Technical and Bibliographic Notes/Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.

L'institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

The copy filmed here has been reproduced thanks to the generosity of:

McLennan Library  
McGill University  
Montreal

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol  $\rightarrow$  (meaning "CONTINUED"), or the symbol  $\nabla$  (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

McLennan Library  
McGill University  
Montreal

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole  $\rightarrow$  signifie "A SUIVRE", le symbole  $\nabla$  signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

# GEORGIAN PLANTAGENET, CA

The waters of these Springs have been subjected to a careful and scientific Analysis, by T. S. HUNT of Montreal, Chemist to the Geological Commission, and found to contain Chlorids of Sodium, Potassium, Calcium and Magnesium, Carbonates of Lime, Iron and Magnesia, Bromid and Iodid of Magnesium, Sulphate of Lime, and Silica, mingled in such quantities (*see Analysis below*.) as to render them highly beneficial and efficacious in the cure of various diseases of the human system.

P. M. ~~aro~~, M. D, Chief Physician of the Hotel Dieu Hospital School of Medicine and Surgery; W. E. Scott, M.D., attending Physician to the Montreal General Hospital and Lecturer on Forensic Medicine at the University of McGill College, and T. Walter Jones, Lecturer on Anatomy at the St. Lawrence School of Medicine,—have freely given their testimony in favor of these waters and recommend them as highly efficacious in the cure of Rheumatism, Dyspepsia, Constipation of the Bowels, caused by sedentary habits or old age, Dizziness, Headache, Heartburn, proceeding from deranged digestion, Successful derangement of the Urinary Organs, Fevers, allaying

## ANALYSIS OF THE WATER OF THE GEORGIAN SPRING.

I have made a careful quantitative analysis of a quantity of this Water, sent me by the Proprietor of the Spring. It is a Saline Water, containing earthly Chlorids, with portions of Bromids and Iodids, thus resembling the Plantagenet Water, from which it differs chiefly in the presence of a portion of Sulphates, which are not often met with in

ious diseases of the human system.

P. Marco, M. D, Chief Physician of the Hotel Dieu Hospital School of Medicine and Surgery; W. E. Scott, M.D., attending Physician to the Montreal General Hospital and Lecturer on Forensic Medicine at the University of McGill College, and T. Walter Jones, Lecturer on Anatomy at the St. Lawrence School of Medicine,—have freely given their testimony in favor of these waters and recommend them as highly efficacious in the cure of Rheumatism, Dyspepsia, Constipation of the Bowels, caused by sedentary habits or old age, Dizziness, Headache, Heartburn, proceeding from deranged digestion, Scrofula, derangement of the Urinary Organs, Fevers, allaying inordinate thirst and producing beneficial results from their tonic and laxative action, Impurities of the Blood and Dyspeptic ailments of various types as an aperient antacid and diuretic, and in allaying gastric derangement attendant upon the early months of pregnancy, these waters are highly recommended.

Having witnessed their beneficial and curative effects in various diseases, which have come under their professional notice, these Gentlemen, eminent in their profession, have cheerfully given their testimony to the public; many inhabitants too, who reside in the vicinity of the Springs and in various parts of the Province, of the highest respectability, who have used the waters for a long time, speak in terms of the highest praise and recommend them to Invalids.

These Springs are situated about 40 miles below Bytown within a few rods from the southern bank of the Ottawa River in Plantaganet, Canada West. A more beautiful and romantic spot is seldom seen in this or any other country. A small Lake is spread out in front of the Springs and embosomed by hills and forest trees. From this beautiful sheet of water issues a creek navigable for small boats, and runs into the Ottawa, where the passengers may be landed from the Steamboats.

A Public House is located at the Springs upon the shore of the Lake, as correctly represented in the above engraving, for the benefit of Invalids and others desirous of visiting the Springs. The water bubbles up from a ledge of rocks upon which the house is situated and conveyed by a pump into the rooms. The Lake and river abound in fish of various kinds and afford fine sport for the angler. Here Invalids may recruit their strength, anglers follow their bewitching art, and the lovers of wild and beautiful scenery have their desires gratified.

A Steamboat ride up the Ottawa is a fine pleasure excursion. This river is a magnificent stream nearly one thousand miles in length and drains 80,000 square miles of territory. Its Rapids, Falls, many wooded Islands, beautiful Lakes and picturesque shores afford one of the most interesting pleasure trips in the country. The time is not distant when pleasure travel-

## WATER OF THE GEORGIAN SPRING.

I have made a careful quantitative analysis of a quantity of this Water, sent me by the Proprietor of the Spring. It is a Saline Water, containing earthly Chlorids, with portions of Bromids and Iodids, thus resembling the Plantagenet Water, from which it differs chiefly in the presence of a portion of Sulphates, which are not often met with in Waters of this class in the Province. It has a specific gravity of 1008,78, and contains in one pound avordupois, the affixed quantities of the following substances:

	Grains		Grains.
CHLORID OF SODIUM, . . .	66,22000	CARBONATE OF LIME, . . .	2,08600
CHLORID OF POTASSIUM, . .	,72800	CARBONATE OF MAGNESIA, . . .	2,54016
CHLORID OF CALCIUM, . . .	31003	CARBONATE OF IRON, . . .	Traces.
CHLORID OF MAGNESIUM, . .	3,45982	SILICA, . . . . .	,14350
BROMID OF MAGNESIUM, . .	,02016		76,87015
IODID OF MAGNESIUM, . . .	,01204		
SULPHATE OF LIME, . . .	1,35044		

T. S. HUNT,

Office of the Geological Survey, }  
 Montreal, May 26, 1851. } Chemist to the Geological Commission.

The Medicinal qualities of the Waters are such that there is never the least inconvenience experienced in making use of it. It does not weaken the system and is not followed by any bad effects as is often the case in using more powerful medicines. It is found to be pleasant and beneficial as a morning beverage, improving the appetite, cleansing and purifying the blood. In many diseases incident to Females it is unsurpassed. Families within a reasonable distance from the Springs will no doubt find it convenient to keep a cask of the water constantly on hand—it is of such a nature that it will retain all its qualities at least for twelve months, when kept in a cool place and the cask properly prepared by saturation.

Orders for the water by mail addressed to the proprietor, STEPHEN TUCKER, Petite Nation, C. E., punctually attended to at moderate prices. Casks will be supplied when ordered. Empty Casks sent to Barnum & Walker, Forwarders, Montreal, will be immediately forwarded to the Springs and returned.

Agents for the sale of the Waters wanted in Canada and the Northern States. Terms to Agents made easy. Persons desirous of taking the agency will please address Stephen Tucker, as above.
