Grace Church

REV. H. J. LEAKE, M. A., Rector
10th Sunday after Trinity
Harvest Festival Services

11 a. m. The Providence of God.
Anthem by the Choir—Come Holy Spirit.

The Bishop of Niagara will celebrate Holy Communion.

3 p. m. Conformation by the Bishop.
Anthem by the Choir—God Be Merciful.

7 p. m. service withdrawn.

The W. A. meets in the Parish hall Thursday afternoon, Sept. 15th.

Knox Church

REV. J. F. WEDDERBURN, B. A., B. D., Minister

11 a. m. Address in the interest of the Canadian Bible Society. Subject: "The Wonderful Book."

7 p. m. The Temptations of Christ
Mission Band meets Sunday afternoon at 3 o'clock.

Sunday School and Bible Classes at 9.45 a. m.

Methodist Church

REV. C. L. POOLE, B. D., Pastor

Sunday School 10 a. m.
Public Services 11 a. m. and 7 p. m.

Morning Subject—He Came Unto His Own.

Evening Subject—Sins Isolation.

Prayer Service on Thursday evening at 8 o'clock.

Greensville

Miss Phyllis Soper of Hamilton spent the week end with Miss Audrey Hopkins.

Mr. and Mrs. Geo. Riley have returned from a trip to Detroit.

Mr. and Mrs. John Clark motored to Orangeville on Sunday.

The remains of Hector Wishart, only son of Mrs. Voltz of Buffalo, were brought here from Montreal on Tuesday and buried in the family plot.

School opened here on Tuesday with Mr. H. Wills and Miss Greenwood as teachers.

Mountsburg

The threshing machine is again making its rounds in this vicinity. Mr. Chas. Mount is also busy filling silos.

A very interesting game of softball was played at Aberfoyle Garden Party on Labor Day between the Mountsburg and Aberfoyle girls, the score being 12 to 6 in the favor of Mountsburg. A prize of \$5 was given the winning team.

A number from here are attending Toronto Exhibition and are reporting a good time.

The Kings Daughters have engaged the Maple Leaf Quartette of Galt to furnish the program at their annual concert in the Rink on Show night, Tuesday, October 4th.

The Old Boy's and Girl's Re-union at Killbuck is reported by those who attended from here, as a huge success exceeding the best hopes and expectations of the promoters. The proceeds amounted to about \$1600.

Base Ball

What proved to be one of the most exciting games of the season was played on Saturday last when the Juniors met Tansley on the home grounds, and won by the score of 9 to 8 in the tenth frame. Tansley at one time looked like sure winners when they got to Arnold, but Reid stepped in and turned the heavy hitting Nelsonites back in big league style, and winning his own game in the tenth by smashing the old pill through the diamond for a single.

Flamboro Centre turned back the Carlisle team by the score of 7 to 3, thereby making their position strong for the championship. A win for Flamboro Centre next Saturday over Tansley means the League champions for them.

LEAGUE STANDING

	Won	Lost	p. c.
Flamboro Centre	10	7	588
Tansley	9	7	562
Waterdown	9	8	529
Carlisle	5	11	312

Saturday, September 10th winds up the Junior Baseball League for the season, with Waterdown at Carlisle and Tansley at Flamboro Centre. If Flamboro Centre wins "nuff said."

Mr. Henry Slater has been appointed by the Canadian Nu-Kol Co. as local agent for their product. Representatives of the company were in the village yesterday and gave a demonstration of the new fuel at Mr Slater's home last evening. Another demonstration will be given this evening at which the public is invited.

Locals

Miss MacKay of Hamilton visited over the holiday with Miss Vera Nicholson.

The W. M. S. of Knox church will meet in the Sunday school room Wednesday afternoon at 2.30.

Mrs. A. B. Higginson and two children of Hamilton, are visiting her sister, Mrs. J. F. Vance.

Mrs. A. Featherston is in St. Joseph's hospital, Hamilton, having underwent an operation there yesterday.

Mr. and Mrs. Chas. Everitt and Miss Evelyn motored to Drayton and spent the week end visiting Mrs. Everitt's brother.

Mr. and Mrs. C. Galivan and family spent a very enjoyable week end visit at the home of Mr. and Mrs. E. H. Slater, St. Catharines.

Mr. and Mrs. Norman Spence and William and Edward Thomas of Eden Mills visited at the home of Mr. Robert Spence last Sunday.

The regular monthly meeting of the W. M. S. of the Methodist church will meet next Wednesday, Sept 14, at 2.30 p. m. in the Sunhay school room.

Mr. Ernest T. Martin, leader of the Baptist Church Choir of Hamilton, and wife, and Mr. Geo. Wellar of Brussels, were holiday guests of Mr. and Mrs. Isaac Baker.

Mr. Blake Binkley, who recently sold his farm at Flamboro Centre, has leased the house on Mill street now occupied by Mr. D. S. Atkins, and will soon move to the village.

Locals

Mr. Reuban Sparks is seriously at his home on Mill street.

Miss Helen McMonies, R. N. is visiting friends in Toronto.

Dr. and Mrs. Whiteley of Gorrie visited with Mrs. Keir on Monday.

Miss C. Webber, Hamilton, spent the week end with Miss Reta Henry.

The Methodist Church Choir held a corn roast Tuesday evening at Creeu's Park.

Miss Clara Reid left on Monday to spend a few days with relatives in Beamsville.

Miss Reta Henry has been appointed as assistant on the Guelph Collegiate staff.

Quite a number from here attended the Memorial and Unveiling service at Carlisle on Sunday.

The High and Public schools reopened Tuesday morning with a good attendance of scholars.

Mr. and Mrs. John Muir have returned from their honeymoon and will reside on Nelson street.

Mrs. Chas. Peer of Lowville is spending a few days with her parents Mr. and Mrs. Watson Hamilton.

Mr. Howard Beemer and wife, of St. Catharines, spent the week end with Mr. and Mrs. Peter Mitchell.

Mrs. Geo. Copp, while picking pears, had the misfortune to fall from a ladder and fracture her arm.

Quite a number from here have been "taking in" the Toronto Fair this week, and report it better than ever.

Mrs. J. W. Young and Miss L. McCready have returned home after visiting relatives and friends in Toronto.

Miss Myrtle Gardner of Orangeville sang a solo in the Methodist church Sunday evening very acceptably.

Mr. McDonald of British Columbia and Miss Lancelotti of Hamilton were holiday visitors of Mrs. Geo. Copp.

Miss May Innies of Hamilton spent the week end with Miss Isabelle Higgins at the home of Mrs. D. Gibson.

Mr. Robert Breckon, of Moose Jaw, Sask., was in the village on Monday visiting his uncle, Mr. J. F. Breckon.

Mr. Kenneth Cust of St. Catharines and Miss Radford of Smithville are visiting their uncle, Mr. Thomas Radford.

Mrs. A. D. Keir and E. Dale Sinclair have returned from Roseau, Muskoka, where they have spent a short vacation.

Miss Mabel Ireland, who has been visiting her aunt, Mrs. H. A. Drummond for the past week, returned to her home last Monday.

Mr. and Mrs. Robert Gardner and daughter Myrtle of Orangeville were the guests of Mr. Mrs. Ferdinand Slater over the week end.

Miss C. Webber of Hamilton and Miss Reta Henry have returned from a trip through the Eastern states, and are much benefited from camping for six weeks at Bennington, N. H.

NOTICE OF APPLICATION FOR DIVORCE

NOTICE IS HEREBY GIVEN that Mildred Emma Blachford, of the City of Hamilton, in the County of Wentworth, in the Province of Ontario, will apply to the Parliament of Canada at the next Session thereof for a Bill of Divorce from her husband, Albert Charles Blachford, of the City of Detroit, Michigan, in the United States of America, Editor, on the ground of adultery.
 Dated at Hamilton, Province of Ontario, the 22nd day of August, 1921.
SNIDER, MORGAN & WALSH,
 Solicitors for Applicant.
ANDREW T. THOMPSON, K.C.,
 Ottawa Agent.

WHAT IS THE MIND?

Physiology of the Brain Has Its Mysteries.

What is the mind? Nobody really knows. A physiologist would tell you that your mental processes represent the co-ordinated functioning of nerve cells in the brain.

The explanation, however, is inadequate and unsatisfactory.

One hears a great deal about the "gray matter" which forms a sort of envelope for the brain, and which contains a great many millions of the above-mentioned nerve cells. But how about the whitish mass which it surrounds?

The answers is that this mass is composed chiefly of fibers which emanate like rootlets from the nerve cells, and which are interlaced and tangled together with an amazing complexity. These fibers and their supporting structures (with small scattered masses of "gray matter") make up what may be called the body of the brain.

It is thought that the nerve cells in the brain of a human being number something like 200,000,000. Their ramifying rootlets connect them one with another, and send out branches which extend to the most remote portions of the physical anatomy.

It is through the medium of their interlaced fibers that the nerve cells of the brain are able to work together harmoniously. To them we owe associations of ideas and memories, the ability to put concepts together and form judgments—to exercise, in a word, all the faculties of consecutive thought and reason.

Although so much has been learned within recent years about the physiology of the brain, only a small beginning has been made in the exploration of that strange and wonderful realm. The very complexity of it seems almost to defy analysis. We know that the fore-brain (made up of two convoluted masses called the cerebral hemispheres) is the main seat of intelligence. Certain definite areas of the "cortex" have been proved to exercise motor control over certain parts of the muscular system of the body. The physiologist will tell you that the centre of visual perception is at the back of the brain, and he can point out in like manner the areas governing hearing, smell, taste.

But he is unable to go very much further. Ask, for instance, what is the business of the little brain called the "cerebellum," behind the ears, which is a distinct structure. He will tell you that it seems to govern locomotion, but that is about all he can say. The fore-brain is connected with the cerebellum by the mid-brain; directly in front of the cerebellum is a smaller mass called the "pons," and beneath the latter is the "medulla oblongata," an elongated body which tapers downward into the spinal cord.

The whole affair, including the medulla oblongata, is in effect the brain, and the spinal cord, through which a core of "gray matter" extends, is practically a prolongation thereof.

Strung along the spinal cord are small masses, mainly composed of the same sort of "gray matter" that is found in the brain, which are called "ganglia," and which are in effect little brains. All through the body such ganglia are distributed, manifestly controlling local activities under direction from the brain proper. It is as if the brain proper were a powerhouse, employing the spinal cord as a main transmission line and the ganglia as substations.

The analogy, indeed, may be considered very close, inasmuch as nerve energy, according to the theory now accepted, is really electricity, and the nervous system a highly complex and wonderfully efficient electrical installation.

No Change In It.

Dickson—"Why is an empty purse always the same, my boy?"
 Smithson—"Fraid I can't tell you."
 "Why, because you never see any change in it!"

FARM COLD STORAGE

Have an Up-to-date Equipment for Family Purposes.

The Farm Refrigerator a Great Boon — You May Put the Heated Term Out of Bounds — Early After Harvest Cultivation.

(Contributed by Ontario Department of Agriculture, Toronto.)

Cold storage practice so far has been connected with the large produce warehouses in our towns and cities. These establishments could not do successful business if their plants were not provided with large storage chambers kept cool and in other particulars suitable for the long storage of perishable products of the farm, such as eggs, butter, cheese, fruit, and so forth. Some day, probably not so far distant after all, the farmers may become sufficiently well organized to build and equip mechanical cold storage warehouses of their own, whereby they will be able to have complete control over the products of their own labor until they are disposed of to the consuming public. The extent to which individual farmers may make use of such cold storage plants on their farms is necessarily limited because the quantities of products requiring to be stored at any one time are small. The exceptions are very large fruit or dairy farmers, and even in these special lines of farming it might not be a paying proposition in all cases to erect an expensive cold storage plant. Personally, I believe the problem of cold storage on the farms should be handled through co-operatively owned warehouses provided with adequate cold storage facilities.

Apart, however, from the question of a cold storage with up-to-date mechanical equipment for the farm or farmers' association as suggested above, there is the problem on almost every farm pertaining to the storage for a few days of small quantities of various foods used on the table from day to day, such as butter, meat, milk, etc. It is certainly a great saving and matter of convenience to have on the farm a small cold storage chamber or refrigerator in which to keep these very perishable articles of food in a good fresh and wholesome condition for use on the table during the warm season of the year. This is made possible by the use of ice, and as it is procurable in almost every district of this country at a reasonable cost, there is no excuse for farmers not laying by in the winter season a few tons in some cheap form of ice-house. In the summer time this ice will be found most useful for cooling the milk and cream, supplying an ice-box or refrigerator in which the butter, for example, may be kept firm, the milk and cream sweet, and the foods in good condition for the table day by day. With ice always so handy and the best of cream available, it is possible for the housewife to make such delicious and wholesome delicacies as ice-cream, sherbets, and many delightful and cool drinks, all of which are most refreshing and stimulating to the folks on the farm in the hot and busy season of the year. In case of sickness, too, ice is sometimes a necessity. There is no doubt then about the fact that every farmer would find a supply of good ice a great advantage in many ways, whether it be stored in some bin from which it is removed as required or in some form of small ice-cold storage where it cools automatically a small refrigerator room adjoining the ice storage room. There are several types of small ice-cold storages suitable for use on the farm. In using these small ice-cold storages, however, it must be kept in mind always that the temperature cannot be maintained lower than about 40 or 45 degrees Fahrenheit scale, which of course is not low enough to keep perishable products like fresh meat longer than a few days, and large quantities of perishable articles must not be stored in a small chamber, nor too many kinds at one time. In spite of this limitation it will pay any farmer to have a supply of ice, preferably stored in a small ice-cold storage that needs no care. In a subsequent article I will deal with a few of the most common and practicable forms of small ice-cold storages for the farm.—R. R. Graham, O. A. College, Guelph.

Beet Growers Can Make Good Syrup.
Shortage of sugar need have no terrors for the sugar beet grower. A rich sweet syrup that can be used for all cooking purposes, serving as a substitute for sugar, can be made from sugar beets, according to the investigations of the Federal Department of Agriculture and chemists of the Minnesota College of Agriculture. A bushel of good beets will make from three to five quarts of syrup. The beets in the quantity mentioned should be cut into thin slices and put in a barrel or wash boiler and covered with boiling water and allowed to stand for about an hour. The water should then be drawn off and strained through a cloth into a kettle or wash boiler for evaporation. When the syrup has been sufficiently concentrated by the process of boiling it down it should

be poured while hot into sterilized glass jars or tin cans and closed tight. Beets that have been stored several months can be converted into good syrup provided they were fully mature when harvested.

Permanent Plastering

(National Crop Improvement Service.)

"Building the weather out is fully as important as maintaining a fire in the furnace. In the old days when we scorched our faces and froze our backs at the open fireplace, we went shivering to bed and breathed icicles on the coverlid.

"We have learned to plaster our houses inside and out, but in frame construction we have always had difficulty through expansion and contraction of preventing the plaster from cracking and scaling off.

"But the introduction of triangular steel reinforcement and the improvement of outside plasters has corrected this evil and a house now could be tumbled end over end and its plastered walls remain intact," says Mr. R. S. Rider, president, Canadian Steel & Wire Co.

"Another feature is that reinforced stucco never has to be painted, which is something every home owner will appreciate."

Speedy Birds.

The swallow is a strong flyer and is estimated to fly at at least 60 miles an hour. Relative to its size, the tiny humming bird has also great powers of flight, and is thought to go from 30 to 50 miles per hour. Of course absolute proof of the average rate of speed of any species is impossible to establish. Birds make long sustained flights in migrating, but it is reasonable to suppose that steady, rather than rapid passage is then desired; while bursts of speed would be characteristic of sudden flight in pursuing prey, or escaping an enemy.

Hard On the Barber.

In spite of the advanced prices the barber was dull, and the razor he was wielding seemed to share his discouragement.

"I've just about decided to open a butcher's shop," he said.

"And will you close this one?" his victim gasped, feebly.

To the Farmer:

The purchase of a Piano or Victrola is only purchased invariably once in a lifetime. Therefore it behoves the purchaser to get the best and make sure you have the best.

I have had 25 years experience in tuning and repairing musical instruments, therefore feel quite confident I can choose the best instruments on the market.

I shall be pleased to place any instrument in your home beside any other in fair competition and let you yourself be the judge, without you feeling under any obligations absolutely. I can also save the purchaser quite a few dollars on account of my expenses being so low. I will always give you my best personal service and devote the whole of my time to supplying the country people. A postcard or telephone call will oblige.

Yours truly,

DEAN'S DAIRY COLUMN

Three Big Questions Answered for Milk Dealers.

Shall I Sell Milk or Cream?—Should Cows Be Fed on Turnips?—How to Pack Butter for Keeping.

(Contributed by Ontario Department of Agriculture, Toronto.)

Shall I sell milk or cream? This will be determined to a large extent by the character of the farming operations. If the need for direct, quick cash in largest amount is great, then selling milk will best "fill the bill." On the other hand, if the dairy farmer can afford to wait for the slower returns from cream and live stock, and particularly if he desires to improve or maintain soil fertility, then selling cream is to be recommended.

Nearness to market is another factor. Where the dairyman is near a small town and has the time to "peddle" milk, he can make more money out of his cows than by any other system. At ten to twelve cents a quart, a good cow will return from \$250 to \$300 per year for her milk. When this is compared with \$100 to \$150 per cow, where cream is sold, or milk sent to a cheese factory or condenser, we see what a decided money advantage there is in selling milk to customers direct.

But this plan robs the young things on the farm—often the farmer's own children—of needed milk supply, hence many farmers are content with less ready cash in order to have better and more live stock, and consequently richer soil, which, after all, is the basis of good farming.—H. H. D.

Should Cows Be Fed Turnips? This is an old question about which considerable difference of opinion exists. If my reader is Scotch, he or she will likely answer the question by saying, "Yes," as Scotchmen, turnips, and good farming are three things usually found together on farms in Ontario.

There was a time when butter buyers were not so particular about the flavor of butter as they are at present. It is common to hear women purchasers on city markets, say to farm butter-makers, "Your butter is turnipy," which is sufficient to cause a loss of the sale. Cream-erymen object very strongly to "turnipy cream." While it is doubtless true that some careful feeders are able to feed quite large quantities of turnips to cows giving milk, without causing any serious trouble, there is always danger, which can best be avoided by not feeding these to milking cows. If they are grown on the dairy farm they are best fed to dry cows, fattening cattle, young stock, pigs, etc. However, if they are fed in the stable where cows are milking, and more especially where the roof house opens into the stable and where the turnips are pulped in the stable or in a feed-room adjoining, the odor of the turnips fills the air, which is carried into the milk pail at the time of milking, and thus the milk, cream, and butter become tainted from the stable air, even though the milk cows may not be fed any of the turnips.

The safest plan is not to grow turnips on a dairy farm. Grow mangels, or sugar beets, and corn for silage. These crops will give as good returns as turnips, are no more expensive to grow, and are much safer. "Safety First" is a good motto on a dairy farm.—H. H. D.

Killed by Lightning

(National Crop Improvement Service.)

In the summer time when the thunder caps appear in the sky and the storm sweeps down on the farm, the farmer thinks less of his safety than he does of his live stock.

When the stock is in the field during the storm it may happen that the animals drift against the wire fence, which may be heavily charged with electricity, and are shocked to death. The ordinary fence built on wooden posts should be grounded every sixth post by means of a wire six or eight feet long twisted around all of the line wires of the fence and then secured in a hole in the ground. The hole should be dug deep enough so that the wire comes in contact with moist earth. A fence so grounded offers no danger to live stock during the thunderstorm.

The wire fence built on galvanized steel fence posts is already grounded at every post and no thunderstorm with its discharge of lightning can injure the cattle enclosed by such a fence.
