadyj*; Hind. *Zeher-morah*; Pers. *Padzehr Kowie*), a concretion found in the stomach of an animal of the goat kind; it has a smooth glossy surface, and is of a dark green or olive colour: the word bezoar, however, has lately been extended to all the concretions found in animals;—such as the *hog bezoar*, found in the stomach of the wild boar in India; the *bovine bezoar*, found in the gall-bladder of the ox, common in Nepal; and the *camel bezoar*, found in the gall-bladder of the camel: this last is much prized as a yellow paint by the Hindoos. The finest bezoar is brought to India from Borneo and the sea-ports of the Persian Gulf; the Persian article is particularly sought after, and is said to be procured from animals of the goat kind, *Capra Gazella*. Many extraordinary virtues were formerly ascribed to this substance, but without any sufficient reason.—(*Ainslie's Materia Indica*.)

**BILBAO**, or (as it is commonly, though incorrectly, written in this country) **BILBOA**, a sea-port town of Spain, in the province of Biscay, on the river Ybai Cabal, about 9 miles from Portugalete. Population 15,000.

*Port.*—The bay of Bilbao lies between *Punto Galea* on its east, and *Punto Luwero* on its western side, distant about 3 miles. It stretches S. E. to within  $\frac{1}{2}$  of a mile of Portugalete, in lat.  $43^{\circ} 15' 47''$  N., long.  $2^{\circ} 45' W.$ , near the mouth of the river on which Bilbao is built. The water in the bay varies from 8 to 10 and 14 fathoms. There is a bar at the mouth of the river, between Santurce and Portugalete, on which there is not above 4 feet water at ebb tide. High water at full and change at 3 h. p. m. Spring tides rise about 18 feet; and large ships taking advantage of them sometimes ascend the river as far as Bilbao; but they usually load and unload by lighters, either at Portugalete, or at Oliviaga, 4 miles below the town. Pilots are to be had at Santurce, without the bar. In winter, a heavy sea sometimes sets into the bay; but if the pilot cannot go off, he places himself on one of the batteries to the N. W. of Santurce, and makes signals with a red flag, so as to direct the ship to the best anchorage ground.—(See *Laurie's Chart of the Bay of Biscay*, with the *Sailing Directions* that accompany it.)

*Trade.*—Bilbao is favourably situated for commerce. The Biscayans are distinguished for the zeal and courage with which they have defended their peculiar privileges, and for their industry and activity. Bilbao and Santander are the principal ports through which the extensive province of Old Castile, and large portions of Leon and Navarre, most easily communicate with foreign countries. They have, in consequence, particularly the former, a pretty considerable foreign trade. Wool is one of the principal articles of export; but since the introduction of Merino sheep into Germany, and their extraordinary increase in that country, this branch of Spanish commerce, though still in a good deal of importance, has materially declined. Since the abolition, in 1820, of all restrictions on the exportation of corn, flour, &c., the shipments of wheat from Bilbao have been, in some years, very considerable. The supplies are principally brought from the provinces of Valencia, Valladolid, and Zamora, which yield immense quantities of wheat. The distance is from 130 to 140 English miles; and owing to the badness of the roads, and the deficient means of transport, the rate of carriage advances enormously when there is any extraordinary foreign demand. If the *Canal of Castile*, intended to unite the Douro with Reynosa, Bilbao, and Santander, were completed, it would make a considerable revolution in this trade. The *campes*, or plains, on the south side of the Dduro, are amongst the finest wheat countries in the world; the crops being frequently so abundant, that the peasants decline reaping the fields at a distance from the villages. In 1831, 146,234 quarters of Spanish wheat, principally from Bilbao, were imported into Great Britain; but from that period down to 1839 the exports of corn to this country were quite inconsiderable. In 1840 they amounted to 40,939 quarters. The iron manufactures of Biscay are in a state of considerable activity, and some part of the produce is exported. The principal articles of importation are wove fabrics, cod-fish, cutlery, and jewellery (sugar, coffee, cacao, and other colonial products, spices, indigo, &c.—(See *Foreign Quarterly Review*, No. 9, art. *Spain*; and *private information*.)

*Monies, Weights, and Measures*, same as those of Castile; which see. We may mention, however, that the *faneqa*, or measure for grain, is equivalent to 165 Winchester quarters.

**BILL OF EXCHANGE.** See **EXCHANGE**.

**BILL OF HEALTH**, a certificate or instrument signed by consuls or other proper authorities, delivered to the masters of ships at the time of their clearing out from all ports or places suspected of being particularly subject to infectious disorders, certifying

the state of health at the time that such ship sailed. A *clean bill* imports that at the time that the ship sailed no infectious disorder was known to exist. A *suspected bill*, commonly called a *touché* patent or bill, imports that there were rumours of an infectious disorder, but that it had not actually appeared. A *foul bill*, or the absence of clean bills, imports that the place was infected when the vessel sailed. — (See QUARANTINE.)

**BILL OF LADING**, is a *formal receipt* subscribed by the master of a ship in his capacity of carrier, acknowledging that he has received the goods specified in it on board his ship, and binding himself (under certain exceptions) to deliver them, in the like good order as received, at the place and to the individual named in the bill, or his assigns, on his or their paying him the stipulated freight, &c. When goods are sent by a ship hired by a charterparty, the bills of lading are delivered by the master to the merchant by whom the ship is chartered; but when they are sent by a *general ship*, — that is, by a ship not hired by charterparty, but employed as a general carrier, — each individual who sends goods on board, receives a bill of lading for the same. In all cases, therefore, the bill of lading is the evidence of and title to the goods shipped.

The liability of a carrier, at common law, to deliver the goods intrusted to his care, is cancelled only by "the act of God and the king's enemies." But to limit this responsibility, the following exception is now, invariably almost, introduced into the clause in bills of lading, binding the master to the delivery of the goods: — "*The act of God, the king's enemies, fire, and all and every other dangers and accidents of the seas, rivers, and navigation, of whatever nature and kind soever, excepted.*"

Bills of lading are not, in general, immediately given by the master on receiving the goods. The usual practice is for the master or his deputy to give a common receipt for the goods, which is delivered up on receiving the bill of lading. The latter should always be required within 24 hours after the goods are received on board.

Three sets of all bills of lading are made out on stamped paper: one of these should be remitted by the first post to the person to whom the goods are consigned, a second being sent to him by the ship; the third is retained by the shipper of the goods. The master ought always to retain copies of the bills of lading for his government. A stamp duty of 3s. is charged on all bills of lading, whether for goods exported or carried coastwise.

The usual form of a bill of lading is as follows: —

W. B. } *N.B.* — SHIPPED, in good order and well conditioned, by *A.B.* merchant, in and upon  
No. 1. a. 10. } the good ship called \_\_\_\_\_ whereof *C.D.* is master, now in the river Thames, and  
\_\_\_\_\_ the goods following, viz. *here describe the goods*, marked  
\_\_\_\_\_ and numbered as *per margin*, to be delivered, in the like good order and condition, as  
aforesaid, (*the act of God, the king's enemies, fire, and all and every other dangers and  
accidents of the seas, rivers, and navigation, of whatever nature and kind soever, excepted*),  
unto the said *A.B.* or his assigns, he or they paying for the said goods at the rate of  
*per piece* freight, with *primage* and *average* accustomed. In witness whereof, I, the said  
master of the said ship, have affirmed to three bills of lading, of this tenour and date; any  
one of which bills being accomplished, the other two are to be void.  
London, this \_\_\_\_\_ day of \_\_\_\_\_, 1843. C. D., *Master.*

But in the case of ships homeward bound from the West Indies, which send their boats to fetch the cargo from the shore, the exception in the bill of lading is usually expressed as follows: — "The act of God, the king's enemies, fire, and all and every other dangers and accidents of the seas, rivers, and navigation, of whatever nature and kind soever, *save risk of boats, so far as ships are liable thereto*, excepted." Other exceptions may be and are sometimes introduced; but the above is the general form.

**Transfer of Bills of Lading.** — Bills of lading are transferable either by blank or special indorsement, like bills of exchange. And whatever may be the character of the person to whom the goods are consigned, whether he be a buyer, or merely the factor, agent, or broker of the consignor, the *bonâ fide* holder of a bill of lading indorsed by the consignee is entitled to the goods, and may claim them from the master, if he can prove that he has purchased the bill for a *good consideration*; but unless he can do this, he is not entitled to the goods. — (*Holt, Law of Shipping*, 2d ed. p. 363.)

Formerly, a factor, though he might sell, could not *pledge* the goods of his principal. But the hardship and inconvenience arising from this rule were such, that it was set aside by the act 6 Geo. 4. c. 94. The second section of this act declares, that any person in possession of a bill of lading shall be deemed the true owner of the goods specified in it, so as to make a sale or pledge by him of such goods or bill of lading valid, unless the person to whom the goods are sold or pledged has notice that the seller or pledger is not the actual and *bonâ fide* owner of the goods. — (See *Factor*.)

**Delivery under Bill of Lading.** — It being usual to sign and deliver three bills of lading, it is possible that there may be conflicting demands upon the captain by the different holders. Nothing, however, is, in such a case, required of him, except that he act with good faith, and to the best of his judgment; and that he make delivery of the goods to the person who first demands them of him, upon presentment of the bill of lading, *provided the circumstances be not such as to justify a suspicion of his having unfairly*

got possession of it. If he act differently, he is answerable, according to the peculiarities of the case, to the person injured by his negligence; the bill of lading being not only the instructions of the merchant to him, as his carrier or servant, but his own especial agreement to deliver according to its conditions.

Where several bills of lading of a different import have been signed, no regard is to be paid to the time when they were first signed by the master; but the person who first gets legal possession of one of them from the owner or shipper, has a right to the consignment; and where such bills of lading, though different upon the face of them, are constructively the same, and the master has acted *bonâ fide*, a delivery according to such legal title will discharge him from all. — (*Holt*, p. 375. and 377.)

**BILL OF SALE**, a contract under seal, by which an individual conveys or passes away the right and interest he has in the goods or chattels named in the bill. The property of ships is transferred by bill of sale. — (*See Rzoistav.*)

**BILL OF SIGHT**. When a merchant is ignorant of the real quantities or qualities of any goods assigned to him, so that he is unable to make a perfect entry of them, he must acquaint the collector or comptroller of the circumstance; and they are authorised, upon the importer or his agent making oath that he cannot, for want of full information, make a perfect entry, to receive an entry by *bill of sight*, for the packages, by the best description which can be given, and to grant warrant that the same may be landed and examined by the importer in presence of the officers; and within 3 days after any goods shall have been so landed, the importer shall make a perfect entry, and shall either pay down the duties, or shall duly warehouse the same. — (3 & 4 Will. 4. c. 52. § 24.)

In default of perfect entry within 3 days, such goods are to be taken to the king's warehouse; and if the importer shall not, within 1 month, make perfect entry, and pay the duties thereon, or on such parts as can be entered for home use, together with charges of moving and warehouse rent, such goods shall be sold for payment of the duties. — § 25.

The East India Company are authorised, without the proof before-mentioned, to enter goods by bill of sight, and to make perfect entry, and pay the duties within 3 months. — § 26.

**BILL OF STORE**, is a licence granted by the Custom-house, to merchants, to carry such stores and provisions as are necessary for a voyage, free of duty.

By the act 3 and 4 Will. 4. c. 52. returned goods may be entered by bill of store, as follows: —

From 5th January, 1826, it shall be lawful to re-import into the United Kingdom, from any place, in a ship of any country, any goods (except as herein-after excepted) which shall have been legally exported from the United Kingdom, and to enter the same by bill of store, referring to the entry outwards, and exportation thereof; provided the property in such goods continue in the person by whom or on whose account the same have been exported; and if the goods so returned be foreign goods which had before been legally imported into the United Kingdom, the same duties shall be payable thereon as would, at the time of such re-importation, be payable on the like goods, under the same circumstances of importation as those under which such goods had been originally imported; or such goods may be warehoused upon a first importation thereof: provided always, that the several sorts of goods enumerated or described in the list following shall not be re-imported into the United Kingdom for *home use*, upon the ground that the same had been legally exported from thence, but that the same shall be deemed to be *foreign goods*, whether originally such or not, and shall also be deemed to be imported for the first time into the United Kingdom; viz.

*Goods exported, which may not be re-imported for Home Use.*

Corn, grain, meal, flour, and malt; hops, tobacco, tea.

Goods for which any bounty or any drawback of excise had been received on exportation, unless by special permission of the commissioners of customs, and on repayment of such bounty or such drawback.

All goods for which bill of store cannot be issued in manner herein-after directed, except small remnants of British goods, by special permission of the commissioners of customs, upon proof of their satisfaction that the same are British, and had not been sold. — § 33.

The person in whose name any goods so re-imported were entered for exportation, shall deliver to the searcher, at the port of exportation, an exact account signed by him of the particulars of such goods, referring to the entry and clearance outwards, and to the return inwards of the same, with the marks and numbers of the packages both inwards and outwards; and thereupon the searcher, finding that such goods had been legally exported, shall grant a bill of store for the same; and if the person in whose name the goods were entered for exportation was not the proprietor thereof, but his agent, he shall declare upon oath on such bill of store the name of the person by whom he was employed as such agent; and if the person to whom such returns are consigned shall not be such proprietor and exporter, he shall declare upon oath on such bill of store the name of the person for whose use such goods have been consigned to him; and the real proprietor, ascertained to be such, shall make oath upon such bill of store to the identity of the goods so exported and so returned, and that he was at the time of exportation and of re-importation the proprietor of such goods, and that the same had not during such time been sold or disposed of to any other person; and such affidavits shall be made before the collectors or comptrollers at the ports of exportation and of importation respectively, and thereupon the collector and comptroller shall admit such goods to entry by bill of store, and grant their warrant accordingly. — § 34.

**BILLINGSGATE**, a market for fish, contiguous to the Custom-house in London. It is held every lawful day, and was established in 1669 by stat. 10 & 11 Will. 3. c. 24. Every person buying fish in Billingsgate market may sell the same in any other market-place or places within the city of London or elsewhere, by retail, with this condition, that none but fishmongers be permitted to sell in fixed shops or houses. No person or persons shall purchase at Billingsgate any quantity of fish, to be divided by

lots or in shares amongst any fishmongers or other persons, in order to be afterwards put to sale by retail or otherwise; nor shall any fishmonger engross, or buy in the said market, any quantity of fish, but what shall be for his own sale or use, under the penalty of 20*l*. No person is to have in his possession, or expose to sale, any spawn of fish, or fish unseizable, or out of season.—(36 Geo. 3. c. 118.) The minimum size of the lobsters to be sold at Billingsgate is fixed by statute.—(See *Lobsters*.)

Down to 1842 no fish of foreign taking or curing, or in foreign vessels, could be imported into the United Kingdom, under penalty of forfeiture, except turbot and lobsters, stock-fish, live eels, anchovies, sturgeon, botargo, and caviars. But now all sorts of fish may be imported on payment of moderate duties. Fresh fish of British taking, and imported in British ships, may be landed without report, entry, or warrant.—(6 Geo. 4. c. 107.)

For some further remarks with respect to this subject, see *FISH*.

**BIRCH** (Fr. *Bouleau*; Du. *Berke*; Ger. *Birke*; It. *Betulla*; Lat. *Betula*; Pol. *Brosza*; Rus. *Beresta*; Sp. *Abedul*, *Betulla*), a forest tree met with every where in the north of Europe. It is applied to various purposes. In Lapland, Norway, and Sweden, the long twigs of the birch are woven into mats and twisted into ropes; the outer bark forms an almost inextinguishable covering for houses; and the inner bark is used, in periods of scarcity, as a substitute for bread. Russia leather is prepared by means of the empyreumatic oil of the birch. It is an excellent wood for the turner, being light, compact, and easily worked. Its durability is not very great. It is sometimes used in the manufacture of herring barrels.

**BIRD-LIME** (Ger. *Vogelleim*; Fr. *Glu*; It. *Pania*; Sp. *Liga*; Rus. *Птичий Клей*) exudes spontaneously from certain plants, and is obtained artificially from the middle bark of the holly. Its colour is greenish, its flavour sour, and it is gluey, astringent, and tenacious. The natural is more adhesive than the artificial birdlime.—(Thomson's *Chemistry*.)

**BIRDS' NESTS** (Ger. *Indianische Vogelneester*; Du. *Indiuanachs Vogelneestjes*; Fr. *Nids de Tunkin*; It. *Nidi di Tunchino*; Sp. *Nidos de la China*; Javan. *Suan*; Malay, *Sarungburing*), the nests of a species of swallow peculiar to the Indian islands (*Hirundo esculenta*), very much esteemed in China. In shape this nest resembles that of other swallows; it is formed of a viscid substance; and in external appearance, as well as consistence, is not unlike fibrous, ill-connected isinglass. Excellent nests are principally found in Java, in caverns that are most frequently, though not always, situated on the sea-coast. Many conflicting statements have been made as to the substance of nests; some contending that they are formed of sea-foam or other marine products, and others that they are elaborated from the food of the bird, &c. But these are points as to which nothing satisfactory is known.

We borrow from Mr. Crawford's valuable work on the *Eastern Archipelago* (vol. iii. pp. 438—437.) the following authentic and curious details as to the traffic in this singular production:—"The best nests are those obtained in deep damp caves, and such as are taken before the birds have laid their eggs. The coarsest are those obtained after the young are fledged. The finest nests are the whitest, that is, those taken before the nest has been rendered impure by the food and feces of the young birds. They are taken twice a-year, and, if regularly collected, and no unusual injury be offered to the caverns, will produce very equally, the quantity being very little, if at all, improved by the caves being left altogether unmoistened for a year or two. Some of the caverns are extremely difficult of access, and the nests can only be collected by persons accustomed from their youth to the office. The most remarkable and productive caves in Java, of which I superintended a moiety of the collection for several years, are those of *Karang-bolang*, in the province of *Engles*, on the south coast of the island. Here the caves are only to be approached by a perpendicular descent of many hundred feet, by ladders of bamboo and rattan, over a sea rolling violently against the rocks. When the mouth of the cavern is attained, the perilous office of taking the nests must often be performed by torch-light, by penetrating into recesses of the rock where the slightest trip would be instantly fatal to the adventurers, who see nothing below them but the turbulent surf making its way into the chinks of the rock.

"The only preparation which the birds' nests undergo is that of simple drying, without direct exposure to the sun, after which they are packed in small boxes, usually of half a picul. They are assured for the Chinese market into three kinds, according to their qualities, distinguished into *first* or *best*, *second*, and *third* qualities. Caverns that are regularly managed, will afford, in 100 parts, 85 parts of those of the first quality, 35 parts of those of the second, 11 parts of those of the third.

"The common prices for birds' nests at Canton are, for the first sort, no less than 3,000 Spanish dollars the picul, or 6*l*. 18*s*. 1*d*. per lb.; for the second, 2,000 Spanish dollars per picul; and for the third, 1,600 Spanish dollars. From these prices it is sufficiently evident, that the birds' nests are no more than an article of expensive luxury. They are consumed only by the great; and, indeed, the best part is sent to the capital for the consumption of the court. The sensual Chinese use them, under the imagination that they are powerfully stimulating and tonic; but it is probable that their most valuable quality is their being perfectly harmless. The people of Japan, who so much resemble the Chinese in many of their habits, have no taste for the edible nests; and how the latter acquired a taste for this foreign commodity is no less singular than their persevering in it. Among the western nations there is nothing parallel to it, unless we except the whimsical estimation in which the Romans held some articles of luxury, remarkable for their scarcity rather than for any qualities ascribed to them."

Mr. Crawford estimates the whole quantity of birds' nests exported from the Archipelago at 349,400 lbs. worth 28*l*. 2*s*. "The value," he observes, "of this immense property in the country which produces it, rests upon the capricious wants of a single people. It is claimed as the exclusive property of the sovereign, and every where forms a valuable branch of his income, or of the revenue of the state. This value, however, is of course not equal, and depends upon the situation and the circumstances connected with the caverns in which the nests are found. Being often in remote and sequestered situations, in a country an lawless, a property so valuable and exposed is subject to the perpetual predation of freebooters, and it not unfrequently happens that an attack upon it is the principal object of the warfare committed by one

petty state against another. In such situations, the expense of affording them protection is so heavy, that they are necessarily of little value. In situations where the caverns are difficult of access to strangers, and where there reigns enough of order and tranquillity to secure them from internal depredation, and to admit of the nests being obtained without other expense than the simple labour of collecting them, the value of the property is very great. The caverns of *Korow-Joling*, in Java, are of this description. These annually afford 6,810 lbs. of nests, which are worth, at the Batavia prices of 3,000, 3,500, and 1,200 Spanish dollars the picul, for the respective kinds, nearly 130,000 Spanish dollars; and the whole expense of collecting, curing, and packing, amounts to no more than 11 per cent. on this amount. The price of birds' nests is of course a monopoly price, the quantity produced being by nature limited, and incapable of augmentation. The value of the labour expended in bringing birds' nests to market is but a trifling portion of their price, which consists of the highest sum that the luxurious Chinese will afford to pay for them, and which is a tax paid by that nation to the inhabitants of the Indian islands. There is, perhaps, no production upon which human industry is exerted, of which the cost of production bears so small a proportion to the market price."—(See also the valuable work of Count Hogenorp, *Coup d'Œil sur l'Isle de Java*, p. 201.)

**BISMUTH** (Ger. *Wismuth*; Du. *Bismuth*, *Bergsteen*; Fr. *Bismuth*; It. *Bismutti*; Sp. *Bismuth*, *Piedra inga*; Rus. *Wismut*; Lat. *Bismuthum*), a metal of a reddish white colour, and almost destitute of taste and smell. It is softer than copper; its specific gravity is 9.822. When hammered cautiously, its density is considerably increased; it breaks, however, when struck smartly by a hammer, and, consequently, is not malleable, neither can it be drawn out into wire; it melts at the temperature of 476°. — (Thomson's *Chemistry*.)

"Bismuth is used in the composition of pewter, in the fabrication of printers' types, and in various other metallic mixtures. With an equal weight of lead, it forms a brilliant white alloy, much harder than lead, and more malleable than bismuth, though not ductile; and if the proportion of lead be increased, it is rendered still more malleable. Eight parts of bismuth, 5 of lead, and 3 of tin, constitute the fusible metal, sometimes called Newton's, from its discoverer, which melts at the heat of boiling water, and may be fused over a candle in a piece of stiff paper without burning the paper. Pewterers' solder is formed of one part of bismuth, with 5 of lead, and 3 of tin. It forms the basis of a sympathetic ink."—(Ure.)

**BITUMEN** (Ger. *Judenpech*; Du. *Jodenlym*; It. *Asfalto*; Sp. *Asfalto*; Port. *Asphalto*; Rus. *Asfalt*; Lat. *Asphaltum Bitumen Judaicum*). This term includes a considerable range of inflammable mineral substances, burning with the flame in the open air. They differ in consistency, from a thin fluid to a solid; but the solids are for the most part liquefiable at a moderate heat. They are,—1. *Naphtha*; a fine, white, thin, fragrant, colourless oil, which issues out of white, yellow, or black clays in Persia and Media. This is highly inflammable. Near the village of Amiano, in the state of Parma, there exists a spring which yields this substance in sufficient quantity to illuminate the city of Genoa, for which purpose it is employed. With certain vegetable oils, naphtha is said to form a good varnish.—2. *Petroleum* is much thicker than naphtha, resembling in consistence common tar. It has a strong disagreeable odour, and a blackish or reddish brown colour. During combustion, it emits a thick black smoke, and leaves a little residue in the form of black coal. It is more abundant than the first-mentioned variety, from which it does not seem to differ, except in being more inspissated. It is found in various countries, and is especially abundant in the Birman empire, where it is met with above Proms, within about 2 miles of the Irrawadi. The gross annual produce of the wells in this place has been estimated at about 80,000,000 lbs., worth on the spot about 1s. 8d. a cwt; and the supply might, if a market could be found, be indefinitely increased. It is used as a lamp oil, and, when mingled with earth or ashes, as fuel and in the paying of boats. (*Geographical Dictionary*, i. 377.) In the United States it is found abundantly in Kentucky, Ohio, and New York, where it is known by the name of *Seneca* or *Genesee* oil. It is also obtained from wells in the island of Zante. Herodotus tells us, that he had seen these wells—(lib. iv. c. 195.); and the description he has given of them, and of the mode of obtaining the petroleum, corresponds, in all respects, with the accounts of the best modern travellers. The average annual produce of the Zante springs is about 100 barrels.—(*Chandler's Travels in Greece*, 4to. ed. p. 301.; *Holland's Travels in Greece*, 4to. ed. p. 18.) Petroleum is particularly abundant in Persia. "When taken from the pit, it is a thick liquid resembling pitch. The bottoms of most vessels which navigate the Euphrates and Tigris are covered with it, and it is also used in lamps, instead of oil, by the natives. The most productive fountains are those of Kerkook, Mendali, and Badku. The wells in the neighbourhood of the latter seem to be quite inexhaustible, being no sooner emptied than they again begin to fill. Some of them have been found to yield from 1,000 to 1,500 lbs. a day!"—*Kimneir's Persian Empire*, p. 39. and 359.)—3. *Maltha*, or *Sea-wax*, is a solid whitish substance, not unlike tallow. It melts when heated, and in cooling assumes the consistence of white cerate. This is, most probably, the *bitumen candidum* of Pliny (*Hist. Nat. lib. xxxv. c. 15*). It is not used as pitch; but it affords a better light than petroleum, and emits a less disagreeable smell. It is found on the surface of the Baikal Lake in Siberia, at the foot of the mountains of Buctiari in Persia, and in some other places.—4. *Elastic Bitumen* yields easily to pressure; is flexible and elastic. It emits a strong bituminous odour, and is about the weight of water. On exposure to the air it hardens, and loses its elasticity. It takes up the traces of crayons in the same

manner as caoutchouc, or Indian rubber, whence it has obtained the name of *mineral caoutchouc*. It has hitherto been found only in the lead mines of Derbyshire. — 5. *Compact Bitumen, or Asphaltum*, is of a shining black colour, solid, and brittle, with a conchoidal fracture. Its specific gravity varies from 1 to 1.6. Like the former varieties, it burns freely, and leaves but little residuum. It is found in India, on the shores of the Dead Sea, in France, in Switzerland, and in large deposits in sandstone in Albania; but nowhere so largely as in the island of Trinidad, where it forms a lake three miles in circumference, and of a thickness unknown. A gentle heat renders it ductile, and, when mixed with grease or common pitch, it is used for paying the bottoms of ships, and is said to protect them from the teredo of the West Indian seas. The ancients employed bitumen in the construction of their buildings. The bricks of which the walls of Babylon were built were, it is said (*Herodotus*, lib. i. § 179.), cemented with hot bitumen, which gave them unusual solidity.

**BLACKING** (Ger. *Schuhschwärze*, *Wische*; Fr. *Noir (de cordonnier)*; It. *Nero da ugnere le scarpe*; Sp. *Negra de zapatos*). A factitious article, prepared in various ways, used in the blacking of boots and shoes. The principal ingredients in its manufacture are oil, vinegar, and various sorts of blacking matter. It is in very extensive demand. Some of the establishments for its manufacture, especially those in the metropolises, are on a very large scale; and it is in such only that it can be cheaply and advantageously produced. One of the principal, or rather we may say the principal outlay in establishing a blacking business, consists in advertising. Indeed any individual or set of individuals, provided they supply a reasonably good article, may by continuous advertising and puffing attain to the highest eminence in the "blacking line." Exclusive of that used at home, blacking is a considerable article of export.

**BLACK-LEAD, PLUMBAGO**, or **WAD**, (Du. *Pollot*; Fr. *Mine de plomb noir*, *Plomb de mine*, *Potelot*; Ger. *Pottloth*, *Reissbley*; It. *Miniera di piombo*, *Piombaggine*, *Corezolo*; Lat. *Plumbago*; Sp. *Piedra mineral de plomo*), a mineral of a dark steel grey colour, and a metallic lustre; it is soft, has a greasy feel, and leaves a dark coloured line when drawn along paper.

This mineral is found only in a state of purity in Berrowdale in Cumberland, the mines in which have been wrought since the days of Elizabeth. The lead is not found in veins but in detached pieces, or in what are called *sops* or *bellies*, so that the supply is very irregular, the miners being frequently employed for a lengthened period in seeking at random for the lead. Its quality also differs very widely. The best is that which is lightest, and the trace of which on paper is easily and completely removed by the application of India rubber. The mine used only to be opened at intervals, but for a considerable number of years past it has been constantly open. The supply, however, has been extremely scanty, and mostly also very inferior. The trade is supplied at sales held on the first Monday of each month, in *Essex Street, Strand, London*.

This lead is now almost wholly employed in making pencils: an inferior variety from Spain and Ceylon being used in the manufacture of crucibles, the polishing of cast iron utensils, the diminishing of friction, and other purposes to which genuine black lead was formerly applied.

**BLACK LEAD PENCILS** (Du. *Pollotpennen*; Fr. *Crayons noirs*; Ger. *Bleystifte*; It. *Lapis nero*; Port. *Lapis negro*; Rus. *Karanaschi*; Sp. *Lapiz negro*) are formed of black lead, encircled with cedar.

There is hardly, perhaps, any thing in which the temptation to substitute a spurious for a genuine article is greater, or in which, consequently the purchaser is more liable to be deceived, than black lead pencils. This is occasioned by the vast difference between the cost of genuine Cumberland lead, and of the other articles that are or may be substituted for it. Pencils are usually described as follows:—

First quality, or drawing pencils.

Second ditto, or prepared pencils.

Third ditto, or composition pencils.

I. Pencils of the first quality are, when genuine, made of pure Cumberland lead, which costs at present (1843) 30s. per lb. or 168s. per cwt. From 18 to 20 dozen such pencils are produced from a pound of this lead.

These pencils are usually made by sawing the lead into the pieces inserted in the cedar. Sometimes, however, the lead is in parts gritty and defective, so that a pencil of this kind may, in fact, be very inferior. To obviate this defect, some makers prepare the lead, to free it from the grit or earthy particles; and, provided no antimony or other alloy be mixed up with the prepared lead, the pencils produced from it are most to be depended on.

II. Pencils of the second quality are manufactured out of the sawings or dust of pure lead, with the dust of the small pieces picked up by poor people from the rubbish thrown out of the mine, mixed or alloyed with a greater or less quantity of antimony. The goodness of this pencil depends, of course, on the proportion in which the pure lead exceeds the antimony. But as the cost of the former may be taken at 100s. a cwt. and that of the latter at only 20s., there is an all but irresistible temptation to increase the proportion of the latter beyond due bounds. This sort of composition produces about 16 or 16 dozen pencils to the pound; their price varying according to the purity of the lead.

III. The third quality of pencil is made by using Mexican or Spanish lead dust, costing 45s. or 50s. a cwt., with antimony costing about 20s. per cwt. It produces about 14 or 15 dozen pencils to the lb., which may be sold at from 2s. 6d. to 12s. per gross, according to the cost of the articles employed and the care taken in mixing them. This sort of pencil may take a firm point, and make a fine stroke, but its trace will not obliterate on being rubbed with Indian rubber. The easy and complete obliteration of the strokes is, in fact, the best and perhaps only test of a pencil being of pure Cumberland lead. — (*Private information*.)

**BLUBBER** (Ger. *Thran*, *Fischtran*; Du. *Thraan*; It. *Olio di pesce*; Sp. *Grassa*, *Acetie de pescado*; Rus. *Sala worwanoe*, *Worwan*; Lat. *Oleum piscinum*), the fat of whales and other large sea-animals, of which train oil is made. The blubber is the *ateps* of the animal: it lies under the skin, and over the muscular flesh: it is about 6

s; Sp. Grassa,  
m), the fit of  
blubber is  
it is about 6

inches in thickness, but about the under lip it is 2 or 3 feet thick. The whole quantity yielded by one of these animals ordinarily amounts to 40 or 50, but sometimes to 80 or more cwt. Formerly train oil was manufactured from the blubber in the seas round Spitzbergen, and other places where whales were caught; but the practice is now to bring the blubber home in casks, and to prepare the oil afterwards.

It is enacted by the 6 Geo. 4. c. 107. §44. that before any blubber, train oil, spermaceti oil, head matter, or whale fins, shall be entered as being entirely the produce of sea animals caught by the crews of ships fitted out in the United Kingdom, or the islands of Jersey, Guernsey, Sark, and Man, the master of the ship importing such goods shall make oath, and the importer also shall make oath, to the best of his knowledge and belief, that the same are the produce of fish or creatures living in the sea, taken and caught wholly by the crew of such ship, or by the crew of some other ship (naming it) fitted out in the United Kingdom, or in one of the islands of Guernsey, Jersey, Alderney, Sark, or Man (naming which).

Before blubber, train oil, &c. can be entered as from a British possession, a certificate must be obtained from the custom-house officer at such British possession, or in default of such officer being there, from two principal inhabitants, notifying that oath had been made before him or them that such blubber, &c. was the produce of fish or creatures living in the sea, and had been taken by British subjects usually residing in some part of his Majesty's dominions; and the importer is to make oath, to the best of his knowledge and belief, to the same effect.

The gauging of casks of oil and blubber is dispensed with since 1825. They are to be passed at the rate of 126 gallons the pipe, and 63 gallons the hogshead.

BOATS are open vessels, commonly wrought by oars, and of an endless variety of shapes, according to the purposes to which they are to be applied.

It is ordered by stat. 6 Geo. 4. c. 108., that every boat belonging to or attached to any other vessel shall have painted on the outside of the stern of such boat the name of the vessel and place to which she belongs, and the master's name withinside of the transom, in white or yellow Roman letters, 2 inches long, on a black ground, under penalty of forfeiture. Boats not belonging to vessels are to be painted with the name of the owner and place to which they belong, under penalty of forfeiture. All boats having double sides or bottoms, or secret places for the purpose of concealing goods, or having any hole, pipe, or other device for the purpose of running goods, are to be forfeited.

Regulations of Watermen on the Thames.—From Chelsea Bridge towards Windsor, 3d. per half mile for scullers.  
Over the water directly between Windsor and Crawley's Wharf, (Greenwich (excepting the Sunday ferries), for one person, 3d.; two persons, 11d. each; exceeding two persons, 1d. each.  
To or from ships westward of Greenwich, for one person, 2d.; exceeding one person, 1d. each; and, where the distance to the ship does not exceed the distance across the river, the fare across the river shall be taken.  
To or from ships eastward of Greenwich, at the rate of 8d. per half mile.

To or from vessels for passengers, for one person, 4d.; exceeding one person, 3d. each, with not exceeding 56 lbs. of luggage for each. After this at the rate of 1s. per cwt.  
Watermen detained by passengers to be paid for time or distance, at the option of the waterman.

By Time for a Pair of Oars.—First hour - - - 2 0  
Second hour - - - - - 1 6  
Each succeeding hour - - - - - 1 0  
For the day - - - - - 18 0  
To last from 7 A. M. to 5 P. M. between Michaelmas and Lady Day; and from 8 A. M. to 6 P. M. from Lady Day to Michaelmas.

SCULLER'S FARES.

The Bridges, &c. stand in the following order.

London Bridge,	Nine Elms,	Shadwell Dock Stairs.
Southwark Bridge,	Red House, Battersea.	Kilney ditto.
Blackfriars Bridge,	Raven Stairs, Chelsea.	Limehouse Hole ditto.
Waterloo Bridge,	Chelsea Bridge.	Ditto, Torrington Arms.
Westminster Bridge,	Iron Gate, George Stairs.	Ditto, Low-Water Gate.
Lambeth Stairs,	King Stairs.	Ditto, Low-Water Gate.
Vauxhall Bridge,	King Edward ditto.	Greenwich, Crawley's Wharf.

The fare from either of the above places to the next is 3d., and so on in proportion.

Passage Boats.—Oars' Fare 8 Passengers. Sculler's Fare 6 Passengers.

For a full boat load of luggage, same as for 8 passengers.  
For half a load, same as for 4 passengers.

Penalties.—Taking more than fare, not exceeding 2s.  
Waterman to have a list of fares in his boat, and on not permitting the passenger to examine it, the passenger is discharged from paying his fare, and the waterman may be fined not exceeding 5s.

Refusing to take a passenger, or not answering when called by the number of his boat, not exceeding 5s.  
Unnecessarily delaying a passenger, not exceeding 5s.

Refusing to permit any person to read the name and number of his boat, or to tell his Christian or surname, at the number of his boat, on being paid his fare, or making use of any abusive language, not exceeding 5s.

Rules and By-laws made by the Court of Aldermen, 15th of April, 1828.—Letting his boat remain at any stairs, whilst wilfully absent, or not being ready to take a passenger into his boat, not exceeding 1s.

Refusing to give his name or number, or that of any other waterman, not exceeding 1s.

Obstructing any other waterman in taking in or landing a passenger, or obstructing a passenger, not exceeding 1s.  
Towing or being towed by any other boat without the consent of all the passengers, not exceeding 5s.

Agreeing to take any less sum than the rate allowed, and afterwards demanding more than the sum agreed for, not exceeding 2s.

Only two boats to be placed aboard any stem-boat at the same time in turn. Watermen, previous to taking turn as aforesaid, to lie with his boat upon his oars at least one boat's length distant from any other boat lying alongside, and shall not approach nearer, until after the former boat shall have proceeded two boat's length, not exceeding 5s.

The offices of Harbour-masters are in Little Thames Street, St. Catharine's, and Canal Office, Blackwall.

BOLE, a friable earthy substance, a species of the soapstone family. Specific gravity 1.4 to 2. It is found in the island of Lemnos, whence it is sometimes called Lemnian earth; and in Armenia, Italy, France, Silesia, various parts of South America, &c. Armenian and French boles were at one time not uncommon in this country, being used in the materia medica; but they are now entirely, or almost entirely, discarded. In India, however, Armenian bole still continues to be in extensive demand. It is brought to Bombay from the Persian Gulph. It is soft, feels greasy to the touch, adheres strongly to the tongue, and is very frangible: it is generally of a yellowish brown colour; though sometimes it is seen of a fine flesh red, which is the variety held in the highest estimation.

in the China trade, and partly in the trade to England and other places. They are for the most part navigated by Indian seamen or Lascars, those of Bombay being accounted by far the best in India, the master and superior officers only, and not always, being Englishmen. Besides these large vessels, there is a numerous class of native craft, under various forms and names, amounting in all to about 50,000 tons, of from 2 to 175 tons each. These vessels, besides furnishing the town with firewood, hay, straw, &c. from the neighbouring continent, navigate coastways from Cape Comorin to the Gulf of Cutch, and sometimes cross the sea to Muscat and the Arabian Gulf. During the eight fair months, that is, from October to May, the largest sized vessels perform five or six trips to Daman, Surat, Cambay, Broach, Jambosir, and Cutch, bringing from these ports, where they sometimes winter, and where many of their owners reside, cotton, ghee, oil, pulse, wheat, cotton cloths, timber, firewood, putchok, mawah, &c.; and return to the northern ports laden with the produce of Europe, Bengal, and China. The capital employed in this trade, in the minor articles of commerce, exclusive of cotton, has been estimated at 1,500,000l. sterling.

**Commerce, &c.**—The small and sterile island of Bombay affords no produce for exportation; indeed, hardly yields a week's consumption of corn for its inhabitants. Nor does the whole presidency of Bombay, although comprising about 70,000 square miles, and from 10,000,000 to 11,000,000 inhabitants, yield, with the exception of cotton and rice, any of the great colonial staples, such as coffee, sugar, and indigo; a circumstance that seems mainly ascribable to the impolitic restraints upon the employment of British settlers and capital that were long imposed by law, and acted upon with peculiar rigour in this and the sister presidency of Madras, in contradistinction to the greater latitude afforded in Bengal. Bombay is also much less favourably situated, in respect of internal communications, than Calcutta. The Ganges and its tributary streams intersect the rich provinces of India, and give Calcutta a vast command of inland navigation; whereas all the inland trade of Bombay has to be carried on by means of roads, that are seldom available for carriages, and which can be used only by pack-bullocks and camels. The transit duties, by which the inland trade was grievously oppressed, have been recently abolished; and if this judicious measure be followed up by the formation of lines of road to the principal markets in the interior, a great increase of the trade and the improvement of the presidency may be expected.

The principal trade of Bombay is carried on with China, Great Britain, the countries on the Persian and Arabian gulphs, Calcutta, Cutch and Sindh, the Malabar coast, foreign Europe, &c. The imports from China consist principally of raw silk, sugar, and sugar-candy, silk piece goods, treasure, &c. The principal articles of export to China are, raw cotton (33,711,049 lbs., in 1840-41), opium (12,022 chests, in 1840-41), principally from Malwa, sharks' fins and fish maw, sandal-wood, pearls, &c. The exports to China being greater than the imports, the returns for several years past have been made to a large extent in bills on London, and in the Indian governments, drawn by the merchants in China.

The trade with the United Kingdom has been regularly increasing since the abolition of the restrictive system. The chief articles of import from Great Britain are, cotton and woollen stuffs, cotton yarn, hardware, copper, iron and lead, glass, apparel, fur, stationery, wine, &c. The principal articles of export to Britain are, raw cotton (31,581,888 lbs. in 1840-41), raw silk, from China and Persia, ivory, pepper and spices, piece goods, coffee from the Red Sea, and wool. The export of the last mentioned article has increased with extraordinary rapidity, the quantity shipped for England in 1833-34 being only 69,944 lbs.; whereas the shipments for England in 1840-41 amounted to 3,428,056 lbs. At present the principal supply of the article is drawn from Cutch and Sindh, and from Marwar, viz. Guzerat, but active measures have been taken by government for improving the flocks in the pastoral country of the Deccan, so that a further and very considerable increase of this new and important trade may be anticipated.

The trade between Bombay and the ports on the Persian Gulph has materially varied of late years. A large portion of the articles of British produce and manufacture that were formerly exported to Persia, by way of Bombay and Bushire, being now sent through Trebisond and ports in the Levant; and a considerable portion of the raw silk that used to be exported from Persia, via Bombay, being now also sent through the ports referred to. On the other hand, however, there is a considerable increase in the exports and imports of other articles; so that, on the whole, the amount of the trade has not materially varied.

The trade between Bombay and Calcutta is not so great now as it was formerly; the abolition of the restrictive system in 1815 having given Bombay the means of bringing various articles direct from foreign ports which she was previously obliged to import at second-hand from Calcutta, and of exporting directly.

**Banks.**—Two banks have recently been established in Bombay. The bank of Bombay, incorporated in 1840, has a capital of 5,225,000 rupees (522,500l.), divided into shares of 1,000 rupees each. It issues notes, and transacts all sorts of banking business, charging no commission for its trouble, and allowing no interest on deposits. The bank of Western Asia, established in 1842-43, has not hitherto been incorporated. It also issues notes and transacts ordinary banking business, charging a commission of 1 per cent. on all payments, and allowing interest on deposits. In neither bank is it allowed to overdraw accounts. A branch of the Agra bank is, also, established in Bombay. We subjoin from a Bombay paper of April, 1843, the following particulars respecting these banks:—

**Bank of Bombay.**—Discount.—On Government bills, above 30 days, 6 per cent.  
On Government bills, within 30 days, 5 per cent.  
On private bills, at or within three months, 3 per cent.

**Interest charged.**—On loans and cash credit accounts on deposit of Government notes, 6 1/2 per cent.  
On loans and cash credit accounts on deposit of bullion, 7 per cent.  
On loans and cash credit accounts on deposit of metals and other goods, 8 per cent.

**Bank Shares.**—30 to 200 rupees per cent. premium.  
The Bombay Bank of Government securities, bank and other stock certificates, and real estate interest and dividends on such as are payable in Bombay, for constituents.

Parties discounting bills may take them up at any period prior to their maturity, and the bank will refund the discount for the unexpired portion of the time such bills may have to run.

Post-bills granted payable at three days' sight, free of charge, and bills payable at Calcutta and Agra, granted at the rate of exchange of the day.

**Bank of Western India.**—Interest allowed.—Class 1. On current deposits subject to a commission of 3 per cent., 4 per cent.  
Class 2. On current deposits, without commission, 5 per cent.  
Class 3. On deposits repayable on a notice of 30 days, 4 per cent.

**Interest and Discount charged.**—On loans and credits on Company's paper, Bank of Bombay shares, and bullion, 7 per cent. On loans and credits on other security, 8 per cent.

**Discount.**—On Government bills, 7 per cent. On private bills, 3 per cent.  
**Exchange.**—For credits payable on application, and drafts on London at one day's sight without grace, 1s. 11 1/2d. per rupee. For drafts at six months' sight, 1s. 10d. per rupee.  
Bank shares, 6 1/2 per cent. premium.

**Memorandum.**—Sales of European goods, when made at an advance on invoice cost, the amount to be converted into Bombay currency at the exchange of two shillings per rupee.

**Dock Regulations.**—At daylight the wickets of the gates are opened, and at 7 o'clock the entry gate. Half an hour after sunset the gates are shut, the wickets of the centre gate being left open till the evening gun be fired. No boats, saving those belonging to the Company's marine department, or her Majesty's navy, are permitted to come to the dock-yard stairs; but must use the piers expressly constructed for their accommodations. No great stores, or baggage for the merchant shipping, of any description, are to be passed through the dock-yards. After the firing of the evening gun, nobody belonging to the ships in the harbour, below the rank of a commissioned officer, is to be allowed to land or enter the dock-yard, without the express permission of the master attendant, or other constituted authorities.

Boats' crews are not to be permitted to quit their boat as the stairs, after the hours of shutting the gates. Small craft are not to dislodge firewood or any other lading, within the limits of the pier, without the superintendent's sanction. The ships and vessels in dock are not to land any lumber whatever on the pier. No cargo of any description is to be landed in or passed through the yard, from or to any ship in dock, without the superintendent's permission in writing. No fire or light is allowed on board any ship or vessel in dock, without the authority of the superintendent, to whom the purposes for which either may be required, must be stated in writing.

(See *Milburn's Oriental Commerce; Bombay Calendar and Register for 1843; Kelly's Combi; Report on the Commerce of Bombay, &c. in 1841-2.*)

**BOMBAZINE**, a kind of silk stuff, originally manufactured at Milan, and thence sent into France and other countries. Now, however, it is nowhere manufactured better, or in larger quantities, than in this kingdom.

**BONES** of cattle and other animals are extensively used in the arts, in forming handlea for knives, and various other purposes; but of late years they have been of most importance in agriculture. When employed in the latter they are, in most instances, ground, or reduced to powder, and are commonly used as manure for turnips, being in general drilled in with the seed, though sometimes, also, they are sown broadcast, and with other crops. The quantity used varies from about 25 bushels of *dust* to about 40 bushels *large* an acre. Their effect is said to be considerably increased when they have undergone the process of fermentation. They were first used, in this country, on a large scale, as a manure in Lincolnshire; and there can be no doubt that their extensive employment in that county has been one of the chief causes of its rapid improvement, and of the high state of cultivation to which it has attained. Bone-dust is now, however, very largely used, not only in Lincolnshire, York, and the adjacent counties, but in most other parts of England, and almost every where in Scotland; and its influence in increasing the crops of corn and turnips, and consequently, also, the supplies of butcher's meat and farm manure, has been quite extraordinary. In fact, it is to the employment of this manure, combined with the extension of furrow drainage, and the introduction of steam navigation, that the wonderful improvements that have been made in agriculture since 1820, and the vast increase of agricultural produce, are principally to be ascribed.

In 1827, Mr. Huskisson estimated the real value of the bones annually imported for manure at about 100,000*l.*; but at present (1843) it probably amounts to more than treble that sum. This is evident from the fact that the *ad valorem* duty of 1 per cent. on bones produced, in 1841, 2,933*l.* 5*s.* 3*d.* net, showing that the value of the imports must then have exceeded 293,000*l.*, of which it is abundantly certain that but a comparatively small portion was employed otherwise than in agriculture. They are principally brought from the Netherlands, Germany, and South America. It is a curious fact, that while the duty on bones imported into Scotland, in 1841, amounted to 749*l.* 4*s.* 4*d.*, the duty on those imported into Ireland amounted to only 2*l.* 10*s.* 1*d.*—(See *Statistical Account of British Empire*, 2d edit. i. 185. and 568., and *Annual Finance Book for 1841.*) The duty on bones was reduced in 1842 to 6*d.* a ton.

**BOOK-KEEPING**, the art of keeping the accounts and books of a merchant. Book-keeping by double entry means that mode or system in which every entry is double, that is, has both a debtor and a creditor. It is called also the Italian method, because it was first practised in Venice, Genoa, and other towns in Italy, where trade was conducted on an extensive scale at a much earlier date than in England, France, or other parts of Europe. This method, however familiar to merchants and book-keepers, seems intricate to almost all who have not practised it; nor is the dryness and difficulty of the task much lessened by the printed works on the subject, which, having been compiled more by teachers than by practical merchants, contain a number of obsolete rules and unnecessary details. The most effectual mode of giving clearness and interest to our remarks will be, first, to state a few mercantile transactions, and then to explain the nature of the accounts and entries which result from them.

BOOK-KEEPING.

At 6 months' credit; due 6th of September. Errors excepted. HENRY BARCLAY & Co. London, 6th of March, 1843.

This invoice, being sent out by the vessel to Messrs. Allan & Co., conveys to them a number of particulars in a short space; viz. the mark, the numbers, the value, and the contents of each package. In former times it was the practice to make an invoice very long, inserting in it a literal copy of each bill of parcels, but it has now become usual to make each tradesman deliver a duplicate of his account, to be sent abroad with the goods; in which case the invoice may be, like the above, little more than a summary of the bills of parcels. This method has two advantages: it saves time at the counting-house of the exporter; and it affords to his correspondent an assurance that no more is charged to him than has been actually paid for the articles.

An invoice ought to be made out with the utmost care, for it is a document of great importance in several respects: first, between the exporting merchant and his correspondent abroad; and next, when in the hands of the latter, it may and generally does form a voucher for calculating the import duty, as well as for the sales effected to retailers or other dealers.

The sum insured by the exporting merchant generally exceeds the amount of the invoice by 2 per cent., because the recovery of a loss from insurers involves a charge of fully that amount. It is thus necessary to cover not only the price of the goods, and the charges of shipping, insurance, and freight, but such further sum as may enable the shipper, in case of loss, to carry to the credit of his correspondent the amount of the invoice, clear of any deduction.

		£676 5 7

We have thus given an example of the transactions which form a great part of the business of our merchants; the export of manufactured goods, and the import and sale of produce received in return. Our next illustration shall be of a merchant's Cash-book. The following is an example of the entries for a month:—

Dr.		CASH.	£ s. d.	PAID.		Cr.	£ s. d.
1842.	Mar. 1	To balance at the bankers	2,550 0 0	1842.	Mar. 2.	By bills payable, paid No. 361. to James Harding	145 10 0
	3	To ship <i>Andie</i> , received of James Jacobs, for freight	175 3 0	4	By George and William Fos, paid their balance of account	350 15 0	
	6	To bills receivable, received payment of No. 251, on J. Henderson	200 0 0	6	By John Smith and Sons, paid J. Jackson for their account	98 0 0	
	9	To James Bailey & Co., received payment of their draft at sight on J. Bainbridge	159 10 0	7	By bills payable, paid No. 362, to J. Stewart	300 0 0	
	15	To William Spence & Co., received balance of their account	970 0 10	18	By interest paid, discount on Harrison & Co., 2 months	6 1 10	
		To debenture account, received drawback on tobacco shipped by the <i>Plaver</i>	15 8 0		By J. Johnson, paid his bill of parcels	278 15 11	
	18	To bills receivable, discounted at the bankers, Harrison & Co., due 12-18 March	730 10 0		By John Wilson do.	42 0 0	
		To profit and loss, received 5 per cent. discount on paying with ready money the accounts per contra, not due till 6 months hence, from			By Simon Fraser do.	335 5 0	
		James Johnson	£13 19 0		By John Mackenzie do.	267 10 0	
		John Wilson	2 2 0		By James Borradaile & Co. do.	32 2 0	
		Simon Fraser	11 16 0		By charges paid, postage, and petty disbursements this month, per petty cash book	525 5 4	
		John Mackenzie	18 7 6		By balance, carried to next month	15 2 6	
		James Borradaile & Co.	0 16 0			2,686 13 0	
		Molling & Co.	16 8 3				
			63 8 9				
			£4,957 0 7				

These transactions, when put into the Journal form, stand thus:—

Folio of Ledger.	MARCH, 1842.	£ s. d.
CASH Dr. to GUNDRIES. Received this month.		
6	To SHIP AMBRIA. 2d. Freight from James Jacobs	175 3 0
6	To BILLS RECEIVABLE. 6th. Received payment of J. Anderson, due this day	200 0 0
	18th. Discounted Harrison & Co., due 5th of May	730 10 0
		930 10 0
7	To JAMES BAILEY & Co. 9th. Received their draft on Bainbridge, due	159 10 0
7	To WILLIAM SPENCE & Co. 15th. Received balance of their account	970 0 10
6	To DEBENTURE ACCOUNT. 15th. Drawback on tobacco by the <i>Plaver</i>	15 8 0
3	To PROFIT AND LOSS. 18th. Received discount on sundry accounts, per cash book	63 8 9
		£2,507 0 7

Folio of Ledger.	SUNDRIES Deb. to CASH.					# s. d.

5	CHARGES.					
	31st. Paid postage, and petty disbursements this month	.	.	.	.	15 2 6
						£2170 7 7

The above shows, that for all sums received, the account of cash is made debtor, and the parties paying the same are made creditors; while for all sums paid, the cash is credited, and the parties receiving them are made debtors.

We are next to state the mode of entering bill transactions.

**BILLS RECEIVABLE.** — We have seen by the Balance sheet that several correspondents are indebted to the house. The debts of correspondents abroad may be reduced by remitting either bills, specie, or merchandise for sale: from correspondents in England, bills are almost the only mode of remitting. When bills come to hand, the rule is to enter each in the bill book, with a minute statement of the date, term, sum, and other particulars, thus: —

No.	Received From whom.	Drawn by	Date.	Term.	Drawn on	To order of	Due.	Sum	How disp. of.
6309	Mar. Bailey & Co.	W. Adams	Belfast, 1 Mar.	3 mths.	T. Jones, Dublin	A. Williams	1-4 May	350	Rainier & Co.
6310	do. Watson & Co.	J. Jacobs	Dork., 3 do.	1 do.	J. Adams, London	G. Wilson	3-8 April	155	Smith & Co.
632	12 do. Spence & Co.	T. Johnson	Falmou., 3 do.	3 do.	T. Allan, Liverpool	G. Jones	3-8 May	360	Greenfield & Co.

The Journal Entries for these bills are as follows: —

Folio of Ledger.	BILLS RECEIVABLE Deb. to SUNDRIES.					# s. d.
	For the following remitted this month:					
7	To JAMES BAILEY & Co.					350 0 0
	No. 530. on T. Jones, Dublin, due 4th of May	.	.	.	.	
7	To T. WATSON & Co.					155 0 0
	No. 631. on J. Adams, London, due 8th of April	.	.	.	.	
7	To WILLIAM SPENCE & Co.					360 0 0
	No. 632. on T. Allan, Liverpool, due 8th of May	.	.	.	.	
						£745 0 0

**BILLS PAYABLE.** — The entries under this head are, of course, wholly different from the preceding, being for acceptances of the house given on account of sums owing by it to correspondents. Each acceptance is entered in the book of bills payable, thus: —

No.	Drawn by	Place and Date.	To Order of	On Account of	Term.	When accepted.	Sum.
151	J. Allan & Co.	Jamaica, 15 Jan.	J. Jones	J. Allan & Co.	60 days' sight	12 March	£175 10 0
152	G. & W. Fox	Falmouth, 7 Mar.	J. Thomson	G. & W. Fox	15 days' date	14 do.	73 15 0
153	J. Clark	Hull, 5 Mar.	G. Barclay	J. Smith & Sons	1 month's date	15 do.	152 10 0

The Journal entries for these bills are as follows: —

Folio of Ledger.	SUNDRIES Deb. to BILLS PAYABLE.					# s. d.
	For the following bills accepted.					
2	JAMES ALLAN & Co.	No. 151. their draft, due 15th of June	.	.	.	175 10 0
2	G. & W. FOX.	No. 152. their draft, due 25th of March	.	.	.	73 15 0
1	SIMON FRANKS.	J. Clark's draft on his account, due 8th of March	.	.	.	152 10 0
						£381 15 0
	MAY, 1842.					
	CASH Deb. to THOMAS KEMBLE & CO.					
1	27th.	Received from them proceeds of sugar per <i>Ceres</i>	.	.	.	254 0 0
		Less their brokerage	.	.	.	2 6 9
			.	.	.	251 13 5
4	30th.	Received coffee per <i>Vittoria</i>	.	.	.	675 5 6
		Less brokerage	.	.	.	6 10 7
			.	.	.	669 5 11
						£201 9 2

The preceding entries, few as they are compared to the monthly transactions of a house of business, are sufficient to show the nature of a Journal as well as of the sub-

subsidiary books, (for cash, bills, invoices, and account sales,) from which it is composed. The Journal, being a complete record of the business of the house, is very varied and comprehensive in its nature, and may be termed an index to every book of consequence in the counting-house. But while in the cash book every payment or receipt is entered on the day it takes place, and in the bill books every bill is registered on the day it comes to hand, or is accepted, the Journal entries, being completed only at the end of the month, admit of being combined to a considerable extent, so as to exhibit a number of transactions in collective sums. Thus all the acceptances of the house paid in the course of the month appear in the Journal entry of Bills Payable Dr. to Cash: they are arranged in this entry as they fall due, after which the whole are added into one sum, which sum alone needs be carried to the Ledger. In like manner, all bills receivable, whether discounted, or kept by the house till they fall due, are collected under the head of Bills Receivable Dr. to Cash, summed up together, and carried to the Ledger in one line; a point of great importance, as we shall see presently, in facilitating the balance of the Ledger.

We proceed to give a specimen of the Ledger: the whole of the Journal entries in the preceding pages, when posted into the Ledger, will stand thus:—

Dr.		STOCK.		Cr.

The Ledger is thus a register of all the entries in the Journal; and a register so arranged as to exhibit on one side all the sums at Debtor; on the other all those at Creditor. It is kept in the most concise form, the insertions in it hardly ever exceeding a line each, or containing more than the title of the entry in the Journal. On opening a page in the Ledger, a person unacquainted with book-keeping is apt to consider this brevity unsatisfactory; and it was formerly the practice to add in each line a few explanatory words. Thus the entries in the account of Simon Frazer, which in our preceding page are briefly

of waste book would have been forgotten, were it not found in the printed treatises on book-keeping which have appeared from time to time, and have been generally composed by teachers in schools or academies, who, unacquainted with the actual practice of merchants, were content to copy and reprint what they found laid down in old systems of book-keeping.

The subsidiary books required in a counting-house are, the Cash book ;  
 Book of Acceptances of the house, or Bills Payable ;  
 Book of Bills receivable, or bills on other merchants which are or have been in possession of the house ;  
 Bought book, or book for bills of parcels ;  
 Invoice book, or register of goods sold or exported ;  
 Account of Sales book ;  
 Insurance Policy book ; containing copies of all policies of insurance ;  
 Petty Journal, or book for such occasional entries as do not belong to any of the preceding.

Such are the authorities from which it is now customary, in every well-regulated house, to compose the Journal. Their number indicates a repartition or subdivision, to a considerable extent, of counting-house work, and nowhere is such repartition productive of greater advantage. How much better is it to enter all bills receivable in one book, all bills payable in another, and all cash transactions in a third, than in any way to blend these very distinct entries. The effect of this subdivision is to simplify the Journal entries in a manner highly conducive to accuracy and despatch ; and to present such means of checking or examining them, that many transactions may be stated, and an account extended over a number of folios, without a single error.

The use of most of the subsidiary books is sufficiently pointed out by their names ; but it may be well to add a few remarks on the " Bought Book," or receptacle for the accounts of goods purchased. A bill of parcels is the name given to the account of goods supplied by a manufacturer, tradesman, or dealer, to a merchant. Such accounts soon become numerous, and it is evidently of consequence to adopt the best method of keeping them. In former times it was the practice to fold them up in a uniform size, and after writing on the back the names of the respective furnishers, to put them away in bundles. But wherever the purchases of a merchant are extensive, and the bills of parcels numerous, the better mode, after arranging them alphabetically, is to paste them in a large book, generally a folio, made of blue or sugar-loaf paper : this book to have its pages numbered, and to have an alphabetical index. Any single bill of parcels may thus be referred to with the same ease as we turn to an account in a ledger ; and one of these folios may be made to hold a very great quantity of bills of parcels ; as many as would form a number of large bundles when tied up on the plan of former times.

*Book of Bills Payable.* — The notice, or, as it is termed, advice of bills payable after sight, generally comes to hand before the bills themselves. As the time of the arrival of the latter is uncertain, the better plan is not to enter them from the advice among the other bills payable, but to appropriate a space of 10 or 12 pages at the beginning or end of the book of bills payable, and to insert there the substance of the advice received.

There are a few books in every counting-house which do not form part of the vouchers or materials for the Journal ; viz. the Account Current book, containing duplicates of the accounts furnished by the house to their different correspondents and connections ;

The Letter-book, containing copies of all letters written to the correspondents or connections of the house ;

The Petty Cash book, or account of petty disbursements, the sum of which is entered once a month in the cash book ;

The Order book, containing copies of all orders received ;

The Debenture book, or register of drawbacks payable by the Custom-house.

It was formerly a practice in some houses for the book-keeper to go over the letter book at the end of each month, that he might take note of any entries not supplied by the subsidiary books. This, however, is now unnecessary ; these books, when carefully kept, containing, in one shape or other, every transaction of the house.

*The Principle of Double Entry.* — From these explanations of the practice of book-keeping, we must call the attention of our readers to a topic of more intricacy — the origin of the present system, and the manner in which it was adopted. To record the transactions of a merchant in a Journal or day book was an obvious arrangement, and to keep a Ledger or systematic register of the contents of the Journal was a natural result of his business, particularly when conducted on credit. Such, in a rude form, are the books of our shopkeepers, who enter their sales and purchases in a day book, and in their Ledger carry the former to the Dr. of their customers, the latter to the Cr. of the wholesale dealers who supply them with goods. By making at the end of the year a list of the sums due to him by his customers, and of those due by him to wholesale

dealers, a shopkeeper may, after adding to the former the value of his stock on hand, make out an approximate statement of his debts and assets. Now, that which in this manner is done indirectly and imperfectly, it is the object of double entry to do with method and certainty. The shopkeeper makes out a list of debtors on one side and of creditors on the other, but he cannot make them balance, because his entries have been single; that is, they have had no counterpart. On making a purchase of cottons from Messrs. M'Connell of Manchester, or of woollens from Messrs. Gott of Leeds, he merely enters the amount to their credit, but he makes no one Dr. to them, because the goods are not sold; and to introduce an imaginary account would be too great a refinement for a plain practical man. But a person accustomed to double entry would, without any effort of thought, make "Printed Calicoes" Dr. to Messrs. M'Connell, and "Kerseymeres" Dr. to Messrs. Gott, for the respective amounts; after which, as the sales proceeded, he would make the buyers Drs. to these accounts for the amount of their purchases.

We thus perceive that the intricacy in the application of double entry was not with the personal so much as with the nominal accounts. Let us refer to the country where book-keeping was first studied, and take as an example the case of Doria, a merchant in Genoa, shipping, in a former age, silk, of the value of 200*l.*, bought from Flori, in Piedmont, to Henderson and Co., silk manufacturers, in England, on the terms of charging, not an additional price, but a commission of 5 per cent. with interest until reimbursed his advance. In entering the transaction, Doria's book-keeper would, as a matter of course, make Hendersons debtors to Flori 200*l.* for the cost of the silk; but he might not so readily find a creditor for the 10*l.* commission, or the 7*l.* interest eventually due on the advance. The custom in this primitive æra of book-keeping probably was, to introduce the firm of the house into their books, making Hendersons debtors to Doria for the 10*l.* and 7*l.*; but as the practice of book-keeping improved, it was found preferable to avoid inserting, on any occasion, the firm of the house, and to substitute nominal accounts, such as, commission, interest, bills payable, bills receivable. These, attention and practice rendered in time familiar to the book-keeper, who learned to open his Journal at the beginning of a year by making the parties who owed balances to the house debtors, not to the firm by name, but to Stock; and those to whom the house was indebted, creditors by Stock. As the transactions of the year proceeded, he made those to whom money was paid debtors, not to the firm of the house, but to Cash; and those for whose account bills were accepted debtors to Bills payable; so that book-keeping by double entry assumed its present form gradually and almost imperceptibly.

What are the advantages of this method compared to that of single entry? First, it supplies a test of accuracy, inasmuch as, the entries on the debtor side of the Ledger being equal to those on the creditor side, their respective totals ought, as a matter of course, to balance. After going through this proof, personal accounts, of whatever length, may be settled with confidence; while in a general account, such as kerseymeres or printed calicoes, the value sold and the value remaining on hand may be ascertained by merely balancing the account in the Ledger, without the repeated references to the sales book that would otherwise be required. Without double entry, a dealer could hardly estimate his property unless he took stock; but with it an extraction of the Ledger balances fulfils that object, and stock-taking, however proper as a test of the honesty of servants, becomes quite unnecessary as a means of calculation. In short, in regard to any person in trade, whether merchant, dealer, or manufacturer, double entry forms the connecting link of his accounts, and affords a ready solution of any inquiry as to the appropriation, increase, or diminution of his capital.

This advantage may fortunately be obtained without any great sacrifice of time or labour. Of the books of dealers, manufacturers, and retailers, nine parts in ten may continue to be kept by single entry; for the addition of a few pages of double entry in the form of a summary, at the end of the month or quarter, will be sufficient to exhibit the result of a great extent of transactions.

*Nominal Accounts.* — Of these our limits permit us to notice only two; Profit and Loss, and Merchandise. The former contains on the creditor side all the entries of commissions earned, and gains obtained on particular adventures; while the debtor side exhibits the losses incurred, whether by bad debts or by unsuccessful purchases. Every house keeping regular books must have a profit and loss account, but a merchandise account is altogether optional. Those who have such a head in their Ledger are accustomed to make it Dr. to the dealers or furnishers from whom they make purchases, and to credit it in return by the correspondents or connections to whom they make sales. In many houses, however, there is no such intermediate account; the parties to whom the goods are sent being made Drs. at once to the furnishers of the goods, as in the case of the shipment to Jamaica stated in our preceding pages.

A merchant, before estimating his profits, ought to charge interest on each head of

investment. His clear profit cannot be ascertained without it; and the practice of charging it is a lesson to him to hold no property that does not afford, at least, interest on his advances.

Mercantile books and accounts must be kept in the money of the country in which the partners reside. A house in Rotterdam composed of English partners necessarily keep their accounts in Dutch money, although their transactions may be chiefly with England. Further, books, it is obvious, can be kept in only one kind of money; and when a merchant in England receives from a distant country, accounts which cannot at the time be entered in sterling for want of a fixed exchange, these accounts should be noted in a separate book, until, the exchange being ascertained, they can be entered in the Journal in sterling.

A book-keeper will do well to avoid all such puzzling distinctions as "J. Johnson, my account with him;" and "J. Johnson, his account proper;" on the plain ground that every account in the Ledger ought to be the general account of the person whose name it bears.

*Errors excepted.*— This expression is merely a proviso, that if any mistakes be discovered in the account in question, they shall be open to correction.

*Accounts Current.*— An account current generally contains all the transactions of the house with one of its correspondents during a given time, generally 6 or 12 months. The following is an example:—

Messrs. JAMES ALLAN & Co., Jamaica, in Account Current with HENRY BARCLAY & Co. London.														
Dr.				Days to 31 Dec.		Interest.		Cr.						
£ s. d.								£ s. d.						
1842, June 30	To balance of last account	867	10	0	184	1,595	1842, Aug. 10	By proceeds of 20 tierces coffee, per Louis, due Sept. 10.	410	0	0	112	459	
July 2	To your draft to J. Smith, due Aug. 15.	128	0	0	140	179		By your remittance on J. Austin, due Oct. 10.	350	0	0	82	287

Dec. 31	Postage and petty charges during the half year				1	15								
	To commission, 4 per cent. on £205 paid, Do. on £260 received on your account				4	6								
	To balance of interest this half year, 1,274 divided by 73, 16				17	9								
		£	1,879	8	7		2,460			£	1,879	8	7	2,460
London, 31st of December, 1842.						Errors excepted.		HENRY BARCLAY & Co.						

We have here on the Dr. side all the payments made or responsibilities incurred for the correspondents in question, and on the Cr. side the different receipts on their account. The interest for the half year, the commission on receipts and payments, the postage and petty charges, being then added, the account may be closed and the balance carried to next year. Copies of accounts current ought to be sent off as soon as possible after the day to which they are brought down; and with that view they ought to be written out from the Ledger before the close of the year or half year, particularly as the entries for interest and commission can be made only after they are written out. The whole ought then to be copied into the account current book.

But in some counting-houses the account current book, instead of being copied from the Ledger and Journal, is posted, like the latter, from the bill book, the cash book, the invoice book, and the account of sales book. It is then considered a check on the Journal and Ledger; and from the comparative ease with which it is posted, may be completed and made use of before the latter are fully brought up. This is certainly an advantage in houses where, from pressure on the book-keeper, the Journal and Ledger are in arrear, but such ought never to be the case for any length of time; while as to the former point—that of forming a check on the Journal and Ledger—the fact is, that these books, from the mode in which they are kept, are much more likely to be correct than the account current book.

*Printed Works on Book-keeping.*— To the publications of old date by teachers have succeeded, in the present age, several treatises on book-keeping by accountants. Some of these are of very limited use, being directed more to recommend a favourite practice of the author in some particular branch of book-keeping, than to convey a comprehensive view of the system. The only works on the subject entitled to that character are two: one by the late Benjamin Booth, published above thirty years ago; the other by Mr. Jones, an accountant in London, printed in 1831. Booth was a man of ability,

who had experience both as a merchant and a book-keeper, having passed one part of his life in London, the other in New York. The reader of his work finds a great deal of information in short compass, without being perplexed either by superfluous detail or by fanciful theory.\*

The form of Mr. Booth's Journal and Ledger is similar to what we have given in the preceding pages, and to the practice of our merchants for more than a century: it was by much the best work on book-keeping, until Mr. Jones devised several improvements calculated to lessen the risk of error in both Journal and Ledger. One of these improvements is the use of two columns for figures in each page of the Journal, one for the Drs., the other for the Crs.: by inserting each sum twice, the book-keeper obtains the means of proving the Journal additions page by page. The posting from the Journal to the Ledger is also simplified and rendered less subject to error by the use of these columns. In regard to the great task of balancing the Ledger, Mr. Jones's plan is to do it quarter by quarter, making use of a separate book, called a balance book, in which are inserted the totals on each side of the Ledger accounts at the end of 3 months. By these means, the agreement of the general balance is made a matter of certainty after completing the additions. Other parts of Mr. Jones's book, viz. his *formula* for books on the single entry plan, and for the accounts of bankers, contain suggestions of evident utility. His volume consists of two parts: the printed part (120 pp.) containing the treatise, with directions; and the lithographed part (140 pp.) giving copious examples in two sets of books, one kept by single, the other by double entry. If, on a reimpression, the author were to divide the work, and to sell the single entry part separately from the double entry, the price of each might be moderate, and a great service would be rendered to the mercantile public.

BOOKS (Ger. *Bücher*; Du. *Boeken*; Da. *Bøger*; Sw. *Bücker*; Fr. *Livres*; It. *Libri*; Sp. *Libros*; Port. *Livros*; Rus. *Knigi*; Pol. *Książki, Księgi*; Lat. *Libri*), written or printed treatises on any branch of science, art, or literature, composed in the view of instructing, amusing, or persuading the reader.

Copyright is the right which the authors of books or treatises claim to the exclusive privilege of printing, publishing, and selling them.

Books are sometimes blank, as account books; but these enjoy no peculiar privileges, and do not come within the scope of our inquiries.

Books are divided into *classes*, according to the mode in which the sheets of the paper on which they are printed or written are folded: viz. *folio*, when the sheet is folded into two leaves; *quarto*, when folded into four; *octavo*, when folded into eight; *duodecimo*, when the sheet is folded into twelve, &c. In making these classifications, no attention is paid to the size of the sheet.

I. *Progress and present State of the Law as to the Copyright of Books.*—It has been doubted whether, in antiquity, an author had any exclusive right to a work, or whether, having once published it, he could restrain others from copying it, and selling copies. We incline to think that he could. The public sale of copies of works is often referred to in the classics; and in such a way as warrants the inference that they were productive to the author, which could not have been the case had every one been permitted to copy them at pleasure. Terence, in one of his plays (*Prol. in Eunuch. l. 20.*), says, *Fabulam, quam nunc acturi sumus, postquam ædiles emerunt*; but why should the magistrates have bought it, had it been free to every one to copy it? Martial, in one of his epigrams, says—

*Sunt quidam, qui me dicunt non esse poetam;  
Sed qui me vendit, bibliopola, putat.* Mart. lib. xiv. Ep. 194.

This evidently conveys the idea that he had assigned the right to sell his book to a single person who profited by it. Passages to the same effect may be found in Horace (*De Arte Poetica*, line 345.), Juvenal (*Sat. 7. line 83.*), &c.

It would have been singular, indeed, had it been otherwise. Of all the species of property a man can possess, the fruits of his mental labours seem to be most peculiarly his own. And though it may, we think, be shown, that many serious inconveniences would result from giving the same absolute and interminable property over ideas that is given over material objects, these inconveniences could hardly have been perceived in antiquity.

It will also be observed, that in antiquity a copyright was of much less value than in modern times. Books could then only be multiplied by copying them with the pen; and if any one chose privately to copy a work, or to buy it of another, it must have been very difficult to hinder him: but when printing had been introduced, the greater cheapness of books not only extended the demand for them in far greater proportion, and consequently rendered copyrights more valuable, but it also afforded the means of pre-

\* The title of the book is "A Complete System of Book-keeping, by Benjamin Booth." London, 1799. thin 4to. Printed for Grosvenor and Snater, and for the late J. Johnson, St. Paul's Churchyard.  
Mr. Jones's book is entitled "The Science of Book-keeping exemplified." 4to. London, 1831. 4s. 4s.

venting their piracy. Printing is not a device by which a few copies of a book can be obtained at a cheap rate. It is productive of cheapness only when it is employed upon a large scale, or when a considerable impression is to be thrown off. And hence, after its invention, piracy could hardly be committed in secret: the pirated book had to be brought to market; the fraud was thus sure to be detected, and the offending party might be prosecuted and punished.

For a considerable time after the invention of printing, no questions seem to have occurred with respect to copyrights. This was occasioned by the early adoption of the licensing system. Governments soon perceived the vast importance of the powerful engine that had been brought into the field; and they endeavoured to avail themselves of its energies by interdicting the publication of all works not previously licensed by authority. During the continuation of this system, piracy was effectually prevented. The licensing act (13 & 14 Chas. 2. c. 2.) and the previous acts and proclamations to the same effect, prohibited the printing of any book without consent of the owner, as well as without a licence. In 1694, the licensing act finally expired, and the press then became really free. Instead, however, of the summary methods for obtaining redress for any invasion of their property enjoyed by them under the licensing acts, authors were now left to defend their rights at *common law*; and as no author or bookseller could procure any redress for a piracy at common law, except in so far as he could *prove damage*, property in books was virtually annihilated; it being in most cases impossible to prove the sale of one printed copy out of a hundred. Under these circumstances, applications were made to parliament for an act to protect literary property, by granting some speedy and effectual method of preventing the sale of spurious copies. In consequence, the statute 8 Anne, c. 19. was passed, securing to authors and their assignees the exclusive right of printing their books for 14 years certain, from the day of publication, with a contingent 14 years, provided the author were alive at the expiration of the first term. Persons printing books protected by this act, without the consent of the authors or their assignees, were to forfeit the pirated copies, and 1*d.* for every sheet of the same. Such books as were not entered at Stationers' Hall were excluded from the benefit of this act.

It had been customary, for some time previous to this period, for the libraries of the Universities of Oxford and Cambridge, &c. to get a copy of most books entered at Stationers' Hall; and the act of Anne made it imperative that single copies of all works entitled to its protection should be delivered to the following libraries: viz. the Royal Library, now transferred to the British Museum; the Libraries of Oxford and Cambridge; the Libraries of the four Scotch Universities; the Library of Sion College, London, and that of the Faculty of Advocates in Edinburgh; — in all, *nine* copies.

The act of Anne did not put to rest the questions as to copyright. The authors contended that it did not affect their natural ownership; and that they or their assignees were entitled to proceed at *common law* against those who pirated their works after the period mentioned in the statute had expired. The publishers of spurious editions resisted these pretensions, and contended that there was either no right of property at common law in the productions of the mind; or that, supposing such right to have existed, it was superseded by the statute of Anne. There was some difference of opinion in the courts as to these points; but Lord Mansfield, Mr. Justice Blackstone, and the most eminent Judges, were favourable to the claims of the authors. However, it was finally decided, upon an appeal to the House of Lords in 1774, that an action could not be maintained for pirating a copyright after the term specified in the statute. — (*Godson on the Law of Patents and Copyrights*, p. 205.)

The act of Queen Anne referred only to Great Britain; but in 1801, its provisions were extended to Ireland; the penalty, exclusive of forfeiture, on printing or importing books without consent of the proprietor, was also increased from 1*d.* to 3*d.* a sheet. In return for this concession, two additional copies of all works entered at Stationers' Hall were to be delivered; one to Trinity College, Dublin, and one to the King's Inns, Dublin.

Every one must be satisfied that 14 years' exclusive possession is far too short a period to indemnify the author of a work, the composition of which has required any considerable amount of labour and research; though 28 years is perhaps, all things considered, not a very improper period. But the grand defect of the statute of Anne consisted in its making the right to the exclusive possession for 28 years contingent on the fact of a person having lived a day more or less than 14 years after the publication of his work. This was making the enjoyment of an important right dependent on a mere accidental circumstance over which man has no control. Could any thing be more oppressive and unjust than to hinder an author from bequeathing that property to his widow and children, that would have belonged to himself had he been alive? Nothing, indeed, as it appears to us, can be more obvious than the justice of extending all copyrights to the same period, whether the authors be dead or not.

But though the extreme harshness, not to say injustice, of the act of Queen Anne had been repeatedly pointed out, its provisions were continued down to 1814, when the copyright act, 54 Gen. St. c. 156, was passed. This act extended the duration of all copyrights, whether the authors were dead or alive, to 28 years certain; with the further provision, that if the author should be alive at the end of that period, he should enjoy the copyright during the residue of his life.

But though the act of 1814 conferred a most important advantage on authors and publishers, it did not satisfy their pretensions, and repeated attempts were subsequently made to have copyrights declared perpetual, or, at all events, to have their term considerably extended. In consequence, after a great deal of discussion, the existing copyright act, 5 & 6 Vict. cap. 45, was passed in 1842. This statute extends the duration of all copyrights, whether the authors be dead or alive, to forty-two years certain; providing, further, that if the author be alive at the expiration of this period of 42 years from the publication of his work, he shall enjoy the copyright to his death, and that his heirs or assignees shall enjoy it for 7 years after that event. We subjoin an abstract of this statute.

Clause 1, repeals former acts, viz. 8 Anne, c. 19., 41 G. 3. 107., and 54 G. 3. c. 156.

Clause 2, refers to this interpretation of this act.

*Endurance of Term of Copyright in any Book hereafter to be published.*—The copyright in every book which shall hereafter be published in the lifetime of its author shall endure for the natural life of such author, and for the further term of 7 years, from the time of his death, and shall be the property of such author and his assignees: provided always, that if the said term of 7 years shall expire before the end of 42 years from the first publication of such book, the copyright shall in that case endure for such period of 42 years; and that the copyright in every book which shall be published after the death of its author shall endure for the term of 42 years from the first publication thereof, and shall be the property of the proprietor of the author's manuscript from which such book shall be first published, and his assigns.—§ 3.

*In Cases of subsisting Copyright the Term to be extended.*—The copyright which at the time of passing this act shall subsist in any published book (except as herein-after mentioned) shall be extended and endure for the full term provided by this act in cases of books thereafter published, and shall be the property of the person who at the time of passing of this act shall be the proprietor of such copyright; provided, that in all cases in which such copyright shall belong in whole or in part to a publisher or other person who shall have acquired it for other consideration than that of natural love and affection, such copyright shall not be extended by this act, but shall endure for the term which shall subsist therein at the time of passing this act, and no longer, unless the author of such book, if he be living, or the personal representative of such author, if he be dead, and the proprietor of such copyright shall, before the expiration of such term, consent and agree to accept the benefits of this act in respect of such book, in the form given in the schedule annexed to the act to be entered in the book of registry herein-after directed to be kept, in which case such copyright shall endure for the full term of the books to be published after the passing of this act, and shall be the property of such person or persons as in such minute shall be expressed.—§ 4.

Clause 5, gives the judicial committee of the privy council power to license the republication of such books as the proprietor refuses to republish after death of the author.

Clause 6, and 7, specify the terms within which copies of books published after the passing of this act, and of subsequent editions, shall be delivered at the British Museum.

Clause 8, directs that (besides the copy for the British Museum) a copy of every book be delivered within a month after demand to the officer of the Stationers' Company for the following libraries: viz. the Bodleian at Oxford, the Public Library at Cambridge, the Faculty of Advocates at Edinburgh, and that of Trinity College, Dublin.

Clause 9, and 10, authorise publishers to deliver copies to the libraries, instead of at the Stationers' Company, and impose penalties for default in delivering copies for the use of the said libraries.

*Book of Registry to be kept at Stationers' Hall.*—A book of registry, wherein may be registered the proprietorship in the copyright of books, and assignments thereof, and in dramatic and musical pieces, whether in manuscript or otherwise, and licences affecting such copyright shall be kept at the hall of the Stationers' Company, and shall be open to the inspection of any person, on payment of one shilling for every entry searched for or inspected in the said book; and the officer in charge of such book shall, whenever required, give a copy of an entry in such book, certified under his hand, and impressed with the stamp provided by said company for that purpose, to any person requiring the same, on payment of the sum of five shillings; and such copies so certified and impressed shall be received in evidence in all courts, and in all summary proceedings, and shall be *prima facie* proof of the proprietorship or assignment of copyright or licence as therein expressed, and in the case of dramatic or musical pieces shall be *prima facie* proof of the right of representation or performance.—§ 11.

Clause 12, enacts that making a false entry in the book of registry shall be a misdemeanour.

Clause 13, enacts that entries of copyright may be made in the book of registry.

Clause 14, enacts that persons aggrieved by any entry in the book of registry may apply to a court of law in term, or judge in vacation, who may order such entry to be varied or expunged.

*Remedy for the Piracy of Books by Action on the Case.*—If any person shall, in any part of the British dominions, after the passing of this act, print or use, or cause to be printed, for sale or exportation, any book in which there shall be a subsisting copyright, without the consent in writing of the proprietor, or shall import for sale or hire any such book unlawfully printed from parts beyond the sea, or, knowing such book to have been so unlawfully printed or imported, shall sell, publish, or expose to sale or hire, or shall have in his possession, for sale or hire, any such book without consent as aforesaid, such offender shall be liable to a special action on the case for the benefit of the proprietor of such copyright, to be brought in any court of record in that part of the British dominions in which the offence shall be committed: provided always, that in Scotland such offender shall be liable to an action in the court of session in Scotland, to be brought and prosecuted in the same manner as any other action of damages to the like amount may be brought and prosecuted there.—§ 15.

Clause 16, enacts that in actions for piracy the defendant shall give notice of the objections to the plaintiff's title on which he means to rely.

Clause 17, enacts that no person, except the proprietor, &c. shall import into the British dominions for sale or hire, any book first composed, &c. within the United Kingdom, wherein there shall be copyright, and reprinted elsewhere, under penalty of forfeiture thereof, and also of 10*l.* and double the value. Books may be seized by officers of customs or excise.

Clause 18, relates to and defines the copyright in encyclopedias, periodicals, and works published in a series, reviews, or magazines.

Clause 19, enacts that proprietors of encyclopedias, periodicals, and works published in series, may enter as ones at Stationers' Hall, and thereon have the benefit of the registration of the whole.

Clause 30. enacts that the provisions of 3 & 4 Will. 4. c. 15. shall be extended to musical compositions, and the term of copyright, as provided by this act, applied to the liberty of representing dramatic pieces and musical compositions.

Clause 23. enacts that pirated books shall become the property of the proprietor of the copyright, and may be recovered by action.

Clause 25. makes copyright personal property. It was farther enacted by the statute 5 & 6 Vict. c. 47. that the importation of all books, of which there is an existing copyright, into the United Kingdom, should be absolutely prohibited from the 1st of April, 1843.

The great practical difficulty in interpreting the copyright acts, is in distinguishing between an original work and a copy made, *anima furandi*, from one already in existence. The following is a summary of Mr. Godson's remarks on this subject:—

"The identity of a literary work consists entirely in the *sentiments and language*. The same conceptions, clothed in the same words, must necessarily be the same composition; and whatever method is taken of exhibiting that composition to the ear or the eye, by *recital*, or by *writing*, or by *printing*, in any number of copies, or at any period of time, the property of another person has been violated; for the new book is still the identical work of the real author.

"Thus, therefore, a transcript of nearly all the sentiments and language of a book is a glaring piracy. To copy part of a book, either by taking a few pages *verbatim*, when the sentiments are not new, or by imitation of the principal ideas, although the treatises in other respects are different, is also considered to be illegal.

"Although it was held by Ellenborough C. J. that a variance in *form and manner* is a variance in *substance*, and that any material alteration which is a *melioration* cannot be considered as a piracy; yet a piracy is committed, whether the author attempt an original work, or call his book an abridgment, if the principal parts of a book are servilely copied or unalteredly varied.

"But if the main design be not copied, the circumstance that part of the composition of one author is found in another is not of itself piracy sufficient to support an action. A man may fairly adopt part of the work of another; he may so make use of another's labours for the promotion of science, and the benefit of the public; but having done so, the question will be, Was the matter so taken used fairly with that view, and without what may be termed the *animus furandi*?

"In judging of a quotation, whether it is fair and candid, or whether the person who quotes has been swayed by the *animus furandi*, the quantity taken, and the *manner* in which it is adopted, of course must be considered.

"If the work complained of be *in substance* a copy, then it is not necessary to show the intention to pirate; for the greater part of the matter of the book having been purloined, the intention is apparent, and other proof is superfluous. A piracy has undoubtedly been committed.

"But if only a *small portion* of the work is quoted, then it becomes necessary to show that it was done *anima furandi*, with the intention of depriving the author of his just reward, by giving his work to the public in a cheaper form. And then the *mode* of doing it becomes a subject of inquiry; for it is not sufficient to constitute a piracy, that part of one author's book is found in that of another, unless it be nearly the whole, or so much as will show (being a question of fact for the jury) that it was done with a bad intent, and that the matter which accompanies it has been *colourably* introduced."—(pp. 215—217.)

"If a work be of such a libellous or mischievous nature as to affect the *public morals*, and that the author cannot maintain an action at law upon it, a court of equity will not interpose with an injunction to protect that which cannot be called property. Even if there be a doubt as to its evil tendency, the Lord Chancellor will not interfere."—(Godson, p. 212.)

II. *Expediency of limiting Copyrights to a reasonable Term.*—It is argued by many that copyrights should be made perpetual; that, were this done, men of talent and learning would devote themselves much more readily than at present to the composition of works requiring great labour; inasmuch as the copyright of such works, were it perpetual, would be an adequate provision for a family. But we doubt much whether these anticipations would be realised. Most books or manuscripts are purchased by the booksellers, or published upon the presumption that there will immediately be a considerable demand for them; and we apprehend that when copyrights are secured for 42 years certain, very little more would be given for them were they made perpetual. When an annuity, or the rent or profit arising out of any fixed and tangible property, with respect to which there can be no risk, is sold, if the number of years for which it is to continue be considerable, the price which it is worth, and which it fetches, does not differ materially from what it would bring were it perpetual. But the copyright of an unpublished work is, of all descriptions of property in which to speculate, the most hazardous, and the chances of reaping contingent advantages from it, at the distance of 42 years, would be worth very little indeed.

Those who write books, and those who publish them, calculate on their obtaining a ready and extensive sale, and on their being indemnified in a few years. Very few authors, and still fewer booksellers, are disposed to look forward to so distant a period even as 28 years for remuneration. They are, with very few exceptions, sanguine enough to suppose that a much shorter term will enable them to reap a full harvest of fame and profit from the publication; and we doubt much whether there be one case in a hundred, in which an author would obtain a larger sum for a perpetual copyright, than for one that is to continue for the period stipulated in the late act.

But while the making of copyrights perpetual would not, as it appears to us, be of any material advantage to the authors, there are good grounds for thinking that it would be disadvantageous to the public. Suppose an individual computes a table of logarithms to five or seven places; if his computations be correct, no improvement can be made upon them, to the extent at least to which they go. But is he or his assignees to be entitled, in all time to come, to prevent other individuals from publishing similar tables, on the ground of an invasion of private property? Such a pretension could not be

admitted without leading to the most mischievous consequences; and yet there is no real ground (though the courts have attempted to make one) on which the claim in question and others of the same description could be resisted, were copyrights made perpetual, and placed in all respects on the same footing as other property. We, therefore, are clearly of opinion that good policy suggests the limitation of the exclusive right of printing and publishing literary works to some such reasonable period as may secure to authors the greater part of the profit to be derived from their works; and that this period being expired, they should become public property.

Perhaps the period of 28 years has been advantageously extended to 42; but we are satisfied that more injury than benefit would result to literature by extending it beyond this term. In France, copyrights continue for 20 years after the death of the author. In most of the German states they are perpetual; this, however, until very recently, hardly indemnified the authors for the case with which spurious copies might be obtained from other states. But by a late resolution of the Diet, a copyright secured in one state is good in all.

III. *International Copyrights.*—The establishment of an international copyright system, that should enable the authors of one country to secure the copyright of their works in other countries, has, of late, excited a good deal of attention. We doubt, however, whether the advantages that would result from such a system, were it established, would be so great as many seem to suppose. No doubt it would be advantageous for the authors of popular works in Great Britain and the United States, for example, to be able to secure a copyright in both countries; but the real question is, would the interests of literature and of the public be promoted by such arrangement? Now we incline to think that this question must be answered in the negative. The single market of either Great Britain or the United States is quite large enough to secure a sale for really good works sufficient to afford ample encouragement to their authors; and such being the case, it is difficult to see on what ground the republication at a cheap rate in the one country of books originally published in the other should be prevented. Indeed, such prevention would appear, by obstructing the circulation of knowledge and of amusement, to be injurious to both. It has, it is true, been alleged, that if we had a copyright system in common with America, English and American books might be published at a less price, inasmuch as the extension of the market would secure them a larger sale. But though this result *might*, we doubt much whether it *really would*, happen. We apprehend that then, as now, authors and publishers would impose such prices on their works as they supposed would realise the largest amount of profit, and that if they thought a high price more likely to do this than a low one, it would be preferred. The extensive reprinting of cheap editions of French works that has for a lengthened period been carried on at Brussels has certainly been disadvantageous to the literati of France. Still, however, the market of that kingdom seems to be sufficiently extensive to insure the unlimited production of works displaying the greatest talent, research, and industry; and it is plain that if the production of valuable works be not checked in France by their being reprinted abroad, the injury done to French men of letters redounds to the advantage of every foreigner who has occasion to look into or consult their works. Every effort should be made to prevent copyrights being invaded by pirates at home, and by the clandestine importation of books printed abroad; but farther than this we should not go. We are well convinced that it is for the advantage of the public and of literature that nations should have full liberty to republish each other's works in such forms and at such times and prices as they may think fit.

The real evil with which our literature has to contend originates in the barefaced piracy carried on at home, and not in the proceedings of foreigners. The latter may, perhaps, interfere a little with the sale of native works, by supplying the public with foreign instead of home editions; but the proceedings of the indigenous pirates are ten times more mischievous. They consist for the most part of knaves and drudges, without talent or learning of any sort, save only that of transmuting and adulterating the labours of others, and disguising their own rascality. Such persons fasten like leeches on any new work of talent, research, and industry; they forthwith announce some system, compilation, or abridgment of the same sort, every idea and statement in which is stolen; and then publish their spurious rubbish at a low price, advertise it as being decidedly the best work on the subject, and find numbers of newspaper writers ready to puff off and eulogise their disinterested and meritorious labours! It is difficult, we admit, to deal with such a nuisance, and it cannot, perhaps, be abated by legislation. But while we regret the fact, there cannot, we believe, be a question that courts and juries have for a lengthened period inclined too much to a lenient interpretation of the law as to piracy; and that literary plunderers, whose robberies are but little disguised, too often escape with impunity.

IV. *Taxes on Literature.*—These taxes, when carried to any considerable extent, are at once impolitic, oppressive, and unjust: impolitic, because they tend to obstruct

the growth and diffusion of knowledge; oppressive, because they very frequently swallow up the entire reward of the labours of the most deserving persons; and unjust, because they are not proportioned to the value of the article on which they are laid, and are, indeed, much oftener paid out of capital than out of profit.

These taxes consist, in Great Britain, of the duty on paper, the 5 copies of all works given to certain public libraries, and the advertisement duty. When the former edition of this work was published, these were exceedingly heavy and most oppressive. In the interval, however, they have been diminished fully a half, and are now comparatively moderate; though the principle on which they are imposed still necessarily renders them productive of hardship and injustice.

The following statements show the mode in which the duties operate: they are also interesting as throwing some light on the expense of publishing books, and the precarious and limited nature of the profit to be derived from them: they refer to an octavo volume of 500 pages, the paper such as this, with the ordinary quantity of matter on the page, and sold by retail at 12s. a copy. We subjoin an Estimate of the cost of such a volume when 500, 750, and 1,000 copies are printed, showing what portion of the cost consists of duty, and the profits of the author and publisher on each edition when the whole is sold off: a similar estimate is subjoined for a pamphlet of 80 pages.

These statements show that, notwithstanding their reduction, the duties are yet far from inconsiderable, and form indeed a heavy charge on the publication of works for which the demand is limited. As seen above, they amount, on an edition of 500 copies of an ordinary octavo volume, to nearly as much as the sum remaining after the entire impression has been sold, for profit for author and publisher.

It is essential, however, to bear in mind that the previous statements show only how the duties affect books when the entire impression is sold off at the *first publication price*; but this seldom happens. Excluding pamphlets, it may be truly affirmed, that, at an average, the original impression of half the books printed is hardly ever sold off, except at a ruinous reduction of price. Now, if we suppose, in the previous example of an edition of 750 copies, that only 625 instead of 725 were sold, the result would be that only 37l. 16s. would remain at profit to the author and publisher, and as a compensation for interest, the risk of bad debts, &c. Were only 500 copies sold, a loss of 134. 4s., exclusive of the author's labour, would be incurred; and were only 400 copies sold, government would receive 20l. 17s. 3d. of duty from a speculation by which the author must lose all his labour, and the bookseller 54l. of his capital! The mere possibility of such a supposition being realised, is sufficient to show the hardship of the duties; but, in point of fact, such cases, instead of being merely possible or rare, are of every day occurrence.

There is a radical difference between the demand for books, or of food for the mind, and food for the body. The latter is always sure, under any circumstances, to command a sale. It cannot be dispensed with, and the demand for it is, therefore, comparatively constant. If a tax be laid on malt, hats, or shoes, it will, perhaps, somewhat lessen the demand for these articles; but the quantities of them brought to market, in future, will sell for such an advanced price as will leave the customary rate of profit to their producers. But with books the case is altogether different. The taste for them is proverbially capricious; so much so, that the most sagacious individuals are every day deceived in their anticipations as to the success of new works, and even as to the sale of new editions. But if a book do not take, it is so very ruinous an affair, that a publisher is glad to dispense of the greater part of an

impression at a fourth or a fifth part of its regular price; and is often, indeed, obliged to sell it as *waste paper* to the trunk-maker or the tobacconist.

On an investigation into the affairs of an extensive publishing concern, a few years since, it was found, that of 130 works published by it in a given time,  *fifty had not paid their expenses*. Of the 80 that did pay, 13 only had arrived at a second edition; but, in most instances, these second editions had not been profitable. In general it may be estimated, that of the books published, a *fourth* do not pay their expenses; and that only *one in eight or ten can be reprinted with advantage*. As respects pamphlets, we know we are within the mark, when we affirm that *not one in fifty* pays the expenses of its publication. Now, when such is the case, it is plain that nothing can be more *unfair* than to impose the same duty on all works before they are published. In a few cases such duty falls principally on the buyers, and makes only an inconsiderable deduction from the profits of the author and publisher; but in a much larger number of cases it makes a serious inroad upon their profits, and goes, indeed, far to swallow them up; while in very many instances there are no profits to absorb, so that the duty has to be paid out of the capital of the unfortunate author or publishers, who, though they may have done nothing very meritorious, would hardly seem to deserve such harsh treatment.

The reduction of the advertisement duty in 1833 was a most proper measure. But the above statements show that it still presses very severely on literature, and in the majority of cases is more injurious than the paper duties. Formerly 11 copies of all new works had to be given to different public libraries. Happily, however, this tax, which not unfrequently prevented the publication of expensive works that had only a limited demand, has been reduced to 5 copies. We incline to think that it is expedient, to secure the preservation of books and to facilitate their consultation, that copies of all works should be deposited in the British Museum, and in libraries in Edinburgh and Dublin. Perhaps it would be right that the public, for whose advantage they are preserved, should pay for such copies; we should not, however, object to the authors doing this, but they should not be required to do more. To call upon them to provide copies for the libraries of rich foundations, like the Universities of Oxford and Cambridge, is a proceeding at variance with every fair principle.

The law of other countries is, in this respect, preferable to ours. In America, Prussia, Saxony, and Bavaria, only *one* copy of any work is required from the author; in France and Austria *two* copies are required; and in the Netherlands, *three*.

*V. Book Trade of Great Britain.*—London is the great centre of the British book trade; the number of new publications that issue from its presses being far greater than all that appear in the rest of the empire. Within the course of the last forty years, however, many very important works have been published in Edinburgh; but the latter, as well as those that appear in Oxford, Cambridge, Glasgow, &c., are principally deposited by the London trade. The booksellers of Edinburgh, and of all the provincial towns, have agents in London to whom they consign a certain number of copies of every work they publish; and to whom, also, they address their orders for copies of such new or old works as they have occasion for. The London booksellers, who act as agents for those in the country, are in the habit of regularly despatching parcels to their correspondents on the last day of each month, with the magazines and other monthly publications; but if any new work of interest appears in the interim, or orders be received from the country that cannot be conveniently deferred to the end of the month, a parcel is immediately forwarded by coach. The booksellers of Edinburgh and Dublin act as agents for those of London, and supply the Scotch and Irish country trade with the metropolitan publications.

The price of new works is fixed by the publishers, who grant a deduction to the retail dealers of from 20 to 25 per cent. on the price of *quartos*, and from 24 to 30 per cent. on that of *octavos*, and those of smaller size. The credit given by the publishers to the retailers varies from seven to twelve months; a discount being allowed for prompt payment at the rate of 5 per cent. per annum.

From inquiries we have made with much care and labour, we find that at an average of the 4 years ending with 1842, 2,149 volumes of new works, and 755 volumes of new editions and reprints (exclusive of pamphlets and periodical publications), were annually published in Great Britain; and we have further ascertained that the publication price of the former was *£. 94*., and of the latter *£. 27* a volume. Hence, if we suppose the average impression of each work to have been 750 copies, it will be seen that the total value of the new works annually produced, if they were sold at their publication price, would be 708,494 *£. 8*., and that of the new editions and reprints, 231,218 *£. 15*.. We believe, however, that if we estimate the price at which the entire impressions of both descriptions of works actually sell at 4*s.* a volume, we shall not be far from the mark; and if so, the real value of the books annually produced will be 435,600*£.* a year. Subjoined is a summary of these results.

Years.	New Works.			Reprints and New Editions.

We regret that no estimate can be formed of the number or price of the pamphlets that annually make their appearance; but we shall endeavour, in the article *FRANCIS & TAYLOR*, to give some details as to the number and cost of the latter. It would be, in many points of view, desirable, were the librarians of the British Museum directed to keep and annually publish an account, classified according to the subjects and the size of the works, of all the new British books, pamphlets, and periodical publications that come into their hands, specifying the average publication price of each class. Such a return might be made up without any great difficulty, and would afford curious information not otherwise attainable.

The old book trade carried on in Great Britain is very extensive, and employs many dealers. The price of old books depends very much on their condition; but, independently of this circumstance, it is very fluctuating and capricious; equally good copies of the same works being frequently to be had in some shops for a half or a third part of what they can be bought for in others.

*VI. Regulations as to Importations of Foreign Works.*—For the duties, see *TARIFF*. To prevent foreign books and maps, the property of individuals, from being cleared with duty more than once, the proprietor shall, on each importation subsequent to the original one, declare that the duties were paid

when they were first imported, or that he purchased them in this country in a fair way of trade; that they are the identical books or maps he exported from this kingdom, and that they are now brought back for his private use, and not for sale. — (*Treasury Order*, 3d, and *Customs Order*, 8th of Oct., 1816.) Individuals coming from foreign parts might, down to the 1st of April 1845, import as baggage single copies of English works of which the copyright had not expired; but, in consequence of the facilities for smuggling that grew out of this indulgence, it has been withdrawn, and the importation of all English works printed in foreign countries, of which there is an existing copyright, is absolutely prohibited. — (5 & 6 Viet. cap. 47, § 24.)

The duty on foreign works produced in 1841, 8,450*l.* 18*s.* 6*d.* nett.  
**VII. Book Trade of France.** — The activity of the French press has been very greatly increased since the downfall of Napoleon. Count Daru, in his *Notions Statistiques sur la Librairie*, published in 1827, estimated the number of printed sheets, exclusive of newspapers, produced by the French press in 1816, at 66,852,883; and it appears (*art. Librairie, Dict. du Commerce*) that in 1836 the number of printed sheets (ex. newspapers) had increased to 118,857,000; so that it may now (1845) be fairly estimated at from 120 to 130 millions of sheets! The quality of many of the works that have recently issued from the French press is also very superior; and it may be doubted whether such works as the *Biographie Universelle*, the new and enlarged edition of the *Art de vérifier les Dates*, in 38 vols. octavo, and the two octavo editions of *Bayle's Dictionary*, could have been published in any other country. The greater number of new French works of merit, or which it is supposed will command a considerable sale, are immediately reprinted in the Netherlands or Switzerland, but principally in the former. To such an extent is this practice carried, that a single bookseller in Brussels has reprinted as many as 150,000 volumes of new French works in the course of a single year!

All the French booksellers are *brevetés*, that is, licensed, and sworn to abide by certain prescribed rules. This regulation is justly complained of by the publishers, as being vexatious and oppressive; and as tending to lessen the number of retail booksellers in the country, and to prevent that competition which is so advantageous.

The discount allowed by the French publishers to the retail dealers is not regulated, as in England, by the size of the volumes, but by the subjects. The discount on the sale of books of history, criticism, and general literature, is usually about 25 per cent.; in the case of mathematical and strictly scientific works, it is seldom more than 10 or 15 per cent.; while upon romances, tales, &c. it is often as high as 50 or 60 per cent.

**VIII. German Book Trade.** — This trade is very much facilitated by the book fairs at Leipzig; the Easter fair being frequented by all the booksellers of Germany, and by those of some of the neighbouring countries, as of France, Switzerland, Denmark, Livonia, &c., in order to settle their mutual accounts, and to form new connections. The German publisher sends his publications to the keeper of assortments *à condition*, that is, on commission, for a certain time, after which the latter pays for what have been sold, and may return the remainder. This is not so favourable for the publisher as the custom in the French and English book trades, where the keepers of assortments take the quantity they want at a fixed rate. In the German book trade it is the custom for almost every house, either in the country or abroad, which publishes or sells German books, to have its agent at Leipzig, who receives and distributes its publications. A., of Riga, who publishes a book calculated for the German trade, has his agent B. in Leipzig, to whom he sends, free of expense, a number of copies of his publication, that he may distribute the new work to all the booksellers with whom he is connected, from Vienna to Hamburg, and from Strasburgh to Königsberg, each of whom has his agent in Leipzig. Instructions are also given as to the number of copies to be sent to each. B. delivers those copies in Leipzig to the agents, who send them every week, or more or less frequently, by the post or by carriers, at the expense of the receiver. C., of Strasburgh, who finds that he has not received copies enough, writes for an additional number of copies to his agent D., of Leipzig; D. gives this order to B., who delivers the number wanted to D., to be transmitted to C. This arrangement is advantageous to the German book trade, as well as to Leipzig. The dealer receives every thing from Leipzig; and, as a great number of packets, with books from all parts of Germany, write there for him every week, he can have them packed together and sent at once. The carriage is thus much less than if the packets were sent to him separately from the different places, and the whole business is simplified. The booksellers are also enabled to agree with ease on a certain discount per cent. No such intimate connection of the booksellers has yet been formed in any other country. The German booksellers rarely unite, as is the practice in England, in undertaking the publication of extensive works. — (*German Conversations-Lexicon*, American edition.)

The literary deluge which commenced in Germany in 1814 still continues to increase. For the 2,000 works which were then about the annual complement, we have now from 5,000 to 7,500. The catalogue of the Leipzig fair for Easter, 1837, contained 4,738 articles, of which 4,251 were actually published. Magazines and Encyclopedias have increased in the same proportion, and the public has shown as great a desire to read as the learned have to write. Private libraries are diminishing, while the public ones are daily increasing.

**BOOTS AND SHOES**, the external covering for the legs and feet, too well known to require any description. — For an account of the value of the boots and shoes annually produced in Great Britain, see **LEATHER.**

**BORAX**, or **TINCAL** (Arab. *Buruk*; Pers. *Tunkar*) one of the salts of soda. It is white, transparent, rather greasy in its fracture; its taste is styptic, and it converts syrup of violets to a green. It readily dissolves in hot water, and swells and bubbles in the fire. It is of great use as a flux for metals. — (*Thomson's Chemistry.*)

This salt is found in a crystallised state at the bottom of certain lakes in Thibet, and in various localities in Persia, China, South America, and Europe. Formerly, however, the demand of Europe was almost wholly supplied from the East, and especially by importations from Thibet, where the salt is comparatively abundant. When imported, it is called *tincal*; and is in a crude or impure state, being enveloped in a fatty matter, from which it has to be separated by a process that was long known only to the Venetians and Dutch.

The demand for borax is now in great part supplied from the famous lagoons near Monte Cerbete, in Tuscany. These lagoons, which occupy a large extent of surface, consist of an infinite number of low volcanoes, and spring in a furious state of ebullition; the ground, which shakes and burns beneath the feet, is covered with crystallisations of sulphur and other minerals; the whole scene presenting a striking picture of the most tremendous energy and sterility. The vapours that are constantly burbling forth from the boiling lagoons being found to contain boracic acid, it occurred to a most ingenious person, a M. Lardere, to construct pans through which the vapours being made to pass impregnate the water in them with the acid. The pans are kept boiling by the heat of the lagoons; and the water being evaporated, the acid is deposited in crystals. In consequence of this discovery, the lagoons from being altogether worthless have become most valuable. From 10,000 to 12,000 lbs. (12 *os.* each) of acid are now daily produced; and this vast supply, and the facility with which borax may be obtained from the acid, has occasioned a great reduction in its price, and enabled it to be much more extensively employed than before. Dr. Bowring, from whose valuable Report on Tuscany we have derived these particulars, gives the following

## Account of the Exports of Boracic Acid from Leghorn during the Nine Years ending with 1850.

	1842	1843	1844	1845	1846	1847	1848	1849	1850
Exports	1,029,000	1,029,000	1,029,000	1,029,000	1,029,000	1,029,000	1,029,000	1,029,000	1,029,000
Imports	1,029,000	1,029,000	1,029,000	1,029,000	1,029,000	1,029,000	1,029,000	1,029,000	1,029,000

And we are informed that the exports have gone on increasing in the interval nearly in the same proportion. In 1811, 15,000 cwt. boracic acid and 4,100 cwt. silica were exported for consumption. The district was worth in London, in January 1845, from 4s. to 4s. 2s., duty (5s.) included, and the latter from 6s. to 4s. 2s., a ton, 400 lb. (11.)

**BORDEAUX**, a large and opulent commercial city of France, on the Garonne, about 75 miles from its mouth, lat. 44° 50' 26" N., long. 0° 34' W. Population 107,000. The commerce of Bordeaux is very extensive. The Garonne is a noble river, with depth of water sufficient to enable large ships to crane up to the city, laying open, in conjunction with the Dordogne and their tributary streams, a large extent of country. The commerce of Bordeaux is greatly promoted by the famous canal of Languedoc, which communicates with the Mediterranean. By its means Bordeaux is enabled to furnish the south of France with colonial products at nearly as cheap a rate as Marseilles. Wines, brandies, and fruits are the staple articles of export; but the merchants apply themselves more particularly to the wine trade. Most part of their other business is confined to dealing on commission; but this they conduct almost invariably on their own account. The reason they assign for this is, that the difficulties attending the purchase, racking, fining, and proper care of wines, so as to render them fit for exportation, are so very great, as to make it almost impossible to conduct the business on any thing like the ordinary terms so as to satisfy their employers. Colonial products, cotton, dye stuffs, pepper, hides, tobacco, rice, form the principal articles of importation.

Money is the same at Bordeaux as in other parts of France. All accounts are kept in francs, the par of exchange being 25 fr. 30 cent. the pound sterling. — (See FRANCIS.)

Weights and Measures. — With the exception of wines and brandies, the new or decimal system is of general application in Bordeaux, both in wholesale and retail operations. — (See WEIGHTS AND MEASURES.)

Wine is still sold by the tun of 4 hogheads. The hoghead contains 30 vells.

Brandy by the 50 vells.

Spirits of wine by the velle.

The velle is an old measure of which 50 = 2 3/4 hectolitres.

Oil is sold by weight (per 50 kilog.) 50 = 8 1/2 imperial gallons.

Entrance to the River. — This lies between Point de la Coubre on the north and Point de l'Isle on the south, bearing from each other nearly S. E. and N. W., distant about 6 leagues. There are lights on both these points, but neither of them is elevated to any great height above the level of the sea. The middle part of the entrance to the river is encumbered with extensive sand banks and rocks. On one of the latter, in lat. 45° 33' 15" N., long. 1° 10' W. stands the Tour de Cordouan, one of the most celebrated light-houses in Europe. It was erected in 1610; but has been materially improved since. It is 206 feet high. The light, which is revolving, exhibits in succession a brilliant light, a feeble light, and an eclipse, the changes following each other every half minute. It may be distinguished at the distance of 8 or 9 leagues. The Point de la Coubre is 2 1/2 leagues N. & W., and the Point de l'Isle 1 1/2

leagues S. E. by E. J. R. from the Tour de Cordouan. There are two main channels for entering the river, — the Passo du Nord, and the Passo de l'Isle. The former lies between the north side of the river and the banks in the middle, about 1 1/2 mile south from the Point de la Coubre; the water, where shallowest, being about 6 fathoms. The entire passage is nearly S. E. & E. The other principal passage lies between the Tour de Cordouan and the Point de l'Isle, nearly in a N. N. E. and S. S. W. direction. In some places it has not more than 13 feet water; and is in all respects very tedious in the other passage, which is steep as to be preferred, especially with a large ship. The tides, both ebb and flood, go through the channels with great rapidity, so that a great deal of caution is required on making the river; but having once entered, there is no further danger. Spring tides rise from 14 to 15 feet, and neaps from 7 to 8; but the former depend almost entirely on the direction of the wind. All vessels, except French coasters under 40 tons burden, and small craft from the north of Spain, entering the Gironde, are obliged to take a pilot on board as soon as one offers himself. In summer, pilots are not infrequently met with 50 or 60 miles west of the Tour de Cordouan; but in winter they seldom venture far beyond the banks, and sometimes cannot proceed even thus far. — (See LIGHTS.)

Shipping. — In 1857, the customs duties in Bordeaux produced 5,441,864 fr.; but in 1841 they amounted to 15,268,170 fr. During the same year there belonged to Bordeaux 370 ships, of the burden of 68,500 tons.

**Port Charges.** — Account of Port Charges, Brokerage, and other public Disbursements payable in Bordeaux on account of a French or English Vessel of 300 Tons Burden, from a Port of England to Bordeaux, or from Bordeaux to a Port of England, or from it to any other British Possession in Europe.

Nature of Charges.	On a Fr. or Brit. Vessel.		On a Foreign Vessel.	
	In French Money.	In Sterling Money.	In French Money.	In Sterling Money.
	Fr. s. d.	£ s. d.	Fr. s. d.	£ s. d.
Report and pilotage from sea to Bordeaux for a vessel drawing 14

Pilotage from Bordeaux to sea	930 0	4 16 0	965 51	9 16 3
Broker's commission outwards, care and attendance for expediting the vessel				
In ballast, 50 c. per ton (5d.), say 150 fr. at most (4l. 16s.)				
Loaded per charter or on owner's account, 1 fr. 10 c. (per ton, average	300 0	12 0 0	300 0	12 0 0
Loaded in freight, 1 fr. 50 c. (1s. 5d.) per ton				
	1,454 68	57 7 10	2,234 60	80 6 1

**N.B.** — No regard paid to the nature of the cargo, as all goods are imported either for consumption or exportation, which does not expose vessels to pay more or less charges.

British vessels are on a perfect equality with French vessels when they come from British ports in Europe, otherwise they pay pilotage and tonnage dues like all other foreign vessels, as stated in the foregoing column.

The following are the species of articles exported from Bordeaux to the different parts of the world:—  
 To *Martinique and Guadeloupe*.—Provisions, flour, wine, brandy, and a small quantity of manufactured goods.  
 To *Isle de France*.—Wines, provisions, cattle, furniture, coarse and fine hardware, perfumery, silk, cotton and linen stuffs, stationery, fashionable articles, &c.  
 To *the United States*.—Wines, brandy, almonds, prunes, verdigris, and a trifling quantity of manufactured goods.  
 To *Spanish America, Cuba, &c.*—Wines, brandy, silks, cloths, stationery, fashions, jewellery, perfumery, saddlery, &c.  
 To *the South Seas*.—Wines, brandy, liqueurs, and all sorts of manufactured articles.  
 To *the East Indies and China*.—Wines, brandy, furniture, silks, &c.  
 To *England*.—Wines, brandy, liqueurs, fruits, tartar, cream of tartar, plums, cherries, walnuts, loaf sugar to luermen and Jersey, clover seed, annatto, corn, flax, skins raw and dressed, cork wood and corks, vinegar, turpentine, resins, &c.  
 To *the North of Europe*.—Wines, brandy, spirits of wine, tartar, cream of tartar, colonial produce, loaf sugar, molasses, &c.  
*Wine*.—This forms the great article of export from Bordeaux. The estimated produce of the department of the Gironde in wine of all kinds, and one year with another, is from 220,000 to 250,000 tuns; the disposal of which is, approximately, as follows:—  
 Consumed in the department, about 50,000 tuns.  
 Exported to the different parts of  
   France - - - - - 125,000 -  
   Converted into brandy - - - 25,000 -  
   Exported to foreign countries - 50,000 -  
 = 250,000 tuns.

The principal exports of wine to foreign countries in 1839 were:—to England 1,230 tuns, Russia 5,499 ditto, Sweden and Norway 489 ditto, Prussia 2,964 ditto, Denmark 612 ditto, the Hanse Towns 8,188 ditto, and Holland 7,281 ditto. During the year ended the 30th of September, 1841, the United States imported from France 2,329,769 gallons of wine in casks, exclusive of a considerable quantity in bottles. Wine is also shipped from Bordeaux for the East and West Indies, the Levant, &c.  
 The red wines are divided into three great classes, each of which is subdivided into several sorts.

Class I. embraces the Medoc wines, Graves, and St. Emilion, common, or cargo wines.  
 The *first class* is composed of the "grands crus," the "crus bourgeois," and the "crus ordinaires."  
 The "grands crus" are further distinguished as *firsts, seconds, and thirds*.  
 The *firsts* are the wines of Chateau Margaux, Lafite, Latour, and Haut-Brion. The latter is properly a *crus* wine, but it is always classed amongst the *firsts*.  
 The *seconds* are the wines of Rauzan, Looville, Larose, Mouton, &c.  
 The *thirds* are the wines which are produced by the vineyards touching those above named, and which differ little in quality from them.  
 The quantity of "grands crus" wine of the above description does not exceed 3,000 tuns, and sells at from 1,500 fr. to 3,200 fr. per tun on the *lee*.  
 The "crus bourgeois" consists of the superior Margaux, St. Julien, Pauillac, St. Estephe, &c.; a quantity estimated about 4,000 tuns, and prices on the *lee* 800 fr. to 1,500 fr. per tun.  
 The "crus ordinaires" sell at 300 fr. to 700 fr., according to the year and the quality. Quantity 25,000 to 30,000 tuns.  
 The whole produce of Medoc is therefore about 40,000 tuns. The "grands crus" and "crus bourgeois" require 4 years' care and preparation, before delivery for use or exportation, and this augments their price from 30 to 35 per cent.  
 The *second class* consists of the common or cargo wines—*St. Emilion*, which are in greater quantity, and amongst them some of a very superior quality, that are generally bought for mixing with Medoc. The first quality of these wines sells from 800 fr. to 1,800 fr. per tun. The second qualities—Quercy, Montferand, Basans, &c.—500 fr. to 600 fr.  
 The *third class* consists of the common or cargo wines, the greater part of which is consumed in the country, or converted into brandy. The portion exported is sent off the year of its growth. Prices from 150 fr. to 250 fr. per tun.  
 The white wines of the "crus" such as Haut-Bernay, Frenais, Beaumes, &c. are only fit for use at the end of 4 or 5 years, and for exportation at the end of 1 or 2 years more. Prices on the *lee* vary from 800 fr. to 1,500 fr. per tun.

The "grand crus" of white *Graves*, St. Bries, Carbonneux, Dulamon, &c. sell, in good years, from 500 fr. to 800 fr.

Inferior white wines 130 fr. to 400 fr. per tun.

The expenses of all kinds to the wine-grower of Medoc, for the cultivation, gathering, and making his wine, and the cask, are estimated to amount, in the most favourable years, to 50 fr. per hoghead, or 200 fr. per tun.

The merchants in general purchase up the finest *crus* as soon as sufficiently advanced to judge of their character; or more frequently they are bought up for a series of years, whether good or bad. They are transported to their cellars or "chais," in Bordeaux, so situated and protected by surrounding houses, as to preserve a tolerably equable temperature throughout the year; and in these they ripen, and undergo all the different processes of fining, racking, mixing, &c. considered necessary to adapt them to the different tastes of the foreign consumers.

It is pretty generally the practice to adapt the wines for the English market by a plentiful dose of the strong, full-bodied, and high-flavoured wines of the Rhone, such as Hermitage, Côte Rotie, and Croze—especially the first, by which means they are hardly cognisable by the Medoc flavour. Perhaps the principal reason for keeping these wines so long before they are used is to give them time to acquire a homogeneous flavour, destroyed by the mixture of several different qualities. The wines shipped under the titles of Château Margaux, Lafitte, and Latour, are also mixed with the wines of the surrounding vineyards, which, from the nature of the soil, and proximity, cannot be greatly different. Other good wines are also said to enter largely into the composition of these celebrated *crus*; and those of a superior year are employed to bring up the quality of one or two bad years, so that it is easy to conceive, that the famous wines of 1811, and of the years 1815, 1819, and 1825, are not speedily exhausted. Some houses pretend to keep their wines pure; but the practice of mixing is, at any rate, very general.

The purchase of the wines whether from the grower or merchant, is always effected through brokers, some of whom have acquired a reputation for accuracy in dissecting the different flavours, and in tracing the results of the wines by certain measures of tanning or treatment.

England takes off nearly half the highest priced wines, and very little of any other quality. Except in Bordeaux itself, there is but a very moderate portion of the superior Medoc consumed in France. The capital takes off only second, third, and fourth rate wines.

The Dutch, who are large consumers of Bordeaux wine, go most economically to work. They send vessels to the river in the wine season, with skilful supercargoes, who go amongst the growers, and purchase the wines themselves cheaper even than a broker would do. They live on board the ship, take their own time to select, and wait often for months before the cargo is completed; but they attain their object, getting a supply of good sound wine, and at as low a rate, with all charges of shipping included, as the wine merchants can deliver it into their stores in Bordeaux. They never purchase old wine; they take only that newly made, which, being without the support of stronger bodied wines, must be consumed in the course of 2 or 3 years. They follow the same system at Bayonne, where 2 or 3 ships go annually for the white wines of Jurançon, &c.

The cargo wines are so manufactured that it is hardly possible to know of what they are composed. They are put free on board for 2*fr.* per hoghead and upwards, according as they are demanded. They are such as will not bear exposure in a glass when shipping; the tasters have a small flat silver cup expressly for them. These wines are principally shipped to America and India, and some at a higher price to the north of Europe.

The principal wine merchants have agents in London, whose business is more particularly to introduce their wines to family use; and it is to that end they pay them from 300*l.* to 800*l.* for travelling expenses and entertainments, besides allowing 3 per cent. or more on the amount of sales. They generally look out for individuals for their agents of good address, and some connection amongst the upper classes.

*Brandies, and Spirits of Wine.*—The quantity distilled in the neighbourhood of Bourdeaux is estimated at about

Ditto, in the Armagnac	-	20,000	ditto
Ditto, in the Marmaudais	-	8,000	ditto
			46,000 pieces, ordinary proof.

Of this quantity, France takes off about 23,000 pieces for consumption; England, 2,500; United States, 10,000; India, 2,500; north of Europe, 5,000; in all, 43,000 pieces.

Languedoc produces annually about 40,000 pieces, of 80 veltes each, the greater part of which comes to Bourdeaux to be forwarded to the different ports of the north of France, or to foreign countries.

France consumes about two thirds of the above quantity; the remaining one third goes to the north of Europe.

The prices of brandy are from 130 fr. to 150 fr. per 50 veltes, ordinary proof; aprils of wine, from 4 fr. to 5 fr. per velte.

It is at the port of Formay, on the Charente, that the greatest shipments of brandy take place to England. Cognac, from which the brandy takes its name, and where there are large distilleries, is a few leagues up the river. The quantity exported is far greater than what is made at Cognac; the two leading distillers there (Martel and Hennessy) buying great quantities from the small cultivators. The greater part of the wines made about Angoulême, and thence down toward the sea, are of inferior quality, and fit only for making brandy; and so little do the prices vary, that the proprietors look upon it nearly in the same light as gold. When they augment their capital by savings or profits, it is employed in keeping a larger stock of brandy, which has the further advantage of paying the interest of their capital by its improved value from age. England is said to receive upwards of 6,000 pieces annually from Charente.

At Bourdeaux, as at Paris and Marseilles, there is a constant gambling business in time bargains of spirits of wine. It is in the form of spirits of wine that nearly all the brandy consumed in France is exported, as in this form there is a great saving in carriage.—(For an official account of the exports of wine and brandy from France, see WINE.)

The fruits exported consist almost entirely of prunes and almonds. The latter come principally from Languedoc.

The revolution in the Spanish American colonies, and the troubles in Spain, have made many wealthy Spaniards settle in Bourdeaux. They are in possession of the greater part of the American Spanish trade of this port, and are viewed with a jealous eye by the old merchants. They have also contributed greatly to beautify the city, by erecting their wealth in buildings, which they have done to a considerable extent. They have also reduced the rate of interest, and contributed to the facilities of discounting bills. The Spanish houses generally discount long bills at  $\frac{1}{4}$  or  $\frac{1}{2}$  per cent. lower than the Bank.

Bourdeaux possesses some iron foundries, cotton factories, sugar refineries, glass works, &c., but labour and living are too high to admit of its becoming a considerable manufacturing city.

*Banking Establishments.*—There is only one banking company in Bourdeaux—the "Bordeaux Bank." It has a capital of 3,000,000 fr., in shares of 1,000 fr. each. It issues notes for 1,000 and 500 fr. (40*l.* and 20*l.*) payable in specie on demand. Its affairs are managed by a board of directors, named by the 50 principal shareholders. This board fixes the rate of discount, and the number of names that ought to guarantee each bill; it being left to the discount committee to judge of the responsibility of the signatures on the bills presented. At present (1843) the bank discounts bills having more than 40 days to run, and guaranteed by 3 signatures, at 4 per cent.

When bills are presented not having the required number of names, or those deemed suspicious, they

take, in guarantee, public stock bonds, or other effects, advancing to the extent of 9-10ths of their current value.

The bank advances 4ths of the value of gold and silver in ingots, or in foreign money deposited with them, at the rate of 5 per cent. per annum. It also accepts in deposit diamonds, plate, and every kind of valuable property, engaging to re-deliver the same in the state received for 3 per cent. per quarter, or 1 per cent. per annum.

Those who have accounts current with the bank may have all their payments made, and money received, by the bank, without fee. It allows no interest on balances, and never makes advances either on personal security or on mortgage.

The affairs of the bank are subject to the inspection of the Prefect, to whom half yearly reports of its situation are made. These are printed entire, and distributed to the 50 principal shareholders; an abstract being, at the same time, published in the Bordeaux journals.

**Brokers.**—No one is allowed to act as a mercantile broker in France who is not 25 years of age, and who has not served 4 years in a commercial house, or with a broker, or a notary public. They are nominated by the king, after their qualifications have been ascertained by the Chamber of Commerce. All brokers must deposit the sum of 8,000 fr. in the treasury as a guarantee for their conduct, for which they are allowed interest at the rate of 4 per cent. At present there are in Bordeaux 21 ship brokers, 24 merchandise do., 20 wine and spirit do., 7 insurance do., and 20 money and exchange do.: the latter form a separate class.

All foreigners are obliged to employ ship brokers to transact their business at the Custom-house; and although masters and owners of French vessels might sometimes dispense with their services, they never do so, finding it to be, in all cases, most advantageous to use their intervention. All duties outward on vessels and cargoes are paid by the ship brokers, who invariably clear out all vessels; French as well as foreign.

**Rates of Commission.**—1. Ship brokers:—Vessel in ballast, 50 cents (5d.) per ton; vessel loaded per charter or on owner's account, 1 fr. (10d.) per ton. 2. Merchandise brokers:—3 per cent. on colonial produce, and other goods. 3. Wine and spirit brokers:—2 per cent. on wine, &c. 4. Insurance brokers:—3 per cent. 5. Money brokers:—3 per cent. on Paris and foreign paper; 4 per cent. on Bordeaux do. 6. Merchants:—2 per cent. on all sorts of operations between natives; 2½ per cent. on all sorts of operations between strangers; 3 per cent. on litigious affairs; 1 per cent. on goods *in transitu*, when the consignment is present; ½ per cent. on banking affairs.

**Insurance** of ships, houses, and lives is effected at Bordeaux. The first is carried on partly by individuals, and partly by companies; the last two by companies only. The partners in these associations are generally liable only to the amount of the shares they respectively hold.

For statements as to the *Warehousing System, Smuggling, &c.* the reader is referred to the article **HAVRE**.

**Quarantine** is performed at Trompeloup, where a spacious lazaretto has been constructed. Bordeaux is a favourable place for repairing and careening ships, and for obtaining supplies of all sorts of stores.

The *exchange or money brokers* of Bordeaux follow the mode of business pretty similar to the London private bankers. They receive, negotiate, and pay bills and orders of such houses as have accounts opened with them, charging and allowing an interest on balances, which varies from 3 to 4½ per cent., according to circumstances. They charge ½ per cent. for negotiating bills, and ¼ per cent. on all the payments they make.

There are, besides, numerous capitalists who employ their spare funds in discounting bills. They prefer bills at long dates, and take from 5 to 6 per cent. discount, according to the confidence they have in the paper presented.

There are not wanting individuals who guarantee, with their names, every sort of paper presented, taking from 5 to 60 per cent. for the risk.

**Customary Mode of Payment, and Length of Credit.**—Colonial produce, spices, dye stuffs, and metals are usually sold for cash, with 3 per cent. discount. Corn, flour, brandy, and several other articles, are sold for net cash, without discount.

Wines are generally bought of the cultivators at 12 and 15 months' credit, or 6 per cent. discount. When they change hands amongst the merchants, the practice is to sell for cash, allowing 3 or 5 per cent. discount.

The usage is generally established in Bordeaux, to consider all paper having less than 30 days to run as *cash*; and with such all payments are made, where there is not an express stipulation to be paid in coin.

**Tares.**—The tares allowed in Bordeaux are as follows:—

At Custom-house.	In Commerce.	At Custom-house.	In Commerce.
Cotton in bales, 6 per cent.	Large square bales, 6 per cent. Smaller do., 8 per cent. Round do., 4 per cent. In bids, 17 per cent. Tret per hhd. 1 kil. (2-24 lbs.)	Indigo, in chests, real tare.	In chests, real tare. In serons weighing from 45 to 55 kil. (101 to 125 lbs.), 7 kil. Do. 55 to 60 kil. (122 to 146 lbs.), 8 kil. Do. 60 to 72 kil. (133 to 160 lbs.), 9 kil. Do. 72 to 80 kil. (160 to 178 lbs.), 10 kil. Do. 80 to 107 kil. (214 to 240 lbs.), 11 kil.
Sugar in bids, 15 per cent.	Tret per hhd. 1 kil. (2-24 lbs.)	Ashes, pot end pearl, 12 per cent.	Pot and pearl, 12 per cent.
Do. in cases, Havannah, &c., 10 per cent.	In cases, Havannah, &c., 14 per cent. Tret per case, 1 kil. (2-24 lbs.)	Querciton bark, real tare.	In casks of 200 kil. and above (443 lbs.), 12 per cent. Do. from 150 to 200 kil. (337 to 448 lbs.), 15 per cent. Do. from 120 to 150 kil. (269 to 336 lbs.), 20 per cent.
Do. in bales from Bourbon, Mauritius, Manila, &c., nett.	In bales from Bourbon, &c., real Mauritius, Manila, &c., 8 per cent.	Peruvian bark, real tare.	In chests, fire nett. Do. above 75 kil. (168 lbs.), 2 kil. In serons, 50 to 60 kil. (112 to 134 lbs.), 3 kil.	Cochinal, real tare. Gum in casks, do. Mace and nutmegs, do. Annatto, none.	Saxaparilla, real tare, or 2 per cent.
Cocoa in bags, tare nett, or 2 per cent.	Do. 60 kil. (131 lbs.), 1 kil. Do. from 60 to 75 kil. (135 to 168 lbs.), 1½ kil. Do. above 75 kil. (168 lbs.), 2 kil.		
Pepper in bags, 2 per cent.			

\* \* \* The instructive details with respect to the trade of Bordeaux given above, so very superior to what are to be found in any other publication, have been principally derived from the private communications of intelligent parties on the spot; but some particulars have been learned from official sources.

**Operation of the French Commercial System on the Trade of Bordeaux, &c.**—The trade of this great city has suffered severely from the short-sighted, anti-social policy of the

French government. This policy was first broadly laid down, and systematically acted upon, by Napoleon; and we believe it would not be difficult to show that the privations it entailed on the people of the Continent powerfully contributed to accelerate his downfall. But those by whom he has been succeeded have not hitherto seen the expediency of returning to a sounder system; on the contrary, they have carried, in some respects at least, the "continental system" to an extent not contemplated by Napoleon. Notwithstanding the vast importance to a country like France, of supplies of iron and hardware at a cheap rate, that which is produced by foreigners is excluded, though it might be obtained for a third part of the price of that which is manufactured at home. A similar line of policy has been followed as to cotton yarn, earthenware, &c. And in order to force the manufacture of sugar from the beet-root, oppressive duties have been laid, not only on foreign sugar, but even on that imported from the French colonies. The operation of this system on the commerce and industry of the country has been most mischievous. By forcing France to raise, at home, articles for the production of which she has no natural or acquired capabilities, the exportation, and consequently the growth, of those articles in the production of which she is superior to every other country, has been very greatly narrowed. All commerce being bottomed on a fair principle of reciprocity, a country that refuses to import must cease to export. By excluding foreign produce — by refusing to admit the sugar of Brazil, the cottons and hardware of England, the iron of Sweden, the linens of Germany, and the cattle of Switzerland and Wirtemberg — France has done all that was in her power to drive the merchants of those countries from her markets. They are not less anxious than formerly to obtain her wines, brandies, and silks; inasmuch, however, as commerce is merely an exchange of products, and as France will accept very few products belonging to others, they cannot, how anxious soever, maintain that extensive and mutually beneficial intercourse with her they would otherwise carry on: they sell little to her, and their purchases are, of course, proportionally diminished.

This, indeed, is in all cases the necessary and inevitable effect of the prohibitive system. It never fails to lessen exportation to the same extent that it lessens importation; so that, when least injurious, it merely substitutes one sort of industry for another — the production of the article that had been obtained from the foreigner, for the production of that which had been sent to him as an equivalent. — (See *COMMERC.*)

France is not only extremely well situated for carrying on an extensive intercourse with foreign countries, but she is largely supplied with several productions, which, were she to adopt a liberal commercial system, would meet with a ready and advantageous sale abroad, and enable her to furnish equivalents for the largest amount of imports. The superiority enjoyed by Amboyna in the production of cloves is not more decided than that enjoyed by France in the production of wine. Her claret, burgundy, champagne, and brandy are unrivalled; and furnish, of themselves, the materials of a vast commerce. Indeed, the production of wine is, next to the ordinary business of agriculture, by far the most extensive and valuable branch of industry in France. It is stated by the landholders and merchants of the department of the Gironde, in the admirable *Pétition et Mémoire à l'Appui*, presented by them to the Chamber of Deputies in 1828, that the quantity of wine annually produced in France amounts, at an average, to about 40,000,000 hectolitres, or 1,060,000,000 gallons; that its value is not less than from 800,000,000 to 1,000,000,000 francs, or from 32,000,000*l.* to 40,000,000*l.* sterling; and that upwards of *three millions* of individuals are employed in its production. In some of the southern departments, it is of paramount importance. The population of the Gironde, exclusive of Bordeaux, amounts to about 450,000 individuals, of whom no fewer than 230,000 are supposed to be directly engaged in the cultivation of the vine.

Here, then, is a branch of industry in which France has no competitor, which even now affords employment for about a tenth part of her population, and which is susceptible of indefinite extension. She has, in this single article, the means of carrying on the most extensive and lucrative commerce. "*Le gouvernement Français,*" says M. Chaptal, in his work *Sur l'Industrie Française*, "*doit les plus grands encouragements à la culture des vignes, soit qu'il considère ses produits relativement à la consommation intérieure, soit, qu'il les envisage sous le rapport de notre commerce avec l'étranger, dont il est en effet la base essentielle.*"

But instead of labouring to extend this great branch of industry, government has consented to sacrifice it to the interests of the iron-founders, the cotton and linen manufacturers, and the planters of Martinique and Guadeloupe! We do not, indeed, imagine that they were at all aware that such would be the effect of their policy. There is only one instance, among myriads that may be specified, to prove that ignorance in a ministry is quite as pernicious as bad intentions. The consideration, apparently not a very recalcitrant one, that, notwithstanding the bounty of nature, wine was not gratuitously produced in France, and could not, therefore, be exported except for an equivalent, would seem never to have occurred to the ministers of Louis XVIII. and Charles X.

But those whose interests were at stake, did not fail to apprise them of the hollowness of their system of policy. In 1822, when the project for raising the duties on sugar, iron, linens, &c. was under discussion, the merchants of Bordeaux, Nantes, Marseilles, and other great commercial cities, the silk manufacturers of Lyons, and the wine-growers of the Gironde, and some other departments, presented petitions to the Chambers, in which they truly stated, that it was a contradiction and an absurdity to attempt selling to the foreigner, without, at the same time, buying from him; and expressed their conviction, that the imposition of the proposed duties would be fatal to the commerce of France, and would consequently inflict a very serious injury on the wine-growers and silk manufacturers. These representations did not, however, meet with a very courteous reception. They were stigmatised as the work of ignorant and interested persons. The Chambers approved the policy of ministers; and in their ardour to extend and perfect it, did not hesitate deeply to injure branches of industry on which several millions of persons are dependent, in order that a few businesses, nowise suited to France, and the support of which costs her several millions a year, might be bolstered up and protected!

It is plain, had there not been some powerful counteracting cause in operation, that the exports of wine from France should have been very greatly augmented since the peace of 1815. The United States, Russia, England, Prussia, and all those countries that have at all times been the great importers of French wines, have made prodigious advances in wealth and population since 1789; and, had the commerce with them not been subjected to injurious restrictions, there is every reason to think that their imports of French wine would have been much greater now than at any former period. So far, however, from this being the case, they have declined in a most extraordinary degree. This is proved beyond all question by the following extract from a report made to the Council General of the Gironde in 1841, and published by its orders and with its sanction.

"Previously to 1790, the wine trade at Bordeaux had an immense development. The books of our most ancient houses, transmitted down religiously from father to son, and the registries of our lands, prove that in the years preceeding 1787 our exports had reached more than 100,000 tuns of wine, 10,000 casks of brandy, and 5,000 of vinegar. They also show that from 1,200 to 1,400 vessels from the north took large quantities of wine, in return for their national produce, which they easily disposed of amongst us. It was a most lucrative commerce, for we then sent 15,000 tuns to Prussia, 18,000 to England and Ireland, 6,000 to Dantzic, 40,000 to Hamburg, Lubeck, and Bremen, 10,000 to Holland, 7,000 to Sweden, 5,000 to Denmark and Norway, and 12,000 to the United States. But at that period we had not closed our frontiers to the produce of all these nations; we received at moderate duties their woollens, linens, hemp, iron, wood, cattle, and other articles, the consumption of which was less expensive, and the quality better, than similar articles made at home, and forced on us by customs duties. At present, notwithstanding the rapid increase of commercial affairs, notwithstanding the new nations of America, the advantages of a more expeditious, certain, and economical navigation, the demands of nations increased in number and industry, and consequently more disposed to purchase for consumption, our commerce is declining in a most alarming manner. Authentic documents prove that, in 1839, our exports only reached 1,399 tuns to England, 2,499 to Russia, 147 to Sweden, 342 to Norway, 2,964 to Prussia, 612 to Denmark, 8,188 to the Hans Towns, and 7,621 to the Netherlands. Since then our exports have not increased, so that instead of 100,000 tuns at least taken by the north of Europe from the department of the Gironde previously to 1790, not more than 25,000 tuns are taken at present. Yet, the taste for wine and the necessity to use it, have not been weakened amongst the various nations; but the exaggerated duties with which its introduction has been loaded, only allow it to be consumed by the wealthy classes, who are everywhere the least numerous. These duties are established in retaliation of those which France lays on foreign productions. If the exportation of wine has diminished in so great a proportion, the cause must be sought in the protective system. When the variations in the exports of wine are attentively examined, and their decrease looked to since 1822, when this system attained its height, to 1840, it is impossible not to be struck with the fact that these variations are intimately connected with the system itself. The decrease in the exports of wine has followed the increased development of the protective system, and, therefore, we are forced to draw this conclusion, that it is this system which destroys our export trade. Yet foreign consumption is the most certain and most profitable for Bordeaux wines, and it is particularly in the markets of the north of Europe and of England that the wines of the finest quality which our department produces find purchasers. Let us, then, insist on the necessity of re-opening these markets, which have been closed by the enormous amount of duties imposed by foreigners in reprisal of those laid by us on their products."

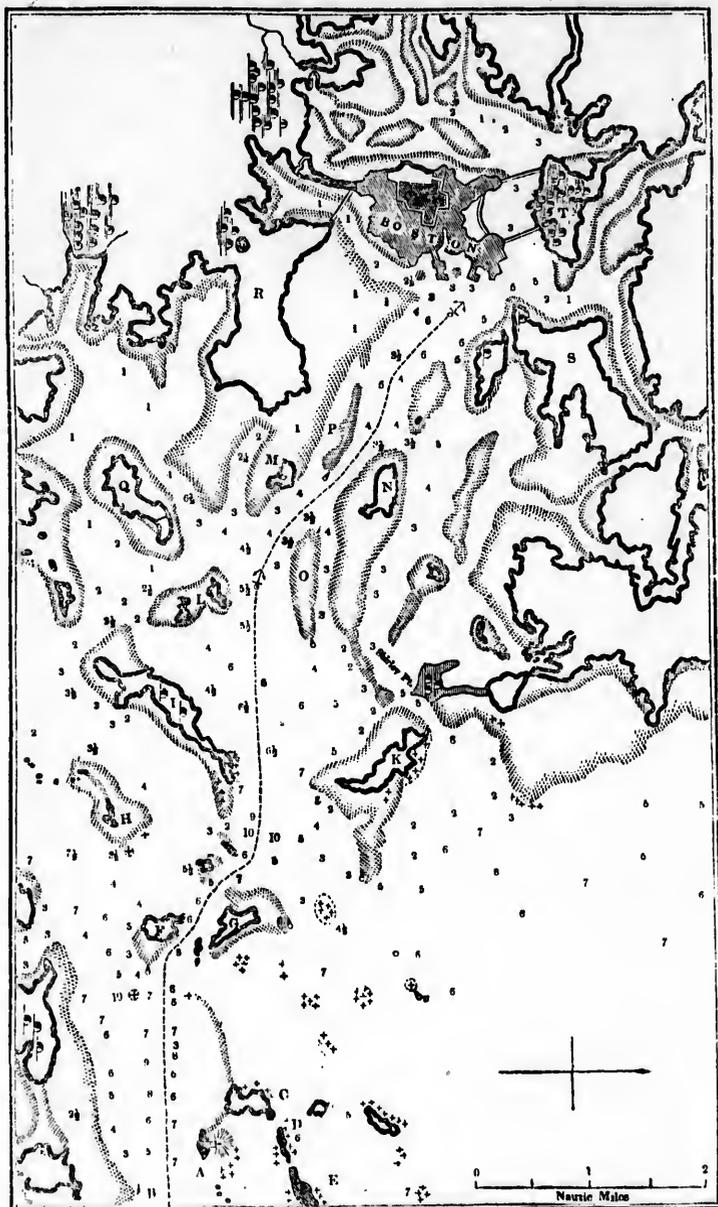

Besides the injury inflicted on the wine trade by the prohibitive system of commercial

policy adopted in France, and the retaliatory measures it has provoked in other countries, it has suffered severely from the octrois and other duties on internal consumption. But the depression, though felt everywhere, is greatest in the Gironde, which is especially dependent on its export trade. This is strikingly evinced by the large stocks of wine that remain in the hands of the growers and merchants, and by the fall in its price. This has, of course, reacted on the vineyards, many of which have become all but unseable; and a stop has been put to every sort of improvement. Nor have matters been in the least amended during the current year: on the contrary, they seem to be gradually getting worse. Such is the poverty of the proprietors, that wine is now frequently seized and sold by the revenue officers in payment of arrears of taxes; and such is at present the extent of the evil, that, in the course of this year, 1843, the committee of wine growers have applied to government for a loan of 2,000,000 francs to be applied to the payment of taxes due by the wine growers.

Such are the effects of the restrictive system of policy on the wine trade of France,—on a branch of industry which, as already seen, employs *three millions* of people. It is satisfactory, however, to observe, that the landowners and merchants are fully aware of the source of the misery in which they have been involved. They know that they are not suffering so much from hostile or vindictive measures on the part of foreigners, as from the blind and senseless policy of their own government; that they are victims of an attempt to counteract the most obvious principles—to make France produce articles directly at home, which she might obtain from the foreigner in exchange for wine, brandy, &c. at a third or a fourth part of the expense they now cost. *They cannot export, because they are not allowed to import.* Hence they do not ask for bounties and prohibitions; on the contrary, they disclaim all such quack nostrums; and demand what can alone be useful to them, and beneficial to the country,—a free commercial system. And notwithstanding the powerful interests involved in the support of the prohibitive policy, we cannot doubt but that, in the end, they will be compelled to give way; and that France, by opening her ports to a freer importation of foreign products, will insure the proportional extension of her exports of wines, brandies, silks, and other products, which she can furnish more cheaply and of a better quality than any other country. It is reasonable to suppose, that the experience that has been afforded of the ruinous effects of the prohibitive system, and the more general diffusion of correct ideas with respect to the real sources of wealth, will at no distant period occasion the adoption of such changes in the commercial legislation of France, as may render it more conducive to her interest, and more in accordance with the spirit of the age. Indeed we incline to think that but for the unfortunate misunderstanding about the Turkish question, and the irritation thence arising, a commercial treaty on a comparatively liberal footing would have been already entered into between France and this country; and it is much to be wished that some such arrangement should speedily be completed. If, indeed, we were hostile to France, we should wish her to continue her present system, for it must effectually prevent her making any considerable progress either in manufactures or commerce; but we disclaim being actuated by any such feelings. We are truly anxious for her prosperity, for her sake and our own; for unless she be surrounded by Bishop Berkeley's wall of brass, whatever contributes to her well-being must, in some degree, redound to the advantage of her neighbours.

"Were such narrow and malignant politics to meet with success," said Mr. Hume, writing in the middle of the last century, and when the prosperity of others was generally regarded with an evil eye, "we should reduce all our neighbouring nations to the same state of sloth and ignorance that prevails in Morocco and the coast of Barbary. But what would be the consequence? They could send us no commodities; they could take none from us: our domestic commerce itself would languish for want of emulation, example, and instruction; and we ourselves should soon fall into the same abject condition to which we had reduced them. I shall, therefore, venture to acknowledge, that not only as a man, but as a British subject, I pray for the flourishing commerce of Germany, Spain, Italy, and even France itself. I aim, at least, certain that Great Britain, and all those nations, would flourish more, did their sovereign and ministers adopt such enlarged and benevolent sentiments towards each other."—(*Essay on the Jealousy of Trade.*)

BOSTON, a commercial city of the United States, the capital of Massachusetts, and the largest town of New England, lat. 42° 23' N., long. 71° 4' W. Population, in 1840, 83,707. The city is situated on a peninsula near the bottom of a large and deep bay, being surrounded on all sides by water, except on the south, where it is joined to the main land by the narrow isthmus called Boston Neck. But it communicates, by means of extensive wooden bridges, with Charleston on the north side of the bay, and with Dorchester on the south. Boston Bay is of great extent, and is studded with many islands. The plan, on the opposite side, will give a better idea of it than could be derived from any description.

**References to Pilotage.**—A, outer light-house, 65 feet high, having a revolving light, 10 feet above the top of the shaft, off Abiorion Point; B, D, R, Great Middle, and Outward Brewster's Islands; C, George's Island. The passage for ships, lying between the islands and the rocks on the opposite side of Lovell's Island (H), being very narrow, it is, in effect, the key of the harbour, and large sums have recently been expended on its fortification. To the south of George's Island, and Ingham's Island (I), is Nantasket Point, where there is good anchorage. The outer light-house lies to the west of Lovell's (H) and George's (F) Islands, being separated from the inner harbour by Eagle Island, and the low-lying island (N). On the north end of Long Island (J) is a light-house fixed light, 27 feet high. K, Tree Island; L, Pine-tree Island; O, Middle Ground, Key at Lull; P, Coupe, and Middle Ground, having, as abut, only a few water; Q, Thompson's Island; R, Dorchester Point; S, Nantasket Island; T, Charlestown; Governor's Island (M), Coat's Island (N), and Nantasket Island (O), are all fortified. The course that a ship ought to steer is marked by the dotted line, leading between the light-house and Abiorion Point, and between George's Island (F) and Lovell's Island (H). The soundings are laid down in fathoms as follows:

**Shipping.**—According to the official accounts laid before Congress, since July, 1844, (the registered, enrolled, and licensed tonnage belonging to Boston in 1844) average 1,000,000 tons, of which 10,000 tons were employed in the coasting trade, and 1,700 in the fisheries.

**Shipping Charges.**—For an account of these, see New York.

**How to enter the Port.**—In coming from the Atlantic, a ship should first bring the light-house to bear W. by N. to W. N. W. and run direct for it. The largest ships may pass it at within less than a cable's length. If there be no pilot on board, or the master be unacquainted with the harbour, or the wind be north-westerly, which is the most unfavourable for entering, she had better steer W. by S. for Nantasket roads, where she may anchor, and get a pilot.

**Moorings, &c.**—Generally speaking, there is sufficient depth of water to moor the largest ships to come up to town at all times of the tide. The usually moor alongside quays or wharfs, where they lie in perfect safety. There are in all about 60 wharfs, which for the most part, are built on a high and a superstructure of stone and earth. The two principal are "Long Wharf," 550 yards in length; and "Central Wharf," 415 yards long by 50 in breadth, having a range of lofty timber stores and warehouses along its whole length.

**Pilotage.**—No particular place is designated at which vessels may anchor for a pilot. But all vessels, with the exception of coasters under 500 tons, and American vessels laden with plaster of Paris from British America, if hailed by a pilot within about 14 mile of the outer light, must take him on board, under a penalty of 50 dollars. If they have got within this distance before being hailed, the obligation to take a pilot on board ceases. This regulation has obviously been dictated by a wish to have the pilots constantly on the alert; it being supposed that masters not well acquainted with the bay will have to take one on board, though they have got within the free limits.

Table of the Rates of Pilotage on Outward and Inward bound Vessels in the Port of Boston.

**Coasting, Glass, &c.**—Boston is a very favourable place for screening and repairing ships. All kinds of supplies may be had of the land rights and of immediate prices.

**Immigration.**—The number of immigrants arriving at Boston in any great season passing 1,000 in a year. A circular decree directs that the masters of vessels bringing immigrants shall enter into a bond with securities to the amount of 200 dollars

for each immigrant, that he shall not become a charge upon the state for 3 years, or pay a commutation of 5 dollars on account of each individual. But this regulation does not apply to immigrants having a reasonable amount of property; the declaration of the foreign consuls at this point is commonly acted upon.

**Trade of Boston, &c.**—Boston has a very extensive trade with the southern states and with foreign countries, and is also one of the principal seats of the American fisheries. She is wholly indebted to her southern neighbours, and principally to New York, Maryland, and Pennsylvania, for supplies of flour and wheat, and for large quantities of barley, maize, oatmeal, oats, &c., as well as for cotton, tobacco, staves, rice, &c. Of these, the imports of flour may amount, at an average, to about 600,000 barrels a year; all sorts of grain, to about 2,200,000 bushels; cotton, 110,000 bales; staves, 3,000,000, &c. Her returns are made, partly in native raw produce, as beef, pork, lard, &c.; partly and principally in the produce of her manufacturing industry, in which Massachusetts is decidedly superior to every other state in the Union; and partly in the produce of her fisheries and foreign trade. At an average, Boston annually sends to the southern parts of the Union about 45,000 barrels of beef and pork; 165,000 barrels mackerel, herrings, alewives, &c.; 20,000 quintals of dried and smoked fish; 3,500,000 pairs of boots and shoes; 600,000 bundles of paper; besides a very large amount of cotton and woollen manufactured goods, nails, ice, furniture, cordage, &c.; so as to leave a large balance in her favour. Her exports of native produce to foreign countries consist principally of the same articles she sends to the southern states; but she also exports a large amount of the foreign produce she had previously imported. The imports from abroad consist principally of cotton and woollen goods; linens, canvas, &c.; hardware, silks, sugar, tea, coffee, wines and brandy, spices, hides, indigo, dyewoods, &c. The total imports from foreign countries into the state of Massachusetts in the year ending 30th of September, 1841, amounted to 20,318,003 dollars; while the exports of native produce, during the same year, amounted to only 7,397,692 dollars, and of native and foreign produce together, to 11,487,343 dollars; the balance against Massachusetts being paid off by bills upon the southern states, to which she exports much more than she imports. New York alone is, in fact, supposed to be at all times indebted to Boston about 5,000,000 dollars. We subjoin some statements illustrative of the trade of Boston.

**Flour.**—The quantity of Flour imported into Boston was—  
 In 1842 - 639,460 bush. In 1838 - 379,704 bush.  
 1841 - 674,353 " 1837 - 435,348 "  
 1840 - 619,261 " 1836 - 418,597 "  
 1839 - 456,667 " 1835 - 408,519 "

**Corn.**—The quantity of Corn imported into Boston was—  
 In 1842 - 1,835,165 bush. 393,174 38,416  
 1841 - 2,143,354 338,202 41,198

**Progress of Trade.**—The following statements show that the foreign trade of Boston has more than doubled within the last 10 years. The number of foreign arrivals has increased from 1,815, with a tonnage of 408,931, in 1838, to 4,729 in 1847, with an aggregate tonnage of 375,574; the tonnage cleared, from 156,884 to 356,708; the number of men employed in foreign bound ships, from 7,981 to 16,841; the value of imports, from \$13,463,166 to \$42,110,761; of exports, purely the products of American industry, from \$4,410,991 to \$8,837,778; and the amount of revenue collected, from \$7,518,398 40 to \$5,414,253 39.

Statement of the Value of Imports into, and Exports from Boston, with the Customs Revenue, from 1838 to 1847, both inclusive.

**Ice.**—In 1841 there were no fewer than 16 companies engaged in the business of shipping ice in Boston, for the southern parts of the Union, the Havannah, &c. But the trade has since vastly increased, and Boston ice is now found in every part of the world; immense quantities being shipped for S. America, the East Indies and China, the U. Kingdom, &c. At present (1848) the exports probably exceed 80,000 tons! It was formerly sold in New Orleans and the Havannah at 6 cents per lb., but it is now sold for 1 cent per ditto, and a similar reduction has taken place in its price in other emporiums. The ice, which is principally brought by railway from the Wenham Lake, about 18 miles from Boston, is remarkably pure and solid. It is sawn into square blocks, not less than 12 inches thick, and is packed in vessels with straw and hay, boxed with thin lumber made all-light. One of the companies paid 7,000 dollars in 1841, for the straw and hay they used for packing.

**British Royal Mail Packets.**—The mail packets between England and America (nine in number) sail from Liverpool every Saturday, alternately, for Boston and New York. The arrivals and departures noticed above, are exclusive of the packets in question. The latter, however, convey large quantities of the more valuable descriptions of goods; the imports by them into Boston in 1846 being estimated at \$4,445,000. They also convey large numbers of the more opulent class of passengers.

**Insurance Companies.**—In insurance, both fire and marine, is carried on to a great extent by joint-stock companies, and to some extent also by individuals. The stocks of the different insurance companies amounted in 1847 to \$1,575,000. There is a great deal of risk in the business, which is more, indeed, like a lottery than a regular trade; and the dividends, consequently, vary from next to nothing to 10, and sometimes even 20 per cent. or upwards. The dividends paid by the different companies varied, at an average of the previous 5 years, from 3 1/2 to 2 1/2 per cent.

**Banking.**—There were, in January 1848, in Boston, 26 Banking Companies, having an aggregate capital of \$18,863,650.

Their dividends have recently varied from 5 1/2 to 7 per cent.

**Credit.**—Foreign goods are frequently sold for ready money, but more usually at a credit of from 3 to 12 months; average length of credit, 6 months; but on iron and some other articles 12 months' credit is given. Discount for ready money at the rate of 6 per cent. per annum.

**Commission.**—The rates of commission are arbitrary, varying from 2 to 5, and sometimes (for *credes* included) to 7 1/2 per cent. On small accounts, and West India goods, 5 per cent. is usually charged. The ordinary rate may be taken at 4 per cent.; but competition is so great, that commission merchants

may be found who will transact business on almost any terms. Sometimes whole cargoes are sold by brokers on an average, and to recoup a specific sum in lieu of commission and broker's fee.

Money.—In Massachusetts, and throughout New England, the dollar passes as 6s.; so that the pound sterling = 11. 6s. 6d.

Roston currency.—(For full particulars as to Money, Weights, Measures, &c. see New York.) We have derived these details partly from official, partly from private information, and partly from tables and statements in Hunt's valuable Commercial Magazine.

**BOTARGO**, called in Provence *Bouargues*, a sausage made on the shores of the Mediterranean and the Black Sea, of the roe of the mullet. The best come from Tunis and Alexandria.

**BOTTLES** (Fr. *Bouteilles*; Ger. *Bouteillen*; It. *Bottiglie*, *Fiaschi*; Rus. *Builihi*; Sp. *Botellas*), glass vessels for holding liquids, too well known to require any description. They are exported in considerable quantities. The duty of 8s. a cwt. on bottle glass, like the duties on other descriptions of glass, was both oppressive in amount, and was imposed and collected in the most vexatious manner. Happily, however, it has been repealed.—(For further details, see GLASS.)

**BOTTOMRY AND RESPONDENTIA.**—Bottomry, in commercial navigation, is a mortgage of the ship. The owner or captain of a ship is, under certain circumstances, authorised to borrow money, either to fit her out so as to enable her to proceed on her voyage, or to purchase a cargo for the voyage, pledging the keel, or bottom of the ship (a part for the whole), in security for payment. In bottomry contracts it is stipulated, that if the ship be lost in the course of the voyage, the lender shall lose his whole money; but if the ship arrive in safety at her destination, the lender is then entitled to get back his principal, and the interest agreed upon, however much that interest may exceed the legal rate.—(*Black. Com.* book ii. c. 30.) The extraordinary hazard run by the lenders of money on bottomry, who, in fact, become adventurers in the voyage, has been held, in all countries, as justifying them in stipulating for the highest rate of interest.

When the loan is not on the ship, but on the goods laden on board, which, from their nature, must be sold or exchanged in the course of the voyage, the borrower's personal responsibility is then the principal security for the performance of the contract, which is therefore called *respondentia*. In this consists the principal difference between bottomry and respondentia. The one is a loan upon the ship, the other upon the goods. The money is to be repaid to the lender, with the *marine interest*, upon the safe arrival of the ship, in the one case, and of the goods in the other. In all other respects these contracts are nearly the same, and are governed by the same principles. In the former, the ship and tackle, being hypothecated, are liable, as well as the person of the borrower; in the latter, the lender has, in general, only the personal security of the borrower.

This contract, which *must always be in writing*, is sometimes made in the form of a deed poll, called a bill of bottomry, executed by the borrower or sometimes in the form of a bond or obligation, with a penalty. But whatever may be its form, it must contain the names of the lender and the borrower, the name of the ship and the master; the sum lent, with the stipulated marine interest; the voyage proposed, with the commencement and duration of the risk which the lender is to run. It must show whether the money is lent upon the ship, or upon goods on board, or on both; and every other stipulation and agreement which the parties may think proper to introduce into the contract.—(See the *Forms* at the end of this article.)

"It is obvious," says Lord Tenterden, "that a loan of money upon bottomry, while it relieves the owner from many of the perils of a maritime adventure, deprives him also of a great part of the profits of a successful voyage; and, therefore, in the place of the owners' residence, where they may exercise their own judgment upon the propriety of borrowing money in this manner, the master of the ship is, by the maritime law of all states, precluded from doing it, so as to bind the interest of his owners, without their consent. With regard to a foreign country, the rule appears to be, that if the master of a vessel has occasion for money to repair or victual his ship, or for any other purpose necessary to enable him to complete the enterprise in which she is engaged; whether the occasion arises from any extraordinary peril or misfortune, or from the ordinary course of the adventure; he may, if he cannot otherwise obtain it, borrow money on bottomry at marine interest, and pledge the ship, and the freight to be earned in the voyage, for repayment at the termination of the voyage. When this is done, the owners are never personally responsible. The remedy of the lender is against the master of the ship."—(*Law of Shipping*, part ii. c. 3.)

In bottomry and respondentia bonds, the lender receives the whole of his principal and interest, or nothing; *he is not answerable for general or particular average*; nor will any loss by capture, if subsequently recaptured, affect his claim. In this respect our law differs from that of France (*Code de Commerce*, art. 330.), and most other countries; the lenders on bottomry bonds being there subject to average, as our underwriters upon policies of insurance. No loss can void a bottomry contract, unless a total loss, proceeding from a peril of the sea, during the voyage, and within the time specified by the contract. If the loss happen through any default or act of the owners or master, to which the lender was not privy, he may still recover.

There is no restriction by the law of England as to the persons to whom money may be lent on bottomry or on *respondentia*, except in the single case of loans on the ships of foreigners trading to the East Indies, which are forbidden by the 7 Geo. I. stat. 1. c. 21. § 2.

It does not, however, appear to be necessary, in order to enable the master of a ship in a foreign port to obtain money for her repair, outfit, &c., that the contract pledging the vessel in security of the debt should be in the nature of a bottomry bond. Provided the person who advances the money do not choose to take upon himself the risk of the ship's return, and do not stipulate for *marine interest*, there seems," says Lord Tenterden, "to be no reason why the master should not pledge both the ship and the personal credit of the owner." And in the case of money advanced in this way to refit a ship in distress at Jamaica, which was captured on the voyage home, the lender recovered.—(*Law of Shipping*, part ii. c. 3.)

Bottomry contracts were well known to the ancients. At Athens, the rate of interest was not fixed by law; but the customary rate seems to have been about 12 per cent. But when money was lent for a voyage, upon the security of the ship and cargo, the interest, on account of the superior risk encountered by the lender, was in most cases much higher. In voyages to the *Taurica Chersonesus* and Sicily, it was sometimes as high as 30 per cent.—(*Anacharsis's Travels*, i. lv. p. 369. Eng. trans.) By the

\* Mr. Serjeant Marshall doubts this; but it was so decided by the Court of King's Bench in *Joyce v. Williamson*, 5. 11. Mich. 29 Geo. 3.

Rhodian law, the exactness of such high interest as is usual in bottomry was declared to be illegal, unless the principal was really exposed to the dangers of the sea. — (*Rorck's Public Economy of Athens*, vol. i. p. 177. Eng. trans.) This principle was adopted by the Romans, who gave to bottomry interest the name of *naviculum fœnus*; and has been transferred from the Roman law into all modern codes.

"Formerly," says Mr. Berjeant Marshall, "the practice of borrowing money on bottomry amid respondents was more general in this country than it is at present. The immense capitals now engaged in every branch of commerce render such loans unnecessary; and money is now seldom borrowed in this manner, but by the masters of foreign ships who put into our ports in need of pecuniary assistance to enable them to pay their men, to purchase provisions, &c. Sometimes officers and others belonging to ships engaged in long voyages, who have the liberty of trading to a certain extent, with the prospect of great profit, but without capitals of their own to employ in such trade, take up money on respondents to make their investments; but even this, as I am informed, is now not very frequently done in this country."

The term bottomry has sometimes been incorrectly applied to designate a contract, by the terms of which the ship is not pledged as a security, but the repayment of money, with a high premium for the risk, is made to depend upon the success of the voyage. This, however, is plainly a loan upon a particular adventure, to be made by a particular ship, and not a loan upon the ship, and, of course, the lender has only the personal security of the borrower for the due performance of the contract. And it seems that loans have sometimes been made in this manner, and probably also with a pledge of the ship itself, to an amount exceeding the value of the borrower's interest in the ship; and such a contract is still legal in this country in all cases, except the case of ships belonging to British subjects bound to or from the East Indies; as to which it is enacted (19 Geo. 2. c. 37. § 5.),

"That all sums of money lent on bottomry or respondents upon any ship or ships belonging to his Majesty's subjects, bound to or from the East Indies, shall be lent only on the ship, or on the merchandise or effects laden, or to be laden, on board of such ship, and shall be so expressed in the condition of the bond, and the benefit of salvage shall be allowed to the lender, his agents or assigns, who alone shall have a right to make assurance on the money so lent; and no borrower of money on bottomry or at respondents as aforesaid, shall be allowed to insure the value of his interest on the ship, or in the merchandise and effects laden on board of such ship, exclusive of the money so borrowed; and in case it shall appear that the value of his share in the ship, or in the merchandise and effects laden on board, doth not amount to the full sum or sums he hath borrowed as aforesaid, such borrower shall be responsible to the lender for so much of the money borrowed as he hath not laid out on the ship, or merchandise laden thereon. In the proportion the money so laid out shall bear to the whole money lent, notwithstanding the ship and merchandise be totally lost."

Lord Tenterden says that this statute was introduced for the protection of the trade of the East India Company; and its rules must be complied with in the case of bottomry by the masters of ships trading to the East Indies.

For a further discussion of this subject, see *Abbott on the Law of Shipping*, part ii. c. 3. § Marshall on *Insurance*, book ii.; and *Park on Insurance*, c. 31.

1. Form of a Bottomry Bond.

KNOW ALL MEN by these presents, That I, A. B., commander and two-thirds owner of the ship *Exeter*, for myself and C. D., remaining third-owner of the said ship, am hold and firmly bound unto E. F. in the penal sum of two thousand pounds sterling, for the payment of which well and truly to be made unto the said E. F., his heirs, executors, administrators, or assigns, I hereby bind myself, my heirs, executors, and administrators, jointly by these presents. In witness whereof I have hereunto set my hand and seal, this 14th day of December, in the year of our Lord 1766.

Witness as the above bound A. B. hath taken up and received of the said E. F. the full and just sum of one thousand pounds sterling, which sum is to run at respondents on the block and freight of the ship *Exeter*, whereof the said A. B. is now master, from the port or road of *Bombay* on the voyage to the port of *London*, having permission to touch, stay at, and proceed to all ports and places within the limits of the voyage, at the rate or premium of twenty-five per cent. (25 per cent.) for the voyage. In consideration whereof usual risks of the seas, rivers, enemies, fires, pirates, &c. are to be on account of the said E. F. And for the further security of the said E. F. the said A. B. doth by these presents mortgage and assign over to the said E. F., his heirs, executors, administrators, and assigns, the said ship *Exeter*, and her freight, together with all her tackle, apparel, &c. And it is hereby declared, that the said ship *Exeter* and her freight is thus assigned over for the security of the respondent taken up by the said A. B., and shall be delivered to no other use or purpose whatever until payment of this bond is first made, with the premium that may become due thereon.

Now THE CONDITION of this obligation is such, that if the above bound A. B., his heirs, executors, or administrators, shall and do well and truly pay, or cause to be paid, unto the said E. F. or his attorneys in *London* legally authorised to receive the same, their executors, administrators, or assigns, the full and just sum of 1,000*l.* sterling, being the principal of this bond, together with the premium which shall become due thereon, at or before the expiration of ninety days after the safe arrival of the said ship *Exeter* at her moorings in the river *Thames*, or in case of the loss of the said ship *Exeter*, such an average as by custom shall have become due on the salvage, then this obligation to be void and of no effect, otherwise to remain in full force and virtue. Having signed to three bonds of the same tenor and date the one of which being accomplished, the other two to be void and of no effect.

A. B. for self } (L. S.)  
and C. D. } (L. S.)

Signed, sealed, and delivered, where no stamped } G. H.  
paper is to be had, in the presence of } J. K.

In this bond the occasion of borrowing the money is not expressed, but the money was in reality borrowed to repair the ship *Exeter*, which, being on a voyage from *Bengal* to *London*, was obliged to put back to *Bombay* to repair. See *The Exeter*, *Whitford*, 1 Rob. A. R. 176. The occasion therefore of borrowing the money gave the lender the security of the entire interest of the ship. But this bond, although expressed to be executed by the master for himself and the other part-owner, would not bind the other part-owner personally, unless he had by a previous deed authorised the master to execute such a bond for him. — (*Abbott on the Law of Shipping*, part iii. c. 1. § 2.)

II. Form of a Bottomry Bill.

TO ALL MEN TO WHOM THESE PRESENTS SHALL COME. I, A. B., of *Bengal*, mariner, part-owner and master of the ship called the *Exeter*, of the burden of five hundred tons and upwards, now riding at anchor in *Table Bay*, at the *Cape of Good Hope*, send greeting;

Witness as I, the said A. B., part-owner and master of the aforesaid ship, called the *Exeter*, now in prosecution of a voyage from *Bengal* to the port of *London*, having put into *Table Bay* for the purpose of procuring provision and other supplies necessary for the continuation and performance of the voyage aforesaid, am at this time necessitated to take up upon the adventure of the said ship, called the *Exeter*, the sum of one thousand pounds sterling monies of Great Britain, for setting the said ship to sea, and furnishing her with provisions and necessaries for the said voyage, which sum C. D. of the *Cape of Good Hope*, master attendant, hath at my request lent unto me, and supplied me with, at the rate of twelve hundred and twenty pounds sterling for the said one thousand pounds, being at the rate of one hundred and twenty-two pounds for every hundred pounds advanced as aforesaid, during the voyage of the said ship from *Table Bay* to *London*. Now KNOW YE, that I, the said A. B., by these presents, do, for me,

my executors and administrators, covenant and grant to and with the said C. D. that the said ship shall, with the first convoy which shall offer for England after the date of these presents, sail and depart for the port of London, there to finish the voyage aforesaid. And I, the said A. B., in consideration of the sum of one thousand pounds sterling to me in hand paid by the said C. D. at and before the sealing and delivery of these presents, do hereby bind myself, my heirs, executors, and administrators, my goods and chattels, and particularly the said ship, the tackle and apparel of the same, and also the freight of the said ship, which is or shall become due for the aforesaid voyage from Bengal to the port of London, to pay unto the said C. D., his executors, administrators, or assigns, the sum of twelve hundred and twenty pounds of lawful British money, within thirty days next after the safe arrival of the said ship at the port of London from the same intended voyage.

AND I, the said A. B., do, for me, my executors and administrators, covenant and grant to and with the said C. D., his executors and administrators, by these presents, that I, the said A. B., at the time of sealing and delivering of these presents, am a true and lawful part-owner and master of the said ship, and have power and authority to charge and engage the said ship with her freight as aforesaid, and that the said ship, with her freight, shall, at all times after the said voyage, be liable and chargeable for the payment of the said twelve hundred and twenty pounds, according to the true intent and meaning of these presents.

AND lastly, It is hereby declared and agreed by and between the said parties to these presents, that in case the said ship shall be lost, miscarry, or be cast away before her arrival at the said port of London from the said intended voyage, that then the payment of the said twelve hundred and twenty pounds shall not be demanded, or be recoverable by the said C. D., his executors, administrators, or assigns, but shall cease and determine, and the loss thereby be wholly borne and sustained by the said C. D., his executors and administrators, and that then and from thenceforth every act, matter, and thing herein mentioned on the part and behalf of the said A. B. shall be void; any thing herein contained to the contrary notwithstanding.

In WITNESS whereof the parties have interchangeably set their hands and seals to four bonds of this tenor and date, one of which being paid, the others to be null and void.

At the Cape of Good Hope, this 15th day of November, in the year of our Lord one thousand eight hundred and thirty.

Witness, { E. F.

          { J. K.

A. B.

(L. S.)

**BOUNTY**, a term used in commerce and the arts, to signify a premium paid by government to the producers, exporters, or importers of certain articles, or to those who employ ships in certain trades.

1. *Bounties on production* are most commonly given in the view of encouraging the establishment of some new branch of industry; or they are intended to foster and extend a branch that is believed to be of paramount importance. In neither case, however, is their utility very obvious. In all old settled and wealthy countries, numbers of individuals are always ready to embark in every new undertaking, if it promise to be really advantageous, without any stimulus from government; and if a branch of industry, already established, be really important and suitable for the country, it will assuredly be prosecuted to the necessary extent, without any encouragement other than the natural demand for its produce.

2. *Bounties on Exportation and Importation.* — It is enacted by the 3 & 4 Will. 4. c. 52, that a merchant or exporter claiming a bounty or drawback on goods exported must make oath that they have been actually exported, and have not been re-landed, and are not intended to be re-landed, in any part of the United Kingdom, or in the Isle of Man (unless entered for the Isle of Man), or in the Islands of Faro or Ferro; and it is further enacted, that if any goods cleared to be exported for a bounty or drawback shall not be duly exported to parts beyond the seas, or shall be re-landed in any part of the United Kingdom, or in the Islands of Faro or Ferro, or shall be carried to the Islands of Guerosey, Jersey, Alderney, Sark, or Man (not having been duly entered, cleared, and shipped for exportation to such islands), such goods shall be forfeited, together with the ship or ships employed in re-landing or carrying them; and any person by whom or by whose orders or means such goods shall have been cleared, re-landed, or carried, shall forfeit a sum equal to treble the value of such goods. — § 87—95.

3. *Policy of Bounties.* — It was formerly customary to grant bounties on the exportation of various articles; but the impolicy of such practice is now very generally admitted. It is universally allowed that bounties, if they be given at all, should be given only to the exporters of such commodities as could not be exported without them. But it is plain that, by granting a bounty in such cases, we really tax the public, in order to supply the foreigner with commodities at less than they cost. A. has a parcel of goods which he cannot dispose of abroad for less than 110*l.*; but they will fetch only 100*l.* in the foreign market; and he claims and gets a bounty of 10*l.* to enable him to export them. Such is the mode in which bounties on exportation uniformly operate; and to suppose that they can be a means of enriching the public, is equivalent to supposing that a shop-keeper may be enriched by selling his goods for less than they cost!

But however injurious to the state, it has been pretty generally supposed that bounties on exportation are advantageous to those who produce and export the articles on which they are paid. But the fact is not so. A trade that cannot be carried on without the aid of a bounty, must be a naturally disadvantageous one. Hence, by granting it, individuals are tempted to engage or continue in businesses which are necessarily very insecure, and are rarely capable of being rendered lucrative; at the same time that they are prevented, by trusting to the bounty, from making those exertions they naturally would have made, had they been obliged to depend entirely on superior skill and industry for the sale of their produce. The history of all businesses carried on in this country by the aid of bounties, proves that they are hardly less disadvantageous to those engaged in them than to the public.

The truth of these remarks has been acknowledged by government. The bounty on the exportation of corn was repealed in 1815; and the bounties on the exportation of linen and several other articles ceased in 1830.

4. *Bounties on Shipping* have principally been paid to the owners of vessels engaged in the fishery, and their influence will be treated of under the articles *HERRING FISHERY* and *WHALE FISHERY*.

For an account of the bounties that still exist, see the article *TARIFF*.

**BOX-WOOD** (Ger. *Buchsbaum*; Du. *Palmhout*; Fr. *Fuis*; It. *Busso, Bosso, Bossole*), the wood of the box tree (*Buxus sempervirens*), growing wild in several places in Great Britain. This tree was greatly admired by the ancient Romans, and has been much cultivated in modern times, on account of the facility with which it is fashioned into different forms. Box is a very valuable wood. It is of a yellowish colour, close-grained, very hard, and heavy; it cuts better than any other wood, is susceptible of a very fine polish, and is very durable. In consequence, it is much used by turners, and mathematical and musical instrument makers. It is too heavy for furniture. It is the only wood used by the engravers of wood-cuts for books; and provided due care be exercised, the number of impressions that may be taken from a box-wood cut is very great. In France, box-wood is extensively used for combs, knife-handles, and button moulds; and sometimes, it has been said, as a substitute for hops in the manufacture of beer. The value of the box-wood sent from Spain to Paris is reported to amount to about 10,000 fr. a year. In 1815, the box trees cut down on Box-hill, near Dorking in Surrey, produced upwards of 10,000*l*. They are now, however, become very scarce in England. Previously to 1837 the duty on box-wood was quite oppressive, being 5*l*. a ton if brought from a foreign country, and 1*l*. a ton if from a British possession; but it was then reduced to 10*s*. a ton without reference to origin. In 1841 this duty produced 554*l*., showing that 1108 tons had been entered for consumption. In 1842 the duty on box-wood from a British possession was reduced to 2*s*. 6*d*. a ton. Turkey box-wood sells in the London market for from 4*l*. 10*s*. to 8*l*. 15*s*. a ton, duty included.

**BRAN**, the thin skins or husks of corn, particularly wheat, ground, and separated from the corn by a sieve or boulder.

**BRANDY** (Ger. *Brandwein*; Du. *Brandewyn*; Fr. *Eau de vie, Brandy*; It. *Aquazente*; Sp. *Aguardiente*; Port. *Aguardente*; Rus. *Wino*; Lat. *Vinum adustum*), a spirituous and inflammable liquor, obtained by distillation from wine and the husks of grapes. It is prepared in most of the wine countries of Europe; but the superiority of French Brandy is universally admitted. The latter is principally distilled at Bordeaux, Rochelle, Cognac, the Isle de Rhé, Orleans, Nantes, and in Poitou, Touraine, and Anjou. That of Cognac is in the highest estimation.

Wines of all descriptions, but chiefly those that are strong and harsh (*poussés*), are used in the manufacture of brandy. The superior vintages, and those that have most flavour, are said to make the worst brandy. It is naturally clear and colourless. The different shades of colour which it has in commerce, arise partly from the casks in which it is kept, but chiefly from the burnt sugar, saunders wood, and other colouring matter intentionally added to it by the dealers. It is said that the burnt sugar gives mellowness to the flavour of the liquor, and renders it more palatable.

The art of distillation is believed to have been first discovered by the Arabians. From a passage in the *Testamentum Novissimum* of the famous Raymond Lully, who flourished in the thirteenth century, it would appear that the production of brandy and alcohol from wine was familiar to his contemporaries.—(p. 2. edit. *Argent*. 1571.) But the practice does not appear to have been introduced into France till 1313.—(*Le Grand d'Aussi Vie privée de François*, t. iii. p. 64.) When first introduced, brandy or burnt wine (*vinum adustum*) appears to have been used principally as an antiseptic and restorative medicine; and the most extravagant panegyrics were bestowed on its virtues. It was described as a sovereign remedy in almost all the disorders of the human frame; it was commended for its efficacy in comforting the memory, and strengthening the reasoning powers; it was extolled, in short, as the elixir of life, and an infallible preservative of youth and beauty!—(*Henderson's Hist. of Wine*, p. 24.) Dr. Henderson says that the experience of later times has shown how little this eulogy was merited; but in this he is contradicted by Burke, who maintains, with equal eloquence and ingenuity, that "the *alembic* has been a vast benefit and blessing."—(*Thoughts and Details on Scarcity*, p. 41.)

Brandy formed, for a lengthened period, a prominent article in the exports of France; few ships sailing from Bordeaux, Rochelle, or Nantes, without taking a certain quantity of it on board; but of late years there has been an extraordinary falling off in the exports of brandy as well as of wine. We subjoin—

Account of the Quantities and Values of the Brandy exported from France during each of the 10 Years ending with 1839, to the United Kingdom and to all Countries.

*Duties on Brandy in Great Britain and Ireland. Quantities consumed.*— In nothing, perhaps, has the injurious operation of oppressive duties been so strikingly exemplified as in the case of brandy. At the latter end of the seventeenth century, when the duty on brandy did not exceed 9*l.* a tun, the imports into England amounted to about 6,000 tuns, or 1,512,000 gallons—(*Historical and Political Remarks on the Tariff of the late Treaty, 1786, p. 113.*); whereas at present, notwithstanding our vast increase in wealth and population since the period referred to, we do not import so much brandy as we did then! Nor is this extraordinary circumstance to be ascribed to any preference on the part of the public to other beverages, but is wholly owing to the exorbitant duties with which brandy is loaded. The price of brandy in bond varies, at this moment, according to quality, from 3*s.* to 5*s.* a gallon (Imperial measure), while the duty is no less than 22*s.* 10*d.* Had the imposition of such a duty taken away the taste for brandy, it would have been comparatively innocuous. But it has done no such thing. Its only effect has been to convert a trade, that might otherwise have been productive of the most advantageous results, into a most prolific source of crime and demoralisation. The temptation to smuggle, occasioned by the exorbitancy of the duty, is too overpowering to be counteracted by the utmost penalties of the law. All along the coasts of Kent and Sussex, and the districts most favourably situated for running spirits, almost the whole of the labouring population are every now and then withdrawn from their ordinary employments, to engage in smuggling adventures. The efforts of the revenue officers to seize foreign brandy and geneva have in innumerable instances been repelled by force. Bloody and desperate contests have, in consequence, taken place. Many individuals who, but for this fiscal scourge, would have been industrious and virtuous, have become idle, predatory, and ferocious; they have learned to despise the law, to execute summary vengeance on its officers; and are influenced by a spirit that has been, and may be, turned to the most dangerous purposes.

Neither can it be truly said that this miserable system is upheld for the sake of revenue. On the contrary, it is easy to show that, besides the other mischievous effects it entails on the public, it occasions the loss of at least 1,000,000*l.* a year. In 1786, Mr. Pitt, by a wise and politic measure, took 50 per cent. from the duty on brandy and geneva; (the duty on the latter has been for a lengthened period the same as that on brandy;) and instead of being diminished, the revenue was increased. In 1790, when the duty on brandy and geneva was 5*s.* the wine gallon, the quantity retained for home consumption was 2,225,590 gallons. During the 3 years ending with 1803, when the duty was 9*s.* 2*d.*, the quantities of brandy and geneva retained for home consumption amounted, at an average, to about 2,700,000 gallons; but during the 3 years ending with 1818, when the duty had been increased to 18*s.* 10*d.* the wine gallon, the quantities retained did not exceed 850,000 gallons, while the quantities actually entered for home consumption were considerably less! The consumption increased considerably between 1818 and 1822; but since the latter epoch it has remained nearly stationary; and, notwithstanding the great increase of wealth and population in the interval, is not nearly so great now (1843) as it was half a century ago! Nothing, therefore, can be more palpably erroneous than to contend that the revenue is improved by the present system. Have we not seen the revenue derived from coffee trebled, by reducing the duty from 1*s.* 7*d.* to 6*d.*? Have we not seen the revenue derived from British spirits greatly increased, by reducing the duty from 5*s.* 6*d.* to 2*s.* the wine gallon? And where is the ground for supposing that the result would be different, were the duties on brandy equally reduced? But the experience afforded by Mr. Pitt's measure, in 1786, is decisive as to this point. He quadrupled the consumption and increased the revenue, by taking a half from the duty when it was a good deal less oppressive than now? Were a similar reduction made at present, does any one doubt that a similar result would follow?

Smuggling and adulteration would immediately cease; our trade with France would be very greatly extended; and the revenue would gain, not merely by a direct increase of duty, but indirectly by a very great diminution of the expense of collection.

But the effect of the increase of the duties on brandy in Ireland has been still more extraordinary. At an average of the 3 years ending with 1802, when the duty was 7s. 3d. the wine gallon, the average annual consumption of brandy in Ireland amounted to 208,064 gallons, producing a nett revenue of 77,714*l.* Now, mark the consequence of *trebling* the duties. The consumption during the 3 years ending with 1842, notwithstanding the population is more than doubled, only amounted, at an average, to 15,399 gallons, producing about 17,560*l.* a year revenue! Dr. Swift has shrewdly remarked, that in the arithmetic of the customs two and two do not always make four, but sometimes only one. But here we have threefold duties, with less than a fourth part of the revenue, and less than a fourteenth part of the consumption!

It is surely impossible that a system like this, evincing in every part a degree of ignorant rapacity, to be paralleled only by that of the savages, who to get at the fruit cut down the tree, should be permitted for a much longer period to disgrace our fiscal code. Those only who are anxious for the continuance of smuggling, with all its consequent crime and misery, can be hostile to a reduction of the duty on brandy. By fixing it at 10*s.* a gallon, neither the consumption of British spirits nor that of rum would be sensibly affected. The middle classes would, however, be able to use brandy on occasions when, perhaps, at present, they use nothing; its clandestine importation would be prevented; those engaged in smuggling would be obliged to have recourse to industrious pursuits; and the manufacture of the abominable compounds, that are now so frequently substituted in its stead, would be put an end to. It is not easy, indeed, to suggest any measure that would be productive of so much advantage, and be attended with fewer inconveniences.

*Regulations as to Importation, &c.*—Brandy, geneva, and other foreign spirits, must be imported, in casks, in casks containing not less than 40 gallons, under penalty of forfeiture.—(3 & 4 Will. 4. c. 32.) They must also be imported in ships of 70 tons burden or upwards, and are not to be exported from a bonded warehouse except in a vessel of like tonnage, under pain of forfeiture.—(Ibid.)

Brandy is not to be imported except in British ships, or in ships of the country or place of which it is the product, or from which it is imported, on pain of forfeiture thereof, and 100*l.* by the master of the ship.—(3 & 4 Will. 4. c. 34.)

Brandy may be exported to Mexico, Chili, or Peru, in casks containing not less than 15 gallons each.—(Treat. Ord. 17th of December, 1827.)

Brandy and geneva may be bottled in bonded warehouses for exportation to British possessions to the East Indies, under the same conditions as wine and rum.—(See SPIRITS.)

In most of the public accounts the imports of brandy and geneva are blended together. It would appear, too, from the note on the following account, that there are no means of accurately distinguishing them, except since 1814. The reader will find, in the article SPIRITS, an account of the quantities of brandy and geneva entered for home consumption, and the rates of duty upon them, in each year since 1789. The following account shows the consumption of brandy, and rates of duty on it, since 1814:—

An Account of the Number of Gallons (Imperial Measure) of Foreign Brandy entered for Home Consumption in Great Britain and Ireland, the Rates of Duty affecting the same, and the entire nett Produce of the Duty, each Year since 1814 (obtained from the Custom-house).

Note.—In consequence of the destruction of the official records by fire, no separate account can be rendered of the consumption of brandy and geneva, or the revenue derived therefrom, for the years prior to 1814.

The trade accounts of Great Britain and Ireland having been incorporated during 1830, the particulars for that year are stated for the United Kingdom only.

BRASS (Ger. *Messing*; Du. *Messing, Missing, Geelkoper*; Fr. *Cuivre jaune, Laiton*; It. *Ottone*; Sp. *Laton, Azofar*; Rus. *Selenoi njed*; Lat. *Orichalcum, Aurichalcum*) is a factitious metal, made of copper and zinc in certain proportions. It is of a beautiful yellow colour, more fusible than copper, and not so apt to tarnish. It is malleable, so ductile that it may be drawn out into wire, and is much tougher than copper. Its density is greater than the mean density of the two metals. By calculation it ought to be 7.63 nearly, whereas it is actually 8.39; so that its density is increased by about one tenth. The ancients do not seem to have known accurately the difference between copper, brass, and bronze. They considered brass as only a more valuable kind of copper, and therefore used the word *æs* to denote either. They called copper *æs cyprium*, afterwards *cyprum*; and this in process of time was converted into *cuprum*. Dr. Watson has proved that it was to brass they gave the name of *orichalcum*. Brass is malleable when cold, unless the proportion of zinc be excessive; but when heated it becomes brittle. It may be readily turned upon the lathe; and, indeed, works more kindly than any other metal.

There is a vast variety in the proportions of the different species of brass used in commerce; nor is it easy to determine whether the perfection of this alloy depends on any certain proportions of the two metals. In general, the extremes of the highest and lowest proportions of zinc are from 12 to 25 parts in the 100. In some of the British manufactories, the brass made contains one third its weight of zinc. In Germany and Sweden the proportion of zinc varies from one fifth to one fourth of the copper. The ductility of brass is not injured when the proportion of zinc is highest. This metal is much used in the escapement wheels and other nice parts of watch-making; and bars of brass, very carefully made, fetch for this purpose a high price.

The use of brass is of very considerable antiquity. Most of the ancient genuine relics are composed of various mixtures of brass with tin and other metals, and are rather to be denominated bronzes. The best proportion for brass guns is said to be 1,000 lbs. of copper, 990 lbs. of tin, and 600 lbs. of brass, in 11 or 12 cwt. of metal. The best brass guns are made of malleable metal, not of pure copper and zinc alone; but worse metals are used to make it run closer and sounder, as lead and pot-metal. — (*Thomson's Chemistry, Encyc. Britannica, &c.*)

BRAZILETTO, an inferior species of Brazil wood brought from Jamaica. It is one of the cheapest and least esteemed of the red dyewoods.

BRAZIL NUTS, or *Chestnuts of Brazil*, the fruit of the *Juvia* (*Bertholletia excelsa*), a majestic tree growing to the height of 100 or 120 feet, abounding on the banks of the Orinoco, and in the northern parts of Brazil. The nuts are triangular, having a cuneiform appearance, with sutures at each of the angles; the shell is rough and hard, and of a brownish ash colour. The kernel resembles that of an almond, but is larger, and tastes more like a common hazel nut; it contains a great deal of oil, that may be obtained by expression or otherwise. These nuts do not grow separately, or in clusters, but are contained, to the number of from 15 to 50 or more\*, in great ligneous pericarps or outer shells, generally of the size of a child's head. This outer shell is very hard and strong, so that it is rather difficult to get at the nuts, which are closely packed in cells inside. The natives are particularly fond of this fruit, and celebrate the harvest of the *juvia* with rejoicings; it is also very much esteemed in Europe. The nuts brought to this country and the Continent are chiefly exported from Para, and form an article of considerable commercial importance. — (*Humboldt's Pers. Nar. vol. v. p. 538. Eng. trans.*)

BRAZIL WOOD (Fr. *Bois de Brésil*; Ger. *Brasilienholz*; Du. *Brasilienhout*; It. *Legno del Brasile, Verzino*; Sp. *Madera dei Brasil*; Port. *Pao Brasil*). It has been commonly supposed that this wood derived its name from the country in which it is principally produced. But Dr. Bancroft has conclusively shown that woods yielding a red dye were called Brazil woods long previously to the discovery of America; and that the early voyagers gave the name of Brazil to that part of that continent to which it is still applied, from their having ascertained that it abounded in such woods. — (See the learned and excellent work, *Philosophy of Colours*, vol. ii. pp. 316—321.)

It is found in the greatest abundance, and is of the best quality, in the province of Pernambuco, where it is called *Pao da rainha*, or Queen's wood; but it is also found in many other parts of the Western Hemisphere. The tree is large, crooked, and knotty; the leaves are of a beautiful red, and exhale an agreeable odour. Its botanical name is *Cesalpinia Brasiletto*, but it is called by the natives *Uiripitanga*. Notwithstanding its apparent hulk, the bark is so thick, that a tree as large as a man's body with the bark will not be so thick as the leg when peeled. When cut into chips, it loses the pale colour it before had, and becomes red, and when chewed has a sweet taste. It is used for various purposes by cabinet-makers, and admits of a beautiful varnish, but its principal use is in dyeing red; and though the colour is liable to decay, yet, by mixing with it alum and tartar, it is easily made permanent. There is also made of it, by means of acids, a sort of liquid lake or carmine for painting in miniature.

Brazil wood has been for many years past a royal monopoly; its exportation, except on account of

\* Humboldt says he had most frequently found from 15 to 22 nuts in each pericarp; but De Laet, who gave the first and most accurate description of this fruit, says that the pericarp is divided into six compartments, each of which incloses from 8 to 12 nuts. — (See *Humboldt in loc. cit.*)

government, being prohibited under the severest penalties. Owing to the improvident manner in which it has been cut down by the government agents, it is now rarely found within several leagues of the coast. Indeed, we are assured that many of the planters have privately cut down the trees on their estates, and used the timber as fire-wood, that they might not expose themselves to annoyance from the arbitrary and vexatious proceedings of these functionaries. The quantity of Brazil wood imported into this country is but inconsiderable. Its price in the London market, exclusive of the duty (2s. per ton), varies for the first quality from 60*l.* to 80*l.* per ton. — (*Dr. Bancroft in loc. cit. Encyc. Metrop. Modern Traveller*, vol. xix. p. 87. *1. Matie Brun*, vol. v. p. 526. Eng. ed. &c.)

BREAD, the principal article in the food of most civilised nations, consists of a paste or dough formed of the flour or meal of different sorts of grain mixed with water, and baked. When stale dough or yeast is added to the fresh dough, to make it swell, it is said to be *leavened*; when nothing of this sort is added, it is said to be *unleavened*.

1. *Historical Sketch of Bread.* — The President de Goguet has endeavoured, with his usual sagacity and learning, to trace the successive steps by which it is probable men were led to discover the art of making bread — (*Origin of Laws*, &c. vol. i. pp. 95—105. Eng. trans.); but nothing positive is known on the subject. It is certain, however, from the statements in the sacred writings, that the use of unleavened bread was common in the days of Abraham — (*Gen.* xviii. 8.); and that leavened bread was used in the time of Moses, for he prohibits eating the Paschal lamb with such bread. — (*Exod.* xii. 15.) The Greeks affirmed that Pan had instructed them in the art of making bread; but they, no doubt, were indebted for this art, as well as for their knowledge of agriculture, to the Egyptians and Phœnicians, who had early settled in their country. The method of grinding corn by hand mills was practised in Egypt and Greece from a very remote epoch; but for a lengthened period the Romans had no other method of making flour, than by beating roasted corn in mortars. The Macedonian war helped to make the Romans acquainted with the arts and refinements of Greece; and Pliny mentions, that public bakers were then, for the first time, established in Rome — (*Hist. Nat.* lib. xviii. c. 11.) The conquests of the Romans diffused, amongst many other useful discoveries, a knowledge of the art of preparing bread, as practised in Rome, through the whole south of Europe.

The use of yeast in the raising of bread seems, however, from a passage of Pliny (lib. xviii. c. 7.), to have been practised by the Germans and Gauls before it was practised by the Romans; the latter, like the Greeks, having leavened their bread by intermixing the fresh dough with that which had become stalc. The Roman practice seems to have superseded that which was previously in use in France and Spain; for the art of raising bread by an admixture of yeast was not practised in France in modern times, till towards the end of the seventeenth century. It deserves to be mentioned, that though the bread made in this way was decidedly superior to that previously in use, it was declared, by the faculty of medicine in Paris, to be prejudicial to health; and the use of yeast was prohibited under the severest penalties! Luckily, however, the taste of the public concurring with the interest of the bakers, proved too powerful for these absurd regulations, which fell gradually into disuse; and yeast has long been, almost every where, used in preference to anything else in the manufacture of bread, to the wholesomeness and excellence of which it has not a little contributed.

The species of bread in common use in a country depends partly on the taste of the inhabitants, but more on the sort of grain suitable for its soil. But the superiority of wheat to all other farinaceous plants in the manufacture of bread is so very great, that wherever it is either successfully cultivated, wheaten bread is used, to the nearly total exclusion of most others. Where, however, the soil or climate is less favourable to its growth, rye, oats, &c. are used in its stead. A very great change for the better has, in this respect, taken place in Great Britain within the last century. It is mentioned by Harrison, in his description of England (p. 168.), that in the reign of Henry VIII. the gentry had wheat sufficient for their own tables, but that their *household* and poor neighbours were usually obliged to content themselves with rye, barley, and oats. It appears from the household book of Sir Edward Coke, that, in 1596, rye bread and oatmeal formed a considerable part of the diet of servants, even in great families, in the southern counties. Barley bread is stated in the grant of a monopoly by Charles I., in 1626, to be the usual food of the ordinary sort of people. — (*Sir F. M. Eden on the Poor*, vol. i. p. 561.) At the Revolution, the wheat produced in England and Wales was estimated by Mr. King and Dr. Davenant to amount to 1,750,000 quarters. — (*Davenant's Works*, vol. ii. p. 217.) Mr. Charles Smith, the very well informed author of the *Traacts on the Corn Trade*, originally published in 1758, states, that in his time wheat had become much more generally the food of the common people than it had been in 1689; but he adds (2d ed. p. 182. Lond. 1766), that notwithstanding this increase, some very intelligent inquirers were of opinion that even then not more than *half* the people of England fed on wheat. Mr. Smith's own estimate, which is very carefully drawn up, is a little higher; for, taking the population of England and Wales, in 1760, at 6,000,000, he supposed that 3,750,000 were consumers of wheat; 739,000, of barley; 898,000, of rye; and 623,000, of oats. Mr. Smith further supposed that they individually con-

sumed, the first class, 1 quarter of wheat; the second, 1 quarter and 3 bushels of barley; the third, 1 quarter and 1 bushel of rye; and the fourth, 2 quarters and 7 bushels of oats.

About the middle of last century, hardly any wheat was used in the northern counties of England. In Cumberland, the principal families used only a small quantity about Christmas. The crust of the goose pie, with which almost every table in the county is then supplied, was, at the period referred to, almost uniformly made of barley meal. — (*Eden on the Poor*, vol. i. p. 564.)

Every one knows how inapplicable these statements are to the condition of the people of England at the present time. Wheat bread is now universally made use of in towns and villages, and almost every where in the country. Barley is no longer used, except in the distilleries, and in brewing; oats are employed only in the feeding of horses; and the consumption of rye bread is comparatively inconsiderable. The produce of the wheat crops has been, at the very least, *quadrupled* since 1760. And if to this immense increase in the supply of wheat, we add the still more extraordinary increase in the supply of butcher's meat—(see art. *CATTLE*), the fact of a very signal improvement having taken place in the condition of the population, in respect of food, will be obvious.

But great as has been the improvement in the condition of the people of England since 1760, it is but trifling compared to the improvement that has taken place, since the same period, in the condition of the people of Scotland. At the middle of last century, Scotch agriculture was in the most depressed state; the tenants were destitute alike of capital and skill; green crops were almost wholly unknown; and the quantity of wheat that was raised was quite inconsiderable. A field of 8 acres sown with this grain, in the vicinity of Edinburgh, in 1727, was reckoned so great a curiosity that it excited the attention of the whole neighbourhood! — (*Robertson's Rural Recollections*, p. 267.) But even so late as the American war, the wheat raised in the Lothians and Berwickshire did not exceed a third part of what is now grown in them; and taking the whole country at an average, it will be a moderate estimate, to say that the cultivation of wheat has increased in a *tenfold* proportion since 1780. At that period no wheat bread was to be met with in the country places and villages of Scotland; *oat cakes* and *barley bannocks* being universally made use of. But at present the case is widely different. The upper and also the middle and lower classes in towns and villages use only wheat bread, and even in farmhouses it is very extensively consumed. There is, at this moment, hardly a village to be met with, however limited its extent, that has not a public baker.

In many parts of England it is the custom for private families to bake their own bread. This is particularly the case in Kent, and in some parts of Lancashire. In 1804, there was not a single public baker in Manchester; and their number is still very limited.

2. *Regulations as to the Manufacture of Bread.* — Owing to the vast importance of bread, its manufacture has been subjected in most countries to various regulations, some of which have had a beneficial and others an injurious operation.

a. *Assize of Bread.* — From the year 1266, in the reign of Henry III., down to our own days, it has been customary to regulate the price at which bread should be sold according to the price of wheat or flour at the time. An interference of this sort was supposed to be necessary, to prevent that monopoly on the part of the bakers which it was feared might otherwise take place. But it is needless, perhaps, to say that this apprehension was of the most futile description. The trade of a baker is one that may be easily learned, and it requires no considerable capital to carry it on; so that were those engaged in the business in any particular town to attempt to force up prices to an artificial elevation, the combination would be immediately defeated by the competition of others; and even though this were not the case, the facility with which bread may be baked at home would of itself serve to nullify the efforts of any combination. But the assize regulations were not merely useless; they were in many respects exceedingly injurious: they rendered the price of flour a matter of comparative indifference to the baker; and they obliged the baker who used the finest flour, and made the best bread, to sell at the same rate as those who used inferior flour, and whose bread was decidedly of a worse quality. But these considerations, how obvious soever they may now appear, were for a long time entirely overlooked. According, however, as the use of wheat bread was extended, it was found to be impracticable to set assizes in small towns and villages; and, notwithstanding the fewness of the bakers in such places gave them greater facilities for combining together, the price of bread was almost uniformly lower in them than in places where assizes were set. In consequence, partly of this circumstance, but still more of the increase of intelligence as to such matters, the practice of setting an assize was gradually relinquished in most places; and in 1815 it was expressly abolished, by an act of the legislature (55 Geo. 3. c. 99.), in London and its environs. In other places, though the power to set an assize still subsists, it is seldom acted upon, and has fallen into comparative disuse.

ing to the assize acts, a sack of flour weighing 280 lbs. is supposed capable of being baked into 80 quarter loaves; one fifth of the loaf being supposed to consist of water and salt, and four fifths of flour. But the number of loaves that may be made from a sack of flour depends entirely on its goodness. Good flour requires more water than bad flour, and old flour than new flour. Sometimes 82, 83, and even 86 loaves have been made from a sack of flour, and sometimes hardly 80.

Under the assize acts, bakers are restricted to bake only three kinds of bread, viz. wheaten, standard wheaten, and household; the first being made of the finest flour, the second of the whole flour lawd, and the third of the coarser flour. The loaves are divided into peck, half-peck, and quarter loaves; the legal weight of each, when baked, being, the peck loaf 17 lbs. 6 oz., the half-peck 8 lbs. 11 oz., and the quarter 4 lbs. 5½ oz. avoidupois.

Now, however, it is enacted, that within the city of London, and in those places in the country where an assize is not set, it shall be lawful for the bakers to make and sell bread made of wheat, barley, rye, oats, buckwheat, Indian corn, peas, beans, rice, or potatoes, or any of them, along with common salt, pure water, eggs, milk, barn, leaven, potato, or other yeast, and mixed in such proportions as they shall think fit. — (3 Geo. 4. c. 106. § 2, and 1 & 2 Geo. 4. c. 50. § 2.)

It is also enacted by the same statutes, that bakers in London, and in the country, that is, in all places 10 miles from the Royal Exchange where an assize is not set, may make and sell bread of such weight and size as they think fit, any law or assize to the contrary notwithstanding. But it is at the same time enacted, that such bread shall always be sold by avoidupois weight of 16 ounces to the pound, and in no other manner, under a penalty for every offence of not more than 40s. except, however, French or fancy bread, or rolls, which may be sold without previously weighing the same.

Bakers or sellers of bread are bound to have fixed in some conspicuous part of their shop, a beam and scales, with proper weights for weighing bread; and a person purchasing bread may require it to be weighed in his presence. Bakers, and others sending out bread in carts, are to supply them with beams, scales, &c., and to weigh the bread if required, under a penalty of not more than 5l. — (3 Geo. 4. c. 106. § 8.)

Bakers, either journeymen or masters, using alum or any other unlawful ingredient, and convicted on their own confession, or on the oath of one or more witnesses, to forfeit not exceeding 20l. and not less than 5l. if beyond the environs of London, and not exceeding 10l. nor less than 5l. if within London or its environs. Justices are allowed to publish the names of offenders. The adulteration of meal or flour is punishable by a like penalty. Loaves made of any other grain than wheat without the city and its liberties, or beyond 10 miles of the Royal Exchange, to be marked with a large Roman M.; and every person exposing such loaves without such mark shall forfeit not more than 40s. nor less than 10s. for every loaf so exposed. — (1 & 2 Geo. 4. c. 50. § 6.)

Any ingredient or mixture found within the house, mill, stall, shop, &c. of any miller, mealman, or baker, which, after due examination, shall be adjudged to have been placed there for the purpose of adulteration, shall be forfeited, and the person within whose premises it is found punished, if within the city of London and its environs, by a penalty not exceeding 10l. nor less than 40s. for the first offence, 5l. for the second offence, and 10l. for every subsequent offence. — (3 Geo. 4. c. 106. § 14.)

And if without London and its environs, the party in whose house or premises ingredients for adulteration shall be found shall forfeit for every such offence not less than 5l. and not more than 20l. — (1 & 2 Geo. 4. c. 5. § 8.)  
Bakers in London and its environs are not to sell, or expose to sale, any bread, rolls, or cakes, nor bake or deliver any meat, pudding, pie, tart, or victuals of any sort, on Sundays, except between the hours of nine in the morning and one in the afternoon, under penalty of 10s. for the first offence, 20s. for the second offence, and 40s. for every subsequent offence. — (3 Geo. 4. c. 106. § 16.)

Bakers in the country are prohibited from selling, &c. any bread, &c., or baking or delivering any meat, &c. on Sundays, any time after half past 1 o'clock of the afternoon of that day, or during the time of divine service, under penalty of 5s. for the first offence, 10s. for the second, and 20s. for the third and every subsequent offence. — (29 Geo. 3. c. 36. § 12.)

There are several regulations in the acts now in force with respect to the sale, &c. of bread where an assize is set; but as the practice of setting an assize is nearly relinquished, it seems unnecessary to recapitulate them. The weight of the assize bread has already been mentioned, and the principle on which its price is fixed.

Notwithstanding the prohibition against the use of alum, it is believed to be very generally employed, particularly by the bakers of London. "In the metropolis," says Dr. Thomson (*Suppl. to Encyc. Brit.*, art. *Baking*), "where the goodness of bread is estimated entirely by its whiteness, it is usual with those bakers who employ flour of an inferior quality to add as much alum as common salt to the dough; or, in other words, the quantity of salt added is diminished a half, and the deficiency supplied by an equal weight of alum. This improves the look of the bread, rendering it much whiter and firmer."

There are believed to be about 1,700 bakers in London, Westminster, &c. The trade which they carry on is in general but limited, and it is not reckoned a very advantageous line of business.

**BREMEN**, one of the free Hanseatic cities, on the river Weser, about 50 miles from its mouth, lat. 53° 43' N., long. 8° 48' 3" E. Population 42,000. Its situation on the Weser renders Bremen the principal emporium of Hanover, Brunawick, Hesse, and other countries traversed by that river. The charges on the buying, selling, and shipping of goods, are very moderate. The principal exports are linens, grain, oak bark, glass, smalts, hams, hides, rapeseed, beef and pork, rags, wool and woollen goods, wine, &c. The wheat and barley shipped here are mostly very inferior; but the oats are useful common feed; beans are good. The linens are mostly the same as those from Hamburg. The imports consist of coffee, sugar, and other colonial products; tobacco, whale oil, iron, rice, hides, wines, raw cotton, cotton stuffs and yarn, earthenware, brandy, butter, tar, tea, dyewoods, timber, hemp, &c.

*Entrance to Bremen.*—The entrance to the Weser lies between the Mellum and other sands on the south-western, and the Tagler Platt, &c. on the north-western side. Its course from Bremerloe to its mouth is nearly S. E. and N. W. It is buoyed throughout. The buoys on the right or starboard side when entering being black and marked with letters, while those on the left or larboard are white and numbered. The first or outer black buoy has a gilt key upon it, and is, therefore, called the *key* or *key buoy*; it lies in 10 fathoms, bearing N. E. 3 miles from Wranerogge light. This is an intermittent light, having replaced, in 1835, the old coal-fire beacon on the island of Wranerogge, opposite to the northern extremity of East Friesland. It is, according to the most authentic statements, in lat. 53° 11' N., long. 7° 51' 30" E. and is elevated 63½ feet above high water mark, being alternately

visible and invisible for the space of a minute. A light vessel is moored in the fair-way of the Weser, between the black buoys 2 and 3, and the white buoys 2 and 3; she has two masts: during day, a red flag, with a white cross upon it, is kept flying at the main-mast; and at night she exhibits 7 lantern lights, 48 feet above deck. This vessel is on no account to leave her station, unless compelled by the ice. Large vessels do not now generally ascend farther than Alkmarshagen, on the east side of the river, about 38 miles below Bremen, where a new and spacious harbour, called "Bremer Haven," has been constructed. But vessels not drawing more than 7 feet water come up to town; and those drawing from 15 to 14 feet may come up to Vegesack, about 15 miles from Bremen. (See the *Sailing Directions for the North Sea*, published by Mr. Norrie.)

Statement of the principal Articles imported into and partly re-exported from Bremen in 1838, 1839, and 1840.

Exports.—Linen are one of the most important articles of export from Bremen. They are mostly sold by the piece. The dimensions of the piece, and their prices, are similar to those of Hamburgh, which see. The Westphalia hams are mostly shipped from this port.

Duties.—An export duty of 4 per cent, *ad valorem*, is charged on all merchandise shipped from Bremen.

The import duty is 2 per cent, *ad valorem*, on all articles; having been increased 3 per cent. by the ordinance of 1830.

The value of the imports is calculated according to the invoice price, adding thereto the freight and the rate of insurance current in Bremen; the value of the exports is estimated from the invoice price only. Should there be no invoice of imports, it is the duty of the importer to make a correct estimate of the value upon his oath as a citizen; but the Custom-house has power to institute a stricter examination, if the estimate appears too low.

Emigration.—Bremen has become the most considerable port on the Continent for the shipment of emigrants to the United States, and other parts in America; the number sailing thence usually amounting to from 9,000 to 10,000. Their conveyance has become an object of much importance, particularly to the American ship-owners. A large proportion of the emigrants are from Hesse.

Ship-brokers are licensed officers, and give security, to the amount of 2,000 rix-dollars, for the faithful discharge of their duties. These are, to engage freights, to sell vessels by auction, to enter vessels, and collect freights. They are not permitted to have partners, to transact any commercial business on their own account, to accept commissions or consignments, to sell or purchase bills of exchange, or to engage in any mercantile concerns.

None but appointed brokers of this class can undertake any of the duties assigned to them. Any person employing a non-appointed broker, is deprived of legal redress against the unauthorized agent by whose conduct he may sustain injury.

Ship-brokers are obliged to keep a register of all vessels coming in or going out, of the names of the captains who employed them, to procure manifests of cargoes, and to attend to the payment of duties and other dues chargeable on vessel or cargo.

The fees allowed in them are, for chartering a vessel in ball, 18 grotes per grain last; of this the owner pays 12 grotes, and the freighter 6 grotes.

For outward-bound vessels, taking merchandise as it may be offered, 2 per cent. on the freight.

For entering a vessel from sea measuring 50 lasts, 5 rix-dollars; measuring 100 ditto, 7½ rix-dollars; and if the vessel above 100 lasts, 10 rix-dollars.

Entry dues are to be paid by the consignees of foreign vessels out of the commission they may claim.

For the collection of freight money, the broker is entitled to receive 1 per cent, but the consignee of a foreign vessel is to pay this sum.

Regulations of the Harbour of Bremer Haven.—All vessels entering the harbour are subject to the supervision of the harbour-masters, whose directions are to be obeyed by the captains and crews.

No ballast or rubbish is to be thrown overboard, under a penalty of 10 rix-dollars for the first offence, which is increased in case of repetition; the offender, too, is obliged to remove the articles he may have so cast into the harbour.

It is not permitted to keep gunpowder on board, and any which may be in the vessel must be delivered up within 2 hours after the vessel has reached her berth; non-compliance with this subjects the party to a fine of from 10 to 50 rix-dollars; nor is it permitted to discharge any fire-arms in port.

The use of all fire-arms, from sunset to sunrise, is prohibited; the captain, however, may have a light, in a closed lantern, in his cabin.

The crews are not allowed to carry on shore any fire-arms, darts, or other weapons.

The total value of all the articles imported by sea into Bremen in 1838, was estimated at 13,500,000 rix-dollars, or (at 3s. 2d. per rix-dollar) 3,017,500*l.*; the value of the exports by sea during the same year was estimated at 11,200,000 rix-dollars, or 1,820,433*l.* In 1839 there belonged to Bremen 151 sailing ships, some of them of large size, and 86 river ships.

Bremen merchants carry on an extensive direct trade with the United States, Cuba, Brazil, and other foreign countries.

The Harbour Dues for the Port of Bremen (Bremerhaven) are as follow:—

Vessels.	Burden.		In Jan. March, Sept. Nov.		Feb. April, Oct. Dec.		In May, July, Aug.	
	Lasts.	Tons.	Rix-doll.	£ s. d.	Rix-doll.	£ s. d.	Rix-doll.	£ s. d.
Vessels of - - -	399	450	48	8 0 0	40	6 13 4	40	6 13 4
Square rigged - - -	350	375	42	7 0 0	35	5 16 0	35	5 16 0
Triangular - - -	201	309	35	6 0 0	30	5 0 0	30	5 0 0
Galions - - - - -	150	225	20	3 0 0	25	4 3 4	25	4 3 4
Square rigged - - -	100	150	12	2 0 0	10	3 0 0	10	3 0 0
Galions - - - - -	50	75	6	1 0 0	7½	1 13 4	7½	1 13 4
Square rigged - - -	80	120	11	3 0 0	10	3 0 0	10	3 0 0
Galions - - - - -	60	90	12	2 0 0	10	2 1 8	10	2 1 8
Square rigged - - -	40	60	8	1 0 0	7½	1 5 0	7½	1 5 0
Galions - - - - -	30	45	6	1 0 0	5	0 16 8	5	0 16 8

The above rates are for 2 months; should the vessel remain longer in harbour, then there is an increased charge of 1 to 6 rix-dollars, value 2s. 6d. to 1*l.*, for each additional month, in proportion to the season and to the above measurement.

British or American tonnage is taken as equal to 2 lasts.

In addition to the above, the vessels are subject to other dues of 2 grochen, or about 1*½*d. per ton of the goods on board; that is,

Vessels arriving with goods on board, pay at this rate for the quantity of goods on board, but nothing more on departure whether laden or in ballast.

Vessels arriving in ballast pay this rate on the quantity of goods laden for the outward voyage; this rate is therefore only paid once.

Pillage and light-house Dues, on Bremen ships and those having reciprocity treaties with Bremen, 4 grochen per 200 lbs. cargo per voyage. Ships in ballast are exempted from this duty.

Arrivals.—During the year 1841, 1,690 ships entered the port of Bremen. Of these 537 belonged to Bremen; 128 to Hanover; 24 to Great Britain; 32 to the United States; 214 to Holland; 79 to Denmark; 79 to Prussia; and the remainder to Russia, Spain, Sweden, Norway, &c.

Money.—Accounts are kept in thalers, or rix-dollars, of 78 grochen or grotes; the grote being divided into 4 awars. The Bremen rix-dollar current is worth 3*½*d. sterling; and the par of exchange is 1*l.* sterling = rix-dollars 17 grochen 4 awars.

Weights and Measures.—The commercial weight consists of 160 ounces = 39 (10*½*) = 7,600 English grains. Hence, 100 lbs. of Bremen = 109.8 avoirdupois, or 49,925 kilogram. A load of

pfundcheer = 300 lbs., but carriers reckon it at 308 lbs. A centner = 116 lbs.; a shipboard = 25 centners, or 290 lbs.; a wage of iron = 150 lbs.; a stone of fish = 50 lbs.; a stone of wool = 10 lbs. A ton of butter great measure = 300 lbs.; and a ton of do. small measure = 280 lbs.

The dry measures are, 4 quarts = 1 Viertel; 4 Viertel = 1 Scheffel; 10 Scheffel = 1 quart; 4 quarts = 1 last; the last = 60.70 bushels Winchester measure = 100 English quarters; that is, 10 quarters and 0.7 bushel. A barrel of salt = 34 scheffels.

A last of coal = 2 chaldrons Newcastle measure. The liquid measures are, 88 quart = 1 Viertel; 8 Viertel = 1 anker; 4 ankers = 1 tierce; 1 tierce = 1 oshoff; the oshoff = 88 English wine gallons. Wine is sometimes sold by the shen of 4 ankers = 37½ Eng. wine gallons. A barrel of whale oil = 6 stecken, or 116 lbs. net = 31½ Eng. wine gallons. A ship last of herrings, salt, and coal = 12 barrels.

The Bremen foot = 11.38 Eng. inches = 3 feet, 100 Bremen feet = 94.8 Eng. ditto. The Bremen ell is 2 feet; and 100 ells of Bremen = 63.2 Eng. yards.

There.—The usual rates are, on sugar in casks and Brazil chests, 17 per cent.; on Havannah boxes, 70 lbs; Maryland tobacco, 30 lbs. per hundred; ditto Virginia and Kentucky, 110 lbs. per hundred; 1 centner, round bales, 4 per cent.; square ditto, 6 per cent.; tea (green), 20 lbs. per quarter chest; 20 lbs. ditto, 12 lbs. per quarter chest. Most other articles, such as East India indigo, rice, coffee, spices, &c., are taxed at 10 per cent. principally from the communications of Bremen merchants; the highest of Customs' Laws prescribed by the Imperial Congress, vol. i. p. 431; and Macgregor's Tariff (Germany, p. 264), &c.)

**BRIBE.** Any person giving or offering a bribe, recompence, or reward, to any officer of the customs, to induce him to neglect his duty, to forfeit 200*l.*—(3 & 4 *Will.* 4. c. 53. § 38.)

**BRICKS AND TILES**, well known articles used in the building and covering of houses. They are made of baked clay and sand. Until 1839 an excise duty was charged both on bricks and tiles (the latter being then exempted from the duty), so that their manufacture was, in consequence, placed under surveillance. It is ordered by 17 Geo. 3. c. 42. that bricks made for sale shall be 8½ inches long, 2½ inches thick, and 4 wide; on pain of forfeiting, for bricks of less dimensions when burnt, 20*s.* for every 1,000, and proportionally for a greater or less number. It is also provided, that the size of the sieves or screens for sifting or screening sea-coal ashes to be mixed with brick earth in making bricks, shall not exceed ¼ of an inch between the meshes. Makers of bricks must give notice, under a penalty of 100*l.*, to the excise, of their intention to begin the manufacture.

Bricks being the principal material used in London and in most parts of England in the building of houses, immense quantities are annually produced in that part of the United Kingdom. And notwithstanding the influence of the duty, the consumption in England nearly doubled during the 20 years ending with 1840; the number that paid duty in 1821 having been 899,178,510, whereas in 1840 it amounted to 1,677,811,134. In Scotland, where stone is mostly employed in building, their manufacture is comparatively unimportant. Tiles are now very extensively used in drainage. It were much to be wished that the state of the revenue were such as to admit of the repeal of the duty on bricks. We subjoin

An Account of the Number of Bricks produced in England and Scotland, the Amount of Duties paid thereon, and the Rates of Duty in 1840, 1841, and 1842.

	1840.		1841.		1842.		Rates of Duty.

The entire duties on bricks are drawn back upon exportation. Sufficient security must be given before their shipment that they shall be shipped and exported, and not re-landed in Great Britain.—(24 *Geo.* 3. sess. 2. c. 24. § 16.)

If bricks shipped for drawback be re-landed, those so re-landed shall, over and above the penalty in the bond, be forfeited.—(§ 17.)

*Note.*—Bricks made in Ireland are not subject to excise duty.

**BRIMSTONE.** See **SULPHUR.**

**BRISTLES** (Fr. *Soies*; Ger. *Borsten*; Du. *Borstels*; It. *Setole*; Sp. *Cerdas, Setas*; Pol. *Szeceiny*; Rus. *Schtschetina*; Lat. *Sete*), the strong glossy hairs growing on the back of the hog and the wild boar. These are very extensively used by brushmakers, shoemakers, saddlers, &c., and form a considerable article of import. Russia is the great mart for bristles; those of the Ukraine being held in the highest estimation. Of the total quantity imported in 1841, amounting to 1,735,502 lbs., Russia furnished 1,419,514 lbs., Prussia (Königsberg) 132,136 lbs., and Germany 130,899 do. At an average of the 3 years ending with 1842, the entries for home consumption amounted to 1,772,196 lbs. a year. The duty, which varies from 2*s.* 6*d.* on rough to 3*s.* per cwt. on sorted bristles, produced, in 1842, 24,100*l.* 17*s.* 11*s.* nett.

**BROKERS**, persons employed as middlemen to transact business or negotiate bargains between different merchants or individuals. They are sometimes licensed by public authority, and sometimes not.

Brokers are divided into different classes; as bill or exchange brokers, stockbrokers, ship and insurance brokers, pawnbrokers, and brokers simply called, or those who sell or appraise household furniture distrained for rent. Exclusive, too, of the classes now mentioned, the brokers who negotiate sales of produce between different merchants usually confine themselves to some one department or line of business; and by attending to it exclusively, they acquire a more intimate knowledge of its various details, and of the credit of those engaged in it, than could be looked for on the part of a general merchant; and are consequently able, for the most part, to buy on cheaper and to sell on dearer terms than those less familiar with the business. It is to these circumstances—to a sense of the advantages to be derived from using their intervention in the transacting of business—that the extensive employment of brokers in London and all other large commercial cities is wholly to be ascribed.

The number of brokers in London is unlimited; but by the statute 8 & 9 *Will.* 3. c. 20. they are to be licensed by the lord mayor and aldermen, under such restrictions and limitations as they may think fit to enact. By the 47 *Geo.* 3. c. 60, brokers acting without being duly admitted are made liable in a penalty of 100*l.* The fee on admission is fixed by the same act at 5*l.*; and there is, besides, an annual payment also of 5*l.*

The following are some of the regulations established by the mayor and aldermen pursuant to the act of *Will.* 3. 1.—That every person shall, upon his admission, take an oath truly and faithfully to execute and perform the office of broker, or between party and party, in all things pertaining to the duty of the said office, without fraud or collusion, to the best and utmost of his skill and knowledge; that he shall in all cases reveal the name of his principal; and neither deal in goods on his own account, nor barter and sell again, nor make any gain in goods beyond the usual brokerage; and that he shall regularly register all the contracts, &c. into which he enters.

Brokers grant a bond under a penalty of 500*l.* for the faithful performance of the duties sworn to in the oath of admission.

A medal is delivered to the broker, with his name engraved thereon, which he may produce, if required, as evidence of his qualification.

Twelve persons professing the Jewish religion are permitted to act as brokers within the city, under the same regulations, and receive the silver medal accordingly. This medal is transferable; and is sold generally at from 800*l.* to 1,000*l.*, exclusive of the expense of transfer, which is uncertain. Upon the decease of any of the holders of the medal without its having been transferred, the appointment falls to the lord mayor for the time being; and for it the sum of 1,500*l.* has not unfrequently been given.—(*Moniteur's Com. Dict. art. Brokers.*)

If goods in the city of London be sold by a broker, to be paid for by a bill of exchange, the vendor has a right, within a reasonable time, if he be not satisfied with the sufficiency of the purchaser, to annul the contract, provided he intimates his dissent as soon as he has an opportunity of inquiring into the solvency of the purchaser. In *Hodgson v. Davies*, 2 Camp. N. P. C. 336, Lord Ellenborough was, at first, rather inclined to think that the contract concluded by a broker must be absolute, unless his authority were limited by writing, of which the purchaser had notice. But the special jury said, that "unless the name of the purchaser has been previously communicated to the seller, if the payment is to be by bill, the seller is always understood to reserve to himself the power of disapproving of the insufficiency of the purchaser, and annulling the contract." Lord Ellenborough allowed that this usage was reasonable and valid. But he clearly thought that the rejection must be intimated as soon as the seller has had time to inquire into the solvency of the purchaser. The jury found, in the case in question, that five days was not too long a period for making the necessary inquiries.

**Brokers, Bill.**—Propose and conclude bargains between merchants and others in matters of bills and exchange. They make it their business to know the state of the exchange, and the circumstances likely to elevate or depress it. They sell bills for those drawing on foreign countries, and buy bills for those remitting to them; and, from their knowledge of the mutual wants of the one class as compared with those of the other, a few of the principal brokers are able to fix the rate of exchange at a fair average, which it would not be possible to do if the merchants directly transacted with each other. Their charge as brokers is 2*l.* per cent.

"Those," says Mr. Windham Beaves, "who exercise the function of bill brokers, ought to be men of honour and capable of their business; and the more so, as both the credit and fortune of those who employ them may, in some measure, be said to be in their hands; and, therefore, they should avoid babbling, and be prudent in their office, which consists in one sole point, that is, to *hear all and say nothing*; so long as they never to speak of the negotiations transacted by means of their intervention, or receive any ill reports which they may have heard against a drawer, nor offer his bills to those who have spread it."

**Brokers, Stock.**—Are employed to buy and sell stock in the public funds, or in the funds of joint stock companies. Their business is regulated by certain acts of parliament, by which, among other things, it is enacted, that contracts in the nature of wagers, or contracts apparently framed for the sale or purchase of stock, but really intended only to enable the parties to speculate on contingent fluctuations of the market, without any stock being actually sold, shall be void, and those engaging in them subjected to a penalty of 500*l.* = (7 Geo. 3, c. 8, s. 8, made perpetual by 10 Geo. 2, c. 8.) And by the same act, any one contracting to sell stock of which he is not actually possessed, or to which he is not entitled, forfeits 500*l.* Brokers not keeping a book in which all contracts are regularly inserted, are liable in a penalty of 50*l.* for each omission; half to the king, and half to those who sue for it. The charge for brokerage on all public funds, except Exchequer bills and India bonds, is 2*z.* 6*d.* per cent.; on these it is 1*z.* per cent. No transaction with respect to the purchase and sale of stock in the public funds can be concluded except by the intervention of a licensed broker, unless by the parties themselves.

**Brokers, Ship and Insurance.**—The chief employment of this class of brokers is in the buying and selling of ships, in procuring cargoes on freight, and adjusting the terms of charterparties, settling with the master for his salary and disbursements, &c. Their charge as ship brokers is about 2 per cent. on the gross receipts. When they act as insurance brokers, they charge 5 per cent. on the premium, exclusive of a discount allowed them on settling with the underwriter. The merchant looks to the broker for the regularity of the underwriting, and a proper selection of underwriters. To him also the underwriter looks for a fair and candid disclosure of all material circumstances affecting the risk, and for payment of their premiums. From the importance of their employment, ship and insurance brokers ought to be, and indeed generally are, persons of respectability and honour, in whom full confidence may be reposed. A ship broker is not within the various acts for the regulation and admission of brokers.—(*Giddons v. Ayle*, 3 P. 370 of June, 1807.)

**Brokers, Custom-house.**—It is enacted by the 3 & 4 Will. 4, c. 52, that no person shall be authorised to act as an agent for transacting business at the Custom-house in the port of London, relative to the entrance or clearance of any ship, &c., unless authorised by licence of the commissioners of customs, who are to require bond with one surety for 1,000*l.* for the faithful conduct of such person and his clerks. This regulation does not, however, apply to the clerk or servant of any person or persons transacting business at the Custom-house on his or their account. The commissioners may extend this regulation to other ports. = § 144, & 146.

**Brokers, Pawn.**—See ПАВНОБРОКАЛА.

**Brokers**, simply so called, in their character of appraisers and sellers of goods distrained for rent, are regulated, by 1 Geo. 3, c. 18, which enacts, that no such person making any distress for rent, where the sum due does not exceed 20*l.*, shall take more than the following sums; viz.

	£	s.	d.
For levying	-	-	-
For such keeping possession, per day	-	-	0 3 0
Advertisements, if any	-	-	0 2 0
Attending sale, commission, &c. in the pound on the net produce	-	0	10 0
Stamp duty, lawful amount.	-	-	0 1 0

Appraisements, whether by one broker or more, 6*d.* per pound on the value of the goods, under a penalty of triple the amount of the money unlawfully taken, with costs, to be recovered summarily before a justice of the peace.

In France, the brokers who deal in money, exchange, merchandise, insurance, and stock, are called *agents de change*, and their number, at Paris, is limited to sixty. The company of *agents de change* is directed by a chamber of syndics (*chambre syndicale*) chosen annually by the company. They are severally obliged to give bonds to the amount of 125,000*fr.* for the prevention of abuses. They are also obliged to keep books; are restricted to a charge of from  $\frac{1}{4}$  to  $\frac{1}{2}$  per cent.; and are interdicted from carrying on, or having any interest in, any commercial or banking operations.—(See *Code de Commerce*, § 74, &c. and art. BROKURAT in this Dictionary.)

In the United States, brokers are not licensed, nor do they give bonds.

**BROKERAGE**, the commission, or percentage, paid to brokers on the sale or purchase of bills, funds, goods, &c.—(See FACTORAGE.)

**BRONZE** (Ger. *Stückgut*, *Stückmetall*; Du. *Stückgoed*; It. *Bronzo*; Sp. *Metal de Cincosa*; Lat. *Metalum tormentorum*), "a mixed metal, consisting chiefly of copper, with a small proportion of tin, and sometimes other metals. It is used for casting statues, cannon, bells, and other articles, in all of which the proportions of the ingredients vary."—(*Ure*.)

**BROOMS** (Ger. *Besen*; Fr. *Balais*; It. *Scopa*, *Granate*; Sp. *Escobas*; Rus. *Melli*) are principally made of birch or heath. Vast quantities are manufactured in Southwark, for the supply of the London market.

**BRUSHES** (Ger. *Bürsten*; Fr. *Brosses*; It. *Setole*, *Spazzole*; Sp. *Brozas*, *Cepillos*, *Escobillas*; Rus. *Schtschetki*), well-known implements, made of bristles, and manufactured of various forms.

**BUBBLES**, a familiar name applied generally to fraudulent or unsubstantial commercial projects, which hold out hopes of rapid gain, for the purpose of enriching the projectors at the expense of sanguine and ignorant adventurers; and particularly used to designate those projects, the funds for which are raised by the sale of shares or subscription to a transferable stock. In consequence of the mischief produced by the gambling in transferable shares of bubble companies at the time of the South Sea project, 1719 and 1720, the stat. 6 Geo. 1. c. 18., reciting that several undertakings or projects had been contrived and practised, which "manifestly tended to the common grievance, prejudice, and inconvenience of great numbers of his Majesty's subjects in their trade and commerce," and describing, among other practices of the time, the ordinary mode of raising money by shares and subscriptions to a pretended transferable stock, enacted, that the undertakings and attempts so described, and public subscriptions, assignments, and transfers for furthering them, and particularly the raising or pretending to raise transferable stocks without authority of charter or act of parliament, should be deemed illegal and void, and prohibited them under severe penalties. Some decisions limited the operation of, and finally the stat. 6 Geo. 4. c. 91. altogether repealed, these enactments and prohibitions. The projectors of bubbles, therefore, are now punishable only when they can be deemed guilty of frauds or conspiracies at common law; and there is no other check on the adventurers than the loss and troublesome liabilities under the law of partnership, in which participation in these projects often involves them.

**BUCKWHEAT** (Fr. *Blé Sarrazin*, *Blé noir*; Ger. *Buchweizen*, *Haidekorn*; It. *Grano Saraceno*, *Faggina*, *Fruina*; Sp. *Trigo Saraceno*, *Trigo negro*; Pol. *Tatarca*, *Gryka*, *Pohanka*; Rus. *Gretecha*; Lat. *Fagopyrum*) is principally cultivated, in order that it may be cut when young and green, and employed as fodder for cattle; when allowed to ripen, the grain is usually employed to feed pigeons and poultry. When ripe it is of a deep yellow colour, the seeds bearing a great resemblance to beech-mast: it will grow on the poorest soils. Buckwheat has been cultivated in this country from the latter part of the sixteenth century. Its native country is unknown, but supposed to be Asia. Beckmann has a very learned dissertation on its introduction and early culture in Europe. — (See *Hist. of Invent.* vol. i. art. *Buckwheat*.) The imports of buckwheat are comparatively inconsiderable. The duty is the same as on barley. — (See *COGN LAWS*.)

**BUENOS AYRES**, a city of South America, on the south side of the La Plata, about 200 miles from its junction with the sea, lat. 34° 36' 29" S., long. 58° 23' 34" W. Population very differently estimated; but said by Sir W. Parish to amount to about 100,000, of whom from 15,000 to 20,000 are foreigners, principally English and French. The Plata is one of the largest rivers of the world, traversing a vast extent of country, of which it is the great outlet. Unluckily, however, its estuary, though broad, is in most parts shallow, being, also, encumbered with sand banks, and infested with sudden gusts of wind called *pamperos*. Its navigation is consequently attended with a good deal of difficulty, and ships bound for Buenos Ayres generally take pilots on board. There is no harbour, and vessels drawing 16 or 17 ft. water anchor in the outer roads, called the *Amarradero*, 7 or 8 miles from shore, loading and unloading by means of lighters. This, too, is an operation by no means free from danger, boats being sometimes swamped in crossing the bar between the outer and inner roads. From the want of a pier, and the shallowness of the water on the beach, even the boats are not able to come close to the shore, but are met at a little distance from it by a rude sort of ox-carts, into which they deposit their goods, at no little risk, and sometimes much loss. These unfavourable circumstances, which might, however, be materially improved by a little exertion and outlay on the part of the government, operate as a heavy drawback on the trade of the city, and tend proportionally to augment that of Montevideo, which is more easily accessible. But notwithstanding the competition of the latter, Buenos Ayres is still the principal outlet for the produce of the vast countries traversed by the La Plata, and especially for the provinces situated on its right bank. The principal articles of export are specified in the subjoined tables. (See next page.)

Within the last few years the trade in wool, in consequence of the great improvement effected in the breed of sheep, has become of great and rapidly increasing importance. In 1827 the export of this article to Great Britain amounted to only 19,444 lbs.; whereas in 1815 it amounted to 3,240,200 lbs.; but during the last 2 years the trade of the La Plata has been all but wholly suspended. Curn, which for a considerable period was not produced in sufficient quantity for home consumption, has latterly become an article of export: it is sent chiefly to Brazil. Most of the jerked beef, and numbers of mules, are exported to the Havannah. Hides, tallow, and skins, especially the first, are leading articles of export. The total value of the imports, in 1837, amounted to about 7,000,000 dollars, or 1,487,000*l.*; of which those furnished by Great

Britain amounted to near a half, or to 666,104*l*. The imports hence chiefly consist of cotton (by far the most important article), linen, woollen and silk manufactures, hardware, cutlery, earthenware of all sorts, glass, leather, hats, &c., with about 40,000*l*. or 60,000*l*. worth of foreign and colonial produce. France supplies Buenos Ayres with jewelry, perfumery, and other articles of luxury, to the value, in 1836, of 231,973*l*. The imports from the United States in the same year amounted to 76,986*l*, consisting chiefly of unbleached cloths, spirits, soap, sperm candles, dried and salted provisions, tobacco, furniture, and deals. Germany sends woollen and linen cloths, and Rhenish cottons (the Netherlands, fire-arms, swords, &c.); Holland, butter, cheese, Westphalia hams, &c., chiefly by way of Antwerp, the principal mart for Buenos Ayres hides on the Continent. The Baltic furnishes iron, cordage, canvas, pitch, deals, &c. The Mediterranean trade is principally in Sicilian and Spanish produce, particularly cheap wines, brandies, olive oil, maccaroni, dried fruits, and pepper. Spanish goods are in little demand, though some serges, velvets, sewing silk, and stuffs are imported. The annual importation of Spanish and Sicilian wines is from 10,000 to 12,000 pipes, besides about 1000 pipes of brandy. The *yerba mate*, or Paraguay tea, formerly an import article of some consequence, has been nearly superseded, even in Buenos Ayres, by tea; the other Chinese imports are silks, crapes, nankeens, porcelain, and numerous minor articles. The trade with Chili and Peru is insignificant. The markets of this city are well supplied with butcher's meat and fish. Poultry is dear, a couple of fowls selling for as much as an ox. Vegetables and fruit generally are also dear; milk in quality and price is much the same as in London, and all the butter used is imported. (We have derived these details principally from the valuable work of Sir Woodbine Parish on Buenos Ayres.) In our customs accounts the trade with Montevideo and other ports on the La Plata is mixed up with that of Buenos Ayres. In 1841, the declared value of the exports of British produce and manufactures to the states on the La Plata amounted to 989,362*l*., of which cottons made no less than 538,127*l*.! Probably about two thirds of the whole might be destined for Buenos Ayres.

*Monies, Weights, Measures, &c.* same as those of Spain; for which, see CANIZ.

Exports of Wool from Buenos Ayres for the Three Years ending with 1845

*Port Charges.*—The Argentine government has notified that—

1. From the 1st of January, 1847, national vessels sailing for ports beyond sea shall pay 3 dollars per ton.
2. Foreign vessels shall pay 4 dollars per ton, except those which, in virtue of existing treaties, are admitted to national vessels.
3. Foreign vessels shall pay, for the visit of the health officer, 25 dollars, and the same amount for the bill of health.
4. Foreign vessels belonging to nations having no consul,

and whose roll is made out by the captain of the port, shall pay 40 dollars for it.

5. The duties fixed by the preceding articles shall be paid one-half on the entrance of the vessel, and the other half on her departure.
  6. National and foreign vessels, which do not leave nor receive cargoes, shall pay one-half of the duties here established.
- Let this decree be communicated, and published in the official register.

**BUFF** (Ger. *Büffel, Büffelhäute*; Fr. *Buffe, Peau de buffles, et Peaux pansées en buffles*; It. *Bufalo, Cuojo di bufalo*), a sort of leather prepared from the skin of the buffalo, dressed with oil, after the manner of chamois. The skin of elks, oxen, and other like animals, when prepared after the same manner as that of the buffalo, is likewise called *buff*. It is used in making sword-belts and other articles, where great thickness and firmness are required.

**BUGLES**, small glass beads of different colours. They are in considerable demand in Africa, to which they are mostly exported.

**BULLION**, uncoined gold and silver in the mass. See **GOLD** and **SILVER**.

**BUOYS**, pieces of wood, cork, or some light substance, moored and floating on the water. Those of wood are sometimes solid, and sometimes hollow, like a cask, and strongly hooped; they are made of various shapes and sizes; and are either private or public.

*Private Buoys* are so called from their belonging to private individuals. They are principally employed to mark the place of the ship's anchor, being fastened to it by a rope or chain, so that the men who go in the boat to weigh it may readily find out where it is.

By the 1 & 2 Geo. 4. c. 75. § 11. It is enacted, that if any person or persons shall wilfully cut away, cast adrift, remove, alter, deface, sink, or destroy, or in any way injure or conceal, any buoy, buoy-rope, or mark, belonging to any ship or vessel, or which may be attached to any anchor or cable belonging to any ship or vessel, whether in distress or otherwise, such person or persons so offending shall upon conviction be adjudged guilty of felony, and shall be liable to be transported for any term not exceeding 7 years, or to be imprisoned for any number of years, at the discretion of the court.

*Public Buoys*, being intended for the public service, cannot be placed, altered, or removed, except by competent authority. They are generally of a pretty large size; and are firmly moored by chains or cables to rocks, large stones, anchors, &c. By floating on the surface of the water, they serve at once to mark the channels through which it is safe to steer, and to point out dangers to be avoided, such as sunken rocks, shoals, wrecks of vessels, &c. The places in, and the purposes for, which buoys are exhibited, are always specified in good charts: and as the leading buoys are generally of a peculiar figure or colour, which is also indicated in the chart, the navigator, as soon as he recognises them, shapes his course accordingly. Hence the great importance of having buoys properly placed, and of their being carefully marked in charts.

\* To this amount may be added, as allowance for short manifests, &c., about 20 per cent. additional.

The 8 Geo. 4. c. 125. § 91. enacts, that every person who shall ride by, make fast to, remove, or wilfully run down or run foul of any vessel placed to exhibit lights, or any buoy or beacon belonging to the corporation of the Trinity House of Deptford Strand, or to any other corporation having authority to place such vessel, buoy, or beacon, shall, besides making good all damage occasioned thereby, forfeit, for every such offence, any sum not exceeding 50*l.* nor less than 10*l.*

Subjoined is an

Account specifying the Buoys and Beacons under the Control of the Trinity House, Deptford Strand, with the Rates of Charge on account of the same on British and Foreign Ships, and the Produce of the Rates, in each of the Three Years ending with 1842.—(Furnished by Mr. Herbert, Secretary to the Trinity House.

	Rates of Charges.			Amounts collected.		
	Coasters	British and Foreign privileged Vessels Overseas, per Ton.	Foreign vessels not privileged Overseas, per Ton.	1840.	1841.	1842.
For the buoys and beacons in the channels leading to the river Thames and port of London, including loadsmenage and portage also including the dues formerly returned under the head of Trinity House duties from strangers ships.	In the port of London the following rates are payable for the inward passage only; viz.— The rates vary from 1 penny to 1 farthing per ton, according to the description of the vessel's cargo, and the pieces from whence they arrive.	1 penny	2 pence	10,572 4 8	10,672 0 8	10,855 10 4
	These dues are also received at the ports of Gravesend, Sheerness, Rochester, Faversham, Leigh, Maldon, Colchester, Ipswich, Woodbridge, Harwich, and Aldborough, at which they are payable for the inward passage only. The rate on foreign vessels not privileged, is 4 pence per ton; but in other respects the rates are determined by the ancient usage of the respective places, and are generally one half the amount of those in the port of London.			3,403 7 5	2,401 19 4	2,455 12 1

BURDEN of a ship. See TONNAGE.

BURGUNDY. See WINE.

BURGUNDY PITCH, a resin, the produce of the Pinus Abies, or spruce fir. It is obtained by making incisions in the bark down to the wood, whence it flows thickly and languidly, immediately concreting into flakes that adhere firmly to the tree. These being taken off are melted in boiling water, and strained through coarse cloths. It is of a close consistence, rather soft, has a reddish brown colour, and a not unpleasant smell; it is very adhesive. The greatest quantity is collected in the neighbourhood of Neuchâtel, whence it is brought to us packed in casks. A fictitious sort is made in England, and found in the shops under the title of common Burgundy pitch; it may be distinguished by its friability, want of viscidty and of the odour which characterises the genuine sort.

A species of Burgundy pitch exudes spontaneously from the Norway spruce fir. This, which undergoes no preparation, is the resin or thus of the old London Pharmacopœia. It is imported in the form of tears or small masses, packed in casks, each containing from 1 to 2 cwt. It fetches about half the price of that which is strained.—(Gray's Supplement to the Pharmacopœia, Thomson's Dispensatory.)

BUSHEL, a measure of capacity for dry goods, as grain, fruit, dry pulse, &c., containing 4 pecks, or 8 gallons, or  $\frac{1}{4}$  of a quarter.

The Winchester bushel contains 2150.42 cubic inches, while the Imperial bushel contains 2218.192. Hence, to convert Winchester bushels into Imperial, multiply by the fraction  $\frac{2218.192}{2150.42}$ , or approximately deduct  $\frac{1}{30}$ th, and  $\frac{1}{300}$ th; and if great accuracy be required,  $\frac{1}{3000}$  and  $\frac{1}{30000}$  more. To convert prices per Winchester bushel into prices per Imperial bushel, multiply by the fraction  $\frac{2218.192}{2150.42}$ , or 1.0315157.

By the 5 Geo. 4. c. 74. § 7. the bushel shall be the standard measure of capacity for coals, culm, lime, fish, potatoes, or fruit, and all other goods and things commonly sold by heaped measure. The bushel shall contain 80 lbs. avoirdupois of dist. 'd water, being made round, with a plain and even bottom, and being 19  $\frac{1}{2}$  inches from outside to outside. Sections 7. and 8. direct the mode in which the bushel shall be used for heaped measure.—(See WEIGHTS AND MEASURES.)

The standard measure of capacity, by this act, as well for liquids as for dry goods not measured by heaped measure, shall be the *gallon*, containing 10 lbs. avoirdupois weight of distilled water weighed in air at the temperature of 62° of Fahrenheit's thermometer, the barometer being at 30 inches; and such measure shall be the Imperial standard gallon (containing 277.274 cubic inches); and all measures shall be taken in parts or multiples, or certain proportions, of the said Imperial standard gallon; and the quart shall be the fourth part, and the pint shall be an eighth of such standard gallon; and 2 such gallons shall be a peck, and 8 such gallons shall be a bushel, and 8 such bushels a quarter of corn or other dry goods not measured by heaped measure.

BUSHIRE, or ABUSHIRE, a sea-port town of Persia, in the province of Fars, on the north-east coast of the Persian Gulph, lat. 29° N., long. 50° 50' E. Population uncertain, but estimated by Major Wilson at from 15,000 to 20,000. Bushire is situated at the northern extremity of a sandy peninsula, to the north and east of which is the bay. There is a convenient anchorage for large ships due west from the town, 3 or 4 miles distant, in from 25 to 28 feet water; but ships of 300 tons burden or thereby lie in the inner roads, to the north, about 6 miles from shore; the anchorage is pretty good; but during violent north-westerly gales, they are sometimes obliged to cut their cables, and bear up for Karak, a small island about 15 leagues W. N. W. of Bushire. The water immediately to the east of the town is deep, but the passage to it is obstructed by a bar, which cannot be passed by vessels drawing more than 8 or 9 feet water, except at spring tides, when there is a rise of from 8 to 10 feet. The variation in 1811 was 4° 43' W.—(*Chart of the Persian Gulph, by Captain Ritchie, &c.*) The climate here, as in all the other ports of the Persian Gulph, is extremely hot, particularly June, July, and August. The unhealthy season is in the fall of the year.

*Trade, &c.*—Bushire has a good deal of trade, particularly with Calcutta, Bombay, and Madras. Its merchants supply almost all Persia with Indian commodities; as, also, with a good many of those brought from Europe. Of the imports from India, indigo, sugar, sugar candy, and spices are the most important; the steel of India is preferred in Persia to every other, and is made into excellent swords; tin is brought from Banca; and coffee is principally supplied by Mocha and other ports on the Arabian Gulph. English cotton goods, notwithstanding the admitted inferiority of our red dyes,—a colour in great esteem in Persia,—have already gone far to supersede those that were formerly brought from Hindostan; and the demand for them is rapidly extending, and is susceptible of an almost indefinite increase. Besides those imported at Bushire, a good many are introduced through Bussorah, and some through Turkey and Russia; the latter by way of the Black Sea, the former of Smyrna and Constantinople. Hitherto, indeed, a considerable part of the cottons imported through the last mentioned channels have been supplied by Switzerland and Germany,—their fabrics having been, in some respects, better fitted than ours for the Turkish and Persian markets; but they seem to have lost this advantage, as our exports of cottons to Turkey are now rapidly increasing. Woolen goods, cutlery, watches, &c., sent to India from England, are thence exported to Bushire. Imitation shawls, of the proper size and pattern, are sold to meet with a fair sale. The exports principally consist of raw silk, Kerman wool, Kerman and Cashmere shawls, carpets, horses, silk goods, dried fruits, wine, grain, copper, turquoises, asafoetida, gall-nuts, pearls, and other articles of minor importance. Turkey annually supplies Persia with a very considerable amount of bullion, most part of which is sent to India.

Of the Persian exports, raw silk is the most important. It is produced to some extent in every province; but Gheelan and Mazanderan are those which are most celebrated for its growth. In the former, about 900,000 lbs. are annually raised. Russia is a large customer of this article. Dried fruits and dates are sent in considerable quantities to India. Horses are largely exported to India both by sea and land; they serve for mounting our Indian cavalry, and for supplying the large private demand that always obtains in Hindostan for this noble animal. Though neither so swift nor so beautiful as those of Arabia, the Persian horses are large, more powerful, and, all things considered, better for cavalry. They are capable of supporting an extraordinary degree of fatigue. Wine of Shiraz enjoys a degree of celebrity to which, judging from the few samples we have seen, it seems but ill entitled. Mr. Fraser says that if it is made in so careless a manner, that, in choosing it, not more than 1 bottle in 4 or 5 can be made use of. Persian tobacco and yellow dye berries are highly esteemed; the former enters to a considerable extent into the trade to Turkey as well as to India; the berries bring a very high price in our markets, but the imports hitherto have been inconsiderable. Turquoises, asafoetida, and various sorts of drugs, rose water, with other minor articles, form part of the exports. Sheep's and goats' wool is also exported. The best is that of Kerman. The down furnished by the goats of this province is almost as fine as that of the Tibet or shawl goats. Cotton is extensively produced in Persia; the Russians carry away some, but the greater part is used in the country. Grain is sent to Muscat, but not in large quantities. The pearl trade is now principally centred at Muscat. The copper exported from Bushire is principally the produce of the Persian mines, mixed, however, with some Russian copper from Georgia. Of manufactured articles, the principal are carpets of the most beautiful fabric; shawls, partly native, and partly brought from Cashmere; velvets, silk goods, gold and silver brocade, and a few other articles. The trade between Persia and Russia by the Caspian Sea is not very considerable. Most part of the paper used in the former is supplied by the latter. The furs of Russia find a ready market in Persia. The Russian provinces on the Caspian derive their supplies of indigo from Persia by way of Bushire.

The entire trade between British India and the Persian Gulph, amounts to about 1,500,000. a year. This, however, includes the trade to Muscat and Bussorah, as well as to Bushire, and we have no means of discriminating the separate amount of each.

Water at Bushire is excessively bad and dear; but excellent water, and in great abundance, may be had at Karak. The anchorage at this island is safe at all times; and ships may lie close to the beach. Sir John Malcolm suggested, that the permanent possession of Karak would be an object of considerable importance; and we are rather inclined to agree with him. It is of no value to the Persians, and there seems little doubt that they would be glad to cede it for a trifling consideration. Its possession would not only enable us to command the navigation of the Persian Gulph; but it would form a depot where goods destined for Bushire, Bussorah, &c. might be kept in perfect safety, and in a situation the most convenient, being readily accessible to all sorts of Arabian vessels. A taste for British cottons and woollens is now forming in all the vast countries watered by the Euphrates and the Tigris, or which derive their supplies from the emporia erected on their banks; and it is of the greatest consequence that nothing be omitted that may serve to facilitate the diffusion of this taste, and the means of gratifying it.

**Money.**—Accounts are kept in toman of 50 ahanes, or 100 mancools. The toman is a Patel coin, containing, according to the report of the Bombay Mint, from 71.5 to 67 grs. pure metal, being consequently equal to 1 lb. 7½ to 1 lb. 1½ sterling. The toman of Bussorah is worth about 36s., and that of Gombroon about 34s. These, with Persian and foreign silver coins of all denominations, are found at Bushire; but the rates of the foreign coins are perpetually varying, and the weight of the native coins is also subject to frequent changes.

**Weights and Measures.**—Gold and silver are weighed by the miscal of 4 dwts. 33-19 grs. or 3 dwts. very nearly. The commercial weights vary according to the commodities sold, and the places where they are used. The maund tabree weighs 6½ lbs. avoirdupois at the Custom-house, but only 5½ lbs. at the bazaars. This weight is used by dealers in sugar, coffee, copper, and all sorts of drugs. The maund copra is 7½

lbs. at the Custom-house, and from 7½ to 7½ lbs. at the bazaars. Dealers in rice and other articles of provision use this weight. The maund shew is double the maund tabree, or 13½ lbs. Pearls are weighed by the abbas = 245 grs. Troy.

There are various sorts of galls or cubits. One called the royal gaa = 37½ Eng. inches; the common gaa is two thirds of the former, or 25 inches.

The Persian league or parasang is 1.70th of a degree of the equator, and should, therefore, be equal to 3 miles 3 furlongs and 15 poles English.

The araba, or principal corn measure, is equivalent to about 8 Winch. quarters.

For further particulars, see *Nisabur, Voyage en Arabie*, tome ii. p. 75; *Kinnel's Memoir of the Persian Empire*, p. 70; *Frasar's Travels on the Shores of the Caspian*, Append. pp. 165-166; *Parf. Paper No. 735*, 2d. Nov. 1831, pp. 163-164; *Kelly's Oriental Metrology*; *Theorston's Indian Calculator*, &c.

**BUSS**, a small sea-vessel, used by us and the Dutch in the herring fishery, commonly from 50 to 60 tons burden, and sometimes more. A buss has two small sheds or cabins; one at the prow, and the other at the stern: that at the prow serves for a kitchen.—(See **FISHERY**.)

**BUSSORAH**, or **BASRAH**, a city of Arabia, on the western bank of the Shat-el-Arab (the name given to the river formed by the junction of the Tigris and the Euphrates), above 70 miles from its mouth, lat 30° 30' N., long. 47° 32' E. Population about 60,000, consisting of Arabs, Turks, Persians, Armenians, Jews, &c. The houses and streets are mean and filthy. There is a vast area within the walls, occupied principally by gardens and plantations of date trees, and intersected by canals, on which are numerous small craft.

The bar at the mouth of the Shat-el-Arab has only about 12 feet water, but the channel within is deep, so that ships of 500 tons burden, provided they cross the bar at the springs, may without difficulty ascend the river as far as the city; and both its grand branches may be navigated to a great distance by smaller vessels. Bussorah is the principal inlet on the east, through which Indian and other Eastern products find their way into the Turkish Empire. Its commerce is, therefore, even at present, pretty considerable; and were the rich and extensive countries traversed by the Tigris and the Euphrates occupied by a civilised and industrious people, it would be very great. Its imports from India and Europe are similar to those at Busuraz—(which see); from Persia it imports shawls, pearls from Bahrein, &c., and coffee from Mocha. At an average, 6 or 8 British ships arrive in the course of the year from India; but the principal part of the trade is carried on in Arabian bottoms, the merchants of Muscat being the owners of some of the finest ships that are to be met with in the Indian seas. Its exports are principally bullion, pearls, dates, copper, raw silk, horses, gall nuts, and drugs. Captain Hamilton mentions, that in the early part of last century, the exports of dates from Bussorah exceeded 10,000 tons a year.—(*New Account of the East Indies*, vol. i. p. 78.) The commerce with the interior is conducted by means of caravans to Aleppo and Bagdad; but it might be carried on to much more advantage by means of steam-boats. It was at one time proposed to forward mails from India by steam by the Shat-el-Arab and the Euphrates to Bir, thence by land to Scanderoon, and again by steam to Gibraltar and England; but this project was very wisely given up in favour of the route by the Red Sea.

**Money.**—All sorts of coins circulate here, but their values are constantly fluctuating. Accounts are kept in *mancools* of 10 *ahanes*, or 100 *mancools*; 100 *mancools* make a *toman*, which may be valued at about 15 *aces* rупees, or 36s. sterling.

**Weights and Measures.**—Gold and silver are weighed by the *cheit* of 100 *mancools*, or 7,000 Eng. grains.

The commercial weights are the *maund altere*, the *maund sof*, or *sees*, and the *aks* of Bagdad. 1 *vakia* = 15 oz. avoirdupois; ½ *vakia* = 1 she of Bagdad = 47½ oz. avoirdupois; 1 *maund altere* = 36 lbs. avoirdupois; 1 *maund sof* = 30 lbs. avoirdupois; 1 *akra* of Indigo = 138 lbs. 15 oz. avoirdupois.

These are the weights used by the Europeans settled at

Bussorah; those used by the Arabians differ a little from the above, and frequently also among themselves—a circumstance to which the merchant must pay particular attention.

The long measures are the Aleppo yard for silks and woolens = 2 feet ¼ inches; the Haided *do.* for cottons and linens = 2 feet 10-12 inches; the Bagdad *do.* for all purposes = 2 feet 7-8 inches.

For further details as to the commerce of Bussorah, see *Kinnel's Memoir on the Persian Empire*, p. 245; the article *Bussorah* in this Dictionary; *Kelly's Oriental Metrology*; *Theorston's East Indian Calculator*, p. 424; *Nisabur* has given a plan of Bussorah; *Voyage en Arabie*, tome ii. p. 170.

#### BUTLERAGE. See **PAISAGE**.

**BUTT**, a vessel or measure for wine, containing 2 hogsheads, or 126 wine gallons.

**BUTTER** (Da. *Smür*; Du. *Boter*; Fr. *Beurre*; Ger. *Butter*; It. *Burro*, *Butiro*; Lat. *Butyrum*; Pol. *Maslo*; Port. *Manteiga*; Rus. *Masslo Korowe*; Sp. *Manteica*; Sw. *Smör*), as every one knows, is a fat, unctuous, and, in temperate climates, a pretty firm substance, obtained from milk, or rather from cream, by the process of churning.

The various circumstances attending the introduction and use of butter in antiquity have been investigated by Beckmann with great learning and industry. The conclusion at which he arrives is, "that butter was not used either by the Greeks or Romans in cooking or the preparation of food, nor was it brought upon their tables by way of dessert, as is every where customary at present. We never find it mentioned by Galen and others as a food, though they have spoken of it as applicable to other purposes. No notice is taken of it by Apicius; nor is there any thing said of it in that respect by the authors who treat of agriculture, though they have given us very particular information with respect to milk, cheese, and oil. This, as has been remarked by others, may be easily accounted for, by the ancients having accustomed themselves to the use of good

oil; and in the like manner butter is very little employed at present in Italy, Spain, Portugal, and the southern parts of France."— (*History of Inventions*, vol. II, p. 413, Eng. ed.)

Butter is very extensively used in this and most other northern countries; that of England and Holland is reckoned the best. In London, the butter of Epping and Cambridge is in the highest repute; the cows which produce the finest feed during summer in the shrubby pastures of Epping Forest; and the leaves of the trees, and numerous wild plants which there abound, are supposed to improve the flavour of the butter. It is brought to market in rolls from one to two feet long, weighing a pound each. The Cambridgeshire butter is produced from cows that feed one part of the year on chalky uplands, and the other on rich meadows or fens; it is made up into long rolls like the Epping butter, and generally salted or cured before being brought to market; the London dealers, having washed it, and wrought the salt out of it, frequently sell it for Epping butter.

The butter of Suffolk and Yorkshire is often sold for that of Cambridgeshire, in which it is little inferior. The butter of Somersetshire is thought to equal that of Epping; it is brought to market in flakes containing half a pound each; out of which it is taken, washed, and put into different forms, by the dealers of Bath and Bristol. The butter of Gloucestershire and Wiltshire is very good; it is made up in half-pound packs or prints, packed up in square baskets, and sent to the London market by wagon. The butter of the mountains of Wales and Scotland, and the moors, commons, and heaths of England, is of excellent quality when it is properly managed; and though not equal in quantity, it often is confessedly superior to that produced by the richest meadows.— (*London's Receipts of Agriculture*.)

Considerable quantities of butter are made in Ireland, and it forms a prominent article in the exports of that country; generally, it is very inferior to that of Britain; but this is a consequence rather of the want of cleanliness and attention, than of any inferiority in the milk. Some of the best Irish butter brought to London, after being washed and re-packed, is said as Dorsetshire and Cambridgeshire butter.

The salt butter of Holland is superior to that of every other country; large quantities of it are annually exported. It forms about three-fourths of all the foreign butter we import.

The production and consumption of butter in Great Britain is very great. The consumption in the metropolis may, it is believed, be averaged at about 10 lbs. a year for each individual; and supposing this estimate to be nearly accurate, and the population to amount to 9,000,000, the total annual consumption would, on this hypothesis, be 20,000,000 lbs., or 8,928 tons; but in this may be added 3,000 tons, of the butter required for the victualling of ships and other purposes; making the total consumption, in round numbers, 12,000 tons, or 26,880,000 lbs., which at 10d. per lb. would be worth 1,191,000*l.*

The average produce per cow of the butter counties is estimated by Mr. Marshall at 108 lbs. a year, but owing to the improvements that have been made in the interval, the yield per cow may now be safely estimated at 180 lbs.; so that, supposing we are nearly right in the above estimates, about 100,000 cows will be required to produce an adequate supply of butter for the London market.

The imports of foreign butter have more than doubled since 1830. We subjoin an

Account showing the Total Quantities of Butter Imported into the United Kingdom during each of the Five Years ending with 1841, specifying the Quantities brought from each Country.

Countries.	1837.	1838.	1839.	1840.	1841.
Denmark . . . . .	<i>Cwt.</i> 15,914	<i>Cwt.</i> 14,446	<i>Cwt.</i> 15,104	<i>Cwt.</i> 14,081	<i>Cwt.</i> 18,106

Holland . . . . .	187,325	109,115	150,830	167,809	164,513
All other countries . . . . .	4,725	9,615	5,175	7,470	19,065
Total	298,549	207,183	276,610	299,861	277,659

The duties on foreign butter during the whole of these years were (including the 5 per cent. imposed in 1840) 2*s.* a cwt. In 1842 the duty on butter from a British possession was reduced to 5*s.* a cwt.; and in 1846 it was further reduced to 2*s.* 6*d.* on that brought from our possessions, and to 1*s.* a cwt. on that brought from foreign countries. We subjoin an

Account of the Imports of Butter, and of the Quantities entered for Consumption with the Revenue accruing thereon in 1846 and 1847.— (*Parl. Paper*, No. 107, *sess.* 1848.)

	Imports.	Quantities entered for Consumption.	Revenue.
1846	<i>Cwt.</i> 227,365	<i>Cwt.</i> 255,131	<i>l.</i> 136,081
1847	314,066	319,921	168,608

The average contract prices of the butter furnished to Greenwich Hospital from 1730 to 1842, have been as follows:—

Years.	Prices per lb.	Years.	Prices per lb.	Years.	Prices per lb.	Years.	Prices per lb.	Years.	Prices per lb.
1730	<i>s.</i> 0 <i>d.</i> 5	1770	<i>s.</i> 0 <i>d.</i> 6	1800	<i>s.</i> 0 <i>d.</i> 11	1830	<i>s.</i> 0 <i>d.</i> 0	1835	<i>s.</i> 0 <i>d.</i> 7

1750	0 5	1790	0 6	1815	1 3	1830	0 8	1841	0 8
1760	0 5								

In order to obviate the practice of fraud in the weighing and packing of butter, different statutes have been passed, particularly the 36 Geo. 3, c. 86, and 38 Geo. 3, c. 73, the principal regulations of which are subjoined. It is very doubtful, however, whether they have been productive of any good effect. It might be proper, perhaps, to order the weight of the butter, exclusive of the vessel, and the dairyman's or seller's name, to be branded on the inside and outside of each vessel; but most of the other regulations, especially those as to the thickness of

the staves, and the weights of the vessels, seem to be of no great utility.

Every cooper or other person who shall make any vessel for the packing of butter, shall make the same of good well-seasoned timber, flat and not leaky, and shall groove in the heads and bottoms thereof; and every vessel made for the packing of butter shall be a tub, brick, or half-brick, and no other.

Every tub shall weigh of itself, including the top and bottom

not less than 14 lbs. nor more than 16 lbs. the avoirdupois; and neither the top nor the bottom of any such tub shall exceed in any part five eighths of an inch in thickness.

Every firkin shall weigh at least 110 lbs. including the top and the bottom, which shall not exceed four eighths of an inch thick in any part.

Half-tubs to weigh not less than 4 lbs. nor more than 6 lbs. including the top and the bottom, which shall not exceed the thickness of three eighths of an inch in any part; upon pain that the cooper or any other person contravening any of the above in any respect contrary to the preceding directions, shall forfeit every such vessel and 10s.

Every cooper, &c. shall brand every cask or vessel before going out of his possession, on the outside, with his name, in legible and permanent letters, under penalty of 10s., together with the exact weight or tare thereof.

Every dairyman, farmer, or seller of butter, or other person packing the same for sale, shall pack it in vessels made and marked as aforesaid, and in no other, and shall properly soak and season every such vessel; and on the inside, and on the top on the outside, shall brand his name at length, in permanent and legible letters; and shall also, with an iron, brand on the top on the outside, and on the hoque or body of every such cask, the true weight or tare of every such vessel, when it shall have been soaked and seasoned; and shall also brand his name at length, on the hoque or body of every such vessel, across two different staves at least, and shall distinctly, and at length, inscribe his Christian and surnames upon the top of the butter in such vessel when filled, on pain of forfeiting 5s. for every default thereof.

Every tub of butter shall contain, exclusive of the tare of good and merchantable butter, 54 lbs. every firkin 56 lbs. every half-firkin 28 lbs.; and no old or corrupt butter shall be mixed, or packed in any vessel whatever, with any butter that is new and sound; nor shall any butter made of whey be packed or mixed with butter made of cream, but the respective sorts shall be put in separate tubs, firkins, or half-tubs throughout, be of one sort and goodness; and no butter shall be mixed with any great salt; but all butter shall be salted with small salt; nor shall more salt be intermixed with the butter than is needful for its preservation, under penalty of 5s. for offending against any of these regulations.

No change, alteration, fraud, or deceit shall be practised by any dealers or packers of butter, either with respect to the weight of the butter so packed, whether in respect to quantity or otherwise, under a penalty of 20s. to be imposed on every person engaged in the offence.

Every cheesemonger, dealer in butter, or other person, who shall sell any tubs, firkins, or half-firkins of butter, shall deliver, in every such cask or vessel respectively, the full quantity appointed by this act, or, in default thereof, shall be liable to make satisfaction to the person who shall buy the same for what shall be wanting, according to the price for butter made in his country is generally liquid.

Butter made in hot countries is generally liquid; it is prepared from the milk of buffaloes; it is usually conveyed in dippers, or bottles made of hide, each of which contains from 10 to 40 gallons. Chee is an article of considerable commercial importance in many parts of India.

The Arabs are the greatest consumers of butter in the world. Burchard tells us, that it is a common practice among all classes to drink every morning a cup full of melted butter or ghee; and they use it in an infinite variety of other ways. The taste for it is universal; and the poorest individuals will expend half their daily income that they may have butter for dinner, and butter in the morning. Large quantities are annually shipped from Cosseir, Souakin, and Massouah, on the west coast of the Red Sea, for Djidda and other Arabian ports.—(*Burchard's Travels in Nubia*, p. 440; *Travels in Arabia*, vol. 1, p. 52.)

**BUTTONS** (*Du. Knoopen*; *Fr. Bouton*; *Ger. Knöpfe*; *It. Bottoni*; *Rus. Pogozivü*; *Sp. Botones*) are well known articles, serving to fasten clothes, &c. They are manufactured of an endless variety of materials and forms.

It might have been supposed, that the manufacture of such an article as this would have been left to be carried on according to the views and interests of those concerned, individuals being allowed to select any sort of button they pleased. Such, however, has not been the case; and various statutes have been passed, pointing out the kind of buttons to be worn, and the way in which they are to be made. Most of these regulations have luckily fallen into disuse, but they still occupy a place in the statute book, and may be enforced. The following are amongst the more prominent of these regulations:—

No person shall make, sell, or set upon any clothes, or wearing garments whatsoever, any buttons made of cloth, serge, druggs, frieze, cambric, or any other stuff of which clothes or wearing articles are made, or any buttons made of wood only, and turned in imitation of other buttons, on pain of forfeiting 40s. per dozen for all such buttons.—(4 Geo. 1. c. 7.)

No tailor shall set on any buttons, or button-holes, of serge, druggs, &c., under penalty of 40s. for every dozen of buttons or button-holes so made or set on.

No person shall use or wear, on any clothes, garments, or apparel whatsoever, except waistcoats, any buttons or button-holes, made of or bound with cloth, serge, druggs, frieze, cambric, or other stuff whereof clothes or woollen garments are usually made, on penalty of forfeiting 40s. per dozen, under a similar penalty.—(7 Geo. 1. c. 22.)

which it was sold, and shall be liable to an action for recovery of the same, with all costs of suit.

No cheesemonger, dealer in butter, &c. shall repack for sale any butter, under penalty of 5s. for every tub, firkin, or half-firkin, so repacked.

Nothing in this act shall extend to make any cheesemonger, dealer in butter, or other person, liable to any penalties for selling any of the tubs, firkins, or half-firkins, or for selling butter used in such vessels shall have been taken thereout, for re-packing for sale of any foreign butter, which shall be liable to so repack such foreign butter, entirely and so effect the several names of the original dairyman, farmer, or seller of the butter, on every such vessel, leaving the name and name of the cooper, and the tare of the original dairyman, farmer, or seller thereat in and, after the name are so effaced, shall, with an iron, brand his Christian and surnames, and the words *Foreign butter*, upon the hoque of every such vessel, across 100 staves at least, to denote that such butter is foreign butter.

Persons counterfeiting or forging any such names or marks, shall for every such offence forfeit 40s.

Penalties not exceeding 5s. to be determined by one justice, upon the evidence of one witness, and the whole shall go to the informer.

Penalties above 5s. to be recovered by action of debt, or information, in the courts as Westminster, and the whole to the informer.

Nothing to extend to the packing of butter in any pot or vessel which shall not be capable of containing more than 14 lbs.

Previously to 1820, no butter could be sold in any public market in Ireland, or exported from it, without being previously examined and branded by a public inspector; but a complaint with this regulation is no longer compulsory, but is left to the discretion of the parties.

It is enacted by statute 5 Will. 4. c. 7., that every warehouse-keeper, weigher, searcher, or shipper of butter and cheese, shall receive all butter and cheese that is brought in him for the London cheesemongers, and ship the same without undue preference; and shall have for his pains 2s. 6d. for every load; and if he shall make default, he shall, on conviction before one justice, on oath of one witness, or confession, forfeit for every firkin of butter 10s., and for every weight of cheese 2s.; half for the use of the poor, and half to the informer.

And every such person shall keep a book of entry of receiving and shipping the goods, on pain of 2s. 6d. for every firkin of butter and weight of cheese.

The master of a ship refusing to take in butter or cheese before he is full laden (except it be a cheesemonger's own ship sent for his own goods) shall forfeit for every firkin of butter refused 5s., and for every weight of cheese 2s. 6d.

This act does not extend to any warehouse in Cheshire or Lancashire.

In India it is denominated *ghee*, and is mostly prepared from the milk of buffaloes; it is usually conveyed in dippers, or bottles made of hide, each of which contains from 10 to 40 gallons.

In India it is denominated *ghee*, and is mostly prepared from the milk of buffaloes; it is usually conveyed in dippers, or bottles made of hide, each of which contains from 10 to 40 gallons. Chee is an article of considerable commercial importance in many parts of India.

C.

**CABBAGE**, a biennial plant (*Brassica Lin.*), of which there are many varieties. It is too well known to require any particular description; it is extensively cultivated in the vicinity of London. Sour crout, or properly *sauer kraut*, is a very favourite dish in Germany; it consists of a fermented mass of salted cabbage.

**CABLES** are strong ropes or chains, principally used in the anchoring or mooring of ships.

1. *Rope Cables* are, in Europe, principally manufactured of hemp; but in the East they are very frequently made of *coir*, or the fibrous part of the cocoa nut, and in some places, particularly on the Red Sea, of the coating of the branches of the date tree.

Hemp cables are formed of three principal strands, every strand of three ropes, and every rope of three twists. The twists have more or fewer threads according to the greater or less thickness of the cable. All vessels have ready for service three cables which are usually designated the *sheet* cable, the *best bower* cable, and the *small bower* cable; but besides these, most ships have some spare cables. The ordinary length of a cable is from 100 to 120 fathoms. The following are the existing regulations as to the manufacture of hemp cables and cordage:—

No person shall make or sell any cordage for shipping in which any hemp is used, called short chucking, half clean, whole line, or other toppings, codilla, or any damaged hemp, on pain of forfeiting the same, and also treble the value thereof.

Cables, hawsers, or ropes, made of materials not prohibited by this act, and whose quality shall be inferior to clean Petersburgh hemp, shall be deemed inferior cordage, and the same shall be distinguished by marking on the tally, *staple* or *inferior*. Manufacturers making default herein forfeit for every hundred weight of cordage, 10*l*.

Manufacturers are to affix their names and manufactory to new cordage before sold, under the like forfeiture; and putting a false name is a forfeiture of 20*l*.

Persons making cables of old and overworn stuff, containing above 7 inches in compass, shall forfeit four times the value.

Vessels belonging to British subjects, having on board foreign-made cordage, are to make entry thereof, on entering into any British port, on penalty of 20*l*. for every hundred weight. But this is not to extend to cordage brought from the East Indies, nor to materials at present used by any vessels built abroad before this act.—(25 Geo. 3. c. 56.)

2. *Iron Cables.*—The application of strong iron chains or cables to the purposes of navigation is a late and an important discovery, for which we are indebted to Captain Samuel Brown, R.N. It is singular, indeed, that this application should not have been made at a much earlier period. On rocky bottoms, or where coral is abundant, a hempen cable speedily chafes, and is often quite destroyed in a few months, or perhaps days. A striking instance of this occurred in the voyage of discovery under the orders of M. Bougainville, who lost six anchors in the space of nine days, and narrowly escaped shipwreck; a result, says that able seaman, which would not have happened, "*si nous eussions été munis des quelques chaînes de fer. C'est une précaution que ne doivent jamais oublier tous les navigateurs destinés à de périlleux voyages.*"—(*Voyage autour du Monde*, p. 207. 4to. ed.) The work from which this extract is taken was published in 1771; and yet it was not till nearly forty years after, that any attempt was made practically to profit by so judicious a suggestion. The difficulties in the way of importing hemp from 1808 to 1814, and its consequent high price, gave the first great stimulus to the manufacture of iron cables.

Iron cables are constructed in different ways—(see *Encyc. Metrop.*); but they are uniformly tried by a machine, which strains them by a force greater than the absolute strength of the hempen cable they are intended to replace. By this means the risk of accident from defective links is effectually obviated; and there are exceedingly few instances in which an iron cable has broken at sea. Their great weight also contributes to their strength, inasmuch as the impulse of the ship is checked before the cable is brought nearly to a straight line, or that the strain approaches to a maximum. Bolts and shackles are provided at every fathom or two fathoms, by striking out which the ship may, if necessary, be detached from her anchors with less difficulty than a hempen cable can be cut.

Even in their most defective form, iron cables are a great deal stronger than those of hemp; and as to durability, no sort of comparison can be made. No wonder, therefore, that they should be rapidly superseding the latter; which are now almost wholly laid aside in the navy, and, to a great extent, also, in the merchant service.

CADIZ, the principal commercial city and sea-port of Spain, on its south-western coast, on the rocky and elevated extremity of a narrow, low peninsula, or tongue of land, projecting from the Isla de Leon, N.N.W. about 4½ nautical miles. It is surrounded on all sides, except the south, where it joins the land, by the sea, and is very strongly fortified. Population, in 1837, 58,325. It is well built, and has, at a distance, a very striking appearance. The tower or lighthouse of St. Sebastian stands on the western side of the city, being, according to Tofiño, in lat. 36° 31' 7" N., long. 6° 18' 52" W. It is a most conspicuous object to vessels approaching from the Atlantic. The light, which is 172 feet high, is of great brilliancy, revolves once a minute, and in fair weather may be seen more than 6 leagues off.

*Bay of Cadiz.*—The entrance to this noble basin lies between the city and the town and promontory of Rota, bearing N.W. by N.; distant about 1½ league. The bay is of very great extent, affording, in most places, good anchorage. The port is on the eastern side of the city, where a mole of considerable dimensions has been constructed; but the water is not sufficiently deep to allow large vessels to approach nearer than within about ¼ of a mile, where they anchor in from 5 to 7 fathoms. The rocks called the Cochinos, the Puerca, and the Diamante, lie to the north of the city in the entrance to the bay; the first two at about 3 miles of a mile distant, and the Diamante at rather more than 1½ mile from the city. Vessels may enter between the Puerca and the Diamante; but none, except those not drawing more than 15 feet water, and well

acquainted with the channel, ought to attempt entering between the Cochinos and Puerca and the city. The town of St. Mary's, on the opposite side of the bay, is famous for being the depot of the wines of Xeres. The outer bay, or that of Cadiz properly so called, is separated from the inner bay by the promontory having at its extremity the castle of Malagaquia, which approaches within about ¾ of a mile of the Pointe castle on the Isla de Leon. Within the latter bay is the famous arsenal of the Carracas, the town of San Carlos, the canal of Trocadero, &c. At spring tides the water in the bay rises 10 or 11 feet, but at neaps the rise does not exceed 6 feet.—(For further particulars see the excellent *Chart of the Bay of Cadiz*, by Tofiño; *Matham's Naval Gazetteer*; and *Purdy's Sailing Directions for the Bay of Biscay*, &c.)

*History, Trade, &c.*—Cadiz is a very ancient city, having been founded by the Phœnicians about 1,200 years before the Christian era. The temple which they

erected in it in honour of Hercules was one of the most celebrated in antiquity. — (*Sainte Croix, Des Anciennes Colonies*, p. 14.; *Pomp. Mela*, lib. iii. cap. 6.) Its excellent port, and its situation, favourable alike for commerce and security, have made it, whether possessed by Carthaginians, Romans, Moors, or Christians, and under every vicissitude, a place of considerable commercial and political importance. It has long been one of the principal stations of the Spanish naval force. In 1720, the commerce with Spanish America, which had previously been exclusively carried on from Seville, was transferred to Cadiz. It enjoyed this valuable monopoly till 1765, when it was partially relaxed by the trade to Cuba, St. Domingo, Porto Rico, and the other islands being opened to all the greater ports of Spain. The benefits resulting from this relaxation were so very great, that in 1776 the trade to all parts of America was opened to ships from every considerable Spanish port, except those of Biscay, which, not being subject to the general laws of the kingdom, were not allowed to participate in this privilege. In consequence, however, of her situation, the great capital of her merchants, and their established connections, Cadiz continued, notwithstanding the abolition of the monopoly, to preserve by far the largest share of the American trade. But since the colonies achieved their independence, her commerce has been contracted within comparatively narrow limits; nor is there much prospect of its being materially improved, without a total change of policy on the part of the Spanish government. — (*Robertson's America*, b. viii. passim; *Townsend's Travels in Spain*, vol. ii. pp. 395—401. 2d edit.)

The white wines of Xeres in its vicinity form by far the principal article of export from Cadiz. The quantity exported may amount to about 28,000 pipes a year. The prices vary from 12*l.* to 65*l.* per pipe; but, as the lower qualities predominate, the price may be taken, at a medium, at about 25*l.*, making the total value of the exports 700,000*l.* More than 3*ths* of the whole comes to England. The other articles of export are quicksilver, brandy, oranges and other fruits, oil, provisions, salt, wool, &c. The imports consist principally of sugar and coffee from the Havannah and Porto Rico, cocoa, hemp, flax, linens, dried fish, hides, cotton wool and cotton manufactures, rice, spices, indigo, staves and timber, &c.

The imports of colonial produce, exclusive of cocons, from Cuba and Porto Rico into Cadiz, in 1837, were —

Sugar	lbs.	150,531,774
Coffee	—	36,654,514
Cigars	no.	143,701,500
Tobacco	lbs.	1,196,188
Freestone	—	2,950,448
Honey	—	71,708
Wax	—	920,64
Rum	gall.	314,098

Account of the wines exported from Xeres and Port Mary, in 1835, 1836, and 1837.

1835	—	28,557 butts.
1836	—	31,354 —
1837	—	28,808 —

Annual average 28,687 butts; and as each but contains 600 bottles of wine, the annual export is 17,176,200 bottles, or 1,431,350 dozens. — (Taken on the statistics of Cadiz, in the *Statistical Journal* for October, 1838.)

It appears from the subjoined statements, furnished by the English consul, that while the estimated value of the exports from Cadiz amounts to nearly a million sterling a year, the estimated value of the imports hardly exceeds 30,000*l.* But it is needless to say that there cannot possibly be any such discrepancy; and, in fact, the apparently trifling amount of the imports is entirely owing to their being almost wholly smuggled into the country, and, consequently, not appearing in the printed returns.

Account of the number and tonnage of the vessels entering and sailing from Cadiz during each of the 5 years ending with 1842, specifying the value of their cargoes.

Imports.	Vessels arrived.	Tons.	Val. of Cargoes.
1837	527	51,899	269,948
1838	290	44,303	35,051
1839	287	29,433	18,288
1840	322	49,460	39,248
1841	292	45,801	26,830
1842	296	46,028	59,251

Exports.	Vessels sailed.	Tons.	Val. of Cargoes.
1837	316	56,542	284,133
1838	289	44,443	1,010,081
1839	294	39,094	1,154,051
1840	319	48,451	1,086,769
1841	288	45,334	878,646
1842	300	46,901	710,514

Port and other Charges of Cadiz. — British vessels pay a tonnage duty of one real de Vellon, or 2*½*d. sterling, and for light duty 8*½* maravedis, or 1*½*d. sterling, exchange 5*½*d. per dollar of exchange; but Spanish vessels are exempt from the tonnage duty, and pay for light duty 12 maravedis, or 5*½* farthings sterling, at the same exchange.

Notwithstanding the powerful influence of her anti-commercial policy, we carry on a very considerable intercourse with Spain. This is evident from the following table, which exhibits the quantities of the principal articles we import from her; but no reliance can be placed on the statements as to the exports, the articles intended for Spain being principally shipped for Portugal, Gibraltar, Malta, &c., whence they are smuggled into her markets.

Account of the Quantities of the Principal Articles imported into the United Kingdom from Spain and the Balearic Islands in 1839, 1840, and 1841, and of the Quantities and Declared Value of the Principal Articles of British Produce and Manufacture exported from the United Kingdom to Spain and the Balearic Islands in 1839, 1840, and 1841.

*Money.*—The moneys, weights, and measures, used at Cadiz, are those of Castile. Accounts are kept by the real (of old piece), of which there are 10 in the peso duro, or hard dollar; and as the dollar = 2s. 3d. the real = 1d. A real is divided into 16 quintos, or 31 maravedis. The ducado de plata, or ducat of plate, is worth 11 reals.

*Weights and Measures.*—The ordinary quintal is divided into 4 arrobas, or 100 lbs. of 2 mares each; 100 lbs. Castile = 101 lbs. avoirdupois. The vara, or span = 27 English yard, or 100 varas = 29½ English yards. The cahiz, or measure

for corn, is divided into 12 fanegas, or 144 celeminas, or 576 cuartillos; 100 cahiz's = 197 Winchester quarters, and 5 fanegas = 1 quarter. The cantaro, or arroba, the measure for liquors, is divided into 8 asombros, and 32 quartillos. There are two sorts of arrobas, the greater and the lesser; they are to each other as 32 to 25, the former being equal to 4½ English wine gallons, the latter 10 ½ do. A mozo of wine = 10 arrobas. The botto = 30 arrobas of wine, or 38½ of oil. A pipe = 27 arrobas of wine, or 3½ of oil. Hence the botto = 12½ English wine gallons, and the pipe 11½ do.

In 1829 Cadiz was made a free port, that is, a port where goods may be consumed and bonded without paying duty. This boon would have been of comparatively little consequence but for the opportunity of smuggling afforded by the oppressively high duties laid on most foreign articles imported into Spain. These, as such duties wherever imposed never fail to, have given birth to a very extensive contraband trade; and under the free regime Cadiz became the grand focus of this traffic. The government having seen this effect of the franchise, it was withdrawn on the 22d of December, 1832. This, however, is but a very trifling inconvenience to the smuggler; for nothing, fortunately, but the repeal of prohibitions, and the reduction of oppressive duties to a reasonable amount, can ever materially diminish the field of his exertions.

*Spanish Commercial Policy.*—It is the peculiar misfortune of Spain that every part of her political system has been alike vicious and objectionable. Had her commercial policy been liberal, in some degree, have compensated for the defects in the distribution of property and political power, and would, no doubt, have given a powerful stimulus to industry. But, unluckily, it has been in perfect harmony with her other institutions, and is, in all respects, worthy of the favourite seat and stronghold of the Inquisition. From the reign of Ferdinand and Isabella down to the present time, the grand object of the Spanish government, next to the extirpation of heresy, has been to exclude foreign manufactures from the Peninsula, and to preserve a monopoly of its markets, as well as of those in the colonies, to the home manufacturers. It is, however, almost needless to say, that their efforts to bring about this result have been signally unsuccessful. The oppressive system of taxation, the multiplication of fasts and holy-days, the government monopolies, the badness of the roads and other means of communication, made it impossible for the Spanish manufacturers, even if they had evinced greater enterprise and industry than they have done, to produce manufactured articles as cheap as the English, French, and others less unfavourably situated; and such being the case, it is plain that the prohibition of certain descriptions of commodities, and the oppressive duties laid on others, could have no effect except to suppress the legitimate commerce of the country, and to throw it wholly, or almost wholly, into the hands of smugglers. Any one who takes up a map of Spain must be satisfied at a glance that it would be impossible for an army of customs officers to prevent her being deluged with smuggled products, provided they were materially cheaper than her native products; for, besides her extensive sea frontier, they may be introduced by way of France and Portugal, and also through the Basque Provinces, which have distinct laws, and enjoy an exemption from the commercial code inflicted on the rest of the kingdom. We need not, therefore, be surprised that every effort to prevent the clandestine introduction of foreign products has completely failed. The severities occasionally inflicted on the smugglers, instead of abating, seem really to have increased, the evil. The contraband trade has long been a favourite occupation, and has been eagerly followed by the adventurous, the necessitous, and the desperate. For a lengthened period from 100,000 to 150,000 individuals have been pretty constantly engaged in this occupation; that is, they have been engaged in trampling on the laws, obstructing their officers, and committing acts of violence and blood.

And, strange to say, notwithstanding the ruinous influence of this wretched system was long since exposed by Ulloa, Campomanes, and other distinguished Spaniards, and by Mr. Townsend and other foreigners, who had visited the country, and notwithstanding all the vicissitudes Spain has undergone during the last half century, her old anti-commercial policy still continues to maintain its ascendancy. The existing tariff is divided into classes; and in addition to numerous prohibitions, and oppressive duties on many

articles of the first importance, the numerous forms to be observed at the custom-house, and the delays in entering any article, constitute of themselves a considerable premium on smuggling. It is stated that at present about 3,000 actions are annually instituted against *contrabandistas* and others engaged in illicit trade, which terminate in the ruin of a vast number of families; at the same time that the courts of law are filled with perjury, and the country rife with bloody conflicts. And yet these atrocities secure no one object government has in view.

Notwithstanding their being absolutely prohibited, English and French cotton goods may, at this moment, be bought in every shop in Madrid, and generally throughout Spain; the former at from 20 to 30 per cent. above their price in Gibraltar, where they are about as cheap as in Manchester; and the latter at from 20 to 30 per cent. above their price in Bayonne, which is nearly identical with their price in Rouen. While Cadiz was a free port, about 6,000 persons are said to have been employed in its twisting cigars, which, as soon as finished, were forthwith smuggled into the interior. Three fourths, in fact, of the foreign trade of Spain is in the hands of the *contrabandistas*, and is carried on in defiance of the law. And where such is the case, need we wonder at the low state of industry, or at the prevalence of those predatory and ferocious habits that uniformly mark the character of the smuggler?

In the valuable work of Mr. Inglis, entitled *Spain in 1830*, we find the following statement under the head Cadiz. Though written more than 40 years after the travels of Mr. Townsend, it shows that not one of the flagrant abuses denounced by the latter (*Travels*, ii. 394.) had been eradicated; but that, on the contrary, they all continue to flourish in still ranker luxuriance.

"The whole commercial system of Spain is most erroneously conceived. The prohibitory system is carried to a length absolutely ruinous to the fair trader, and highly injurious to the revenue. The immense duties upon admissible articles, and the total prohibition of others, has occasioned a most extensive contraband trade, both externally with the various ports along the coast of Spain, and internally throughout the whole of the kingdom; and by this trade admissible articles are introduced into the interior, at from 100 to 300 per cent. below the duties imposed. Government could not fail to be benefited by permitting the importation of articles of general use, upon a payment of such a duty as would allow the sale of the article at a lower price than is now paid by the consumer to the smuggler. As an example of the impolicy of the system, I may cite a fact respecting the trade in salted fish, the returns of which I have before me. The import of this article into Cadiz in one year, before that city was made a free port, amounted to 4 vessels, whose cargoes reached 4,092 cwt.; while at the free port of Gibraltar, in the same year, 41 vessels entered with 89,106 cwt., the whole of which was intended for the *illicit trade*, and passed into Spain through the hands of the smugglers. The duty upon this article is more than 100 per cent.; the smuggler considers himself remunerated by a gain of 25 per cent.; so that the article which finds its way into the market through the contraband trade is sold 75 per cent. cheaper than that which is admitted upon payment of the regular duties.

"The duties upon British manufactured goods amount almost to a prohibition; they often reach 100 per cent., and this trade is therefore also in the hands of the smugglers, who obtain the profit, which, under a more wholesome system, might go into the treasury of the kingdom. The fraudulent dealer is also greatly assisted by the custom of granting a royal licence to individuals to import a certain limited quantity of prohibited goods; an expedient resorted to in order to meet the exigencies of the state; and under the licence to enter 100 tons of merchandise, the merchant enters perhaps 1,000 tons; a deception easily practised in a country where, among the public officers, a scale of bribery is perfectly unregulated and acted upon."—(Vol. II. pp. 122—126.) And the returns as to the trade of Cadiz, given above, show that in 1842 smuggling was even more prosperous than in 1830.

It is needless to say that under this miserable system the home manufactures are in the lowest state of degradation; that industry of all kinds is paralysed; and that the customs' revenue does not exceed a fourth part, certainly, of what it would amount to under a liberal commercial code! The truth is, that a thorough reform in her commercial policy is absolutely indispensable to give Spain a chance of being regenerated. So long as the present tariff is maintained, so long will she be a theatre of sanguinary contests, without industry, without civilisation,—a reproach and a disgrace to Europe.

As a specimen of the way in which the tariff is framed, we may mention that, notwithstanding the vast importance of a cheap and abundant supply of iron to agriculture and manufactures, wrought-iron articles are wholly excluded, at the same time that a very heavy duty is imposed on iron in bars (*en bruto*); This, of course, is done to protect the iron-masters and founders of the Basque Provinces.—In other words, a trifling advantage is conferred on one individual in 100, at the expense and to the serious injury of the other 99!

Inasmuch as the returns published by the Spanish authorities of the value of the import and export trade of the country include only the commodities that pass through the custom-house, it is obvious, from the previous statements, that they are really good for nothing. According to the *Balanza Mercantil* for 1838, the aggregate value of the goods imported at 11 of the principal ports, during the course of that year, amounted to 1,615,000*l.*; whereas the value of the exports from the same ports, during the same year, is said to amount to 2,113,888*l.* It is, however, abundantly certain that the value of the imports must have exceeded that of the exports; and the reason why they are apparently so much below the latter is to be found in the fact that, being more generally subject to prohibitions and heavy duties, the trade in them is thrown to a greater extent into the hands of the smugglers. In illustration of what has now been

stated, we may mention that the value of the exports to Great Britain, in 1838, is estimated, in the *Balanza Mercantil*, at 1,327,470*l.*; while that of the imports from Great Britain is set down at only 149,405*l.* In point of fact, however, we send about 400,000*l.* worth of produce direct to Spain, exclusive of the farther and (as already stated) far more considerable amount smuggled through Portugal, Gibraltar, France, &c. We incline to think that, allowing for smuggling, the import and export trade of Spain may each be estimated at about 4,000,000*l.* sterling, or, perhaps, a little more. And we have no doubt that, under a liberal commercial system, her commerce would speedily be trebled, and that, at no very distant period, it would be increased in a tenfold proportion.

There can, in fact, be no reasonable doubt that, but for the system of misrule to which Spain has been subjected, her commerce would have been about the most extensive of any European state. Her natural advantages, superior to most, and not inferior to those enjoyed by any other kingdom; her wines, brandies, fruits, &c.; her wheat, of which she might produce the largest supplies; her wool; her iron, which is of the best quality; her lead and quicksilver mines, respectively the most productive in the world; the timber and excellence of her harbours; the enterprising and adventurous character of her inhabitants, and her favourable situation; would, were she permitted to avail herself of them, raise her to a very high rank among commercial nations. Let the government cease to counteract the intentions of nature; let moderate duties take the place of prohibitions, and freedom of regulation, and all sorts of industrious pursuits will speedily revive from the deadly lethargy in which they have been so long sunk.

CAGLIARI, the capital of Sardinia, on the north-east shore of a spacious bay on the south coast of the island, lat. 39° 12' 13" N., long. 9° 6' 44" E. Population, in 1838, 27,989. The city stands on a rising ground, and has an imposing effect from the sea. The public buildings and churches are numerous, and some of them splendid; but the streets are, for the most part, narrow, steep, and filthy.

The Gulf of Cagliari extends from Pula on the west to Cape Carbonara on the east, a distance of about 24 miles across, and about 12 in depth, with good anchorage every where after getting into soundings. A mole projects from the Pratique office, and ships usually lie about 1 mile S. W. by S. from it, in 6 or 8 fathoms water, on an excellent bottom of mud. There is a very convenient pier harbour at the south angle of the tower wall, capable of containing 14 or 16 vessels of a tolerable size, besides small craft. Altogether, Cagliari is one of the best and safest ports in the Mediterranean.

*Imports and Exports.*—Almost all the trade of Sardinia is carried on by strangers; and even the fish on its coast and in its harbours is caught by Sicilians, Neapolitans, Tuscans, and Genoese. Corn is the principal article of export. In good years, the exports from the whole island may amount to 400,000 sacks, or about 600,000 bushels, of wheat, 200,000 stacchi of barley, 6,000 ditto of maize, 100,000 ditto of beans, 200,000 of peas, and 1,000 ditto of lentils. The culture of vines is gradually becoming of more importance; and about 3,500 Catalan pipes are exported, principally from Alghero and Ogliastro. Cheese is an important object in the rural economy of Sardinia, and considerable quantities are exported. Salt is a royal monopoly, and affords a considerable revenue. Until recently, Sweden drew almost all her supplies of this important necessary from Sardinia, and it continues to be exported in considerable quantities. Flax, unseed, hides, oil, saffron, rags, aquiloux, &c. are among the articles of export. The tinny and coral fisheries employ a good many hands; but, as already observed, they are almost wholly managed by foreigners.

Almost every article of dress, whether for the gentry or the peasantry, is imported. Soap, stationery, glass, earthenware, and furniture, as well as sugar, coffee, drugs, spices, &c. are also supplied by foreigners; and notwithstanding the Sards possess many rich mines, several of which were successfully wrought in antiquity, they import all their iron and steel. The only manufactures carried on in the island are those of gunpowder, salt, tobacco, and woollen caps.

*Money, Weights, and Measures.*—Accounts are kept in lire, reall, and soldi. 5 soldi = 1 reale = 4½d.; 4 reall = 1 lira = 1s. 6d.; 10 reall = 1 scudo = 3s. 9d. The paper money consists of notes for 5, 10, and 20 scudi.

Farm produce and the coarse metals are weighed by the *peel di ferro*: 12 Sard. os. = 1 lb. = 14 os. 6 dr. avoirdupois; 26 lbs. = 1 rubbo; 4 rubbi = 1 cantaro = 93 lbs. 0 os. 8 dr. avoirdupois. The starello, or corn measure, is equivalent to 1 bush. ¼ peck Eng. The palm = 10½ Eng. inches.

*Causes of the depressed State of Sardinia.*—The above statements sufficiently show that the commerce of Sardinia is very far from being what might naturally be expected from her extent, fertility, admirable situation, and the excellence of her many harbours. She contains an area of about 9,500 square miles, being, in point of size, but little inferior to Sicily; and in antiquity was reckoned, along with the latter, a principal granary of Rome. "*Siciliam et Sardiniam benignissimas urbis nostrae nutrices.*"—(Val. Max. lib. vi. cap. 6.)

Utraque frugiferis est inula nobilis arvis:  
Nec plus Hesperiam longinquis messibus ullæ,  
Nec Romana magis complemur horrea terræ.—Lucan, III. lln. 65.

But the establishment of the feudal system in its worst form, and the unfavourable political and municipal regulations under which the island has lately been placed, have gone far to neutralise the advantages it owes to nature. The agriculturists of Sardinia principally consist of two great classes—those who cultivate small farms on the *métayer* principle, and those who work on the estates of others, getting, in most instances, a patch of land for their support, and cultivating it at such times as they are not employed on the lord's lands. Both classes are excessively poor. The agreements under which the former class hold are seldom for more than a year; the landlord furnishing the seed as well as the land, and receiving half the produce. Those who occupy land for which they are obliged to pay a rent in corvees, or other feudal services, are, if possible, still worse off; having usually to borrow the seed either from the landlord or from the *Monti Frumentarii* established for that purpose, and having also to defray the tithe and a host of other burdens. Another disadvantage under which all classes labour, is the want of houses on their farms: the peasants live together in villages, and have frequently to perform a journey of several miles in going to and coming from their farms.

Lands belonging to a canton or commune are frequently cultivated on a kind of partnership system, being divided into three portions: one of these, called *vidazzo*, comprises all the lands that are in cultivation, and which are distributed by lot among certain individuals, while the other two portions are occupied in common as pasture. But, as a new distribution takes place every year, it is plain that no individual can take any interest in the improvement of the soil; and this sort of tenure becomes, in fact, the most effectual that can be devised for the extinction of industry. Latterly, however, the government has been making efforts to promote the formation of inclosures and the division of the lands; which, though opposed by the prejudices of the people, have made some progress.—(Marmora, *Voyage en Sardaigne*, lib. v. cap. 1.)

Even these, however, are not perhaps the greatest discouragements to agriculture. As if to annihilate the possibility of the peasantry emerging from their depressed condition, and to oblige them to confine their industry to the supply of their indispensable wants, it has been enacted that no corn shall be exported if its price exceed 30 reals the *starello*; and a heavy duty is laid on all that is exported, as a substitute for a general land-tax. Most other articles of export have been loaded with similar duties; and it would really seem that every device that ignorance and short-sighted rapacity could suggest had been practised to reduce this "benignant nurse" of imperial Rome to a state of poverty and destitution.

Happily, however, as already seen, the bounty of nature has proved an overmatch for the perverse ingenuity of man; and such is the fertility of this fine island, that, notwithstanding the influence of the duty now referred to, and the wretched system of agriculture, it exports in good years considerable quantities of corn. The culture of the vine is gradually increasing in importance, and about 3,500 Catalan pipes are exported, chiefly from Alghero and Ogliaastro. Olive oil, owing to the little care taken in its preparation, and its consequent bad quality, has hitherto been but little exported; but it is susceptible of an indefinite increase, and might be made an important article. Tobacco is a royal monopoly, and brings about 7 million livres a year into the public treasury. Flax, linseed, saffron, hemp, and barilla are grown to some extent; silk is

produced only in limited quantities, but its produce might, no doubt, be vastly increased; some cotton is produced, and also small quantities of madder, which last grows wild in the island. The mountains are clothed with forests of oak, beech, chestnut, and other timber; but, from the want of roads, these are nearly useless. The agricultural implements and processes are excessively rude. The Sardinian plough, the counterpart of that described by Virgil, does little more than scratch the ground. It is without a coulter, and is very frequently wholly constructed of wood. Oxen only are used in ploughing and other field labour. The corn is left in the fields till it be thrashed, an operation effected by the primitive practice of treading with horses and oxen.

We are glad, however, to have to state, that within the last few years some very important changes for the better have been introduced into the island, and that some of the worst of the abuses previously noticed have been obviated. In 1836, in pursuance of inquiries previously commenced, feudal jurisdictions were completely abolished; and since then the feudal system has been wholly subverted. And if, as it is to be hoped, government follow up the enlightened course of policy on which it has entered, by giving freedom to commerce, the probability is, that the island will, at no very remote period, recover a large share of its ancient prosperity. According to a law passed in 1839, all lands were declared to be the property of individuals, communes, or the crown; the latter becoming the possessor of all waste lands, or those to which neither private parties nor communes could show any title. Lands which had been cultivated or applied to use, whether inclosed or not, were assigned in perpetuity to the occupiers, undisturbed possession being held to confer a sufficient right to the property in the absence of any other title: those whose interests were at all affected by the new changes received compensation in money or lands, or by an assignment of public funded property. The king substituted himself in the place of the barons: he took all the feudal rents into his own hands; and their value being estimated at 20 years' purchase, public securities to the amount, bearing five per cent. interest, were made over to the nobles in exchange for the privileges of which they had been deprived. All kinds of vassalage were, at the same time, made redeemable; and courts of law placed under the direct control of the state were substituted in the place of the feudal jurisdictions where the barons were at once sultors and judges! It is impossible to overrate the importance of these changes; and there cannot be a doubt that they will have the greatest and most beneficial influence. — (*Von Raumer, Italy, &c. i. 295—301.*) We may, also, mention, in proof of the recent improvement of the island, that the population, which, in 1816, amounted to only 362,000, had increased, in 1838, to 524,633. A good road has been constructed, uniting Cagliari and Sassari, and cross roads have been carried from it to some of the more considerable places in the island. Stringent measures have recently, also, been adopted for the suppression of the banditti, with which the island has long been infested. And should these measures of improvement be properly carried out, the administration of justice simplified and freed from the abuses and venality by which it has long been disgraced, and all restraints on exportation abolished, it may be confidently predicted that Sardinia will gradually become more and more prosperous; that the revenues of the crown will be increased in a tenfold proportion; and that the population will cease to be conspicuous only for ferocity, idleness, and contempt of innovation. — (*See Geographical Dictionary, art. SARDINIA, and the authorities therein referred to.*)

**CAJEPUT OIL**, the volatile oil obtained from the leaves of the cajeput tree. (*Melaleuca Lencœulemtron* Lf.) The name is a corruption of the native term *cayu-puti*, that is, white-wood oil; because the bark of the tree which yields it has a whitish appearance, like our birch. This tree is common in Amboyna and other Eastern islands. The oil is obtained by distillation from the dried leaves of the smaller of two varieties. It is prepared in great quantities in Banda, and sent to Holland in copper flasks. As it comes to us it is of a green colour, very limpid, lighter than water, of a strong smell resembling camphor, and a strong pungent taste. It burns entirely away without leaving any residuum. It is often adulterated with other essential oils, coloured with resin of mastic. In the genuine oil, the green colour depends on the presence of copper; for, when rectified, it is colourless. — (*Thousson's Dispensatory.*)

Cajeput oil not being used except in the *matéria medica*, only small quantities are imported. In July, 1831, it sold in London at about 7d. an ounce; but as the idea having then got abroad that it was one of the most efficient remedies in cases of cholera, its price rose in November, 1831, to no less than 11s. an ounce! But it soon after fell into discredit with the faculty, and additional supplies having been obtained from Holland, its price declined almost as fast as it had risen. It is not at present (1843) worth more, in London, than from 4s. to 6s. an ounce.

**CALAHAR SKIN** (Fr. *Petit-gris*; Ger. *Grauwerk*; It. *Vaor, Vajo*; Rus. *Bjelka*; Sp. *Cela pequeño*), the Siberian squirrel skin, of various colours, used in making muffs, tippets, and trimmings for clothes.

**CALAMANDER WOOD**, a beautiful species of timber brought from Ceylon.

It is so hard that common edge-tools cannot work it, so that it must be rasped and almost ground into

shape. It is singularly remarkable for the variety and admixture of colours. The most prevailing is a fine chocolate, now deepening almost into absolute black, now fading into a medium between fawn and cream colour. It arrests the eye from the rich beauty of the intermingled tints, not from any undue showiness. It takes a very high polish, and is wrought into chairs, and particularly into tables. Sir Robert Brownrigg, late governor of Ceylon, had the doors of the dining-room of his seat in Monmouthshire made of calamander. It is scarce in Ceylon, and is not regularly imported; all that is in Great Britain has been imported by private gentlemen, returning from the colony, for their own use. It is by far the most beautiful of all the fancy woods. The nearer it is taken from the root of the tree, the finer it is. — (*Milburn's Orient. Com.; Lib. of Entertaining Knowledge, Vegetable Substance*, p. 173.)

CALCUTTA, the principal city of Bengal, the capital of the British dominions in India, and, with the exception perhaps of Canton, the greatest emporium to the eastward of the Cape of Good Hope. Its citadel is in lat. 23° 34' 49" N., long. 88° 27' 16" E. It is about 100 miles from the sea, being situated on the eastern bank of the western branch of the Ganges, denominated by Europeans the Hooghly River, which is the only arm of the Ganges navigable to any considerable distance by large ships. At high water the river opposite to the town is about a mile in breadth; but during the ebb the side opposite to Calcutta exposes a long range of dry sand banks. Owing to the length and intricacy of the navigation from the sea, it cannot be undertaken without a pilot; so that, even if it did not exceed our limits, it would be useless to attempt any description of it in this place. — (See the reduced *Plan of the Mouths of the Hooghly River*, in the *Mercator's Chart* in this work.)

In 1717 Calcutta was only a petty village; but it subsequently increased very rapidly, and was supposed towards the close of last century to have 600,000 or 700,000 inhabitants. This, however, was a gross exaggeration; and it appears, from a census taken in 1837, that the population of what is properly called the town amounted to only 229,700, composed as follows:—

	Males.	Females.		Males.	Females.
English	1,955	1,265	Chinese	18	18
Portuguese	2,500	1,796	Madrasites	30	25
French	1,715	1,375	Native Christians	30	19
Armenians	401	59	Hindus	85,145	52,506
Persians	465	171	Mohammedans	29,954	19,810
Indians	185	132	Low Castes	12,074	7,910
Nogals	314	193			
Arabs	32	8	Totals	144,993	84,812
Thugs	272	79	General Total	229,705	
	450	235			

A great part, however, of what may be fairly considered the population of Calcutta, consisting of labourers, mechanics, and persons engaged in trade, reside at night in the suburbs, or neighbouring villages; coming into town early in the morning to their respective employments. These were estimated, in 1847, on tolerably good data, at 177,000. The small number of English resident in Calcutta (where, however, they are far more numerous than in any other part of India,) may well excite surprise. It was supposed that the cessation of the Company's monopoly, and of the prohibition of European resort to India, would occasion an influx of British settlers and capital. But this anticipation has not been realised. Scarcely a single English agriculturist, with capital sufficient to cultivate 100 acres of land, has established himself in India, and there has been no immigration of artisans. And this, after all, is only what might have been expected; the country being too fully occupied, the burdens on the land too heavy, and the wages of labour far too low, to admit of anything like an extensive immigration. The Eurasians, the progeny of white fathers and native mothers, are mostly employed as clerks in the government offices and mercantile establishments; and are said to be an industrious and useful class. — (*Bengal and Agra Gazetteer*, vol. i. part iii. p. 10, &c.) The town, excluding suburbs, extends about 4½ miles along the bank of the river, with an average breadth inland of about 1½ mile. Fort William, the citadel, lies on the same side of the river, a little lower down. It is a strong regular fortification; but so extensive that it would require a garrison of 10,000 men for its effectual defence. Calcutta possesses great natural advantages for inland navigation; all sorts of foreign produce being transported with great facility on the Ganges and its subsidiary streams to the north western quarters of Hindostan, over a distance of at least 1,000 miles, while the productions of the interior are received by the same easy channels.

The principal merchants and traders consist of British and other Europeans, Portuguese born in India, Armenians, Jews, Persians from the coast of the Persian Gulph, commonly called Parses, Moguls, Mohammedans of Hindostan, and Hindoos; the latter usually either of the Drabimulaf or mercantile castes, and natives of Bengal. The native Portuguese and Armenian merchants have of late greatly declined in wealth and importance. On the other hand, the Persian merchants have increased in numbers and wealth, several of them being worth 250,000 sterling. The large fortunes of the Hindoo merchants have been much broken down of late years by litigation in the courts, and naturally through the law of equal coparcenary among brothers. To counterbalance this, there has been, since the opening of the free trade in 1814, a vast augmentation of the number of inferior merchants, worth from 200,000 to 50,000 sterling. There are but few Hindoo merchants at present whose wealth exceeds 200,000 sterling.

The principal foreign business is conducted in partnership with the English, or on their own especially to China. The brokers known under the general name of agency commission are as follow:—

Rate of commission and mercantile agency, revised by a general meeting of the Bengal Chamber of Commerce, 3d December, 1839.	Per cent.	Per cent.
1. On the sale, purchase, or shipment of bullion, gold dust, coin, jewellery, pearls, and precious stones	1	1
2. On the purchase (when in funds) or sale of indigo, silk, and opium	2	2
3. On purchase of when funds are provided by the agent	2	2
4. On all sales or purchases of other goods	2	2
5. On the sale or purchase of ships, factories, houses, lands, and all property of a like description	2	2
6. On returns for consignments, if made in produce	2	2
7. On do. if in bills, bullion, or treasure	1	1
8. On goods and treasure consigned, and on all other property of any description referred to agency for sale, which shall be afterwards withdrawn; and on goods consigned for consignment to other agents, so delivered; on invoice amount at the exchange of 2s. per rupee	half	half
9. On making advances, or procuring loans of money for commercial purposes, when the aggregate commission does not exceed 5 per cent.	2	2
10. On ordering goods or superintending the fulfilment of contracts, or on the shipment of goods where no commission except that of account is derived	2	2
11. On guaranteeing bills, bonds, or other engagements, and on becoming security for administration of estates, for contracts and agreements, &c.; and to government, for the disbursements of public money, where the funds of the individuals are insufficient to cover risk	2	2
12. On del credere, or guaranteeing the due realization of sales	2	2
13. On execution, or administration to estate of deceased persons	5	5
14. On the management of estates for executors or administrators	2	2
15. On chartering ships or engaging tonnage	2	2
16. On advertising as the agents of owners or comman-	2	2

Rent will not be charged for a shorter period than half of a month, and after half of a month, the shortest broken period for which it will be charged is a quarter of a month.	
When goods have been in store for certain periods, abatements from the preceding rates are made as follows:	
After 6 months 10 per cent.	After 18 months 25 per cent.
12 months 20	24 months 30

Money. - Accounts are kept here in rupees, with their subdivisions, annas and pices: 16 pices making 1 anna; 16 annas 1 rupee; and 15 rupees 1 gold mohur. The silver currency must all the real specie be converted, before any sum can be regularly entered in a merchant's books. The silver current are gold mohurs, with their subdivisions, annas and pices; rupees, halves and quarters; annas, pices, and half pices. The two last are of copper. There are two other silver coins, the Presidency; that of Ferruckabad; and that of Ferruckabad, in the north-western provinces. The first is probably the most important establishment of the kind in the world; the second out of the machinery, supplied by Messrs. Bolton and Watt of Birmingham, having exceeded 500,000. Gold money is coined at Calcutta only; but silver, which is now, and has always been the standard of India, equally at both mints. The following statement shows the weight, fineness, and sterling value of the coins formerly coined, reckoning the value of gold at 34. 17s. 10d. per standard ounce, and silver at 5s. 2d.

Coins.	Grains pure.	Grains Alloy.	Grains Gross Weight.	Value.
Gold mohur	187.651	17.959	204.710	£ 1 13 21/2
Silver rupee	175.923	19.995	195.918	0 2 0 5/8
Ferruckabad rupee	165.215	15.019	180.234	0 1 11 8/20

The charge for coining silver at the Calcutta mint is 2 per cent. if the bullion be the standard fineness; but where it differs, a proportional charge of from 2 to 4 per cent. is made for refining.

Company's Rupee. - The variety of rupees of different weights and values, circulating in different parts of India, was long found to be productive of considerable inconvenience. But this is now nearly obviated, it having been enacted that from the 1st of September, 1835, the coinage of silver rupees should cease at all the mints throughout India, and that in future there should be coined a rupee (with obverse, reverse, and quarters), to be called 'The Company's rupee,' which contains 165 grains (11-1/2) pure silver, and 4 grains (1/2) alloy. This new rupee, which is made legal tender in all payments, is nearly equal to the former Bombay, Madras, and Ferruckabad standard rupees, and is receivable as an equivalent for them and for the Bonat rupee, and for 15-1/16ths of the Calcutta silver rupee. It is worth reckoning silver at 2s. 2d. and 3s. 6d. an ounce, 1s. 11d. and 2s. 6d. sterling, its current value being 2s. The new, or Company's rupee, bears on the one side the head of the reigning sovereign of Great Britain, and on the reverse the words 'East India Company,' and the designation of the coin in English and Persian.

Mohur. - It has also been enacted, that from the 1st of September, 1835, no gold coins shall be coined at any mint in India, except gold mohurs or 15 rupee pieces (with the subdivisions), containing each 165 grains (11-1/2) pure gold, and 15 grains (1/2) alloy. Such mohurs are now coined at the rate of 20s. 2d. each. These coins are marked in the same way as the silver rupees, but they are not legal tender.

Other sorts of rupees are met with in Bengal, differing in fineness and weight; though their denominations be the same. From this, and from the natives frequently punching holes in the rupees, and filling them up with base metal, and their fraudulently diminishing the weight of the coin after coming from the mint, the currencies in the different provinces are of different values. This defect has introduced the custom of employing shroffs, or money-changers, whose business it is to set a value upon the different currencies, according to every circumstance, either in their favour or their prejudice. When a sum of rupees is brought to one of these shroffs, he examines them piece by piece, and arranges them according to their fineness; and by their weight; he then allows for the different legal bettas (premiums) upon silver and gold; and this done, he values in gross, by the Company's rupees, what the whole are worth.

A lac, means 100,000 rupees; and a crore 100 lacs, or 10,000,000. The following are the monies of account, premising that the lowest denomination is represented by a small smooth shell, a species of cyprus, chiefly imported as an article of trade from the Laccarive and Maldiva islands, and current as long as they continue entire -

4 Cowries	= 1 Anna.
20 Cowries	= 1 Panna.
3 Panna or 12 pice	= 1 Anna.
15 Cowries or 6 pice	= 1 Gold mohur
Weights. - The unit of British Indian weights is the <i>tole</i> of 180 grains English Troy weight; and from it are derived the greater weights of chitticks, seers, and muns or maunds; and also the smaller weights of muddas, ratties, and thans. Thus;	
5 Tolas	= 1 Chittick.
16 Chitticks	= 1 Seer.
40 Seers	= 1 Mudd or Mound = 100 lbs.
	= 1 Muddly seer.
	Troy = 82 2/3 lbs. av.
This mound corresponds very closely with, and is legally equivalent to, the <i>bazzar</i> maund of 82 lbs. 2 oz. 2/3 d. avoirdupois. The factory maund is 10 per cent. less, being 74 lbs. 10 oz. 10/66 d. avoirdupois.	
80 Tolas	= a Calcutta bazaar seer.
60 Tolas	= a Serampore seer.
82 Ditto	= a Hooghly seer.
84 Ditto	= a Bezwars Mirzapore seer.
96 Ditto	= a Allahabad and Lucknow seer.
	= 72.
A Calcutta factory seer is equal to 72 tolas, 11 annas, 2 pannis, 10 gannas, 3/65 cowries.	
Gold and Silver.	
4 Pannicks	= 1 Mudd, or grain.
4 Dhann	= 1 Ratty.
6 Ratties	= 1 Anna.
8 Ratties	= 1 Mudda.
96 Ratties	= 1 Tola.
12 Muddas	= 1 Tola.

**Liquid Measures.**  
 5 Tons = 1 Chittack.  
 4 Chittacks = 1 Fouth, or picc.  
 1 Munkin = 1 Beer.  
 40 Beers = 1 Mound.  
 5 Beers = 1 Pasaaree, or measure.  
 8 Measures = 1 Bazaar mound.  
**Grain Measures.**  
 1 Ratt = 1 Ratt.  
 4 Rattas = 1 Fatta = 9'08 the avoird.  
 4 Rattas = 1 Roulia.  
 80 Roulia = 1 Khaboon = 30 bs. mds.  
**Square Measures.**  
 5 Catta, or hata, in length = 1 Chittack, or 45 Feet (Eng. X 3 in breadth square).  
 16 Chittacks = 1 Cotta.  
 80 Cotta = 1 Bighah = 11,440 sq. ft.  
 32 Bighahs = 1 English statute acre.

**Long Measure.**  
 3 Barleycorn, or jow = 1 Finger. (halfy)  
 4 Fingers = 1 Hand.  
 2 Hands = 1 Span.  
 2 Spans = 1 Cubit, or arm = 18 inches.  
 4 Cubits = 1 Fathom.  
 1 Fathom = 1 Fathom.  
 1 Fathom = 1 mile 1 furlong 3 poles 3/4 yds.  
**Cloth Measure.**  
 3 Anguls = 1 Angula.  
 3 Anguls = 1 Dherah.  
 6 Dherahs = 1 Hast or outi = 18 inches.  
 2 Haats = 1 gaa = 1 yard.  
**For Goods reckoned by Tola.**  
 5 Particulars = 1 Munda.  
 4 Gundas, or 80 particulars = 1 Kootje, or 1 corpe.

**Banks, Banking.**—The paper currency of Calcutta is supplied as follows:—  
 The Bank of Bengal was founded in 1826, and was chartered in 1829. Its capital has been increased to 1,000,000, sterling, divided into shares of 4,000 rupees each, and quarter shares, of which the East India Company hold a considerable number. The shares are now (1843) at a high premium. It is managed by nine directors; three appointed by government, and six elected by the proprietors: time of service, for the latter, three years. The secretary to government in the financial department, the accountant-general, and the sub-treasurer, are the *ex officio* government directors. The bank secretary and treasurer are also *ex officio* directors. This bank possesses peculiar advantages, its notes being received at all the public offices, in payment of revenue, by the collectors in all the districts below Benares; and, consequently, its circulation extends over a very large and the wealthiest portion of our Indian territory. The government being such considerable shareholders, too, it is generally supposed by the natives that the Bengal Bank is part and parcel thereof; and it enjoys, therefore, the same credit. The charter of 1829 limits the responsibility of the shareholders to the amount of their shares.  
 The act of 1839 establishing the Bank of Bengal on its present footing, and the resolutions of the directors, provide—

1. That the bank shall discount no negotiable security that has a longer period than 3 months to run, or lend any money for a longer period than 3 months.
2. That the directors shall make no loan or advance unless the cash in possession of the bank, and immediately available, be equal to one fourth part of all the outstanding claims against the bank payable on demand.
3. That the bank shall not be at any time in advance to government more than 7½ lacs rupees.
4. No account can be overdrawn.
5. The bank may issue promissory notes payable on demand or at 30 days after sight, provided the total amount of such notes does not exceed 2 crores rupees, and that none of them be for a less sum than 10 rupees.
6. The bank makes advances on goods not of a perishable nature; and it makes no charge for transacting the business of its customers, and allows no interest for the money in its hands.

The rates of discount, &c., vary, from time to time, with the state of the money market. In 1847 they were as follows:—  
**Rate of Interest and Discount.**—Discount.—On private bills and notes, at or within three months, 10 per cent.  
 On government acceptances, at or within 3 months, 6 per cent.  
**Interest charged.**—On loans and accounts of credits not exceeding 5 months, and on deposit of Company's paper, 9 per cent.

On deposit of opium and salt, 9 per cent.  
 On deposit of metals and indigo, 9 per cent.  
 On deposit of mola twist, silk, bollees, cottons, and other goods, 10 per cent.  
 No loans on Company's paper or goods granted for less than 1000 rupees.  
 No credit opened for less than 10,000 rupees.

The Union Bank was founded in 1829. It was, previously to its downfall, the only private bank in Bengal: the Bank of Hindostan, the Commercial Bank, and the Calcutta Bank, noticed in the first edition of this work, having all been discontinued. The capital of the Union bank was 1,000,000, sterling, divided into shares of 100, or 1000 rupees each, held by all classes of the community. Its notes circulated in Calcutta and its immediate neighbourhood. The main object of this establishment was to fill up the space in the money market, occasioned by the restrictions imposed on the Bank of Bengal by its charter.

We regret to have to add that this bank was obliged to suspend its payments in 1847; and that the disclosures that have since taken place show that its affairs had been most abominably mismanaged. The majority of its directors appear to have been deeply engaged in mercantile and other speculations; and they farther appear to have availed themselves, without scruple, of the funds of the bank to assist them in their enterprises, most part of which have proved to be of the most ruinous description. The depositors of money with the bank will be paid in full; but it is believed that the entire capital of the

bank will be lost; and it is even doubtful whether the shareholders may not be called upon for further advances to make good the debts that have been so recklessly incurred.

The Agra Bank, established in 1833, has a branch in Calcutta.

**Pilgrage.**—The navigation of the River Hooghly, from the Sand Heads to Calcutta, a distance of about 150 miles, is naturally dangerous and intricate; but rendered compar-

atively safe by a skilful and excellent, though costly pilot establishment.

**Table of Rates of full and broken Pilgrage, chargeable to Ships and Vessels, inward and outward of the River Hooghly.**

Draught of Water.	Full Pilgrage Inward.	Additional Pilgrage outward.	Inward Proportion.		Outward Proportion.

21 22	23	5				
22 23	24	6				

**Note.**—All foreign vessels pay the same pilgrage as those under British colours. By broken pilgrage is meant the proportion of full pilgrage between the different stages or places of anchorage. All ships, the property of foreigners, whether Asiatic or European, are subject to the charge termed "lead money;" it being indispensably necessary that the pilot should have with him a leadman in whom he can confide.

Detention money, at the rate of 4s. per diem, from British and foreign vessels, is charged by persons of the pilot service kept on board ships at anchor by desire of the commander or owner.

In the river before Calcutta, and in other parts, there are chain moorings, of which the charges are as follow:—

Burdens of Ships.	April to October, 7 months.			November to March, 5 months.		
	£	s.	d.	£	s.	d.
500 tons and upwards	-	-	Per diem	0	16	0
Under 500 tons	-	-	Ditto	0	14	0

Hire of the chain moorings at Diamond Harbour, 11. per diem. The lowest charge to a ship requiring the accommodation of the chain moorings at either of the places above mentioned, is for 10 days; and using them longer a farther charge is made at the established rate per diem for every day exceeding 10. The charge for transporting a ship from her moorings into any of the docks at Kidderpore, Howrah, or Sulkea, or from any of the docks to her moorings, is fixed at 30 rupees; and no higher charge for such service is authorised. Besides pilgrage, every ship is chargeable with the hire of a row-boat to accompany her, viz. for a boat of the first class, 14s. of the second class, 1s. and of the third class, 11s. Of late years a light-house has been erected at Kedgerie, for which the charge on British or American flags is at the rate of 3d. per ton per annum. Ships proceeding to Calcutta must land their gunpowder at the powder magazine at Moyapore; the charge is at the rate of 1d. per ton for each cask. The whole pilot establishment and the care of the navigation of the Hooghly is under the management of government, and is directed by a marine board, with a master attendant and harbour-master.

The Marine Board at Calcutta have issued the following regulations with respect to pilgrage, &c.

1. Commanders are requested, prior to quitting their vessels, or arrival off Calcutta, to fill up and certify, or cause to be filled up and certified, a form of certificate, showing the actual registered tonnage, the draught of water, and whether the vessel has or has not been tagged by a steamer any part of the way, or has or has not had the use of a row-boat; which form will be furnished to the pilot, in order to the bills of the vessels being correctly made out.

2. Commanders are further requested, as early after their arrival as possible, to notify in writing, to the master attendant, the name and residence of the reference for the payment of his vessel's bills.

On the receipt by the master attendant of the above certificate, and written reference for payment, a single bill will be prepared, including inward pilgrage, light-house duty, Moyapore magazine duty, and row-boat hire (if any), which, together with the certificate, will be forwarded to the marine board, for collection within 15 days of the arrival of the vessel, and having on it the name and residence of the party referred to for payment, which commanders are requested to furnish to the master attendant in writing, as early after their arrival as practicable, that officer will more readily be enabled to present it. In this arrangement, the charges connected with the vessel, up to her arrival off Calcutta, will be embodied in one bill, instead of, as hitherto, being made up in separate bills.

3. In the event of vessels docking, or being transported at the desire of the commander, it is requested that a certificate may be given by the commanding officer of the vessel, in case having been performed, in order to its accompanying the bill when presented for payment to the reference.

4. The practice of charging for hauling to the chain-moorings, for their monthly hire, and for hauling from the moorings, in separate bills, is discontinued, and henceforward one bill will be prepared, including the charge for hauling to the moorings, that for occupying them, and that for hauling from them; and commanders are requested to give, or cause their commanding officers to give, to the master attendant, or the harbour-master, certificates of the date of hauling to and from the moorings, which certificates, as before, will accompany the bill when presented for payment. The hire of the moorings will be charged for the day on which the vessel is hauled thereto, without reference to the period of the day; and in the same manner, no charge will be made for the day on which she hauls from her moorings, however late in the day she may

quit them. The charges connected with the chain-moorings will thus be embodied in one bill, and be discharged in one payment, instead of three or more, according to the number of months the vessel occupied the moorings.

5. The system of charging outward pilgrage on an estimated draught of water, with an addition of 10 per cent., subject to adjustment after the vessel has sailed, and of charging a certain number of days for a row-boat, subject to the adjustments, is abolished; and in future the outward pilgrage and charge for row-boat hire on outward-bound vessels will be as follows:—

When the vessel is finally laden, the commander is to give notice thereof to the master attendant, when the draught of water is to be ascertained and certified, by the commander or commanding officer on the part of the vessel, and by the harbour-master on the part of government; subject, in case of dispute, to the decision of the master attendant. On receipt of the certificate, the master attendant will cause a bill to be made out for the regular amount of pilgrage, and for the row-boat hire, according to an average rate, with reference to the size of the vessels and the season of the year, fixed by a marine committee which lately sat at the Bank-hill, the majority of which was composed of members of houses of agency and commanders of ships. The bill and certificate will be presented in due course for payment.

As, however, it frequently happens that vessels are taking in cargo or filling their water up to the last day of their departure, or that from other causes the bills for the chain-moorings and outward pilgrage cannot be made out till the eve of departure, owners, agents, and commanders are in such cases particularly requested, with a view to despatch, to cause an individual to attend at the Bank-hill, and expedite the transmission of the bill and certificate to the board for registry, and to the Pay Office for collection; at each of which offices they may in such cases depend upon the most ready and special attention.

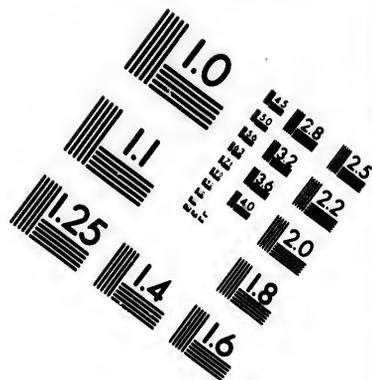

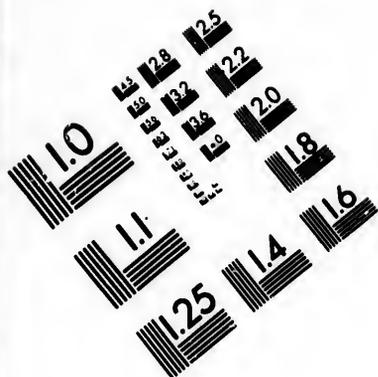

6. In the event of a vessel being tagged any part of the way down by steam, or not having the use of a row-boat, commanders are to obtain from the pilot of Kedgerie a certificate to that effect, which they should forward by 10s. to their agents. On receipt thereof, agents are requested to make out a bill against the Honourable Company for the quarter deducted from the pilgrage allowed for the vessel, or for the row-boat hire paid, as the case may be; and to forward it, together with the certificate, to the marine board for audit and payment. In cases where a vessel leaves Calcutta a vessel's bill, intended to fill up and on some place below, the pilgrage will be charged at the draught at which she sails, and as if she had proceeded to sea; and, with respect to the subsequent pilgrage charge, from the place at which the vessel takes in her cargo, or from the owners or agents of vessels will be required to furnish a special guarantee to pay the amount chargeable according to a certificate of the draught of water signed by the commander, or commanding officer and pilot.

At six sets of moorings at Diamond Harbour having been fitted up specially to enable vessels arriving in distress from loss of anchors and cables to be readily moored, the charge will be 6s. 6s. 10s. for mooring and unmooring, and the daily hire the same as for the moorings at Calcutta. The mooring will, of course, be available to vessels not in distress from loss of anchors and cables; but the harbour-master will be instructed at all times to keep two sets vacant during the N.W. monsoon, to meet casualties.

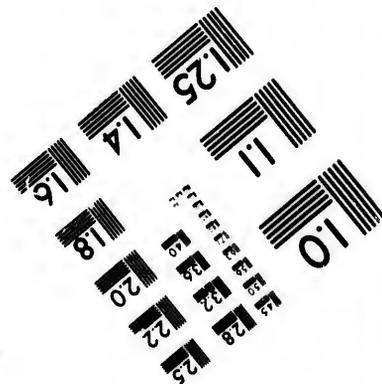

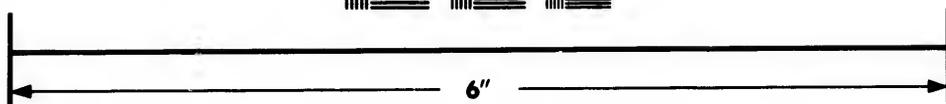

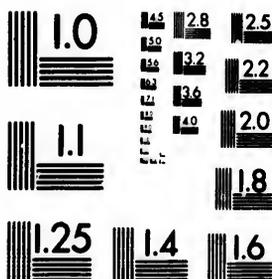

There are several dry docks at Calcutta, in which vessels of any size may be built or repaired. Ships built at Calcutta are of inferior durability to those constructed at Bombay, in con-

*Remarks on the above Duties.*—The policy of charging duties on exported articles seems very questionable. The great difficulty under which India labours, in a commercial point of view, consists principally in her inability to furnish equivalents for foreign imported goods, and to make the necessary payments abroad; and, when such is the case, it is certainly not a little contradictory to lay duties on the exports. The most obvious considerations of expediency and common sense would suggest that they should be allowed to be exported duty free. There can be no doubt that the stimulus this would give to their production would, by increasing the public wealth, infinitely more than compensate the government for the loss of the inconsiderable sum produced by the duties with which they are charged.

*Trade of Calcutta. Exports.*—During the last 30 years the trade of Calcutta has experienced some very striking vicissitudes. Previously to the opening of the trade in 1814-15, cotton piece goods formed the principal article of export from India; the value of those exported from Calcutta, at an average of the 5 years from 1814-15 to 1818-19, being (at 2s. per sicca rupee) 1,360,735*l.* a year. The extreme cheapness of labour in India, and the excellence to which the natives had long attained in several departments of the manufacture, would, it might have been supposed, have sufficed to place this important department beyond the reach of foreign competition. But the wonderful genius of our mechanists, the admirable skill of our workmen, and our immense capital, have far more than counterbalanced the apparently insuperable drawback of high wages, and the expense of bringing the raw material of the manufacture from America, and even India itself; and have enabled our manufacturers to bear down all opposition, and to triumph over the cheaper labour, contiguous material, and traditional art of the Hindoos. The imports of British cottons and twist into India have increased since 1814-15, with a rapidity unexampled in the annals of commerce; and the native manufacture has sustained a shock from which it is not very likely it will ever recover. The influence of these circumstances on the trade in piece goods has been very striking. During the year 1841-42, the value of those exported from Bengal was no more than 17,692*l.*, being only about one seventeenth part of what it amounted to 30 or 35 years previously.

It will be seen, from the subjoined account, that the importation of Bullion at Calcutta has fluctuated in an extreme degree since the opening of the trade in 1814. Bullion had from the earliest period been one of the most advantageous articles of export to the East; and it continued to be largely imported into Calcutta down to 1837-38. But from that period the imports rapidly declined, and were comparatively inconsiderable down to 1837-38; indeed, in 1831-32, and 1839-40, the exports of bullion exceeded the imports; but since 1837-38 its importation has again become very considerable, principally, it is believed, in consequence of the glut and low price of British products in the market.

It does not, however, appear to be very difficult to account for these variations. Formerly the export of bullion to India, though influenced by other causes, was mainly occasioned by the difficulty under which we were then placed of providing articles of merchandise suitable for the Indian markets sufficient to balance our exports. The increasing increase of our exports of cotton goods and yarn to India has, however, gone far to obviate this difficulty; in truth, the fair presumption seems to be, that in future the circumstances of the case will be reversed, and that the difficulty of procuring return cargoes of produce suitable for our markets will, in ordinary years, be found to be the principal obstacle to the extension of our trade with Hindostan as well as with China. There seems to be no limit, other than the necessity of furnishing equivalents to their stead, to the indefinite sale of our products in the East. And, in so far, at least, as India is concerned, the facilities for furnishing such equivalents will, most likely, be gradually increased. The soil and climate of Bengal seem to be peculiarly well suited to the production of grain, sugar, indigo, opium, silk, cotton, saltpetre, and a host of other articles. And as the inhabitants are not deficient in industry, nor in a desire to improve their condition, it would seem that there wants only a reduction of the land-tax, which is so heavy as to paralyze all their energies, to enable them to increase their articles of export to an indefinite extent, and to render the country comparatively flourishing and prosperous.

Statement, showing the Imports and Exports of Treasure to and from the Presidency of Bengal and to and from British India generally, in each Year from 1814-15 to 1839-40. (See Account No. 2. in Appendix 42. to Lords' Report on the Petition of the East India Company.)

At present (1840) the great articles of export from Calcutta are indigo, opium, sugar, raw silk and silk piece goods, saltpetre, rice, hides, cotton and cotton piece goods, gunny bags and gunny cloth, rum, &c. We subjoin

partly to the influence of the importations from Java, where indigo is now very extensively raised, and partly to the alleged decrease in the use of blue cloth. France is, next to England, the great market for indigo.

Statement of the Quantity and Value of the Indigo shipped from Calcutta in 1830-31, 1840-41, and 1845-46.

We had occasion to remark, in the former edition of this work, that of the various articles brought from India, sugar seemed to be the one in which an increase of importation would most likely take place. We have not been disappointed in this expectation. In 1835, the duty on East India sugar, which had previously been comparatively high, was reduced to the same amount as that on West India sugar; and that circumstance, and the continued high price of sugar in this country, could not fail to give a powerful stimulus to its culture in and exportation from India. On the whole, however, great as the increase in the exports of sugar has been, we are rather surprised that it has not been decidedly greater; and we doubt, when the sugar trade is placed on a proper footing, by the abolition of the discriminating duties on foreign sugars, whether the importations from India will not be reduced.

Subjoined is a

The exports of cotton from Calcutta continue stationary; and the expectations that it would be improved in its quality by greater attention being given to its culture and preparation, have not been realised.

The exports of saltpetre from India, have not, as many anticipated, been affected by the competition of nitrate of soda from South America. In 1830-31 the exports from Calcutta were 424,729 fact. maunds; whereas, in 1845-46, they amounted to 618,560½ maunds.

The exports of rice from Bengal fluctuate very greatly. This is not caused so much by variations in the crops of the country, as by variations in those of other countries; for, when a scarcity occurs in most parts of continental Asia, or in any of its islands, recourse is almost invariably had to Bengal to supply the deficiency; and the demands thence arising have been sometimes enormous. In 1831-32, for example, the exports of rice from Calcutta to the coast of Coromandel amounted to only 16,548 maunds, whereas in 1833-34, they amounted to 1,252,096 maunds.—(*Bell's Comparative View of 1832-33, and 1833-34, p. 41.*) It is worthy of remark, that while Bengal is shipping immense supplies of rice and other grain to distant parts, a large part of her own population is frequently in a state of great want and suffering. Ireland is not, therefore, the only country in which the most abject poverty and wretchedness on the part of the inhabitants, are found combined with great fertility of soil, and a large exportation of food.

Besides the articles of native Indian produce exported from Calcutta, she re-exports pretty considerable quantities of various articles brought from other parts. The value of the British cotton goods re-exported amounts to about 200,000*l.* a year. They are principally bartered with the Burmese for silver. The conveyance of the latter out of the Burmese dominions is strictly prohibited; but in Burma, as in England and elsewhere, the ingenuity of the smuggler is too much for the vigilance of the government, and the trade is carried on without much difficulty.

*Imports.*—The great articles of import into Calcutta are, British cotton manufactures and cotton twist; bullion; copper with spelter, tin, lead, iron, and other metals; woollens; wines and spirits; ale and beer; haberdashery, millinery, &c.; coffee; hardware and cutlery; spices; coal; coral, glass, and bottles; plate, jewellery, watches, &c.; books and stationery; tea, &c.

# CALCUTTA.

**Failures at Calcutta.**—During the 3 years ending with 1833, some of the principal mercantile establishments in this city failed for immense sums. To examine minutely into the origin of these disasters would lead us into inquiries foreign to the object of this work, and with respect to which it is difficult to acquire accurate information. We believe, however, that the main source of the evil was the combination, by most of the principal houses, of the business of merchants with that of bankers. Their credit being high, at the end of the war large sums were deposited in their hands, for which they engaged to pay a high rate of interest. But instead of employing these deposits, as bankers in England would have done, in the discount of bills at short dates, or in the purchase of government securities readily convertible into money, they employed them, probably because they could with difficulty dispose of them otherwise, in all manner of mercantile speculations,—advancing very large sums to the indigo planters, exporting goods to Europe, either directly on their own account, or indirectly by lending to those who did,—becoming owners of Indian shipping, &c. Most of these speculations turned out exceedingly ill. The production of indigo was so much increased, partly in consequence of the large capitals turned to the business, and partly of the high prices in England, that “fine blue violet,” which had brought, in the London market, at an average of the 3 years ending with 1827, from 12s. 10d. to 13s. 4d. per lb., fell, at an average of the 3 years ending with 1833, to 6s. 6d. to 6s. 4d. per lb., and other sorts in proportion. At these prices the production would not pay; and very heavy losses were sustained, and much capital sunk, by the planters and those who had supplied them with funds to extend their undertakings. The investments in Indian shipping turned out even worse than those in the indigo plantations, the shipping of England having nearly driven that of India out of the field. The embarrassment occasioned by this locking up of their capital, and by the ruinous nature of the adventures in which they were embarked, began to manifest itself simultaneously with the scarcity of money occasioned by the drains on account of the Burmese war. The great mercantile houses began then to find that they were entangled in difficulties from which they were wholly unable to extricate themselves. After struggling on, some for a longer and some for a shorter period, most of them subsequently failed, the greater number for very large sums.

But, however distressing in the mean time, the embarrassment and want of confidence arising from the failures alluded to were not of long continuance; and have, in the end, been advantageous. It is of the utmost consequence that the vicious combination of the business of a merchant with that of a banker should be put an end to. It is singular, indeed, that individuals should be found willing to intrust large sums in the hands of those who, they are aware, are employing them in the most hazardous adventures. The higher the interest promised by such persons, the greater ought to be the caution of the public in dealing with them.

**Internal Transit Duties.**—A very great improvement has been effected, since the publication of the first edition of this work, in the domestic economy of our Indian empire, by the abolition of the duties on the transit of goods from one part of the country to another. These duties had existed in India from a very remote period; and, by obstructing the intercourse between its different districts, were singularly pernicious. After the East India Company began to acquire a footing in India, they availed themselves of a favourable opportunity to procure an exemption from the transit-duties in favour of their own trade; “the goods which they imported being allowed to pass into the interior, and those which they purchased for exportation in the interior being allowed to pass to the sea, without either stoppage or duties.” (*Mill's India*, 8vo. ed., vol. iii. p. 289.) They were not, however, long permitted to monopolize this privilege. Immediately after the victories of Clive had raised the company to the situation of a great territorial power, their servants engaged largely in the inland trade, and endeavoured, partly by fraud and partly by force, to extend to their own goods the exemption from transit duties established in favour of those belonging to the company. Every reader of Indian history is aware of the multiplied abuses and disturbances that grew out of this attempt of the company's servants to release themselves from duties and charges that pressed with grinding severity on the natives, and, by consequence, to engross (for such was their object) the whole internal trade of the country. The company endeavoured to obviate the evil by strictly forbidding its servants from engaging in internal traffic. But its orders to this effect were long either totally disregarded, or but very imperfectly obeyed. At length, in 1788, Lord Cornwallis adopted the decisive and judicious measure of abolishing the duties. They were, however, again renewed in 1801. The exclusion of Englishmen from all participation in the interior traffic of the country having been gradually carried into complete effect for a lengthened period, they were less alive than they would otherwise have been to the injurious influence of the duties, so that their re-establishment met with comparatively little opposition. In 1810 a new tariff was introduced, by which the duties were triflingly augmented; and they continued from that epoch down to their recent abolition seriously to obstruct all sorts of internal traffic, and to oppose the most formidable obstacle to the improvement of the country.

Had the inland transit duties been productive of a large amount of revenue, that would have been some set-off against the enormous evils of which they have been productive. But such has not been the case. The expenses of collection, and the interruption of communication, were so very great, that the net produce of the inland transit duties was quite insignificant; so much so that, according to Mr. Trevelyan, it did not exceed, in the extensive province of Bengal, the miserable pittance of 27,500*l.* a year. (*Report*, p. 143.) We see no reason to doubt the accuracy of this statement; and, assuming it to be correct, we are warranted in affirming that there is not another instance to be found, in the history of taxation, of a tax so fruitful of mischievous results, and so barren of revenue.

**Town Duties.**—These were charged on the principal articles of consumption in 23 of the chief towns of Bengal. They were in many respects similar to the *octrois* in France; and, though not nearly so injurious as the internal transit duties, were productive of much inconvenience. We are glad, however, to have to state that they, as well as the transit duties, have recently been abolished; and that the internal trade of Bengal is now as free, in so far, at least, as statutory regulations can make it, as the internal trade of England.

This article has been compiled from various authorities, including—*Milburn's Oriental Commerce*;

\* This important measure was preceded, and, we believe, principally brought about, by the publication of an elaborate and very valuable report on the inland customs of Bengal, by Mr. Trevelyan, then one of the Secretaries to the Indian Government, and now Secretary to the Treasury.

*Bell's Comparative View of the external Commerce of Bengal, with the Continuation by Wilkinson for the years from 1826-29 to 1841-42; The Bengal and Agra Guide and Gazetteer, for 1841 and 1842; Parliamentary Papers relating to the Finances of India and the Trade of India and China, 1830-1843; and private communications.*

**CALICO** (Ger. *Kattun*; Du. *Katoen*; Dan. *Kattun*; Sw. *Cattun*; Fr. *Coton*, *Toile de Coton*; It. *Tela Bambagina*, *Tela dipinta*; Sp. *Tela de Algodon*; Port. *Pano de Algodao*; Rus. *Wiboko*; Pol. *Bawelaika*), cloth made of cotton, so called from Calicut, on the Malabar coast, whence it was first imported. In England, all white or unprinted cotton cloths are denominated calicoes; but in the United States this term is applied to those only that are printed.

*Historical Notices of the Art of Calico Printing.* — This art, though apparently one of the most difficult, has been practised from a very remote æra. Herodotus mentions (lib. 1. § 202.), that a nation on the shores of the Caspian were in the habit of painting the figures of animals on their clothes, with a colour formed from the leaves of trees bruised and soaked in water; and he adds, that this colour was not effaceable, and was as durable as the clothes themselves. It is difficult to imagine that the colours could have been so permanent, had not those using them been acquainted with the use of mordants. There is, however, a passage in Pliny (*Hist. Nat.* lib. xxxv. § 11.), which, though in some respects obscure, shows that the ancient Egyptians were fully acquainted with the principle of calico printing. "They paint," says he, "the clothes, not with colours, but with drugs (*sorbentibus medicamentis*) that have no colour. This being done, they immerse them in a vat full of boiling dye, and leave them there for a little: when they take them out, they are painted of various colours. It is extraordinary, seeing that there is only one colour in the vat (*unus in cortina color*), that a variety of colours should be produced by the operation of the drugs." Pliny further states, that the colours were so adhesive they could not be washed out; and that clothes were the stronger for being dyed. A similar process is known to have been followed in India from the earliest times. The chemical and mechanical inventions of modern ages have been the cause of vast improvements in this ingenious and beautiful art; but the passage now quoted shows distinctly that we have, in this instance, been only perfecting and improving processes practised in the remotest antiquity.

*Calico Printing in this Country. Duties on Calicoes.* — In Great Britain the printing of cottons has formed, for a considerable period, a very important and valuable business, which may be truly said to have grown up amongst us in despite of repeated efforts for its suppression. To prevent the use of calicoes from interfering with the demand for linen and woollen stuffs, a statute was passed in 1721, imposing a penalty of 5*l.* upon the weaver, and of 20*l.* upon the seller, of a piece of calico! Fifteen years after this extraordinary statute was so far modified, that calicoes manufactured in Great Britain were allowed to be worn, "provided the warp thereof was entirely of linen yarn." This was the law with respect to calicoes till after the invention of Sir Richard Arkwright introduced a new æra into the history of the cotton manufacture, when its impolicy became obvious to every one. In 1774, a statute was passed, allowing printed goods, wholly made of cotton, to be used, after paying a duty of 3*d.* a yard (raised to 3½*d.* in 1806); and enacting some regulations as to the marks to be affixed to the ends of the pieces, the stripes, &c.

This act continued in force down to 1831; but, though an improvement upon the old law, it was much, and justly, complained of. Its injustice and injurious operation were very forcibly pointed out by Mr. Foullet Thompson (afterwards Lord Sydenham), in his excellent speech on taxation, on the 26th March, 1830. "It is a matter of surprise to me," said the Right Hon. gent., "that this most impolitic impost should have been allowed to continue, especially when it was declared by the committee of 1818 to be 'partial and oppressive, and that its repeal was most desirable'; who, indeed, on examining it, and not feel the truth of this observation? Is it credible, that, in order to raise a net revenue of 699,699*l.*, a gross tax should be imposed of 2,019,737*l.* and yet this was the return, according to the paper on your table, for 1829. And these figures are still far from showing the real cost of the collection of this tax; — that must be taken upon the gross produce; and supposing the rate of the collection for the excise to be 5 per cent., which is less than it really is, you have a cost of 20 per cent. on the net produce of this tax, for charges. In addition to this, from all the inquiry I have been able to make, the increased cost to the manufacturer is fully 5 per cent. upon the whole quantity made; so that you have thus two sums, each of 100,000*l.*, levied on the public, for the sake of exacting a duty of 600,000*l.* But the revenue is again, in this case, far from being the measure of the injury you inflict. The inequality of the tax constitutes its chief objection. The duty is levied upon the square yard, at 3½*d.* per yard. Thus, the piece of calico which sells for 6*d.*, duty paid, contributes equally with that which is worth 1*s.* a yard. You levy an onerous and oppressive tax of 100 or 150 per cent. upon the poor, who are the purchasers of inferior cottons; whilst the rich, who buy only the finest kinds, pay but 10 or 15 per cent."

It is due to Mr. Thompson to state, that, not satisfied with giving this forcible exposition of the inequality and injurious operation of the duty on printed goods, one of his first measures, on coming into office, was to propose its repeal.

In consequence, partly of the abolition of the tax, but principally, no doubt, of the extraordinary increase of the cotton manufacture, the business of calico printing, has increased prodigiously since 1830. In proof of this we may mention, that in 1829, about twelve months previously to the abolition of the duty, 89,962,433 yards of all descriptions of printed goods were exported to foreign parts; whereas, in 1841, there were exported, of printed cottons only, the enormous quantity of 929,940,893 yards, of the declared value of 7,772,728*l.* (See *Board of Trade Papers* for 1841, p. 123.)

By the 34 Geo. 3. c. 23. It is enacted, that the inventor, designer, or printer of any new and original pattern for printing linens, cottons, calicoes, or muslins, shall have the sole right of printing and reprinting the same for 3 months, to commence from the day of first publishing.

**CAMBRIC**, or **CAMBRICK** (Ger. *Kammertuch*; Du. *Kameryhedoch*; Fr. *Cambray Batiste*; It. *Cambraja*; Sp. *Cambray*; Port. *Cambrala*; Rus. *Kamertug*), a species of very fine white linen, first made at Cambray, in French Flanders, whence it derives its appellation. It is now produced, of an equally good quality, in Great Britain.

**CAMEL** (Fr. *Chameau*; It. and Sp. *Camelo*; Ger. *Kameel*; Arab. *Djmel*; Lat. *Camelus*; Greek, *Καμηλος*) is indigenous to Arabia, and we only mention it in this place on account of its extreme importance in the commerce of the East.

The camel is one of the most useful of the animals over which the inhabitants of Asia and Africa have acquired dominion. These continents are intersected by vast tracts of burning sand, the seats of desolation and drought, so as, apparently, to exclude the possibility of any intercourse taking place between the countries that they separate. "But as the ocean, which appears at first view to be placed as an insuperable barrier between different regions of the earth, has been rendered, by navigation, subservient to their mutual intercourse; so, by means of the camel, which the Arabians emphatically call *the Ship of the Desert*, the most dreary wastes are traversed, and the nations which they dojoin are enabled to trade with one another. Those painful journeys, impracticable by any other animal, the camel performs with astonishing despatch. Under heavy burdens of 600, 700, and 800 lbs. weight, they can continue their march during a long period of time, with little food or rest, and sometimes without tasting water for 8 or 9 days. By the wise economy of Providence, the camel seems formed of purpose to be the beast of burden in those regions where he is placed, and where his service is most wanted. In all the districts of Asia and Africa, where deserts are most frequent and extensive, the camel abounds. This is his proper station, and beyond this the sphere of his activity does not extend far. He dreads alike the excesses of heat and cold, and does not agree even with the mild climate of our temperate zone." — (*Robertson's Dissertation on Ancient India*, Note 53.)

The first trade in Indian commodities of which we have any account (Genesis xxxvii. 25.) was carried on by camels; and they still continue to be the instruments employed in the conveyance of merchants and merchandise throughout Turkey, Persia, Arabia, Egypt, Barbary, and many contiguous countries. The merchants assemble in considerable numbers, forming themselves into an association or *caravan* — (see *CARAVAN*), for their mutual protection against the attacks of robbers, and the dangers incident to a journey through such rude and inhospitable countries. These caravans are often very large, and usually consist of more camels than men. The capacity of the camel to endure fatigue, and the small supply of provisions that he requires, is almost incredible. "His ordinary burden," says Volney, "is 750 lbs.; his food, whatever is given him — straw, thistles, the stones of dates, beans, barley, &c. With a pound of food a day, and as much water, he will travel for weeks. In the journey from Cairo to Suez, which is 40 or 45 hours, they neither eat nor drink; but these long fasts, if often repeated, wear them out. Their usual rate of travelling is very slow, hardly above 2 miles an hour: it is in vain to push them; they will not quicken their pace; but, if allowed some short rest, they will travel 15 or 18 hours a day." — (*Voyage en Syrie*, tom. ii. p. 383.)

The Arabians regard the camel as a sacred animal, the gift of Heaven, without whose aid they could neither subsist, nor trade, nor travel. Its milk is their ordinary food; they also eat its flesh, especially that of the young camel, which they reckon excellent; its hair, which is renewed every year, is partly manufactured into stuffs for their clothes and furniture, and partly sent abroad as a valuable article of merchandise; and even its feces serve them for fuel. Bled with their camels, the Arabs want nothing, and fear nothing. In a single day they can traverse 40 or 50 miles of the desert, and interpose its trackless sands as an impenetrable rampart between them and their foes. — (See the admirable description of the camel, in *Buffon*.)

But, however useful to the inhabitants of parched, sandy deserts, it may be worth while, perhaps, to observe, that the camel is of very little service elsewhere. He cannot walk 100 yards on wet or slippery ground without stumbling. He is totally unknown in all hilly or woody countries; and, with few exceptions, may be said to be as great a stranger in the Eastern Islands, Japan, the southern parts of China, the whole country lying between China and India, and all the southern parts of the latter, including Bengal, as he is in Europe. In all those vast countries the ox is the most useful of the lower animals. It is used for draught (for which the camel is totally unfit), in the cart and plough, in the carrying of burdens, in treading corn, in the oil-press, &c., and finally as food.

**CAMEL'S HAIR** (Ger. *Kameelhaar*; Fr. *Poil de chameau*, *Laine de chevron*; It. *Pelo di camello*; Sp. *Pelo ó lana de camello*). The hair of the camel imported into this country is principally used in the manufacture of fine pencils for drawing and painting. In the East, however, it is an important article of commerce, and is exten-

sively used in the arts. It serves for the fabrication of the tents and carpets of the Arabs, and for their wearing apparel. Cloth is also manufactured of it in Persia and other places. The most esteemed hair comes from Persia. It is divided into three qualities; black, red, and grey. The black is the dearest, and the grey is only worth half the red. Considerable quantities of camels' hair are exported from Smyrna, Constantinople, and Alexandria. It is used in the manufacture of hats, particularly by the French. — (*Rose's Cyclopaedia*, art. *Camelus*.)

**CAMLET**, or **CAMBLET** (Ger. and Du. *Kamlet*; Fr. *Camolet*; It. *Ciambellotto*; Sp. *Camolote*; Rus. *Kamolot*), a plain stuff, manufactured on a loom, with 2 threads, as linens are. There are camlets of various colours and sorts; some wholly of goats' hair; others, in which the warp is of hair, and the woof half hair and half silk; others, again, in which both the warp and the woof are of wool; and, lastly, some, of which the warp is of wool and the woof of thread: some are striped, some watered, and some figured.

**CAMOMILE** (Fr. *Camomille*; It. *Camomilla*; Sp. *Manzanilla*; Lat. *Chamomilla*), a well-known plant, whose flowers are used for medicinal purposes. Most of what is brought to the London market is grown about Mitcham, in Surrey. The imports, however, are not inconsiderable; as many as 26,190 lbs. of foreign camomile-flowers having been annually entered for consumption, at an average of the 3 years ending with 1841. The duty is 1s. per lb.

**CAMPHOR**, or **CAMPHIRE** (Ger. *Kampfer*; Du. *Kamfer*; Fr. *Camphre*; It. *Camfora*; Sp. *Aloafor*; Rus. *Kamfora*; Lat. *Camphora*; Arab. and Pers. *Kâfor*; Mal. *Kafer*). There are two descriptions of this valuable article, which must not be confounded.

1. *Camphor of Commerce*, or that met with in Europe, is obtained by boiling the timber of a species of laurel (*Laurus Camphora*), a tree found in the forests of Fokien, in China, near the city of Chinchew, and in certain localities in Japan. Most of the camphor imported into Europe comes from China; but a small quantity, considered of superior quality, comes from Japan by way of Batavia. The exports from Canton may be estimated at about 3,000 piculs, or 400,000 lbs.; and if to this we add the exports from Batavia of Japan camphor, amounting to about 500 piculs, the total annual exports will be about 400,000 lbs. It is brought to this country in chests, drums, and casks; and is in small, granular, friable masses, of a dirty white or greyish colour, very much resembling half-refined sugar. When pure, the camphor of commerce has a strong, peculiar, fragrant, penetrating odour, and a bitter, pungent, aromatic taste. It is in reality a concrete essential oil. Camphor, when refined, is in thin hollow cakes of a beautiful virgin whiteness, and, if exposed to the air, totally evaporates. Great care is therefore requisite in packing camphor, to prevent serious loss.

2. *Camphor, Malay*, commonly called, to distinguish it from the last, camphor of Barua, from the port of Sumatra, where it is mostly shipped. It is a product of the *Dryobalanops Camphora*, a forest tree confined to Sumatra, Borneo, and the Malay peninsula. It is found in concrete masses in the fissures of the wood; there are, however, but very few trees that afford it; and those that do, only in small quantities. This species of camphor is more fragrant and less biting and pungent than that yielded by the laurel, and is in high repute among the Chinese, by whom it is almost wholly consumed. There is an immense disparity in the prices of the two species in China; the finest Chinese camphor being sometimes quoted at 30 dollars per picul, while the Malay camphor is quoted at 30 dollars per catty, making the price of the latter 100 times greater than that of the former! Malay camphor is wholly unknown in Europe as an article of trade. — (*Private information*.)

**CAMPHOR OIL** (Malay, *Minyak*), a fragrant essential oil, obtained in large quantities by heating the wood of the *Dryobalanops Camphora*. It is nearly as cheap as spirits of turpentine, but is not held in any esteem by the Chinese. It might, perhaps, be profitably imported into England as a substitute for spirits of turpentine in the arts, and for medicinal purposes. We may add, that the timber of the *Dryobalanops Camphora* is not inferior to any produced in the countries where it grows, for the purposes of house and ship building. — (*Private information*, and *Crawford's Indian Archipelago*, vol. i. p. 516.)

**CAMWOOD**, a red dyewood, first brought to Europe from Africa by the Portuguese. It is principally obtained from the vicinity of Sierra Leone. The colouring matter which it affords differs but little from that of ordinary Nicaragua wood, either in quality or quantity; and it may be employed with similar mordants. — (*Bancroft on Colours*. See also *Dampier*, vol. ii. part ii. p. 58.) Camwood was worth, in the London market, in January 1843, from 17*l.* to 20*l.* a ton, duty (2*s.* a ton) included. The imports in 1840 and 1841 amounted respectively to 787 and 956 tons. — (*Parl. Paper* No. 551. p. 496. Sess. 1842.)

**CANAL**, **CANALS**. A canal is an artificial channel, filled with water kept at the desired level by means of locks or sluices, forming a communication between two or more places.

(1.) *Historical Sketch of Canals. Ancient Canals*. — The comparative cheapness and facility with which goods may be conveyed by sea, or by means of navigable rivers, seem to have suggested, at a very early period, the formation of canals. The best authenticated accounts of ancient Egypt represent that country as intersected by canals conveying the waters of the Nile to the more distant parts of the country, partly for the purpose of irrigation, and partly for that of internal navigation. The efforts made by the old Egyptian monarchs, and by the Ptolemies, to construct a canal between the

 London, Published by Longman & Co. Pat.

"The canals of Holland are generally 60 feet wide and 6 deep, and are carefully kept clean; the mud, as manure, is very profitable. The canals are generally levels; of course, locks are not wanted. From Rotterdam to Delft, the Hague, and Leyden, the canal is quite level, but is sometimes affected by strong winds. For the most part, the canals are elevated above the fields or the country, to enable them to carry off the water, which in winter inundates the land. To drain the water from Delfland, a province not more than 60 miles long, they employ 200 windmills in spring-time to raise it into the canals. All the canals of Holland are bordered with dams or banks of immense thickness, and on these depends the security of the country from inundation; of course it is of great moment to keep them in the best repair; to effect which there is a kind of militia, and in every village is a magazine of proper stores and men, whose business it is to convey stones and rubbish in carts to any damaged place. When a certain boll rings, or the waters are at a fixed height, every man repairs to his post. To every house or family there is assigned a certain part of the bank, in the repair of which they are to assist. When a breach is apprehended, they cover the banks all over with cloth and stones."

(5.) *Canal from Amsterdam to Nieuwdiep, near the Helder.* — The object of this canal, which is the greatest work of its kind in Holland, and probably in the world, is to afford a safe and easy passage for large vessels from Amsterdam to the German Ocean. This city has 40 feet of water in the road in front of its port, but the pampus or bar at the junction of the Y with the Zuyder Zee, 7 miles below, has only a depth of 10 feet; and hence all ships of any considerable burden entering or leaving the port must unload and load part of their cargoes without the bar. As the Zuyder Zee is everywhere full of shallows, all ordinary means of improving the access to Amsterdam were necessarily ineffectual; and the resolution was, therefore, at length adopted, of cutting a canal from the city to the Helder, the most northern point of the province of Holland. The distance between these extreme points is 41 English miles, but the length of the canal is about 30 $\frac{1}{2}$ . The breadth at the surface of the water is 124 $\frac{1}{2}$  English feet (120 Rhinland feet); the breadth at bottom 36; the depth 20 feet 9 inches. Like the Dutch canals generally, its level is that of the highest tides, and it receives its supply of water from the sea. The only locks it requires are, of course, two tide-locks at the extremities; but there are, besides, two sluices, with floodgates in the intermediate space. It is crossed by about 18 drawbridges. The locks and sluices are double,—that is, there are two in the breadth of the canal; and their construction and workmanship are said to be excellent. They are built of brick, for economy; but bands of limestone are interposed at intervals, and these project about an inch beyond the brick, to protect it from abrasion by the sides of vessels. There is a broad towing-path on each side, and the canal is wide enough to admit of two frigates passing. — (For the expense of towing, see AMSTERDAM.)

The line which the canal follows may be easily traced on a map of Holland. From the Y at Amsterdam it proceeds north to Purmerend; thence west to Alkmaar Lake; again north by Alkmaar to a point within 2 miles of the coast, near Petten; whence it runs nearly parallel to the coast till it joins the sea a little to the east of the Helder, at the fine harbour of Nieuwdiep, formed within the last 30 years. At the latter place there is a powerful steam-engine for supplying the canal with water during neap-tides, and other purposes. The time spent in towing vessels from Nieuwdiep to Amsterdam is 18 hours. The Helder is the only spot on the shores of Holland that has deep water; and it owes this advantage to its being opposite to the Texel, which, by contracting the communication between the German Ocean and the Zuyder Zee to a breadth of about a mile, produces a current which scours and deepens the channel. Immediately opposite the Helder there are 100 feet water at high tides, and at the shallowest part of the bar to the westward there are 27 feet. In the same way, the artificial mound which runs into the Y opposite Amsterdam, by contracting the water-way to about 1000 feet, keeps a depth of 40 feet in the port (at high water), while above and below there is only 10 or 12.

The canal was begun in 1819, and finished in 1825. The cost was estimated at 10,000,000 or 12,000,000 florins, or about 1,000,000 $\frac{1}{2}$  sterling. If we compute the magnitude of this canal by the cubic contents of its bed, it is the greatest, we believe, in the world, unless some of the Chinese canals be exceptions. The volume of water which it contains, or the *prisme de remplissage*, is twice as great as that of the New York Canal, or the Canal of Languedoc, and two and a half times as great as that of the artificial part of the Caledonian canal. In consequence, however, of the facility with which the Dutch canal was dug, and of the evenness of the ground through which it passes, the difficulties with which the engineer had to contend in making it were trifling compared to those which had to be overcome in constructing the canals now mentioned. We have not learned what returns this canal yields; most probably it is not, at least in a direct point of view, a profitable concern. Even in Holland, notwithstanding the

lowness of interest, it would require tolls to the amount of 40,000*l.* a year to cover interest and expenses; and so large a sum can hardly, we should think, be raised by the very moderate tolls laid on the ships passing through it. — (See *AMSTERDAM*.) This, however, is not the only consideration to be attended to in estimating the value of a work of this sort. Its influence in promoting the trade of Amsterdam, and, indeed, of Holland, may far more than compensate for its cost. It is evident, too, that the imposition of oppressive tolls would have effectually counteracted this advantage; that is, they would have defeated the very object for which the canal was constructed. — (We have derived these details, partly from an able article in the *Scotsman*, and partly from private information.)

(6.) *Danish Canals.* — The Holstein Canal, in Denmark, is of very considerable importance. It joins the river Eyder with Kiel Bay on the north-east coast of Holstein, forming a navigable communication between the North Sea, a little to the north of Heligoland, and the Baltic; enabling vessels to pass from the one to the other by a short cut of about 100 miles, instead of the lengthened and difficult voyage round Jutland, and through the Cattegat and the Sound. The Eyder is navigable for vessels not drawing more than 9 feet water, from Tonningen, near its mouth, to Rendsburg, where it is joined by the canal, which communicates with the Baltic at Holtenua, about 3 miles north of Kiel. The canal is about 26 English miles in length, including about 6 miles of what is principally river navigation. The excavated portion is 95 feet wide at top, 51 feet 6 inches at bottom, and 9 feet 6 inches deep (Eng. measure). Its highest elevation above the level of the sea is 24 feet 4 inches; to which height vessels are raised and let down by 6 locks or sluices. It is navigable by vessels of 120 tons burden, or more, provided they are constructed in that view. The total cost of the canal was about 500,000*l.* It was opened in 1785, and has so far realised the views of its projectors, as to enable coasting vessels from the Danish islands in the Baltic and the east coast of Holstein, Jutland, &c., to proceed to Hamburg, Holland, England, &c. in less time, and with much less risk, than in the ordinary course of navigation, they could have cleared the point of the Skaw; and conversely with ships from the west. The smaller class of foreign vessels, particularly those under the Dutch and Hanseatic flags, navigating the Baltic and North Seas, have largely availed themselves of the facilities afforded by this canal. About 3000 vessels pass annually through the canal. This is a sufficient evidence of its utility. It would, however, be much more frequented, were it not for the difficult navigation of the Eyder from the sea to Rendsburg. The dues are moderate. — (*Coxe's Travels in the North of Europe*, 5th ed. vol. v. p. 259, where there is a plan of the canal; *Catteau, Tableau des Etats Danois*, tom. ii. pp. 300—304; and private information.)

(7.) *Swedish Canals.* — The formation of an internal navigation connecting the Cattegat and the Baltic has long engaged the attention, and occupied the efforts, of the people and government of Sweden. Various motives conspired to make them embark in this arduous undertaking. The Sound and other channels to the Baltic being commanded by the Danes, they were able, when at war with the Swedes, greatly to annoy the latter, by cutting off all communication by sea between the eastern and western provinces of the kingdom. And hence, in the view, partly of obviating this annoyance and partly of facilitating the conveyance of iron, timber, and other bulky products, from the interior to the coast, it was determined to attempt forming an internal navigation, by means of the river Gotha, and the lakes Wener, Wetter, &c., from Gottenburgh to Soderkeping on the Baltic. The first and most difficult part of this enterprise was the perfecting of the communication from Gottenburgh to the lake Wener. The Gotha, which flows from the latter to the former, is navigable, through by far the greater part of its course, for vessels of considerable burden; but, besides others less difficult to overcome, the navigation at the point called Tröllhätta is interrupted by a series of cataracts about 112 feet in height. Owing to the rapidity of the river, and the stubborn red granite rocks over which it flows, and by perpendicular banks of which it is bounded, the attempt to cut a lateral canal, and still more to render it directly navigable, presented the most formidable obstacles. But, undismayed by these, on which it is, indeed, most probable he had not sufficiently reflected, Polhem, a native engineer, undertook, about the middle of last century, the Herculean task of constructing locks in the channel of the river, and rendering it navigable! Whether, however, it were owing to the all but insuperable obstacles opposed to such a plan, to the defective execution, or deficient strength of the works, they were wholly swept away, after being considerably advanced, and after vast sums had been expended upon them. From this period, down to 1793, the undertaking was abandoned; but in that year the plan was proposed, which should have been adopted at first, of cutting a lateral canal through the solid rock, about 1½ mile from the river. This new enterprise was begun under the auspices of a company incorporated for the purpose in 1794, and was successfully completed in 1800. The

canal is about 3 miles in length, and has about 6½ feet water.\* It has 8 sluices, and admits vessels of above 100 tons. In one part it is cut through the solid rock to the depth of 72 feet. The expense was a good deal less than might have been expected, being only about 80,000*l*. The Lake Wener, the navigation of which was thus opened with Gottenburgh, is very large, deep, and encircled by some of the richest of the Swedish provinces, which now possess the inestimable advantage of a convenient and ready outlet for their products.

As soon as the Tröllhætta canal had been completed, there could be no room for doubt as to the practicability of extending the navigation to Soderköping. In furtherance of this object, the lake Wener was joined to the lake Wetter by the Gotha Canal, which admits vessels of the same size as that of Tröllhætta; and the prolongation of the navigation to the Baltic from the Wetter, partly by 2 canals of equal magnitude with the above, and partly by lakes, has since been completed. The entire undertaking is called the Gotha Navigation, and deservedly ranks among the very first of the kind in Europe.

Besides the above, the canal of Arboga unites the lake Hielmar to the lake Maelar; and, since 1819, a canal has been constructed from the latter to the Baltic at Södertelge. The canal of Strömsholm, so called from its passing near the castle of that name, has effected a navigable communication between the province of Dalecarlia and the lake Maelar, &c.—(For further details, see, besides the authorities already referred to, *Coxe's Travels in the North of Europe*, 5th ed. vol. iv. pp. 253—266., and vol. v. pp. 58—66.; *Thomson's Travels in Sweden*, p. 55, &c.)

(8.) *French Canals*.—The first canal executed in France was that of Briare, 54 English miles in length, intended to form a communication between the Seine and Loire. It was commenced in 1605, in the reign of Henry IV., and was completed in 1642, under his successor, Louis XIII. The canal of Orleans, which joins the above, was commenced in 1675. But the most stupendous undertaking of this sort that has been executed in France, or indeed on the Continent, is the canal of Languedoc. It was projected under Francis I.; but was begun and completed in the reign of Louis XIV. It reaches from Narbonne to Toulouse; and was intended to form a safe and speedy means of communication between the Atlantic Ocean and the Mediterranean. It is 64 French leagues in length, and 6 feet deep; and has, in all, 114 locks and sluices. In its highest part it is 600 feet above the level of the sea. In some places it is conveyed, by bridges of great length and strength, over large rivers. It cost upwards of 1,300,000*l*., and reflects infinite credit on the engineer, Riquet, by whom it was planned and executed.

Besides this great work, France possesses several magnificent canals, such as that of The Centre, connecting the Loire with the Saone; of St. Quentin, joining the Scheldt and the Somme; of Besançon, joining the Saone, and consequently the Rhone, to the Rhine; of Burgundy, joining the Rhone to the Seine, &c. Some of these are of very considerable magnitude. The canal of The Centre is about 72 English miles in length. It was completed in 1791, at an expense of about 11,000,000 francs. Its summit level is about 240 feet above the level of the Loire at Digoin; the breadth at the water's edge is about 48 feet, and at bottom 30 feet; depth of water 5½ feet; number of locks 81. The canal of St. Quentin, 28 English miles in length, was completed in 1810. The canal joining the Rhone to the Rhine is the most extensive of any. It stretches from the Saone, a little above St. Jean de Losne, by Dole, Besançon, and Mulhouse, to Strasburg, where it joins the Rhine,—a distance of about 200 English miles. From Dole to Vogeaucourt, near Montbéliard, the canal is principally excavated in the bed of the Doubs. It is not quite finished. The canal of Burgundy will, when completed, be about 242 kilom., or 150 English miles, in length; but at present it is only navigable to the distance of about 95 kilom. In addition to these, a great many other canals have been finished, while several are in progress, and others projected. There is an excellent account of the French canals, in the *Histoire de la Navigation Intérieure de la France*, by M. Dutens, in 2 vols. 4to, and to it we beg to refer the reader for further details. He will find, at the end of the second volume, a very beautiful map of the rivers and canals of France.

The railroads now in the course of being constructed in France have, however, checked the progress of canals. We may observe, too, that the state of the law in France is very unfavourable to the undertaking and success of all great public works; and we are inclined to attribute the comparative fewness of canals in France, and the recent period at which most of them have been constructed, to its influence. In that country, canals, docks, and such like works, are mostly carried on at the expense and for behoof of government, under the control of its agents. No scope has been given to the enterprise of individuals or associations. Before either a road or a canal

\* This is the statement of Catteau, *Tableau de la Mer Baltique*, tome ii. p. 77.; Oddy, in his *European Commerce*, p. 306., and Balbi, *Abrégé de la Géographie*, p. 385., say that the depth of water is 10 feet.

can be constructed, plans and estimates must be made out and laid before the minister of the Interior, by whom they are referred to the prefect of the department, and then to the *Bureau des Travaux et des Chaussées*; and supposing the project to be approved by these, and the other functionaries consulted with respect to it, the work must after all be carried on under the superintendence of some public officer. In consequence of this preposterous system, very few works of this description have been undertaken as private speculations. And while not a few of those begun by government remain unfinished and comparatively useless, those that are completed have, as was to be expected, rarely proved profitable. There are some good remarks on this subject in the useful work of M. Dupin, on the *Forces Commerciales* of Great Britain.

(9.) *Prussian Canals.* — The Prussian states are traversed by the great navigable rivers the Elbe, the Oder, and the Vistula; the first having its embouchure in the North Sea, and the others in the Baltic. The formation of an internal navigation, that should join these great *water-ways*, excited the attention of government at a distant period; and this object has been successfully accomplished, partly by the aid of the secondary rivers falling into the above, and partly by canals. In 1662, the canal of Muhrose was undertaken, uniting the Oder and the Spree; the latter being a navigable river falling into the Havel, also a navigable river joining the Elbe near Havelburg. But the navigation from the Oder to the Elbe by this channel was difficult and liable to frequent interruption; and to obviate these defects, Frederick the Great constructed, towards the middle of last century, the Finnow Canal, stretching from the Oder at Oderburg, to the Havel, near Liebenwalde; the communication is thence continued by the latter and a chain of lakes to Plauen; from which point a canal has been opened, joining the Elbe near Magdeburg. The Elbe being in this way connected with the Oder by a comparatively easy navigation, the latter has been united to the Vistula, partly by the river Netze, and partly by a canal joining that river to the Brahe, which falls into the Vistula near Bromberg. A vast inland navigation has thus been completed, harks passing freely through the whole extent of country from Hamburg to Danzig; affording the means of shipping the products of the interior, and of importing those of foreign countries, either by the North Sea or the Baltic, as may be found most advantageous. — (*Catteen, Tableau de la Mer Baltique*, tome ii. p. 11—18.)

(10.) *Russian Canals.* — The inland navigation of Russia is of vast extent, and very considerable importance. The reader will find some details with respect to it under the article ПЕТУАНОВО.

(11.) *Bavarian Canals.* — A grand canal has been for a lengthened period in progress in Bavaria, and is, we presume, now nearly completed, which promises to be of great public utility. It is to extend from Dietfurth on the Altmühl, a navigable affluent of the Danube, to Bamberg on the Mayn, a distance of 23½ German, or about 112 English miles. It is on a large scale, and will, it is supposed, cost from 800,000*l.* to 1,000,000*l.* This magnificent undertaking, which will carry an inland navigation through the centre of Europe, and realise the project of Charlemagne for uniting the Black Sea with the German Ocean, is conducted by a joint-stock company, with the assistance of the Bavarian government. — (*Geographical Dictionary*, i. 308.)

(12.) *Austrian Canals.* — The Austrian Empire is traversed in its whole extent by the Danube; but the advantages that might result to the foreign trade of the empire from so great a command of river navigation, have been materially abridged by the jealousy of the Turks, who command the embouchure of the river, and by the difficulties that are in some places incident to its navigation. Two pretty extensive canals have been constructed in Hungary. That called the Bega Canal is 73 English miles in length: it stretches from Fuscet through the Bannat by Temeswar to Beeskerek, whence vessels pass by the Bega into the Theiss, a little above its junction with the Danube. The other Hungarian canal is called after the Emperor Francis. It stretches from the Danube by Zambor to the Theiss, which it joins near Foldvar, being 62 English miles in length; its elevation, where highest, does not exceed 27 feet. Besides the above, the canal of Vienna establishes a communication between that city and Neustadt. It is said to be the intention to continue this canal to Trieste; but however desirable, we doubt much whether this be practicable. A railroad has been made from Manhausen on the Danube to Hludweiss on the Moldau, a navigable river that falls into the Elbe, which promises to be a highly useful communication. — (*Bright's Travels in Hungary*, p. 246; *Balbi, Abrégé de la Géographie*, p. 216.)

(13.) *Spanish Canals.* — Nowhere are canals more necessary, both for the purposes of navigation and irrigation, than in Spain; but the nature of the soil, and the poverty and ignorance of the government as well as of the people, oppose formidable obstacles to their construction. During the reign of Charles II., a company of Dutch contractors offered to render the Mançanares navigable from Madrid to where it falls into the Tagus, and the latter from that point to Lisbon, provided they were allowed to levy a duty for a certain number of years on the goods conveyed by this channel. The

Council of Castile took this proposal into their serious consideration, and after maturely weighing it pronounced the singular decision — "That if it had pleased God that these two rivers should have been navigable, he would not have wanted human assistance to have made them such; but that, as he has not done it, it is plain he did not think it proper that it should be done. To attempt it, therefore, would be to violate the decrees of his providence, and to mend the imperfections which he designedly left in his works!" — (*Clarke's Letters on the Spanish Nation*, p. 284.) But such undertakings are no longer looked upon as sinful; and many have been projected since the accession of the Bourbon dynasty, though few have been perfected. The canal of the Ebro, begun under the Emperor Charles V., is the most important of the Spanish canals; but it is only partially completed, and during dry seasons it suffers from want of water. It runs parallel to the right bank of the Ebro, from Tudela in Navarre to below Saragossa; the intention being to carry it to Sastago, where it is to unite with the Ebro. The canal of Castile is intended to lay open the country between the Douro and Reynosa, and to facilitate the conveyance of grain from the interior to Santander and Bilbao. It passes by Valladolid, Palencia, and Aguilar del Campos; a small part has been executed, and is now in operation. A company has also undertaken, what the Dutch contractors formerly offered, to render the Tagus navigable from Aranjuez to Lisbon; the free navigation of the river having been stipulated at the Congress of Vienna. A project for deepening the Guadalquivir, and some others, are also on foot. — (*Geographical Dictionary*, ii. 710.)

(14.) *British Canals.* — Owing partly to the late rise of extensive manufactures and commerce in Great Britain, but more, perhaps, to the insular situation of the country, no part of which is very distant from the sea, or from a navigable river, no attempt was made, in England, to construct canals till a comparatively recent period. The efforts of those who first began to improve the means of internal navigation, were limited to attempts to deepen the beds of rivers, and to render them better fitted for the conveyance of vessels. So early as 1635, a Mr. Sandys, of Flatbury, Worcestershire, formed a project for rendering the Avon navigable from the Severn, near Tewkesbury, through the counties of Warwick, Worcester, and Gloucester, "that the towns and country might be better supplied with wood, iron, pit-coal, and other commodities." This scheme was approved by the principal nobility and landowners in the adjoining counties; but the civil war having broken out soon after, the project was abandoned, and does not seem to have been revived. After the Restoration, and during the earlier part of last century, various acts were at different times obtained for cheapening and improving river navigation. For the most part, however, these attempts were not very successful. The current of the rivers gradually changed the form of their channels; the dykes and other artificial constructions were apt to be destroyed by inundations; alluvial sand banks were formed below the weirs; in summer, the channels were frequently too dry to admit of being navigated, while at other periods the current was so strong as to render it quite impossible to ascend the river, which at all times, indeed, was a laborious and expensive undertaking. These difficulties in the way of river navigation seem to have suggested the expediency of abandoning the channels of most rivers, and of digging parallel to them artificial channels, in which the water might be kept at the proper level by means of locks. The act passed by the legislature in 1755, for improving the navigation of Sankey Brook on the Mersey, gave rise to a lateral canal of this description, about 11½ miles in length, which deserves to be mentioned as the earliest effort of the sort in England.

But before this canal had been completed, the celebrated Duke of Bridgewater\*, and his equally celebrated engineer, the self-instructed James Brindley, had conceived a plan of canalisation independent altogether of natural channels, and intended to afford the greatest facilities to commerce, by carrying canals across rivers and through mountains, wherever it was practicable to construct them.†

The Duke was proprietor of a large estate at Worsley, 7 miles from Manchester, in which were some very rich coal-mines, that had hitherto been in a great measure useless, owing to the cost of carrying coal to market. Being desirous of turning his mines to some account, it occurred to his Grace that his purpose would be best accomplished by cutting a canal from Worsley to Manchester. Mr. Brindley, having been consulted, declared that the scheme was practicable; and an act having been obtained, the work was immediately commenced. "The principle," says Mr. Phillips, "laid down at the commencement of this business, reflects as much honour on the noble undertaker as

\* This truly noble person expended a princely fortune in the prosecution of his great designs; and, to increase his resources, is said to have restricted his own personal expenses to 400*l.* a year! But his projects were productive of great wealth to himself and his successors; and have promoted, in no ordinary degree, the wealth and prosperity of his country. He died in 1823.

† There is a good account of Brindley in *Aikin's Biographical Dictionary*. His intense application, and the anxiety of mind inseparable from the great enterprises in which he was engaged, terminated his valuable life at the early age of 56.

it does upon his engineer. It was resolved that the canal should be perfect in its kind; and that, in order to preserve the level of the water, it should be free from the usual construction of locks. But in accomplishing this end many difficulties were deemed insurmountable. It was necessary that the canal should be carried over rivers, and many large and deep valleys, where it was evident that such stupendous mounds of earth must be raised, as would scarcely, it was thought by numbers, be completed by the labour of ages; and, above all, it was not known from what source so large a supply of water could be drawn, even on this improved plan, as would supply the navigation. But Mr. Brindley, with a strength of mind peculiar to himself, and being possessed of the confidence of his great patron, contrived such admirable machines, and took such methods to facilitate the progress of the work, that the world soon began to wonder how it could be thought so difficult.

"When the canal was completed as far as Barton, where the Irwell is navigable for large vessels, Mr. Brindley proposed to carry it over that river by an aqueduct 39 feet above the surface of the water in the river. This, however, being considered as a wild and extravagant project, he desired, in order to justify his conduct towards his noble employer, that the opinion of another engineer might be taken, believing that he could easily convince an intelligent person of the practicability of the design. A gentleman of eminence was accordingly called, who, being conducted to the place where it was intended that the aqueduct should be made, ridiculed the attempt; and, when the height and dimensions were communicated to him, he exclaimed—'I have often heard of castles in the air, but never was shown before where any of them were to be erected.' This unfavourable verdict did not deter the Duke from following the opinion of his own engineer. The aqueduct was immediately begun; and it was carried on with such rapidity and success as astonished those who, but a little before, thought it impossible."

Before the canal from Worsley to Manchester had been completed, it occurred to the Duke and his engineer that it might be practicable to extend it by a branch, which, running through Chester parallel to the river Mersey, should at length terminate in that river, below the limits of its artificial navigation; and thus afford a new, safer, and cheaper means of communication between Manchester and its vicinity and Liverpool. The execution of this plan was authorised by an act passed in 1761. This canal, which is above 29 miles in length, was finished in about 5 years. It was constructed in the best manner, and has proved equally advantageous to its noble proprietor and the public.

"When the Duke of Bridgewater," says Dr. Aikin, "undertook this great design, the price of carriage on the river navigation was 12s. the ton from Manchester to Liverpool, while that of land carriage was 40s. the ton. The Duke's charge on his canal was limited by statute to 6 shillings; and together with this vast superiority in cheapness, it had all the speed and regularity of land carriage. The articles conveyed by it were, likewise, much more numerous than those by the river navigation; besides manufactured goods and their raw materials, coals from the Duke's own pits were deposited in yards at various parts of the canal, for the supply of Cheshire; lime, manure, and building materials were carried from place to place; and the markets of Manchester obtained a supply of provisions from districts too remote for the ordinary land conveyances. A branch of useful and profitable carriage, hitherto scarcely known in England, was also undertaken, which was that of passengers. Boats, on the model of the Dutch treck-schuyts, but more agreeable and capacious, were set up, which, at very reasonable rates and with great convenience, carried numbers of persons daily to and from Manchester along the line of the canal."—(*Aikin's Description of the Country round Manchester*, p. 116.)

The success that attended the Duke of Bridgewater's canals stimulated public-spirited individuals in other districts to undertake similar works. Mr. Brindley had early formed the magnificent scheme of joining the great ports of London, Liverpool, Bristol, and Hull, by a system of internal navigation: and though he died in 1772, at the early age of 56, he had the satisfaction to see his grand project in a fair way of being realised. The Trent and Mersey, or as it has been more commonly termed, the Grand Trunk Canal, 96 miles in length, was begun in 1766 and completed in 1777. It stretches from near Runcorn on the Mersey, where it communicates with the Duke of Bridgewater's Canal, to Newcastle-under-Line; thence southwards to near Titchfield; and then north-westerly, till it joins the Trent at Wilden Ferry, at the north-western extremity of Leicestershire. A water communication between Hull and Liverpool was thus completed; and by means of the Staffordshire and Worcestershire Canal, which joins the Grand Trunk near Haywood in the former, and the Severn near Stourport in the latter, the same means of communication was extended to Bristol. During the time that the Grand Trunk Canal was being made, a canal was undertaken from Liverpool to Leeds, 130 miles in length; another from Birmingham to the Staffordshire and Worcestershire

Canal, joining it near Wolverhampton; and one from Birmingham to Fosseley and thence to Coventry. By canals subsequently undertaken, a communication was formed between the Grand Trunk Canal and Oxford, and consequently with London, completing Brindley's magnificent scheme. In 1792, the Grand Junction Canal was begun, which runs in a pretty straight line from Brentford, on the Thames, a little above the metropolis, to Braunston in Northamptonshire, where it unites with the Oxford and other central canals. It is about 90 miles in length. There is also a direct water communication, by means of the river Lea navigation, the Cambridge Junction Canal, &c., between London and the Wash. In addition to these, an immense number of other canals, some of them of very great magnitude and importance, have been constructed in different parts of the country; so that a command of internal navigation has been obtained, unparalleled in any European country, with the exception of Holland.

In Scotland, the great canal to join the Forth and Clyde was begun in 1768, but it was suspended in 1777, and was not resumed till after the close of the American war. It was finally completed in 1790. Its total length, including the collateral cuts to Glasgow and the Monkland Canal, is 58½ miles. Where highest it is 150 feet above the level of the sea. It is on a larger scale than any of the English canals. Its medium width at the surface is 56, and at the bottom 27 feet. Originally it was about 8 feet 6 inches deep; but recently its banks have been raised, so that the depth of water is now about 10 feet. It has, in all, 39 locks. In completing this canal, many serious difficulties had to be encountered. These, however, were all successfully overcome; and though unprofitable for a while, it has for many years past yielded a handsome return to its proprietors, the dividend having latterly been about 28 per cent. on the original stock. Swift boats on the plan of those subsequently described were established on this canal in 1832. — (See *Glasgow's Statistics of Glasgow*, p. 170, &c.)

The Union Canal joins the Forth and Clyde Canal near Falkirk, and stretches thence to Edinburgh, being 31½ miles in length. It is 40 feet wide at the top, 20 at bottom, and 8 deep. It was completed in 1822; but has been, in all respects, a most unprofitable undertaking. Hitherto the proprietors have not received any dividend; and their prospects, we understand, are little, if anything, improved.

A canal intended to form a communication between Glasgow, Paisley, and Ardrossan, was commenced in 1807; but only that portion connecting Glasgow with Paisley and the village of Johnstoun has hitherto been finished. This part is about 12 miles long; the canal being 30 feet broad at top, 18 at bottom, and 4½ deep. It was here that the important experiments were originally made on quick travelling by canals, which demonstrated that it was practicable to impel a properly constructed boat, carrying passengers and goods, along a canal at the rate of 9 or 10 miles an hour, without injury to the banks! — (See *post*.)

The Crinan Canal, across the peninsula of Kintyre, is 9 miles in length, and 12 feet in depth, admitting vessels of 160 tons burden.

The Caledonian Canal is the greatest undertaking of the sort attempted in the empire. It stretches S. W. and N. E. across the island from a point near Inverness to another near Fort William. It is chiefly formed by Loch Ness, Loch Oich, and Loch Lochy. The total length of the canal, including the lakes, is 60½ miles; but the excavated part is only about 23 miles. At the summit it is 96½ feet above the level of the Western Ocean. It is mostly constructed upon a very grand scale, being intended to be 20 feet deep, 50 feet wide at bottom, and 122 at top; the locks are 20 feet deep, 172 long, and 40 broad; and had it been wholly executed as was originally intended, frigates of 32 guns and merchant ships of 1,000 tons burden might have passed through it. It was opened in 1822, being executed entirely at the expense of government, from the designs and under the superintendence of Thomas Telford, Esq. The entire cost amounted, exclusive of interest, on the 1st of May, 1841, to 1,035,460*l.* 10*s.* 0½*d.* It would appear, however, to have been projected without due consideration, and promises to be a most unprofitable speculation. The revenue of the canal amounted in 1841-42 to only 2,723*l.* 7*s.*, being considerably under the ordinary expenditure incurred in keeping it open! But this is not all. Owing to a wish to lessen the expense and to hasten the opening of the canal, parts of it were not excavated to their proper depth, while others were executed in a hurried and insufficient manner. Hence the canal does not really admit vessels of above 250 or 300 tons burden; and owing to the want of steam tugs on the lakes, these are frequently delayed in making their passage across for a lengthened period. During 1837 and 1838, the works sustained considerable damage; and it has been gravely debated whether it would not be better entirely to break up and abandon the canal!

There is naturally, however, an extreme disinclination to destroy a work, which, how inexpedient soever originally, has been executed at an enormous expense; and various schemes have been suggested for relieving the public from the expense of keeping it up without involving its destruction. Among others it has been proposed

to assign it to a joint stock company, on their agreeing to complete the works and keep them in repair; and an act authorising such transfer was passed in 1840. But hitherto it has not been found possible to dispose of the canal in this way; and parliament has since voted 75,000*l.* for the partial repair of the works; but it is believed that it will require fully three or four times that sum to complete the canal according to the original plan, and to furnish it with the necessary steam tugs.

Some other canals have been projected and completed in different parts of Scotland. Of these the Monkland Canal, for the supply of Glasgow with coal, has been the most successful.

The following extract from the Trade List for the 27th of June, 1843, gives an account of the number of shares in the principal British canals, the cost or sum actually expended upon each share, the dividend payable upon it, with its selling price at the above-mentioned date, and the periods when the dividends are payable.

(15.) *Irish Canals.* — Various canals have been undertaken in Ireland, of which the Grand Canal and the Royal Canal are the principal. The Grand Canal was begun in 1765, by a body of subscribers; but they could not have completed the work without very large advances from government. The canal commences at Dublin, and stretches in a westerly direction, inclining a little to the south, to the Shannon, with which it unites near Banagher, a distance of 85 statute miles, and thence on the west side of the river to Ballinasloe, 14 miles. But, exclusive of the main trunk, there is a branch to Athy, where it joins the Barrow, a distance of about 27 miles; and there are branches to Portarlington, Mount Mellick, and some other places. There is also a westerly branch, recently constructed, from the Shannon to Ballinasloe, about 14 miles in length. The total length of the canal, with its various branches, is about 164 Eng. miles. Its summit elevation is 200 feet above the level of the sea at Dublin. It is 40 feet wide at the surface, from 24 to 20 feet at bottom, has 6 feet water, and cost, in all, above 2,000,000*l.* The tonnage and tolls on this canal for the eight years ending with 1837, were —

In 1830	Tonnage.	Toll.	In 1834	Tonnage.	Toll.
-	224,749	£33,464	-	229,473	£34,123
1831	227,910	36,753	1835	215,508	36,030
1832	216,418	34,553	1836	226,770	38,033
1833	226,738	38,054	1837	215,910	37,597

Two capital errors seem to have been committed in the formation of this canal, — it was framed on too large a scale, and was carried too far north. Had it been 4 or 4½ instead of 6 feet deep, its utility would have been but little impaired, while its expense would have been very materially diminished. But the great error was in its direction. Instead of joining the Shannon about 15 miles above Lough Derg, it should have joined it below Limerick. By this means, barges and other vessels passing from Dublin to Limerick, and conversely, would have avoided the difficult and dangerous navigation on the Upper Shannon; the canal would have passed through a comparatively fertile country; and it would not have been necessary to carry it across the bog of Allen, in which, says Mr. Wakefield, "the company have buried more money than would have cut a spacious canal from Dublin to Limerick." — (*Account of Ireland*, vol. i. p. 642.)

The Royal Canal was undertaken in 1789. It stretches westward from Dublin to the Shannon, which it joins near Tormanbury. Its entire length is about 92 miles exclusive of a branch of 5 miles from Kilashee to Longford; its highest elevation is 307 feet above the level of the sea. At bottom it is 24 feet wide, having 6 feet depth of water. It had cost, exclusive of interest on stock, loans, &c. advanced by government, in February, 1823, 1,421,954*l.* The tolls produced, in 1836, 25,148*l.*, the expenses of the canal for the same year being 11,912*l.*, leaving only 13,236*l.* for the nett revenue of a work which must have cost, interest included, 3,000,000*l.* — (*Second Report on Railways in Ireland*, p. 12.)

This canal seems to have been planned in the most injudicious manner. It has the same defect as the Grand Canal, of being extravagantly large; and throughout its whole course it is nearly parallel to, and not very distant from, the latter. There are consequently two immense canals, where there ought, perhaps, to be none. At all events, it is abundantly certain that one canal of comparatively moderate dimensions would have been quite enough for all the business of the district, though it were much greater than it is at this moment, or than it is ever likely to become.

Besides the above, there are some other canals, as well as various river excavations, in Ireland; but hardly one of them yields a reasonable return for the capital expended upon it. They have almost all been liberally assisted by grants of public money; and their history, and that of the two great canals now adverted to, strikingly corroborates the caustic remark of Arthur Young, that "a history of public works in Ireland would be a history of jobs." — (*Tour in Ireland*, part ii. p. 66. 4to ed.) Those who wish to make themselves fully acquainted with the history and state of the canals of Ireland, may consult the *Report by Messrs. Henry, Mullins, and M. Mahon*, in the *Appendix to the*

Report of the Select Committee of 1830 on the State of Ireland, and the very valuable Report, referred to above, on Railways.

(16.) *American Canals.*—The United States are pre-eminently distinguished by the spirit with which they have undertaken, and the perseverance they have displayed in executing, the most magnificent plans for improving and extending internal navigation. Besides many others of great, though inferior, magnitude, a canal has been formed connecting the Hudson with Lake Erie. This immense work is 363 miles in length, the rise and fall along the entire line being 692 feet. It was originally 40 feet wide at the surface, 28 feet at bottom, and 4 feet deep. But these dimensions being found, from the rapidly increasing traffic and importance of the canal, to be far too limited, an act was passed in 1835, providing for its enlargement. Under this act the canal is to be increased, so as to be 70 feet wide on the surface, 42 feet wide at the bottom, and 7 feet in depth, the locks being of corresponding dimensions. The original cost of the canal was 9,027,456 dollars; and the cost of the enlargement has been estimated at from 23 to 24 millions of dollars, or at nearly three times its first cost.—(Art. on the Erie Canal in the *New York Register* for 1843, p. 189.) The undertaking is already considerably advanced, and, when completed, the new canal will be one of the greatest and most important works of its kind in the world. The Erie canal is the property of the state of New York; and, notwithstanding the contracted scale on which it was constructed, has completely verified the predictions of its projector, De Witt Clinton, having been at once profitable as a mercantile speculation, and of singular advantage in a public point of view to the state of New York and the Union generally. We subjoin a

Statement exhibiting the Length, original Cost, and Revenue of the principal Canals belonging to the State of New York.

Names.	Length.	Cost.		Tolls in 1850.		Tolls in 1855.		Tolls in 1842.

N. B. It is to be observed that the tolls have been considerably reduced since 1830.

The *Chesapeake and Ohio Canal* would, had it been completed, have been a great and useful work. It begins at the tide water of the Potomac River above Georgetown in the district of Columbia, and is intended to terminate at Pittsburgh, in Pennsylvania, a distance of 341½ miles. Its dimensions are nearly identical with those of the new Erie Canal; its breadth at the surface being from 60 to 80 feet, ditto at bottom 50 feet, with a depth of water varying from 6 to 7 feet. Several tunnels occur in the line which crosses the Alleghany ridge. The cost of this work was estimated at 22,275,000 dollars, which were to be subscribed partly by individuals, and partly by the United States and the States of Maryland and Pennsylvania. Owing, however, to the inability, or rather disinclination, of the two last mentioned states to make good their engagements, the works on the canal have been suspended, after about 10 millions of dollars have been expended upon them. But the probability is that they will be resumed and completed at some future period; their completion being the only means by which the capital already expended upon them can be made to yield any thing.

A great many other canals have been completed, and are in progress in different parts of the Union. Of the former, the Ohio Canal, uniting the Ohio with Lake Erie, is by far the most important, and is, if at all, only less advantageous than the Erie Canal. Cleveland, where the canal unites with Lake Erie, promises at no distant period to be one of the greatest emporiums on the lakes.

(17.) *Canadian Canals.*—The British government has expended a very large sum upon the Rideau River and Canal, stretching from Kingston, on Lake Ontario, to Bytown, on the Ottawa, or Grand River, an affluent of the St. Lawrence. But this work was undertaken as much in the view of improving the military defences of Canada, as of protecting its commerce, though in the latter respect it has been of considerable utility. The British government has, also, constructed the Welland Canal, uniting Lakes Erie and Ontario, the navigation between which by the river is interrupted by the falls of Niagara. This canal has become a well-frequented commercial channel, and is every day rising in importance.

(18.) *Utility of Canals.*—The utility of canals, when judiciously contrived, and opening an easy communication between places capable of maintaining an extensive intercourse with each other, has never been better set forth than in a work published in 1765, entitled "A View of the Advantages of Inland Navigation," &c. But the following ex-

tract from *Macpherson's Annals of Commerce* (anno 1760) contains a brief, and at the same time eloquent, summary of the principal advantages resulting from their construction. — "They give fresh life to established manufactures, and they encourage the establishment of new ones, by the ease of transporting the materials of manufacture and provisions; and thence we see new villages start up upon the borders of canals in places formerly condemned to sterility and solitude. They invigorate, and in many places create, internal trade, which, for its extent and value, is an object of still more importance than foreign commerce, and is exempted from the many hardships and dangers of a maritime life and changes of climate. And they greatly promote foreign trade; and consequently enrich the merchants of the ports where they, or the navigable rivers they are connected with, terminate, by facilitating the exportation of produce from, and the introduction of foreign merchandise into, the interior parts of the country, which are thus placed nearly on a level with the maritime parts; or, in other words, the interior parts become coasts, and enjoy the accommodations of shipping. The price of provisions is nearly equalised through the whole country; the blessings of Providence are more uniformly distributed; and the monopolist is disappointed in his schemes of iniquity and oppression, by the ease wherewith provisions are transported from a considerable distance. The advantages to agriculture, which provides a great part of the materials, and almost the whole of the subsistence, required in carrying on manufactures and commerce, are pre-eminently great. Manure, marl, lime, and all other bulky articles, which could not possibly bear the great expense of cartage, and also corn and other produce, can be carried at a very light expense on canals; whereby poor lands are enriched, and barren lands are brought into cultivation, to the great emolument of the farmer and landholder, and the general advantage of the community, in an augmented supply of the necessaries of life and materials of manufactures; coals (the importance of which to a manufacturing country, few people, not actually concerned in manufactures, are capable of duly appreciating), stone, lime, iron ore, and minerals in general, as well as many other articles of great bulk in proportion to their value, which had hitherto lain useless to their proprietors by reason of the expense, and, in many cases, impossibility, of carriage, are called into life, and rendered a fund of wealth, by the vicinity of a canal; which thus gives birth to a trade, whereby, in return, it is maintained. The cheap, certain, and pleasant conveyance of travellers by the treckschuyts in Holland, has been admired by all who have been in that country; and it must be owing to the universal desire in this country of flying over the ground with the greatest possible rapidity that a mode of travelling so exceedingly easy to the purse and the person is so little used here. Neither ought we entirely to forget, among the advantages of canals, the pleasure afforded to the eye and the mind by a beautiful moving landscape of boats, men, horses, &c. busied in procuring subsistence to themselves, and in diffusing opulence and convenience through the country. And, in a word, we have now the experience of about 40 years to establish as a certain truth, what was long ago said by Dr. Adam Smith, that '*navigable canals are among the greatest of all improvements.*'"

(19) *Increased Speed of Travelling by Canals.* — Great, however, as have been the advantages derived from the formation of canals, their progress has been to a considerable degree checked by the formation of RAILROADS (which see). We believe, however, that canals will always be preferred for the conveyance of coal and other bulky and heavy products; and even passengers are now conveyed along them with a rapidity that would previously have been supposed impossible. This new system was introduced on the Paisley and Glasgow Canal, by Mr. Houston, in June, 1831. The results are described in the following statements, to which it is unnecessary to call the reader's attention.

Mr. Thomas Grahame, civil engineer, in his "Letter to Canal Proprietors and Traders," says, "The experiments of great velocity have been tried and proved on the *narrowest, shallowest, and most curved canal in Scotland*, viz. the Ardrossan or Paisley Canal, connecting the city of Glasgow with the town of Paisley and village of Johnstone, — a distance of 12 miles." The result has disproved every previous theory as to difficulty and expense of attaining great velocity on canals; and as to the danger or damage to their banks by great velocity in moving vessels along them.

"The ordinary speed for the conveyance of passengers on the Ardrossan Canal has, for nearly 2 years, been from nine to ten miles an hour; and, although there are fourteen journeys along the canal per day, at this rapid speed, its banks have sustained no injury. The boats are 70 feet in length, about 5 feet 6 inches broad, and, but for the extreme narrowness of the canal, might be made broader. They carry easily from 70 to 80 passengers; and, when required, can and have carried upwards of 110 passengers. The entire cost of a boat and fittings up is about 125*l.* The hulls are framed of light iron plates and ribs, and the covering is of wood and light oiled cloth. They are more airy, light, and comfortable than any coach. They permit the passengers to move about from the outer to the inner cabin, and the fares per mile are one penny in the first, and three farthings in the second cabin. The passengers are all carried under cover, having the privilege also of an uncovered space. These boats are drawn by 2 horses (the prices of which may be from 50*l.* to 60*l.* per pair), in stages of 4 miles in length, which are done in from 22 to 25 minutes, including stoppages to let out and take in passengers, each set of horses doing 3 or 4 stages alternately each day. In fact, the boats are drawn through this narrow and shallow canal, at a velocity which many celebrated engineers had demonstrated, and which the public believed, to be impossible.

"The entire amount of the whole expenses of attendants and horses, and of running one of these boats 4 trips of 12 miles each (the length of the canal) or 48 miles daily, including interest on the capital, and

20 per cent. laid aside annually for replacement of the boats, or less on the capital therein vested, and a considerable sum laid aside for accidents and replacement of the horses, is 700*l.* some odd shillings; or, taking the number of working days to be 312 annually, something under 2*l.* 2*s.* 4*d.* per day, or about 11*d.* per mile. The actual cost of carrying from 80 to 100 persons a distance of 30 miles (the length of the Liverpool railway), at a velocity of nearly 10 miles an hour, on the Paisley Canal, one of the most curved, narrow, and shallow in Britain, is therefore just 1*l.* 7*s.* 6*d.* sterling. Such are the facts, and, incredible as they may appear, they are facts which no one who inquires can possibly doubt.

Boats on this principle have since been established on a great many British canals, and on the Grand and Royal Canals in Ireland.

(20.) *Profits of Canals.* — It is a well-known fact, that canals, at an average, and allowing for the length of time that must elapse from the first outlay of capital before they yield any return, are not very productive. When, indeed, they connect places that have an extensive intercourse, and when no very extraordinary difficulties have to be surmounted in their construction, they most commonly yield very large profits: but, generally speaking, this does not appear to be the case; and, on the whole, they seem to have been more beneficial to the public than to their projectors.

It is customary to insert clauses in the acts authorising canals to be cut, limiting the charge which the proprietors shall be entitled to impose upon the goods conveyed by them. But we think that the dividend ought also to be limited; and that it should be stipulated that whatever a moderate toll yielded over and above defraying this dividend, and providing for the repair of the canal, should be accumulated as a fund in order to buy up the stock of the canal, so that the toll may ultimately be reduced to such a sum as may suffice merely to meet the necessary repairs. We are not aware that this country, or any other, has adopted a plan of this sort; and had it been adopted in this country, there are several instances in which it would have been very advantageous for the public. When the canal of Languedoc was completed, the most likely method, it was found, of keeping it in constant repair, was to make a present of the tolls to Riquet the engineer. "These tolls constitute," says Dr. Smith, "a very large estate to the different branches of the family of that gentleman; who have, therefore, a great interest to keep the work in constant repair. But had these tolls been put under the management of commissioners, who had no such interest, they might, perhaps, have been dissipated in ornamental and unnecessary expenses, while the most essential parts of the work were allowed to go to ruin." Dr. Smith ought, however, to have mentioned that Riquet advanced a fourth part of the entire sum laid out upon the canal (*Dutens, Navigation Intérieure de la France*, tom. i. p. 119, &c.); and that officers were appointed by the crown to see that the tolls were not rendered oppressive, and the canal kept in good order. At the Revolution, most part of the property of the canal was confiscated; but at the restoration of the Bourbons in 1814, such parts of the confiscated property as had not been sold were restored to the successors of M. Riquet, who have at this moment the principal management of the canal.

\* \* The accompanying map of the canals, railroads, &c. of Great Britain and Ireland, has been executed with great care and attention; and will, we hope, be found to be a valuable acquisition. Those who wish to see them laid down on a larger scale, are referred to the magnificent six-sheet map, published by J. Walker, Esq. of Wakefield, and to other maps of the same kind. "An Historical Account of the Navigable Rivers and Canals, &c. of Great Britain," in 4to., attached to Mr. Walker's map by way of Index, is an accurate and useful publication.

CANARY SEED. See SEED.

CANDLE (Ger. *Lichter, Kerzen*; Du. *Kaarzen*; Fr. *Chandelle*; It. *Candelle*; Sp. and Port. *Velas*; Rus. *Sujetschi*; Lat. *Candela*), a taper of tallow, wax, or spermaceti, the wick of which is commonly of several threads of cotton spun and twisted together.

Dr. Ure gives the following table, as containing the result of certain experiments he had made, in order to determine the relative intensity of the light, and the duration of different sorts of tallow candles.

Number in a Pound.	Duration of a Candle.	Weight in Grains.	Consumption per Hour, in Grains.	Proportion of Light.	Economy of Light.	Candles equal one Argand.
10 mould	5 a. 9 m.	882	152	142	66	4·7
10 dipped	4 36 m.	672	150	15	65	6·25
8 mould	6 21	856	132	10	59	5·5
5 do.	7 34	1,160	163	14	68	5·0
4 do.	9 36	1,797	180	20	80	3·5
Argand oil flame	- -	- -	512	69·4	100	-

"A Scotch mutchkin," says Dr. Ure, "or  $\frac{1}{4}$  of a gallon of good seal oil, weighs 6,010 gr., or 13 $\frac{1}{10}$  oz. avoirdupois, and lasts in a bright Argand lamp 11 hours 44 minutes. The weight of oil it consumes per hour is equal to 4 times the weight of tallow in candles 8 to the pound, and 3 $\frac{1}{2}$  times the weight of tallow in candles 6 to the pound. But its light being equal to that of 5 of the latter candles, it appears from the above table, that 2 lbs. weight of oil, value 9*d.* in an Argand, are equivalent in illumina-

ating power to 3 lbs. of tallow candles, which cost about 2s. The larger the flame in the above candles, the greater the economy of light."

Until 1831, when it was repealed, candles were, for a lengthened period, subject to an excise duty; and their consumption was, in consequence, pretty exactly ascertained.

An Account of the Rates of Duty separately charged on Tallow, Wax, and Spermaceti Candles, the Number of Pounds' Weight of each Sort produced, and the Total annual Nett Revenue derived from Candles, in Great Britain, in each Year since 1820. — (*Part. Paper No. 468. Sess. 1830.*)

Year.	Tallow.	Rate of Duty per lb.	Wax.	Rate of Duty per lb.	Spermaceti.	Rate of Duty per lb.	Nett Revenue.			
	lbs.	d.	lbs.	d.	lbs.	d.	£	s.	d.	d.
1820	88,359,461	1	692,705	5½	133,463	3½	373,455	14	5	
1821	83,816,348	—	697,198	—	163,547	—	395,811	8	7	
1822	98,231,901	—	684,241	—	178,208	—	415,660	15	5	
1823	102,461,879	—	694,194	—	180,401	—	433,537	15	8	
1824	109,810,900	—	799,721	—	173,454	—	466,043	16	1

1826	110,108,643	—	705,615	—	301,090	—	467,069	12	1	
1827	114,936,578	—	715,655	—	226,477	—	487,518	3	4	
1828	117,244,457	—	746,423	—	270,863	—	497,770	2	9	
1829	115,156,808	—	746,652	—	303,683	—	489,059	1	9	

**CANDLE, Sale or Auction by Inch of,** is when a small piece of candle being lighted, the bystanders are allowed to bid for the merchandise that is selling: but the moment the candle is out, the commodity is adjudged to the last bidder.

**CANELLA ALBA** (Fr. *Canelle blanche*; Ger. *Weisser Zimmt*; It. *Canella bianca*; Sp. *Canella blanca*; Lat. *Canella alba*), the inner bark of the *Canella alba*, a tree growing in the West Indies. It is brought to this country packed in casks and cases, in long pieces, some rolled in quills and others flat; the quilled sort is considerably thicker than cinnamon, and the flat nearly  $\frac{1}{4}$  of an inch in thickness. The quilled pieces are yellow on both sides; the flat pieces are yellow on the outside and pale brown within. The odour of both kinds, when fresh broken, is aromatic, something like a mixture of cloves and cinnamon; and the taste slightly bitter, and extremely warm and pungent.

**CANES.** See BAMBOO, RATTANS.

**CANNON, CANNONS** (Du. *A. nonen*; Fr. *Canons*; Ger. *Kanonen*; It. *Cannoni*; Pol. *Dzials*; Por. *Canhoes*; Rus. *Fuschki*; Sp. *Canonas*; Sw. *Kanon*), a kind of long hollow engines for throwing iron, lead, or stone balls by the force of gunpowder. They are commonly made of iron, but frequently also of a mixture of copper, tin, and brass. They are either cast hollow, or solid and then bored; those made in the latter way being very superior. Brass cannons, or cannons made of mixed metal, are said not to be so well calculated for hard service, or quick and continued firing, as those made of iron. The proportions of the ingredients used in making the former do not differ materially in different countries, though they rarely coincide. To 240 lbs. of metal fit for casting, we commonly put 68 lbs. of copper, 52 lbs. of brass, and 12 lbs. of tin. To 4,200 lbs. of metal fit for casting, the Germans put 3,687 $\frac{1}{2}$  lbs. of copper, 204 $\frac{1}{2}$  lbs. of brass, and 307 $\frac{3}{4}$  lbs. of tin. Others, again, use 100 lbs. of copper, 6 lbs. of brass, and 9 lbs. of tin; and others, 100 lbs. of copper, 10 pounds of brass, and 15 lbs. of tin.

It seems to be the general opinion that cannon were first made use of in 1336 or 1338; but Don Antonio de Capmany has produced some statements, which render it almost certain that some sort of artillery was used by the Moors in Spain so early as 1312. — (*Questiones Criticas*, p. 181, &c.) Cannons were certainly used by the English in 1347 at the siege of Calais, and by the Venetians at Chioggia in 1366, and in their wars with the Genoese in 1379 and 1380. The Turks employed them at the sieges of Constantinople, in 1394 and 1453. When first introduced, they were for the most part very heavy and unwieldy, and threw balls of an enormous size: they were, however, owing to their frequently bursting, about as dangerous to those using them as to their opponents. There is a valuable article on the construction and history of cannons in *Rees's Cyclopædia*; but it was published previously to the appearance of Capmany's work referred to above.

**CANTHARIDES, or SPANISH FLY** (Fr. *Cantharides*, *Mouches d'Espagne*; Ger. *Spanische Fliegen*; It. *Cantarelle*; Lat. *Cantharis*; Rus. *Hischpanski muchi*; Sp. *Cantaridas*). This insect is found on a variety of shrubs in Spain, Italy, France, &c. Those used in this country are imported partly from Sicily, but principally from Astracan, packed in casks and small chests. The best are of a lively fresh colour, a small size, and not mouldy. They are frequently adulterated with the *Melolontha vitis*; but this is distinguishable by its form, which is squarer than the cantharis, and by its black feet. If they be properly dried and protected from the air, they may be kept for a very long period. — (*Thomson's Dispensatory*.)

**CANTON**, one of the greatest emporiums in the East, ranking, as a port of trade, either before, or immediately after, Calcutta, in the province of Quantong, in China; being, previously to 1843, the only place in that empire open by authority to European traders: lat. 23° 7' 10" N., lon. 113° 14' E.

Canton stands on the eastern bank of the Peking River, which flows from the interior in a navigable stream of 800 miles to this city, where it is rather broader than the Thames at London Bridge; falling, after an additional course of 80 miles, into the southern sea of China. Near its junction with the sea, it is called by foreigners *Boeca Tigris*. The town is surrounded by a thick wall, partly of stone and partly of brick, and is divided into 2 parts by another wall running east and west. The northern division is called the Old, and the southern the New City. In the old city is the Mantehou or Tartar general, with a garrison of Mantehou troops under his command. The lieutenant-governor or Fooyuen's office is also in the old city, but the governor and Hoppo (principal customs officer) reside in the new city, not far from the river.

All foreign commerce is conducted in the south-west suburb, where the foreign factories are situated; and which, with the other suburbs, is probably not less populous than the city itself. The residence of Europeans is confined to a very small space, on the banks of the river; which might, however, be as pleasant as a crowded mercantile place can well be, were it not for the great number of small *dwelling boats*, which cover the face of the river. The people who occupy the larger portion of these boats are said to have come originally from the south; and being a foreign and despised race, were not, at first, allowed to dwell on shore; but most of the distinctions between them and the rest of the people have been abolished.

Although Canton is situated nearly in the same parallel of latitude as Calcutta, there is a considerable difference in their temperature; the former being much the coolest, and requiring fires during the winter months. The streets are very narrow, paved with little round stones, and flagged close to the sides of the houses. The front of every house is a shop, and those of particular streets are laid out for the supply of strangers. China-street is appropriated to Europeans; and here the productions of almost every part of the globe are to be found. One of the shopkeepers is always to be found sitting on the counter, writing with a camel's hair brush, or calculating with his swanpan, on which instrument a Chinese will perform operations in numbers with as much celerity as the most expert European arithmetician. This part of Canton being much frequented by the seamen, every artifice is used by the Chinese retailers to attract their attention; each of them having an English name for himself painted on the outside of his shop, besides a number of advertisements composed for them by the sailors in their own peculiar idiom. The latter, it may be supposed, are often duped by their Chinese friends, who have, in general, picked up a few sea phrases, by which the seamen are induced to enter their shops; but they suit each other extremely well; as the Chinese dealers possess an importurbable command of temper, laugh heartily at their jokes without understanding them, and humour the seamen in all their sallies.

Ships only ascend the river as far as Whampoa, about 15 miles below Canton; loading and unloading by means of native boats.

The Chinese, considered as traders, are eminently active, persevering, and intelligent. They are, in fact, a highly commercial people; and the notion that was once very generally entertained, of their being peculiarly characterised by a contempt of commerce and of strangers, is as utterly unfounded as any notion can possibly be. Business is transacted at Canton with great despatch; and nowhere in the world may cargoes be sold and bought, loaded and unloaded, with more business-like speed and activity.

Provisions and refreshments of all sorts are abundant in Canton, and, in general, of an excellent quality; nor is the price exorbitant. Every description of them, dead and alive, is sold by weight. It is a curious fact, that the Chinese make no use of milk, either in its liquid state, or in the shape of curds, butter, or cheese. Among the delicacies of a Chinese market are to be seen horse flesh, dogs, cats, hawks, and owls. The country is well supplied with fish from the numerous canals and rivers by which it is intersected.

**Foreign Factories.**— These extend for a considerable way along the banks of the river, at the distance of about 100 yards. They are named, by the Chinese, *hongs*, and resemble long courts, or closes, without a thoroughfare, which generally contain 4 or 5 separate houses. They are built on a broad quay, and have a parade in front. This promenade is railed in, and is generally called *Respondentia Walk*; and here the European merchants, commanders, and officers of the ships meet after dinner and enjoy the cool of the evening. The English hong, or factory, far surpasses the others in elegance and extent. This, with the American and Dutch hongs, are the only ones that keep their national flags flying. The neighbourhood of the factories is occupied with warehouses for the reception of European goods, or of Chinese productions, until they are shipped. In 1822, during a dreadful conflagration that took place at Canton, the British factories and above 10,000 other houses were destroyed; on which occasion the East India Company's loss was estimated at 500,000*l.* sterling, three fifths in woolsens,

For the space of 4 or 5 miles opposite to Canton, the river resembles an extensive floating city, consisting of boats and vessels ranged parallel to each other, leaving a narrow passage for others to pass and repass. In these the owners reside with their families; the latter rarely visiting the shore.

All the business at Canton with Europeans is transacted in a jargon of the English language. The sounds of such letters as B, D, R, and X, are unknown in China. Instead of these they substitute some other letter, such as L for R, which occasions a Chinese dealer in rice to offer for sale in English a rather unmarketable commodity. The name mandarin is unknown among the Chinese; the word used by them to denote a person in authority being *quan*. Mandarin is a Portuguese word derived from the verb *mandar*, to command. — (*Hamilton's East India Gazetteer*; *Milburn's Orient. Commerce*; *Companion to Anglo-Chinese Calendar*, &c.)

*Trade with China. Treaty of 1842.* — The only real difficulty in trading with China originates in the despotism, pride, and jealousy of the government, and in the general corruption of its officers. The former affects to treat all foreigners with contempt, and is always exposing them to insult; while the latter endeavour to multiply and enforce vexatious regulations and demands, that they may profit by the doucours given for their evasion. We submitted, with exemplary forbearance, for a lengthened period, to every petty indignity the Chinese government chose to inflict; but the proceedings connected with the seizure and destruction, in 1839, of the opium belonging to British subjects — (see *Opium*), led to hostilities between this country and China; and these, as every one knows, have been productive of events that will have a powerful influence over the future intercourse of Englishmen, and of foreigners generally, with the Chinese. It is due to the latter to state, that though they were uniformly defeated, how superior soever in respect of numbers, they evinced no want of courage; and there can be no doubt that their ill-success proceeded principally from their ignorance of military affairs, and the extreme inferiority of their firearms and artillery.

The following are the principal provisions in the treaty signed by Sir Henry Pottinger and the Chinese commissioners on the 29th of August, 1842:

"China to pay \$1,000,000 dollars in the course of the present and three succeeding years.

"The ports of Canton, Amoy, Foo-chow-foo, Ningpo, and Shanghai to be thrown open to British merchants; consular officers to be appointed to reside in them; and regular and just tariffs of import and export (as well as inland transit) duties to be established and published.

"The island of Hong Kong to be ceded in perpetuity to her Britannic Majesty, her heirs and successors.

"All subjects of her Britannic Majesty (whether natives of Europe or India) who may be confined in any part of the Chinese empire to be unconditionally released.

"An act of full and entire amnesty to be published by the Emperor, under his imperial sign manual and seal in all Chinese subjects, on account of their having held service or intercourse with, or resided under, the British government or its officers.

"Correspondence to be conducted on terms of perfect equality amongst the officers of both governments.

"On the Emperor's assent being received to this treaty, and the payment of the first instalment, 4,000,000 dollars, her Britannic Majesty's forces to retire from Nanking and the Grand Canal, and the military posts at Chinkai to be also withdrawn; but the islands of Chusan and Kolangsoo are to be held until the money payments and the arrangements for opening the ports be completed.

In the course of the present year (1843), a proclamation was issued, prohibiting, conformably to the stipulations in the above treaty, British subjects from resorting, for the purposes of trade and commerce, to any other ports in the dominions of the Emperor of China, than those of Canton, Amoy, Foo-chow-foo, Ningpo, and Shanghai, or than may be in the occupation of her Majesty's forces. Any persons committing a breach or violation of this direction are, upon conviction in any of her Majesty's courts of record or Vice-Admiralty, liable to a penalty, not exceeding 100*l.*, or to imprisonment for a term not exceeding 3 months, at the discretion of the court.

It will be seen from the subjoined documents that the principal stipulations in this treaty have since been very fully carried into effect. The tariff of import and export duties, framed in compliance with the clause to that effect in the treaty, appears to be bottomed on fair and liberal principles; and the superintendent has pledged himself that it shall, in as far as the British government is concerned, be honestly acted upon.

*Proclamation.* — Sir H. Pottinger, Bart., G.C.B., her Britannic Majesty's Plenipotentiary, &c. &c. in China, has the satisfaction to announce, for the general information and guidance of all subjects of her Majesty, that he has concluded and sealed with the High Commissioner appointed by his Imperial Majesty the Emperor of China to treat with him, a commercial treaty stipulated for in the definitive treaty of peace signed at Nanking on the 29th day of August, 1842, and the ratifications of which definitive treaty of peace have been lately exchanged under the sign manual and seals of her Majesty the Queen of Great Britain and Ireland, and his Majesty the Emperor of China. Her Britannic Majesty's Plenipotentiary, &c. now publishes the export and import tariff and the regulation of trade which have been, after the most searching scrutiny and examination, fixed and finally agreed upon, and which tariff and regulations of trade are to be promulgated in Chinese simultaneously with the proclamation, accompanied by a proclamation on the part of the Imperial Commissioners, &c. Her Britannic Majesty's Plenipotentiary, &c. trusts that the provisions of the commercial treaty will be found in practice mutually advantageous, beneficial, and just, as regards the interest, honour, and future augmented prosperity of the governments of the two contracting empires and their subjects, and his Excellency most solemnly and urgently calls upon all subjects of the British crown, individually and collectively, by their allegiance to their sovereign, by their duty to their country, and by their own personal reputation, respect, and good name, and by the integrity and honesty which is due from all men to the Imperial rights of the Emperor of China, not only to strictly conform and act up to the said provisions of the commercial treaty, but to spurn, deny, and make known to the world any base, unprincipled, and traitorous overtures which they, or their agents,

or *employés*, may receive from, or which may be in any shape made to them by any subject of China, whether official or not, for entering into any collusion or scheme for the purpose of evading or acting in contumacy of the said provisions of the commercial treaty.

Her Britannic Majesty's Plenipotentiary, &c. will not allow himself to anticipate or suppose that the appeal which he makes to all her Majesty's subjects will be unheeded or overlooked, by even a single individual; but, at the same time, it is his duty, in the responsible and unprecedented situation in which he has been placed by the course of events, to distinctly intimate that he is determined, by every means at his disposal, to see the provisions of the commercial treaty fulfilled by all who choose to engage in future in commerce with China, and that in any case where he may receive well-grounded representations from her Majesty's consuls, or from the Chinese authorities, that such provisions of the Commercial Treaty have been evaded, or have been attempted to be so, he will adopt the most stringent and decisive measure against the offending parties; and where his present power may not fully authorize and sanction such a measure as may seem to him fitting, he will respectfully trust that the Legislature of Great Britain will hold him indemnified for adopting them in an emergency directly compromising the national honour, dignity, and good faith in the estimation of the government of China and in the eyes of all other nations.

Dated at the Government House at Victoria, Hong Kong, this 22nd day of July, 1843.

(Signed)

HENRY POTTINGER.

*General Regulations under which the British Trade is to be conducted at the Five Ports of Canton, Amoy, Foo-chow-foo, Ningpo, and Shanghai.*

1. *Pilots.*—Whenever a British merchantman shall arrive off the five ports opened to trade, viz.: Canton, Foo-chow-foo, Amoy, Ningpo, or Shanghai, pilots shall be allowed to take her immediately into port; and in like manner when such British ship shall have settled all legal duties and charges, and is about to return home, pilots shall be immediately granted to take her out to sea, without any stoppage or delay. In respect to the remuneration to be given these pilots, that will be equitably settled by the British Consul appointed to each particular port, who will determine it with due reference to the distance gone over, the risk run, &c.
2. *Custom-house Guards.*—The Chinese Superintendent of Customs at each port will adopt the means that he may judge most proper to prevent the revenue suffering by fraud or smuggling. Whenever the pilot shall have brought any British merchantman into port, the superintendent of customs will depute one or two trusty custom-house officers, whose duty it will be to watch against frauds on the revenue. These will either live in a boat of their own, or stay on board the English ship, as may best suit their convenience. Their food and expenses will be supplied them from day to day from the custom-house, and they may not exact any fee whatever from either the commander or consignee. Should they violate this regulation, they shall be punished proportionately to the amount so exacted.
3. *Masters of Ships reporting themselves on Arrival.*—Whenever a British vessel shall have cast anchor at any one of the above-named ports, the captain will, within four-and-twenty hours after arrival, proceed to the British consulate and deposit his ship's papers, bills of lading, manifest, &c., in the hands of the consul; failing to do which he will subject himself to a penalty of 200 dollars. For presenting a false manifest the penalty will be 500 dollars. For breaking bulk and commencing to discharge before due permission shall be obtained, the penalty will be 500 dollars and confiscation of the goods so discharged. The consul, having taken possession of the ship's papers, will immediately send a written communication to the superintendent of customs, specifying the register tonnage of the ship, and particulars of the cargo she has on board; all of which being done in due form, permission will then be given to discharge, and the duties levied as provided for in the tariff.
4. *Commercial Dealings between English and China Merchants.*—It having been stipulated that English merchants may trade with whatever native merchants they please, should any Chinese merchant fraudulently abscond or incur debts which he is unable to discharge, the Chinese authorities, upon complaint being made thereof, will of course do their utmost to bring the offender to justice; it must, however, be distinctly understood that if the offender cannot be found, or he dies or bankrupt, and there be not wherewithal to pay, the English merchants may not appeal to the former customs of the Hong merchants paying for one another, and can no longer expect to have their losses made good to them.
5. *Tonnage Dues.*—Every English merchantman, on entering any one of the above-mentioned five ports, shall pay tonnage dues at the rate of five mace per register ton, in full of all charges. The fees formerly levied on entry and departure, of every description, are henceforth abolished.
6. *Import and Export Duties.*—Goods, whether imported into or exported from any one of the above-mentioned five ports, are thenceforward to be taxed according to the tariff as now fixed and agreed upon, and no further sums are to be levied beyond those which are specified in the tariff. All duties incurred by an English merchant vessel, whether on goods imported or in the shape of tonnage dues, must first be paid in full, which done, the superintendent of customs will grant port clearance, and this being shown to the British consul, he will thereupon return the ship's papers and permit the vessel to depart.
7. *Examination of the Goods at the Custom-house.*—Every English merchant having cargo to load or discharge, must give due intimation thereof, and hand particulars of the same to the consul, who will immediately despatch a recognised linguist of his own establishment to communicate the particulars to the superintendent of customs that the goods may be examined, and neither party subjected to loss. The English merchant must have a properly qualified person on the spot, to attend to his interests when his goods are being examined for duty; otherwise, should there be complaints, these cannot be attended to. Regarding such goods as are subject by the tariff to an *ad valorem* duty, if the English merchant cannot agree with the Chinese officer in fixing a value, then each party shall call two or three merchants to look at the goods, and the highest price at which any of these merchants would be willing to purchase shall be assumed as the value of the goods. To fix the rate of duty, if the English merchant cannot agree with the custom-house officer, then each party shall choose so many chests out of every 100, which, being first weighed in gross, shall afterwards be tared, and the average tare upon these shall be assumed as the tare upon the whole, and upon this principle shall the tare be fixed upon all other goods in packages. If there should still be any disputed points which cannot be settled, the English merchant may appeal to the consul, who will communicate the particulars of the case to the superintendent of customs, that it may be equitably arranged. But the appeal must be made on the same day, or it will not be regarded. While such points are still open, the superintendent of customs will delay to insert the same in his books, thus affording an opportunity that the merits of the case may be duly tried and settled.
8. *Manner of paying the Duties.*—It is herein-before provided, that every English vessel that enters any one of the five ports, shall pay all duties and tonnage dues before she be permitted to depart. The superintendent of customs will select certain shroffs, or banking establishments of known stability, to whom he will give licences authorizing them to receive duties from the English merchants on behalf of government, and the receipts of these shroffs for any money paid them shall be considered as a government voucher. In the paying of these duties, different kinds of foreign money may be made use of; but as foreign money is not of equal purity with specie silver, the English consuls appointed to the different ports will, according to time, place, and circumstances, arrange with the superintendent of customs at each port, what coins may be taken in payment, and what per centage may be necessary to make them equal to standard or pure silver.
9. *Weights and Measures.*—Sets of balance-yards for the weighing of goods, of money weights, and of measures, prepared in exact conformity to those hitherto in use at the custom-house of Canton, and duly

stamped and sealed in proof thereof, will be kept in possession of the superintendent of customs, and also at the British consulate, at each of the five ports, and these shall be the standard by which all duties shall be charged, and all sums paid to government. In case of any dispute arising between British merchants and the Chinese officers of customs regarding the weights or measures of goods, reference shall be made to these standards, and disputes settled accordingly.

10. *Licenses or Cargo Boats.*—Whenever an English merchant shall have to load or discharge cargo, he may hire whatever kind of lighter or cargo boat he pleases, and the sum to be paid for such boat can be settled between the parties themselves, without the interference of government. The number of these boats shall not be limited, nor shall a monopoly of them be granted to any parties. If any smuggling take place in them, the offenders will, of course, be punished according to law. Should any of these boat people, while engaged in conveying goods for English merchants, fraudulently abscond with the property, the Chinese authorities will do their best to apprehend them; but, at the same time, the English merchants must take every due precaution for the safety of their goods.

11. *Transhipment of Goods.*—No English merchant ships may tranship goods without special permission; should any urgent case happen where transhipment is necessary, the circumstances must first be submitted to the consul, who will give a certificate to that effect, and the superintendent of customs will send a special officer to be present at the transhipment. If any one presumes to tranship without such permission being asked for and obtained, the whole of the goods so illicitly transhipped will be confiscated.

12. *Subordinate Consular Officers.*—At any place selected for the anchorage of the English merchant ships, there may be appointed subordinate consular officers of approved good conduct to exercise due control over the seamen and others. He must exert himself to prevent quarrels between the English seamen and the natives, this being of the utmost importance. Should any thing of the kind unfortunately take place, he will in the like manner do his best to arrange it amicably. When sailors go on shore to walk, officers shall be required to accompany them; and should disturbances take place, such officers will be held responsible. The Chinese officers may not impede natives from coming alongside the ships to sell clothes or other necessaries to the sailors living on board.

13. *Disputes between British Subjects and Chinese.*—Whenever a British subject has reason to complain of a Chinese, he must proceed to the consulate and state his grievance. The consul will thereupon inquire into the merits of the case, and do his utmost to arrange it amicably. In like manner, if a Chinese has reason to complain of a British subject, he shall no less listen to his complaint, and endeavour to settle it in a friendly manner. If an English merchant have occasion to address the Chinese authorities, he shall send such address through the consul, who will see that the language is becoming, and if otherwise, will direct it to be changed, or will refuse to convey the address. If, unfortunately, any disputes take place of such a nature that the consul cannot arrange them amicably, then he shall request the assistance of a Chinese officer, that they may together examine into the merits of the case, and decide it equitably. Regarding the punishment of English criminals, the English government will enact the laws necessary to attain that end, and the consul will be empowered to put them in force; and regarding the punishment of Chinese criminals, these will be tried and punished by their own laws, in the way provided for by the correspondence which took place at Nanking after the concluding of the peace.

14. *British Government Cruisers anchoring within the Ports.*—An English government cruiser will anchor within each of the five ports, that the consul may have the means of better restraining sailors and others, and preventing disturbances. But these government cruisers are not to be put upon the same footing as merchant vessels, for as they bring no merchandise, and do not come to trade, they will of course pay neither duties nor charges. The respective consuls will keep the superintendent of customs fully informed of the arrival and departure of such government cruisers, that he may take his measures accordingly.

15. *On the Security to be given for British Merchant Vessels.*—It has hitherto been the custom, when an English vessel entered the port of Canton, that a Chinese Hong merchant stood security for her, and all duties and charges were paid through such security merchant. But these security merchants being now done away with, it is understood that the British consul will henceforth be security for all British merchant ships entering into any of the Chinese ports.

*Government Notification.*—With reference to the preceding proclamation, it is hereby notified that the new system of trade will commence at Canton on the 1st day of the 7th month of the present Chinese year (27th July, 1843), and that from that day the Hong merchants' monopoly and Consoo charges will cease and terminate.

The other four ports of Amoy, Foo-chow-foo, Ninpo, Shanghai, which agreeably to the treaty of Nanking are to be resorted to by British merchant vessels, cannot be declared to be opened for that purpose until an imperial edict to that effect shall be received from the cabinet of Peking. This edict is expected to reach Canton early in the month of September. An immediate public notice will be given of the arrival. In the interim, measures will be taken for the appointment of consular officers, and their establishment, to the port in question, in order that no unnecessary delay may take place in the commencement of trade at them, and merchants may make their arrangements accordingly.

The following extracts from instructions addressed to Mr. Lay, officiating consul at Canton, are published for general information, and her Majesty's chief superintendent of trade enjoins every one concerned to pay implicit obedience to them:—  
"You will see from the enclosed notification, that you are for the present relieved from the exercise of your consular judicial functions; and in the event of letters or petitions (in English or Chinese) referring to disputes, or containing complaints, being presented to you, you will (unless they should be of the most trivial and easily-adjusted nature) write upon them 'referred to the assistant superintendent, &c.', and sign your name.

"You will hold the masters of all vessels responsible to you, for the orderly and peaceable behaviour of their boats' crews, or any other persons belonging to their respective ships, who may visit Canton; and no 'liberty men' are to go up to that city without your previous permission, obtained in writing in answer to an application, specifying the number (of the propriety of which you are to consider yourself the judge), and distinctly promising and stating that an officer will accompany such liberty men, to look after and control the seamen or lascars, as the case may be.

"In any instance where you may discover that seamen or others are at Canton on liberty, without your permission, and the previous stipulations (above adverted to) having been complied with, you will request the commander of her Majesty's ship, which will be stationed at Whampoa, to support your authority, to have the seamen or others forthwith sent back to their ships, and you will report the circumstance to me, that I may adopt such further steps as the case may call for. You will at the same time intimate to the master, owner, or consignee, of the vessel from which the seamen or others unlawfully come, that all expenses attending the removal of the seamen or others from Canton, will be charged to the ship to which they belong, and will be recovered before she is allowed to sail.

"In cases of petty frays or assaults, or riotous and drunken conduct (unattended, however, with any marked degree of violence), in which you may be of opinion that the ends of justice will be obtained, and a sufficient example will be made, by fining the offender any sum not exceeding 10 dollars, or confining him for a period not exceeding five days, you have my authority to summarily decide in such cases, without even recording the evidence, merely making a memorandum of the fact, in a book to be kept for the purpose; but, in all cases where you may reconsider the offence to call for more serious notice, you will, with the assistance of the captain of her Majesty's ship, have the offender placed in confinement until a formal investigation can be held, and for which I will arrange on hearing the particulars from you.

Should you obtain positive and incontrovertible proof, that any British merchant ship on the river has been, or is, engaged in smuggling, or evading the payment of the just dues of the Chinese government, as laid down in the Tariff and regulation of trade, you will take immediate measures for intimating the same to the Chinese high officers, and officers of customs, in order that they may, if they think proper, put a stop to such vessel either landing or shipping further cargo, as the case may be; and you will likewise apprise the master, owner, or consignees of such ship of the steps you have taken, and will acquit them that any attempt to carry on their smuggling practices, or to trade in any shape, by force, in opposition to the wishes and directions of the Chinese authorities, will oblige me to have such ship removed from the river.

I annex a table of consular fees which you are to levy, and which are to form a fund for the present, to be subject to such instructions as may be hereafter received from her Majesty's government.

(By order)

G. A. MALCOLM, Sec. of Legation.

Dated at Government-House, at Victoria, Hong-Kong, this 22d day July, 1843.

Tariff of Duties on Exports from and Imports into China, established in pursuance of the above Treaty, in Chinese and Mercantile Currency (Dollars and Cents), reduced into their equivalent Rates in sterling Money, according to English Weights and Measures.

We are indebted for this valuable Table to W. Tait, Esq., author of the Modern Comber, an accurate and useful publication, by which we have profited on many occasions.

**Measures.**—Chinese *Wahkai*, per standard: 1 picul = 100 catties = 1,600 taels = 1354 *swatdipoi*. 1 tael = 9851 grains Troy. 400 lb. *swatdipoi* = 3 picul. 1 cwt. *swatdipoi* = 60 catties. 1 lb. *swatdipoi* = 15 taels.

**Chinese Measure.**—1 *chuan* = 141 English inches, or 12 *changs* = 47 yards. Liquids and generally, grain are sold by weight.

**Chinese Money.**—1 tael = 10 mace = 100 candareen = 1,000 cash.

The principal monetary integer, the tael, is the weight of pure silver, there being no Chinese coins in gold, and no other Chinese currency, or medium of payment, in all, than the small pieces of silver, stamped by the shroffs or bankers appointed by the government. The average purity of silver may be reckoned at 96 tose, or 151 dwts., better than British standard; and as it contains, on the average, about 18 grains of gold in the pound Troy, the net value is 60 pence per ounce standard, after making the usual allowance for the extraction of the gold, is very nearly equal to 78½ pence sterling, per tael.

In mercantile currency, or the money of account of foreign merchants trading with China, the dollar is divided into 100 cents, and 720 taels of Chinese account are reckoned equal to 1,000 dollars in this currency, making the tael equal to 1 dollar 28-8-9ths cents; but in small amounts it is reckoned at 1 dollar

40 cents. This is, however, only a nominal valuation, by which the dollar is made nearly 50½ pence sterling, or 15½ per cent. above its real value.

According to the 18th article of the general regulations under which the British trade is to be conducted at the five ports of Canton, Amoy, Foo-chow-foo, Ningpo, and Shanghai, the English consuls appointed to these ports are to arrange with the superintendants of the customs at each, what coins may be taken in the payment of the duties, and what per centage may be necessary to make them equal to standard or pure silver. In pursuance of this regulation, the following estimations have been made at Canton, and will, probably, be followed at the other ports of trade:—*rupes* weighing 100, 75, 50, &c.; *Pavlovian* dollars, 111½, 4m, 5c, 5c, 5c; Mexican dollars, 111½, 5m, 0c, 0c; *Belgian* dollars, 111½, 5m, 5c, 0c; *Chinese* dollars, 112½, 5m, 5c, 0c; and shopped dollars, 112½, 5m, 0c, 7c; are to be accounted as 100 taels of pure silver, being, according to this monetary tariff, respectively equal to 8 dwts., 6½ dwts., 6½ dwts., 6½ dwts., 7½ dwts., and 8½ dwts. worse than British standard. To these per centages are to be added 4 per cent. for difference between the hooper's and the shroff's weights, and another 4 per cent. for refining. Hence the value of the tael of pure silver is rendered very nearly equal to 79½ pence, and with the 1 per cent. to 80½ pence sterling, at which value the Chinese rates in the above schedule have been reduced.—(Tael.)

**Opium.**—A notion having been entertained that opium might be legally imported into China, under the provisions of this tariff, on paying an *ad valorem* duty of 5 per cent., the following proclamation has been issued on the subject:—

**Proclamation.**—It having been brought to my notice that such a step has been contemplated as sending vessels with opium on board into the ports of China, and demanding that the said opium shall be admitted to importation, by virtue of the concluding clause of the new tariff, which provides for all articles not actually enumerated in that tariff *vasice*: at an *ad valorem* duty of 5 per cent., I think it expedient, by this proclamation, to point out to all whom it may concern, that opium being an article the traffic in which is well known to be declared illegal and contraband by the laws and imperial edicts of China, any person who may take such a step will do so at his own risk, and will, if a British subject, meet with no support or protection from her Majesty's consuls or other officers.

This proclamation will be translated and published in Chinese, so that no one may plead ignorance of it.

Government-house, Victoria, this 1st day of August, 1843.

But, notwithstanding this proclamation, and in defiance of the strong denunciation of smuggling in the proclamation of the 2d of July (see p. 230\*), it is distinctly stated in Hong Kong papers that there was, on the 21st of September 1843, almost in sight of our consular flag, a "fleet of British vessels openly engaged in the vending of opium to the Chinese!" This certainly is a curious commentary on the above proclamations; and it were much to be wished, seeing that the trade cannot be suppressed, that it were legalised on opium paying a reasonable duty.

The payment of our consuls by fees is much, and we believe justly, objected to at Canton. It is a bad practice anywhere, and especially so in China.

Supposing, however, that the treaty with China is *bona fide* carried into effect, still it may be doubted whether the trade with that empire will ever be so extensive as many suppose. We believe, indeed, that China will afford a most extensive outlet for various descriptions of our manufactured goods, provided we can bring away equivalents suitable for the European and other foreign markets. But this, we incline to think, will be no easy matter. Excepting tea, China has few articles suitable for extensive use in Europe, other than silk and silver. Chinese silk is, however, losing ground as compared with that of Italy and Turkey, while it is most probable that the enhancement of its price, consequent to any great increase in the exportation of silver, would, in no very long time, bring it to a close. Tea is the grand equivalent which the Chinese have to exchange for our products; and there cannot, as it appears to us, be a doubt that the effectual reduction of the present exorbitant duties on tea would be the most likely means of extending the trade with China.

**Hong Kong.**—The island of this name, ceded to us by the above treaty, is situated on the N. side of the entrance from the sea to the estuary of the Canton River, being separated from the main land by a narrow channel having 14 fathoms water. It stretches about 8 miles from east to west, and is of a very irregular figure, having several promontories, and being deeply indented with bays. It consists principally of a series of high hills, the highest having an elevation of about 1,200 feet. Victoria, the principal British settlement on the north side of the island, in lat. 22° 16' 27" N., long. 114° 10' 48" E., has the advantage of an excellent roadstead with from 3 to 7 fathoms water and good holding ground. There are also numerous well-sheltered roads and bays with deep water on the south side of the island; which, indeed, appears, from its position and other advantages, extremely well fitted for a naval station. Every thing, however, will depend on the fact of its being healthy, of which, we are sorry to observe, grave doubts are entertained. Should these happily prove unfounded, it is probable that in no very lengthened period a considerable portion of the trade which is at present centred in Canton will be transferred to Hong Kong; and, under the above

condition, it can hardly fail to become an important *entrepôt*, not merely for the trade with the Canton River, but with China generally. It is intended to have it strongly fortified. — (See the *Plan of the Canton River in the Mercator's Chart* prefixed to the title-page of this work.)

**Monies.** — Accounts are kept at Canton in taels, mace, candarins, and cash the tael being divided into 10 mace, 100 candarins, or 1,000 cash. There is but one kind of money made in China, called cash, which is not coined but cast, and which is only used for small payments: it is composed of 8 parts of copper and 2 of lead; it is round, marked on one side, and rubbed round at the edges with a square hole in the middle. These pieces are commonly carried, like beads, on a string of wire. A tael of fine silver should be worth 1,200 cash; but, on account of their convenience for common use, their price is sometimes as much raised that only 750 cash are given for the tael.

Foreign coins, however, circulate here, particularly Spanish dollars; and for small changes they are cut into very exact proportions, but afterwards weighed for such purpose merchants generally carry scales, called *dotchin*, made somewhat after the plan of the English *centenars*.

The tael used to be reckoned at 6s. 8d. sterling in the books of the East India Company; but its value varies, and is generally computed according to the price paid for mace or Spanish dollars in London. The tables given for this proportional value may be calculated in pence sterling, by the multiplier 1/100. Thus, if the price of the mace be 6s. 7d. per catty, the value of the tael will be 6s. 1/408 or 7s. 4d.; if at 6s. 6d., the value of the tael will be 7s. 12d.; and for any other price in the same proportion.

**Fineness of Gold and Silver.** — The fineness of gold and silver is expressed by dividing the weight into 100 parts, called *tauch* or *touch*; similar to the modern practice of France. Thus, if an ingot be 99 *tauch*, it is understood to contain 7 parts of alloy and 93 of pure metal, making in the whole 100.

The fineness of precious metals, expressed in these decimal proportions, may be converted into English proportions by the following annexed rule: Suppose gold is 91.66 *tauch*, say, as 100 : 91.66 :: 18 : 1; the standard, and you will have 16.5 standard silver into *tauch*, say, as 100 : 16.5 :: 100 : 99.5, the *tauch* of sterling silver. Pure gold or silver without alloy is called by the Chinese *tyen*, and sometimes, when of less purity, the metal is accepted as *tyen*.

**Silver Ingots** are used as money, and weigh from 1/2 a tael to 100 taels, their value being determined by their weight. These ingots are of the best sort of silver; that is, about 94 *tauch*.

**Gold Ingots.** — Gold is not considered as money, but as merchandise: it is sold in regular ingots of a determined weight, which the English call *shen* of gold; the largest of these weigh 10 taels each; and the gold is reckoned 94 *tauch*, though it may be only 92 or 93.

**Weights.** — Gold and silver are weighed by the *catty* of 16 taels; the tael is divided into 10 mace, 100 candarins, or 1,000 cash. 100 taels are reckoned to weigh 16 lbs. avoirdupois, which makes the tael equal to 57.75 English grains, or 37.566 grammes.

The principal weights for merchandise are the *picul*, the *catty*, and the *tael*; the *picul* being divided into 100 catties, or 1,600 taels.

	Lbs. av. dwt.
1 Tael weight, avoirdupois	0 1 0.333 = 14 gr.
16 Taels, or 1 catty	0 2 5.333 = 1 lb.
100 Catties, or 1 picul	135 0 9.333 = 153 lbs.

Hence the *picul* weighs 60.478 kilogrammes, or 133 lbs. 0 oz. 8 dwt. 15 gr. Troy.

The above weights are sometimes otherwise denominated, especially by the natives; thus, the *catty* is called *pin*; the *tael*, *tyang*; the *mace*, *tyen*; the *candarins*, *tyan*; and the *cash*, *lin*.

There are no commercial measures in China, as all dry goods and liquids are sold by weight. In delivering cargo, English weights are used, and afterwards turned into Chinese *picul* and *catties*.

**Long Measures.** — That used in China is the *covid* or *cobre*; it is divided into 10 puns, and is equal to 0.3715 metres, or 14.625 English inches.

	Mètres.	Eng. Inch.
The foot of the mathematical tribunal	0.333 = 15.252	
The builders' foot, called <i>coups</i>	0.3398 = 14.7	
The sailors' and engineers' foot	0.3383 = 15.33	
The foot used by engineers	0.3211 = 12.65	

The li contains 180 fathoms, each 10 feet of the last mentioned length; therefore the li is 1,800 English feet; and 192 li measure a mean degree of a meridian nearly; but European missionaries in China have divided the degree into 360 li, each li making 1,800 English feet, which gives the degree 69.166 English miles, or 111.51 French myriamètres.

**Hong Merchants.** — Previously to the commencement of the new system, it had, as stated above, been the invariable practice, enforced by law, that all foreign vessels arriving in the port should employ, as broker or agent, a hong or security merchant, who became, by doing so, responsible to the government for the duties. These merchants, who were but few in number, were the only individuals in the empire legally authorised to trade with foreigners, a privilege for which they had to pay very largely. Even after an arrangement had been made with any particular hong merchant for securing a ship, the captain or supercargo might deal with any other hong merchant, or even with any outside merchant (or merchant not belonging to the hong) he pleased. The peculiar duty of the hong merchant was to pay the duties on both the inward and outward cargoes; and hence arose the practice of foreigners buying all goods for export duty paid, and selling all the goods brought with them free of duty, the duties being, in both cases, paid by the hong merchants who had secured the ship; and hence, also, the ignorance of most foreigners as to the amount of the duties. But now that the privilege of the hong merchants has been abolished, the duties will have to be paid to the Chinese authorities by the parties importing and exporting, in the same way as in this country.

**European Trade at Canton.** — As soon as a vessel arrives among the islands which front the entrance to the Canton river, she is generally boarded by a pilot, who conducts her into Macao or Hong Kong, or the entrance to the river, as, however, as early, the ships push on without waiting for the pilot, who, if the weather be bad, is sometimes long in coming on board. The pilots' licences are registered at the *Kan-tsin* office, near *Loan*; 1 licence is issued for a vessel to act, the sum of 500 dollars is paid. The person who takes out the licence sometimes has a fishing boat on the river; but employs fishermen to do the duty. The vessel's arrival in the road, the pilot goes on shore to report her at the office of the *kan-tsin*-lo, who, when he has received answers to his inquiries, gives a permit for her to pass through the *doges*, and orders a river pilot on board. This pilot seldom repairs on board the vessel before 24 hours have elapsed. When arrived, the vessel proceeds through the *doges*, and up the Canton river, to *Whampoa*.

Every ship that enters the port requires the service of a linguist and comprador, before she can commence unloading. The master used to be required to give a written declaration, in duplicate, solemnly affirming that the ship has brought no opium.

All the trade with foreigners used to be confined in the *hong* or security merchants; but this restriction has recently been abolished; and foreigners may now deal with any merchant or other party they think fit to employ, who requires the aid of some interpreter, who procures permits for delivering and taking in cargo, transact all the Custom-house business, and keep accounts of the duties. All the minor changes of the government, also, are paid by them; in consideration of which they receive a fee of about 175 dollars, previously to the vessel's departure.

When a vessel wishes to discharge or receive cargo, the linguist is informed a day or two previously, what kind of goods are to be received or discharged, and in what quantities. He then applies for a permit, which being issued, the lighter or chop-boat proceeds to *Whampoa*, where they usually arrive on the evening of the second or morning of the third day. For a single boat the linguist used to receive a fee of 25 dollars; but if a permit be obtained for from 3 to 4 boats at a time, the fee for each boat was only 11 taels 8 mace 6 cand., or about 104 dollars.

When the goods are ready to be landed from or sent to the ship, the *hoyp* (principal Custom-house officer) sends a demand, a writer, and a police officer; the hong merchant who has secured the ship sends a domestic, called a *cast-pong man* (one who attends at the public office, on ordinary occasions, in behalf of his master); and the linguist sends an accountant and interpreter, to attend at the examination of the goods. The hong merchant used to be held responsible by government for all duties, whether on imports or exports in foreign vessels; and therefore, when goods were purchased, it was customary for the parties, before fixing the price, to arrange between themselves as to who was actually to pay the duties.

Of an import cargo, such as chop-boat, according to rule, which, however, is not rigidly enforced, should contain, — of wolans, camlets, and long-sil, 140 bales in tin, 500 pieces; lead, 500 pigs; Bombay Cotton, 55 bales; Bengali cotton, 50 bales; best India Pepper, &c., 500 piculs.

Of export goods, a chop-boat should take, — of tin, 600 chests; of oil or sorts of goods, 500 piculs. If more than this, the hong merchant gives to the chop-boat, for each additional picul, 6 dollars.

In calculating the duties on export goods, 90 catties are considered 100. The wolans, long-sil, and camlets, are measured by the *chang* of 10 *covid*, without any deduction; and single articles are numbered.

If, after entering the port, any persons tranship goods, it is considered that the one ship sold them to the other; and, in that case, the same duty has to be paid as if the goods were brought up to Canton. Provisions are not included in this regulation.

Ships' boats are not allowed to carry up or down any thing chargeable with duty. Gold, silver, copper, and iron are prohibited to be exported; a few culinary articles are the only exception. When it is desired to export treasure, the hong merchant must make an estimate of the value of the import and export cargoes; and whatever balance there may be in favour of the ship, may then be shipped off as treasure.

If more cargo be sent to a ship than she can take on board, and she wishes to go to be shipped on board another, it must be done within 3 days after announcing the goods at the Custom-house, and a hong merchant must state it to government; if granted, a hong merchant and linguist are ordered to go to *Whampoa* and take an account of such cargo, all with the expense of boats, runners, &c. at *Whampoa*, costs 40 or 50 dollars. — [Companion to Anglo-Chinese Calendar, pp. 92-101.]

**Foreign Merchants.**—These consist of British, American, French, Dutch, Danish, Swedish, Spanish, and Portuguese, with Parsee and Indian Mohammedan British subjects. The Americans, French, and Dutch have each consular agents recognised by the Imperial government. The same privileges have been, or are to be, conceded to all foreigners that have been granted to the English.

**Rates of Commission in China, agreed upon in November, 1831, and revised by the Chamber of Commerce, March, 1838.**

Vessels importing rice or other grain into any of the five ports open to British vessels, are liable to no charges whatever; but if they take away an export cargo, they then have to pay the duties on such cargo agreeably to the tariff, and one moiety of the tonnage dues, or 1/4 mace per ton.</p> |
|--|---|

**Trade between England and China.**—Down to 1834, the trade between the United Kingdom and China was monopolised by the East India Company, but in the above year this monopoly was happily abolished, and the trade with China thrown open to all classes under the conditions specified in the act 3 & 4 W. 4. c. 93. Tea has always been by far the principal article of import from China; and it is mainly owing to the diffusion of the taste for it, and its consumption by all ranks and orders of the people, that the trade with China has attained its present importance: and, as already seen, we believe we must principally look to the increased consumption of tea that would, no doubt, follow the effectual reduction of the exorbitant duties with which it is at present loaded, for the future increase of the trade. The other articles of import are raw silk and silk manufactures, nankeens, cassia lignea, and a few other articles; but they are of very inferior value and importance as compared with tea.

The great articles of export from this country to China consist of cotton stuffs and yarn, woollen goods, linen, &c., earthenware, iron and steel, &c. Bullion used to be largely exported to China; but latterly the current has begun to set in the opposite direction.

Previously to the abolition of the monopoly, in 1834, the real value of the merchandise annually exported from the U. Kingdom to China did not exceed 600,000*l.*; whereas it had increased in 1836 to 1,326,368*l.*; and though it fell off in 1837 to 678,375*l.*, it rose in 1838 to 1,204,356*l.* The interruption of the regular trade, by the disturbances and hostilities that afterwards ensued, prevents any accurate conclusions in regard to its probable future amount being deduced from the returns for 1839, 1840, and 1841.

But in 1842, the exports from the U. Kingdom to China amounted to 969,381*l.*; in 1843 they were 1,456,180*l.*; and in 1845 they rose to the unprecedented amount of 2,394,827*l.* And great as this amount may seem, most probably it would, at no distant period, be very much increased but for the difficulty the Chinese experience in making returns; a difficulty which would, however, be very materially diminished were the duty on bohea reduced, as it should be, to 6*d.* or 8*d.* per lb., and that on other teas in the same proportion.

The act 6 & 7 Victoria, cap. 80., authorises the superintendent of the trade of her Majesty's subjects in China, being at the same time governor of Hong Kong, to issue, with the advice of the legislative

count of the island, laws and ordinances for the government of British subjects in China, or within 100 miles of the same. Laws and ordinances so issued are to be laid before parliament.

Account of the Quantities of Tea Imported into the United Kingdom direct from China, in each Year from 1793 to 1845, both Inclusive.

Opium, which is by far the most important and valuable of all the articles imported into China, is excluded from the Table of Imports (next page), which comprises those articles only that are legally admissible. Although, however, it is nominally excluded, opium is openly, systematically, and easily introduced; the trade in it being, in fact, as safe and as regular as that in any other commodity, while it is incomparably more extensive. The table above exhibits a detailed account of its importation into China from 1816-17 to 1837-38. We regret we have no means of continuing it down to the present time; but the imports have since continued rapidly to increase; so much so, that we are assured by Mr. McGregor, the very intelligent consul at Canton.

that the imports of opium in 1845 amounted to 38,000 chests, worth 23,000,000 dollars | being little short of double the value of all the other articles of import put together | (*Returns of Trade of China in 1845, p. 40.*)

A General View of the (legalised) Import Trade from Foreign Countries, at the Port of Canton, during the Year 1845, specifying the Description and Quantities of Commodities imported, as well as their estimated Value, and distinguishing the Nations to which the Ships belonged in which they were imported, viz. :—

Description of Commodities.	Quantities, and in what ships imported.									Estimated Value in Spanish Dollars, at 4s. 4d. sterling.

N.B. — See Table of Export Trade on top of next page.

But in addition to the trade carried on with the port of Canton, we carry on a considerable trade with the other ports opened to us under the treaty of 1842, especially with Shanghai. And taking these into account, the total amount of the legitimate trade carried on under the British flag with China in 1845, will be —

Ports.	Tonnage Inwards.	Value of Imports.	Tonnage Outwards.	Value of Exports.
Canton	86,087	2,211,692	98,277	1,492,370
Amoy	5,653	141,434	6,535	15,478
Foochow	783	21,981	765	40,423
Ningpo	1,586	10,308	1,296	17,493
Shanghai	15,371	1,064,207	16,760	1,259,201
Total	111,401	3,505,772	124,533	3,824,747

\* The consul's returns contained on both sides (imports and exports) the value of a cargo which was not unladen, amounting to 28,126*l.* This was deducted.

Shanghai is situated in the S. part of the province of Kiang-Su, at a considerable distance from the sea, on the river Woo-Sung, in about lat. 31° 10' N., long. 120° 50' E. The river, which may be navigated by large ships for a considerable distance above the town, crosses the grand canal, and, consequently, makes Shanghai an *entrepôt* for all the vast and fertile countries traversed by the canal and by the great rivers with which it is connected; and hence the present importance of this emporium, as evinced by the extent of our trade with it in 1845; and hence, also, the infinitely greater importance to which its commerce will hereafter most probably attain.

A General View of the (legalised) Export Trade to Foreign Countries, at the Port of Canton, during the Year 1845, specifying the Description and Quantities of Commodities exported, as well as their estimated Value, and distinguishing the Nations to which the Ships belonged in which they were exported, viz. —

Consular Fees. — The consular fees imposed in 1843 have been withdrawn (antf. p. 229), and the following table of fees, payable by British ships in all the ports of China, has been substituted in its stead.

Table A: —	Table B: —
Certificate of due landing of goods exported from the U. Kingdom - - - - - 2 dollars	Noting a protest - - - - - 1 dollar
Signature of ship's manifest - - - - - 2 "	Order of survey - - - - - 2 "
Certificate of origin, when required - - - - - 2 "	Extending a protest or survey - - - - - 1 "
Bill of health, when required - - - - - 2 "	Registrations - - - - - 1 "
Signature of master-rol, when required - - - - - 2 "	Visa of passport - - - - - 1 "
Attestation of a signature, when required - - - - - 1 "	Valuation of goods - - - - - 1/2 cent
Administering an oath, when required - - - - - 1 "	Attending sales, 1/2 per cent. where there has been a charge for valuing; otherwise 1 per cent.
Seal of office, and signature of any other person not specified herein, when required - - - - - 1 "	Attendance out of consular office at a ship's wreck, five dollars per diem for his personal expenses, and above his travelling expenses.
	Attendance on opening a will - - - - - 5 dollars
	Management of property of British subjects dying intestate - - - - - 2 1/2 cent.

Trade between British India and China. — This trade is decidedly more valuable and important than that carried on between Great Britain and China. The greatest article of export from India to Canton used to be cotton wool, principally from Bombay; but it is now become insignificant as compared with opium, the imports of which into China, as seen above, are worth, at present, about 23,000,000 dollars. The edicts of the emperors are as unable to prevent its introduction, as the proclamations of

James and Charles were to hinder the use of tobacco in England. The smuggler is, if anything, even more omnipotent in China than in Spain. Opium is everywhere imported with ease and safety. The trade was at first principally conducted at Whampoa; but the exactions of the Chinese authorities drove it to Macao, where it increased, but whence it was subsequently driven by the exactions of the Portuguese. It is now principally carried on in the Bay of Lintin and generally along the east coast. At Lintin the opium used to be kept on board receiving ships, of which there were frequently not less than 12 quietly lying at anchor, without danger or molestation of any sort.

The exports from China to India consist of sugar for Western India, tea, porcelain, nankens, cassia, camphur, &c., but the amount of these is not very considerable, and the returns are principally made in bills and bullion. We subjoin an

Account, stated in Pounds Weight, of the Total Quantities of Tea exported from Canton in 1844, specifying the Countries for which the same were shipped, and the Quantity shipped for each.

The United Kingdom	15,175,533	India	470,887	Brazil	6,000

The quantities exported in 1844 were shipped in 97 vessels; those exported in 1845, in 105 vessels; and those exported in 1846, in 117 vessels.

Exports of tea to the United States, in 50 vessels, during the year ending June 30th, 1845. Black, 6,000,460 lbs.; green, 15,982,800 lbs.; making together 20,983,260 lbs.

**Coerency.**—Doubts having been entertained respecting the value of the coin current in Hong Kong and its dependencies, the following rates at which such coins are made legal tender were fixed by proclamation dated 1st May, 1845:—  
 "The gold number of the East India Company's territory, coined since the 1st day of September, 1835, at the rate of 1s. 6d. sterling money of the United Kingdom.  
 "The dollar of Siam, Mexico, or the South American States, at the rate of 1s. 6d. sterling.  
 "The rupee of the East India Company's territory, coined since the 1st day of September, 1835, at the rate of 1s. 10d. sterling and the half rupee, quarter rupee, and eighth of rupee pieces, in proportion.  
 "The cash, or copper coin current in China, at the rate of 24s. cash for 1s. sterling.  
 The following provision establishes with respect to silver currency the same principle that prevails in England:—  
 "Provided always, nevertheless, and we do further ordain and declare, that nothing herein contained shall be deemed or

taken to render it compulsory on any person to accept at any one payment a larger amount in silver coins of the United Kingdom of lower denomination than 1s., or in the half, quarter, or eighth rupee pieces herein-before mentioned, than the equivalent to 2s. sterling money, or a larger amount in copper coins of the United Kingdom, or in the Chinese copper coins before mentioned, than the equivalent to 1s. sterling money."  
 The Portuguese trade, particularly that with the possessions of Portugal on the continent of India, was considerable during the war, but has since greatly declined. A nation of more spirit than the Portuguese would, with the advantage they enjoy in the possession of the convenient station of Macao, be able to carry on the Chinese trade with superior success. There is a considerable intercourse, carried on in Spanish ships, between Canton and Manila. The Philippine Islands afford many commodities in demand in the Chinese markets; but the Spaniards are deficient in the skill and enterprises required fully to avail themselves of these advantages.

**Trade with the Indian Islands, &c.**—In his evidence before the select committee of the House of Commons, Mr. Crawford gave the following details with respect to the native foreign trade of China:—

**Native Foreign Trade of China.**—The principal part of the junk trade is carried on by the four contiguous provinces of Canton, Fokien, Chekiang, and Kiannan.

No foreign trade is permitted with the island of Formosa; and I have no means of describing the extent of the traffic which may be conducted between China, Corea, and the Leechew Islands. The following are the countries with which China carries on a trade in junks; viz. Japan, the Philippines, the Noo-loo Islands, Celebes, the Moluccas, Borneo, Java, Sumatra, Singapore, Rho, the east coast of the Malayan peninsula, Siam, Cochin China, Cambodia, and Tonquin; and these may, in all, employ about 222 junks. The ports of China at which this trade is conducted are Canton, Techo-theou, Nanking, Hoocheou, Suheing, Kongmoon, Changlin, and Kiang, in the province of Canton; Amoy and Chuchew, in the province of Fokien; Ningpo and Slang-hai, in the province of Chekiang; and Nantcheou, in the province of Kiannan.

The above estimate does not include a great number of small junks belonging to the island of Hainan, which carry on trade with Tonquin, Cochin China, Cambodia, Siam, and Singapore. Those for Siam amount yearly to about 50, and for the Cochin Chinese dominions to about 43; these alone would bring the total number of vessels carrying on a direct trade between China and foreign countries to 307. The trade with Japan is confined to the port of Ningpo, in Chekiang, and expressly limited to 10 vessels; but as the distance from Naigasaki is a voyage of no more than 4 days, it is performed twice a year.

With the exception of this branch of trade, the foreign intercourse of the two provinces Chekiang and Kiannan, which are famous for the production of raw silk, tea, and nankens, is confined to the Philippine Islands, Tonquin, Cochin China, Cambodia, and Siam; and none of this class of vessels, that I am aware of, has ever found their way to the western parts of the Indian Archipelago. The number of these trading with Siam is 24, all of considerable size; those trading with the Cochin Chinese dominions 18, also of considerable size; and those trading with the Philippines 5; making in all 47, of which the average burden does not fall short of 17,000 tons.

Besides the junks now described, there is another numerous class, which may be denominated the

colonial shipping of the Chinese. Wherever the Chinese are settled in any numbers, junks of this description are to be found; such as in Java, Sumatra, the Straits of Malacca, &c.; but the largest commerce of this description is conducted from the Cochin Chinese dominions, especially from Siam, where the number was estimated to me at 300. Several junks of this description from the latter country come annually to Singapore, of which the burden is not less than from 300 to 400 tons.

The junks which trade between China and the adjacent countries are some of them owned and built in China; but a considerable number also in the latter countries, particularly in Siam and Cochin China. Of those carrying on the Siamese trade, indeed, no less than 81 out of the 89, of considerable size, were represented to me as being built and owned in Siam. The small junks, however, carrying on the trade of Hainan, are all built and owned in China.

The junks, whether colonial or trading direct with China, vary in burden from 2,000 piculs to 15,000, or carry dead weight from 190 to 900 tons. Of those of the last size I have only seen 2 or 4, and these were in Siam, and the same which were commonly employed in carrying a mission and tribute yearly from Siam to Canton. Of the whole of the large class of junks, I should think the average burden will not be overrated at 300 tons each, which would make the total tonnage employed in the native foreign trade of China between 90,000 and 70,000 tons, exclusive of the small junks of Hainan, which, estimated at 180 tons each, would make in all about 60,000 tons.

The junks built in China are usually constructed of fir and other inferior woods. When they arrive in Cambodia, Siam, and the Malayan islands, they commonly furnish themselves with masts, rudders, and wooden anchors, of the superior timber of these countries. The junks built in Siam are a superior class of vessels, the planks and upper works being invariably teak. The cost of ship-building is highest at the port of Amoy in Fokien, and lowest in Siam. At these places, and at Chang-tsin in Canton, the cost of a junk of 8,000 piculs, or 47½ tons burden, was stated to me, by several commanders of junks, to be as follows:—

At Siam	-	-	-	-	-	7,400 dollars
Chang-tsin	-	-	-	-	-	16,000 "
Amoy	-	-	-	-	-	21,000 "

A junk of the size just named has commonly a crew of 90 hands, consisting of the following officers, besides the crew: a commander, a pilot, an accountant, a captain of the helm, a captain of the anchor, and a captain of the hold. The commander receives no pay, but has the advantage of the cabin accommodation for passengers, reckoned on the voyage between Canton and Singapore worth 150 Spanish dollars. He is also the agent of the owners, and receives a commission, commonly of 10 per cent. on the profit of such share of the adventure, generally a considerable one, in which they are concerned. The pilot receives for the voyage 300 dollars of wages, and 50 piculs of freight out and home. The helmsman has 15 piculs of freight and no wages. The captain of the anchor and the hold have 5 piculs of freight each, and the seamen 7 piculs each. None of these have any wages. The officers and seamen of the colonial junks are differently rewarded. In a Siamese junk, for example, trading between the Siamese capital and Singapore, of 6,000 piculs burden, the commander and pilot had each 100 dollars for the voyage, with 13 piculs of freight apiece. The accountant and helmsman had half of this allowance, and each seaman had 13 dollars, with 5 piculs of freight.

In construction and outfit, Chinese junks are clumsy and awkward in the extreme. The Chinese are quite unacquainted with navigation, saving the knowledge of the compass: notwithstanding this, as their pilots are expert, their voyages short, and as they hardly ever sail except at the height of the monsoons, when a fair and steady 7 or 8 knots' breeze carries them directly from port to port, the sea risk is very small. During 13 years' acquaintance with this branch of trade, I can recollect hearing of but 4 shipwrecks; and in all these instances the crews were saved.

The construction and rigging of a Chinese junk may be looked upon as her proper rigging, and they are a very effectual one; for the least deviation from them would subject her at once to foreign charges and foreign duties, and to all kinds of suspicion. The colonial junks, which are of a more commodious form and outfit, if visiting China, are subjected to the same duties as foreign vessels. Junks built in Siam, or any other adjacent country, if constructed and fitted out after the customary model, are allowed to trade to China upon the same terms as those built and owned in the country. If any part of the crew consist of Siamese, Cochin Chinese, or other foreigners, the latter are admitted only at the port of Canton; and if found in any other part of China, would be seized and taken up by the police exactly in the same manner as if they were Europeans. The native trade of China conducted with foreign countries is not a clandestine commerce, unacknowledged by the Chinese laws, but has in every case at least the express sanction of the viceroy or governor of the province, who, on petition, decides the number of junks that shall be allowed to engage in it; and even enumerates the articles which it shall be legal to export and import. At every port, also, where such a foreign trade is sanctioned, there is a hong or body of security merchants, as at Canton; a fact which shows clearly enough that this institution is parcel of the laws or customs of China, and not a peculiar restraint imposed upon the intercourse with Europeans.

The Chinese junks properly constructed pay no measurement duty, and no cumshah or present; duties, however, are paid upon goods exported and imported, which seem to differ at the different provinces. They are highest at Amoy, and lowest in the island of Hainan. The Chinese traders of Siam informed me that they carried on the fairest and easiest trade, subject to the fewest restrictions, in the ports of Ningpo and Ning-hai in Chekiang, and Souchoon in Kiannan. Great dexterity seems every where to be exercised by the Chinese in evading the duties. One practice, which is very often followed, will afford a good example of this. The coasting trade of China is nearly free from all duties and other imposts. The merchant takes advantage of this; and, intending in reality to proceed to Siam or Cochin China, for example, clears a junk out for the island of Hainan, and thus avoids the payment of duties. When she returns she will lie 6 or 7 days off the mouth of the port, until a regular bargain be made with the custom-house officers for the reduction of duties. The junk held out in such cases is to proceed to another port, and thus deprive the public officers of their customary perquisites. I was assured of the frequency of this practice by Chinese merchants of Cochin China, as well as by several commanders of junks at Singapore. From the last-named persons I had another fact of some consequence, as connected with the Chinese trade; viz. that a good many of the junks, carrying on trade with foreign ports to the westward of China, often proceeded on voyages to the northward in the same season. In this manner they stated that about 30 considerable junks, besides a great many small ones, proceeded annually from Canton to Soucheong, one of the capitals of Kiannan, and in wealth and commerce the rival of Canton, where they sold about 300 chests of opium at an advance of 50 per cent. beyond the Canton prices. Another place where the Canton junks, to the number of 5 or 6, repair annually, is Chincheew, in the province of Canton, within the Gulf of Fochow, or Yellow Sea, and as far north as the 37th degree of latitude. — (*Appendix, Report of 1830, p. 268.*)

A Chinese ship or junk is seldom the property of one individual. Sometimes 40, 50, or even 100 different merchants purchase a vessel, and divide her into as many different compartments as there are partners; so that each knows his own particular part in the ship, which he is at liberty to fit up and secure as he pleases. The bulk-heads, by which these divisions are formed, consist of stout planks, so well caulked as to be completely water-tight. A ship thus formed may strike on a rock, and yet sustain no serious injury;

a leak springing in one division of the hold will not be attended with any damage to articles placed in another; and, from her firmness, she is qualified to resist a more than ordinary shock. A considerable loss of stowage is, of course, sustained; but the Chinese exports generally contain a considerable value in small bulk. It is only the very largest class of junks that have so many owners; but even in the smallest class the number is very considerable.

*Population of China.*—For some remarks on the conflicting accounts and theories that have been put forth with respect to the population of this empire, the reader is referred to the *Geographical Dictionary*, art. *China*.

**CANVAS** (Fr. *Toile à voiles*; Ger. *Segeltuch*; It. *Canevazza*, *Lona*; Rus. *Parusnoe polotno*, *Parussina*; Sp. *Lona*), unbleached cloth of hemp or flax, chiefly used for sails for shipping. Masters of ships are required to make entry of all foreign-made sails and cordage, not being standing or running rigging, in use on board their respective ships, under a penalty of 100*l*. Sails in actual use, and fit and necessary for such ship, are imported free; but when otherwise disposed of, they are liable to an *ad valorem* duty of 20 per cent.—(3 & 4 *Will* 4. c. 56.) It had been the practice for a considerable period to grant bounties on the exportation of canvas or sail-cloth; these, however, finally ceased on the 1st of January, 1832. By an act passed in the reign of Geo. 2., new sails were ordered to be stamped with the maker's name and place of abode; but this regulation was repealed by the 10 Geo. 4. c. 43. § 9.

**CAOUTCHOUC.** "This substance, which is generally termed elastic gum, and vulgarly, from its common application to boots, is called per *marks* on paper, *India rubber*, is obtained from the milky juice of different plants in various countries. The chief of these are the *Jatropha elastica*, and *Urceola elastica*. The juice is applied in successive coatings on a mould of clay, and dried by the fire or in the sun; and when of a sufficient thickness, the mould is crushed, and the pieces shaken out. Acids separate the caoutchouc from the thinner part of the juice at once, by coagulating it. The juice of old plants yields nearly two thirds of its weight; that of younger plants less. Its colour, when fresh, is yellowish white, but it grows darker by exposure to the air. The elasticity of this substance is its most remarkable property; when warmed, as by immersion in hot water, slips of it may be drawn out to 7 or 8 times their original length, and will return to their former dimensions nearly. Cold renders it stiff and rigid, but warmth restores its original elasticity. Exposed to the fire, it softens, swells up, and burns with a bright flame. In Cayenne it is used to give light as a candle."—(*Ure's Dictionary*.)

Caoutchouc has become an article of very considerable importance. M. de la Condamine, who was one of the first to communicate authentic information with respect to it, mentions, that, owing to its being impervious to water, it was made into boots by the Indians.—(*Voyage de la Rivière des Amazones*, p. 76.) It is now employed in a similar way here. Means have, within these few years, been discovered of reducing it to a state of solution; and when thin filaments of it are spread over cloth or any other substance, it is rendered impervious alike to air and water. Air cushions and pillows are manufactured in this way; as are water-proof cloaks, now in very extensive demand, hats, boots, shoes, &c. It is also extensively used in the manufacture of braces and other articles which it is desirable should possess considerable elasticity; and there can be little doubt that it will be employed still more extensively, and in a still greater variety of ways.

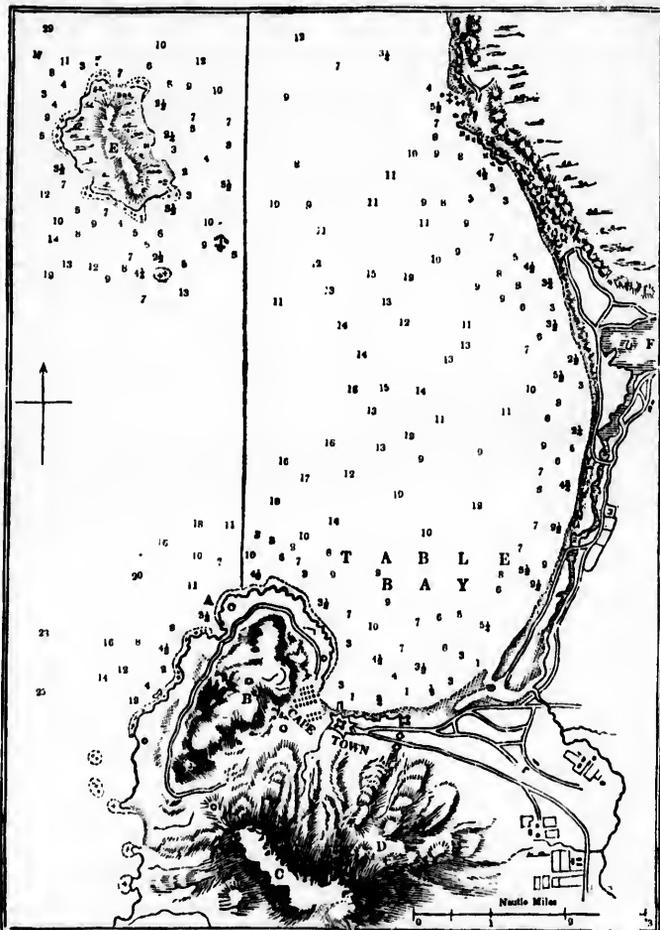

Previously to 1830, the importations of caoutchouc were comparatively inconsiderable, having in that year amounted to only 52,000 lbs.; whereas, in 1840, the duty of 1*s*. a cwt, produced 322*l*, showing that 6,640 cwts., or 721,280 lbs., had been entered for consumption. It is principally imported from Brazil, Colombia, and other parts of S. America. The imports from Brazil (Para) amounted, at an average of the 3 years ending with 1842, to 3,790 cwts. a year.—(*Parl. Paper* No. 369, Sess. 1843.) The price of caoutchouc varied in the London market, in January 1843, from 7*d*. to 1*s*. 3*d*. per lb.

**CAPERS** (Fr. *Capres*; Ger. *Kappern*; Du. *Kappers*; It. *Cappari*; Sp. *Alcaparras*; Rus. *Kaperszû*; Lat. *Capparis*), the pickled buds of the *Capparis spinosa*, a low shrub, generally growing out of the joints of old walls, and the fissures of rocks, in most of the warm parts of Europe. Capers are imported into Great Britain from different parts of the Mediterranean; the best from Toulon in France. Some small salt capers come from Majorca, and a few flat ones from about Lyons. The duty of 6*d*. per lb. on capers produced, in 1840, 2,100*l*. nett, showing that 84,000 lbs. had been entered for home consumption.

**CAPE-TOWN**, the capital of the British territory in South Africa, at the bottom of Table Bay, about 32 miles north from the Cape of Good Hope, and on the western side of the territory to which it gives its name; lat. 33° 55' 56" S., long. 18° 21' E. The town was founded by the Dutch in 1650; and remained, with the territory subject to it, in their possession, till it was taken by the British in 1795. It was restored to the Dutch by the treaty of Amiens; but being again captured by the British in 1806, it was finally ceded to us in 1815. The streets are laid out in straight lines, crossing

each other at right angles; many of them being watered by canals, and planted on each side with oaks. The population in 1842 amounted, according to the statement in the *Cape Almanac*, to 22,543, of whom about a third were blacks. The town is defended by a castle of considerable strength. Table Bay is capable of containing any number of ships; but it is exposed to the westerly winds, which, during the months of June, July, and August, throw in a heavy swell, that has been productive of many distressing accidents. This, in fact, is the great drawback upon Cape-Town, which in all other respects is most admirably fitted for a commercial station. At the proper season, however, or during the prevalence of the easterly monsoon, Table Bay is perfectly safe; while the cheapness and abundance of provisions, the healthiness of the climate, and above all its position, render it a peculiarly desirable resting place for ships bound to or from India, China, Australia, &c.

The subjoined plan of Table Bay is taken from the survey of the Cape of Good Hope, executed by Lieut. Vidal and others, under the direction of Captain Owen.

**Reference to the Plan.**—A, light-house, furnished with double lights. They may be seen clearly off deck at 10 miles distance; but they do not present double lights for 7 miles to the westward from the lighthouse and only one light is seen. B, Lion's Bluff; C, Table Mountain; D, Devil's Peak, in lat. 33° 27' S., E, Seaside Island; F, Salt River. The figures denote the soundings in fathoms.

**First Instructions.**—ART. 1. On the arrival of merchant vessels in Table Bay, a proper berth will be pointed out to the masters thereof by the port captain, when he boards them; and no master of a merchant vessel shall anchor with his vessel without permission from the port captain, unless in case of extreme emergency, when he must report his having done so as early as possible as the port-office.

It should be the intention of a master of a vessel to discharge or receive on board any considerable quantity of merchandise, a berth will be pointed out to him as close to the jetty, or other landing-place, as the safety of the vessel and other circumstances will admit. And the master will then moor with two bow anchors, with an open hawse to the N. N. E., taking special care, in so mooring, not to overlie the anchors of any other ship; or in any way to give the vessel near him a foul berth. Ships and vessels anchoring in Table Bay for water and refreshments alone, may ride at single anchor in the outer anchorage; but in this case it is particularly recommended to wear out 80 or 90 fathoms, if they ride by a chain cable, as the liability of steering or fouling the anchor, resulting the chain, will thereby be greatly lessened; and if riding by a rope or soft cable, to run out a stream or good kedge, to steady the ship; and in both cases the other lower anchor should be kept in perfect readiness to let go. When the vessel is properly moored with bow anchors, or well secured with a lower and stream anchor, and with good cables, levers, and bower-rope, the master will then lay the exact place of the ship by the bearings of 3 land-marks, and the depth of the water; and should ascertain every, in which the vessel may drift from this situation, or lose her anchors, a good bearing and depth of water being taken, and the vessel in the same must be notified in writing to the port captain. It is particularly recommended that vessels be kept as snug as possible, to counteract the effects of the gales, which at times blow with considerable violence.

The district subject to Cape Town is of very great extent, and contains every variety of soil, from the richest level to the wildest mountain, and tracts destitute of even the appearance of vegetation. The climate fluctuates between the two extremes of rain and drought. In the whole, its advantages and disadvantages seem to be pretty equally balanced; and the prospects which hold out to the industrious emigrant, if not very alluring, are certainly not discouraging.

**Population.**—According to the official returns, the population of the Cape Colony in 1847, consisted of 107,095.

**Produce.**—Large quantities of corn of a very good description are produced in the immediate neighbourhood of Cape Town, and in other parts of the colony; but agriculture is crippled by the Dutch law of succession, which, by dividing a man's property equally among his children, hinders the accumulation of capital in masses, and the formation of prosperous farming establishments. — [Thomson's Travels in Swieleria Africa, p. 351.]

The Mauritius and Rio Janeiro are the principal markets for the corn of the Cape. The exports of wool have increased very rapidly within the last 10 years, and it now forms by far the most important article sent from the colony. The native breed of sheep is very inferior; its fleece is worth nothing, and it is exportable only for the size of the tail, which sometimes weighs 50 lbs. But fine woolled Spanish merinos, Saxons and English sheep succeed remarkably well, and their wool fetches a high price. The eastern district of Albany is especially suitable for sheep.

Large quantities of wine, and of what is called brandy, are produced at the Cape; but with the exception of Constantia, they are very inferior. The effect of allowing the importation of Cape wine into the United Kingdom at a comparatively low duty is, not to occasion their direct consumption; but to cause them to be employed as a convenient means of adulterating others; so that, besides being injurious to the revenue, such reduction of duty promotes fraudulent practices, and detracts from the comforts of the public.

Considerable quantities of hides, skins, and horns are exported. They are principally brought from Algoa Bay, on the eastern side of the colony; and the trade has increased very fast during the last 6 or 7 years. Aloes are an important product; and horses, butter, tallow, tallow, and various other articles, are among the exports. The latter include dried fish, whale and seal oil, &c., the Cape fisheries being of considerable value.

The imports at the Cape consist of woollens, cottons, hardware, earthenware, furniture, haberdashery, soap, paper, books, &c. Portions of most articles used in this country. Rice goods and teak timber are imported from India, tea from China, sugar from India, the Mauritius, &c.

**Trade.**—The trade between the colonists and the Independent natives is subjected to various restraints, of which it is not always very easy to discover the policy. The sale of gunpowder and fire-arms to the natives has been prohibited; a regulation which might have been a judicious one, had they not been able to obtain them from any other side. The Americans have however traded with the eastern coast, and have liberally supplied the natives with these and various other articles; so that by keeping up the regulation in question, we merely exclude ourselves from participating in what might be an advantageous trade. But since we have taken possession of Natal, this intercourse may perhaps have been stopped.

**Account of the Quantities and Values of the Staple Articles, the Produce of the Colony of the Cape of Good Hope, exported in the Year ended 5th January, 1847.**

Articles.	Quantities.	Value.	Articles.	Quantities.	Value.
Aloes . . . lbs.	913,750	2,340 0 0	Hides (horse and ox) . . num.	60,837	32,777 0 0
Agave . . . lbs.	80,000	200 0 0	Horns . . . . .	85,650	1,244 0 0
Beef and pork . . . cwt.	4,800	15,154 0 0	Horses . . . . .	400	17,228 0 0
Horn (white) . . . lbs.	5,851	264 0 0	Ivory . . . . .	28,242	5,372 0 0
Butter . . . . .	81,765	5,007 0 0	Males . . . . .	2,281	23 0 0
Candles . . . . .	9,200	845 0 0	Oil, viz.—Whale . . num.	2,801	411 0 0
Corn, and meal, viz.—			Skins, viz.—Cal . . . num.	129	46 0 0
Hestey . . . muids	9,599	1,408 0 0	Good . . . . .	230,161	22,649 0 0
Beats and pens . . .	9,919	1,028 0 0	Seal . . . . .	190	188 0 0
Horn . . . . .	555,193	1,432 0 0	Sheep . . . . .	249,849	9,793 0 0
Flour . . . . .	750,478	7,918 0 0	Spirits, viz.—Brandy . gal.	4,917	555 0 0
Date . . . . .	108	400 0 0	Tallow . . . . .	147,971	2,491 0 0
Wheat . . . . .	810	218 0 0	Was . . . . .	2,213	268 0 0
Feathers (ostrich) . . lbs.	1,167	7,055 0 0	Wine, viz.—Constantia gal.	8,068	2,614 0 0
Fish (cured) . . . . .	1,398,925	7,981 0 0	Ordinary . . . . .	508,708	37,838 13 6
Fruits (dried) . . . . .	255,812	8,838 0 0	Wool . . . . .	3,471,128	178,011 0 0
Hides (green) . . . . .	5,800	50 0 0	Other Articles . . . . .		568,290 13 6
					34,485 0 0
			Total . . . . .		4398,775 13 6

Of the above, the value of the exports from Cape Town was . . . £ 828,915 0 0  
 Ditto exported from Simon's Town . . . . . £ 471 13 6  
 Ditto exported from Port Elizabeth . . . . . £ 170,289 0 0  
 £ 4398,775 13 6

Port Elizabeth, on the east side of Algoa Bay, is rapidly rising in commercial importance; and from the greater fertility of the country in its vicinity its exports will, probably, in no very lengthened period, exceed those from the Cape.

**A Summary View of the Trade and Navigation of the Colony, in the Year ended 5th January, 1847.**

CUSTOM-HOUSE REGULATIONS, DUTIES, FEES, &c.

**On Admission of a Ship to Water, observe—**  
 1. The ship's register must be lodged in the Custom-house, until the vessel clears again for sea.  
 2. The manifest of the cargo on board for this place must be deposited there.  
 3. The contents of cargoes shipped from any place in Great Britain or Ireland for this place must also be deposited there. From the endorsement of such caskets, an extract is to be made, which will show the contents of the different packages on board, and facilitate the making out of the entries.  
 4. In making out the declarations, the value by invoice of the different commodities must be given by the importer, in order to enable the Custom-house to estimate the duties payable, and to send into Government, annually, the required statement of the total duties received upon the several articles imported.

**In the clearing of a Ship outwards, observe—**  
 1. The master must produce a certificate from the harbour-master, that the tonnage duties of the port have been paid.  
 2. The export manifest must be examined with the permits granted, in order to ascertain whether packages have been shipped without a permit.  
 3. Export declarations must be sent in by the several shippers, of the quantity and value of goods or produce shipped by them, in order to ascertain the amount of the exports of the colony.  
 4. When Cape wine is shipped for exportation to England, affidavit of the particular description of such wine must be delivered, and a certificate granted, by the collector or comptroller of customs, to the master, on his arrival at each affidavit.  
 5. Manifests, in triplicate, of such goods as are shipped from the Cape for Great Britain, must be delivered, signed and sworn to by the master, before the collector or comptroller.  
 The original of which is to be returned to the master to accompany the cargo.  
 The duplicate to be forwarded, by the first conveyance sailing subsequently to the vessel containing the original, to the commissioners of customs in England or Scotland respectively, as the case may happen.  
 And the triplicate, written on or covered with a stamp, to remain as an office copy.

**Whisky taken in cargoes for other parts of the world, are required to deliver only original and duplicate manifests.**  
 6. When whole oil or whale bone is shipped from the Cape for England, the proprietor of the whale fishery is to make oath, before the collector or comptroller, that the same were *bona fide* the produce of fish, or creatures living in the sea, actually taken and caught wholly by His Majesty's subjects usually residing in this colony; and the collector or comptroller is to grant a certificate under his hand and seal to the master, testifying that such oath hath been made before him.  
 7. When salted seal skins are shipped from the Cape for England, the shipper is to make oath before the collector or comptroller, that the same are really and *bona fide* the skins of seals taken and caught on the coast appertaining to the Cape of Good Hope, wholly by His Majesty's subjects usually residing in this colony; and that all the said used in the curing or preserving of the same was not made in, or exported from, Great Britain or Ireland; and the collector or comptroller is to grant a certificate to the master accordingly.

**The original manifest, and a copy thereof, of ships touching at the Cape of Good Hope, with cargoes from the eastward for England, to be delivered and sworn to by the master before the collector or comptroller. The original is to be returned to the master, and the copy forwarded from the Custom-house to the commissioner of customs.**  
 8. If any part of such cargo shall be discharged at the Cape of Good Hope, the collector or comptroller is to indorse upon the manifest the part of the cargo so discharged, and verify the same.

**A Table of Duties of Customs payable on goods, wares, and merchandise, imported into the Colony of the Cape of Good Hope.**

Goods.	Duty.	£ s. d.
Coffee, viz. —		
The produce of B. Possessions	- cwt.	0 3 0
The produce of foreign possessions	- cwt.	0 10 0
Fish, dried or salted, and fins and skins, the produce of creatures living in the sea, of foreign fishing or taking, for every 100 lb. of the value thereof		12 0 0
Flour, wheaten, not being the manufacture of the U. K., or of any B. possession, barrel 196 lbs. (tinspinner)		0 3 0
Meal, salted or cured, of all sorts, not being the production or manufacture of the U. K., or of any B. possession	- cwt.	0 3 0
Meat, salted or cured, of all sorts, being the production or manufacture of the U. K., or of any B. possession	- cwt.	0 1 3
Oil, viz. —		
Train and blubber, the produce of fish or creatures living in the sea, of foreign fishing		3 0 0
Merchandise of foreign fishery, tin (measure)		7 10 0
Pepper	- cwt.	0 4 0
Rice	- cwt.	0 1 6
Sugar, viz. —		
Not refined, the production of any B. possession	- cwt.	0 3 3
Not refined, the produce of any other place	- cwt.	0 4 6
Refined, or candy, not manufactured in the U. K., or of any B. possession	- cwt.	0 6 0
Refined, or candy, the manufacture of the U. K., or of any B. possession	- cwt.	0 3 0
Spirits of all sorts, viz. —		
Not being the manufacture of the U. K., or of any B. possession, of strength of proof by Sykes's Hydrometer, and so in proportion for any greater strength	- imp. gal.	6 1 0

Spirits of all sorts, viz. —	£ s. d.	
Being the manufacture of the U. K., or of any B. possession, of strength of proof by Sykes's Hydrometer, and so in proportion for any greater strength	- imp. gal.	0 0 4
Not being the manufacture of the U. K., or of any B. possession, of strength of proof by Sykes's Hydrometer, and so in proportion for any greater strength	- imp. gal.	0 0 4 1/2
Tobacco, viz. —		
Not manufactured	- cwt.	0 12 0
Manufactured (not cigars)	- cwt.	0 10 0
Cigars	- cwt.	0 8 0
Wood, unmanufactured, viz. —		
Shalopy, rosewood, and oakwood	- cub. ft.	0 0 3
All other wood, not the produce of the U. K., or of any B. possession	- cub. foot.	0 0 3
Wine, viz. —		
In bottles, each not exceeding 6 to the imp. gal.	- dos.	0 4 0
In bottles, each not exceeding 12 to the imp. gal.	- dos.	0 3 0
Not in bottles	- imp. gal.	0 1 6
Goods, wares, and merchandise, not otherwise charged with duty, and not herein declared free of duty, being the growth, produce, or manufacture of the U. K., or of any B. possession abroad, for every 100 lb. of the value		3 0 0
Goods, wares, merchandise, not otherwise charged with duty, and not herein declared to be free of duty, being the growth, produce, or manufacture of any foreign state, for every 100 lb. of the value		12 0 0
Bottles of common glass, imported full		
Bullion		
Casks, staves, hoops, and cooper's rivets		
Gain		
Diamonds		
Horses, mules, asses, sheep, cattle, and all other live stock and live animals		Free.
Seeds, bulbs, and plants		
Specimens, illustrative of natural history		
Provisions or stores of every description, imported or supplied for the use of Her Majesty's land or sea forces		

Provided, that whenever any article, being the growth, production, or manufacture of any foreign country, herein-before charged with any duty, is imported into the said colony from the U. K., having been there entered for consumption and re-exported without any drawback of duty having been first paid thereon, such articles shall be liable only to such duty as is herein-before charged upon similar articles, being the growth, production or manufacture of the U. K., or of any of the B. possessions abroad.

Provided also, that if any goods, being the growth, produce, or manufacture of any foreign country, be imported into the said colony through the U. K., having been there warehoused therein and being exported from the warehouse, or the duties thereon (if there paid having been drawn back), there shall be charged on such goods, over and above the duties herein-before imposed on similar goods, being the growth, produce, or manufacture of the U. K., or of any of the B. possessions abroad, 2 1/2% of the difference (if any) between such duties and the duties herein-before charged on goods not being the growth, produce, or manufacture of the U. K., or of any of the B. possessions abroad.

**A Table of Prohibitions and Restrictions.**

**Gunpowder, Arms, Ammunition or articles of war.**  
 Prohibited to be imported, except from the U. K., or from some other B. possession.  
**Articles of foreign manufacture, and any packages of such articles, bearing any names, brands, or marks, purporting to be the names, brands, or marks of manufacturers resident in the U. K.**  
 False or counterfeit coin.  
 Books, wherein the copyright shall be subsisting, first composed, or written, or printed in the U. K., and printed or reprinted in any other country, as to which the proprietor of such copyright, or his agent, shall have given to the Commissioners of Customs a notice in writing, that such copyright subsists; such notice also stating when such copyright will expire.

**Table of Duties, Fees, &c.**

**Queen's Warehouse Rent.**—A certain sum per week is charged upon goods in proportion to their bulk and value.  
**Warehousing and Storage.**—The wharf department is under the immediate control of the customs. The following tariff of dues is levied under authority of Ordinance No. 31, dated 14th Dec. 1856.  
**On Goods landed.**—On every plyw, punchbom, butt, or other cask of the capacity of 50 imp. gall, or upwards, and containing wine, spirits, or other liquids - - - - - cask 0 2 0  
 On every hogshead, half punchbom, tierce, or other cask of the capacity of 40 imp. gall, and under 50 gall, containing wine, spirits, or other liquids - - - - - cask 0 1 6  
 On every quarter or other such cask of the capacity of 30 imp. gall, and under 40 gall, containing wine, spirits, or other liquids - - - - - cask 0 1 0  
 On every barrel, cask, keg, or other cask of less capacity than 30 imp. gall, containing wine, spirits, or other liquids - - - - - cask 0 0 8  
 Liquids in jars, bottles, and other packages (not bulk) each of the content of one imp. gall, or upwards - - - - - imp. gall. 0 0 1  
 Liquids in jars, bottles, and other packages (not in bulk) each of less content than one imp. gall. - - - - - 0 1 3  
**Tax in all packages.**  
 Coffee, sugar, pepper, sago, saltpeetre, tinic, tannin, rinds, spices, dates, and drugs in bags - - - - - bag 0 0 3  
 Rice in bags - - - - - bag 0 0 2  
 Wheat, barley, oats, rye, and other grain, in bags or bulk - - - - - imp. quarter 0 0 6  
 Flour - - - - - 116 0 6  
 Tobacco, manufactured (except cigars) - - - - - cwt. 0 0 6  
 Tobacco leaf - - - - - cwt. 0 0 4

Every caravan is under the command of a chief or aga (*caravan-bachi*), who has frequently under him such a number of troops or forces as is deemed sufficient for its defence. When it is practicable, they encamp near wells or rivulets; and observe a regular discipline. Camels are used as a means of conveyance, almost uniformly, in preference to the horse or any other animal, on account of their wonderful patience of fatigue, eating little, and subsisting three or four days or more without water. There are generally more camels in a caravan than men. — (See CAMEL.)

The commercial intercourse of Eastern and African nations has been principally carried on, from the remotest period, by means of caravans. During antiquity, the products of India and China were conveyed either from Sues to Rhinoculura, or from Busorah, near the head of the Persian Gulf, by the Euphrates, to Babylon, and thence by Palmyra, in the Syrian desert, to the ports of Phœnicia on the Mediterranean, where they were exchanged for the European productions in demand in the East. Sometimes, however, caravans set out directly from China, and, occupying about 250 days in the journey, arrived on the shores of the Levant, after traversing the whole extent of Asia. — (*Gibbon*, vol. vii. p. 93.) The formation of caravans is, in fact, the only way in which it has ever been possible to carry on any considerable internal commerce in Asia or Africa. The governments that have grown up in those continents have seldom been able, and seldom indeed have they attempted, to render travelling practicable or safe for individuals. The wandering tribes of Arabs have always infested the immense deserts by which they are intersected; and those only who are sufficiently powerful to protect themselves, or sufficiently rich to purchase an exemption from the predatory attacks of these freebooters, can expect to pass through territories subject to their incursions, without being exposed to the risk of robbery and murder.

Since the establishment of the Mohammedan faith, religious motives, conspiring with those of a less exalted character, have tended to augment the intercourse between different parts of the Eastern world, and to increase the number and magnitude of the caravans. Mohammed enjoined all his followers to visit, once in their lifetime, the Caaba, or square building in the temple of Mecca, the immemorial object of veneration amongst his countrymen; and in order to preserve continually upon their minds a sense of obligation to perform this duty, he directed that, in all the multiplied acts of devotion which his religion prescribes, true believers should always turn their faces towards that holy place. In obedience to a precept so solemnly enjoined and sedulously inculcated, large caravans of pilgrims used to assemble annually in every country where the Mohammedan faith is established; and though, owing either to a diminution of religious zeal, or the increasing difficulties to be encountered in the journey, the number of pilgrims has of late years declined greatly, it is still very considerable. Few, however, of the pilgrims are actuated only by devotional feelings. Commercial ideas and objects mingle with those of religion; and it redounds to the credit of Mohammed, that he granted permission to trade during the pilgrimage to Mecca; providing at the same time for the temporal as well as the lasting interests of his votaries. "It shall be no crime in you, if ye seek an increase from your Lord by trading during the pilgrimage." — (*Sale's Koran*, c. 2. p. 36. ed. 1764.)

The numerous camels of each caravan are loaded with those commodities of every country which are of easiest carriage and readiest sale. The holy city is crowded during the month of Dhalbaja, corresponding to the latter part of June and the beginning of July, not only with zealous devotees, but with opulent merchants. A fair or market is held in Mecca and its vicinity, on the twelve days that the pilgrims are allowed to remain in that city, which used to be one of the best frequented in the world, and continues to be well attended.

"Few pilgrims," says Burckhardt, "except the mendicants, arrive without bringing some productions of their respective countries for sale: and this remark is applicable as well to the merchants, with whom commercial pursuits are the main object, as to those who are actuated by religious zeal; for, to the latter, the profits derived from selling a few articles at Mecca diminish, in some degree, the heavy expenses of the journey. The Moggrebyns (pilgrims from Morocco and the north coast of Africa) bring their red bonnets and wollen cloaks; the European Turks, shoes and slippers, hardware, embroidered stuffs, sweetmeats, amber, trinkets of European manufacture, knit silk purses, &c.; the Turks of Anatolia bring carpets, silks, and Angora shawls; the Persians, Cashmere shawls and large silk handkerchiefs; the Afghans, tooth-brushes, called Mesouak Kattary, made of the spongy boughs of a tree growing in Bokhara, beads of a yellow soapstone, and plain coarse shawls manufactured in their own country; the Indians, the numerous productions of their rich and extensive region; the people of Yemen, snakes for the Persian pipes, sandals and various other works in leather; and the Africans bring various articles adapted to the slave trade. The pilgrims are, however, often disappointed in their expectations of gain; want of money makes them hastily sell their little adventures at the public auctions, and often obliges them to accept very low prices." — (*Travels in Arabia*, vol. ii. p. 21.)

The two principal caravans which yearly rendezvous at Mecca are those of Damascus and Cairo. The first is composed of pilgrims from Europe and Western Asia; the second of Mohammedans from all parts of Africa.

The Syrian caravan is said by Burckhardt to be very well regulated. It is always accompanied by the pacha of Damascus, or one of his principal officers, who gives the signal for encamping and starting by firing a musket. On the route, a troop of horsemen ride in the front, and another in the rear to bring up the stragglers. The different parties of pilgrims, distinguished by their provinces or towns, keep close together. At night torches are lighted, and the daily distance is usually performed between 9 o'clock in the afternoon and an hour or two after sunrise on the following day. The Bedouins or Arabs, who carry provisions for the troops, travel by day only, and in advance of the caravans; the encampment of which they pass in the morning, and are overtaken in turn and passed by the caravan on the following night, at their own resting place. The journey with these Bedouins is less fatiguing than with the great body of the caravan, as a regular night's rest is obtained; but their bad character deters most pilgrims from joining them.

At every watering place on the route is a small castle and a large tank, at which the camels water. The castles are garrisoned by a few persons, who remain the whole year to guard the provisions deposited there. It is at these watering-places, which belong to the Bedouins, that the sheikhs of the tribe meet the caravan, and receive the accustomed tribute for allowing it to pass. Water is plentiful on the route; the stations are nowhere more distant than 11 or 12 hours' march; and in winter, pools of rain-water are frequently found. Those pilgrims who can travel with a litter, or on commodious camel-saddles, may sleep at night, and perform the journey with little inconvenience: but of those whom poverty, or the desire of speedily acquiring a large sum of money, induces to follow the caravan on foot, or to hire themselves as servants, many die on the road from fatigue. — (*Travels in Arabia*, vol. ii. p. 3—9.)

The caravan which sets out from Cairo for Mecca is not generally so large as that of Damascus; and its route along the shores of the Red Sea is more dangerous and fatiguing. But many of the African and Egyptian merchants and pilgrims sail from Sues, Cosseir, and other ports on the western shore of the Red Sea, for Djidda, whence the journey to Mecca is short and easy.

The Persian caravan for Mecca sets out from Bagdad; but many of the Persian pilgrims are now in the habit of embarking at Bussorah, and coming to Djidda by sea.

Caravans from Bagdad and Bussorah proceed to Aleppo, Damascus, and Diarbeker, laden with all sorts of Indian, Arabian, and Persian commodities; and large quantities of European goods, principally of English cottons, imported at Bussorah, are now distributed throughout all the eastern parts of the Turkish empire by the same means. The intercourse carried on in this way is, indeed, every day becoming of more importance.

The commerce carried on by caravans, in the interior of Africa, is widely extended and of considerable value. Besides the great caravan which proceeds from Nubia to Cairo, and is joined by Mohammedan pilgrims from every part of Africa, there are caravans which have no object but commerce, which set out from Fez, Algiers, Tunis, Tripoli, and other states on the sea-coast, and penetrate far into the interior. Some of them take as many as 50 days to reach the place of their destination; and as their rate of travelling may be estimated at about 18 miles a day at an average, the extent of their journeys may easily be computed. As both the time of their outset and their route is known, they are met by the people of the countries through which they travel, who trade with them. Indian goods of every kind form a considerable article in this traffic; in exchange for which, the chief commodity the inhabitants have to give is slaves.

Three distinct caravans are employed in bringing slaves and other commodities from Central Africa to Cairo. One of them comes direct from Mourzouk, the capital of Fezzan, across the Libyan desert; another from Senaar; and the third from Darfur. They do not arrive at stated periods, but after a greater or less interval, according to the success they have had in procuring slaves, ivory, gold dust, drugs, and such other articles as are fitted for the Egyptian markets. The Mourzouk caravan is said to be under the best regulations. It is generally about 50 days on its passage; and seldom consists of less than 100, or of more than 300, travellers. The caravans from Senaar and Darfur used formerly to be very irregular, and were sometimes not seen in Egypt for 2 or 3 years together; but since the occupation of the former by the troops of Mohammed Ali, the intercourse between it and Egypt has become comparatively frequent and regular. The number of slaves imported into Egypt by these caravans is said to amount, at present, to about 10,000 a year. The departure of a caravan from Darfur is looked upon as a most important event; it engages for a while the attention of the whole country, and even forms a kind of era. — (*Brown's Travels in Africa*, 2d ed. p. 78.) A caravan from Darfur is considered large if it has 2,000 camels and 1,000

slaves. Many of the Moorish pilgrims to Mecca cross the sea from Souakin and Massouah to the opposite coast of Arabia, and then travel by land to Mecca; and Burekhardt states, that of all the poor pilgrims who arrive in the Hedjaz, none bear a more respectable character for industry than those from Central Africa.

Caravans are distinguished into *heavy* and *light*. Camels loaded with from 500 to 600 lbs.\* form a heavy caravan; light caravans being the term applied to designate those formed of camels under a moderate load, or perhaps only half loaded. The mean daily rate at which heavy caravans travel is about 18½ miles, and that of light caravans 22 miles.

The safety of a caravan depends materially on the conduct of the *caravan-bachi*, or leader. Niebuhr says, that when the latter is intelligent and honest, and the traveller understands the language, and is accustomed to the Oriental method of travelling, an excursion through the desert is rarely either disagreeable or dangerous. But it is not unusual for the Turkish pachas to realise considerable sums by selling the privilege of conducting caravans; and it is generally believed in the East, that leaders so appointed, in order to indemnify themselves, not unfrequently arrange with the Arabian sheikhs as to the attack of the caravans, and share with them in the booty! At all events, a leader who has paid a large sum for the situation, even if he should be honest, must impose proportionally heavy charges on the association. Hence the best way in travelling with caravans is, to attach oneself to one conducted by an active and experienced merchant, who has a considerable property embarked in the expedition. With ordinary precaution, the danger is then very trifling. It would be easy, indeed, were there any thing like proper arrangements made by government, to render travelling by caravans, at least on all the great routes, abundantly secure.—(Niebuhr, *Voyage en Arabie*, tome ii. p. 194. ed. Amst. 1780.)

No particular formalities are required in the formation of a caravan. Those that start at fixed periods are mostly under the control of government, by whom the leaders are appointed. But, generally speaking, any dealer is at liberty to form a company and make one. The individual in whose name it is raised is considered as the leader, or *caravan-bachi*, unless he appoint some one else in his place. When a number of merchants associate together in the design, they elect a chief, and appoint officers to decide whatever controversies may arise during the journey.—(For further details with respect to caravans, see the *Modern Part of the Universal History*, vol. xiv. pp. 214—243.; *Robertson's Disquisition on Ancient India*, Note 54.; *Rees's Cyclopaedia*, art. *Caravan*, most of which is copied from Robertson, though without a single word of acknowledgment; *Burekhardt's Travels in Arabia*, vol. ii. *passim*; *Urquhart on Turkey and its Resources*, p. 137, 151, &c.)

CARAVANSERA, a large public building or inn appropriated for the reception and lodgment of the caravans. Though serving in lieu of inns, there is this radical difference between them,—that, generally speaking, the traveller finds nothing in a caravansera for the use either of himself or his cattle. He must carry all his provisions and necessaries with him. They are chiefly built in dry, barren, desert places; and are mostly furnished with water brought from a great distance and at a vast expense. A well of water is, indeed, indispensable to a caravansera. Caravanseras are also numerous in cities; where they serve not only as inns, but as shops, warehouses, and even exchanges.

CARAWAY-SEED (Fr. *Carvi*, *Cumin des prés*; Ger. *Kewmmel*, *Brodtkümmel*; It. *Carvi*), a small seed, of an oblong and slender figure, pointed at both ends, and thickest in the middle. It is the produce of a biennial plant (*Carum carui*), with a taper root like a parsnip, but much smaller. It should be chosen large, new, of a good colour, not dusty, and of a strong agreeable smell. It is principally used by confectioners; and is extensively cultivated in several parts of Essex.

CARBUNCLE (Ger. *Korfunkei*; Fr. *Escarboucle*; It. *Carboneio*; Sp. *Carbunculo*; Lat. *Carbunculus*), a precious stone of the ruby kind, of a very rich glowing blood-red colour, highly esteemed by the ancients.—(See *Ruav.*)

CARD (Fr. *Cartes*; Ger. *Kardtischen*, *Karten*, *Wollkrazen*; It. *Cardi*; Rus. *Bardü*; Sp. *Cardas*), an instrument, or comb, for arranging or sorting the hairs of wool, cotton, &c. Cards are either fastened to a flat piece of wood, and wrought by the hand; or to a cylinder, and wrought by machinery.

CARDAMOMS (Fr. *Cardamomes*; Ger. *Kardamon*; It. *Cardamomi*; Sp. *Cardamomos*; Hind. *Gujarati clacki*), seed capsules produced by a plant, of which there are different species growing in India, Cochin China, Siam, and Ceylon. The capsules are gathered as they ripen; and when dried in the sun, are fit for sale. The small capsules, or lesser cardamoms, are produced by a particular species of the plant, and are the most valuable. They should be chosen full, plump, and difficult to be broken; of a bright yellow colour; a piercing smell; with an acrid, bitterish, though not very

\* This is the burden of the small camel only. The large ones usually carry from 750 to 1,000 lbs.

unpleasant taste; and particular care should be taken that they are properly dried. They are reckoned to keep best in a body, and are therefore packed in large chests, well jointed, pitched at the seams, and otherwise properly secured; as the least damp greatly reduces their value. The best cardamoms are brought from the Malabar coast. They are produced in the recesses of the mountains, by felling trees, and afterwards burning them; for wherever the ashes fall in the openings or fissures of the rocks, the cardamom plant naturally springs up. In Soonda Balagat, and other places where cardamoms are planted, the fruit or berry is very inferior to that produced in the way now mentioned. The Malabar cardamom is described as a species of bulbous plant, growing 3 or 4 feet high. The growers are obliged to sell all their produce to the agents of government, at prices fixed by the latter, varying from 550 to 700 rupees the candy of 600 lbs. avoirdupois: and it is stated that the contractor often puts an *enhanced value on the coins* with which he pays the mountaineers; or makes them take in exchange tobacco, cloths, salt, oil, betel nut, and such necessary articles, at prices which are frequently, no doubt, estimated above their proper level. Such a system ought assuredly to be put an immediate end to. Not more than *one hundredth* part of the cardamoms raised in Malabar are used in the country. They are sent in large quantities to the ports on the Red Sea and the Persian Gulph, to Sind, up the Indus, to Bengal, Bombay, &c. They form a universal ingredient in curries, pillaus, &c. The market price, at the places of exportation on the Malabar coast, varies from 800 to 1,200 rupees the candy.—(*Milburn's Orient. Commerce*, and the valuable evidence of T. H. Baber, Esq. before the Lords' Committee of 1830, p. 216.)

Malabar cardamoms were worth, in January 1843, from 2s. 3d. to 5s. a pound in the London market, duty (2d.) excluded; Ceylon cardamoms were, at the same time, worth from 1s. 2d. to 1s. 4d.

**CARDS, or PLAYING CARDS** (Du. *Kaarten, Speelkarden*; Fr. *Cartes à jouer*; Ger. *Karten, Spiel Karten*; It. *Carte da giuoco*; Rus. *Kartu*; Sp. *Carras, Naipes*; Sw. *Kort*). The only thing necessary to be noticed in this place with respect to cards, is the regulations as to their manufacture, sale, and the payment of the duty.

It is regulated by the 6 Geo. 4. c. 18., that an annual licence duty of 5s. shall be paid by every maker of playing cards and dice. The duty on every pack of cards is 1s., and is to be specified on the ace of spades. Cards are not to be made in any part of Great Britain, except the metropolis; nor in Ireland, except in Dublin and Cork; under a penalty of 100l. Cards are to be enclosed in wrappers, with such marks as the commissioners of stamps may appoint. Before licence can be had, bond must be given to the amount of 500l. for the payment of the duties, &c. Selling or exposing to sale any pack of cards not duly stamped, subjects a licensed maker to a penalty of 50l.; and any one else to a penalty of 10l. Any person having in his possession, or using, or permitting to be used, any pack of cards not duly stamped, to forfeit 5l. Second-hand cards may be sold by any person, if sold without the wrapper of a licensed maker; and in packs containing not more than 52 cards, including an ace of spades duly stamped, and enclosed in a wrapper with the words "Second-hand Cards" printed or written in distinct characters on the outside; penalty for selling second-hand cards in any other manner, 20l.

The duty of 1s. per pack on cards produced, in 1841, the sum of 9,222l. 18s.; showing that 184,478 packs had been disposed of.

**CARMEN**, of the city of London, are constituted a fellowship by act of common council. The rates which they are allowed to charge, and the regulations by which they are to be guided, are settled at the quarter sessions. In other respects they are subjected to the rule of the president and governors of Christ's Hospital, to whom the owner of every cart pays an annual licence duty of 17s. 4d.

Carman are to help to load and unload their carts; and if any carman exacts more than the regular rates, upon due proof, before the Lord Mayor, or any two magistrates, he shall suffer imprisonment for the space of 31 days.

If any person shall refuse to pay any carman his hire, according to the regular rates, upon complaint made, the president of Christ's Hospital, or a justice of the peace, may compel payment.

Merchants or other persons may choose what cart they please, except such as stand for wheat-work, tuckie-work, crane-work, at shops and merchants' houses, which are to be taken in turn; and every carman standing with his empty cart next to any goods to be loaded, shall, upon the first demand, load the same for the accustomed rates; and if any person shall cause a carman to stand at his house, shop, warehouse, or cellar, with his loaded cart, the carman being

willing to help to unload the same, he shall pay the carman after the rate of 12d. for every hour after the first half hour for his attendance.

Every licensed carman is to have a piece of brass fixed upon his cart, upon which is to be engraven a certain number; which number, together with the carman's name, is registered in a register kept at Christ's Hospital; so that, in case of any misbehaviour, the party offended, by taking notice of the number of the cart, may search for it in the register, and the name will be found.

Carman not conforming to these rules, or working without a numbered piece of brass fixed on the cart, may be suspended from their employment.

Carman riding upon the shafts of their carts, or sitting within them, not having some person on foot to guide the horses, shall forfeit 10s.

**CARMINE** (Ger. *Karmin*; Du. *Karmyn*; Fr. *Carmine*; It. *Carminio*; Lat. *Carminum*), a powder of a very beautiful red colour, bordering upon purple, and used by painters in miniature. It is a species of *lake*, and is formed of finely pulverised cochineal. It is very high priced.

**CARNELIAN**. See AGATE.

**CARPET, CARPETS** (Ger. *Tappiche*; Du. *Tapyten, Vloer-tapyten*; Fr. *Tapis*; It. *Tappeti*; Sp. *Alfonbras, Alcatifas, Tapetes*; Rus. *Kowrii, Kilimi*.) Persian and Turkish carpets are the most esteemed. In England, carpets are principally manufactured at Kidderminster, Wilton, Cirencester, Worcester, Axminster, &c.; and in Scotland, at Kilmarnock. Those made at Axminster are believed to be very little, if any thing, inferior to those of Persia and Turkey.

**CARRIAGES**. See COACHES.

**CARROT** (*Daucus carota* Lin.), a biennial plant, a native of Britain. Though long known as a garden plant, its introduction into agriculture has been comparatively recent. The uses of the carrot in domestic economy are well known. It is extensively cultivated in Suffolk, whence large quantities are sent to the London market. Horses are said to be remarkably fond of carrots.

**CARRIERS** are persons undertaking for hire to carry goods from one place to another.

Proprietors of carts and wagons, masters and owners of ships, hoymen, lightermen, bargemen, ferrymen, &c. are denominated common carriers. The master of a stage coach who only carries passengers for hire, is not liable for goods; but if he undertake to carry goods and passengers, then he is liable for both as a common carrier. The post-master general is not a carrier in the common acceptance of the term, nor is he subjected to his liabilities.

1. *Duties and Liabilities of Carriers.*—Carriers are bound to receive and carry the goods of all persons, for a reasonable hire or reward; to take proper care of them in their passage; to deliver them safely, and in the same condition as when they were received (excepting only such losses as may arise from the act of God or the king's enemies); or, in default thereof, to make compensation to the owner for whatever loss or damage the goods may have received while in their custody, that might have been prevented.

Hence a carrier is liable, though he be robbed of the goods, or they be taken from him by irresistible force; and though this may seem a hard rule, yet it is the only one that could be safely adopted; for if a carrier were not liable for losses unless it could be shown that he had conducted himself dishonestly or negligently, a door would be opened for every species of fraud and collusion, inasmuch as it would be impossible, in most cases, to ascertain whether the facts were such as the carrier represented. On the same principle a carrier has been held accountable for goods accidentally consumed by fire while in his warehouse. In delivering the opinion of the Court of King's Bench on a case of this sort, Lord Mansfield said—“A carrier, by the nature of his contract, obliges himself to use all due care and diligence, and is answerable for any neglect. But there is something more imposed upon him by custom, that is, by the common law. A common carrier is in the nature of an insurer. All the cases show him to be so. This makes him liable for every thing except the act of God and the king's enemies; that is, even for inevitable accidents, with those exceptions. The question then is, *What is the act of God?* I consider it to be laid down in opposition to the act of man; such as lightning, storms, tempests, and the like, which could not happen by any human intervention. To prevent litigation and collusion, the law presumes negligence except in those circumstances. An armed force, though ever so great and irresistible, does not excuse; the reason is, for fear it may give room for collusion, which can never happen with respect to the act of God. We all, therefore, are of opinion that there should be judgment for the plaintiff.”—(*Forward v. Pittard*, 1 T. R. 27.)

A carrier is not obliged to have a new carriage for every journey; it is sufficient if he provide one that, without any extraordinary accident, may be fairly presumed capable of performing the journey.

A carrier may be discharged from his liability by any fraud or concealment on the part of the individual employing him, or of the bailor; as if the latter represent a parcel as containing things of little or no value, when, in fact, it contains things of great value. But when the carrier has not given a notice limiting his responsibility, and when he puts no questions with respect to the parcel to the bailor, the latter need not say any thing with respect to it; and though the bailor should represent the thing delivered to the carrier as of no value, yet if the latter knows it to be otherwise, he will be responsible in the event of its being lost or damaged. If the bailor deliver goods imperfectly packed, and the carrier does not perceive it, he is not liable in the event of a loss occurring; but if the defect in the package were such that the carrier could not but perceive it, he would be liable. On this principle a carrier was made to answer for the loss of a greyhound that had been improperly secured when given to him.

A carrier may refuse to admit goods into his warehouse at an unreasonable time, or before he is ready to take his journey; but he cannot refuse to do the ordinary duties incumbent on a person in his situation.

It is felony, if a carrier open a parcel and take goods out of it with intent to steal them; and it has been decided, that if goods be delivered to a carrier to be carried to a specified place, and he carry them to a different place, and dispose of them for his own profit, he is guilty of felony; but the embezzlement of goods by a carrier, without a felonious taking, merely exposes to a civil action.

No carrier, wagonman, carman, or wainman, with their respective carriages, shall travel on Sundays, under a penalty of 20*s.*—(3 *Chan. l. c. 1.*)

A carrier is always, unless there be an express agreement to the contrary, entitled to a reward for his care and trouble. In some cases his reward is regulated by the legislature, and in others by a special stipulation between the parties; but though there be no legislative provision or express agreement, he cannot claim more than a reasonable compensation.

2. *Limitation of Responsibility.*—Until the act of 1830, a carrier might, by express stipulation, giving public notice to that effect, discharge his liability from all losses by robbery, accident, or otherwise, except those which arose from *misfeasance and gross negligence*, from which no stipulation or notice could exempt him, and provided the notice did not contravene the express conditions of an act of parliament.

Notices generally bore, that the carrier would not be responsible for more than a certain sum (usually 5*s.*) on any one parcel, the value of which had not been declared and paid for accordingly; so that a person aware of this notice, entering a box worth 100*l.* without declaring its value, or entering it as being worth 200*l.* would, should it be lost, have got in the first case only 5*l.*, and in the latter only 200*l.*, unless he could have shown that the carrier had acted fraudulently or with gross negligence. But, to avail himself of this defence, the carrier was bound to show that the bailor or his servant was acquainted with the notice at the time of delivering the goods. No particular manner of giving notice was required.

It might be done by express communication, by fixing it up in a conspicuous place in the carrier's office, by insertion in the public papers or Gazette, by the circulation of handbills, &c.; it being in all cases a question for the jury to decide whether the bailor was really acquainted with the notice of the limitation; since, if he were not, he was entitled to recover, whatever efforts the carrier may have made to publish it. Thus, a notice stuck up in a carrier's warehouse, where goods were delivered, was of no avail against parties who could not read; neither was it of any avail against those who could read, and who had seen it, unless they had actually read it. On this principle it was held, that a notice in a newspaper is not sufficient, even when it was proved that the bailor read the newspaper, unless it could also be proved that he had read the notice itself.

These attempts to limit responsibility gave rise to a great deal of litigation and uncertainty; and to obviate the inconveniences thence arising, the important statute 1 Will. 4. c. 68, was passed. This act declares, that carriers be liable for the loss of certain articles specified in the act, when their value exceeds 10*l.*, unless the nature and value of such articles be stated at the time of their delivery to the carrier, and an increased charge paid or agreed to be paid upon the same. It is further

declared, that no publication of any notices by carriers shall have power to limit their responsibility at common law for all other articles except those specified in the act. But as the act is of great importance, we subjoin it.

From and after the passing of this act, no mail contractor, stage coach proprietor, or other common carrier by land for hire, shall be liable for the loss of or injury to any article or articles or property of the description following, viz. gold or silver coin of this realm or of any foreign state, or any gold or silver in a manufactured or unmanufactured state, or any precious stones, jewellery, watches, clocks, or time-pieces of any description, trinkets, bills, notes of the Governor and Company of the Banks of England, Scotland, and Ireland respectively, or of any other bank in Great Britain or Ireland, orders, notes, or securities for payment of money, English or foreign stamps, maps, writings, title-deeds, paintings, engravings, pictures, gold or silver plate or plated articles, glass, china, silks in a manufactured or unmanufactured state, and whether wrought up or not wrought up with other materials, furs, or lace, or any of them, contained in any parcel or package which shall have been delivered, either to be carried for hire or to accompany the person of any passenger in any mail or stage coach or other public conveyance, when the value of such article or articles or property aforesaid contained in such parcel or package shall exceed the sum of 10*l.*, unless at the time of the delivery thereof at the office, warehouse, or receiving house of such mail contractor, &c. the value and nature of such article or articles or property shall have been declared by the person or persons sending or delivering the same, and such increased charge as hereinafter mentioned, or an engagement to pay the same, be accepted by the person receiving such parcel or package. — § 1.

When any parcel or package containing any of the articles above specified shall be so delivered, and its value and contents declared as aforesaid, and such value shall exceed the sum of 10*l.*, it shall be lawful for such mail contractors, stage coach proprietors, and other common carriers, to demand and receive an increased rate of charge, to be notified by some notice, affixed in legible characters in some public and conspicuous part of the office, warehouse, or other receiving house, where such parcels or packages are received by them for the purpose of conveyance, stating the increased rate of charge required to be paid over and above the ordinary rate, as a compensation for the greater risk and care to be taken for the safe conveyance of such valuable articles; and all persons sending or delivering parcels or packages containing such valuable articles as aforesaid at such office shall be bound by such notice, without further proof of the same having come to their knowledge. — § 2.

Provided always, that when the value shall have been so declared, and the increased rate of charge paid, or an engagement to pay the same shall have been accepted as herein-before mentioned, the person receiving such increased rate of charge or accepting such agreement shall, if required, sign a receipt for the package or parcel, acknowledging the same to have been insured, which receipt shall not be liable to any stamp duty; and if such receipt shall not be given when required, or such notice as aforesaid shall not have been affixed, the mail contractor, stage coach proprietor, or other common carrier as aforesaid, shall not have or be entitled to any benefit or advantage under this act, but shall be liable and responsible as at the common law, and be liable to refund the increased rate of charge. — § 3.

And be it enacted, that from and after the 1st day of September 1830, no public notice or declaration heretofore made or hereafter to be made shall be deemed or construed to limit or in any wise affect the liability at common law of any such mail contractors, stage coach proprietors, or other public common carriers as aforesaid, for or in respect of any articles or goods to be carried and conveyed by them; but that all and every such mail contractors, stage coach proprietors, and other common carriers as aforesaid shall, from and after the said 1st day of September, be liable, as at the common law, to answer for the loss of any injury [so *in the act*] to any articles and goods in respect whereof they may not be entitled to the benefit of this act, any public notice or declaration by them made and given contrary thereto, or in anywise limiting such liability, notwithstanding. — § 4.

And be it further enacted, that for the purposes of this act, every office, warehouse, or receiving house, which shall be used or appointed by any mail contractor, or stage coach proprietor, or other such common carrier, for the receiving of parcels to be conveyed as aforesaid, shall be deemed and taken to be the receiving house, warehouse, or office of such mail contractor, stage coach proprietor, or other common carrier; and that any one or more of such mail contractors, stage coach proprietors, or common carriers, shall be liable to be sued by his, her, or their name or names only; and that no action or suit commenced to recover damages for loss or injury to any parcel, package, or person, shall abate for the want of joining any co-proprietor or co-partner in such mail, stage coach, or other public conveyance by land for hire as aforesaid. — § 5.

Provided always, and be it further enacted, that nothing in this act contained shall extend or be construed to annul or in any wise affect any special contract between such mail contractor, stage coach proprietor, or common carrier, and any other parties, for the conveyance of goods and merchandises. — § 6.

Provided also, and be it further enacted, that where any parcel or package shall have been delivered at any such office, and the value and contents declared as aforesaid, and the increased rate of charge been paid, and such parcels or packages shall have been lost or damaged, the party entitled to recover damages in respect of such loss or damage shall also be entitled to recover back such increased charges so paid as aforesaid, in addition to the value of such parcel or package. — § 7.

Provided also, and be it further enacted, that nothing in this act shall be deemed to protect any mail contractor, stage coach proprietor, or other common carrier for hire, from liability to answer for loss or injury to any goods or articles whatsoever, arising from the felonious acts of any coachman, guard, book-keeper, porter, or other servant in his or their employ, nor to protect any such coachman, guard, book-keeper, or other servant, from liability for any loss or injury occasioned by his or their own personal neglect or misconduct. — § 8.

Provided also, and be it further enacted, that such mail contractors, stage coach proprietors, or other common carriers for hire, shall not be concluded as to the value of any such parcel or package by the value as declared as aforesaid, but that he or they shall in all cases be entitled to require, from the party suing in respect of any loss or injury, proof of the actual value of the contents by the ordinary legal evidence; and that the mail contractors, stage coach proprietors, or other common carriers, as aforesaid, shall be liable to such damages only as shall be so proved as aforesaid, not exceeding the declared value, together with the increased charges as before mentioned. — § 9.

And be it further enacted, that in all actions to be brought against any such mail contractors, &c., the defendant or defendants may pay the money into court. — § 10.

It will be observed, that carriers continue, notwithstanding this act, liable, as before, for the felonious acts of their servants, and their own misfeasance or gross negligence. It is not possible, however, to lay down any general rule as to the circumstances which constitute this offence. Differing as they do in almost every case, the question, when raised, must be left to a jury. But it has been decided, that the *misdelivery* of a parcel, or its *non-delivery within a reasonable time*, is a misfeasance that cannot be defeated by any notice on the part of the carrier limiting his responsibility. In like manner, the sending of a parcel by a different coach from that directed by the bailor, the removing it from one carriage to another, are misfeasances. Where a parcel is directed to a person at a particular place, and the carrier, knowing such person, delivers the parcel to another

who represents himself as the consignee, such delivery is gross negligence. Leaving parcels in a coach or cart unprotected in the street is also gross negligence.

At common law, there is no distinction between carriage performed by sea or land; but by the 7 Geo. 2. c. 15. and 26 Geo. 3. c. 86., corrected and amended by the 53 Geo. 3. c. 159., it is enacted that ship owners are not to be liable for any loss or damage happening to goods on board through the fraud or neglect of the master, without their knowledge or privity, further than the value of the vessel and the freight accruing during the voyage. — (See OWNERS.)

3. *Commencement and Termination of Liability.* — A carrier's liability commences from the time the goods are actually delivered to him in the character of carrier. A delivery to a carrier's servant is a delivery to himself, and he will be responsible. The delivery of goods in an inn-yard or warehouse, at which other carriers put up, is not a delivery so as to charge a carrier, unless a special notice be given him of their having been so delivered, or some previous intimation to that effect.

A carrier's liability ceases, when he vests the property committed to his charge in the hands of the consignee or his agents, by actual delivery; or when the property is resumed by the consignor, in pursuance of his right of stopping it *in transitu*. It is in all cases the duty of the carrier to deliver the goods. The leaving goods at an inn is not a sufficient delivery. The rule in such cases, in deciding upon the carrier's liability, is to consider whether any thing remains to be done by the carrier, as such; and if nothing remains to be done, his liability ceases, and conversely.

A carrier has a lien upon goods for his hire. Even if the goods be stolen, the rightful owner is not to have them without paying the carriage.

For further details as to this subject see *Jeremy on the Law of Carriers*, passim; *Chitty's Commercial Law*, vol. iii. pp. 369—386.; and *Burn's Justice of the Peace*, tit. *Carriers*. There are some excellent observations with respect to it in *Sir William Jones's Essay on the Law of Bailments*. — (For an account of the regulations as to the conveyance of passengers in stage coaches, see COACHES, STAGE.)

**CARTS.** Every cart, &c. for the carriage of any thing to and from any place, where the streets are paved, within the bills of mortality, shall contain 6 inches in the felly. No person shall drive any cart, waggon, &c. within 5 miles of the General Post Office, unless the name, surname, and place of abode of the owner, be painted in conspicuous letters, at least 1 inch in height, on the right or off side thereof, under a penalty of 5*l.* Any person may seize and detain any cart, waggon, &c. without such mark. — (1 & 2 Will. 4. c. 22.)

**CASH**, in commerce, means the ready money, bills, drafts, bonds, and all immediately negotiable paper in an individual's possession.

**CASH ACCOUNT**, in book-keeping, an account to which nothing but cash is carried on the one hand, and from which all the disbursements of the concern are drawn on the other. The balance is *the cash in hand*. When the credit side more than balances the debit, or disbursement side, the account is said to be *in cash*; when the contrary, to be *out of cash*.

**CASH ACCOUNT**, in banking, is the name given to the account of the advances made by a banker in Scotland, to an individual who has given security for their repayment. — (See BANKS (SCOTCH).)

**CASHEW NUTS** (Ger. *Akajunüsse*, *Westindische Anaharden*; Du. *Catsjoenooten*; Fr. *Noix d'acajou*; It. *Acaju*; Sp. *Nueces d'acaju*; Port. *Nozes d'acaju*), the produce of the *Anacardium occidentale*. They are externally of a greyish or brownish colour, of the shape of a kidney, somewhat convex on the one side, and depressed on the other. The shell is very hard; and the kernel, which is sweet and of a very fine flavour, is covered with a thin film. Between this and the shell is lodged a thick, blackish, inflammable oil, of such a caustic nature in the fresh nuts, that if the lips chance to touch it, blisters immediately follow. The kernels are used in cooking, and in the preparation of chocolate.

**CASPIAN SEA.** See TAORANOG.

**CASSIA.** There are four species of cassia in the market, viz. *Cassia Fistula*; *Cassia Lignea* or *Cassia Bark*; *Cassia Buds*, and *Cassia Senna*.

1. *Cassia Lignea*, or *Cassia Bark* (Fr. *Casse*; Ger. *Cassia*; Port. *Cassia lenhosa*; Arab. *Selekeh*; Hind. *Tuf*; Malay, *Kaya-leg*), the bark of a tree (*Laurus Cassia* Lin.) growing in Sumatra, Borneo, the Malabar coast, Philippine Islands, &c.; but chiefly in the provinces of Quantong and Kingsi, in China, which furnish the greatest part of the cassia met with in the European markets. The tree grows to the height of 80 or 60 feet, with large, spreading, horizontal branches. The bark resembles that of cinnamon in appearance, smell, and taste, and is very often substituted for it; but it may be readily distinguished; it is thicker in substance, less quilled, breaks shorter, and is more pungent. It should be chosen in this piece; the best being that which approaches nearest to cinnamon in flavour; that which is small and broken should be rejected. A good deal of the cassia in the Indian markets is brought from Borneo, Sumatra, and Ceylon. Malabar cassia is thicker and darker coloured than that of China, and more subject to foul packing: each bundle should be separately inspected. — (*Ainslie's Materia Indica*;) *Milburn's Orient. Com.*, &c.)

The duty on cassia was reduced in 1825 from 2*s.* 6*d.* per lb. to 1*s.*, and in 1829 to 6*d.* Owing partly to these reductions, and partly to the heavy duty on and high price of cinnamon, the consumption of cassia has more than trebled since 1829. Of 1,261,648 lbs. imported in 1841, 971,902 were brought from the

East India Company's territories and Ceylon, 178,008 lbs. from the Philippine Islands, 63,071 from the Western coast of Africa, and 38,766 from China. Cassia was quoted in the London markets, in February 1843, at from 80s. to 70s. a cwt. in bond.

3. *Cassia Buds*, the dried fruit or berry of the tree (*Laurus cassia*) which yields the bark described in the previous article. They bear some resemblance to a clove, but are smaller, and, when fresh, have a rich cinnamon flavour. They should be chosen round, fresh, and free from stalk and dirt. Cassia buds are the produce of China. The imports of all sorts of cassia from Canton in 1842 into the United Kingdom amounted to 376,117 lbs.—(*Milburn's Orient. Com.*; *Anglo-Chinese Calendar*; and *Port. Paper No. 397*, *Hera*, 1843.)

3. *Cassia Fistula* (Fr. *Casse*; Ger. *Rhonkassie*; It. *Polpa di cassia*; Lat. *Cassia pulpia*; Arab. *Khyar aheber*) is a tree which grows in the East and West Indies, and Egypt (*Cassia Fistula* Lin.). The fruit is a woody, dark brown pod, about the thickness of the thumb, and nearly 2 feet in length. These brought to this country come principally from the West Indies, packed in casks and cases; but a superior kind is brought from the East Indies, and is easily distinguished by its smaller smooth pod, and by the greater blackness of the pulp. For details as to its importation, &c., see below.  
*Cassia Senna*. See SENNA.

Account, specifying the Quantities of Cassia Lignea imported into, exported from, and entered for Consumption in the United Kingdom, with the Amount and Rate of Duty on the same, during each of the 13 Years, ending with 1842.

Years.	Quantities imported into the United Kingdom.	Quantities re-exported from the United Kingdom.	Quantities retained for Home Consumption in the United Kingdom.	Amount of Duty received thereon.	Rates of Duty.	
					From British Possessions.	From other Parts.
1830	284,880	297,642	65,705	1,524	6d. per lb.	1s. per lb.

Average quantity of *cassia buds* imported into the United Kingdom in each of the above thirteen years, 40,231 lbs.  
 Ditto ditto entered for home consumption during each of the said years 6,510 lbs.  
 Average annual amount of duty received thereon, 512.  
 Average quantity of *cassia fistula* imported into the United Kingdom in each of these years, 9,968 lbs.  
 Ditto ditto entered for home consumption ditto 2,105 lbs.  
 Average annual amount of duty received thereon, 44.

CASTOR (Fr. *Castoreum*; Ger. *Kastoreunt*; It. *Castoro*; Sp. *Castoreo*), the produce of the beaver. In the inguinal region of this animal are found four bags, a large and a small one on each side: in the two large ones there is contained a softish, greyish yellow, or light brown substance, which, on exposure to the air, becomes dry and brittle, and of a brown colour. This is castor. It has a heavy but somewhat aromatic smell, not unlike musk; and a bitter, nauseous, and subacid taste. The best comes from Russia; but of late years it has been very scarce; and all that is now found in the shops is the produce of Canada. The goodness of castor is determined by its sensible qualities; that which is black is insipid, inodorous, oily, and unfit for use. Castor is said to be sometimes counterfeited by a mixture of some gummy and resinous substances; but the fraud is easily detected, by comparing the smell and taste with those of real castor.—(*Thomson's Dispensatory*.)

CASTOR OIL (Fr. *Huile du Ricin*; Ger. *Rizinusohl*; It. *Olio di Ricino*; Sp. *Ricinusel*) is obtained from the seeds of the *Ricinus communis*, or *Palma Christi*, an annual plant found in most tropical countries, and in Greece, the south of Spain, &c. The oil is separated from the seeds either by boiling them in water, or by subjecting them to the action of the press. It is said, that though the largest quantity of oil may be produced by the first method, it is less sweet, and more apt to become rancid, than that procured by expression, which, in consequence, is the process now most commonly followed. Good expressed castor oil is nearly inodorous and insipid; but the best leaves a slight sensation of acrimony in the throat after it is swallowed. It is thicker and heavier than the fat oils, being viscid, transparent, and colourless, or of a very pale straw colour. That which is obtained by boiling the seeds has a brownish hue; and both kinds, when they become rancid, thicken, deepen in colour to a reddish brown, and acquire a hot, nauseous taste. It is very extensively employed in the materia medica as a cathartic.—(*Thomson's Dispensatory*.)

The duty of 1s. 3d. per cwt. on castor oil entered for home consumption produced in 1842, 252*l.* 9s. 1*d.*, showing that the entries had amounted to 452,387 lbs. Of the total quantity imported in 1841, amounting to 271,400 lbs., no fewer than 869,947 lbs. were brought from the East India Company's territories and Ceylon. East India castor oil was worth in 1843, in the London market, from 4*s.* to 8*s.* per lb.

CATECHU (Fr. *Catchou*; Ger. *Kaschu*; Hind. *Cut*; Mal. *Gambir*), a brown astringent substance, formerly known by the name of *Terra Japonica*, because supposed to be a kind of earth. It is, however, a vegetable substance obtained from two plants; viz. the *Mimosa*, or more correctly the *Acacia catechu*, and the *Uncaria gambir*. The

first of these is a tree from 20 to 30 feet high, found in abundance in many of the forests of India, from 16° of lat. up to 30°. The places most remarkable for its production are the Burmese territories; a large province on the Malabar coast called the Concan; and the forests skirting the northern part of Bengal, under the hills which divide it from Nepal. The catechu is obtained from this tree by the simple process of boiling the heart of the wood for a few hours, when it assumes the look and consistency of tar. The substance hardens by cooling; is formed into small balls or squares; and being dried in the sun, is fit for the market. The price to the first purchaser in the Concan is about 1*5s.* a cwt. According to Dr. Davy, who analysed it, the specific gravity of Concan catechu is 1.99; and that of Pegu, 1.28. The taste of this substance is astringent, leaving behind a sensation of sweetness; it is almost wholly soluble in water. Of all the astringent substances we know, catechu appears to contain the largest portion of tannin. According to Mr. Purkis, 1 lb. is equivalent to 7 or 8 lbs. of oak bark for tanning leather. From 200 grs. of Concan catechu, Dr. Davy procured 109 of tannin, 68 of extractive matter, 13 of mucilage, and 10 of earths and other impurities: the same quantity of Pegu catechu afforded 97 grs. of tannin, 73 of extract, 16 of mucilage, and 14 of impurities. The *uncaria gambir* is a scandent shrub, extensively cultivated in all the countries lying on both sides of the Straits of Malacca; but chiefly in the small islands at their eastern extremity. The catechu is in this case obtained by boiling the leaves and imbibing the juice; a small quantity of crude sago being added, to give the mass consistency; it is then dried in the sun, and being cut like the Concan catechu into small squares, is ready for use. There is a great consumption of this article throughout all parts of India as a masticatory; it forms an ingredient in the compound of betel pepper, areca nut, and lime, which is in almost universal use. Catechu may be purchased at the Dutch settlement of Rhio, or at Malacca, in the Straits of Singapore, at the rate of about 10*s.* a cwt. Large quantities of it are imported, under the corrupted name of catech, into Calcutta from Pegu. From Bombay a considerable quantity is annually imported into China. The quantity of catechu, under the name of gambir, produced in Rhio by the Chinese settlers, amounts to about 4,600 tons a year, about 2,000 of which are exported for the consumption of Java; the rest being sent to China, Cochinchina, and other neighbouring countries. — (See *Ainslie's Materia Indica*; *Ure's Dictionary*; *Singapore Chronicle*; *Buchanan's Journey through Mysore, Canara, and Malabar*; *Bell's Review of the external Commerce of Bengal*.)

CAT'S EYE, a mineral of a beautiful appearance, brought from Ceylon. Its colours are grey, green, brown, red, of various shades. Its internal lustre is shining, its fracture imperfectly conchoidal, and it is translucent. From a peculiar play of light, arising from white fibres interspersed, it has derived its name. The French call the appearance *chatoyant*. It scratches quartz, is easily broken, and resists the blowpipe. It is set by the jewellers as a precious stone.

CAT SKINS. The skin or fur of the cat, is used for a variety of purposes, but is principally dyed and sold as false sable. It appears from evidence taken before a late Committee of the House of Commons, that it is a common practice in London to decoy the animal and kill it for the sake of its skin. The fur of the wild cat is, however, far more valuable than that of the domestic cat. The wild cat skins imported into this country are brought almost wholly from the territories of the Hudson's Bay Company. The animal from which they are taken is a good deal larger than the English wild cat, and is sometimes called the *leop cervier*, or Canadian lynx. It is very courageous. At an average about 40,000 cat-skins are annually imported, of which more than a half are retained for home consumption.

CATTLE, a collective term applied to designate all those quadrupeds that are used either as food for man, or in tilling the ground. By *neat* or *horned cattle* is meant the two species included under the names of the ox (*Bos*) and the buffalo (*Bubalus*); but as the latter is hardly known in this country, it is the former only that we have here in view.

The raising and feeding of cattle, and the preparation of the various products which they yield, have formed, in all countries emerged from the savage state, an important branch of industry.

It would be quite inconsistent with the objects and limits of this work, to enter into any details with respect to the different breeds of cattle raised in this or other countries. They are exceedingly various. In Great Britain they have been vastly improved, both in the weight of carcass, the quality of the beef, and the abundance of the milk, by the extraordinary attention that has been given to the selection and crossing of the best breeds, according to the objects in view. This sort of improvement began about the middle of last century, or rather later, and was excited and very much forwarded by the skill and enterprise of two individuals — Mr. Bakewell of Dishley, and Mr. Culley of Northumberland. The success by which their efforts were attended roused a spirit of emulation in others; and the rapid growth of commerce and manufactures since 1760

having occasioned a corresponding increase in the demand for butcher's meat, improved systems of breeding, and improved breeds, have been very generally introduced.

But the improvement in the size and condition of cattle has not been alone owing to the circumstances now mentioned. Much of it is certainly to be ascribed to the great improvement that has been made in their feeding. The introduction and universal extension of the turnip and clover cultivation has had, in this respect, a most astonishing influence, and has wonderfully increased the food of cattle, and consequently the supply of butcher's meat.

It was stated in the First Report of the Select Committee of the House of Commons on Waste Lands (printed in 1795), that cattle and sheep had, at an average, increased in size and weight about a fourth part since 1732; but there are strong grounds for supposing that the increase had been much more considerable than is represented by the committee.

According to an estimate of Dr. Davenant in 1710, the average weight of the *net* carcase of black cattle was only 370 lbs., of calves 28 lbs., and of sheep only 28 lbs.; but according to Sir F. M. Eden (*Hist. of the Poor*, vol. iii. Appen. p. 88.) and Mr. Middleton (*Agric. of Middlesex*, 2d ed. p. 541.), the average net weight of the carcase of bullocks killed in London might be taken, about the end of the last or the beginning of this century, at 800 lbs., calves at 140 lbs., sheep at 80 lbs., and lambs at 50 lbs.

*Consumption of Butcher's Meat in London.*—The number of head of cattle, sheep, and lambs, sold in Smithfield market, each year since 1732, has been as follows:—

Years.	Cattle.	Sheep.	Years.	Cattle.	Sheep.	Years.	Cattle.	Sheep.	Years.	Cattle.	Sheep.
1732	76,210	514,700	1760	68,594	622,210	1788	92,829	679,100	1816	120,439	968,660
1733	80,169	555,050	1761	82,514	666,010	1789	93,269	693,700	1817	129,888	1,044,710
1734	78,810	566,910	1762	102,831	772,160	1790	103,708	749,660	1818	138,047	963,250

The number of *fatted calves*, exclusive of sucklers, of which no account is taken, sold annually in Smithfield from 1821 inclusive, has been as follows:—

Date.	Number.	Date.	Number.	Date.	Number.
1821	- 21,768	1829	- 20,879	1836	- 18,900
1822	- 24,255	1830	- 20,800	1837	- 17,716
1823	- 22,739	1831	- —	1838	- 18,653
1824	- 21,949	1832	- 19,522	1839	- 18,148
1825	- 20,958	1833	- 18,374	1840	- 17,154
1826	- 22,118	1834	- 19,721	1841	- 17,054
1827	- 20,729	1835	- 20,882	1842	- 19,648
1828	- 20,832				

The contract prices of butcher's meat per cwt. at Greenwich Hospital, since 1730, have been as below:—

Year.	£ s. d.	Year.	£ s. d.	Year.	£ s. d.
1730	- 1 5 8	1790	- 1 16 10	1825	- 2 19 6½
1740	- 1 8 0	1800	- 3 4 4	1830	- 2 3 6
1750	- 1 6 6	1810	- 3 12 0	1835	- 2 0 7½
1760	- 1 11 6	1815	- 3 8 0	1840	- 2 14 0
1770	- 1 8 6	1820	- 3 10 4½	1842	- 2 12 8½
1780	- 1 12 6				

We suspect, from what we have heard from practical men of great experience, that the weights assigned by Sir F. M. Eden and Mr. Middleton to the cattle sold in Smithfield were, at the time when their estimate was framed, decidedly in excess; but the great improvements that have since been made in the breeding and feeding of cattle in all parts of the empire, have materially increased their average size; so that the above weights are now, we have been well assured, not far from the mark. In order, however, to be within bounds, we shall take the net weight of the cattle at 750 lbs.; and supposing this and the other estimates to be nearly right, we should be able, provided we

knew the respective numbers of sheep and lambs, to estimate the total quantity of butcher's meat furnished for London by Smithfield market, exclusive of hogs and pigs. Sheep and lambs are not, however, distinguished in the returns; but it is known that the former are to the latter, nearly as 3 to 1; so that we may estimate the average weight of the sheep and lambs at about 70 lbs.

Average Number of Animals sold in Smithfield in each of the 3 Years ending 1844.	Gross Weight.		Offal.		Net Weight.		Butcher's Meat.	
	Libs.	1,000	Libs.	250	Libs.	750	Libs.	100
173,255 Cattle	-	-	1,000	250	750	139,641,250		
1,373,643 Sheep and lambs	-	-	90	20	70	96,107,810		
17,932 Calves	-	-	175	35	140	2,443,280		
					Total	228,542,340		

This quantity, estimated at the average price of 6d., would cost 5,713,558l. 10s.; at 8d. it would cost 7,615,078l.

But exclusive of the above, or of the beef properly so called, a large portion of the offal, including the head and tongue, heart, tripe, fat, &c., is used as food.

A part of the cattle sold at Smithfield go to supply the towns in the vicinity; but, on the other hand, many cattle are sold in the adjoining towns, and slaughtered for the use of London, of which no account is taken. We have reason to think that the latter quantity rather exceeds the former; but, supposing that they mutually balance each other, the above quantity of 228,542,340 lbs. may be regarded as forming the annual supply of butcher's meat at present required for London; exclusive, however, of the offal used as food, and of hogs, pigs, suckling calves, &c., and exclusive also of bacon, hams, and salted provisions brought from a distance. The quantities thus omitted from the account are very large indeed; and since the introduction of steam navigation great numbers of cattle and sheep are killed in Scotland and other distant parts of the empire, the carcases of which are sent up for sale in the London market. We have no means of forming any correct conclusion on such a subject, but we are inclined to think that the carcases so sent up, added to the offal used as food, and the hogs killed in town, may be considered as fully equivalent to the butcher's meat used in the victualling of ships. On this hypothesis there will remain 228,542,340 lbs. of butcher's meat for the supply of the metropolis, which, taking the population at 1,870,127, gives 122½ lbs. for the consumption of every individual, exclusive of bacon, hams, and salted provisions, and, also, of poultry.

This, though not nearly so great as has been sometimes represented\*, is, we believe, a larger consumption of animal food than takes place any where else by the same number of individuals. † According to M. Chabrol, the consumption of butcher's meat in Paris amounts to between 85 lbs. and 86 lbs. for each individual. At Brussels the consumption is a little greater, being supposed to average 89 lbs. each individual; being rather more than 3 lbs. above the mean of Paris, and 33 lbs. under the mean of London.

In estimating the weights of the animals killed in country towns, a lower standard must be adopted than that taken for London; first, because the largest and finest cattle are brought to the metropolis; and secondly, because a very large proportion of the calves killed in country towns are sucklers, which are excluded from the London accounts.

The following Table, drawn up from the Reports of the Manchester Statistical Society, shows the Consumption of Butcher's Meat in Manchester and its Environs in 1836, the Population being estimated at 343,500.

Description of Meat.	Average weight of Carcases.	Number of		Quantity to each Person.
		Carcases.	Pounds.	
Cattle	560 lbs.	40,480	22,839,800	66 lbs. 8 os.
Sheep	68½	165,040	7,214,745	21
Lambs	37	96,668	3,576,715	10 7
Calves	90	11,791	1,061,190	3 1
Offal (edible)	-	324,319	34,709,452	101 0
			1,387,308	4 9
Total	-	-	38,097,160	102 9

The consumption of butcher's meat in Glasgow is about the same, compared with the population, as in Manchester. And this statement, taken in connection with the fact

\* Mr. Middleton (*Agriculture of Middlesex*, p. 643.) estimates the consumption of animal food in London, exclusive of fish and poultry, at 234 lbs. a year for every individual! And he further estimates the total average annual expense incurred by each inhabitant of the metropolis, for all sorts of animal food, at 8s. 8d.

† In the former edition of this work we inadvertently deducted the offal from the net instead of the gross weight of the animals. This blunder was soon after brought forward in the *Dictionnaire des Comptes* to show that the weight of cattle slaughtered in Paris was greater than that of those killed in London; and that the consumption of animal food was, also, greater in the former than in the latter!

that, so late as 1760, the slaughter of bullocks for the supply of the public market was unknown in Glasgow, sets the wonderful improvement that has since taken place in the food of the Scotch people in the most striking point of view. Previously to 1780 it was customary in Glasgow, Edinburgh, and the principal Scotch towns, for families to purchase in November what would now be reckoned a small half-fed cow or ox, the salted carcase of which was the only butcher's meat they tasted throughout the year. In the smaller towns and country districts this practice prevailed till the present century; but it is now everywhere abandoned. We believe, indeed, that there has never been, in any country, a more rapid increase in the quantity, or a greater improvement in the quality, of the food brought to market, than has taken place in Scotland since 1770. In so far as respects butcher's meat, this has been occasioned partly by the growing numbers and opulence of all classes, and partly by the vast increase in the food of cattle consequent to the introduction of green crops, and of an improved system of cultivation. — (See *BREED*.)

The introduction of steam navigation, and the improved means of communication by railroads and otherwise, has already had, and will no doubt continue to have, a material influence over the supply of butcher's meat. Owing to the difficulty and expense of their conveyance, cattle could not formerly be conveniently fattened at any very considerable distance from the great markets; but steam navigation has gone far to remove this difficulty. Instead of selling their cattle, lean or half-fed, to the Norfolk graziers, by whom they were fattened for the London market, the producers, in various districts of Scotland, now fatten them at home, either sending the live animals or the carcases by steam to London, Liverpool, &c. This practice is indirectly as well as directly advantageous to the farmer, inasmuch as it enables him to turn his green crops to better account, and to raise larger supplies of manure. The same practice is also extending in Ireland; and will, no doubt, spread itself over every part of the country where feeding can be carried on, that has the required facility of transport.

Exclusive of the cattle raised in Great Britain, we import considerable supplies of beef and of live cattle from Ireland.

Account of the Number of Cows and Oxen, and of the Quantities of Beef, imported into Great Britain from Ireland, from 1801 to —

Years.	Cows and Oxen.		Beef.	Years.	Cows and Oxen.		Years.	Cows and Oxen.		Beef.
	No.	Bovvts.			No.	Bovvts.		No.	Bovvts.

1808	13,108	88,806		1817	45,801	105,555	1825	63,519	63,557	
1809	17,017	89,771								

In 1825 the trade between Great Britain and Ireland was placed on the footing of a coasting trade, so that there are no means of continuing this account to a later date; but for further particulars, the reader is referred to *Liverpool*, art. *Docks*; for an account of the sales of cattle at the great fair of *Bullinacree*, see *Fairs and Markets*.

*Number of Head of Cattle in Great Britain.* — It would, on many accounts, be very desirable to have an accurate estimate of the number and value of the stock of cattle in Great Britain, and of the proportion annually killed and made use of; but owing to the little attention that has been paid to such subjects in this country, where every sort of statistical knowledge is at a very low ebb, there are no means of arriving at any conclusions that can be depended upon. The following details may not, however, be unacceptable.

Arthur Young has given, both in his *Eastern and Northern Tours*, estimates of the number and value of the different descriptions of stock in England. The greatest discrepancy, unaccompanied by a single explanatory sentence, exists between them; but there can be no doubt that the following estimate (*Eastern Tour*, vol. iv. p. 456.) is, though, perhaps, rather under the mark, is infinitely nearer the truth than the other, which is about twice as great: —

Number of Draught cattle	-	-	-	-	684,491
Cows	-	-	-	-	741,532
Fattening cattle	-	-	-	-	513,369
Young cattle	-	-	-	-	912,656
Total	-	-	-	-	2,852,048

Now, taking this number at the round sum of 3,000,000, and adding a third to it for the increase since 1770, and 1,100,000 for the number of cattle in Scotland (*General Report of Scotland*, iii. *Ahlenda*, p. 6.), we shall have 5,100,000 as the total head of cattle of all sorts in Great Britain. The common estimate is, that about a fourth part

of the entire stock is annually slaughtered; which, adopting the foregoing statement, gives 1,275,000 head for the supply of the kingdom; a result which all that we have heard inclines us to think is not far from the mark.

*Importation of Cattle.* — Previously to 1842, the importation of horned cattle, sheep, hogs, and other animals used as food was strictly prohibited; but this prohibition was then withdrawn, and the importation of the animals in question permitted on paying a duty of 20s. a head on oxen and bulls, 15s. on cows, 3s. on sheep, 5s. on hogs, &c. This certainly was one of the most important inroads that has ever been made on the prohibitive system, and reflects the greatest credit on the administration of Sir Robert Peel. At the same time, however, the benefits of the measure are rather of a prospective and negative than of an immediate and positive description. It will most probably lead, in the course of time, to a considerable importation, and it will no doubt prevent or be a great obstruction to any oppressive rise in future in the price of butcher's meat in this country; but we doubt whether it will do more than this. The apprehensions which the measure when proposed excited amongst the agriculturists, and the panic it occasioned, were wholly destitute of any good foundation. And the fact that the price of cattle is lower now (1843), than before the repeal of the prohibition, is not, assuredly, owing to the inconsiderable importation that has taken place, but to the fact of their price having previously been quite exorbitant, and to the diminution of the consumption of butcher's meat in a large portion of the country originating in the depressed state of manufactures in 1842 and in the early part of 1843. Indeed we believe that their price would have been quite as low at this period (June 1843), as it really is, had the prohibition continued in full force.

The fact is that, low as the duties are, very few cattle can be imported into England; nor is there any such discrepancy as is commonly supposed between the prices of butcher's meat here and on the Continent. No doubt the rates at which it is quoted in the markets of the latter are in the great majority of instances a good deal below its price in London and other great British markets; but this difference is in great part apparent only, and depends on the superior quality of English butcher's meat as compared with that of other countries.

There is an immense variety in the breeds of the continental cattle; but with the exception of the cattle of Holstein, the beef of those in Western Europe is universally inferior to that of England; and the continental mutton is hardly eatable. In most parts of the Continent the object is to have a fine fleece, with but little regard to the carcase; whereas in England the carcase is an object of more importance than the fleece.

Denmark, including Holstein, exports annually from 25,000 to 30,000 head of cattle, principally to Hamburg and Altona; and there could be no reason for supposing that the repeal of the prohibition against importation into this country should lessen the demand for beef in Hamburg, otherwise than by raising its price. Inasmuch, however, as the beef of Holstein (which is principally cured and smoked) had hitherto sold in Hamburg for from 4½d. to 5d. per lb., or at but little below the cost of beef in England, it was evident that a comparatively small increase of price would suffice to prevent its exportation. And this in truth is precisely what has happened; for it has been found that when to the cost of cattle in Hamburg has been added the cost of their conveyance and sale to the butcher in England, amounting to at least 40s. a head, and the duty of 20s. a head, their price has been such that they could rarely be sold in London with a profit, and that their importation has been hardly worth notice.

But, if we except Denmark and Ireland, no country of Western Europe has hitherto been in the habit of exporting cattle. France exports a few; but her imports always overbalance her exports; and it is probable, indeed, should no change be made in the policy on which she has been acting of late years, that she will cease to export a single animal. The truth is, that there has latterly been a great increase in the price of butcher's meat in France, and a material decrease in the stock of cattle in that kingdom, occasioned by the excessive additions made to the duty on the importation of cattle. Previously to 1814 all sorts of cattle might be imported into France duty free. In that year, however, a duty of 3 francs (2s. 6d.) a head was laid on their importation; and had the duty been allowed to continue at this reasonable rate, it could not justly have been objected to. But in 1822, this moderate duty was suddenly raised to the enormous amount of 55 francs, or 44s.; and the result has been, that, in the interval, the stock of cattle in France has been reduced about 2,000,000 head; the price of butcher's meat has been greatly increased, and the consumption of beef in Paris has declined from about 31 kilogrammes to 25 kilogrammes per individual! In consequence, loud and well-founded complaints have been made by the town and manufacturing population of the operation of the duty; and the probability is, that it will, at no very distant period, be effectually reduced. But it is material to observe, that, despite this oppressive duty, the value of the live animals imported into France in

1839, principally from England, Wirtemberg, Bavaria, and Baden, amounted to 674,775*l*. Under these circumstances, the idea of France supplying us with any considerable quantity of cattle is out of the question. Indeed, any one acquainted with the state of France, with the smallness of the farms, and the all but total deficiency of green crops, must treat with contempt the notion of her exporting beef or cattle.

Spain, since the repeal of the prohibition, has supplied us with a few cattle, and sanguine expectations have been entertained of her capabilities in this respect. We doubt, however, whether these be destined to be realised. The pastures of Spain are no doubt of vast extent; but it is generally believed that they are more suitable for sheep than for cattle; and the voyage across the Bay of Biscay will always be a considerable obstacle to the cheap and easy importation of the latter.

Eastern Europe, including Hungary and the southern parts of European Russia, has a vast extent of fine pasture land and some very fine breeds of cattle, with which, but for the distance, we might be abundantly supplied. Unluckily, however, the expense of their conveyance would be so very great as to preclude the possibility of their being imported; and it is even doubtful whether we shall ever be able to derive from these countries any considerable supply of salted provisions.

It appears from the customs' returns that from the repeal of the prohibition against the importation of foreign cattle, on the 9th July 1842, down to the 5th of January 1843, only 4,277 head of cattle (including calves) were imported, and only 648 sheep and lambs (*Parl. Paper No. 45, Sess. 1843.*) And it is well known that this inconsiderable importation was unprofitable rather than otherwise; and that there has hardly been a single animal imported during the 3 months ending with June 1843. At the same time, however, it must be admitted that it is by no means improbable that agriculturists in the contiguous countries should apply themselves to the breeding of stock for the English markets; and that their importation should, in consequence, be considerably increased. But supposing (of which we regret there is little or rather no probability) that in some half dozen years we should be able annually to import 30,000 or 35,000 head of foreign cattle, and that eventually this number should be increased to 100,000 or 150,000 head, still it is easy to see it could entail no real injury on the agriculturists of this country.

We have already seen that at present (1843) the average annual slaughter of cattle in London amounts to about 175,000 head; and the average annual slaughter in Great Britain is certainly not under 1,350,000 head. Hence it appears, that even on the extravagant supposition that 100,000 head of cattle were imported, it would not amount to one thirteenth part of our supply, and could not therefore have any material influence over prices. The influence of an importation of 30,000 head would, it is obvious, be all but insensible.

In saying that an importation even of 100,000 head of cattle, which most certainly is 4 or 5 times greater than the importation will amount to for a good many years to come, would not materially affect prices, we do not reason theoretically, but on the solid foundation of experience and analogy. In 1826, for example, we imported about 57,000 head of cattle from Ireland into Great Britain; but in consequence of the increased facilities given to importation, by the introduction and extension of steam navigation, Ireland now supplies us with about 180,000 head of cattle, or between 3 and 4 times as many as we imported from her 17 years ago! But instead of the price of cattle in Great Britain falling in consequence of this immense increase of importation, every body knows that it has very decidedly increased. And when such is the fact, is it not childish to suppose that the value of stock is to be seriously depressed, and the breeders and graziers ruined, by the admission of cattle from abroad under a duty of 20*s.* each?

It is singular how, in a great and rich country like this, a vast addition may be made to the supply of any important article without materially affecting prices. In illustration of this, we may observe, that in 1840 the imports of fresh salmon into London amounted to about 1,700,000 lbs., and in 1841 they amounted to about 3,200,000 lbs. Here we have an increase of little less than 100 per cent. in the supply, and yet the wholesale price was only reduced from 11*d.* in 1840, to about 9*d.* in 1841; and it should be borne in mind that salmon is more of a luxury than beef, and that its consumption being necessarily at all times confined within a more limited circle, it has less power of expanding and contracting with variations of price.—(See art. SALMON.) Taking the average price of beef in England at 6*d.* per lb., a fall to 5½*d.* per lb. would certainly take off 100,000 additional head of cattle; that is, it would take off more than there is much probability we shall get from the Continent, under the existing arrangements, any time during the next dozen years.

We incline to think that the principal imports of beef and other articles of provision from the Continent and elsewhere under the existing tariff, will not come to us in the shape of live animals, but of salted provisions. But even of these, the importation, we

apprehend, will be much less than has been supposed. For some years past, foreign salted and cured beef has been admitted on paying a duty of 12s. a cwt. If, therefore, the price in any part of the Continent had been so low as most people here imagine, a large importation of salted and cured beef could hardly have failed to have taken place under this duty. But, in point of fact, the importation has been quite inconsiderable; the entries of foreign salted beef for home consumption in 1841 being only 1,698 cwt. This shows conclusively that the notions as to the cheapness of foreign beef are nearly if not altogether chimerical; and it also shows that the reduction of the duty from 12s. to 8s. a cwt. can have but little influence over the trade.

We believe, however, that there will, under the new arrangements, be a considerable importation of bacon and hams, the duty on which has been reduced from 28s. to 14s. a cwt. It is, indeed, much to be wished that such should be the case, inasmuch as a fall in the price of bacon would be a great boon to the labouring classes, at the same time that it could do little or no injury to any one else.

It may, perhaps, be asked, if you be right in these statements, if the new measures will not materially reduce the price of provisions, where is the advantage of having interfered with the former arrangements? Why not "have let well alone?" To that question we might reply by asking, has not the importation of cattle from Ireland been of vast advantage, though it has not sensibly influenced prices? Though the new measure should not lower the price of butcher's meat, it will, at all events, prevent its further increase, and enable provision to be made for the wants of our rapidly increasing population. It will also have the good effect of undeceiving the public, of proving to the conviction of every individual, that the price of butcher's meat in this country is what Adam Smith would call its natural and necessary price, and that it is not sensibly affected by restrictive regulations.

It is much to be regretted that the same manly and decisive course was not taken in respect of corn that has been taken in respect of butcher's meat. The delusion in the one case is quite as great as in the other. Suppose the ports were constantly open to importation at a fixed duty of 5s. a quarter on wheat, it admits of demonstration that our average prices would not thereby be in the least degree affected. But such a measure would give us an additional security against the mischievous effects of hail harvests, at the same time that it would make an end of a gigantic delusion, and dry up a most prolific source of misrepresentation, abuse, and agitation.

*Cattle of the Continent.*—Baron Malchus gave, in his work on European Statistics, published at Stuttgart in 1836, an account of the number of horned cattle, sheep, swine, &c., in most European countries. In so far as respects the British empire, the statements were mostly copied from Colquhoun, and are ludicrously inexact. Perhaps, however, they may, in so far as regards the Continental states, be better entitled to credit. The following statements, which we have endeavoured to deduce from the best authorities, are probably less wide of the mark:—

Countries.	Head of Cattle.	Countries.	Head of Cattle.	Countries.	Head of Cattle.
Sweden (1837)	- 1,657,070	Saxony	- 400,000?	Austria	- 10,000,000?
European Russia	- 16,000,000?	Hanover	- 900,000?	France	- 7,000,000?
Denmark	- 1,650,000?	Wirttemberg	- 800,000?	Spain and Portugal	- 2,000,000?
Belgium	- 898,076	Baden	- 400,000?	Switzerland	- 800,000?
Prussia	- 4,838,622	Bavaria (1837)	- 2,350,388		

*Laws as to Cattle.*—No salesman, broker, or factor, employed in buying cattle for others, shall buy for himself in London, or within the bills of mortality, on penalty of double the value of the cattle bought and sold.—(31 Geo. 3. c. 40.)

Cattle not to be driven on Sunday, on penalty of 20s.—(3 Cha. 1. c. 1.)

Any person unlawfully and maliciously killing, wounding, or maiming any cattle, shall be guilty of felony, and, upon conviction, may be transported, at the discretion of the court, beyond seas for life, or for any term not less than 7 years, or be imprisoned for any term not exceeding 4 years, and kept to hard labour; and, if a male, may be once, twice, or thrice publicly or privately whipped, if the court shall think fit so to order.—(7 & 8 Geo. 4. c. 36.)

Persons wantonly and cruelly abusing, beating, or ill-treating cattle, may, upon being convicted before a Justice of such offence, be fined in any sum not exceeding 5s. and not below 10s. 1 and upon nonpayment of fine, may be committed to the house of correction for any time not exceeding 3 months.

Complaint must be made within 10 days after the offence. Justices are instructed to order compensation to be made, not exceeding 20s., to persons vexatiously complained against.—(3 Geo. 4. c. 71.)

**CAVIAR** (Fr. *Caviar*, *Cavial*; Ger. *Kaviar*; It. *Caviario*, *Caviale*; Sp. *Caviario*; Rus. *Ikra*; Lat. *Caviarium*), a substance prepared in Russia, consisting of the salted roes of large fish. The best, which is made of the roe of the sturgeon, appears to consist entirely of the eggs, and does not easily become fetid. It is packed in small casks or kegs; the inferior sort being in the form of dry cakes. Caviar is highly esteemed in Russia, and considerable quantities are exported to other countries. It is principally made of the roe of the sturgeon caught in the Wolga, in the neighbourhood of Astrachan, as many as 30,000 barrels of caviar having been exported from that city in a single season.—(See *Geog. Diet.* art. *ASTRAKHAN*.)

**CAYENNE PEPPER**, or **GUINEA PEPPER**. See *CHILLIES*.

**CEDAR** (Ger. *Zeder*; Du. *Ceder*; Fr. *Cedre*; It. and Sp. *Cedro*; Rus. *Kedr*; Lat. *Cedrus*). The cedar of Lebanon, or great cedar (*Pinus cedrus*), is famous in Scripture: it is a tall majestic-looking tree. "Behold," says the inspired writer, "the Assyrian was a cedar in Lebanon; with fair branches, and with a shadowing shroud, and

of an high stature; and his top was among the thick boughs. His height was exalted above all the trees of the field, and his boughs were multiplied, and his branches became long. The fir trees were not like his boughs, and the chestnut trees were not like his branches, nor any tree in the garden of God was like unto him in beauty." — (*Ezekiel*, xxxi. 3. 5. 8.) The cedar grows to a very great size. The timber is resinous, has a peculiar and powerful odour, a slightly bitter taste, a rich yellowish brown colour, and is not subject to the worm. Its durability is very great; and it was on this account (*propter aternitatem*, Vitruvius, lib. ii. § 9.) employed in the construction of temples, and other public buildings, in the formation of the statues of the gods, and as tablets for writing upon. In the time of Vitruvius, cedars were principally produced in Crete, Africa, and some parts of Syria. — (*Loc. cit.*) Very few are now found on Lebanon; but some of those that still remain are of immense bulk, and in the highest preservation. Cedar exceeds the oak in toughness, but is very inferior to it in strength and stiffness. Some very fine cedars have been produced in England.

There are several other kinds of timber that are usually called cedar; thus a species of cypress is called white cedar in America; and the cedar used by the Japanese for building bridges, ships, houses, &c. is a kind of cypress, which Thunberg describes as a beautiful wood, that lasts long without decay. The *Juniperus oxycedrus* is a native of Spain, the south of France, and the Levant; it is usually called the brown berried cedar. The Bermudian cedar (*Juniperus Bermudiana*), a native of the Bermuda and Bahama islands, is another species that produces valuable timber for many purposes, such as internal joiners' work, furniture, and the like. The red cedar, so well known from its being used in making black-lead pencils, is produced by the Virginian cedar (*Juniperus Virginiana*), a native of North America, the West India islands, and Japan. The tree seldom exceeds 45 feet in height. The wood is very durable, and, like the cedar of Lebanon, is not attacked by worms. It is employed in various ways, but principally in the manufacture of drawers, wardrobes, &c., and as a cover to pencils. The internal wood is of a dark red colour, and has a very strong odour. It is of a nearly uniform texture, brittle, and light. — (See *Trulgold's Principles of Carpentry; Lib. of Entertaining Knowledge, Veget. Substances; Rees's Cyclopaedia, &c.*)

The duty on cedar (10s. a ton from a foreign country, and 1s. from a British possession) produced in 1842, 34s. Its price in bond varies from 6s. to 9s. a foot.

**CERTIFICATES**, in the customs. No goods can be exported by certificate, except foreign goods formerly imported, on which the whole or a part of the customs paid on importation is to be drawn back. The manner of proceeding is regulated by the 8 & 9 Vict. c. 86. § 72. &c. The person intending to enter outwards such goods, is to deliver to the collector or comptroller of the port where the goods were imported or warehoused, two or more bills, specifying the particulars of the importation of such goods, and of the entry outwards intended to be made; and the officers, if they find such bills to agree with the entry inwards, are to issue a *certificate* of such entry, with the particulars necessary for the computation of the drawback upon the goods, the names of the person and ship by whom and in which the goods are to be exported, &c. The merchant then enters the goods outwards, as in the common way of exportation. The cockpit granted upon this occasion is called a *certificate cockpit*, and differs a little in form from common over-sea cockets. Notice of the time of shipping is to be given to the searcher. Some time after the departure of the vessel, the exporter may apply for the drawback. The collector and comptroller then make out on a proper stamp a debenture, containing a distinct narration of the transaction, with the exporter's or merchant's oath, that the goods are really and truly exported beyond seas, and not reloaded, nor intended to be reloaded; and also with the searcher's certificate of the quantity and quality of the goods at the time of shipping. The debenture being thus duly made out and sworn to, the duties to be repaid are indorsed, the merchant's receipt taken below, and the money paid.

*Certificates of origin*, subscribed by the proper officers of the places where the goods were shipped, are required, to entitle the importers of sugar, coffee, cocoa, and spirits, from any British plantation, to get them entered as such. A similar certificate is required in the case of blubber — (see *BLUBBER*); and in the case of wine from the Cape of Good Hope; and sugar from the limits of the East India Company's charter, &c. — (See *IMPORTATION AND EXPORTATION*.)

**CHAIN**, in surveying, a measure of length, composed of a certain number of links made of iron wire, serving to take the distance between two or more places. Gunter's chain contains 100 such links, each measuring 7 $\frac{1}{8}$  inches, consequently equal to 66 feet, or four poles.

**CHALDRON**, a dry English measure. 36 coal bushels make a chaldron, and 21 chaldrons a score. The coal bushel is 19 $\frac{1}{2}$  inches wide from the outside, and 8 inches deep. It contains 2,217.6 cubic inches; but when heaped, 2,815.5, making the chaldron 58.65 cubic feet. There are 12 sacks of coal in a chaldron; and if

5 chaldrons be purchased at the same time, the seller must deliver 63 sacks: the 3 sacks additional are called the *ingrain*. But coals are now sold in London, and almost everywhere else, by the ton of 20 cwt. avoirdupois. The Newcastle chaldron of coals is 53 cwt., and is exactly double the London chaldron. — (See COAL.)

CHAMBER OF COMMERCE, is an assembly of merchants and traders, where affairs relating to trade are treated of. There are several establishments of this sort in most of the chief cities in France; and in this country, chambers of this kind have been erected for various purposes.

CHAMBRE OF ASSURANCE, in France, denotes a society of merchants and others for carrying on the business of insurance; but in Holland it signifies a court of justice, where causes relating to assurances are tried.

CHAMPAGNE, one of the most esteemed and celebrated of the French wines. See WINE.

CHANKS, or CHANK SHELLS, common conch shells, are fished up by divers in the Gulf of Manar, on the coast opposite Jaffnapatam, in Ceylon, in about 2 fathoms water; and at Travancore, Tuticoreen, and other places. Large fossil beds of chanks have also been found. They are of a spiral form, and form a considerable article of trade in India, where they are in extensive demand all over the country. They are sawn into narrow rings or bracelets, and are worn as ornaments for the arms, legs, fingers, &c. by the Hindoo women; many of them are also buried with the bodies of opulent and distinguished persons. Those which, from being taken with the fish, are called green chanks, are most in demand. The white chank, which is the shell thrown upon the beach by strong tides, having lost its gloss and consistency, is not worth the freight up to Calcutta. The value of the green chank depends upon its size. A chank opening to the right, called in Calcutta the right-handed chank, is so highly prized, as sometimes to sell for 400, or 500, or even 1,000 rupees. — (*Bell's Commerce of Bengal, and private communications.*)

The fishery of chanks is monopolised by government, who most commonly let the banks for about 4,000*l.* a year. Sometimes, however, they are fished by the servants of government on its account. But as the fishermen of the coast, and those belonging to the little islands where they are found, cannot be prevented from taking chanks, the better plan, as it appears to us, would be to give every one leave to fish them; but to lay a somewhat heavier duty on their exportation. We have been assured by those well acquainted with the circumstances, that this would be advantageous to all parties, but especially to government. We have heard that an arrangement of this sort has recently been made, but we have not learned any thing positive respecting it.

CHARCOAL (*Fr. Charbon de bois; Ger. Reine Kohle; It. Carbone di legna; Sp. Carbon de lena; La. Carbo ligni*), a sort of artificial coal, consisting of wood burned with as little exposure to the action of the air as possible. "It was customary among the ancients to *char* the outside of those stakes which were to be driven into the ground, or placed in water, in order to preserve the wood from spoiling. New-made charcoal, by being rolled up in clothes which have contracted a disagreeable odour, effectually destroys it. When boiled with meat beginning to putrefy, it takes away the bad taint: it is, perhaps, the best tooth-powder known. When putrid water at sea is mixed with about  $\frac{1}{4}$  of its weight of charcoal powder, it is rendered quite fresh; and a much smaller quantity of charcoal will serve, if the precaution be taken to add a little sulphuric acid previously to the water. If the water casks be charred before they are filled with water, the liquor remains good in them for years: this precaution ought always to be taken for long sea voyages. The same precaution, when attended to for wine casks, will be found very much to improve the quality of the wine." — (*Thomson's Chemistry.*)

CHARLESTON, a city and sea-port of the United States, in South Carolina, in lat. 32° 46' 33" N., long. 79° 48' W. Population in 1840, 29,261. The situation of Charleston has a good deal of resemblance to that of New York, being built on a point of land between the Ashley and Cooper rivers, at their point of confluence. The exports principally consist of cotton and rice (particularly the former), which are the staple products of the state. There are a few other articles exported, such as naval stores, hams, bacon, &c., but their value is inconsiderable. All the cotton sent from South Carolina to foreign countries is shipped at Charleston. In 1840-41, the shipments of cotton to foreign countries (including 12,991 bales sea-land) amounted to 162,263 bales, of which 101,564 bales went to England: the shipments of cotton eastward during the same year were estimated at 63,959 bales. — (*Downes's Amer. Arc.* p. 238.: for the exports in 1841-42, see below.) The imports from foreign countries principally consist of cottons, woollens and linens, hardware, iron and steel, coffee, sugar, tea, wine, spices, &c. The greater part of the imports do not, however, come from abroad, but from the northern and middle states. The former supply her with fish, shoes, and all sorts of coarse manufactured goods for the use of the

it is made by him at home, under circumstances which afford evidence of the expressed or implied assent of the owners; is binding upon the latter. But, according to the law of England, no *direct actio* can be maintained upon the instrument itself against the owners, unless it be signed and sealed by them, or unless they authorize the master (or agent, as the case may be) to enter into the contract, and unless it be distinctly expressed in the charterparty that he acts only as agent.

When a ship is chartered by several owners to several persons, the charterparty should be executed by each, or they will not be liable to an action for nonperformance. But if the charterparty be not expressed to be made between the parties, but runs thus:—"This charterparty indented witnesseth, that C., master of the ship W., with consent of A. and B., the owners thereof, lets the ship to freight to E. and F.," and the instrument contains covenants by E. and F. to and with A. and B.; in this case A. and B. may bring an action upon the covenants expressed to be made with them; but unless they seal the deed, they cannot be sued upon it. This, therefore, is a very proper form.

The general rule of law adopted in the construction of this, as of other mercantile instruments, is, that the interpretation should be liberal, agreeable to the real intention of the parties, and conformable to the usage of trade in general, and of the particular trade to which the contract relates.

The charterparty usually expresses the burden of the ship; and by the famous French Ordinance of 1681, it is required to do so. According to Molloy (book li. c. 4. § 8.), if a ship be freighted by the ton, and found of less burden than expressed, the payment shall be only for the real burden; and if a ship be freighted for 200 tons, or *thereabouts*, the addition of *thereabouts* (says the same author) is commonly reduced to *five tons more or less*; but it is now usual to say so many tons "register measurement."

The usual covenant, that the ship shall be seaworthy, and in a condition to carry the goods, binds the owners to prepare and complete every thing to commence and fulfil the voyage. But though the charterparty contained no such covenant, the owner of the vessel would be, at common law, bound, as a carrier, to take care that the ship should be fit to perform the voyage; and even though he should give notice, limiting his responsibility from losses occasioned to any cargo put on board his vessel, unless such loss should arise from want of ordinary care, &c., he would be liable if his ship were not seaworthy.—(See *Seaworthiness*.)

In all maritime transactions, expedition is of the utmost consequence; for even by a short delay, the object or season of a voyage may be lost; and therefore, if either party be not ready by the time appointed for the loading of the ship, the other may seek another ship or cargo, and bring an action to recover the damages he has sustained.

The manner in which the owner is to lade the cargo is, for the most part, regulated by the custom and usage of the place where he is to lade it, unless there be any express stipulation in the charterparty with respect to it. Generally, however, the owner is bound to arrange the different articles of the cargo in the most proper manner, and to take the greatest care of them. If a cask be accidentally staved, in letting it down into the hold of the ship, the master must answer for the loss.

If the owner covenants to load a full and complete cargo, the master must take as much on board as he can do with safety, and without injury to the vessel.

The master must not take on board any contraband goods, whereby the ship or cargo may be liable to forfeiture and detention; nor must he take on board any false or colourable papers; but he must take and keep on board all the papers and documents required for the protection and manifestation of the ship and cargo by the law of the countries from and to which the ship is bound, by the law of nations in general, or by any treaties between particular states.

If the master receive goods at the quay or beach, or send his boat for them, his responsibility commences with the receipt in the port of London. With respect to goods intended to be sent coastwise, it has been held, that the responsibility of the wharfer ceases by the delivery of them to the mate of the vessel upon the *truck*. As soon as he receives the goods, the master must provide adequate means for their protection and security; for even if the crew be overpowered by a superior force, and the goods taken while the ship is in a port or river within the country, the master and owners are liable for the loss, though they may have committed neither fraud nor fault. This may seem a harsh rule; but it is necessary, to put down attempts at collusive or fraudulent combinations.

The master must, according to the terms of the charterparty, commence the voyage without delay, as soon as the weather is favourable, but not otherwise.

Sometimes it is covenanted and agreed upon between the parties, that a specified number of days shall be allowed for loading and unloading, and that it shall be lawful for the freighter to detain the vessel a further specified time, on payment of a daily sum as *demurrage*.—(See *DEMURRAGE*.) If the vessel be detained beyond both periods, the freighter is liable to an action on the contract. The rate of demurrage mentioned in the charterparty will, in general, be the measure of the damages to be paid; but it is not the absolute or necessary measure; more or less may be payable, as justice may require, regard being had to the expense and loss incurred by the owner. When the time is thus expressly ascertained and limited by the terms of the contract, the freighter is liable to an action for damages if the thing be not done within the time, *although this may not be attributable to any fault or omission on his part*; for he has engaged that it shall be done.—(*Abbott on the Law of Shipping*, part iii. c. 1.)

If there has been any undertaking or warranty to sail with convoy, the vessel must repair to the place of rendezvous for that purpose; and if the master neglect to proceed with convoy, he will be answerable for all losses that may arise from the want of it.

The owners or master should sail with the ship for the place of her destination with all due diligence, and by the usual or shortest course, unless in cases of convoy, which the master must follow as far as possible. Sometimes the course is pointed out in the charterparty. A *deviation* from the usual course may be justified for the purpose of repairs, or for avoiding an enemy or the perils of the seas, as well as by the sickness of the master or mariners, and the mutiny of the crew.

By an exception in the charterparty, not to be liable for injuries arising from the act of God and the king's enemies, the owner or master is not responsible for any injury arising from the sea or the winds, unless it was in his power to prevent it, or it was occasioned by his imprudence or gross neglect. "The question," said Lord Mansfield, in an action brought by the East India Company, "is, whether the owners are to pay for the damage occasioned by the storm, the act of God; and this must be determined by the intention of the parties, and the nature of the contract. It is a charter of freight. The owners let their ships in hire, and they never was an *it*—a that they insure the cargo against the perils of the sea. What are the obligations of the owners which arise out of the fair construction of the charterparty? Why, that they shall be liable for damages incurred by their own fault, or that of their servants, as from defects in the ship, or improper stowage, &c. If they were liable for damages occasioned by storms, they would become insurers." The House of Lords confirmed this doctrine by deciding (20th of May, 1789) that the owner is not liable to make satisfaction for damage done by goods by storm.

The charterparty of a ship may include it either with its own goods, or, if he have not sufficient, may take in the goods of other persons, or (if not prevented by a clause to that effect in the charterparty) he may wholly underlet the ship to another.—(For further details, see *Abbott on the Law of Shipping*, part iii. c. 1.; *Chitty's Commercial Law*, vol. iii. c. 9. § 2.; and the articles BILL OF LADING, FREIGHT, MASTER, &c. in this Dictionary.)

#### Forms of Charterparties.

The following is one of the most usual forms of a charterparty:—

This charterparty, indented, made, &c., between A. B., &c., mariner, master, and owner of the good ship or vessel, called, &c., now riding at anchor, &c., of the burthen of 200 tons, or thereabouts, of the one

part, and C. D. of, &c., merchant, of the other part, witnesseth, that the said A. B., for the consideration hereinafter mentioned, hath granted, and to freight letten, and by these presents doth grant, and to freight let, unto the said C. D., his executors, administrators, and assigns, the whole tonnage of the hold, stern-sheets, and half-deck of the said ship or vessel, called, &c., (from the port of London, to, &c.,) in a voyage to be made by the said A. B. with the said ship, in manner hereinafter mentioned, (that is to say,) to sail with the first fair wind and weather that shall happen after, &c. next, from the port of London with the goods and merchandise of the said C. D., his factors or assigns, on board, to, &c. aforesaid, (the act of God, the king's enemies, fire, and all and every other dangers and accidents of the seas, rivers, and navigation, of whatever nature and kind, in so far as shipp, are liable thereto, during the said voyage, always excepted,) and there unlade and make discharge of the said goods and merchandises; and also shall there take into and on board the said ship again, the goods and merchandises of the said C. D., his factors or assigns, and shall then return to the port of London with the said goods, in the space of, &c. limited for the end of the said voyage. In consideration whereof, the said C. D., for himself, his executors, administrators, and assigns, doth covenant, promise, and grant, to and with the said A. B., his executors, administrators, or assigns, by these presents, that the said C. D., his executors, administrators, factors, or assigns, shall and will well and truly pay, or cause to be paid, unto the said A. B., his executors, administrators, or assigns, for the freight of the said ship and goods, the sum of, &c. (or so much per ton,) within twenty-one days after the said ship arrived, and goods returned, and discharged at the port of London aforesaid, for the end of the said voyage; and also shall and will pay for demurrage, (if any shall be by default of him, the said C. D., his factors or assigns,) the sum of, &c. per day, daily, and every day, as the same shall grow due. And the said A. B., for himself, his executors and administrators, doth covenant, promise, and grant, to and with the said C. D., his executors, administrators, and assigns, by these presents, that the said ship or vessel shall be ready at the port of London to take in goods by the said C. D., on or before, &c. next coming. And the said C. D., for himself, his, &c., doth covenant and promise, within 10 days after the said ship or vessel shall be thus ready, to have his goods on board the said ship, to proceed on in the said voyage; and also, on arrival of the said ship at, &c., within, &c. days to have his goods ready to put on board the said ship, to return on the said voyage. And the said A. B., for himself, his executors and administrators, doth covenant, promise, and grant, to and with the said C. D., his executors, administrators, and assigns, that the said ship or vessel now is, and at all times during the voyage shall be, to the best endeavours of him, the said A. B., his executors and administrators, and at his and their own proper costs and charges, in all things made and kept stiff, staunch, strong, well-appareled, furnished, and provided, as well with men and mariners sufficient and able to sail, guide, and govern the said ship, as with all manner of rigging, boats, tackle, and apparel, furniture, provision, and appurtenances, fitting and necessary for the said men and mariners, and for the said ship during the voyage aforesaid. In witness, &c.

The great variety of circumstances under which different voyages are made produce a corresponding diversity in charterparties. The charterparty of which the following is a copy affords a good example of the more complex species of these instruments.

It is this day mutually agreed between Mr. T. B. Rann, owner of the good ship or vessel called the *Mormaid*, William Thomason, master, of the measurement of 472 tons, of the above now in the river Thames, and Mr. David Thomason, of the firm of Messrs. Thomason, Passmore, and Thomason, of Mauritius, merchants, that the said ship, being tight, staunch, and strong, and every way fitted for the voyage, shall, with all convenient speed, sail and proceed to Calcutta, with leave to take convicts out to New South Wales, and from thence troops, merchandise, or passengers, to the aforementioned port of Calcutta, with leave to touch at Madras on her way thither, if required on owner's account, or so near thereto as she may safely get, and there load, from the factors of the said merchants at Calcutta, a full and complete cargo of rice, or any other lawful goods which the charterer engages to ship, and proceed with the same to Port Louis, in the Isle of France, and deliver the same free of freight; afterwards load there a full and complete cargo of sugar in bags, or other lawful merchandise of as favourable tonnage, which the charterer engages to ship, not exceeding what can reasonably stow and carry over and above her tackle, apparel, provisions, and furniture; and, being so loaded, shall therewith proceed to London, or so near thereto as she may safely get, and deliver the same on being paid freight, viz. for such quantity of sugar equal to the actual quantity of rice, or other goods, that may be shipped at Calcutta, at the rate of 5*l.* 12*s.* 6*d.* per ton of 20 cwt. nett, shipped there; and should the vessel deliver more nett sugar in the port of London than the quantity of rice, or other goods, actually shipped in Calcutta, the owners to be paid on the excess at the regular current rate of freight for sugar which other vessels, loading at the same time at Port Louis, receive; the tonnage of the rice, wheat, or grain, to be reckoned at 20 cwt. nett per ton; that of other goods at the usual measurement (the act of God, the king's enemies, fire, and all and every other dangers and accidents of the seas, rivers, and navigation, of whatever nature and kind soever, during the said voyage, always excepted). The freight to be paid on unloading and right delivery of the cargo, as is customary in the port of London. Ninety running days are to be allowed the said merchant (if the ship is not sooner despatched) for loading the ship at Calcutta, discharging the cargo at Port Louis, and loading the cargo there; the said lay days to commence on the vessel being ready to receive cargo, the master giving notice in writing of the same at Calcutta, and to continue during the loading there; and from the time of her arrival at Port Louis, and being ready to discharge, till the final loading at that port, and to be discharged in the port of London with all possible despatch; and 20 days on demurrage over and above the said laying days, at 12*s.* per day. Penalty for non-performance of this agreement, 4,000*l.* The cargo to be brought to and taken from alongside at the expense and risk of the merchants. The necessary cash for the disbursements of the vessel at Calcutta, not exceeding 300*l.*, to be advanced by the charterer's agents; they taking the master's drafts on the owner for the same, at the regular current rate of exchange, and at three months' sight; and if the said bills be not regularly accepted and paid when due, the same to be deducted from the freight payable by this charterparty. The vessel to be disbursed at Port Louis by the chartering agents; sum not to exceed 300*l.*, free of commission; and the amount to be deducted from the freight at the final settlement at the port of London. Captain not to ship goods without consent. In the event of the ship being prevented, by damage or any other cause, reaching the Mauritius on or before the 1st day of January, 1843, the charterer or his agents shall be at liberty to employ the vessel for one or two voyages to Calcutta, at the rate of 2*l.* per ton of rice, or other goods, delivered at Mauritius. Fifty running days, to load and discharge, to be allowed on each voyage; it being understood that the charterer or his agents shall load the ship, as before agreed, either at the end of the first or second voyage, as the case may be. The freight on the intermediate voyages (if any) to be paid on delivery of the cargo, in cash, or by bills on London at usance, at the option of the master. The vessel to be addressed, both at Calcutta and Isle of France, to the agents of the charterer. In witness whereof, the said parties have hereunto set their hands and seals, at London, the 23 day of December, 1841.

*Stamp Duty on Charterparties.* — The statute 55 Geo. 3. c. 181. enacts, that any charterparty, or any agreement or contract for the charter of any ship or vessel, or any memorandum, letter, or other writing, between the captain, master, or owner of any ship or vessel, and any other person, for or relating to the

freight or conveyance of any money, goods, or effects, on board of such ship or vessel, shall be charged with a duty of 1*l.* 1*s.*

And when the same, together with any schedule, receipt, or other matter, put or indorsed thereon, or annexed thereto, shall containe 2,160 words or upwards, then for every entire quantity of 1,080 words contained therein over and above the first 1,080 words, there shall be charged a further *progressive* duty of 1*l.* 5*s.*

CHAY or CHOY ROOT, the roots of a small biennial, rarely triennial, plant, growing spontaneously in light, dry, sandy ground near the sea; and extensively cultivated, especially on the coast of Coromandel. The cultivated roots are very slender, and from 1 to 2 feet in length, with a few lateral fibres; but the wild are shorter, and supposed to yield one fourth part more of colouring matter, and of a better quality. The roots are employed to dye the durable reds for which the Indian cotton yarn and chintzes have been long famous, and which can only be equalled by the Turkey red.

Chay root forms a considerable article of export from Ceylon. Only a particular set of people are allowed to dig it. It used to be all bought up by government, who paid the diggers a fixed price of 75 or 80 rix-dollars a candy, and sold it for exportation at about 175 rix-dollars. — (*Bertolucci's Ceylon*, p. 270.)

This root has been imported into Europe, but with no success. Dr. Bancroft suspects it may be injured by the long voyage; but he adds, that it can produce no effect which may not be more cheaply produced from madder. It is a very bulky article, and is consequently burdened with a very heavy freight. — (*Permanent Colours*, vol. ii. pp. 282—303.)

CHECKS, CHEQUES, or DRAFTS, are orders addressed to some person, generally a banker, directing him to pay the sum specified in the check to the person named i. , or bearer, on demand. The following is the usual form: —

£100.

London, 10th July, 1843.

Pay A. B. Esq., or bearer, One Hundred Pounds, on  
account of

C. D.

Messrs. Jones, Loyd, and Co.

In point of form, checks nearly resemble bills of exchange, except that they are uniformly payable to bearer, and should be drawn upon a regular banker, though this latter point is not essential. They are assignable by delivery only; and are payable instantly on presentment, without any days of grace being allowed. But by the custom of London, a banker has until 5 of the afternoon of the day on which a check is presented for payment, to return it; so that where a check was returned before 5, with a memorandum of "cancelled by mistake" written under it, it was held a refusal to pay. If a check upon a banker be lodged with another banker, a presentment by the latter at the clearing-house is sufficient. Checks are usually taken conditionally as cash; for unless an express stipulation be made to the contrary, if they be presented in due time and not paid, they are not a payment. It is difficult to define what is the due or reasonable time within which checks, notes, or bills should be presented. A man, as Lord Ellenborough has observed, is not obliged to neglect all other business that he may immediately present them: nevertheless it is the safest plan to present them without any avoidable delay; and if received in the place where payable, they had better be presented that day, or next at furthest. If a check be not presented within a reasonable time, the party on whom it is drawn will be justified in refusing to pay it; and the holder will lose his recourse upon the drawer. Checks drawn on bankers residing 10 miles or more from the place where they are drawn, must be on a stamp of the same value as a bill of exchange of an equal amount; but checks drawn on a banker, acting as such within 10 miles of the place where they are issued, may be on plain paper. — (*Chitty on Commercial Law*, vol. iii. p. 591.; *Wootrych on Commercial Law*, c. 3. § 2, &c.)

CHEESE (Ger. *Käse*; Du. *Kaas*; Fr. *Fromage*; It. *Formaggio*, *Cacio*; Sp. *Queso*; Rus. *Syr*; Lat. *Caseus*), the curd of the milk separated from the whey, and pressed or hardened. It has been used as an article of food from the earliest ages: vast quantities of it are consumed in Great Britain, and in most countries of Europe.

There is an immense variety of cheeses, the qualities of which depend principally on the richness and flavour of the milk of which they are made, and partly on the way in which they are prepared. England is particularly celebrated for the abundance and excellence of its cheese. Cheshire and Gloucestershire are, in this respect, two of its most famous counties; the cheese produced in the former has been estimated at 14,000 tons a year. There are two kinds of Gloucester cheese, double and single; the first is made of the milk and cream, the latter of the milk deprived of about half the cream. They are of various sizes, from 20 to 70 and even 80 lbs.; but they generally run from 50 to 60 lbs. A great deal of cheese is also made in that part of Shropshire which borders upon Cheshire, and in North Wiltshire. The former goes under the name of Cheshire cheese; the latter was, till lately, called Gloucestershire cheese: now it receives its appellation from the county where it is made. A strong cheese, somewhat resembling Parmesan, is made at Cledder in Somersetshire. The celebrated rich cheese called Stilton, is made in Leicestershire, principally in the villages round Melton Mowbray. It is not reckoned sufficiently mellow for eating unless it be two years old; and is not saleable unless it be decayed, blue, and moist. A rich cheese is also made at Leigh, in Lancashire. The other cheeses made in England, which have

required a peculiar name, either from the quantity made, or from the quality, are the Derbyshire, Cottingham, and Southern cheeses. The last two are now milk cheeses, of a peculiarly fine flavour; the cheese where they are made are in Cambridgeshire. Bath and York are remarkable for their cream cheeses. The county of Warwick, and Banbury in Oxfordshire, are also remarkable for cheeses; the former for the quantity made in it, very large supplies being sent from it to London and Birmingham. Banbury cheese is distinguished for its richness.

Southern is not celebrated for its cheese; the best is called Dunlop cheese, from a parish in Ayrshire, where it was originally manufactured. Dunlop cheeses generally weigh from 20 to 60 lbs. each; and are, in most respects, similar to those of Derbyshire, except that the latter are smaller. Cheeses made to resemble those of Dunlop are now extensively produced in other parts of Scotland.

Large quantities of very good cheese are produced in Holland. In the manufacture of Gouda cheese, which is reckoned the best made in Holland, muriatic acid is used in curdling the milk instead of rennet. This renders it pungent, and preserves it from mites.

Parmesan cheese, so called from Parma in Italy, where it is manufactured, is merely a skim-milk cheese, which owes its rich flavour to the fine herbage of the meadows along the Po, where the cows feed. The best Parmesan cheese is kept for 3 or 4 years, and none is ever carried to market till it be at least six months old.

Swiss cheese, particularly that denominated Gruyère, from the bailiwick of that name in the canton of Friburg, is very celebrated. Gruyère cheeses are made of skimmed or partially skimmed milk, and are flavoured with herbs. They generally weigh from 40 to 60 lbs. each, and are packed for exportation in casks containing 10 cheeses each.

According to Mr. Marshall, the average yearly produce of cheese from the milk of a cow in England, is from 3 to 4 cwt. or more than double the weight of the butter.

For further details, see *Statistical Account of the British Empire*, l. 501, 2d ed.

The duty on all descriptions of foreign cheese amounted, previously to 1842, to 10s. 6d. a cwt.; but in that year the duty on cheese imported from a British possession was reduced to 2s. 6d. a cwt. In 1845 the duties were still farther reduced, being then fixed at 5s. a cwt. and 1s. 6d. per ditto respectively on cheese from foreign parts and from British possessions.

We have hitherto derived by far the largest portion of our supplies of foreign cheese from Holland, but within the last few years the imports from the U. States have been rapidly increasing. The latter, which began in 1841, when 15,038 cwts. were imported, amounted in 1847 to 109,322 cwts. We subjoin

An Account of the Imports of Cheese and of the Quantities entered for Consumption, with the Revenue accruing thereon in 1846 and 1847.—(*Parl. Paper*, No. 107, Sess. 1848.)

	Imports.	Quantities entered for Consumption.		Revenue.
	Cwt.	Cwt.	£	£
1846	311,690	357,385		85,546
1847	351,802	365,503		90,928

The contract price of the cheese furnished to Greenwich Hospital, in the undermentioned years, has been as follows:—

Years.	Prices per lb.						
1730	d.	1770	d.	1810	d.	1850	d.
1740	5	1780	5½	1815	8	1855	4
1750	5	1790	4	1820	7½	1860	4
1760	5	1800	6½	1825	7½	1865	4½

CHERRIES, the fruit of a tree (*Prunus Cerasus*, Lin.) too well known to require any description.

They derive their name from Cerasus, a city of Pontus, whence the tree was brought by Lucullus, about half a century before the Christian era. It soon after spread into most parts of Europe, and is supposed to have been carried to Britain about a century after it came to Rome. The principal supplies of cherries for the London market are brought from the cherry orchards in Kent and Hertf. The wood of the cherry is close, takes a fine polish, and is not liable to split.—(*Rees's Cyclopædia*; *Landon's Encyclopedia of Agriculture*, &c.)

CHESTNUT, a forest tree (*Fagus castanea*) growing abundantly in most parts of the southern countries of Europe. It was at one time very common in England; and is still frequently met with. It is long lived; grows to an immense size; and is very ornamental. The wood is hard and compact; when young, it is tough and flexible; but when old, it is brittle, and often shaly. The chestnut contains only a very small proportion of sap-wood; and hence the wood of young trees is found to be superior to even the oak in durability. It is doubtful whether the roof of Westminster Hall be of oak or chestnut, the two woods being, when old, very like each other, and having been formerly used almost indifferently in the construction of buildings. A good deal of chestnut has been planted within the last thirty years.—(*Tredgold's Principles of Carpentry*.)

CHESTNUTS (Fr. *Châtaignes*; Ger. *Kastanien*; It. *Castagne*; Sp. *Castanas*), the fruit of the chestnut tree. Chestnuts grow in this country, but are very inferior both in size and perfection to those imported from the south of Europe. In some parts of the Continent they are frequently used as a substitute for bread, and form a large proportion of the food of the inhabitants. This is particularly the case in the Limousin, in Corsica, and in several districts of Spain and Italy. The inhabitants of the Limousin are said to prepare them in a peculiar manner, which deprives them of their astringent and bitter properties. Chestnuts imported from Spain and Italy are frequently kiln-dried, to prevent their germination on the passage. In this country they are principally served up roasted at desserts.

The duty of 2s. a bushel on chestnuts produced, in 1842, 3,435l. 3s. 0d. nett, showing that the consumption must have amounted to 34,351 bushels.

CHETWERT, a measure of corn in Russia, equal to 5½ Winchester bushels; so that 100 chetwerts = 74½ Winchester quarters.

**CHICCORY** or **SUCCORY**, the wild endive, or *Cichorium Intybus* of Linnæus. This plant is found growing wild on calcareous soils in England, and in most countries of Europe. In its natural state the stem rises from 1 to 3 feet high, but when cultivated it shoots to the height of 5 or 6 feet. The root, which runs deep into the ground, is white, fleshy, and yields a milky juice. In Germany, and in some parts of the Netherlands and France, chiccory has long been extensively cultivated for the sake of its root, which is used as a substitute for coffee. When prepared on a large scale, the roots are partially dried, and sold to the manufacturers of the article, who wash them, cut them in pieces, kiln-dry them, and grind them between fluted rollers into a powder, which is packed up in papers containing from 2 oz. to 3 or 4 lbs. The powder has a striking resemblance to dark ground coffee, and a strong odour of liquorice. It is largely used in Prussia, Brunswick, and other parts of Germany; but as it wants the essential oil and the rich aromatic flavour of coffee, it has little in common with the latter, except its colour, and has nothing to recommend it except its cheapness.

Chiccory was formerly raised to some extent in England as an herbage plant, its excellence in this respect having been much insisted upon by the late Arthur Young. Latterly, however, chiccory has been largely substituted for coffee here, as well as on the Continent: and as foreign chiccory, when imported, pays a duty of 6*d.* per lb., while that raised at home pays no duty, its cultivation has been rapidly extended. It has, in fact, been affirmed, by those best acquainted with the subject, that in 1842 the growth of British chiccory was little, if at all, short of 3,000 tons! We need not, therefore, be surprised, considering the influence of this large and rapidly increasing supply of untaxed chiccory over the consumption of coffee and the revenue derived from it, that this subject has engaged a good deal of attention. We do not, however, think that it presents any real difficulty. If a duty is to be laid on coffee, the interests of the consumer and of the revenue alike require that an equal duty should be laid on all articles used either as substitutes for coffee, or (which is the usual method of employing chiccory) as means of adulterating the latter. We are well convinced that the substitution of chiccory for coffee has already occasioned a loss to the revenue of 100,000*l.* a year, besides its mischievous influence in adulterating and debasing a popular beverage. There cannot, therefore, as it appears to us, be a doubt that, if the culture of chiccory be permitted, it should be subjected to the same duty as coffee. Inasmuch, however, as the collection of the duty would be difficult, and much fraud and evasion would doubtless be practised, the better plan would be to follow the precedent set in the case of tobacco, by grubbing up the chiccory plantations, and making, at the same time, compensation to their owners. A measure of this sort would do justice to all parties, and would afford that protection to the interests of the consumer and of the revenue which is indispensable.

**CHILLIES** (Hind. *Gua Murrilge*; Javan. *Lombok*; Malay. *Chabai*), the pods or fruit of the *Capsicum ann.*, or Guinea pepper. This is one of the hardiest and most productive plants raised in tropical climates; growing luxuriantly in almost all dry soils, however indifferent. In the wild state, the pods are small, and so pungent and acrid as to blister the tongue; but when raised on rich soils, they are large, and comparatively mild. The plant is said to be a native of both Indies. It is very extensively cultivated; and, with the exception of salt, is far more extensively used than any other condiment. In tropical countries, the pods are frequently made use of when unripe and green: when ripe, they become of a deep red colour; and in this state they are exported dry and entire, or reduced to powder—that is, to *Cayenne pepper*; which, when genuine, consists wholly of the ground pods of the *capsicum*.—(See *PEPPER*.)

**CHINA ROOT** (Ger. *Chinawurzel*; Du. *Chinawortel*; Fr. *Squine*, *Esquine*; Sp. *Raiz China*, *Co. almeca*; Arab. *Rhubaine*), the root of a species of climber (*Smilax China* Lin.). It comes from the West Indies as well as from China: but that from the latter is best. It is oblong and thick-jointed, full of irregular knobs, of a reddish brown colour on the outside, and a pale red within; while new, it will snap short, and look glittering within; if old, the dust flies from it when broken, and it is light and kecky. It should be chosen large, sound, heavy, and of a pale red colour internally. It is of no value if the worm be in it.—(*Milburn's Orient. Commerce*.)

**CHINA WARE.** See *PORECLAIN*.

**CHINTS** or **CHINTZ** (Fr. *Indiennes*; Ger. *Zitze*; It. *Indiane*; Ven. *Siz*); Sp. *Chites*, *Zaraza*), fine printed calico, first manufactured in the East Indies, but now largely manufactured in Europe, particularly in Great Britain.—(See *CALICO*.)

**CHIP HATS.** See *HATS*.

**CHOCOLATE** (Du. *Chocolade*; Fr. *Chocolat*; Ger. *Schokolade*; It. *Cioccolata*; Por. *Chocolate*; Rus. *Schokolad*; Sp. *Chocolate*), a kind of cake or confection, prepared principally from the cocoa nut. The nuts are first roasted like coffee; and being next reduced to powder and mixed with water, the paste is put into tin moulds of the desired shape, in which it speedily hardens, being, when taken out and wrapped in paper, fit for

the market. Besides cocoa, the Spaniards use vanilla, sugar, maize, &c. in the preparation of chocolate. This article, though celebrated for its nutritious qualities, is but little used in Great Britain; a circumstance which is probably, in some considerable degree, ascribable to the fiscal regulations to which it has been subjected. Its importation used, indeed, to be prohibited; and though this prohibition no longer exists, yet, as the duties on it are proportionally heavier than upon cocoa, we manufacture at home almost all that is required for our consumption. British chocolate is said to be very largely adulterated with flour and Castile soap. — (See *Edward's West Indies*, vol. ii. p. 364. ed. 1819; and the art. COCOA.) The quantity of chocolate brought from abroad, and left for home consumption in the United Kingdom, in 1841, amounted to only 1,543 lbs.

“ Alike easy to convey and employ as an aliment, it contains a large quantity of nutritive and stimulating particles in a small compass. It has been said with truth, that in Africa, rice, ginn, and shea butter, assist man in crossing the deserts. In the New World, chocolate and the flour of maize have rendered accessible to him the table lands of the Andes, and vast uninhabited forests.” — (*Humboldt's Pers. Nar.* vol. iv. p. 234. Eng. trans.)

CHRISTIANIA, the capital of Norway, situated at the bottom of a fiord or gulph, in the province of Aggerhuus; in lat. 59° 55' N., long. 10° 48' E. Population in 1835, 23,121. Christiania is about 60 miles from the open sea; the gulph is in some places very narrow, and its navigation somewhat difficult; but it is sufficiently deep for the largest vessels, having 6 or 7 fathoms water close to the quay. It is compulsory on all ships to take a pilot on board at the mouth of the bay. The trade of the town is considerable. The principal exports are timber and deals; glass, particularly bottles; iron and nails, bones, smalts, oak bark, &c. Salted and pickled fish, one of the staple products of Norway, is principally exported from Bergen. The deals of Christiania have always been in the highest estimation; a consequence of the excellence of the timber, and of the care with which the sap-wood and other defective parts are cut away; and not, as Mr. Coxe seems to have supposed, of the skillful sawing of the plank. The saw mills were formerly licensed to cut a certain quantity only, and the proprietors were bound to make oath that it was not exceeded. — (*Coxe's Travels in the North of Europe*, 5th edit. vol. iv. p. 28.) This absurd regulation no longer exists. There are far fewer restrictions on industry and commerce in Norway than in Sweden. In the former, British manufactured goods are admitted on moderate duties, and are very generally made use of. The principal articles of import are corn, colonial produce; woollen, linen, and cotton goods; butter, wine, brandy, &c. We subjoin an

Account of the Quantities of the Principal Articles imported into the United Kingdom from Norway in 1838, 1839, 1840, and 1841; and of the Quantities and declared Value of the Principal Articles of British Produce and Manufacture exported from the United Kingdom to Norway in 1839, 1840, and 1841.

Nothing would do so much to extend our trade with Norway, and not with it only, but with the whole north of Europe, as the repeal of the discriminating duty on Norwegian and Baltic timber. And, as this measure would be, in other respects, highly advantageous, it is to be hoped that its adoption may not be long deferred.

**Customs Regulations.**—Within 24 hours after a vessel has got to her moorings, the master should deliver to the collector his general report as to ships, cargo, or passengers, and the requisite documents for having such report made out with the assistance of a ship broker, whose services masters of foreign vessels cannot entirely dispense with. On making this general report, the measuring bill is to be exhibited, and payment of the tonnage and other dues inward is to be made. If the ship has not been previously measured in Norway, and, consequently, not provided with a Norwegian measuring bill, she is to be measured, in accordance with the Norwegian commercial laws, for the calculation of the tonnage duty.

The general report having been made, the Customs-house officers in charge of the vessel are furnished with the papers for delivery, and the discharge of the cargo commences under their inspection; and the consignees may make their special reports under their responsibility and signature. If they give without precise information as to the contents of any or all of the packages or bales to their address, these bales or packages may, at their request, be opened in the presence of the officers before report is made. If a consignee omits availing himself of this permission, his pretending thereafter, that more of these goods than he had ordered, or been advised of, have been sent to his address, will not be attended to. In the reports or entries it is to be stated, whether he is intended to pay the duties forthwith, whether the goods are intended for exportation, or whether they are to be landed.

Prior to commencing loading onwards, the master is to give verbal notice of his intention at the Customs-house. If he have no Norwegian measuring bill, the vessel is to be measured. This being done, the shipper or shippers of the outward cargo, are each of them to make their special entries as to the quality, weight, and measure of the goods therein to be landed.

A copy of such entries is to be deposited at the Customs-house, and the loading commences under the control of the officers. This applies to bonded cargoes; but if the cargo consists of cargo consist exclusively of wood, the shipper or shippers are only to notify that they intend loading wood, without specifying quantity, measure, &c., as the port duty is then charged according to the burden of the vessel. When the master clears onwards, he produces the proper documents for showing the burden of his vessel, and to what port she belongs, and he is then, on proper application being made, provided with a pilot, who takes his vessel in tow.

**Warehousing.**—In Norway, goods brought from abroad may be landed or warehoused, with a view to their being again exported some future period. Goods entered for home consumption may also be landed for a certain period, in order to facilitate the payment of the duties.

The former is called "free-opslag," that is, depositing or warehousing goods for exportation, subject to transit duties only. The latter is called "credit opslag," that is, warehousing or landing on credit.

**Money, Weights, and Measures.**—In Norway there are no gold coins. The principal silver coin, called a species dollar, is divided into 120 skillings. There are, also, half species, or 60 skilling pieces; and what is denominated skillingmynt, or small change.—That is, 4 and 2 skilling pieces. The species dollar contains 800/100 Eng. grs., and is consequently worth 4s. 6d. sterling, the par of exchange being 4 species dollars 42 6/10 skilling, or 14. All Norway coins, except the small change, are alloyed with 1-7th copper, so that the species dollar weighs 448 3/4 Eng. grs., and its divisions in proportion. Small change coins are alloyed with three times their weight of copper. There are 1 and 2 skilling pieces of copper.

**Weights and Measures,** same as at COPENHAGEN; which see.

**Shipping Charges.**—The various charges of a public nature payable by a shipper, on entering the port of Christiania, with a mixed cargo on board, unloading there, taking on board another cargo, and clearing out, are as follows:

	£	s.	d.
1. <b>Charges Inwards.</b> —Pilotage from Farler, at the month of Christiania Bay, where all ships must take a pilot on board	2	2	9
Bill of health, assuming that the crew, including the master, consists of 12 persons	0	17	9
Tonnage dues and light money	0	16	9
Brokers' fees	0	15	4
2. <b>Charges Outwards.</b> —Pilotage	0	4	9
Cash dues	0	1	7
Master roll of crew	0	13	5
Pale or stake money	0	3	4
Measuring bill	2	4	0
Charity chest	0	1	7
Tonnage dues and light money	10	11	1
Highland light	0	0	9
Pilotage to Farler	1	14	8
Brokers' fees	0	18	11
	£	18	6

**N.B.**—There is no difference between the charges on native ships in Norwegian ports, and privileged foreign ships, that is, the ships of countries having reciprocity treaties with Norway; not in the duties on goods imported by native ships and such privileged foreign ships. Great Britain is a privileged country.

The shipping of Norway has declined considerably of late years; a proof, if any such were wanting, of the growing influence of the Linnæus kept up in this country as to the supposed pernicious influence of reciprocity treaties on our shipping.

**Banking.**—There are two public banks or establishments in Norway; but there is a public bank, having its principal office at Drontheim, with branches at Christiania, Bergen, and Christiania. It was established by a royal charter, issued in 1816. Its capital consists of 2,000,000 species dollars, in transferable shares, divided amongst those who were forced to contribute to its formation. These shares are now at a premium of 50 per cent. Its managers are appointed by, and are accountable to, the Norwegian or Christiania parliament. It issues notes for 100, 50, 10, and to low as 1 species dollar. These notes should be payable in specie on demand; but they are not redeemable of 55 per cent., and are paid by the bank at that rate. Its accounts, both at 2 and 3 months date at 5

1. **Transit Oplog.**—Under this system, goods from abroad may be warehoused for exportation free of import duty, paying only a reservation a transit duty, which is to be paid in full of what they would pay if entered for home consumption. If the goods are deposited in the Customs-house warehouses, they are free of rent or dues during 14 days, and if in private warehouses, under the key and seal of the customs, during 6 months. If they remain long, viz. beyond 14 days in the one, and beyond 6 months in the other case, they are to be valued at 1-8th of the transit duty per month; which, after the lapse of 3 months, as regards goods in the Customs-house warehouses, is increased to 1-4th of the transit duty per month.

2. **Credit Oplog.**—This system allows most goods imported from abroad to be placed in the owner's or importer's own warehouses, under his own lock, free of duty, for a given time, in his reporting to the customs, every 3 months, how much he has sold, otherwise consumed, or exported, and then paying the duty on such amount; the Customs-house officers, who are bound quarterly to examine the goods, conveying themselves, by actual demonstration, that no more is missing than the quantity reported to have been taken away.

This credit on the duties in no case to exceed 3 years from the time the goods were imported.

Way of security for payment of the duties on which the credit is granted, government reserve to themselves.—

1. Priority of mortgage on all the goods in question.

2. Priority, or first right, in the property, goods, and effects of every description belonging to the trader availing himself of this credit, in as far as such property is not previously legally mortgaged.

3. Liberty for the Customs-house officers, when and as often as they shall deem it expedient, between the stated quarterly inspections, to look over the stock on hand, and to ascertain, retaining whether there remains sufficient value for the duties; and if they see reason to doubt this, full right, in default of other satisfactory security being given, to open the stock, and to sell the whole, or as much as shall cover the duties.

4. In case of death or failure of the party, an equal right to go forthwith in the whole of his stock, and to retain as much of the proceeds as shall cover the duties; and in case of delinquency, an established claim for the remainder on the estate of the deceased or bankrupt, as the case may be.

In charging the duties, no allowance is made for waste or damage in the warehouses.

The warehouse rent charged on goods bonded under the transit system, in the Customs-house warehouses, is as follows:

On a quarter of wheat, for the first 3 months	0	5	588	per month
Afterwards	0	1	076	—
On a ton of raw sugar, for the first 3 months	0	15	581	per month
Afterwards	1	11	079	—

per cent. per annum) advances money on mortgage at 4 per cent. and transacts the ordinary banking business of individuals. It does not allow interest on deposits.

**Credit.**—Goods are sold partly for ready money, and partly on credit, but principally the former.

**Commission, &c.**—The number of brokers in Christiania is limited to 4. Commission on the sale of goods, 2 per cent., or, if real estate included, 3 per cent. Brokerage is fixed by law at 5-6ths per cent., which, in practice, is paid by the seller.

**Insurance.**—All houses situated in the Norwegian market towns must be insured in the General Insurance Company at Christiania, which is guaranteed by the state. The premium is moderate, being, on buildings situated in towns, 1-3th, and on those situated in the country, 1-8th per cent. Sometimes, however, when very destructive fires occur, it is raised.

**Provisions, &c.**—Christiania is not a favourable place for careening and repairing ships; but supplies of beef, bread, water, and other sea stores, may be had as cheap or cheaper than in any other part of Norway; but its situation from the sea is too great to allow of its being visited by ships desirous merely of victualling.—(We have derived these details from various sources, but principally from Consul's Returns.)

**Tinifer.**—A standard Christiania deal is 11 feet long, 12 inch thick, and 9 inches broad; and 31 2/3 such deals make a load.

**Freight of deals from Norway to London** is calculated at the rate of single deals, the standard measure of which for Christiania and all the southern ports of Norway, except Dram, is small town on the Drammen, about 80 miles S.W. of Christiania), is 11 feet long, and 12 inch in thickness. A single deal from Dram is reckoned 10 feet long and 12 inch thick.

**Battens.**—Three battens make 2 deals, retaining their own length and thickness. Half deals are only counted as deal counts, if they run under 6 feet; but if they run 6 or 7 feet long, 3 half deals are counted a deal, retaining their own thickness.

**Ends of Deals.**—Four ends of deals, although 5 feet long, make but a deal 11 feet long, retaining their thickness, while the owners and captains of ships think unreasonable; but as the first owners of ships seldom care to have their goods, which commonly run from 3 to 5 feet, and are taken on board as stowage, consequently for the advantage of the ship and not the bather, the ship ought to be counted as 4 deals.

**Ends of Battens, called Larvick Pulvis.**—No less than 6 ought to be counted a single deal, 11 feet long and 12 inch thick.

**Fair-boards,** when they have their proper length, are 7 feet long; 3 pile-boards are counted a single deal.

Stow for logbook take up more room in consequence of which more than 10 cannot be computed a single deal.

The width of deal is never noticed in the calculation of freight; a good deal ought to run 2 inches within the stow,

which not a twentieth part of a cargo (as at present) but, though more may be above 9 inches wide, many are only 8, therefore care must be taken for the latter.

*Timber of living chests*, cannot be exactly computed according to the contents in shells, because it cannot be stored in a ship in the same manner as shells; the freight is, therefore, agreed for by the tonnage, or according to the number of deals which the vessel may have taken on board on a former voyage.

One hundred deals = 100.  
 A ton = 41 solid feet of timber, cut in a square.  
 One load of deals, or timber, is 20 solid feet.  
 Two loads of timber are reckoned for 100 deals.  
 The several bills of lading contain together an exact account of the cargo which the captain has received on board his ship, consequently binding him to deliver according to their contents; when, therefore, the deals are mentioned as usual 9 and 10 feet, and 11 and 12 feet, he cannot insist on more freight than half of the length, according to his description.

One thousand Norway standard deals are reckoned equal to a keel of deals, which is 21 tons.

*Boards* pay duty as masts; capstems are above 1½ and under 18 inches in circumference at the middle, and without bark. Cleuboard is exported in whole pieces and unquartered. Deals from Germany pass as Norway deals; spruce deals are upwards of 30 feet in length; deals from Norway, above 7 feet long, are counted as whole deals; above 5 feet, and not above 7 feet in length, are accounted as half deals, and two of them pass as one whole deal.

The difference between the Christiania and Dram standard being nearly 1-11th part, the freight to Dram ought to be varied proportionally. It has sometimes happened that ships both for Christiania and Dram have been in company, and those for Christiania have got up, loaded, and sailed, before the others for Dram have got overboard, which runs very strong down in the spring of the year.—(Riddons' European Commercior.)

**CHUNAM**, the name given in India to lime. The best, obtained by the calcination of shells, is employed in the composition of **BETEL**—(which see), to prevent, it is said, its injuring the stomach.

**CIDER**, or **CYDER** (Fr. *Cidre*; Ger. *Zider*, *Apfelwein*; It. *Cidro*; Rus. *Sidor*; Sp. *Sidra*), the juice of apples expressed and fermented. The produce of the duty on cider and perry (the expressed and fermented juice of pears) amounted, in 1828, to 37,220,1 which, as the duty was 10s. a barrel, shows that the quantity produced and brought to charge must have amounted to 74,440 barrels, exclusive of what might be clandestinely manufactured. The perry is supposed to have amounted to about a fourth part of this quantity. The duty was repealed in 1830.—(See **APPLES**.) Perhaps the total produce of elder and perry may now be estimated at from 150,000 to 160,000 barrels.

**CIGARS**. See **TOBACCO**.

**CINNABAR** (Ger. *Zinnuber*; Du. *Cinaber*, *Vermilion*; Fr. *Cinnabre*; It. *Cinabro*; Sp. *Cinabrio*; Rus. *Kinowar*; Lat. *Cinnabrium*).

1. *Native Cinnabar*—a mineral substance, red, heavy, and brilliant. It is found in various places, chiefly in quicksilver mines, being one of the ores of that metal. The cinnabar of the Philippine Islands is said to be of the highest colour; but that of Almaden, in Spain, is the richest. The best native cinnabar is of a high colour, brilliant and free from earthy or stony matter.

2. *Artificial Cinnabar*.—"When two parts of mercury and one of sulphur are triturated together in a mortar, the mercury gradually disappears, and the whole assumes the form of a black powder, formerly called *Ethiops mineral*. When this mineral is heated red hot, it sublimes; and if a proper vessel be placed to receive it, a cake is obtained of a fine red colour. This cake was formerly called cinnabar; and, when reduced to a fine powder, is well known in commerce under the name of *vermillion*."—(Thomson's *Chemistry*.)

**CINNAMON** (Du. *Kaneel*; Fr. *Cannelle*; Ger. *Zimmet*, *Kaneel*; It. *Cannella*; Lat. *Cinnamomum*, *Cavalla*; Por. *Canella*; Sp. *Canela*; Pers. and Hind. *Darchinie*; Arab. *Daraini*; Malay, *Kaimanta*; Greek, *Κινναμωμ*), the bark of the cinnamon tree (*Laurus cinnamomum*), a native of Ceylon, where it grows in great abundance Cochin China, and perhaps of some other countries. It is brought home in bags or bales weighing 92½ lbs. each; and, in stowing it, black pepper is mixed with the bales to preserve the cinnamon. The best cinnamon is thin and rather pliable: it ought to be about the substance of royal paper, or somewhat thicker; is of a light yellow colour, approaching nearly to that of Venetian gold; it is smooth and shining; fractures splintery; has an agreeable, warm, aromatic flavour, and a mild sweetish taste; when chewed, the pieces become soft, and seem to melt in the mouth; it is not so pungent but that it may be borne on the tongue without pain, and is not succeeded by any after taste. Whatever is hard, thick as a half-crown piece, dark-coloured or brown, or so hot that it cannot be borne, should be rejected. Particular care should be taken that it be not false packed, or mixed with cinnamon of an inferior sort.—(Milburn's *Orient. Comm.*; Marshall's *Essay*, quoted below.)

The cinnamon of Cochin China grows in the dry sandy districts lying N. W. of the town of Fribbe, between 15° and 16° N. lat. It is preferred in China to the cinnamon of Ceylon; the annual imports into Canton and other ports vary from 250,000 to 300,000 lbs. There are no fewer than 10 varieties of this species in the market. It is not cured, like that of Ceylon, by freeing it from the epidermis.—(Crawford's *Embassy to Siam*, &c. p. 475.)

*Cinnamon Monopoly*.—Down to 1833, the cultivation of cinnamon in Ceylon was restricted to a few gardens in the neighbourhood of Colombo; the production and sale of the article being wholly monopolized by government. Upon the transference of the island from the East India Company to the king's government, the former agreed to pay 60,000*l.* a year for 400,000 lbs. or 4,342½ bales of cinnamon: it being stipulated, that if the quantity collected exceeded this amount, the surplus was to be burned! \*

\* See an article by H. Marshall, Esq., staff surgeon to the forces in Ceylon, in Thomson's *Annals of Philosophy*, vol. x. p. 336.

But this agreement was afterwards broken off, and the cinnamon was sent to England by government, and sold on its account at quarterly sales. The nett revenue derived from the cinnamon monopoly, in 1831, is said to have amounted to 127,961*l.* As the monopoly could not be enforced, except by confining the culture of cinnamon to certain districts, it necessarily led to the most oppressive interferences with the rights of individuals, to the creation of numberless imaginary offences, and the multiplication of punishments, forming a heavy drawback upon the prosperity of the island. A sense of these disadvantages led at length to the abolition of the monopoly system in 1833, when we ceased to be amenable to the charge of upholding, without improving, the worst part of the Dutch policy, and restored to the natives their right to cultivate cinnamon any where and in any way they think fit.

*Duties on Cinnamon.*—Unfortunately, however, the abolition of the old monopoly system was accompanied by the imposition of the exorbitant duty of 2*s.* per lb. on all cinnamon exported, without distinction of quality. This new system having been organised at the period when the former edition of this work was being printed, we took the liberty to animadvert upon it, as follows. "The natural cost of cinnamon does not, we believe, exceed 6*d.* or 8*d.* per lb., but taking it at 1*s.*, the proposed duty is no less than 200 per cent. 1 So enormous a tax, by confining the export of cinnamon within the narrowest limits, will go far to deprive the island of the advantages it would otherwise derive from the repeal of the monopoly, and will be, in all respects, most injurious. We have heard, that it is contended, in vindication of this oppressive tax, that Ceylon having a natural monopoly of cinnamon, it is sound policy to burden it with the highest duty it will bear; as the largest revenue is thus obtained at the least expense to the island. But, in addition to the cinnamon produced in Cochin China, and which it is more than probable will speedily find its way to the European markets, the extent to which *cassia lignea* is substituted for cinnamon, shows that the monopoly possessed by Ceylon is of very trifling importance. But though it were otherwise, though *cassia lignea* did not exist, and cinnamon were to be found nowhere but in Ceylon, we should not the less object to so exorbitant an export duty. So long as it is maintained, it will confine within the narrowest limits, whatever might otherwise become a most important branch of industry, and a copious source of wealth to the island. According to the crown commissioners, the average quantity and value of the different sorts of cinnamon annually sold of late years has been—

Sorts of Cinnamon		Quantity.	Rate.	Amount.
		<i>Lbs.</i>	<i>s.</i> <i>d.</i>	<i>£</i> <i>s.</i> <i>d.</i>
First sort	- - -	90,000	7 8 1	59,400 15
Second sort	- - -	250,000	5 10 1	67,500 10
Third sort	- - -	180,000	4 3 4	34,437 10
All sorts	- - -	500,000	- - -	159,343 15

"It is not at all probable that the exports will materially increase under the new system; but had the duty varied from about 6*d.* per lb. on the best, to 3*d.* or 4*d.* on the inferior sorts, we have little doubt, now that the culture is free, that the exports would, at no very distant period, have amounted to some millions of pounds. It is the high price of cinnamon—a price not caused by its scarcity or the difficulty of its production, but by the oppressive monopolies and duties to which it has been subjected, and which has now to be regarded as a luxury attainable only by the rich. There is no other spice that is so universally acceptable; and there is none, were it charged with a reasonable duty, that would be so sure to command an immense sale. We know, quite as well as the writer of an article on this subject in the *Colombo Journal*, that 'the cook who employs 1 ounce of cinnamon to improve the flavour of his dishes, will not employ 4 ounces when the spice is a fourth of the price;' but we further know, what the journalist would seem to be ignorant of, that were its price reduced, as it might be, to a third of what it has hitherto cost, it would be used by ten or a dozen cooks, for every one who employs it at present. In fact, the entire consumption of cinnamon in Great Britain is under 20,000 lbs. a year!

"Should the exports of cinnamon from Ceylon under the new plan amount to 500,000 lbs. a year, government will receive from it an annual revenue of 75,000*l.*; and supposing them to amount to 600,000 lbs., the revenue will be 90,000*l.* And to secure the immediate payment of this trifling sum, every ulterior consideration of profit and advantage has been sacrificed. It is, however, pretty clear, that this short-sighted rapacity will be, in the end, no less injurious to the revenue, than to the industry and trade of the island. Were cinnamon allowed to be exported for a few years under a low duty, or till such time as the taste for it was fully diffused throughout this and other countries, it would then be easy, by gradually raising the duty, to obtain from it, without materially checking the consumption, a very large revenue; at least 5 or 6 times more than it will ever produce under the present plan.

"Suppose that we had had the power effectually to monopolise the inventions by which Sir Richard Arkwright and others have so prodigiously facilitated the spinning of cotton; what would have been thought of the policy of those who should have proposed laying a duty on exported cottons equivalent to the peculiar advantages we enjoyed in their production? Had this been done, we should have got a monopoly value for our exports of cotton; but instead of amounting, as at present, to 22,000,000*l.* a year, they would not, under such a plan, have amounted to 200,000*l.*; and instead of affording subsistence for some 1,300,000 or 1,400,000 individuals, the cotton manufacture would not have supported 50,000! And yet this is the mischievous nostrum—for it would be an abuse of terms to call it a principle—on which we have proceeded to regulate the export of the staple product of Ceylon."

The experience of the last 10 years has more than confirmed the truth of these statements. Instead of increasing, as they certainly would have done but for the exorbitancy of the duty, the exports of cinnaon have declined even below their amount during the monopoly. Notwithstanding the reduction of the duty in 1841 to 2*s.* per lb., the exports in that year amounted to only 323,461 lbs., producing a revenue of 33,111*l.* This result has been brought about, as we anticipated, partly by the high duty and its consequent high price restricting the demand for cinnamon; partly by the duty operating as a bounty to introduce the culture of the plant into other places; and partly and principally by its encouraging the use of *cassia lignea* and other substitutes in the place of the genuine article.

"It does not," says Mr. Cook, "admit of a doubt, that unless the export duty of 2*s.* per lb. payable on the shipment of cinnamon at Ceylon, be removed, the trade must speedily be annihilated. In 1798 the cultivation was known in no other part of the world, and notwithstanding the monopoly even then of such an exorbitant charge, the trade was comparatively little affected; but in 1825 a successful attempt was made in Java by an experienced planter from Ceylon, and the shipments from that island, which, having since been annually increasing, are now estimated for this year (1842) at 117,000 lbs. at least, on which is levied a duty, on the value, of 4 per cent. only. The culture has also extended itself to Guiana and the West Indies; and, judging from a small parcel lately received from Jamaica, there can be no question it can be successfully produced in that quarter, and that a supply may at no distant period confidently be expected from thence, the duty there being only 2*s.* per cent. From Cochin China, Malabar, &c. large quantities will also doubtless ere long find their way to Europe, their produce being comparatively free from fiscal charges. It is therefore evident that Ceylon cinnamon cannot, under existing circumstances, withstand the competition of that of other countries; and if the merits of the question were understood by the government, this interesting trade would assuredly be no longer allowed to remain in

\* Of the firm of Trueman and Cook, brokers, the highest authority that can be referred to on such a subject.

its present anomalous state. Indeed Ceylon cinnamon, independently of other adverse influences, would be very soon driven out of the European markets by the increased use of *cassia lignea* as a substitute. The question of revenue will no doubt engage the attention of government, the cinnamon duty having yielded in 1833 as much as 160,000*l.*, or about half the revenue of the island; whereas in 1841 the governor estimated it at 47,000*l.* only, and it is doubtful if it will realise even this much. — (In fact it only realised 33,111*l.*); so that the levying an impost so oppressive has proved as injurious to the collection of revenue as to the prosperity of the trade.

It is unnecessary to add any thing to this conclusive statement. We may mention, however, that the export duty either has been or is to be immediately reduced to 1*s.* per lb. But even this reduced duty will be most oppressive. A duty of 3*d.*, or at most 4*d.* per lb., is the very highest that should be imposed. During the 3 years ending with 1842 the cinnamon entered for consumption, and the duties, were—

CINQUE PORTS. These are ancient trading towns, lying on the coast of Kent and Sussex, which were selected, from their proximity to France, and early superiority in navigation, to assist in protecting the realm against invasion, and vested with certain privileges by royal charter.

“The ports so privileged, as we at present account them, are Dover, Sandwich, Romney, Hastings, Hythe, and the two ancient towns of Winchelsea and Rye; although the two latter places appear to have been originally only members. The services which they were appointed to perform were either honorary, viz. assisting at the coronation and sending members to parliament; or auxiliary to the defence of the realm, as furnishing a certain supply of vessels and seamen, on being summoned to that service by the king's writ.

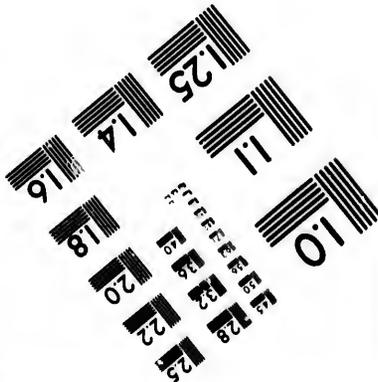

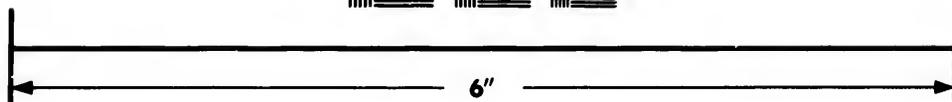

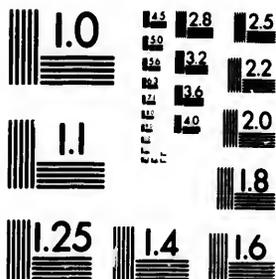

“In process of time the Cinque Ports grew so powerful, and, by the possession of a warlike fleet, so audacious, that they made piratical excursions in defiance of all public faith; on some occasions they made war, and formed confederacies as separate independent states. It seems, however, that these irregularities were soon suppressed, when the government was strong, and sufficiently confident to exert its powers. So long as the mode of raising a navy by contributions from different towns continued, the Cinque Ports afforded an ample supply; but since that time their privileges have been preserved, but their separate or peculiar services dispensed with. Their charters are traced to the time of Edward the Confessor; they were confirmed by the Conqueror, and by subsequent monarchs. William the Conqueror, considering Dover Castle the key of England, gave the charge of the adjacent coast, with the shipping belonging to it, to the constable of Dover Castle, with the title of Warden of the Cinque Ports; an office resembling that of the Count of the Saxon coast (*Comes littoris Saxonici*) on the decline of the Roman power in this island. The lord warden has the authority of admiral in the Cinque Ports and its dependencies, with power to hold a court of admiralty; he has authority to hold courts both of law and equity; is the general returning officer of all the ports, — parliamentary writs being directed to him, on which he issues his precepts; and, in many respects, he was vested with powers similar to those possessed by the heads of counties palatine. At present the efficient authority, charge, or patronage of the lord warden is not very great; the situation is, however, considered very honourable, and the salary is 3,000*l.* He has under him a lieutenant and some subordinate officers; and there are captains at Deal, Walmer, and Sandgate Castles, Arcliff Fort, and Moats Bulwark.

“There is an exclusive jurisdiction in the Cinque Ports (before the mayor and jurats of the ports), into which exclusive jurisdiction the king's ordinary writ does not run; that is, the court cannot direct their process immediately to the sheriff, as in other cases. In the Cinque Ports, the process is directed to the governor of Dover Castle, his deputy or lieutenant. A writ of error lies from the mayor and jurats of each port to the lord warden of the Cinque Ports, in his court of Shepway, and from the court of Shepway to the King's Bench; a memorial of superiority reserved to the crown at the original creation of the franchise; and prerogative writs, as those of habeas corpus, prohibition, certiorari, and mandamus, may issue, for the same reason, to all these exempt jurisdictions, because the privilege, that the king's writ runs not, must be intended between party and

party, and there can be no such privilege against the king."—(*Chitty's Commercial Law*, vol. ii. p. 12.)

**CITRON** (Ger. *Succade*; Da. *Sukkat*; It. *Confetti di cedro*; Sp. *Acitron verde*; Fr. *Citronat verd*), an agreeable fruit, resembling a lemon in colour, smell, and taste. The principal difference lies in the juice of the citron being somewhat less acid, and the yellow rind being somewhat hotter, and accompanied with a considerable bitterness.—(*Lewie's Mat. Med.*) It is imported, preserved and candied, from Madeira, of the finest quality.

**CIVET** (Ger. *Zibeth*; Du. *Civet*; Fr. *Civette*; It. *Zibetto*; Sp. *Algalia*), a perfume taken from the civet cat. It is brought from the Brezils, Guinea, and the interior of Africa. When genuine, it is worth 80s. or 40s. an ounce.

**CIVITA VECCHIA**, a fortified sea-port town of the papal dominions, on the Mediterranean, lat. 42° 4' 58" N., lon. 11° 44' 52" E. Population 7,000.

**Harbour.**—The port of Civita Vecchia is artificial, and is formed by three large moles. Two of them projecting from the mainland, inclined one to the north and the other to the south, form the sides of the harbour; while a third mole, or breakwater, constructed opposite to the gap between the other two, serves to protect the harbour from the heavy sea that would otherwise be thrown in by the westerly gales. A lighthouse, having the lantern elevated 74 feet above the level of the sea, is erected on the southern extremity of the outward mole; the distance from its extremity to the extremities of the lateral moles, on which there are towers, being about 90 fathoms. Vessels may enter either by the south or north end of the outer mole, but the southern channel is the deepest, having from 8 to 6 and 4 fathoms. Ships may anchor within the port, in from 16 to 18 feet water; or between it and the outer mole, where the water is deeper. Within the port there is a dock and an arsenal.—(*Plans of Civita Vecchia*.)

**Historical Notice.**—This harbour, which is by far the best on the western side of the papal dominions, owes its origin to the Emperor Trajan, and affords the most unequivocal proof, not of his power merely, but of his sagacity and desire to promote the interests of commerce and navigation. There is in one of Pliny's Letters (lib. vi. epist. 31.) a clear and interesting account of this great work, which has obviously been planned and constructed with equal skill and judgment. The outer mole was mostly formed, precisely like the breakwater at Plymouth, by sinking immense blocks of stone into the sea, which became fixed and consolidated by their own weight, till by degrees it was raised above the waves. (*Assurgit autem arte visenda: ingentia saxa latissima navis provehit. Contra hæc alia super alia defecta ipso pondere manent, ac sensim quodam œstus aggeres construuntur.*) Originally it was called *Trajanus Portus*, and it is to be regretted that it did not always bear the name of its illustrious founder. But in the latter ages of the Roman empire it was called *Centum Cellæ*, and in modern times *Civita Vecchia*.—(*Cellar's Notitia Orbis Antiquæ*, i. p. 734.)

**Money.**—Accounts are kept here, and throughout the papal states, in crowns or scudi, and scudi are three denari. 1 scudo = 10 pæsti, and 1 pæst = 10 bajocchi. The scudo contains 400 grains of English standard silver, and is consequently worth 4s. 4d. sterling. Payments above 5 scudi are made in credits, or schedules, a species of bank notes; but these, not being payable in specie on demand, are uniformly at a discount.

**Weights.**—The *libra*, or pound of 16 *onci* or 6,492 grains, contains 6,354 English grains. Hence, 100 Roman pounds =

14,771 lbs. avoirdupois = 90,868 lbs. Troy = 33,906 kilo grammes = 70,008 lbs. of Hamburg. There are three different cantares or quintals; viz. of 100, 160, and 250 lbs. The quintale = 1,000 lbs.

**Measures.**—The Roman foot = 11.75 Eng. inches; the cubit = 18.54 Eng. inches; the canna used by builders = 57.96 Eng. inches; the barrel of wine = 14.94 imp. gallons, and the barrel of oil = 12.64 imp. galls.; the soma of oil = 36.15 imp. dis.; the rubico of corn = 64.43 imp. bushels.—(*Kelly's Cambist; Nellesbrucher, Manual Universel.*)

**Imports and Exports.**—Though the wealth and population of the country round Civita Vecchia are much fallen off in modern times compared with antiquity, it still continues to be the entrepôt of Rome, and engrosses almost the entire trade of the papal dominions on the side of the Mediterranean. The imports consist principally of cotton, woollen, silk, and linen stuffs; coffee, sugar, cocoa, and other colonial products; salt and salted fish, wines, jewellery, glass and earthenware, &c. The exports consist of staves and timber, corn, coal, wool, cheese, potash, pumice-stone, alum, from Tofia, in the vicinity, and other articles. The total value of the imports may be reckoned at from 650,000, to 700,000, and it may be fairly presumed that the real value of the exports is not much inferior. Marseilles and Genoa have the largest share of the foreign trade of Civita Vecchia, and next to them England.

**Duties.**—Civita Vecchia is a free port, that is, a port into which produce may be imported, and either consumed or re-exported, free of duty.

**Quarantine regulations** are strictly enforced; no vessel with a full bill of health being permitted to enter any of the papal ports.—(*Annuaire du Commerce Maritime*, tom. ii. p. 366, &c.)

**CLARET**, one of the best French wines. See the articles **BORDEAUX** and **WINE**.

**CLEARING**, among *London Bankers*, is a method adopted by them for exchanging the drafts on each other's houses, and settling the differences. Thus, at half-past 3 o'clock, a clerk from each banker attends at the clearing-house, where he brings all the drafts on the other bankers, which have been paid into his house that day, and deposits them in their proper drawers (a drawer being allotted to each banker); he then credits their accounts separately with the articles which they have against him, as found in the drawer. Balances are then struck from all the accounts, and the claims transferred from one to another, until they are so wound up and cancelled, that each clerk has only to settle with two or three others, and their balances are immediately paid.

It appears from an account given in the Appendix to the Second Report of the Committee of the House of Commons on Banks of Issue, that, in 1839, the aggregate demands made through the clearing-house on the different bankers who make use of its agency, amounted to the vast sum of 954,401,600*l.*, in the settlement of which the payment of only 66,275,600*l.* bank notes, or about  $\frac{1}{14}$ th part of the total amount, was required.

"Such drafts as are paid into a banker's too late for clearing, are sent to the houses on which they are drawn, to be *marked*, which is understood as an engagement that they will be paid the next day."—(*Kelly's Cambist.*) The technical operations carried on at the clearing-house have been described by Mr. Gilbart, in his *Practical Treatise on Banking*, pp. 16—20.

**CLEARING-HOUSE**, the place where the operation termed clearing is carried on.

**CLOCK, CLOCKS** (Ger. *Uhren, Grosse Uhren, Wanduhrke; Du. Uren, Urwerken, Horologien; Fr. Horloges; It. Orologgi, Oriuoli; Sp. Relojes; Rus. Zhadani*), a kind of machine, put in motion by a gravitating body, and so constructed as to divide, measure, and indicate the successive portions of time with very great accuracy. Most clocks mark the hour by striking or chiming. It is a highly useful instrument, and is extensively employed for domestic and philosophical purposes. Clocks are made of an endless variety of materials and models, so as to suit the different uses to which they are to be applied, and the different tastes of their purchasers. Their price consequently varies from a few shillings to more than 100*l.* The Germans and Dutch are particularly celebrated for their skill in the manufacture of wooden clocks; while the English, French, and Genevese, especially the former, have carried the art of making metallic clocks, so as to keep time with the greatest precision, to a high degree of perfection.

The history of the invention, introduction, and successive improvements in the manufacture of clocks, has been carefully investigated by some very learned and industrious antiquaries—(see *Beckmann's Hist. of Inventions*, vol. i. pp. 419–462. Eng. ed.; and *Rees's Cyclopaedia*); but, notwithstanding these researches, the subject is still involved in considerable obscurity. It seems, however, that the middle of the fourteenth century may be regarded as the epoch when clocks, having weights suspended as a moving power, and a regulator, began to be introduced. The period when, and the individual by whom, the pendulum was first applied to clockwork, have been subjects of much contention. Galileo and Huygens have disputed the honour of the discovery. "But whoever may have been the inventor, it is certain that the invention never flourished till it came into the hands of Huygens, who insists, that if ever Galileo thought of such a thing, he never brought it to any degree of perfection. The first pendulum clock made in England was in the year 1662, by one Fromantel, a Dutchman."—(*Hutton's Math. Dictionary*.)

The clock manufacture is of considerable importance and value. It is carried on to a great extent in London.

The *ad valorem* duty of 25 per cent. on foreign clocks produced, in 1841, 7,378*l.* nett. It is principally derived from the wooden clocks brought from Holland and Germany. In 1842 the duty was reduced to 20 per cent. *ad valorem*.

Under the article WATCHES, the reader will find some statements as to the importation and exportation of clocks, as well as watches.

Clockmakers are obliged to engrave upon the dial-plate of all clocks made by them their name, and the place of their residence. No outward or inward box, case, or dial-plate of any clock or watch, with the maker's name engraved thereon, shall be exported without the movement or machinery being in or with such box or case, under forfeiture of double its value.—(3 & 4 Will. 4. cap. 52. § 104.) It is illegal to import, or to enter to be warehoused, any clock or watch impressed with any mark purporting to represent any legal British mark, or not having the name of some foreign maker visible on the frame, and also on the face, or not being in a complete state.—(§ 57.)

It is said, however, not to be an uncommon practice among the less reputable portion of the trade, to engrave their names and "London" on foreign clocks and watches, and to sell them to the public as English work. The fraud may be detected by referring to any respectable watchmaker.

By a Treasury order of the 4th of September, 1838, clocks and watches for private use, though not marked in the manner now specified, may be admitted on payment of the duty, on the parties making affidavit of their entire ignorance of the law in question.

Persons hired by, or in the employment of, clock and watch makers, who shall fraudulently embezzle, secrete, sell, &c. any metal, material, or precious stone, with which he may happen to be intrusted, shall, upon trial and conviction before a Justice of the peace, forfeit 20*l.* for the first offence; and for the second, and every subsequent offence, he shall forfeit 40*l.*; and, in default of payment, it to be committed to the house of correction.—(27 Geo. 2. c. 7. § 1.)—(See WATCH.)

**CLOTH.** See WOOL, LINEN, &c.

**CLOVER** (Ger. *Klee; Du. Klaver; Fr. Trefle, Luzerne; It. Trifoglio; Sp. Tredol; Rus. Triflistnik; Lat. Trifolium*), a very important species of grass. Some of the species in cultivation are annual; others biennial or triennial; and others perennial. The seed used formerly to be principally imported from Holland; but that which is raised in this country is now said to be of a superior quality.—(*Loudon's Encyclopedia of Agriculture*.) Culture for seed is, however, very precarious, and of uncertain profit.

The entries of clover seed for home consumption amounted, at an average of 1840 and 1841, to 111,318 cwt. a year, showing that notwithstanding the improvement of the home produce, foreign seed is still in very extensive demand. And there can be no doubt that the importation in the above years would have been much greater but for the heavy duty of 20*l.* a cwt. with which foreign clover seed was then loaded. Such duty had the mischievous effect of tempting farmers to use seed of inferior quality, and felt with peculiar severity on Scotland and those parts of the country which grow no seed. We are, therefore, glad to have to state that the duty was reduced to 10*l.* a cwt. in 1842; and we are much mistaken if, in addition to its beneficial influence in other respects, this reduced duty do not yield as great a revenue as the high duty did before. The price of foreign clover seed varies from 30*s.* to 3*s.* a cwt. ex duty.

**CLOVES** (Ger. *Nägeln, Gewürznelken; Du. Kruidnagelen; Fr. Clous de girofle, Girofles; It. Chiodi di garofano Garofani, Garofoli; Sp. Clavos de especia, Clavillos; Rus. Gwoadika; Arab. Kerenful; Malay, Chankee*), the fruit, or rather cups of the unopened flowers, of the clove tree, or *Caryophyllus aromaticus*. The clove tree is a

native of the Moluccas, where it was originally found; but plants have since been carried to Cayenne and other places, where they succeed tolerably well. Cloves are shaped like a nail; whence the name, from the French *clou*, nail. They are imported from the Dutch settlements; the best in chests, and an inferior kind in bags. The best variety of the Amboyna cloves is smaller and blacker than the other varieties, very scarce, and, as a mark of pre-eminence, is termed the Royal clove. Good cloves have a strong, fragrant, aromatic odour; and a hot, acrid, aromatic taste, which is very permanent. They should be chosen large sized, perfect in all parts; the colour should be a dark brown, almost approaching to black; and, when handled, should leave an oily moisture upon the fingers. Good cloves are sometimes adulterated by mixing them with those from which oil has been drawn; but these are weaker than the rest, and of a paler colour; and whenever they look shrivelled, having lost the knob at the top, and are light and broken, with but little smell or taste, they should be rejected. As cloves readily absorb moisture, it is not uncommon, when a quantity is ordered, to keep them beside a vessel of water, by which means a considerable addition is made to their weight — (*Thomson's Dispensatory; Milburn's Oriental Commerce.*)

*Policy of the Dutch as to the Trade in Cloves.* — From the expulsion of the English from Amboyna, in 1623, the Dutch have, a few short intervals only excepted, enjoyed the exclusive possession of the Moluccas, or Clove Islands. In their conduct as to the clove trade, they have exhibited a degree of shortsighted rapacity, which has been, we believe, seldom equalled even in the annals of monopoly. Their object has not been to encourage the growth and trade of cloves, but to confine both within the narrowest limits. They have preferred deriving a large profit from a stunted and petty trade, to a moderate profit from a trade that might have afforded employment for a very large amount of capital; and to prevent their narrow and selfish projects from being counteracted by the operations of the natives, they have subjected them to the most revolting tyranny. "That they might," says Mr. Crawford, "regulate and control production and price just as they thought proper, the clove trees were extirpated every where but in Amboyna, the seat of their power; and the surrounding princes were bribed, by annual stipends, to league with them for the destruction of their subjects' property and birthright. This plan was begun about the year 1651. The contracts are still in force, and an annual fleet visits the surrounding islands to suppress the growth of cloves, which, in their native country, spring up with a luxuriance which these measures of Satanic rigour, and of sacrifices towards bountiful nature, can scarce repress. By the plan on which the clove trade is now conducted, — a plan carried into effect through so much iniquity and bloodshed, — the country of spices is rendered a petty farm, of which the natural owners are reduced to the worst condition of predial slavery; and the great monopoliser and oppressor is that government, whose duty it should have been to insure freedom and afford protection. Human ingenuity could hardly devise a plan more destructive of industry, more hostile to the growth of public wealth, or injurious to morals, than this system framed in a barbarous age; and it reflects disgrace upon the character of a civilised people to persevere in it.

"It is curious to remark how the monopolisers, in carrying the details of this system into effect, at once impose upon the natives and deceive themselves. The nominal price paid to the natives is actually above the natural price of the commodity, but they are cheated in its details. The cultivator brings his produce to the public stores, where it is subjected at once to a deduction of one fifth for payment of the salaries of the civil and military officers. The price of the remainder is fixed at the rate of 9-8 Spanish dollars the picul; but before payment is made, another deduction of one fifth is made; one half of which is for the chiefs or *rajas*, and the other for the native *elders*, who are overseers of the forced cultivators. The real price, therefore, paid to the grower is 9 Spanish dollars per picul, or 3-4 per lb. avoirdupois, instead of 11-8 Spanish dollars per picul, or 4-2 per lb., which is pretended to be given.

"When cloves have been sold on the spot, the price usually exacted has been about 64 Spanish dollars the picul, or 8 times the price paid to the cultivator. The average price in Holland, previously to the war of the French revolution, may be taken at 6-2 per lb., or 177-7-8 Spanish dollars per picul, being 2,122 per cent. advance on the real cost of the commodity in the place of its growth. When brought direct to England, they have cost at an average 3-8d. the lb., making 108-10-0 Spanish dollars per picul, an advance on the natural export price of 1,254 per cent." — (*Eastern Archipelago*, vol. iii. pp. 288 — 290.)

*The Duty on Cloves* was considerably reduced in 1819; and there has been, in consequence, a considerable increase in the consumption of this article; though not nearly so great as it would have been, had it been supplied under a more liberal system. At an average of the 3 years ending with 1842, the entries of cloves for home consumption amounted to 85,015 lbs. a year, producing annually 2,319-4-1d. of revenue. The cultivation of the clove is carried on to some extent in the Moluccas. The superiority which the latter enjoy over every other place in the production of cloves is so very great, that were any thing like freedom given to those engaged in their culture, they would very speedily exclude every other from the market. It is not to be imagined, that so liberal and intelligent a government as that of Holland can much longer continue insensible to the disgrace of supporting a system like the present, and to the many advantages that would result from its abolition.

In 1842 the duty on cloves was farther reduced from 3s. per lb. to 6d., a reduction which, there can be no doubt, will be followed by a considerable increase of consumption.

The price of cloves, exclusive of the duty in the London market, varied, in January 1843, from 1s. to 2s. 2d. per lb.

**CLOVES, OIL OF,** is procured from cloves by distillation. When new, it is of a pale reddish brown colour, which becomes darker by age. It is extremely hot and fiery, and sinks in water. The kind generally imported from India contains nearly half its weight of an insipid expressed oil, which is discovered by dropping a little into spirits of wine; and on shaking it, the genuine oil mixes with the spirit, and the insipid separating, the fraud is discovered. — (*Milburn.*)

**COACHES,** vehicles for commodious travelling. They have sometimes two, and sometimes four wheels. The body of the coach is generally suspended, by means of springs, upon the framework to which the wheels are attached. They are usually drawn by horses, but recently have been impelled by steam. The forms and varieties of coaches are almost innumerable.

1. *Historical Notice.* — Beckmann has investigated the early history of coaches with

his usual care and learning. It is certain that a species of coaches was used at Rome; but whether they were hung on springs, like those now made use of, is not certain. After the subversion of the Roman power, horseback was almost the only mode of travelling. About the end of the fifteenth century, however, covered carriages began to be employed by persons of distinction on great occasions. In 1550, there were at Paris only three coaches; one of which belonged to the queen; another to the celebrated Diana of Poitiers; and the third to a corpulent, unwieldy nobleman, René de Laval, lord of Bois Dauphin. Coaches were seen, for the first time, in Spain, in 1546. They began to be used in England about 1580; and were in common use among the nobility in the beginning of the seventeenth century. — (*Hist. of Invent.* vol. i. pp. 111, 127. Eng. trans.)

2. *Manufacture of Carriages.* — This is a department of considerable value and importance. The best built and handsomest carriages are made in London, where only the trade of a coach currier is carried on; but the carriages made at Edinburgh, and some other places, are also very superior. Down to 1825, a duty was laid on all carriages made for sale; and it appears from the following account, that, in 1812, 1,591 four-wheeled carriages, 1,700 two-wheeled ditto, and 105 taxed carts (small carriages without springs), were made for sale.

3. *Duties on Carriages.* — These duties have been long imposed, and have fluctuated considerably at different periods. The Table on the next page shows the number of four-wheeled and other carriages (exclusive of hackney coaches) charged with duties in the years 1812, 1825, 1830, and 1840, the rates of duty on each species of carriage, and the produce of the duties.

4. *Stage Coaches, Travelling by.* — Owing to the improvement in the breed of horses and the building of carriages, but above all, to the extraordinary improvements that have been effected, within these few years, in the laying out, construction, and keeping of roads, the ordinary rate of travelling by stage coaches is seldom under 9 or 10 miles an hour, stoppages included, and, on some roads, is as much as 11 or 12! The stages having been shortened, this wonderful speed is not found to be materially more injurious to the horses than the slower rate at which they travelled some years ago. The surface of the roads being perfectly smooth, and most sharp turns or rapid descents having been got rid of, travelling even at this speed has been rendered comparatively safe; and it is astonishing, considering the number of coaches, how few accidents occur. They are occasioned, for the most part, by the misconduct of the drivers; and principally by their endeavouring to make up by increased speed for time lost at stoppages, or by their attempting to pass each other.

*Law as to Stage Coaches.* — This is now embodied in the acts 2 & 3 Will. 4. c. 120, and 3 & 4 Will. 4. c. 43.

*Definition.* — A stage coach is any carriage travelling along the road at the rate of 3 miles or more an hour, without regard to form, provided the passengers pay separate fares for their places therein; but all carriages used wholly on a railway, or impelled by steam, are excepted from this definition. — (2 & 3 Will. 4. c. 120. § 4.)

*Licences, Duties, &c.* — A large portion of the act is occupied with regulations as to licences, duties, plates, &c. But it is sufficient for our purpose to give the following schedule of the duties: —

Duty.		s. d. d.	
s. d. d.		s. d. d.	
For and in respect of every original licence to be taken out yearly by the person who shall keep, use, or employ any stage carriage in Great Britain, (that is to say,) for every such stage carriage	5 0 0	And if such stage carriage shall be licensed to carry more than 21 passengers, then for every 3 additional passengers exceeding 21 which such stage carriage shall be licensed to carry, the additional duty of	0 0 0
And for and in respect of every supplementary licence for the same carriage, for which any such original licence shall have been granted, which shall be taken out in any of the several cases provided for by this act, during the period for which such original licence was granted	0 1 0	And where such excess above 21 shall not be exactly 2, or a multiple of 2, then such additional duty of <i>sd.</i> shall be payable for any number of such excess being less than 3, or progressively less than any multiple of 3, which such carriage shall be licensed to carry.	
And for and in respect of every mill which any such stage carriage shall be licensed to travel, the several sums following respectively, (that is to say,) if such stage carriage shall be licensed to carry —		Provided always, that the number of passengers for carrying of which any stage carriage shall be licensed, shall be reckoned exclusive of the coachman or driver, and also exclusive of the conductor or guard, if there shall be a conductor or guard.	
Not more than 4 passengers	0 0 1	And also the duties on passengers conveyed for hire by carriages travelling upon railways; (that is to say.)	
More than 4 and not more than 6 passengers	0 0 1 1/2	The proprietor or company of proprietors of every railway in Great Britain, along which any passengers shall be conveyed for hire, or in upon carriages drawn or impelled by the power of steam, or otherwise, shall pay for and in respect of all such passengers at and after the rate of <i>sd.</i> per mile for every 4 passengers so conveyed.	
More than 6 and not more than 9 passengers	0 0 2		
More than 9 and not more than 12 passengers	0 0 2 1/2		
More than 12 and not more than 15 passengers	0 0 3		
More than 15 and not more than 18 passengers	0 0 3 1/2		
More than 18 and not more than 21 passengers	0 0 4		

*Want of Licence, &c.* — Keeping, using, &c. any stage carriage without a licence, or without plates, or with recalled plates, or contrary to their licences, or with improper plates, are offences punishable each by a penalty of 20*l.* — § 27, 28.

*Penalty on Drivers of Coaches without Plates,* if not the owner, 10*l.*; if the owner, 20*l.* — § 30.

*Forging Plates,* a misdemeanor. — § 23.

*Names of Proprietors, &c. to be painted outside,* in legible and conspicuous characters, the names of the extreme places between which such carriage shall be licensed to go, and also the number of passengers licensed to be carried inside and outside. Penalty for neglect in this particular, 5*l.* — § 36.

*Certain Carriages not to carry outside Passengers or Luggage, viz.* those, the top or roof of which shall be more than 8 feet 9 inches from the ground, or the bearing of which on the ground, that is, the distance between the centres of the tracks of the wheels, shall be less than 4 feet 6 inches. Penalty 5*l.* — § 37.

*Luggage on the Roof not to exceed a certain Height, viz.* 10 feet 9 inches from the ground on a carriage drawn by 4 or more horses; and 10 feet 3 inches from ditto, if on a carriage drawn by 2 or 3 horses. Driver of any carriage where such offence is committed liable in a penalty of 5*l.* — § 43.

Account of the Numbers of four-wheeled and other Carriages (exclusive of Hackney Coaches) charged with Duties in 1812, 1825, 1830, and 1840, the Rates of Duty, and the Produce of the Duties.

The clauses in the act 3 & 3 Will. 4. c. 120. relating to the distribution of outside passengers, &c. have been repealed by the act 3 & 4 Will. 4. c. 48., which substitutes the following in their stead.

**Number of outside Passengers, &c.**—Any licensed stage carriage with 4 wheels or more, the top or roof of which shall not be more than 8 feet 9 inches from the ground, and the bearing of which on the ground shall not be less than 4 feet 6 inches from the centre of the tracks of the wheels, if such carriage shall be licensed to carry any number not more than 9 passengers, shall be allowed to carry not more than 5 of such passengers outside; and if licensed to carry more than 9 and not more than 13 passengers, shall be allowed to carry not more than 8 of such passengers outside; and if licensed to carry more than 13 and not more than 15 passengers, shall be allowed to carry not more than 11 of such passengers outside; and if licensed to carry more than 15 and not more than 18 passengers, shall be allowed to carry not more than 12 of such passengers outside; and if licensed to carry any greater number than 18 passengers, shall be allowed to carry not more than 2 additional passengers outside for every 3 additional passengers which such carriage shall be so licensed to carry in the whole; provided that in no case a greater number of passengers shall be carried on the outside than is authorised by the licence. If more be carried, driver to forfeit *£*.—*4* 3.

**Driver, Guard, and Children in lap,** not to be counted as passengers; 2 children under 7 years reckoned as 1 passenger.—*4* 3.

**No Person to sit on Luggage on the Roof,** nor more than 1 person besides driver on the box. Penalty *£*.—*4* 14.

**Justices, Road-surveyors, Toll-keepers, &c.** authorised to cause stage carriages and luggage to be measured; any passenger authorise to require the driver to stop at a toll-gate, and to require the gate-keeper to measure the carriage and luggage, and to count the number of inside and outside passengers. Penalty on driver refusing to stop, &c.; on gate-keeper neglecting to provide a measure, or refusing to measure and count, &c.—(2 & 3 Will. 4. c. 120. § 45.)

**Conduct of Drivers, &c.**—Drivers quitting the box before a proper person shall stand at the head of the horses; such person leaving the boxes before some other person shall be placed in like manner, or have the command of the horses, or before the driver has resumed his seat on the box and taken the reins; driver allowing any passenger or other person to drive for him, or leaving the box without any reasonable occasion, or for a longer time than is absolutely necessary; concealing or misplacing plates; guard discharging fire-arms unnecessarily; driver, conductor, or guard neglecting to take care of luggage; asking more than the proper fare; neglecting to account to his employer; or assaulting or using abusive language to any person having travelled, or about to travel, as a passenger, or to any person accompanying the same: shall in each and every such case forfeit *£*.—*4* 7.

**Drunkness, &c.**—Drivers, conductors, or guards having the care of any stage carriage, endangering, through intoxication, negligence, or wanton and furious driving, the safety of any passenger or other person, or the property of the owner of such carriage or other person, shall each person so offending forfeit *£*.—*4* 13.

**Owners liable for penalties,** when driver or guard is not known or cannot be found.—*4* 40.

**Railway Proprietors** are to render accounts of the passengers conveyed along the same to the Stamp Office, and to give security to keep and render such accounts, and to pay the duties.—*4* § 50, 51.

**Treasury may compound** with proprietors of railways for the duties chargeable on passengers conveyed by them.—*4* 55.

**MAIL COACHES** are under the regulations of the postmaster general; and the enactments in this act as to plates, inscriptions, outside passengers, and luggage, do not extend to them; but the other regulations as to the conduct of drivers, guards, &c. do apply to them. Mail coaches have only four outside passengers; one on the box, and three immediately behind the box. No passenger allowed to sit beside the guard. The rate of travelling, the time allowed for stoppages, the quantity of luggage to be carried, &c. are all regulated by the postmaster general.

**Rates of Duty on Carriages.**—On those having—

For an account of HACKNEY COACHES, see the term.

**COAL** (Du. *Steenkoolen*; Fr. *Charbon de terre*; Ger. *Steinkohlen*; It. *Carboni fossili*; Lat. *Lithanthrax*; Port. *Carvoes de terra, ou de pedra*; Rus. *Ugolj, Kamennoe*; Sp. *Carbones de tierra, Carbones de piedra*; Sw. *Sthenkol*). This highly important combustible mineral is divided by mineralogists into the three great families of black coal, unflammable coal, and brown coal; each of these being again divided into many subordinate species.

All the common coals, as slate coal, foliated coal, cannel coal, &c., belong to the black coal family. Slate and foliated coal is found in vast quantities in Durham and Northumberland, at Whitehaven in Cumberland, in the river district of the Forth and Clyde, in South Wales, &c. The best Newcastle coal kindles easily; in burning it cakes or runs together into a solid mass, emitting a great deal of heat, as well as of smoke and flame; it leaves a small quantity of heavy, dark-coloured residuum or ashes. Most of the Scotch coals are what are familiarly called *open burning* coals. They do not last so long as the Newcastle coal, yield less heat, do not cake or run together in burning, and usually leave a considerable quantity of light, white ashes. They make, however, a very pleasant, cheerful fire; and, for most household purposes, the best fire is said to be made of a mixture of Scotch and Newcastle coal.

Cannel coal is sometimes met with in the Newcastle pits, in Ayrshire, &c.; but the largest beds of it, and of the purest kind, are near Wigan in Lancashire. It burns with a beautiful clear flame, emitting a great deal of light, but not much heat. It takes a good polish; and articles made of it are often passed off for pure jet.

Total 3,374 3,291 16

The unflammable coals are those known by the names of Welsh culm or stone coal, Kilkenny coal, and the *blind* or *deaf* coal of Scotland. These coals are difficult to kindle, which has given rise to their name; but when once thoroughly ignited, they burn for a long time; they make a hot, glowing fire, like charcoal, without either flame or smoke; but owing to their emitting noxious vapours, they cannot be used in dwelling houses, though they are in considerable demand among maltsters, dyers, &c.

Brown, or Bovey coal, so called from its being principally found at Bovey near Exeter, is light, yields but little heat in burning, and is seldom used as fuel.

In all, about *seventy* species of coal are said to be imported into London, of which *forty-five* are sent from Newcastle! Of course, many of them differ from each other by almost imperceptible degrees, and can only be distinguished by those thoroughly conversant with the trade.

*Origin of Coal. Phenomena of Combustion, &c.* — Coal beds, or strata, lie among those of gravel, sand, chalk, clay, &c., which form great part of the present surface of the earth, and have been evidently accumulated during remote ages by the agency of "moving water,"—similar to accumulations now in process of formation at the mouths of all great rivers, and in the bottoms of lakes and seas. When these strata had, by long contact and pressure, been solidified into a rocky crust to the earth, this crust, by subsequent convulsions of nature, of which innumerable other proofs remain, has been in various parts broken and heaved up above the level of the sea, so as to form the greater part of our dry or habitable land; in some places appearing as lofty mountains, in others as extended plains. In many situations, the fracture of the crust exhibits the edges of the various distinct strata found in a given thickness of it. When the fracture has the form of a precipitous cliff, these edges appear one above another, like the edges of piled planks or books; but often also they are met with in horizontal succession along a plain, as the edges of a pile of books laid down upon a table; or they may be seen surrounding hills of granite, which protrude through them. Coal, and other precious minerals, were first discovered at the fractures of the strata above described, and by the continued digging of the strata or veins the vast excavations called mines have been gradually formed. When it was at last discovered that the mineral strata occur every where in nearly the same order or succession, so that the exposure of a portion of one stratum is a good indication of the other strata being near, the operations of the miner became of much surer result, and expensive boring through superior strata might be prudently undertaken, even where no specimen of the desired but more deeply buried substance had yet been seen.

Before the discovery of coal mines, or the invention of cheap means of working them, wood was generally used as fuel; and in many countries where the arts have not much flourished, it continues to be principally employed as such. Coal, however, for many purposes, answers much better than wood; and, in fact, the two, although in appearance so different, are in their ultimate composition very nearly allied. They both have for their basis or chief ingredient the substance called by the chemists *carbon*, and for their chief other ingredient, the substance called hydrogen, which, when separated, exists in the form of air or gas. The hydrogen is easily driven away or volatilised from either coal or wood, by heating in a close place; and when it is caught and preserved, it forms the gas now used to light our streets and public buildings. What remains of coal, after being so treated, is the substance called *coke*; and what remains of wood, similarly treated, is the substance called *charcoal*,—both being nearly pure carbon, but differing as to the states of compactness. This kindred nature of coal and wood does not surprise, when the fact is known, that much of our coal is really transformed wood; many coal mines being evidently the remains of antediluvian forests, swept together in the course of the terrestrial changes already alluded to, and afterwards solidified to the state now seen. In these mines, the species of the plants or trees which formed them are still quite evident in abundant specimens, mixed often with the remnants of the animals which inhabited the earth at the same time. The extensive peat-mosses now existing on the surface of the earth, consist chiefly of vegetable remains in an early stage of the kind of change which terminates in the formation of coal.

A substance which, like coal or wood, cheaply answers the purpose of producing great heat and light, is called fuel, and the phenomenon of that production is called combustion. Now, modern discovery has ascertained that, in every instance, combustion is merely an appearance which accompanies the mutual action, when very intense, of two substances in the act of forming an intimate or chemical union. Where that act is less energetic, the heat produced is less intense, and there is no light. Thus, water and sulphuric acid when mixing produce great heat, but no light. Water and quicklime produce still greater heat; sufficient, it is known, to set fire to a ship in which the mixture unfortunately occurs. It is an occurrence of the same kind when heat is evolved from an acid dissolving a metal; and it is still of the same kind when a mass of coal or wood in a

fire-grate is, with the appearance of combustion, undergoing solution in the oxygen of the atmosphere. In this last case, however, the temperature of the fuel is, by the very intense action, raised so much that the fuel becomes incandescent or luminous; an appearance assumed by every substance, whether burning or not,—of a stone, for instance, or piece of metal,—when heated beyond the temperature indicated by 800° of Fahrenheit's thermometer. The inferior degrees of such incandescence are called *red heat*; the superior degrees, *white heat*. The reason why any strongly heated body throws out light, we cannot yet explain. When a quantity of wood or coal has been burned to ash in a confined portion of air, the whole of the fuel, vanished from view, is held in solution by the air, as salt is held in water, and is again recoverable by the art of the chemist. The phenomenon of common fire, or combustion, then, is merely the fuel being chemically dissolved in the air of the atmosphere. If the fuel has nothing volatile in it, as is true of pure carbon, and nearly true of coke and charcoal, it burns with the appearance of red-hot stones; but if there be an ingredient, as hydrogen, which, on being heated, readily assumes the form of air, that ingredient dilates before burning, and in the act produces the more bulky incandescence called flame.

The two great purposes which combustion serves to man, are, to give light and heat. By the former he may be said to lengthen considerably the duration of his natural existence; for he converts the dismal and almost useless night into what, for many ends, serves him as well as day; and by the latter, besides converting winter into any climate which he desires, he is enabled to effect most important mutations in many of the substances which nature offers for his use; and, since the invention of the steam engine, he makes heat perform a great proportion of the work of society. From these considerations may be perceived the importance of having fire at command; and, as the cheapest means of commanding fire, of having abundance of coal.

As respects the supply of coal, Britain is singularly favoured; a large portion of the surface of the country having under it continuous and thick beds of this valuable mineral,—vastly more precious to us than would have been mines of the precious metals, like those of Peru and Mexico; for coal, since it has been applied to the steam-engine, is really hoarded power, applicable to almost every purpose which human labour directed by ingenuity can accomplish. It is the possession of her coal mines which has rendered Britain, in relation to the whole world, what a city is to the rural district which surrounds it,—the producer and dispenser of the various products of art and industry. Calling her coal mines the coal cellars of the great city, there is in them a supply, which, at the present rate of expenditure, will last for 2,000 years at least; and, therefore, a provision which, as coming improvements in the arts of life will naturally effect economy of fuel, or substitution of other means to effect similar purposes, may be regarded as inexhaustible.

The kinds or differences of coal depend on their comparative proportions of carbon and hydrogen, and of earthy impurities totally incombustible. While some species of coal contain nearly a third of their weight of hydrogen, others have not a fiftieth part. The former kinds are flaming coal, pleasing in parlour fires, and fit for the manufacture of gas. The other kinds—some of the Welch stone coal, for instance—will only burn when in large heaps, or when mixed with more inflammable coal: they have no flame. When flaming coal is burned where a sufficiency of oxygen cannot pass through or enter above the fire, to combine with and consume the hydrogen as fast as it rises, a dense smoke is given out, consisting of hydrogen and carbon combined in the proportions which form a pitchy substance. The Welch coal above mentioned can as little give out smoke as flame, and hence is now much used in great breweries, and in the steam-engine furnaces of towns, where smoke is a serious nuisance. The foliated or cubical coal, and slate coal, are chiefly used as fuel in private houses; the caking coals, for smithy forges; the slate coal, from its keeping open, answers best for giving great heats in a wind furnace, as in distillation on a large scale; and glance coal, found in Staffordshire, is used for drying grain and malt. The coals of South Wales contain less volatile matter than either the English or the Scotch; and hence, when employed in smelting the ore, produce a greater quantity of iron. It is supposed that 3 parts of good Newcastle coal are equivalent, as fuel, to 4 parts of good Scotch coal.

*Consumption of Coal. Number of Persons engaged in the Trade. Supply of Coal.*—The great repositories of coal in this kingdom are in Northumberland and Durham, whence London and most parts of the south of England are at present supplied; in Cumberland, whence large quantities of coal are exported to Ireland; and in Staffordshire, Derbyshire, Lancashire, Yorkshire, Leicestershire, Warwickshire, South Wales, &c. In Scotland, coal is found in the Lothians, Lanarkshire, Renfrewshire, Ayrshire, and other counties. In Ireland, coal is both deficient in quantity and inferior in quality to that of Great Britain; and turf forms the great article of fuel.

It is not easy to form any very accurate estimate of the annual consumption of coal in Great Britain; probably, however, the following may not be far from the mark.

	Tons.
Domestic consumption in 1848 and smaller manufactures	18,000,000
Production of pig and bar iron	9,000,000
Copper smelting, brass manufactures, &c.	1,000,000
Cotton manufacture	800,000
Woolen, linen, silk ditto	800,000
Salt works	400,000
Lime works	600,000
Railway carriages, steam boats, &c.	1,800,000
Home consumption	31,800,000
Exports to Ireland	1,000,000
Ditto to colonies and foreign parts	1,800,000
Total home and foreign consumption	34,600,000

Mr. Buddle, of Wallsend, an extremely well informed coal engineer, gave, in 1829, the following estimate of the number of persons engaged in the different departments of the coal trade on the Tyne and Wear, in the conveyance of coal to London, and in the London coal trade:—

"I hold a paper in my hand stating the number of people employed in the coal trade in each department. I would beg to observe, the returns from the Tyne are official documents; from the Wear I have no returns, but it is by an approximate calculation. The number of persons employed under-ground on the Tyne are,—men, 4,937; boys, 3,554; together 8,491; above ground,—men, 2,745; boys, 718; making 3,463; making the total employed in the mines above and below ground, 11,954, which in round numbers I call 12,000, because I am pretty sure there were some omissions in the returns. On the river Wear, I conceive there are 9,000 employed; making 21,000 employed in digging the coal, and delivering it to the ships on the two rivers. From the best calculations I have been able to make, it would appear that, averaging the coasting vessels that carry coals at the size of 220 London chaldrons each vessel, there would be 1,400 vessels employed, which would require 15,000 seamen and boys. I have made a summary. There are, seamen, 15,000; pitmen and above-ground people employed at the collieries, 21,000; keel-men, coal-boatmen, casters, and trimmers, 2,000; making the total number employed in what I call the Northern Coal Trade, 38,000. In London, whippers, lightermen, and so forth, 5,000; factors, agents, &c. on the Coal Exchange, 2,500;—7,500 in all, in London. Making the grand total in the North country and London departments of the trade, 45,500. This does not, of course, include the persons employed at the outports in discharging the ships there." It is necessary, however, to bear in mind that these statements apply only to 1830, and that there must have been a material increase in the interval.

In another place, Mr. Buddle states, that "colliers are always paid by the piece," and consequently their wages, although at the same rate per chaldron, vary according to the quantity of work they have to do; and it is difficult to form an average, they vary so very considerably: they have varied from 14s. a week, to, in some instances, 40s. "The colliers can earn up to 5s. or even more per day; but there is not full employment for them; they sometimes do not earn more than half that sum; 2s. 6d. is the certain wages that they are hired to receive from their employers, whether they are employed or not; that is, consequently, a tax on the coal owner, during the suspension of his colliery from any accident. The men have the option of finding work elsewhere; but if they cannot do this, they may call upon their master to pay them 14s. per week; it was 15s. a week till 1828."

We regret that we are unable to lay any estimates before our readers of the number of persons employed in the other branches of the coal trade; but taking into view the proportion which the trade on the Tyne and the Wear bears to the trade of Great Britain, and the increase since 1830, we are inclined to think that the total number of persons directly engaged in the coal trade may be set down at from 190,000 to 220,000.

The importance of coal as a necessary of life, and the degree in which our superiority in arts and manufactures depends upon our obtaining supplies of it at a cheap rate, has naturally attracted a good deal of attention to the question as to the period when the exhaustion of the coal mines may be anticipated. But the investigations hitherto made as to the magnitude and thickness of the different coal-beds, and the extent to which they may be wrought, are too vague and unsatisfactory to afford grounds for forming any thing like a tolerably near approximation to a solution of this question. But such as they are, they are sufficient to show that *many centuries* must elapse before posterity can feel any serious difficulties from a diminished supply of coal. According to an estimate prepared by Mr. Taylor, an intelligent coal engineer, in 1829, the coal-fields of Durham and Northumberland are adequate to furnish the present annual supply for a very long period. We subjoin Mr. Taylor's estimate.

ESTIMATE OF THE EXTENT AND PRODUCE OF THE DURHAM AND NORTHUMBERLAND COAL-FIELDS.

<i>Durham.</i>		Sq. Miles.
" From South Shields southward to Castle Eden, 21 miles; thence westward to West Auckland, 22 miles; north-east from West Auckland to Eltringham, 23 miles; and then to Shields, 23 miles; being an extent or area of	-	804
<i>Northumberland.</i>		
" From Shields northward, 27 miles, by an average breadth of 9 miles	-	243

" Estimating the workable coal strata at an average thickness of 12 feet, the contents of 1 square mile will be 12,300,000 tons, and of 729 square miles	-	9,069,480,000
" Deduct one third part for loss by small coal, interceptions by dikes, and other interruptions	-	3,023,160,000
	-	6,046,320,000

" This remainder is adequate to supply the present vend from Newcastle, Sunderland, Hartley, Blyth, and Stockton, of 3,500,000 tons, for a period of 1,727 years.

" It will be understood that this estimate of the quantity of coal in Durham and Northumberland can only be an approximation, especially as the south-eastern coal district of Durham is yet almost wholly unexplored; but the attempt is made, in the hope of satisfying your Lordships that no apprehension need be entertained of this valuable mineral being exhausted for many future generations.

" There is also a considerable extent of coal-field in the northern and south-western districts of Northumberland; but the foregoing comprises that which is continuous, and most suitable and available for exportation. It is, however, to be observed that the shipments of coal from the ports mentioned by Mr. Taylor has been largely increased during the last dozen years; so that, supposing the estimate to be in other respects accurate, it must now be modified accordingly."—(*Lords' Report*, 1829, p. 124.)

Dr. Buckland, the celebrated geologist, considers Mr. Taylor's estimate as greatly exaggerated; but in his examination before the committee of the House of Commons in 1829, he quoted with approbation a passage of Bakewell's *Geology*, in which it is stated that the coal-beds in South Wales were alone sufficient to supply the then demand of England for coal for 2,000 years. The passage is as follows:—

" Fortunately we have in South Wales, adjoining to the Bristol Channel, an almost exhaustless supply of coal and ironstone, which are yet nearly unwrought. It has been stated, that this coal-field extends over about 1,200 square miles; and that there are 23 beds of workable coal, the total average thickness of which is 95 feet; and the quantity contained in each acre is 100,000 tons, or 65,000,000 tons per square mile. If from this we deduct one half for waste, and for the minor extent of the upper beds, we shall have a clear supply of coal equal to 32,000,000 tons per square mile. Now, if we admit that 5,000,000 tons from the Northumberland and Durham mines is equal to nearly one third of the total consumption of coal in England, each square mile of the Welsh coal-field would yield coal for 100 years' consumption; and as there are from 1,000 to 1,200 square miles in this coal-field, it would supply England with fuel for 2,000 years, after all our English coal mines are worked out!"

But supposing this supply to last only 1,000 years, that carries us so far into futurity, that it appears to be quite idle either to prohibit, or impose heavy duties on the exportation of coal, on the ground of its accelerating the exhaustion of the mines.

*Profits of Coal Mining. Coal Owners' Monopoly, &c.*—Instead of the business of coal mining being, generally speaking, an advantageous one, it is distinctly the reverse. Sometimes, no doubt, large fortunes have been made by individuals and associations engaged in this business; but these are rare instances. The opening of a mine is a very expensive and hazardous operation, and of very uncertain result. Collieries are exposed to an infinite number of accidents, against which no caution can guard. The chances of explosion have, it is true, been a good deal lessened by the introduction of Sir Humphry Davy's lamp; and some mines are now wrought, that, but for the invention of this admirable instrument, must have been entirely abandoned. But besides explosions, which are still every now and then occurring, from the carelessness of the workmen, and other contingencies, mines are very liable to be destroyed by *creeps*, or by the sinking of the roof, and by drowning, or the irruption of water from old workings, through fissures which cannot be seen, and consequently cannot be guarded against. So great, indeed, is the hazard attending this sort of property, that it has never been possible to effect an insurance on a coal-work, against fire, water, or any other accident.

Mr. Biddle informed the committee of the House of Lords, in 1829, that " although many collieries, in the hands of fortunate individuals and companies, have been, perhaps, making more than might be deemed a reasonable and fair profit, according to their risk, like a prize in a lottery; yet, as a trade, taking the whole capital employed on both

rivers, he should say that certainly it has not been so."—(*First Report*, p. 56.) Again, being asked, "What have the coal owners on the Tyne and Wear, in your opinion, generally made on their capital employed?" he replied, "According to the best of my knowledge, I should think that by no means ten per cent. has been made at simple interest, without allowing any extra interest for the redemption of capital."—(p. 57.)

In addition to the vast expense attending the sinking of shafts, the erection of steam engines, &c., and the risk of accidents, the coal, after being brought to the surface, has frequently to be conveyed 7 or 8 miles to the place of shipping; and those whose collieries are in that situation, have to pay *way-leave* rents, amounting, in some cases, to 500*l.* a year, for liberty to open a communication, or a railroad, through the properties lying between them and the shore.

Much has frequently been said of the monopoly of the coal owners on the Tyne and the Wear; but we are satisfied, after a pretty careful investigation of the circumstances, that no such monopoly has ever existed; and that the high price of coal in the metropolis is to be ascribed wholly to the various duties and charges that have been laid upon it, from the time that it has passed from the hands of the owner to the time that it is lodged in the cellar of the consumer. What means have the coal owners of obtaining a monopoly price for their coal? They enjoy no exclusive privileges of any sort; they are a numerous body; and the trade is as open as any other to all capitalists to engage in. The number of places on the east and west coasts, both of England and Scotland, and the southern parts of Wales, from which coals are exported, render it quite visionary to suppose that any general agreement to keep up prices can take place amongst the various coal proprietors. And though such an agreement were entered into, it is impossible it could be maintained. The power of producing coal greatly exceeds the present demand; many new mines have been recently opened, and many others would be brought into activity were the price artificially enhanced. It is true that the coal owners referred to, having experienced the ruinous effects of throwing a superabundant quantity of coal upon restricted and already glutted markets, have occasionally met together; and each having named the price he thinks his coal will command, and at which he intends to sell it, they have proceeded jointly to regulate, according to the probable demand, the quantity that each shall raise during any particular period. By means of this arrangement, the supply and price of coal have been kept, during the time it has existed, comparatively steady. Common prudence prompts and justifies such an arrangement; but it also suggests the necessity of reducing the price of coal to the lowest level that will afford the customary rate of profit. For were the price demanded by the northern coal owners raised above this level, new mines would be opened in Durham and Northumberland; the imports from the Tees, whence a large supply of excellent coal is at present brought to the London market, would be augmented; and fresh competitors, from Swansea and other places, would come into the field and undersell them. Government should encourage and promote this fair competition; but it ought, at the same time, to do equal justice by all the competitors. It is not to lend assistance, or remove burdens from, one set of adventurers, which it does not lend to or remove from others. It is no part of its duty to say how coals, or any species of produce, shall be carried to market. It is bound to give every reasonable facility for the opening of new channels or modes of conveyance between all parts of the country; but it would be glaringly unjust to lay a tax on the coals conveyed by a particular channel from which those conveyed by other channels were exempted.

Mr. Buddle thinks that the aggregate capital employed by the coal owners on the Tyne amounts to about 1,500,000*l.* exclusive of the craft in the river: and supposing this estimate to be nearly correct, it will follow, allowing for the value of the ships, that the total capital employed in the coal trade may be moderately estimated at from eight to ten millions; an immense sum to be almost wholly at the risk of the owners, without any insurance upon it.

*Progressive Consumption of Coal. Duties and Regulations affecting it, particularly in the Port of London.*—There are no mines of coal in either Greece or Italy; and no evidence has been produced to show that the ancients had learned to avail themselves of this most useful mineral. Even in England, it does not seem to have been used previously to the beginning of the thirteenth century; for the first mention of it occurs in a charter of Henry III., granting licence to the burgesses of Newcastle to dig for coal. In 1281, Newcastle is said to have had a considerable trade in this article. About the end of this century, or the beginning of the fourteenth, coals began to be imported into London, being at first used only by smiths, brewers, dyers, soap-boilers, &c. This innovation was, however, loudly complained of. A notion got abroad that the smoke was highly injurious to the public health; and, in 1316, parliament petitioned the king, Edward I., to prohibit the burning of coal, on the ground of its being an intolerable nuisance. His Majesty issued a proclamation conformably to the prayer of the petition; but it being but little attended to, recourse was had to more vigorous measures;

a commission of oyer and terminer being issued out, with instructions to inquire as to all who burned sea-coal within the city, or parts adjoining, to punish them for the first offence, by "pecuniary mulcts;" and upon a second offence, to demolish their furnaces; and to provide for the strict observance of the proclamation in all time to come.

But notwithstanding the efforts that were thus made to prohibit the use of coal, and the prejudices that was long entertained against it, it continued progressively to gain ground. This was partly, no doubt, owing to experience having shown that coal smoke had not the noxious influence ascribed to it, but far more to the superior excellence of coal as an article of fuel, and the growing scarcity and consequent high price of timber. In the reign of Charles I. the use of coal became universal in London, where it has ever since been used to the exclusion of all other articles of fuel. At the Restoration, the quantity imported was supposed to amount to about 300,000 chaldrons. In 1670, the imports had increased to 270,000 chaldrons. At the Revolution, they amounted to about 300,000 chaldrons, and have since gone on increasing with the growing magnitude and population of the city; being, in 1750, about 500,000 chaldrons; in 1800, about 900,000 chaldrons; and at present about 1,700,000 chaldrons. — (*Campbell's Political Survey of Great Britain*, vol. ii. p. 80; *Edington on the Coal Trade*, p. 41, &c.)

It might have been supposed, considering that coal is, in this country, a prime necessary of life, and by far the most important of all the instruments of manufacturing industry, that it would have been exempted from every species of tax; and that every possible facility would have been given for its conveyance from the mines to the districts in the south of England, and other places in want of it. But such has not been the case. The coal trade of Great Britain was, for more than a century and a half, subjected to the most oppressive regulations. From a very early period, the corporation had undertaken the task of weighing and measuring the coal brought to London; and had been accustomed to charge 8*d.* a ton for their trouble. In 1613, the power to make this charge was confirmed to the city by royal charter, it being at the same time ordered that no coal should be unladen from any vessel till the Lord Mayor had given leave. The right to charge this sum according to the chaldron of coal, has since been confirmed to the city by act of parliament; and as the labouring meters, notwithstanding they have been very well paid, have received only 5*d.* out of the 8*d.*, the balance of 3*d.* per chaldron, which produced about 20,000*l.* a year, went to the city treasury.

But besides the above, duties for civic purposes have been laid on the coal imported into London from the reign of Charles II. downwards. They were originally imposed in 1667, after the great fire, in order to assist in the rebuilding of churches and other public edifices; and have ever since been continued, to enable the corporation to execute improvements in the city; though it is probable most of our readers will be inclined to think that few improvements could be so great, as a reduction in the price of so very important an article as coal.

Exclusive of the corporation duties, a duty payable to government was laid on *all sea-borne* coal in the reign of William III., which only ceased in 1831. This duty was at once glaringly unjust and oppressive: unjust, inasmuch as it fell only on those parts of the empire to which coals had to be carried by sea; and oppressive, inasmuch as it amounted to full *fifty* per cent. upon the price paid to the coal owner for the coal. This tax, after being long stationary at 5*s.* a chaldron, was raised to 9*s.* 4*d.* during the late war; but was reduced to 6*s.* in 1824. But the inequality of the tax was not confined to its affecting those parts only of the empire to which coal had to be carried by sea. Even there its pressure was not equal; for, while it amounted to 6*s.* a chaldron, or 4*s.* a ton, in the metropolis and all the south of England, it only amounted to 1*s.* 7*d.* a ton on coal carried by sea to Ireland, and to 1*s.* 8*d.* on that carried to Wales; while Scotland was for many years entirely exempted from the duty.

Besides this striking partiality and injustice, various troublesome Custom-house regulations were required, in consequence of distinctions being made between the duties on large and small coal, between those on coal and culm (a species of coal), and coal and cinders, and of coal being allowed to be imported duty free into Cornwall, Devon, &c. for the use of the mines. These distinctions were, however, wholly abolished in 1830, and no duties exist on coal except those collected in London and a few other ports, and appropriated to local purposes.

A small supply of coal was of late years brought to London from Staffordshire, by canal navigation. This coal was charged with a duty of 1*s.* a chaldron; but this is now also repealed.

The regulations to which the sale and delivery of coals were subjected in the city of London were, if possible, still more objectionable than the duties imposed on them. Instead of being sold by weight, all coals imported into the Thames were, previously to 1831, sold by measure. It is curious to observe the sort of abuses to which this practice has given rise. It is stated by the celebrated mathematician, Dr. Hutton, who, being a native of Newcastle, was well acquainted with the coal trade, that, "If

one coal, measuring exactly a cubic yard (nearly equal to 5 bolls), be broken into pieces of a moderate size, it will measure  $7\frac{1}{2}$  bolls; if broken very small, it will measure 9 bolls; which shows that the proportion of the weight to the measure depends upon the size of the coals; therefore, accounting by weight is the most rational method.\* The shippers were well aware of this, and insisted upon the coal owners supplying them with large coal only; and to such an extent was this principle carried, that all coal for the London market was *screened*, as it is technically termed, or passed over gratings, to separate the smaller pieces. Inasmuch, however, as coals were sold in all their subsequent stages by measure, no sooner had they been delivered by the owner, than it was for the interest of every one else into whose hands they came before reaching the consumer, to break them into smaller portions. In fact, the profit of many of the retailers in London has arisen chiefly from the increase of measure by the breakage of coal. And Mr. Brandling, a very intelligent and extensive coal owner, stated to the Commons' committee of 1829, that, in consequence of the breakage, coals are reduced in London to a size inferior to what they would be, were they put on board *unscreened*, and subjected to no additional breakage.

The statements now made sufficiently evince the nullity of all the regulations enforcing the sale of coal by correct measures: for even though these regulations had been enforced, instead of being, as they usually were, wholly neglected, they would have been of almost no use; inasmuch as any dishonest dealer was as able to cheat, by breaking his coals a little smaller than usual, as if he had sold them in deficient measures.

The loss occasioned by the useless process of screening has been very great. The quantity of coal separated by it has amounted in some cases to from 20 to 25 per cent. of the whole; and the greater part of this residue, containing a portion of the very best coal, is *burned on the spot*. "I have known," says Mr. Buddle, "at one colliery, as many as from 90 to 100 chaldrons a day destroyed. If they were not consumed, they would cover the whole surface, and in the burnings of them they are extremely destructive; they destroy the crops a great way round, and we pay large sums for injury done to the crops, and for damage to the ground."—(*First Lords' Report*, p. 72.) The waste of coal has been in this way enormous; and the coal owner has been obliged to charge a higher price upon the coal sold, in order to indemnify himself for the loss of so great a quantity, and for the mischief he does to others in burning.

The fact, that so monstrous a system should have been persevered in for more than a century, sets the power of habit in reconciling us to the most pernicious absurdities in a very striking point of view. Happily, however, the nuisance was at last abated; the sale of coal by weight taking away both the temptation to break coal, and the necessity of screening.

The duties of all sorts that were formerly paid to the corporation of the city of London were computed in 1830 for a duty of 1*s.* 1*d.* per ton<sup>†</sup>, which produced in 1841 a gross revenue of 152,887*l.* 9*s.* 5*d.* (*Westminster Review*, No. 77, p. 332). Various oppressive duties and regulations were then also abolished, a measure which has been productive of a considerable saving to the public. Supposing the average price of a ton of coal, in the pool below London Bridge, to be at present (1843) 20*s.*, it would perhaps be made up nearly as follows:

Prime cost and shipping charges in the Tyne or the Wear	-	-	-	£	s.	d.	per ton.
Freight	-	-	-	0	9	3	
Insurance	-	-	-	0	0	1	$\frac{1}{2}$
City dues	-	-	-	0	1	1	
Half weighage	-	-	-	0	0	1	$\frac{1}{2}$
Allowance to the buyer, of tret, discount, and storage	-	-	-	0	0	6	
Factory, 3 <i>d.</i> <i>Del credere</i> , 1 <i>d.</i>	-	-	-	0	0	4	
Stamps and petty incidents	-	-	-	0	0	1	$\frac{1}{2}$
				0	20	0	

The charges on the conveyance of coal from the vessel to the cellar of the consumer amounted, in 1830, to about 11*s.* a ton, but at present they do not exceed 7*s.*; thus:—

Lighterage	-	-	-	£	s.	d.	
Wharfinger	-	-	-	0	1	3	
Loading	-	-	-	0	0	6	
Cartage	-	-	-	0	3	6	
Shooting	-	-	-	0	1	0	
Total	-	-	-	0	7	0	

No doubt, however, the expenses attending the delivery of coal to the consumer might be farther and very materially reduced, were quays constructed at which ships could lie alongside, and discharge their cargoes without the intervention of lighters, and without being subject to the delays to which they are now exposed. It appears also, that, the practice of sending coals to the consumers in bags might in the great majority of cases be advantageously dispensed with. No such practice exists in Manchester, Liverpool, Glasgow, or other large towns; and, generally speaking, it seems in occasion not only a heavy, but a perfectly useless, expense. There is a very keen competition in the retail coal trade in London, and the individual who deals with a respectable coal merchant may be pretty well assured that he gets his coals at the lowest price at which, as matters now stand, they can be sold.

\* Eightpence per ton of this duty will (unless the regulations under which it is now imposed be altered in the interval) cease in 1862, its produce having been mortgaged till that year, to defray the cost of certain civil improvements.

Account exhibiting the Quantities of the various Descriptions of Coal imported into London by Sea in 1842, and specifying also the Number of Ships or Cargoes.

Descriptions of Coal.	Ships or Cargoes.	Tons.
Newcastle	1,084	680,777
Newcastle Wallend	1,008	514,055
Sunderland	1,008	514,055
Sunderland Wallend	9,455	5,100
Rochton	10	5,100
Stockton Wallend	9,408	4,838,128
Blyth	408	100,984
Scott	401	19,484
Walc	445	17,000
Yorkshire	705	69,518
From sundry places	5	450
Small coal	5	1,100
Calm	9,667	4,710,793
Cinders	10	2,184
Total Imports	9,691	8,788,800

Account exhibiting the Importation of Coal into London by Sea during each of the 13 Years ending with 1844.

Years.	Cargoes.	Tons.	Years.	Cargoes.	Tons.
1834	7,588	4,159,078	1839	9,540	5,223,325
1835	7,077	4,010,409	1840	9,138	4,866,999
1836	7,404	4,073,685	1841	9,241	4,933,414
1837	7,058	4,008,819	1842	9,661	5,275,000

1839	8,780	4,895,957	1844	9,666	5,265,101
1838	9,003	5,061,085			

Regulations as to Sale in London.—A seller's ticket is to accompany all coals sold within the city of London and its environs, specifying the species of coal, and the number of sacks and weight of coal sent. The coals may be either in bags containing 1 or 2 cwt., or in bulk. The carman is in all cases bound to carry a weighing machine with the coal, which machine is to be made conformably to regulation; and, upon being desired, he is to weigh any one sack, or the whole sacks in his wagon. Penalty on refusing to weigh, or otherwise obstructing the purchaser, 20s. In the event of the weight being deficient, a penalty is imposed of 10s. or 20s., according to deficiency. Quantities of less than 500 lbs. may be sold without being weighed.—(1 & 2 Will. 4. c. 71.)

In order to save trouble in collecting the duties that still attach to coal in the port of London, the corporation is authorized to compound with the owner or master of any ship or vessel importing coal, for the tonnage upon which the duties are to be paid. A certificate of such composition, expressing the number of tons of coal, cinders, or small, agreed to be taken as the cargo of the ship or vessel compounded for, is to be given to the master or owner of the same, and to be taken as evidence of the quantity on board.

When an composition is entered into, the coal is to be weighed in the presence of an officer of the customs at the port of shipment; and the duties are to be paid upon the weight so shipped.

The shipment of coal in the Tyne is at present regulated by the Act 8 Geo. 4. c. 72. commonly called the *Turn Act*. The object of this act is to make all ships engaged in the trade of the Tyne be loaded in the order in which they arrive. It prevents any preference being given to particular ships; and renders it nearly impossible for any coal owner to give constant employment to any vessel in the trade which he may wish to employ. In some respects this act is probably advantageous, but, on the whole, its policy seems very questionable. Why should a coal owner be prevented from employing certain ships in preference to others? Under this act, if more ships engage in the trade than can be profitably employed in it, the loss produced by detentions in port, and waiting for a cargo, instead of falling, as it naturally would, were the trade free, on particular ships, and driving them from the business, falls equally on every ship employed, and depresses the whole trade. There is no regulation of this sort on the Wear.

*Duty on Coal conveyed to London by Railways, Canal, &c.*—The 8 & 9 Vict. c. 101. has imposed the same duties on coals conveyed to the metropolis by railway, canal, or other inland carriage that are imposed on them when conveyed by sea. It has further enacted that 1d. per ton of the produce of such duties shall be accumulated, from the 31st December, 1840, as a fund for the execution of improvements within the metropolis.

The question as to the policy of laying duties on the exportation of coal depends (as the exhaustion of the mines need not be thought of) on the fact, whether British coal be necessary or of considerable consequence to the progress of manufactures and of the arts in foreign countries. If it be, then certainly it would be good policy to preserve that superiority which we derive from the possession of coal by prohibiting its exportation, or burdening it when exported with a considerable duty; but if the possession of our coal be not necessary or of considerable importance to the foreigner, such prohibition or duty would encourage the working of foreign mines by discouraging the working of our own, without producing any corresponding advantage. It is not, however, very easy to say how the fact stands. But on the whole there seems to be little doubt that a supply of British coal, though not indispensable, is of very considerable advantage to the foreigner; and if so, it would seem to be sound policy to lay reasonable duties on its exportation, such, for example, as those imposed in 1842. These, however, were repealed in the course of the present year (1845).

An Account of the Quantity and Value of the Coal, Culm, &c. exported from the United Kingdom in 1842, specifying the Quantity and Value of the Coal sent to different Countries.

Countries.	Coal exported.	Value.	Countries.	Coal exported.	Value.
	Tons.	£		Tons.	£

This table sets the beneficial influence of the abolition of the duty on coals, and of the other alterations that have been made in the management of the trade, in a very striking point of view.

COASTING TRADE, the trade or intercourse carried on by sea between two or more ports or places of the same country.

It has been customary in most countries to exclude foreigners from all participation in the coasting trade. This policy began in England in the reign of Elizabeth (5 Eliz. c. 5.), or, perhaps, at a more remote era; and was perfected by the acts of navigation passed in 1651 and 1660. A vast number of regulations have been since enacted at different periods. The existing rules with respect to it, which have been much simplified, are embodied in the act 8 & 9 Vict. c. 86., and are as follow: —

*All Trade by Sea from one Part of the U. K. to another, or to the Isle of Man, to be deemed Coastwise, and no Part to be deemed beyond the Seas.* — All trade by sea from any one part of the U. K. to any other part thereof, or to the Isle of Man, or from the Isle of Man to any part of the U. K., or from one part of the Isle of Man to another part thereof, shall be deemed to be a coasting trade, and all ships while employed therein shall be deemed to be coasting ships; and no part of the U. K. or of the Isle of Man, however situated with regard to any other part, shall be deemed in law, with reference to each other, to be parts beyond the seas in any matter relating to the trade or navigation or revenue of this realm: provided always, that all goods liable to duty of customs upon the importation or bringing of them into the Isle of Man, when brought from the U. K. into the said Isle, and all vessels bringing the same, shall be liable to the same rules and regulations as are required by law in respect of goods imported into the said Isle from foreign parts, and in respect of the vessels bringing the same; and all penalties and forfeitures inflicted by law for any breach of the said rules and regulations shall attach upon all goods so brought into the said Isle contrary to the said rules and regulations or any of them, and upon all persons committing any breach of any such rule or regulation: and such penalties and forfeitures may be recovered in the same manner as any penalty or forfeiture may be recovered by any act relating to the customs. — § 113.

*Lords of Treasury to regulate what shall be deemed trading by Sea under this Act.* — Whereas some parts of the coast of the U. K. may be so situated with regard to other neighbouring parts thereof that doubts may arise in some cases whether the passage between them by water shall be deemed to be a

passage by sea within the meaning of this act; and that in other cases, although such passage be by sea, it may be unnecessary for the purposes of this act, or of any act relating to the customs to subject ships passing between such places to the restraints of coast regulations; be it therefore enacted, that it shall be lawful for the lords of the treasury to determine and direct in what cases the trade by water from any place on the coast of the U. K. to another of the same shall or shall not be deemed a trade by sea within the meaning of this act or of any act relating to the customs.—§ 114.

**Coasting Ship confined to coasting Voyage.**—No goods shall be carried in any coasting ship except such as shall be laden to be so carried at some port or place in the U. K., or at some port or place in the Isle of Man respectively; and no goods shall be laden on board any ship to be carried coastwise until all goods brought in such ship from parts beyond the sea shall have been unladen; and if any goods shall be taken into or put out of any coasting ship at sea or over the sea, or if any coasting ship shall touch at any place over the sea, or deviate from her voyage, unless forced by unavoidable circumstances, or if the master of any coasting ship which shall have touched at any place over the sea shall not declare the same in writing under his hand to the collector or comptroller at the port in the U. K., or in the Isle of Man where such ship shall afterwards first arrive, the master of such ship shall forfeit the sum of 500l.—§ 115.

**Before Goods be laden or unladen, Notice of Intention or of Arrival to be given, and proper Documents to issue.**—No goods shall be laden on board any ship in any port or place in the U. K., or in the Isle of Man to be carried coastwise, nor having been brought coastwise shall be unladen in any such port or place from any ship, until due notice in writing, signed by the master, shall have been given to the collector or comptroller, by the master, owner, wharfinger, or agent of such ship, of the intention to lade goods on board the same to be so carried, or of the arrival of such ship with goods so brought, (as the case may be), nor until proper documents shall have been granted as herein-after directed for the lading or for the unlading of such goods; and such goods shall not be laden or unladen except at such times and places, and in such manner, and by such persons, and under the care of such officers, as is and are herein-after directed; and all goods laden to be so carried, or brought to be so unladen, contrary hereto, shall be forfeited.—§ 116.

**Particulars in Notice.**—In such notice shall be stated the name and tonnage of the ship, and the name of the port to which she belongs, and the name of the master, and the name of the port to which she is bound or from which she has arrived, and the name or description of the wharf or place at which her lading is to be taken in or discharged (as the case may be); and such notice shall be signed by the master, owner, wharfinger, or agent of such ship, and shall be entered in a book to be kept by the collector for the information of all parties interested; and every such notice for the unlading of any ship or vessel shall be delivered within 24 hours after the arrival of such ship or vessel, under a penalty of 200l., to be paid by the master of such ship or vessel; and in every such notice for the lading of any ship or vessel shall be stated the last voyage on which such ship or vessel shall have arrived at such port; and if such voyage shall have been from parts beyond the sea there shall be produced with such notice a certificate from the proper officer of the discharge of all goods (if any) brought in such ship, and of the due clearance of such ship or vessel inwards of such voyage.—§ 117.

**From and to Ireland with certain Goods, the Master must attend to deliver Notice, &c.**—Upon the arrival of any coasting ship at any port in Great Britain from Ireland, or at any port in Ireland from Great Britain, the master of such ship shall within 24 hours after such arrival attend and deliver such notice, signed by him, to the collector or comptroller; and if such ship shall have on board any goods subject on arrival to any duty or excise, or any goods which had been imported from parts beyond the sea, the particulars of such goods, with the marks and numbers of the packages containing the same, shall be set forth in such notice; and if there shall be no such goods on board, then it shall be declared in such notice that no such goods are on board; and the master shall also answer any questions relating to the voyage as shall be demanded of him by the collector or comptroller; and every master who shall fail in due time to deliver such notice, and truly to answer such questions, shall forfeit the sum of 100l.—§ 118.

**After Notice given of lading Goods on board Coasting Ships, Collector may grant a general Suffrance.**—When due notice shall have been given to the collector or comptroller at the port of lading of the intention to lade goods on board any coasting ship, such collector or comptroller shall grant a general suffrance for the lading of goods (without specifying the same) on board such ship, at the wharf or place which shall be expressed in such suffrance; and such suffrance shall be a sufficient authority for the lading of any sort of goods, except such (if any) as shall be expressly excepted therein; provided always, that before any suffrance be granted for any goods prohibited to be exported the master or owner of any such ship, or the shipper of such goods, shall give bond, with 1 sufficient surety, in treble the value of the goods, that the same shall be landed at the port for which such suffrance is required, or shall be otherwise accounted for to the satisfaction of the commissioners of customs.—§ 119.

**Master of Coasting Vessel to keep a Cargo Book.**—The master of every coasting ship shall keep or cause to be kept a cargo book of the same, stating the name of the ship and of the master, and of the port to which she belongs, and of the port to which bound on each voyage; and in which book shall be entered, at the port of lading, an account of all goods taken on board such ship, stating the descriptions of the packages, and the quantities and descriptions of the goods therein; and the quantities and descriptions of any goods stowed loose, and the names of the respective shippers and consignees, as far as any of such particulars shall be known to him; and in which book, at the port of discharge, shall be noted the respective days upon which any of such goods be delivered out of such ship, and also the respective times of departure from the port of lading, and of arrival at any port of unlading; and such master shall produce such book for the inspection of the coast-writer or other proper officer, so often as the same shall be demanded, and who shall be at liberty to make any note or remark therein; and if such master shall fail correctly to keep such book, or to produce the same, or if at any time there be found on board such ship any goods not entered in the cargo book as laden, or any goods noted as delivered, or if at any time it be found that any goods entered as laden, or any goods not noted as delivered, be not on board, the master of such ship shall forfeit the sum of 500l.; and if, upon examination at the port of lading, any package entered in the cargo book as containing any foreign goods shall be found not to contain such goods, such package, with its contents, shall be forfeited; and if at the port of discharge any shall be found to contain any foreign goods which are not entered in such book, such goods shall be forfeited.—§ 120.

**Accounts of Foreign Goods, and of Goods subject to Coast Duty, to be delivered to Collector.**—Before any coasting ship shall depart from the port of lading, an account, together with a duplicate of the same, all fairly written, and signed by the master, shall be delivered to the collector or comptroller; and in such account shall be set forth such particulars as are required to be entered in the cargo book of all foreign goods, and of all corn, grain, meal, flour, or malt laden on board, and generally, whether any other British goods or no other British goods be laden on board, as the case may be, or whether such ship be wholly laden with British goods not being any of the descriptions before mentioned; as the case may be; and the collector or comptroller shall inspect and retain one of such accounts, and shall return the other, dated and signed by him, and noting the clearance of the ship thereon; and such account shall be the clearance of the ship for the voyage, and the transfer for the goods expressed therein; and if any such account be false, or shall not correspond with the cargo book, the master shall forfeit the sum of 500l.—§ 121.

**Transit to be delivered to Collector before Goods unladen.**— Before any goods be unladen from any coasting ship at the port of discharge, the master, owner, wharfinger, or agent of such ship shall deliver the transit to the collector or comptroller of such port, who shall thereupon grant an order for the unloading of such ship at the wharf or place specified in such order: provided always, that if any of the goods on board such ship be subject to any duty of customs or excise payable on arrival coastwise at such port, the master, owner, wharfinger, or agent of such ship, or the consignee of such goods, shall also deliver to the collector or comptroller a bill of the entry of the particulars of such goods, expressed in words at length, together with a copy thereon, in which all sums and numbers may be expressed in figures, and shall pay down all duties of customs, or produce a permit in respect of all duties of excise, which shall be due and payable on any such goods, as the case may be; and thereupon the collector and comptroller shall grant an order for the landing of such goods, in the presence or by the authority of the coast-waiter.— § 112.

**Collector, in certain Cases, may grant general Transits.**— It shall be lawful for the collector and comptroller, in the cases herein-after mentioned, to grant for any coasting ship a general transit, to continue in force for any time not exceeding 1 year from the date thereof, for the landing of any goods (except such goods, if any, as shall be expressly excepted therein), and for the clearance of the ship in which the goods shall be laden, and for the unloading of the goods at the place of discharge, viz.

For any ship regularly trading between places in the river Severn seaward of the Tidmouth.

For any ship regularly trading between places in the river Humber.

For any ship regularly trading between places in the Firth of Forth.

For any ship regularly trading between places to be named in the transit, and carrying only manure, lime, chalk, stone, gravel, sand, or any earth, not being fallers' earth.

And it shall and may be lawful for the commissioners of customs, whenever it shall appear to them to be necessary, to grant general transits, under such regulations and for such time as they may see fit, for the landing of any goods, and for the clearing the ship in which the goods shall be laden, and for the unloading the goods at the place of discharge: provided always, that such transits shall be written in the cargo book

herein-before required to be kept by the masters of coasting ships: provided also, that if the said commissioners or the collector and comptroller shall at any time revoke such transit, and notice thereof shall be given to the master or owner of the ship, or shall be given to any of the crew whom on board the ship, or shall be entered in the cargo book by any officer of the customs, such transits shall become void, and shall be delivered up by the master or owner to the collector or comptroller, or to any officer of customs demanding the same.— § 113.

**Coast-waiter, Landing-waiter, or Searcher may go on board and examine any Coasting Ship.**— It shall be lawful in any case, and at all legal times, for the coast-waiter, and also for the landing-waiter, and for the searcher, and for any other proper officer of the customs, to go on board any coasting ship in any port or place in the U. K. or in the Isle of Man, or at any period of her voyage, and strictly to search such ship, and to examine all goods on board, and all goods being laden or unladen, and to demand all documents which ought to be on board such ship.— § 114.

**Times and Places for Landing and Shipping.**— No goods shall be unshipped from any ship arriving coastwise in the U. K. or in the Isle of Man, and no goods shall be shipped or waterborne to be shipped, in the U. K. or in the Isle of Man, to be carried coastwise, but only on days not being Sundays or holidays, and in the daytime, (that is to say,) from the 1st day of September until the last day of March between sun-rising and sun-setting, and from the last day of March until the 1st day of September, between the hours of 7 of the clock in the morning and 4 of the clock in the afternoon: nor shall any such goods be so unshipped, shipped, or waterborne unless in the presence or with the authority of the proper officer of the customs, nor unless at places which shall be appointed or approved by the proper officer of the customs.— § 115.

**Goods prohibited or restrained.**— Whenever any goods which may be prohibited to be exported by proclamation or by order in council, under the authority of this act, shall be prohibited, it shall be lawful in such proclamation or order in council to prohibit or restrict the carrying of such goods coastwise; and if any such goods shall be carried coastwise, or shall be shipped or waterborne to be carried coastwise, contrary to any such prohibition or restriction, the same shall be forfeited.— § 116.

An Account of the Number and Tonnage of the Vessels employed in the Coasting Trade, which entered inwards and cleared outwards, with Cargoes, at the several Ports of the United Kingdom, in 1843 and 1844, distinguishing the Vessels employed in the Intercourse between Great Britain and Ireland from other Coasters.

**COBALT** (Ger. *Kobalt*; Du. *Kobal*; Sw. *Cobalt*; Fr. *Cobalt*; It. *Cobalto*; Rus. *Kobalt*; Lat. *Cobaltum*), a mineral of a grey colour, with a shade of red, and by no means brilliant. It has scarcely any taste or smell; is rather soft; specific gravity about 8.6. Sometimes it is composed of plates, sometimes of grains, and sometimes of small fibres adhering to each other. Its oxides are principally employed. — (See *SMALTS*, or *SMALTZ*.) They form the most permanent blue with which we are acquainted. The colouring power of oxide of cobalt on vitrifiable mixtures is greater, perhaps, than that of any other metal. One grain gives a full blue to 240 grains of glass. — (*Thomson's Chemistry*, and *Ure's Dictionary*.)

**COCULUS INDICUS**, or **INDIAN BERRY** (Sans. *Kakamari*; Malay. *Tubaidigi*), the fruit of the *Mentipernum Cocculus*, a large tree of the Malabar coast, Ceylon, &c. It is a small kidney-shaped berry, having a white kernel inside, of a most unpleasant taste. It is of a poisonous and intoxicating quality, and has been employed to adulterate ale and beer. But its employment in that way is prohibited under a penalty of 200*l.* upon the brewer, and of 500*l.* upon the seller of the drug, by the 56 Geo. 3. c. 58.

**COCHINEAL** (Ger. *Koschenilze*; Du. *Conchenilje*; Fr. *Cochenille*; It. *Cocciniglia*; Sp. *Cochinilla*; Grana; Port. *Cochinilha*; Rus. *Konsuel*), an insect (*Coccus cacti*) found in Mexico, Georgia, South Carolina, and some of the West India islands: recently, also, it has been introduced into Java, and promises to become an important product of that rapidly improving colony. Formerly it was in Mexico only that it was reared with care, and formed a valuable article of commerce; but its culture is now more or less attended to in various parts of the West Indies and of the United States. It is a small insect, seldom exceeding the size of a grain of barley; and was generally believed, for a considerable time after it began to be imported into Europe, to be a sort of vegetable grain or seed. There are two sorts or varieties of cochineal: the best or domesticated, which the Spaniards called *grana fina*, or fine grain; and the wild, which they call *grana ylocatna*. The former is nearly twice as large as the latter; probably because its size has been improved by the favourable effects of human care, and of a more

copious and suitable nourishment, derived solely from the *Cactus cochineifer*, during many generations. Wild cochineal is collected six times in the year; but that which is cultivated is only collected thrice during the same period. The insects, of which there are about 70,000 in a pound, being detached from the plants on which they feed by a blunt knife, are put into bags, and dipped in boiling water to kill them, after which they are dried in the sun. It is principally used in the dyeing of scarlet, crimson, and other esteemed colours. The watery infusion is of a violet crimson; the alcoholic, of a deep crimson; and the alkaline, of a deep purple, or rather violet hue. It is imported in bags, each containing about 200 lbs.; and has the appearance of small, dry, shrivelled, rugose berries or seeds, of a deep brown, purple, or mulberry colour, with a white matter between the wrinkles. In this state they suffer no change from length of keeping. Dr. Bancroft says that that cochineal is the best, which is "large, plump, dry, and of a silver white colour on the surface."

The species of cochineal called *granilla*, or dust, is supposed by Dr. Bancroft to be principally formed of *grana sylvestra*. The insects of which it consists are smaller than those composing the *finia cochineal*; and it does not yield more than a third part of the colouring matter that is yielded by the latter. The cochineal insect was introduced into India in 1795; but a very inferior sort only is produced. It has also been introduced into Java and Spain, but with what success remains to be seen. — (*Thomson's Dispensatory; Bancroft on Colours, &c.*)

An Account of the Quantities of Cochineal Imported into the United Kingdom in 1839, 1840, and 1841, specifying the Countries whence it came, and the Quantities brought from each, and specifying also the Quantities entered for Consumption, and the Produce of the Duties, in each of the 3 Years ending with 1842.

Countries.	1839.	1840.	1841.	1842.
	Lbs.	Lbs.	Lbs.	Lbs.

Duties paid thereon	-	£ 36 19 10	£ 36 15 2	£ 283 17 11

The duties on cochineal were reduced (foreign from 6*s.*, and colonial from 2*d.* per lb.) in 1842 to 1*s.* a cwt.

The price of cochineal fluctuated very much during the war, partly on account of the obstacles which it occasionally threw in the way of importation, and partly on account of its being an article of direct government expenditure. In 1814 the price of the best cochineal was as high as 35*s.* and 39*s.*; and it has since gone on regularly declining, with hardly a single rally, till it has sunk to from 4*s.* to 6*s.* per lb. Previously to the war it had never been under 12*s.* or 13*s.* Lac dye has recently been employed to some extent in dyeing scarlet; but notwithstanding this circumstance, the consumption of cochineal, occasioned, no doubt, partly by its cheapness, and partly, perhaps, by some change of fashion, has been materially increased since 1824. This, however, has not had any material influence on its price; and it would appear, from the long continuance of low prices, not only without any diminution, but with a large increase of imports, that they are still sufficient to remunerate the growers of the article. — (*Tooke, &c. on High and Low Prices; Cook's Commercial Circulars.*)

COCOA, or, more properly, CACAO, (Fr. and Sp. *Cacao*; Ger. *Kakao*) the seed or nuts of the cocoa tree (*Theobroma cacao*), growing in the West Indies, and in many parts of South America. It is said, by Mr. Bryan Edwards, to bear some resemblance, both in size and shape, to a young *blackheart cherry*. The nuts are contained in pods, much like a cucumber, that proceed immediately from all parts of the body and larger branches; each pod contains from 20 to 30 nuts, of the size of large almonds, very compactly set. The shell of the nut is of a dark brown colour, brittle, and thin; the kernel is, both internally and externally, brownish, divided into several unequal portions, adhering together, but separating without much difficulty; it has a light agreeable smell, and an unctuous, bitterish, rather rough and peculiar, but not ungrateful taste. The nuts should be chosen full, plump, and shining, without any mustiness, and not worm-eaten. They yield, by expression, a great deal of oil; but they are cultivated only that they may be employed in the preparation of the excellent beverage cocoa, and the manufacture of chocolate, of which they form the principal ingredient. The finest cocoa is said to be that of Socomusco. The principal importations are, however, derived from the Caraccas and Guayaquil, particularly the former, the cocoa of which is, also, the more valuable. The exports from Guayaquil amounted, at an average of the 3 years ending with 1838, to 8,878,255 lbs. a year. — (*Geog. Dict. art. GUAYAQUIL.*)

M. Humboldt estimated the consumption of cocoa in Europe, in 1806, at 29,000,000 lbs., of which from 6,000,000 to 9,000,000 were supposed to be consumed in Spain. The production of cocoa had been languishing in the Caraccas for several years previously to the commencement of the disturbances in South America; and latterly the cultivation

of one or other of the great staples of cotton, sugar, and coffee, seems to have been, in most parts, gaining the ascendancy. — (*Humboldt, Pers. Narrative*, vol. iv. pp. 236—247. Eng. trans.)

*Duties. Consumption in England.* — Down to a late period the consumption of cocoa in England was confined within very narrow limits; a result which we are inclined to ascribe to the oppressiveness of the duties with which it has been loaded, and not to its being unsuitable to the public taste. It is now many years since Mr. Bryan Edwards declared that the ruin of the cocoa plantations, with which Jamaica once abounded, was the effect of "the heavy hand of ministerial exaction." — (*Hist. of West Indies*, II. 263. ed. 1819.) And, unaccountable as it may seem, this pressure was not materially abated till 1832, when the duties on cocoa from a British possession were reduced from 6*d.* to 2*d.* per lb. And such has been the influence of this judicious measure, that the consumption of cocoa, which, at an average of the 3 years ending with 1831, amounted to 440,578 lbs. a year, had increased, at an average of the 2 years ending with 1842, to 2,072,332 lbs. It is seen from the accompanying table that the duty on foreign cocoa continued from 1830 down to 1842 to be (generally 6*d.* per lb.), three times as great as that on coffee from a British possession; and in consequence of this enormous discrepancy, none of it was entered for home consumption under the duty, though it is worthy of remark that cocoa for the navy, which pays no duty, is almost always taken from foreign stock. In 1842 the duty on cocoa from a British possession was farther reduced 1/2*d.* per lb.; and it might have been expected that the ratio of protection in favour of plantation cocoa would then, also, have been diminished; but, on the contrary, it has been increased from 300 to 400 per cent., the duty on foreign cocoa being at this moment 4 1/2*d.* per lb.

Cocoa nut husks and shells may be imported and entered for consumption on paying a duty (if from a British possession) of about 1/2*d.* per lb. They are brought not only from the West Indies, but from Gibraltar and other places, being the refuse of the chocolate manufactories carried on in them.

Cocoa cannot be entered as being the produce of a British possession in America, or of the Mauritius, until the master of the ship by which it is imported delivers to the collector or comptroller a certificate and declares that the goods are the produce of such places. — (3 & 4 Will. 4. c. 52. § 37.) Neither shall they be deemed to be the produce of such places, unless imported direct from thence. — (7 Geo. 4. c. 48.)

No abatement of duty is made on account of any damage received by cocoa. — (3 & 4 Will. 4. c. 52. § 32.)

An Account of the Quantity, in Pounds Weight, of Cocoa imported into the United Kingdom, in each Year from 1832 down to 1842, both inclusive, specifying the Quantities annually entered for Home Consumption, the Rates of Duty, and the Total Annual Produce of the Duty: — Also, a similar Return for Cocoa Husks and Shells.

*Sources of Supply.* — Trinidad furnishes by far the largest proportion of the cocoa brought from the British West Indies, the imports from that island, in 1841, having amounted to 2,493,302 lbs., while the imports from all the other islands amounted to only 426,296 lbs. Of 5,014,681 lbs. cocoa imported in 1841, 2,920,293 lbs. were brought from the West India colonies, 1,802,947 lbs. from Columbia, and 291,794 from Brazil.

British plantation cocoa was worth in bond in the London market, in June 1843, from 3*s.* to 4*s.* a cwt.

**COCO, COKER**, or, more properly, **COCOA NUTS** (Ger. *Kokonüsse*; Du. *Koekoeten*; Fr. and Sp. *Cocos*; It. *Cocchi*; Rus. *Kokos*; Sans. *Narikela*), the fruit of a species of palm tree (*Cocos nucifera* Lin.). This tree is common almost every where within the tropics, and is one of the most valuable in the world. It grows to the height of from 50 to 90 feet; it has no branches, but the leaves are from 12 to 14 feet in length, with a very strong middle rib. The fruit is nearly as large as a man's head; the external rind is thin, tough, and of a brownish red colour; beneath this there is a quantity of very tough fibrous matter, which is used in many countries in the manufacture of cordage, and coarse sail-cloth — (see *CORA*); within this fibrous coating is the shell of the nut, which is nearly globular, very hard, susceptible of a high polish, and used for many domestic purposes; the kernel is white, in taste and firmness resembling that of a hazel nut; it is hollow in the interior, the hollow being filled with a milky fluid. While the nut is green, the whole hollow of the shell is filled with fluid, which is refreshing, agreeable, and pleasant to the taste. The solid part of the ripe kernel is extremely nutritious, but rather indigestible. The kernels yield by expression a great deal of oil, which, when recent, is equal to that of sweet almonds; but it soon becomes rancid, and is then employed by painters. A tree generally yields about 100 nuts, in clusters near

the top of about a dozen each. The wood of the tree is made into boats, rafters, the frames of houses, and gutters to convey water. The leaves are used for thatching buildings; and are wrought into mats, baskets, and many other things, for which osiers are employed in Europe; so that every part of it is applied to some useful purpose.

If the body of the tree be bored, there exudes from the wound a white liquor, called palm wine or toddy. It is very sweet when fresh; kept a few hours, it becomes more poignant and agreeable; but next day it begins to grow sour, and in the space of 24 hours is changed into vinegar. When distilled, it produces the best species of Indian arrack; it also yields a great deal of sugar. Toddy is obtained from several species of palms, but that of the *Cocos nucifera* is the best. — (See *Ainslie's Materia Indica*; *Rees's Cyclopædia*, &c.)

An improvement has recently been effected in the preparation of cocoa oil, which promises to be of much importance in the arts, by making it available in the manufacture of candles and soap, and for various purposes to which it was not previously applicable.

The palm oil met with in the market is not obtained from the *Cocos nucifera*, but from another species of palm. It is chiefly imported from the coast of Guinea. — (See PALM OIL.)

Cocoa nuts are produced in immense quantities in Ceylon, forming, with their products, — oil, arrack, and colir, — the principal articles of export from that island. They are also very abundant in the Maldivé Islands, Siam, and on several places of the coast of Brazil. Cocoa oil is in very extensive use all over India, and large quantities are manufactured in the lower provinces of Bengal. This latter is said to be superior to that imported from Ceylon.

The duty on cocoa nuts, which is imposed by tale, was judiciously reduced in 1832, from 6s. per 100 on those from a British possession to 1s. per 1,200; those from a foreign country pay 20 per cent. *ad valorem*.

COD (Ger. *Kabjau*, *Bakalau*; Du. *Kabelfaauw*, *Baukaelja*; Da. *Kabliaw*, *Shreitorsk*, *Bakelau*; Sw. *Kabelfjo*, *Bakelau*; Fr. *Morue*, *Cabillaud*; It. *Baccala*, *Baccalare*; Sp. *Bacalao*; Port. *Bacalhão*; Lat. *Gadus*), a species of fish, too well known to require any description. "It is amazingly prolific. Leewenhoek counted 9,384,000 eggs in a cod-fish of a middling size; a number that will baffle all the efforts of man to exterminate. In our seas they begin to spawn in January, and deposit their eggs in rough ground, among rocks. Some continue in roe till the beginning of April.

"The cod is only found in the northern parts of the world; it is an ocean fish, and never met with in the Mediterranean. The great rendezvous of the cod-fish is on the banks of Newfoundland, and the other sand banks that lie off the coast of Cape Breton, Nova Scotia, and New England. They prefer those situations, by reason of the quantity of worms produced in these sandy bottoms, which tempt them to resort there for food. But another cause of the particular attachment the fish have to these spots is their vicinity to the polar seas, where they return to spawn: there they deposit their roes in full security; but want of food forces them, as soon as the more southern seas are open, to repair thither for subsistence. Few are taken to the north of Iceland, but they abound on its south and west coasts. They are also found to swarm on the coasts of Norway, in the Baltic, and off the Orkney and Western Isles; after which their numbers decrease in proportion as they advance towards the south, when they seem quite to cease before they reach the mouth of the Straits of Gibraltar.

"Before the discovery of Newfoundland, the greater fisheries of cod were on the seas of Iceland, and off our Western Isles, which were the grand resort of ships from all the commercial nations; but it seems that the greatest plenty was met with near Iceland. The English resorted thither before the year 1415; for we find that Henry V. was disposed to give satisfaction to the King of Denmark for certain irregularities committed by his subjects on those seas. In the reign of Edward IV. the English were excluded from the fishery, by treaty. In later times, we find Queen Elizabeth condescending to ask permission to fish in those seas, from Christian IV. of Denmark. In the reign of her successor, however, no fewer than 150 English ships were employed in the Iceland fishery; which indulgence might arise from the marriage of James with a princess of Denmark." — (*Pennant's British Zoology*.)

Cod is prepared in two different ways; that is, it is either gutted, salted, and then barrelled — in which state it is denominated green or pickled cod, — or it is dried and cured — in which state it is called dried cod. Ready access to the shore is indispensable to the prosecution of the latter species of fishery.

*Cod Fishery, British.* — This fishery, including under the term not only that of common cod, but of haddock, ling, hake, torsk, &c., is of very considerable value and importance. It consists of two grand departments, which may be respectively termed the *home*, and the *distant* or *colonial* fishery. The first is carried on in a great variety of places contiguous to the shores of the British islands; but the most productive and valuable of the adjacent fisheries are those in the neighbourhood of the Shetland and Orkney islands, and off the shores of Essex, Suffolk, Norfolk, Lincoln, &c. Formerly the principal part of the cod brought to London was taken round the edges of the Dogger-bank, or rather in the hollows between it and the Well-bank; and the finest is still brought from thence. But within the last few years the London market has been in great part supplied with cod taken between Yarmouth and the Nore; and in conse-

quence of its being procured so much nearer home, the average price of cod has fallen from 30 to 50 per cent. below what it was from 1815 to 1820. — (*Report on the Channel Fisheries*, p. 85.) This change has occasioned a great increase in the number of fishing smacks belonging to Barking, Gravesend, and other ports on the Thames; while those belonging to Harwich and the more distant ports have been materially reduced. The cod taken by the fishermen of Shetland and the Western Isles is mostly cured dried, but it is partially, also, cured green or in pickle; and it is sometimes, though much seldom now than formerly, conveyed alive in walled vessels to London. The haddocks taken on the Aberdeenshire coast, and cured at the village of Finnan, near Aberdeen, are held in the highest estimation. The haddocks taken in Dublin bay are the largest of any taken on the British coasts.

There are no means by which to form any estimate either of the number of fishing vessels, or of the quantity or value of the fish annually taken in the home cod fishery; by far the larger portion being landed without account or notice of any kind, and disposed of fresh. The following account contains such particulars only as have been brought under the notice of the commissioners for the improvement of the British fisheries.

Account of the Total Quantity of Cod, Ling, or Hake, cured, punched, or branded, and exported, since 1826, in so far as the same has been brought under the Cognisance of the Officers of the Fishery Board.

N.B.—The books of this department do not exhibit the total quantity of cod, ling, or hake cured till the year commencing 5th of April, 1825. The bounty from the commencement of this abstract to the 5th of April, 1830, was near 4s. per cwt. for fish cured dried, and 2s. 6d. per barrel for fish cured in pickle, taken by the crews of vessels or boats not on the tonnage bounty; while the bounty vessels licensed for cod, ling, or hake fishery, on the tonnage bounty, was 50s. per ton for tonnage and cargo to the 5th of July, 1826; 45s. from thence to the 5th of July, 1827; 40s. to the 5th of July, 1828; and 35s. to the 5th of April, 1830; when the bounties ceased altogether, and have not since been renewed.

*Distant Cod Fishery.*—The great bank of Newfoundland, discovered by John or Sebastian Cabot in 1497, was long, and perhaps still is, the principal seat of the distant cod fishery. The extraordinary abundance of cod-fish on its banks having been speedily ascertained, the French, Portuguese, and Spaniards soon after engaged in the fishery. The English were later in coming into the field. In 1578, France had on the banks of Newfoundland 150 vessels, Spain 120 or 130, Portugal 50, and England from 30 to 50. During the first half of last century, the fishery was principally carried on by the English, including the Anglo-Americans, and the French; but the capture of Cape Breton, and of their other possessions in America, gave a severe blow to the fishery of the latter. The American war divided the British fishery; that portion of it which had previously been carried on from New England being thereafter merged in that of the United States. Still, however, we contrived to preserve the largest share. At an average of the 3 years ending with 1789, we are said to have had 402 ships, 1,911 boats, and 16,856 men, engaged in the American fisheries. During last war, the French being excluded from the fisheries, those of England attained to an extraordinary degree of prosperity; the total value of the produce of the Newfoundland fishery in 1814 having exceeded 2,800,000. But since the peace, the British fishery on the Newfoundland banks has rapidly declined; and can hardly, indeed, be said, at this moment, to exist. It is now carried on almost entirely by the French and the Americans; the facilities enjoyed by the latter for its prosecution being greater than those of any other people, and the former being tempted to engage in it by the extraordinary encouragements afforded by government. At present, the British fishery carried on by the inhabitants of Newfoundland is confined entirely to the shore or boat fishery. But this, though probably not so good a nursery of sailors as the bank fishery, is admitted to be "the most productive of merchantable fish and oil." — (*McGregor's British America*, 2d ed. vol. i.

p. 206.) The average annual produce of the fisheries of all sorts, including seal, salmon, &c., exported from Newfoundland, during the 3 years ended with 1832, is stated by Mr. M'Gregor to have amounted to 516,417*l*. — (Vol. I. p. 161.) A considerable fishery is also carried on from the ports and harbours of Nova Scotia and Cape Breton, New Brunswick, &c. But next to that of Newfoundland, the principal British fishery is carried on along the coast of Labrador. We borrow from the valuable work now referred to, the following statements with respect to it:—

"During the fishing season, from 280 to 300 schooners proceed from Newfoundland to the different fishing stations on the coast of Labrador, where about 20,000 British subjects are employed for the season. About one third of the schooners make two voyages, loaded with dry fish, back to Newfoundland during the summer, and several merchant vessels proceed from Labrador with their cargoes direct to Europe, leaving, generally, full cargoes for the fishing vessels to carry to Newfoundland. A considerable part of the fish of the second voyage is in a green or pickled state, and dried afterwards at Newfoundland. Eight or nine schooners from Quebec frequent the coast, having on board about 80 seamen and 100 fishermen. Some of the fish caught by them is sent to Europe, and the rest to Quebec; besides which, they carry annually about 6,000*l*. worth of furs, oil, and salmon to Canada.

"From Nova Scotia and New Brunswick, but chiefly from the former, 100 to 120 vessels resort to Labrador. The burden of these vessels may amount to 6,000 or 7,000 tons, carrying about 1,300 seamen and fishermen. They generally carry the principal part of their cargoes home in a green state.

"One third of the resident inhabitants are English, Irish, or Jersey servants, left in charge of the property in the fishing rooms, and who also employ themselves, in the spring and fall, catching seals in nets. The other two thirds live constantly at Labrador, as furriers and seal-catchers on their own account, but chiefly in the former capacity, during winter, and all are engaged in the fisheries during summer. Half of these people are Jerseymen and Canadians, most of whom have families.

"From 16,000 to 15,000 seals are taken at Labrador in the beginning of winter and in spring. They are very large; and the Canadians, and other winter residents, are said to feast and fatten on their flesh. About 4,000 of these seals are killed by the Esquimaux. The whole number caught produce about 850 tons of oil, value about 8,000*l*." — (Vol. I. p. 185.)

The total produce of the Labrador fishery in 1832 was estimated by Mr. M'Gregor at 302,050*l*.; and he farther estimated the total produce of the British fisheries in the various seas and rivers of America, including seal oil and skins, at an average of the 5 years ending with 1832, at 887,310*l*. year. — (Vol. II. p. 696.) We subjoin

An Account of the Quantities and Value of each kind of Fish taken in the Newfoundland Fishery (including that carried on at Labrador by Boats from Newfoundland) in 1837, 1838, and 1839.

Description.	1837.		1838.		1839.	
	Quantities.	Value.	Quantities.	Value.	Quantities.	Value.
Cod-fish, dried . . . . .	848,098	4528,098	781,515	4484,649	865,377	4508,157

Seal skins . . . . .	255,254	34,835	575,361	80,474	437,301	46,536
Total value . . . . .	—	4857,849	—	4790,885	—	4836,011

Note. — The number of ships employed in the fisheries cannot be ascertained; and the number of boats was 6,159.

About eight tenths of the dried fish exported from Newfoundland by British subjects are sent to Spain, Portugal, Italy, and other Continental nations; the rest goes to the West Indies and to Great Britain.

The act 5 Geo. 4. c. 51. contains several regulations with respect to the Newfoundland fisheries. Aliens are prohibited from fishing on the coasts, or in the bays or rivers of Newfoundland, excepting, however, the rights and privileges granted by treaty to foreign states at amity with his Majesty.

All British subjects may take, cure, and dry fish, occupy vacant places, cut down trees for building, and do other things useful for the trade. — § 3.

Certificates shall be granted to vessels clearing out for the fishery; and on arrival at Newfoundland a report shall be made of such certificate, and registered; and on leaving the fishery the usual clearance shall be obtained. Vessels having on board any goods other than fish, &c. to forfeit the fishing certificate. — § 4.

Persons throwing out ballast, &c. to the prejudice of the harbours in Newfoundland, shall be subject to a penalty. — § 5.

A contract in writing, specifying wages, and how to be paid, must be entered into with seamen and fishermen. — § 7.

A fisherman is prohibited receiving more than three fourths of his wages during service; but the balance due to him is to be paid immediately upon the expiration of the contracted time of service. No fisherman to be turned off, except for wilful neglect of duty, or other sufficient cause, under a penalty, for such offence, of not less than 5*l*. nor more than 50*l*.

In order to fulfil the conditions in any treaty with a foreign state, his Majesty may empower the governor of Newfoundland to remove any works erected by British subjects for the purpose of carrying on the fishery between Cape St. John and Cape Ray, and to compel them to depart to another place. — § 12.

Every person so refusing to depart shall forfeit 50*l*. — § 13.

The governor is empowered to sell or lease places within the island called Ship-rooms. — § 14.

For the regulations, &c. as to the importation of fish into Great Britain, see FISHERY. It is doubtful whether the distant cod fishery may not have passed its zenith. Spain, Italy, and other Catholic countries, have always been the great markets for dried fish; but the observance of Lent is every day becoming less strict; and the demand for dried fish will, it is most likely, sustain a corresponding decline. The relaxed observance of Lent in the Netherlands and elsewhere has done more than any thing else to injure the herring fishery of Holland.

Cod Fishery, American. — The Americans have at all times prosecuted the cod fishery with great vigour and success. Their fishermen are remarkable for their activity and

enterprise, sobriety, and frugality; and their proximity to the fishing grounds, and the other facilities they possess for carrying on the fishery, give them advantages with which it is very difficult to contend. In 1795, the Americans employed in the cod fishery about 31,000 tons of shipping; in 1807, they are said to have employed 70,306 tons; but it subsequently declined for several years, and was almost entirely suspended during the late war. According to the official returns (laid before Congress the 21st of July, 1842), the Americans had in the year ending the 30th of September, 1841, 66,556 tons shipping engaged in the cod fishery. During the same year they exported 252,199 quintals of dried, and 36,508 barrels of pickled cod; their aggregate value being 751,783 dollars.

"The Americans follow two or more modes of fitting out for the fisheries. The first is accomplished by 6 or 7 farmers, or their sons, building a schooner during winter, which they man themselves (as all the Americans on the sea coast are more or less seamen as well as farmers); and after fitting the vessel with necessary stores, they proceed to the banks, Gulf of St. Lawrence, or Labrador; and, loading their vessel with fish, make a voyage between spring and harvest. The proceeds they divide, after paying any balance they may owe for outfit. They remain at home to assist in gathering their crops, and proceed again for another cargo, which is salted down, and not afterwards dried; this is termed mud-fish, and kept for home consumption. The other plan is, when a merchant, or any other, owning a vessel, lets her to 10 or 15 men on shares. He finds the vessel and nets. The men pay for all the provisions, hooks and lines, and for the salt necessary to cure their proportion of the fish. One of the number is acknowledged master; but he has to catch fish as well as the others, and receives only about 30c. per month for navigating the vessel; the crew have five eighths of the fish caught, and the owners three eighths of the whole.

"The first spring voyage is made to the banks; the second either to the banks, Gulf of St. Lawrence, or the coast of Labrador; the third or fall voyage, is again to the banks; and a fourth, or second fall voyage, is also made, sometimes, to the banks."—(Mr. Gregor, vol. 1. p. 290.)

It is stipulated in the first article of a convention between Great Britain and the United States, signed at London, 20th of October, 1818, that the subjects of the United States shall have liberty to take all sorts of fish "on that part of the coast of Newfoundland from Cape Ray to the Ramens Islands, on the western and northern coasts of Newfoundland from Cape Ray to the Quirpon Islands, on the Magdalen Islands, and also on the coasts, bays, harbours, and creeks, from Mount Joly, on the southern coast of Labrador, and through the Straits of Belleisle, and thence northwardly indefinitely along the coast, without prejudice, however, to any of the exclusive rights of the Hudson's Bay Company; and that the American fishermen shall also have liberty, for ever, to dry and cure fish in any of the unsettled bays, harbours, and creeks of the southern part of the coast of Newfoundland here above described, and of the coast of Labrador; but so soon as the same, or any portion thereof, shall be settled, it shall not be lawful for the said fishermen to dry or cure fish without previous agreement for such purpose with the inhabitants, proprietors, or possessors of the ground. And the United States hereby renounce for ever any liberty heretofore enjoyed or claimed by the inhabitants thereof, to take, dry, or cure fish on or within 3 marine miles of any of the coasts, bays, creeks, or harbours of his Britannic Majesty's dominions in America not included within the above mentioned limits." The American fishermen are, however, admitted into all bays, &c. for the purpose of shelter, of repairing damages, of purchasing wood, and of obtaining water, and for no other purpose whatever; and when there, they are to be placed under such restrictions as may be necessary to prevent their abusing the privileges hereby reserved to them.

**Cod Fishery, French.**—France has always enjoyed a considerable share of the cod fishery. The following Table shows the extent to which she has carried it since the peace.

Account of the Number of Ships, with their Tonnage, Crews, and Cargoes, that have entered the different Ports of France during the under-mentioned Years.

Years.	Shipping.			Imports.		
	Ships.	Tons.	Men.	Codfish, green.	Codfish, dry.	Oil.
1795	828	35,173	6,511	Quint. 72,289	Quint. 138,237	Quint. 14,945
1820	377	45,036	6,174	104,003	156,437	11,560
1826	653	55,311	11,323	161,627	67,748	15,570
1840	458	24,243	6,897			
1841	449	24,064	5,259		204,740	17,968

The quantities of oil are exclusive of *draches* (hules non epurés); there are also sounds, &c. Marseilles, Granville, Dunkirk, Bordeaux, La Rochelle, and Nantes, are the principal ports whence ships are fitted out for the fishery.

But notwithstanding the apparent prosperity of this branch of industry, it may be doubted whether it be really so beneficial to France as would at first sight appear. It depends more upon artificial regulations than upon any thing else. Foreign cod is excluded from the French markets by the oppressive duty with which it is loaded; and the comparatively great demand for dried fish in Catholic countries renders this a very great boon to the French fishermen. But it is admitted that this would not be enough to sustain the fishery; and high bounties are paid to those engaged in it. These, however, have been reduced of late years; and they will probably, in no long time, undergo still further alterations.

St. Pierre and Miquelon, small islands on the coast of Newfoundland, belong to the French. Their right of fishing upon the shores of that island, and upon the great bank, was replaced, in 1814, upon the footing on which it stood in 1792. This concession has been much objected to by Mr. M'Gregor and others: we believe, however, that they have materially over-rated its influence.

**COFFEE** (Ger. *Kaffee*, *Kaffeebohnen*; Du. *Kaffy*, *Kaffeeboenen*; Da. *Kaffe*, *Kaffebønner*; Sw. *Kaffe*; Fr. It. and Port. *Caffè*; Sp. *Cafè*; Rus. *Koffè*; Pol. *Kawa*; Lat. *Coffea*, *Caffea*; Arab. *Bun*; Malay. *Kawa*; Pers. *Tschem*, *Koweh*; Turk. *Choube*), the berries of the coffee plant (*Coffea Arabica* Lin.). They are generally of an oval form, smaller than a horse-bean, and of a tough, close, and hard texture; they are prominent on the one side and flattened on the other, having a deeply marked furrow running lengthwise along the flattened side; they are moderately heavy, of a greenish colour, and a somewhat bitterish taste.

*Historical Notices of Coffee.* — The coffee plant is a native of that part of Arabia called *Yemen* — *terris fuba misa Sabatis*; but it is now very extensively cultivated in the southern extremity of India, in Java, the West Indies, Brazil, &c. We are ignorant of the precise period when it began to be roasted, and the decoction used as a drink, though the discovery is not supposed to date further back than the early part of the fifteenth century. No mention of it is made by any ancient writer; nor by any of the moderns previously to the sixteenth century. Leonhart Rauwolf, a German physician, is believed to be the first European who has taken any notice of coffee. His work was published in 1573, and his account is, in some respects, inaccurate. Coffee was, however, very accurately described by Prosper Albinus, who had been in Egypt as physician to the Venetian consul, in his works *de Plantis Egypti*, and *de Medicina Egyptiorum*, published in 1591 and 1592.

A public coffee-house was opened for the first time, in London, in 1652. A Turkey merchant, of the name of Edwards, having brought along with him from the Levant some bags of coffee, and a Greek servant accustomed to make it, his house was thronged with visitors to see and taste this new sort of liquor; and, wishing to gratify his friends without putting himself to inconvenience, he allowed his servant to make and sell coffee publicly. In consequence of this permission, the latter opened a coffee-house in Newman's Court, Cornhill, on the spot where the Virginia Coffee-house now stands. Garraway's was the first coffee-house opened after the great fire in 1666. — (See the learned and elaborate treatise of Moseley on coffee, 5th ed. p. 15.)<sup>\*</sup>

M. de la Roque mentions that the use of coffee was introduced into France between 1640 and 1660; and he further states, that the first coffee-house for the sale of coffee in France was opened at Marseilles, in 1671. — (*Voyage de la Syrie*, tom. ii. pp. 310—319.) It was hardly, however, known, except to a few travellers who had visited the East, till 1669, when it was introduced to the best society in Paris by Solyman Aga, ambassador from the Grand Seignior to Louis XIV. It immediately became fashionable; and the taste for it having been quickly diffused, a coffee house was opened for its sale in 1672, which, in no long time, had several competitors. — (See the excellent work of Le Grand D'Aussy, *Vie Privée des Français*, iii. 127. ed. 1815.)

Some time between 1680 and 1690, the Dutch planted coffee beans they had procured from Mocha, in the vicinity of Batavia. In 1690, they sent a plant to Europe; and it was from berries obtained from this plant that the first coffee plantations in the West Indies and Surinam were derived.

*Progressive Consumption of Coffee in Great Britain. Influence of the Duties.* — In 1660, a duty of 4d. a gallon was laid on all coffee made and sold. Previously to 1732, the duty on coffee amounted to 2s. a pound; but an act was then passed, in compliance with the solicitations of the West India planters, reducing the duty to 1s. 6d. a pound; at which it stood for many years, producing, at an average, about 10,000*l.* a year. In consequence, however, of the prevalence of smuggling, caused by the too great magnitude of the duty, the revenue declined, in 1783, to 2,869*l.* 10s. 10*d.* And it having been found impossible otherwise to check the practice of clandestine importation, the duty was reduced, in 1784, to 6*d.* The consequences of this wise and salutary measure were most beneficial. Instead of being reduced, the revenue was immediately raised to near three times its previous amount, or to 7,200*l.* 15s. 9*d.*, showing that the consumption of legally imported coffee must have increased in about a *winefold proportion*! — a striking and conclusive proof, as Mr. Bryan Edwards has observed, of the effect of heavy taxation in defeating its own object. — (*Hist. of the West Indies*, vol. ii. p. 340. 8vo. ed.)

The history of the coffee trade abounds with similar and even more striking examples of the superior productiveness of low duties. In 1807, the duty was 1s. 8*d.* a pound; and the quantity entered for home consumption amounted to 1,170,164 lbs., yielding a revenue of 161,245*l.* 11s. 4*d.* In 1808, the duty was reduced from 1s. 8*d.* to 7*d.*;

<sup>\*</sup> Charles II. attempted, by a proclamation issued in 1675, to suppress coffee-houses, on the ground of their being resorted to by dissipated persons, who "devised and spread abroad divers false, malicious, and scandalous reports, to the defamation of his Majesty's government, and to the disturbance of the peace and quiet of the nation." The opinion of the Judges having been taken as to the legality of the proceeding, they resolved, "That retailing coffee might be an innocent trade; but as it was used to nourish sedition, spread lies, and scandalise *great men*, it might also be a common nuisance!"

and in 1809, no fewer than 9,251,847 lbs. were entered for home consumption, yielding, notwithstanding the reduction of duty, a revenue of 245,856*l.* 8*s.* 4*d.* The duty having been raised, in 1819, from 7*d.* to 1*s.* a pound, the quantity entered for home consumption, in 1824, was, 7,998,041 lbs., yielding a revenue of 407,544*l.* 4*s.* 3*d.* In 1824, however, the duty being again reduced from 1*s.* to 6*d.*, the quantity entered for home consumption, in 1825, was 10,766,112 lbs., and in 1831 it had increased to 22,740,697 lbs., yielding a nett revenue of 583,781*l.*

The rapid increase in the consumption from 1825 to 1839 must not, however, be wholly ascribed to the reduction of the duty. This, no doubt, had the greatest influence; but a good deal is also owing to the low price of coffee from 1824 to 1830; and also to the great reduction during the same period in the price of low brown sugar (fully 1*½d.* per pound), a cheap and abundant supply of which is so indispensable to the extensive use of coffee.

These statements, which are principally deduced from the accompanying account, No. I., refer to the consumption of Great Britain only; but the account No. II. includes the United Kingdom, and is brought down to 1844. The most remarkable features in this account are the reduction of the duty on coffee from the East Indies and Ceylon to the same level as that on coffee from the West Indies, and the farther reduction of the duty on coffee from British possessions in 1842 to 4*½d.* per lb. The equalisation of the duty on East and West India coffee had become indispensable after the rapid decline in the supplies from the West Indies consequent to the emancipation of the slaves; for, as foreign coffee is burdened with a high discriminating duty, the price of British coffee must otherwise have risen to such a height as materially to interfere with the consumption. The latter, indeed, has not increased since 1832, in the ratio which might have been expected from the increasing wealth and population of the country, and, in fact, rather declined during the years 1840, 1841, and 1842. This result was no doubt in part to be ascribed to the then comparatively depressed situation of the manufacturing classes; but we believe that it was mainly owing to the admixture of chicory, and other matters, with coffee. We have already seen (art. *CHICORY*) the extent to which chicory is produced free of duty in this country, and the rapid increase of its culture; and as it is wholly used as a substitute for coffee, or rather as a means for its adulteration, we need not be surprised at the stationary consumption of the latter, even with low prices and a reduced duty. It is, indeed, indispensable, if we would do justice to the coffee planters, and protect the revenue, either to lay the same duty on chicory that is laid on coffee, or if that be impracticable, to grub up the chicory plantations, on making compensation to their owners. But exclusive of chicory, it is affirmed, and we believe truly, that other and more objectionable substances have latterly been extensively employed in the adulteration of coffee. Something, perhaps, may be done to obviate such frauds by increased vigilance on the part of the police and the revenue officers; but the only effectual remedy is to buy coffee before it is ground; and as a mill for grinding may be bought for a small sum, and coffee is sold ready "roasted," there is, in this way, no great difficulty in obviating adulteration. Those who use ground coffee will also be secure against fraud if they resort only to shops of the highest character.

We observed in the former edition of this work, that "sound policy would seem to suggest that the duty on foreign coffee should be materially reduced; for though it be absolutely less now than formerly, it amounts to 8*½d.* per pound, being double that on coffee from a British possession. But its reduction to about 6*d.* per pound, at the same time that it would allow Brazil and other foreign coffee to be freely entered for consumption in the event of the supply of British colonial coffee becoming deficient, or rising in price, would leave a protection of no less than 50 per cent. in favour of the latter; which surely is as much as can be conceded with any due regard to the interests of the consumer." And we are glad to have to state that, in 1844, the duty on foreign coffee was reduced to 6*½d.* per lb.

The introduction of tea and coffee, it has been well remarked, "has led to the most wonderful change that ever took place in the diet of modern civilised nations, — a change highly important both in a moral and physical point of view. These beverages have the admirable advantage of affording stimulus without producing intoxication, or any of its evil consequences. Lovers of tea or coffee are, in fact, rarely drinkers; and hence the use of these beverages has benefited both manners and morals." — (*Scotsman*, 17th of October, 1827.) So early as 1710, the famous Latin poet Vanierius described the preparation and eulogised the virtues of coffee.

— "Illo medicamine vates  
Ingenium emendat, lectusque infecta resumat  
Carmina; nec fontes allos, quibus ara potitæ  
Proluerint, fluxisse solum malo credit Achivo."

Lib. xi. p. 272. ed. 1774.

It should be observed, with reference to the large quantity of coffee from the Cape of Good Hope admitted to consumption in 1842, that this coffee was not grown in the Cape Colony, but was sent to it from Brazil, Java, and other foreign countries. This round-about importation grew out of the fact that, the Cape being a British possession within the limits of the East India Company's charter, foreign coffee carried to it might, under the regulations established in 1835 and 1840, be imported thence and entered

for home consumption in the United Kingdom, on paying 6d. per lb. less duty than if it had been imported direct from the place of its growth. And this advantage was sufficient to make the coffee of Brazil, Cuba, Hayti, and other countries, intended for England, be carried to the Cape in the first instance. The act of 1842 has put an end to this costly and absurd method of introducing foreign coffee into our markets, by charging it with the same duty, however imported. The magnitude of the duty on foreign coffee is the only thing, in respect of its importation, that can possibly be now objected to.

*Supply and Consumption of Coffee.*—Owing to the increasing consumption of coffee in this country, the Continent, and America, the great value of the article, the large amount of capital and labour employed in its production, and the shipping required for its transport, it has become a commodity of primary commercial importance. It deserves particular attention, too, inasmuch as there are few, if any, articles that exhibit such variations, not only as to consumption, but also as to growth and price. These are occasioned partly by changes of commercial regulations and duties, and partly, also, by the plant requiring 4 or 5 years before it comes to bear; so that the supply is neither suddenly increased when the demand increases, nor diminished when it falls off. St. Domingo used formerly to be one of the greatest sources of supply, having exported, in 1786, about 35,000 tons; and it is supposed that, but for the negro insurrection which broke out in 1792, the exports of that year would have amounted to 42,000 tons. The devastation occasioned by this event caused, for a series of years, an almost total cessation of supplies. They have again, however, increased, and are understood to amount, at present, to about 15,000 tons a year. From Cuba, the exports of coffee have, for some years, owing partly to an increased consumption in the island, and partly to the efforts of the planters having been more directed to the cultivation of sugar, been comparatively stationary. They may at present amount to about 22,000 tons, or, including Porto Rico, to 25,000 tons. In Java and Brazil, the culture of coffee has increased with unprecedented rapidity (see *BATAVIA* and *RIO JANEIRO*); so much so, that the exports from Java, which did not, a few years ago, exceed 18,000 tons, now amount to at least 65,000; while those from Brazil, which have increased in an equal degree, amount to about 80,000 tons. The growth of coffee in India and Ceylon has been very greatly increased, especially in the latter, where, within the last few years, the plantations have been so much extended, that it is believed their produce will very shortly equal the present consumption of the U. Kingdom. There has, no doubt, been a serious decrease in the exports of coffee from the British West Indies; the imports into the U. Kingdom having declined from 11,014 tons in 1832 to 4,147 do. in 1844; but when reference is made to the whole supply, this diminution is but inconsiderable.

The following may, we believe, be regarded as a pretty fair estimate of the present (1848) exports of coffee from the principal places where it is produced, and of the annual consumption in those countries into which it is imported from abroad.

Exports.		Tons.
Mocha, Hodelda, and other Arabian ports	.	8,000
Java	.	65,000
Sumatra and other parts of Foreign India	.	8,000
Brazil and the Spanish Main	.	80,000
Hayti	.	15,000
Cuba and Porto Rico	.	25,000
British West India colonies	.	4,000
India and Ceylon	.	131,000
Dutch West Indies	.	5,000
French West Indies and the Isle de Bourbon	.	8,000
		231,000
Consumption.		Tons.
Great Britain	.	17,000
Netherlands and Holland	.	40,500
Germany, Russia, and countries round the Baltic	.	50,000
France, Spain, Italy, Turkey in Europe, the Levant, &c.	.	50,000
The United States	.	45,000
Canada, Australia, &c.	.	8,000
		210,500

Of the entire export of coffee from Arabia, not more, perhaps, than 4,000 or 5,000 tons finds its way to the places mentioned above; so that, supposing these estimates to be about correct, it follows that the supply of coffee at present exceeds the demand by about 20,000 tons a-year. The latter, however, is rapidly increasing; and it is not easy to say whether it be destined to outrun, keep pace with, or fall short of the supply. On the whole, however, we should be inclined to think, that though they may occasionally vary to the extent of a few thousand tons on the one side or the other, the probability is that the supply and demand will be pretty nearly balanced; so that, supposing peace to be preserved, we do not anticipate any very great variation of price. When prices are considerably depressed, consumption is stimulated, and production checked, and conversely when prices are high. Oscillations will, no doubt, continue to take place in future, as they have done hitherto; but unless the cost of producing coffee

should be seriously affected, which probably is not very likely, (unless some violent measures should be adopted with respect to the slaves in Brazil,) they will not be more than temporary.

The consumption of coffee in the United States has increased with great rapidity since 1821, in which year it amounted to only 5,306 tons. Part of this increase is, no doubt, to be ascribed to the reduction of the duty, first from 5 to 2 cents per pound, and its subsequent repeal; part to the fall in the price of coffee; and a part, perhaps, to the increase of temperance societies. Probably, also, it was in some degree ascribable to the comparatively high duties formerly laid on the teas imported into the United States; these, however, finally ceased in 1833.

Account of the Imports of Coffee into the United States, the Exports from the same, and the Quantities left for Home Consumption, during each of the 12 Years ending the 30th of September, 1841.— (Papers published by Order of Congress.)

Years.	Imports.	Exports.	Left for Home Consumption.
1835	103,199,577 lbs.	11,446,775 lbs.	91,752,802 lbs. 40,961 tons.
1836	93,790,507	18,143,207	77,647,300 34,664

Bahia:—					
Good ordinary colony	30 0	34 0			
Ordinary	36 0	38 0			

Species of Coffee. Roasting, &c.— The coffees of Jamaica, Ceylon, and Mocha are generally esteemed the best; then follow the coffees of Costa Rica, Dominica, Berbice, Demerara, Bourbon, Java, Martinique and Hayti. Arabian or Mocha coffee is produced in a very dry climate, the best being raised upon mountainous slopes and sandy soils. The most fertile soils are not suitable for the growth of very fine coffee. Mr. Bryan Edwards observes, that "a rich deep soil, frequently ameliorated by showers, will produce a luxuriant tree and a great crop; but the beans, which are large, and of a dingy green, prove, for many years, rank and vapid." And the same remark is made by Mr. Crawford, with respect to the coffee of Java.—(East Indian Archipelago, vol. 1. p. 487.) Coffee is improved by being kept; it then becomes of a paler colour. Coffee berries readily imbibe exhalations from other bodies, and thereby acquire an adventitious and disagreeable flavour. Sugar placed near coffee will, in a short time, so impregnate the berries, and in-

Coffee is sold in bond: the business being done in the public market either by private or public sales. It is always sold as landing weights and retent tares; the latter being on casks, barrels, and boxes identical with the real tares, and an average rate on boxes and bags. Draft is allowed for as follows; viz. on packages weighing under 1 cwt., 1 lb.; 1 cwt. and under 3 cwt., 2 lbs.; 3 cwt. and under 5 cwt., 4 lbs.; and 5 cwt. and upwards 5 lbs. Coffee is sold at a prompt 1 month, allowing a discount of 3 per cent. or 1 per cent. Thus the coffee of St. Domingo, Havannah, and Brazil, (with the exception of the "plantation" variety of the last two) are sold at a discount of 2 1/2 per cent., whereas all coffee of British plantations, or that liable to the low duty, including also the coffees of Laguaira, Costa Rica, "plantation" Rio and Havannah, Mocha, Java, and other East India varieties, are sold at a discount of 1 per cent. The following *Pro forma* account of the sale of coffee from Ceylon may be taken as representing coffee sold at a discount of 1 per cent., and that of the sale of Rio coffee as representing coffee sold at a discount of 3 per cent. (but, of course, the freight and insurance would vary according to the port it came from. These sales are made out as if the goods were sold within one month from arrival. There is no charge for rent, as the consolidated rate covers that charge for 12 weeks. Coffee is always rent-free to the purchaser to the prompt day, and lies at the seller's risk till then, unless paid for.

jure their flavour, as to lower its value 10 or 20 per cent. Dr. Moseley mentions, that a few bags of pepper, on board a ship from India, spoiled a whole cargo of coffee.

"The roasting of the berry to a proper degree requires great nicety: the virtue and agreeableness of the drink depend upon it; and both are often injured by the ordinary method." Bernier says, when he was at Calro, where coffee is so much used, he was assured by the best Judges, that there were only two people in that great city who understood how to prepare it in perfection. If it be under-done, its virtues will not be imparted, and, in use, it will load and oppress the stomach; if it be over-done, it will yield a flat, burnt, and bitter taste, its virtues will be destroyed, and, in use, it will heat the body, and act as an astringent." — (Moseley, p. 30.)

Regulations with respect to Sales, Importation, &c. — Roasted beans and peas, when used, have frequently been used to adulterate ground coffee; and the possession of such substitutes for coffee was formerly an offence punishable by the forfeiture of the articles, and a penalty of 100*l*. But by the act 3 Geo. 4. c. 53., persons who are not dealers in coffee may take a licence for roasting and selling corns, peas, beans, or parrots, labelling the parcels with the names, and conforming to the various regulations prescribed in the act. Dealers in coffee must take out a licence, renewable annually, which, at present, costs 11*s*.

No coffee can be imported in packages of less than 100 lbs. net weight. No abatement of duties is made on account of any damage coffee may have received.

Coffee cannot be entered as being the produce of any British possession in America or of the Mauritius, until the master of the ship in which the coffee is imported delivers to the collector or comptroller a certificate of its origin, and declares that the coffee is the produce of such place. — (8 & 9 Vict. cap. 80. § 35.)

COINS, pieces of metal, most commonly gold, silver, or copper, impressed with a public stamp, and frequently made legal tender in payment of debts, either to a limited or an unlimited extent.

1. *Circumstances which led to the Introduction and Use of Coins.* — When the precious metals first began to be used as money, or as standards by which to measure the value of different articles, and the equivalents for which they were most commonly exchanged, they were in an unfashioned state, in bars or ingots. The parties having agreed upon the quantity of metal to be given for a commodity, the exact amount was then ascertained by weight. But it is obvious that a practice of this sort must have been attended with a great deal of trouble and inconvenience. There can, however, be little doubt that the greatest obstacle to the use of unfashioned metals as money would be found in the difficulty of determining their quality, or the degree of their purity, with sufficient precision. The operation of assaying is one of great nicety and difficulty; and could not be performed in the early ages otherwise than in a clumsy, tedious, and inaccurate manner. It is, indeed, most probable, that when the precious metals were first used as money, their quality would be appreciated only by their weight and colour. A very short experience would, however, be sufficient to show the extreme inexactness of conclusions derived from such loose and unsatisfactory criteria; and the devising of some method, by which the fineness of the metal might be easily and correctly ascertained, would very soon be felt as indispensable to the general use of gold and silver as money. Such a method was not long in presenting itself: it was early discovered, that, to ascertain the purity of the metal, and also to avoid the trouble and expense of weighing it, no more was necessary than to mark each piece with a *stamp*, declaring its weight and fineness. This invention was made at a very early period. According to Herodotus, the Lydians were the first who coined money. — (Lib. i. c. 94.) Other ancient authors say that the art of coining was invented during the period when Saturn and Janus reigned in Italy; that is, in a period antecedent to authentic history. — (*Goguet, de l'Origine des Loix*, &c. tom. i. p. 267.)

2. *Metal used in the Manufacture of Coins.* — Before the art of metallurgy was well understood, the baser metals were frequently used as money. Iron was the primitive money of the Laedemonians, and copper of the Romans. But both iron and copper deteriorate by being kept; and besides this defect, the rapid improvement of the arts, by lowering their price, rendered their bulk too great in proportion to their value to permit of their continuing to be used as money. Copper, indeed, is still used in the form of tokens, convertible into silver in very small payments. In this country, copper pence and halfpence are rated at about 72 per cent. above their real value; but as their issue is exclusively in the hands of government, and as they are only legal tender to the extent of one *shilling* in any one payment, this over-valuation is not productive of any bad effect. The use of copper in other countries is limited in much the same way; gold and silver being every where the only metals made use of in the manufacture of the coins used in considerable payments.

3. *Standard of Coins.* — By the standard of a coin, is meant the degree of its purity, and its weight; that is, the fineness of the metal of which it is made, and the quantity of metal contained in it.

(1.) *Silver Coins.* — A pound Troy, or 12 ounces, of the metal of which English silver coins are made, contains 11 oz. 2 dwts. pure silver, and 18 dwts. alloy. This pound is coined into 66 shillings; so that each shilling contains 80·727 grains fine silver, and 87·27 grains standard silver; and the *money pound*, consisting of 20 shillings, contains 1614·545 grains pure silver, and 1745·454 grains standard silver. From 1600 down to 1816, the pound weight of standard silver bullion was coined into 62 shillings. All the English silver coins have been coined out of silver of 11 oz. 2 dwts. fine, from the Conquest to this moment, except for the short period of 16 years, from the 34th Henry VIII. to the 2d Elizabeth.

(2.) *Gold Coins.* — The purity of gold is not estimated by the weights commonly in use, but by an Abyssinian weight called a *carat*. The carats are subdivided into four parts, called grains, and these again into quarters; so that a *carat grain*, with respect to the common divisions of a pound Troy, is equivalent to 2½ dwts. Gold of the highest degree of fineness, or pure, is said to be 24 carats fine. When gold coins were first made at the English mint, the standard of the gold put in them was of 23 carats 3½ grains fine and ½ grain alloy; and so it continued, without any variation, to the 18th of Henry VIII., who, in that year, first introduced a new standard of gold of 22 carats fine, and 2 carats alloy. The first of these standards was called the old; and the second the new standard, or crown gold; because crowns, or pieces of the value of 5s., were first coined of this new standard. Henry VIII. made his gold coins of both these standards under different denominations; and this practice was continued by his successors until 1633. From that period to the present, the gold of which the coins of this kingdom have been made has been invariably of the *new* standard, or

rown gold; though some of the coins made of the old standard, previously to 1633, continued to circulate till 1732, when they were forbidden to be any longer current. — (*Liverpool on Coins*, p. 27.)

The purity of our present gold coins is, therefore, 11 parts fine gold and 1 part alloy. The sovereign, or 20 shilling piece, contains 113·001 grains fine gold, and 123·274 grains standard gold. The pound Troy of standard gold is coined into 46  $\frac{2}{3}$  sovereigns, or into 46l. 14s. 6d. The mint, or standard price of gold is, therefore, said to be 46l. 14s. 6d. per lb. Troy, or 3l. 17s. 10 $\frac{1}{2}$ d. an ounce.

The alloy in coins is reckoned of no value. It is allowed, in order to save the trouble and expense that would be incurred in refining the metals, so as to bring them to the highest degree of purity; and because, when its quantity is small, it has a tendency to render the coins harder, and less liable to be worn or rubbed. If the quantity of alloy were considerable, it would lessen the splendour and ductility of the metals, and would add too much to the weight of the coins.

The standard of the coins of foreign countries may be learned at a glance, by inspecting the *Table of Coins* subjoined to this article.

4. *Variations of the Standard.* — The value of all sorts of property being estimated, and the stipulations in almost all contracts for its purchase, sale, or hire, being made in money or coins, it is plain that no change can take place in the value of such money or coins, without virtually subverting these estimates and contracts, and enriching the debtor portion of society at the expense of the creditor portion, or *vice versâ*. As the cost of producing all commodities is liable to vary from improvements in the arts, the exhaustion of the present or the discovery of new sources of supply, none can be selected to serve as money or coin that may not vary in its real value. It is believed, however, that the precious metals vary less than any material that could be suggested. And with the exception of the extraordinary fall in their value caused by the discovery of the American mines, it seems to have been remarkably constant at other periods.

But in addition to the fluctuations naturally inherent in the value of coins, arising from variations in the cost of the metal of which they are made, their standard has been repeatedly changed. Notwithstanding that money or coin, from its being universally used as a scale by which to compute the value of all commodities, and as the equivalent for which they are commonly exchanged, is by far the most important of all the measures used in society; and should, consequently, be preserved as invariable as possible; there is none that has been so frequently altered. The necessities or extravagance of governments have forced them to borrow; and to relieve themselves of the incumbrances thus contracted, they have almost universally had recourse to the disgraceful expedient of degrading the coin; that is, of *cheating* those who lent them money, to the extent of the degradation, and of enabling every other debtor in their dominions to do the same.
