NATIVE INDIAN POPULATION

OF

BRITISH AMERICA.

There are probably few persons who, in the course of their reading in history, have not dwelt with peculiar interest upon the glimpses we catch through the mists of the past, of whole races of men that have vanished from the face of the earth, leaving no heirs or representatives to inherit the richer blessings of our age: of nations whose part in the great drama of human life we can never ascertain, whose sages are forgotten; whose warriors lie with "the mighty that were before Agamemnon" in the obscurity of oblivion. Then we may remember "how small a part of time we share" whose interests are so momentous for eternity; and may recognize, in the force of our sympathy, in the eagerness with which we interrogate the monuments that have descended to us; in the curiosity which all their reserve cannot baffle; a testimony to the truth of the declaration of the sacred historian, that the Creator 'hath made of one blood all the nations upon earth'; as well as the tie of relationship which unites all the descendants of our common parents, whatever their place in the stream, or their fortunes on the stage of life.

Naturalists have been able to number some half-dozen birds or animals that have become totally extinct within the period of authentic history. We have lately seen what general rejoicing, the discovery of a living specimen of one previously ranked in that number (the *Apterix*), has created among them. The skull, the foot, and a few rude pictures of the Dodo, have furnished ample material for a quarto volume. How many might be written on the varieties of the human race that have ceased to exist within the same period! The Dodo was perfectly common at the Isles de Bourbon two centuries ago, it was neglected, hunted down, exterminated accordingly: and the Dutch seamen who made an easy prey of whole flocks, twenty or thirty at a time, in 1602, (the Dodo, page 15,) no more suspected that we should now be ransacking all the museums of Europe for scraps to elucidate its affinities, than the first settlers of Newfoundland did that we should also be seeking in vain for one relic of its aborigines. When happy and hospitable crowds welcomed the Spaniards to the shores of Hispaniola, those cavaliers little dreamt that in three centuries or less the numerous and warlike Caribs of that Island, like the Gauchos of the Canaries, would be extinct, as completely so as the Architects of the Cyclopean remains of Italy, or the race that preceded Saxon

and Dane, and Celt, in the occupation of the British Isles. In half a century there will be no trace of a native race in some of the British colonies in the east. The natives of Van Dieman's Land, for example, who numbered 210 in 1835, were reduced to 38 in 1848.* It even appears doubtful, whether that most interesting of all savage races, the Maoris of New Zealand, with its wonderful force of character, and faculty for civilization, will not die out faster than it can conform to its altered condition. Like those silent yet ceaseless operations of nature, which are wearing down, while we speak, the solid matter of every mountain chain, and water course on the globe, and substituting the luxuriant vegetation of the tropical coral reef for the barren waste of the sea; so, slowly and imperceptibly, are the great changes effected, by which one race supersedes another in the occupation of portion after portion of the globe, bringing higher qualities, a different moral and physical organization, to work out higher destinies, and fulfil higher ends of the same controuling Providence.

These reflections have been suggested by the subject of the paper which I now propose to lay before this Society, containing the result of some enquiries I have made with a view to forming something like an authentic estimate of the number of the Indian race inhabiting the British possessions in America. A portion only, it is true, of the whole race, yet one which by reason of the great extent of those possessions, is commonly regarded as a very important one. If, as I think, it can be shown, that number is vastly smaller than most persons would suppose, and very rapidly diminishing, under circumstances which are nevertheless by no means unfavourable to its preservation; then it must be admitted that the prospects for the race at large are anything but encouraging—that the time may not be far remote when posterity may be counting its last remnants, and wishing that we in our day had been more alive to the facts, and more industrious in setting up marks by which they might measure the ebbing tide, and comprehend the destiny about to be consummated.

What constitutes density of population, is a question not easy to answer, when it relates to civilized communities, so wonderfully has Providence ordained that with fresh demands, and the heavier pressure of necessity, fresh resources should be found in nature for human sustenance; but in reference to uncivilized man, linked to nature by stronger ties, and having his existence bound up as it were, with those of her provisions which do not greatly vary from age to age, and are not so beyond our means of estimation, it does not seem impossible to assign limits beyond which his numbers can never far extend, and within which there

* Our Antipodes by Colonel G. Mundy, 1852—Vol. II.

is no reason that they should much vary, unless by the operation of external causes. However, I have no intention of attempting such an estimate here. We have evidence in the great Earthen Works of Ohio, requiring an immense number of hands for their erection, that at some period a considerable population occupied the fertile vallies of that region. We know that Agricultural pursuits prevailed among many tribes, which have since almost completely abandoned them; but with all this, it is difficult to avoid the conclusion, based on the desolating habits of Indian warfare, on the severity of the climate, and on the degraded position of the female sex, that upon the whole, the population of the middle and northern portion of the continent must, at all times, have been small in proportion to its area, and never on a par with the simplest of all natural resources, the animal life of the region. The materials for a specific estimate of their numbers at any one early period, are exceedingly scanty. The early travellers dealt in round numbers to an alarming extent. "*Qui dit un Canton d'Iroquois*" says de la Hontan, "*dit un douzaine milliers, d'ames. Il s'en est trouve jusqua quatorze mille et l'on calculait ce nombre par deux mille Vieillards quatre mille Femmes, deux mille Filles, et quatre mille Enfants.*" And as there were then five such cantons or Nations, this people, if the Baron or his authorities can be trusted, counted considerably less than two centuries ago, from sixty to seventy thousand souls. Yet he gives as informants persons who had lived twenty years among them. Little reliance can be placed on the estimate—the ancient *Coureurs des Bois* were addicted to romancing, and the habit of perverting facts in reference to the more remote tribes they visited, by way of discouraging rivalry in their lucrative trade, must have clung to them when discussing those nearer home. Equally apochryphal, I cannot but suspect, must be the 20,000 warriors whom King Oppeccanough somewhat earlier, is related to have led against the settlers in Virginia. Yet these and other similar estimates, which it would be easy to multiply, if they fail to furnish a numerical basis for comparison, convey a general idea of populousness which, as compared with what is known to our times, would justify anything that can be said as to the decline of the race. "There are abundant proofs," says Catlin, "in the History of the country, to which I need not at this time more particularly refer, to show that the very numerous and respectable part of the human family, which occupied the different parts of North America, at the time of its first settlement by Anglo Americans, contained more than *fourteen millions*, who have been reduced since that time, and undoubtedly in consequence of, that settlement, to *something less than two millions.*" (Catlin II.

p. 238.) In the elaborate alphabetical enumeration of Indian tribes and Nations, upward of 400 in number, prefixed to Drake's well-known Book of the Indians: 10th Edit., 1848.—we find the estimated numbers of a large proportion of them stated, but being of a great variety of dates, and the data probably of very variable authority, no general estimate can be based on it, without an analysis much more laborious, than the result is likely to be accurate.

In the course of a couple of summers spent a few years ago in the Hudson's Bay territory, I took pains to arrive at an estimate of the actual numbers of Indians inhabiting that country, by enquiries among the resident traders, and by procuring whenever possible, a specific statement of the number of hunters frequenting each Post, the number of young unmarried men, and an estimate of their families. The two first were, no doubt, ascertained very correctly, as far as the enquiry went; the last does not admit of much doubt. With respect to the districts which I visited but from which I did not procure these data, it is not difficult to base a tolerable approximation on the information derived from observation and inquiry, and in respect to those which I did not visit, which however form but a small part of the territory, I am guided in the estimate by the facts that where there are no trading posts, there are no Indians, and that where there are trading posts, all the Indians of the district frequent them, habit having rendered the articles of European trade essential to their existence; consequently we may infer the number frequenting any given post, pretty nearly, when the scale of the establishment is known. There are, perhaps, a few exceptions to this remark in the district of Mackenzie's River, where our intercourse with many tribes is of recent origin; but it is true almost everywhere else. Whenever a conjectural addition was made, by well-informed persons, on the spot, to the more precise numbers, it has been included in the following enumeration.

The British territory in relation to its native population, may be divided into four regions. *First*.—The region west of the Rocky Mountains, and north of the parallel of 49° . *Second*.—The region east of the Rocky Mountains, but north of the parallel of 55° ; the whole of which is inhabited by tribes of a common origin, and grouped by Ethnologists under the generic designation of "Tinnè." *Third*.—The region from the parallel of 55° to 49° , occupied partly by tribes of what is called the Eythinyuwuk or Algonquin stock, and partly by tribes of an intrusive race kindred to the Iroquois or Five Nations. *Lastly*, —the British Colonies.

Beginning with the *Second* of these subdivisions, we have—

*Franklin gave, in 1820, 685 hunters.

† Franklin rated them at 200 men and boys.

The foregoing enumeration, although it embraces a large extent of country, does not bring us into contact with the more numerous tribes, which are to be found only on the plains, where countless herds of Buffalo furnish ample means of subsistence. Without going into any nicety of classification, founded upon affinities of race, upon which subject Dr. Latham and Sir John Richardson, (Arctic Expedition,) have given much information, the tribes are referred to here by the designations they commonly bear among the traders. Mr. Harriet, then, a gentleman who had passed his life among them, estimated the six or seven tribes going by the general name of Blackfeet, as mustering 1,600 to 1,700 tents, at 8 per tent, 13,200.

Mr. Rowand, one of the oldest resident traders, gives them thus:—Sir John Franklin's estimate in 1820, is added—

		Franklin, 1820.
Blackfeet, proper	300	350
Pe-a-gans	400	400
Blood Indians	250	300
Gros Ventre's, or Fall Indians	400	500
Circees	45	150
Cotone's	} Mountain tribes {	100
Small robes		

1645 at 8 p. t. 13,160

Mr. Shaw allowed to the Blackfeet, only

Considering that these are perfectly independent estimates, they agree remarkably, and we may take by their mean—

The Blackfeet tribes

We have next the Assiniboines, a tribe of the Sioux, and said to be of the Iroquois stock: they are distinguished into those frequenting the woods, and those frequenting the plains, or Strongwood and Plain Assiniboines:—

Mr. Harriet, in 1842, gave Strongwood	80 tents.
Mr. Rowand gave Plain Assiniboines	300 3,200
Mr. Shaw gave, both together	4,000
Giving for Assiniboines	3,600

For the Strongwood Crees about Edmonton, TENTS.

Mr. Rowand gave	100	4,000
Other Crees of the plains	200	2,000
Mr. Shaw gave		4,000

- (3.) Crees
- (4.) Ojibbways, or Chippewas of the Saskatchewan—Mr. Rowand

I. The aggregate, then, of the tribes inhabiting the Plains, in the British Territory, by competent authorities was, in 1843, not more than 23,400. Catlin's estimate for the same tribes, is 35,000; but I found that all his numbers were regarded by better authorities (for Mr. Catlin did not visit the region here in question,) as too high.

II. We have next the various divisions of that widely diffused race, the *Eythinyuwuk* or Crees, which form the population of the wooded country east of the Great Plains, and south of the Churchill River, extending however in some instances *on* to the one, and *north* of the other. The Crees of the Plains we have already counted. There are a few Crees trading at Fort Chipewyan, at Isle a la Crosse, and at Lesser Slave Lake.

To this division belong the Chippewas or Ojibwas, Saulteurs and Tetes de Boule of Lake Superior, Lake Huron, and their tributary waters. It was ascertained by the Honourable W. B. Robinson, Indian Commissioner in 1851, that the Indians on the north side of Lake Superior, from the Sault St. Mary to Pigeon River, and inland as far as the possessions of the Hudson's Bay Company, forming 6 bands, or sub-divisions, were in all 1102 souls; and that the Indians on the north side of Lake Huron, from the Sault to French River, forming 17 bands, amounted to 1,422 souls, giving a total of 2,521. The bands were found to

(a) About one-third half-breeds.

With respect to the Indians in Canada proper, it is stated, in a very interesting Report concerning them, (Journals of House of Assembly, 1844-'5, Appendix 2,) that the earliest document received by the Government, which contains any detailed statement relative to the tribes, is one prepared by Major-General Darling, Military Secretary to Lord Dalhousie, in 1828. The total number of Indians who then came under the observation, and within the influence of the Government, in both Provinces, did not exceed 18,000. I am indebted to Col. S.P. Jarvis, late Indian Superintendent, for the following authentic returns of their more recent numbers. In 1835, the number of resident Indians receiving presents, as they are improperly called, being rather annuities or rent charges upon the soil of Upper Canada, was stated as follows:—

TABLE I.

	Men.	Women	Boys und'r 15.	Girls und'r 15.	Total.

(b) Two bands called the old and the new, or Young Nanticokes, are included in these; they numbered 29 and 17 souls, respectively, in 1844.

The Chiefs and Warriors in the first class, are those who served in the last war. The numbers in 1847 are taken from the *Quebec Gazette*. The apparent increase in 1846 is due to the permanent settlement of many Indians within the Province, previously residing beyond its limits, and was occasioned, as is well known, by the objection made on the part of the United States to our continuing to supply arms and ammunition to friendly natives belonging to their territory, the details of the table however, when they are comparable, give satisfactory grounds for supposing that as regards the small portion of the Indian race inhabiting Canada, the worst is over. They appear to be slightly on the increase, and are at the same time acquiring to some extent, the habits of civilized life.*

The following Table, of the number of Indians in Lower Canada, is taken from the Report presented to the Legislative Assembly, 1845, (Journal 1844-5—App. 2) to which reference has been made before:—

DENOMINATION.	Men	Women	Boys.			Girls.			Tot.
			15 to 10	9 to 5	under 5	15 to 10,	9 to 5	under 5	
Iroquois, Caughnawaga..	266	306	61	67	72	53	66	64	955

* The fact that the Mohawk Chief, John Brant, was once elected member of the House of Assembly, although he lost his seat for want of sufficient freehold property, deserves to be remembered.

It is to be regretted that the Lower Canadian returns do not distinguish the Iroquois according to the distinct nations of that once powerful confederacy. It will be observed, however, that the above numbers, combined with those of the Upper Canada return for 1846, make the number of chiefs and warriors still to amount to 1,220, and the total number to 4,301*. That their ancient loyalty to the British Crown is unabated, was shown by many incidents of the Canada rebellion, and by the language of their chiefs on the very interesting occasion of the meeting to restore General Brock's Monument in 1841. There is no native race entitled to claim, on so many grounds, the interest and respect of British inhabitants of Canada.

The following numbers of Indians in the several *Counties*, taken from the Census Returns of 1852, are added, to bring down the information on that subject to the latest date. It is evident, however, that the enumerators in Upper Canada did not always distinguish them from the rest of the population. There are, for example, none returned for the Counties of Lambton and Essex, on the St. Clair,—thus the total is far below the truth,—but the list appears to be complete for Lower Canada.

UPPER CANADA. 1852.		LOWER CANADA. 1852.

*The Mohawks of the Bay of Quintè are included, but the Delaware of the Thames are excluded, as never belonging to the Six Nations although at present associated with them in all the returns of the Indian Department.

The number of Indians on the lower St. Lawrence, frequenting the King's posts of the Hudson's Bay Company, is not known, but must be insignificant. I believe this to be also the case of the Indians in Nova Scotia and New Brunswick, but have no access, at present, to authentic returns.

We have still to consider the population west of the Rocky Mountains, in New Caledonia.

In 1820 Harmon, who had lived long among them, stated that the number, of all ages, did not exceed 5,000; they have diminished since with fearful rapidity, probably faster in that quarter than in any other. Mr. McGillivray, in Ross Cox's Travels, of somewhat earlier date, makes the tribes inhabiting the country about Frazer's River, the most populous part of the country, to number no more than 1,012 souls, including the Chilcotins, Naskotins, Tolkotins, and Atnahs—four tribes. Commodore Wilkes in 1840, upon a very careful survey, and doubtless upon much more complete and authentic data, than either of the others, makes the total population of Oregon and New Caledonia together, amount to 19,354 souls, about two-thirds of what M. Duflot de Mofras estimates for Oregon alone. So that on the whole, I consider that 2,000 for the interior of New Caledonia, (Oregon no longer being British territory,) is an ample allowance.

We have also to include the large Islands of Quadra or Vancouver's, and Queen Charlotte, together with the seaboard of that region. The population of the former has been estimated at from 10,000 to 20,000, and that of the latter at from 7,000 to 10,000.

By the kindness of Mr. Kane, whose labours as an artist in the least known parts of this continent, have yet to be fully appreciated, I am enabled to present an abstract of a very full census of Indian tribes inhabiting the north-west coast, which he procured in 1847. If it can claim anything like the general accuracy and fidelity of his pictures of Indian life, we need not hesitate to adopt it. (*See Table III., next page.*)

I confess that I was not prepared for the comparative density of population evinced by this table: it makes, in fact, the north-west coast the great centre of the Indian race at the present day; and the very detail of the returns from which it has been compiled, almost provokes a doubt of their accuracy. Mr. Kane had them however from the highest authorities—and his own observation confirms the general fact. I adopt the result therefore as

entitled to confidence—and it gives for the Indians inhabiting the north-west coast of America, including, however, in part, the Russian Territory, of which the Hudson's Bay Company has at present the partial occupation, for trading purposes—a total of no less than 63,340.

TABLE III.

* Trade at Fort Simpson, Vancouver's Island, and generally reside in its vicinity.

† Trade at Fort McLaughlin.

‡ Trade at Sitka, Stikene and Tacca.

§ Trade generally at Sukene, but frequently visit Fort Simpson.

* Trade generally at Fort Simpson.

|| Frequent Fort Simpson, Stikene, Zacca and Sitka.

* Frequent Fort Simpson.

† Frequent Fort McLaughlin.

We may now proceed to reckon up the result, not forgetting that the region under discussion is equal in extent to nearly one-twentieth part of the habitable surface of the globe, and has been generally looked upon as the asylum and stronghold of the race of North American Indians. Excluding the Esquimaux, whose numbers, notwithstanding the great extent of sea-line they occupy, cannot be large—probably not more than two or three thousand, we have the following enumeration:—

Chipewyan tribes—namely, Chipewyans proper, Dog-ribs, Hare or Slave Indians, Yellow Knives, Beaver

Indians, Da-ha-dinnies, and Carriers	7,575
Northern Indians of the <i>Kutchin</i> stock	6,028
Ethiny-u-wuk Indians of the Plains	23,400
Chipeways and Crees, exclusive of the above	8,675
Indians of the Seaboard and Islands of the Pacific	63,840
Indians of New Caledonia—Interior	2,000
Indians of Canada	13,000

Grand Total

124,518

Or to drop the appearance of precision conveyed by the broken numbers, 125,000, being barely double the number at which de la Hontan estimated the six Nations of the Iroquois alone, in 1690.

I am conscious that this number, for the gross population of so large a portion of the whole Continent, may appear almost incredibly small. In going over carefully and re-considering the details, I do not believe them to be, upon the whole, under estimated; no important region of the British territory appears to be omitted. It is presented, therefore, as an approximation, which may at least serve to direct further attention to the subject. It is, of course, to be taken as representing only a portion of the race. I have no means of estimating the native population of Russian America, and we have not considered the native population of the United States, Texas, Mexico and Oregon. The first of these was estimated in 1835 at 330,000, which, however, I take to be too high. Mr. Cuthbertson, a naturalist travelling for the Smithsonian Institution at Washington, gives the following for the probable number of Indians on the Upper Missouri, and its tributaries, in 1850. (Fifth Annual Report of Board of Regents 1851.)

Sioux	30,000
Cheyene	3,000
Ariccaree	1,500
Mandan	150
Gros Ventres	700
Assiniboine	4,800
Crow	4,800
Blackfoot	9,000

Total

54,550

Among whom, appear to be included, some of those frequenting the British trading posts, and previously reckoned. It is scarcely possible that the Indians of the Lower Missouri, Texas and Mexico, can make up even an approximation to the 330,000 of

the Baptist Committee. (Religion in America, p. 56.) Putting the whole together, it would scarcely seem that the present aggregate can be placed so high as 250,000, instead of the two millions of Catlin.

To this remnant, then, has been reduced a race supposed to have numbered from ten to twenty millions, not more than three centuries ago. "War, death or sickness hath laid siege to it," and is still laying siege at a rate in no degree less rapid than at any former period. Not to mention the cruel destruction effected by the American fur traders and trappers in the South; by utter lawlessness and wanton disregard of humanity; by Florida wars and wholesale deportations; we find that even in regions where the more obviously depopulating agencies have been held in great restraint, the process goes on. The Indians themselves are fully aware of it, and fully conscious also that the whites cannot always be directly charged with it. Sir John Richardson has given us a curious mythological tradition which serves to account for it to the Kutchin (p. 239.) A friend of mine, who conferred on the subject with a sage old native of New Caledonia, found that his only theory was that the white men's tobacco poisoned them. The white's fire water in this case, and throughout the Hudson's Bay Territory, is happily guiltless, for none enters the country.* If we charge it, in the case of the Carrier, to the unbounded licentiousness which prevails among them, we have to account for the same causes not having had the same effect at earlier periods; for, with the sole exception of the Indians of Virginia, boundless licentiousness appears to have been the rule among the natives on our first acquaintance with them. The travels of Lewis and Clerk beyond the Mississippi, only half a century ago, fully corroborate the accounts of all travellers of the seventeenth century in Canada and the more Eastern regions, in respect to this characteristic.

Doubtless, some causes can be assigned which tend to reduce the physical stamina of the race—such as the substitution of inferior European clothing for their native robes of fur; the use of stimulants, tobacco almost universally, alcohol partially; the gradual loss of native arts and appliances, without the acquirement of anything better; the introduction of new forms of disease; a marked deterioration in their dwellings, from the skins

* I cannot avoid referring Temperance advocates to the amusing Essay, "Sur l'Yvrognerie des Sauvages," in the Histoire de l'eau-de-vie en Canada, 1705; re-printed by the Literary and Historical Society of Quebec. It is well to know that, *il n'y a qu'une mesure d'ypresse qu'ils appellent Ganontiouaratonseri, c'est à dire, Yvrognerie pleine!*

of which they were formerly made, acquiring a market value, but being exchanged for nothing so essential to their health. There are also moral causes tending to depress the race—such as the consciousness of decline; the pressure of new necessities; the hopeless sense of inferiority to the whites in many respects, which, with all their reputed pride, is a general feeling among the Indians. Lastly, we must add the influence of practices which have a frightful prevalence in certain districts. I mean the administration of potions destined sometimes to produce abortion, sometimes to cause absolute sterility, in females. Dr. Hodder, in an Essay on the Poisonous Plants of Canada, read since the date of this paper, has alluded to the former as one of the secrets of the Indians in Canada, which he has not succeeded in discovering, but to which he attributes, in a very great degree, their decrease in number. Many instances of the latter were related to me in the interior—the Crees, more particularly, have a bad eminence as medicine men, which, shews a general disposition among them to these unnatural arts. In fact they are stated to be among the commonest resources of jealousy and revenge. However, some of these causes have not been found to check the reproductiveness of other races; and it may be doubted whether any or all of them are adequate to explain the broad fact, the final solution of which can probably be found only in the supposition of a design of Providence to make way for one race by removing the other.
