Gophercide

(SOLUBLE STRYCHNINE)

What happens when "Gophercide" is used.

What happens when "Gophercide" is not used.

Gets the Gophers — before — They Get Your Crops

No time—no money—no grain—can be put to more profitable use than in exterminating gophers. If they have invaded your farm, and you don't kill them off, they will certainly make a big hole in your profits.

The time to go after them is in early spring, when they are hungry—and before they have had time to breed or eat the growing wheat.

The poison to use is "GOPHERCIDE"—the most convenient and successful gopher exterminator ever devised. If every farmer in each infested district used it systematically, this expensive pest would soon be wiped out.

KYLEVILLE, Sask.
Some time ago I bought a packet of "Gophercide" and distributed it at the Gopher holes, and the results I received were most magnificent. I killed 300 Gophers with one packet, and now what would those 300 Gophers destroy in six months? I guess a lot more than a packet of "Gophercide" cost.

T. ROY CRAVEN, V.S.

BETHUNE, Sask.
Yours to hand regarding "Gophercide", would say I heartily recommend "Gophercide" as the greatest poison I have ever tried and would advise others to use it. I have used all kinds of poison but never had so many killed in half an hour as with "Gophercide".

OLIVER M. NICHOLSON.

CLAYDON, Sask.
I used this Spring a packet of your "Gophercide". The success being better than I anticipated, having practically destroyed all the Gophers round my shack, 96.5, acres needed. If all homesteaders would use a packet we should soon be almost free from this pest. Please send me another packet as I let a neighbour have one who had tried " " with no good results.

ALFRED HYAME.

"GOPHERCIDE" is a special preparation of strychnine, so altered as to make it many times more soluble, without lessening its well-known killing power.

As a result, it dissolves readily in warm water, without vinegar or other acids, and so is very easy to prepare. The solution soaks right through the wheat, poisoning every particle of it, and so does not wash away or lose its deadly power even if exposed to the rain.

Gophers eat the "gophercided" wheat freely—and it kills them quick and sure. At trifling expense, and with very little trouble on your part, "Gophercide" will clear the warrens and save you perhaps hundreds of dollars.

The Canadian Lawyer

This book will help farmers to keep out of law suits and protect their rights. It will not make a lawyer out of a farmer, but it will prevent him against the sharp practice of agents or attorneys who would like to get him into a tight corner. This book gives the most important portions of the laws of Canada, and especially of Manitoba, Saskatchewan and Alberta. The information is given in simple, everyday language, so that farmers will be able to do a great deal for themselves, saving money and time. We have endeavored to give a brief list of valuable advice. Every farmer has a lot of time and more or less money during the course of his career, because he is necessarily concerned with his legal rights and the proper method of redress. Half of the law exists before the court is brought about because some person was ignorant of a simple fact of law which he should have known. In addition to take more valuable

information on the maritime laws, this book also gives definite information and ample but correct forms for the preparation of all kinds of legal documents that a farmer would need to use. Legal language and terms of law are explained fully, how to make them and the law in regard to various business transactions is given, on checks, bills of exchange, bank accounts, partnerships, leases, mortgages, contracts, and wills. The book also contains forms on marriage and certain sections of the law of partnerships, how to have documents patented and protected, the use and form of powers of attorney, the law in regard to corporations, the law of trademarks, how to prepare land transfers under the Torrens system, which is used in Western Canada, the law in regard to trust and trustees, and practically everything else that a farmer would require to study. Price, postpaid \$2.00

A PINK NOTICE

A pink notice attached to this page shows that your renewal is due. We hope you have enjoyed The Guide and that you will send us \$1.50 for your renewal at once, using the blank coupon and the addressed envelope which will also be enclosed. We always give several weeks' notice so that subscribers will have plenty of time to forward their renewals and not miss any copies of The Guide. We cannot supply back numbers of The Guide, so we hope you will not delay in sending your renewal. When requesting a change of address, please give us three weeks' notice. If the date of the address label on your Guide is not changed within a month after you send your renewal, please notify us at once. It is always safer to send your money by postal, bank or express money order. Mail your \$1.50 today.

THE GRAIN GROWERS' GUIDE

"Equal Rights to All and Special Privileges to None"
A Weekly Journal for Progressive Farmers

Published under the auspices and employed as the official organ of the Manitoba Grain Growers' Association, the Saskatchewan Grain Growers' Association and the United Farmers of Alberta.

The Guide is the only paper in Canada that is absolutely owned and controlled by the organized farmers—entirely independent, and not one dollar of political, capitalistic or special interest money is invested in it.

SUBSCRIPTIONS AND ADVERTISING

Published every Wednesday. Subscriptions in the British Empire \$1.50 per year, except Winnipeg City, which is \$2.00 per year. Foreign and United States subscriptions \$3.50 per year. Single copies 5 cents.

Advertising Rates

Commercial Display—20 cents per agate line. Livestock Display—16 cents per agate line. Classified—5 cents per word per issue.

No discounts for time or space on any class of advertising. All changes of copy and new matter must reach us seven days in advance of date of publication to ensure insertion. Heading matter advertisements are marked "Advertising." No advertisement for patent medicines, liquor, mining stock or extravagantly worded real estate will be accepted. We believe, thru careful enquiry, that every advertisement in The Guide is signed by trustworthy persons. We will take it as a favor if any of our readers will advise us promptly should they have any reason to doubt the reliability of any person or firm who advertises in The Guide.

Digests Unconsciously

Rich with your favorite filling, good pie crowns the meal it graces. Housewives who excel in pastry will tell you that pie is at its very best only when wrapped in a FIVE ROSES crust. So hard will the children find it to catch up with their appetites, that never again will you be satisfied with a lesser flour than

Five Roses*

FLOUR for Breads-Cakes-Puddings-Pastries

Why Does Puff Paste Puff?

Every time you fold and butter a pastry dough every time you roll it, you add an extra fold. When the heat expands the cold air between the buttered flakes, each layer puffs and springs happily in the oven. The colder the dough, the more it puffs. Because FIVE ROSES has elastic to spare, you can fold and roll your pastry much thinner without cracking. Because FIVE ROSES resists fat absorption, your pastry is seldom soggy; nor do the layers stick together—the shortening acts as an impermeable coating between the flakes. Because FIVE ROSES is ground uniformly, your pastry puffs evenly in the oven, and you get that even flakiness of texture so much desired—thin as silk paper. Insist on FIVE ROSES.

Over 27 years' experience attests its value in Pie Crust, Puff Paste, and so-called difficult things. To the well-raised crust it gives a clear, dainty appearance, a golden creamy bloom.

Its presence is readily perceived in the lively, close-grained flakiness that melts away on the tongue tip. And the witching flavor lingering on the soft palate is Nature's toothsome contribution to this pastry treat.

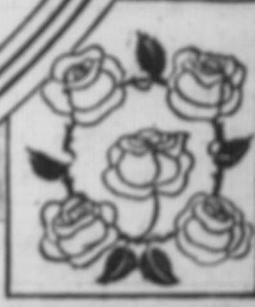

You who have so successfully used FIVE ROSES in other foods, try it now in pies and pastry. Let your folks enjoy the flower of the pie family, a truly succulent, tasty article that retains till eaten its crisp freshness.

FIVE ROSES brings more, it brings flour economy. With the same amount of shortening and water, simply because of uncommon strength, you use at least one-fifth less flour.

Packed in bags or barrels of popular sizes, your dealer will gladly supply you.

Do YOU Want This Book?

Indispensable to the housewife major & minor
The famous FIVE ROSES COOK BOOK strips Pastry Baking of its mystery.
It is the beginner's insurance against disappointment.
Gives complete, understandable information on pastry, torts, puffs, pasties, pages of pie recipes, etc.
Brings you the FIVE ROSES experience of over a quarter century, plus the best selected recipes of thousands of successful FIVE ROSES users.
Full of notes, pointers, useful formulas. So essential to good housekeeping that already over 200,000 women have written for this 144 page manual. Send for 10c. stamp

New Saskatchewan Legislation

A brief summary of the Acts Passed at the last Session at Regina

The Saskatchewan Legislature which has just adjourned passed some very significant legislation at the last session. This included revision of some bills and a number of new bills which should have a very beneficial effect, particularly on the rural communities of the province. The most important of these acts are those on rural credits, municipal hail insurance, union hospitals, returned soldiers' employment, patriotic revenues and Saskatchewan co-operative creameries.

Possibly the most important of all is the rural credits act. This is modelled on the New Zealand plan of long-term rural credits, very similar to that recently put into effect in the province of Alberta. The new Saskatchewan loan act will be administered by a board, consisting of one commissioner and two other members. The actual business will be carried on by the commissioner who is a salaried employee and who will be the chief man in the whole organization. He will hold office for ten years. The board will have full power to approve and reject applications for loans and settle the form of all mortgages, or other security taken by the board for loans made on lands. No loans will be made except on a first mortgage security and every loan shall be expended on permanent improvements to the property, or on productive purposes connected with the development of the property, or on the payment of liabilities previously incurred for such purposes. Loans will not be for more than fifty per cent of the board's valuation of the property offered for security.

All loans will be for thirty years and will be repayable in equal annual instalments of principal and interest. The rate of interest will be only such as will be necessary to pay the interest on the money borrowed and the cost of carrying on operations. Borrowers will be able to make advance payments on any due date, equal to, or larger than, the payment next falling due. This will be credited on the next payment; all subsequent payments, however, must be met as they fall due. Under certain conditions of the borrower failing to live up to his agreement, the board may declare the whole of the principal and interest due and take possession of the property.

The provincial treasurer will raise all monies required and pledge therefor, the credit of the province. Five million will be the maximum raised for this purpose and bonds and debentures will be given as security for terms not exceeding forty years. The credit of the consolidated fund of the province will be pledged. Pending the raising of such money the provincial treasurer may borrow from the general revenues of the province or from any person, bank or corporation the sums required to start the board working. All sums repaid to the board by borrowers may be reloaned under the provisions of the act, expended in the purchase of bonds or otherwise used at the discretion of the board. This act comes into force on the 1st of May, 1917, but no money is to be loaned until after the next election in Saskatchewan.

Municipal Hall Insurance

The Hall Insurance Act, as revised, provides for a system of management similar in character to that of the Saskatchewan Co-operative Elevator Company. Each municipality which decides to come under the scheme appoints a delegate to represent it at the annual general meeting of the organization. At this meeting nine directors will be elected, three for three years, three for two years, and three for one year. At subsequent general meetings three directors will be elected for three years. Previously the Hall Insurance Act has been administered by a commission of three, the chairman of which was appointed by the government and the other members by the representatives of municipalities. The idea of the act is to turn over the management completely to the municipality. The association created will have power to make provision for a crop acreage assessment in addition to

a flat rate if it so desires, but such action on the part of a general meeting of the organization cannot become operative in the year in which it is passed, thus giving an opportunity to any municipality which does not approve of the idea to withdraw from the scheme at the next following municipal election.

Ample provision is made for the withdrawal from taxation of certain lands in which a small area is cultivated or on certain grazing or unpatented homestead lands. Notice must be given to the secretary of the association by those suffering from damage from hail, within thirty days of such damage. In the payment of losses by the association, whether in full or pro rata priority will be given to losses in those municipalities, which have discharged their indebtedness to the association in full, on or before, November 15. The council from any municipality will be able to borrow from any bank, person, or corporation, the money required to enable it to pay in full to the association the amount of special rate assessed within each municipality. Monies due as indemnity for claims under the act shall be exempt from garnishee and attachment and cannot be assigned.

Union Hospital Act

Provision has now been made whereby any two or more rural municipalities may co-operate with any number of urban municipalities in providing a union hospital. Union hospitals may be arranged for by an hospital committee composed of representatives from the municipality and town or village intending to unite in this work. This committee carries on the work until a permanent hospital board is appointed. Proposed by-laws are drawn up and submitted to the councils of the various municipalities concerned. The council of the municipality will appoint two members, one of whom shall be the reeve or the secretary, and the other a resident ratepayer, not a member of the council. The council of each village shall appoint one member who shall be a resident ratepayer of the village. The council of each town shall appoint two members, one of whom shall be the mayor or clerk and the other a resident ratepayer and a council of each city shall appoint three members. No member of the board shall be a medical man in actual practice. Members will hold office for one year and will be paid at the rate of \$3.00 per day for attendance at meetings of the board and 10 cents per mile travelling. The hospital board will be incorporated and it shall furnish a statement showing in detail the estimated cost of a suitable building for its purposes. The plans shall be subject to the approval of the commissioner of public health and the commissioner of public health will also approve of the site for the hospital. No aid will be granted by the province to an hospital erected on a site not so approved.

Land may be expropriated for this purpose and the property required for an hospital shall be exempt from all municipal or other taxation. The tax required to raise the sums annually to support such an hospital shall not be higher than two mills on the dollar on all taxable property in the municipality. Municipalities not represented on the hospital board may receive service by contributing certain fixed rates.

Returned Soldiers' Commission

The Returned Soldiers' Employment commission provided for is the result of a recent conference between Provincial and Dominion authorities with respect to returned soldiers. At that conference it was agreed that the Dominion government should be responsible for the care of returned soldiers, who are unable to work for any reason, while the provincial should be responsible for finding employment for returned soldiers who are able-bodied and thus in a position to be absorbed into civil life. The Saskatchewan Commission is the body intended to carry out the work in that province with government assistance.

Winnipeg, Wednesday, April 4, 1917

AGRICULTURAL COLLEGE

It is apparent that there is not a clear realization of the important principle involved in the trouble between the Minister of Agriculture and the Manitoba Agricultural College. The advisory board of the college, which is the governing body of the institution under the law, engaged a professor of animal husbandry two years ago. He has done excellent work. The president of the college, the board and the student body are all of one mind on the satisfactory character of the administration of his department. The advisory board is the only authority with power to engage or discharge any member of the teaching faculty. Yet, because of a personal prejudice against the professor, Honorable Valentine Winkler has cut his name off the salary roll. The minister, by his arbitrary action has defied, insulted and humiliated the advisory board and the president of the college. A few months ago another professor left the college because of the interference with his work on the part of the minister. Our information is that others are likely to accept positions in other institutions where their work, and the institution itself commands the respect and co-operation of the Department of Agriculture.

Most educational institutions in all English speaking countries are controlled and conducted by governing boards. This system of management was devised expressly to save such institutions from political mismanagement and interference, and the system has proven to be an admirable one. Mr. Winkler has deliberately overthrown the system and violated the spirit of the act under which the college was established. If his action is not repudiated by the government, and the advisory board permits it to pass unchallenged the Agricultural College will have lost the greater part of its usefulness to the province. Agricultural education and development in Manitoba are inseparably linked up with the Agricultural College. That institution, despite the graft and extravagance which characterized its construction, has an opportunity to become one of the best on the continent. It is impossible to measure the benefits which it can bring to agriculture in Manitoba. But this can only be accomplished under a democratic system of management in which political interference and personal prejudice is absolutely eliminated. The farmers of Manitoba have paid a high price for the Agricultural College and we do not believe they will willingly see it destroyed by an autocratic minister. It is unfortunate that there should be a weak link in a government otherwise so progressive. Premier Norris, as head of the government, will have the hearty support of the farmers of Manitoba in any move he may make for the safety and progress of the Agricultural College and the proper development of the Department of Agriculture.

PROGRESS OF THE REVOLUTION

It would be expecting the impossible to anticipate that the revolution in Russia could be accomplished without great differences of opinion between different sections of the people, as to the best path to pursue in the establishment of democratic government. Few revolutions in history have been consummated without internecine strife. Rioting, bloodshed and even civil war have characterized most revolutions, successful or otherwise. Such reports as come to hand, however, intimate that Russia is conducting the sanest revolution in history. Occasional news reports filter thru which would indicate that a counter revolution is being advocated by extremists who are dissatisfied with the actions of the moderates in

control, but apparently the danger of such a move is remote. The thorough nature of the revolution is well illustrated by the helplessness of the bureaucrats. The chief bulwark of autocratic or bureaucratic oppression is military power. Russia's military power is engaged in the defense of the Empire and its services therefore were not at the disposal of the reactionaries in combating the revolution. Besides, the democratic spirit seems to be permeating the Russian army. Under such circumstances it is not surprising to learn that the Grand Dukes have offered to give up the land held under authority from the Crown. Their chief concern seems to be to save their ducal heads. Representatives of the new government are acclaimed by both soldiery and civilians on their promise to have the basis of Russia's new institutions laid on that broad foundation, the will of the people.

One of the most gratifying and significant results that the revolution promises to accomplish is the emancipation of the Jews. The story of what the Jews of Russia have suffered constitutes one of the blackest chapters in her history. The Jewish problem is interwoven in all phases of the political, social and industrial life of Russia. The reconstruction of Russia along democratic lines, demands the emancipation of the Jewish people. Democracy never persecutes. It stands for the free exercise of religion. The success of the revolution may largely be gauged by its effect on the status of the Jews in Russia. In Finland, the effect of a new and more beneficent regime is also being felt. Finland has fared badly under the reactionaries. Her liberties have for decades been made a political football by them. One of the first acts of the new government was to grant constitutional freedom to that distressed country. The Golden Rule works well in national affairs. Democracy has not been practiced in Russia, but there is now ample evidence that its principles have been well studied there. Lovers of progressive government everywhere are hoping that the new Slavic ship of state will safely weather the perilous initial stages of its voyage.

RAILWAY INVESTIGATION REPORT

A special Railway Investigation Commission appointed last fall to make a detailed investigation of the Canadian railway problem has about concluded its report. The conclusion seems to be, according to an unofficial statement, that Canada must either continue its system of subsidies, guarantees and loans to two of these roads, or nationalize them. It is said that two commissioners (more than might have been expected) favor the nationalization and consolidation of the Canadian Northern Railway and the Grand Trunk Pacific with the roads already owned by the government and that one favors the retention of these roads under corporation control. The Grand Trunk Pacific is shown to be in a fearfully neglected condition which would require the expenditure of at least \$50,000,000 to put it on an equally efficient running basis with the Canadian Pacific Railway. It is also shown that, in spite of the assurances of Canadian Northern interests, at the time they were granted their last subsidy, that no more financial aid would be required, another \$50,000,000 is necessary to put that road on a running basis. No suggestion that the government should take over the Canadian Pacific railway has been offered so far as is known. It will be noticed that the amounts required to put each of the crippled roads in running condition is approximately equal to the profits from the Canadian Pacific railway alone last year (\$49,000,000). In view of the success of public ownership of railways in

countries where such railways have been built from business needs, and not from political motives, and given a fair trial, is there any good reason why the government should not take over these three roads? The people must pay the deficits or profits in any case. They must guarantee the bonds and make good the losses. The whole prosperity of the roads depends on the people in Canada, and on no one else. Why then should not the people own these roads and apply the profits of one to wipe out the deficits of the others, instead of permitting themselves to be further exploited for two promoters' roads? There would then be some opportunity to equalize freight rates in this country and to wipe out one of the greatest causes of political corruption. The government of Canada it is said intends to take action on the report of this commission before the present adjourned session of parliament closes. It is up to the people of Canada and especially the West, which has been, and is being, plundered more than any other section to insist that no half-way measures are adopted. The talk of enormous cost and lack of managing ability is not an insurmountable difficulty. The present or equally capable men are available to run our railroads, the people have to pay for them in any case, and to the people are due the returns. This enormous question cannot be kept in the background any longer and some definite action is due very shortly. It ought to be decided on the interest of all the people; not in the interests of a few railway magnates who have already put too much in their pockets that properly belongs to the Canadian public.

RAISING PATRIOTIC REVENUES

The Saskatchewan legislature at its last session put into effect a measure designed to secure greater equality in personal war sacrifices. In order to assist patriotic funds for war relief purposes, it enacted one year ago the "Patriotic Revenues Act" the main provision of which empowered the government to levy one mill per dollar on the total value of all the rateable property in the various municipalities. By the latest amendment this rate is raised to one and one-half mills and a poll tax of two dollars on non-property owners is also to be levied. The idea is not to abolish voluntary subscriptions, but to discourage widespread campaigns of that nature and raise the money by taxation. This is a step worthy of emulation by other governments and particularly the federal. Many individuals at the present time are making little or no sacrifice and are furnishing the excuse that the money for patriotic purposes should be raised by taxation. Such is an excellent plea, but it is not always employed unselfishly. It may not be possible to equalize sacrifice in war-time, but some greater attempt to that end should be made than is now being done. Manitoba adopted this policy a year ago.

TURNING THE POLITICAL WHEEL

It is announced that the new government in British Columbia will cancel the appointment of Sir Richard McBride as agent-general of the province in Great Britain. It will be remembered that under the old government in British Columbia a quarrel arose within the party. It was settled by McBride retiring from the premiership and being succeeded by Bowser. McBride then went to England as agent-general for the province at a salary stated to be \$15,000 per year, or more than double his salary as premier. The former agent-general in Britain was retired on a pension of \$6,000 in order to find a place for McBride. Thus is the game of politics played

in this fair Dominion of ours. And now Richard is to have his salary amputated. Let us hope that some day in the near future we will see honesty in public administration and economy in the expenditure of the people's money.

THE EMPIRE FARM

Men high in the councils of Empire have devised a scheme described elsewhere in this issue, by which, if it were worked, Canadian agriculture would be saddled with most of the imperial war debt. According to this proposal the undeveloped natural resources of the Empire are to be withheld from use or their title retained until a land hungry people is willing to pay off the war debt in order to gain possession of them. The most ambitious detail of this colossal proposition is the purchase from the Dominion government of 200,000,000 acres of agricultural land in Western Canada, chiefly, of course in the northern districts. The price to be paid is estimated at the modest sum of one dollar an acre, which the government would be required to expend in developing the territory. It is apparently the idea to promote settlement, but to retain the title until the presence of population has increased the value of the land to \$100 an acre, when it would be sold, the sum thus realized amounting on paper to some twenty billions of dollars with which the cost of the war would be liquidated.

This visionary and impractical scheme might be passed over in silence but for the high source from which it emanates. Canada's problem is not to extend the boundaries of her settlements, but to fill up the vacant sections in districts already partly settled and served with railways. It would be folly indeed for her to endeavor to serve her now unsettled hinterland with an expensive railway system, without which no settlement is possible. She has had enough of building railways over

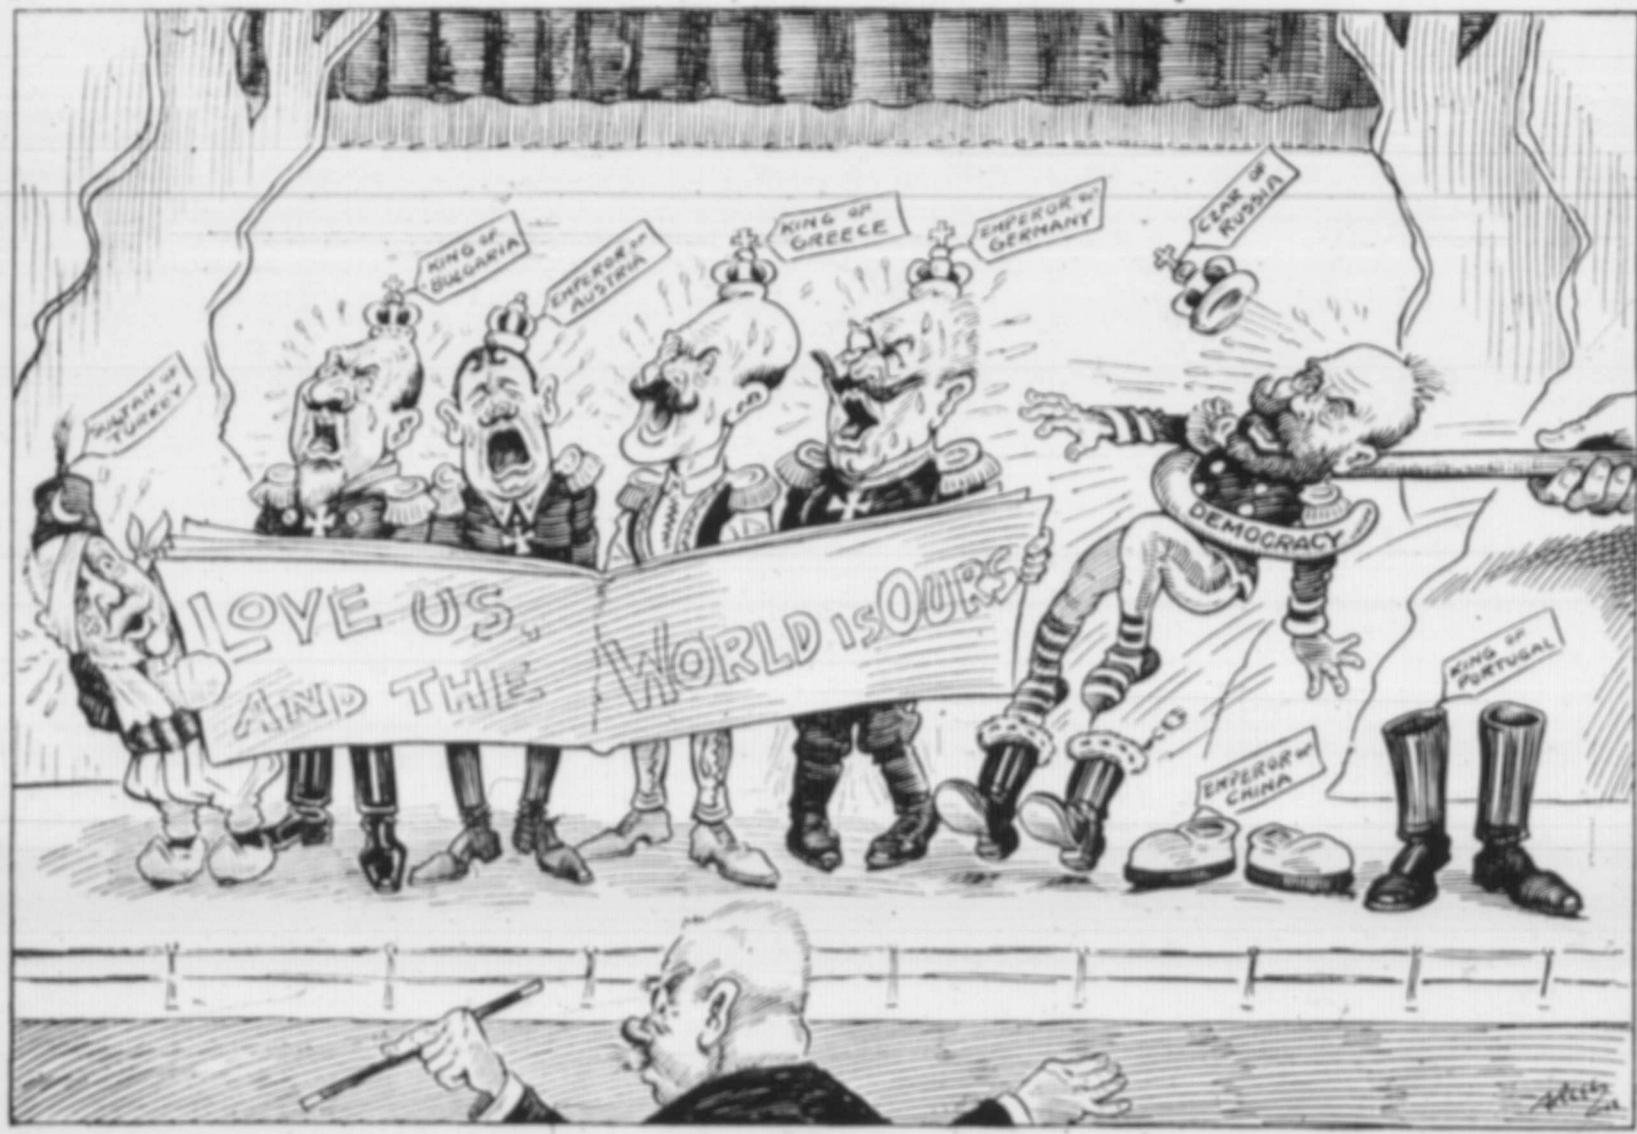

vacant lands to distant settlements. The Royal Commission states that it will take \$100,000,000 on top of the countless millions already spent to put the Grand Trunk Pacific and Canadian Northern systems on a solid footing. The country is saddled with this enormous burden because she has built a railway system capable of serving 50,000,000 people, if properly distributed, for the accommodation of a scant 8,000,000. All the agricultural land available from these railroads has long since been alienated. The only land available is outside this system and much of it is of doubtful value for farming purposes. Canada has squandered her agricultural lands with such reckless prodigality that it is questionable if one quarter of the acreage could be found that would be satisfactory for agricultural purposes, and the dollar would have to decrease much further in value before each acre of such land would fetch 100 of them. Even if such prices could be realized it would only mean an increased burden to be carried by the farmers as it is pointed out by Mr. Buchanan elsewhere in this issue. By no method of reasoning, imperialistic or otherwise, can the fact be evaded that this scheme, if practicable, would succeed in unloading the British war debt on Canadian agriculture.

But visionary as the scheme is it contains an important principle. It recognizes that community values should be taken for governmental purposes. But if this principle is applicable at the extreme confines of the Empire, it is also applicable at the heart. The method of taking over these values would have to be somewhat different from that suggested. Instead of taking over the full capital value of the land at some future date, it would be necessary to take only the annual rental value. Doubtless however, the aristocratic landlords who sponsor the scheme would lose much of their enthusiasm for it if it were to include taking, for the payment of war or other public debt, the value of the land of which their

ancestors robbed the British people.

Sir Adam Beck, that doughty champion of public ownership, is making things warm for the MacKenzie and Mann interests. Recently in the Ontario legislature he charged them openly with stealing power at the Falls. He also arraigned them for their questionable lobbying methods. Sir William MacKenzie in a letter to Premier Hearst, assumes the role of martyr, stating that he has reached the age when reputation is everything to him, and that he is going to defend it. Reputation is the place a man holds in the opinion of the people. The coterie who have engineered the C.N.R. deals may rest assured that the place they occupy in public opinion isn't worth defending.

Russian working men have appealed to the working men of the central powers to throw off the yoke of autocratic rule. It is reported that the tendency is no longer to regard the war as a struggle between nations, but as one between the new spirit of democracy and the old spirit of imperialism. The Russians believe that their success will mean a revolution in Germany. The effect on the Germans is made evident by the fact that reforms which the Kaiser and his military advisors have hitherto refused to discuss are now being introduced by the government. The socialistic element of the Reichstag makes demands that are far reaching. One of these is that the Reichstag have control over the formation and breaking off of alliances, and over the making of peace and war. Another is that the Chancellor, who has hitherto been the channel thru which the imperial will was transmitted to the Reichstag, be dismissed if that body so demands. This would make him not the servant of the Kaiser, but of the people. Democracy is the antidote for war. The progress of events strengthens the hope that the war will result in the spread of that democracy under which war would be no more.

Backsetting the Farmer

III.—Agriculture and the Greatness of Nations

By A. S. Handicap

As has been already stated, national greatness has its source in the land. Tilling the soil and caring for flocks and herds were men's primary occupations and agriculture was brought to a highly advanced state by many ancient and heathen nations.

Persia and Babylonia were highly cultivated and densely populated over five hundred years B.C. The land was brought under an excellent system of irrigation and was very fruitful. Wheat was produced, yielding two hundred and three hundred-fold, while barley and apples were also grown extensively. The palm was made to produce wine, vinegar, honey and meal. The terra cotta, bronze, and ivory work, enamelled bricks and manufactured textile fabrics of these ancients were equal, if not superior, to those of the present day. Their terraced and hanging gardens are among the wonders of the world. The people were well versed in astronomy and from them we get our Arabic notation. They invented a rude alphabet and are said to have had a code of laws 2,250 years before the birth of Christ. Now the country is a comparative desert and the people are few and impoverished.

Land Laws of the Jews

Palestine was, at her best, an almost perfectly developed agricultural nation. The land laws, as well as the moral laws, of the Jews were excellent and are worthy of attentive study today. Some of the features of the laws relating to land were:

- (a) A plot of land was given to each head of a family.
 - (b) Land was easy to acquire and hard to alienate.
 - (c) The land came back to the original owner in the year of Jubilee, which came every fifty years.
 - (d) Land lost could be redeemed at any time on payment of the value of the unexpired term.
 - (e) The Fallow Year came every seventh year, when the land had to be rested and the natural crop went to the poor.
 - (f) Farming was looked upon with honor and the highest men of the nation took part in it.
 - (g) The people had a knowledge of trees, roots and fruits. The grafting of fruits was well known to them, and great care was taken to preserve the fertility of the soil.
- Now the fertility is gone and the people are wretchedly poor.

Decline of Egyptians

Egypt was at one time the storehouse of the world and at the height of her prosperity had a population of from six to seven millions. Agriculture was the chief pursuit. The people were divided into castes and occupations descended from father to son. The farmers were among the highest order and were considered superior to the merchants. The land, irrigated by the waters of the Nile, was admirably adapted to the growing of wheat, and the nation became very wealthy and highly civilized. The pyramids, the Sphinx and the mastabas show a marvellous knowledge of the mechanical powers. It is claimed that the Egyptians had steam, railways and electric light, also the microscope, that they had an intricate knowledge of engraving, porcelain making, glass blowing and the manufacture of paper and books, and that nearly every great social question was thoroughly discussed by her great men. But in time the lands were neglected, fertility declined and the nation sank into poverty and ignorance. It is interesting to note the great prosperity that has re-

cently been brought about in this country by British engineering skill and wise administration.

Spain, under the Saracens, 1,200 years ago, was more highly developed agriculturally than any country of modern Europe up to twenty-five years ago. Both the theoretical and practical side of agriculture were developed and the people enjoyed a time of great prosperity. The magnificent gardens and palaces of those days are in striking contrast with the extreme and depressing poverty of Spain today. We are indebted to the Saracens for what many no doubt consider a recent discovery, the farm silo.

Mexico, before the advent of Cortez, had agriculture as a finished science. Everybody except the soldiers worked on the land. They preserved the forests, summer fallowed the land and became very wealthy. The chafing dish, supposed to be a modern novelty, was used by the Mexicans hundreds of years ago. History marvels at the accomplishments of that ancient people. Everybody is familiar with present conditions in that once prosperous country.

The Aztec Age

Peru was naturally an arid district, largely steep hillsides. When the Spanish visited that country they found that the natives had terraced the slopes, had brought water five hundred miles for irrigation and domestic purposes, had made roads, suspension bridges and dug rock tunnels—and had done this without iron. The land was divided in

In older days idleness was a crime, punishable by death.

equal shares and everybody worked on it. Idleness was a crime, punished by death. No one was rich, no one was poor, everybody was comfortable. Now the great works of that country are in ruins and the people generally in a backward and destitute condition.

Poverty Follows Soil Exhaustion

Coming down to modern times:

New England was the cradle of freedom, the home of democracy, the land where they built schools and raised men. Thousands of the farms there were practically abandoned years ago, thru depletion of the soil; mournful testimony to the fact that the English speaking farmer could create desolation scarcely less hopeless than the Mongol or the Turk.

The wheat-raising centres of the United States are steadily moving West and North as the soil is exploited and exhausted.

The average yield of wheat in Manitoba has fallen off about five bushels per acre since the land was first cultivated.

In Alberta and Saskatchewan there are no signs of soil exhaustion as yet, but there are unmistakable signs of danger from foul weeds and from floods and washouts caused by forest depletion. There are also too many unoccupied homesteads, conspicuous as "sunflower sanatoriums and noxious weed resorts."

What causes led up to Palestine's greatness as an agricultural nation?

(1) Her excellent, equitable land laws by which every man became a producer.

(2) Co-operation under the patriarchal or family form of government.

What causes led to her decline?

(1) The breaking away of the people from the laws.

(2) Soil impoverishment.

(3) Wars and dissensions.

What were the causes of the success of the heathen nations referred to?

(1) Their successful cultivation of the land, by which they produced great wealth.

(2) Their co-operation under the form of government of master and slave.

What were the causes of their decline?

(1) The people forsook the land.

(2) Drones or non-workers became too numerous, wars drained the resources of the country and took the people away from the land, which, being neglected, failed to produce.

Secret of Civilization

The secret of civilization is co-operation—that is real co-operation in wages, views, votes, production, distribution, selling and buying. In the ancient system the form of co-operation was master and slave and the driving force was fear. Under the feudal system the form was lord and serf, the driving force being submission to authority. Under the present or wage system hired men take the place of slaves or serfs, and the compelling power is money, or gain, or a living. The coming system will be the brotherhood of man. Machinery will take the place of slaves or hired men. The men will take an interest because of love of the work and because they will get a share of the profits. The use of land will be open for all. There will be union for strength and time and opportunity

for each person to develop his individuality.

While many different causes contributed towards the neglect of the land by the people it was this neglect that impoverished the nation. It has been stated as a general principle that two centuries of livelihood from the soil without building it up will drive the people into extremes and depressing poverty.

China's Contrast

China may be cited as a contrast to the fate of many of the ancient nations. There have been no changes in her laws and customs for thousands of years. Under pressure of a great population the fertility of the soil has been preserved. The president of the Ontario Agricultural College, who visited China a year or two ago, states that the whole country is under most intensive cultivation, that there are families living on less than one acre of land, that great attention is paid to putting fertilizers on the soil so as to keep up its productiveness. In China the laborer is superior to the artificer. The country has never gone out after trade. In fact, extreme measures have been taken to keep it out, the desire of the nation being to be left alone on the land.

After the fall of the Roman Empire Europe was devastated by wars. For purposes of defense the small farms had to give way to large holdings. The danger in dividing lands led to the laws of primogeniture and entail and to the establishment of the

Tilling the soil was brought to a very advanced state in many ancient and heathen nations.

Farm Experiences and Problems

Practical Suggestions and Opinions on Everyday Farm Work

ADVICE TO THE NEW SETTLER.

The spring of 1917 will see many men making their first start as independent farmers on the prairie. Many of them are coming from other parts of Canada or from the United States. Very many have had but limited experience of Western agriculture. Such men are anxious to benefit by the accumulated experience of those who have lived many years in the West. Even to those who have done considerable practical farming a short summary, containing the gist of that experience, should be welcome. It was with the idea of securing a budget of reliable information and advice for the beginner that a representative of The Guide called upon Mr. Angus McKay, whose long experience of western conditions, and thorough knowledge of prairie farming, gained as superintendent of the Experimental Farm at Indian Head, qualifies him as few men in the West to counsel the man who is just starting on new or partly improved land.

Flax and Oats for a Start

"The inexperienced settler or the young man just starting up on a new or partly improved half-section," said Mr. McKay, "should choose land with from twelve to twenty inches of clay loam with clay subsoil and with water available. Rose bushes indicate good wheat land. The equipment he would require would be two or three horses, plow, harrows, wagon, drill and binder for the first year if flax or oats are sown. During his first summer it is best for him to erect a house and stable in April; break for flax and oats early in May; cultivate and sow the land as soon as broken, and break the latter part of May and all of June for his next year's crop."

"The young man could do with very little the first year," continued Mr. McKay, "I think flax is a good crop to start with—ten or fifteen acres of it; he should not overdo it. This gives him a little money in the fall. It is the only crop he can be sure of the first year. It is not wise for him to go too fast at first. He can raise potatoes and vegetables, of course, and if he had a few hens it would be an advantage. Supposing he had a thousand dollars, he could put in about twenty acres of flax and say ten acres of oats. Flax is the surest crop he can grow under such circumstances. Oats often is a fair crop, but not much should be risked. Forty pounds of seed should be sown to the acre for flax and two bushels of oats. After the first year the flax should be dropped."

Backsetting Advisable

Asked his opinion regarding the breaking and cultivation of virgin prairie, Mr. McKay stated that the best plan was to break three inches deep in June. Breaking and backsetting gave the best and surest results. To form a good seedbed this breaking should be rolled or packed as the breaking was done. It should be disked when the grass starts and again in the fall. If the settler grew a crop on spring breaking he should summer-fallow the following year. If he took no crop off the first year and seeded his breaking the second season he should figure on seeding wheat when the frost is out of the ground, two inches deep, in April. No previous cultivation is necessary before seeding. Formalin should be used to treat seed for smut and this should not be neglected. Seed should be provided at the rate of a bushel and a half to the acre, sown two inches deep. After cutting this grain the settler should leave the stubble and burn it. Plowing for oats or barley should be done in the spring, from one to two inches deeper than the breaking. Both harrows and packer should follow right after the plow.

If no cattle are raised, one-third of the cultivated land should be summer-fallowed each year; if cattle are raised, part of the land should be seeded down for hay and pasture.

Should Livestock Be Kept?

"It is not advisable for the settler to keep stock the first year, but certainly O.K. after that," said Mr. McKay, when questioned on this point. "The milking strain of Shorthorns is the best. In the matter of feed for winter forage prairie wool hay is usually available on new land. Oats make good winter feed if cut on the green side. The reason it is not advisable to attempt keeping stock the first year is that the new settler will have so much

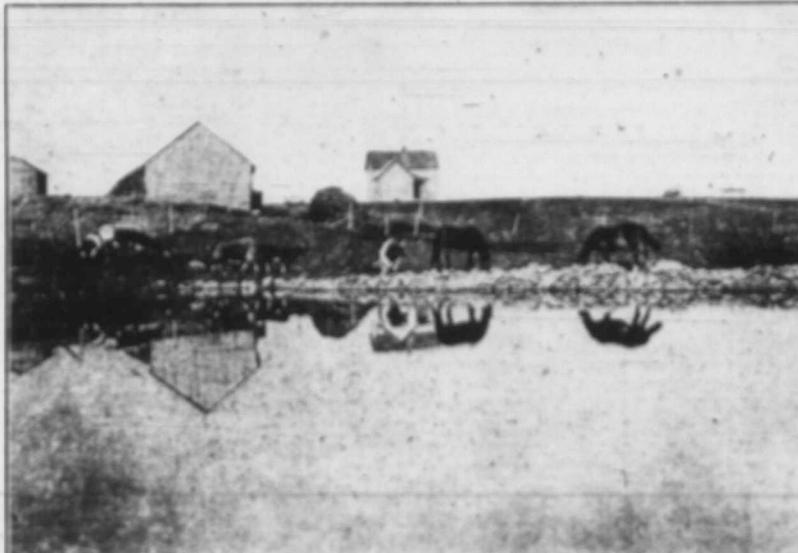

other work to do getting up his buildings, breaking his land, etc., that he will scarcely have time for stock. There is no objection to a cow, of course."

Mr. McKay considers that the best grasses for hay are western rye grass or timothy; for pasture, western rye. The stubble land should be plowed in May and fifteen lbs. of western rye grass seed should be sown to the acre. Timothy requires eight lbs. to the acre. When mixed, twelve pounds of western rye and three lbs. of timothy should be sown. The seed should be sown in a drill box and not with the grain. Alfalfa should be sown alone—twelve to fifteen lbs. per acre. "Good cultural methods and seed selection," concluded Mr. McKay, "should increase the average yield of all grains throughout Western Canada by from five to eight bushels."

MAKING A PLANK DRAG

A year ago you published articles by Seager Wheeler and described a plank drag to level with before seeding. I would like to know what length to make one for three and also for four horses, what width between planks and the correct angle of drag in use. Would 45 degrees do? How would a combination do, that is, the planks to stand on made to be used as a pulverizing drag?

Does it make wheat later maturing if harrowed when just showing thru, providing one used lever harrows, with the teeth slanted backwards, so

On the Farm of Stanley Moyness, Brock, Sask.
This dam was built in a ravine which crosses the farm and is very useful in applying water to the stock and threshing rigs. They can also cut ice from it in winter. The stones were taken from the fields before breaking and the dirt was scraped in with two teams, taking two weeks' time. It can yet be raised a few feet.

as not to thin the stand?—A. H., Canwood, Sask.

Answer

It is not advisable to make the plank drag longer than 9 or 10 feet for several reasons. When wider it will not do satisfactory work, particularly if the surface of the ground is ridged. Such may be the case even when apparently it is level. By drawing the drag at an angle of about 45 degrees, it will offset this to some extent.

The combination drag your correspondent had reference to is not necessary as the plank drag is not intended to pulverize the soil, but to level the surface, excepting on new breaking that has just been disked. It is not good practice to pulverize the soil (unless in special circumstances) as this will cause the soil to drift. A plank drag that pulverizes the soil grains or crushes them to dust should not be used on the ordinary prairie soil. We do not want a dust mulch so much as a granular mulch.

The plank drag, set on edge, as I recommend, is for the purpose of shaving the soil, and filling up all depressions, which is done by rolling the soil lumps along the front edge of the drag instead of floating over the surface, reducing the soil to a fine dust, as is done by the plan of the drag your correspondent suggests, which would really be a float. Again, in the plan submitted the cross bar is too close to the ground and will prevent the soil moving along the front side of the drag, and will fill up inside of the drag. The cross piece connecting the two sides of a drag should be placed as near the top edge of the drag as possible to allow the soil to pass freely. The plank drag I recommend will do excellent and better work on soddy ground than the float.

With respect to harrowing grain when it is just

about to come thru the ground, that is the best stage at which to do effective work, and will rather hasten maturity than retard it, by reason of the cultivation given at that time. It will retard maturity if harrowed when an inch to four or six inches above the ground when in single leaf stage. It may be harrowed again when it is stooling. Any ordinary harrow may be used just as it is showing thru the soil. In fact I would recommend setting the teeth straight at this time rather than sloping them.—Seager Wheeler.

FEEDING AND BREEDING LAMBS

At the recent stock show held at Denver the champion load of lambs of the show were sold by Clay Robinson at the record price of 25 cents per lb., a price only approached by the champion lambs at the last International at Chicago that were exhibited by the Butterfield Livestock Co., Weiser, Idaho, at 21½ cents per lb. The lambs that set the new high price were fed by Bruce Eaton, Eaton, Colo., who wrote the following for the February issue of the American Sheep Breeder.

"These lambs were all registered Southdowns from the original stock I bought of Charles Leet & Sons, Mantua, Ohio. They were ten months old when sold and weighed 91 lbs., bringing 25 cents per lb. As soon as they would eat grain I let them run thru creepers for about three months, after which their mothers and the lambs were turned on a slough grass pasture with quite a lot of sweet clover. This being the driest year that Colorado had ever seen, the pasture was nothing extra. They were taken away from their mothers September 1 and put in the feed lots. I started them on rolled barley and alfalfa, fed in a self-feeder, but the alfalfa was not cut or ground; their feed ration was gradually raised and at the end of thirty days they were eating a pound per head. We then switched the feed from rolled barley to whole barley and raised them up gradually to a pound and three quarters per day, being fed morning and evening, also alfalfa hay was fed to them with their meals. They had access to running seepage water at all times. They were held on this feed until two weeks before the Denver show, when we switched to whole corn, as we could not get the whole barley at the Denver show. We shipped to Denver, January 17 and held them in open pens and they did not fill very well and they should have weighed about 95 lbs. These lambs were fed by a man who had never fed a sheep before in his life, and I can only say this, that the main secret is good foundation stuff to start with. In four years I have always had the grand championship load and also won in the carcass contest."

SYSTEM AND STANDARDIZING

Last year when the farmer went in haste for repairs to the local implement dealer he could not supply his wants at once. In many cases he had to wait a week before the piece came and in others the required parts could not be obtained.

The implement agents claimed that the manufacturers were manufacturing munitions in place of repairs as they found it more profitable and the agent could not obtain a line of supplies.

I believe that some agents devoted too much time and money to the selling of automobiles, the result being that they could not or did not arrange for an adequate supply of repairs for farm implements.

The dealer could assist the farmer by putting forth every effort to secure a large supply of repairs, early in the season. It would sometimes save time if a printed list of supplies on hand were posted in the office.

I have gone for a repair and have had to wait a long time because the dealer did not seem to know just where various parts of his stock were placed.

The mail order house could help the farmer by having repairs on hand and not being compelled to send to the factory when orders were received.

The farmer can assist the agent in many ways. First, he should look over his machinery and discover the parts that are weak or worn. If he would take a list of these parts to the agent it might help the agent to serve him promptly when needs arose. The farmer might secure all these parts this winter and he would have a pleasant feeling of

Opinions on Our Banking System

II... More Opinions from Farmers and Replies to Mr. Brown

LUCID REPLY TO MR. BROWN

I have read with interest the two articles in The Guide on "Rural Banking Credits," from the pen of Vere Brown. While we cannot do less than agree with his contention, that a bank cannot lend money to a farmer under circumstances which would preclude the possibility of securing a loan elsewhere, yet there are several points in these articles which will bear analysis.

Mr. Brown claims at the outset of his article that the banks are fulfilling their function towards the farmers in the west, and advances in support of this statement the large amount of credit, to the amount of \$75,000,000, extended to farmers and ranchers in the west, stating as a further evidence of the liberal policy of the banks, that the three prairie provinces contain no more than 150,000 farmers. Just how much of the \$75,000,000 has been loaned to bona-fide farmers, and what proportion their numbers bear to the total number quoted above, he does not say. What he does say is: "that the aggregate amount loaned to farmers . . . is always limited only by the amount of acceptable farmers business offering," and since the banks are the sole arbiters in the matter, the acceptable business can only correspond with their inclination to lend.

I agree with Mr. Brown, when he states that the farmers have, in the past, suffered from too much credit of the wrong kind, but that they have ever been granted too much credit of the right kind has yet to be demonstrated.

Mr. Brown states that the banks are in the position of trustees for the individuals to whom deposits belong. This cannot be true, since the law affecting the relations of banker and depositor, is that of debtor and creditor, this having been definitely laid down in a privy council case, *Tobin versus Hill*, as long ago as 1848. The banker is not a trustee responsible to the depositor for the manner in which he uses his money. The banker keeps what profit he may make with the money deposited and should the bank suspend payment, the depositor ranks with the other creditors, so that the banks have no further responsibility towards their customers than to pay them their regular rate of interest on their deposits and their money, so long as solvent and, if such be the arrangement, on demand.

Mr. Brown recognizes the fact that ability to repay is the pre-requisite for credit. Security, reputation (not character) together with the other cardinal virtues mentioned by him form a good combination when applying to the bank for a loan.

The hypothetical cases given by our author are scarcely to be taken as a fair criterion of the class of farmers who require assistance from a bank. If the hypothetical Smith and Brown, to take two, could not produce in any given year more than \$660 worth of say, grain, on a quarter section, they would be a mighty poor risk, even for a banker. Moreover, in the cases given these farmers have passed the stage where they would require any financial assistance, except in the case of an abnormal crop failure. We have suffered in Canada during the past sixty years from this evil, the continued protection and assistance of industries after they have passed the infant stage. The farmer who is on his feet should be prepared to help, not be looking for help. But of course the banks, as do the politicians, work on the literal principle of "To him that hath shall be given." It is when a man is struggling that he requires the life line. It is a well known fact that this is the time the bank machinery fails, and it is for this reason that the farmers in many instances turn in disgust from the sickly platitudes avert better farming coming from the bankers. If advice is the only thing the bankers can offer the farmers at the critical period of their life then it is time that the whole business of rural credits were taken out of the hands of the present banks and centered in the government or in the farmers themselves.

Mr. Brown should be more specific when he states that: "In no end of cases," the farmers have taken refuge behind the exemption laws and transferred their land to their wives. It is to be hoped also that the farmers won't take Mr. Brown's advice re "the simple lien or pledge" too seriously. He scores the exemption laws saying: "the intention is good, . . . (and I hope the retention will be made good for in many instances this is the only protection afforded the struggling young farmer), but the fact remains that it curtails the credit of the farmers." The act renders it possible for many rogues to cheat their creditors therefore places the honest men on the same plane as the rogues by removing the exemption. This, all over the west seems to be the feeling, treat all men as rogues until you find them to be honest, and in some instances, after their honesty is discovered, if they remain poor continue to treat them as rogues.

It would be an ideal state of affairs if the farmers were to use the banks as their sole credit house, but it would be interesting to know just how many far-

mers. By all means let us have co-operative credit, but let it come thru some channel where the profits of any will be returned to the people.

If the Canadian banks are capitalized too high it cannot be the fault of the farmers and why they should be asked to contribute towards the support of such highly capitalized institutions is beyond the ken of thinking men.

With Mr. Brown's remarks anent insurance everyone will agree tho they can scarcely agree with the fact of the bank manager's acting as agent for the insurance companies.

"Learn to shape your affairs so that you can obtain all necessary credit from your bank," sounds well as a slogan, but who is to help the farmers to get into shape so that they can apprehend their opportunity; when they are in such shape it does not matter so much, they will be attended to.

"There is nothing wrong with our banking system," we are told, and conclusive proof is brought in from the east. The farmers there don't complain.

"What's the matter with you, Mr. Western Farmer? It is you who are wrong." Here, if anywhere, east is east, and west is west. Did the eastern farmer never complain or has he just reached the stage where complaint is unnecessary? Has the western farmer to be condemned because he is progressive, because he wants to enjoy some of the fruits of his labor now, and not leave it all to posterity? He does not want to wait 100 years in order to achieve his purpose. Here and now is his cry. Can it be that the farmers, livestock men, newspapermen, article writers, politicians, are all wrong about this matter, and that the banking system as at present constituted is just about perfect, for the needs of agriculture? Can it be, that we as farmers, have again been chasing a will-o'-the-wisp, that we have been duped again. We think not, in spite of the reiterated unqualified statements of Mr. Brown.

What we want in the west and we want it quick, is a system that will help the under-dog, not further strengthen the upper, tho he, if he, be well behaved can be left to his own devices. Our banking system is aristocratic. Let us try a democratic system. Banking can be done by mail and if the three prairie provinces followed this program to the logical conclusion, and established a rural credit system in each of these provinces, there is no occasion why loans, both for long and short terms cannot be made by mail under a contributory system, on the recommendation of an inspector, farmers' association, or other body, where the only pre-requisite in the applicant for credit will be honesty, well directed industry and thrift, leaving the question of security in abeyance.

Work industriously, fellow farmers, for government or farmer controlled credit companies, both for long and short term loans. It will cost you something to inaugurate the scheme, but the benefits to be derived will out-weigh, immeasurably, the cost.

J. A. P.

Sask.

THE NEW SETTLER PROBLEM

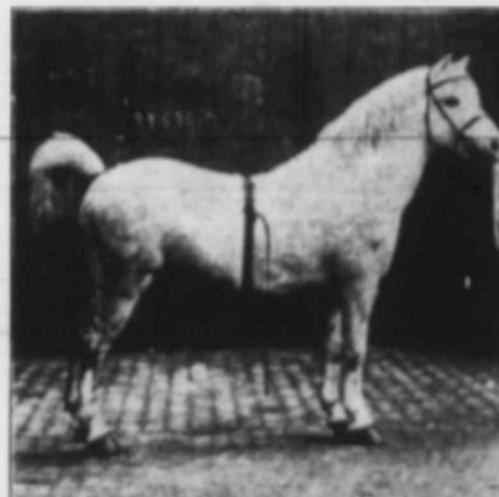

I have read several times with the greatest interest Vere Brown's recent articles on Rural Banking Credits. Mr. Brown's handling of the subject, and his ability in discussing and arranging his subject matter certainly cannot be questioned, and it would be a hard matter indeed to attack his theory of credit—as such. But anyone who has lived in this western country and been at all in close touch with its conditions and its people cannot help feeling that the articles in question, especially in so far as the application of the principles laid down are made to convert conditions prevailing in the newer parts, clothes a heresy which, if put into actual practice would temporarily stop colonizing progress, and compel the people of the country to stay where they are, whatever their means or condition.

Perhaps the two oftener asked questions of the day are: How can we keep the farmer boy on the farm? and: How can we establish the city boy on the land? If we look closely for the reason for these two questions it is not hard to find and it is this.

The nearest approach that can be found to the actual production of wealth, production as opposed to conversion, is to be found on the land. The laborers in a factory do not produce, they take raw material and convert it. It is therefore to the interest of as many individuals as can, to become employed on the land, and it is also to the interest of every country which has within its boundaries any non-producing soil to see that as many of its citizens as it is possible to induce to do so, go on the land and take part in that production in some way.

The conditions as existing in most of the older communities are such that by the time the farmers' sons are grown men they are forced to a choice either partitioning up the old homestead, becoming laborers for others, or getting out on the frontier, so long as any undeveloped country remains. Usually

The Country Homemakers

CONDUCTED BY FRANCIS MARION BEYNON

A PROPHECY

For I dipt into the future, far as human eye could see,
Saw the vision of the world, and all the wonders that would be.
Saw the heavens filled with commerce argosies of magic sails,
Pilots of the purple twilight, dropping down with costly bales.
Heard the heavens fill with shouting, and there rain'd a ghastly dew
From the nation's airy navies grappling in the central blue;
Far along the world wide whisper of the south wind rushing warm,
With the standards of the peoples plunging thru the thunder storm.
Till the war-drum throbbed no longer, and the battle flags were furled,
In the parliament of man, the federation of the world.

—From Tennyson's "Locksley Hall."

INTERNATIONALISM

The war has done at least one thing. It has clarified in the minds of the pacifists of each of the warring countries their relations to their fellow men. It has made it clear that the spirit refuses to acknowledge the limitations of arbitrary and artificial boundary lines, that the real comradeship of human beings is international.

As the temperance workers of Western Canada have more in common with the officials of the Chinese republic who refused every bribe to permit the continuation of the opium traffic than with those English bishops who opposed prohibition because they had money invested in the liquor traffic, so the English conscientious objector has more in common with Liebknecht and his followers than with the Lord Milners of their own land.

According to The Tribunal, published by the No-Conscription Fellowship of England, many months ago sentence had been passed upon more than fifteen thousand conscientious objectors, men who believe that the killing of human beings is always wrong. Some of these men accepted alternative service, but thousands of them refused to do any kind of work which would release another man for the war. As Professor Bertrand Russell, dismissed from Cambridge University because of his pacifist opinions, has explained, this attitude brought them into a deadlock with the military authorities. The latter could not understand men, formerly useful, industrious citizens, many of them university graduates, who would refuse pleasant outdoor work, and choose rather the hardships of jail, and the harsh treatment to which conscientious objectors are subjected to test the sincerity of their belief.

Thus it has become apparent that the real foreigners are not those who have been raised in a different country and who speak a different tongue, but those people, wherever they meet, whose standards and ideals of life are so at variance that they have no means of communication.

In their belief in the efficacy of force, the glorifying of nationality, the rightness of things as they are, Lord Milner, Lord Curzon, the Kaiser, Bethmann Hollweg, the late Czar of Russia, and Theodore Roosevelt would understand each other perfectly. None of them can understand the pacifist or Socialist.

On the other hand the conscientious objector in jail in England reaches out hands of spiritual fellowship to Liebknecht and the thousands of his followers in jail in Germany, to the Russian exiles who, from England, America, France and Siberia, have begun the great trek back to the homeland, to Bryan who gave up the secretaryship of state because of his pacifist views, and to Rabindranath Tagore, of India, who is an interesting article in the Atlantic Monthly upon "Nationalism in the West," touches upon these new citizens of the world to whom the war has made it clear that no race matters but the human race. To quote from a review of his article: "He condemns and utterly derides 'the thing called the nation.' Nationalism is mechanical; rather, it is a sort of monster feeding upon 'mutilated humanity.' This war is nationalism's climax—the fifth act of the tragedy of the unreal." Tagore stands for the individual.

"Take this from the closing paragraph: 'And we of no-nations of the world, whose heads have been bowed to the dust, will know that this dust is more sacred than the bricks which build the pride of power. For this dust is fertile of life and of beauty and of worship. We shall thank God that we were made to wait in silence thru the night of despair, had to bear the insult of the proud and the strong man's burden, yet all thru it, the our hearts quaked with doubt and fear, never could we blindly believe in the salvation which machinery offered to man, but we held fast to our Trust in God and the truth of the human soul.'"

ANOTHER FREE TRADER

Dear Miss Beynon:—I have just been reading one of the sisters' letters on Free Trade, and it moves me to say my say in its behalf. I realize it does deeply concern any woman who looks well to the ways of her household. Therefore, I hold up both hands for Free Trade.

I have had a slight experience which may be of interest to the women of our land, which will prove that if we can buy American goods profitably, and pay the duty, we can profit much more by buying them free of duty. A few years ago I started a small business in one of the villages in Saskatchewan, my goods consisting of articles of apparel for women and children. Having had a similar business on the other side of the line, I had bought my goods from a wholesale company in Chicago, but on speaking of buying again from my old firm, I was heartily discouraged by the Canadian people, who said the duty would swallow up the profit. So I was persuaded to buy in Toronto and Winnipeg, and after two years' buying in Canada I decided to try my old Chicago firm, and found such entire satisfaction that I gave them all my orders for the past three years, and duty at 35 to 42 per cent. Still I am able to give my customers better value, at a lower price, and have more profit and a clear conscience for myself, which, after all, is the greatest profit to the woman who wants to be of service to her fellow beings and make an honest living as well. Yours for Free Trade.

A SISTER

ALSO DISLIKES ILLUSTRATIONS

Dear Miss Beynon:—In The Guide of March 14 appears a letter by "A Reformer," drawing atten-

"I'm Only Training You."

tion of the women to a subject which has been causing private discussion for some time, and which I believe deserves to be considered by every women's club. It is only a pity that a resolution dealing with this matter was not brought before the Farm Women's Conventions during the past winter.

The illustrations in these catalogs are indeed shameful. Perhaps it is thoughtlessness on the part of the issuers of the catalogs; in any case they certainly should be asked to make a change. In my opinion the article for sale could be just as well illustrated alone, without using the full figure picture of a woman, or man either, and in fact many articles would be much better not illustrated at all. The economy in space and paper thus practiced could be advantageously used toward turning out a better class of goods, which would be much more appreciated by we western women. Before another deluge of these mail order catalogs comes upon us I hope the women's clubs will have taken some effective action in the matter and that we will have a catalog free from any of these unnecessary and shocking illustrations.

SASK.

NO OBJECTION TO ADVERTISING

Dear Miss Beynon:—In The Grain Growers' Guide of March 14 there is an article "Offensive Advertising," which is nothing more than amusing to read.

"A Reformer" says it is shameful how the mail order houses have womanly forms in their catalogs. I fail to see where we should be so horrified, as the figures are to give the purchaser an idea of the goods' fitting qualities, and are a model, that is all. What would "Reformer" think if she saw how the women are dressing in the war zone now, or if she saw the works of art in marble which are to be seen anyway? In fact "Reformer's" letter is more suggestive than the advertising.

AMUSED.

RECEIVED PATTERNS

Dear Miss Beynon:—I have been silently reading and enjoying the letters on the Homemakers page, also the Children's page. I wrote your page once before for patterns. I received some from a lady, and have written her twice, but received no answer. If she sees this maybe she will write. Do not know that I got her right address as she sent two.

Please find enclosed fifteen cents in stamps for the little booklets "How to Teach the Truth to Children," and "The Most Wonderful Story in the World," as I have three little girls who will soon be asking questions and it is sometimes a puzzle to answer them truthfully. Will sign my old pen name.

CURLY.

AN INTERESTING COLOR PLAN

Dear Miss Beynon:—I am an interested reader of your page, and must say I learn something new each week from it. So, at last, I have gained courage to ask help. We are thinking of building a small house with just a living room and bedroom looking south, the living room being on the southeast. I am thinking of having the whole lined with plaster board and the living room panelled with picture moulding. My color scheme is this: I expect to have a diningroom suite in Early English, so to go with that I thought if the walls were painted buff in flat wall paint and stain the moulding and woodwork Early English to match furniture, in antique stain. What color would I do the ceiling to match? I am having cream serice for curtains and imitation oak plank design linoleum, with one or two small rugs in tans and browns, with a touch of blue, green and red, for the floor; and small pictures done in black passe partout. Do you think this will be effective? Please tell me what you think. I didn't mention I intend having a kitchen at the north and looking east, and a pantry and clothes closet off the bedroom. My idea is to have the bedroom walls in a dull blue, with woodwork painted and enamelled in white, and floor painted a French grey, and have rag rugs in blue and white laid around. The furniture is all white. Curtains are to be cream serice, bordered in blue and the ceiling white. I may say the kitchen will be the same as bedroom. Do you think this latter part all right?

Thanking you in advance for your kind help, I am,
AN INTERESTED READER.

Answer

Your ideas of color are so good that you do not much need help. The changes I would make, if it were my home, are really only a matter of personal preference. I would like it better with the stripes of the wainscot painted like the wall, and I prefer a matting patterned linoleum to the imitation oak plank, but, as I say, there is no special reason why my way would be better than yours. Paint the ceiling cream, in the buff room, and white in the blue and white room.—F.M.B.

NOT YOU

Time restores to earth each year
All it took away.
Snows depart and birds appear;
Woods grow green and gay;
Blossoms fill the orchard-tree;
Wintry skies turn blue;
Everything comes back to me,
But—not you.
Into port come speeding ships;
Trains rush up the rail;
And from loving hearts and lips
Rings the cry of "Hail!"
Home-returning throngs I see,—
Old-time friends I know;
Everyone comes back to me,
But—not you.
No unaltered is each place,
Garden, house, and street,
Oft I turn to seek your face,—
Listen for your feet.
Times like that it seems to be
Monstrous and untrue;
That all things remain with me,
And—not you!

—Ella Wheeler Wilcox.

April 4, 1917

RECORD CHEQUE

I have just received from J. A. Kearney, secretary of Olds Local Union, No. 11, a cheque for \$100 in payment of membership dues, which I think constitutes a record for dues from any local sent in at one time. This is the second cheque received this year and makes a total of two hundred and forty-nine members for the Olds Local for 1917. The record is the more remarkable as our figures since 1912 show the following number of members:

1912, 40; 1913, 30; 1914, 21; 1915, 32; 1916, 20 and 1917, 249.

In 1915 and 1916 the union was to all intents and purposes dead. Some of the best organizers we had were sent there with apparently no effect. In the spring of 1916 President Wood personally made two visits to the local, and it is on record that on one occasion he spoke for one hour and a half to less than a dozen men in an effort to have them keep the union going, with results which apparently are about to be realized. A very considerable number of our locals this year are showing a most gratifying increase in their membership, but up to the present Olds is easily to the front. Who will be the next to take the lead?

AN EXAMPLE WORTH FOLLOWING

I understand that at a recent meeting of Blackie Local, No. 309, the question of the increase in the membership fee to \$2.00 as discussed at the convention was taken into consideration and a very lively and enthusiastic debate followed. The suggestion was made and ultimately endorsed by resolution, that each member instead of paying \$2.00 as membership fee for 1917 should make himself responsible for at least one new member, and that any present member who failed to secure another member by the end of the year should forfeit the sum of \$1.00 which would be forwarded to the central office as a contribution to the general funds. This is a practical application of the suggestion which I made to our convention twelve months ago, when I suggested that a better way to assist the central office would be to double our membership instead of doubling our fee. While the suggestion was received with enthusiasm, very few of the locals made any particular effort to put it into effect. Owing to the shortage of labor it is going to be difficult to undertake as much organization work as we would like this year, and it will be up to each member to do what he can to assist. It is surely not asking a very great deal or placing a very heavy obligation on each of our members when we ask them to secure one new member in the next few months or forfeit to the general funds the sum of \$1.00, which represents the membership fee that a new member would pay. The Blackie Local has set the example. I hope that every other local in the province will adopt this plan with enthusiasm.

THE ALBERTA SPIRIT

The replies to Circular No. 5 are beginning to come in and indicate quite clearly that those pages of our history in regard to our part in the great war, which we have not, out of respect for those who have gone, seen fit to parade and advertise to the public at large, are pages of which we do not need to be ashamed, but of which on the contrary we have a just right to be proud. Pine Lake Local, No. 463, is not a large local and never has been, but there are seventeen members of that local on active service; one has made the supreme sacrifice, four are reported as wounded. The Winnipeg Free Press will be interested in the following resolution:

Moved, seconded and carried unanimously by the members of Pine Lake Local Union, No. 463: "Resolved that we send to the central office a Roll of Honor of our local members and sons of members, who have gone overseas, and that in regard to our subscriptions to the various relief funds our members rest content that they are doing their duty."

Incidentally, it might be mentioned that the column for nationality is producing some very interesting statistics. From one local, four out of nine members at the front were born in the United States, and the reports generally would indicate that the citizens of Alberta of whatever nationality, have

not been slow to indicate in a practical way their sense of responsibility as citizens of the British Empire.

\$314.50 FOR PATRIOTIC FUND

P. L. Rogers, secretary of Belmont Local, No. 537, reports that owing to the weather this winter the meetings have been very poorly attended. The report of the delegate to the convention was well given at the last meeting and accepted with a vote of thanks. It was also decided that the secretary should take the agency for The Guide as per request of the central office. The union held a successful basket social in aid of the Patriotic Fund on St. Patrick's Eve. The total amount realized was \$314.50, the baskets averaging about \$9.33 each.

INTEREST REVIVING

Broadview Local, No. 342 held the first meeting of the year on Saturday, March 17. The secretary remarks that they have been in a very lethargic state for the past nine months but judging from this meeting he expects new life will be given them as all members seemed enthusiastic and anxious to get the local to full strength at this, which was practically the annual meeting. The election of officers took place and resulted as follows: President, Jos. LeBlanc; vice-president, G. W. Sturmer; sec-treas., Hugh Bower. The union voted in favor of the hall insurance scheme as outlined in Circular No. 4 and have appointed the new secretary, Mr. Bowes, to act as agent. The union decided that the dues for this year should be \$1.50 each, and trust all other locals will see the necessity of increasing their dues to this amount as \$1.00 is really not enough to carry on the work of the association as it should be done.

DISTRICT LOCAL ORGANIZED

W. H. Soper, president of the South Athabasca Local, reports that there is quite a revival in U.F.A. work in that district recently, caused no doubt thru the efforts of the locals to secure an elevator, also thru the personal efforts of all the members of the South Athabasca and Colinton Locals. On March 15, Mr. Soper organized a local at Meenook with a membership of eighteen and great things are expected of this local as they have a large field to draw from and they are after a large membership. On March 16 he drove eighteen miles north of the landing to Pleasant Valley and organized a local at that point also. The meeting was well attended, some of those present having driven seven and eight miles. Mr. Soper explained the objects of the U.F.A. and the benefits derived from organization and at the close of meeting every farmer present signed the roll. On March 10, a district local was organized, delegates from Colinton, Stocks, Poplar Ridge, Grosmont, West Athabasca and South Athabasca being present, about 100 in all. Joe Williamson was elected president, Max Ziegler, vice-president and W. H. Soper secretary-treasurer. The next meeting of this association was called for March 24, when they hope to complete the organization.

TOOK STOCK

On Wednesday, March 14, the president and secretary of Edwell Local, No. 53 went to Hill End School to hold a meeting of the Hill End Branch of this local. It was a fine night and several members turned out. Lively discussions took place on several matters contained in the head office circulars, especially on the financial part of the business. One member considered that the U.F.A. should take stringent action against members who take advantage of the co-operative business of the local and who do not come up with their dues. The secretary took several orders for formalin, gopher poison, also some subscriptions for The Grain Growers' Guide and last but not least a further share subscription to the

Alberta

This 9th issue of The Guide is conducted officially for the United Farmers of Alberta by P. P. Woodbridge, Secretary, Calgary, Alberta, to whom all communications for this page should be sent.

co-operative elevator to be erected in Penhold. Altogether the members had a very enjoyable meeting, one member stating that it was worth the dues alone to meet his fellow-members and have a talk. The meeting adjourned at a late hour to meet at Willowdale, on Wednesday, March 28.

U.F.W.A. ORGANIZED AT RED ROSE

Roy O. German, secretary of Red Rose No. 523, reports that at the last meeting of the local the ladies organized a branch of the U.F.W.A. with Mrs. German as president and Mrs. A. L. Sanders as secretary-treasurer. The local decided in favor of the Hall Insurance scheme as outlined in Circular No. 4, and appointed the secretary as agent. Four of the members intend driving down to organize a union at Lonebutte and Fraserton in the near future, the President and W. L. Summerby taking the Lonebutte and the Secretary and H. A. LeBlanc taking Fraserton meetings.

PUSHING ORGANIZATION WORK

The following letter is being sent out to the locals in his constituency by Director H. E. Spencer of Battle River.

Edgerton, Alta.

March 24, 1917.

The members of the Battle River Constituency, United Farmers of Alberta: It was with sincere pleasure I received the news that I had been elected Director of Battle River Constituency, as I had been keenly interested in the association for the past eight years. My only regret was that I might not be able to fill the post to your satisfaction.

I take this opportunity of thanking those who thought fit to vote for me; and to those who did not, as a farmer, I thank you for having the farmers' interest sufficiently at heart to attend the convention.

We have a great work in front of us to better conditions of farm life, from the social, educational and economic sides. We need the help of not only every member but of every farmer. To get this our organization has got to be complete. The following plan works well:-

Divide the district into wards, make lists of every possible member in each. Then put a director or committee man in charge making if need be a house to house canvass. These lists should be checked over at your monthly meetings, so that the man who will not join will be known.

Another good way is to have a member of the executive attend every social gathering in the district and make an individual canvass. When on these trips it is well to carry along a bit of the things the U.F.A. has done and is doing. This information can be obtained at the central office. Then when the usual question is put "What has the U.F.A. done?" you can show the questioner the numerous benefits he has got for nothing, and by someone else's labor. If this subject is put right up to a man, no self-respecting farmer will refuse. Let our motto be: "Every farmer a member."

We are supposed to have a representative government. How much it is, you all know. What with an unjust patronage system, political funds secretly subscribed and secretly disbursed, the farmer or worker is not likely to get a fair share of legislation. We now have a farmers' platform, and if we only support men (whether Grit or Tory) who will work for that platform, we shall gradually get a clean government, and be able to live under better and finer conditions. Nothing is given unless it is demanded, and that demand must have numbers behind it. Let not a man stand back because he is too busy or too far from meeting place; his name on the list will help central and his \$1.00 will help a little. The we can do very useful and needed work locally, we must not forget the more necessary work of supporting the central executive, without which we can do

nothing in the way of passing legislation.

And what is the use of growing a crop if you cannot sell it?

Now that the farmers are organized from Ontario to British Columbia, and all are affiliated in the Canadian Council of Agriculture, we are in a much better position to approach the Dominion as well as the Provincial Government in regard to rural legislation. But we cannot stand still, we either go forward or backward. Let there be no doubt as to the way we are going. We need co-operation in both men and money. Let us not forget that besides the economic, we must work to promote social intercourse, and bring about a higher standard of community life. In this respect the women of the constituency can be of great help by forming U.F.W.A.'s or joining the men.

The work in front of us might be classified as organization, education and co-operation. If you get the first, you can give the second and the third will come naturally. We need funds for central to be able to organize and educate. If proceeds from an entertainment were given to central once a year from each local it would strengthen our organization immensely.

I am hoping to be able to visit a lot of points after seeding. I may say the unorganized districts are in greater need of a visit than the organized ones, tho I would like to visit them all; but that is hardly possible on account of the cost of time and money. I shall be very glad if locals will report to central or to me, of any districts who wish to organize.

Remember, our motto is "Equity," equal rights and privileges to one and all. In conclusion, let us endeavor to make Battle River take first place in the ten constituencies.

HENRY E. SPENCER.

THE GRAIN GROWERS' GUIDE

(607) 15

GREAT DISCOVERY!

Remarkable Cloth that won't wear out or tear! Samples free by post to any reader.

Just fancy, readers! Whether a blacksmith, carpenter, engineer, laborer, farmer or clerk, could you by solid, hard, grinding wear, every day in the week—not just Sundays—wear a small hole in a \$2.25 pair of pants or a \$6.50 suit in six months? Could any of your boys wear a small hole in a \$2.25 suit in six months? Remember, six months of solid grinding wear and tear—not just Sundays—but every weekday and Sundays, too! If any reader can do this, he can get another garment free of charge!

A remarkable new untearable cloth has been discovered by a well-known firm in London, England. These new Holeproof Cloths are amazing! You can't tear them, you can't wear them out, no matter how hard you try. Yet, in appearance, they are exactly as finest tweeds and serges sold at \$20. But the price is only \$2.25 for a pair of trousers, breeches \$2.50, and for a well-made, smart, stylish Gent's suit, delivered by post, with no further charge whatever \$6.50 only. Boys' suits from \$2.25, knickerbockers from \$1.00. Readers are reminded that the above sums cover cost of postage and all charges, and there is nothing more to be paid on delivery. Full particulars of these remarkable cloths, together with a large catalogue of patterns, fashions, and a simple measure chart with which readers can measure themselves at home, will be sent absolutely free and postage paid to all those who just send a postcard to (Agents Dept. 2), The Holeproof Clothing Co., P.O. Box 777, Winnipeg. The firm's London address is 56 Theobalds Road, London, W.C., Eng., but all applications for samples should be sent to Winnipeg. Advertisement.

**THE C.P.R. GIVES YOU TWENTY YEARS TO PAY**

An immense area of the most fertile land in Western Canada for sale at low prices and easy terms ranging from \$11 to \$15 for farm lands with ample rainfall—irrigated lands up to \$50. One-tenth down, balance if you wish within twenty years. In certain areas, land for sale without settlement conditions. In irrigation districts, loan for farm buildings, etc., up to \$2000, also repayable in twenty years—interest only 6 per cent. Here is your opportunity to increase your farm holdings by getting adjoining land, or to secure your friends as neighbours. For literature and particulars apply to Allan Cameron, General Superintendent of Lands, Department of Natural Resources, 801 First Street East, Calgary, Alta.

determinable from market value and will at the same time be free from the fatal defect above pointed out—namely the variation inversely with the tax.

The Proper Basis

Such a basis will be supplied by "Market Value, plus Capital Value of Tax." For example, where the existing tax is \$50.00 on a site valued at \$2,500.00, the basis for taxation would be \$2,500.00 (selling price, plus \$1,000.00 (tax of \$50.00 capitalized at 5 per cent, = \$3,500.00). Suppose then the tax be raised to \$100.00, this would diminish market value by \$1,000.00—as the net rental value is less by \$50.00 than previously. The basis for taxation is, however, unchanged as shown by the following equation: Selling price, \$1,500.00, plus tax capitalized, \$100.00 x 20 = \$3,500.00. Similarly when the tax is raised to \$175.00 the full annual rental value, selling price disappears, but the basis remains as before, namely \$175.00, capitalized at 5 per cent, i.e., \$3,500.00. The rate of interest, of course, varies from time to time, but may be easily determined by observation of the sale of municipal securities.

This basis includes "actual market value" as proposed in Mr. Armstrong's bill. The addition of "tax capitalized" corrects the shrinkage caused by the increase of tax.

In addition this basis has the following advantages:

(a) It leaves nothing to the arbitrary will of the assessor.

(b) It makes discrimination between classes and individuals more difficult.

(c) It automatically equalizes the basis of assessment as between municipalities, and makes boards of equalization unnecessary.

(d) The speculative element of market value is more easily reached by adoption of full market value—an advantage lacking where "economic rent" is the basis.

(e) It affords a true index of the credit of a municipality for borrowing purposes.

(f) It works equally well at all stages in the increase in the tax and thereby facilitates the progress of tax reform.

These are merits that no other basis can claim and I believe they indicate the path true assessment reform must take to escape from the chaotic condition in which it now stands.

—ECONOMIST.

THE PROPOSED IMPERIAL CONFERENCE

Editor, Guide:—The agitation for Imperial reorganization, to which the war has given fresh vitality, finds expression in a memorandum prepared by a group of prominent citizens of Toronto. It calls for a meeting of the political leaders of the different parts of the empire as soon as may be feasible. The ground upon which they base the need for such a conference is that "it is an inevitable development of responsible government in the Dominions that they should assume their proportionate share in the defence of the empire, and should have a voice in determining its relation to other states." The memorandum concedes at the same time that there must be no sacrifice of responsible government in domestic affairs, nor any surrender of control over fiscal policy by any portion of the empire, such as was proposed, for example, in Lionel Curtis' "Problem of the Commonwealth."

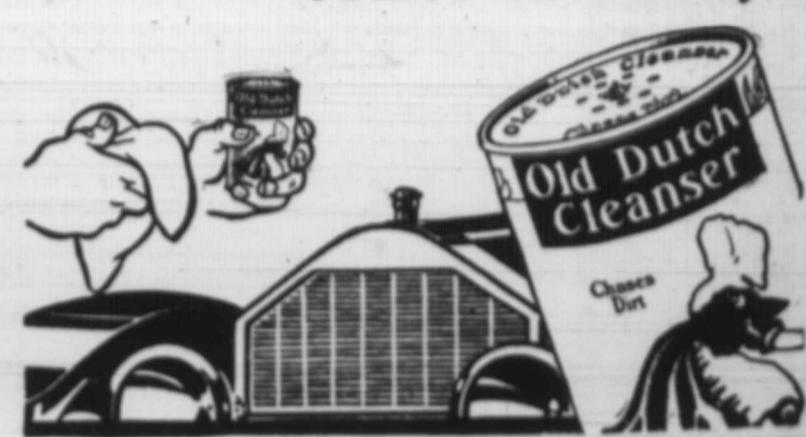

The first question that comes to mind on reading the memorandum is, where has the present scheme of imperial organization fallen down? Canada, the one absolutely disinterested participant in the war, has sent 400,000 men to swell the Imperial forces, and spends something like \$25,000,000 a month on war purposes. What form of Imperial reorganization could show a keener realization of our duty to "assume our proportionate share in the defence of the empire?" Does the memorandum suggest that we have done too much, or not enough? Is our contribution less welcome, coming as it has spontaneously, than if it were regulated by some neat scheme devised by a little coterie of men in whose interests Canada has not first place?

Perhaps, then we are to consider the second clause as the important one, that we should have a voice in determining the Imperial attitude in world affairs. It is a pleasant fancy for plain folks

Around your car, in the garage—a can of

Old Dutch
comes in handy**WITH LOUDEN EQUIPMENT IT IS EASY**

Your time during haying and harvest is most valuable. Save one-third of it by using Louden Hay Tools. They enable you to move larger loads easier and faster than in any other way. There are no delays at the barn for the user of Louden equipment. Louden Carriers with forks or slings will handle the loads safely and surely, and just as fast as they can be drawn from the fields.

THE LOUDEN JUNIOR CARRIER

Is at all times safe and dependable, because of its simplicity and its strength. For twenty years it has been standard, and on thousands of farms it is to-day giving excellent service.

THE LOUDEN BALANCE GRAPPLE FORK

Set the tines of the fork deep into the load. It will lift an immense bundle and deliver it in the mow in even flakes, not tangled up as is the case when other forks are used. Handles clover, alfalfa, loose grain or straw, as clean as timothy.

Our catalogues will tell you all about the big Louden line. Write for them today. They are free.

Is Your Dwelling A House Or is it a Home?

Does it represent the advancement of the times or is it merely the old fashioned place in which to eat and sleep?

Does Mother spend one day in every week sweeping carpets and scrubbing softwood floors, or has your home been modernized with

Hardwood Floors

Among the greatest developments in home-building stands most prominently the great improvement wrought with hardwood flooring. No more semi annual house cleanings—no weekly scrubbing of floors or daily sweeping of carpets—and an endless series of nights in bright and cheery surroundings where young and old may enjoy modest entertainment—at home.

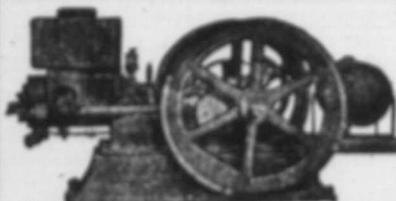

Let us show you that "Beaver Brand" Hardwood Floors cost less than carpets for either old or new houses.

Prophets of Modern Times

"Thomas Carlyle"

By HORACE WESTWOOD, D.D.

Carlyle's main thesis was that history is but the biography of great men writ large. His own life, however, is the clearest illustration of the limitations of that principle. He never completely realized how much the great man was made by his environment. Apparently he leads his age. In reality he is carried forward on the tidal-crest of the wave of his time.

So with Carlyle. He challenged his times, but because they challenged and made him. His strongest virilities show the influence of both ancestry and early environment, and in the glory of "Thomas the son" you have the immortality of the peasant virtues of "James the father" and "Margaret the mother."

Carlyle's Parents

What a father he had! Simple but industrious; ignorant but intelligent; stern but just; rugged but soft of heart; and in the faithfulness of the father to duty, in the fact that as a mason and builder, building houses "whose very gables wore a masterful look," Carlyle got his noblest conception of "labor" as worship. And what a mother! Her greatness and strength of character alone are revealed in the fact she learned to write in order that she might correspond with her son. No wonder that born in such a household, reared in the stern faith of the "Shorter Catechism, of the Judges in Israel and the Prophets, in a religious atmosphere that knew no compromise, placing duty ever before convenience; and in daily contact with the "wind beaten, rough weather thought of the men of the moors," that Thomas grew into the title of "the rugged prophet."

It was in such an atmosphere that Carlyle was born in 1795. He carried it with him until his exit from the world in 1881 at the age of 86. The ministry and the kirk lost a stalwart when Thomas decided he could not carry out the wishes of his parents. The church's loss, however, was the world's gain. Entering Edinburgh university with the intention of fulfilling his father's dream, Thomas, after much heart-searching, wrestling in the secret of his chamber with "doubt, fear, unbelief, mockery and scorn" and "with agony and travail of soul," decided that the church was not his sphere, and on leaving the university he became teacher of mathematics in the little academy at Annan.

The entrance of Carlyle into the field of literature was by no means easy. Travelling to London, the literary Mecca of his day, after much weary searching he prevailed upon the editor of the London Magazine to engage him in writing "Portraits of Men of Character and Genius, commencing with a life of Schiller." He translated also Goethe's "Wilhelm Meister," which was accepted by an Edinburgh publisher. His early work, however, was reviewed as "eminently absurd, puerile and incongruous." He came to the conclusion that London was no place for the son of Scotland and so he retraced his steps to Craigenputtock, a farm which his father had purchased for him near his home.

Carlyle's Marriage

For genius to embark upon the sea of matrimony is invariably a dangerous thing, and for a man of Carlyle's rugged temperament to enter the bonds of marriage with the refined, cultivated, carefully nurtured Jane Welsh was doubly dangerous. But at the age of 30 the young couple set up housekeeping in Edinburgh.

It was a trying period for Carlyle. He was as yet by no means sure of himself, and from one of his letters ascends the wail: "Someday—oh that the day were here—I shall speak the things that are living in me, and give me no sleep until they are spoken! Or else if the Fates would be so kind as to show me I have nothing to say!"

Edinburgh proved as inhospitable to him as London, for he received no work but a few magazine articles, and almost

in despair he retired with his wife to his eagle eyrie at Craigenputtock. Here gazing out upon the world he wrote what some regard as his greatest piece of creative work, "Sartor Resartus," and which contains the framework of his whole philosophy of life. With the manuscript in his pocket he trudged off to London once more. But again he met with rebuffs. No publisher could be found. Finally he prevailed upon Frazer's Magazine to publish it in serial form, only to find that as the articles appear they meet with a storm of vituperation and protest from every quarter.

Sartor Resartus

Time judges all things. Today "Sartor Resartus" is regarded as one of the truly great books in our language. Here under the guise of a professor "of things in general," Carlyle works out the philosophy of clothes, getting beneath the sham garments of the world and its rags of hypocrisy to its naked soul, perceiving beneath all the "Ever Present God" who runs not the world as an "absentee landlord," but is "in all and thru all."

The publication of "The French Revolution" three years later at once brought him fame, and his place was then fairly established in the literary world.

Carlyle's Message

Wherein lies his great message? In what sense may we speak of him as a prophet? In the narrower sense it may be said that the chief function of a prophet is to be an irritant in the body politic. Pre-eminently he is a preacher, the "voice of one crying in the wilderness"—"Repent ye! Seek the way of the Lord!" Such a one is nearly always what may be styled a "healthy pessimist." He is a sort of diagnostician of the ills of his time. He may give the people the vision of a better day, but it is always in the background of things as they are. He declares: "Man may not see the promised land unless he first sees the ugliness, nakedness and filth of the swamp in which he lives; and the promised land is never a 'far country,' but the purified, purged, drained swamp in which he lives."

It is in this sense Carlyle may be regarded as the great prophet of the nineteenth century. He made his generation see itself as it really was. He caused it to behold its shams, hypocrisies, rottenness, social iniquity and unrighteousness as in a mirror—to see the reality behind the rage, the horror beneath the guilt. He shaped to a large extent the social conscience of which to day we see the fruit.

He affected to despise democracy, yet he loved labor. We hear his voice today exclaiming: "Giant Labor, truest emblem there is of God the world-worker, Demiurgus and Eternal Maker. Noble Labor, which is yet to be king of this earth, and to sit on the highest throne, staggering hitherto like a blind irrational giant. Labor must become a seeing rational giant, with a soul in the body of him, and take his place in the throne of things."

Work and Despair Not

Grim he stood, his face set against the world. Yet he loved it. Apparently he distrusted democracy, yet in his heart he believed in it. Beneath his cynicism and scorn there breathed a mighty heart fighting valiantly for the rights of humanity. Unorthodox, yet a man of mighty faith; agnostic, yet wherewithal reverent and trusting in God, he towers above his age as one of the greatest sons of his time. He sought neither fame nor wealth, only to express the truth that was in him. Humbly, as he lived he died. They sought to lay his body in Westminster Abbey. But in accordance with his wishes his dust lingers in the little graveyard in Ecclesiastic mingling with the ashes of his kin.

His parting words to the students at Edinburgh epitomise his life: "Work and despair not!" That was his motto. It is a fitting one for us in these troublous times.

Alleged Humor

A boy fell into a pond, and when a man who was passing pulled him out he said to the boy: "Well, son, how did you come to fall into the lake?"

"I didn't come to fall in at all," replied the boy with some heat, "I came to fish."

He: "And that night we drove the Germans back two miles."

She: "Drove them, indeed. I'd have made them walk every step of it."

He was about to propose, but before doing so he wished to make sure she was a competent girl. So he asked her:

"Can you wash dishes?"

"Yes," she said sweetly. "Can you wipe them?"

He didn't propose.

Recruiting Sergeant: I am afraid you are too short to enlist, my man.

"Too short? Why, there's a soldier no taller than me."

"Yes, but that's an officer."

"Well, I don't mind. I'll be an officer."

Minister: And so you are about to take unto yourself a new wife.

Absent-Minded Widower (an exchange fiend): Yes, what will you allow me for the old one?

Political Canvasser: "May I see Mr. McFerguson?"

Mrs. McFerguson: "No, you can't."

P.C.: "I merely wanted to know what party he belongs to."

Mrs. McF.: "Well, take a good look at me. I'm the party he belongs to!"

Pat went to a druggist to get an empty bottle. Selecting one that answered his purpose, he asked:

"How much?"

"Well," said the clerk, "If you want the empty bottle it'll be one cent, but if you have something put in it we won't charge anything for the bottle."

"Sure, that's fair enough," observed Pat. "Put in a cork."

Old John Bates, an Edinburgh upholsterer, was renowned for his silence. People who had been his customers for a generation had, many of them, never heard a word from him, except "Good morning. Five shillings. Thank you. Good day."

A patron one day said to John:

"What's the best kind of mattress?"

"Hair," was the reply.

The patron, some twenty years later, had occasion to buy another mattress, and again asked what the best kind was.

"Cotton," said John.

"Cotton," the patron, cried. "Why, you told me twenty years ago that hair was the best."

The old man gave a quaint sigh.

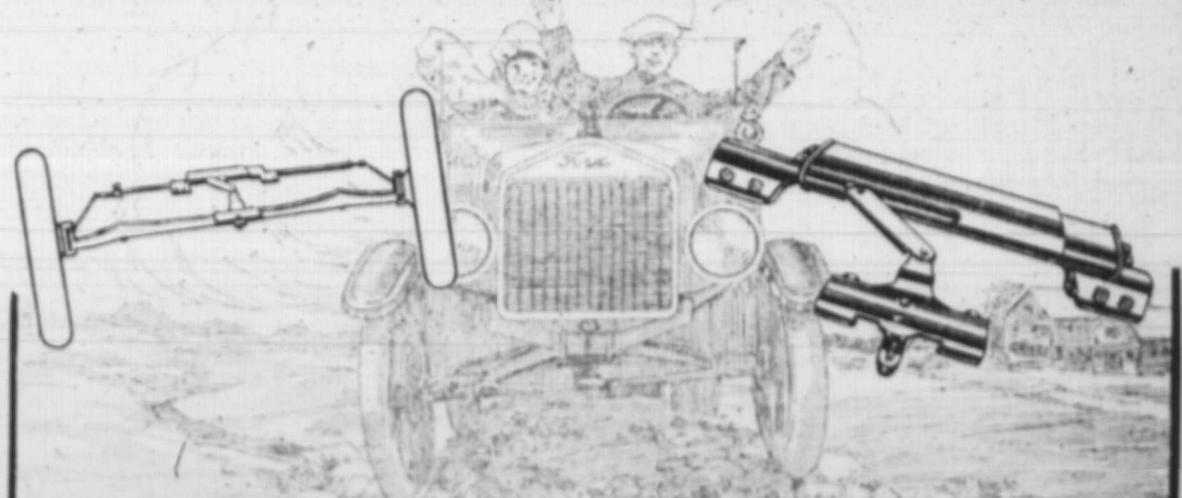

"Talking has always been my ruin," he said.

An elderly woman, slightly deaf, who is inclined to make the imperfect ear a greater handicap than it really is, was recently taken to a moving-picture show.

"And how did you enjoy the pictures?" asked her companion afterward.

"Well, on account of my poor hearing I do not get the pleasure from entertainments I used to."

IDEAL SAFETY STEERING DEVICE KEEPS YOUR CAR STRAIGHT ON THE ROUGHEST ROADS

5.00 THE KING OF SAFETY FOR ALL AUTO DRIVERS 5.00

Being obliged to grip the steering wheel of your machine with both hands all the time robs motoring of its pleasure. That's why you read every little while of some fellow losing control of his machine, having a collision, taking the ditch, perhaps burning turtle. Statistics show that 92 per cent of accident insurance claims paid on automobile, are due to the wheels of the cars hitting some obstacle and being jerked to one side or another of the road.

HOW ABOUT YOU? STEERING GEAR?

Even if you have no serious accidents the shock to your steering gear causes sufficient displacement of the front wheel to make excessive, expensive wear on your front tires. You can avoid the accidents, the unnecessary front tire expense, the loss of pleasure, and make your Ford, or any other car, drive as easily as a big car by installing an Ideal Safety Steering Device.

T.EATON CO., WINNIPEG, CANADA

What Does It Do For Your Car?

It prevents accidents by holding in the road.

It is a positive steering guide.

It takes the shake out of front of car.

It gives stability of the wheels, and therefore saves you many times its cost in tires.

It saves money, and has a wearing effect on your car, and therefore cuts down expenses.

It is a shock absorber.

It prevents car from running over, as it is a positive guide.

Thousands of owners of Ford, Electric and other cars have proven absolutely that the improvement in steering, the safety, the comfort, the peace of mind afforded by the installation of an Ideal Safety Steering Device is worth many times the expense incurred.

*Mobilize Farm Forces
for Production!*

TO Raise Armies is not enough—they must be fed.

Vast quantities of staple foods are needed for overseas.

Wheat,	Oats,	Beef,	Bacon,	Cheese,
Eggs,	Butter,	Poultry,	Beans and Peas,	
Wool,	Flax and Flax Fibre.			

THE CANADIAN FARM can render NATIONAL SERVICE by keeping up the Food Supply.

Tremendous demand, scarcity of labour and high cost of seed insure against over-production.

THIS YEAR it will pay to

- Save the choice calves
- Breed all good heifers
- Keep an extra sow
- Rear another brood of chicks

- Save time and labour by planning the year's work

Every extra effort helps.

REMEMBER it always pays to

- Test seed for vitality
- Sow clean, plump seed
- Treat wheat, barley and oats for smut
- Sow only on properly prepared land
- Grow the best producing varieties

NO matter what difficulties may face us, food production is a supreme duty.

A great cause—

A sure reward—

A grand opportunity.

If you need information on any subject connected with the farm, write

EVENTS of 1300 Years

GREEN'S SHORT HISTORY of the English People, new and up-to-date edition, is now available and we highly recommend our readers to buy it. Accepted everywhere as a standard work, the book's popularity has continued steadily since 1874. It is the accurate story of the common people since the days of the early English kings, a master production which is no less entertaining than informative. The new edition has 1,000 pages, clear type bound beautifully in green buckram, gilt lettering. Tables of chief events and dates in English history and an exhaustive index make it particularly valuable as a reference work. The latest edition brings it up to 1914. No one can know Britain who has not read Green's History.

HARNESSING THE MOTOR CAR

With our automobile we have helped to solve the problems of power and transportation on the farm. Our car is a runabout of a 1912 model. Its first owner was no easy taskmaster, and after a couple of years of hard service the car was traded in for a later model. When we saw it—a scarred and ratty veteran—we paused.

Its appearance did not give much assurance that it would do the hard work we had planned for it. But the motor sounded good; the rear construction was quiet; and for \$250 the car was ours.

To increase the efficiency of the conventional runabout in handling errands, we took off the rear deck and substituted a removable box, three feet long, three feet high, and wide enough to fit the car. With a slatted door it has made an ideal place in which to carry wobbly calves, little pigs, or, when fall arrives, a pair of setters.

The next step was the transformation of the car into a truck capable of carrying a ton. A trailer was made by a local wheelwright working under our direction. It was just an oak frame the size of the frame of the car, floored, and with front, side and tail boards three feet high. These boards were removable.

A front axle, of the make of the car, was tied to the spindles by iron straps, and everything was made rigid. Two regular wheels with thirty-one by four-inch shoes completed the running gear, which was fastened to the frame of the trailer by two ordinary springs, the centres of which were three feet from the rear of the frame.

Under the forward end of the trailer we have an iron tongue three feet three inches long, two and three-quarters inches wide and three-quarters of an inch thick. This is bolted to the forebridge, extending a foot in front of the trailer. A five eighth inch hole is bored one inch from the end. An iron strap of similar width and thickness but five feet long is bolted across the rear of the car and round the corners toward the front for about a foot. Along the sides this strap is bolted to the car's frame every four inches. While hot the strap was twisted horizontal to the body for a space of seven inches in the centre of the rear of the car. A five-eighth inch hole was bored in this flat space.

To couple the trailer and the car the tongue of the trailer is placed upon the flat space of the strap of the car, the holes are lined up, a bolt is dropped thru and cotterpinned. We have a truck at a cost of \$100.

Now for the power plant: We built a frame, using two 5 by 6 inch sticks 9 feet long, and three shorter 4 by 4 inch sticks, all oak. The two long ones were lined up parallel and secured by the three shorter ones, used as cross pieces. The system of fastening was frame and pin work. The extreme width of the frame was four feet two and a half inches. To one end of the frame two 18 inch shaft hangers were bolted, with the bearing boxes turned upside down. Thru these boxes was run five feet of 1½ inch shafting.

On the outside ends of the shaft were placed two steel pulleys of 5 inch face and 16 inch diameter. In the centre of the shaft was another steel pulley with a 6 inch face and 20½ inch diameter. At the end of the frame opposite the shafting are two wooden jacks. These hold the rear axle of the car when it is backed on to them, and the tires are then removed.

Belts two inches wide are run from the wheel rims to the pulleys at the ends of the shafting. Then the centre pulley is belted to any desired machine. The motor is started and the operator shifts speeds just as in road driving. "Dropping into high," the shafting and pulleys turn with very little effort on the part of the car. Cooling is materially helped by an auxiliary sizer.

The power arrangement cost, complete with lumber, shafting hangers, pulleys, belts and labor, fifty dollars. With the car at \$250, the trailer at \$100 and the power plant at \$50, we have a total expenditure of \$400. We can change from a runabout to truck in ten seconds. To change from automobile to power plant takes about fifteen minutes.

EGGS FOR HATCHING FREE

Now is the time to secure your settings of eggs. We can supply them from our **famous prize winning stock, pure bred, or bred-to-lay** stock in the four popular breeds, viz.: Barred Plymouth Rocks, Red Comb Rhode Island Reds, White Wyandottes, and Buff Orpingtons.

During the past few weeks The Guide has given away a large number of breeding pens to our readers who have been assisting us by collecting subscriptions. The season is now rather late for securing breeding stock and while we will be able to supply a few more of these pens it will pay you better to secure eggs for hatching at this time of the year.

Our prize winning eggs have been produced from the stock of poultry men who are undisputed leaders in their respective breeds, and have carried off the highest prizes at the big international shows. Our **pure bred stock** is also very desirable, and will easily hold its own at most poultry shows. Our **bred-to-lay** stock is from high trap nest record hens and sired by 220 and 221 egg bred males. For the special purpose of producing eggs in large quantities, this stock will be very valuable. Fill out the coupon below with your name and address, mail it to The Guide office, and we will send you our illustrated poultry folder which explains fully how you may secure our eggs for hatching absolutely free of charge. Do not delay, as the earlier you secure these eggs the more valuable will your stock be.

COUPON

The Grain Growers' Guide, Winnipeg.

A Cold Blooded Proposal

British Landlords Scent Danger—Would Shift Debt to Canadians

By D. W. Buchanan

The liquidation of the Empire's War Debt by the development of the un-tapped resources within the Imperial dominions is the object of a committee recently formed in London. The membership of the Empire Resources Development committee as the new organization is called, includes several well-known peers, members of Parliament and other prominent individuals. Among these may be mentioned: Lords Desborough and Dunraven, Earl Grey, Lord Islington, the Earls of Plymouth and Selborne, Sir Horace Plunkett, W. Astor, Alfred Bigland, Sir Starr Jaffeson, Henry Page Croft, L. Worthington Evans, John Hodge, H. J. Maskinder, G. C. Marks, J. A. Seddon, Moncton Frewen, H. Wilson Fox and Rupert Gwynne.

The following article consists of part of a recent newspaper despatch appearing in the Manitoba Free Press, Winnipeg, and an analysis of such a scheme by Mr. Buchanan. Many references to this Empire Farm scheme have appeared recently, so that Mr. Buchanan's criticism is very timely.

eludes a considerable bunch of "noble" lords and a couple of common knights thrown in to make up weight. Lord and landlord, of course, means about the same thing in Britain. What is more natural than that these landlords should hit upon a land scheme as the means of shifting the burden of the war debt upon others. They have exploited the people of Britain for centuries. They first robbed the people of their land, and then they shifted the taxes from the land to the producers. They have become the wealthiest aristocracy in the world, thru the power which land monopoly has given them to transfer the earnings of the toilers into their own pockets. They have compelled the people of Britain to pay tribute to them for centuries, without giving any value in return for the taxes which they have levied upon the people. And now with the enormous war-debt upon the nation they begin to fear for their special privileges.

If the landlords are patriotically disposed of helping to pay off the war debt, let them give up their own lands. If the lands of Britain were given over to the people, to whom they rightfully belong, they would find it comparatively easy to meet the war debt. Let them set the land free. Let the people have access to the land for the production of wealth, and the war debt problem will be solved. Surely the landlords have robbed the people long enough. The men who have fought for the land have far greater claim upon it than the landlords, and when they return from the war it will be a matter for surprise if they do not assert their rights.

The memorandum suggests that an Imperial Development Board should arrange with the Dominion of Canada for the purchase of some 200,000,000 acres of arable land in great blocks in Alberta, Saskatchewan, Manitoba and British Columbia for, say £40,000,000, paid by England at the rate of £10,000,000 a year, and on the condition that the Dominion Government spend the whole of that capital in the immediate development of her great and fertile north land. It is believed that the value of these great lands in such an Empire farm would speedily reach £20 an acre, or, in all, the Empire would receive in cash £4,000,000,000—the value of its debts for war or pre-war.

How It Could be Done

In the Empire Review Mr. Frewen in discussing his scheme among other things says: "The men I saw in the early eighties tramp in and settle up the free lands of Minnesota, the Dakotas, Nebraska, Kansas, Utah, Idaho, Washington and Oregon have by this time made modest fortunes, and have sons and even grandsons to settle in life. Already they are swarming north to the new region. What will these capitalist immigrants pay for 200-acre farms, half developed and tributary to the markets of the Atlantic seaboard and Europe, westward by the Panama Canal, eastward by Hudson's Bay?"

"I say with entire conviction that if financed on the instalment plan—the plan of the Irish Land Act, connected with the name of the late Mr. George Wyndham—they will purchase these farms readily at £20 an acre. £20 an acre in twenty or even forty instalments, with three per cent. interest—here, then, is a sum, its security constantly improving, of four thousand millions sterling which the Americans will pay—spread over forty years, in order to insure their food supplies for those whose annual turnover in America's factories is five thousand millions a year. Let Canada to this large project supply the land; she is today giving her fertile lands away to the first comer; let her present this virgin area to the Empire instead. Next Great Britain will find the labor and the capital, and while the instalments paid will, in twenty or forty years, have amortized all the national debts of the Empire, Canada will also have been enriched by

the splendid settlement of a million virile families."

Evidently the British landlords scent danger and they are casting about for a means of escape. The list of promoters of this gigantic swindle in-

April 4, 1917

soil. "The taxable area would be widened," but for the benefit of those people who grow rich from the burdens of the common people.

Evils of Land Monopoly Rampant

Already the conditions due to land and trade monopoly have worked great evil in this new country. The last census showed that the agricultural population had actually decreased in many of the best farming counties of Ontario. It is now very much more difficult to get a start on the land in these new prairie provinces than it was a few years ago, thanks to the speculators and monopolists who hold nearly all the good land at all convenient to settlement. Farm tenancy is increasing rapidly all over the continent: Surely the evils of land monopoly are everywhere sufficiently apparent to lead us to oppose this proposed extension of the monopoly.

The success of this iniquitous proposal, we are told by the promoters, depends upon the perpetration of another iniquity, namely a protective tariff compact between Britain and Canada. That is, the value of our lands are to be advanced to \$100 per acre by Act of Parliament. Canadian farmers would have to be given a monopoly of the British markets, with corresponding preference for British manufacturers in Canada. Thus one form of monopoly and exploitation of the people would be accompanied by another equally vicious in principle. Not only agricultural lands, but other natural resources, timber, minerals and even the fisheries are to be developed in the same fashion by the proposed "Empire Board," so that the tariff monopoly would have to be extended to "protect" everything. Beautiful, is it not?

I am addressing this article to The Grain Growers' Guide so that the farmers may be put on their guard as to this scandalous proposal. The farmers of Canada represent the only organized body sufficiently powerful to prevent the carrying out of this thing, should it assume a dangerous position. One would scarcely imagine that any serious attempt could be made to put it into effect; but then our politicians do some strange things. We have the same kind of exploitation going on all the time. Practically all the great fortunes in Canada have been secured by the exploitation of our natural resources in exactly the same way as proposed by the British lords. The only difference is that it has gone to build up private fortunes instead of paying off the British debt. Vast fortunes have been made in this way by people who never lived in Canada or who were only temporary residents here. Is it not time we were shaking off the old monopolies, rather than to countenance further gigantic exploitations?

REPORT ON NICKEL SITUATION

Toronto, March 26.—The Royal Commission on Nickel has reported in the Ontario legislature. Its findings are briefly summarized as follows:

The nickel ore deposits in Ontario are much more extensive and offer better facilities for the production of nickel at low cost than do those of any other country. Any of the processes now in use for the refining of nickel could be successfully carried on in Ontario. The most satisfactory method would be the electrolytic process. The commission believes the present system of mining taxation to be just and equitable in the public interest and the best known system for the province. It says the present rate of taxation of three per cent. should not be raised above five per cent. The output of the refineries to be built in Ontario will fully meet, if not surpass, the entire requirements of the British Empire. It does not favor government ownership, stating that it would probably cost one-hundred million dollars to secure for the people of Canada the deposits and plants around Sudbury.

Editor's Note.—The report of this commission is interesting, in view of the fact that the International Nickel Company which controls most of the output is said to have made \$16,000,000 this year in profits and has been making profits very much in that proportion for the past three years. It secured the properties for a song and has only been paying \$40,000 a year taxes heretofore.

McLAUGHLIN RESERVE POWER

THE McLaughlin valve-in-head motor actually develops from 15% to 20% more power with the same fuel consumption than any other type of motor of the same bore and stroke. This fact has been established by engineers, by block tests and tests in actual service. This means fuel economy and power.

Because this power is sometimes vital, it is found in abundance in McLaughlin Motor Cars, ready for instant application. It is "RESERVE POWER" and marks the dependable and efficient car.

Get the Money from Your Grain WITH A FOSSTON Automatic Cleaner

IT IS THE BETTER MACHINE Why?

The main reason is our patented zinc wheat gang for separating Wild or Tame Oats from Wheat. This gang consists of nine (9) zinc sieves, so arranged that the most thorough separation is assured, besides giving you a big capacity. Then the bottom screen, 36 Ins. long, equipped with our patented cleaning rack (to keep it clean).

Then we have the reciprocating crank motion of the lower screen and the upper shoe, which takes away all jar from the machine and makes it last much longer.

done with them! A policy of strict conservatism in rural finance would soon drive a lot of these men off the land as independent farmers or drive them off the land altogether. Can we afford to lose them? No. These very men who have the initiative to strike out for themselves and the ambition to stay with the attempt are the class that do most of our colonizing and establish our new settlements and the communities in which the very institutions who desire restricted credit later on enter for the purpose of making money. Further, if these settlers were barred from securing in reason the credit they require from some source, it would be equal to compelling them to remain forever, or nearly so in the ranks of the laboring class. It would be the greatest factor possible in the tendency to form permanent castes. Had such a policy been carried out in the past, our present country would have been a great deal behind what it is now; how much it is impossible to estimate. The monied institutions, very true, might not have lost so many dollars, but on the other hand their territory would have been so much more restricted that they would not have made nearly so much money either.

There is of course such a thing as abusing credit, and there is indiscriminate credit. At the same time our banks should—remember that while they are given the opportunity of doing certain business they are at the same time shouldered with a duty towards the country which gives them the opportunity, and that country comes in contact with them not only thru its government but also thru the private individuals with whom they daily transact business, and who, taken collectively really are the country. If credit to farmers were to be restricted along the lines laid down in the article mentioned, it would be paramount to offering credit to those only who do not require it, and leaving out those who do. Some of the most honest and most capable men on our western farms today are men who need the assistance that it appears is going to be refused. Whether an individual is really worthy of support, whether he has the qualities to make good, or whether he has the honesty really to desire to repay, no one can be in a better position to say than a local bank manager who really knows his community. If a farmer who is beyond doubt capable, who is honest, who is thrifty and ambitious and a hard worker, but of small means is to be refused credit for the simple reason that he has not already reached a practically independent position, is there not somewhat of a moral obligation there which is not being met?

There is also an especially jarring note in the policy as outlined which must strike any reader in the west especially with considerable force. Money, at the present time and if measured in terms of other commodities is worth only say about 60 per cent. of what it was worth some three years ago. That would mean that an advance to a farmer of \$1,000 now would be worth a little, if any, more to him now, other circumstances being equal, than an advance of \$600 was then. We all know there is no arguing the point—that credit has not been extended along the lines now being recommended, but rather has been based somewhat on the needs and personal quality of the borrower coupled with his ability to pay. Now it is proposed to so alter the credits as to lessen them. And at the same time as, thru restricted credit, the country taken as a whole, is due to be faced with the possibility of being curtailed in its production, comes appeal after appeal from the people's representatives, the government, for extra efforts to bring into use every available acre of tillable land. Lately it has even been put up to the people of the province of Saskatchewan that the Dominion looked to them to be the mainstay of the empire in cereal production owing to their large tillable area. At the same time we are told that we have in the past been too lavishly supplied with borrowed funds, and that in every interest the supply must be curtailed. It appears to the ordinary layman somewhat hard to reconcile the two attitudes.

These facts appear outstanding in discussion on credits; that if money has been lost thru short term farm loans, it has been so lost, not so much because the people to whom it was advanced were

on the whole not worthy, as because the individual managers were at the time of loaning not well enough acquainted with their personal risks. That if the western provinces, especially in the newer localities are to keep up their production, they must be assisted by way of short term credits with which to operate their farms; that if all were to be barred from securing the use of such credits except the farmers who stood as well as appears required, a vast majority of the smaller farmers would practically be put out of business. And I would say that the biggest factor in determining whether the ordinary small farmer should be assisted or not, is, not exactly what he already has, but his personality, his ability to make good. It is the man getting the loan who is carrying the heaviest risk, for in the balance hangs all he has, and he has first, all the uncertainties of nature to contend with, and also the uncertainties of the world's market, while the amount of his indebtedness and its conditions remain fixed.

A. KRISTENSON.

RESERVE FUND NOT INVESTED CAPITAL

In his last article Mr. Brown tried hard to explain the large profits made by the banks. He wanted the reserve fund to be looked upon as invested capital, so that the profits would be cut in two. This of course, is just an endeavor to get out of a difficult situation. Why, if the banks want to be taken as invested capital, don't they transfer it to capital account?

Here are the banks increasing their business at a tremendous rate yet their responsibility to the public is not increasing even a measurable distance to it. Will Mr. Brown tell us just what addition has been made during the last ten years to paid-up capital and what increase of business during the same period? The reason why there is practically no increase in paid-up capital seems to be that they do not want to commit themselves any further to the double liability under the Bank Act, and further, because of the tax on capital. Also an increase of capital would bring down the value of the existing shares.

The banks have power to issue notes up to the amount of their paid-up capital without tax. (There is a temporary war tax of one per cent. on it at present). Besides this power of issue, during the crop moving period they can issue excess up to 15 per cent. of their combined capital and reserve, but on this excess a tax of 5 per cent. is charged by the government. This excess feature was as a result of a shortage of currency in 1907. Had there been a larger amount of paid-up capital this would have been obviated.

About three years ago what is known as the Central Gold Reserve was instituted. When a bank is getting up to its limit in circulation, it deposits part of its cash reserves (don't mix the cash reserve with the reserve fund, the reserve fund is an accumulation of surplus, just as in any other business) in the Central Gold Reserve. Every bank has power to issue notes against an equal amount of gold deposited in the Central Gold Reserve. The result of this arrangement is that a bank can use part of its cash reserve to supply currency on which it pays no tax. It gets them out of the difficulty of having to pay a tax on excess currency during the crop moving period and they are able to get along without making any addition to capital. Few banks now make use of the power to issue excess, they don't need to and by not doing so they save five per cent. on this issue. In view of the manifest reluctance on the part of the banks to increase their capital for above reasons how can Mr. Brown expect us to look on the reserve fund as invested capital?

Will Mr. Brown kindly explain his statement that shareholders have paid in, in cash, 58 per cent. of the reserve fund? It might be very interesting.

I should like to see a movement in our association for a national system of banks, with a national currency similar to that in use in England at present. The British Labor Party have the nationalization of banks as part of their program. Shall we follow the lead of this powerful party? Why not?

SINE MORA

Friction

Is the Problem Solved in

Hudson Super-Six

This is to give you a clear understanding of what the Super-Six motor means.

This is why it holds unquestioned the leading place in Motordom. Why it won all the worth-while records. Why it stopped the trend toward Eights and Twelves. And why it gave supremacy—perhaps forever—to this new type of a Six.

What Friction Does

Motion causes friction. You know this in farm machinery. It is friction that finally destroys it.

In a high-speed motor the vibration makes friction a big problem. A large part of the power is consumed by it. The motor's endurance is limited.

So the chief problem in motor car engineering has been the reduction of friction.

Sixes Disappointed

The Six-type was adopted to lessen this vibration. The Light Six, with small bore, was made to lessen it further. But the highest attainment in a Light Six proved a disappointment. Motor friction was not reduced as engineers had hoped.

So some leading makers, including the Hudson, started tests with Eights and Twelves. It was hoped that twin motors, set at angles, would solve the friction problem.

Then Came This

That was in 1915. Many engineers thought the Six type was doomed. That the V-types would displace it, as they had in certain cars.

But in that year Hudson engineers invented the Super-Six. In December, 1915, we were granted patents on it.

Tests proved that this invention added 80 per cent to the efficiency of the Six. And it did that solely by reducing friction beyond any other type.

All Records Won

Last year, in a hundred tests, the Super-Six won all the stock-car records which can prove a motor's value. It won the records for speed, for hill-climbing, for quick acceleration and endurance.

It broke the 24-hour endurance record by 32 per cent. It twice broke the transcontinental record in one continuous 7000-mile round trip.

So, in performance and endurance, the Super-Six has no rival. And that is due to the fact that friction is reduced almost to nil.

The Economy Car

This endurance will probably double the life of the Hudson car. The reduction of friction saves immense power waste.

In addition, we this year add to the Hudson a wonderful gasoline saver.

So the Hudson Super-Six means economy to you. It means a daily saving—in the long run, a very big saving.

It means pride in your car. The Super-Six owner knows that he rules the road. And, in beauty and luxury, the car stands out as a master-piece in any crowd.

You can have all this, and still save money, because of the Super-Six economics. These are things to consider well when you buy a car to keep.

If you don't know the nearest Hudson dealer, ask us for his name. Let him show you all the ways in which this master car excels.

Registered Marquis Wheat

We have a small quantity of choice registered Marquis Wheat left over from our big seed grain competition. This wheat was carefully selected from the best grown in the Prairie Provinces. It is all first generation, that is, grown from hand selected seed, guaranteed to be absolutely pure in variety, free from all noxious weed seeds, plump, free from frost, and germinating 98 per cent. There is no better seed available for a small seed plot of from a quarter to two or three acres from which to grow the seed for sowing a larger acreage next year. Any person who wishes to become a member of the Canadian Seed Growers' Association may use this seed as foundation stock and become eligible for membership. This wheat is all put up in 20, 40 and 80 lb. sacks, inspected and sealed by an expert inspector of the Seed Growers' Association, which guarantees the quality. The price at which we will sell this seed, sacks free, is: 20 pound sack, \$1.40; 40 pound sack, \$2.00; 80 pound sack, \$8.00.

With each order we will send instructions prepared by Seager Wheeler for preparing the seed plot, taking care of the grain, hand selection in the fall, threshing and maintaining the standard of quality. We have only a small quantity and orders are limited to a dozen each, others to be filled in the order in which they are received.

BARRED ROCK EGGS—GUARANTEED FROM Gould's choice barred-to-lay stock. An dressed poultry same stock was first at last two Guiph shows. \$2.00 for 15. Alfred Lachance, St. Eustache, Man.

A DOMINION EXPRESS MONEY ORDER FOR five dollars costs three cents.

Selling Livestock

Have you ever figured out why it is that some livestock breeders get results from their advertising while others don't?

First of all the ad. should be well written. Most livestock breeders can write an attractive ad. if they give the matter a little thought and care. Where assistance in drawing up an ad. is desired, this will be readily given by The Guide's Service Department, if the advertiser will send particulars of what he wishes to advertise.

Secondly, the medium used is of very great importance. The size of the circulation and the kind of people the paper reaches must be considered. Papers with large circulations have higher advertising rates than papers of smaller circulation. The Guide's circulation exceeds 35,000 copies weekly, which is larger than that of any other farm paper in Western Canada. Also farmers have confidence in The Guide because it is their own paper. This confidence is of great value to The Guide's advertisers.

Even with a good ad. in a paper with large circulation and enjoying the confidence of its readers, sales are often lost because the advertiser fails to answer inquiries promptly and in businesslike manner. It is always advisable to answer every inquiry, even if you are sold out.

A livestock breeder can have confidence in advertising in a paper which is getting results for other breeders. Here are some recent testimonials which The Guide has received and which speak for themselves:

The results from advertising in your paper were very gratifying.—A. J. McPhail, Regina, Sask., February 12, 1917.

(Advertised Hereford Bulls) I think it is only fair to let you know that all the advertising I have done in your paper has always brought good results. It is undoubtedly the best advertising medium in Western Canada.—James N. Ewens, Bethany, Man. February 15, 1917.

(Advertised Berkshire Swine, Shropshire Sheep) Much pleased with results. Brought me a purchaser first mail after ad. appeared. No need to continue. Shall keep this in mind.—G. J. Beattie, Portage la Prairie, February 15, 1917.

(Advertised Durso Jersey Hogs)

SEED GRAIN AND GRASSES

REGISTERED MARQUIS WHEAT—WE HAVE
a small quantity of choice registered Marquis
wheat left over from our big seed grain com-
petition. This wheat was carefully selected
from the best grown in the prairie provinces.
It is all first generation, that is, grown from
hand selected seed guaranteed to be absolutely
pure in variety, free from all noxious weed seeds,
plums, tree roots and germinating weeds.
There is no better seed available for a small
seed plot of from a quarter to two or three acres
from which to grow the seed for sowing a larger
area next year. Any person who wishes to
become a member of the Canadian Seed Growers'
Association may use this seed as foundation
stock and become eligible for membership. This
wheat is all put up in 20, 50 and 100 lb. sacks,
inspected and sealed by an expert inspector of
the Seed Growers' Association, which guarantees
the quality. The price at which we will sell this
seed, sacks free, is—20 pound sack, \$1.40; 50
pound sack, \$2.65; 100 pound sack, \$5.00. With
each order we will send instructions prepared
by Seager Wheeler for preparing the seed plot,
taking care of the grain, hand selection in the
fall, threshing and maintaining the standard
of quality. We have only a small quantity and
orders are limited to five bushels each, orders to
be filled in the order in which they are received.
Address, The Grain Growers' Guide, Winnipeg,
Man. Box 84, Kilburn, Man. 14-2

SEED GRAIN AND GRASSES

SEED POTATOES FOR SALE AT \$2.00 PER

BROME AND WESTERN RYE GRASS SEED,
mixed about half and half, of best quality, well
cleaned and sacked in 50 lb. and 100 lb. bags.
This seed is the very best quality procurable
regardless of price. It has been grown, threshed,
bundled, cleaned and sacked by a specialist in
the most conscientious manner in order to give
the customer the best possible value. The
seed is plump and well matured without damage
by frost, and cleaned with the most up-to-date
special machinery installed for the purpose.
Our warehouse is located on track and shipments
will be made the same day as order is received.

GOPHER POISON

An AMERICAN farmer gives the following recipe for preparing a very effective and inexpensive gopher poison. Procure from your druggist or mail order house two ounces of Tasteless Extract of Stryke (the sure of the real article, as all other preparations of this kind are very bitter and expensive). Add to this one dram of oil of amiss, two tablespoons of sugar, and two cups of common flour. Soak a gallon of wheat or oats over night in water and white still quite moist stir in the above mixture. This gives you as much prepared poison for fifty cents as you usually pay one dollar and a quarter for, and is quite simple to prepare.—ADVERTISER

**A FAMILY OF GRAIN GROWERS**

Dear Editor:—I was delighted to hear that I was the winner of the first prize for wheat in the Boys' and Girls' Seed competition.

I may say I am the youngest member of a prize winning family of grain growers. My eldest sister was one of the winners in the first Boys' and Girls' Competition in Manitoba 17 years ago, given by Dr. Robertson.

My father has for many years exhibited and taken prizes at the shows at Winnipeg and Brandon. He won the \$100.00 prize given by A. E. McKenzie Co., at Brandon Winter Fair, 1914, for the best bushel of wheat grown in Manitoba. He also took the first prize (\$25.00) for best bushel of wheat at the Dominion Show at Brandon in 1913, so you see all our family are very much interested in and take great care of our seed, especially wheat.

The grain that won this prize is from Marquis Wheat, Registered Seed, grown under the rules of the Canadian Seed Growers Association. My father bought sufficient for ten acres of new breaking. He threshed nearly 200 bushels from it which he is keeping for seed in 1917. I selected heads as I had seen father do and threshed it in a sack by hand. I got nearly half a bushel, which I fanned, then picked out the smaller seeds by hand and then sent it express to you. I think I shall put the money in the bank in town.—Connie Hey, McCreary, Man.

HOW PLUGGING AWAY WON

Dear Editor:—I first saw the competition advertised in The Grain Growers' Guide which my papa takes.

I selected of seed by going out into the field with the wheelbarrow and wheeled them down to the house where I got a canvas and hammered them out with a stick. I then emptied them from one dish to another and let the wind blow them clean.

The variety of oats was the 20th Century. I selected my grain on September 9 and 11 but the grain had been cut about two weeks at least before that, some of it longer. There was about 75 acres in the field from which I selected my oats. Mamma helped me fill the grain in the sack and my little brother helped me to gather it up to clean. I asked papa to help get the paper. I had no trouble in getting it as he likes The Guide and I believe I could have got more subscriptions.

Papa has never hand picked any seed to improve his crops. He just has the best seed in bulk he can get and then he treats it before he sows. He plowed the ground and packed it, sowed the grain and packed right after the drill and the grain was up in just a little while. Papa tests his seed grain in a box early in the spring to see how much of it will grow. He says it pays. We

Boys' and Girls' Clubs**How We Made Our Seed Selections**

Boys and Girls Tell How They Won Prizes in The Guide's Great Seed Selection Contest

have about 2,000 bushels of oats papa kept for seed and feed.

I am going to school but we don't study seed selection. I am going to buy some pigs or an heifer calf with my money. Papa says he will help me. I will send a letter to my uncle, Hugh A. McCullough, who has been in France ever since the war began telling him about my prize. I'll try again next year. I got tired once at picking the oats but papa said if he was to quit when he got tired he would not get his grain stooked up and if I were to win I must not think of being tired but to keep plugging. So I kept plugging and I guess he was right.

He told me if I did not win he would

pouring the grain from pan to pan until it was free from all chaff and dirt. I then selected what I thought to be the best kernels.

I am going to school and am in Grade IX. I have not studied anything about seed selection yet. With this fifteen dollars plus some prize money that I earned in the Boys' and Girls' Club contests, I am going to buy a bicycle. I also won a second prize in a contest on essay writing last spring which was in The Guide, and am going to enter the Five Hundred Dollar contest for good seed selection. In all, I think The Guide a veritable gold mine.

I had some time getting my photograph taken.—Milton Harvey, Durban, Man. Age 14.

GIVING PART TO RED CROSS

Dear Editor:—I certainly was pleased to learn that I been awarded the third prize in the seed wheat competition.

Our teacher told us about this seed competition at school, and I looked it up in The Grain Growers' Guide when we got home.

My father showed me two fields of Marquis wheat and said I could take some of each and then see which was the better. So I went out with the scissors after the grain was cut and took the best heads I could find. I put them both in separate bags and pounded them with a stick until the grain was threshed out. Then I held the bag up and let the grain run out slowly and the wind blew the chaff out. I then picked out the poor grains from the lot that looked the better, and sent it to The Guide.

The one subscription was obtained without any difficulty from a neighbor who thinks The Grain Growers' Guide is one of the best farm papers. I believe I might have obtained more subscriptions if it had been necessary for me to do so.

My father hand selects a small amount of wheat each year and sows it in a separate plot, but this year it was haled so badly that it was not worth cutting. I have not got any more hand selected seed at home for next year.

There has just been a Red Cross Society formed here. I am going to use some of the prize money to become a member. The rest I shall put in the savings bank.—Mable Orchard, Halcyonia, Sask. Age 14.

COMPETITIONS IN ONTARIO

About 100 boys from different parts of Ontario won a two weeks' short course in stock and seed grain judging at the Agricultural College, at Guelph, last year. The course is given as a prize in the pig feeding and acre-profit competitions conducted by the Department of Agriculture. These competitions are open only to boys who have taken one of the four short courses in agriculture held at various local points each winter by the district representatives of the department. The prizes go to those who have shown the greatest profit in their districts in feeding a small pen of pigs or in growing an acre of one of the staple crops. All expenses incurred in attending the college by the winners are defrayed by the government.

Backsetting the Farmer

Continued from Page 7

feudal system, the effects of which we have not got rid of yet. William the Conqueror introduced the feudal system into Great Britain nearly a thousand years ago, and altho there has been a continual struggle to get the land for the people, out of 43,000,000 of a population there are 10,000,000 rich and 20,000,000 very poor; while 20,000,000 acres of the best land are devoted to pleasure grounds and deer forests. Great improvements have been made in the condition of the farmers in the last few years on the continent, in England and in America. Probably the greatest advance has been made in Denmark in Europe and in Wisconsin in the United States.

Prosperity of Denmark

Denmark, after the wars of Napoleon, was threatened with extinction. The land, never very rich, was run out. The winters were long and the climate indifferent. But the Dane owned his land. Ninety per cent. of the people owned their farms and stuck to them. There are in that country 68,000 farms of less than 1½ acres each, 65,000 of from 1½ acres to 13½ acres, 46,000 from 13½ to 40 acres, 61,000 of from 40 to 150 acres and 8,000 of from 150 to 650 acres. That is, the largest farm in Denmark is about equal to one section of land in this country. The whole country is a market garden. A man makes a living for himself and family off a few acres. They export \$50,000,000 worth of butter per year and \$10,000,000 worth of poultry and eggs. They average \$9.00 worth of farm produce for every acre and support a population of 155 to the square mile. They are also credited with the largest yield of wheat per acre in the world. How do they do it?

(1) It is a farmer-state. The ministry, the legislature and the people have the same point of view, and the laws are made in the interests of the farmers.

(2) They have intensive cultivation. It has been stated that it takes \$4.87 worth of fertility out of the soil to produce a ton of wheat and 36 cents worth to produce a ton of butter. This estimate should be considered by the wheat growers of the western provinces.

Co-operation

In addition to the fact that the masses own and reside on the land in Denmark, the people there have brought co-operation to a high state of efficiency. They have co-operation in—

(1) Creameries;
(2) Egg circles;
(3) Hog raising, killing and marketing;

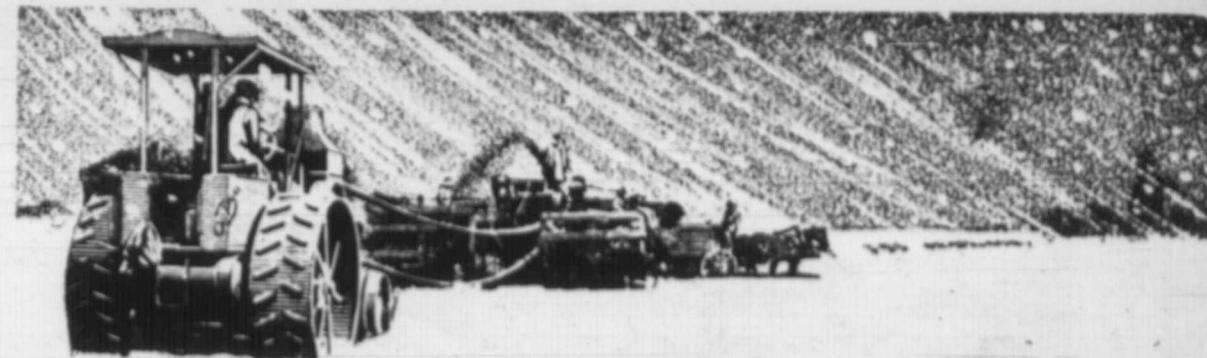

(4) Savings Banks, of which they have about six hundred;

(5) Buying and selling, cutting out the profits of the jobber and the retailer.

(6) Making the laws, the government being a people's government.

Wisconsin and Mixed Farming

Wisconsin a few years ago was an ordinary state, showing plain evidence of soil exhaustion. But the state government, assisted by a corps of state university experts, led the people to go into mixed farming. In the year 1900 there were 988,297 cows in the state; in 1912 there were 1,471,000, an increase of 47 per cent. In 1915 there were 2,150,000, an increase of more than 100 per cent. over 1912. There are now one hundred and ten dairy breeding associations in the state. In 1899 the state produced 61,000,000 pounds of butter; in 1909 it produced 105,000,000 pounds, or an increase of 70 per cent. In 1899 the cheese production was 77,000,000 pounds; in 1909 it was 145,000,000 pounds, an increase of 87 per cent. Wisconsin now produces more than half of the total quantity of cheese made in the world. The total dairy exports in 1909 were worth \$79,000,000, or more than the gold and silver output of Colorado, California and Alaska. By attention to soil fertility and seed selection the United States average of 25 bushels per acre of corn has been raised in Wisconsin to 36.3 bushels, and pure pedigree corn has produced as

"I thresh right up until Christmas with my OILPULL"

"When it is 40 below my OilPull is always ready to work."

—W. H. Thompson, Binger, Sask.

THAT'S the kind of *year in and year out* dependability that has given the OilPull such a lead in Canada. There are hundreds of OilPull owners in Canada who have been up against every extreme of weather and working conditions, and they'll tell you the OilPull is "on the job" and ready every time.

A little thing like cold weather doesn't bother the OilPull. It starts as easy at 40 below as at 70 above, and just to make it easier we've put on a self-starter this year. And the new pre-heater means quick warming up and full engine efficiency after only a few turns of the motor.

Another advantage for Canadian farmers—the OilPull is *oil cooled*. There is no water to haul and the radiator can't freeze.

A Written Guarantee

For fuel the OilPull burns cheap kerosene at all loads, under all conditions, and, gallon for gallon, gives more power than other tractors of like size on gasoline. But we do more than just claim that the OilPull will burn kerosene—we give an absolute *written guarantee*—the kind of a guarantee you are entitled to and should demand with the tractor you buy.

Besides these big *cost cutting* advantages, in the OilPull you get unusually strong, long lasting construction. All parts are well protected and efficiently lubricated. The OilPull is built to not only do the work but to stand up to it.

You want close regulation in your tractor and you can't beat the OilPull for smooth, steady, even power—regardless of the load. The speed of the engine is automatically and instantaneously adjusted to meet every change in the load.

No matter what your power job is, drawbar or belt, the OilPull will handle it—in winter or in summer. Two sizes—15-30 and 30-60 horsepower.

The same shops that build the OilPull make the famous Rumely Ideal Separator, Rumely & Gair-Scott Steamers, engine gang plows and the new Advance-Rumely 9-15 tractor.

Ask our nearest branch for the special OilPull catalog.

Quick Hauling To Market

JUST think of the time the Ford saves a busy farmer in hauling milk to the cheese factory—vegetables, butter, eggs and poultry to market—fruit to the railway station. One fruit grower, last season, made four trips a day to the railway station, a total of 144 miles, and carried as high as 72 crates of 11 quarts each on a trip. He couldn't have made more than one 36 mile trip a day with a team.

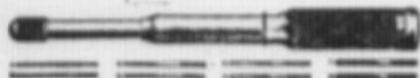

The Ford soon pays for itself in the time it saves the farmer. With help so scarce, every farmer needs to make use of every precious minute of his time. To him the Ford car is a real necessity. Indeed, some farmers tell us that it is doubtful if they could carry on their farm work under present labor conditions if it wasn't for the time the Ford saves them.

No farmer need be without a Ford. In fact, the average farmer could afford one if it were double the price. It is as easy to drive as a horse, three times as fast, and costs less per mile to run. Why not order one to-day?

Free—Mr. Punch Automatic Drill

It works by a spiral motion. You simply place the drill point and push the handle forward after each stroke. To the handle there are eight points of different sizes. Each size is contained in a compartment by itself, and the number is printed over the base in which it is contained, as shown in the illustration. The cutting points range in size from 1/8 to 1 1/4 of an inch. This useful tool will be sent free and postage prepaid to anyone who applies for it and sends a postage stamp or equivalent to The Grain Growers' Guide, at \$1.00 and send the money collected and the name and address of the subscriber to The Guide office. If you can collect a two-year subscription at \$2.00, it will shorten the time to receive ready subscriptions. Mail your subscriptions to—

Circulation Department
GRAIN GROWERS' GUIDE, WINNIPEG

Cash for Eggs and Butter

We can handle all your new laid eggs, also No. 1 fresh dairy butter in 1 lb. bricks, crocks or tubs, and will give you the highest market price. Owing to the fluctuation of the market it is difficult for us to quote prices here until a few weeks, when we will give you a guaranteed price. If you have no egg crates we will be pleased to ship same immediately upon receipt of your order.

high as 139 bushels per acre and carefully selected seed barley has produced 75 bushels per acre, the average yield for a number of years being 27½ bushels per acre. How have they done it? Read the history of Wisconsin for the past few years and you will find that the people have been busy. They have—

- (1) Abolished monopoly.
- (2) Put the bosses out of business;
- (3) Passed new laws giving producers a chance;
- (4) Developed co-operation by means of the state university, the state legislature, special commissioners, state banks, state insurance, income tax and control of the railway rates and public utility charges;
- (5) Direct control by the people of the primary elections.
- (6) Paid great attention to soil and forest conservation.

Kansas and Wisconsin

A comparison of the great grain state, Kansas, with the dairy state, Wisconsin, may prove interesting. In 1910 Kansas had 177,841 farms, while Wisconsin had 177,127. The average farm size in Kansas was 244 acres, the average farm size in Wisconsin, 119 acres, or less than one-half that of the average Kansas farm. The annual revenue per Kansas farm was \$2,295.32, while the Wisconsin farm returned \$2,162.40. That is to say, the average Kansas farmer with his farm more than double the size, received only \$132.92 more than the average Wisconsin farmer. The dairy state farmer does not find it profitable to rob his soil of its fertility. It is also significant that in Wisconsin 85.5 per cent. of the total farms were operated by the owners, while the owners operated only 62 per cent of the farms in Kansas.

Farm Experiences and Problems

Continued from Page 8

security when he went to work in the spring knowing that there was little likelihood of delay because of broken machinery. If he knows that he will require a binder or a wagon in August he should order them now, as last year it was impossible to buy a binder in some towns after harvesting operations began.

The farmer should have a shop where he can make repairs during this slack time. He can do much to prevent breaks and can preserve the life of his machinery to a great extent by cleaning, painting, etc.

As to the number of horses to be used in one outfit I believe that six horses are all that can possibly be used to advantage. When more than that number are attached to one implement, the outfit becomes cumbersome.

Standardize Implement Parts

The manufacturers could help solve the problem by sticking to the same pattern for pieces of machinery that do not make any material difference in the working of the implement.

Very often when a part of a machine manufactured three or four years ago, is broken, the repair obtained from the local dealer is so changed that it will not fit the implement. The implement may be in good repair otherwise and it would be an act of waste to throw it away. Again it is impossible to get repairs for certain models or types of machinery that are still in good condition except for some small piece that would not cost more than one dollar.

The farmers should use care in getting the number of the piece required as great delay is often caused by the wrong number being presented. Then too, it seems at times that the men in the warehouses ship repairs without being certain of what was stated in the order.

If farmer, agent and manufacturer will co-operate by stating difficulties and offering suggestions I believe it will result in mutual benefit.

A JUMP IN FREIGHT RATES

Toronto, March 26.—The Canadian railways have just issued new tariffs providing for a general increase in class and commodity freights by rail and water, amounting to 20 per cent. These increases are to become effective on April 2, and April 23, respectively. The increase in class rates to become effective on April 2, increasing the class rates to Fort William, Port Arthur and Westport are as follows:

Class 1, 10c per 100 lbs.; class 2, 9c per 100 lbs.; class 3, 7c per 100 lbs.; class 4, 6c per 100 lbs.; class 5, 5c per 100 lbs. These increases to apply from all points east thereof.

Tariff No. 2 rail and water to be effective April 23, has been issued by George C. Ransom, chairman Canadian Freight Association, Montreal, advancing the class rates as follows:

From all points east of the lakes to all points west of Port Arthur:

Class 1, 6c per 100 lbs.; class 2, 3c per 100 lbs.; class 3, 3c per 100 lbs.; class 4, 3c per 100 lbs.; class 5, 2c per 100 lbs.

It has been intimated that it is the intention later on to increase "all rail" rates to points west of Fort William and Port Arthur, and thus maintain the present difference between "All Rail" and "Lake and Rail" class rates.

Old and New Rates

The following comparison from the Manitoba Free Press of old and new rates from Montreal to Winnipeg on the basis of 100 lbs. shows how western shippers will be affected.

Class 1, old rate \$1.35, new \$1.41, increase 6c; class 2, old \$1.15, new \$1.18, increase 3c; class 3, old 94c, new 97c, increase 3c; class 4, old 73c, new 76c, increase 3c; class 5, old 63c, new 65c, increase 2c; class 6, old 57c, new 58c, increase 1c. The increases in classes 7 to 10 are also 1c.

While the total freight charges to Regina, Moose Jaw, Saskatoon, Calgary and Edmonton are different than to Winnipeg, the amount of increase in freight rate that the shippers at those points will pay will be the same as Winnipeg. This, of course, is accounted for by the fact that the increase is reckoned only on the systems west of Fort William.

Commodities Affected

Rates on the following commodities from eastern shipping points to the head of the lakes are advanced as under, effective April 2.

Binder Twine	.15	.17	.02
Iron commod.	.19	.22	.02
Cement	.12	.15	.02
Salt	.08 1-3 .11 2-3 .03 1-3	.10	.02
Glucose syrup	.20	.30	.10
Plasterers' Hairs	.20	.30	.10
Stable fittings	.25	.27	.02
Sugar	.20	.27	.07

REPORT ON HIGH COST OF LIVING

The foregoing comparisons of rates will show that the increases are general and affect the movements of practically all traffic from eastern to western Canada via the lake and rail routes. Under the freight rates finding by the railway commission some three years ago, the tariff was supposed to be fixed as it affected traffic between Fort William and points west of that. The new rates do not affect that traffic. There is no change, so far at least, on the rates from Fort William westward. The increases only applies to traffic east of Fort William, that increase being added on to the present thru rate to the west.

No explanation has been adduced locally, as to why the railway companies should increase their rates at the present time, except that a similar increase has been made by the American companies on their lake and rail routes in the east. Next to nothing, in a public way, has been said regarding these new schedules, and they have been sprung within a week of the time the first is to go into effect. Every westerner should be especially interested in view of the Dominion Railway board in the western rates case three years ago, ordering a reduction in class rates from the head of the lakes to points in Saskatchewan and Alberta.

Advice has been received that hereafter all tariffs to points west of the lakes will be issued from one office by George C. Ransom, chairman Canadian

Freight Association, on behalf of all the railways.

DOMINIONS COMMISSION REPORT

London, March 26.—The final report of the Dominions Royal Commission has just been issued. This Commission is made up of representatives of Great Britain and a number of the various colonies for the purpose of making a study of the natural resources and facilities for trade, commerce, etc., between various parts of the Empire. It declares it to be vital that the Empire should be placed in such a position as to enable it to resist power which a foreign power could exercise in time of war or peace, thru the control of essential raw materials and commodities. It recommends that a complete survey should accordingly be made of the relation between Empire production and Empire requirements of such materials. Regarding materials mainly produced and controlled outside of the Empire such as cotton, petroleum, nitrates and potash, it recommends a most careful investigation for new sources of supply, or the finding of substitutes within the Empire. Such investigations should be carried on by a new Imperial Development Board working thru existing departments in the United Kingdom and Dominions, as well as local scientific institutes.

It recommends greater control by Imperial and overseas agencies for the selection of emigrants and the creation of a central emigration authority for the purpose of supervision. It also urges the matter of providing adequate capital for training soldier settlers and greater attention to the emigration of women from Great Britain. It proposes an interchange of school teachers between the United Kingdom and the Dominions. It recommends larger vessels and larger harbors to render more cheap, speedy, and efficient transport. It suggests improved mail facilities, quicker routes and some measure of government control of steamship companies regarding freights. It urges the necessity of cheaper cabling and favors state control of Imperial wires as well as a considerable reduction of press rates, to enable a wide dissemination of Imperial news. It suggests the holding of periodic Inter-Imperial exhibitions and the unification of legislation, particularly the patents, trade marks and the companies' laws. It suggests the creation of an Imperial Development Board, of an advisory nature to co-ordinate and correlate this work and the following representation on the Board is suggested: The United Kingdom, India, Crown Colonies and Protectorates, seven; South Africa, Canada, Australia, New Zealand and Newfoundland, one each.

REPORT ON HIGH COST OF LIVING

Winnipeg, Man., March 3.—After several months investigation, Commissioner P. A. McDonald appointed to investigate the high cost of living finds there is nothing unreasonable in the prices in Winnipeg in comparison with those of other points throughout America, that no undue combinations exist to cause advances and that the law of supply and demand is wholly to blame for the present high prices. He believes there is active competition in all lines. The variations in the prices of wheat he believes have been normal, but that dealing in futures on the grain market should be confined to actual handlers of grain. The Commission adds: "The buying public is an unorganized and un-informed mass of individuals. Their only means of obtaining information is from the merchants. Implicit confidence is not to be expected and distrust spreads. To provide against this I would recommend that some official, either Civic, Provincial or Dominion be permanently clothed with authority to investigate any seemingly unjust condition, and to furnish explanations to the public."

If the explanations such as official might furnish the public are no more satisfactory than investigations and findings of the Department of Labor, during the past few months, such an official would merit about the same amount of public confidence, in so far as doing any real good is concerned, as the Department has enjoyed in this matter.

Brains Win therefore,
if the pitchers around your threshing rig
have none, it will pay you to attach a

Garden City

Feeder

to your Separator; for where it is used the pitchers do not require any **Brains**—all they need is a good fork and plenty of muscle to keep the feeder supplied. Let them pile the grain in "any old way;" the feeder will supply the **Brains** and deliver all the grain to the separator in an even flow of uniform volume, every bundle **end first**, regardless of how it is piled upon the feeder; making you independent of the mean or careless pitcher. **That's why we claim the Garden City Feeder has Brains.** It corrects the errors of the pitchers.

Even feeding requires less power and results in fast threshing, perfect separation and freedom from nine-tenths of your threshing troubles.

REGISTERED MARQUIS WHEAT

We have a small quantity of choice registered Marquis Wheat left over from our big seed competition. This wheat was carefully selected from the best grown in the Prairie Provinces. It is all first generation, that is, grown from hand selected seed, guaranteed to be absolutely pure in variety, free from all noxious weed seeds, pluming, free from frost and germinating 98 per cent. There is no better seed available for a small seed plot of from a quarter to two or three acres from which to grow the seed for seeding a larger acreage next year. Any person who wishes to become a member of the Canadian Seed Growers' Association may use this seed as foundation stock and become eligible for membership. This wheat is all put up in 20, 40 and 80 lb. sacks, inspected and sealed by an expert inspector of the Seed Growers' Association, which guarantees the quality. The price at which we will sell this seed, sacks free, is: 20 pound sack, \$1.40; 40 pound sack, \$2.65; 80 pound sack, \$5.00.

With each order we will send instructions prepared by Seager Wheeler for preparing the seed plot, taking care of the grain, hand selection in the fall, threshing and maintaining the standard of quality. We have only a small quantity and orders are limited to 3 bushels each, orders to be filled in the order in which they are received.

Rural Schools

YOUR HELP IS INVITED

In order to make the department of Rural Schools a success the cooperation of the readers of The Guide is a necessity. The editor is particularly anxious to hear from those districts which have taken some practical steps to make the rural school serve more perfectly the needs of a rural community, but letters on any phase of the educational problem will receive consideration.

As a small compensation for the time and trouble involved all letters and illustrations used in this department will be paid for at our regular rates.

Contributions should be addressed to Rural Schools Editor, Grain Growers' Guide, Winnipeg, Man.

to be administered by a municipal school board.

I think that any government would be justified in placing an act on the statute book making it compulsory to organize a school district where there is even one child of school age and to have the ratepayers taxed for the cost of transporting to

and from some adjacent school and also paying tuition fees for that one child. This I think would only be fair. The children are a national asset, the value of that asset can only be determined by the amount of education they receive.

The country is losing scores of valuable settlers each year on account of the lack of ordinary educational facilities.

I have in mind a district lying west of me. In area it comprises, I should judge, fifty sections. The land is all taxable, the greatest portion of it being held by large landowners who reside south of the International line.

Considerable quantity of the land is farmed.

There are also some single men whose interest in the education of the children of the district is nil.

In the last two years two residents of this district have sold out and moved to town, their reasons for doing so being to get their children to school. Another settler has resolved to go this spring for the same reason.

Now there are still one or two children of school age in the district but the chances for them getting to school are nil for two or three years yet. The

make the education of the children compulsory in fact, not in name only. Make all land owners pay taxes to educate all the children. Why should I pay twenty dollars per annum when the man across the road only pays two dollars?

Rigs to take children to and from school should be part of the school equipment. I have three children aged twelve, nine, and seven years who walk three miles to school in all kinds of weather. Is it any wonder that teachers find their pupils dull and weary?

An Eleven Year Old Boys' Club Corn Grower in North Dakota. Similar Boys' and Girls' club work are being organized in Manitoba thru the Rural Schools.

parents of those children are at their wits' end to know what to do to get their children educated. Each settler that leaves the district makes it harder to get a school started.

If you ask any of the single men to get together to erect a school district they politely tell you that there are not enough children.

Now this, in my opinion, is a very serious matter, not only for the parent but for the state. Every child within the state is entitled to an education therefore I think every man should be taxed in proportion to his holdings for their education. Instead of that we find one ratepayer in an organized district paying from eight to twenty-five dollars per quarter-section, annually, while the other fellow just across the line paying only two dollars per annum as an educational tax.

This is an injustice that should be remedied as soon as possible. I don't think there is any other solution than the erecting of larger districts, either by two or more districts consolidating, or making each municipality responsible for the education of all children within the municipality. Educational affairs

The average ratepayer takes little or no interest in school affairs. At the annual meeting held recently out of a possible thirty, ten turned out. We have a good barn and the weather was elegant.

Trustees are not elected for their ability to administer the affairs of the district in an efficient manner but on their ability to keep down taxes. It's poor economy. They will pay a teacher big wages (not because they want to, but because they have to), then stint him on his equipment, and altho they are paying him \$400 on account of short equipment he is earning only \$200. In conclusion, I would say keep up the agitation, you will make good soon I hope.

L. B. A. J.

NEED AGRICULTURAL READERS

I have been very much interested in reading your rural school page. Just now I want to point out a few criticisms to be made on the writer who is opposed to teaching agriculture in the rural schools.

deed to have this subject taught; agriculture, including horticulture, olericulture, chemistry, soil physics, botany, stock-raising, etc., could well be taught from grade two up. All that is necessary is a new system of reading books for schools. These subjects could be put up into simple language that would certainly be no more difficult than the reader used at present. Certainly, there is nothing more interesting than agriculture when it is presented to pupils who are able to understand it, and all children on a farm are fully capable of so doing. Children would learn to read just as quickly as they do at present; in fact, I believe they might learn more quickly if they were reading of things that they hear of constantly. Arithmetic could be taught by giving problems that are met with on all farms. A farmer uses arithmetic constantly in his work. He plows, harrows, drills, or discs so many rods; he sells so much wheat, or so many eggs, etc.

I do not believe subjects taught in this way would burden a teacher in any way. I have long advocated the above changes in teaching and I see no reason why our children would not be able to read, write, spell and figure just as well, as they do at present.

I think the teachers too often resent interference in school matters. I know I tried to get a teacher interested in making a list of books for the library. I offered to help her make a list of books. She politely told me to mind my own business, as that was her privilege and she would see the trustees. She never made the list and never saw the trustees about it, so we are still without the books. Now, I consider it most decidedly my business to see that the proper books are given my children; and I also consider that teacher needs a little training in the matter of being at least courteous to parents. The teacher I mention was not, yet she had an M.A. degree and had taught for many years. So it is not only the poorly trained teacher we have to contend with. They may at least be willing and anxious to learn.

However, these matters are not so vital to me as the fact that I must live in town to send my children to school. What are we to do when so many farmers live near villages where the vacation is in the summer? The children must go in winter or be always behind their classes. When the distance is too far for the children to go in winter it means a breaking up of home.

SASKATCHEWAN

SHOULD CLEAN SCHOOLS

Dear Editor:—I have been reading with much interest your page headed, "The Rural School," and have been instructed, amused and astonished by some of the opinions expressed there. The article entitled, "Parents to blame," and signed "A Reader," finally brought me to the point where I took up my pen and began this letter.

"A Reader" has drawn a doleful picture of the dirty, untidy school of his or her childhood and asks if it is not a pretty fair picture of the average rural school of today and reluctantly we are obliged to agree with "A Reader" that there are still many schools like it but when "A Reader" asks who is to blame and answers the question by blaming it nearly all on the parents I beg to differ.

Many years ago I spent several years as a teacher of rural schools. I not only asked myself the same question "Who is to blame for said condition of rural schools?" but I answered it and demonstrated that my answer was correct. The teacher is to blame if she is not a cripple or otherwise physically unfit.

Anyone who knows conditions in rural Manitoba knows that there is no one who makes a business of scrubbing and cleaning to be hired to clean out the school house, except in very rare cases. Is it therefore up to the school teacher to clean up her own work room or ask or expect the already overburdened mothers of the district to do it for her? She cannot expect the "dads" to do it, can she?

Of course the assistance of such scholars as are old enough to help is a foregone conclusion and in only one case in my life have I known them to refuse, but that is another story, altho' it

Thieves! Robbers! Burglars!

How any farmer would call for help, if a highwayman robbed him like gophers do! Yet gophers are robbing farmers right and left. Kill 'em! You can do it for 1 cent an acre with

Kill-Em-Quick

GOPHER POISON

The Time-Tested, Guaranteed Gopher Killer

Let Kill-Em-Quick Protect You

Gophers often average 20 or more to the acre. They cause a loss of 25 cents each per year. These statements are from no less authority than Professor Jackson of the Manitoba Agricultural College.

Kill-Em-Quick has been tried under his direction and as a result of the tests made he has written the following letter:

Messrs. Kill-Em-Quick Co., Ltd.,
182 Logan Avenue,
Winnipeg, Manitoba.

Dear Sirs: My field representative, Mr. Kitely, has given your gopher poison (Kill-Em-Quick), and several other gopher poisons, field tests and reports having found Kill-Em-Quick the most efficient and entirely satisfactory. He found on a series of trials that Kill-Em-Quick killed the gopher in from three and a half to seven minutes. He has been entirely satisfied with the effectiveness of your poison.

And of the four hundred letters which I received this summer, from farmers who had tried your poison on our advice, and with our assistance, all but one reported having satisfactory results, and this one report stated that as the gophers were breeding, it was found that they did not take the poison at that time.

We are, therefore, prepared to recommend Kill-Em-Quick as an effective gopher poison next year.

Yours sincerely,

[Signed] V. W. JACKSON,
Professor of Biology.

Is Not This Sufficient Proof that you should find out for Yourself by Using Kill-Em-Quick on your Farm how Much it will Save you?

It's easy to use—get it

Simply soak oats or ground feed over night, drain off the water, stir in Kill-Em-Quick thoroughly, then drop into the burrows. That's all. The gopher's voracious appetite will do the rest. WE GUARANTEE it, on every package. MONEY BACK, if it fails. 40-acre size, 50¢; 100-acre size \$1.00. Get it from your druggist, or if he cannot supply you, we ship direct upon receipt of the price. hinges on the same subject we are discussing.

Let us compare those two women who are blamed for the dirty, unattractive rural school, since I can find no others to lay the blame on. Let us have a look at "the parent" first. She is usually a farmer's wife. She may be, and usually is cook, laundress, house-maid, seamstress, purchaser of supplies, accountant, nurse, teacher, doctor, preacher, gardener, entertainer, stoker, plumber, painter and floor polisher. In her spare hours she may make lace collars, pictures, stories, jam, butter, cheese, pickles or any other trifle that would help to make ends meet in her domestic domain, and she fills the bill with a fair measure of success. Her days are anywhere from twelve to eighteen hours of labor and her nights are often disturbed by small children. To her, holidays and real leisure are practically unknown but few would assert that rural homes are, in general, dirty or uncomfortable.

The Teacher's Opportunity

Now let us take a look at the average teacher. She is usually young, strong, sometimes even athletic. She can run, dance, or take part in out-door games with vim. Her profession calls for from five to six hours work out of the twenty-four. Her nights are generally periods of undisturbed rest. She draws one year's salary for two hundred-and-four days' teaching. She therefore has one hundred-and-nine days' holidays, not counting Sundays, in a year. So she has ample leisure. I know of no other trade or profession that has so much. Her salary is good and assured. The heaviest tool that her work calls on her to wield is a book, a pencil, or a pointer. She certainly is not overtaxed physically. Parents spend hundreds of dollars to build and equip a workroom and allow her to use it, free of charge, yet according to "A Reader" and many other reliable people we very often find she is satisfied to allow her work room to become filthy and equipment all out of repair rather than roll up her sleeves and put in a few hours cleaning it up. Who is to blame? Dear reader, take another think.

When I look back to my school teaching days and contrast the day's work then with my day's work now as a parent I kiss my hand to the good old days. I weighed then one hundred-and-ten pounds, not a very heavy weight, but I could run, jump, skip or lift things promiscuously. Believe me I dare not do it now and I don't know many maternal parents who can either. But in spite of handicaps we knew nothing about then I can still find time and strength to keep my work rooms a little bit clean and attractive and there are no big scholars to help me either, but there are several little ones to cling to my skirts and otherwise contribute their share to my comfort when I am working.

Her First School

When I surveyed the premises of my first school my first thought was "What kind of women can my predecessors have been?" The building was a fair sized frame structure, painted white, with brown trimmings, the whole set on a stone foundation. There was a porch on one end with a plank platform, in the angle between it and the main building. The inside had been plastered and nicely wainscotted. Half of the forms were homemade, the other half were nice ones, purchased from some school supply firm. There had been nice roller blinds on the windows and the other school equipment had been very good, including a nice coal heater stove, generously embellished with nickel. Parents had done their part well. There were twenty scholars on the roll. The average attendance was about ten and subsequent experience proved them to be exemplary children with very little correction needed and the parents were as good allies as any teacher could wish for.

While I say these things had been, they were no longer so, as regards the building. The corner of the stone foundation had been literally torn away until you could see under the building. Wood had been cut on the platform at

the door until one of the planks was half gone, one half of the lower panel of the porch door was gone, a piece of board was broken out of the porch floor. The blinds were torn off the roller and the maps ditto. The blackboards were scratched and pieces of plaster dented, ready to fall out, where baseballs had been bounced against them. The desks were cut and notched and disfigured with ink and dirt. In fact it looked more as if it had been the abode of the proverbial drunkard instead of a nice young lady and some ordinary children from good homes.

It never occurred to me to expect the busy mothers or fathers of that district to come to the school and clean up or even help me. I should have been ashamed to have done so. As it was Autumn and the sloughs were dry I made some apologetic enquiries as to how I should get a barrel of water brought to the school. A very busy tired parent managed to get a barrel of water for the teacher after his day's work in the harvest field was done and never again during the next three years could anyone say or think that a school smelled or looked dirty. Before a year had passed it had lost much of its unattractiveness. A fence was built and trees planted along the fire brake on the north side. The children and teacher kept the weeds pulled and the roots mulched with manure from the stable where we kept our ponies and at the end of those three years those trees made a nice showing.

The Next Teacher's Work

I am sorry to say my successors did not take any interest in trees and when I visited the place five years later only some scrubby gads were growing where I had hoped to see some nice shade trees. It is twenty years since I planted those trees and there is very little more to be seen yet, but my trees still insist on sending up a bushy growth in spite of all abuse and neglect, a living reproach to those who should have carried on the work which I began. If the pupils of that school could take pride in growing trees when I was there they would have done it for my successors had they encouraged them to do so.

If one teacher with the help of only small pupils could keep the school premises clean and improve and repair them, and if the busy mothers can keep their houses clean and comfortable by the work of their hands without compromising their dignity or ruining their health, surely many of the splendid looking young women who preside over our schools and balk at even sweeping a room out, might acquire a new dignity and respect in our eyes if they seized brush and scrub pail and banished the reproach of dirty rural schools from the land forever, instead of figuratively speaking, wallowing in dust and dirt for months at a stretch.

If it is too much to expect a teacher, with her ample leisure and such help as she may get from her pupils, to keep her school room clean, isn't it a shame to ask the busy parents to keep their houses clean and her's too.

What if we parents begin to entertain prejudices against such menial labor as sweeping and scrubbing, etc.? What if we conclude we can be happy in a dirty house as well as the teachers?

Dear reader, when you hear someone blaming it all on the parents or nearly all, again take a few minutes to think of what I have tried to tell you.

If one little teacher and the pupils could transform a wreck of a school into a place that "people came to see," others can do the same or better. Try it, dear teachers. Drown you foolish ideas of what is fitting for anyone in your position to do, in a few pails of soap and water. Scour them off the face of the earth. And be happier. Believe me, dear girls, you are no better than your mothers.

Yours truly,

A TEACHER.

And why why should not the "Daddys," with twice the physical strength of a woman, get down on their overalled knees and scrub the school floor!—E4.

Please send your name and address to the Rural Schools Editor, Grain Growers' Guide, Winnipeg, Man.

The Last Days of Jesus Christ

With His Friends in the Home

By Dr. Lyman Abbott, Editor New York Outlook

From his conflict with his enemies in the Temple during his last eventful week Jesus sought at night repose, generally outside the city walls; sometimes probably sleeping on the hillside with his burro wrapped about him; once we know in a garden of olives; once in a house of a friend in the neighboring village of Bethany; once in the house of an unknown friend within the city. The name, condition, character of this friend are all unknown. Jesus probably had many devoted friends even in Jerusalem whose friendship in that perilous hour was carefully concealed except from the elect few. This unknown friend had offered him a room where he could observe the Passover supper with his disciples. Even they apparently knew nothing of their host.

The record which we possess of the Master's parting words to his disciples was probably written down by disciples of John, as his amanuenses, more than half a century after the event. To the literalist this will seem a great misfortune. To me these incomparable words are not less sacred because they represent the imperishable memory of the one disciple whose courageous devotion to his Master kept him at the cross until his Master's death—the disciple whom Jesus in that hour adopted as his son and to whom he intrusted the future care of his own widowed and heart-pierced mother. It was characteristic of Jesus that he made this hour of gloom the most luminous hour of his life's teaching, that he did not seek comfort from his disciples but gave comfort to them, and strengthened the courage of his own faith by imparting courage to their perplexed and troubled hearts. For the spirit always grows by imparting: we add to our courage by encouraging the timid, inspire our hopes by ministering to the disheartened, and make clearer our vision by telling others what we have seen.

I shall not attempt a paraphrase of Christ's monologue. My ambition is humbler; it is to translate it into terms of every-day human experience.

His opening sentence gives two keys to unlock the door to the "life that really is." "Have faith in God." How can we have faith in him whom we have not seen and cannot see? Show us the Father and it sufficeth us. If you cannot have faith in God, then "Have faith in me."

Faith in God is not the door to Christian faith; Christian faith is the door to faith in God. It is not easy in a world of sorrow, temptation, and sin to have faith in a good God who made and governs the world. But it is not difficult to have faith in a good man who confronts danger with courage, endures sorrow with patience, encounters temptation without thought of yielding, and bears the burdens of sins not his own without murmuring. We can do other than believe in such a one! Not in ecclesiastical definitions about him, but in his character, in his personality, in the worthwhileness of his life. Faith in Abraham Lincoln has inspired the American people and made them what they would not have been but for Abraham Lincoln. Faith in Jesus Christ has made the world what it never could have been without Jesus Christ. This is the beginning of Christian faith: it inspires us in us the desire to encounter our dangers with his courage, to bear our burdens with his patience, to meet our temptations with his unyielding resolve, and to bear the consequences of others' sins with his suffering love.

But this is only the beginning. This human life is a reflection of the divine life. Sir Oliver Lodge has put this second step in the Christian faith with beautiful simplicity:

"Undoubtedly the Christian idea of God is the simple one. Overpoweringly and appallingly simple is the notion presented to us by the orthodox Christian churches:

A babe born of poor parents, born in a stable among cattle because there was

no room for them in the village inn—no room for them in the inn—what a master touch! Revealed to shepherds. Religious people inattentive. Royalty ignorant, or bent on massacre. A glimmering perception, according to one noble legend, attained in the Far East—where also similar occurrences have been narrated. Then the child growing into a peasant youth, brought up to a trade. At length a few years of itinerant preaching; flashes of miraculous power and insight. And then a swift end: set upon by the religious people, his followers overawed and scattered, himself tried as a blasphemer, flogged, and finally tortured to death.

Simplicity most thorough and most strange! In itself it is not unique. Such occurrences seem inevitable to highest humanity in an unregenerate world; but who, without inspiration, would see in them a revelation of the nature of God? The life of Buddha, the life of Joan of Arc, are not thus regarded. Yet the Christian revelation is clear enough and true enough if our eyes are open and if we care to read and accept the simple record which, whatever its historical value, is all that has been handed down to us."

Believe in me, Jesus says to me. Yes, I reply; I can believe in thee. Even Renan, even John Stuart Mill, could believe in thee. Believe that the Father is in me. Yes; I can believe that the Father is in him. The Church tells me that the Father is all-powerful. Perhaps. But I do not worship power. The Church tells me that the Father is all-wise. Perhaps. But I do not worship wisdom. Jesus tells me that the Father is all love, and his life tells me what love means. And I worship love. Whether it is all-powerful or not, whether it is all-wise or not, I worship love. Even if I were a Persian and believed in two gods, an Ormuzd and an Ahriman, a good god and a bad god, and believed that this world was the stage where they were in a battle on which the destiny of the universe depended, even if I did not know and could not even guess which was to win, I would worship the good god and fight the bad one. Even if I thought the drama of Palestine foreshadowed the end of the world drama, that the ambitious Caiaphas and the cowardly Pilate and the treacherous Judas would be victors and love would be crucified, I should still worship love, and I hope I should dare to take my place with the mother of the pierced heart, not with the triumphant foes. Yes; I can believe that the Father is in Jesus his son.

But this is not the end of the Christian faith. There is a third stage. "I will not leave you orphans; I will come to you. Yet a little while, and the world seeth me no more; but ye see me, because I am living and ye shall live also." An orphan is not one who is fatherless. He had a father, whom memory recalls from the past. He will have a father, whom hope anticipates meeting in the future. But now he is without a father. There are many orphaned Christians. They believe in a Father who was formerly active in the world, about whom they read in the Bible. They believe in a Father who will appear in the great day of the future to judge the world. But now? Now they are without a Father. Inspiration and revelation have ceased; no wonder, then, that prayer ceases. Why go on forever talking to a god who gives no answer? God in history! Yes, in past history. In Jewish wars, but not in the European war. In humanity? Yes. In Hebrew prophets; but not in twentieth-century prophets. Walking with Enoch, but with no one now; speaking to Abraham, but to no one now; dwelling in the Christ, but dwelling with no one now. A silent God; an absent God; a forgetting and a forgotten God; yes, what Carlyle has well called "an hypothetical God." Over against this common experience of to-day I put Harnack's confession of his

You Need this Book

It is a text-book—not a catalogue. Helpful—Concise—Complete. Send for it before you undertake any kind of painting—it will show you the way, and save you from many costly mistakes.

It is full, from cover to cover, of practical, sensible hints and suggestions which will help you solve your paint problem. It has saved time, labor and money for progressive Canadian farmers and home makers everywhere.

Next to having good paint is knowing how to use it.

Do you know why paint protects objects to which it is applied and prevents decay?

Do you know what kind of brush to use for painting different surfaces?

Do you know why Oil Paint is preferable to Water Paint in painting a house?

Do you know why a gallon of base Paint covers a much larger surface better than cheaper grades?

This book answers these questions, and hundreds of others as important.

Canada Paint Products are the best that money will buy and this book shows you how to use them for satisfactory results.

Send for your copy of free book today.

The Red Cross of Finance

Other assets may depreciate or even become worthless but life insurance remains unaffected by fluctuations in security values.

In the dark days of financial loss and disaster the life policy is often the thing that saves. A distinguished speaker said at our recent annual meeting—

"The world of Finance is a field of war in which many casualties occur day by day, but I like to think that in this battlefield the life insurance company fulfills its function of the Red Cross."

Every private home should of course be protected by means of sound life insurance, but so should every business. The loss of an influential partner might easily be fatal to a business organization.

Life insurance is often the only portion of a man's estate that he can bequeath to his heirs—unencumbered. There is no other asset that can compare with a policy issued by The Mutual Life of Canada.

Scientifically Made

EUREKA HARNESS OIL is a scientific preparation.

It is a pure mineral oil, therefore cannot turn rancid.

It contains no acids, and so does not destroy stitching.

Eureka tones up all black leather—makes it bright, shiny, pliable—new-looking.

faith: "Not only in the beginning was the Word, the Word that was at once deed and life; but the living, resolute, indomitable Word—namely, the person—has always been a power in history, along with and above the power of circumstance."

This is my faith. I believe in a Universal Presence, a Great Companion, a living Christ forever incarnate in the hearts and lives of his own, living now in the world with mightier and wider influence and in more intimate communion and companionship with his disciples than ever before, a living vine growing from a little seed planted nineteen centuries ago and since then spreading over the whole earth, whose fruits are a peace which troubles cannot disturb and a joy which pains cannot destroy. The seed of this faith was given to me many years ago by John's report of the last discourse of Jesus to his disciples. It has grown since with the growing experience of over half a century of Christian discipleship. It is true I have never had the ecstatic visions which I read of occasionally in the spiritual biographies of the mystics. Jesus has not promised such visions to any one. They may be real, but they are not normal. I doubt whether they conduce to the most Christlike living. At all events, they are not for me. I have no desire for them. George Croly has voiced for me my prayer:

"I ask no dream, no prophet ecstasies,
No sudden rending of the veil of clay,
No angel visitant, no opening skies;
But take the dimness of my soul away,
Teach me to feel that thou art always nigh;
Teach me the struggles of the soul to bear,
To check the rising doubt, the rebel sigh;
Teach me the patience of unanswered
prayer."

I have never practiced the fastings, the flagellations, the denials of the body which some of the mystics seem to have thought essential to obtain their spiritual ecstasies. If personal fellowship of God is to be a natural experience, the condition of enjoying it must be a natural condition. Jesus prescribes no other. Loyalty to him is the only condition he prescribes. "If a man love me, he will keep my word; and my Father will love him, and we will come unto him, and make our abode with him." And lest any one should think this word which his disciples are to keep requires some mystical act of faith or supernatural act of self-denial, Jesus tells them what this word is: "This is my commandment. That ye love one another, as I have loved you." Love is the key to Christ's character; love is the secret of the Christ life; to love is to follow Christ. A life of asceticism, a life of retirement and meditation, is not the way to companionship with Christ. The way to companionship with Christ is a life like that of Jesus—a life of love, service, and sacrifice. And as to self-denial as a means for the purification of the spirit, "Life itself, rightly lived, offers the best and most normal means of purification. Here, right at hand, in daily living, without fleeing to the desert or retreating to the monastery, without the use of fasting or hair shirt, mortification or flagellation, in every-day duties and disciplines, lies the divinely ordained corrective of the flesh. Here is ample training for the spirit."

Faith in the life and character of Jesus Christ as a supreme example of a life worth living and a character worth having; faith in Jesus Christ as the supreme interpretation of a God to love and to obey; and faith in Jesus Christ as a giver of life by his presence and companionship with those that love him and desire to be like him.—Such is the last message of Jesus to his disciples or rather as much of that message as one of his disciples has learned in his life experience.—From the *Outlook*.

In planting around a home the larger trees and shrubs should have first consideration. Flowers may then be used around the borders of the grounds, near the foundation of the house, along the wall, or in the garden.

Poor roads are a bar to better markets, better schools, better churches, better living.

Hatch early and use fresh eggs.

If one can have a few small fruits in the garden along with the vegetables it is well nigh complete. Strawberries, raspberries, gooseberries and currants all grow well in this country if sheltered, and with the exception of strawberries require very little attention; a little pruning and a little fertilizing each year and they do very well. Think of the pleasure and convenience of picking the desserts from the garden for at least two months in the year, and such wholesome and delicious desserts too.

Making Cheese on Farm

A farmer's wife of Hilda, Alta., wishes instructions on making cheese from sweet milk. The following instructions are given by the cheese maker at the Manitoba Agricultural College:

The following directions are for fifty pounds of milk:

Take twenty-five pounds of the even-

ing's milk and twenty-five pounds of the morning's milk. Heat the milk up to 86 or 88° F. by setting the milk container in hot water at 140°.

If colored cheese is wanted add half a teaspoonful of cheese color per fifty pounds of milk before adding the rennet. Mix the color with half a pint of cold water before adding it to the milk. When the milk is at the proper temperature and the color has been added, the rennet should be added.

For fifty pounds of milk use one teaspoonful of rennet, or enough to thicken the milk in twenty or thirty minutes. Dilute the rennet in a pint of cold water before adding it to the milk and stir it thoroughly in the milk for two or three minutes with a dipper or large spoon.

Cut the curd when it breaks clean before the finger. To do this, insert the index finger into the curd and with the thumb make a dent or slight cut in the curd just at the base of the finger and move fingers slowly forward. The curd then should be cut in cubes of about half an inch square. When the curd is cut stir it for about ten minutes, when cooking should begin.

For cooking, set container in hot water or take out part of the whey, heat it up to 130 or 140° and return it to the container. This should be repeated until the curd has reached a temperature of 98 or 100°.

Stir the curd constantly until it is firm enough. The curd is firm enough when it has a rubbery feeling and a shiny appearance. When the curd is firm enough the whey should be removed by dipping the curd and whey into a strainer or thru a cheese-cloth. Keep the curd well stirred for about fifteen or twenty minutes to allow the whey to escape.

When the curd is dry enough salt can be added. Add about a tablespoonful of salt for every twenty-five pounds of milk. Mix the salt thoroughly thru the curd and then let it stand for ten or fifteen minutes, after which it should be put into the moulds. A nice mould is one six inches in diameter and twelve inches high without bottom. Make a bag of cheese-cloth the same size as the mould and fill it with the curd in the mould. Put a piece of white cotton on top of curd and a wood cover which fits the mould and apply weights gradually until the seventy or seventy-five pounds is added. Leave the curd in press two days, after which it can be taken out and kept in a cool, dry place. A cool cellar is a good place. The cheese should be turned upside down every day for a month.

Cheddar cheese is not fit to eat before it is two or three months old.

Now that eggs are within reach again they will no doubt form quite an important article of diet with many of us. It is so easy to boil or poach an egg we are apt to forget that they can be served in any other way.

A Plain Omelet

A plain omelet is easy to prepare and if cooked with a slow heat is creamy and easy to digest.

6 eggs
½ teaspoon salt.

6 tablespoons milk.
A pinch of pepper.

Beat the whites and yolks separately. Add milk, pepper and salt to the yolks. Fold in the whites. Have a little butter hot in a pan, turn in the omelet and cook on a slow heat until the bottom is set. Put in a slow oven to finish cooking and brown. If the fire is too hot the omelet will be tough.

Lucanian Eggs

5 hard boiled eggs
1 cup cooked macaroni.

Anchovy sauce.

2 cups white sauce.

Onion juice.

Cracker crumbs.

Salt and pepper.

Cook the macaroni in boiling salted water for 20 minutes, drain and pour over cold water. Cut the eggs in strips lengthwise, mix with the white sauce, a little onion juice and if you like it a little anchovy sauce, turn into a dish cover, with cracker crumbs, dot with butter and bake until brown. A little tomato may be used instead of the onion and anchovy sauce.

SUMMER DESSERTS
I want to get your best recipes for summer desserts, so that I can pass them along to others who read this page. Please send me your best dessert for hot weather. You will be the first to receive the name of the person who sends you a copy of the "Country Cook Book" containing 1000 tried and tested recipes. Write on one side of the paper only and put recipes in same style used on this page. They must reach me not later than April 20. Address: The Country Cook, Grain Growers' Guide, Winnipeg.

WRIGLEY'S

The Gum with Lasting Flavour

"After every meal"

The question of sweets is answered to the satisfaction of all the family by WRIGLEY'S, the Perfect Gum.

And it is as beneficial as it is pleasing.

Its waxed package protects and preserves it—keeps it fresh, full-flavoured and clean.

Have it always on hand—it costs little and lasts long. Quenches thirst, helps appetite and aids digestion.

Made in Canada

Send for free copy of "WRIGLEY'S MOTHER GOOSE" book in colors.

The great racing Pedalmobile is built exactly like a 6 cylinder 10 horsepower motor car. It has real electric head lights, rubber tires, artillery wheels, long sweeping hood, mud guard, wind shield, gasoline tank, three speed lever, steering wheel, radiator, horn, lamps, etc.

HERE IS THE GRANDEST PROPOSITION EVER MADE

BOYS, you can earn this big, handsome racing Pedalmobile and be the pride of the town. Pedalmobiling is the greatest sport ever invented; you simply jump in the car, apply the speed lever, touch your foot to the pedal and go spinning along at break the bank. Put on your helmet and take the big winning position, then the charges comes without fear of spelling, now your heart is in the way, or reverse your speed lever and stop. In fact, the Pedalmobile will do everything a real auto will do but burn up gasoline. Roads bicycling all hollow, and just think of it, boys, you can get a racing Pedalmobile absolutely free and a jin dandy guaranteed watch as well that anybody would be proud to own. It has double solid nickel case, famous American movement, stem wind and stem set and absolutely guaranteed for one year.

If you are a live girl or boy buy those two grand prizes and we will send us your name and address. We want you to help us advertise and increase the demand for our famous new Royal Japanese Perfume, THE REGAL MANUFACTURING CO., Limited, Dept. W 15 TORONTO, ONT. 26

the newest and most delightful perfume ever produced. We make six lovely odors: Beauty Rose, French Carnation, Wood Violet, etc., and big handsome bottles sell us only 10c. each. Everybody wants this sweet perfume.

Write to-day and we will send you only 35 bottles, all charges paid. Send them among your friends at only 10c. each. It is easy. Return our money, \$3.50 when your sales are completed and we will promptly send you this magnificent watch, all charges paid, and the big Pedalmobile you can also receive without selling any more of our goods, by simply showing your dues prior to six of your friends who would like to have our perfume and will sell our goods as you do.

Hurry, boys. Be the first Pedalmobile driver in your neighborhood. You can return the perfume if you cannot sell it, so you take no risk. Write to-day and don't forget to put the extra 1c. war tax stamp on your letter or it will never reach us. Address

Regal Manufacturing Co., Limited, Dept. W 15 TORONTO, ONT. 26

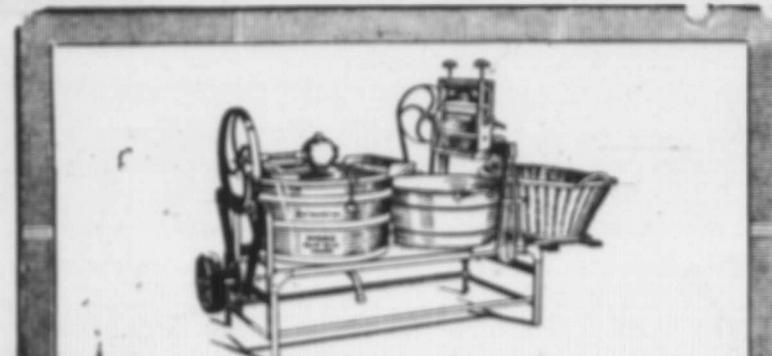

An Example of Co-operation

During the past six months we have supplied over 100 carloads of **Gold Drop Flour** to The Grain Growers' Grain Co. On the other hand, during that time we have purchased from them almost an equal number of ears of wheat. An evidence of quality supplied in both cases—also an example of the co-operative spirit.

If you have not tried Gold Drop, ask the nearest G.G.G. Agent about it, or write direct.

Young Canada Club

By DIXIE PATTON

TERMS OF MEMBERSHIP

Once again little folk have begun to send me self-addressed and stamped envelopes and ask me to send them membership pins in The Young Canada Club. So this is just to explain once again that it isn't done that way. When you want to become a member of this club write the best story you can think up and send it along with your self-addressed and stamped envelope.

Lately the little people have been sending fairy stories, but if you are not good at writing that kind, tell, as brightly as you can, about some of the interesting things you have seen happen among nature's children, the birds, plants, animals or insects.

Somebody wants also to know whether you may use pen names in writing to the Young Canada Club. You may, but I would much rather that you would sign your own names. I think it is a good habit to get into.

DIXIE PATTON.

FROZEN IN (A Prize Story)

One dull winter day when fairyland lay fast asleep and the snow covered the ground, the sun suddenly came out from behind a cloud. The day became warm and bright. Then the snow began to melt.

All the fairies awoke and began to think what fun they could have now. At last one fairy called Starlight thought of a plan. They would get on their leaf canoes and float down the streams. It was not long before they were sailing. They had great fun until sunset. Then they thought they would go back to fairyland. Some of them would not stop and kept on sailing. The others thought they might as well keep on.

Now the enemy of the fairies, Jack Frost, came along. He froze all the streams and the poor little fairies were imprisoned in icy walls.

The sun did not come out any more that winter and the fairies had to stay all winter in the ice. In the spring when the sun began to shine and old Jack Frost was forced to fly, the fairies came out and went singing away to their homes in fairyland.

DONALD MCKENZIE,
Welwyn, Sask.

Age 12.

JACK FROST AND MR. SUN

One morning, when I got up, I saw that Mr. Jack Frost had come in the evening and painted everything outside. It looked very beautiful outside, but in about two hours Mr. Sun came out and melted all of Jack Frost's painting. "That was very rude of you, Mr. Sun," said Jack Frost. "Why?" said Mr. Sun, "ain't I of more use than you are?" "No!" said Jack Frost, "you can shine all summer and I can only come in the winter and go away again in the spring." Now Mr. Sun thought that was certainly very unkind of him to be so rude over Jack Frost. So the next evening Jack Frost came again and painted everything as before. Now when morning came Jack Frost was expecting Mr. Sun out again, but he waited and waited, but Mr. Sun would not come out. This made Jack Frost very glad, but in a day or two, Mr. Sun came out again and shone so hot and spoiled everything of Jack Frost's over again. This made Jack Frost so angry that he stayed away for two or three days.

PAULINE KULAK,
Fort Saskatchewan, Alta.

Age 14.

THE SUN DOGS

I wonder how many of the Young Canada Club have seen sun dogs. I suppose you all have. In the mid-winter the days get weary and the wind blows and the snow drifts into large white mounds. It is then that our little friends the fairies come to try and cheer us up. They always appear in two parties, one on each side of the sun. They are dressed in red, yellow and orange, and are sometimes very bright and clear, sometimes dull and pale. The sun dogs think that the fairies are mocking them and call the

clouds and winds, and we have a storm. The fairies are so frightened that they hide and are not seen for two or three days. Then sometimes the fairies form in a circle and dance around the sun. This pleases the sun and he smiles on the earth and everything is happy. In the spring and summer the sun is jolly and the little fairies, seeing they are not needed, retreat to the caves of some friendly dwarfs. Often during a thunderstorm or on a dark, gloomy day they are seen flitting over some lake, marsh or swamp.

This is the end of my story. I would like some boy of my own age, which is twelve years, to correspond with me.

JAMES BURKE,

Walpole, Sask.

Age 12.

WHAT JACK FROST AND THE WIND DID

It was a very cold day, and the birds in the house in the maple could not make the fire burn. The names of the birds were Mr. and Mrs. Tom Sparrow. They had two children whose names were Fluffy and Buff.

Mr. Tom Sparrow said he would go and cut some wood to put on the fire. But of course Jack Frost was looking for some mischief. So he said to the wind, "Come and have some fun."

As Tom Sparrow took his tiny axe Jack Frost first bit him on one foot and then the other, so you see he could not walk, but still he could fly, so he started to fly towards the house, but the wind was strong and he made very little progress. Before he could get to the house Jack Frost froze his wings and the poor bird fell to the ground and the wind covered him with snow. So he froze to death.

Mrs. Tom, seeing her husband did not return, went out to find him, but Jack Frost played the same trick on her. So the children were left alone in the house. The fire went out and there was nothing to eat, and the poor birds froze and starved to death.

ALICE S. JAPP,

Age 13.

THE SNOW-FAIRIES

One day, as Jack Frost looked out of his den, he said: "Where are the snow fairies?" He looked and looked, and then said: "if they do not come soon I will go after them." It was now the twenty-first of December. In a week's time he looked out again and what did he see? He saw the snow fairies falling one after another. Day after day they fell. One day he saw the children from a hill coasting down with their sleds.

One day he heard the thunder. He looked out and he saw it was starting to rain. He said: "it must be going away." Of course he meant the snow. And one day the sun began to shine and you should have seen how Jack Frost did scamper to the North Pole where he stayed all the winter time. I would like to receive a prize as this is my third letter to the Young Canada Club.

EDNA HICKS,

Rid Deer, Alta.

Age 9.

THE SNOWFLAKE FAIRIES

Once upon a time there was a little fairy who lived in a snowflake and wore a soft white dress and had golden hair.

One day the snowflake began to slide slowly downwards. At last it lit on the top of a mountain where it stayed for many days. A lot of other snowflakes came and the fairies had a lovely time skating, working charms on the ice and playing hockey.

Sometimes there were bad snow storms which frightened the fairies but none of them were hurt. Soon the mountain was covered with snow and it began to grow warm and a warm wind blew day and night until the snow began to slide. Faster, faster and faster it went till there was a crash. The snow tumbled into the river and the fairies flew toward the sky where they got new homes.

New Saskatchewan Legislation Continued from Page 4

Patriotic Revenues Act

The Patriotic Revenues Act for the raising of contributions to the various patriotic funds has been amended so as to increase the tax from one mill to one and a half mills, and also to provide for a two dollar poll tax on non-property owners. The idea is to get away from the necessity of campaigns for voluntary subscriptions. There is no intention to abolish such voluntary subscriptions, but it is only desired that such money should be raised insofar as possible by taxation.

Saskatchewan Creameries Act

The Saskatchewan Co-operative Creameries, Ltd., will be a new company which will be made up of the 17 creameries which have previously been operated as local co-operative enterprises, managed by the Dairy Branch of the Department of Agriculture, on behalf of the shareholders. The organization is very similar to that of the Co-operative Elevator Company and the government is empowered to advance 75 per cent. of the cost of local creameries. In the case of settlements of returned soldiers the government may advance up to one hundred per cent. of the cost. The company may establish locals at any point in the province and provision is also made for the establishment by the Creamery Company of cold storage warehouses, in the establishment of which the government is empowered to loan 75 per cent. of the capital cost.

Out of the money raised by the company in the conduct of business there shall be first paid the expenses of operation and maintenance, and after the payment of the principal and interest a dividend will be declared. If any balance is left the company may distribute to the patrons on a patronage basis such sums as may be fixed by the company, but such shall not exceed 50 per cent. of the surplus. Money would be distributed in proportion to the quality and quantity of the raw material supplied. Any portion of such surplus might be applied as payment for shares in the company up to one share.

Other Acts

Other acts of some general importance are the ones respecting liquor and votes for soldiers. The Saskatchewan Temperance Act is very similar in character to the Act at present operating in the province of Manitoba, but a separate act has been passed prohibiting stores of liquor in the province for exportation to other provinces.

The act respecting soldiers' votes provides that all soldiers that are in Canada at the time of election may vote in the constituencies in which they formerly resided, but that in connection with soldiers overseas at the time of the election three constituencies at large shall be created, one member of the legislature to be elected by those soldiers who are in England, and two members by those who are in France and Belgium. The qualification for candidates is six months' service overseas.

ECHO FLOUR MILLS BURNED

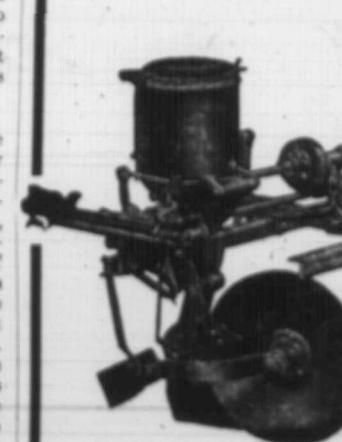

The entire plant of the Echo Milling Company, Gladstone, including mill, warehouse and elevator, was destroyed by fire on the night of March 31, the loss involved exceeding \$150,000. Owing to lack of transportation there was an unusual accumulation of grain in the elevator and at least \$70,000 of flour-mill products were on hand. The plant had a capacity of 300 barrels per day. It is believed the loss will be covered by insurance. An overheated bearing is given as the cause of the fire. It is expected the plant will be rebuilt.

A RECORD FINANCIAL YEAR

Canada's fiscal year, which closed on March 31, shows the largest revenue and expenditure for any one year in the history of the Dominion. Complete figures will not be available for a few days, but the expectation of Sir Thomas White, minister of finance, that the revenue would reach the \$230,000,000 mark is likely to be realized. This is \$100,000,000 more than the revenue collected two years ago. The minister of finance expects that after meeting all current and capital expenditures, including pensions, there will be at least fifty millions available with which to pay a part of the general war expenditures.

G.G.G. CORN MACHINERY

Three-way, edge-drop hill planter. Drops 2, 3 or 4 kernels as desired, without changing plates or stopping team. Hills can be placed 3 ft. 4 in., 3 ft. 6 in., or 3 ft. 8 in. apart. This planter will drill or check row your corn. Equipment included 80 rods of wire and automatic reel.

At the left are shown
disc runners now on

It Does Your Heart Good—

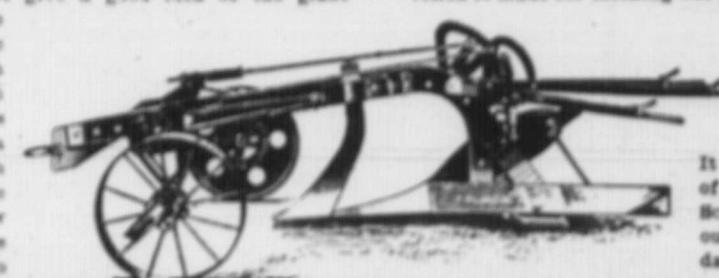

To see the way this Scrub Plow rips and tears its way through Brush and Scrub—anywhere the Tractor can go—and turns it under to rot

Cockshutt Scrub Breaker

Of all the hard, costly jobs you ever tackled, breaking up scrub land, without a Cockshutt Scrub Breaker, will certainly be the toughest. In fact you can't afford to waste human labor on it. The Cockshutt will do it quicker, better and far cheaper.

This cut does not give a good idea of the giant strength yet the simplicity and the ease with which this implement can be operated. It's an all-steel, extra heavy plow, with extra clearance between furrow wheel and share to allow trash to

pass. The beams are carefully forged and strongly braced against pulling strain. Powerful, easily-operated levers, equipped with helper springs, control its operation. No handles are necessary. Heavy steel colter is exceptionally strong and rigid. Provision is made for hitching one plow behind the other.

Please let us send you our latest illustrated folder.

It tells the whole story of the popular Cockshutt Scrub Breaker. Address our nearest branch today.

WAR LOAN SUBSCRIPTIONS

A considerable number of wealthy people in eastern Canada have subscribed large sums to the war loan. Charlie Chaplin, the famous comedian, subscribed \$58,000 in addition to the \$10,000 which he subscribed to the previous loan and \$150,000 to the recent British "Victory" loan. The new Canadian members of the House of Lords

also subscribed liberally to the war loan. Lord Hugh Graham, proprietor of the Montreal Star, subscribed \$100,000 to the first, second and third Canadian war loans. Lord Shaughnessy, president of the C.P.R., subscribed \$100,000 to the first and second loans, and \$80,000 to the third. J. W. Flavelle, chairman of the munitions board took \$50,000 in each of the three loans. J. K. L. Ross, Montreal, has subscribed a total of \$1,500,000 to the three loans, which is the largest subscription of any individual Canadian. Col. Cockshutt, president of the Cockshutt Plow Company, subscribed \$50,000 to each of the three loans. Sir Robert Holt, president of the Royal Bank of Canada, has subscribed to the three loans a total of \$550,000.

and ensures quick delivery.

CLUB ORDERS carefully packed, each order separate, no confusion in unloading.

Hundreds of Farmers all over the Prairies praise our Quality, Service and price. What a few say:

Wm. Howard, Minot, Minn.: "I received three cars from you; the lower grades were very satisfactory, while the higher grades were of the best and should satisfy the most exacting."

H. G. Dunn, Estevan, Alta.: "It is such fine stuff and I saved \$225.00."

J. B. Hoffeld, Jansen, Sask.: "I can only speak well of you for quality and price. Your No. 2 lumber is better than No. 1 from the yards, and then it is \$8 per M cheaper."

Joseph Hahn, Sec'y., Bruden, Sask.: "We saved 25 per cent. to 30 per cent. getting a better grade than handled by the local yards."

Manitoba Rural Credit Societies

The Rural Credits Act passed at the recent session of the Manitoba Legislature, provides for short term credit for farmers. Loans obtained under the act become due on the last day of the year in which they are taken out. Provision is made, however, that they may be extended if necessary and directors of the society approve of the extension. The objects of such loans are to provide the farmer with the means of purchasing seed, feed, or other supplies; implements or machinery; cows, horses, or other livestock, or to pay the cost of carrying on farming operations. The loans are not secured by mortgages on land. To understand the security it is necessary to know the form of the organization. The plan under which rural credit societies are formed is as follows: Each member takes \$100.00 worth of stock, ten per cent. of which must be paid up before the society can operate. Not less than 100 farmers, or prospective farmers, subscribing for \$100 each of stock, are necessary to organize a society. The stock subscribed by this number would be at least \$10,000. The provincial government and the municipality each take stock to the extent of one-half that subscribed by the farmers. This brings the stock up to \$20,000, which forms a guarantee fund for the basis of credit. It is expected that a society having such a fund will be able to secure credit to the extent of \$200,000 for its members, or ten times the capital investment. A smaller number of farmers can organize but the capital subscribed must be \$10,000.

For all loans secured from banks or persons the society is responsible. Most of the business then will be done thru banks. Notice of a man becoming a borrowing member is filed in the office of the clerk of the municipality and registered. This registration automatically acts as a lien against all the farmer's goods and chattels whether they be those already owned or those purchased with the money secured thru the loan. In case of non-payment the lender can demand payment with interest from the society, which must provide for the repayment within fifteen days.

How to Organize a Society

The first step in the organization of a Rural Credit Society is for, at least, fifteen farmers who wish to take advantage of the act, to sign a petition, which is sent to the provincial secretary, setting forth therein the names, addresses and occupations of the petitioners, the land they own, occupy, or intend to use and the amount of capital each agrees to subscribe. It also states that the petitioners desire to organize a credit society, gives the proposed name, the amount of capital stock and number of shares, the amount paid in on account of each subscription and the names of three of their number who shall be provisional directors. The government will then issue letters incorporating the society. It also appoints an officer to act as secretary or treasurer until the organization of the society is completed. The society cannot commence business until 100 farmers have subscribed for at least \$10,000 worth of stock, viz., \$100 worth, each. When organization work is complete the management of the society is vested in nine directors, three selected by the shareholders, three by the government, and three by the municipality. One of the government appointees must be a graduate in agriculture, who becomes general supervisor of agriculture for the district. One of the directors acts as secretary and must be a capable accountant. He is the only officer paid by the society and, in all probability, he also would be an appointee of the government. The directors are responsible for making all necessary inquiry as to applications for loans and for endorsing and passing them on to the banks with which the borrower is doing business, and whose security is guaranteed by the society.

How Loans Are Handled

Applications for loans are made on the form which sets out the purpose for which the loan is desired. This is passed on to the directors, who hold one or more meetings in March and April for the consideration of applications. The board examines into the security and

passes upon the application. If satisfactory the approved application is passed on to the bank or other lender with whom the terms and conditions upon which the amount is advanced are settled. The lender of the society may demand notes from the borrower, such notes being endorsed by the secretary for the society when passed on to the lender. The borrower then deals directly with the bank or other lenders while the society gives its security. The society must take full responsibility in connection with the guaranteeing of the loans. The rate of interest is not to exceed seven per cent., one per cent. of which goes to the society and six per cent. to the lender. The banks are said to have expressed their willingness to take on an unlimited amount of this business at six per cent. rate. Loans are repayable on Dec. 31 of the year they are given but can be renewed by the society. The lender and the society have at all times the right to enter the premises of the borrower and to examine into the use to which the money is being put. Any person dealing with the borrower from a society may secure full information as to the advances which have been made to him. The capital stock of a society must be invested in government securities or in municipal or school bonds. The income from these is used for paying the expenses of the society, paying dividends on stock or in accumulating the reserve.

Should Consolidate Debts

This act, if it can be put to the proper use by the farmers, that is, if the organization is found workable, should encourage farmers to consolidate their borrowings and debts in one sum and from one source. The placing of debts in many different places is one of the handicaps every farmer works under and is one of the handicaps every creditor must put up with. The money a farmer is about to secure thru a rural credit society theoretically should finance his operations for the season, when the loan can be cleaned up and another granted for the following year. This money should enable the farmer to pay cash for nearly all of his purchases; indeed, it is almost essential that a borrowing member of this society should be able to secure enough money thru the society to finance all his floating debts throughout the year, because tradespeople, implement men, etc., are liable to be very wary indeed of granting credit to farmers who have a lien against all their property, which virtually amounts to a blanket mortgage. It should be realized by farmers who are going into this that that is the true state of affairs. It will be noticed that, tho the farmers pay half the capital stock and the government and municipality one-quarter each, the directors are not in similar proportion, that is, one-third of the directors are appointed by farmers, government and municipality respectively. What effect the considerable number necessary to form a society will have remains to be seen, but it seems likely it may retard organization or at least render it very slow.

FARMERS TO PUT UP CANDIDATE

At an enthusiastic meeting of farmers, held at Trux, on March 24, it was decided that the time was ripe to put an independent candidate in the field at the forthcoming provincial elections to support the Farmers' Platform as drafted by the Canadian Council of Agriculture, and which has been unanimously adopted by the organized farmers of Manitoba, Saskatchewan and Alberta. There were delegates present from Avonlea, Trux, Dahinda and Wagner (Dummer) Grain Growers' Associations and there was absolutely no opposition to the movement. A primary committee was elected whose business it will be to get into touch with all the Associations in the Milestone constituency with a view to holding a convention at some central point within the next week or so. Already election funds had been started in the Trux and Avonlea associations, and at the meeting, contributions were called for to meet the primary expenses, to which there was a ready response.

The women as well as the men are going to be invited to take an active

part in the election, and will be eligible for election to the election committee. The following were elected to the primary committee: Mrs. D. Simpson, D. N. Roundy, E. J. Davis, and R. P. Decker, secretary-treasurer; Trux; Mrs. R. Reid, J. Campbell, H. M. Cathro, chairman; Avonlea; Mrs. F. Creelman; Dahinda; A. Creelman and H. Miller. The Wagner association will appoint at the next meeting.

It was decided to write all the secretaries of the men's and women's associations in the constituency asking them to appoint delegates at the earliest possible moment as there is no time to be lost if they are to be ready for the election.

The Trux Women's Grain Growers' Association provided an excellent dinner and lunch, the entire proceeds of which are to go to the Returned Soldier's Association.

MUNICIPAL LOANS FOR SEED GRAIN

At the recent session of the Legislature an Act was passed to enable municipalities to borrow limited amounts of money for seed grain purposes, the money to be furnished by the provincial treasury department under authority of a concurrent act giving the provincial treasurer the authority to make these loans from funds secured for that purpose.

This arrangement has been made to facilitate seeding operations in districts in the province in which damage was sustained by failure of the grain crops last year, and it is provided that any rural municipality may borrow a sum not exceeding \$60,000, for the purpose of furnishing seed grain to farmers in the municipality, and to the wives and other representatives of the farmers of the municipality, who, being the owners of the land, are on active service with His Majesty's forces.

The Act provides that each person may be aided to an extent not to exceed \$600 worth of seed grain, and each municipality may borrow by promissory note, payable on or before the 31st day of December next, or by issuing debentures for a period not exceeding five years. Any municipality supplying seed grain under the Act is authorized to charge the amount of the same on the tax bill of the person who gets the seed.

Full particulars of this legislation are being supplied to the secretary-treasurer of each municipality in the province, and the Department of Agriculture has a list, which will be furnished on request, of farmers having seed grain for sale.

The Dominion Seed Grain Commission, of which A. E. Wilson, Post Office Building, Regina, Saskatchewan, is commissioner, has purchased a large amount of seed grain, which can also be supplied to farmers thru the municipalities.

Full particulars, if required, can be secured by addressing the Department of Agriculture, Winnipeg.

The Manitoba Good Roads Association has suggested that two instructors be appointed to demonstrate the use of the split log drag in the province. Municipalities will be asked to enter as much mileage as possible in the drag competitions. Two classes of road, earth and gravel, may be entered in this competition. The cash prizes will be, for each class: First prize, \$50; second prize, \$30; third prize, \$20; fourth prize, \$10. Other prizes will also be awarded. The judges will be S. R. Henderson, A. McGillivray, Highway Commissioner W. F. Tallman and A. C. Emmett.

AMENDMENTS TO THE GAME ACT

An amendment has been made to the Game Act whereby spring shooting of geese is prohibited, the season now opens September 15, 1917.

The shooting at, or taking of little brown crane, whooping crane and sandhill crane is prohibited until September 15, 1927.

In that part of the province lying south of the fifty-third parallel of north latitude the trapping or killing of beaver and otter is prohibited indefinitely.

In that part of the province lying north of the fifty-third parallel of north latitude the season is open for the trapping of beaver and otter from the 1st day of November to the 30th day of April following, both dates inclusive.

The Farmers' Market

(687) 45

WINNIPEG MARKET LETTER

Wheat—The first market of last week started out strong, but there was a lot of selling on the advice, and later in the day more favorable reports from the south regarding the winter wheat crop caused prices to break considerably. On Tuesday there was a lot of cool buying in the local futures, which caused hoppers to buy again. During the balance of the week the local market was slow and narrow and did not respond to the strength in the American markets. Chicago was the strongest market, influenced by the winter wheat reports, but toward the end of the week settlement to Chicago was made. No doubt rains now would improve conditions greatly there, and the probability of a very early spring in the spring wheat states and provinces is becoming a factor also.

Coarse Grains—Coarse grains have been steady, with prices working higher, as the wheat prices have done.

Livestock News

Manitoba now has 100,000 sheep.

The Alberta Government has appropriated \$5,000 for the destruction of timber wolves and coyotes.

The \$500,000 provided by the Manitoba government to be loaned thru municipalities for assisting farmers to purchase seed grain will, it is estimated, be only partially utilized this spring. Checks varying from \$5,000 to \$10,000 have however been issued to districts.

The champion steer of the Chicago International this year, "California Favorite," sold for \$1,75 per pound dressed out over 70 per cent. in the carcass, an unusually high dressing percentage.

A decrease of 64 lbs. on each head of cattle, calves excluded, that arrived in Chicago in January, compared with the first month of 1916 is attributed to two things: attractive prices and high cost of beef producing rations.

Andrew Diller, of Carroll, Man., recently sold four steers on foot at his farm for \$575. The steers were two years and ten months old, three of them grade Herefords, the other a grade Shorthorn. They received only ordinary good care and a little chop during last winter. That looks like good money.

The Ontario Government has brought down a bill providing for farm loans. It is proposed to lend provincial funds thru the municipalities which will assume responsibility for the size and character of the loan and for the nature of the security offered for it. The government will take, for each amount paid out, a covering debenture of the municipality.

Roberts, of Winnipeg, at the Brandon Spring Show sold "Kolumbin," champion Percheron at Brandon, Saskatchewan, North Battleford and Prince Albert fairs in 1916, to A. J. Hind, of Glen Ewen, Sask., for \$3,000. "Kolumbin" is a black six year old weighing 2,340 pounds. Later in the day he sold "Janard," a big dapple grey, that stood third in a class of 50 at the International Chicago in 1916, to Wishart, of Portage la Prairie, for \$2,500. Both transactions were cash.

On October 22 last, Mr. G. W. Quinn, of Margravine, bought thru The Grain Growers' Grain Co. Livestock Commission Department, 25 head of two year old grade Shorthorns at a cost of \$1,761.19. For forty days the cattle had the run of the stubble, and for 60 days they were fed threshed Timothy hay and straw, with a light ration of barley chaff.

On February 1, Mr. Quinn sold the 25 head thru the same company for \$3,607.93. The total cost for freight, commission and yardage amounted to \$98.73 or approximately \$30.00 a head for feed and labor.

CALGARY BULL SALE

500 pure breed bulls of the beef breeds is the number entered for the auction sale to be held by the Alberta Cattle Breeders' Association at Calgary, April 10 to 13, at the same time as the spring horse show.

The sale includes 295 Shorthorns, 163 Herefords, 32 Aberdeen Angus, 7 Galloways and 1 Red Poll. This we believe is the largest number of bulls ever entered for an auction sale on this continent and has only been surpassed possibly at two annual sales anywhere in the world.

The sale will be held in the Horse Show Building in Victoria Park, where stockmen will have the best opportunity ever offered to inspect such a large number of good bulls. There will be bulls suitable for herd leaders and for range. Fully 90 per cent. of the bulls offered are Alberta bred and those which are not bred in Alberta have all been in the province over six months and are acclimated.

Catalog of entries for the bull sale as well as the spring horse show, April 10-13, is now ready for distribution and may be had on application to Secretary E. L. Richardson, Calgary. Freight will be paid on bulls purchased at this sale to the buyers' nearest station in Alberta, Saskatchewan and B.C. Mainland points, at a nominal rate, and there will be single fare excursion rates for return from all Alberta points. The bulls will be judged on April 10, and the sale will commence at 9:30 a.m. Wednesday, April 11. The breeds will be sold in the following order:

Shorthorns, Aberdeen Angus, Galloways, Herefords, and Red Polls. Among the Herefords to be sold are several Poll Herefords.

The number of breeders who have entered bulls of the several breeds are as follows:

80 contributors of Shorthorns, 37 contributors of Herefords, 13 of Aberdeen Angus and 1 each of Galloways and Red Polls, a total of 141 breeders.

Visitors to the bull sale and spring horse show at Calgary will have an opportunity of seeing the outstanding Hereford bull "Gay Lad 4th," recently purchased by Mr. Frank Collicut, of Alberta, for the sum of \$11,500.

MINIMUM CARLOAD WEIGHTS INCREASED

An important judgment by the railway commission in the case regarding the proposed minimum carload weights on grain and grain products is announced as follows:

Judgment issuing in the complaint of the Dominion millers and Toronto board of trade, allowing increased minimums as published on grain and grain products, except flour, in 60,000 and 70,000 pounds capacity cars, for which minimum of 45,000 pounds is allowed. Grain minimums may be effective April 2, but new minimums on flour and products must be postponed until schedule amending flour is published, so as to have simultaneous effectiveness.

The result of this order is regarded as of importance to shippers of grain and its products. The railroads applied to the railway commission for an increased minimum on carload weights so that the cars should be loaded as nearly as possible to their capacity. Their application has been allowed with the exception of flour, for which the commission has fixed a minimum weight of 45,000 pounds, where the railways asked for a minimum of 50,000 pounds. The application was made by the railway companies with a view to aid in ending the car shortage and other transportation difficulties. The railway commissioners have supported the view of the companies and the increase in grain minimums will go into effect, followed by the increase in flour minimums.

ELECTORAL REFORM IN BRITAIN

A bill embodying the recommendations of the speaker's conference on electoral reform has been introduced by Mr. Asquith in the British House of Commons, and has been endorsed by a majority of 279. It represents the settlement, practically by consent, of the numerous controversial questions that have stood in the way of progress toward a simpler and more democratic franchise. Amongst its provisions is one favoring the granting of the franchise to women. It is proposed that any woman on a local government register who has attained a specified age, and the wife of any man on that register, shall be entitled to vote in a parliamentary election. A redistribution of seats is to be made. The qualifying period for registration is to be reduced to six months. Every person of full age, not subject to any legal incapacity, who, for the qualifying period, has resided in any premises, or has occupied for the purpose of his business, profession, or trade, any premises of a clear yearly value of not less than £10, shall be entitled to be registered as a parliamentary elector. The qualification to be registered as a parliamentary elector shall not be lost by removal to different premises within the same constituency, or from one constituency to another in the same borough or county (including the administrative county of London), or to different premises in a contiguous county or borough.

A person shall not vote at a general election in more than one constituency. Provided that a person shall be entitled to one additional vote in another constituency in respect of the occupation of his business premises, or in respect of any qualification he may have as a university voter.

It shall be the duty of the registration officer to ascertain, as far as possible, the names and addresses of all persons of full age who ordinarily reside in his area, but who are serving in His Majesty's forces, and such persons shall be qualified to be registered and to vote as parliamentary electors within that area.

Proportional Representation

A constituency entitled to return more than five members shall be divided into two or more constituencies each returning not less than three nor more than five members. The election in any such constituency shall be held on the principle of proportional representation and each elector shall have one transferable vote.

At a general election all polls shall be held on one day. All nominations shall take place on one day. There shall be an interval of eight days between the day of nominations and the day of poll.

The following maximum scale of expenses is prescribed: Sevenpence per

elector in a county; 5d. per elector in a borough other than a borough returning three or more members; 4d. per elector in a borough returning three or more members. Where there are joint candidates the total amount of the expenses of the joint candidates shall not exceed one and a half times the scale allowed for a single candidate.

At any election in a single-member constituency where there are more than two candidates, the election shall be held on the system of voting known as the alternative vote.

RUSSIA'S RAPID PROGRESS

Russian history is being made rapidly these days. The Progressives in control are finding the time ripe for many reforms. The reconstruction that has been accomplished and promised within the last few weeks would fill 100 years of the history of progressive legislation in many countries. With one bound Russia is leaping from the position of the least progressive country in Europe into the front rank of progressive democracies. The form of government to be adopted has not been arranged as to details, but will probably take the form of a republic. Steps are being taken to have the natural resources released from the control of the aristocratic land owners. The Grand Dukes, seeing the trend of events, have voluntarily offered to give up lands held by them under the Crown. The disabilities are being removed from the Jews. Constitutional government is to be re-established in Finland, the political freedom of which has been at the mercy of capricious reactionaries for decades. A proclamation has been issued by the Russian government to all Poles, announcing that Poland can decide its own form of government for itself. The establishment of an independent Polish state, composed of all territories, the majority of whose population is Polish will probably be consummated in accordance with the plan agreed upon by the Entente Allies for the prosecution of the war. The Polish state will be bound to Russia by a free military union and form a rampart against the pressure of the central powers against the Slav nation. The proclamation of an independent Poland is signed by all the members of the provisional government.

One of the interesting side issues of the revolution is that the Russian provisional government is disposed sympathetically toward the wish expressed by the 10,000 Doukhobors in Canada to return to Russia. The question of their liability to military service will be determined by the judicial committee of the provisional government.

COOLING CREAM ON-THE FARM

Two methods are employed for cooling cream with well water. One, which is the simplest and most effective where the well is two or more feet in diameter, consists in using a windlass to lower the two cans of cream down into the well, either to the water or near it. The larger can contains the mixed cream from several skimmings. It is lowered first and closely following it, and fastened to the same cable, is a smaller can which contains the last skimming. The purpose of the two cans is to keep the fresh cream separate from the older cream until it is cold. Each time a new lot of cream is added to the older cream, it is a good plan to give the mixed cream a thorough stirring or mixing. In this way the cream is kept smooth and of an even texture. Lumps will be prevented from forming and a smoother, better quality of cream will be produced. A cream stirrer made of a saucer-shaped, galvanized or tin disc attached to a quarter inch galvanized handle makes an excellent device for stirring cream.

The other method of using well water to cool the cream consists of interposing a cream tank between the pump and the house, or stock water tank. By this means the water which is pumped passes thru the cream tank before it goes to the other tanks. By keeping the cans of cream in this tank and protecting the tank from exposure to the hot rays of the sun, quite a satisfactory means of keeping the cream cool is obtained. In Western Canada over much of the season this method should be fairly effective. The efficiency of such tanks will depend upon the temperature of the water which flows thru the tank, the perfect insulation and protection given the tank and the

frequency and amount of water passed thru the tank.

Insulated Cream Tanks

Several styles of insulated refrigerator cream tanks have been devised. One of the cheapest and most suitable for construction on the farm or by a local carpenter was devised by Professor J. H. Frandsen of the Nebraska Experiment Station. This tank is constructed of two inch planed cypress planks, with the exception of the cover, which is constructed of two layers of one inch cypress with a sheet of rubberoid roofing between one layer being laid crosswise of the other to prevent warping. The outside of the tank is given two coats of paint and the inside is oiled. The interior of the tank is divided into three sections. In one section is set the can of mixed cream and in one of the smaller sections the can of fresh cream is cooled before mixing it with the general lot. The third section may be used by the housewife for the keeping of eggs, butter or other food materials which may need refrigeration. By having a tight-fitting lid to this latter section, odors from the food may be prevented from coming in contact with the cream. The following is a list of the materials required, also specifications for the construction of this insulated tank:

List of Material

4 pieces 2 x 8 in. x 10 ft. (sides).
1 piece 2 x 6 in. x 12 ft. (bottom).
2 pieces 1 x 10 in. x 14 ft. (cover double).
6 rods 1/2 x 27 in., threaded each end.
4 band irons 1 1/2 in. x 3/4 in. x 28 in. with
three 1/2 in. holes in each.
Sheet rubberoid 21 in. x 30 in.
1 1/4 in. in. pipe with lock nuts.
1 in. drain pipe with lock nuts and esp.
Hinges, cover clamps, chain, nails and
spikes.

Estimated cost of material, not including labor, \$10.00. Such a tank could be constructed from fir quite as satisfactory as from the cypress used by Prof. Frandsen.

At this price it will be found economical for obtaining low temperature in the cream. At the Oklahoma Experiment Station it was found that with an insulated cream tank and food refrigerator combined in the same cabinet that 100 pounds of ice was sufficient to keep sweet ten gallons of cream which was produced during four days. Ten gallons of cream will contain, if the cream tests 40 per cent., about 32 pounds of butterfat. This is a cost of approximately 13 1/2 cents per pound butterfat. With a differential of 3 cents per pound, or possibly more, between the price of first and second grade cream, it is evident that it is economical to purchase ice and produce a first grade cream.

There is still another additional advantage in using the refrigerated cream tank, even if ice must be used, and that is in the economy of cost of delivering the cream to market. Trips to market with the cream cannot be made without taking a horse and some person away from the farm work, where they may be needed. The cost of delivering cream where trips are made several times a week, and particularly where small quantities of cream are produced, is very expensive. This cost is worthy of consideration by the farmer if he has work on his farm which must be left undone because of making frequent trips to market with the cream.

There is then not only the increased price which is received by producing first grade cream, but also it is delivered to market at a lower cost in time and expense if low temperatures are maintained in the cream, and there must be an added pleasure from the production of a product which is clean, pure and wholesome.

The Farmers' Phone

Gives Unequalled Service
Stock at Regina

KELLOGG Code No. 2839 Farm Line Telephone is especially built for the severe rural line service. It has sturdy, well seasoned, quartered oak cabinet; Kellogg standard long distance transmitter (over two million of one type in use), powerful five bar generator; reliable, durable, receiver with Kellogg Bakelite shell. This telephone gives the most reliable service, with the least amount of repairs. Its use throughout the world proves it the unequalled farm line phone.

We have a stock of these subscriber and profit making telephones at Regina, Saskatchewan, ready for prompt delivery. Here you can buy from us complete supplies, including these splendid telephones and your orders and inquiries will have our prompt, intelligent attention.

Do you need wire, pole or line hardware, tools, batteries, etc., for your spring work?

A selected stock for spring renewals and extensions, with switchboards and telephones, ordered now will mean a saving and enable you to give a better service. Write us today.

We issue a booklet entitled "How to Organize a Rural Telephone Company," and we will forward this on request.

Canada West Electric Ltd.
REGINA, SASKATCHEWAN, CANADA

Distributors for Kellogg Switchboard & Supply Co.,
Manufacturers of Standard Telephone Equipment.

The Oliver Line Has the Plow for You

OLIVER plows led the rest as long ago as the "50's" in the last century. Ever since they have been kept at the top level, building up plow confidence in the farmer. These words are to remind you that Oliver plows are, as usual, the latest and best, improved types, of great strength, light draft, of close adjustment, and easy to operate.

Oliver Improved No. 1 Gang should have your close study—it is the important plow for the coming season. It is shown here. You will need our new catalogue to appreciate its many good points—these for example: The beams are landed, distributing the pull equally on both beams, avoiding twisting strains, making plow steadier, giving more room for horses to walk abreast. The lift device, quick and powerful in action, raises plows or forces them into hardest ground instantly. Perfectly straight furrows and straightening of crooked furrows insured because rear wheel is free to cast and to follow absolutely the landside, even though the tongue is turned to extreme right or left. The front wheel support is exceptionally strong; the bar steel frame is double, and a bracket reinforces the frame. The rear furrow wheel is made to resist extreme landside pressure. It is made with a wide adjustment right and left to hold plows in position under all frame wear and strain. The Oliver No. 1 gang is more satisfactory than ever before.

For every buyer there is the right plow in the Oliver line. At your disposal are Oliver sulky of several types, walking plows, disk gangs, breakers and cultivators. Oliver—a plow for any soil and any sized farm, as successful as they have been for many years. Write to the nearest branch house for full particulars about any style.

The Power Behind the Profitable Farm

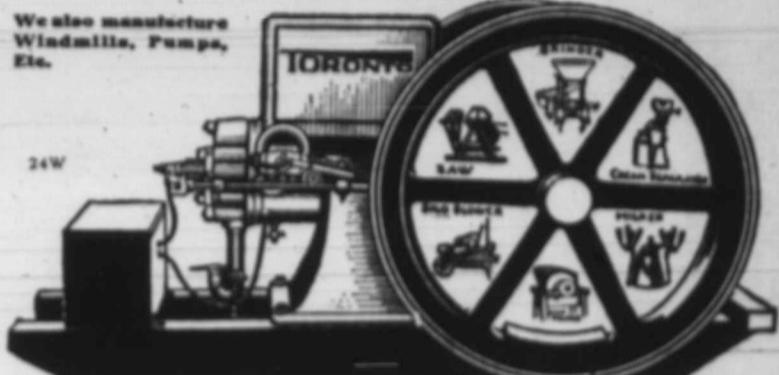

Farmers to-day have the best chance ever to make money—if they can only solve the labor problem!

Here's where the TORONTO Gasoline Engine comes in. It handles no end of heavy work around the barn and house, and does it far cheaper than hired men—even if you could get them. From grinding, driving the straw and hay cutter, filling the silo, pumping water and sawing wood, down to running the milker, the separator and the grindstone, it will do so many hard, tiresome jobs that you'll wonder how you ever got along without it.

TORONTO ENGINES

Give particularly good satisfaction because they are so simple and adaptable. Our illustrated booklet shows that there is nothing complicated about them to be figured out, tinkered up or referred to experts—nothing likely to get out of order and tie up an important job. They start easily and run like clockwork, at a speed that can be controlled within wide limits while they are running.

We also manufacture
Windmills, Pumps,
Etc.

Ontario Wind Engine & Pump Co., (Western Branch) Limited
Dept. "E"

WINNIPEG and REGINA.

If you do not see what you want advertised in this issue, write us and we will put you in touch with the makers.

FREE Registered POTATOES

Offer Still Open

Good potatoes for seed are a very expensive article this year. Ordinary potatoes are selling on the Winnipeg market at \$1.50 a bushel. The Guide has been fortunate in securing a limited quantity of registered seed potatoes. We have for distribution "Table Talk" and "Irish Cobbler." These registered seed potatoes if bought on the market would probably cost you from \$3.00 to \$3.50 per bushel. Both varieties have been grown under the rules of the Canadian Seed Growers' Association and are registered stock, which means that they are the very choicest and best quality seed. Every tuber is perfect, and none of them weighs more than six ounces nor less than three ounces, and they are absolutely free from all spots, scars or disease of any kind. Any person who secures either of these varieties will be entitled to use them as foundation stock for producing registered seed, and can join the Canadian Seed Growers' Association. "Irish Cobbler" potatoes are excellent cookers, they mature later than most varieties, their keeping qualities are good, and at the Provincial Fair at Saskatoon, in January, "Irish Cobbler" took first prize as an early white potato. "Table Talk" is a smooth white potato with shallow eyes and an excellent cooker. As a table potato it has no superior, and it always brings a good price on the market.

Our "Table Talk" potatoes will be put up in one and a half bushel sacks, and "Irish Cobbler" in one bushel sacks. In both cases the sacks will be sealed with the official seal of the Canadian Seed Growers' Association.

We have only a limited quantity of these potatoes, and those who wish to secure some of them will need to act quickly. We are giving these potatoes away to any person who will collect a few subscriptions to The Guide in their own locality. Any person who will collect four yearly subscriptions to The Guide, new or renewal, at \$1.50, and send \$6.00 in cash to The Guide office, will be entitled to one and a half bushel sack of "Table Talk" or a one bushel sack of "Irish Cobbler" potatoes, or if you can collect any two-year subscriptions at \$3.00, we will count them the same as two one-year subscriptions at \$1.50. Your subscriptions may be sent in all at one time or at different times.

With the price of potatoes steadily advancing there is no doubt that the demand for this registered seed will be tremendous and that our small supply will soon be exhausted. If you want some of these potatoes, get your subscriptions in at once.

"Doctor, girlie has taken a bad turn. Come quickly!"

When EVER MINUTE COUNTS

When accident occurs—or sickness comes—sudden and treacherous—what wouldnt you give to save the life of that dear one?

¶ In such a crisis, fortunate is that man who can turn to his Telephone and instantly summon the assistance he needs so quickly.

¶ Nothing on your Farm will give so much value and constant pleasure to you and your Family as the Telephone. It will enrich your home life—enlarge your social circle—broaden your vision and make you a bigger and better business Farmer. It creates neighborliness and unites a community. And be it summer or winter, noonday or midnight, stormy weather or calm, your faithful Telephone is there, always ready for an emergency.

¶ Many letters have come to us from Farmers all over Canada, telling of their varied experiences with the Telephone. These have helped us to prepare a most fascinating Booklet, a copy of which should be in the hands of every Farmer without a Telephone. Clip and mail the Coupon to-day, there is no cost or obligation.

WE SUPPLY everything a Telephone Company needs from the organization of a Company to the complete plant—inside apparatus and batteries as well as line construction material and tools. Our business is the telephone business.
